The Case for Financial Centralisation

In our leading article of April 21 in which we examined the nature of the tasks before the new Finance Member, we expressed the view that the whole system of public finance in India has to be adjusted to the requirements of postwar development, that the present is the most opportune moment for laying down the essential bases of such adjustment and that the Finance Member should not allow undue respect for political susceptibilities to interfere with so important a task. Political susceptibilities are involved because the requisite changes will call for the abandonment of some of the essential principles of federalism in finance. We have taken the view that the reversal of recent trends towards financial devolution will on the whole meet with popular approval, if only because financial autonomy such as the Provinces have had since the Montford Reforms has been a cruel mockery. What is more, the public is ready to subordinate political predilections to a very large extent to the requirements of economic development. If the public is persuaded that, in the present conditions of India, a system of federal finance will not facilitate rapid and allround economic development, if will be prepared to support centralisation in this regard and look elsewhere for such safeguards as may be needed. The question whether and how safeguards should be provided against the evils of increasing financial centralisation may be deemed outside the scope of this enquiry. But it may be urged that the Centre should approach the problem from the point of view of adequacy of resources for planned development in the postwar period, rather than of invading the rights of constituent members of the future Federation of India. It is precisely from the point of view of adequacy of resources that we have urged an attitude of scant regard for the principles of federal finance. Both the nature of our potential sources of revenue and the nature of the tasks we have on hand require that we should keep our ideas about the system of public finance in a more or less plastic form.

It is necessary at this stage to examine the nature of the economic tasks that we have to tackle. It is too late in the day to labour what is perhaps a commonplace of modern economic discussion, that the division of values into economic and non-economic is illogical and unhelpful. But in India it is a simple fact, which anyone can satisfy himself about, that economic development is impossible unless the nation ensures as a preliminary certain values like education and public health, which are regarded as non-economic. In industry, in agriculture and in services alike, the efficiency of the average Indian has to be raised to a comparatively very high level if schemes of economic development are not to be upset by the inefficiency of the average man. The reports of the various reconstruction committees, while they have carefully surveyed the position and our needs and possibilities, have not gone into the administrative requirements of the various plans. The Sargent Report, for instance, has furnished detailed estimates of the costs and has also made clear the date at which we may expect the requisite personnel to be provided. But one important question, viz., the question of administrative changes and other arrangements, seems to have been ignored. Considering the prodigious cost of the scheme, over Rs. 300 crores a year in the final stages, it is necessary to see how the required funds will be found and how they will be distributed. The source of the funds and the manner of distribution will necessarily determine to some extent at least the question of control and division of responsibility. And apart from the financial considerations, there are others which pertain more closely to these problems and which argue against the devolution of power that has so far obtained. Every tier in the governmental hierarchy has so far had some share of the responsibility in regard to education and public health. The Central Government, the Provincial Governments, District Boards, Municipalities and local bodies, all raise revenues from sources allotted to them and tinker, in ways peculiar to them, with the vital problems of education and public health. While there are municipalities which have attempted to introduce compulsory and universal primary education, there have been District Boards unable to make any outlay on education. At the other end of the scale of education, universities have multiplied with either communal or similarly narrow provincial outlook. There is to-day the utmost disparity of standards, which is bad enough in an ordinary liberal education but most dangerous in technical or other specialised study and training. There is also the disparity in the calibre, mental and moral, of the people who exercise authority over educational institutions. The indignities suffered by the teaching profession at the hands of unschooled Ministers, District Board Presidents and Trustees are ultimately felt in the educational attainments of the growing generation. In the conditions of postwar planning, education will not be a sentimental luxury but the sheet anchor of every scheme of economic development. It would be criminal to expose so vital a part of nation-building as education or public health to the vagaries of local authorities or even, for the matter of that, to the chance that every Province will succeed in getting a fully efficient Ministry.

The requirements are not different if we turn to the purely economic values. The Government of India's statement about the future industrial policy is a powerful reinforcement of the views advanced in this series of articles. The Central Government have shown themselves fully alive to the conflict that there is between provincial autonomy and local self-government on the one hand, and the needs of full and co-ordinated development on the other. They have found it necessary to declare that, though industry is a provincial subject, certain industries will have to be treated as central subjects. Though opinions may differ as to whether a particular industry should be a central or a provincial subject, there can be no gainsaying the need for bringing all the more important industries under the jurisdiction of the Centre. Another point at which central control will be felt to be indispensable is where schemes of development can be worked only with the co-operation of more than one province or State. In subjects which call for regional plans, too, Central authority will be indispensable.

The case of agriculture may be thought to be far different. While the difference, no doubt, exists, most of the conditions pre-requisite for agricultural progress rest with the Government of India. In so far as agricultural development depends on the progress of education and public health, on the establishment of heavy industries and the chemical industry, provincial Governments by themselves can do little. The claim of the provincial Government to a fuller control of agriculture than of industry rests primarily on their closer knowledge of local conditions rather than their ability, in other respects, to provide the appropriate solution for each problem of Indian agriculture. The general idea that only in industry does the question of divided jurisdiction arise is to be attributed the consciousness that the fate of industries is decided largely by the fiscal policies of the Central Government. This view overlooks not only the basic requirements of agricultural development but also the importance of trade treaties, helps for export trade and other matters which are exclusively under the Central Government.

One has only to look into the various provincial plans that have so far been published to realise how poor and uncertain the prospects will be if the Provinces and not the Centre were to have the greater share of the responsibility for economic development. Most of the provincial plans have been formulated in the spirit of conformity to a prevalent fad or fashion rather than of a realistic tackling of the tasks. The provincial plans as a rule do not follow any principle. It cannot be claimed that plans have been formed with an eye to resources and immediate practicability. Nor can it be said of the plans emanating from the Centre, that they are concerned only to map out the needs and methods without much regard for means. The former is, in the nature of things, impossible. With the kind of limping autonomy that they had the Provinces can hardly think of running the race for economic development. The plans had to be well above what their resources would warrant. At the same time reasonably ambitious plans would not only entrench on the sphere of the Centre but would also have to make large assumptions about financial assistance from the Centre. Without such assumptions, neither a rich Province like Bombay nor a province like Madras which is well placed from the point of view of the Government's finances is in a position to make its own plans. The Centre has not for its part given any indications as to the extent of the financial assistance it will provide. The bases on which the provinces can proceed with their tasks of economic planning have been indicated only slowly and as incidental advantages of other actions of the Government. The Second Report of the Reconstruction Committee did mention a few paragraphs about the assistance that the Centre will be prepared to give to the provinces. But those referred to such matters as expert advice, the need for regionalisation and the like. Financial assistance was talked of in the most general terms. Assistance in raising loans for works of a productive nature hardly needs to be mentioned and may be taken for granted. In the circumstances in which the Provinces find themselves today, what they need to know is the extent to which they can expect the Central Government to augment their meagre resources. We understand that in the case of one of the Provinces, the provincial government has been instructed to revise its postwar economic plan so as to reduce very considerably the outlay required. While we are not prepared to vouch for the truth of this report, it seems to us quite understandable that the Government of India should feel uneasy about the scale of provincial planning.

This unsatisfactory state of affairs in regard to the preparation of plans is bound to continue so long as the Central Government has no clear ideas of the part it will play in provincial planning, particularly on the financial side. It has not yet tried to clarify for itself its own taxation policy for the post war period. It has made no attempt to estimate its surplus resources over the prewar scale of expenditure. It shrinks from the task of measuring up its potential resources to the needs of planned development. And it is naturally incapable of giving the lead which the provincial governments require most of all.

We urge that it is precisely this position that it is the task of Sir Archibald Rowlands to correct.

His predecessor, who was expected in many quarters to administer a cold douche to the Bombay Plan, gave the cause of planning a splendid start by declaring in his budget speech of February, 1944 that the Government of India can well afford an outlay of Rs. 1,000 crores on planning in the first five years of the Plan. Since then the Second Report of the Reconstruction Committee has confirmed the view expressed by Sir Jeremy. But the further progress of planning has not been helped very considerably by these statements. That progress rests at the present stage with the Provinces. And the Provinces, as we have been at pains to show, stand in need of a lead from the Centre in certain respects, before they can satisfy the expectations entertained of them. It is therefore for Sir Archibald to take stock of the whole position, estimate the prospects of public revenue in the years to come and furnish the basis on which concrete plans can be made for the future. This basis falls into two divisions, one, the total surplus of public revenues, in the Centre and the Provinces taken together, over expenditure on the pre-war functions of the State in India and, two, the percentage of this total which the Provinces will derive as from their own sources, the percentage which they will get from the Centre and the percentage which the Centre will be spending directly on schemes of development.

Since many complicated and controversial questions are involved, we suggest that Sir Archibald issues within a reasonably short time a sort of White Paper on this subject giving the estimates of public revenue, the basic assumptions behind these estimates in regard to currency and credit and price policies, the division of taxes into Provincial, Central and Centrally collected Provincial taxes. Such a White Paper could appropriately discuss questions of financial policy and administration, such as have a bearing on political and constitutional problems. A dispassionate and authoritative treatment of these problems on their merits will go a long way to rid the public mind of political predilections and teach politicians of all parties to approach technical problems in a scientific and not partisan spirit. Once these estimates are made available, planning will cease to hang in the air. The Committee will not waver between bringing plans down to the plane of immediate possibilities and taking them up to the impossible level of mere needs so-called.

Of the three classes of taxes we have mentioned, what we have called Centrally collected Provincial taxes are by far the most important to the overhaul of public finance in India. These taxes form a borderland between taxes which belong indubitably either to the Provinces or to the Centre. Not to shake off current ideas too radically, one may assume that land revenue, stamp duties and the older Provincial excises belong to the Provinces, while the Centre may lay claim to exclusive ownership and advantage of the profits of commercial departments, currency and coinage and the yield of customs revenue. Income-tax and other direct taxes and indirect taxation other than customs revenue may, in the line of reasoning adopted in these articles, be said to constitute the borderland. Income-tax, which for long has been divisible, the sales tax which now belongs to the Provinces, the excise duties which have been introduced, extended and expanded in recent years and Death Duties and other measures which are under contemplation, all these must form the common pool of resources for development purposes. The profits of new State enterprises must also be added to this pool. But there can be no such pool unless special steps are taken to create it. The divisible pool of income tax, a decade ago, was next to nothing. Today, it is dependent on the contribution of the Railways whose outlook is uncertain. The position must be radically different. The hope that a beginning would be made in the introduction of Centrally collected, but not Central, taxes has been weakened by the report that the Estates Duties Bill has not made much progress. There can be no doubt that India cannot do without a well conceived scheme of Death Duties. Nor will planning be possible without the centralisation of the sales tax. At present the sales tax has not been introduced in all the Provinces. It is not uniform either in scale or scope. It serves no other purpose than to add a crore or two to the revenues of normally impecunious Provincial Governments. Once it is centralised, it can be made uniform. Its scope can be extended so as to transform it into a turnover tax of rich yields. It can be made to serve the purpose of automatic collection of economic statistics and intelligence, particularly on the side of distribution and consumption.

A White Paper such as we have suggested will be a help in the solution of many a knotty problem. It will help a settlement not only with the Provinces but also with the States, which, once the basis of collection and distribution are made fairly clear, will have less hesitation in falling into line with the rest of India.

SPECIAL ARTICLE.

The Role of Cost Accounting in Industrialisation

By M. SHOAIB, M.B.E., M.A., LL.B., F.C.W.A., F.I.C.A.

Industrialisation is in the air and post-war plans are being prepared, by individuals, by groups of industrialists and businessmen and by Government. A great deal is being said about our requirements of machine tools and technicians. No one, however, seems to have paid any serious attention to one major aspect of the problem,—the need of adequate, properly trained cost accounting staff.

Large scale industrialisation needs cost accountants not only when the process of industrialisation is accomplished but at the very inception of any scheme towards that end, as it is essential that planning should be carried out with due regard to the cost aspect. In the present day world, when our conception of distance has had to undergo such a change, what takes place in one country affects not only its neighbour but also countries on the other side of the globe. It is impossible to plan in terms of a rigid national economy without taking into consideration the effects of international economy. A country might on paper produce all its requirements of food and consumers' goods and luxuries but in spite of any reasonable tariff walls that may be put up, the acid test will be whether the product of the country can stand up, value for value and quality for quality, against competition from other countries. It will not do ostrichlike to dig our heads into sand and not look the competitor in the face and work for the best. We must be prepared to compete against the whole world at least for our own markets.

It is here that the value of Cost Accounting becomes apparent, if the duties of cost accountants are properly understood and carried out. For although it is the Cost Accountant's function to compile the cost of production of commodities, it is a more important part of his duties to help in ensuring that such cost is reasonable. The modern cost accountant aims at giving cost figures which are 'live' and not historical. He analyses the day to day activities of the factory or business, points out where leakages of manpower or material are taking place, where over-expenditure may be avoided, where extravagance seems to exist and, also, where extra expense would be justified. The cost accountant's functions have changed in recent years from that of a compiler of historical costs to the dynamic one of the man who actively helps in shaping the actual costs as they are incurred and in deciding the direction in which further expansion of activities should take place. In order to carry out these functions, he makes use of all the modern developments that have taken place in costing theory and practice. He uses comparative costs in advising whether a particular line of activity would be profitable and whether a particular type of plant and machinery would be the best for the purpose in view. He uses standard costs and other methods of cost control to test whether the commodities are produced as economically as possible. He introduces budgetary control to spot waste and extravagance in the day to day running of the factory. In short, the aid of the cost accountant is essential for industry at every step. He is as indispensable for planning as for production.

This, however, is apt to be overlooked when large scale industrialisation by the state is in view and when there is the danger that political considerations may result in a decision to industrialise at any cost. The Cost Accountant is completely unconcerned with politics and does not pose as having any knowledge of statecraft. He does claim, however, that his advice should be sought at the planning stage in determining which of the thousand and one possibilities it would be profi-

OUR LONDON LETTER:

SAVINGS CAMPAIGN TO CONTINUE

... SCHEME FOR COTTON SURPLUS : NO UNANIMITY

REVIVAL OF WOOL EXPORTS

London, April 20.

If the present plans of the Government succeed, Britain will present to the world an unprecedented and paradoxical picture of the public being hounded to SAVE, SAVE, SAVE at the same time that banks are glutted with almost uninvestible funds, and savings in Post Office bank stand at an all-time high level and the vast majority of individuals carry around far larger amounts of unspent income than ever before.

In other words, a peace-time savings campaign is being launched on a scale quite as great as the long wartime savings campaign. It will be called "Reconstruction Savings Campaign" and will utilise the same trained personnel, both professional and volunteer, which the war has brought into existence.

An interesting thing about the movement is that it requires educating the public in economics, teaching people that by continuing to save, save, save, they are preventing themselves from competing for the small supply of consumers' goods and thus preventing an inflation in prices. But it has been found that economic theory is too baffling for the general public and that the savings campaign, in order to be successful, must be stated in terms of buying something. Thus, throughout the war, the public has been encouraged to save in order to pay for "Spitfires" or bombers or specifically named vessels for the Navy. Similarly, this "Reconstruction Campaign" will have slogans about saving for houses, or factories, or for purchase of raw materials abroad for the manufacture of goods for export.

Lord Beaverbrook's newspapers have been campaigning for the early abandonment of various "controls" and an early return to the glories of "free enterprise"; but the public generally is too fearful of post-war inflation in prices to show much enthusiasm for the return to "free enterprise.' Mr. Bevin speaking at the luncheon of the British Plastics Federation, severely attacked Lord Beaverbrook and sketched a lurid picture of "post-war chaos" if the controls are precipitately abandoned

Incidentally, Mr. Bevin's speech has very conspicuously omitted to condemn the continuance of industrial conscription in the post-war period though this is a very sore point with thousands of workers. Instead of saying—as most Left-wing papers are saying—that the termination of war will make it unnecessary for the Government to conscript workers for jobs, regardless of whether such jobs happen to be congenial or not, Mr. Bevin contented himself with the argument that it would be unjust to control labour in the post-war period, unless a similar sort of control is maintained "for the capitalist side." The ambiguity in his remarks will increase the widespread suspicion that Mr. Bevin is more or less converted to at least a certain degree of industrial conscription until the problems of reconstruction are solved.

Deep interest has been taken here in the apparent breakdown of the meeting in Washington of delegates from the chief cotton-exporting countries to discuss plans for an international cartel. With a cotton surplus among exporters of around 19.5 million bales compared with the normal twelve months' exports around 13 million bales, producers certainly face a glut which is likely to increase since shipping space in 1945-46 is expected to handle only some 3.5 to 4 million bales.

The United States has argued that the exporting countries should adopt quotas based on their shipments during the 1930's; but this is rejected by countries which have been able to take advantage of the United States' preoccupation with the war to increase their exports. Unable to reach an agreement, the Conference appointed a special expert committee to "explore" the whole problem of disposing the world's surplus.

The British view is that no such international cartel could be formed without exhaustive preliminary discussions with the importing countries; but nothing is known about the amount of raw cotton that Lancashire will be allowed to buy and pay for during the early post-war years.

Wool exports, however, seem to be in a somewhat better position. Recently, British merchant firms were allowed to handle shipments of South African wool to Portugal, each firm being restricted to 1,000 bales. Last month a similar scheme was arranged for shipments of South African wool to Turkey, each firm being limited to 750 bales.

Now, the Wool Control is pressing wool exporters to report how much raw wool they exported in the pre-war period to Czechoslovakia, Greece, Holland, Poland and Yugoslavia. It is assumed in the wool trade that early steps will be planned to resume exports to those liberated countries as early as possible, and through ordinary commercial channels.

There have been fair shipments of raw wool to France and Belgium but entirely through official channels.

The Stock markets paid a surprising tribute to Russia during the past week by turning strongly bullish on the announcement that M. Molotov is going to San Francisco. This announcement came close on the heels of the shock following Mr. Roosevelt's death when turnover sharply declined, while the city of London explored all possibilities of the new situation. Turnover remained low all the week but buying found the market bare of stock; and prices rose to new hights each day.

This bullishness was based on the theory that Russia is giving to her distressed Allies the plainest possible signal that she intends to have full co-operation with them, not only in war, but in peace. This, in turn, would mean that the immense network of postwar problems would not be more complicated by the strained relations between the Big Three. Those who held this theory lost no time in backing it up by purchases.

However, this boom in industrials is not being supported by a similar boom in home rails. On the contrary, rails weakened throughout the week, mainly on well-informed reports that the Labour Party intends to press for the nationalisation of railroads as well as all other forms of transport. It is true that railroads would be purchased from the present owners and not confiscated, but it is doubtful whether any Government would dare recognise as legitimate all sections of the existing capital of the British railways. In other words, nationalisation would probably mean official attempt to "'squeeze out water," which is believed to form the unwholesome portion of the capital of the four mainline railroads.

However, although the country is swinging Leftward visibly, there are many who question whether the Labour Party has won popular confidence to a degree enabling it to become the largest party in the House of Commons and to form a Government.

(Continued from previous Page)

table to explore. Without in any way attempting to influence the final decision, he earnestly desires that those in a position to decide should have all the facts before them. This is equally true whether the decision is to be taken by the State or by an individual.

Development of cost accounting is thus of vital importance for any scheme of industrial development. Without cost accounting, industry would be like the blind man groping in the dark, not always knowing which way to turn and losing a lot of time and energy in misdirected effort. We have to aim at excellence. The second best will not do. Let us then provide ourselves with all the means of achieving excellence. And, in industry, it is just impossible to attain excellence without cost accounting.

Let us industrialise then, by all means. But let all concerned understand that this involves the training of cost accountants simultaneously with and also as part of the training of technicians and that any delay here would be just as fatal as delay in technical training.

Editorial Notes

Five Year Plan for Madras

The Madras Government's five-year plan of development appears to possess some of the essential attributes of a sound plan—concreteness, proper relating of parts to one another and immediate practicability. The plan, as a whole, will be submitted to the Government of India for their general approval and might have to undergo modifications for being fitted into the framework of an all India plan. The plan is based on the recommendations of the Postwar Reconstruction Committee and involves an expenditure of Rs. 136½ crores out of a total of Rs. 142½ crores likely to be available to them during the five-year period. It has been decided to retain the sum of Rs. 6 crores for postwar reconstruction to meet "a possible need for expenditure on schemes which have not been worked out." That is typical of the cautious policy of the Madras Government. One of the special priority schemes provides for the establishment of 50 agricultural colonies scattered over the Province. The land in these colonies will not be granted to individual settlers but will be owned by a cooperative society of which the settlers will be members. The scheme is expected to provide for 9000 men. Another scheme which unlike the previous is intended exclusively for ex-soldiers, is the establishment of ten District Cooperative workshops for the manufacture and sale of such articles as furniture, machine tools, leather goods etc., capable of absorbing 3000 technicians. Only a very small fraction of the 360,000 ex-service men will thus be provided for.

The schemes for the improvement of the Province's agriculture, forests, livestock and fisheries cost Rs. 12 crores. It is proposed to establish Government livestock farms in the main breeding tracts and to aim at the production within 8 years of 100,000 bulls and 100,000 cows of the Ongole, Kangayam and Halikar breeds. The schemes for the improvement and extension of Madras forests provide for the creation of two new forest divisions for the control and acquisition of private forests, for further forest reservation including the creation of village forests, and for the return of panchayat forests to the control of the Department. The Fisheries Department is to be strengthened on both the administrative and research sides, to develop the pearl and chank fisheries by the purchase of boats, to set up ice factories, fish meal, fish demonstration factories, and fish curing yards. During the five years beginning from 1945-46 the Government hope to put into execution seven major irrigation projects as well as several minor works and to increase the yields in the existing deltas by improving the drainage systems. The future of the industry in this Province, as in many others, is to a large extent bound up with the provision of electric power at a reasonable price. And naturally Power Development has received due attention. The ultimate objective of the Madras Government is to provide compulsory free education for both boys and girls throughout this province up to the 8th standard. This is estimated to be accomplished in 20 years. This appears to be a very ambitious plan, but time alone can say how far the Government will succeed in this, for many years ago one Education Minister had the same objective.

On the whole, the plan appears to be an earnest attempt at an all-round improvement of the Province.

Supply Side of Economists

In a somewhat belated attempt to make its Agricultural Credit Department efficient and efficacious, the Reserve Bank of India had advertised for a full complement of officials specially qualified for economic studies and research. Such advertisements from Government and quasi-Government agencies should increase in number as we move out of the present war period into the period of post-war economic planning. It is, therefore, high time that some consideration was given to the supply side of this value. The Reserve Bank is not the only institution which stands in need of trained students of economics. Financial journals, Chambers of Commerce, and private individuals wishing to blossom into respectable authorities on economic problems, all have felt the supply to be extremely deficient alike in quality and quantity. The Reserve Bank will, doubtless, receive numerous applications. In this country we have no more of gradation of educational attainments than of grading of commodities. It is a common thing for young men to apply for jobs with a wide variety in salary offered as well as qualifications asked for. And it is far from rare for preferment to go by letter and affection rather than by merit. But what is important is, not only is the supply poor, but the conditions necessary for improving it in quality and quantity are wholly lacking. To be a good statistician for an Economic Bureau, one has to combine economic insight with mastery of higher mathematics. Nearly all the famous economists of the Western world are first rate mathematicians; and in India, economists who can follow every page of their writings are rare, if there are any at all. It is not surprising, therefore, that while we have physicists and biologists who are as tall as any in the world outside, we have no economist to compare with a Keynes or a Pigou or a Cassell. Even if we limit our ambitions to the collection and interpretation of facts and figures pertaining to our own economic life, the need for a higher standard of mathematical attainments in Indian students of economics will not be obviated. But so far as we are aware, no Indan university has a curriculum which combines mathematics and economics suitably. The result is there are mathematicians who are labouring diligently at economic statistics, and economists trying to circumvent the need for mathematical knowledge. The end of this dilettantism is still far away and cannot be in sight, so long as steps are not taken to revise university curricula to meet this paramount need of economic planning. Will the Reconstruction Committee of the Viceroy's Council take the necessary steps?

Thief of Health

In our issue of March 31, we referred to the decision of the Central Food Advisory Committee with regard to expansion in the production of Vanaspati, popularly, though wrongly, described as vegetable ghee. The Committee have favoured the grant of priority in the matter of permits to import machinery to areas like East and South India which are now experiencing a great shortage of natural or animal ghee and which, at the same time, do not have any large-scale plants for manufacturing vegetable ghee. We also understand that preference is to be given to areas which grow oilseeds (particularly groundnuts) in large quantities; and that, in the light of these two factors, sanction must be accorded on a regional basis, the provincial governments being requested to select suitable firms from among the large number of applications already received. It is quite a long while ago that the Central Government came to realise the urgency in the matter of expanding the production of Vanaspati; and, spurred by this realisation, the Government have arranged with foreign manufacturers for the early supply of machinery and plant for over a dozen factories. This arrangement for machinery was fixed months ago; and it was made known that the Government would distribute these plants among a few selected applicants. There was a spate of applications, report estimating the number of applications at over 150. For get-rich-quick aspirants and for black-market practitioners, Vanaspati is ideally fitted. Hence the hydra-headed flood of claims for special consideration.

Influences of various kinds are being presed into service, and the Food Department in New Delhi and the food departments in the various provinces find themselves in the unenviable position of limited patronage and unlimited solicitation. The premium that some of the applicants would be prepared to pay for getting one of these plants is reported to be as high as Rs 1 lakh. In this plight, the Government are evidently finding it no easy matter to make the final choice among the applications. We sympathise with Sir Jwala Prasad Srivastava and his harassed and bothered officials, but suggest that postponing decision is hardly the correct solution. The famine for ghee needs to be tackled without any delay; and, the sooner the Vanaspati plants get into production, the more effective will be the relief provided. Three precious months have already been lost; that is to say, an earlier decision would have brought the end of ghee-famine nearer by three months. Procrastination is the thief of health in this case; and we ask for the final decision to be made now and here. Preference is to be given to firms who are in a position to undertake to build and equip the factory and start production in the minimum time. Our idea of minimum time is nine months to twelve months.

If the Government find themselves gravely embarrassed in deciding because of the numerous and powerful claimants, may we suggest that Vanaspati, as being a product for the masses, may well be undertaken as a state enterprise? The industry is simple and easy to pilot and run; and we commend to the Central Government the following passage from Sir Jeremy Raisman's last budget speech: "Public discussions of the advantages of the State ownership or operation of industry, as against the advantage of private enterprise, are being very actively pursued at the present time, which is natural in view of the intrinsic importance of the question. But in the public consideration of these matters, I feel that perhaps insufficient attention has hitherto been paid to the question whether it would not be advisable to extend State ownership of industries as a source of additional revenue. It may well be that in the future the State may find it necessary to nationalise certain industries—especially those with large possibilities of expansion in order that it may have at its disposal additional sources of income for the sustenance of national well-being as a whole." Vanaspati can thus serve the sustenance of national well-being and the provision of additional revenue.

Words, Words, Words :

Michael Foot is evidently not much impressed with the quality or the character of the speeches at the opening session of the San Francisco Conference. Great occasions inspire great speeches; and the greatness of the speeches is in their directness and in their expression of fundamentals. That is to say, only if the fundamentals are clearly perceived and recognised can their enunciation be genuinely great. The Frisco Conference has revealed, not realisation of fundamentals, but differences in fundamentals. Patch-up, compromise, mental and moral reservations, intrigues and manipulations—these stand out as the dominant traits. It is no wonder that Michael Foot is as cynical as Hamlet about words, words, words. If the main theme and the exponents of the main theme did not rise to greatness, the commentator achieves greatness in the following description:

"Meaningless words, senseless words, words which seemed to possess the same monotonous flavour when you woke up and discovered it was Chinese.

"Nobody appeared to remember Gettysburg which only took two minutes to deliver. None aspired to win eternal fame by similar brevity. Words almost smothered the peace."

As a study in contrast, we may refer to the speech which Mahatma (then Mr.) Gandhi delivered at the Imperial War Conference which met in Delhi in April 1918. Lord Chelmsford had invited prominent rulers and leaders and sought to impress on and through them the gravity of the situation and the need for all-out support by India. There was only one resolution; and it was moved by the Gaekwar of Baroda. The seconder was Mr. Gandhi. His speech was in Hindi, and he himself translated it into English. It consisted of one, and only one sentence and was as under: "Realising fully my responsibility in lending support to the purposes of this Conference, I have the honour and duty of seconding this resolution". It took only two minutes to deliver; but it rendered the subsequent spate of oratory flat, stale and meaningless.

Military Notes For Burma

Burma is almost completely liberated but the task of stabilising her economy is by no means easy. Three years of Japanese occupation have told heavily on her resources and post-war prospects, and possibiy the greatest damage has been done only in the field of currency. To serve their own interests the Japs issued rupee, yen and dollar currency notes to enormous value and these notes are blissfully unrelated to any backing, bullion or otherwise. They bear no numbers and no promise to pay is indicated. They are denominated in rupees and cents. The Burmese people, compelled to work under the Jap regime, have absorbed a lot of these useless notes. Some inconvenience may now be caused to them as the British Military Administration in Burma have decided not to recognise the Japanese notes but to issue their own with effect from 1st May. It is stated in a Press Note that the hardship that may be caused to the Burmese cannot be helped since the need to bring down the price level and stop the galloping inflation is great. The circulation of the Japanese currency amongst the Burmese inhabitants has not been interfered with till now and instructions have been issued that in cases where refusal to accept Japanese currency threaten to cause undue hardships free distribution of supplies may be resorted to, and, in some bad cases, acceptance of the Japanese note at a depreciated rate in payment for such supplies has also been allowed. But from May 1, 1945 only the following will be legal tender in Burma: (1) India notes and coins (2) The old Burma notes of Rs. 5, 10 and 100 denomination. The higher denomination of Rs. 1 000 and Rs. 10,000 will be exchange at their face value if the manner in which these notes came into the possession of the holders satisfies the British Military Administration. (3) British Military Administration notes. These notes are only India notes overprinted, with the words "Military Administration of Burma. Legal tender in Burma only". Arrangements are being made to supply Burma with adequate quantities of small coins but if transport difficulties interfere for the time being, the position will be eased by the issue of notes of annas eight and annas four.

controlling interest in the small-sized share capital. Fabulous bids have been made in recent years for obtaining such controlling interest in shares. Dalmias paid a colossal price for getting the controlling shares in Bharat Insurance Company. The majority shares in the National Insurance Company changed hands some years ago for a fantastic consideration. I suspect that a similar change has occurred in the case of National Indian. In the case of Lakshmi of Lahore, the Managing Director who built up the business and the staff who assisted him in this work are dominated by the Chairman who has managed to purchase a majority of shares. Recent instances of such manipulations of controlling shares are the Jupiter Insurance Company which now joins the stable of East and West, the Anand Insurance Company which becomes associated with Warden Insurance Company and the Empire of India. In the last case, the Managing Director of a Bombay bank has become a director as the result of the change in the ownership of shares. Sir Padampat Singhania has secured a large interest but is kept at bay by legal processes. In all these cases, the prices paid were many times the intrinsic prices —intrinsic prices in the sense of market rating, yield and prospects. That is to say, if a thousand shares of an insurance company securing control are intrinsically worth Rs. 5 lakhs, as much as Rs. 20 lakhs and Rs. 30 lakhs has been paid. Now, those gentlemen who have paid a premium of a good many lakhs must have certainly some ulterior motives and may be depended upon to get back all this premium by hook or by crook. 'By hook or crook' means, in simple terms, the appointment of themselves or their nominees in fat jobs and profits and commission arising from the investment of the large life funds. These undesirable practices may be said to have reached their climax when a traditionally conservative company like the Empire of India is reported to have received the attentions of those who seek to convert the controlling interest into a vested interest.

* * * *

For my part, I would have preferred the terms of the new Insurance Committee to be more precise and more detailed. I would also have preferred that this Committee be authorised to investigate the affairs of such banks as are involved in transactions connected with the securing of controlling interest in insurance companies. There have also been some recent cases of manipulation to secure controlling interest in banks This is an even more undesirable feature than the securing of controlling interest in insurance companies. I suggest that the Committee headed by Sir Cowasji Jehangir is given wide powers so that it can investigate these and allied matters also.

On the first day of this month, the Indian Institute of Art in Industry was duly registered. It is the result of five years of untiring pioneering and Mr. Born deserves the congratulations of one and all for his success in putting this part o his work on a permanent basis. Apparently a number of these Art in Industry Exhibitions were needed to open the eyes of people to the value of art in industry. Some may see a faint paradox in that term. But the truly aesthetic will recognise that utility and beauty are not antithetical but are two complementary aspects of all values of life. Opposition to modern industrialism can be traced to this divorce of beauty from utility. The Institute that has now been established will work methodically for bringing about and maintaining their reunion.

* * * *

Bombay during the last week has seen the death of two notable Railway officers, one in retirement and the other in active service. Mr. Ramnath S. Aiyar, though he retired years ago, was up to the moment of his death in the thoughts of all his colleagues. Mr. Aiyar rose from the lowest rungs to be the Chief Auditor and Deputy Manager of the G.I.P., but had nothing of the parvenu or of the hauteur of officials who start life as officers. His sympathy with young men in the days of colossal unemployment among the educated classes was real, unostentatious and practical. And to the end he lived a life the features of which were fixed by the days of his clerical status. Genuine, affectionate and simple in every way, Mr. Aiyar leaves a far wider circle of friends to feel the loss than he knew.

* * * *

The death of Mr. K. C. Srinivasan is in many ways far more poignant. A brilliant student of the Presidency College, Madras, he entered the Indian Finance and Audit Service at an early age and rose, to the dismay of seniors and according to the expectations of all his friends. Meticulous and diligent in his work, he put his native powers to the highest advantage; and throughout his career he was one of the few men in the brilliant cadre to which he belonged who were marked out for special jobs. Those who knew him will suspect no partiality in me when I say that, if he had lived, he would have taken a major part in the management of our Railway. But fate never intended longevity to be one of its gifts to Srinivasan. And his friends and the country alike are poorer for his death.

(FROM OUR CORRESPONDENT)

New Delhi, April 23.

The week opened with a significant announcement that His Excellency the Commander-in-Chief had left India for a short visit on duty to the United Kingdom. The announcement naturally has given rise to some speculative and wishful thinking; but I am not prepared to venture into the realms of conjecture at this stage.

* * * *

The Government's policy announced some time ago in respect of imports of engineering stores under a panel scheme will come in for discussion at a meeting of the A... mittee to be held on the 8th instant. That policy, as may be recalled, was to the effect that the inflationary problem demanded that the Indian market should import as much as it can absorb, that since supplies were likely to be forthcoming the grant of licences should not be restricted to people who had imported before the war, but that they should be granted to a much wider circle of consumers who had been in the habit of importing direct, and that licences should be issued freely up to a certain ceiling. This would to some extent conflict with the interests of Indian manufacturers of engineering stores who, during the war years, have striven under considerable handicaps to meet Defence requirements of engineering stores. The problem of reconciling the interests of these and the needs of the consumers, who have during the war years been starved of their requirements, is one which requires careful consideration. Arrangements equitable to both will, it is hoped, emerge from the meeting that is to take place on the 8th.

* * * *

The policy of regionalising industry now appears to be a settled one. After the vegetable product industry, the cement industry has recently been the subject of a communique issued by the Government. Government consider that this industry, like other important industries, should be dispersed over the whole country, with due regard to factors such as availability of raw materials, power, proximity to markets and such other considerations. Government also wish to discourage monopolistic conditions in the industry and have therefore decided that, in the anticipated expansion of the industry, interests other than the Associated Cement Companies and Dalmia Group should be given preference. They have therefore invited applications from parties other than the above two for setting up of cement factories.

* * * *

It is recognised that the existing levels of prices for foodgrains are still rather high, but it has been decided not to make any reduction in the statutory minium and maximum prices, for the reasons that procurement might cause difficulties and the efforts of the "Grow More Food" campaign may not be prejudiced. Government have announced that there is to be no change in the maximum and minimum prices for the year 1945-46. This, however, does not prevent Provincial Governments from settling a fixed price instead of permitting fluctuations between the maximum and the minimum.

* * * *

The preservation and processing of food has engaged attention at the first meeting of the panel of scientists which has been formed to advise the Food Department on food technology. Opening the conference on the 1st May, the Hon'ble the Food Member stated that the application of science and technology would prevent damage to food grains, remove seasonal gluts, increase or retain the nutritional value of foodstuffs and produce new foods like yeast, synthetic vitamins and vitamin concentrates. The Hon'ble Member outlined three basic elements on which the solution of the food problem rested, namely, (1) production of raw foodstuffs (2) the food technological industries enabling the preservation, processing and fortification of foodstuffs, foodgrains technology and all relative problems and (3) the distribution of food to the population according to physiological needs.

* * * *

In dealing with these aspects of the problem he emphasised the importance of the new de-hydration industry and the refrigeration industry. The small scale of the cold storage industry in this country and the scope which exists for its development is being realised more and more, and it is to be hoped that capital will flow more freely into these essential industries than heretofore. The hope expressed by the Food Member that by the joint endeavours of technological experts the development of a fully fledged food industry in this country on scienific lines may be helped, will be generally shared.

There has been much criticism of Government's policy in setting up Government Grocery Stores and Fair Price Shops. The objections to this policy have been that goods imported for general consumption have been diverted for supply to a favoured class, that public funds had been expended to supply goods and stores at concessional rates to a small section of the community, and that this preferential treatment was being given at the expense of the general taxpayer. Trading interests have a more real grievance in that they have been deprived of a part of their business by these stores competing with them both in price and in clientele. Government have now explained their policy in regard to the institution of these stores and shops. They point out that these shops are self-supporting and do not constitute any charge on public funds. The fact that they are able to sell at rates cheaper than those fixed for the general public by the Department of Industries and Civil Supplies is attributed to the fact that Government imported direct and that the intermediary's charges, which are often quite considerable, are thus avoided. Government, it appears, do not subsidise these shops in any manner. Government regret that this scheme should

The Romance of a Cotton Bud

Nature's bounty and man's ingenuity have given us many of the finer things of life. The inanimate and most unimaginative object— the cotton bud— gives man a great opportunity in fashioning for himself, cotton materials rich in texture, and in a wealth of designs, to suit a variety of tastes and fancies. From sarees to shirtings, and bedsheets to several other household fabrics, the cotton bud is a faithful servant in the hands of man who can mould it to his liking.

The Lakshmiratan Cotton Mills are amongst the oldest textile manufacturers and it is their policy to apply their experience and resources to producing new and better fabrics to meet the requirements of one and all.

HINDUSTHAN GENERAL INSURANCE SOCIETY LIMITED

Mr. Nalini Ranjan Sarker on First Year's Working

Brother Shareholders,

The Report of the Board of Directors and the Statement of Accounts and Balance Sheet of the working of the Hindusthan General Insurance Society, Ltd., for the year which ended on the 31st December, 1944, have already been to you and I trust that with your kind permission they may be taken as read.

As you have seen from the Reports and the Accounts that during the first year of its operation, the nett premium income of the Society from all the departments amounted to Rs. 1,21,932-10-0. After providing for nett claim and expenses of management and taking into account the receipt of commission of Rs. 8,985-1-6 the surplus amounted to Rs. 65,413-12-0 out of which 40 per cent. of the nett premium income amounting to Rs. 48,773 has been reserved for unexpired risks.

As you will find from the Profit and Loss Account, we have also provided for a special reserve of Rs. 25,000 which will form a nucleus of a general reserve. Apart from this special reserve, we have been able to write off the whole of the preliminary expenses for the formation of the Society and commission on sale of shares, even in this, the first year of the Society's existence, which is quite creditable since rarely does a new company achieve this in such a short time.

During the first year of our working, which incidentally constituted a period of only 10 months we faced handicaps which are common to all newcomers to Insurance business. We opened a number of branches but only towards the latter part of the year and some of them practically at the very end of the year under report. When due allowance is made for these factors and others associated with the starting of a new general insurance company, I trust you will agree with me that the progress of your company has been satisfactory. We have now established 7 branches namely at Bombay, Madras, Delhi, Lahore, Lucknow, Indore and Ahmedabad. With all these branches in full operation I have every reason to hope that the progress of the Society's business during 1945 will be greatly accelerated.

When comparison is made with the progress Indian companies have made in Life Insurance business, the relative backwardness of Indian companies vis-a-vis non-Indian companies in general insurance business is striking. The new premium income from the policies issued in 1943 by *Life* Insurance companies was Rs. 3.97 crores of which the Indian companies had as large a share as Rs. 3.48 crores. Against this, the nett premium income of all general insurance business in India during 1943 amounted to Rs. 7.63 crores of which the meagre share of Indian companies was Rs. 2.89 crores only. Even these figures do not present a correct picture of the position of Indian companies in general insurance business as there is no account available of the total gross premium income of general insurance business in India. The total gross premium income available in India must be many times more than the nett premium income and as a very large portion of the Indian business of both Indian and non-Indian companies is re-insured outside India, the foreign companies naturally obtain a bulk of the reinsurance premiums. The over-all position of Indian insurance companies in relation to non-Indian companies is therefore much inferior to what a mere comparison of the shares of nett premium income of Indian and non-Indian companies would indicate. It may be said that the progress of general insurance business in a country is intimately related to its industrial and commercial development. In India, the non-Indian Managing Agents control even to-day a quite considerable portion of the larger industrial and commercial undertakings of the country and the non-Indian Insurers take full advantage of this position and it is they who receive most of the insurance business of these concerns.

The control of large section of Indian industries by non-Indians confers important advantages to non-Indian Banks and Insurance companies which indigenous institutions are deprived of. It is noteworthy that even though Indian shareholders may preponderate in many of these foreign controlled enterprises in India, yet the banking and insurance business of these undertakings is handled by non-Indian companies. Only in Bombay, agitation by shareholders as well as the influence exerted by Indian Directors of these companies have yielded some results and there the Indian general insurance companies are getting some of the direct business of the non-Indian managed undertakings. However, the general position still is that the share of Indian companies in the general insurance business written in India is yet in no way commensurate with the country's industrial and commercial development. While on this subject, I must acknowledge with gratitude the support Indian industrial concerns are giving to Indian companies and I hope in the future, this support will be further extended. Non-Indian managed undertakings will also, I hope, extend their support to Insurance companies of this country in which they do their business in the changed circumstances that we hope will exist in the near future.

I may refer in passing to the anxiety that is sometimes felt in regard to the prospects of general insurance business in the post-war period. There are some who apprehend a serious deflation after the war and consequently, adverse repercussions on our business. I am not sure if there are sufficient grounds to be too pessimistic. If there is a planned programme of Industrial development of the country after the war, as I believe there must be, I think the expansion of business resulting from such rapid industrial progress will compensate, at least to a large extent, the adverse effects of the suspension of war-time industrial activities and fall in the prices of commodities. The Indian companies may also expect to obtain a substantial portion of the business that will result from this industrial expansion, as it will be effected under Indian auspices. Further, I believe that the public in our country will be more insurance-minded in future so that there will be a very large expansion of business under all categories including Fire, Accident, Burglary, Insurance of residential premises. On a consideration of all these facts, I am inclined to believe that we need not apprehend any serious setback to our business in the post-war period.

I would like to make a brief reference to the handicap felt by Indian companies in regard to the Tariff Regulations which are framed by Associations controlled mainly by foreign interests. There is a general belief shared by many Indian companies that the Indian Tariff Association, which are affiliated Associations of organizations in London, make rules which in effect work in a way detrimental to the progress of indigenous companies. Being very new in this class of business, I do not feel myself competent to give an opinion, yet I am aware that Indian companies nurse this grievance. The foreign insurance interests operating in India would do well in their own interest to dispel this apprehension entertained by many Indian companies. In the field of general insurance to which Indian companies have been attracted only of late, there is, I believe, ground for fruitful collaboration for many years to come between Indian and foreign companies. The foreign companies must appreciate the demand of Indian companies to a position in their own country which is their due, and should also assist them in reaching this level. It is my belief that a cordial relatinship between Indian and non-Indian companies will be advantageous to both of them.

I must finally acknowledge our debt of gratitude to the Hindusthan Co-operative Insurance Society Ltd., for the manifold assistance we have received from them, particularly in the matter of extending our organisation. I also take this opportunity to offer our thanks to the Officer-in-Charge and the Junior Officers of the Society for the enthusiastic and devoted service. The Branch Managers, the Staff at the Head Office and the Branches have all done good work for which they deserve thanks.

Gateway of India

(From Our Correspondent)

Bombay, 1st May 1945.

The Government of India's statement on industrial policy has had a mixed reception in industrial and commercial circles here. As the press reports first carrried the announcement in the shape of a bald declaration that the Government wanted to control and take over the key industries, the reaction to the alleged proposal for nationalisation was naturally sharp. Fortunately, Sir Ardeshir Dalal was in the city during the week and in his talks with businessmen was able to dispel wrong notions as to the precise import of the official statement of policy. He made it clear that the object is mainly to establish Central control over industries, which are now a provincial subject. In a sense, there is nothing to smell a rat in this move, since as far back as 1919 itself, the Indian Fiscal Commission had recommended that the Central Government should be actively associated with the economic organisation of industry in the country. The relief with which Sir Ardeshir's explanation was hailed was clearly seen in the fact that equities made a sharp recovery on the Stock Exchange. It would still not be quite correct to say that industrialists have been entirely reassured by the Planning Member's explanations. On the other hand, there is a good deal of honest scepticism in the industrial circles as to the ultimate objective, and the true purport of what is going to be the new industrial policy. No one here denies the unexceptionable character of the statement; it is in regard to the actual implementing of the policy that a large residue of doubt and difficulty remains.

* * * * *

It is clear that a policy which envisages the control of the licensing, location and emergence of industries as well as the definite taking over by the state of the management of the electric power industry and others of a quasi-public importance will impinge at many points upon the structure of industry obtaining at present. Further, it has been definitely said that ship-building as well as the manufactue of locomotives and boilers would be carried pari passu by the state and by private enterprise. So the new policy is merely not one of centralisation, but includes the extension of control over new spheres as well as the entry of the government into the spheres of private enterprise. It is this which makes Mr. M. A. Master contend that it would be difficult for private enterprise to maintain its own position in the running of the same industry along with the state in competition with it. He fears that private enterprise would not be able to command the same influence and the same resources as the State would have, and also genuinely doubts whether there is real economic scope for the running of industries side by side by the State and private enterprise. The fact that the official announcement was made without prior consultation with the provinces and commercial bodies also seems to have irked some businessmen. The absence of any indication as to the position that will be occupied by foreign corporations in the management of industries is considered a drawback. The irrepressible Mr. Manu Subedar sees in the announcement the attempt of an irresponsible government to perpetuate war-controls and the drastic regulations now existing in the shape of the Defence of India Rules. He is categorical that a London controlled government might use the wide powers now sought for the new industrial policy for discriminating against Indian industries. Sir Chunilal B. Mehta has said that the effect of the announcement on the eve of the industrialist delegation's visit to England and America may be to make industrialists hesitate before venturing on the establishment of new industries.

It is true, of course, that the statement of industrial policy has had a very curious, not to say significant, timing. Just look at it in the context now obtaining—that war in the western front is moving to its close ; Lord Wavell in London is reported to be straining himself to the utmost for a political settlement; our captains of industry, with their ambitious plans for expansion of industries, are going abroad obviously to contact foreign industrialists and possibly to arrange for the purchase of machinery and equipment for the expansion of Indian industry, with an official of the government of India as the Secretary to assist them in their endeavours. And yet, this is the moment which the Government of India chooses to come out with a statement, which, however, unexceptionable in itself, is bound to be viewed askance in such a setting as pictured above. There are even some who fear that the communal principle(!) may be introduced in the economic field also in the operation of the control now sought to be exercised by the Central Government. You have stated the position pithily in the leading article of last week "but it should not be forgotten that more than the merits of nationalisation as they are ordinarily understood, it is the probable fate of nationalised industries that is important. And that fate depends in the last resort on the character of the government." That is precisely the view of most people, who feel that, without a national government at the Centre, no policy, however forthright and progressive, has any chance of acceptance, still less of fruitful accomplishment in the best interests of the country.

* * * *

The Indian non-official trade delegation to Australia have come back to this country, carrying with them glowing impressions of the large strides of progress made by Australian industry during the war. And to us that has a peculiar irony about it, since in our country we have been repeatedly told that no expansion of industry was possible, and in fact, it has not been possible. Australia, which at one time seemed in danger of being gobbled up by Japan, has not found the war a bar to progress. As Mr. Neville Wadia said, the country has capital goods, machine goods, and is building aircraft as good as any produced elsewhere. India's venture into the aircraft industry was chocked and the automobile industry, despite repeated attempts, is yet to come into existence, the Birlas and Walchands notwith-

South India

(From Our Correspondent)

Madras, May 2.

The publication of the five-year plan for the development of the Madras Presidency in the postwar period, has, on the whole, been received well. The plan is based on the recommendations of the Postwar Reconstruction Committee involving an expenditure of Rs. 136½ crores of Rs. 142½ crores likely to be available for the Government for this purpose. The money is to come from the Revenue Reserve Fund as it will stand when the plan is to be put into operation, Reserve surpluses during the period, Loans, General Provincial balances and Contribution from the Government of India. The Government have considered it expedient to keep in reserve Rs. 6 crores in view of the uncertainty of the trend of postwar prices and their effect on Government revenues, salaries and wages and in view of the possible need for expenditure on schemes which have not yet been worked out. The plan has been prepared in three parts; the first part consists of Special Priority schemes, some of which have already been sanctioned and all of which the Government hope to put into execution as soon as materials are available. Parts II and III of the plan consist of All-Province and Particular Area schemes. The future of industrry in this province, the Plan rightly realises, is to a large extent bound up with the provision of electric power at a reasonable price. Some progress in this direction had been made in the pre-war years, but still the per capita consumption of Madras is only 7.5 k.w. while in Mysore it is 49.5 k.w. The Pykara plant is the key plant in the Province as it is in a position to borrow from and lend to the Papanasam and Mettur systems. An extension of 25,000 k.w. to the Pykara plant is one of the urgent schemes. Other schemes will connect the Madras thermal station with the Mettur Hydro-Electric system, add to the generating capacity of the existing Papanasam Hydro-Electric power station and provide the ground work for the Tungabhadra and Machjund Hydro-Electric projects. Other important schemes which will be begun during the period, and continued during the following five years, are a relief scheme for Pykara by making use of its tail waters at Moyar, and a joint enterprise with the Travancore State consisting of three independent units which on the Madras side will link up with the Papanasam system and thereby with the southern grid. During the five years beginning from 1945-46 the Government hope to put into execution seven major irrigation projects as well as several minor works, and to increase the yields in the existing deltas by improving their drainage systems. The schemes for the improvement and extension of Madras forests provide for the creation of two new forest divisions for the control and acquisition of private forests, for further forest reservation including the creation of village forests and for the return of *panchayat* forests to the control of the department. It is proposed to increase the strength of the Fisheries Department on both the administrative and research sides, to develop the pearl and chank fisheries by the purchase of boats, to set up ice factories, fish meal and fish manure demonstration factories and fish curing yards. Many Government Livestock farms in the main breeding tracts are to be established with the aim of producing within eight years 100,000 bulls and 100,000 cows of the Ongole, Kangayam and Halikar breeds. There is provision for a wide expansion of the Agricultural Department's activity, for the multiplication and distribution of seeds of improved strain and for supply to farmers at concession prices of manures and agricultural implements. A twenty-year plan by which medical help and Public Health services will be brought within a reasonable distance of every village in the province, is also envisaged. When the plan has been completed, no village will be more than five miles from the nearest rural dispensary, while in thickly populated areas there will be a health centre for every 10,000 to 12,000 people. The ultimate objective of the Madras Government is to provide compulsory free education for both boys and girls throughout the Province upto Standard VIII. It is considered that this can be accomplished in a period of 20 years. The aim underlying the immediate postwar programme is to get the maximum number of children into school in the shortest possible time and to educate them upto the stage at which there is a little or no danger of a lapse to illiteracy.

Ten Presidents attended a meeting of the Chamber of District Boards, held recently at Saidapet. The Chamber reiterated its view that roads could be maintained more efficiently and more economically by local bodies and if Government decided to take away certain roads from the control of local bodies, they would request that half grants be given for capital works and maintenance of roads that would be left with the District Boards. The Chamber also requested the Government to grant the Boards a portion of certain other taxes which the Government collected. The Chairman pointed out that the request for grants was justified because he understood that there was a proposal before the Local Government to levy a tax on bullock carts as it had been represented to the Government by the Engineering Department that carts caused a lot of damage to roads and they should pay for their maintenance. The Government have before them a proposal to have a combined service of Municipal Commissioners and District Boards Secretaries. Inviting the views of the District Board Presidents on the scheme, the Government stated that representations were made to the Government that a Service of District Board Secretaries should be constituted and the inclusion of Secretaries in a regular service for the whole province provided for. This would give the Secretaries security of tenure, prospects and consequently their work would be more efficient. As there were only 24 secretaries in all, the Government felt, it might not be practicable or advantageous to have a service for them alone. Therefore the Government contemplate a scheme for the constitution of a combined service of Municipal Commissioners and District Board Secretaries. Under this scheme the power of appointment of District Board Secretaries and of disciplinary control over the Secretaries and the District Board Staff would be taken away from the Presidents. But such curtailment of the minor powers of the President as was involved was incidental to the scheme and had been proposed in the interests of the efficient working of District Board offices, relieving the President of much routine work. After considering all aspects of the Government's proposal the Chamber came to the conclusion that the proposed change will not be in the interest of efficient administration.

The Government Press Note on the food situation states that seasonal conditions improved considerably during the first fortnight of last month. Water scarcity was felt in

Airway Port

(From Our Correspondent)

Karachi, April 26.

With the war in Europe reaching its last lap, politicians and businessmen of this province are planning for the future. Sind, which had so long been a desert has been converted into an agricultural paradise thanks to the Sukkur Barrage. Rice and cotton are grown in plenty, but unfortunately for us, we have no textile mills and cotton that is grown in the province has to be sent all the way to Bombay or Ahmedabad.

A few years back, a textile mill was started at Karachi, but it never flourished. Our main handicap in the matter of industrialisation has been want of water, coal and crude oil to run machines. After the completion of the Indus water scheme, there is no dearth of water in the city of Karachi. Oil can be exported in large quantities from Persia when normal times come. Hence efforts are being made by the Sind Government and the Karachi Municipal Corporation to transform this city from a mere importing and exporting centre into an industrial city, with mills and workshops manufacturing a wide range of articles. A number of sites in the city have been earmarked to house the new industries. Care has been taken to see that the industrial areas do not come in the way of the growth of the city. Blue prints are ready in the case of some sites which have been divided into plots approximately of 10,000 square yards. A commendable feature of the planning of industrial areas is that location is fixed according to the type of industry. For instance, sites for textile and grain mills have been selected at a considerable distance from the city and at a place where it will be convenient to lay railway lines for easy transport. Applications have been received so far from promoters of forty industries. At present, we have only a cement factory, a factory producing electric bulbs and a textile mill. In Hyderabad there is a glass factory and a small paper producing factory. There are a few ginning factories round about Mirpurkhas. The city of Sukkur is the real industrial centre of Sind, and it houses a number of factories, producing a variety of articles from shoes to biscuits. Even the big textile mill which the Sind Government proposes to erect will be located, not in the city of Karachi, but in the interior. Our industrial expansion is possible only if we have a direct railway link with Gujerat, and it is a matter of satisfaction to know that the Central Government has agreed to give priority of investigation to the project.

The Sind Government has revised its policy in the matter of the purchase of foodgrains. Now the government has agreed to purchase any quantity that is offered and the date of delivery is to be notified by the sellers and not by the government. The government has further declared that if they fail to take delivery on due date, they shall pay 25 per cent of the price of goods sold and kept apart for government, and in addition, pay a holding charge of two annas per maund per month for the first two months and an anna and half for each subsequent month. The government has also notified the rate at Rs. 3-10 for a maund of wheat for the whole of next year.

I understand from reliable quarters that the visit of the industrial mission to England and America will depend on the fate of Wavell's visit to England. Provisionally, it has been decided by the delegation to proceed in two batches. The first is expected to leave Karachi on May 10 and the second on May 15. The local commercial community is organising a round of receptions for members of the delegation. Among them are receptions at the Indian Merchants' Association and the Buyers and the Shippers' Chamber.

Sir A. Dalal, Planning Member to the Government of India, is also expected to pass through Karachi to England, accompanied by Mr. Iyengar, his Secretary. His presence here will be availed of to discuss some of the postwar Karachi industrial projects.

The bullion market here continues to be firm with prices on the up-grade due to higher Bombay advices and speculative buying. There is absence of buying in the cotton market and speculative selling. Local market is week and the demand poor. Even if the war in Europe ends overnight, there will not be any serious ups or downs in the local market.

Resume of Commodity Markets

The bullion market has been very erratic during the past week, though on balance no appreciable reduction in prices has been recorded. Early in the week on reports that there was a possibility of a split in the Allied forces, following the threat of M. Molotov to withdraw from the World Security Conference. There was a sharp rise in prices, but reports of the unconditional offer from Himmler led to a wave of selling and the whole of the gains were lost. There was no real break in prices, however, as at the close prices did not show any appreciable change on balance. The raw cotton market has now been slightly better on reports that bulls might compel the Committee of the East India Cotton Association to take measures against a bear raid on the market. The raw jute market has been quietly steady while the jute manufactures market has been easy. It would have been generally expected that the sudden weakness in the hessian market would have affected the jute market as well, but so far there has been no adverse effect on values and prices remain unchanged. In spite of the optimistic estimates regarding the size of the crop for the next season, it is confidently expected that all available supplies will be taken up especially as mill consumption will be higher. With the liberation of the Continent, exports will be larger. Another important factor to be taken into consideration is the liberation of the Far Eastern countries in a short time. This might result in a large demand for bags as Indo-China, Burma and other countries will need large quantities of bags for their exports of grain and other raw materials. As for the old crop holders, they are placed in an enviable position. All the stocks will be needed by mills before the new crop arrives and as such, they are in a position to get the rates they demand. The weakness of the hessian market for forward positions is to be explained to the fears about the possibility of a reduction in working costs and the need for mills to make a gesture to overseas consumers. As mills are not in a position to take any definite view of the future outlook regarding costs and prices and it is not possible to form any definite ideas regarding the level of production, there is naturally a disinclination to reduce rates immediately. At this stage, however, it is feared that it will be impossible to dispose of all production. The bottleneck in regard to shipping is expected to be overcome before the end of the year.

* * * *

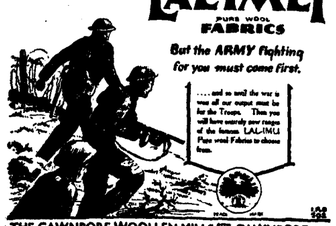
The raw cotton market was inclined to be slightly steadier in mid-week on bear covering and on reports that bull operators might persuade the Committee of the East India Cotton Association, to adopt a higher basis for tenderable cotton. It is pointed out that acceptance of a lower standard for deliveries resulted in the purchase of large quantities of low-grade cotton and that Bears were able to push down prices as the Spot position grew heavy. The offtake in the Spot market is satisfactory but with the confused ideas regarding the future outlook for Indian cotton, the general sentiment in the market is inclined to be bearish.

* * * *

At the meeting of the Industry Committee last week the question of rationalisation of mill production and standardisation of varieties, which will be acceptable to the public, was considered. It appears that many objections have been raised by millowners and that in view of the technical difficulties and the cutting out of many styles from production, no useful purpose will be gained by further interference with the activities of mills. There is also difference of opinion in regard to the allocation between different varieties. At the present moment, emphasis is placed on the manufacture of sarees and dhoties for which there is an acute shortage. The question of borders seems to present difficulties and this might affect the rate of output. Also the figure of 30 per cent of total output of sarees and dhoties is said to be high. No definite conclusions have been reached on this question but it has been agreed that where rationalisation is not possible, mills should be allowed to produce cloth and yarn to the maximum extent possible at their own discretion.

* * * *

It has been said that the absence of strict control over mills outside Bombay and Ahmedabad, has been to a certain extent responsible for the unsuccessful working of cloth control. There is agitation for greater power for the Textile Commissioner for India and also the tightening up of control in other producing areas. Even with the vigorous control measures it is pointed out that there has been no appreciable increase in output and that the cloth shortage will continue to be felt for some time, at least till such time as it is possible to bring in large imports from other countries. With the cry of world cloth shortage it remains to be seen how far it will be possible to augment total available supplies of cloth and yarn with imports from abroad.



* * * *

The bullion market has not been very much affected by the events in the war situation though the undertone has been very irregular. There was rather a sharp rise earlier in the week on hopes of the continuance of war for some time yet, but the reports about immediate peace led to selling and prices could not be maintained. Even so gold ready is quoting Rs. 74 and silver Rs. 130. There is no large discount for forward positions. The Reserve Bank's sales are rather small and unless the supply position improves, it cannot be expected that there will be any appreciable decline in prices.

Jute and Jute Manufactures

(From Our Correspondent)

Special to "Indian Finance"

Calcutta, 3rd May.

Two factors have combined, during the past week, to puncture the buoyancy of the Jute Fabrics markets. The apparent imminence of the end of hostilities in Europe was one and the remarkable improvement in the coal arrivals was the other. Exactly why peace should be interpreted as a "bear" factor is not quite clear except that according to the Marwari mentality, wartime is the opportunity to make money. Logically, the conclusion of peace should be the precursor of large demand for containers of all descriptions for the rehabilitation of occupied and devastated territories and should also mitigate to some extent the limitations on shipping to many countries outside the war zones which are normally large consumers of gunnies. It even looks as if the Burma market might be reopened for trade before very long though some time may elapse before other eastern markets, such as Siam, the Dutch Indies and China will be ready to trade. It can be more logically argued that the increased coal supplies are a "bear" factor, though he would be a bold man who would bet on the present level of arrivals being kept up. Certainly the past two weeks have been an immense improvement on anything we have seen since the acute shortage started. The average last week was more than 50 per cent above the weekly average over the past six months and so far this week the figure is even better, and for the first time since the rationing scheme started, arrivals look like being sufficient to provide all mills with full supplies for the week's working. The whole question is, will this level of supply be kept up for any length of time or is it merely a fortuitous "flash in the pan"? Not being able to find the wave-length for Delphi on our radio, we cannot supply the answer, though the late Mr. Asquith would doubtless counsel "Wait and see".

The easier tendency so very apparent in the fabrics market finds no reflection in the raw jute section. In that market there has been no great activity, but sellers show no disposition to reduce prices. So far as Old Crop is concerned, this is probably due to the firmness of up-country markets where imports are coming forward on a very restricted scale. Prospects for the New crop however are very favourable and the crop is showing good progress. Sufficient rainfall is reported from most districts though there are still a few places which could do with more. Sowings are nearly completed and in most districts are assessed as 12 annas or over, and the early plants are already 5 feet high. So the crop has had a favourable start at least, which is half the battle, and once established, jute is a hard plant to kill. On the other hand, sowings of 18 annas of last year do not promise a crop of excessive proportions. Last year's crop was officially estimated at 55 lakhs of bales. We consider that everything points to this figure being exceeded, both from the arrival figures to date and from the well grown nature of the jute indicating a yield above the average. Probably 65 lakhs of bales would not be too far from the actual. An increase of two annas in area therefore, still under favourable conditions, would not produce a crop of more than say 73 lakhs of bales in the coming season which might well be short of requirements. Sellers therefore may not be wrong in their disinclination of discount prices for the present, though we cannot refrain from repeating the warning that an all round break in prices of both raw jute and jute goods is inevitable in the not far distant future (we decline to suggest how far or how distant) for the simple reason that the main claim of jute to continued demand in the world's markets must always remain that of the cheapest form of container against all competitive fibres or fabrics.

At least a corner of the veil has been raised from over one of the multifarious activities of the Jute Industry in the War Effort in an article in the latest number of the Bulletin of the Indian Central Jute Committee. The Manager of the Technological Research Laboratories reveals some of the details of the mysterious "P. B. S.", which being interpreted, stands for Pre-fabricated Bitumenised Surfacing. It consists of a fairly heavy standard jute cloth, treated with a bitumen preparation and was devised as a means of rapidly and at small expense, providing a surface for airfields. The cloth is supplied in rolls and can be applied very rapidly to the prepared surface of the field and when laid in double layers, it provides a surface as hard as concrete and impenetrable to the heaviest monsoon rains, and suitable for the use of all types of Aircraft. Formerly, for an all-weather runway, concrete was considered the only suitable material and some 40,000 tons of concrete was required for an average field. Now, 700 tons of P. B. S. is sufficient to provide a substitute in almost every respect as satisfactory, and obviously the cost of construction is a mere fraction of the concrete field, while the speed at which the runway can be brought into service is also immensely accelerated. The proved value of bitumenised jute cloth in this respect is surely a plain indicator of the demand which must arise for its use in the preparation of the roadways of which India is so badly in need, the provision of which has been long deferred on account of the immense cost involved. P. B. S. would appear to be the obvious solution to the problem. Jute fabric also enters into another invention released from the Secret List, a device called a **Storpedo** for the dropping of stores with great accuracy. This device is provided with a parachute made from Hessian cloth which, though only 12 feet in diameter, is sufficient to steady a load up to 200 pounds. It is claimed that, with this device, loads can be dropped within an area of 100 by 300 feet and that, from planes flying at only 500 feet, fragile articles like eggs and electric lamp bulbs can be dropped with 100 per cent efficiency. These revelations confirm the claims of the late Chairman of the I. J. M. A. when in his last speech to the Association he declared that the Jute Industry was manufacturing everything from Parachutes to Tea chests and from Five gallon Drums to Aeroplane Runways.

The raising of the Black-out in Calcutta brings to mind the vexed question of compulsory War Risk Insurance. The astounding figures recently revealed of the incidence of these schemes on Industry suggests that their immediate repeal is called for and free cover afford to all such risks for the remainder of the War period, unless it is the avowed intention of the Government that these impositions should be maintained as a form of indirect taxation on Industry. If that is the case, it should be admitted honestly. Claims met under the Goods insurance scheme amounted to a little over Rs. 4 lakhs against premia collected of Rs. 17½ crores. Claims met under the Factories scheme were just over Rs. 2½ lakhs against premia of Rs. 19 crores ! Figures such as these are enough to make the toughest Insurance guy swoon.

Little of interest falls to be reported from the Pucca Bale market. Sympathetically with the decline in Gunny prices, the Fatka quotation of Jute fell, but in the open market the tone remained quite steady and in the case of some of the lower grades actually hardened. The impression seems to be that the cessation of hostilities in the west will be followed rapidly by a demand for shipments of raw jute. Whether this will be so remains to be seen. For export some Outport Lightnings were done at Rs. 718 but sellers subsequently advanced their price by a rupee. With Mills a small business was reported in Rejections at Rs. 69. and in Dundee Daisee at Rs. 77.

Demand for loose Jute has been slow but sellers show no inclination to break rates to secure business. A moderate quantity of Supervised Jat has been done at Rs. 16 and Rs. 13 for Mids and Bots in assortment, while Mids alone were reported at Rs. 15/8. In New Crop some medium District Weedings were done at Rs. 16. and there is enquiry for European standard packing at Rs. 16. 12. 0 and Rs. 13. 12. 0. Mids and Bots but no business has been reported thereat. Up-country markets continue firm with imports scarce. New Crop prospects are satisfactory with the crop making good progress. More rain would be beneficial in some districts.

(*Continued from page* 593)

standing. The experience of Australia underlines the only lesson relevant to the present discussion on industrial policy viz. the need for a popular government.

* * * *

It is common knowledge that latterly certain undesirable tendencies have crept into the field of insurance management. The Bombay Stock Exchange has for some months now witnessed large fluctuations in the value of some insurance shares which shall be nameless. Time and again, large blocks of shares changed from the old holders to new hands who have direct connections with banking institutions. It was this which prompted the Government of India to appoint a committee of enquiry of which Sir Cowasji Jehangir is the Chairman, assisted by such distinguished colleagues as Sir George Morton, Sir Alan Lloyd, Mr. Wajahat Hussain, Mr. K. R. P. Shroff and Mr. L. S. Vaidyanathan (Secretary). The Committee held its first meeting on Friday last when it examined (in camera) Mr. J. P. Kapadia, Secretary of the Bombay Shareholders' Association and its vice-president Mr. M. A. Chaevala. Mr. Kapadia should have placed before the Committee impressive evidence relating to the objectionable features in the management of insurance companies. The inter-locking transactions between insurance companies and banks, as well as the recent corners of insurance shares on the Stock Exchange (and often outside the Stock Exchange), will be particularly looked into. It is believed that the recommendations of the Committee may be incorporated into the Insurance Amendment Bill.

* * * *

The War Transport Member was in the city last week and had discussions with the Bombay Government on the new road transport scheme prepared by the provincial government long ago. Its main feature is the proposal to form separate transport companies in twelve zones in the province, in which each company will have its own directors and executives. Joint controlling interest in the enterprises will be ensured by the fact that the shares of each company will be divided equally between the Railway Board, the provincial government, and the existing operators. The new scheme will be launched by the provincial government after the Central Government declare their policy for co-ordinating road-rail transport.

* * * *

From the 1st week of June, mill-made cotton cloth of varieties ordinarily used for clothing will be rationed in Bombay city and suburbs. A quota of 30 yards for an adult and 15 yards for children below six is to be allowed per year. A good aspect of the ration scheme is that the full ration will not be allowed to be drawn at one time and fractions of the total quota for each have been prescribed to be availed of at intervals of a few months. Limits are also fixed for certain basic varieties, so that a person shall not be allowed to take only one variety of cloth to the detriment of others. The food rationing establishment will administer the cloth ration scheme.

(*Continued from page* 694)

some taluks in the Tinnevelly District affecting late planted paddy to some extent. This difficulty was overcome by well irrigation whereever possible. Stocks of foodgrains were generally adequate for current requirements. The flow of foodgrains to the markets during the fortnight was fair. There was shortage of firewood in parts of the Anantapur, Cuddappah, Bellary and some other districts. Suitable action is being taken to meet the situation. Statutory rationing continued to work satisfactorily in all the Municipal towns in the Province and in the rural areas of Malabar. Informal rationing was also working satisfactorily in areas where it had been introduced. There was also some improvement in the offtake of wheat in all the rationed areas. Propaganda for the popularisation of wheat is being continued.

(*Continued from page* 588)

rials imported amounted to between 12,000,000 and 13,000,000 tons. In this connection, it is interesting to note that imports of iron ore were considerably reduced, while imports of half finished steel products increased by 2½ to 3 times the prewar amount. Timber imports have perforce been very much cut down at the expense of the country's own forests and paper supply. There has been an increase in aluminium and copper imports. There can be no doubt that in the postwar period, with a return to the production of consumers' goods and other products for the British and Overseas markets, the demand for raw materials of every kind will again rise considerably. Certain changes which have gradually come about during the war years will, of course, leave their imprint both on the volume and composition of imports.

(*Continued from page* 591)

have resulted in a loss of trade for ordinary importers and dealers, but they consider that it is a development which circumstances have necessitated. They are, however, prepared to consider the placing of goods on sale to Government servants at prices at which they are now available in Government shops.

The question of the form that an Indian National War Memorial should take has now been decided by the Government of India. This will be a military academy, on the lines of the United States Military Academy at West Point, for training of officers of the Royal Indian Navy, the Indian Army and the Royal Indian Air Force. The announcement has been made of the appointment of a Committee to prepare a scheme for the establishment of the proposed military academy and to examine whether any special educational institutions should be estabished to serve as feeders of the academy. The personnel of the committee consists of distinguished educationists and military men.

* * * *

There is an air of keen expectancy regarding the announcement of cessation of hostilities in Europe. By the time this paragraph is read by readers of "Indian Finance" it may be that the news has come in and is probably two or three days old. The psychological effect of the announcement must indeed be cheering after the depressing atmosphere of the past years. One may not yet look forward to the lifting of the restrictions one has had to live under these years but the feeling that the cause for these controls has partly disappeared will raise hopes of an era of peace and plenty.

HILL-BIRD.

RESERVE BANK OF INDIA

Applications are invited for the following permanent posts in the Reserve Bank of India, Department of Statistics and Research:—(1) Officer-in-Charge, Division of Rural Economics, (2) Senior Statistician, (3) Deputy Director of Research, (4) Statistician, and (5) A few Research Officers, who will be required to conduct research work in monetary and economic problems including the subjects of (a) Banking, Currency, Capital and Money Markets, Public Debt and Finance, and (b) Agricultural Economics, Agricultural Finance, Co-operation and Agricultural Marketing.

2. *Pay*—For (1) and (2), scale of Rs. 900-75-1,200 plus house allowance and duty allowance at rates prescribed by the Bank from time to time, the present rates are 15 per cent of pay and Rs. 150 respectively. For (3), a scale of Rs. 500-35-850 plus house allowance and dearness allowance at rates prescribed by the Bank from time to time; the present rates are 15 per cent of pay and 20 per cent of pay with a maximum of Rs. 150 respectively. A higher starting salary may be given to a candidate having exceptional qualifications or experience. For (4) and (5), a scale of Rs. 250-25-500 o.b. 35-850 plus house allowance and dearness allowance as for (3). A higher starting salary may be given to a candidate for special qualifications.

3. *Qualifications*—For (1), first or high second class degree in Economics of a British or foreign University or Doctorate degree in Economics of a foreign or Indian University and research work in agricultural Economics of high quality for a number of years. For (2), first or high second class degree in Statistics or Mathematics of a British or foreign University or Doctorate degree in Statistics of a foreign or Indian University and experience of handling statistical problems for at least 5 years. For (3), first or high second class degree in Economics or Commerce of a British or foreign University or Doctorate degree in Econmics of a foreign or Indian University and some experience of research work in Economics. For (4), first or second class degree in Statistics or Mathematics of a British or foreign University or Doctorate degree in Statistics of a foreign or Indian University or first or second class Master's degree in Statistics or Mathematics of an Indian University and experience of statistical work for some years. For (5), first or high second class degree in Econmics or Commerce of a British or foreign University or a Doctorate degree in Econmics of a Foreign or Indian University or first or second class Master's degree in Economics or Commerce of an Indian University and a period of research work in one or more of the subjects mentioned in paragraph 1.

4. Applications must give full particulars of age, academic record and practical experience including research or other work done and must be accompanied by testimonials and the names of two persons to whom references regarding the candidate's character and integrity may be made. The applications should be addressed to Wajahat Hussain, Esq., C.I.E., Deputy Governor, Reserve Bank of India, Central Office, Bombay, and must reach him not later than the 1st June, 1945. A remittance of Rs. 7-8-0 by money order, postal order or bank draft on a scheduled bank in Bombay should be sent to Officer-in-Charge, Reserve Bank of India, A.C.D., Bombay. Applications from candidates already in service must be forwarded through the Head of the institution or Department in which the candidate is serving.

5. Successful candidates will be required to accept the Bank's Staff Regulations copies of which will be supplied to them on selection and to subscribe to the Bank's Provident Fund. They will be on probation for a period of two years. Before appointment candidates will be required to undergo a medical examination by the Bank's Medical Officer, and to be passed fit for service in the Bank.

6. A commensurate number of posts will be reserved for candidates from the minority communities which will be filled provided the standard of qualifications and experience of the applicants meets the requirements of the posts.

7. The Bank does not undertake to acknowledge the receipt of applications and will not enter into correspondence regarding them.

JUTE

(By Our Staff Correspondent).

Calcutta, May 3.

The raw Jute market has been quietly steady with a smaller amount of business passing though the undertone appears to be easier with the weakness of the hessian market. There is a tendency on the part of mills to await further developments as it is felt that new crop supplies will be plentiful and that in the absence of any large forward sales and an improvement in the coal position, it would not be justifiable to enter into commitments for further jute purchases. Sellers are not anxious to discount rates though they are keen for business especially for new crop. As for old crop only small stocks are available and these are expected to be consumed before the new crop arrives. Weather conditions in the jute growing districts continue favourable and the standing crop is reported to be progressing satisfactorily. Sowings in the midlands have been completed and in the highlands they are progressing well.

In the loose jute section a small amount of business has been done with mills not taking very much interest in the market. But, as remarked above, there is no improvement in rates. Supervised Jat Middles and Bottoms were done at Rs. 16 and Rs. 13 per maund. European packing Middles and Bottoms were unchanged at Rs. 16-12 and Rs. 13-12 per maund. A small amount of business was reported in Weedings at Rs. 16-8.

In the pucca bales section, export enquiry has been larger but buyers are asking for a reduction in rates. Balers are not willing to concede lower rates especially as loose jute continues steady. A small amount of business was reported in outport Lightnings at Rs. 71-8, but sellers are asking for Rs. 72-6 at the close. Mills have done some business in Dundee Lightnings at Rs. 110. They have also purchased Firsts at minimum rates.

JUTE MANUFACTURES

Calcutta, May 3.

In the jute manufactures market a definitely easier tone is noticeable with bazar operators taking a rather bearish view of the future outlook. While it is agreed that there would be a large increase in exports improvement in mill production might be such as to result in a reduction in rates. Mills are well sold upto the end of the year, but there might still be a surplus to be disposed of if the anticipated improvement in the coal situation comes about. Earlier in the week there were not many sellers in the bazar for positions earlier than December at a discount whereas at the present moment maximum rates are available only for April-June delivery and for October-December a discount of 4 annas is available. Mills, however, have not reduced their rates so far and are not prepared to enter into any business which may require a cut in rates.

The easier tone in the hessian market has naturally resulted in a decline in the Heavy Goods section too. Holders have been very keen to clear out their stocks and on speculative selling prices have been marked down. "B" twills ready are quoted Rs. 65-8 with October-December at Rs. 62-8. Mills are sellers only at maximum rates, though only for near positions, and a substantial discount is being offered for forward deliveries.

PIECEGOODS

Calcutta, May 3.

The piecegoods market is still in a confused state and private trading is at a standstill. The delay in the introduction of the rationing scheme has increased the hardship of consumers particularly in the mofussil. In spite of the fact that certain quantities of piecegoods have been handed over to the handling agents, there are no reports of any appreciable improvement in conditions in outside districts. In Calcutta, the approved shops scheme is coming into effect, but the number is not large enough to be of any real benefit to the consuming public. In the outlying areas also ration shops have been opened.

DISPOSAL OR DELIVERY OF YARN
FRESH DIRECTIONS ISSUED

Lincensees under the Bengal Cotton Cloth and Yarn Control Order, 1943, are hereby directed not to dispose of or deliver any yarn detailed in the Schedule below arriving in Calcutta and the Industrial Area by railway, steamer, road, boats or any other method irrespective of whether the goods are brought from within or outside the Province of Bengal, without a Permit in writing issued by the Additional Director of Textiles (II) in that behalf and otherwise than in accordance with such a Permit.

All licensees who in Calcutta and the Industrial Area receive any Yarn for sale or storage for sale from any place in Bengal including the place where such Yarn is received whether by means of rail steamer, road, boats or by any other method, shall submit a detailed statement of the goods received with Invoices to the Additional Director of Textiles (II) immediately after their arrival, like others who get such goods from outside Bengal.

In the case of arrivals of any Cotton Yarn whether by rail, steamer, road, boat or by any other method in areas in the Province of Bengal other than Calcutta and the Industrial Area, the detailed statement of the goods with proper Invoices must immediately be submitted by the consignees or the persons on whose behalf the goods are brought, to the Subdivisional Officers concerned and the goods of the varieties specified in the schedule below must not be disposed of or delivered without a permission in writing from such Subdivisional Officers.

This cancels all other previous Orders on the subject by the Provincial Textile Controller or Director of Textiles.

SCHEDULE

All counts of Cotton Yarn including "ply yarn," but excluding (i) Hosiery Yarn on cones and (ii) Sewing Thread manufactured and prepared for sale as such in make-ups not exceeding 2,000 yards.

Stock Markets to-day and to-morrow:

MACNEILL COAL GROUP RESULTS

The week has been full of surprising developments in the war situation both in the West and the East. They have come about with such dramatic suddenness that operators in the Calcutta and Bombay Stock Markets seem to have been, to a certain extent, unprepared for such a rapid march of events. It was generally expected that the war in the West would soon be over but with the possibility of a prolongation of the war against Japan it was said that there could not be any appreciable setback especially as the Central Government had a large programme of industrial development.

The behaviour of the markets in the past few days, however, has been very irregular and there has been a regular struggle between bulls and bears. On Wednesday, a rather big drop in prices was recorded but on Thursday there was a recovery. Friday's opening also was steady as there was need for adjustment of outstandings for the weekly settlement but the close was heavy and quotations were at the lowest levels for the week.

Indian Irons have declined to Rs. 38-12 from Rs. 40-10 last week and Steel Corporations to Rs. 31-10 against Rs 32-12. Burrakurs have dropped more than two points to Rs. 38-12. Jute Shares also have been affected though Howrahs have remained steady, for technical reasons, at Rs. 93-4. It is reported, however, that selling has been mostly professional and that investors have not been anxious to dispose of their holdings.

The Bombay market has been easier throughout the week but in that centre no big decline in prices is to be recorded, *Tata* deferred being lower at Rs. 2,025 and Bombay Dyeings at Rs. 1,775.

The behaviour of the bullion market has been rather intriguing. Prices fluctuated rather widely in the early days and there was considerable resistance to selling pressure below Rs. 74 for gold ready and Rs. 130 for silver ready. In Thursday's session, however, prices have declined sharply.

* * * *

The results of the Macneil group of Coal Companies for the half-year ended December, 1944 have been published during the week. The earnings for the group should be considered satisfactory though it was generally expected that they would show much better showing. The increase in working expenses and the seasonal drop in raisings prevented any appreciable increase in profits. Three out of five companies are paying higher dividends, Equitable paying a dividend and bonus of Rs. 1-12 per share against Rs. 1-8 per share, West Jamuria Rs. 1-12 against Rs. 1-8 and Hurriladih Re. 1 against twelve annas. Mundulpoor and Dhemo Main are paying only the former dividends of 2½ per cent and 3¾ per cent.

The aggregate earnings for the group are Rs. 5.7 lakhs higher at Rs. 49.92 lakhs.

The net profit, before providing for taxation and depreciation, of the *Equitable Coal Company, Limited* for the half-year is perhaps the highest in the history of Company, being Rs. 31,75,608 against Rs. 27,64,870 for the previous six months. The provision for taxation is the large sum of Rs. 18,27,600 (Rs. 16,35,000). The amount set aside to depreciation is Rs. 1,89,850 (Rs. 1,97,890), while the transfer to funds are Rs. 6.28 lakhs (Rs. 4.5 lakhs). The dividend on ordinary shares, as stated above, has been only maintained at Rs. 1-8 per share. But there is to be a bonus of four annas in addition.

* * * *

West Jamuria Coal Company, Limited, the next important colliery in the coal group, has made a net profit of Rs. 7,54,441 for the same half-year against Rs. 6,56,373. The increase in the provision for taxation is more than the increase in earnings and the higher distribution to shareholders has been only possible by reducing allocation to funds and drawing in on the amount brought in from the previous accounts.

* * * *

Hurriladih Coal Company, Limited has actually reported a lower level of earnings, the net profit being only Rs. 1,18,135 against Rs. 4,35,368. The smaller provision for taxation of Rs. 2,53,000 (Rs. 2,90,000) has enabled the higher payment of 10 per cent against 7 per cent.

The decision of the directors to pay larger dividends with smaller disposable profits is due to the optimistic view regarding the future outlook. The directors point out in the reports that "prospects for the future appear good, particularly as it seems that the plans for the development of Indian Industry will assure a steady demand for Indian Coal for some time to come. Moreover, they anticipate that a large proportion of the machinery which the Company requires to maintain and improve its output will arrive this year".

They add a note of caution, however. The future policy of the government towards industry and the possibility of greater interference in its affairs are factors which should chasten optimism.

In spite of the continued difficulties regarding coal supplies, *Fort Gloster Jute Manufacturing Company, Limited* has more than maintained the earnings for the half-year ended March, 1945 at the level of the previous half-year. The net profit, before providing for taxation and depreciation, is Rs. 9,95,226 (Rs. 9,64,536). The allocation to Reserve and compulsory deposits is Rs. 6.9 lakhs (Rs. 6.25 lakhs). The charge on account of depreciation is lower at Rs. 1.25 lakhs (Rs. 1.5 lakhs). The dividend has been maintained at Rs. 10 per share.

* * *

As a foster mill, *Anglo-India Jute Mill Company, Limited* has not done better. The reduction in output on account of the night shift system and the contribution to the Industrial Pool have resulted in a decline in earnings. But the ordinary dividend has been maintained at 7½ per cent. The net profit is Rs. 17,07,555 (Rs. 19,81,455). The provision for taxation is Rs. 11.30 lakhs (Rs. 12.60 lakhs). The transfer to War Contingency Reserve is lower at Rs. 1 lakh (Rs. 2.5 lakhs).

* * * *

Naskarpara Jute Mills Company, Limited has been able to report a satisfactory level

FREE EXPERT ADVICE ON ROPEWAYS BY BIRD & CO., Calcutta

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, May 4.

Rather irregular conditions have been noticeable on the Calcutta Stock Exchange during the past week. The developments in the war situation have been spectacular and it is now expected that the war in the West would end any moment. Happenings on the Burma war front also have been very encouraging. The prospect of immediate peace has naturally induced a mood of caution on the part of operators. With bears trying to take advantage of the present conditions in the market, there was a decline in prices, but bulls have not been scared. Investors also have not been keen to dispose of their holdings. After an initial decline prices have been fluctuating in narrow limits in the past three days. Coal shares have been very uninteresting as also cotton shares. Jute shares also have been lower though Howrah have been very firm around Rs. 93-8 with the shortage of scrips. In the Engineering section, Indian Irons came down to Rs. 39 from Rs. 40. The close is nearer the lower levels at Rs. 39-4. There are no important features in other sections. The undertone is rather quiet and there might be a further slight decline in prices with the actual cessation of hostilities.

The giltedged securities section has been steady though business passing has not been large. Prices are unchanged with 3½ per cent Paper quoting Rs. 100-2, and 3 per cent Paper Rs. 90-13. Among terminable loans, 3 per cent 1953-55 were Rs. 100-5, 3 per cent 1957 Rs. 100, 3 per cent 1951-54 Rs. 100-14, 3½ per cent 1947-50 Rs. 103-8 and Rs. 4½ per cent 1955-60 Rs. 117. 5 per cent 1945-55 were unchanged at Rs. 101-15. Easy conditions have continued to prevail in the money market though the Central Government has again been obliged to grant an increase in the rate.

In sympathy with the giltedged securities section, Bank shares have been steady with *Calcutta National* at Rs. 15-6, *Imperial Bank* fully paids at Rs. 1,962 and *United Commercial* at Rs. 19-4 premium.

Cotton shares were uninteresting. There was a drop in quotations in sympathy with other sections. *Cawnpore Textiles* were Rs. 12-8, *Elgin* Rs. 62-8 and *New Victoria* Rs. 6-15.

In the *Coal section*, enthusiasm seems to have disappeared and the leading counters are lower. *Bengal* were ten points lower at Rs. 672 while *Bhalgora* dropped nearly a point to Rs. 18-15. *Bokaro and Ramgur* were Rs. 46-15 cum-dividend against Rs. 47-8, but *Central Kurkend* were well held at Rs. 39. The declaration of a dividend of one rupee and twelve annas per share for the half-year ended December, 1944 by the Equitable Coal Company has not had any effect on the market, *Equitable* being quoted Rs. 67. *Burrakur* are nearly one and a half points lower at Rs. 39-11 ex-dividend. *New Churulia* were Rs. 12-2 against Rs. 13-2, *Talcher* Rs. 10-15 against Rs. 11-8 and *South Kurampura* Rs. 28-8 against Rs. 29-4.

In the Jute section, with the exception of Howrahs a decline in prices is noticeable all round, the bigger denominations having lost nearly all the gains registered last week. The efforts of bears to push down the quotation for *Howrah* have not been quite successful. There was a rise in the quotation to as high as Rs. 94-4 early in the week. There was a setback to Rs. 93-2, but the close is again higher at Rs. 93-12. *Anglo-India* were Rs. 469 against Rs. 482, *Bally* Rs. 350 against Rs. 366, *Kamarhatty* Rs. 709 against Rs. 722 and *Kanknarrah* Rs. 589 against Rs. 602. *Reliance* are not very much lower at Rs. 77-8. *Andrew Yule* group of shares also are lower. *National* were Rs. 34-7, *Nellimarla* Rs. 33-15, *Presidency* Rs. 14-14 and *Rameshwara* Rs. 19-14.

In the Engineering section, *Indian Iron* have been easier at Rs. 39. They were done upto Rs. 40-10 on the announcement of the interim dividend of ten annas per share. The quotation is now around Rs. 39-7. *Steel Corporation* are eight annas lower at Rs. 32-4. *Jessop* were Rs. 23-14 ex-dividend. *Kumardhubi Engineering* were not affected being dealt in around Rs. 10-4. *National Iron and Steel* also were unchanged at Rs. 11-6.

Sugar shares are easier in sympathy with other sections, *Carew* being Rs. 26 and *Champarun* Rs. 35-12 against Rs. 36-8. *Ramnugger* have lost the gains and are now again quoted Rs. 14-12.

There is very little business in the Tea section, *East India* being recorded at Rs. 17-4, *Teloijan* Rs. 14-4 and *Tukvar* Rs. 21-4.

In the Miscellaneous section, Burma shares are higher with *Burma Corporation* being done upto Rs. 5-11. *B. B. Petrol* also were higher at Rs. 5-9. *Assam Bengal Cement* were Rs. 18-6 against Rs. 19-6. *Indian National* preferred ordinary were firm at Rs. 24-8. *Midnapore* shed four points to Rs. 168. *Assam Saw* were unchanged at Rs. 5-14. Among Paper shares *Titaghur Paper* were Rs. 26-12 against Rs. 27-12, *India Paper Pulp* Rs. 218 against Rs. 223 and *Mysore* Rs. 21-10 against Rs. 22-6.

OCTAVIUS STEEL & CO., LTD.,
Managing Agents.

Calcutta, 27th April, 1945.

Note:—The Directors recomend payment of a dividend at the rate of three annas per share free of Income Taq for the year ended 31st December, 1944.

In accordance with the Government of India Notification No. 1564-OR-42 dated 7th September, 1942 the Directors Report and the Accounts will not be published.

(*Continued from page 601*)

of earnings for the half-year ended October 1944, the net earnings being higher at Rs. 2,30,222 against Rs. 2,04,942. The charge on account of depreciation is Rs. 50,989 (Rs. 47,486). After placing Rs. 1.2 lakhs (Rs. 1 lakh) to taxation and E. P. T. deposit the dividend has been maintained at eight annas per share.

In ten months' working the Hindusthan General Insurance Society Limited has been able to report satisfactory results. Even out of the profits for this short period it has been possible to provide the statutory reserve of 40 per cent. for unexpired risks besides a special reserve of Rs.25,000. It has been also possible to write off the whole of the preliminary expenses and commission on sale of shares. With the opening of numerous branches better results are expected for the current year. The chairman said "with all these branches in full operation I have every reason to hope that the progress of the Society's business during 1945 will be greatly accelerated."

WATCH-DOG.

THE DHEMO MAIN COLLIERIES LD.

Carry F'd	3,428	12,658	9,171
Div. per cent	7½	7½	12½

Audited accounts for the year ended 31st December, 1944.

After providing for depreciation the year's working resulted in a profit of Rs. 4,768-13-8, and after making sundry adjustments, providing Rs. 2,500 for taxation and transferring Rs. 3,500 from Hail Insurance Reserve there is a balance of Rs. 18,428-1-0 at the credit of Profit and Loss Account. From this the directors recommend the payment of a dividend of Rs. 7-8-0 per share absorbing Rs. 15,000, leaving a balance of Rs. 3,428-1-0 to be carried forward.

A total crop of 1,345 mds. was secured and sold in the Internal Market at an average price of Rs. 1-2-6 per lb.

The reduction in crop was due to heavy hailstorms in the early part of the season. Otherwise climatic conditions were generally favourable, rainfall being 115.86 inches compared with an average of 126.49 inches for the previous nine years.

Estimates for the current season have been framed for a crop of 1,600 mds. to cost Rs. 1,34,933.

To be carried forward ..	5,223	14 8
Total Rs. ..	69,223	14 8

The output from Dhori Colliery was adversely affected through colliery labour being employed by contractors carrying out other work in the district, but the Director of Unskilled Labour took vigorous action in the matter with the result that most of our labour returned towards the close of the half-year and a decided improvement in output has since taken place. The development of Kuju Colliery proceeded satisfactorily and good progress was made in laying out the surface of Pipradih Colliery. Coal raising commenced at Pipradih Colliery on the 1st January, 1945. Since the close of the half-year both these collieries have substantially added to the Company's output of coal which, it is hoped, will be reflected in the profits of the current year.

BOUQUETS & BRICKBATS

(From our Readers)

Eavesdropper—the Prophet

"Eavesdropper" is truly deserving of a bouquet for his shrewd forecast in the series "If peace comes to-morrow?"

I may recall the contemporary circumstances in which he played the role of the prophet. The markets in India were in the grip of the worst peace-jitters. "Everything will collapse" was the dominant influence; and the exchange rings were full of gloomy Jeremiahs. The bears had the merriest time of their lives; and the overpowering psychology was one of a severe postwar slump.

"There will be no postwar slump on this occasion"—declared Eavesdropper unequivocally and unreservedly. He argued that, even as World War II had been different from every previous war in history, so would the peace period following this war be totally untrue to "norm".

He examined this hypothesis in relation to every section of world economy and national economy; and his arguments were so convincing that the postwar slump complex was nipped in the bud, though he was the only individual in the whole of India who, at the time, had the foolhardiness to gauge the future in such unfalteringly optimistic style.

Last Tuesday's behaviour of the Indian stock exchanges after the receipt of the news of German surrender provides the first impressive testimony to Eavesdropper's lone advocacy securing universal acceptance.

Many operators in the Katni market, counting on traditional reactions in stock exchange securities, had sold thousands of Indian Irons roundabout Rs. 38-4-0; and the were confident the price would slip to Rs. 37 Lo! and behold! Indian Irons marche forward to Rs. 39.

The following reviews of Tuesday's stock exchange activities do not show any postwar slump fears :

Calcutta:—"The market welcomed the announcement of Victory in the West with confidence and prices generally improved to close firm. A fair turn-over was recorded, particularly in the more speculativ counters".

Bombay:—"During early trading, the Stock Exchange showed a downward trend with the fall of Germany and was aided by the decline in bullion prices but latterly rallied briskly on short covering. Steels and Textiles later made sizeable recoveries while, among the Miscellaneous, Associated Cements attracted a good following. Banks were in good request."

Bombay, in particular, was stubbornly refusing to take a rosy view of postwar prospects; and the brave showing of the share market in the Western Capital is, therefore, all the more noteworthy.

N. L. GHOSE.

* * * *

2½ per cent Borrowing Rate

To your suggestion of a 2½ per cent borrowing rate, powerful support is lent by the success of the 1¾ per cent British Exchequer Bonds (1950). Up to 3rd April, the total subscriptions for these Bonds since their inauguration twenty-two weeks ago amounted to £213.92 million. This is approximately £10 million a week.

London advices are to the effect that the Bonds may be discontinued as the view is, in the words of the "Economist", that they are beginning to be rather costly to the borrower. A fall in the rate of interest is considered likely; and it is expected that, in the not distant future, the bonds will be substituted by another new stock, say, of a 1½ per cent type.

If 1½ per cent in Britain, why more than 2½ per cent in India?

S. SURI.

* * * *

Calcutta Electric Supply

The authorities in U.P. have decided on exercising the option that falls due shortly in respect of the license of Cawnpore Electric Supply Company. I think a similar decision has been arrived at as regards Delhi Electric Supply and Delhi Tramways. In these cases the decision was curt and sharp.

Why is it that, in the case of the Electric Corporation and Tramways Company of Calcutta alone, there is all this wavering, indecision and unreadiness to do the obvious? The Woodhead Commission have severely censured Bengal Government for dilatoriness and inability to act at the right time. Do these traits overpower and overwhelm the Bengal Government in every sphere?

Why not Nationalisation?

"Indian Finance" excels in posing problems rather than in solving problems. Eavesdropper's analysis of the task before the Insurance Committee is masterly; but, may I ask, what is his solution for the defects and shortcomings he has pointed out?

Or does "Eavesdropper" fight shy of the one and only solution—Nationalisation?

"SOCIALIST."

* * * *

The other side of the Medal

Much is talked about scrambling for bank staff. It appears that almost all the old established banks are out to denounce the newly started banks—in particular a certain bank which is advancing with rapid strides inspite of brickbats and bouquets. Is it the wail of dying men or the cry of the interested persons to pave the way for further exploitation of their employees? Will it be disloyalty if some of the best workers of the old institutions—working under a sense of frustration—seek asylum and shelter in any of the

Supply side of Economists

I have read your note on "The supply side of Economists". Your suggestion that our universities should have a curriculum combining mathematics and economics will no doubt be widely supported. (Perhaps, you do not know that the Mysore and Madras Universities have courses in mathematical Statistics and Economic Statistics).

But the science of economics can grow and economists will be produced in adequate numbers in India only if the Government make up their mind to organise the collection of economic data regularly and comprehensively in all parts of India and publish them for popular use. If Cassells, Marshalls, Pigous, Cannans and Keyneses are produced in the Western world, it is mostly because, in the European countries, the statistical services are excellent, regular and full. If Keynes were in India, ten to one, he would produce only second-rate stuff. The soil is such.

We have to-day in India an illustrious British economist, Dr. Gregory. Is he satisfied that conditions are favourable in India for theoretical research in economics? Just compare the data collected by the Indian Census Department with similar achievments in the U.S. and elsewhere.

Suitable economic policies for India can be evolved and first-rate economic theories put forth only if facts and figures are available to the economists. With the powerful pen you always wield, will you please clamour for an efficient organisation in all provinces and States for the collection of economic data and press for their early publication?

Another point to which I would like to draw your attention is this. You have stated that "we have physicists and biologists who are as tall as any in the outside world, but we have no economists to compare with a Keynes." The physicists and biologists, let me remind you, can set up their laboratories and create their data and often they have collaborators in foreign countries; but the Indian economist is almost entirely at the mercy of the Government for raw materials. A few field surveys and enquiries conducted by the universities can only serve minor purposes, but cannot yield the wealth of accurate information necessary for evolving or even verifying economic theories.

You have already pleaded for an efficient Economic Civil Service in India. Agitate first for an efficient economic intelligence service; you would then have helped in making a beginning to produce Indian Keyneses and Cassells.

J. HARI

Who is the white elephant?

Your Gossip in the last week's issue on the extravagance in the management of insurance companies is timely. Realising that it is not in the interest of the policyholders that the life insurance companies should be run at the high expense ratios that are now obtaining, the Select Committee on the Insurance Amendment Bill introduced a provision limiting the overall expense ratio of life insurance companies but, at the same time, proposed reduction of agents' commission and, for the first time, limitation of commission payable to the Chief Agents as necessary steps to achieve the reduction in the overall expenses.

The limitation for commission appears to be a beginning at the wrong end. The agents are the life blood of the company; and, but for the business they bring in and help to maintain, no life insurance company can run profitably. To reduce their remuneration will mean the driving off of the better class agents and consequent fall in business.

The real cause of high expenses is the high remuneration paid to the managing agents masquerading as managers, secretaries, etc. Your article, I hope, will draw the attention of the Insurance Committee to this real cause of the high expenses.

ADITYA

TOOTH AND CLAW

HERE are a few of the vermin, red in tooth and claw — stoat, magpie, little owl, jay and crow—which, with the rest of their tribe, wreak havoc among poultry and game, and indirectly injure crops by killing the birds and animals which are the farmer's friends. The destruction of these pests is essential to efficient food production. Trapping and poisoning are the most effective methods, but vermin can also be shot. Poisons are obviously products of the chemical industry, but it may be less obvious that the sporting cartridge is the product of chemist as well as engineer and depends on chemicals for its action. Held in a chamber in the head is the cap, containing a minute quantity of a compound of mercury fulminate and other chemicals, so sensitive to shock that it must be mixed in a silk bag electrically agitated from a distance. This cap faces the point of a small brass anvil. Pressure of the trigger brings about a violent chemical reaction. The striker of the gun forces the cap against the anvil and causes a flash which sets off the charge of explosive, based on cotton fibre treated with nitric and sulphuric acids. With terrific force the gas produced drives the wad forward like a piston and propels the shot out of the gun barrel. This is a simple description of a highly complex article whose making involves a dozen or more raw materials, over 150 separate manufacturing operations and the use of not less than 140 steel gauges, accurate to the thousandth of an inch. No article in common use and costing so little is made with more scrupulous care — a fact which may well be borne in mind now that cartridges are in such short supply. Years of research and experience will ensure that British-made cartridges will be the best in the post-war world, as they were in the world which ended in 1939.

TREASURY BILLS

Central Government:

Tenders for Rs. 4,00,00,000 of three months' Government of India Treasury Bills were opened on Tuesday, the 8th May, 1945. Total amount offered was Rs. 5,75,00,000. Tenders at Rs. 99-14-3 per cent were accepted in full and those at Rs. 99-14-0 per cent were allotted approximately 68 per cent. Total amount accepted was Rs. 4,00,00,000 the average rate of accepted tenders being Re. 0-7-11 per cent per annum.

Tenders for Rs. 4,00,00,000 of three months' Government of India Treasury Bills will be received upto 11 a.m. (Standard Time) on Tuesday, the 15th May, 1945 at all centres. Successful tenders should make payment on Friday, the 18th May, 1945. Other conditions are as usual.

During the week ended the 4th May, 1945 Government of India Treasury Bills for Rs. 67,50,000 were sold in favour of the Issue Department of the Reserve Bank of India.

Fact Parade

Production of Gold

The Bank for International Settlements Annual Report says that gold production declined every year since 1940, namely, 1941, two per cent, 1942, 9 per cent, 1943, 17 per cent and 1944, 12 per cent. Hence gold in 1944 was about one-third below the 1940 record with individual reductions in United States and Australia of over 70 per cent, Canada 40 and South Africa only 15 per cent. After an uninterrupted increase from 1931 to 1944 United States monetary gold stock fell in 1942, 10 million dollars, 1943, 788 million and 1944, 1340 million dollars which was mainly absorbed in reserves of other countries which also absorbed current gold production amounting to about one millard dollars annually in 1943 and 1944 Nevertheless at the end of 1944 the United States had 6 milliards dollars more gold than at the end of 1938.

The Mines Welfare Fund Advisory Committee has recommended the construction of a colony of two-room tenements on the outskirts of the Raniganj coalfields area. The colony is estimated to cost Rs. 27 lakhs and will be provided with educational, medical and recreational facilities for the miners.

Mr. A. F. T. Cambridge, a delegate to the International Air Transport Conference, disclosed recently that Indian National Airways was planning to have a net-work of airways extending to the remotest regions of India's lines now covering 4,990 miles will total at least 10,000 miles within the next five years.

* * * *

Replying to a question in the House of Commons on April 19, Mr. L. S. Amery stated that India's Post-War requirements of railway wagons would be 5,400 per annum for 10 years, all of which, it was expected, would be made in India. It was also hoped that a substantial part of requirements of locomotives would be met by Indian industry.

* * * *

The Government of India, it is understood, is importing about 20 million lbs. of yarn from the U. S. A. The first instalment of about 5 million lbs. is expected shortly.

* * * *

The Government of India has made a schedule of the heavy power equipment required by post-war India and taken steps for the reservation of the necessary manufacturing capacity. The total capacity reserved is over 850 magawatts, valued at about Rs. 500 million.

* * * *

Over 1,300 firms in Britain have been permitted to prepare themselves for peace. It is learnt that keen competition for novel designs is going on amongst firms interested in locomotives, buses, rail and road coaches and other requirements of rail and road transport.

* * * *

Planned Production of Jute

An All-India Jute target of 100 lakhs bales in yield, or about 34 lakhs in acreage, was decided upon by the Planning Sub-Committee of the Indian Central Jute Committee at a two-day meeting, which concluded today (Tuesday) held at 4, Hastings Street, Calcultta, with Mr. H. R. Stewart in the chair.

The Planning Sub-Committee discussed the information to enable it to make long term proposals. It, therefore, confined its recommendations to a short term five-year period commencing with the jute crop year 1946-47.

It was agreed that the recommendations should deal with three main aspects, viz.,

(1) The fixation of an all-India production target.
(2) The division of the all-India target into a target for each of the provinces concerned.
(3) The steps necessary to ensure that these targets may be achieved.

After reviewing the data relating to production, consumption and disposal during the last 30 years, taking into account the stocks in hand and the extent of the probable carry-over at the end of the 1945 and 1946 jute seasons, and viewing the present conditions, both internal and abroad, the Sub-Committee recommended that the all-India jute production target in the immediate future might be fixed at 100 lakhs bales per annum, made up as follows:—

		Lakhs bales
Internal mill consumption	...	66
Internal village consumption	...	6
Exports	...	28
		100

The Sub-Committee agreed that the all-India target of 100 lakhs bales of jute should be apportioned among the four provinces of Bengal, Bihar, Assam and Orissa on the basis of area and production during the last 15 years (1929-30 to 1943-44) for which data were available. For Orissa the period is only nine years (1935-36 to 1943-44) as separate statistics for that province are not forthcoming for a longer period.

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

There is no change to report in the short loan market where interbank call money continues to be quoted nominally ½ per cent in Calcutta and ¼ per cent in Bombay. There have been occasional spells of demand for interbank call money in Madras and Bombay; but there is nothing to suggest that such requirements are more than routine adjustments in the case of some particular institutions. As a matter of fact, for the last few years, transactions in interbank circles have shrunk to the meagrest dimensions. Banks generally carry more than sufficient funds in the till; and, what is more, most banks maintain with the Reserve Bank deposits considerably in excess of statutory requirements. In the 'twenties, the interbank call money market used to be lively, with considerable turnover. Particularly on the approach of Thursday which was the mail day, interbank call deposits for considerable amounts would change hands. The British exchange banks were generally takers of money, while the large Indian joint stock banks and the National City Bank of New York (which was then known as the International Banking Corporation) were generally lenders. There were brokers who specialised in call money business; and it was definitely lucrative. Since the inauguration of air mail service between London and India, the significance of Thursday as mail day disappeared. This was the first disruptive factor in the interbank call money market. Then followed the period during which deposits expanded rapidly, as also surplus cash in the hands of banks. The present position is that there are only occasional and special borrowers whose requirements, too, are only for a short time. To make up for this shrinkage in the interbank call deposits, some of the banks in Bombay lent out, on call basis, large sums to brokers against government securities. In the case of call loan against gilt-edged, the margin demanded is much less than usual. This business has also shrunk in the Western capital, while banks in Calcutta have never had any large business of this nature.

While rates in the short loan market indicate continued easy conditions, an opposite impression is created by the results of sales of treasury bills during the last few weeks. There has been a steady rise in the average discount rate, culminating in the rate of annas 11 pies per cent per annum on May 5. The amount of Central treasury bills on offer was Rs. 4 crores. In view of the poorer response and more sluggish bidding, the Reserve Bank authorities have reduced the offer for next week to Rs. 2 crores.

The French financial policy and France's budgetary position, as revealed by M. Rene Pleven, Minister of Finance, on March 29, are significant as providing a pattern to which financial policies and budgets of countries just released from enemy occupation may be expected to conform. M. Pleven budgets for an expenditure of Frs. 406,000 million as compared with Frs. 437,000 million in 1944 and Frs. 443,000 million in 1943. The cessation of war and the relief from payment of occupation charges have thus made no great difference to France's expenditure. On the basis of existing taxation, the revenue expected is Frs. 154,000 million; the estimate from additional sources of revenue is Frs. 38,000. Total revenue will thus be Frs. 192,000 million. It may be said that about 50 per cent of the expenditure is expected to be raised by current revenue. The Minister of Finance hopes to utilise an aggressive National Savings campaign to bridge the gulf. From the point of view of taxation, it is to be noted that there are to be higher taxes on tobacco, alcohol and luxury commodities. The French Government propose to deal firmly with illegal profits made during the years in which France was occupied by German forces. Illegal profits thus confiscated will, it is hoped, yield Frs. 12,000 million. Full credit for this amount has not been taken in the estimates for 1945 budget. Another important measure is a levy on wartime increase in the property of individuals. The full scheme has not been worked out; and M. Pleven will elaborate the scheme later. Meantime, the accruals from this levy are estimated at between Frs. 100,000 million and Frs. 125,000 million. This levy is to be collected in four annual instalments beginning from 1946. With the reduction in expenditure that may be expected in the more settled conditions of 1946, and with the yield from the levy on wartime increase in value of properties, the budget for the coming year must show a greatly reduced gap between revenue and expenditure. The main difficulty is that there are marked differences of opinion between the Minister of Finance and the Minister of National Economy with regard to the relation of financial policy and budgetary policy to national economy. The Minister of Finance believes that, while financial policy is only a means, the end is the immediate increase in production. Production must be increased to a maximum at any cost; and rationing must be continued on the strictest basis. Through high taxes and widespread savings campaign, the inflationary forces must be kept under check. These are the objectives set out by the Minister of Finance. These do not seem to suffice for the Minister of National Economy who, the report goes, resigned shortly after the budget speech.

In France, as in Belgium, a large section of the men who are in ministerial responsibility wish to apply drastic measures so as to secure to the State the maximum from illegal profits made during the war years and the maximum from the appreciation in properties. The problems facing the Government are immense and complicated; and they have been rendered all the more difficult by the damage and disruption of transport in the short period when the Allies had to continue relentless bombing after the landing in Normandy. That is to say, the domestic situation in these countries has deteriorated vastly by the very operations taken by the Allies to redeem them from enemy possession. Confiscation of illegal profits and nationalisation of as many industries as possible are, in such circumstances, regarded as facile solutions.

We believe that, in the case of India, too, equally drastic measures will be necessary to deal with illegal profits, tax evasion strategies, black money, and black market operations. The Central Budget will stand to gain directly and substantially from the success of the measures taken to deal with the past, present and future tax evasions and illegal profits.

The exchange market had two holidays, while the other three days were overshadowed by the holiday feeling. The turnover was small, and rates are unchanged.

Time marches on. And, with Time, the country's progress also. The India of 100 years ago has changed so very much that today industry has almost as important a place in India's scheme of things as agriculture.

India's industry is today on the march—a march that is destined to bring a general increase in the standard of living of the country's teeming millions. In keeping with the country's march of progress, both industrial and agricultural, the 60-YEAR-OLD-FIRM of Herman & Mohatta, Western India's pioneers in the Iron and Steel Industry, are now busy manufacturing goods for agriculture and industry.

Exit War—Enter Planning?

Over the dawn of victory in Europe, a far wider world than the people of the principal Allied Nations will rejoice. Considering the serious vicissitudes of the war now ended, victory has come sooner than one had a right to expect. Indeed, the progress of the war had been such that, even now after the victory of the Allies, it is difficult to say which was the turning point. While the driving out of the Axis forces from North Africa and the rolling back of the tide of German invasion of Russia are by themselves great achievements, the formidable nature of Hitler's continental "fortress" and the apparent certainty of a hard core of German resistance on German territory seemed to hold out the threat of a far longer war. Looking back, it is easy to recognise that the outer defences of Europe were far stronger than the Nazi defences on German soil. Norway, the Channel Islands and Crete have held on up to the last minute of German surrender, while German defences crumbled, the moment Zukhov and Montgomery were well poised for an attack on the heart of Germany. It is, therefore, reasonable to suggest that more credit is due to those who stemmed the tide of German aggression in the farthest confines of Europe and North Africa than to those who marched triumphantly to victory after the German forces had been thoroughly demoralised. The gigantic scale of American war production, the grim resistance and the fiery onslaught of the Russian forces, the indomitable will of Britain to win through, the dutiful and strenuous fighting put up by Indian forces wherever they were posted, these should, in a just reckoning, count for more than the confident final thrusts towards the German capital. If the part played by India in the victory over the Nazis is great, it would in all certainty be even greater in the ultimate triumph over Japan. It is at once a measure and an index of the fundamental unsoundness of world politics that, in spite of the role that India has played and will yet play in the present war, her place in the international sphere should be the plaything of small-minded politicians both at home and abroad. No thinking person can imagine the satisfactory evolution of a world order in which India will not have a large share of rights and obligations. The war itself is perhaps the greatest demonstration of superiority of spirit over matter. And it is only in the fitness of things that India should be enabled not only to pull her weight in the cause of civilisation but also to bring the impact of our own unique civilisation to bear on the life of the nations. In sad contrast to this, the future of India hardly comes in for any recognition as a matter of first-rate import to the future of civilisation. At the moment, it seems to hang on the talks that are now going on between Lord Wavell and Mr. Amery in London. The prolongation of these talks far beyond their original scheduled date seems to buoy up drooping confidence. But whatever Mr. Amery and Lord Wavell may agree on, the revitalisation of India's national life is the common responsibility of all the nations which have been engaged in the supreme task of rescuing democracy and civilisation from ruthless militarism. The uncertainties of the peace to come can however do little to detract from the feelings of grateful rejoicings that will be felt all over the world on this V-Day in Europe.

The incredibly swift breakdown of the German resistance suggests clearly that the end of Japan, too, is not far. Despite obvious differences, there is an illuminating similitude between the position of Japan in the Pacific and that of Nazi Germany in Western Europe. Both contrived within a short period of the declaration of hostilities in creating wide rings of protective defences for themselves and keeping the enemy out of striking distance, the difference being that, in the case of Japan, the defences were on sea. But what the allied and Russian armies did to Germany in 1943 and 1944, the American navy has done to Japan during the last one year and more. Japan's defences have been pierced at many points and the Americans utilised effectively the gains that they have made. Japanese invasion in South-east Asia has been rolled back with unpredictable rapidity. The re-conquest of Burma, the ways and means of which were far from clear to the layman a year or two ago, is now an accomplished fact. With Burma lost and supplies pouring into China by the old Burma Road in addition to the new, the elaborately planned defences of Japan will soon come to nought. It is possible, too, that the end of the war in the east will be hastened by Russian action. In any case, with or without Russian help, the Allied forces will not take long to beat the Jap down to his knees. And then there will be a more hilarious V-day all over the world than what we see today.

Jubilation over victory in Europe and the prospect of victory in the East must not however take long to give place to the hard thinking that the problems of peace undoubtedly call for. While in the international sphere far more than hard thinking is called for to ensure a stable and just peace, in India, the obvious necessity of limiting our ambitions renders our immediate tasks to that extent easier. The impact of the war on this country cannot be estimated till years after the restoration of peace. Wars as a rule are known to be more effective in changing the outlook and mental habits of the people than in changing the economic and political organisations. One may be certain that by far the profoundest of the changes that this war will cause in India will be the change in the outlook and aspirations of millions of village folk who have been drawn all of a sudden into the vortex of the most powerful current of life in the modern world. The consequences of that change and the adjustments that they will call for are wellnigh impossible to gauge or predict. But it would not be shortsighted or otherwise unwise to insist that the conditions of economic life in the country as it affects ordinary people should not be allowed to suffer an abrupt change for the worse. Peace normally would mean a change for large numbers of men and women from the pecuniary plenty of the war period to the indigence of the pre-war years. In the last war, the scale and intensity of war time employment were far less and demobilised men counted for little both in numbers and in the apprehension of the issues involved. Today, however, conditions are far different. The number of men drafted into the armed forces comes to more than two millions, and around them there is a wide penumbra of service and labour engaged in war work of one kind or another. If peace should mean their discharge from comparatively high salaried employment, the political and social consequences would prove truly formidable. To these must be added the hopes raised in the average citizen of a genuine, planned plenty following hard on the heels of wartime prosperity. The vital question, therefore is, whether India will ring out the war and ring in the plan.

India's economy is now kept together by the war disbursements which, on Government of India's account and Allied Governments' account, are of the order of Rs. 800 crores per year. Employment, production and wages and salaries are based on this outgo of Rs. 800 crores from Government's coffers. Should this fountain dry up, employment, production and the wage structure will be all in a chaotic state, unless a new fountain starts to play in the form of disbursements on account of post-war plans. In our series, "If peace comes tomorrow," we predicted a prosperous post-war period, and dispelled all fears of the usual post-war slump, on the assumption that the new fountain will be functioning in accordance and in proportion with the tapering off of war expenditure. That is to say, if the expenditure incurred in connection with planning does not mount up as and when war expenditure falls down, there will be a total disruption of our financial and economic fabric.

The answer to the question whether India will ring in the Plan as she rings out the war rests with the Government of India as a whole and the Planning and Finance Members in particular. It is, no doubt, the part of the Planning Member to study the impact of peace on India's economic life from the point of view of the prospects of the plans which he is busy preparing for the post-war period. Sir Ardeshir Dalal will be quite within his rights in telling his colleagues that, if peace should be allowed to usher in a period, however short, of low money incomes, large scale disemployment and falling prices and production, his plans of the future might be irreparably prejudiced. He will be quite within his rights, too, in insisting that to prevent such a development, the Government of India should agree to bring forward the time schedule of the various development measures that they have been thinking of during these years. We are confident that Sir Ardeshir will take up some such line and will do his best to prevent the peace causing a setback in the material fortunes of the nation as well as of large numbers of individuals. But it is difficult to command a similar confidence in the ability of his other colleagues, barring the Finance Member, to appreciate the force of this line of reasoning. One of the greatest dangers in the lack of collective responsibility is the lack of incentive for each Member to understand and follow the problems of every one of his other colleagues. Under these circumstances, the Planning Member will have to rely almost wholly on the insight and acumen of his colleague in the Finance portfolio. We have no doubt in our mind that Sir Archibald Rowlands will for his part appreciate the importance of this issue and lose no time in taking the steps necessary to ensure that peace does not cause a heavy uncomfortable jolt in the financial coach that is entrusted to his care. The possible dangers of peace that we have indicated above have more immediate significance to the Finance Member of the Government of India than even to the Planning Member. The decline of employment and money incomes might conceivably occur sufficiently early to upset the financial plans for fighting the war with Japan. We do not suggest that this should be the main

motive of finding speedy substitutes for war expenditure. In the series of articles which we published not long ago on the tasks of the new Finance Member, we took pains to point out that, though the increase in the levels of public revenue in India is attributable in the main to wartime inflation, it would be dangerous from every point of view to allow those levels to subside in the future. Sir Jeremy Raisman too, in his last Budget speech emphasised the importance of maintaining money incomes at about the same level as during the war period. While Sir Jeremy had in mind the requirement of the period of planning ahead, our plea for the rapid substitution of developmental expenditure in place of the present outlay on war purposes is based on the anxiety to maintain the even tenor of economic life in the country as a whole. We trust that Sir Archibald Rowlands will recognise the certain consequences of allowing a sudden drop in the level of public expenditure and the importance, from every point of view, of maintaining the level of money incomes for the majority of the people of the country.

Obviously, it would be foolish to maintain public expenditure for its own sake, without regard to its return. In the position in which India has been placed all along, the test of sound public expenditure is not alone the immediate return realised by the Government, but its ultimate capacity to increase the national income and the taxable capacity of the people and to facilitate the repetition of this process. Such a process would be hard to secure unless the outlay of public revenues is made on carefully chosen projects calculated to secure an improvement in the efficiency of all the factors of production. Thanks to the interest in planning which started at an early stage of the present war, it is not impossible, given the necessary drive, for the Government to collect a bunch of such plans and expedite the preliminaries of their actual execution. The essential condition is that the total outlay on these plans should be approximately equal at every stage to the fall in military expenditure. This is not indeed too much to ask, since the fall in defence expenditure is bound to be gradual even as the end of the world war has been. If the onset of peace had been abrupt, it would perhaps be difficult to secure a smooth transition from war to peace in the financial sphere.

Numerous plans have already been got ready in various spheres of development. It should not be difficult to hasten their perfection for immediate and actual execution. To take a concrete instance, there is no reason why schemes comprised in the Kharegat plan should not be allocated to the Provincial Governments concerned for execution, with allotments of funds therefor. Likewise, the Provinces may be asked to inaugurate the initial stages of the Sargent Plan for Education, the road plan and the Bhore plan to come. When Sir Jeremy emphasised in his last budget speech that postwar reconstruction must be post-war, he must, we believe, have implied that to the extent that war recedes, peace time development should also advance. And this, it would appear, is the requirement as much as of the economic life of the people as of the stability of public finance in this country.

Famine Enquiry

The report of the Famine Enquiry Commission has been released for publication at a time when it can have little more than academic interest. The administrative actions and the social events to which the report refers seem now to belong to a comparatively distant past. Public policy, too, in respect of food control, procurement and distribution has been shaped in a rough and ready manner by the exigencies of the various stages and has more or less come to stay, without the aid which prompt enquiry into the tragedy of the famine and early public discussion of the findings would have provided. In all cases of bad bungling in matters of vital public concern, enquiry after the event should serve one of two purposes, if not both. One is the search for possible corruption or crime and bringing the offenders to justice. The other is to make clear the errors of judgment and providing safeguards egainst their repetition. The Woodhead Report does not seem to have served either purpose; and the blame cannot be said to belong wholly to its authors. There can be no doubt that the Commission have gone about their work conscientiously; their understanding of the issues involved can hardly be questioned and their findings are sound. But there is apparent throughout the report a feeling of constraint in its authors. In some strange way, the scope of the enquiry seems to have been increasingly circumscribed. While the Commission cannot be charged with having whitewashed the sins of commission and omission of the authorities and other agencies concerned in this tragedy, there is nowhere in the report the spirit of a crusader against a grave wrong done to the public. It has been rightly said, by those from whom normally one would least expect it, that the Report has nothing to say of the apparent indifference of many high placed personages to the tragedy as it was happening in Bengal. Criticism of measures adopted in crucial stages are suggestive of bona fide errors of judgment rather than of interested deflection of policy. The language is provokingly tepid in contexts in which heat and light are not appreciably different. The result is that the reports, though in many ways a respectable document, can hardly serve any useful purpose from the standpoint of the public interest. It has been rendered singularly innocuous.

Nevertheless, the report may be truthfully said to repay study. Attempts have been made to pull down the personnel of the Commission in public estimate. To select the personnel of enquiries of this kind is never an easy task; and to gain unanimity of support for selection, once made, is even more difficult. But considering the terms of reference which, regrettably enough, shifted the emphasis from fault finding to the improvement of the diet of the people and the system of administration, the choice of two civilians, one retired and the other active, and of a nutrition expert and of a non-official of wide touch with public affairs need hardly be quarrelled with. If the report has dwelt lightly on certain aspects of the administration, one may reasonably doubt whether a

OUR LONDON LETTER :

MELLOWED JOY ON V-DAY

PROSPECTS OF GENERAL ELECTION

BUSINESS FEARS THE LEFT, NOT LABOUR

London (By Cable).

A neutral observer would notice only one sign that V-day is rapidly approaching; he would be struck with the unusual number of the brewery drays, drawn by the famous big brewery horses, unloading barrels of beer and huge crates of bottled beer and spirits. What Britain calls "the trade" had decided that next week would leave ample time for the public houses to receive their extra supplies for V-day; but the headlong, pellmell Allied drive through unresisting Germany caused a hasty readjustment in their plans and hurried the rush to get ready for the wildly excited celebrations of the end of the European War.

And even this sign is not too important if the Gallup Poll's report this week of how the public plans to celebrate is an accurate forecast; for the Poll showed that only 18 per cent of the adult population plans "celebrating, going wild, dancing in streets", while 24 per cent plans to "do nothing, take the day off, relax" and another 16 per cent plans either going to the church or be "in prayers of thanksgiving".

The truth would appear to be that nobody is completely adjusted to Peace. The people read newspapers without excitement; almost dully, in fact. Dead tired from the long strain, conscious, too, that burdens of the Pacific War must still be borne, they have very little vitality left to be dissipated.

The Stock Exchange typifies this mood completely. It is too dull to stage either a boom or a slump. Perhaps the only sign of life is the disposition to think a little more clearly than heretofore about the disagreeable fact that the General Election is not far away and that the by-election last week in the rural constituency of Chelmsford in Essex, where the youthful 29-year-old Socialist, lambasting Mr. Churchill's policies both domesitc and foreign, romped home an easy winner, suggests that less reliance can be placed on the "magic of Churchill's name" than they had hoped. Prices of industrials have weakened daily since this thought dawned upon the stock market and even giltedged have lost ground.

There is general agreement in the city of London that public temper—and especially the predisposition of millions of new voters—is much further to the Left than normally, though probably no further than it was after the last war. What is new is the much stronger emotional hostility to the Conservative Party than was seen since the last war, a disposition to hold the Party responsible for the planlessness in industry which permitted mass unemployment to develop, a foreign policy which built up Hitler and flouted Soviet Russia, and an incapacity to speed up rearmament when, in 1935, it became fairly clear that a second world war was developing. It is felt that those voters who are in this mood will cheerfully vote for anybody who can defeat the Conservative candidate.

Lord Beaverbrook is reported as strongly urging that the Conservatives would practically drop their party name for the General Election and concentrate propaganda on Mr. Churchill, describing every Conservative candidate as a "Churchill man". Many importand Conservatives are said to resent the suggestion; but it was certainly tried out in the Chemsford by-election without, however, proving successful. Another new element is the press complaint that the Conservative Party headquarters are inefficient, prone to inner quarrels, and altogether unprepared for the General Election as early as June.

To investors and to businessmen there are degrees of disaster implicit in the Conservative Party defeat. For example, if the Labour Party proved to be the largest party in the House of Commons, it would have the greatest difficulty in forming a strong Government since its personnel are heavily weighted with elderly retired trade unionists of no great capacity. Thus, according to the theory widely held, the postwar Labour Government would be timid. much as Mr. Ramsay Macdonald's two governments were timid, and it would press legislation through only by general consent.

On the other hand, if the Labour Party made agreements with other Left groups, it could provide a "Left Coalition Government with men of very great ability and could drive legislation through fairly rough shod. Such a Cabinet, assuming that it contained men of ability and determination, could make things very unpleasant for first, the coal industry, secondly, the highly cartellised and not too efficient iron and steel industry, thirdly, the electric power combine and fourthly, possibly the capital market which longs for the old-time freedom and therefore, would be indisposed to look kindly upon schemes for National Investment Board to control investments in the interests of "full employment policy".

In short, the market which might take the Labour victory with cynical detachment and calm, might well get profoundly alarmed and depressed at a sweeping victory for the Left Coalition.

The City is interested in the visit of the leading French industrialists to the Federation of British Industries. The visit is believed to be mainly political. French industrialists would feel stronger if they enjoyed firm alliance with the F. B. I. with the latter in a position to press the British Government, if any assistance is needed against the French Left parties. The French Government has already taken steps to nationalise some coal mines and various individual industries, but might hesitate to go much further, if the British Foreign Office deprecated further invasion in the field of "free enterprise".

But it is possible that the delegation is also here on business connected with electric power equipment. Under the cartel agreement in the pre-war period between British and German manufacturers of electrical equipment. Germany agreed to stay out of India and the Empire, if the United Kingdom stood out of France, Belgium and Holland. The result to-day is that France and the Low Countries find themselves no longer able to turn to Germany for renewal or replacement of electrical machinery.

France also, like the Low Countries, needs railroad equipment: but a good deal of this has already been secured from the United States.

The sudden announcement of reduction in rayon prices has startled and depressed the Lancashire cotton trade as a clear hint that postwar competition is going to be severe at least in those quality lines in which Lancashire has been most hopeful of preserving from invasion. The trade opinion reiterates that the world shortage of cotton goods is so acute that there will be plenty of work for every spindle, every loom, at least for a few years.

(Continued from previous page)

change of personnel would have made any difference. The public should in any case have been content to bury the hatchet. But no amount of dispassionate calm or judicial balance can prevent the Commission from expressing disapprobation of the attitude, policy and actions of the Government of India and the Government of Bengal. That the Government of India under Lord Linlithgow was singularly unaffected by the tragic course of events in Bengal, no one needs to be told. But it is of great importance not only to the economic but also the political future of this Province that the strictures on the Government of Bengal are firmer. The propaganda carried on by the Government to persuade the public that stocks were adequate was extremely unwise, particularly as it prevented the Government from declaring famine even when it was stalking over the Province. The Commission express the view that it would have been far better to warn the people of the approach of famine. They also emphasise that the position was aggravated by the failure to take effective measures. Crucial steps were delayed by blind insistence on the communal ratio for essential staff. These aspects of the administration in critical times should have wholesome effects on political animosities in the future.

Constructively, the findings of the Commission have less value owing to the inordinate delay in the publication of the Report. It is perhaps charitable to assume that the findings were made available to the authorities while food policy was being overhauled. In any case, half-hearted measures in procurement and distribution were done away with even before the Commission concluded its labours. Monopoly purchase by the Government and extension of rationing are the keynote of food policy to-day. That policy is not the ideal best. Its defects are detected, not by careful perusal of files, but by scrutiny of the machinery of its actual working, the deterioration of food in storage, the unsuitability of the foodstuffs supplied to large classes of individuals, the complete destruction of ordinary incentives to improvement of service and above all the feeling of helplessness of individual consumer against the impersonal system which has displaced the solicitous grocer of old. These are, no doubt, not outweighed by other and more vital considerations. But the public would like to see whether the Commission has anything to say of the return to a healthy normal in the matter of food supply.

By Special Cable.

SOBER V-DAY CELEBRATIONS IN U.S.A.

PLAN FOR VIGOROUS ONE FRONT WAR

Washington, (*By Cable*).

An exultant populace celebrated the surrender of Germany last week and then got on with the job of defeating Japan and rendering relief to prostate Europe and seeking solutions to the new flock of domestic and economic problems. These tasks are interwoven and promise to place new strains on the economy test ability of the Truman administration. Already the War Production Board and the Military had inaugurated a gradual transition from two front to one front war by reducing contracts for war material, terminating projects for the construction of new war plants, cutting back aircraft production and planning for the release of more material for civilian requirements.

The business and banking community showed some hesitance in the face of the inevitable letdown in the warswollen economy, but did not overlook the many favourable factors present in this new phase.

The National City Bank of New York, for example, said in their Monthly Report on Economic Conditions, "There is no possible doubt that civilian requirements can absorb all the workers likely to be released from war production for some time to come as fast as readjustments can be made and that both the deferred wants and spending power are stupendous. In such circumstances, possibilities of inflation increase and there is likely to be much controversy about how best to avert it." The Government may want to retain the price, wage and rationing controls well past the defeat of Japan.

Regarding rehabilitation in Europe, President Truman received a report from Judge Samuel I Roseman, who just completed a mission in the North-West countries, in which it was recommended that immediately a policy must be formulated for the United States to supply 'a substantial share' in the civilian requirements. Judge Roseman described, the wrecked industrial plant, the below minimum coal production, the dangerously low level of nutrition, the destroyed transport systems and said, 'the future permanent peace of Europe depends largely upon the restoration of the economy of these countries". The United States economy too, will be deeply affected unless the North-West Europe again resumes its place in the international exchange of goods and services". Roseman J. emphasised more on humanitarian aspects of supplying Europe as there were involved internal and international political considerations. He urged that efforts should be made to send food, coal mining machinery and means of transport into Europe. It now seems perfectly clear that the Bretton Woods proposals will not be approved by the Congress during the San Francisco Conference and moreover, may never be approved as originally written. They are still under consideration in the House of Representatives Banking Committee and there seems increasing desire for more clearly defining the purposes and powers of the International Fund, perhaps, with a proposal to make it a department of the Bank.

Editorial Notes

Katni Market's Heyday

In the twilight between war and peace, while cables kept announcing that the actual surrender of Germany was a matter of a few hours, the Katni market in Calcutta reached its peak in brazenness and speculative orgy. Transactions in this market are mainly confined to Indian Irons, with Howrahs playing a minor role; and there is daily settlement. To the extent that all outstanding business is to be cut off on the basis of the ruling prices at 3 o'clock on each day, a matter of a few hours, certainly indicative of a short spell of time in ordinary circumstances, is of profit and loss, life and death significance to a market where the maximum life of a transaction is 24 hours. It thus happened that the daily excitement was provided by the expectation that the news of surrender would come through before the fatal 3 p.m. In this expectation, and in the further belief that the news of the end of the war in Europe would induce a considerable decline in prices in traditional style, bear sales for an enormous number of shares had been effected. This is a market in which the unit of transaction is something like 1,000 shares. Those who would hesitate to operate on the scale of 100 or 200 shares in the regular stock exchange are prepared light-heartedly to undertake commitments for 1,000 or 2,000 shares in the Katni market. One of the main reasons for this is that the brokerage charged in the Katni market is 1 pice per share as compared with 2 annas per share charged by ordinary brokers and 4 annas per share claimed by first-class brokers. Between the buying and selling rate, there is thus a saving of over 3½ annas per share to the operator. This is a great inducement to jobbers.

From the enquiries we have made, there is reason to believe that the daily turnover of transactions in the Katni market is over ten times, the turnover in the ring of the Calcutta stock exchange. We have also reasons to think that a goodly number of members of the Calcutta stock exchange are also members of the Katni market under the name and style of some other firm. Every speculator has made full use of permutation and combination to devise names of a dozen firms among which he can distribute business and secure tax relief or even evade tax altogether. Our information is firstly that there are brokers in the Katni market in the same way as there are brokers in the Calcutta stock exchange; secondly, that the members of the stock exchange in many cases have large dealings in the Katni market; thirdly, that some of the members of the one market are also members of the other market in another name; fourthly, that all settlement in the Katni market is in the form of cash; and fifthly, that the differences in cash thus paid and received every day must easily run into six figures. The Calcutta police is aware of the existence and activities of this market, but is unable to do anything in the matter as their hands are full with scores of defiances of law of this kind. We consider that the best way of tackling the Katni market is through the employment of a special detective agency as in the case of investigations into corruption and bribery. The amount representing tax-evasions through the Katni market is certainly no less than Rs. 2 crores per year. Surely, prevention of this leakage is worth special measures. Moreover, it is the accumulation of tax-evasion such as these that proves to be the most incorrigible factor in the inflationary situation.

Sales Tax and Economic Statistics

The suggestion was made in the course of our leading article last week that the sales tax should be centrally collected and that its collection should be made the means of obtaining economic statistics. The problem of ensuring the collection of economic statistics which will be sufficiently reliable and illuminating to serve as a guide to practical policy is often raised in this country and as often shirked. Not only is there the problem of personnel referred to in a note last week in this section, but there is also the question of cost. Collection of economic statistics is not very old in history as a conscious purpose of the Government or of private agencies. Economic statistics originated in the book keeping of tax gatherers. Arthasastra and Doomsday Book alike were inspired by the desire to prevent tax evasion. When customs revenue came into general vogue, statistics were more automatically collected. Private business took a long time to appreciate the value of facts in concrete statistical form. But they forestalled Governments in the collection of statistics of production and consumption; because such statistics were more important for speculative trading than for tax collection. The scope of statistical enquiries required for the regulation of modern economic life has extended vastly. While Governments have been content with statistics which are closely linked to revenue and private business with figures that point the way to profits, the figures which are necessary for the betterment of the standard of living of the average man have all along been neglected. This is not surprising, since these figures are both difficult to procure and unprofitable to the agency which collects them. The average text book of economics does not devote more than a small fraction of the total number of pages to "consumption", though "consumption" is one of the three divisions into which Economic Science is supposed to fall. But the development of modern economy has tended to stimulate interest in figures of consumption. Big business hoped to find in them a timely warning about cyclical trends which are otherwise difficult to forecast with useful precision. In America chain stores and similar organisations facilitated the collection of statistics of consumption. In India such organisations are absent; and there is not the faintest ray of light thrown on the trends of consumption. The institution of special agencies for collecting statistics in this regard will, doubtless, prove costly; and what is more, there is no certainty that the figures will be reliable. But if the sales tax is centralised and compliance with certain formalities ensured, it may yield not only much larger revenue, but also economic statistics of great value about the trends of consumption in this country of wide disparities in standards of living. The shops and other organisations which collect the sales tax in the first instance can be made to differentiate between the different kinds of goods which they sell and on which they collect the tax from the consumer. The details are easily settled by the authorities concerned; and if the taxes are realised at short intervals, the authorities will be in a position to publish figures of consumption leading to very valuable conclusions and yielding as valuable guidance for practical policy. If the collection of economic statistics were thus made a by-product of the collection of taxes, the State will be having two birds at one shot. If we remember that the aim of economic planning is not merely to treble the national income but to ensure for the average man a decent minimum of the necessaries and comforts of life, then the importance of the step we urge here will be readily conceded. We trust that in this as in a few other matters, comments in these columns will lead to departmental action in the direction indicated.

German Gold Reserves

A report from SHAEF says that the German gold hoard hidden in the salt mine at Merke and in the bank vaults in other towns in Thuringia is now estimated at 200 tons. This, according to Colonel Bernard Bernstein, formerly of the U.S. Treasury depart-

List on request

ALWAYS START YOUR FAN AT LOWEST SPEED

Today fans are scarce as the entire output of established brands are requisitioned for the essential services. You should therefore treat your present fan with care.

Damage to fans are frequently caused by starting it at top-speed. This occurs when you do not use the graduated switch of the regulator. Every time the fan starts with a jerk, the bearings get loosened and in a few weeks the motor is damaged. Irritating noise will develop, the mechanism will wear-out and heavy current consumption will result.

"Orient" fans are specially built to give noiseless and uninterrupted service for years. The regulator supplied with each "Orient" fan offers positive selection of four speeds.

Preparations are being made to meet the demands for "Orient" fans in full immediately after the war.

Call in a Mechanic :
- when noise develops
- for regular oiling and cleaning
- to inspect the wiring and switches.

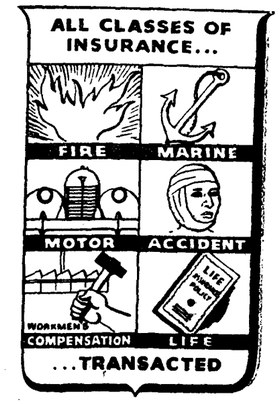
CENTRAL LAND & BUILDING SOCIETY LIMITED

2/2, SOUTHERN AVENUE, CALCUTTA



ment, represents a major portion of Germany's total gold reserve. The estimate of total German reserves is bound to remain a guesswork for some time to come because full and reliable details are not available as to how much gold the Nazis could seize during the first four years of war, and how much they had had to spend since 1939. In 1939 the Reichbank was believed to possess gold worth 250 million marks. The annexation of Austria added gold worth 120 million marks, while Czechoslovakia and Danzig contributed gold estimated at 140 million marks. Though a sizeable portion of France's gold moved to America on the eve of German penetration into the French soil, the Nazis succeeded in obtaining gold from France, Holland and Hungary to the tune of 1,100 million marks. Italy is reported to have yielded nearly 275 million marks of gold. People attach special value to the yellow metal during the uncertain years of war, and during the four years of German rule the European people under the Nazi heels would have tried their best to hoard as much gold and jewellery as possible. Wartime expenditure would have been heavy reducing the gold reserves of Germany. How much of the looted gold has been spent cannot be ascertained; but it is not a bad guess that a considerable part of Germany's gold should have been driven underground.

Change in the Coinage

It is understood that the Government of India contemplate introducing a change in the coinage system. The two-anna, one-anna, half-anna and pice pieces at present circulating in the country were introduced in 1942, as a wartime measure to cope with the greatly increased demand for small coins consequent on hoarding and the short supply of nickel and tin. The design of the pice has not been attractive and the nickel-brass alloy used for minting other coins has not proved to be popular. After the war, it might be necessary to re-mint the coins and the Government wish to take that opportunity to replace the nickel-brass alloy by the pre-war cupro-nickel alloy. The present system, under which the rupee is divided into 16 annas and each anna into 12 pies, though by no means ideal for calculation, has stood the test of time and people have got accustomed to it. The present proposal is that the Indian rupee, like the Ceylon rupee, should be divided, not into 192 pies, but into 100 cents. The present rupee (100 cents) half-rupee (50 cents) and quarter rupee (25 cents) coins would remain; but the lower denominations would be replaced by coins of the value of 10, 5, 2 and 1 cents, with possibly half a cent coin. Considering that India is to have a high standard of living and remembering the fate of the pie during the war it is unnecessary to have cent in our coinage. This decimal system of coinage has gradually displaced all other forms in most of the countries of the world except India, Great Britain and certain European countries. Simplification of accounting and facility of calculation are the obvious advantages of this system. By adopting the decimal system India would rank as one of the countries having a simplified coinage system. In post-war India, with the increase in trade and commerce and the rise in the standard of living, it would certainly be welcome to the common people to have more coins of several denominations and an easier system of accounting. While the present series of coins of low denomination are being slowly withdrawn during the period of transition, the two sets of coins would circulate side by side, prices being expressed in both. But the process of change must necessarily be difficult, and it is reassuring, that Government do not propose to take any step in this direction unless they are confident of public support. And public support should be forthcoming despite the initial inconvenience.

Manufacture of Locomotives in India

It is heartening to hear that the Tatas have completed negotiations with the Government of India for establishing a factory near Dhanbad for the manufacture of locomotives and boilers. On several occasions the Government of India have definitely and openly committed themselves to a policy of manufacturing locomotives and wagons in India, even before the end of the war, if possible. They have also said that their Consulting Engineers were planning for the conversion for locomotive building of one of the repair shops put to war work and were basing their proposals on up-to-date practice in England and America. But very little appears to have been done in that direction. Some time ago, the Tata Iron & Steel Company, Ltd. started negotiations with its shareholders to convert deferred shares into ordinary shares. It was pointed out during the negotiations that the company wanted to increase the capital of the existing company by Rs. 4 to Rs. 5 crores. It is understood that the negotiations have broken down and a new company is to be floated with an authorised capital of Rs. 5 crores of which Rs. 2 crores would be issued immediately and that 50 percent of the issued capital would be paid up. The shares are not to be offered to the public for investment. The Tata Iron & Steel Company

The GENERAL ASSURANCE SOCIETY Ltd

INFORMING THE NATION

The periodicals that spread the facts and opinions of current thought across the face of India are constantly reaching higher standards as their circulations grow.

The majority of the more important magazines use Titaghur Paper, because it makes fine reproduction of letter-press, half-tones, colours and offset a straightforward job either with high-speed rotary presses or on flat-bed machines—for smaller quantities.

The best printers know the performance of Titaghur Paper in their regular qualities, and can usually advise the publisher on the best value for size, weight and surface. And Titaghur will welcome experiments with their newer grades when these are available.

OTHER TITAGHUR PRODUCTS

Papers and boards for writing, typing, duplicating—Letters and Ledgers—Binding-cases, packages, Labels.

Notepaper and Envelopes; Shorthand Notebooks.

TITAGHUR

JWT (E) LTD.

Ltd., Tata Sons Ltd., the Baroda Government and the Hyderabad Government are co-operating in the scheme. Details regarding terms and conditions under which Tata Sons, Ltd., have been entrusted with the manufacture and the agreements about deliveries of locomotives and boilers to the Indian Railways are not known. But it is understood that a certain number of boilers and locomotives will be delivered every year at prices to be fixed from time to time. Prices will be determined on the basis of the cost of production plus a profit of 7 per cent and the cost of imported locomotives whichever is lower. It is really heartening to hear that the Government workshops at Singhbhum might be taken over by Messrs. Tata Sons, Ltd., where 150 to 200 locomotives could be manufactured a year.

Plan for Sugar

The sugar industry in India owes its phenomenal rise to the tariff protection given in 1932 and though much progress has been achieved during the past decade, the day has not arrived when we can lower or do away with protection. In an article appearing in the April issue of "Indian Sugar" Sir T. S. Venkataraman refers to the problem of postwar planning in sugar and underlines the need to help the industry for facing postwar competition. When peace is fully restored, foreign sugar producers would again be up and doing and it is not improbable that the existing tariff wall for the protection of Indian sugar may be breached. India's competitors possess climatic and other advantages, and even though striking results have been achieved in the improvement of the sugarcane produced in this country, the future cannot be taken to be all rosy. A heavy responsibility, therefore, rests with the recently constituted Central Sugarcane Committee who should help in enabling the Indian sugar industry to consolidate past achievements and work for more. The cost of sugarcane is very high compared to other countries and every effort should be made to reduce the cost of the raw material of white sugar. This, Sir Venkataraman suggests, can be achieved either by increasing the present low yield per acre or by reducing the cost of cultivation or both. He indicated four important causes of the poor acre yield of sugarcane in India, viz., (1) location of the bulk of our industry in the sub-tropical regions of the country, the target yield figures of which are lower—all the world over—than for areas in tropical regions; (2) the very small number of large-scale sugarcane plantations, where alone it is possible to employ the cheapest and most efficient methods of cane-growing; (3) the absence in most cases of common interests and close liaision between the grower and the manufacturer; and (4) fluctuations in the quantity and quality of raw material available to the industry from year to year which introduces an element of uncertainty in the working of factories and adversely affects their efficiency and economic working. Utmost cooperation between the sugar interests and the Government is therefore needed if an early solution is to be found to strengthen this important food industry.

Irrigation Target for Bombay

In his presidential address at a recent meeting of the members of the Institution of Engineers (India), Bombay, the chairman, Rao Bahadur N. S. Joshi, drew pointed attention to the uneven distribution of irrigation works in India. While the Punjab, the U. P. and Madras are having 16, 11 and 9 million acres respectively, out of the total of 64 million acres, Bombay irrigates just about a million acres only every year. The percentage of the irrigated area to the total area sown comes to 86 in Sind, 59 in the Punjab, 32 in U. P., 27 in Madras and only 4 in Bombay. That Bombay needs more canals and other irrigation works cannot be doubted; but the hard Deccan trap makes irrigation works excessively costly. It is calculated that while in the Punjab a capital investment of Re. 1 is required for the construction of canals to produce one rupee worth of annual produce, Bombay requires Rs. 8. But balanced diet for the population and not mere cost should be the consideration of an enlightened administration and Bombay's population is swelling fast. Rao Bahadur Joshi fixed a target of 5 million acres of irrigated land for Bombay "if she is to supply a properly balanced diet to her population 30 years hence." Even to-day Bombay is a net importer of food grains and the position will be definitely worse after three decades unless steps are taken, here and now, to speed up the production of foodgrains. Regarding the area irrigated by ghat-fed tanks and canals, good results are obtainable only if the present method of isolated and petty individual sanctions is given up. The upper reaches should be set apart for industrial or co-operative large-scale irrigation and the lower reaches should have block irrigation work. This arrangement would facilitate the lining up of the canals in the upper reaches and the water saved by this method should increase the irrigated area by 8 or 10 lakhs of acres. Wells should serve the areas not covered by the canals and the Government should come forward to construct wells themselves or give the cultivator insurance against the risk of failure. Government help is necessary because of the peculiar geological formation in the Deccan trap which makes location of wells a well nigh hazardous adventure. The case for Government intervention in this matter is strengthened by the fact that in the past private efforts fell short of requirements. Rao Bahadur Joshi further calculates that Bombay should spend Rs. 160 crores on irrigation works, and India about Rs. 1,500 to Rs. 2,000 crores, to feed the population 30 years hence.

Preservation and Processing of Food

Though the conditions of the war period aggravated the food problem and brought it inescapably before the Government and the country, its importance for the future is unmistakable. It is now recognised that the problem should be tackled from three sides, viz., production of raw foodstuffs; developing food technological industries including the preservation, processing and fortification of foodstuffs, vitamin technology and all related problems; and the distribution of food to the population according to physiological needs. To the development of food technological industries Sir J. P. Srivastava drew pointed attention in his address to the Panel of Scientists formed to advise the Food Department on food technology. The importance of these industries was rightly emphasised by the Food Member when he said: "The application of Science and Technology will prevent damage to foodgrains, remove foodstuffs from seasonal gluts, increase or retain the nutritional value of foodstuffs and produce new foods like yeast, synthetic vitamins and vitamin concentrates." The conditions of this country require that food technology should reach the high watermark of development. But thanks to the war only the base beginnings have been made. The question of prevention of spoilage of cereals is receiving much greater attention than before. Canning of fruits has been started on a large scale in the North-West Frontier Province. But it could be extended to other parts of India, since India is one of the important citrus producing countries of the world and the fruit is grown practically all over the country. The development of the hydrogenated oil industry has also received some attention. Industries like pepper, mustard, golden syrup, sugar cubes, lime juice cordial, refined salt, chutney have been sought to be developed. Production of synthetic vitamins and fortification of foodstuffs is yet to be undertaken. The principal deficiency of Indian diets, it is pointed out, is lack of high-grade proteins and vitamins of the "B" complex both of which are found in yeast.

AUDITORS' REPORT.

We have audited the foregoing Balance Sheet of the Allahabad Bank, Limited, as at the 31st day of March, 1945, and also foregoing Profit and Loss Account of the Bank, in which are incorporated Branch Returns certified by the respective Agents, for the year ended on that date, and report that

(a) We have verified the cash and securities at Head Office and have obtained all the information and explanations which we have required,
(b) in our opinion, the foregoing Balance Sheet and Profit and Loss Account are drawn up in conformity with the law,
(c) such Balance Sheet exhibits a true and correct view of the state of the Bank's affairs according to the best of our information and the explanations given to us and as shown by the books of the Bank, and
(d) in our opinion, books of account have been kept by the Bank for the period under report as required by Section 130 of the Indian Companies Act.

7 SWALLOW LANE CAL

Clive Street Gossip

V-day has dawned at last on a war-weary world. In the long, dreary night of a modern war, one can never tell how near it is today. The development of modern warfare and Nazi technique alike had made it difficult, up to a late stage, to predict the end. Even when the Red Army was only 30 miles from Berlin and the Allied forces had recovered from the Rundstedt offensive, there was talk of more secret weapons to come. And what is more, a long drawn guerilla warfare in the heart of Germany was expected. Happily, all these fears have been disproved. The facade of German resistance proved deceptive. The complete breakdown of German morale is what one might expect, if one relied less on current newspaper reports and more on a commonsense understanding of human nature. To credit the German with capacity to fight with his back to the wall is to credit him with a combination of qualities never yet found in any individual or race. Once the landing in Europe was effected and the Russians had crossed the Oder, not only was the end certain but the end would be speedy, too. If there was some doubt here and there, it is to be attributed to the legend which Germany had successfully created about her power to turn the scales at any time by one or more of her secret weapons. Legends are not known to repel powerful invaders. With the Red Flag flying over the Reichstag and the allied forces mopping up German forces in the West, neither the German High Command nor the German people could continue to hug flattering illusions about themselves. The necessary political changes had occurred even while the Russian and the Allied armies were marching to join hands. Hitler naturally went the way of the legends he had created about himself and "his people" Fate, of which he talked so often and so loud, had kicked him down the steps of the throne on which she had put him not long ago. The circumstances of his exit from the stage of history will probably not be known for some time to come. But it is certain that like all tyrants he overreached himself even more recklessly in the later stages than in the earlier and thus hastened his own end. Dead or alive, he ceases to count in the life of the nations. Himmler first and Doenitz next have bowed to the inescapable facts of the situation; and after a palpably futile attempt to separate Russia from the Allies, Germany has surrendered unconditionally.

* * * *

The surrender brings peace to Europe. The War in the East remains. Just jubilation at the end of the war in Europe is tempered by the consciousness that there is still no inconsiderable fighting to be done against Japan in the East. This should help to emphasise the uniqueness of the present war. It had no definite beginning and it seems yet to lack a definite end. Howevermuch the Nazi menace may have loomed large in the fortunes of mankind, it is by no means the only threat to peace. Japan, which began armed hostilities much earlier than either of her Fascist partners, is still unsubdued. And just as the self-interest of other nations gave Japan the chance to pursue her plans of aggression unmolested till a late stage, it is not impossible that their cross purposes may even now spare her the fate which has overtaken Germany. That Japan will be beaten, there can be no doubt, particularly as the Anglo-American forces are free to concentrate on the war in the East and Russia is coming off the fence. But the requirements of balance of power may come to the aid of Japan and save her from the complete extermination of her military power. Whatever that might be, peace in the East is not far; and in designing its form, the continuance of hostilities in this part of the globe need make no difference.

* * * *

It is this circumstance that makes the partial peace of the present seem almost like total peace. It is this circumstance too, that accounts for the hasty unleashing of the forces of power politics. The San Francisco Conference has given the world a bitter foretaste of what may be expected. The wrangles and bickerings over Poland have come to a head with the disclosure that some of the Polish leaders had been arrested and detained by the Soviet Government on charges of diversionary activities. If Russia has sinned in the matter of arresting national leaders, there is no one to throw the first stone at her. The San Francisco Conference has so far no achievement to its credit. M. Molotov has played with it as he chose and has now left the stage to a nominee of his. Perhaps graver issues in Europe have called him back to Moscow. Or, perhaps, he feels that his task in San Francisco is done. But the onset of peace in Europe has revealed nothing material about the nature of positive peace.

* * * *

Already, the question is asked whether Poland will start another and a bigger war. No war saw so much talk of the next war as this one. When the war of 1914-18 was fought, there was a complacent assumption that it was a war to end war. Not that people were more idealistic than they are now. There was far less of realism; and it was not till years after that the public in all countries could realise that all the blood and treasure had been spent in vain. The realism that one sees to-day is to some extent an advantage—war weariness will not lead to a free hand for war mongers. Whether the microbes of a new war are found in the old imperialist nations or in a communist State which has had its first taste of power beyond its frontiers, world opinion will be alive to the fact that to beat down the Nazi to his knees is not the same thing as to ensure a just and lasting peace.

* * * *

At the moment, however, one cannot help recalling the immensity of the ordeal that mankind as a whole has passed through. The ordinary man will recall with a shudder the colossal scale of bloodshed, and damage to property and suffering for old and young which the war has caused all through these five years and more. But without the true perspective of history, it is difficult to appraise all the dangers that the rise of Nazism in Germany clearly portended. Time was when the West patted itself on its back for all its achievements and just waited to see the panorama of history unfold the pageant of the Parliament of Man. Victorian complacency received its rude shock when Kaiser Wilhelm made the shooting at Serajevo the occasion for a major war in Europe. All the trends of history, which till then had been obscured by the superficial signs of progress, suddenly emerged to view. The basic immaturity of western civilisation and, what is more, the inchoate nature of its development, in politics and economics came to be recognised by all knowledgeable men and women. The clash of imperialist ambitions in the international sphere and the conflict of classes in the national, the lack of correlation between political democracy and the trends in economic organisation, the dangers of supreme indifference to the non-European parts of the globe—all these defects slowly surged up in the consciousness of the western powers. These conflicts had to be resolved before western civilisation could become an organic part of the world civilisation to be. The stage was indeed set for the slow removal of such conflict. In almost all countries of the world, the Leftist parties were steadily

gaining in importance and power. The economic organisation was being modelled on new lines under pressure of the exigencies created by the Great Depression. International trade had been curbed to give national economies an opportunity of developing with greater deference to internal needs. And, above all, the capitalist nations were learning to look for and recognise the bright spots in the record of Soviet Russia. There can be no doubt that, if the trends of the early thirties had been allowed free play, new forms of economic organisation and governmental administration would have developed and unfolded new possibilities of peaceful but radical change.

* * * *

The most hateful aspect of Nazism is its crude and violent impact on a world that was preparing itself for rational change. It interposed itself as a misshapen hybrid between Soviet Communism and the regulationism of the capitalist countries. It befogged the minds of communists and capitalists alike. It played on the anti-communist prejudices of the latter and, by keeping Soviet Russia away from France and Britain, assured for itself a cheap career of conquest and annexation. Its pretensions to a consistent social ideology passed muster even with the intelligentsia of the capitalist countries. At home it fattened the ever obese national ego of the German and gained control of the most ruthless war machine that the world has ever seen. It perfected the art of looking formidable to all its enemies, at home and abroad. Not only did it deify force, which is understandable, but it sought to invest wanton cruelty with a halo which it did not possess even in the eyes of the Marquis de Sade.

* * * *

Hitler embodied in himself the paranoia of the German race and inspired it to new heights of military efficiency and ingenuity. When, thus prepared, Germany precipitated the present war, confusion in social ideology was worse confounded. The needs of national survival outweighed all other considerations. Parties of all shades and hues ran helter skelter to form national coalitions sufficiently strong to ensure total effort in a totalitarian war. Imperial nations stifled their stirring conscience and stopped at nothing to ensure the co-operation of subject countries in the fight against the Nazi menace. The rules and conventions of international law broke under the terrific strain of immediate necessities. Whole countries were overrun, their people were torn from their homes, their leaders were sundered in discordant, warring camps, if only because no two people could think alike on what to do with the Nazi invader. There was hardly any country in Europe without its collaborationists and patriots, hardly any country without its Quislings and underground resisters. Among them, Poland has, of course, a unique position. As almost a direct cause of the loss of Sudetenland to the Nazis, she has experienced nemesis and retribution in every form. Arrogant in her dealings with Soviet Russia, and cringing in her attitude to France and Britain, she saw the last two powerless at every stage to protect her or her interests and the former holding her in her firm, though not quite inconsiderate, grip. She was the first victim of Nazi aggression, the first prize of Soviet diplomacy and, first and last, the apple of discord so far as the Allies are concerned. But every country presents, though in a less acute form, the problems that Poland poses before the Allies.

* * * *

All the confusion that now reigns in the international sphere is directly attributable to the impact of Nazism on a continent that was slowly waking up to its follies. The litter that the Nazis created will take long to clear. But it is well to recognise also the good that has flowed from the Nazi menace. Any danger, less grave, would have failed to cure America of her short sighted isolationism. If the whole of Europe had not been reduced to a Nazi fortress, cash and carry would never have been replaced by Lease and Lend. There would have been no link of any kind between the war in the East and the war in the West; and without a world war there would have been no manner of approach to world polity, federal or otherwise. If Nazi Germany has reduced the small states of Europe to shapeless pulp, she has also made good the most serious defect of the League of Nations, viz., American aloofness. To have killed American isolationism is in itself a great achievement. To bring America into the war and keep her in the world organisation to come is perhaps the greatest contribution any nation can make to the cause of peace.

But what use will America make of the unique opportunities that have come her way? It was never easy to tell. And it becomes even more difficult, now that President Roosevelt is dead and President Truman has, by all accounts, more of sensitiveness to public opinion than of the dynamic personality of his predecessor. The Gods are still unkind to Man in that they have prejudiced Peace by taking Wendell Willkie and Roosevelt well ahead of their time. Roosevelt might have avoided ruffling a Stalin and succeeded in curbing the Chauvinism of a Churchill. Truman might falter in both these directions. But, apart from personalities, the basic problem of the world lies in the achievement of working equality. From the point of view of a world order equality among the nations is even more important than equality among individuals. The colonial empires are drawing together more closely to protect their own interests. France, of all nations, pleads for the return of Italian colonies to Italy; and the motive is clear, the retention of Tunis and Corsica. Britain stands for non-intervention in her Empire and less scrutiny in the administration of mandated territories. The U.S.A. postpones freedom to the Philippines. Only Soviet Russia remains among the great powers to stop the reactionary rot. There may be blots on her escutcheon. But M. Molotov touched more hearts when he asked for the uplift of subject nations than Churchill or Roosevelt ever did when they talked of the four freedoms. The right to shape the peace rests on the contribution made to victory. The imperialist nations of the Continent should on this principle have the least share in the making of the peace. And, by the same token, countries like India have more voice than their rulers would like to grant them. But the shape of things to come lies in the lap of the great powers. And the war and the conditions that brought it about have not been left so far behind that balance of power, sphere of influence and all the powerful cliches and mental habits of the ugly past will all of a sudden cease to count. If the war in Europe has ended, it only leaves the Powers free to pull the strings both in Europe and elsewhere. Much will depend on how the war in the East is brought to an end, whether with Russian help or without. Russia, for her part, is determined that she will be no outsider in the Conference that will settle the terms of peace in the Pacific. In the last war, the East was an outsider, however interested. But now the East may well be said to hold in its palm the prospects of war or peace. Hence the importance of subject countries, the crucial character of the issue raised by M. Molotov, and the sad lack of finality in Dumbarton Oaks or San Francisco. Victory, we have. But Peace? Oh, where is peace? Not round the corner.

Gateway of India

(From Our Correspondent)

Bombay, 8th May, 1945.

Gandhiji has set the cat among the pigeons by issuing a particularly vehement statement deprecating the impending visit of the industrial delegation to England and America. From the cool heights of Mahableshwar, the Mahatma has spoken with a tempest in his brain, and has poured lava and brimstone down on the proposed visit of industrialists. "The best of us will speak loud and give it the lie by our action. Big merchants, capitalists, industrialists and others speak and write against the Government but in action do its will and even profit through it. . . . The so-called unofficial deputation dare not proceed, whether for inspection or for entering into a shameful deal, so long as the moving spirits of the Working Committee are being detained. . . Independence will come only when the interests, big or small, are prepared to forgo the crumbs that fall to them from partnership with the British in the loot which British rule takes from India." The Mahatma's statement has bewildered and pained commercial circles here. Surely, the Mahatma knew that Indian industry has been actively associated with the war effort and that in the process the industries have been benefitted to some extent, particularly in the shape of larger productive capacity. Then again, the visit of the industrialists had been planned long ago and with the Mahatma did not want them to proceed with their visit, he could surely have expressed himself against it long ago. More than everything else, it is felt that Gandhiji is pre-judging the issue or of the results of the proposed mission. The industrialists have a right to say, as Sir Sultan Chinoy claims that their motives should not be viewed askance and that their patriotism should not be impugned.

* * * *

In March, the working class cost of living index number declined by four points to 225 for Bombay with the average prices for the year ended June 1934, equal to 100. Actually, however, the index number for food articles declined by only one point. The cost of living index number for Sholapur for March, with the average prices for the year ended January, 1928, equal to 100, was 195, same as in February. But the index number for food articles declined by five points to 187. In view of the possibility of larger imports in the near future, the movement of the cost of living indices should be interesting to watch, but there is every reason to believe that the index number for food articles will take a long time to come down, particularly in the metropolitan centres. It is a pity that the recapture of Burma is not expected to lead to an increased supply of rice. While there is some satisfaction in the thought that the upward tendency of the cost of living indices has been halted, it is also to be greatly desired that every effort will be made to bring it down. From the standpoint of Indian industry, which now bears a fairly onerous burden in the shape of high wages, the sooner costs of production are brought down the better. Now that the war in Europe is almost ended, it is time that attention is given to the problems of a more effective control over inflation and of bringing down prices. Industries like textiles, cement, steels and others stand to be particularly benefited by concerted measures devised to bring down the cost of production.

* * * *

A prominent industrialist, who is the chief sponsor of one of the two newly floated concerns for starting an automobile industry in India, has recently returned after a trip to the United States, where he completed arrangements with the Chrysler Corporation. A general indication of how the larger American manufacturers propose to make their goods available in India is provided by the outline of operations of the above Corporation. The Premier Automobiles Ltd., will take over the manufacturing and distribution of Chrysler Automobiles and trucks and is expected to have its plant at Bombay. It is said that no date has been fixed by way of target of production because the Chrysler Co. is not in a position to know when its plants in the United States will be freed from war production, and when it will be able to spare the tools and other items necessary to set up its factory in India. It is more probable that the Chrysler Corpn. will be putting on the market at an early date products like air-conditioning equipment, diesel motors and similar items. Regional agencies are being set up by the Chrysler Company.

* * * *

Incidentally, I may refer in this connection to the very great difficulty experienced by Indian manufactures, particularly in the textile trade, in obtaining import permits for the import of machinery from the United States. It is said that, if a cotton mill in India orders for 10 ring frames, it is hardly able to get one, and that, too, only with the greatest difficulty. The Travancore Chemicals and Fertilisers have, it seems, been successful in obtaining the greater part of their initial equipment, thanks to the efforts of Mr. Seshasayee, their energetic managing agents. There may be individual cases like this where equipment has been available relatively easily, but on the whole the experience of Indian industrialists has been the other way. To my knowledge, there has been an instance in which the Government of India allowed an industrialist to complete the deal for importing machinery for manufacturing Vanaspathy and at the last moment, cancelled the same so that the enterpreneur in quesiton is contemplating the filing of a suit against the Government. From the same source, I also understand that the greatest difficulty is being experienced in respect of imports of textile machinery and associated items of equipment, so much so that American textile manufacturers are said to have become fed up with the whole thing and decided not to entertain any orders from India, at least as far as textile manufacturing equipment is concerned. In fact, it would not be exaggeration to say, that the Indian textile industry which badly needs overhaul of equipment is singled out for this treatment. Is there a motive and a policy behind the restrictions and handicaps sought to be imposed by the Government of India on this particular industry ? On the other hand, in view of the still acute textile supply position in the country, one would have expected that the authorities would give every facility to Indian textile manufacturers to import equipment with the necessary high import priority. This is not being done. No wonder, the impression is slowly gaining ground that the authorities are not particularly eager to help the textile industry in India, either to renovate its equipment or to take steps to increase production. This is a matter in which only the pressure of public opinion can effect a change in the offical policy.

* * * *

Mr. Kasturbai Lalbhai has just returned after attending the meeting of the Textile War Production and Resources Board at Washington. According to him, the status of India as the second largest producer of cotton textiles as well as the splendid contribution made by this country to the war effort had been but poorly appreciated in the United States. It appears that the conference recognised that, while the U. S. and U. K. were not in a position to step up production, India is. Mr. Kasturbhai pressed upon the two countries the necessity of making available substantial quantities of coal or fuel oil. He also stated that neither the U. S. nor the U. K. was directing its policy with a view to capturing markets in the post-war period. This is somewhat reassuring. Of course, the Indian textile industry will first have to concern itself with clothing the people of this country; and meeting world shortages can only be thought of, if the necessary equipment is provided by the U. K. and U. S. A. In Mr. Kasturbhai Lalbhai's interview to the press, there is no hint that such equipment will be provided. Fine words carry us nowhere; and it is not enough to say that India can play a great part in making available cloth to countries which need it badly. In some circles, the apprehension persists that, when Europe is completely liberated and the Allies take in hand the question of supplying food and clothing to the starved people, this country may be compelled to increase its exports in the name of altruism. It is to be hoped that this will not happen. Even the existing export quota of less than 600 million yards is something which India can ill afford in the present short supply position. And the Chairman of the Textile Control Board in his last speech showed his opposition to the existing exports in unmistakable terms, characterising them as being allowed by the Government of India for "diplomatic reasons." For love or money, we cannot export, unless and until the conditions for increasing domestic production are created and cloth famine is avoided.

South India

(From Our Correspondent)

Madras, May 9.

An appeal to the business magnates and financiers in South India to utilise their funds for the industrial advancement of South India so that Madras could hold its own with the other provinces, not in a spirit of competition but in that noble spirit of increasing the greatness of the country, was made by Dr. Alagappa Chettiar, the newly elected President of the South Indian Chamber of Commerce at a meeting held here to felicitate him on his election. Dr. Chettiar said that the South Indian Chamber of Commerce was an institution to which the commercial community of the province looked up for guidance and help. The Chamber must not only be a Chamber of Commerce but of industry as well and added it would be more appropriate to call it the South Indian Chamber of Commerce and Industry. Business magnates, he added, had been accustomed to small margins and percentages of profit which came from their trade overseas. It was not a matter for congratulation, that in a great province like Madras, they could remain satisfied with living on such small profit margins. In the post-war world, Madras should take its proper share in the industrialisation of the country.

The Tirupur Cotton Market Committee presented the other day a memorandum to the officers of the Agricultural Department. The memorandum stated that it was the feeling of growers of cotton in the jurisdiction of the committee that the prices of cotton seeds are excessively high and that in their interests as consumers of the article for cattle feed, the prices should be controlled by Government. The plea for control of prices of seeds is reasonable, they argued, because everything else in which the grower is interested is being controlled. The prices of all food crops are fixed as they are rationed articles. Though cotton seeds are a by-product of cotton, they are the most important among the articles used for cattle food. Oilcake as cattle food is less important than cotton seeds but whereas the prices of even oilcakes are fixed, the question of fixing the prices of seeds has not yet been so far considered.

It is said that the control of prices of seeds may involve a proportionate reduction in the market value of the 'kapas' or unginned cotton brought by the grower for sale. This is more apparent than real. The grower stands to lose more by purchase of seeds at high prices than by a reduction in the value of 'kapas' sold by him. The committee suggests a maximum price of Rs. 60 for Cambodia seeds and Rs. 70 for Karunganni seeds which represent approximately a reduction of about Rs. 40 from the respective market rates prevailing at present for Cambodia and Karunganni seeds. Consequent upon the reduction in the price of seeds the proportionate fall in the prices of 'kapas' will not be more than Rs. 6 per pothi. The grower actually stands to gain more by a reduction in the prices of seeds. As it will be unworkable to localise the fixation to any particular area or areas in the Province the Committee is of the opinion that the fixation should be for the whole of the province of Madras. Further, owing to the "grow more food" campaign and unfavourable weather conditions in the chief cotton production centres a general shortage of cotton crop is apprehended and if prices are not pegged to particular levels, seed prices may be raised to unduly high levels by profiteering and the grower is likely to be hit hard for his much needed supplies. The average pre-war level of the prices of cotton seeds was around Rs. 20. The prices at the beginning of 1943 were about Rs. 50. By the end of 1943 prices rose to about Rs. 100 and have since maintained the level unaffected by anything like the fluctuations which have been characterising the movement of the prices of cotton. It is the request of the committee that the Government may fix these ceiling prices for Cambodia and Karunganni seeds and enforce them properly in the entire Presidency. There are other cotton crops in the Presidency such as Western Farms and Coconadas which in comparison with these two growths are small and for this purpose may easily be classified with the one or the other. As relief to growers is the object of this suggestion prompt steps may be taken in the matter.

The Commissioner of Madras Corporation has submitted to the City Council a plan for the expansion of the city limits, under which 20 square miles will be added to the city limits. The proposals are for the inclusion within city limits of Saidapet, Sembium and Amjikarai and other small villages adjoining the city. The Commissioner had pointed out that in 1941 it was considered that public health in the city was endangered by epidemic diseases spreading into the city from the surrounding villages where control of public health was not satisfactory. It was then considered that the congestion of population in the city could not effectively be relieved until the Corporation could acquire lands at much lower value than obtained in the city. The Government were, therefore, addressed by the end of 1941 to consider the extension of the city limits so as to include the villages to the west and south of the city. The Government revived the proposals in 1944 and the City Council approved the proposals. The Government also approved the proposals and asked the Corporation to furnish detailed information under various heads. According to the scheme presented, the total extent to be included in the city limits is 19.97 square miles, the present extent of the city being 31.10 square miles. The total receipts when these areas are included in the city limits are estimated at Rs. 5.8 lakhs. The expenditure will be Rs. 5.31 lakhs. The Commissioner has pointed out that this estimated expenditure of Rs. 5.31 lakhs for an extent of 19.97 square miles might look low in comparison with the expenditure of Rs. 100 lakhs for the city of 31.1 square miles. But the built-up area in the 19.97 square miles is small. The population in these areas is only 1,10,000 as against a population of over a million in the city. There is no sewage, nor are there any disposal works in those areas. Only a few areas have systems of water supply and the supply is in very limited quantities.

Most of the roads are earthern or metalled or tarred. In short, the standard of civic amenities in those areas is much lower than that provided in the city. The income of the Corporation will be augmented if the Saidapet Municipality is included within the City limits. The share of the entertainment tax from the Guindy race course which now goes to the Saidapet Municipality will go to the coffers of the Corporation. By the proposed scheme of Greater Madras, nearly two miles of railway track of the M. and S. M. Railway and nearly 5 miles of track of S. I. Railway will come within the city limits and the whole area of the Perambur Railway workshops of the M. and S. M. Railway will also come within the city. The Saidapet Municipality is collecting property tax on the railway station buildings only. The land under the permanent way has not been assessed to property tax as is being done within the present limits of the city. The line, traversing 234 acres is estimated to fetch an annual income of Rs. 8,000. The Commissioner states that the scheme for the inclusion of the areas named does not appear to be unsatisfactory, considering the possibility of improving public health in those areas and safeguarding public health in the city and the development of the whole region on proper lines.

REPORT OF THE DIRECTORS OF THE ELPHINSTONE SPINNING AND WEAVING MILLS CO., LTD, TO THE SHAREHOLDERS

Your Directors have pleasure in submitting the Profit and Loss Account for the year ended 31st December, 1944, and Balance Sheet as at that date as certified by the Company's Auditors.

	Rs.	Rs.
After meeting all working expenses, including special Dear Food Allowance, providing for the bonus to the operatives of two months' pay on their average earnings in 1944 (payable in 1945) and setting aside Rs. 26,50,000 for estimated tax liability on the profits of 1944, the result of the year's working shows a profit of		11,11,506
to which must be added the balance brought forward from 1943		44,950
making a total sum of		11,56,456
Out of this amount your Directors have appropriated for depreciation		7,00,000
leaving a balance for the year of		4,56,456
Available for disposal which your Directors recommend may be dealt with as follows:—		
To payment of a Dividend of:		
(a) Rs. 7 per share (subject to Income-tax) on 25,000 7 per cent. Cumulative Preference Shares of Rs. 100 each for the year 1944 ..	1,75,000	
(b) Rs. 5 per share (free of Income-tax) on 50,000 Ordinary Shares of Rs. 50 each for the year 1944 ..	2,50,000	
		4,25,000
To be carried forward		31,456
Total Rs. ..		4,56,456

Mr. Umadutt Nemani, who was appointed an additional Director under Article 102 of the Articles of Association of the Company, retires from the Board, and being eligible offers himself for re election.

As provided by Article 112 of the Articles of Association of the Company, Mr. Mulraj Kersondas and the Hon'ble Mr. M. Ct. M. Chidambaram Chettyar, retire from the Board by rotation, and being eligible offer themselves for re-election.

The following donations were made during the year:—

Rs. 2,500 to the Kasturba Memorial Fund.

Rs. 3,710 to the Department of Chemical Technology of the University of Bombay.

Rs. 1,000 to the Viswa-Bharathi (Shanti Niketan).

Rs. 7,210

Your Mill Machinery, Buildings and stocks are insured for Rs. 1,84,55,600 and standing charges are insured for Rs. 4,90,000 covering a period of two years.

You are requested to appoint Auditors and fix their remuneration. The present Auditors, Messrs. S. B. Billimoria & Co., offer themselves for re-appointment.

Dr. Profit and Loss Account for the Year Ended 31st December, 1944 Cr.

	Rs.		Rs.

REPORT OF THE AUDITORS TO THE SHAREHOLDERS.

We have audited the foregoing Balance Sheet of the Elphinstone Spinning and Weaving Mills Co., Ltd., as at 31st day of December, 1944, and also the foregoing Profit and Loss Account of the Company for the year ended upon that date, and report that:

(a) We have obtained all the information and explanations we have required;

(b) In our opinion, the foregoing Balance Sheet and Profit and Loss Account are drawn up in conformity with the Law;

(c) Such Balance Sheet exhibits a true and correct view of the Company's affairs according to the best of our information and explanations given to us and as shown by Books of the Company; and

(d) In our opinion, books of account have been kept by the Company for the period under report as required under Section 130 of the Indian Companies Act, 1913.

S. B. BILLIMORIA & CO.,
Registered Accountants.

Bombay, 2*nd April*, 1945.

The above Balance Sheet to the best of our belief contains a true account of the Capital and Liabilities and of the Property and Assets of the Company.

For and on behalf of
CHIDAMBARAM MULRAJ & CO., LTD.,
Agents.

MULRAJ KERSONDAS,
Director.

Resume of Commodity Markets

The features of the week in the commodity markets are the slump in bullion prices and the weakness in hessian values The raw jute market is inclined to be easier with a lower hessian market while business in the piecegoods section in both Bombay and Calcutta is at a standstill as in both centres private traders have been prohibited from doing any business in mill-made cloth pending the introduction of the rationing scheme. Arrangements for the introduction of rationing in the Western centre are complete and a communique was published a few days back giving the procedure to be adopted by individual consumers in regard to the purchase of their requirements. Arrangements for rationing cloth and yarn supplies in Calcutta are still to be completed though for the more needy consumers it is expected that the Ward Committees will be able to make the necessary allotments which will be set off against their ration quotas at a later date.

The raw jute market has not been very much affected by the weakness of the jute manufactures market though a definitely easier feeling is noticeable and dealers seem to be uncertain regarding the future outlook. As for old crop there is no great anxiety on the part of holders to liquidate stocks as it is felt that an appreciable improvement in the coal situation would result in a larger jute mill consumption and that all available supplies would be needed before the new crop arrives .It is admitted at the same time that a discount for new crop will necessarily have its effect on old crop m[illegible] though with an increase in mill buying any appreciable drop in prices will be prevented. If there is a consistent improvement in mill output even prices for the new crop might not decline appreciably. With the larger arrivals in September there might perhaps be a temporary setback. In any case, mills will have to pay minimum prices except for the fact that the black market in reverse might come into existence if Government measures prove to be unsuccessful. The real difficulty, however, will arise only when restrictions regarding minimum and maximum prices are lifted after March or modified. If the authorities aim at maintaining prices at a reasonable level, in relation to other commodities, a definite decision can only be taken at the time of sowings for the 1946-47 crop. It is a long way ahead and between now and then there might be many unforeseen developments.

The easier tone of the hessian market, it should be said, is unrelated to the expectations of a decline in jute prices later in the year. It was the bazar that started discounting rates for positions after June Even for nearer positions a discount is now available. They seem to be of the view that production expenses must come down and any improvement in the shipping position might not be commensurate with the increase in mill output. With the need for shipping on a large scale for the transfer of men and materials from the West to the East, the anticipated improvement in exports might not come about though there would be demand for all the production. Mills are not inclined to agree with bazar operators in their point of view as they are still of the opinion that labour will be scarce at least till the end of the year and that no appreciable reduction in working expenses can be expected. Prices for all jute goods might at best be adjusted to minimum prices for raw jute, which means that at the worst, there cannot be more than 10 to 15 per cent fall in prices for jute goods. In the present conditions mill business has naturally been restricted and the general tendency on the part of everyone is to await further developments. In the heavy goods section, rather weak conditions are noticeable and there has been a slump in the quotation for B. twills ready to Rs. 62-8. October-December is quoted as low as Rs. 58-8.

The raw cotton market has not in any sense been affected by the developments in the past few days. Bears continue to dominate the market. Even the announcement that the U.S. have agreed to import larger quantities of cotton, provided shipping pace is available, has not had any stimulating effect on prices. As business in the ready market has been on a smaller scale and it is reported that the U.S. crop will be larger prices have been fluctuating around last levels. The weakness of the bullion market also had a restricting influence.

In spite of the efforts of bull operators the news regarding the end of hostilities in Europe has had a bearish effect and a rather sharp decline in prices has been recorded in both gold and silver. The decision of the Reserve Bank to reduce sales of silver bars to 250 from 300 per day has not helped bulls. Mofussil selling and the anxiety of bulls to unload their holdings have been mainly responsible for the drop in values but at every stage bears have been cautious to consolidate their positions. There has thus been a recovery after every 2 to 3 points fall. Gold ready came down to Rs. 69/12 from Rs. 74-4 at the end of last week and Forward to Rs. 70/10 from Rs. Rs. 72/8. In an effort to check undue decline in prices bulls have been effecting purchases for new delivery. It is thus that there is a premium for forward over ready by as much as Re. 1/2 against a discount of fourteen annas at the end of last week.

In the silver market the quotation for ready dropped to Rs .121/8 from Rs. 129/4 and for Forward to Rs. 119/8 from Rs. 127/12. Covering has resulted in a rally to Rs. 125/12 and Rs. 122/10 respectively. The decision of the Reserve Bank to reduce silver sales is mainly responsible for the maintenance of the premium for ready at the level of the previous week.

With exchange controls still in force and with the anxiety of holders to prevent an abrupt drop in prices, there would naturally be resistance to selling pressure at every stage. But it cannot be denied that the downward movement has started and as the weeks go by prices will be gradually marked lower.

(Continued on page 634)

Man-Power and Output

The supply of labour is a problem—the proportion of skilled to unskilled workers is a problem—the ratio of output to man hours is a problem. All these and other allied matters are problems because the urgent need of every industrial plant in India is to speed victory by keeping production at a very high level, yet, at the same time, conserving manpower and materials.

Tremendous attention is, therefore, focussed on the efficiency of the individual worker and his ability to maintain a high standard of physical effort and concentration for long periods. Anything that promotes this is a very real boon to the factory manager. In a great many factories tea has been found of great value. It has been proved in practice that tea served to the worker on the job materially increases his power to maintain efficiency to the end of his shift.

To those interested in this subject, much valuable advice and assistance will be gladly given by the Indian Tea Market Expansion Board, 101, Clive Street, Calcutta.

INSERTED BY THE INDIAN TEA MARKET EXPANSION BOARD

Jute and Jute Manufactures

(From Our Correspondent)

Special to "Indian Finance".

Calcutta, 10th May.

For the second month in succession, Mill stocks of goods show an increase, though not so substantial as at the end of March. The total increase is only 2,595 tons and is caused by an accumulation of all types of Government goods. Commercial Hessians are fractionally higher by 479 tons or 40½ lakhs yards, but this is offset by a reduction in Commercial Sacking goods by 1,204 tons or 5½ lakhs yards. Government held descriptions are all higher, notably Hessian Bags, Cloth and Canvas by 1,270 tons and Sacking goods by 1,884 tons. The net result is that Hessians of all kinds in stock stand at 29,95 lakh yards or 75,473 tons, an increase of 85 lakhs yards or 1,915 tons over the previous month; while Sacking goods in stock stand at 23,85 lakhs yards or 99,237 tons, an increase of 32¾ lakhs yards or 680 tons over the previous month. The gross weight of goods in stock is 174,710 tons, or roughly speaking, two months production in present circumstances.

The vastly improved quantity of arrivals of coal at the Dump has not proved quite the blessing it should. Two weeks ago the daily average was 62 wagons against the October-March average of 42 wagons. Last week the daily average jumped to 91 wagons per day, but unfortunately all this could not be distributed from the dump owing to the lack of boats. Boats for any purpose are extremely difficult to secure just now and the result is that not a few mills had to find what comfort they could at the sight of coal in the dump while there was none in their own compounds. In such circumstances it should surely be possible to divert excess wagons beyond what the dump can handle, into some conveniently close mill compound where it could be unloaded on the spot where required, debited against that mill's quota for some time ahead if necessary, and handling charges and disappointment to others saved. Supplies of wagons are still satisfactory though not on the high level of last week and if supplies are likely to be kept up, some compromise such as the above seems desirable, for the boat position is likely to be tight for some considerable time to come.

Reverting to the article on the subject of pre-fabricated bitumenised surfacing (P.B.S.), from which we quoted in our last issue, we note that the Manager of the Technological Research Laboratories of the Indian Central Jute Committee attributes the possible origin of P. B. S. to experiments made in a Calcutta jute mill, with which he was associated some years ago. It is quite likely that this is really the case, in which case much credit for the development of this, as well as of many other novelties in jute and combined fabrics, is due to Mr. John Murray, Superintendent of Jardine Skinner's Jute Mills, and to Dr. P[illegible] Research Chemist attached to the same group of mills.

The position of Jute Transport by river has undergone a remarkable change from a few months ago. Up to the end of the year and a little longer, freight space was being distributed in most miserly fashion in most up-country stations and offerings of goods for transport were far beyond the space available. Now the position is completely opposite. Plenty of freight space is on offer and very little jute is available to fill it. So much is this so that the quota system for distribution of freight space to shippers has been suspended. [illegible] River Transport is looking for cargo. They have even written to the Indian Jute Mills Association suggesting that Mills should so adjust their purchases as to provide a strong steady demand on space all the year round. This is a counsel of perfection we fear, a consummation devoutly to be wished no doubt by the Transport authorities, but never likely to be attained. It must be remembered too that the normal all-river traffic has been milked of quite a sizeable quantity of freight in order to supply the B. & A. Rly. with back traffic from Khulna. This is a recent development which does not particularly appeal to jute mills, though they acquiesced in it, and it has also been a source of endless trouble in the synchronisation of freight rates by this route, not all of which is settled even yet; and there is quite a considerable sum due to mills for refund of overcharges, much of which is liable to be time-barred if a final settlement is not arrived at quickly. Meantime, Mills' response to the appeal of the River Transport authorities has not been noticeable.

With the cessation of hostilities in the west and the probability that there will be an early switch back of much American Industry to peace requirements, we have no qualms about reverting to a letter from which we quoted shortly after America came into the war. The letter was written before controls were as effectively imposed on the entry of jute goods into the U.S.A., and also before maximum rates were fixed here. The letter pointed out that during the decade preceding the war, a period of extremely low prices, Jute goods lost ground steadily in U. S.A. markets due to the inroads of cotton and paper substitutes. One of the main reasons for this loss of ground was the highly speculative nature of the Calcutta Hessian market rendering it practically impossible for those connected with the American end of the trade to make stable plans with any assurance. In fact, the business was stigmatised as "a pure gamble". It cannot be suggested that there has been any improvement in this aspect of the situation, which is doubly dangerous now by reason of the very high price level prevailing—high that is to the pre-war price level. When the question of substitutes is raised, many in the trade stigmatise it as a "Bogey." The American writer assures us that the Cotton and Paper interests there will prove a very active and tangible Bogey. The total loss of the Cement Bag trade to Calcutta at one time is an instance of what may happen in other directions. We quote again, this time from the member of the I. J. M. A. who brought the subject to the notice of his committee. We repeat that the next para is not ours, but emanates from a responsible member of the Calcutta Jute Manufacturing trade, though we must record that we are in agreement with every word he says. It is as follows:—"The root of the trouble in our opinion lies in the complete apathy of Calcutta Jute Mills as to the destination of their goods. So long as the Sump of the Bazar is there, into which to dump their forward sales, they have not the slightest interest as to where their goods are ultimately utilised. They are blind to the "Bogey of Substitutes" for they do not even know where to look for it. Or if they do hear of it, they are blissfully ignorant as to whether it is competing with their own trade or not."

The time is now rapidly approaching when, with the removal of restrictions, trade will once more become competitive. The I. J.-M. A. is a very strongly organised body and,

A NEW CHAPTER

Someday—we hope soon—it will be written, the story of the struggle of Indian Industry in its post-war developement.

Meanwhile we enter the fine Chemical and Pharmaceutical Industry—even during this period of world struggle—confident of serving the best interests of the public and this branch of the chemical industry of our country by the maintenance of the same highest quality of production and service to the community that has earned the generous recognition of the public for the products of our enterprises in the textile, sugar, soap and oil industry in which we are associated through

THE CALICO MILLS, AHMEDABAD,
THE BIHAR SUGAR WORKS, PACHRUKHI,
THE SWASTIK OIL MILLS, BOMBAY,

and now A NEW CHAPTER in the long history of our association with the Indian industry:—

the establishment of

Sarabhai Chemicals

for the products of Quality and Reliability foundations on which we shall endeavour to lay our post-war developments in the fine chemicals and pharmaceuticals field.

KARAMCHAND PREMCHAND LIMITED

SARABHI CHEMICALS

P.B. 28, AHMEDABAD & WADIWADI, BARODA.

NAS 88-5

granted sufficient foresight, ought to be able to meet all competition. But it will require a much more realistic approach to their channels of trade than exists at present. And finally, we cannot refrain from reiterating that though jute may be a monopoly of India, it is a monopoly conditioned by price as providing the cheapest form of wrapper or container that the world produces. Remove this condition by any hair-brained schemes to maintain prices at their present fictitiously high levels and the monopoly idea will require more than a hessian parachute to keep it from crashing.

The Export Jute market has been idle except for a small business in Outport Lightnings at minimum with sellers not eager to accept the price. Some Cuttings, both old and new crop, were reported at Maximum. Mills enquired for New Crop and were quoted Rs. 79/- and Rs. 74/- for Firsts and Lightnings but no business resulted.

It has also been a light week for business in Loose Jute. Some European standard New Crop Jat was reported at Rs. 16/12 and Rs. 13/12 for Mids and Bots, also some Tossa Weedings at Rs. 16/4, but little else. New Crop prospects continue satisfactory. Most districts have had a sufficiency of rain and the crop is growing well and weeding is proceeding. Estimated arrivals of jute during April were 4,25,000 bales against 4,39,000 last year. Total arrivals from the beginning of the season to the end of April amount to 54,45,000 bales, practically the full estimated quantity of the crop. Last year during that period 45,16,000 bales had come forward.

The depression in the Fabrics market due to the cessation of hostilities in the west deepened as the news became confirmed but at the close a slightly better tone is evident. Mills' attitude remained steady but second-hand holders showed anxiety to liquidate, even May/June hessians being offered at a discount of four annas from maximum, while July/Sept. and Oct/Dec. are at Rs. 1/- and Rs.1/8 discount respectively. Ready Sacks and "Bs" have each sold at Rs. 64/8.

(*Continued from page* 623)

A Special Officer of the Food Department has recommended that a factory should be established to manufacture yeast with a capacity of 3,000 tons per annum. Dehydration of vegetable and fish which has been started now should be switched on to peace-time distribution. Indigenous methods of preservation should, if possible, be improved. Refrigeration which is considered the best method of preservation of perishables should also be introduced in this country extensively.

Valuable Addition.

The Banaili Readership Lectures, which Mr. Nalini Ranjan Sarker delivered a few months ago, have now been published in the form of a booklet entitled "Economic Policy and Programme for Postwar India". The publication is to be welcomed as a necessary addition to the somewhat scrappy kind of literature that is growing on this subject. Writers on planning have as a rule less of a workable plan in mind, than of ideas and prejudices relevant to planning as an issue of academic economics. Mr. Sarker has demonstrated the value of a practical commonsense approach to problems on which the majority of writers are either bookish or prejudiced. One can see in Mr. Sarker's treatment traces of bias both for private enterprise and against socialistic trends. But he has remained loyal to his definition of planning as care for the tasks more than for theories. And it is on this basis that he adyocates radical measures of reform in regard to land and shows firm adherence to a system of distribution that will keep every citizen above a decent minimum standard of living. The same habit of picking ideas on their merits leads him to favour 'mass production by the masses' with a view to secure not only equitable distribution of national income, but also a low level of outlay on fixed capital. The issues that the acceptance of planning raises cover a wide field; and it is not easy for the average man or even the businessman or the professional economist to see these issues in their proper relation. Mr. Sarker gives them both perspective and proportion. By dividing the whole theme into needs, resources and methods, he gives the average citizen invaluable help in sizing up the problems of planning as they affect this country.

Rational use of Fuel Resources

The problem of conserving fuel and making the most economic use of available forms of power is fundamental to the enduring success of any scheme of industrialisation especially in a country like India which is poor in power resources in relation to its population. It is reasonable to expect that the Government in drawing up their plans will give due importance to this aspect of industrialisation, which only a Government is competent to tackle. For, it is one of the advantages of a centrally directed plan that it will be able to take into account the long-term interests of the country as a whole, whereas, in a regime of free enterprise, entrepreneurs will be forced, by the need to attain economic rationality in their own respective spheres, to make use of the 'cheapest' available resources, even though this involves wasteful exploitation of the nation's stores of accumulated energy which lie under the earth in the form of coal and oil. What is cheap for the individual is often costly for the nation and may leave a legacy of bankruptcy to posterity.

Known deposits of coal and oil are extensive enough to last for many generations, and more may be discovered in the future. But complete exhaustion is possible in a measurable period and has therefore to be allowed for in any scheme of human affairs. Moreover, long before complete exhaustion is reached, we shall be faced by rising costs aggravated by the extension of modern power industry to regions which remained so long in a primitive stage of economic development. The practical course to adopt is to encourage the exploitation of what may be called perennial sources of power and thus to reduce as far as possible demands on wasting assets like coal and oil.

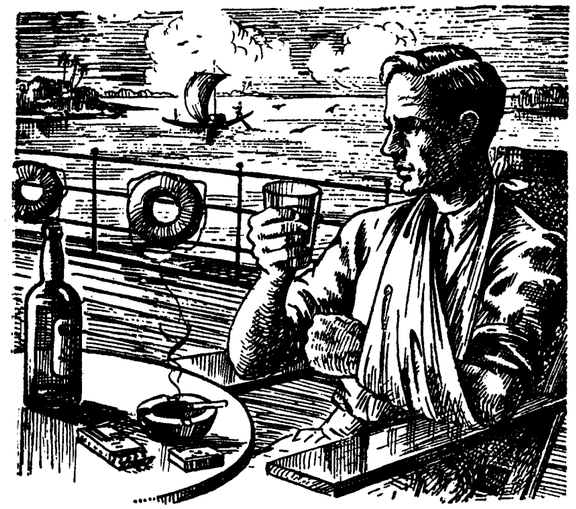
Apart from hydro-electric power, alcohol which is manufactured from the products of agriculture is the most important of these perennial resources. There is no danger of the supply running out. It will last at least as long as this planet remains fit for human habitation. But, for obvious reasons, the manufacture of alcohol is subject to stringent State regulation, so that its development to the stage at which it will count in any enumeration of power resources, has to wait on State action. The Power Alcohol industry in India is one of those which owe their origin to the war. Actual production started in 1941, in one factory in the United Provinces, which was taken over by the Government in the following year. The record of production and use as a fuel for motor cars during the last three years is impressive, though as yet, it is but a hint of the potentialities which await exploitation. The realization of these in action will be a measure of the soundness of the Government's policy of industrialsation. For, even apart from the larger considerations examined above, the importance of the power alcohol industry to India, weak as she is in oil resources, cannot be exaggerated. The industry owes its origin to State initiative. Government interest in the subject dates from the Japanese occupation of the valley of the Irrawaddy. It remains to be seen whether that interest will persist after the Japs have been driven out of Burma.

Juice and Fibre

The rapid progress of events in South East Asia and the launching of Combined operations on a large scale in this theatre bring the day nearer, when the Indian Sugar Industry will have to adjust itself to the conditions of competition. It may be thought right that the acceptance of planning markets the case for protection indubitably strong. The impact of planning on protection is too often misunderstood. Planning, in fact, makes productive efficiency more important and not less. In any case, there is no denying that steps to increase technical efficiency and intelligent exploitation of by-products will stand the industry and the country in good stead in the days that lie ahead. The sugar industry is especially well placed in this respect. The story of molasses is well known. Bagasse, too, is important, though to a lesser extent.

It is stated that sugar extracted does not account for more than a tenth of the weight of cane crushed, while 33 per cent is bagasse, the fibrous residue left after extraction of the juice. The obvious thing to do with bagasse, as discovered long ago by the indigenous 'gur' industry, is to burn it as fuel But its high moisture content makes it an unsatisfactory fuel with a low calorific value requiring specially designed furnaces to ensure proper combustion. It is, however, claimed that with efficient and heavy crushing to reduce moisture and improved furnace design, the fuel needs of a factory can be exclusively met by bagasse. But few Indian factories have attained that stage of self-sufficiency in which they can be independent of outside fuel in the form of coal and firewood. Considering the coal situation in the country at present and the needs of the future, any measure which lessens the strain on fuel resources should interest others besides sugar factories.

Possibilities of profitable exploitation of bagasse are not limited to its use as fuel. Investigations carried out in India and abroad are full of promise. And when we consider the list of products, ranging from resin and its plastics to artificial silk, which can be made from this juiceless residue, it is surely not extravagant to look forward to the establishment of a string of bagasse industries in the not too distant future. But before bagasse can rival coal tar in this respect, sugar factories will have to overhaul their equipment and practice so that they have enough bagasse to spare after meeting all their own requirements of fuel. Competition in the sugar market from foreign imports will not leave a bitter taste if it leads to such a development within the industry.



(*Continued from page* 632)

Bombay is again ahead of Calcutta and rationing of cloth is to be introduced shortly. A press communique has been issued to that effect and it is said that individual consumers would be entitled to a total of 30 yards of cloth. This quantity can be purchased in two half-yearly periods though soon after the introduction of the rationing scheme consumers may not be allowed to purchase more than 8 to 10 yards per head out of that total. This step has been adopted to conserve stocks. A maximum limit will be placed on the purchase of sarees and dhoties while the consumer will be offered a choice between the different varieties in regard to the balance of their quotas. The varieties affected by the rationing scheme are sarees and dhoties, mulls, voiles, dorias and shirtings other than grey shirtings. The quantum will be fixed for each individual on the basis of foodgrains units, half of the adult quantum being allotted for children before 6 years. Total quantum per individual and the maximum quantities for each variety of rationed cloth that can be obtained within the total quantum will be announced in due course. In Calcutta no details have yet yeen announced but interim arrangements have been made for distribution of cloth to the more needy consumers.

Rest in Comfort

Gentle hands administering to his needs, rest and comfort, are sheer heaven to the man wounded in battle on the Indo-Burma front.

One of the various methods of transporting sick and wounded soldiers from jungle hospitals in the Forward Areas to base hospitals, is by Hospital Steamer.

The Indian Red Cross provides these small ships with all kinds of comforts for its passenger-patients.

Hot drinks and drinks that are really cold (straight from the Red Cross ice-box), biscuits, sweets and cigarettes are distributed.

Indoor-games and music from the Red Cross gramophone help to while away the time.

We need YOUR money to help these men sail smoothly on to health and strength.

Please send your contributions regularly to the Hony. Treasurer, Indian Red Cross Appeal (Bengal), Government House, Calcutta.

Stock Markets to-day and to-morrow:

MARKETS CELEBRATE VICTORY NEWS

The biggest event of the week is the unconditional surrender of Germany to the Allies. It was not unexpected as even earlier Himmler had offered unconditional surrender to Britain and the U.S.A. but the proposal was rejected by the two Powers as Russia was not included. But the developments in the military situation suggested that the complete defeat of Germany was not in doubt, and that the period of transition from war to peace had begun. There is still the war against Japan to be fought to a successful conclusion though, here, too, there is no doubt. But the needs of a one-front war will be appreciably lower especially as large quantities of men and materials are awaiting to be used and the transfer problem only present difficulties.

Operators in the stock markets were, therefore, fully prepared for the end of hostilities in Europe and did not show any surprise when the announcement was made by Mr. Churchill to this effect on Tuesday morning. For some time, the implications of the end of the war in the West were not correctly understood and it was felt in certain quarters that there might actually be a decline in prices, though temporarily, when the announcement came. But the experience of markets in the past few days is something very different. It is true that the opening on Tuesday morning was rather quiet but in the afternoon bears found that they were alone in their attempt to push down prices. Bull operators were very firm in their ideas and investors did not show any disposition to liquidate their holdings. As a matter of fact, it was reported that at the lower levels there was some outside buying and that the sharp recovery in Friday's session was due to the need for adjustment of outstanding transactions with a heavily oversold position. It is thus that Indian Irons have recovered from the lowest level for the week of Rs. 38 to Rs. 39-14, Steel Corporations from Rs. 31-10 to Rs. 33-4, Burrakurs from Rs. 37-10 to Rs. 39-2 and Howrahs from Rs. 93-8 to Rs. 100-2. The sensational rise in Howrahs, however, is due to special factors namely the continued cornering by a certain section of the market and the acute shortage of scrips.

The Bombay market also received the news of the German surrender calmly and there was no sharp decline in prices even with the upset in the bullion market. Closing prices are at the highest levels for some time and the undertone suggests that there might be yet further improvement in values.

From the behaviour of markets after Tuesday it would perhaps be reasonable to conclude that both operators and investors are convinced of the maintenance of prices at present levels and that with the pressure of money seeking investment in stock exchange securities, especially with the prospect of a debacle in bullion prices, there cannot possibly be any setback in values even if the expectations of a large-scale postwar industrial development do not materialise at an early date.

• • • •

It has been suggested in certain quarters that the difficulty in the transition from war to peace and the delay in the execution of plans for postwar industrial development might result in lower industrial profits and lower stock exchange prices. It is forgotten, however, that the deferred purchases and the large needs for reconstruction purposes will keep up industrial activity at high levels and that the delay, if there be any, in putting into effect the numerous schemes of the Government will not be acutely felt as the war against Japan will last for some months yet and there will be continued expansion of currency. The total volume of surplus funds seeking investment will still be large as to afford good support to the stock market.

My anticipations, therefore, of a postwar boom in prices might be fully justified. I have to admit, however, that the recovery in prices after the news of the German surrender has been much sooner than expected. I had a feeling that there was still a section of the market which was not fully convinced about the bright future outlook.

• • • •

The accounts of the *Indian Galvanising Company* (1926), *Limited*, for the year ended December, 1944, show a big increase in earnings for the previous year and ever over those for 1943. The availability of raw materials in larger quantities and the full employment of the workshops have been responsible for the sharp rise in earnings. Shareholders, however, do not derive any benefit as the amount set aside for taxation has taken up very nearly the whole of the increase in profits. The net profit, before providing for taxation and depreciation, is Rs. 9,78,450 (Rs. 6,99,556) for the previous year. The charge on account of depreciation is very much higher at Rs. 1,05,779 (Rs. 44,208) while the amount transferred to General Reserve is Rs. 50,000 against the same amount to Stock Reserve. The provision for taxation is Rs. 7,19,420 (Rs. 5,01,823). After maintaining the dividend at 25 per cent the amount carried forward is Rs. 46,215 against Rs. 45,592 brought in.

• • •

Elphinstone Spinning & Weaving Mills Company, Limited, has been able to report satisfactory results for 1944 even with the reduction in ceiling prices on several occasions. Total turnover was only slightly lower at Rs. 1.48 crores against Rs. 1.77 crores. The profit, before providing for taxation and depreciation, is Rs. 37,61,506 against Rs. 49,56,551 for 1943. The provision for taxation is naturally lower at Rs. 26.5 lakhs against Rs. 35.5 lakhs. After the transfer of Rs. 7 lakhs (same) for depreciation the dividend on ordinary shares is 10 per cent against 20 per cent on the previous occasion. The amount carried forward is Rs. 31,456 against Rs. 44,950 brought in.

• • • •

Allahabad Bank Limited, is perhaps one of the few prominent banks to be able to utilise very effectively the increase in working capital in the year ended March, 1945. It is perhaps also one of the very few banks

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, May 11.

The week under review is short of two working days, markets on the Calcutta Stock Exchange being closed on Wednesday and Thursday on account of V-day celebrations. But during the short period markets have remained open there have been significant developments and the general trend of values is unmistakable. The announcement of unconditional surrender to the Allies by Germany did not find the market unprepared as even at the end of last week, it was generally agreed that Germany had been defeated and that peace prospects had been fully discounted. The announcement by Mr. Churchill on Tuesday morning that Germany had surrendered unconditionally for a time had a depressing effect on prices, but as the market opened for the regular session investors were averse to dispose of their holdings and professional operators were caught napping. The close on Tuesday was very firm and losses were more than regained, Indian Irons recovering to Rs. 39-4 from the lowest level of the week to Rs. 37-15, Steel Corporation to Rs. 32-4 from Rs. 31-11, Howrahs to Rs. 94-6 from Rs. 93-8 and Burrakur to Rs. 38-12 from Rs. 37-10. The reopening on Friday, after the holidays, was firm and a further rise in prices has been recorded, Howrahs having a sensational rise to Rs. 99. With the reserve of investors and the strong position of bull operators it is expected that, so far as the Calcutta market is concerned, there may not be any appreciable setback in prices for some time.

The giltedged securities section was rather quiet with the interest of operators centred in other sections. Values are slightly lower but the general undertone is steady. 3½ per cent Paper quoted Rs. 100-1, and 3 per cent Paper Rs. 90-4. Among terminable loans, 3 per cent 1946 were Rs. 102-6, 3 per cent 1949-52 Rs. 101-7 and 3 per cent 1953-55 Rs. 100-7-6. Long-dated issues were unchanged with 3 per cent 1963-65 at Rs. 98-15, 3 per cent 1966-68 at Rs. 98-4 and 3 per cent 1970-75 at Rs. 97. The only transaction in Provincial loans was in U. P. 1961-66 at Rs. 98-12. Conditions in the money market continue easy but the Central Government has been successful in getting its requirements of treasury bills only with a further improvement in the average discount rate to 7 annas 11 pies per cent per annum.

In sympathy with better advices from Bombay, Bank shares are higher. *Imperial Bank* Contributories are Rs. 490 and *United Commercial Bank* Rs. 19-4 premium. *Reserve Bank* were unchanged at Rs. 133 while *Hindusthan Mercantile* changed hands at Rs. 46-8. *Calcutta National Bank* were steady at Rs. 15-6.

Cotton shares have not participated in the general recovery in the last two days and quotations are around the lowest levels for the week, *Cawnpore Textiles* being dealt in at Rs. 12-4, *Elgin* Rs. 61-4 and *Dunbar* Rs. 285. *New Victoria* were not very much lower at Rs. 7.

Coal shares came in for heavy selling with *Burrakur* being done as low as Rs. 37-10 and *South Karanpura* Rs. 27-10. *Bengal* also shed ten points to Rs. 664, but expectations of an increase in production and lesser difficulties in regard to labour resulted in a recovery in prices. *Burrakur* are quoted at the time of writing at Rs. 39-2 and *South Karanpura* Rs. 28-12. *Bengal* also are 5 points higher at Rs. 669. *Bhalgora* receded to Rs. 17-14 from Rs. 19-4, but are now again higher at Rs. 10-2. *Bokaro and Ramgur* have improved from Rs. 45-12 to Rs. 47-10. *Equitable* are not very much changed at Rs. 67. There has been good buying of *New Beerbhoom* and the quotation is actually higher on balance at Rs. 38-4. *Searsole* on publication of satisfactory results, are steady at Rs. 10-14 while *West Jamuria* were sticky at Rs. 60-2. *Talcher* came down to Rs. 10-10 from Rs. 11-4 and are now quoting Rs. 11.

The feature of the Jute section is the sensational rise in Howrahs to Rs. 99 on speculative buying and forced bear covering. With an acute shortage of scrips there is a jump in the quotation to Rs. 99 from Rs. 93-8, the lowest level for the week. Only a slight recession has been recorded on profit-taking, the quotation now being Rs. 98-8. Other shares were marked lower earlier in the week, but on investment buying and expectations of a large increase in exports the losses have been regained. *Anglo-India* quoted Rs. 469. After coming down to Rs. 462, they are now quoting Rs. 477. *India* are 8 points higher over the week at Rs. 697 after being done as low as Rs. 682. *Kamarhatty* came down to Rs. 698 from Rs. 710, but are now Rs. 720. Similarly *Kanknarrah* are quoting Rs. 592 against last week's quotation of Rs. 588 and the lowest for the week of Rs. 584. *National* were Rs. 33-8 on Monday, they are now quoting Rs. 34-10. *Nuddea* were steady throughout the week at Rs. 131 as also *Presidency* at Rs. 12.

In the Engineering section, *Indian Iron* came down by more than a point to Rs. 37-15 and *Steel Corporation* to Rs. 31-10, but they have both recovered to Rs. 39-8 and Rs. 32-14 respectively. *Indian Malleable Castings* ordinary were Rs. 10-15, *Indian Standard Wagon* Rs. 84-6, *Jessop & Co.*, Rs. 23-10 and *Kumardhubi Engineering* Rs. 10. *Braithwaite* were a shade higher at Rs. 11-2.

There is nothing of interest to be recorded in either the Sugar or Tea sections. *Balrampore* were easier at Rs. 15-4 and *Carew & Co.* at Rs. 25-14 among sugar shares. *Ramnugger Cane and Sugar* were a shade better at Rs. 15. Business in the Tea section has been restricted with *Jutlibari* at Rs. 26 *Tirrihannah* at Rs. 36 and *Dufflaghur* at Rs. 32.

In the Miscellaneous section, *Burma* shares were better with *B. B. Petrol* being done at Rs. 5-14 and *Burma Corporation* at Rs. 5-12. Present prices are slightly lower at Rs. 5-11 and Rs. 5-9 respectively. *British India Corporation* were Rs. 6-1, *Bararee Coke* were better at Rs. 32 and *Dunlop Rubber* at Rs. 64-12. *Aluminium Corporation* were unchanged at Rs. 14-6 and *Rohtas Industries* at Rs. 15-2. Among Paper shares, *Titaghur* came down to Rs. 26-8, *India Paper Pulp* were unchanged at Rs. 215, *Orient* were higher at Rs. 28-7. *Midnapore Zemindary* fluctuated around Rs. 167-8 and *Assam Saw* Rs. 5-12.

KHARDAH COMPANY, LIMITED.

(Continued from page 637)

to be able to report a reduction in the total of the investment portfolio. As a result, the earnings for the past year are very satisfactory. It has been possible for the management to strengthen further the position of the Bank. Total deposits were more than Rs. 2 crores higher at Rs. 22.91 crores while Advances rose by Rs. 1.79 crores to Rs. 9.72 crores. Investments showed a decrease of Rs. 25 lakhs to Rs. 10.43 crores while cash balances were Rs. 59 lakhs higher at Rs. 3.59 crores. The net profit, after taxation, is Rs. 18,62,748 against Rs. 15,06,065 for 1943-44. The dividend and bonus on ordinary shares have been maintained at 12 per cent and 6 per cent respectively. The transfer to reserve fund is Rs. 4 lakhs (same), to Contingencies Rs. 4 lakhs (same), but the newly created fund receives Rs. 2 lakhs (nil). The amount carried forward subject to payment of bonus to staff, is very much higher at Rs. 10,01,379 against Rs. 6,99,453 brought in from the previous accounts.

That technical factors can prevent an uninterrupted decline in prices for bullion also has been amply demonstrated during the week. Bears were long awaiting the V-Day announcement to hammer down prices for both gold and silver and they did succeed in pushing down prices substantially. But at every stage there was resistance to selling pressure. Bears also have been anxious to take their gains whenever there was a setback in prices. With the recent experience still green in their memory there is no disposition to take any large risks especially as the Reserve Bank is not a free seller and its policy is calculated to help the bulls. It is also felt that until exchange controls are completely removed and imports of the precious metals come in as before there cannot be any drop in values to world parity prices. It can thus be only said that the ice has been broken and that given favourable chances the bear can be expected to have his vengeance.

(Half-yearly General Meeting on 13-5-1945 at noon. Books closed from 6th to 18th May, 1945).

Audited accounts for the half-year ended 31st March, 1945.

These show a profit on Revenue Account of Rs. 16,55,905-5-6. On transfer of this sum to Profit and Loss Account and after reserving Rs. 11,30,000 for Taxation there is a balance at credit of that account of Rs. 7,46,978-12-8. Of this balance the directors have transferred Rs. 1,00,000 to War Contingencies Reserve Account and now recommend that the following dividends be paid, without any dedution for income-tax paid by the Company:—

On Preference Shares at the rate of 7 per cent. per annum (Rs. 3-8-0 per share) Rs. 96,677-0-0; On Ordinary Shares at the rate of 15 per cent. per annum (Rs. 7-8-0 per share) Rs. 3,69,052-8-0; Total, Rs. 4,65,729-8-0; leaving a balance of Rs. 1,81,249-4-8 to be carried forward.

Manufacture throughout the half-year was confined to the Company's two electrically driven mills which each worked 120 hours per week. In addition to Upper Mill, previously totally requisitioned, part of Middle Mill was requisitioned in November, 1944, which involves a continuance of the present system of working until such time as these mills can be put into commission after release by the military authorities.

Results have been adversely affected by decreased production due to night work and by the Company's net contribution to the Mills Industrial Pool of Rs. 2,15,894-12-0.

RESERVE BANK OF INDIA

Applications are invited for the following permanent posts in the Reserve Bank of India, Department of Statistics and Research:—(1) Officer-in-Charge, Division of Rural Economics, (2) Senior Statistician, (3) Deputy Director of Research, (4) Statistician, and (5) A few Research Officers, who will be required to conduct research work in monetary and economic problems including the subjects of (a) Banking, Currency, Capital and Money Markets, Public Debt and Finance, and (b) Agricultural Economics, Agricultural Finance, Co-operation and Agricultural Marketing.

2. *Pay.*—For (1) and (2), scale of Rs. 900-75-1,200 plus house allowance and duty allowance at rates prescribed by the Bank from time to time; the present rates are 15 per cent of pay and Rs. 150 respectively. For (3), a scale of Rs. 500-35-850 plus house allowance and dearness allowance at rates prescribed by the Bank from time to time; the present rates are 15 per cent of pay and 20 per cent of pay with a maximum of Rs. 150 respectively. A higher starting salary may be given to a candidate having exceptional qualifications or experience. For (4) and (5), a scale of Rs. 250-25-500 e.b. 35-850 plus house allowance and dearness allowance as for (3). A higher starting salary may be given to a candidate for special qualifications.

3. *Qualifications*—For (1), first or high second class degree in Economics of a British or foreign University or Doctorate degree in Economics of a foreign or Indian University and research work in agricultural Economics of high quality for a number of years. For (2), first or high second class degree in Statistics or Mathematics of a British or foreign University or Doctorate degree in Statistics of a foreign or Indian University and experience of handling statistical problems for at least 5 years. For (3), first or high second class degree in Economics or Commerce of a British or foreign University or Doctorate degree in Economics of a foreign or Indian University and some experience of research work in Economics. For (4), first or second class degree in Statistics or Mathematics of a British or foreign University or Doctorate degree in Statistics of a foreign or Indian University or first or second class Master's degree in Statistics or Mathematics of an Indian University and experience of statistical work for some years. For (5), first or high second class degree in Economics or Commerce of a British or foreign University or a Doctorate degree in Economics of a Foreign or Indian University or first or second class Master's degree in Economics or Commerce of an Indian University and a period of research work in one or more of the subjects mentioned in paragraph 1.

4. Applications must give full particulars of age, academic record and practical experience including research or other work done and must be accompanied by testimonials and the names of two persons to whom references regarding the candidate's character and integrity may be made. The applications should be addressed to Wajahat Hussain, Esq., C.I.E., Deputy Governor, Reserve Bank of India, Central Office, Bombay, and must reach him not later than the 1st June, 1945. A remittance of Rs. 7-8-0 by money order, postal order or bank draft on a scheduled bank in Bombay should be sent to Officer-in-Charge, Reserve Bank of India, A.C.D., Bombay. Applications from candidates already in service must be forwarded through the Head of the institution or Department in which the candidate is serving.

5. Successful candidates will be required to accept the Bank's Staff Regulations copies of which will be supplied to them on selection and to subscribe to the Bank's Provident Fund. They will be on probation for a period of two years. Before appointment candidates will be required to undergo a medical examination by the Bank's Medical Officer, and to be passed fit for service in the Bank.

6. A commensurate number of posts will be reserved for candidates from the minority communities which will be filled provided the standard of qualifications and experience of the applicants meets the requirements of the posts.

7. The Bank does not undertake to acknowledge the receipt of applications and will not enter into correspondence regarding them.

THE RELIANCE JUTE MILLS COMPANY, LIMITED.

NOTICE is hereby given that the Seventy-seventh Half-year Ordinary General Meeting of Shareholders will be held at the Registered Office of the Company, No. 4, Clive Row, Calcutta, on Friday, the 8th June, 1945, at 12-5 p.m., for the following purposes:—

(1) To receive the Directors' and Auditors' Reports and pass the Accounts for half-year ended 31st March, 1945.
(2) To declare Dividends.
(3) To elect a Director.
(4) To elect Auditors and to fix their remuneration.
(5) To transact any other business that may be brought before the meeting.

The Share Transfer Books of the Company will be closed from 18th May to 8th June, 1945, both days inclusive.

By order of the Directors,
JARDINE, SKINNER & CO.,
Managing Agents.

Calcutta, 4th May, 1945.

KUMARDHUBI ENGINEERING WORKS LIMITED.

Notice is hereby given that the First Ordinary General Meeting of Kumardhubi Engineering Works, Limited, will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta on Saturday, the 2nd day of June, 1945, at 11-0 A. M., for purpose of receiving the Directors' Report, passing the Audited Accounts for the year ended 30th November, 1944, declaring Dividends, electing Directors, appointing Auditors, and for transacting any other ordinary business of the Company.

The share Registers of the company will be closed from the 18th May, 1945, to the 2nd June, 1945, both days included.

By Order of the Board,
BIRD & CO.,
Managing Agents.

Chatered Bank Buildings,
CALCUTTA. 3rd MAY, 1945.

N.B.—Printed copies of the Report and Accounts will be despatched to the Shareholders on or about the 11th May, 1945.

GOVERNMENT OF INDIA DEPARTMENT OF SUPPLY (Main Secretariat)

NOTICE

The Government of India have now decided that, as from the 1st May 1945, orders for Machine Tools of U.S.A. and Canada origin, except those required for direct War use or otherwise eligible for procurement under Lease Lend, will no longer be placed on the Machine Tool Controller, Calcutta, for procurement through Government channels. Such orders may be placed either direct on suppliers in the U.S.A./Canada or on manufacturers' agents or importers in India for import through normal trade channels.

All imports should, however, be covered by import licences issued by the Machine Tool Controller, Directorate General, Munitions Production, Supply Department, 6, Esplanade East, Calcutta, in accordance with the Machine Tool Control Order, 1941.

Other details of procedure will be as described in the notice issued during the first week of March 1945 in connection with commercial imports from United Kingdom.

GOVERNMENT OF INDIA. DIRECTORATE GENERAL OF MUNITIONS PRODUCTION.

NOTICE

The following amendments to the Press Notice published in "Indian Finance" of April 21, 1945, on General Service Electric Lamps are notified for general information:—

1. Against Serial No. 3 in the Schedule of prices the stockist's issue rates should be amended to read Rs. 18-9-6 per doz.

2. Against Serial No. 6 the stockist's issue rates should be amended to read Rs. 28-12-9 per doz.

(Akhtar Husain)
Deputy Secretary to the Government of India.

THE STEEL CORPORATION OF BENGAL LIMITED

NOTICE is hereby given that Directors have authorised the half-yearly payment of dividend due on the 5% Cumulative Preference Shares of the Corporation for the half-year ended 31st May, 1945.

The Share Transfer Books for the Preference Shares of the Corporation will remain closed from the 17th May, to 31st May, 1945 both days inclusive. Payment will be made only to those Members or their Mandates whose names appear on the Registar of the Corporation on the 16th May, 1945.

No application for warrants will be necessary. Claims on behalf of holders of shares held on blank transfer will not be entertained.

By Order of the Board,
BURN & CO.,
Managing Agents.

12, Mission Row,
Calcutta,
The 8th May, 1945

BOUQUETS & BRICKBATS

(From our Readers)

Enter Finance Member:

You have, at the opportune time, stressed the importance of planning from the point of view of the immediate and near future of India's finances. There will be full agreement with you in your contention that the end of the war must coincide with the beginning of planning; and that the rising tempo of expenditure on reconstruction schemes must be in accordance with the progressive decline in war expenditure.

From this point of view, postwar plans become the concern of the Finance Member no less than of the Member for Planning and Development. Up to the present stage, the Finance Member was not called upon to take any direct interest in the various schemes and in the progress made with regard to the time-table for their execution. The Finance Member now enters the scene with a new and direct interest not only in the substance of the plans but in the capital schedule that will have to be observed.

There is every reason to believe that great headway has been made in the different sections of planning; but the paramount question under present circumstances is how many of the schemes can be given effect to, now and here, and how many of the schemes are in such an advanced stage that their execution can begin in the next few months. The examination of the reports of the several sub-committees has now to be shifted from the technical plane to the financial and administrative plane. Experts in the respective fields have framed schemes; and it is now for the Finance Department to scrutinise them carefully with regard to the immediate capital implications and early practicability.

If the matter be looked at this way, the Finance Department must needs be strengthened with a personnel who will be a link between planning and finance. The bearing of planning on our financial structure is of such tremendous significance that Sir Archibald Rowlands will be providing right guidance to the public if he gets a White Paper issued dealing with the immediate practicability and capital outlay of postwar reconstruction plans.

P. K. SUBRAMANIAN.

* * * *

Katni Market:

You have done a great service by exposing the activities of the Katni market. I was amazed to learn that a good many members of the Calcutta stock exchange also figure largely in the Katni market. Surely it is up to the Committee members of the Calcutta stock exchange to take disciplinary action against such members as have dealings with the unauthorised Katni market. Members of the Committee can have no difficulty in securing the necessary information to book the offending parties. It is to be hoped that the committee members at any rate are in no way connected with the transactions in the Katni market.

If I remember right, your first reference to the Katni market was as long ago as nine months. This market has thriven and grown stronger in this period. What I would like to know is why the Government have so far not taken any steps to put an end to the activities of a market which is responsible for a considerable loss of revenue both to the Central Government and the Provincial Governments.

Your Editorial note on Katni markets would seem to suggest that its killing is not an easy matter. These markets of day-to-day settlement can never be crushed. If the police chase them away from the pavements at 1 o'clock, they will appear at at the very same spot at 2 o'clock. If they are driven from Royal Exchange Place, they will hold their session in Swallow Lane. If their gamble in shares is made impossible, they will turn their attention to some other speculative counter. A particular Katni market may be crushed; but I doubt even this. So far as the spirit that makes for Katni market is concerned, it will flourish so long as there is a bunch of Marwaris.

In dealing with the Katni market, the authorities will do well to get first-hand information about what has happened to forward transactions in the Bombay market. Under the Defence of India Rules, future trading and *budla* business are forbidden in the Bombay Stock Exchange. But any tyro knows that you can do forward transactions and fix up *budla* as freely as in the old days.

A. GHOSH.

* * * *

Driedup Sympathy:

Your Bombay Correspondent has urged a plea for "the pressure of public opinion" on behalf of the cotton textile industry so that our mills will be helped by the Government to secure machinery for postwar expansion. Your Bombay Correspondent must be blissfully ignorant of the state of public opinion in other provinces.

It will be no easy matter in the future for Bombay mills to get any sympathy from the public with regard to their demands and agitation. It will take a long time for the average Indian to forget that he has been made to pay through his nose for cloth for all these years.

Let the cotton millowners find some other way of bringing pressure on the Government; they will not be able to count upon public pressure.

N. GUHA.

* * * *

The Sales Tax and Economic Situation:

Your vigorous plea for making use of taxes for purpose of collecting the much-needed economic statistics is most timely and welcome. It is well-known—and the Statistician to the Economic Adviser to the Government of India has also revealed in his Guide to Statistics—that while precious little data are available for the study of the problems of India's internal trade, fairly large [illegible] of materials is available regarding India's overseas trade. This, of course, is understandable. A foreign Government is interested only in the foreign trade of a country whose resources it is systematically exploiting. The research scholars in our universities are aware that the British Government will shirk collection of full details regarding the different sectors of Indian economy; these facts will speak and politicians will make full use of them. If a National Government is formed, I am sure, their first business would be just what you have suggested.

The Finance Member recently spoke as he was labouring to inaugurate an era of tax reform in this country. The best way of introducing tax reform is to establish machinery for the regular and systematic collection of statistics. Now that the Government is said to be in right earnest regarding postwar progress of India, I hope they would give the suggestion you have given the earliest possible consideration.

Research workers in Indian economic problems have found the collection of data from the merchant classes a wellnigh im-

BOUQUETS & BRICKBATS

possible affair. The best solution of their difficulty is to levy appropriate taxes and compel them to yield the statistical details.

In this connection it will be useful to recall how even the Taxation Enquiry Committee felt handicapped for want of figures to study the shifting and incidence of taxes in this country.

I wish your suggestion all success.

RAMANI.

BOOK REVIEWS

"New Horizon" Pamphlets

(1) A diary of Japanese Aggression.
(2) The Spirit of Japan.
(3) War Leaders.
(4) Men who rule Japan.

Kitabistan, Allahabad, deserves to be congratulated on the publication of the 'New Horizons' Series of pamphlets, which present in a handy form and at moderate price a fund of useful information on current topics.

'A diary of Japanese Aggression' gives the important dates and events in Japan's military history from April 1885 to the end of 1943. The blind worship of the Emperor, the thought they are the one and only supernation, the all-powerful military clique which rules Japan, and which exploits religion, education, etc., for its own ends, are described in detail in the 'Spirit of Japan'. The condition of women in Japan is unimaginably bad. To quote Mr. Nitobe, a Japanese, "The Japanese woman is a problem for herself . . . her whole life is one continuous sacrifice of self, it is vicarious death." Business in Japan is controlled by a few rich families who are naturally powerful in the Government. The author hopes that by defeat in this war, Japan may be resurrected if light from the rest of the world is allowed to chase the darkness in which she has too long slumbered.

"War leaders" gives, in a short compass of 44 pages, the lives and the arresting qualities of four important military leaders from the Allied countries, America, England, Russia and China. The names of the Leaders appear in alphabetical order to avoid the question of the order of importance. Written in a simple and interesting style, the book should satisfy the interest and curiosity of the average citizen of to-day.

'Men who rule Japan' contains 20 names of the powerful men of Japan who have played conspicuous part in the military history of Japan at one time or another.

Economic Development of England

(By R. Dubey; Kitab Mahal; Price Rs. 5).

Good text-books on the Economic History of England suitable for Indian students are not many. The difficulty of getting standard books as Cunningham, Knowles, and others from abroad is indeed great for reasons well known. The days when it was thought that it is patriotic to read the history of one's mother land and unpatriotic to read the history of other countries, are all of the past.

The path that must be followed and the mistakes that must be avoided are both equally important. For sooner or later India will be on her way to industrialisation. The book under review traces the economic progress of Great Britain from the early times to the eve of the present war. It deals with British agriculture and commerce through various stages, as also the part played by the State in this development. Written by an experienced teacher who understands the needs of the students, in simple and readable style, the book should prove useful to students for whom it is primarily meant.

TREASURY BILLS

Central Government:

Tenders for Rs. 2,00,00,000 of three months' Government of India Treasury Bills were opened on Tuesday, the 15th May, 1945. Total amount offered was Rs. 5,70,30,000. Tenders at Rs. 99-14-3 per cent were accepted in full and those at Rs. 99-14-0 per cent were allotted approximately 19 per cent. Total amount accepted was Rs. 2,00,00,000, the average rate of accepted tenders being Re. 0-7-5 per cent per annum.

Tenders for Rs. 2,00,00,000 of three months' Government of India Treasury Bills will be received on Tuesday, the 22nd May, 1945 at Bombay upto 11 a.m. (Standard Time) and upto the close of business on Monday the 21st May, 1945 at other centres. Successful tenderers should make payment on Friday, the 25th May, 1945. Other conditions are as usual.

During the week ended the 11th May, 1945, Government of India Treasury Bills for Rs. 1,82,00,000 were sold in favour of the Issue Department of the Reserve Bank of India.

Fact Parade

According to the U. S. Department of Agriculture the cotton crop in cultivation in the United States on July 1, 1944, was 20,354.000 acres: the area harvested 20,009,000 acres and harvested lint yield of cotton 293.5 pounds per acre. Included in estimates of total cotton acreage and production are 7,800 bales of American Egyptian cotton, produced from 14,700 acres in 1944 compared with 60,900 bales harvested from 132,000 thousand acres in 1943. Twenty millon acres in 1944 was the smallest crop of cotton harvested in the United States since 1895. It was a little more than seven per cent below the ten year (1933-42) average

The Australian Treasurer is considering whether bank-notes of £5 and more should be withdrawn to curb black-marketing and disclose hoarding for purposes of tax evasion. The Australian note issue has expanded from £48,525,000 in 1939 to £193,244,000 in Jany., 1945. The issue of £5 notes has risen from £12,514,000 to £70,852,000. The issue of £10 notes has grown from £5,554,000 to £42,246,000. £50 notes are up from £1,435,000 to £4,459,000; £100 notes have risen from £2,503,000 to £5,864,000.

Meanwhile hoarders and others, influenced by the likelihood of Government action being taken, have returned thousands of notes of large denominations to the Commonwealth Bank. In one week recently the note issue dropped by £2.000,000.

* * * *

The National Bank of Belgium has advanced 8,657,000,000 francs (about 200 million dollars) to the Belgian Treasury for the needs of the Allied armies.

On the assets side the gold holding amounts to 32,094,000,000 francs, at the revaluation price of 49,518,.08 francs a kilogram. Of this amount 10,493,000,000 francs represent the proceeds of revaluation of the gold reserve.

The total of the Bank's credits on the State amounts to 32,581,000,000 francs.

* * * *

China has struck oil, cables Graham Barrow, Reuter's Special Correspondent in Chungking. Deposits discovered in remote areas of the north-west are so large that they warrant the hope that the petroleum industry may become one of China's biggest industries.

Oil is already produced in the province of Kansu, as well as in Manchuria, and China at the moment can produce more than she can refine and refine more than she can transport.

Specific figures on extent of new deposits are not yet available but Chinese reports are supported by American experts associated with Mr. Donald Nelson, Economic adviser to the Government of China.

* * * *

The slogan "Travel you must" would replace the slogan 'travel only when you must' after the war, observed Sir Edward Benthall, member for War Transport, opening the first meeting of the Tourist Traffic Committee under the chairmanship of Dr. John Sargent in New Delhi last week.

* * * *

A comprehensive scheme for the development of agriculture in Sind, estimated to cost Rs. 8,00,00,000, has been submitted to the Government by Mr. Roger Thomas, Adviser to Government in Agriculture and Post-war Reconstruction.

* * * *

The British-owned Iraq Petroleum Company has decided to construct a second pipeline between Kirkuk and Haifa at the end of 1945. The line will be 16 inches in diameter throughout its 620 miles with a capacity of four million tons crude oil annually and will run parallel to the present 12-inch line which carries two million tons.

* * * *

The Soviet Union has already opened its offensive on the peace-time reconstruction front and is placing big emphasis on more food. Stringent rationing continues, however, throughout the country.

It is estimated that nearly 20,000,000 acres more than last year have already been sown and ample supplies of sugar are promised with the planting of an extra 250,000 acres of beet.

* * * *

It is understood that the committee appointed by the Council of Industrial and Scientific Research on production of penicillin in India, has recommended construction of two plants with a capacity of 10,000 to 20,000 million units. The Committee has recommended two chemists and two medical men to be sent to the United States and Canada to study the method of production and has suggested the names of Col. Sokhey, Dr. Jivraj Mehta, Dr. Ganapati and Prof. Subramanyan.

BY INVESTING IN WAR LOANS ASK YOUR BANK

India's War Economy

Cotton Textiles.—India's cotton textile industry has supplied millions of yards of cloth for defence needs. Twenty per cent of the industry's output was supplied to Government to meet war demands in 1942 and thirty-five per cent of the manufacturing capacity supplied war demands in 1943.

Tents.—By far the largest number of tents for the Eastern group countries as well as for the Middle East and Far East centres have been supplied from India. The value of tentage contracts placed in 1939-40 was approximately Rs. 1 crore; in 1940-41 about Rs. 8.3 crores; in 1941-42 Rs. 13 crores and purchases for 1942-43 were worth Rs. 16 crores.

Woollen Textiles.—The handloom industry has supplied 2,000,000 Army blankets.

Clothing Supplies.—Eight Ordinance factories have been fully employed on fabrication of tailored items of clothing. They employed a labour force of 90,000. In the last year of war they accounted for and converted 215,000,000 yards of textiles.

Indian Timbers—have been extensively used for the load-carrying bodies of Army vehicles and for shipbuilding and the construction of country craft. Timber was also supplied for telegraph and transmission poles, railway sleepers of various types, jetty piles, wharf timbers, bamboos and a large variety of woodware such as tent poles, camp furniture and equipment, ammunition boxes, battery boxes, etc. From 2,42,000 tons in 1940-41 the figure for timber production rose to 1,274,000 tons in 1943-44.

The production of plywood has been greatly developed and there was great demand for it for tea chests, shipbuilding and aircraft. India now produces over 60,000,000 sq. ft. of plywood.

Chemicals.—India's chemical industry has recorded a 100 per cent increase; Soda ash, caustic soda, bleaching powder, Chlorine, sodium and potassium bichromates, chrome acid, sodium thiosulphate and calcium chloride are some of the important chemicals now produced in large quantities which were not produced before the war or were produced only on a very small scale. A large number of pharmaceutical and other chemicals which used to be imported in the past are also being manufactured. Drug making equipment comprising 18 items has been secured from the U.S.A. on lease-lend and allotted to firms to enable them to step up production or to take up new items of manufacture. India produces the entire requirements of the Allies of Strychnine, Caffeine, Santonin etc. The output of medical stores has gone up to nearly 60 per cent of India's total requirements from only 25 per cent at the beginning of the war. Nearly 300 drugs and medicines which were previously imported are being produced locally and most types of hospital and theatre equipment and standard and orthopaedic instruments are being manufactured in the country.

Leather Industries. In 1941, 0.6 million pairs of footwear were produced by India's tanneries but during 1942 this figure rose to 16.22 million pairs.

Miscellaneous Stores.—These include many articles which were manufactured in India for the first time. In 1940-41 the value of the stores supplied amounted to Rs. 71 lakhs and in the following year rose to as much as Rs. 488 lakhs. New manufactures were bicycles, sewing machines, spring balances, fire-fighting equipment spirit lamps, electric bulbs, boot polishes, etc.

Cottage Industries.—In 1941-42 direct war orders to the value of Rs. 498 lakhs were placed with small scale industry. In 1942-43 additional orders to the value of Rs. 610 lakhs were placed.

Paper and Pulp.—Right at the outbreak of war, fibre board packing cases were made for ordnance for packing petrol tins and stores and also a corrugated kraft liner board packing case. Two most interesting developments were perhaps the making of parchmentised paper for gas detection and producing a waterproof paper for map reproduction capable, within reason, of standing up to wet, mud and blood.

Minor Forest Products.—The most spectacular of the minor products was perhaps the discovery of a number of uses for tamarind seed. This seed is a rich source of the well-known pectin used in the manufacture of jams and jellies. The tamarind pectin was then converted into a gum-like substance resembling gum tragacanth. The seed kernel powder was used as a sizing for textiles, the demand for which was enormous.

Ceramic Products.—India began to produce for the first time porcelain cleats, insulators and fuse holders.

Plastics.—A new industry of plastics to make lamphoers and ceiling roses was developed.

Dry Batteries and Cells.—Communication between aircraft air to ground and *vice versa* depends largely on the efficiency of the batteries the planes carry. Arrangements for the production of a particular type of batteries required for the R.A.F. were begun in India during the latter part of 1941 and since then India has supplied millions of cells for the R.A.F. alone. If other services are taken into consideration the number of batteries supplied would reach astronimical figures.

Camouflage nets, paints and hemp.—The nets made in India would, stretched end to end, loop the world eight times. These camouflage nets were not all the products of India's high-power factories but are being made by the thousand in villages and little known parts of India.

Scientific Dehydration.—This is a development which can be attributed entirely to the war. India has supplied 40,000 tons.

Ordnance Factories.—India's war-time output of ammunition has increased many times over and in certain items to as much as 30 to 50 times. Some of the striking increases recently recorded were Rifles, 11 times pre-war output; bayonets, 20 times pre-war output; small arms ammunition, 4 times; guns and mortar ammunition, 35 times; grenades, mines, bombs, pyrotechnic stores, not made in India before; instruments, 50 times pre-war output.

Manufacture of explosives such as Toluene, Acetine and various acids is on a considerable scale. There are also a number of plants for nitric acid, for concentration of sulphuric acid and for cordite. India may be said to be well on the way to obtaining self-sufficiency in the manufacture of high explosives.

Before the war India's Ordnance factories employed 15,000 men; the number of workers in 1944 was 1,00,000, a sixfold expansion.

Engineering Workshops.—At the outset of the war, there were about 600 trade and railways workshops; the Director-General of Munitions Production is now using 1,500 Engineering Workshops—800 for general engineering items, over 300 for small items, and 365 workshops for munitions components.

This is by no means an exhaustive survey. The development in civilian consumption goods industries is as impressive and is a subject which must be dealt with separately.

Review of World Gold Position

Summing up the world gold position, the Financial Times says the Argentine in particular, and other South American countries in general, have materially improved their positions as a result of the re-distribution of gold during the war.

A number of these countries will embark on the post-war period with gold reserves much in excess of anything they have hitherto enjoyed.

The United States, despite losses in the last year or two, will have gold in reserve in excess of that at the beginning of the war.

Switzerland, Spain, Sweden and Portugal have increased gold stocks.

Britain has seen her reserves badly depleted although she probably possesses more gold, than some people imagine.

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

Money is in plentiful supply and call money rates are nominally quoting ½ per cent in Calcutta and ¼ per cent in Bombay. Only there is no great disposition, as pointed out last week, on the part of banks to place large sums either in Treasury Bills or Giltedged securities. It is satisfactory to note that, in recent weeks, investments in Government securities have been on a larger scale, as working capital of banks has shown a big increase. The reduction in the offer of Treasury Bills by the Central Government from Rs. 4 crores to Rs. 2 crores has had the effect of bringing about a decrease in the average discount rate from 7 annas 11 pies, per cent to 7 annas 5 pies per cent per annum. The amount of applications at Rs. 5.7 crores, having regard to the reduced size of the offer, should be taken as a sign of keener bidding. The offer for next week has been maintained at Rs. 2 crores.

The returns of the Reserve Bank show that there has been further expansion of currency. Total notes issued were Rs. 1132.49 crores against Rs. 1125.34 crores. The increase in notes in circulation is more pronounced, the total at Rs. 1125.03 crores revealing an increase of Rs. 9.24 crores. Sterling securities have improved by Rs. 8 crores to Rs. 1014.33 crores while there is a decline in rupee coin by Rs. 85.45 lakhs to Rs. 15.9 crores.

In the banking department, Central Government's balances are lower at Rs. 264.19 crores against Rs. 268.44 crores. Large payments must have been made during the week but the absence of any increase in bank balances is not quite understandable. As a matter of fact there is a big drop of Rs. 11.2 crores to Rs. 82.4 crores. Other Government accounts are not very much changed at Rs. 16.14 crores. Balances held abroad are Rs. 379.93 crores against Rs. 391.31 crores. As the transfer to the issue department is only Rs. 8 crores the decline of over Rs. 11 crores in sterling securities must be due to some payment in connection with the repatriation of sterling investments or other obligations. Investments are Rs. 1.13 crores lower at Rs. 21.7 crores.

A perusal of the statement of the Imperial Bank for the week ended May 11, will show that the drop in bank balances in spite of large Government payments is mostly on account of the Imperial Bank. Total cash shows a decrease to Rs. 28.06 crores from Rs. 36.31 crores. The decline in cash is due both to the lower level of deposits and an increase in the investment portfolio. Deposits were Rs. 231.53 crores against Rs. 236.19 crores while investments were Rs. 142.55 crores against Rs. 139.64 crores. Advances were not very much higher at Rs. 70.87 crores.

The statement of scheduled banks for the week ended May 4 records a jump in Demand liabilities to Rs. 615.41 crores from Rs. 604.6 crores while Time liabilities have continued to improve, the latest figure at Rs. 227.05 crores comparing favourably with the previous figure of Rs. 226.17 crores. Almost the whole of the increase in working capital of banks is reflected in larger cash balances. Balances with the Reserve Bank were Rs. 89.85 crores against Rs. 77.35 crores. For the second week in succession, both bills discounted and advances are lower. Advances were Rs. 275.48 crores against Rs. 278.22 crores and Bills discounted Rs. 14.33 crores against Rs. 14.59 crores.

(*Continued from previous page*)

France has retained a goodly amount and incidentally she has met Belgium's claim regarding gold stolen by the Germans.

Holland has been able to safeguard a fair amount of her gold although she has converted much into commodity reserve.

Germany looted gold right and left but sooner or later she will be compelled to disgorge it.

Belgium, Czechoslovakia, Holland and France will presumably benefit. Most other liberated countries will not be very well placed.

The British Dominions will be in a stronger position, but the position of Soviet Russia cannot be given accurately.

Japanese gold stock will presumably share the same fate as that of Germany which will mean a re-distribution of a substantial amount.

Taken on the whole it is more than likely the problem of maldistribution will be just as acute after the war as before. Moreover, some time must elapse before the balances are adjusted through the normal process of international trade.

A plea for a White Paper

Last week we posed the question whether the Planning and the Finance Members of the Government of India will see to it that the onset of peace does not mean a serious setback in public finance and the economic fortunes of the country. We urged that steps should be taken from now to ensure that the outlay of public expenditure on peace time projects should be increased to the same extent as the fall in military expenditure. The consequences of neglecting this important task, we pointed out, will be immediately disastrous and, in the more distant view, extremely serious.

To prevent these dangers it is necessary to pick out the schemes out of the many that are now being formulated by the various committees, expedite their perfection from the point of view of execution and take steps for their inauguration without loss of time. In other words, the loose ends of these plans ought to be tied up as soon as possible. Some kind of time schedule, dependent, among other things, on the decline in military expenditure, must be formed. But the aim must be the adequate replacement of military expenditure by civil.

We are confident that on the wisdom and justice of this demand there will be no two opinions. But it is necessary to consider how far the policy we have indicated is practicable, firstly, from the point of view of the readiness of the plans, secondly, from the administrative and other relevant considerations. We have also to remember that the war in the East cannot in any case last for more than a year and that an earlier end is far from unlikely. Quantitative ideas about the scale of expenditure required to fill the gaps that will be caused by the decline in military expenditure are thus extremely important. The two important facts to remember in this connection are the scale of war expenditure and the scale of expenditure on planning which a growing consensus of opinion will recognise as proper for the first five years of the plan. This was first indicated as Rs. 1,000 crores. Though it has since been generally accepted in Government circles, we have, for our part, shown more than once that it may be raised well above that level. In our leading article in the Indian Finance Year-Book which is issued this week, we have shown that in the post-war period it is possible to maintain public revenues, at the Centre and the Provinces, at Rs 150 to Rs. 170 crores a year in excess of the pre-war levels. On this basis, the first five years of the plan should yield not less than Rs. 750 crores for expenditure on planning. If the State should be in a position to spend Rs. 750 crores out of revenue, then the total outlay should be very much more. It is not necessary in this context to determine how much of borrowed money should be employed in the working of our plans. That in schemes of this kind loans should be more, and not less, than revenue expended is more or less axiomatic. But even on the basis of equal amounts from revenue and from borrowings, outlays of Rs. 300 crores a year will be feasible from a purely financial point of view.

The other nodal point from which this question has to be considered is the scale of defence expenditure incurred during the war period. Defence expenditure in 1939-40 amounted to Rs. 49.64 crores as compared with Rs. 46.18 crores in 1938-39 which was the last complete pre-war year. From this level it has risen to Rs. 397.23 crores in the budget estimates for the current financial year. An even more important factor in determining the level of money incomes and the tempo of business activity is the amount spent on account of the allied governments. This amount has been at a higher figure which may be estimated at about Rs. 400 crores a year. Of the other disbursements from the government coffers, interest payments which have risen from about Rs. 6 crores before the war to about Rs. 34 crores in the revised estimates for the last year are only a function of the size of the debt and the average borrowing rate. General expenditure has more than doubled itself from about Rs. 21 crores to about Rs. 46 crores. Of these increased disbursements indicated above, it is idle to ask for a direct and full counterpart of the expenditure incurred on account of the allied governments. It is not desirable either that the full scale of wartime disbursements should be kept up after the full establishment of peace. The cessation of disbursements on account of the allied nations should form the starting point in tackling the difficult and complicated problem of adjusting wartime inflation to post-war needs and conditions. If the old scale of expenditure should be kept up, then, it would mean virtually that note circulation and prices will be maintained at the levels of wartime or perhaps even worse. The increase in general expenditure of the administration may be expected to continue without special efforts, if developmental projects are introduced without any avoidable delay.

The crucial question, therefore, is not so much the maintenance of government disbursements during war time as the progressive diversion of the money that are now being expended on the war to peacetime purposes. The rise in defence expenditure is from Rs. 50 crores before the war to about Rs. 400 crores during the last two years. Of the increase of about Rs. 350 crores, some allowance may have to be made for the rise in prices and the difference in the standards of adequate defence in peacetime. The amount of war expenditure which should be diverted to peacetime purposes may, therefore, be said to be well over Rs. 300 crores a year. A part of the disbursements now made on account of the allied nations may be replaced by expenditure of borrowed money.

The pace of increase in development expenditure, it has been assumed in this examination, is to be set by the falling off in war expenditure. That is almost the hypothesis on which the whole reasoning is based. But it is necessary to remember that the practical significance of this principle of gradualness depends a great deal on how long the war in the East may be expected to last and whether the course of the nature of India's part therein will lead to anything like a gradual decline in our defence expenditure. There appears to be general agreement on this point, that the time that will be required to beat the Jap to his knees the same as the Nazi has been is greatly exaggerated. Now that the U.S. and Britain are free to turn all their resources to the war in the East, it may end much sooner than a cool calculation of the odds would suggest. And if diplomatic factors such as pressure from Russia, not to speak of her joining the Allies, should intervene, then the war may end even sooner. So that, though it is necessary to recognise that there is no long period in which the principle of gradualness can be fully applied to the problem on hand. There are not many stages possible during the three or six or twelve months that may be still left of the war with Japan, in which war expenditure may show a phased decline suggesting a similarly phased increase in developmental expenditure. Considering that the plans on hand are still in a markedly inchoate stage, it were wise from a practical point of view to proceed as if a number of plans will require to be put into effect all at once. Our problem now is in the main to prevent a slump in public expenditure such as would lead to a slump in everything else. Any exaggeration of the value of gradualness may conceivably lead to delay in the important task of making ship shape as many of the plans on hand as possible.

It is reasonable, therefore, to suggest that the aims of the Government must be to get ready plans involving an expenditure of about Rs. 350 crores to start with and rising thereafter to make a total of something like Rs. 1,700 crores for the first five years of this programme. The old idea that we must wait for the formal cessation of hostilities in all parts of the world to begin the work of post-war reconstruction has to be very considerably modified. We have to act as if we meant only the European war whenever we used the word, "Post-war" in reference to economic reconstruction in this country. Besides the economic and financial reasons we have adduced, there is also the manner in which the course of the war has shaped during the last few months. It is not realised that Burma had been virtually reconquered before Doenitz signed the surrender agreement. And months before that, Soviet Russia had denounced her non-aggression Pact with Japan. This means that with the Allied Governments and the Government of India, the war in the East need not be the same all absorbing preoccupation as the world war was before Germany was forced to surrender. While, therefore, the Allied Governments can have a considerable surplus energy to devote to other purposes, in the purely economic and financial sphere, there are good and weighty reasons why post-war reconstruction should not be postponed further after the surrender of Germany.

The Government of India must, therefore, be prepared from this moment with plans that will require the full extent of the difference between the war expenditure of the present and that of the pre-war period. Have we sufficient plans for the purpose? It is difficult to furnish any definite clear-cut answer to this question. For, so far, the progress of planning has been such that a plan is either too vague or too forbiddingly costly. In either case, it is useless from the point of view of immediate or early execution. For the purpose we are now considering, a plan must satisfy the conditions of definiteness and at the same time being within the financial means at our command. Not all the plans so far evolved have clear-cut phases. And plans, which, like the Sargent Plan, have had their stages clearly indicated, have been thought of in terms of the expenditure involved in the final stages. Reconstruction committees have as a rule worked on the unquestioned assumption that the day of actual execution of their plans is very far off. The significance of the some-

what quick change that has come over the outlook of the war has not been fully appraised by all the committees If the Government are to succeed in their attempt to prevent peace occasioning even more severe hardships than war, they have to appoint a body of officials whose sole job will be to pick and choose specific schemes which will prepare the ground for genuine, planning and which, at the same time, will call for an outlay equal to what is now made on the prosecution of the war. For this purpose, they will have to direct the various committees to take special cognisance of this problem and formulate the initial stages of their larger plans as virtually independent schemes for immediate execution. Great care will doubtless have to be taken that no sound principle, financial or other, is sacrificed for the sake of expedition. But the main problems of economic development in India lend themselves to this distinction, so that there need be no great fear that haste may involve waste.

We trust we have shown the nexus of problems and considerations in this context. Doubtless, they call for more careful and more through-going scrutiny. The volume of public revenue which, in the conditions of the post-war period, can be considered to be a genuine surplus which the Government of India and the provincial gavernments can divert to peacetime projects is only a matter of wide, not to say wild, conjecture. Likewise, one cannot say with confidence how many of the plans which are now in the embryonic stage can have the pace of their pre-natal development forced in the way we want. In these circumstances, we can only ask, as we did for a similar purpose sometime ago, for the preparation of a White Paper on the subject to be prepared jointly by the Planing and the Finance Members. It must be the task of the Finance Member to determine to a nicety the volume of the increase in public revenue over the expenditure on pre-war objects of public expenditure. And it will be for the Planing Member to put together a number of plans for immediate execution which will be sound from the point of view of long-term planning and which will just help to fill the gap caused by the decline in war expenditure. Such a White Paper will bring peacetime planing palpably nearer and help to rid the markets of the bogey of a post-war slump.

The War and Indian Rural Economy

(From Our Staff Correspondent on Tour).

That the war has given the business class in India unusual profits is an admitted fact. The business community has not only taken full advantage of the opportunities presented by the war but large numbers of them have also swelled their earnings through highly dubious and anti-social methods. They may argue that the E. P. T. and higher Income Tax in British India and some of the native states has deprived them of very nearly the whole of the extra profits of the war, but these denials cannot stand the testimony of rapidly rising bank balances, greedy investments and enormous amounts of cash that defy easy detection but come out where sufficiently tempted. That this war has also created a large volume of alround employment, particularly for the middle class and labour, is also obvious. What is otherwise a world catastrophe has thus clearly a beneficient result on Indian business and Indian labour; but how far it has added to the prosperity of the Indian agriculturist does not seem to be so obvious nor does the theme lend itself to easy conclusions.

Apparently there are strong grounds to believe that the agriculturist in India has also shared in the general wave of financial prosperity. The rise in agricultural prices, ranging roughly between 200 to 400 per cent is easy testimony to this. The producer of foodstuffs finds himself in a particularly favoured position; as he is the sole beneficiary of the enforced self-reliance of the country in the matter of food supply and as long as he produces less than what the population needs, he is assured of this favoured position.

It is needless to prove with facts and figures the phenomenon of the rise in agricultural profits. I am giving certain figures just to indicate how producers of different commodities in different places have fared in the bargain. In the Central Provinces, according to official estimates, rice which used to yield a per acre profit of Rs. 5 before war now gives the ryot Rs. 35 net; jowar yields Rs. 28 for a prewar figure of Rs. 3; and wheat shows a net profit of Rs. 30—a jump of Rs. 26 from the prewar rate of Rs. 4. (These look very modest estimates. Actually the figures in both cases might be higher). Figures obtained from Mysore show that the net profit per acre has registered a rise of 300 to 400 per cent for food commodities. In certain cases, it is even higher. For example, for irrigated paddy, the per acre profit has shot up from its prewar figure of Rs. 18 to Rs. 115; the potato grower seems to be the most fortunate in this respect. Garden potato which yielded on an average Rs. 218 to Rs. 268 per acre profit in prewar years is now showing a net profit of Rs. 563 to Rs. 2183. There is a similar jump in the case of dry land potato as well. Wherever the prices have been moving up sluggishly, the Governments have come in with subsidies and minimum prices.

Such general observations as these, however, are very inadequate indications of the impact of war conditions on the different sections of the Indian ryots, nor do they give any clear idea as to the actual improvement in terms of material prosperity which the rise in prices has brought in. The very circumstances of a general belief in the bloated prosperity of the ryot is a handicap in any investigation into the extent and nature of the change that has taken place. The many variations in our tenancy systems, rate of taxation and wide differences in the extent of holdings are further complicating factors. Even to define the term agriculturist in a comprehensive way is rather difficult under Indian conditions. For purposes of this discussion, however, I take the agriculturist to mean the person who bears the risks of cultivation, whether he be tenant or landlord; because all others have a fixed rent income, the labourer his fixed wages, the landlord his fixed rent and Government takes its fixed revenue. The person who enjoys the residual income, who bears the losses of bad season, bad prices, pests and theft, I refer to as the ryot.

A random survey of the conditions in different parts of India reveals that while the belief in the increased prosperity of the Indian ryot is generally justified, it has its vital limitations. For a very large section of the agriculturists the war has resulted in varying amounts of savings. From being perpetual debtors, many have not been able to pay up their debts, but also to put by surpluses. From my conversations with responsible officials in Banking institutions in C. P. and Mysore, I was able to gather that more than 50 per cent of the debts owed by the villagers to co-operative and land mortgage bank has, been repaid, in full, during the last three years, even though these debts were originally contracted for a longer period of instalment repayment. Inevitably, the demand for fresh loans from these institutions has also fallen substantially. I am citing one or two of what might be called local evidence to this conclusion. The Bank themselves seem to get idle in many places. Mr. Y. N. Ballal a Nagpur Delegate to the Congress of the Central Provinces & Berar Co-operative Federation, held at Nagpur last November, states "the agriculturists are to-day in a comparatively prosperous condition and do not need loans to the same extent as before. This has deprived the co-operative Banks of their usual business." The President of the Fereration also tells the same story. Speaking about Land Mortgage Banks he says. "The advent of the second world war has brought in its turn advantages in the shape of higher land values and higher prices of agricultural produce in those countries which did not fortunately become theatres of war. The cumulative effect of all this has been very good for the agriculturist in general and it seems that these land mortgage banks, even though they are still in their infancy, have outlived their utility." The same type of testimony comes from another part of India. The chairman of the Mysore Central Co-operative Land Mortgage Bank, in an address delivered last October, says. "I wish to invite your attention to the fact that the Bank has for a second year in succession achieved cent per cent collection of its annual instalments." From the figures supplied by this Bank, which makes loans through co-operative societies, it is gathered that though these societies had during the last two years increased in number, and membership, there is a fall in the receipt of loan applications. It is argued that to some extent this lack of enthusiasm in seeking loans is due to the inordinate delay and inconvenience involved in securing them. In spite of such possibilities, the easy money conditions in the villages are a factor to reckon with, in this respect.

The revenue officials whom I have met in U.P., C.P. and Mysore tell me that collections have not only become easier, more prompt and regular, but official pressure as a factor in revenue realisations has well-nigh disappeared in many places. Instead of the Revenue collectors going to the ryot and compelling payment of kist through persuasion and threats many villagers are now seeking the village officers to pay up their dues. There are, of course, a few who think that they can now afford to pay a fine and be a little more slothful than before; but these form a negligible proportion of the vast

SPECIAL ARTICLE:

BRETTON WOODS: An American Controversy

By **Frank Dorsey**

While diplomats hammered out a world political order at San Francisco, prospects brightened for United States approval of a world economic order as proposed at Bretton Woods. Despite general acnnowledgement that political agreement among nations would mean little without economic agreement, the Bretton Woods plan faced severe criticism in America. The United States admittedly is expected to furnish most of the credits for rebuilding a wartorn world. Congressional approval or disapproval of Bretton Woods, expected before the end of the San Francisco meeting, is therefore vital to any projected world organization.

American opposition to the Bretton Woods plan, in its original form, came mostly from bankers. Professional economists were inclined to look first at the weaknesses of the plan and feared both financial loss to the United States and world disillusionment if it failed to work as advertised.

Support for the plan came principally from the government, which urged quick acceptance by Congress without change, and from organized labour Both AFL and CIO were strongly for it. The business community was divided. The influential National Foreign Trade Council, for example, approved the plan "substantially as drafted," while the United States Chamber of Commerce approved one half of it, and rejected the other.

Attacks on Eretton Woods centered on the proposed International Monetary Fund. The other half of the proposal, for the International Bank for Reconstruction and Development, met little opposition. The Bank's powers were conservatively defined and one-third of the voting power was reserved for the United States, which would supply a third of the capital Americans remembered that after the last war they had lent heavily, if not wisely, only to find themselves winding up in the role of the world's Uncle Shylock. This time, by putting responsibility on an international body, the United States hoped to escape the unpopularity of the moneylender—on collection day.

The Fund, on the other hand, drew heavy fire. It was attacked as an "export subsidy," as a device to aid Great Britain at the expense of the United States, as an uncontrolled credit pool for insolvent nations, as an attempt to buy competitors of the United States off from undesirable forms of competition—with no teeth in it to assure that they would stay bought off.

The extreme pessimist view was expressed by Leon Fraser, president of the First National Bank of New York and former president of the Bank for International Settlements, who late in March proposed to abandon the Fund on the ground that nations would in any case undertake "what we call economic warfare but what they call economic necessity." He also proposed to reduce the capital of the Bank from dollar 10,000,000,000 to as low as 500 million. "It will last," he said, "until we have a breakdown in the world again, as we shall some day." Fraser committed suicide two weeks after issuing this statement.

The most powerful attack on the Fund was made by the American Bankers Association, which proposed to do away with it and transfer its function of stabilizing international currency exchanges to a minor department of the Bank. W. L. Hemingway, President of the Mercantile Commerce Bank & Trust Co of St. Louis and chairman of the ABA advisory committee called the proposed Fund an "economic super-state" and expressed fear of a "tendency toward managed economy and totalitarianism."

A detailed criticism of the Fund was made by Winthrop Aldrich, Chairman of the Board of the Chase National Bank of New York. He charged that "since the United States will have the least need to use the Fund's resources, our position becomes mainly that of a contributor, and by far the largest contributor. Inasmuch as the Fund gives nations with relatively poor currencies access on an automatic basis to relatively good currencies, the good currencies may be pulled down to the level of the poor currencies. The provisions of the plan permitting changes in exchange rates are so liberal that exchange depreciation would undoubtedly become an accepted and normal procedure in international financial affairs."

He predicted that the American contribution to the Fund would not be limited to the original subscription of $2,750,000,000, but that the United States would have to make further inversions to save the Fund's dollar reserves from exhaustion and stave off consequent defalcation by other nations on their dollar debts.

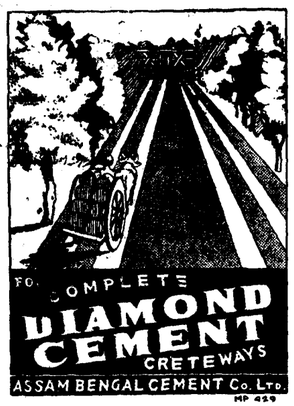
In place of the Fund, Aldrich recommended the so-called "key-nation" plan, by which the pound and dollar would be linked in a fixed relationship and other currencies left to find their own level.

Rebuttal to the bankers' arguments was severe. Senator Claude Pepper, a leading New Dealer, told a labor group in New York: "Big bankers, led by Winthrop Aldrich, are already trying to scuttle Bretton Woods. These bankers want to dominate international finance not for public but for private profit."

Fred M Vinson, Director of the Office for War Mobilization declared: "If international economic problems cannot be solved by discussion and agreement, they will be solved by the sword."

Assistant Secretary of State Dean Acheson called the Bretton Woods agreement an "absolutely essential counterpart" to the world political organization. "The heart of the Bretton Woods proposal," he said "is that there must be some action to get the nations to agree to abandon methods of economic warfare—such methods as competitive exchange depreciation, multiple currencies and exchange controls. If you cannot get countries to abandon these practices, it does no good to make stabilization loans."

It was clear that the advocates of Bretton woods were for both Fund and Bank primarily for their immediate postwar political value—as assuring a broad international meeting ground on which economic problems might be thrashed out. The opponents of the Fund, on the other hand were concerned chiefly with its alleged technical weaknesses, which they feared might lead to overoptimism followed by a breakdown. A compromise between the two positions was needed and one was supplied.



The Committee on Economic Development, representing some 2,000 firms and individuals, suggested that both Fund and Bank be approved but that the powers of the Bank be extended to permit it to make short term loans for currency stabilization whenever the Fund might seem inadequate for that task. The compromise clearly lay nearer the position of the government than that of the opposition But even those bankers who were deeply sceptical of the Fund's practicality had no desire to stand in the way of what was at least an attempt at world economic unity. The American Bankers Association promptly announced its acceptance of the compromise, practically assuring its passage by Congress. Some experts even believed the Bretton Woods document as presently worded could be stretched to cover the compromise. If this interpretation were recognised by other countries, no further international meeting on the subject would be necessary

The ultimate rerdict of the banking freternity was expressed in May, with the San Francisco conference already in mid-course, by ABA president W. Randolph Burgess. He said:

"We will swallow all the technical objections we find in the draft in recognition of its great virtue of creating a ground for international co-operation in the monetary sphere. We ask only for the minimal amendments which we believe necessary to safeguard the interests of the American people. If we can obtain these amendments, we are willing to go along with active support and vigorous co-operation with the Bretton Woods plan."

(Continued from page 654)

majority, it can be said, that whenever they have to pay either in liquidation of debts or for revenue or rent, the present surpluses they hold have induced them to discharge obligations promptly and willingly. This is one side to the picture. How far the rural community has utilised its added wealth to increase its standard of living, even within the limitations imposed by the general shortage of consumer goods, how far the new money has gone into the habits of foolish extravagance and what percentage among the agriculturists themselves have any genuine surplus to put by, I shall discuss in my next article.

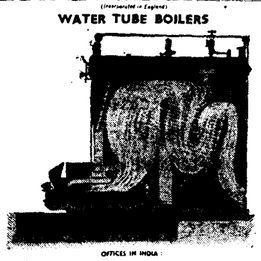
Post War Plan for U. P.

The first five-year plan of postwar reconstruction prepared by the Government of the United Provinces is now placed before the public. As in other provinces the emphasis is laid more on agriculture, irrigation, and no details are given regarding the industrial scheme for the province. The Plan does not therefore contain detailed schemes either of the development of U.P. industries or schemes for land reform or taxation reform. Agriculture gets a high priority in the list, and while the whole plan of the U. P. Government involves an expenditure of Rs. 114.18 crores, the agricultural schemes alone involve a capital expenditure of Rs. 6.11 crores. Intensive and extensive development of rural areas is placed in the forefront of the Plan and the drive for food production will be intensified all-round. It is proposed to multiply and distribute seeds to the tune of 15 lakh maunds every year. There is a scheme to add to the manurial resources of the province and night soil of larger cities will be converted into 'activated sludge.' Provision is also made for the distribution of fertilisers and oilcakes to the extent of about 18 lakhs and 10 lakhs of maunds respectively. Facilities would also be given for the introduction of improved implements and power-driven machinery. Among other features of the agricultural plan the important are the following: development of food and vegetable production; arrangements of a model dairy and bull producing farms; establishment of a veterinary college and research station for the improvement of livestock of the province and the formation of 15,000 co-operative societies in a period of five years from the commencent of the plan. The welfare of the ex-soldiers will be looked into and much importance is attached to the training of technical personnel. The existing training institutions will be enlarged and new ones set up to meet the increased demands for trained staff. The establishment of a number of Polytechnic institutions in the province and the granting of scholarships for training abroad are also contemplated. A gas plant will be set up at Ferozeabad the nearest industrial centre in the U.P. so that capable workers can get gas at cheap rates. One of the most attractive features of the plan is the provision of free compulsory primary or secondary education for about 15 million children of the province.

The U. P. Plan involves an expenditure of Rs. 114.18 crores on the whole, involving a recurring expenditure of about Rs. 27.87 crores and a capital expenditure of Rs. 86.3 crores. The irrigation scheme aims at bringing 4,599,800 acres of land under irrigation and the electricity scheme provides for increasing the present generating capacity of 48,000k. to 296,250k. The road plan for the U. P. consists of the construction of 21,470 miles of roads including highways districts roads and village roads.



Problems of Industrial Finance:

In his talk to the members of the Bombay branch of the Indian Council of World Affairs Sir Chintaman Deshmukh, Governor of the Reserve Bank of India, discussed how the internal financial requirements for industry are met in various countries, what facilities India has or is likely to have in that respect, and what new agencies appear to be needed. Industry requires fixed capital and working capital and there are four sources from which finance for industry might be derived *viz.*, investment market, the commercial banks, special institutions and the State. Referring to the role played by the State in financing industry, Sir Chintaman said that in the U.S.S.R. the entire economic structure is collectivist and the level of economic development is determined by the Government's general economic policy. In capitalist countries mixed banking had played a leading part. And in most countries legislative restrictions had been imposed on Commercial banks engaged in such finance. Turning to Indian conditions, he pointed out the necessity of organising an Indian Finance Corporation to supply medium and long term finance to the industry. He categorically stated that the present stage of development of commercial banks did not warrant their taking substantial interest in the long term finance of industry. He laid down certain conditions which commercial banks should observe before they take to industrial financing, one of which was that the prospects and profitability of the Industry must be relatively more assured. Another was that the banks must be more impregnable. The last was more knowledge on the part of the bankers regarding industrial propositions. Until that stage is reached Sir Chintaman Deshmukh pointed out, a special type of institution deriving its resources from long-term deposits and debenture and share capital, participated in by the State if necessary would appear to be a more suitable agency.

Fruit Industry in India:

It is welcome news that the Government of India have both short-term and long-term plans for developing the fruit farming and fruit preservation industry in India. The yield of fruit per acre in India compares favourably with that in other countries. With methodical spacing of trees and better cultural operations, it would be possible to obtain still higher yields. But the per capita consumption of fruits in India is very low. In view of the nutritive value of fruits, it is necessary that their quota in the daily diet of every person in the country should be increased. As the present production is not adequate to meet internal requirements, efforts should be made to increase it. Efforts should also be made to increase loss of production by cultivating profitable commercial varieties on scientific lines so that their prices may be within the reach of the masses. The aim of the Government is to increase India's present acreage under fruit by 100 percent to meet the absolute minimum fruit requirements of the entire country necessary to maintain the health of the nation. The Government contemplate passing a Fruit Products Control Order with a view to raising the standard of quality of the Indian-made products and to improving the hygienic conditions of manufacture. The Indian Institute of Fruit Technology has also been established to carry on research in fruit preservation and to give training and guidance to the people on the subject. With the growth of fruit preservation industry, canning of fruit, making of marmalades, and jams, juice and squashes will be profitable occupations. Short-term schemes aim at bringing about immediate increases in fruit production by increasing the area under quick yielding fruits like papaya, banana, pineapple etc., and by improving the standard of cultivation in the existing gardens and orchards. The Government of India propose to offer a subsidy to Provinces and States to help in this direction. In addition to fruit development nurseries are to be established throughout the country. Every province will have a number of nurseries capable of nursing lakhs of plants of good varieties for supply to fruit growers at reasonable prices. The cost of

the maintenance of these nurseries will be shared between the Centre and the Provinces or States. A scheme is in view for paying stipends and training 2000 malis to start with. Agriculture graduates are to be trained in horticulture and put in charge of development schemes. With the success of these schemes the fruit industry, it is safe to assume, has a promising future.

Canada's Foreign Trade:

The value of Canada's exports for 1944 reached the record figure of 3500 million dollars. Compared to 1943 the value of exports rose by 20 percent. Merchandise imports were of the value of 1490 million dollars, an increase of 3 percent over the previous year. The phenomenal development of exports is due, directly or indirectly, to the war. Official estimates show that war materials proper, munitions and metals as well as foods, exported under Mutual Aid accounted for about 48 percent of the value of all exports from Canada in 1943, and that indirect war exports accounted for another 27 per cent, leaving only about 25 percent for strictly commercial trade along established lines. An analysis of Canadian exports in 1943 indicates the percentage distribution of this trade: to the U.K. 41 percent of munitions and 59 percent of indirect war material and commercial foods and 60 percent munitions and 40 percent of other goods to other parts of the Empire; the United States got 33 percent of munitions and 67 percent of other goods; 92 percent of goods sent to other foreign countries was munitions and only 8 percent was other commercial goods. The indirect war exports comprise goods which normally enter into channels of civilian consumption but have now been largely diverted into the war effort, with the consequence that their demand has increased enormously. Hence the large exports of such items as foodgrains, flax seed, industrial alcohol, lumber and wood pulp as well as foodstuffs and textiles to meet the needs of civilians predominantly engaged in war work. Even strictly commercial exports have been affected by the war for while some have been greatly curtailed by controls and shortages others have been stimulated by increased demands. The comparatively high percentage of munitions trade with the other Dominions and Colonies as well as with foreign countries other than the United States, is due to military and defence operations in various parts of the world. The outstandnig feature of Canada's exports is the increase in exports of foodstuffs over 1943. The value of wheat shipments has doubled, feed grains and flour are over one-third higher, meat over one-half, with minor increases in fish and eggs. Butter shipments are down even below the prewar level, but those of cheese have been well maintained. Moderate increases are shown in the major items of forest products. Thus the final stages of this war find Canada with an economy greatly expanded by her present export markets.

Rehabilitation of Indian Forests:

Though planless destruction of forests has been going on in India for over sixty years, Indian forests have always answered the calls of crisis. During the war of 1914-18 and also during this war Indian forests have come to the rescue of the Government in supplying the materials needed for the construction of ships and for the production of other vital materials. As Professor E. P. Stebbing calls it, the forest forms a huge 'factory' which can face new demands provided sufficient labour is available and research work progresses. When the shipping position made it impossible to get imports of several forest products, India could find substitutes

To cut costs and increase PRODUCTION
MANUFACTURERS! Think of the Post-war competition now. Remember your very existence after the war will depend upon your being able to offer quality goods at competitive prices. So reorganize—make your production more efficient, more economical. Use tools that will save time, save material—save costs—use BATU TOOLS.
BATU TOOLS, for their extreme durability and high resistance, help to cut costs, increase production, maintain quality and provide trouble-free factory operations. Besides, their accuracy ensures better out turn—minimum spoilage.

in some lines to the satisfaction of the War departments. The wartime achievements of our forests should not blind us to the fact that the forest 'factory' should not be too heavily exploited because it forms a valuable capital capable of enriching the country. The people of the land have got a right to expect that forests are well planned and preserved for comfortable living. A forest is a delicate organism and can be easily and permanently ruined by hasty and ill-judged fellings. The utilisation of forests for military or civilian purposes should always be under the guidance and regulation of expert forest officers who alone know how to preserve the permanent interests of the country and, at the same time, serve immediate and temporary needs. Forests are necessary to avoid soil erosion, to maintain the temperature of the locality, for the manufacture of several drugs and medicines and for supplying firewood for the civilian population. Trees are not like agricultural crops; they can be felled easily but it takes time to produce them. Some of the most valuable trees like timber if once destroyed recklessly, cannot be produced except after a long number of years. History has recorded that populations have a tendency to move to more salubrious parts, or gradually die out, owing to the destruction of neighbouring forests. Agricultural operations will be affected, soil will be impoverished and migration of populations will result if forests are not properly planned and safeguarded. Five years of war have resulted in hasty felling in different parts of the world including the U.S.A. But now that war is over, governments must take proper steps to rectify the past mistakes of commission or omission. Canada, Australia, Sudan and Kenya have taken active steps in evolving correct forest policies. The Government of India also have published their Blue Book on post war forest development. It is well to remember in this connection that in advanced countries the governments try to keep at least 20 to 25 percent of the land under forests in India the percentage is dangerously low namely, 13 percent. Early rehabilitation work, therefore, is most important in India and we hope that the provincial governments as well as the Central government will take up the matter without delay.

Industrial Standardization

The Government of India propose to introduce the decimal system of coinage in accord with progressive practice the world over. Of more immediate importance to the development of the country is the establishment of a central organization which will lay down the standards of industrial practice and define the specifications of the products of industry. The growth of wartime industrial activity and the prospect of a planned drive to accelerate development in the post-war period underline the need for an organization which will formulate standards and revise them periodically to keep abreast of scientific and technical advance. So far as standards of measurement are concerned convenience and common sense alike dictate the adoption of internationally accepted units. And scientific organization in India is yet ill-equipped to undertake the determination of the Standard Constants whose values are known with a high degree of precision, in the hope of effecting improvements. But industrial standards fall in a different category, and call for independent action.

India, so far, has been making use of B.S.I. standards and the Government of India makes an annual contribution to B.S.I. funds. This makeshift arrangement could be justified so long as industrialisation proceeded at the pace of the bullock-cart and the range of materials involved was limited, so that devising Practice Standards to suit local

conditions did not present a difficult problem. But with a programme of rapid expansion under way, *ad hoc* arrangements will prove inadequate, and it will be necessary to set up machinery to devise standards of quality, performance and practice to suit Indian conditions. The policy of transplanting standards defined with respect to entirely different conditions, climatic and otherwise, will be no better than having no standards at all, as the necessity of individual adjustment in actual working will lead to chaotic conditions. It is of interest to note in this connection that in addition to B.S.I. standards which are in general use, some engineering concerns in India have recently begun to adopt American A.S.A. standards as they permit "tolerances" more in keeping with manufacturing practice.

The task of laying down standards for adoption by industries throughout the country calls for the establishment of an organisation similar in function and structure to analogous institutions in Great Britain and the U.S.A. The constitutions of the British Standards Institution and its American counterpart, and the procedures adopted by them are described in the current number of the Journal of Scientific and Industrial Research.

Soviet War Finance:

During the five years from 1940-45 Soviet revenues have nearly quardupled. From about 80,200 million Roubles in 1940 the revenue of the U.S.S.R. rose to 209,700 million Roubles in 1943 and now stands at 305,000 million Roubles in 1945. Both revenue and expenditure have increased in Soviet Russia as in other capitalist countries but there are also some interesting differences. During the first two years of the war 60 percent of State revenues was diverted to war purposes; but this percentage fell to 51 percent in 1944 and lower still to 45.1 percent in 1945. It is remarkable that, even before the war is over, provision for a rehabilitation of the devastated areas has increased by leaps and bounds. 28,600 million Roubles have been set apart for education and the grant of 30,200 million for Public Health is a feature which capitalist countries can well emulate. The population policy of the U.S.S.R. Government has been to encourage rapid increase in view of wartime ravages and this is reflected in the huge grant of 14,000 million Roubles to mothers of large families. Before 1940 nearly fourfifths of the Soviet budget was derived from the profits arising out of State and co-operative enterprises. But now this source has come down to 50 and more and reliance is placed on general taxation, loans and compulsory and voluntary contributions.

Plan for Bombay:

The document on Post-war Reconstruction presented the other day to the Provincial Board of Rural Development, Bombay is characterised by realistic approach and great practical commonsense. The schemes contemplated under the plan have been worked out in great detail so that their impact can be understood and the demands to be made on the public appreciated. The Reconstruction schemes fall under four main categories, viz., Special priority schemes, All-Province schemes, Particular Area schemes and Concentrated Area Schemes. The Special Priority schemes which are intended to bridge some of the gaps in the economic front and overcome the likely bottlenecks, will prepare the ground for translating other schemes into practice as soon as hostilities cease.

The object of the Government Reconstruction Plans is said to be "to raise the economic level of the countryside, increase the well-being of its inhabitants and generally to improve the Province in every aspect of its social, economic and cultural life, both urban and rural". One will at once agree that the aim is laudable. But there are certain hurdles which have to be cleared before this object could be achieved. The Bombay Presidency is, and has always been, inextricably mixed with various States. Till recently these states were in political relations with the Government of Bombay. If economic development is to be planned on a comprehensive and effective basis there should be co-operation between the Province and the States. The acting Governor of Bombay rightly pointed this out when he said "Even constitutional developments cannot alter hard geographical facts and I think we all realise that for real development, the States and the Bombay Presidency remain still wedded and that no divorce of interest is really possible". To solve problems of land improvement through the construction of electric Grid system, of irrigation and road construction, Sir Henry suggested some authority as the T. V. A. which will deal with problems which affected more than one Province or State. So also co-operation is necessary where state villages are scattered in British territory and *vice versa* for the control of epidemics. The State may not have the finance to meet the situation as effectively as may be necessary. It is indeed a happy augury that the States concerned have accepted the invitation of the Provincial Government to discuss their post-war reconstruction scheme.

Potato in Assam:

India needs more potatoes and Assam is trying her best to increase her output as early as possible. Already 30,000 acres are under potato cultivation in this province and the work of improving potatoes in Assam, which was started in the Upper Shillong farm in 1909, has recorded excellent progress. More than 50 improved varieties have been tested so far of which a dozen varieties have been found to be of excellent quality and of high yield. The Shillong farm has conducted experiments in the acclimatisation of and trials with most varieties of potatoes obtained from Europe. Experiments regarding correct manuring have proved that the best chemical fertiliser is a mixture of niciphos at 200 lb. and sulphate of potash at 200 lb. per acre. Proper manuring results in a yield of about 200 mds. per acre under Upper Shillong Farm conditions. Prevalence of disease is the reason for the extraordinary low yield in the field and the

OBJECTS

The Company has been formed for the purpose and with the object as setforth in the Memorandum of Association of the Company and in particular for carrying on the business of Mica mining, dealing in Mica of all varieties—manufacturing of Mica and Micanites of all varieties and forms, condensers for Radio and other Electrical machineries, Black and Yellow adhesive Tapes, Empire Cloth and tubes etc.

PURPOSE OF THE PRESENT ISSUE

A very big mica mining property comprising more than 8000 acres of land has been acquired by the Company. This is on the world-renowned Mica belt of Hazaribagh and contains most important Ruby *Muscovite* Mica, the the quality of which is considered by experts to be the finest in the world. The acquired property contains a number of mines and the Company has already commenced working in some of them and has also opened several new mines and started development of the same. The rich veins detected in them promise excellant potentialities. Besides the existing mines, the unexplored regions in the acquired area, according to the opinion of the experts, contain further rich deposits of mica. It is a well known fact that. if modern scientific mining methods are employed a good mine generally proves relatively in-exhaustible in its contents and thus becomes a source of untold wealth.

In view of the above, the Company has contemplated to develop the Mica Mines and to employ most up-to-date and scientific methods and work them with the latest machineries.

The above Scheme of the Company has also been approved by the Government of India and they have expressed their eagerness to give all possible assistance to the Company for attainment of its object.

IMPORTANCE AND PROSPECT OF MICA INDUSTRY.

In a very real sense, our vast electrical development is a monument to Mica, the one indispensable di-electric. The history of the intense Electrification that has been in progress during the last three decades, is the history of modern Mica Industry.

INDIA HAS A PRACTICAL MONOPOLY OF PRODUCTION DUE TO THE AMOUNT AND QUALITY OF HER MICA DEPOSITS AND THE ABUNDANCE OF LABOUR.

AFTER THE TERMINATION OF WAR, INDUSTRIAL DEVELOPMENT WILL BE MORE RAPID AND EXTENSIVE. INDUSTRIES BOTH LARGE AND SMALL. AGRICULTURE. TRANSPORT, ETC., WILL BE DETERMINED TO A GREAT EXTENT BY THE DEVELOPMENT OF ELECTRICITY.

plains where 60 to 90 mds. only are produced per acre. In an article on 'Potato in Assam' (Indian Farming, December 1944) Mr. H. K. Nandi points out several lines of improvement with particular reference to the tackling of potato diseases. The Central Potato Breeding Station established in Simla in 1936 has already utilised the experience obtained at the plant breeding institutes in the U.S.S.R., Germany, England and South American countries and has improved several potato varieties combining high yield, good quality and disease resistance. The Department of Agriculture, Assam, is supplementing the Simla breeding station and it is hoped that with systematic education of the agriculturists in the correct method of breeding potatoes, the production of Assam potatoes would be more than doubled in the near future.

Future of Germany:

The problem before the world is two-fold: first, the elimination of the most obvious danger—the renewal of the war by Germany and Japan, second, the construction of an international organisation with the vitality and the power to handle the unpredictable threats to peace which are certain to arise. It can be argued that the first problem will be automatically taken care of if the second is solved. But just as ordnance experts require atleast two safety devices to protect a high explosive bomb from premature explosion politicians need employ similar technique. History teaches us that a once powerful and strong nation, defeated in war, will cherish the aims of renewing the war at the first opportunity. Hence J. B. Conant, President of the Harward University suggests that Germany and Japan should be disarmed and kept in that condition for another 30 years till the next generation, now unborn, has grown up and come to power. Bitterness and spirit of revenge might disappear by then. By that time an international organization should have gained sufficient support and strength to guarantee German industrial scene and a considerable degree of redistribution of European industry. Germany and Japan must both be prevented from the manufacture or use of air planes even for commercial purposes for years to come. Conant argues that a consideration of economic repercussions should not stand in the way of the disarmament of Germany. Many others hold the view that Europe will be in chaos for a decade without the rebuilding of Germany. Is Conant's proposition practicable? Conant's plan and Morgenthau's plan which aims at making Germany an agricultural country seem to us ot be extreme views. Conant further suggests that for a long period of time there must be available to the world from year to year information as to the potentialities of Germany and Japan for waging war. A reliable public report each year of their industrial status in so far as it affects rearmament will be needed, particularly during the period of five to 15 years from now.

Yet to meet its master!

Mysore Sandalwood Oil is the purest and highest grade of Sandalwood Oil available. Whether for pharmaceutical use or manufacture of soap and perfumery—Sandalwood Oil bearing the name 'Mysore' stands unsurpassed.

Mysore SANDALWOOD OIL

A MYSORE GOVERNMENT PRODUCT

THE MICA MINING & TRADING CO. OF INDIA LTD.—*Contd.*

IN POST-WAR PLANNING, ELECTRICITY OCCUPIES THE FIRST AND FOREMOST PLACE AS IT HOLDS THE KEY TO ALL THE OTHER INDUSTRIES. BUT ELECTRICITY DEPENDENT ON MICA, THE CORNERSTONE UPON WHICH RESTS THE MIGHTY STRUCTURE OF A NATION'S INDUSTRY. WITH THE GROWTH OF INDUSTRIAL ACTIVITIES MORE EXTENSIVELY, AFTER THE WAR, THE DEMAND FOR MICA WOULD NATURALLY INCREASE AND THE PROSPECT OF IT IN POST-WAR PERIOD IS FULLY ENSURED.

ACTIVITIES.

The Company has been supplying Mica to Joint Mica Mission, the nominated sole Mica Purchasing Agent in India for United Nations to their entire satisfaction.

The Mission has been exporting and supplying Mica to different allied countries and the product of the Company has by this time, earned high reputation amongst them. The good will thus created, will be an invaluable asset in post-war period when the Company will be in direct touch with all Mica Consumers of the world who are eagerly awaiting to open direct connection with the Company.

To have the best advantage of dealing direct with the consumers the Company intends after the war to open a branch in New York and another in London the main Mica consuming and distributing centres of the world.

DIVIDEND.

THE COMPANY HAS BEEN TAKEN OVER BY THE PRESENT MANAGEMENT IN THE YEAR 1941. SINCE THEN IT HAS BEEN PAYING REGULAR DIVIDENDS TO ITS SHAREHOLDERS AND HAS PAID TOTAL DIVIDEND OF 32½ PER CENT ON ORDINARY AND 28 PER CENT ON PREFERENCE SHARES KEEPING A DECENT AMOUNT IN THE RESERVE FUND.

Clive Street Gossip

The Rowlands report is a good companion of the Woodhead report. If I may indulge in a curious, but strikingly suggestive, mixture of idioms, I may say that they both come from the same Augean stable. Bengal apparently needs more than one Hercules to cleanse the public and official life of the province. I do not remember the details of the old Greek legend, but I dare say the stink rose to Heaven before Hercules was asked to turn the waters of the river over the vast cesspools of the Augean stable. In this province, the stink took the form of the famine of 1942-43 and the obvious incapacity of the province to put provincial autonomy to good use though, unlike the other two presidencies, it retained all its constitutional forms. It is quite understandable that among the people of the province a new sensitiveness to criticism from foreigners has slowly grown up and has set up its own peculiar obstacles to a proper appraisement of the issues involved. But there are times when the first step in securing progress is to overcome such sensitiveness, to acquire the ability to consider criticisms inspite of the possibility of their being not wholly bonafide and to assimilate to the fullest extent the bitter lessons of past experience. I quite sympathise with the mood of the public in Bengal. While there is no doubt an eagerness on the part of the public to obtain an expert diagnosis of all the troubles and consider every prescription that may be made, there is also a degree of intolerance of criticism combined with a natural suspicion that such criticism may be politically motivated. Supporters of the ministry are apt to regard criticisms of the past as gratuitous additions to the armoury of their political opponents. The latter, comprising as they do, largely of Congressmen and the congress-minded public, see in criticisms of the ministry a clever plan to secure a return to the autocracy of the official framework. But if one remembers the vast scale of suffering caused in recent years and, what is more, the more or less chronic inability of the administration to cope with the increased tasks of to-day, not to speak of the ponderous tasks of nation-building of to-morrow the customary attitude will be seen to be a great impediment in the way of much-needed reform. After all, no one can deny that what we have witnessed in Bengal is only a particularly aggravated form of what is present in different degrees in other parts of India as well. No part of India is free from the food problem that proved so insoluble in this province. Nor can the administrative system in the other parts of India be said to be fully qualified and equipped for the immense tasks of nation-building which it will have to tackle before long. It is just possible, therefore, that the two enquiries that have been carried out in Bengal have lessons for the rest of India as well.

* * * *

In the appraisement of the Rowlands and Woodhead reports, the emphasis in the initial stages is on the features peculiar to Bengal. The peculiarity of Bengal, to my mind, is its extraordinarily long run of ill-luck. In her demographic trends, in the development of her economic life, in the twists and turns of her internal politics and in the vicissitudes of her relations to the politics of India as a whole, Bengal has been singularly unfortunate. What we see to-day is largely the effects of prolonged misfortune. And misfortune has two different kinds of effects On the one hand, it sours and embitters the outlook of the victim, disables him for correct self-estimate and renders him unfit to profit by criticism, well-intentioned or otherwise. On the other hand misfortunes enable even deliberate oppressors to pose as benefactors and prolong the facility for such outrageous pretence. There is besides a type of mentality which looks on misfortune as crime and not only denies the sympathy that is due, but is also anxious to make out that the sufferings are deserved. It is hardly necessary in this context to give the long list of Bengal's woes. The Permanent Settlement, for instance, which has had its diverse effects on all spheres of life, the partition of Bengal and its incidence and upshot, the terrorist movement with its impact on the psychology of Government and people alike and, perhaps most important of all, the ugly deformities caused in its public life by the sudden collision of the forces of a high-spirited nationalism with those of a crudely realistic communalism—all these have gone into, shall I say, the unmaking of Bengal. The Woodhead and Rowlands committees have been called upon to enquire into the relation between these chaotic conditions and the administrative tackling of specific problems. The Woodhead commission had a narrower scope which was confined to the crisis created by the food shortage. The Rowlands Committee has a far wider scope. The crisis that occasioned the Rowlands enquiry, let us remind ourselves, is by no means less serious than the crisis that occasioned the Woodhead Commission. If in one case, people starved in millions in the streets, the other has shown vital defects in the administration. As an example, one has only to cite the strictures passed by the Public Accounts Committee on public expenditure in Bengal. One can also to cite the failure of the Bengal Government so far to put forth a scheme of economic planning such as most other provinces have been able to formulate. And, apart from specific instances, one can see dissatisfaction around at the increasing inefficiency of the system of administration which has not been reduced to any considerable extent by getting a number of senior officers from the Central Government Both in the case of the food crisis and in the case of the cloth crisis, it has been openly admitted that one of the main defects is the lack of competent officers.

If the administration has been unequal to the increase in the tasks of war time, then how much more unequal should it prove to the increased tasks of the period of planning that lies ahead. This thought should suffice by itself to set afoot the kind of enquiry that Sir Archibald Rowlands was called upon to carry out. I do not know if the British Government had other motives in instituting this enquiry. From the comments in some sections of the Press in Calcutta it would appear that the Government had less commendable motives than the one I have mentioned. But the motives are to a large extent irrelvant to the merits of the issues raised or the findings and recommendations contained in the report. For my part, I set very high value on any careful examination of the impact of provincial autonomy and democratic government on the system of administration in the provinces. From bureaucracy to representative government is a vast change; and our people and our politicians are by no means so disciplined that they can accomplish the change without any considerable unsettlement. If democracy in India had meant nothing more than the installation of the traditional leaders of the people in seats of power, it would not perhaps have occasioned any serious change in the efficiency of administration. But unfortunately the British Government had queered the pitch for democracy in India by setting special communal electorates of various kinds and encouraging them to claim specific shares in governmental employment. We have, therefore, had something more than democracy ordinarily understood. When Indians first claimed equality of status with Europeans in the public services, the claim was made on behalf of Indians, who were definitely more qualified for the jobs than their European incumbents. Every concession to those claims meant an increase, rather than a decrease, in efficiency. Far other is the case with the claims that have been made and conceded to the various com-

munities. Qualifications and standards have had to be definitely lowered. Ministerial jobs have gone in some cases to people who, if they had belonged to a different community, would not have been admitted to even the lowest cadres of the public services. The low standards that sometimes obtain in the top rungs automatically lead to lower standards in all ranks of the administration. The impartiality, which the old civilians practised as a matter of course wherever the interests of the ruling classes were not touched, became increasingly difficult to preserve. All these results, one may expect with what may be called a change in the ruling class. Provincial autonomy accentuates these evil effects since it had to work in conditions of troubled transition.

* * * *

To some extent, these evils are the common lot of all the Provinces In the case of Bengal, they became more pronounced and more glaring, firstly because communalism is a more powerful factor and secondly, because conditions in this Province have for long been different from those of the other provinces in many material respects. The Rowlands Committee deserve credit for bringing into prominence one important feature of the administration in Bengal, viz., the lack of a hierarchy of revenue officials such as there are in Bombay, Madras and other provinces where there is no permanent settlement. The revenue officials in the other provinces provide an organisation which can claim an extraordinary degree of versatility and even omniscience in matters of administrative importance. Whenever the Government takes on new tasks, these officials are in a position to provide at least a sound start for their ultimate accomplishment. It has now been brought out that the lack of such officials was responsible to some extent for the fatal delay in the execution of a policy of direct procurement and distribution of food supply by the Government. Sir Archibald Rowlands is led by this discovery to suggest that the public administration in Bengal cannot be toned up till the Permanent Settlement is done away with and the recommendations of the Floud Committee given effect to in full.

* * * *

While thus one serious defect of the administrative system in Bengal as compared with the other Provinces should be made up by the abolition of the Permanent Settlement and the insitution of a hierarchy of revenue officials, there is also the positive aspect of making the system more suitable for the administrative tasks that await the Government in the future. The Rowlands Committee suggests that the District Magistrate-Collector, who has till now been a sort of police man and tax gatherer in one, should also be the head of the district administration for the discharge of the more positive functions of Government in this country. Scrutiny of the record of Ministers in the past has also led to the suggestion that the function of the ministry should be limited to the initiation of policies and that their execution should be left in the hands of the permanent officials. This implies that Ministers should not interfere with appointments and transfers below certain grades and that, generally speaking, Ministers should not act as departmental heads.

* * * *

It is this aspect of the recommendations of the Rowlands Committee that has raised a suspicion that the British Government are endeavouring to revive, in a covert way, the autocracy of the old civil service. And it is in relation to this article to set the background against which the recommendations have to be viewed. It is not for me to suggest that there is no ground for such suspicion. What I wish, however, to emphasise is that these suspicions, valid or otherwise, should not determine the criterion of judgment so far as these proposals are concerned. There can be no gainsaying the fact that public administration in Bengal has all along struggled under the handicap imposed by the lack of revenue officials such as other Provinces have had and that the deleterious effects of representative Government on the efficiency of the administration are far more marked in this Province than in others. If these facts are granted, then we can have nothing to say against most of the proposals of the Rowlands Committee, except perhaps the suspicion that the adoption of these recommendations may tend to strengthen the hands of the foreign officials.

Olympus

(From Our Correspondent)

New Delhi, May 15.

The officially sponsored Victory-Day celebrations were held on Tuesday. Connaught Place presented a colourful spectacle. The lack of spontaneity and non-official participation in these celebrations was perhaps not a very noticeable feature, but all the same discerning observers might have had a feeling that genuine public rejoicing was not so evident in spite of the Mela attractions. One literally sees red in Connaught Place the flame of the forest trees being all in bloom but seeing so much red in New Delhi, one supposed, is not symbolic.

* * * *

The Famine Enquiry Commission's report has been before the public for nearly a week and its recommendations will have been familiar by now. According to the Commission only one section of the community suffered from starvation—the poorer classes in the rural areas. The well-to-do in industrial areas and greater Calcutta and elsewhere did not go short of food. As has been stated, after religion and race the greatest dividing line that runs through the Indian people is distinction between town and country. In the former we have most of the forces which drive us forward and in the latter forces which hold us back. As the Commission observes "It is undeniable that throughout 1943 the necessary supplies reached Calcutta and a considerable proportion of the population of greater Calcutta obtained their supplies at subsidised prices from the employers' shops or the controlled shops. It is also true that a relatively large proportion, about two-thirds of the supplies reaching Calcutta under the control of Government, much of which was secured from outside the province, was consumed in greater Calcutta. The quantities sent to the districts were only a small fraction of the requirements of the poorer classes in the rural areas who were unable to buy rice at prevailing prices." The Commission also stated that there was unprecedented profiteering and that it has been reckoned that the amount of unusual profits made on the buying and selling of rice during 1943 was Rs. 150 crores, that these enormous profits were made out of the calamity and that in the circumstances, profits for some meant death for others. A large part of the community lived in plenty while others starved, that there was much indifference in fact of suffering and that corruption was widespread throughout the province and in many classes of society.

Profiteering in other industries would, doubtless, provide as gruesome reading as the above were the full facts exposed to the public. Time was when the consumer was wooed and cajoled and his patriotic sentiments were roused to encourage Indian industries but at a time when the consumer was deprived of facilities to import his requirements from competing markets and was virtually at the mercy of Indian industries they have given him a deal which, to say the least, was not fair or square. A compilation of instances of such profiteering would be a highly revealing document.

* * * *

The public does not appear to be quite familiar with the airmail service operating within India. At present there are the following services; (1) A sea plane service between Calcutta and Karachi operating twice a week; (2) a land plane service between Calcutta and Karachi operating three times a week; (3) Tata's land plane service between Karachi and Madras operating five times a week. The frequency of all the services is the same in both directions.

The Central Board of Revenue have explained in a press note the purport of the Indian Income-tax Amendment Ordinance, 1945. The earned income exemption applies only to incomes which may be described as derived from personal exertion and does not apply for example to the income of companies or to income derived from dividends or from interest on securities or from property. Furthermore it applies only in respect of income-tax and is not applicable at all in respect of super-tax. All salaries earned in 1945-46 will obtain the benefit of earned income relief and in making deduction of tax at source under section 18 (2) of the Income-tax Act earned income relief will be given in respect of salaries paid during 1945-46.

Total subscriptions to the Central Government's loans during the 3 months ending 28th April were Rs. 83 crores made up as follows: Rs. 18¼ crores in the 3% Victory Loan 1957, Rs. 11½ crores in the 3% Second Victory Loan 1959-61, Rs. 27 crores in the 3% First Development Loan and Rs. 26¼ crores on other loans on sale through the Reserve Bank of India.

And amendment has been made to the War Risk Factories Insurance Ordinance and Rules "so as to cover accidental damages occurring as a result of an explosion or fire which involves any explosive munitions or other dangerous things required for war purposes and which happens, or is caused by, through, or in connection with, the manufacture, storage or transportation of any such explosives, munitions or dangerous things".

* * * *

Telephone users in the ports will be much concerned to hear that Government propose under Rule 17 of the Defence of India Rules, to give powers to the Telephone Department to listen in to telephone calls. The object is to prevent leakage of valuable information regarding defence plans and intentions reaching the enemy. The public are earnestly requested in their own interests and those of the fighting forces to assist by refraining from divulging any information over the telephone which might assist the enemy. The public are advised that topics such as the following should be avoided. Locations of military or air force units, descriptions of defence armaments or equipments, plans or intentions connected with future operations, communicatios such as the use or conditions of roads, railways, etc

* * * *

The first conference of the panel of scientists which has been formed to advise the Food Department on food technology has now taken place. The objects are all laudable, but it has been one's experience that there has been no Department where more has been talked and less accomplished than by the Food Department. The initial errors and mistakes which characterised the Food Department's work in its early years have been criticised by the Famine Enquiry Commission, and the Department might well be held culpable jointly with the Bengal Government for the deaths of nearly two million people and for the misery and privation caused in Bengal.

Hill-Bird.

(Continued from previous page).

If certain changes are needed in the light of past experience, how can we look on these suspicions as a decisive argument against their adoption? After all, it depends upon the political status of the country whether there is, or is not, room for such suspicions. And in fact, no public problem of any importance can be discussed to-day except on the basis that we are or will soon be masters over our own affairs. When the form of the administrative system is considered, the sovereignty of the people is by no means brought into question. What we are concerned to ensure is that, once the will of the people is translated by responsible Ministers into clear-cut policies, there will be no hindrance thereafter to their efficient execution. Representative Government does not require that public officials should be fully subjected to the whims and fancies of every Minister. I may recall here a speech of Sir John Anderson, when he was Governor of Bengal, in which Sir John made out that in some respects the permanent officials derive their powers, not even from the legislature, but directly from the very constitution. I would not in any craven fear of an efficient bureaucracy give room for corruption and inefficiency. Whether the will of the people rules supreme or not is dependent upon the character of the people. It is up to the political parties to ensure that the permanent officials act according to the wishes of the Ministers in all questions of policy.

* * * *

I hold, therefore, that the report of the Rowlands Committee contains many a point for calm and dispassionate consideration. As I began by saying, it has its application and use not only for Bengal but for the whole of India. All over the country there is need, which will increase rather than decrease with time, for an administrative system of growing integrity and efficiency. Wherever we may turn there is evidence of the inroads of favouritism in Governmental administration I do not hold this to be an index of permanent inferiority in this respect. For, it is natural, when you see in seats of power and importance familiar men of your own race instead of the aloof foreigners of old. But the tendency must be checked. Proneness to hand chits to this officer or that must be established. We must learn to see no new bogey of official tyranny in the stipulation that Ministers should have nothing to do with appointments and transfers below a certain level. And if the tasks of economic planning require that every district should have a more or less supreme head to co-ordinate work in all departments, we must learn to see in him a necessary instrument of ambitious plans and not a new local tyrant

I may say, too, that the assumption of the Finance Membership of the Government of India by one who has had the opportunity of studying closely the defects and requirements of Provincial administrations is a happy augury for the future.

"Eavesdropper".

The attention of our readers is drawn to a correction given below relating to the Govt. of India D. G. M. P. General Service Electric Lamps advt. which appeared on page 508 in *Indian Finance*, dated 21st April. In the last column giving "Retail rates, i.e., dealers, Selling to General public each" the words per dozen should be deleted.

Gateway of India

(From Our Correspondent)

Bombay, 15th May.

Market reactions to Victory Day in Europe have been of the most hopeful kind, and at this stage at least they indicate a refreshing absence of defeatism in the minds of the investing public and merchants. The protracted delay in the announcement of final German surrender had generally led people to expect that V. E. Day would touch off a bout of considerable selling pressure. Actually, save for a slight marking down of values in the beginning, stocks and shares gave a very good account of themselves notwithstanding reports of a lower Tata Steels dividend. It is still the view of some that the decline has not gone far enough and they attribute the present firmness of the market to the formation of a powerful bull clique of Marwari Operators, who are credited with the intention of raising share values anyhow. In fact, they have not allowed the market to decline at all, and investors of the smaller kind looked in vain for an opportunity. The Giltedged market was on the whole steady. The bullion market provided the most baffling surprise and many a prophet saw his predictions go awry. The beatitude of the bears proved to be of all too short duration. The gold price, after an initial sharp decline to Rs. 68 for a brief while, shot up again to a level higher than pre-Victory and the bulls are once more trying to squeeze the bears. Hoarders are not disgorging their stocks ; on the other hand, offtake is well sustained and considerable; and to cap it all, the Reserve Bank, in its infinite mercy and in this of all possible moments, effected a sudden change in its sales policy. In fact, it supplied the market only about 25,000 tolas on two working days last week and about 555 silver bars at the same time. This attitude looked strange against the background provided by the stock position estimated at 50,000 tolas and a daily offtake of 20,000 tolas. It is clear that inflation in India will die hard, and that, at any rate, those in authority do not desire a sharp deflation.

* * * *

Even the cotton market stimulated some enthusiasm and I. C. C. July which dipped to Rs. 408 on the 7th recovered its poise on trade buying as well as short covering; the highest price touched was Rs. 424 on Saturday last. In view of the good enquiry for better styles and the expectations of export demand, many people are prepared to go long in cotton. While the world statistical position, which shows a record carry-over estimated at 27.2 million bales on August 1st is anything but satisfactory, the expectations of increased domestic consumption as well as of a higher volume of trade in 1945-46 would probably justify a higher price for cotton. Indian cotton is still cheap, at least for Indian mills. The release of some shipping space for the transport of merchandise may bring some relief, and China is stated to have placed an order for 1,000 tons of Indian cotton in June. Restrictions on trading with France, Belgium and Spain are said to have been lifted and the prospects of cotton exports to these countries are brighter and there is already enquiry for old crop Berar Deshi Dhollera and Mathia.

* * * *

Important recommendations have been made by the Agricultural Commodities Price Fixation Committee to the General Policy Committee of the Government of India in regard to the fixation of prices in the post-war period and the setting up of a suitable machinery to enforce them. The Committee, which was presided over by Sir Pheroze Kharegat in the absence of Sir V. T. Krishnamachary, discussed the principles on which fixation of prices of all sorts of agricultural produce should be made. It started with the premise that a substantial measure of Government control in the post-war period over the procurement, distribution and prices of commodities will exist. It is also said to have recommended that, if a minimum price is to be assured to the grower, the State should give an undertaking to buy all the surplus in the market which could not be disposed of at determined prices. The Committee considered it desirable to maintain buffer stocks to stabilise the price scheme. A more thorny problem was posed by the question as to how the benefits of price fixation could be equitably distributed among the different agricultural classes ; and that led up to the question whether there should be State monopoly of exports and imports to implement to a fixed price policy. A new but wise suggestion was made that wages to the agricultural classes may be paid partly in kind. Doubtless, the Committee's recommendations will be of great value when it submits its replies to the draft questionnaire issued by the Government of India. A Committee, which includes Dr. L. C. Jain, Dr. B. K. Madan, Dr. V. K. R. V. Rao, and Prof. C. N. Vakil in its personnel, may be trusted to draft the blueprints of an adequate agricultural price control policy.

* * * *

Gandhiji's gratuitous aspersions against our industrialists proceeding to London naturally drew from them emphatic repudiation. Mr. J. R. D. Tata's statement is a model of restraint in spite of the very grave provocation. But the important part of Mr. Tata's reply resides in this : "It seems that some people have made it their business to misrepresent to Gandhiji the objects of the visit and it is a thousand pities that he should not have sent for some of us and obtained a clarification of our aims before giving expression to his views." It is generally felt that Gandhiji has been rushed against his better judgment, into a sharp exhibition of unfairness. And the fact that Gandhiji got out of the predicament with the statement that his view deals with the hypothetical case and chose to give his blessings to the tour has not really made much difference, or amends. It is, however, very well-known that a section of commercial opinion, of which Mr. Master is a spokesman, feels very strongly about the participation of foreign capital and the association of foreign industrialists in the development of our country. In his quarterly address to the Indian Merchants' Chamber, Mr. Master questioned whether there was any advantage in joint ventures by Indian and foreign industrialists and whether any such advantages were not entirely outweighed by the fresh shackles such association would inevitably bring in its wake. The Committee of the Chamber in a statement to Press has bluntly stated that India would prefer to go without industrial development rather than be a party to the creation of a new form of John Company. The argument on which this view is based is that nothing but a national Government can truly safeguard national industries against the pressure of foreign vested interests.

There is nothing that adds more to the natural charm and beauty of a woman than does a saree. The grace and simple dignity that it gives the wearer is a striking tribute to this colourful costume which can flatter the most sylphlike figure. Lakshmiratan Cotton Mills' sarees are worked in designs simple yet striking and set off by pretty, gay borders. There is a wide and varied selection to suit all tastes. Also shirtings and suitings and other household fabrics —smart and of the finest quality.

(From Our Correspondent)

Madras, May 16.

Certain proposals for making the world organisation a really efficient instrument for the maintenance of international peace are formulated in a joint statement issued under the signatures of the Rt. Hon. V. S. Srinivasa Sastri, Sir N. Gopalaswami Iyengar, Sir Alladi Krishnaswamy Aiyar, Mr. T. R. Venkatarama Sastri, Mr. K. Srinivasan and a few others. The whole fabric of the world organisation, the statement says, for which a charter is being prepared at San Francisco depends upon the maintenance of the sovereign equality of the peace loving states which will be members of it. Otherwise the organisation is in danger of being so manipulated as to serve as a machinery for securing and perpetrating the domination of the stronger over the weaker states. If the proposed organisation is going merely to do equality lip service and is not to contain provisions for implementing it especially for those who do not posses this status injustice will not be eliminated and war cannot be avoided. The signatories also suggest that the Indo-British question should be submitted for the consideration and decision of an *ad hoc* tribunal of competent and impartial outsiders. The proposals have been sent to San Francisco for the consideration of the Conference.

Speaking on "Future of Road Transport" Mr. E. A. Watson, said that it was agreed on all hands that roads were vital for the development of this country. With the development of roads there should be automatic increase in transport. The roads should be planned to meet the requirements of all road users including bullock carts and pedestrians. The manufacture of motor vehicles in this country at present presented certain difficulties but the difficulties could be overcome in course of time and we should begin with the manufacture of parts. But even when motor transport begins to be used more and more, the bullock cart occupied a definite place in our village economy. The target aimed at in this province in the development of roads is to provide access through a good road to every village with a population of 500. The design of the roads, especially village roads should be to suit local needs and cannot be based on Western models. Mr. Watson suggested that bullock carts should be modernised and of improved design if they would be more useful and result in less wear and tear of the roads.

Dr. Millen of the Allahabad Agricultural Institute speaking at Trivandrum expressed his pleasure that Travancore was sending a number of students for foreign study. He felt that the cost of such a programme was small compared to the cultural and practical gains that are to be realised from the interchange of ideas between peoples of different climates and customs. He said he had met many students from Travancore, who were all so enthusiastic about their State that he called them the "Californians of India". But one thing about which no Travancorean could boast was the quality of the cattle, which apparently lacked phosphorous in their diet. Travancore is blessed with many industries and alert educationists. Rubber goods were locally made; glass needed for the construction of apparatus for artificial insemination among animals was available. Dr. Millen, who had demonstrated the use of the equipment, was confident that soon the procedure would enable the improved stud bulls of the State to increase their effectiveness several fold. "We must plan our research so that our questions are put to nature without prejudice," concluded Dr. Millen, "we must not formulate our precepts and expect nature to agree".

An increase in the number of students under instruction in colleges and secondary schools in the Province in 1943—44 is recorded in the report of the Director of Public Instruction, the Government's review on which has just been published. But there was a reduction both in the number of elementary schools and in their strength. The reduction was due to the closing down of a large number of uneconomic and ill-working schools. One of the objectives of the Education Department was that the education of girls should keep pace with the education of boys and the department has generally enforced the condition that in cases in which a single school serves the needs of both the boys and girls of a local area, at least 25 or 30 per cent of the girls of school age of that area should be under instruction in the school. The total number of public institutions specially intended for Muhammadans increased. The number of Muhammadan students in Arts Colleges rose from 918 to 967 of whom 44 and 57 respectively were women. There was a rise in the number of pupils belonging to the scheduled classes in all stages of instruction.

'Communal Problem' was the subject of a symposium held here. Mr. K. Bashyam said that the communal problem in India existed for a very long time. Various attempts had been made for solving it. The Lucknow Pact was one. The position now would have been completely different, if they had not conceded separate electorates. Separate electorates had forced the communities to drift apart. They created extreme communal leaders who wanted to safeguard the separate electorate for their own selfish motives. Thus had come into being separate colleges, chambers of commerce and communal trade unions. He hoped that right-thinking Muslims would bring round their misguided Muslim brethren to the correct view. The Sapru committee, he said, had taken into consideration only two communities namely, Hindus and Muslims. It had not given due attention to the minority communities. Dr. Ambedkar's formula is a timely reminder of this. But, said the speaker, there was one supreme merit in the Sapru committee proposals. It insisted upon joint electorates. If joint electorate was possible any concession to the minorities was worthwhile making.

Airway Port

(From Our Correspondent)

Karachi, May 12.

As was anticipated, the end of war did not create any flutter in the local market. Excepting for a decline in the price of silver and gold, the market has been steady. Those who thought that cotton prices would shoot up have been disappointed. Until the export problem is eased, trading in Indian cotton will be at a standstill. While there is an insistent demand for Indian textiles both in Middle East countries and South Africa, it is really curious that foreign yarn should be allowed to be dumped into this country. Local merchants are also expecting a large consignment of American textiles very soon. No doubt there is increased speculative activity in the local cotton market, but fluctuations in prices are very narrow. There are rumours that ceiling and floor rates would be removed from the next season, in view of the end of war in Europe. Local merchants have got information to the effect that France, Belgium, Spain and Italy have made their cotton purchase principally in America, and even in Liverpool, there is as yet no inquiry for Indian cotton.

Grains are quiet and gram prices are easy owing o no export outlet and accumulated stocks.

Now that the shipping position has eased, large consignments of consumer goods are expected in Karachi very shortly and local merchants have increased their orders.

The first batch of Industrialists' Mission, consisting of Messrs. J. R. D. Tata, A. D. Shroff, Sir Jehangir Ghandy and Mr. S. Mudgaonkar have arrived in Karachi, on their way to the United Kingdom and the United States. Mr. Mudgaonkar belongs to the Administrative and Technical Executive of the Associated Cement. The second batch consisting of Mr. G. D. Birla, Mr. N. R. Sarkar and others are expected here in a couple of days.

Members of the Mission when asked to explain the object of their visit to Great Britain and the United States said that there was nothing mysterious about their mission. During the last five years of the war, industrial technique has made such tremendous progress as to excite the curiosity of the whole world. Naturally India too would like to get acquainted with the post-war developments of industries abroad. Our country would need a lot of capital goods for the development of her industries after the war and members of the delegation would take the opportunity of their visit to England and America to see for themselves how best the country's need for such capital goods could be met.

Mr. A. D. Shroff stressed the need for the establishment of a permanent Tariff Board for examining the cases of industries in post-war India for protection from foreign competition. He said : "I welcome the Government of India's statement on industrial policy mainly because for the first time in the economic history of India, the Government have recognised it to be one of their positive duties to promote the industrial development of the country. I am not in agreement with those who are critical of the Government's intentions to regulate and control the industrial development of India. Obviously, there is a distinction between planned development and development of industries as a result of individual enterprise. During wartime, we have been accustomed to an increasing measure of control from the Government, and it is to be admitted that in so far as Government control is properly administered, it has resulted in some equitable distribution." He added : "It is obvious that planned development of industries cannot proceed unless it is based on a uniform policy applicable to the whole of India. The public disappointment regarding the failure of the Government to make a definite announcement about the institution of the machinery for the protection of industries, both those created during the war and those which may be adversely affected by foreign competition after the war, is fully justified. It is high time that the Government constituted a permanent Tariff Board, through which some industries could obtain from Government immediate protection and relief.

I feel confident that if such a measure is immediately instituted, it would give a tremendous fillip to enterprising men in the country to undertake the risk of starting new industrial projects." Mr. Shroff concluded by saying that the Planning Department of the Government of India was trying to do its best to foster the development of industries in the country.

Sir J. Ghandy outlined some of the post-war projects of the Tatas. At the outset he said, they would start a welding mill. They had also plans to start a plant for the manufacture of rods and hoops and another plan for the manufacture of special metal alloys and tools. Still another proposal which was receiving the consideration of the Directors was a ball and roller bearing plant. Sir J. Ghandy envisaged a bright future for the iron and steel industry of the country. The present capacity of steel industry in India, with the expansion recently completed was 1¼ million tons, and the Government of India in pursuance of their planning for the industrial development of the country, had set a target of production capacity of from 2½ to 3 million tons for the industry within five years of the cessation of hostilities.

A 75 per cent increase in the total production of rice in Sind, a 50 per cent increase in wheat, a 40 per cent increase in cotton and a 700 per cent increase in fruits and vegetables, all in five years, is envisaged in a five-year plan for agricultural development in the province, prepared by Mr. V. Iswaran, Director of Agriculture, as a part of Sind's plan for post-war reconstruction. The increase in the output is to be brought about both by increase in cultivation and increase in yield.

Visualising the plan as a whole, the following targets have been fixed for achievement at the end of the five-year period. Wheat : Acreage to be increased from the present 15 lakhs to 18 lakhs. Rice : With a slight increase in acreage 11,000 to bring the present figure to 14 lakhs, the output is to be increased from 4,65,000 tons to 8,25,000 tons. Cotton : Acreage to be increased from 8,82,000 to 10 lakhs. The area under fruits and vegetables is to be increased fivefold.

Resume of Commodity Markets

The feature of the week is again the strength of the bullion market, the uncertainty regarding the Reserve Bank's sales being a great bullish point. The cotton market also was higher on expectations of larger exports though some selling towards the close has resulted in a slight revision in prices. The raw jute market is steady in spite of the poor mill support while the jute manufactures market has improved on the publication of lower production figures for April. In the piecegoods market business is difficult and arrangements in regard to rationing in the various areas have brought private trading almost to a standstill. The anxiety of consumers to lay is as much stocks as possible, before the rationing scheme comes in force, has increased the activities of black market traders. So that the propaganda for consumers' co-operation to eradicate black market trading has had no effect.

Expectations of a large improvement in exports of jute and jute manufactures to the Continent have been mainly responsible for the steadiness of the raw jute market. As earlier contracts have been nearly fulfilled and the offtake of finished goods from Calcutta has not been such as to enable the consumption of all the jute produced up to now mills are not keen on purchasing further jute stocks especially as the outlook is uncertain and it is felt that, given certain developments, there is every possibility of a decline in prices to the minimum rates. It would seem rather surprising that there is no anxiety on the part of mills to take advantage of the present easy conditions for the internal transport of jute. It is perhaps a move on the part of mill to depress prices, especially for old crop, as it is the only way by which holders of old crop can be coaxed into selling their stocks at lower prices. But upcountry dealers are sure of being able to market their holdings. With an improvement in output mills will have to enter the market before long.

Whatever be the result of this tussle between dealers and mills the transport authorities seem to be rather worried about the present situation. The wastage of available facilities will result in considerable difficulties later. Mills do not seem to be worried about their purchases just at the moment as with the war against Japan being fought far away from India's frontiers, they seem to be of the opinion that inland river and rail transport will be available in plenty. The developments in the raw jute market will thus be of more interest in the next few months.

It was announced during the week that arrangements have been made for direct shipments of jute from this country to Belgium and France. Some shipments are already on their way. The initial requirements of jute and jute goods were supplied by the Combined War Materials Board.

Production figures for the month of April showing a decrease to 79,423 tons from 94,406 tons have come as a surprise to the market as it was generally expected that with the steam-driven units working single-shift it would be possible to report at least the same level of output as for the last month. It will be remembered that March figures were the highest since October, 1944, and were considered very encouraging by the industry.

The decline in output in April is attributed to the scarcity of labour though the argument that diversion of labour from foster units to the steam-driven units when they start working did not result in any net additions to the output, does not hold good, having regard to the experience of March. May figures will possibly show whether labour difficulties have again affected output. Unfortunately there has been a deterioration in the coal situation in last two weeks. There is no clear understanding of the various difficulties involved and unless there is proper co-operation between the parties concerned the jute industry cannot be expected to reach the target output.

The bullion market has not shown any signs of weakness during the week. In fact, prices are higher on balance. It was at first feared that the end of hostilities in Europe would start a downward movement in prices both for gold and silver but with no prospects of imports on private account and the relaxation of export control so long as the war against Japan is waged, bulls continue to dominate the market. So far the fear of losses on bullion purchases was expected on account of the principal traders. It is now said, however, that there is an effort on their part to gradually unload holdings and clear out when the going is good. Such an attempt should be prevented by the Reserve Bank and the operators who tried to corner stocks should be made to pay the penalty. Even if the Reserve Bank sold silver and gold on the scale of the last quarter of 1944 prices can be brought down appreciably. The authorities, however, do not seem to be concerned about a proper level of prices for bullion so long as they are able to make good profits on their sales.

Last week it was mistakenly stated that ready was quoting at a discount over forward. With the re-purchasing by bulls for settlement there was only a narrowing in the premium for ready over forward. There was never at any time a discount over forward.

The end of the war in the West has not apparently resulted in a reduction in purchases of oilseeds. It was reported during the week that the British Ministry of Food purchased castorseeds and linseed in large quantities at approved rates. The groundnut market, however, is neglected. Purchases from the Argentine has kept the British Ministry of Food well supplied. The general tone of the oilseeds market is satisfactory as it is felt that the large export trade with the Continent will be resumed at an early date and there may even be a shortage of certain varieties after some time. For this reason the publication of the First All-India Winter Oilseeds Forecast indicating an increase in acreage under linseed by 6 per cent is to be welcomed. The total area under the crop in 1944-45 is estimated at 2,810,600 against 2,642,000 acres. (revised) Under rapeseed and mustard the acreage is estimated at 2,991,000 against 4,043,000 (revised), a decrease of 2 per cent.

* * * *

According to the survey of the sugar position of all producing areas for the week ended April 30, 1945, production for the season so far has been estimated at 9,59,440 tons. Despatches during the week ended April 30, 1945 were 26,978 tons bringing the progressive total up to the end of April to 3,40,990 tons. Balance of stock as at the end of the month was 6,18,457 tons including 9,067 tons of 1943-43 and 1943-44 seasons sugar.

Calcutta, May 17.

A summary of the reported production of jute goods manufactured on civil and military accounts during April 1945 discloses a total of 79,423 tons which is a decrease of 10,944 tons from the previous month's total production figure. Goods manufactured on military account amount to 8,995, tons or 11.3 p. c. of the total production, representing a decrease of 2,791 tons when compared with the corresponding figures for March, 1945. From July, 1944 to April, 1945 inclusive, the production of manufactured goods of all descriptions amounts to 8,26,205 tons; equivalent to a monthly average of 82,620 tons during the current season. Hessian production during April was 12½ crores yards or 33,019 tons of which 74¼ lakhs yards or 2,843 tons was on military account. Sacking for the same period totalled 10½ crores yards or 43,049 tons of which 1¼ crores yards or 5,706 tons was on military account. Other unspecified descriptions of manufactured goods accounted for 2,909 tons and 446 tons for civil and military requirements respectively. The decrease in the weight of goods produced last month is shared almost equally between hessian goods and sacking goods but the reduction in outturn was not reflected in the stock position of manufactured goods at the end of the month which, as reported in these columns last week, showed a total increase of 2595 tons caused mainly by an accumulation of all types of Government goods. The difference between production in March last and production in April (a drop of 12 p. c. in the latter month) was due to two causes, i.e. labour shortage and our pet bugbear, coal. Although no reports have reached us of active discontent amongst jute workers, many mills are having the greatest difficulty in keeping a full complement of hands and, in not a few instances, mills which are working full time have many looms standing due to a shortage of labour. At this time of the year it is quite normal for many workers whose homes are up-country to return to the mofussil in order to assist with the tilling of the land and the sowing of the crops but we are informed that the exodus from the mills has been greater than usual this year and that there are not nearly enough "budlis" to take the places of the departed regular employees. Also many workers continue to find new employment which offers more remuneration for their labours especially with those military units who employ casual civilian labour. The existing necessity for employing mill labour in shifts has had a detrimental effect, too, as the majority of workers prefer steady employment during normal working hours throughout the day. But the main cause of loss of productive capacity is beyond question irregular and inadequate supplies of coal; a fact which in itself creates those conditions making for an unsettled labour force by keeping large numbers of workers idle at frequent intervals.

A week ago we were able to report a great improvement in the quantity of coal arriving at the Indian Jute Mills Associations' Dump but due to lack of boats distribution from the Dump was impeded and therefore the impact of the increased supplies was not felt as much as it might have been. In any case the recrudescence of optimism (indulged in by certain sections of the trade) engendered by the above mentioned improvement in deliveries of coal has been short lived. The daily average of 91 wagons attained two weeks ago apparently has proved too much of a strain on the authorities concerned who, during the week which ended last Saturday (i.e. 12th inst.), could only muster at the Dump an average of 32 wagons each day.

Recent reports from the U. S. A. indicate that there has been a substantial increase in the supply of jute goods to that country and in all likelihood this fact has been responsible for the decision of the War Production Board of America to grant generous allocations of such goods to the trade in that country. The W. P. B. announced before the end of 1944 that approximately 96,500 bales of burlap (i.e. about 193 million yards) would be allotted to bag manufacturers during the first quarter of 1945. This is an increase of 35,000 bales (i.e. 71 million yards) or 58.2 p. c. over the total quantity allotted for the manufacture of bags during the last three months of 1944. More than this, under the new allocations bag manufacturers are permitted 45 percent of their total requirements to be of light-weight material. For some considerable time statistics of the consumption of hessian in the U. S. A. have not been available but this information has now been supplied by the U. S. correspondent of the Indian Central Jute Committee. According to this correspondent the consumption of burlap in the U. S. A. during the first ten months of 1944 has increased to the extent of 97 per cent., as compared with the corresponding period of the previous year. A total of 402 million yards, we are told, was consumed in the manufacture of agricultural bags during this period, as against 1943. It should be noted that these figures have been computed on the basis of 74 per cent. of the total burlap consuming industry. On the basis of 100 per cent. of this industry, it is estimated that consumption during the ten-month period would aggregate 527 million yards, or 83 per cent. above the 288 million yards consumed during the corresponding months of 1943. It may be mentioned here that the U. S. A. consumed 712 million yards of hessians in 1939, while for 1940, 1941 and 1942, the consumption was estimated at 654, 713 and 432 millions yards, respectively.

In the Pucca Bale market very little interest has been shown either by Mills or shippers. Some business was reported done in Cuttings at Rs. 42/- and Rs. 43/- but in this grade business was restricted due to scarcity of sellers. A report is current in the market that Russian representatives are actively interested in pucca bales for export and that business has been done at Rs. 74/- for Lightnings (Mills standard).

Mills are showing only a very meagre interest in the Loose Jute market. A falling off in coal supplies being again responsible for much of the hesitation to enter into new commitments. Small business was done in Supervised Jat 50/50 assortment Middle and Bottoms at Rs. 16/- and Rs. 13/- and also at four annas less. District Tossa sold at Rs. 16/- and Rs. 13 for Middles and Bottoms. Some Jat Bottoms were also done at Rs. 13-4-0. Although sellers are showing keenness for business they are unwilling to discount prices owing to continued firmness in the mofussil markets.

In the hessian market some Mill small lots of 10 oz/40" sold at maximum price for June delivery. Shippers generally have shown no interest during the past week and mills are mostly sitting out owing to the recurrance of an unfavourable position as regards coal.

In the Heavy goods market local speculators took advantage of the falling off in coal supplies to push up prices in the forward positions which had declined during the past week or so but no genuine business has been reported and at the time of writing prices in this section have again subsided and the market at the close is quite.

JUTE

(By Our Staff Correspondent).

Calcutta, May 17.

The raw jute market is quietly steady though business is on a restricted scale. The large exports in March and the expectations of a further increase in jute consumption by France and Belgium have been mainly responsible for the reserved attitude of sellers. Mills are awaiting fresh developments and seem to be of the opinion that as the months go by prices for raw jute would decrease. For this reason they are not taking advantage of the transport facilities which are now freely available. Godown accommodation is still difficult and, in the case of many mills, it is not possible to store all the jute that has been delivered in recent weeks. This is said to be the main reason for the deferment of jute purchases. Unless the Indian Jute Mills Association acts in coordination with the transport control authorities, it cannot be assured that all the available jute supplies will be received in time. The publication of the production figures for the month of April also have had a disappointing effect as it was generally expected that it would be maintained at the level of March. In the mofussil areas sowings for the new crop are progressing satisfactorily and the standing crop is reported to be good. Arrivals of old crop have almost ceased and the few holders are not anxious to clear out their stocks except at their own prices. In view of the fact that total arrivals for the season up to now have very nearly equalled Government estimates of yield, there is not possibly much left to be despatched from upcountry centres.

In the loose jute section even though business is on a small scale prices have been fairly maintained. Supervised Jat Middles and Bottoms for fifty-fifty assortment being done at Rs. 16 and Rs. 13 per maund. District Tossa also were done at the same rates. European packing were quoted 4 annas lower at Rs. 15-8 and Rs. 12-8 respectively.

In the pucca bales section also business has been restricted. Only Output Daisee were done at Rs. 77 per bale. It is expected that the United Kingdom will be taking a larger interest in the export market before long. Mills have purchased Cuttings N.C. and M.C. at Rs. 43 and Rs. 42 per bale also Firsts and Lightnings at minimum rates.

JUTE MANUFACTURES

Calcutta, May 17.

A slightly steadier feeling is noticeable in the jute manufactures market though a substantial discount is still available for forward positions in the bazar. Mills are not doing any business below maximum rates. Export enquiry has been rather poor owing to the holidays all over the world. The publication of disappointing production figures for March led to some covering by bazar operators but the general trend is still bearish and it is possible to get lower prices from bazar operators. The lower production figure for April is due to the scarcity of labour. It is feared that unless arrangements are made for the proper working of steam-driven units when they get the necessary supplies of coal at the same time enabling other mills to continue production at the former rate, it will not be possible to bring about an increase in the total output. 9 porters for July-September were quoted Rs. 28 and for October-December Rs. 27-10.

In the Heavy Goods section weak conditions were noticeable earlier in the period but on bear covering there has been a slight rally in prices. "B" twills for Ready being quoted at Rs. 65 and for October-December Rs. 59. Not much of business has been reported.

PIECEGOODS

Calcutta, May 17.

There is no change in the conditions in the piecegoods market as details of the rationing scheme are yet to be announced. The Wards Committees have to a certain extent been useful, but the relief afforded by the small number of approved shops has not been appreciable and consumers are still experiencing considerable hardship. It is not clear as to when it will be possible for the Provincial Government to release supplies to put the rationing scheme into operation. In Mofussil areas, the distress is as great as ever.

Stock Markets to-day and to-morrow:

A. C. C. TO ISSUE BONUS SHARES

Till Thursday this week, quite firm conditions were noticeable on both the Calcutta and Bombay stock markets and business showed signs of expansion. In three sections values were higher by more than a point and there was every suggestion that the upward trend would continue to be in evidence. On Friday afternoon, however, a sharp setback in prices has been recorded on reports that the Japanese are making efforts to make peace with the Anglo-American powers and that the changes in the Japanese administration showed anxiety to terminate the war as early as posible. The recent fire raids on the industrial cities of Japan have perhaps affected morale to a certain extent. Operators were expecting that the Japanese war would continue for at least one year, and that the transition from war to peace, so far as industries were concerned, would not bring about any important changes. If, as is feared by the market, the Japanese are successful in bringing about the end of hostilities at an early date, there would certainly be a big reduction in the war effort and industrial profits might be affected at least so far as special industries are concerned; but here again, the drop in earnings, if any, will not be quite pronounced as the distinction between war and peace industries is not great now as in the past, and apart from the difficulties in the change over it can be expected that demand for various kinds of goods would keep up industrial activity at a high level. The needs of the devastated areas and the satisfaction of deferred demand will keep industries busy. Only if there is any considerable delay in the execution of post-war plans or the expectations regarding the rate of industrial development do not materialise, markets will have genuine cause for disappointment. But it is too early to form any definite ideas regarding the success or otherwise of the new plans.

Rumours regarding the possibility of additional capital issue by *Associated Cement Companies, Limited,* have now been confirmed. It was announced during the week that shareholders will be offered the opportunity for subscribing for one new share for every two shares held at a premium of Rs. 50 per share. As has already been pointed out in these columns, the additional capital is needed for expansion purposes, the plan for extentions to factories and the erection of new ones have now been approved by the Central Government. The directors in their circular to the shareholders are very optimistic regarding the prospects for the industry. They point out that even on the basis of the increase in consumption in the thirties, there is scope for expansion of output in the cement industry; not to speak of the possibilities of a large increase in consumption with the construction of new roads, hydro-electric projects, rural reconstruction and public and privatebuildings. It is also anticipated that there will be heavy export demand to rehabilitate countries such as Burma, Malaya, and the Dutch East Indies until the cement factories in those parts of the world are capable of meeting the requirements of their own markets. "The programme of expansion", the directors point out "is based on a close knowledge of the growth of demand in each province and an intelligent anticipation of possible postwar requirements. It ensures an increase in production spread rationally throughout the country and when completed, it is designed to add further substantial tonnage to the existing manufacturing capacity of the Company".

* * * *

The present authorised capital is Rs. 8 crores in eight lakhs of ordinary shares of Rs. 100 each and issued capital of Rs. 7,05,42,100 in 705,421 shares of Rs. 100 each. It is proposed to issue 352,711 shares of Rs. 100 each at a premium of Rs. 50 per share in the proportion of one share for every two shares held. As a result of this issue, the issued capital of the Company will be raised to Rs. 10,58,13,200. The company will, in effect, be getting an additional working capital of Rs. 5 crores, the premium as a result of the new issue being over Rs. 1.75 crores. The shareholders will be required to pay Rs. 25 per share on application together with Rs. 25 out of the premium of Rs. 50 per share. The balance of premium, namely, Rs. 25 per share will be made payable with the next call which will not be less than Rs. 25. After the announcement of the terms of the new issue, there was naturally a rise in the quotation for the shares, though it is pointed out that just at the present moment, the shareholders stand to derive benefit only to the extent of one-fourth of the new issue. That is, a shareholder on the basis of the present market quotation for the shares gets only the advantage of Rs. 10 per share.

* * *

The first balance-sheet after reconstruction of the *Kumardhubi Engineering Works Limited* has been published during the week. It relates to the accounting period for 12 months ending November 1944. For the first time in the history of the company, a dividend is to be paid both on the ordinary and preference shares on the reconstructed capital. I have pointed out on more than one occasion, the need for a reduction in capital and the consolidation of arrears of dividend on the preference shares by the allotment of some new shares either preference or ordinary or preferred ordinary. It is, therefore, gratifying to note that the reconstruction proposals have after all been brought into effect and the financial position placed on a sound footing. The paid-up capital on November 1944 was Rs. 27.3 lakhs, Rs. 12 lakhs being in 5 per cent cumulative preference shares of Rs. 100 each and 15,30,000 in ordinary shares of Rs. 3 each. 360,000 ordinary shares of Rs. 3 each were issued to the holders of 12,000, 7 per cent cumulative preference shares in lieu of dividend due to them from the company. General Reserve amounted to Rs. 3.2 lakhs while sundry liabilities including dividends were Rs. 11,49,939. The provision for taxation is Rs. 11,25,803. On November 1943, the paid-up capital was Rs. 27 lakhs and reserve Rs. 3 lakhs. Sundry liabilities were Rs. 10,80,714 and provision for taxation Rs. 10,67,512. On the liabilities side, the important change therefore only relates to the paid-up capital.

On the assets side, block has been reduced to Rs. 16,66,103 from Rs. 17,88,873; stores are Rs. 16,13,355 against Rs. 18,29,466 and outstandings Rs. 6,45,425 against Rs. 4,98,983. Advances are Rs. 1,45,329 against Rs. 1,81,568. Investments are unchanged at Rs. 42,743 while cash balances show a large increase to Rs. 12,31,597 from Rs. 8,64,844. There are

no contingent liabilities regarding arrears of dividend. It is clear that the financial position has considerably improved and with an assured level of income it would be possible to pay a decent dividend on the ordinary shares in future years. The net profit before providing for taxation and depreciation for the year is slightly lower at Rs. 10,65,249 against Rs. 12,21,327 for the previous 12 months. After providing for depreciation Rs. 1,36,693 (*Rs.* 1,71,327) the transfer to stock adjustment reserves was Rs. 50,000. The dividend on ordinary shares after paying 5 per cent on preference shares is 5 annas per share. On the last occasion General Reserve received Rs. 1 lakh and Rs. 2 lakhs to Reserves for plant renovations. Net provision for taxation was Rs. 7.5 lakhs. The amount carried forward is Rs. 2,80,937 against Rs. 1,01,895 brought in.

The works were very busy throughout the year, being engaged entirely on controls for the Government but since the close of the year war contracts are easing off and the works are in a position to undertake orders for Government postwar schemes and industrial concerns. The directors consider the prospects for the current year to be favourable, provided raw material supplies are freely available.

The publication of the latest balance-sheet has not had any effect on the market as the dividend of 5 annas is not enough to warrant a further rise in prices.

Mica Mining and Trading Company of India Limited is raising additional capital to expand its activities. A very big mining property comprising more than 8,000 acres of land has been acquired and it has been found that the quality of the mica produced is the finest in the world. In view of the fact that the company has been paying dividends in recent years the present issue might appear attractive to investors. Both the ordinary and preference shares are issued at par.

* * * *

Having regard to the changed conditions in the cotton textile industry in 1944 the results of the *Edward Textiles Limited* for that year should be considered satisfactory. The total sale proceeds were Rs. 185 lakhs against Rs. 207 lakhs in 1943. The reduction in the turnover is entirely due to the reduction in ceiling prices effected during the year. The net profit before providing for taxation and depreciation has declined from Rs. 69.5 lakhs to Rs. 36.5 lakhs in 1944. Taxation again absorbed a major part of the profits and after setting aside Rs. 27.6 lakhs for taxation the balance available was Rs. 9 lakhs against the provision for taxation of Rs. 52.5 lakhs and disposable profits of Rs. 17 lakhs on the former occasion. As the provision for E.P.T. deposit formed a considerable portion of the balance it has been possible to recommend a dividend of only Rs. 15 per share.

Regarding the future of the textile industry Sir Victor Sassoon had very interesting remarks to make in the course of his speech at the annual general meeting of shareholders held recently. If Government policy were helpful the industry would be in a position to take full advantage of the improved conditions as Japan would not be an important producer for several years.

The United Sind-Punjab Bank Limited, an announcement of which appears elsewhere in this issue, starts with certain initial advantages. The United Commercial Bank, which is mainly responsible for the floistion of this new enterprise, should be congratulated on the new turn given to the development of Indian banking. So far banking activity has been confined mostly to urban areas. It is believed that the new bank will play an important part in rural areas and that the United Commercial will act in Coordination. The United Commercial Bank has substantial interest in the new enterprise being the holder of 20,000 shares of Rs. 100 each out of the issued number of 50,000 shares of Rs. 100 each. The authorised capital is Rs. 1 crore in 1 lakh shares of Rs. 100 each. Applications for over 30,000 shares have already been received and the directors are considering allotment at their discretion. So that the public is not asked to subscribe for any portion of the Capital.

As the Managing Director of the United Commercial is both the Ex-officio Director and Technical Adviser a bright future is assured.

SATISFACTORY WORKING IN 1944

Sir Victor Sassoon, on the Industry's prospects

Speaking at the Annual General Meeting of the Company, held on 7th May, 1945, Sir Victor on the Chairman said:

The Report of the Directors to the Shareholders together with the Company's Profit and Loss Account for the year ended 31st December, 1944, and the Balance Sheet at that date have been in your hands for some time and with your permission I propose to take them as read.

When addressing you last year, I told you that although the year 1943 had been the most successful in the Company's history, the profit shown in the accounts must be attributed very largely to the conditions created by the war. Another year of war has gone, and although the continuation and development of the controls introduced by Government in 1943, under which several reductions in the prices of cloth and yarn were effected in 1944, has resulted in lower earnings, still further reductions must be expected before we can look upon the result reflected in our Profit and Loss Account as being representative of trading under normal conditions.

The total sale proceeds for the year were Rs 185 lacs as compared with Rs. 207 lacs in 1943. Your mill worked to full capacity in 1944 as it did in 1943, and the reduction in turnover is entirely due to the reduced prices which were arrived at by agreement between the Government and the Cotton Textile Industry.

The Profit, before providing for depreciation and taxation, fell from Rs. 69½ lacs in 1943 to Rs. 36½ lacs in 1944. Taxation again absorbs a major part of the profits, and after setting aside Rs. 27.6 lacs for taxation we are left with a profit of Rs. 9 lacs for the year as compared with Rs. 52½ lacs for taxation and a profit of Rs. 17 lacs in 1943.

When we held our General Meeting last year, Government had just announced their intention of immobilising all excess profits, and the effect of this policy is brought out very clearly in the Appropriation Account now before you. Adding our 1944 net profit of Rs. 9.07 lacs to the balance of Rs. 1.47 lacs brought forward from the previous year, and deducting Rs. 2 lacs for current depreciation, we should have been left with no less than one-half the amount of our issued share capital, that is, with Rs. 8½ lacs, out of which to recommend a dividend which you should have been happy to approve and at the same time to leave a substantial amount to be carried to Reserve.

You will see, however, that the compulsory deposit of our Excess Profits with the Government absorbs no less a figure than Rs. 6,35,000, and out of the balance left with us we have not felt justified in recommending a larger dividend than Rs. 15 per share, which proposed dividend will absorb Rs. 1,27,000 leaving Rs. 92,886 to be carried forward to 1945.

I know that some mills in Bombay have used more than the cash available to them from the year's working in order to pay their dividends, but your Directors take a conservative view in such matters and do not believe that a policy of mortgaging the Company's future in order to maintain current dividends at a high level can ever be satisfactory or indicative of wise stewardship if a long-term view is taken.

The extent to which our funds which should be available for disposal are being whittled down by taxation is perhaps not fully appreciated. Last year Government announced their intention of immobising the whole of the Excess Profits. This year they have gone a step further. By increasing the surcharge on Income-tax by 3 pies in the Rupee, and leaving the compulsory deposit at last year's figure of 19/64ths of the excess Profits Tax paid, they now take from us 0.51 per cent. more than the Excess Profits. The cash required for this extra payment has to be taken from what the Company has left after paying Income-tax and Corporation Tax on its standard profit : and in addition to this, the extra Corporation Tax of one anna in the rupee on dividends must also be found out of what remains of the standard profit. Although to the casual observer these demands may not appear to have much bearing on the question of dividends, they have is fact reduced the free cash available for dividends out of the 1944 profits of your Company by no less than Rs. 3 per share.

Shareholders have sometimes asked why the Managing Agents should be allowed to take a larger share of the profits by way of commission than the shareholders receive by way of dividends. At first glance, this may seem to be a pertinent question, but let us examine it in its true perspective and in relation to facts. The figures of your Company for 1944 are, Managing Agents Commission, Rs. 6,47,231, and appropriation for the proposed Dividend, Rs. 1,27,500. First, I would remind you that in the bad times of the past the Managing Agents have not hesitated to waive their claim to the commission to which they were entitled : in the good times of the present, while Excess Profits are being made, any amounts waived by the Agents would merely be collected by Government and there would not be one pie of extra cash immediately available for distribution to the shareholders. In fact, for the reason I have just explained to you, there would be less free cash available because any commission waived would increase the Excess Profits and this in turn would increase the over-collection by Government which can only come out of the standard profit.

The real cost to the Company of the Managing Agents' services in 1944 is less than Rs. 1½ lacs, compared with over Rs. 9 lacs which is the Company's profit for the year after paying Agents' commission and providing for taxation. I am sure that you will not call less than Rs. 1½ lacs an excessive amount to pay for the work done by your Managing Agents who, while shouldering the responsibility of all industrialists in serving the interests of the Country and its needs, have yet been able to safeguard the interests of the Company and to preserve its Goodwill.

The continued improvement in the Company's financial position is reflected in the Balance Sheet now before you. The declared policy of your Directors ever since the Company returned to a profit-making basis after the long depression of the 1930's has been to set the Company's finances on a sound basis. In pursuance of this policy the Company has paid off its Debenture Loan of Rs. 12 lacs, another fixed loan of Rs. 9½ lacs, and other large sums of borrowed money which at times exceeded the paid-up capital of the Company. The Profit and Loss Accounts for those years of depression showed interest payments amounting to about Rs. 2¾ lacs a year which had to be met before any return to the shareholders could have been contemplated. To-day the Company has been relieved of the heavy interest charges which were running against it, and your Directors claim with justification that their object of rehabilitating the Company's finances out of current earnings has been achieved.

When you consider the number of mills companies which were forced into liquidation, which had to sell their assets at only a fraction of their real value, whose shareholders were fortunate if they received back even a small part of their investment, you have every reason to appreciate the policy which has carried the Company through the long period of depression and has helped it to the sound financial position in which it stands to-day.

The original cost of your Fixed Assets, excluding Land, at 31st December, 1944, was Rs. 49.87 lacs against which you have a Depreciation Reserve of Rs. 38.60 lacs. So your 920 looms and 49,164 spindles have now been written down to the very low level of Rs. 11¼ lacs.

Out of the profits earned to the end of 1944, we shall have Deposits with the Government amounting to almost Rs. 15 lacs which are to be returned to us after the war, and, what the Balance Sheet does not show, Government will have to refund to us Rs. 6.41 lacs of the Excess Profits Tax we have paid. Because Excess Profits Tax is deducted in full when arriving at the profits which are assessed to Income-tax and Corporation Tax, these refunds will be liable to Income-tax and Corporation Tax when received. At current rates of taxation, the net value of the refunds will be about Rs. 3.71 lacs, which I think you will agree is a useful contribution to the Company's resources, making about Rs. 18.71 lacs in all to be received from Government as refunds and repayment of Deposits. Thus at the cessation of hostilities we export to be in a satisfactory position and shall have funds available either to replace old machinery or to improve and modernise the existing machinery as we may wish. This means you have the best of two worlds : in the post-war world you can reconstruct, while in the present you are able to work your machinery to a maximum to obtain the maximum benefit now.

During the year the Mill has been worked three shifts on spinning to provide yarn for double shift working of the weaving shed, and also to help to meet, to the maximum of our capacity, the great demand from the handloom industry. The heavy wear and tear of your plant and machinery which has resulted from this intensive working has necessitated greater expenditure on repairs, and as new replacement parts become available it is expected that our expenditure under this head will increase. In the early years of the war we had the advantage of large stocks of stores and machinery spare parts brought at relatively low prices, but these stocks have now been consumed. Owing to war conditions replacement stocks have at times been difficult to obtain and have tended to deteriorate in quality, but in spite of this we have maintained a high standard in our current purchases.

We have always recognised the important part which labour plays in the Industry, and our cordial relations with our labour force have continued throughout the year; but the increase remuneration of labour in recent years has in a way added to our difficulties, since workers when they draw their yearly bonuses show an increasing tendency to return to their villages, and their replacement with badli workers for the duration of their holiday further increases the difficulties of management.

Much publicity has been given recently to the policy of increasing production by reducing the number of sorts manufactured, as a means of meeting the acute shortage of cloth. As a result of the curtailment of war demands, we have been able to reduce the number of sorts now produced in your mill to two only, one for Government and one for civilian requirements. This concentration on two sorts has resulted in further improvement in the already high standard of efficiency of your mill and has enabled us to balance production so that all your machinery is used to the greatest advantage.

Comparisons are bound to be made as to the results of this policy, and our working results for 1944 bear out my contention that the ceiling prices have in the past been very much in favour of luxury cloths particularly those which are dyed, mercerised, bleached and super-finished.

We have always conceived it to be our duty to produce the maximum quantity of yarn and cloth your mills are capable of making and so to further the combined war effort. It is pleasing to note that the Textile Industry now feel that the price structure of civilian cloths should be revised to encourage the production of utility cloths, and to discourage luxury materials, cloths which are wasteful of yarn, and cloths which waste fuel by elaborate and unnecessary finishes.

The only absolute solution for the present difficulties in the cloth trade is to produce more cloth —to produce more cloth more machinery must be installed or there must be no stoppages of the machinery which is now available and it must be worked to its maximum capacity. Neither of these remedies can be successful unless coal is available to work the machinery; apart from the obvious solution of increasing coal output, coal can be saved by curtailing the manufacture of styles that require excessive finishes—bleaching, dyeing, mercerising, etc., and using the coal so released for the manufacture of yarn or grey cloth. If the quantity of cloth which is now being given such elaborate and unnecessary finishes were cut down by only one-half, enough coal would be released to run to its full capacity the spinning and weaving machinery which is now stopped from time to time for want of coal. This would mean sacrifices by the bleaching and dyeing trade and by small bleachers and dyers which could be relieved by levying a small cess on all producers of grey cloth which of course should be allowed as a charge on their gross profits. In times such as these, sacrifices must be made by everyone. Sacrifices cannot all be on the side of the industry —rationing is a form of sacrifice which, if made willingly and in a spirit of co-operation by all consumers would make stocks go further and help to a rational distribution of the limited supply of cloth which is available. I welcome the recent announcement that the Government of Bombay has decided to ration mill-made cloth of the varieties commonly in use, but with cloth stocks in retail stores now reduced to a minimum, I feel that the present scheme, even with such increased production as can be contemplated, will not cover the short fall unless each consumer makes a real personal effort to reduce the quantity of cloth he uses.

The end of the last war saw the collapse of many businesses. Fortunately for us, the change-over from war to peace-time conditions does not constitute any major problem, as our machinery can turn out goods for the civil market just as well as it can meet Government demands for the war effort. While in recent years our efforts have concentrated on meeting Government demands, and are now being concentrated to an increasing extent on helping to meet the acute shortage of cloth for civilian consumption, our technicians and marketing staff have been engaged in drawing up careful plans of post-war machinery requirements. This entails something more than mere replacement of worn-out machinery by the latest type of the same machinery. The problem

(Continued on page 680).

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, May 18.

Rather firm conditions have been noticeable on the Calcutta Stock Exchange in the past week with business passing on a larger scale. The strength of the bullion market and the conviction of investors regarding a bright future for stock exchange securities have led to bear covering and a rise in prices is noticeable in almost all the sections. It is even reported that at the lower levels there was some outside buying.

The feature of the week is provided by the coal and engineering sections. There has been heavy buying of Burrakurs and South Karanpuras in Coal and Indian Irons and Steel Corporations in the engineering section. In the jute section also steady conditions have been noticeable though Howrahs have declined by over 5 points to Rs. 94-6 with selling through a prominent operator. Cotton shares also are steadier while there was a revival in the tea section. Sugar shares were neglected. In the Miscellaneous section Burma shares were in greater favour.

The giltedged securities section has continued steady with small buying enquiry from prominent institutions. With the increase in the working capital of banks, there is a greater disposition to place funds in giltedged securities. 3½ per cent Paper was higher at Rs. 100-3 as also 3 per cent Paper at Rs. 91-12. Among terminable loans 3 per cent 1946 was Rs. 102-6, 3 per cent 1953-55 Rs. 100-10 and 3 per cent 1957 at par. Not much of interest has been shown in long-dated issues, 3 per cent 1959-61 Rs. 99-12. The only transaction in Provincial loans was in 4 per cent Punjab loan 1948 at Rs. 104.

Bank shares were unchanged though towards the close *United Commercial Bank* have been marked to Rs. 20-2 premium on the announcement that a new bank styled the *United Sind Punjab Bank, Limited* was to be floated in which the United Commercial would have substantial interest. *Reserve Bank* were Rs. 133, *Hindusthan Commercial* Rs. 52-12, *Hindusthan Mercantile* Rs. 45-8 and *National Bank* Rs. 43.

Cotton shares were a shade better with *Elgins* at Rs. 64-4, but *Cawnpore Textiles* were not very much changed at Rs. 12-6. There was some enquiry for *Muir Mills* around Rs. 426. *New Victoria* also were higher at Rs. 7-5.

The Coal section has returned to favour, there being considerable buying of prominent counters like Central Kurkend, Burrakur, South Karanpura and New Beerbhoom. *Bengal* have registered a rise of 20 points to Rs. 690 while *Bhalgora* were nearly a point higher at Rs. 25. *Bokaro and Ramgur* were Rs. 47-12, while *Central Kurkend* moved up on special buying to Rs. 44. There was good buying of *Burrakurs* and the quotation has improved from Rs. 39-4 to Rs. 40-12, the highest level for the week being Rs. 41. *South Karanpura* likewise have risen from Rs. 28-10 to Rs. 30-7, the close was steady at Rs. 30-4. *New Beerbhoom* were Rs. 44, *Standard* Rs. 42-4, *New Churulia* Rs. 12-8 and *Talcher* Rs. 11-12. *Equitable* were not very much in demand but there has been a rise towards the close to Rs. 68-6.

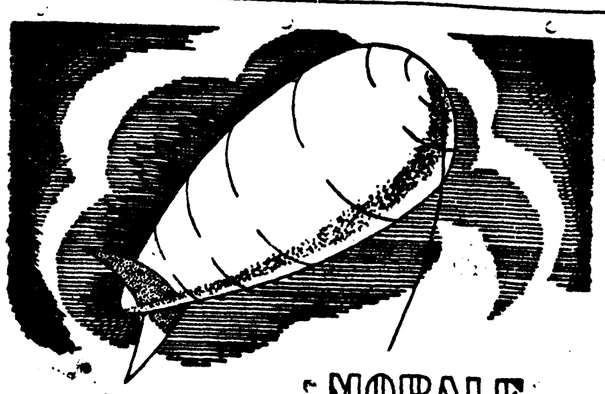
In the Jute section, there is a drop in *Howrah* to Rs. 94-6 from Rs. 100-4 last week which has had a restricting influence. But apart from the decline in prices for this counter, there is nothing special to be recorded, the bigger shares having retained the gains of last week. *Anglo-India* were Rs. 484, *Budge-Budge* Rs. 539, *Champdany* Rs. 263, *Kanknarrah* Rs. 728, *National* Rs. 34-12. *Presidency* were better at Rs. 12-3 and *Soorah* Rs. 36-6.

In the Engineering section, both Indian Irons and Steel Corporations have been in good request, *Indian Irons* being at one time done up to Rs. 40-8, the quotation at the time of writing being Rs. 40-2. *Steel Corporation* are around the highest levels for the week at Rs. 33-6; last week they were quoting Rs. 33-1. Other shares are unchanged. *Indian Malleable Castings* (Defd.) were Rs. 3-1, *Jessops* Rs. 23-12, *Marshalls* Rs. 5-5 while *Kumardhubi Engineering* were a shade better at Rs. 10-6.

In the Sugar section, there is nothing of importance to be recorded though *Carew & Co.*, are slightly higher at Rs. 26-12 and *Cawnpore* Rs. 37-6. *Belsund* were Rs. 14-3 and *Buland* Rs. 40-4.

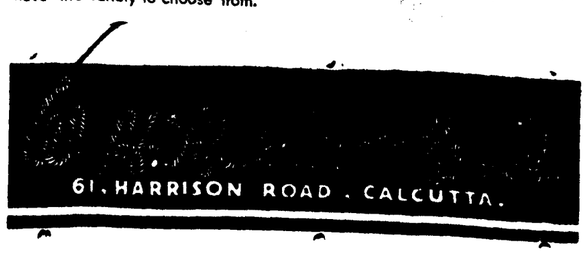
In the Tea section, a longer list of transactions has been recorded, *Central Cachar* being Rs. 111, *East India* Rs. 17 and *Hasimara* Rs. 78-12, *Rydak* Rs. 100-8 and *Tezpur* Rs. 21-6.

In the Miscellaneous section, Burma shares were neglected for most part of the week, but towards the close quotations are higher with *Burma Corporation* at Rs. 5-13 and *B. B. Petrol* Rs. 5-11. *Assam Bengal Cement* have been active with a further rise to Rs. 20. *Dalmia Cement* (Ordinary) also were bought up to Rs. 17. *Karanpura Development* were very firm in sympathy with the coal section at Rs. 34-4. *Calcutta Trams* are 2 points higher at Rs. 45-8, *B. I. Corporation* were sticky at Rs. 6-4. Among paper shares *India Paper Pulp* were Rs. 217, *Orient* Rs. 28-10 and *Titaghur* Rs. 27-5. *Midnapore Zemindary* were 5 points higher at Rs. 73-8 while *Assam Saw* were unchanged at Rs. 5-15.



GAYA SUGAR MILLS LIMITED.

REVISED NOTICE.



NOTICE is hereby given that the Twelfth Annual General Meeting of the Shareholders of the above Company will be held on Monday, the 4th June, 1945, at 9-30 A.M., at "KRISHNA BHAVAN", Gaya, for the purpose of receiving the Directors' Report, passing the accounts for the year ending 30th September, 1944, electing Directors, appointing Auditors and passing their bill for additional remuneration for the year ending 30-9-44 and transacting any other ordinary business that may be brought forward.

The Share Transfer Books of the Company will be closed from 21st May, 1945, to 4th June, 1945, both days inclusive.

By order of the Board,
(Sd.) M. M. RAZA,
Secretary.

Defence of a country, particularly in modern warfare, largely depends on the excellent morale of the people, irrespective of whether they are directly engaged in war work or not. It is the unshaken morale of the people of Great Britain that helped in the magnificent defence against the terrible Air Bombardment by Germany and gave the Germans the first setback. It is the knowledge of every individual and the satisfaction that their country is well defended that creates such morale. In the defence against Air Raids Baloon Barrage plays an important part. So also the efficiency of the fire fighting services and the Rescue parties. All these need—and an essential need of course—suitable and strong ropes. Hartons play the leading role in these supplies. Whatever the kind of quality in ropes may be Hartons have the variety to choose from.

COMPANY REPORTS

DHEMO MAIN COLLIERIES, LIMITED

H-year ended	31.12.1944	30.6.1944	31.12.1943
	Rs.	Rs.	Rs.
Net profit	4,12,099	4,10,051	24,585
Taxation	2,70,000	2,42,000	...
Depreciation	21,941	24,662	6,084
Reserves	56,000	50,000	...
Dividend A'mt	60,000	60,000	Nil
Carry F'd	14,396	10,239	—23,150
Div. per cent	3¾	3¾	Nil

Audited accounts for the half-year ended 31st December, 1944.

After providing Rs. 21,941-0-0 for Depreciation, Rs. 2,70,000-0-0 for Taxes and Cesses and Rs. 56,000-0-0 for Excess Profits Tax Deposit Fund the Accounts show a sum of Rs. 74,396-6-8 at credit of Profit and Loss Account including Rs. 10,238-9-11 brought forward from last half-year. The Directors recommend that this should be allocated as follows:—

To payment of a Dividend at the rate of 7½ per cent. per annum, free of Income Tax, for the half-year ended 31st December, 1944 Rs. 60,000-0-0; Leaving to carry forward Rs. 14,396-6-8; Total Rs. 74,396-6-8.

Net Raisings during the half-year were 1,01,321 tons compared with 1,12,683 tons during the previous six months and 53,908 tons in the corresponding period of 1943.

Despatches amounted to 1,01,552 tons, compared with 1,14,321 tons and 54,074 tons in the preceding two half-years.

Stocks totalled 2,287 tons on 31st December, 1944

Colliery.—The Company's Colliery has been maintained in good order.

General.—The results for the half-year were satisfactory though the raising showed the seasonal drop which usually follows upon the sowing and harvesting activities of the labour.

Prospects for the future appear good, particularly as it seems that the plans for the development of Indian Industry will assure a steady demand for Indian Coal for some time to come.

Nevertheless there are many unpredictable factors which may still affect the future of the Coal Industry; and far reaching decisions from Government concerning such matters as prices, wages and conservation are inevitable in the not distant future.

Mg. Agents.—Messrs. Macneill & Co.

Authorised, Issued and Subscribed Capital—Rs. 16,00,000 in 1,60,000 *Ordinary shares of Rs. 10 each, fully paid up.*

Audited accounts for the half-year ended 31st December, 1944.

After providing Rs. 1,89,850-0-0 for Depreciation Rs. 18,27,600-0-0 for Taxes and Cesses Rs. 3,78,000-0-0 for Excess Profits Tax Deposit Fund and transferring Rs. 1,50,000-0-0 to General Reserve and Rs. 1,00,000-0-0 to Replacement Reserve the Accounts show a sum of Rs. 6,56,062-6-10 at credit of Profit and Loss Account including Rs. 1,25,703-15-7 brought forward from last half-year. The Directors recommend that this should be allocated as follows:—

To payment of a dividend on the Preference Capital at the rate of 6 per cent. per annum, free of Income Tax, for the half-year ended 31st December, 1944, Rs. 12,000-0-0; To payment of a dividend on the Ordinary Capital at the rate of 30 per cent. per annum, free of Income Tax, for the half-year ended 31st December, 1944, Rs. 4,44,564-0-0; To payment of a Bonus of As. 4 per share free of Income Tax Rs. 74,094-0-0; Leaving to carry forward Rs. 1,25,404-6-10; Total Rs. 6,56,062-6-10.

General Reserve.—Rs. 2,50,000-0-0 has been transferred frim this reserve in reduction of Block items.

Net Raisings. during the half-year were 6,78,875 tons compared with 7,08,794 tons during the previous six months and 4,60,110 tons during the corresponding period of 1943.

Despatches amounted to 6,81,412 tons against 7,07,030 tons and 4,66,438 tons during the preceding two half-years.

Stocks totalled 19,918 tons on 31st December, 1944.

Collieries.—The Company's Collieries have been maintained in good order.

General.—The results for the half-year were satisfactory hough the raisings showed the seasonal drop which usually follows upon the sowing and harvesting activities of the labour.

Prospects for the future appear, good, particularly as it seems that the plans for the development of Indian Industry will assure a steady demand for Indian Coal for some time to come. Moreover it is anticipated a large proportion of the machinery which the Company requires to maintain and improve its output will arrive this year.

Audited accounts for the half-year ended 31st December, 1944.

After providing Rs. 25,463-0-0 for Depreciation Rs. 2,53,000-0-0 for Taxes and Cesses and Rs. 60,000-0-0 for Excess Profits Tax Deposit Fund the Accounts show a sum of Rs. 97,228-6-2 at credit of Profit and Loss Account, including Rs. 17,536-1-8 brought forward from last half-year. The directors recommend that this should be allocated as follows:—

	Rs.	A.	P.
To payment of a Dividend at the rate of 20 per cent per annum, free of income-tax, for the half-year ended 31st December, 1944 ..	80,000	0	0
Leaving to carry forward ..	17,228	6	2
Total ..	97,228	6	2

Net Raisings during the half-year were 1,13,206 tons, compared with 1,38,255 tons during the previous six months and 1,07,303 tons in the corresponding period of 1943.

Despatches amounted to 1,15,545 tons against 1,37,708 tons and 1,16,490 tons in the preceding two half-years.

Stock totalled 3,634 tons on 31st December, 1944.

Collieries.—Jharia: The efforts to increase the capacity of Kendwadih Colliery are still held up by the non-arrival of machinery from abroad.

Raneegunge:—No. 1 Pit has now been worked out. Development of the new pits (7 and 8) is being pushed on with all speed but is being returned partly by the same cause at Kendwadih and partly by the difficulty of mining in the thin coal at this Colliery.

(Continued from page 675).

is to ensure that the machinery in each section is balanced with that in all the other sections so that maximum production combined with flexibility can be assured, and the Company may be enabled to face competition with every advantage in the post-war world.

As far as can be foreseen, the future for several years after the war looks very bright.

Japan, whose exports of cloth and yarn reduced the industry here almost to beggary, will be in a very bad state for a number of years.

From more than one source I have been given to understand that more than 80 per cent. of her textile machinery, including new spindles which had been kept unused and intact for post-war production, has been scrapped to make up for the get from the United States and other countries. shortage of the scrap metal which Japan used to This is no negligible factor in our optimistic outlook.

Conditions are vastly changed from the days when we were left to face state-subsidised competition from such countries as Japan, competition which brought many established mills companies to ruin, competition which merely brought from Government the admonition that the industry must set its house in order by its own efforts.

The industry can and should set its house in order. All that we ask from Government is that we should be granted facilities to replace at reasonable cost our plant and machinery which has been worn out on their work; that we should be that our refunds of Excess Profits Tax should be enabled to instal new machinery where required; made available to us and when we want them, and that we should never again be called upon to face competition conducted not on commercial lines but on totalitarian principles forming part of the broader national policy of hostile nations.

I now have pleasure in moving the adoption of the Report and Accounts.

After that resolution has been seconded, and before it is put to the Meeting, I shall be pleased to answer questions arising out of the Report and the Statements of Account.

MINERVA MILLS, LIMITED.
(Incorporated in British India: Liability of Members is limited)

NOTICE.

NOTICE is hereby given that the TWENTY-FIFTH ORDINARY GENERAL MEETING OF THE SHAREHOLDERS of the above Company will be held at the Registered Office of the Company, Temple Bar Building, 70, Forbes Street, Fort, Bombay on Friday, the 22nd June, 1945 at 4-30 P.M. (From our Readers)

Fact Parade

Let me congratulate you on your new feature 'Fact Parade'. Readers of Indian Finance while they appreciated the sharp and sensible comments, in the 'Gossip' and 'Comments' and the letters from different provinces of India, have felt the need for a column giving news items regarding Industry, Commerce and finance in India and abroad. You have rightly supplied a long-felt want. Well done! Go ahead.

J. Ram Singh.

Military Notes for Burma:

Your note on the above subject which appeared in the May 5th. issue of Indian Finance is unusually colourless and instead of bringing out the full implications of the official decree you have given a neat but lifeless summary of the latest position. I agree with you that it is a ticklish subject and you have to think a lot before you come out with your own ideas as to the effects the Proclamation rendering worthless all the currency issued in Burma during the past few years of the Japanese occupation of this country. While all would agree that those who co-operated with the Japs should not go free there must be a method of rectifying the mess of a situation brought about by the enemy. After all, you cannot cut the nose to spite the face and the Proclamation would affect some who have been politically neutral but, owing to circumstances beyond their control, had to accept the currency issued by the enemy. You must have given the lead in showing how the galloping inflation in Burma would been managed without inflicting heavy though temporary strain on Burmese economy.

K. L. Tilak.

Supply Side of Economists:

You have made much about the importance of economists in your note 'Supply side of economists.' The fraternity of Economists (may that tribe decrease!) seems to be a mutual adoration society. I, for one, being a practical villager earning his bread at the sweat of his brow, see no use for these social parasites—Economists—about whose value and importance you shout from housetops. You speak so highly of British economists as if they are models of men. What did these economists do at the Bretton-woods Conference except plan not to return to poor India her sterling balances? Burke's words are truer today than in his own day. A country like India with its Gandhian ideals of simple living and high thinking has no use for these dismal scientists who scheme and plan, calling it economic planning, all for self-aggrandisement.

N. Kripalani.

Manufacture of Locomotives:

You seem to be very optimistic in your note on the Manufacture of Locomotives in India. How many times have the Government of India openly said it is their policy to encourage manufacture of locomotives in India and how many more times are they going to say that! If your information that the Government are co-oeprating with the Tatas, the Baroda Government and Hyderabad Government, is correct the Government should, through a Press note, inform the people of their plans and how they intend to execute them.

The 'Great Mission' led by Sir Akbar Hydari, you say elsewhere, has achieved much. Are you sure it has not arranged for locomotives and cars to be imported from England? English economists will, I know, argue that they are consumers' goods. Sometime ago I read that not only Canadian locomotives have been imported into India, but also an engineer to see if these locomotives work properly. Of what avail is it having India as a member of the British Commonwealth of Nations if other members cannot help her with locomotives and cars and such other goods! By the way, the Industrial delegation has gone to England. God knows what presents it will bring home. May be similar goods. Sober people will find it difficult to swallow the news that locomotives will be made in India and will believe it only when they actually see Indian made Railway engines running on Indian rails.

Share Pushers:

I must congratulate you on your campaign for the removal of Katni markets. But I am afraid you have overlooked the equally menacing fact that the "government registered" firms dealing in stocks and shares are taking undue advantage over an ignorant public, and defrauding them of large sums of money. I am aware of more than one instance in which investors have been coaxed into buying worthless shares and deliveries have not been made in most cases. Payments are received in advance. These firms advertise widely in the daily press and it should be said that the newspapers who accept these advertisements do a great disservice to the public.

These firms who are not registered members of any officially recognised stock exchange association have thus an advantage over the members of stock exchanges who are precluded from advertising their activities.

It is true that even in the case of stock exchange members, considerable difficulties are being experienced between client and broker but the men in charge of some of the stock and share dealer firms have started their business with the definite intention of relieving the investing public of surplus funds.

I hope the Central Government will include, in the scope of its enquiry into the working of the stock exchanges in India, the activities of these firms and make sure that they do not go scot-free

At any rate, the Government must straightaway declare illegal the advertising by share-pushers and their kind.

Asis Gupta.

War and Rural Economy:

At the outset, let me draw your attention to the inexcusable mistakes (mostly due to carelessness) in the otherwise admirable survey provided on this topic by your correspondent on tour.

I extract the following sentence from the article "From being perpetual debtors, many have not been able to pay up their debts but also to put by surpluses." It is obvious that the omission of the word 'only' after 'not' and before 'been' has made a hash of one of the most important passages.

I leave it to you to correct the bad grammar in the following sentence: "The very circumstances of a general belief in the bloated prosperity of the ryot is a handicap in any investigation into the extent and nature of the change that has taken place."

The conclusions drawn by your staff correspondent are too good to be true. I suggest that they should be supported by more detailed investigations conducted in various kinds of villages—that is, villages under permanent settlement, villages under ryotwari system, villages depending upon canal irrigation, villages whose supply of water is from wells, villages cultivating "wet" crops and villages cultivating "dry" crops, villages having homogenous population from the point of view of religion or caste and villages with mixed population, etc.

That is to say, there should be an intensive survey of at least twenty villages, covering house-to-house investigation as well as overall picture of the economy of the entire village.

If your staff correspondent completes a study of this kind, his conclusions will be valuable for more reasons than one.

For my part, I do believe that his conclusions as now stated are correct. But more detailed proof is necessary from the point of view of the far-reaching significance of these conclusions.

If proved irrefutably correct, the first thing that needs to be noted is this: For decades and decades, we have been worrying about solutions for this chronic indebtedness of agriculturists in India. War has, in a simple and complete way, given the solution. Surely, there is a soul of goodness in things evil—goodness in war itself.

Secondly, now that this age-old indebtedness has disappeared, what are the measures to be taken to ensure that the rural folk do not relapse into old habits and get entangled in new debts?

The disappearance of rural indebtedness gives a promising setting for rural reconstruction; it must also furnish the main lines which reconstruction must follow.

P. K. Subramanian

PATIENCE UNREWARDED

IN Britain since the war those who do not bring their own paper or bag in which to take home their purchases, are often disappointed. Here is a sharp reminder of the wide array of papers, cartons, wrappers and containers which in easier days we took for granted, but on which modern retail distribution has largely been built. All these are the results of chemical research applied to the paper and allied trades, or new products developed entirely by the chemical industry. Modern packaging is already a minor science, with research directed towards improving both the range of utility and the beauty of packages and packaging materials. The chemist has first made paper and cardboard perform a variety of functions. He has succeeded in evolving coatings which are at once flexible, have no smell, do not contaminate the materials with which they come in contact and, finally, will hold oils or oily substances, pure drugs and foods. He has produced adhesive intercoatings which are moisture proof and do not "bleed" through the thinnest lining paper. He has also treated paper with lacquers and pigments which add an attractive appearance to usefulness. Not content with extending the uses of paper and cardboard, the chemist has begun to produce packaging materials of his own. He has made cellulose film into a wrapper of strength, convenience and beauty and has begun to draw heavily on the ever-extending range of plastic materials, as well as on synthetic resins, waxes and rubber. The British chemical industry is constantly at work on new and better linings to increase the usefulness of the common packaging materials like paper, wood and metal, and also to discover and develop new synthetic materials which will improve upon the old.

REVISION OF TARIFF POLICY

EFFORTS TO REPEAL JOHNSON ACT

Washington, May 22.

The extended series of Congressional debates on the United States foreign and economic policies were scheduled to be inaugurated this week and when they are concluded other nations will have clearer conception of the role this country will play in future in the solution of international economic problems and the promotion of world trade. First on the agenda was the consideration by the House of Representatives of legislation sponsored by the Administration to extend and broaden the Trade Agreements Act which embodies Mr. Cordell Hull's most-favoured-nation principle. By the time this legislation is sent to the Senate, the House Banking Committee should be ready finally to submit houseward the measure implementing the Bretton Woods proposals.

Meanwhile, the Senate Finance Committee is scheduled to open consideration on May 24 of the Bill by Senator Fulbright to repeal the widely opposed Johnson Act under which the World War I debtors are prevented from selling securities to the United States citizens or in effect from obtaining private financial aid in this country.

The Trade Act renewal will revive the United States history-long tariff debate. As the House was preparing for consideration, Republicans and Democrats were lining up forces in keeping with old familiar pattern. The Democrats managed to get the bill reported favourably from the Ways and Means Committee to the House simply because they had a comfortable majority. The Committee vote was fourteen Democrats favouring, one Democrat and ten Republicans opposing. The Democratic majority last week appealed for the House approval on grounds that the Trade Act is an essential element in preventing economic nationalism while "it is not the sole foundation of solid and durable international security, it is one of the main stones". The Democrats propose that the Administration be authorised to reduce the present tariffs by fifty per cent in exchange for concessions by other nations and that the law be extended for three years. In aggregate, this would mean tariff reductions of seventy-five per cent since the original act carried fifty per cent authorisation. The Republicans insist on the renewal of the original measure without change which is quite a concession for them. They contend that the Administration will use reciprocity to achieve political aims.

The Bretton Woods proposals are still bogged down in the House Committee but observers felt that some settlement must be arrived at soon. The Republicans and Democrats contend that they agree in principle on the International Fund but the Republicans want amendments to insure against longterm loans. The Democrats agree with the Treasury Department that this insurance is implicit in that part of the Bretton Woods Act which sets up the Fund and suggest that if further safeguards are deemed essential the United States directors should seek clarification after this country enters the Fund. There seems little controversy on the United States' participation in the International Bank.

(Continued from first column)

During the week ended the 18th May, 1945, Government of India Treasury Bills for Rs. 2,10,00,000 were sold in favour of the Issue Department of the Reserve Bank of India.

Fact Parade

RE-DISTRIBUTION OF GOLD

The Argentine in particular and other South American countries in general have materially improved their positions as a result of the re-distribution of gold during the war. A number of these countries will embark upon the post-war period with gold reserves much exceeding anything they have enjoyed hitherto, says the 'Financial News' in summing up the world gold position.

The United States, despite losses in the last year or two, will have a gold reserve in excess of that held at the beginning of the war.

Switzerland, Spain, Sweden and Portugal have increased their gold stocks.

Britain has seen her reserves sadly depleted, although she probably possesses more gold than some imagine.

France retained a goodly amount and, incidentally, has met Belgium's claim regarding gold by the Germans.

Holland has been able to safeguard a fair amount of her gold, although she converted much into commodity reserve.

Germany looted gold right and left, but sooner or later she will be compelled to disgorge.

Belgium, Czechoslovakia, Holland and France will presumably benefit.

Most other liberated countries will not be very well placed. British Dominions will be in a stronger position.

The position of Soviet Russia cannot be given accurately.

The Japanese gold stock will presumably share the same fate as that of Germany, which will mean redistribution of a not unsubstantial amount.

Taken on the whole it is more than likely that the problem of maldistribution will be just as acute after the war as before, adds the 'Financial News'. Moreover, some time must elapse before balances are adjusted through the normal process of international trade.

* * * *

THE AUSTRALIAN TAXPAYER—WHAT HE EARNS:

Most of the persons who furnish a taxation return in Australia have a taxable income between £251 and £300 a year. The latest report of the Australian Commissioner for Taxation shows that this group is the largest of the 1,493,053 taxpayers who furnish returns.

More than 60% of taxpayers have an assessable income of less than £400 per annum. Of the total taxable income assessed of £581,211,809 personal exertion accounted for £515,854,597, and income from property £65,357,212. Four taxpayers furnished returns showing taxable income of more than £50,000 per annum. One taxpayer's income was stated as £94,244 derived solely from property. After he had been dealt with by the Taxation Commissioner his net income was £11,627.

* * * *

TRANSVAAL GOLD OUTPUT

The output of the Transvaal gold mines for the month of February was declared by the Chamber of Mines at 965,569 fine ounces, valued at £8,110,780, compared with 1,029,384 fine ounces, valued at £8,646,826, during the previous month. The working period in February was 24 days, two days less than in January, but the average daily output rose by 2,107 fine ounces to 40,232 fine ounces.

At the annual general meeting of the Transvaal Chamber of Mines on March 26th, the retiring President, Mr. W. H. A. Lawrence, made some interesting comparison between the industry's activities and output last year and the peak year of 1941; these comparisons are detailed hereunder:—

		1941.	1944.
Tonnage milled	...	67,250,000	58,500,000
Output (fine ozs.)	...	14,400,000	12,300,000
Working Revenue	...	£117,000,000	£100,000,000
Working Costs	...	£71,100,000	£66,700,000
Working Profit	...	£45,800,000	£32,900,000
Dividends	...	£19,400,000	£13,600,000
Payments to Govt.	...	£27,300,000	£18,500,000

The increased burden borne by the industry is perhaps best illustrated in the rise in working costs despite the appreciable deduction in tonnage milled: the fall in dividends is also interesting, and the decline in payments to the Government between 1941 and 1944 despite increases in the Special Contribution levy is worthy of note.

HENRY KAISER TO BUILD 2,000,000 HOMES FOR AMERICANS

Mr. Henry J. Kaiser, noted American shipbuilder, announced formation of a five million dollar corporation to begin the immediate construction of entire communities of homes. Mr. Kaiser said the new corporation would build not single homes but whole communities with recreation, health and educational facilities, business sections and aircraft landing fields where space was available.

He said each residential unit would be built to include two bedrooms and that the Fededal Housing Authorities would insure bank loans of finance the cost of from four to five thousand dollars for each house.

He announced that the corporation was ready to begin construction at once of 6,000 homes in the San Francisco Bay area, Los Angeles and Portland, Oregon. He said of the project: "Up to now our nation has talked in terms of building one million new homes in the first year after the war. I am convinced that we should plan for two million new homes."

Kaiser Community Homes is out to create an entirely new market. They will be within the range of families who have been unable to own their own homes.

"Construction of two million homes will give direct employment to 1,750,000 workers and indirect employment in allied fields for 2,500,000 workers or a total of well over four million."

U.S. WAR EXPENDITURES

The total war expenditures of the United States beginning with the fiscal year 1941 to May 5, 1945, was 275,703 million dollars, the Treasury Department announced. The Treasury also said the total expenditure of the U. S. Government, since July 1, 1940, are approaching double the amount expended by the Government in its entire history upto that time. Whereas, all budgetary expenditures of the Federal Government from 1789 to July 1, 1940, totalled 173,000 million dollars, the total budgetary expenditures from July 1, 1940 to May 5, 1945, are estimated at 300,000 million dollars. The total net receipts of the Government to May 5, 1945 were 124,882,000 million dollars, the Treasury announced.

GROW MORE FOOD IN ORISSA

The Orissa Government's schemes for 'Grow More Food' which have been approved by the Central Government, are estimated to cost about Rs. 60 lakhs during the current financial year. Two-thirds of this expenditure, it is understood, will be borne by the Government of India and the balance by the Provincial Government.

* * * *

IRON ORE IN KENT

A Government survey reveals big deposits of iron ore in Kent, England, which could produce over one million tons of iron ore annually with reserves for one hundred years.

* * * *

AMENDMENT TO IRON AND STEEL CONTROL ORDER

A notification published in the 'Gazette of India' amends the Iron and Steel (Control of Production and Distribution) Order, 1941, so as to allow free transaction between stockholders in India. The stockholders are no longer required to obtain a permit to acquire or dispose of iron and steel as between themselves.

CLOTH FAMINE IN GWALIOR

Though Gwalior State is a centre of textile industry it is surprising that the State experiences cloth famine.

The Controller of the Cloth Control Board recently visited Ujjain for enquiring into the question of black-marketing and profiteering by mills and merchants.

The export of cloth from Freegunj, Ujjain, has been controlled and measures are being taken to control the prices of the cloth stocked by mills and dealers.

COCHIN RUBBER

It is understood that when the Rubber Production Bonus Scheme expires on June 30, this year it will not be renewed. Instead, the Government of India will pay, until further notice, fixed prices for 'Hevea' rubber based on a price of Re 1 per lb. for Group 1 rubber delivered to the Government Godown, Cochin.

This will provide producers with a substantially higher return than has been averaged over the period of the Bonus Scheme and it is hoped will stimulate the maximum possible production of crude rubber, which is still most critically needed.

INVESTING IN PRIZE BONDS

"May turn the tide of Life"—

Says Lucky Winner of Rs.50,000

When the results of the Prize Bonds Draw held in January 1945 were published, Mr. P. C. Ghosh of Calcutta found that he was the happy winner of Rs. 50,000 in return for a mere Rs. 100 investment. In a statement, Mr. Ghosh said:

"I purchased a Prize Bond for Rs. 100 which, I am glad to say, has fetched me one of the First Prizes amounting to Rs. 50,000.

"Purchase of these Bonds is not only a safe investment and in a way co-operation with the war effort, but gives one ample opportunity of trying his luck which may turn the tide of his life.

"I got the prize money without any difficulty whatsoever through the Reserve Bank in Calcutta and I much appreciate their courtesy in this respect.

"I earnestly hope that those who have not yet purchased these Bonds will do so without delay."

AAA 211

PRIZE BONDS are of two denominations—Rs.100 and Rs. 10. For each series of one lakh pieces of Rs. 100, 1st Prize Rs. 50,000, two 2nd Prizes of Rs. 20,000 each, two 3rd Prizes of Rs. 5,000 each. For each series of one lakh pieces of Rs. 10, 1st Prize Rs. 2,500, two 2nd Prizes of Rs. 1,250 each, five 3rd Prizes of Rs. 500 each, ten 4th Prizes of Rs. 250 each. Prizes drawn half-yearly until January 1949 when all bonds will be redeemed in full. Each Bond has eight more chances of winning; the same Bond can win several times over. No Income Tax, Super Tax, Excess Profits Tax and Corporation Tax payable on Prize money.

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

Definitely easier conditions have been noticeable in the money market and call rates are nominally quoting ½ percent in Calcutta and ¼ percent in Bombay. There has been a small demand for funds for wheat movement but with the continued expansion of currency and the smaller demand for trade purposes from other directions banks have been very keen to place funds both in short-term bills and giltedged securities. That is the reason why with the smaller treasury bills offer in the last two weeks there has been keener bidding and the average discount rate has come down. In the giltedged market there has been greater investment buying and prices have recorded an increase all round. Banks have now a feeling that the withdrawals of deposits, even with a substantial improvement in the import trade, will not be on a large scale and that there is no need for keeping such large cash balances as was at first anticipated. It is perhaps too early to form any definite conclusions in this regard, as even with the pressure on account of tax payments over, deposits of scheduled banks show violent fluctions especially under Demand liabilities and it is not clear as to how these changes come about.

At the auctions of treasury bills held this week bidding was more keen and the amount of applications was fairly high at Rs. 5.42 crores. The amount accepted was Rs. 2 crores, the same as last week, and the average discount rate was 5 pies lower at 7 annas percent per annum. The offer for next week has been mantained at Rs. 2 crores. The downward trend in the yield on Treasuries might be more pronounced from the beginning of the next month if there is no increase in the offer. Maturities are at present equal to sales but from the beginning of June they will be Rs. 4 crores every week for nine weeks in succession. If the Central Government do not find any need for large-scale treasury bill borrowing there might be a decline in the discount rate, though the opportunity might be utilised by Provincial Governments to raise loans on a short-term basis.

* * * *

The returns of the Reserve Bank for the week ended May 18, 1945 show that the latest currency expansion has been effected only to increase the cash balance in the banking department. Notes issued are Rs. 4.8 crores higher at Rs. 1137.23 crores but notes in crculation are only Rs. 36 lakhs higher at Rs. 1125.38 crores. Notes in the Banking Department have naturally improved to Rs. 11.85 crores from Rs. 7.46 crores. Rupee coin have declined to Rs. 15.64 crores while sterling securities are Rs. 5 crores higher at Rs. 1,019.33 crores.

In the banking department, there is a a rise in Central Government balances by Rs. 4.06 crores to Rs. 268.25 crores as also Other Governments to Rs. 19.02 crores from Rs. 16.14 crores. Bank balances with the Reserve Bank are higher at Rs. 83.97 crores. Other deposits also show a rise of Rs. 1.25 crores to Rs. 26.31 crores. Even with the transfer of Rs. 5 crores to the issue department, foreign balances are Rs. 5.2 crores higher at Rs. 386.11 crores.

The statement of the Imperial Bank for the same week does not show any improtant changes, deposits being only Rs. 42 lakhs higher at Rs. 231.95 crores. There is a similar rise in investments to Rs. 142.94 crores while there is a drop in advances by Rs. 16 lakhs. Cash balances are higher at Rs. 28.33 crores against Rs. 28.06 crores. It would appear from a perusal of the Imperial Bank's statement for the last four or five weeks that trade demand is rather poor and that the upward tendency in regard to deposits is expected to be maintained though the rate of increase might be considerably slowed down. So that, as explained above, there is no reason for anxiety on the part of banks to keep large cash balances anticipating heavy withdrawals.

The statement of scheduled banks for the week ended May 11, 1945 shows a drop in Demand liabilities to Rs. 607.9 crores from Rs. 615.41 crores but Time liabilities have continued to improve, the latest figure at Rs. 228.85 crores showing an improvement of Rs. 1.8 crores to Rs. 228.85 crores. The decline in balances with the Reserve Bank to Rs. 80.82 crores from Rs. 89.85 crores is obviously due to a lower level of Demand liabilities but as there was only a small increase in advances and bills discounted, investments for over Rs. 1.5 crores in Government securities appear to have been made. This perhaps explains the strength of the giltedged securities market in the past two weeks.

Through the courtesy of the Reserve Bank, we are in a position to throw some light on the issues we raised, in our issue of April 21, on the agency agreement between Reserve Bank and the Imperial Bank. We extract the following passage from our article of April 21:

"Section 45 of the Reserve Bank of India Act 1934, provides for the Agreement with the Imperial Bank to come into force and to remain in force for fifteen years and thereafter until terminated after five years' notice on either side. That is to say, the Reserve Bank came into being on April 1, 1935; and it has just completed ten years of its existence. The completion of the tenth year is important, as, in case the agreement is to be terminated at the end of the period mentioned therein, the five years' notice to be given must have been given on March 31, 1945."

Our interpretation that notice of termination (if it is so decided) is to be given on April 1, 1945 is questioned by the Reserve Bank authorities, who point out that the agreement as it stands is for a minimum of twenty years and that, if at all, notice can be given on April 1, 1950 at the earliest. Another passage in our article ran as follows:

"The remuneration of the Imperial Bank is due for reconsideration as from the 1st April, 1945, (mark the words "shall be revised"); and this is to be determined on the basis of the actual cost to the Imperial Bank, as ascertained by expert accounting investigation."

We are now informed that such expert investigation had been made in due time and that the new agreement in force as from last April is on terms far more favourable to the Reserve Bank. No details of the changes in terms of remuneration were vouchsafed to us. While, as posing this question in the first instance, we expected to receive officially details of the new terms, we find that one or two of our contemporaries have been more lucky in breaking through official reticence and have furnished a partial account of the changes in the rates of remuneration. We further understand that the Reserve Bank is under no obligation to place the altered agreement before the Central Assembly. The original agreement. as we had pointed out, was to be laid before the Central Legislature "as soon as may be after it is made."

The exchange market has been steady with a small remittance demand. Rates remain unchanged.

Need for Efficiency Drive

Though sentiment in favour of economic planning has been well established both in official and non-official circles, there has been so far little or no attempt to make the preparations necessary for the success of planning on the administrative side. It would be hardly an exaggeation to say that the support which the cause of planning has had is due in the main to the expectations of direct profit entertained by individuals and groups of individuals. There is hardly a section of the population which does not believe that it stands to gain materially from the pursuit of a programme of planned economic development. Though the expectation is quite legitimate, it cannot by itself afford a sure foundation for the success of economic planning. Where other necessary conditions are absent, it will serve to bring about an inert longing for improvement in the conditions of life rather than a readiness to put forth the effort required Though for our part, we do not believe that present conditions, constitute a reason for pessimism, we must urge that efforts must now be directed to the creation of the appropriate psychology in the qublic mind. This is all the more necessary because what has been said before applies as much to the Government as to the public, to the various factors of industry as much as to the large masses of unemployed and under-employed people. The motives of the Government as it is now constituted in putting forward planning as an established public policy and continuing the effort for the formulation of economic planning are not, it must be confessed wholly clear. It is possible that the Government in its higher rungs looks more to a possible reduction of zeal for political programme than to relief of suffering in the country. It is possible, too, that the notion is held in Government circles that, in the absence of planned development, aimed at the continuance of the present conditions of pecuniary prosperity, the social fabric and the present political structure cannot be easily maintained. Something similar may also be said of Indian industry. Indian industries reached the end of a blind ally when the policy of discriminating protection revealed to the full its internal contradictions. It became clear that for the further development of Indian industry, other means would have to be sought. While the pre-war period revealed the need for planned development in wider sectors of the economic life of the country, the war period taught industry that government intervention need not necessarily be adverse to its interests. In other words, controls have lost their terrors as a result of the experience of the war period. As for the masses, planning holds out the promise of new employment taking the place of the employment of the war period. It also holds out the promise that in the post-war years to come the lot of the average man will not again become the play thing of inscrutable economic forces operating over the wide ranges of world economy and international trade. If industrial workers see in planning a means of keeping all their gains of the war period, if the agriculturists are convinced that the high prices of farm produce will be prevented from slumping during the years of peace, and if the middle classes are confident that, with the inauguration of planning, the present plentitude of employment will be kept up, then the popularity of planning is achieved without any effort.

The question is, however, to be asked, whether, if the prizes are so attractive, the efforts required to secure them should not to that extent be more strenuous. This unpleasant poser has been unconsciously dodged too long. The public has not been taught to prepare themselves, except in vaguest terms, for the toil and sacrifice that planning will involve. Industrialists are thinking more of the wider avenues of profit-making than of the special efforts they will have to put forth to secure them without harm to the public interest. The Government for its part has not faced the implications of economic planning for the tone and structure of public administration Now that there is very little left of the world war and planning presumably is not far away, it is apposite to raise the question of the implications of planned effort. We may make it clear at the outset that we do not sympathise with the views expressed by the authors of the Bombay plan that the public must be prepared for considerable sacrifices and that planning may involve comparative scarcity of consumer's goods of various descriptions. When the Bombay Plan was first published, we stated our view that planning without tears is possible. We seek to guard against the view that we have modified that view. What we seek to emphasise is that, while planning without tears is possible, planning without perspiration is not. Throughout the somewhat unique course of history in this country, it is doubtful if efficiency in economic production was ever held high as a popular ideal. The tempo of life in India has always been low. With agriculture as the mainstay of the people it is impossible, in the nature of things, that our people should set the same value on time as the people of advanced industrial countries in the West. The conditions are no longer favourable for the same even flow of life. The old basis of economic society has been shown to be utterly inadequate for sustaining the life of the people. With a marked shortage of the necessaries of life on the one hand and the sudden and marked increase in the aspirations of the people on the other, the necessity of planning is inescapable The public has to be disciplined, industry needs to have a better sense of service, and public administration must needs acquire higher standards of efficiency and probity.

In the case of the public, the necessary self discipline has to take somewhat subtle forms, even as the lack of self discipline manifests itself in apparently in unimportant shortcomings like unreadiness to queue up, jay-walking and other un-social and anti-social behaviour. It is possible that discipline is best instilled in the people by the ruthless removal of of such habits, followed duly by devotion to duty, sound civic sense and other positive virtues. But the responsibility for ensuring the proper psychology for the success of planning devolves largely on the Government and on industry. Whether the economic life of the country is carried on a truly economic basis rests in the last resort on the efficient functioning of industry. If Indian industry should continue in its old ways of slovenly work on the part of factory hands, inefficient co-ordination among the technicians, nepotism at the top and corruption in all ranks with the consequent wastage of men and material, one may be sure that planning will add new troubles without any alleviation of old sufferings. It is not to be supposed that the national income can be doubled merely by doubling the working hours of the workers and the productive equipment. The progress of the national economy depends upon our increasing ability to utilise the men and material to the best advantage and to place at the disposal of the people the resultant produce at fair prices.

But unfortunately in India the spur to improve efficiency has been either non-existent or blunt. In the days of discriminating protection, Indian industries could rely on public support for the extension of the period of protection and even for enhancing the import duties as and when necessary. Such economies in production as were achieved must be attributed to sheer force of time or other adventitious circumstances. The iron and steel industry is probably alone in acquiring the ability to face foreign competition unaided. In the case of the sugar industry, the last Tariff Board enquiry categorically refused to consider the date at which protection can be terminated. The rise of Japanese competition in cotton textiles has induced the public to regard protection to Indian industry as permanently indispensable. There is, therefore, a general readiness to acquiesce in current standards of productive efficiency which must prove dangerous in the days when all kinds of industries will be started under the pretext of planned development. There is a real danger of economic considerations being thrown overboard during a planned regime. If in the days of discriminating protection there was no incentive to economy, the conditions of the war period have hardly improved the position. The inauguration of a regime of controls during this period of scarcity has meant that inefficiency in production carries with it no penalties. Prices being fixed in relation to the least efficient producer, the margins of profit are high and the ordinary economic motives are denied freeplay. Planning is certain not to alter the position in this respect. It is, therefore, necessary to insist that well ahead of the inauguration of the planning in India, attempts should be made by the Government to ensure that the Government is always well equipped for judging costs in industries and for laying down standards of efficiency appropriate to the improvement that will be achieved at every stage in the quality of the mechanical equipment and of the personnel of the industry. The second part of the Bombay Plan laid commendable emphasis on price fixing in the light of rigorous cost accounting tests But if this recommendation is to prove effective, preparations have to be made from now to provide for such cost accounting tests being made. We published recently an illuminating article on this subject from a highly competent writer. If it is remembered that planned economic development is impossible without some manner of control of prices, then it will be realised that special provision for experience in cost accounting should be made from now instead of the whole question being shelved to a later stage. India has need to get over her traditional attitude of indifference to efficiency in work and to prepare herself for a strenuous social life srch as she ha never known before in her long history

We may now turn to consider the position of public administration in this regard. It is well known that over a long period the Indian Civil Service was regarded as exemplary in efficiency and integrity That it deserved this reputation, nobody can question. But during the last two decades and particularly during the war period, the administration has not only grown but has also developed on lines which still await

co-ordination. While perhaps nothing can be said against the calibre, moral and intellectual, of the important services, there have been forces at work to bring about its deterioration. In his comments on the Rowland's report last week, "Eavesdropper" brought out forcibly the strength and nature of these forces. The inauguration of Provincial autonomy, its survival in Provinces in which communal feeling is stronger, the introduction of various forms of economic controls and the opportunities it has created for "worthwhile" corruption, these have tended to undermine the efficiency and integrity of public administration in India. The pace at which additions have had to be made to the services is also not conducive to the preservation of old standards. Over and above all this, there is the difference in the nature of the work that has to be tackled. He would be a bold man therefore who would say that public administration in India is economic and efficient. Nearly all the charges that can be made against industry can be preferred against the administration as well.

There is need, therefore, for a full and dispassionate consideration of the scope and meeans for improvement. It is only when the administration has been rendered efficient and uncorruptible that it can be trusted to administer the various controls that are inseparable from planning. It is only such an administration, too, that can force industry to achieve and confirm to the standards of efficiency that can be reasonably set in consideration of the quality of men and material. And without the smooth and equitable working of the controls, public enthusiasm for planning and public co-operation in ensuring its success will be hard to obtain. We hope that Sir Archibald Rowlands who began the work so well in Bengal will pursue it for the whole of India as well.

Problems of Demobilisation

Now that the war in Europe is over and the hostilities in the Far East promise to come to an end in the course of a year, problems connected with the demobilisation of the Indian personnel loom large in public consideration. It is therefore, quite timely on the part of the Government of India to have announced a scheme for the re-settlement and re-employment in civil life of demobilised soldiers and discharged war workers. The plan seems to be, firstly, to collect, in advance, information regarding persons likely to be seeking work, and employment opportunities likely to be available for the various categories of workers and also to propose area-by-area plans of labour supply and demand. The results of this enquiry will aid in devising, guiding and directing demobilised prsons in the selection of civil employment. Secondly, the scheme also involves imparting of a technical and vocational training to those persons so that they can be equipped for the post for which they are best suited and also for meeting the post-war requirements of manpower for the successful execution of the development schemes. Thirdly, the task of re-settlement will not be fulfilled when the first two are done and so the Government propose to "follow up" by keeping in touch with the ex-service man and women in order to assist them and to acclimatise them to the new jobs amidst new environment. An elaborate administrative machinery is proposed to be set up in the Labour Department. This machinery is divided into nine sections in charge of nine main regions of India. viz., Punjab & Northwest Frontier Province, Sind & Baluchistan. Delhi and Ajmer Merwara, United Provinces, Behar and Orissa, Bengal and Assam, Central Provinces and Berar. Bombay, Madras and Coorg. Each one of these regions will have one Regional Exchange and several Sub-Regional Exchanges and for the whole of India these exchanges number 59. For the naval & aircraft trades, two Special Exchanges will be constituted, and the exchanges working in the different parts of India will be co-ordinated and centralised by a Central Exchange. It is also stated that at present there are about ten employment exchanges at work and when the whole scheme is completed, there will be 71 exchanges of all grades. The registration and employment of personnel within the respective areas will be done bye the sub-regional exchanges. In order to assist them in this work Employment Bureaux are proposed to be set up at the rate of one for every thousand demobilised persons residing in a compact area. This Employment Bureaux will function as a link connecting the demobilised persons and the sub-regional exchanges. The task of running the administrative machinery for demobilisation is entrusted to the Director-General of Re-settlement and Re-employment who will establish contact with the various departments of the Central Government and the Provincial and State Governments. The Director-General as well as other Regional Exchanges will be associated with Advisory Committees consisting of representatives of the Central and Provincial Governments and of employers' and workers' organisations. The scheme is expected to be completed in the course of five years in the first instance, and prompt and suitable employment would be given to the demobilised soldiers at convenient areas It is reported that demobilisation has already started and the Labour Department would take care of the discharged military personnel till March 1946 when the proposed machinery is expected to be in full swing. A separate scheme has also been prepared by the Labour Department for the disabled so that opportunities for rehabilitation, stabilised vocational training and retraining can be given to these unfortunate people.

The country would surely welcome any organised attempt at employing satisfactorily those people who have staked everything to fight for democracy. But it appears from the Government communique that they have not fully appreciated the real implications of demobilisation and all its effects on national economy. Demobilisation has to consist of three distinct categories: (1) The armed forces (2) Industrial workers & war technicians etc., and (3) Administrative surveys. It is not clear that the proposed demobilisation scheme covers all these three categories. With regard to the armed forces, while it is quite easy for the naval and air forces men to be satisfactorily employed, just after the war, it may not be so with regard to those who have served in the Army. Their number is more than two million and in peacetime the strength of the Indian Army cannot obviously be more than a small percentage of this. Since the great percentage of the people who joined the Army came from the villages—mostly landless labourers—they may be employed in agricultural pursuits if the Government's agricultural plans are quickly and fully initiated.

Sir Feroz Khan Noon, referring to the problems of demobilisation in March last year, spoke of collective farms as one of the effective ways of absorbing these demobilised men. Recruitment has not been evenly distributed in all the provinces and extreme poverty, play of political forces, social conditions and many other factors besides governed the rate of recruitment in the different areas. The impact of demobilisation, therefore, may not be evenly felt in all the provinces though the Punjab, Madras and the United Provinces may have to pay special attention to schemes of resettlement. The returning soldiers have acquired new habits, wider outlook and better standards of living and, therefore, the replacement planning must take these into consideration Before any attempt is made to place them back on the land a thorough and systematic survey of the cultivable waste and primary catchment areas will have to be made.

The Defence Member spoke of purchasing 90,000 acres of ground land in the Punjab out of the Central Revenues with a view to re-employing the Punjabi soldiers. While everybody will agree that the record of the service of the Punjabis has been remarkable in the several theatres of war, if the Central Government takes the problem of Punjabi demobilisation alone as a special case for extra consideration, it would leave behind a feeling of discontent in other provinces. The Central Government as far as possible, should steer clear of provincial discrimination in respect of demobilisation schemes. The Government of India plans, particularly the road plan, would absorb the drivers and fitters employed in the army but the Soldiers' Fund which has been accumulating all these years has come up only to Rs. 10 crores which is not adequate for launching ambitious schemes for the re-absorption of military personnel. Every year the Indian population is increasing by five million and the task of finding jobs for about two million of the returning soldiers, cannot be after all very difficult of achievement. But how best to utilise the industrial workers and other technicians is a question which has to be satisfactorily answered by the Government. Normally, India is a land of unemployment and under-employment and the great pressure of the population on agriculture has gone on for the past few decades making the situation worse year by year. What is needed today is a thorough overhaul of Indian economic system through an all round industrialisation. The landless labourers in the villages have to be, and can be, employed satisfactorily only if Indian industrialisation is speeded up. In the last analysis the problem of satisfactorily employing demobilised soldiers is directly linked to the task of avoiding a postwar slump. Unless Indian economy is kept expanding, it would not be possible to aim at full employment in this country. To rely on agricultural colonies for satisfying the postwar needs of demobilised soldiers will surely end in disillusionment as it happened after the last war. While the public would certainly be grateful to the Government for placing so much emphasis on the vocational training of the demobilised and also for instituting an organisation to follow up the demobilisation schemes for some years to come, it is to be regretted that there is no indication in the scheme outlined that the Government have realised that demobilisation must be part and parcel of a comprehensive scheme for full employment in India on the model of the scheme submitted by Sir William Beveridge for the United Kingdom

OUR LONDON LETTER:

V-E DAY AND AFTER

RELAXATION IN WARTIME CONTROLS

London, May 11, 1945.

London is still pleasantly relaxed after the enthusiastic twin holiday which marked the VE celebrations. Authorities have dropped grim reminders that the war will still be on until Japan accepts unconditional surrender and that the transitional period will be long and slow. Consequently the people realise that the most delicious respite of the war is ending and that they will have to carry on the tough undertaking of waging total warfare against the remaining Axis foe.

The authorities, however, have seen fit to reward the Britons for the produce of nearly six years of all-out effort. The drastic petrol (gasoline) rationing system is to be eased within a month. A modest basic ration will be available to all owners of private motor cars and motor cycles. It will be about the same as that in the United States, which gives each owner about 120 miles worth of petrol, every month. The Board of Trade expects the return of 20,000 workers to the civilian clothing trade; there will be more clothes and better shoes for children as a result of that, experts believe. Many defence regulations have been revoked, and Londoners are enjoying an experience of greater personal freedom. even though they have not been directly affected by the measures. For instance, you could not be hanged for looting. You could not be compulsorily directed into the police force. You can buy fireworks and shoot them off without fear of penalty. You can look forward to more horse and dog-racing. You will have a better chance of getting a seat at a football game because the authorities have abolished the restrictions on the number of people who may attend You can no longer be searched by the police. It is true that the food rationing will continue being severe. Taxes will not be changed for some time. There are plenty of visible signs that England is engaged in all-out warfare. The recent measures are a taste of what the Englishmen can expect on broader scale when reconversion gets under way.

There has not been anything spectacular or significant about business so far since Wednesday, which was VE plus one. There was nothing to indicate the future tone or direction of the stock markets. The city expects the market to start assuming a trend within the next few days

Interest in the forthcoming general elections has provided a ready topic for current conversation. It is evident that some people think it is near treason to be talking of an election at all, but the fact remains that politicians are doing little else. The two main questions in connection with the elections are the date and the likely trend. Protests are heard against a so-called "snap" election. It is pointed out, however, that it would take at least six weeks to stage an an election; and that could hardly be classified as a "snap" election. There are arguments against an early election. The strongest is perhaps that the average voter will not be sufficiently adjusted to cast a vote at an early date.

Support of Bretton Woods in Great Britain has increased during the past week or so, according to competent observers. There is no visible evidence of this, but observers of conservative nature explain that the reason for the recent increase of support of Bretton Woods lies in a desire to draw nearer to the United States. It is believed by many people that in the interests of closer British-American relations it might be worth Britain's while to accept Bretton Woods despite what the British believe will be considerable unilateral sacrifices. They argue that security is more important than prosperity. That, of course, is a controversial point because there are many who contend Anglo-American friendship depends on mutual respect and that Britain might not secure that respect if she were willing to accept sacrifices Since the plan would not be effective until the end of the war, it seems likely that ultimate adoption or rejection will be delayed.

Once again the treasury has had to increase the fiduciary note issuing power of the Bank of England by £50 million sterling to £1,300 million sterling. Except for less than £250,000 worth of notes issued against gold coin and bullion, the whole of the note issue is under the fiduciary powers. That does not mean that there is only that small amount of gold in the country There may be ten times that amount in the Government's Exchange Equalisation account. but it is no longer linked with British domestic currency. The need for increasing the note issue occurred suddenly as a result of the victory celebrations. If the holiday had fallen on a Thursday or a Friday. the public would have taken out the extra cash and spent it in time to allow for its return to the Bank before the following Wednesday. As it turned out, the Bank scrapped past the critical day with nearly £200,000 worth of notes to spare, and the returning notes were expected to flow in during the next few days. It is thought, though that the additional amount would have been needed anyway before long because there is no sign of an early reduction in Government spending.

The City has been watching with interest the continuous arrival of American businessmen. Belgium, Holland, Italy and eastern France, which heretofore have been classified as "war zones" are to be opened to American businessmen. It has been estimated that businessmen from the United States have recently been heading overseas—mostly to London and Paris—at the rate of 150 a week. They have been buying goods in western France and in England and consulting with the British about possible demands for American products in India and Egypt according to informed sources. This demonstration of American desire to establish overseas markets for the post-war era have impelled British traders to intensify a similar programme.

Sir John Anderson's announcement of a new treaty with the United States greatly reducing double taxation has interested the City of London more than any other feature in his budget address. Fairly long queues promptly formed outside the H. M. Stationery Office to secure copies of the text which are now being carefully studied.

Just how much relief will be secured seemingly depends on many complex factors but the first impression in the City is that the combined British and American taxation which now absorbs between 60 to 70 per cent of original earnings will now be reduced to between 40 and 50 per cent The biggest question is to what extent the tax authorities of the two countries will agree in application of their definitions Will they have the same criteria for differentiating between the company's branch overseas and the firm which is acting as its correspondent? Will they agree on what earning should be regarded as earned at home? Both the Governments during the past twenty years have developed their own definitions which, so far as can be seen, substantially agree, but the actual application in concrete cases is expected to keep solicitors busy and happy for some years.

The Stock Exchange was marked up substantially for all shares likely to enjoy larger dividends from overseas earnings but selection was haphazard.

Needless to say the City is equally interested in the Government's promise to promote similar tax agreements with the Dominions but concrete developments here are still some ways off.

The White Paper on National Income and Expenditure which, now and in the future, can be counted upon as regular feature of the Budget Day, contains numerous improvements and one strikihgly interesting new feature. The latter is an analysis of the country's expenditures on consumption goods at 1933 values. This shows how consumers have reduced their consumption during the war. Total consumers' expenditures in the year 1939 were (at 1938 prices) valued at £3,612,000,000 from which level they fell to £2,798,000,000 in 1943 and recovered moderately (through release of additional goods and not through any inflation prices) to £893,000,000 in 1944

Detailed classification showed that food consumption (again at 1938 prices) declined by 18 per cent but consumption of beer rose by 17 per cent and cigarettes by 21 per cent.

The most striking decline was for furniture. Total "consumption" of furniture in three years, 1942. 1943 and 1944, was only little over two-thirds of the total for the single year 1938. Actual consumption in 1944 was about one-fifth that of 1938. There was also a visible remarkable decrease in consumption in men's and boy's clothing; briefly, the total for the war years is done by equivalent of two full peacetime years.

But the grimmest figure in the White Paper, as in its predecessors, is the growing total of Britain's 'dis-investment", during the war. The figure at the end of 1914 was £3,596,000,000 covering only overseas assets which formerly furnished income to the United Kingdom and now lost.

The chief criticism levelled at the new budget is that the Government was overtimid in not drastically altering the taxation basis of motor cars in such a way as to encourage manufacturers to enter upon production of high-powered cars which could be sold abroad There is a small section of motor manufacturers who would like to see it is done and there is a group of middlemen, anxious to develop export trade in British motor cars, who are also urging for this. But the majority of manufacturers are seemingly quite satisfied with the domestic market and realise that the existing taxation system is good protection against foreign competition since it bars ownership of foreign cars to all except the very wealthy. The Chancellor has retained the old basis, thus continuing the former protection to the home market and the technical changes made in order to graduate taxation upward for every additional 100 cubic centimetres of engine capacity merely redistributed, the burden among the home users and does not weaken protection of the home market.

Editorial Notes

White Washing:

We extract the following questions and answers from the Central Assembly Proceedings of March 13:—

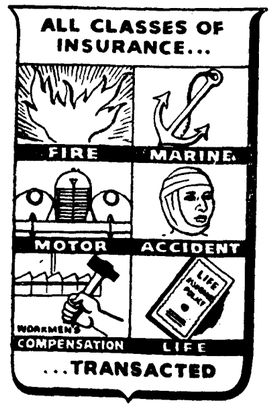
Mr. Hossain Imam asked whether certain defalcations and serious irregularities had occurred in the Telegraph organization of stores at Calcutta.

Sir Mohammed Usman, Member for Posts and Air, replied that certain irregularities had come to his notice. An official investigation was in progress and the matter was receiving his personal attention.

Mr. Hossain Imam: I hope the matter will be put in the hands of the police as soon as possible.

Sir Mohammed Usman: The Hon Member may trust me to do the right thing.

Mr. Hossain Imam: Not that it will be white-washed.



Sir Mohammed Usman: In view of my assurance, such fear is not justified.

Two and a half months have elapsed since the Hon. Member for Posts and Air gave the assurance that the matter was receiving his personal attention; and there is so far no tangible evidence available to the public as to whether the Hon. Member's attention has led to any action. It is admitted that certain irregularities have come to light in the Telegraph stores at Alipore; but, as long ago as March, there was the fear that, in the end, everything might be whitewashed. Does this inordinate delay mean confirmation of the fear? We hope not. For, the defalcations are serious and the resultant losses to the Government heavy. To distant Dehi, the full details can be known only through bulky files; but to those who live in Calcutta, rumours and reports furnish a definite picture of diabolical plotting. The *modus operandi* conforms to form; the highest officials are bribed and when their bank accounts show bulging balances, the naive explanation is given by the dutiful wife: "You know, my husband is very lucky in his bets at the races." This particular group of officials (among whom figure majors and captains) must have had a good and long run of luck. The officers at the top are aided and abetted by the assistants at the bottom. Firms of no consequence and with hardly any office are given orders for all kinds of goods; and prices paid are many times the controlled rates.

The Government suffer loss in a variety of ways. Supplies cost the Treasury four or five times more than they should. And the fellows who grab these profits do not pay any taxes on the profits. The morale of the whole organisation is so corrupted that no mending is possible; there has to be thorough overhaul of the Telegraph stores. The spokesmen of the Central Government have, again and again, protested that they would give no quarter to corruption wherever found. Rumour is not a lying jade in this instance: Sir Mahomed Usman has officially admitted the correctness of the reports. Why, then, this delay in booking the offenders?

Agricultural Incometax for Madras:

Just as the thrown-out Finance bill in the Central Legislature is again presented in a recommended form, so also the Madras Government, despite the chorus of opposition to its proposed Agricultural Income Tax has extended the time for the receipt of objections and suggestions till the end of the month. Half-hearted and fitful attempts have been made by the Adviser concerned and other officers to justify the measure, attempts to defend the indefensible, or in the words of the veteran administrator, Sir N. Gopalaswamy Iyengar these statements of Government have been altogether perfunctory, incoherent and unconvincing. The proposed tax is unnecessary because the budget has a surplus. The argument that such a tax is being levied in Bengal, Assam and in Travancore cannot hold water, for Bengal is a permanently settled area and in Assam and Travancore, the Planters who manage the plantations as any other industry pay tax. Neither is the case in Madras. The question whether land revenue is a tax or a rent has been thoroughly discussed, as Mr. T. R. Venkatarama Sastri pointed out, in a case by the Bombay High Court who came to the conclusion that it was a tax. As such the imposition of an agricultural income tax over and above land revenue would amount to double taxation of land. In the ryotwari areas land revenue is very heavy in its incidence. Land assessment in Madras is the highest in India. The wartime rise in agricultural prices has led the Government to think that the Agriculturist is well off and should be taxed. As a retired Chief Engineer to the Provincial Government pointed out in a communication, due to the war, agriculturists have been hard hit owing to the scarcity of labour and the highly increased cost of cultivation due to the high prices of cattle, manure and agricultural implements. But granting the agriculturist is a little better off than before how can the Government claim a moral right to tax him now in his prosperity when it did not lift its little finger during the depression of the last thirties when he was almost in penury? Sir T. S. Venkataraman rightly pointed out that when we plan for post war development of agriculture a tax on agricultural income, before development, is hardly the right thing to encourage agriculture. The Governor's Adviser, Sir Norman Strathie argues that the land revenue system, as it is, is iniquitous and should be reformed. Nobody disputes that. But the iniquity cannot be removed by levying a new tax on one set of people while the poor ryots are allowed to groan under the weight of land revenue. The Government piously hopes that it might ultimately be able to exempt the poorest ryots altogether from the burden of taxation. This hope is delightfully vague and Sir Gopalaswami Iyengar thinks that it is not a practical proposition to exempt any piece of land under occupation from taxation altogether. The most rational thing to do is to reform the land taxation and treat income from land on the same footing as income from non-agricultural sources and levy an income tax in lieu with due regard to the peculiarities of this source of income. But that change cannot be accomplished by a government which is not responsible to the people. One cannot do better than quote the words of Mr. Langley, the leader of the European group in the Madras Assembly, on this point, 'It is repugnant to British principles and traditions that a fiscal enactment of this nature should be imposed by an uncontrolled executive. I thought this war was being fought for democracy. The way in which this proposal has been launched seems to be the very negation of this principle.'

Road Transport:

In his address to the Indian Roads and Transport Development Association, Bombay, its retiring Vice-chairman Mr. Turnbull rightly emphasised the fact that India's prosperity lies along her unmade roads because prosperity in every sphere has been retarded in India owing to the lack of an adequate road system. Whether we take agriculture, which is the mainstay of this country, or trade and commerce or industries or social services such as education, health and other amenities of civilisation, the absence or inadequacy of roads has undoubtedly been a deterrent to India's progress. Though accurate data regarding roads throughout India is inadequate, yet conditions in one province are illustrative of other provinces. The Congress Ministry in Bombay in 1938 set up the Bombay Economic and Industrial Survey Committee (under the Presidentship of Sir Purshottamdas Thakurdas) which reported that 75 percent of the total area was not served by road at all while the percentage of villages cut off totally from outside stood at 70 to 80 percent in certain areas. How far this unsatisfactory state of affairs prevented rapid industrialisation and the cultivator from getting better return for his produce, it is not difficult to guess. Rightly did the Committee say "we cannot sufficiently emphasise the imperative necessity of Governernment setting right this deplorable defect to the economic structure of the province from the point of view both of its agriculture and its industries." One can say without hesitation that these words apply equally, and possibly more, to other provinces. It has been estimated that if all the bullock carts now operating over field tracks could be provided with suitable roads transport costs to India would be cheaper by as much as Rs. 55 crores every year, which is equivalent to one-half of the gross annual traffic receipts of railways before the war. This will show that India is paying in the shape of increased cost of goods due to the high cost of transport, more than it would have paid for providing cheap transport through good road communications. The pilot surveys conducted by the India Roads & Transport Development Association Limited have shown that as a direct result of the facilities afforded by more and improved roads, not only would more lands be brought under cultivation and fairer prices ensured to the agriculturist, but far-reaching improvements could be brought about in the type of agriculture to the cultivator's benefit and a great fillip would be given to the production and marketing of perishable articles such as fruits, vegetables, milk, eggs, etc., over larger areas. The surveys indicated that for every Rs. 100 spent on roads the returns through increased earnings to the community would amount to roughly Rs. 277. The educational and other social benefits the population will receive by bringing villages nearer to the city cannot be measured in terms of rupees. Roads to feed the railways have been inadequate and their construction should not be delayed. The revenue from Road Transport derived mainly through duties on petrol and motor vehicles and provincial motor vehicles taxes, just before petrol rationing, reached almost double the normal expenditure on roads. This revenue should be put back on roads without delay. Road construction can assist in no small measure in providing work for demobilised soldiers. It is, therefore, no exaggeration to say that all reconstruction schemes whether in respect of agriculture, public health, education or industry cannot be planned efficiently and developed effectively unless communications are first improved.

Town Planning in Hyderabad:

Taking inspiration from Mr. J. M. Linton Bogle's admirable book "Town Planning in India." the Hyderabad Government have decided to launch on master-plans for the orderly development of towns and villages in the State. Most of the evils of unplanned development of residential areas are found in Hyderabad but since industrialisation has just begun the scope for scientific planning is rated vast. Post-war housing plan for Hyderabad will be outlined after making all allowances for the economic development of the towns, subject to the best utilization of land. Careful surveys will be made and areas will be reserved for market-gardening, agricultural pursuits, and highway communications. The July issue of 'Hyderabad Information" which contains details of the town planning of the State elucidates the principles governing the Hyderabad Town planning. The Dominions cover a vast area of 82,698 sq. miles and will be zoned for purposes of town-planning. Location of the various centres, such as civic, industrial and residental, will be restricted as to character, height and the number of buildings per acre. Residential areas will be protected from the inroads of industrial buildings and shops. Consideration is given for keeping open space, playgrounds, gardens and woodlands. The housing schemes restrict the number of dwellings per acre and allow an average

density of ten to twelve houses per acre for middle class people and up to twenty in the case of poorman's quarters. So far 13,00 residential plots have been provided for in Hyderabad. The town improvement schemes provide for the removal of factories and grain markets from residential areas to outlying regions and already ten markets have been removed to new sites. Emphasis is placed on slum clearance which is closely linked to drainage, watersupply schemes and road plans. If Hyderabad's ambitious industrial schemes are to be initiated in such a way as not to affect the healthy living conditions of the masses the housing plans should be executed without delay.

War and British Farming:

The achievements of British farmers during the five years of war have been remarkable and significant. They have achieved during the years of stress, toil and tears what the British industrial workers did in the factories and mines. The problems facing Great Britain during the days when the U-boats sank merchant shipping on all sides of the British Isles looked for some time too difficult to be solved but British tenacity and resilience succeeded in tackling the situation gloriously. The facts speak for themselves. In 1939 Britain imported over 22 million tons of food and animal foodstuffs. Out of her farming land 18.8 million acres out of a total of 31.8 million acres was in permanent grass which was used as an exercising ground for the livestock that fed upon imported rations. Only 1½ million acres were under the plough and agricultural labour consisted of 35,000 farmers with 75,000 farm workers. Before the war, British farmers were not interested in growing more food but were keen on producing for more money. Agricultural farming standards were coming down and there was a marked tendency for the land to be starved of labour, fertilisers and equipment. When the war started, the whole atmosphere changed, almost overnight. Before the war Britain imported 72 million tons of food and animal feeding stuffs annually but in 1943 the figure was halved and brought down to, 11.5 million tons. British agriculture increased the net output of human food by 70 per cent in terms of calories and proteins. The chief responsibility of the British farmer was to plough the cow pastures to produce sugar, wheat and potatoes for human needs. He had also to plough the grass acres, to grow fodder for their cows and to replace the imported foodstuffs on which they had relied previously. It had also at the same time increased the production of liquid milk the demand for which had exceeded all previous records. The scope for land reclamation was very little. While the technical problems had to be solved war itself introduced several handicaps. The demand for land for airfields, battle training grounds and other military requirements reduced the net area available for cultivation. The total prewar regular male staff on the farms was reduced to one-fifth and women had to take up the job. Agriculture had to get on with an area shrunk by 600,000 acres and with a loss of only 100,000 skilled regular workers who had joined the forces. But the task was done and the situation was successfully tackled by the use of more fertilisers, greater application of science and increasing use of tractors on the land. The tractors used for cultivation increased from 55,000 to 180.000 in five years and British agricultural engineers produced the machinery required for the new conditions. More than half the country's pigs and a third of its poultry had to be sacrificed so that the remainder could be fed properly. Everything was done to push on intensive and extensive cultivation to the utmost limit, and in five years Britain changed from a predominantly pastoral type of agriculture to a predominantly arable. The arable land increased from 13 million in 1939 to 19 million in 1944 while permanent grass decreased from 19 million to 12 million acres. The total output of grain in all its forms in 1943 came to 8.6 million tons, the greatest in British history. While Britain can be proud of her farmers whose team work saved the country from starvation and destitution, the lesson for India is clear. Four years of bungling and muddling on the foodfront in India have resulted in enormous suffering. The Government of India could have learnt as to how much State help can do to avert disaster during times of crisis.

Future of Handloom Industry:

As a result of the war, and the scarcity of imported clothing materials some fillip has been given to the handloom industry. Government spokesmen, in their speeches, have encouraged millowners and capitalists to establish weaving sections in their mills. But on taking this advice capitalists have to be careful that reconditioned textile machinery of the prewar and improvised types are not dumped on India. The textile industry in India can be secure only if industrialisation spreads from the cottage upwards. Experience has shown that it is not impossible to link up the handloom industry with the powerloom without leading to any conflict in their spheres of trade. It is a matter of common knowledge that a considerable portion of the working class in the villages is in some way or other connected with individual or collective form of handloom weaving. The existing control of textiles can be used and if necessary extended to future planning. The mill industry and handloom industry, with due regard to the conditions and environments of particular areas, should divide between themselves the production on mass scale of standardized qualities throughout the country, and manufacture of costlier and varying qualities. The quality fabrics of rare and varied nature could be left to the handloom industry while the mills can undertake production of standardized qualities. Hierarchy of district, provincial and central organisations for the handloom scheme should be set up which will divide cloths for manufacture between handlooms and mills on an economical basis. These organisations should supply raw materials, fix specifications according to marketability, give technical guidance, necessary finishing, besides a thorough inspection by technical staff. Private weavers need not in any way be barred from having their own trade, nor need they be debarred from seeking help from such organisations. Agriculturists who have considerable leisure hours might be induced to manufacture ordinary varieties of cloth for village consumption. This will add to their income. The linking up of handloom and mill weavers could go a long way in placing the weaving industry on a sound basis.

Search For Assets:

The publication of the National Expenditure Committee's report on British expenditure in India has provided an occasion for a renewed bout of loose thinking on the question of India's sterling balances. The presence of the Indian industrialists' delegation, it is stated, has acted as the signal for a wailing campaign in British financial circles. The financial editor of the *Manchester Guardian* is considerably exercised over the "problem of paying off this debt which will leave no asset behind." It is remarkable how, so soon after the end of the war in Europe, Britishers who ought to know better affect to forget that the debt was incurred not to build but to blast, and can hardly be expected to leave any tangible assets be-

AUDITOR'S REPORT.

I have audited the Balance-sheet as on 31st December, 1944 and Profit and Loss Account for the year ending 31st December, 1944 and Profit and Loss Accounts for the year ending 31st forth with books and accounts as kept at the Head Office with which are incorporated the branch balance-sheets as on 31st December, 1944, as certified and reported to by the respective Registered Accountants and I have obtained all the informations and explanations I have required.

In my opinion, the balance-sheet and Profit and Loss Account as referred to in this report are drawn up in confirmity with the law and such balance-sheet exhibits a true and correct view of the state of the Banks affairs according to the best of my information and explanations given to me and as shewn by the books and accounts as kept by the Bank as required in the Section 130 of the Indian Companies Act VII of 1913 (as amended in 1936).

AGENCIES IN ALL IMPORTANT CITIES OF INDIA

hind. But the blasting has been very effectively done. Hitler is dead, along with Goebbels, Goering is a prisoner, Himmler has killed himself and Berlin is a mass of rubble. The Third Reich which cast its shadow over Europe for more than a decade, has ceased to exist, its armament factories have been blown to pieces and its territories are overrun and occupied by Allied armies. Statesmen of the United Nations can now discuss at leisure the foundations of international security, wrangle about frontiers and mandates and play with the fate of subject nations. The war in short has been won. Towards the cost of this most expensive of wars India has made a contribution out of all proportion to her ability. Of the real cost of this contribution, in terms of human effort and misery, the sterling balances can hardly give any indication. The Parliamentary Committee's report has disposed once for all of the fashionable superstition that British war purchases in India were made at inflated prices. Indians, it may be readily granted, have not given convincing evidence of goodsense in ordering their political affairs, but it is hoped that India's industrial ambassadors will counteract the scaremongering propaganda by assuring British businessmen that India has no interest in undermining British solvency. For the question essentially turns on Britain's ability to pay and India's capacity to absorb payment.

Anyone who considers the total cost of the war and realises that the major part of it has been met out of current income, cannot entertain any doubts of Britain's ability to pay. Britain has been spending over £10 million a day for more than five years to pay for the cost of war. Theoretically a continuation of the war effort for three months should enable the British people to pay off the £1000 million which they owe India. Not that any reasonable person expects or desires them to make the terrible effort which this involves. India's capacity to take the payment without choking has also to be considered. But it should not be beyond human ingenuity to devise a time-tab'e geared to India's industrial plan which would enable Britain to repay the debt without unduly straining herself and gain the goodwill of 400 millions which will be an asset of incalculable value in the years that lie ahead.

U. S. Tariff Policy :

The House of Representatives Ways and Means committee's vote in favour of the Bill authorizing the President to reduce tariffs if necessary, by a further fifty per cent is an event which claims more than passing mention. Though the Bill still awaits the approval of the House and the Senate, the voting in the committee followed the lines of party cleavage. The passage of the Bill should considerably facilitate the work of the committee at San Francisco which, under the chairmanship of Sir A Ramaswami Mudaliar, is drawing up the blueprints for closer economic co-operation between nations in the postwar period.

The Bill has the blessings of the late President, and has the approval of Mr. Truman. The day after the House Committee voted, United States Attorney General Biddle, testifying before the Senate Special Committee on petroleum resources, entered a powerful plea for removal of trade barriers and pledged the Administration to support vigilant enforcement of a free and competitive enterprise programme. The emphasis on free enterprise should mollify Big Business and take the edge off traditional Republican opposition. Mr. Biddle's resignation should make no difference to the Administration's ahead are also preparing to create the mar- support. American businessmen looking

kets as they produce the goods and new forms of economic collaboration are being devised to act as stilts for undeveloped regions or to help put war devastated countries back on their feet.

Apart from the direct consequences of the reversal of American economic policy the repercussions on Britain's reconstruction programme should be of considerable importance to India. All through the inter-war period British economists have insisted that the American Tariff wall blocked the free flow of international trade and caused the whirlpools in which the national economies of Europe foundered. Britain managed to keep afloat by raising walls of her own round the empire and at the cost to prestige involved in repudiating the war debt. But the removal of the American tariff barrier threatens to let loose a torrent that will overflow if not entirely wash away the dykes of Empire.

Labour on the War Path :

The exchange of compliments between Bevin and Bracken, which threatened last month to upset Mr. Churchill's applecart, provided the first indication of the feeling which was gathering strength, that the end of war in Europe should coincide with the end of the Coalition. The problems of post-war cleaning up, which are getting daily more complicated, apparently dictate that Britain should regain a free hand in the international arena. Mr. Churchill has accordingly informed the leader of the Labour Party that "tolerable conditions under which we could work together" no longer exist, and a general election is forecast for the second week of July.

The state of relations with Soviet Russia has been, for Labour, an obvious source of anxiety, but it is not easy to see what other course is open which does not involve sacrifice of vital interests about the maintenance of which Labour is as much concerned as any Tory diehard. Sir Stafford Cripps addressing the Labour Party conference at Blackpool stated: "We must make it clear that we will not tolerate any unnecessary quarrel with our great ally Russia." It is not without significance that Sir Stafford is alive to the possibility of 'necessary' quarrels with the 'great ally.' The prospect of general election in Great Britain may be expected to prolong the incubation period of European distempers and provide the time necessary for the Foreign Office to take bearings afresh.

On the home front, Labour, it is stated, has been caught at a decisive disadvantage, with its voters still on active service overseas. But general sentiment registers a swing to the Left and the British electorate will be faced with a really hard choice be-

Sixty Years' Service TO INDUSTRY

Our services to the Iron, Steel and other Indian Industries started sixty years ago at the growing port of Karachi, but today they spread all over India. As the largest engineering concern in North-West India, we have carried out many successful contracts both at home and abroad.

We manufacture:

Steel Doors and Windows; Pressed Steel Tanks; Equipment for Textile and Sugar Mills; Powerhouses and Factories; Garden Rollers; Water Supply Systems; Motor Launches; Plastiplug; Waterproofing, etc.

We stock:

Motor Trolleys; Marine Engines; Asphalt Boilers; Jenkins Clod Breakers; Structural and General Engineering Stores; Bitumastic, Pudlo and Solignum; Steel and other Metals; Cements, etc.

We can advise you on all your engineering and building problems; why not consult us without any obligation.

tween playing second fiddle to Moscow in Europe or more vigorous participation in American projects. Against this background Labour's domestic programme loses much of its significance for it is obvious that developments abroad will determine the electorate's verdict. Labour can at least enhance its prestige if not its chances of office by making India the main plank of its platform.

Industrial Development of Orissa

From the report on "the Industrial survey of Orissa" submitted by Mr. P. Mohanty, it would appear that the industrial possibilities of Orissa are greater than the public ever imagined. A rapid survey of existing industries and the potential resources of this province was undertaken with a view to providing a basis for post-war industrial development. The survey has revealed that this part of India is well endowed by nature for the provision of electric power and for the development of mineral industries. High-grade iron ore is available at Umarkot and low-grade ores in several places in Sambalpur district. When electricity becomes cheap and available, it would be possible for the secondary production of steel using pig iron and for the production of ferro-manganese. It is also quite easy to establish a rerolling mill for making structural steels, tools and agricultural implements. Among the large-scale industries for Orissa, the most suitable are in the heavy chemicals group. The manufacture of salt and salt products such as alkalis, soda ash, sodium hydroxide and bleaching powder is considered very suitable. Since Rampur coal is rich in volatile contents, it is considered good for distillation purposes. The report also considers the establishment of a pharmaceutical industry quite feasible and urges the extraction of strychnine from nux vomica, agar-agar from Chilka weeds, and the preparation of Shark liver oil and of syrups and extracts from various indigenous medicinal plants. The manufacture of alums and bicromites will be facilitated if a sulphuric acid plant is set up. A bone mill can immediately be set up for purposes of supplying fertilisers and limestone available at Kottameta can be used for preparing calcium cynamide. The immediate setting up of a paper mill at Motu is also considered though at present there is no scope for the manufacture of rayons and artificial plastics. The sugar mill at Rayaghada has considerable excess capacity and, if the cane area is extended, the mill can very easily serve the local demand for sugar. The development of the glass industry is, however, directly linked up to the manufacture of soda ash in the province and the survey has revealed that the manufacture of glass bangles, beeds, small bottles, etc., can be happily organised on a cottage basis. There are also great scope and vast possibility for making fire-clay, refractory stoneware and white porcelain ware. The handloom industry has been languishing for some time past and the demand for yarn is so great that there is need for several spinning mills. Orissa deserves and should have one textile mill. The survey also has revealed great possibilities for timber industry, fishing industry, tanning and leather goods industry and the manufacture of silk products. Cottage industries have not been neglected and Mr. Mohanty's report is based upon the known and verified economic potentialities of the province. If early steps are taken to implement the recommendations of the Report, the erstwhile backward Province will emerge as one of the most progressive areas contributing to the economic development of this country.

Clive Street Gossip

Time, it would appear, has taken a hand in settling the long and somewhat desultory controversy about India's sterling balances. Only those who have followed the controversy closely can perhaps appreciate the fact that the two sides have never come to grips, partly for lack of clarity of the issues involved, and partly because of the tactical advantage that one side had in prolonging the controversy as much as possible. In India, the main concern of the people was firstly to ensure that the colossal sterling balances, which India has accumulated as a result of her wartime transactions with Britain and other foreign countries, should not be frittered away as after the last war in supporting a high exchange rate, and secondly, that these balances should be available for paying for the large-scale imports of machinery which India will require for her post-war economic development. No one in India could possibly have any doubt about the equity of Britain owing large sums to this country and making them available to India for expenditure in any part of the world according to her needs. But on the British side, financial journalists and others interested in this question have up to now had not a little difficulty in persuading themselves that Britain has received full consideration for the amounts which she now owes to India and that she has every moral and legal obligation to make these moneys available to India in the form and at the time she may choose. More than this, British journalists and public men are keenly conscious of the difficulties which Britain will experience in the discharge of these obligations to India. National pride does stand in the way of the acknowledgment either of the services rendered by India to Britain, or of the incapacity of Britain to return these obligations in suitable forms.

* * * *

The result, therefore, has been that attempts have been made to question in the first place, whether adequate consideration has been received and secondly, to suggest that both the manner in which these obligations have been incurred and the position of Britain's national economy in the future require that the moods and inclinations and conveniences of the debtor, rather than the needs of the creditor, should determine the time and form of repayment. There has been throughout the course of this controversy a clear perception on the part of Britain of the danger of advocating repudiation in any but covert forms. The discussion has, therefore, followed devious courses in which relative price levels, the pegged exchange rates and the nature of the financial settlement between the Government of India and His Majesty's Government regarding the allocation of military expenditure have all been dragged in and every ingenious attempt made to change their bearings, to the advantage of Britain. India has therefore been hard put to it to meet these points after world opinion has been to a great extent prejudiced by British misrepresentations. The financial Press in Britain gave it out to the world that India's sterling balances were made possible by a financial settlement which was extremely unfair to Britain and debited an unduly large share of the military expenditure incurred in this country to His Majesty's Government. When it was made known that India was supplying everything, that she had been allowed by the jealous British Government to equip herself to produce, the emphasis was shifted from the financial settlement to the relative price levels and the exchange rate. Even today it is unbelievable that competent financial journalists in Britain should ever have seriously suggested that the fixing of the exchange rate throughout the war period has been to the disadvantage of His Majesty's Government in their dealings with the Government of India. But the point was made that exchange should have been allowed to take its course and that, if this had been done, the sterling balances would not have been as much as they are now.

* * * *

The one-sided thinking which undue pre-occupation with self-interest always evokes is no doubt responsible for this kind of fallacious economic reasoning, but the event showed that they were meant to be a tactical prelude to a partial or wholesale repudiation of the debt owed to India. The contention that the financial settlement had been heavily partial to India and that the accumulation of India's sterling balances would not have been possible otherwise was really intended to pave the way for the suggestion that, for the realisation of such dubious debts, India must be content to wait indefinitely. The meeting of the Bretton Woods Conference also furnished the occasion for Britain making it clear to India that she cannot treat her sterling balances as foreign exchange realisable at call. Once the settlement of abnormal war balances was definitely taken out of the scope of the International Monetary fund and once the Conference acquiesced in the view that the settlement of such balances was a matter for bilateral negotiations between the countries concerned, it became clear to India that the arguments started in the earlier stages of the controversy were meant to serve a definite tactical purpose. Sir John Anderson has missed no opportunity to emphasise that India's sterling balances cannot be treated as ordinary commercial debts. If I am not mistaken, he has emphasised this point at least three times during the last four or five months, and the way in which British Treasury officials have carefully avoided discussions with Indian representatives on this question shows that the battle is yet far off and that, materially, the odds are heaily against us.

* * * *

That British standards of commercial honesty in this matter are not what they should be is no matter for surprise. Even in the relations between individuals in a single society, law is only minimum morality. In the society of nations and in the relations between States, there is no law to enforce even that minimum. If according to the books at Delhi and London, Britain owes India large sums, it is idle to expect the time and modes of repayment to conform to copy-book maxims. The relative strength of the two countries concerned is, no doubt, the most decisive factor. Indians, who did not suffer from exaggerated ideas of the value of comment and argument, will see nothing surprising in this. But it is one thing to repudiate debts; it is quite another to charge the creditor with fraud and forgery. No Indian puts out of his mind the possibility of Britain being unable to repay these funds except with special aids obtained from abroad. While, therefore, we are prepared not only to wait but also to forego a not inconsiderable part of the debts owed to us, it would be absurd to allow reckless, baseless charges to stand unanswered. Times without number India's public men and publicists have emphasised that, if the financial settlement has been partial,

K. N. DALAL, *Managing Director.*

it is not to India, that, if sterling balances give the impression of India having gained a prodigious windfall, it has been bought with unprecedented suffering and sacrifice all over the country and that, if the exchange rate is pegged throughout the course of the war, its advantages have accrued to Britain, and not to this country, and that if prices in India have been high relatively to the pre-war level, the prices paid by the British Government and the Government of India for Indian products have been distinctly less than those paid by them in their own home markets.

These issues have been discussed at every suitable stage in all sections of the Indian Press and the impartial reader will have no difficulty in judging the merits of the various questions. But the handicap of lack of suitable data could not be got over. While we are aware that the Supply Department has been working on the basis of strictly controlled prices, we have lacked the means of showing with incontrovertible facts and figures that the British and Allied Governments have throughout had good bargains. It is here that, as I said, time has taken a hand in the controversy regarding sterling balances. The report of the Parliamentary Committee on national expenditure has finally disproved many of the contentions of the British Press against the justice and equity of India's claims. It is described by Reuter's City Corresponden' as a mine of revealing information on the process by which India has accumulated sterling balances of over 1,000 million sterling. The Government of India has, according to the report, succeeded in negotiating contract prices which, though they were less strictly controlled than prices in Britain, escaped the worst fluctuations of Indian Commercial prices. Other British buyers of Indian commodities have also done relatively well. The Indian Government placed the bulk of orders on behalf both of itself and the British Government since both the Governments buy identical or similar things from the same Indian factories. In the case of the more important producers, prices were negotiated at six monthly periods in accordance with the changes in cost of production. While wages were determined by the prices of commodities which were uncontrolled, Indian producers had to submit to price stipulation laid by the Government which did not take into account the full extent of the rise in the cost of living and in wages.

* * * *

The principles of price fixing were best brought out in the case of the Tatas as more than 50 per cent of the Indian Supply Department's expenditure represents the cost of steel. While the civil Departments of the Government of India paid more for steel than the British Government did at home for similar purposes, the Indian Government's military departments got the same price as the British Government. No price increase was claimed by the Tatas during the first three years of the war and present rates for war contracts are about 27 per cent over pre-war level. Tata's price of steel must thus be appreciably below British and United States prices. And this is crucially important, because steel is the basis of any economy. Tata's achievement in this regard is all the more remarkable because the wages paid by Indian suppliers depend on the worker being able to pay for food and clothing. As the most distinguished instance of full service to the war effort, the Tatas naturally get high praise from the Parliamentary Committee though, in accordance with convention, their name has not been specifically mentioned. What is true of the Tatas is also true, though to a slightly less extent, to other suppliers as well. The report states, "the figures giving comparative prices in India and here, for a wide range of stores, including textiles, general stores and munitions, show that Indian prices are seldom higher and are generally appreciably—for some stores markedly—below the home price: usually higher prices occur where articles are not those markedly—below the home price: usually higher prices occur where articles are not those which Indian factories were accustomed to produce." Reuter's City Correspondent has significantly added that the report is an eye-opener to many people here including apparently the Chancellor of the Exchequer who were convinced that Britain's war debt to India has been swollen by the inflated prices charged to Britain while the rupee rate remained fixed at the pre-war figure.

* * * *

Now that there is an authoritative verdict on this issue, it is possible to hope that the British Press will no longer trot out the old spurious pleas about the inequity of Britain's debts to India. On the other hand, there should be some honest searching of the heart and some attempt to gain a proper attitude to the problems raised by the sterling balances. After all, the basic facts of the situation are not altered by insincere or otherwise hollow arguments. If Britain should find it difficult to repay her debts to India, that will be a fact which neither Britain nor India can afford to ignore. On the other hand, India's readiness to accommodate herself to the needs and requirements of Britain in this regard will be increased, rather than reduced, by a frank recognition on the part of Britain that full consideration has been obtained and that India had undergone suffering and privations out of all proportion to the advantages that she may derive out of these sterling debts. The many issues by which the British sought to prejudice international opinion in the matter of India's sterling balances have been cited at an earlier stage of this article; and it will be appreciated that the report of the Parliamentary Committee settles clearly all these issues, excepting perhaps the question of the allocation of financial expenditure. And on this matter of the division of military expenditure between Britain and India, it is wholly beyond question that, if India was not able to bear a bigger share of the military expenditure, it was

(From Our Correspondent)

New Delhi, May 22.

The events of the week were H. M. Government's declaration of policy on the restoration of constitutional government in Burma, the departure of Members of the Indian Industrial Mission, the announcement by the Director General of U.N.R.R.A. of India's contribution of Rs. 8 crores, the Government of India's decision to restore certain reductions voted by the Legislature.

H. M. Government have reiterated their considered policy of promoting full self-government in Burma. As however, Burma's progress towards full self-government has been interrupted and set back by Japanese invasion and occupation, and the foundations of her economic and social life shattered, H. M. Government have decided that it is not possible to re-establish a Burmese Government as it existed in 1941 until conditions are stabilised and her economy rehabilitated. The emergency provision under which the administration is carried on by the Governor in direct responsibility to H. M. Government and which was brought into operation, has been extended until December 1948. H. M. Government are, however, anxious that all the functions of Government should not in fact be concentrated in the Governor but should be provided with significant means of obtaining Burmese assistance and that representatives of Burmese opinion should be associated with him in executive and legislative capacities. It is the intention of H. M. Government that when conditions are sufficiently restored to make it possible to hold an election, the normal provisions of the Act will re-enter into force. A three years' interruption has meant in terms of constitutional progress a setback of thirty years, a reversion analogous to the constitution under the Minto-Morley Reforms of 1911 to 1919. How long the task of rehabilitation will take depends on how violently Burma's social order and economy have been disrupted by the Japanese occupation and how diligently the interim Government sets about its task of reconstruction.

The Industrial Delegation has now left on its mission, which is to examine developments in technical processes during war-time and also to study the trend of these developments. These ambassadors of commerce will also see what type of capital goods would suit India, but it is hoped that they would not allow themselves to be persuaded to commit the country to any deal which is not to its advantage.

Mr. Herbert Lehmann, the Director General of the United Nations Relief and Rehabilitation Administration has announced that the Government of India, with the approval of the Legislature, has agreed to contribute Rs. 8 crores to U.N.R.R.A. This contribution will be largely used to procure initial supplies in India for shipment to countries receiving U.N.R.R.A. assistance, but Mr. Lehmann pointed out that U.N.R.R.A. was aware of retaining in India such goods as were required to meet the urgent need of the Indian people. No one would grudge Government acting the Good Samaritan, but are not there among the Indian masses many who need relief themselves and who, like Lazarus at Dives Gate, look to Government for assistance and wait in hope.

The week has seen the completion of the annual farce of a supernumerated legislature refusing supplies and the Governor-General in Council, in the exercise of his residuary powers, restoring the demands. The reductions voted by the Assembly in respect of the Executive Council, Department of Information and Broadcasting, Emigration—External and Post War Planning and Development have all been restored as being essential to the discharge of the Governor-General's responsibilities. Government have accepted the remaining reduction which being token cuts are small in amount. The earned income relif given effect to by the Income Tax (Amendment) Ordinance and the other reliefs and measures included in the Indian Income Tax Amendment Bill are not, in Government's view, expected to have any material net effect on the estimates for 1945-46.

A unified scheme of social insurance for industrial workers is receiving the Government of India's attention. It will be recalled that last year Mr. Adarkar undertook a special enquiry regarding health insurance and that he submitted his report early this year, recommending compulsory insurance for wage earners in organised industries—textiles, engineering, minerals and metals. He proposed that a cash benefit should be furnished through a special insurance medical service. Two experts of the International Labour Office, Messrs. Stack and Rao, were called in by the Government of India for advice, and they have advised a bolder approach and have suggested a comprehensive integral scheme covering accidents and maternity as well as sickness, applying to all workers in all perennial factories and financed by an inclusive contribution as in this way all those risks which required medical benefit would be brought into a single scheme.

In a tone rather different to the one we have been used to hearing in the last four years, the Railway Board has now been pleased to suggest certain measures for reducing travel troubles and to define the Railways' and the passengers' part. The policy of the Board during the war years has been so arbitrary and characterised by so little regard to public interest and convenience that one would not have supposed that the passengers' part was anything more than to obey and abstain from all travelling. The Board has now discovered two new problems, namely, the cluttering up of compartments with luggage and the question of overcrowding. A harrassed public will be subjected to further trouble for steps are being taken to see that passengers take into carriages only such articles as are required for their use on journey or can be placed under the seats. To prevent overcrowding a new Defence of India Rule has been promulgated to make police help available to railway servants in deterring people from travelling on the roofs, buffers, or footboards of carriages. In Indian Railway system we have a foretaste of what State owned industries can be like and of how a monopolistic concern without fear of rivalry or competition, now that the road transport system has become a subsidiary undertaking to the Railways, can behave.

The Industrial Panel set up by the Planning and Development Department for the expansion of the machine tool industry in India is to meet in Bombay on the 26th and 27th July. Ways and means of maintaining the present output of Indian manufacture and ensuring a market for its products after the termination of war and means of developing the industry are to be considered. Suggestions have been invited from commercial and industrial organisations. At its recent meetings the Advisory Committee of Manufacturers of Engineering Goods has stressed the need of protecting the industry against the European war has made a stark reality.

(From Our Correspondent)

Bombay, 22nd May, 1945.

The production of utility cloth is going to be a *fait accompli* after all. It will be remembered that, after the last meeting of Industry's Committee of the Textile Control Board, a Committee to enquire into the rationalisation of production was appointed. This Committee is reported to have finished its work and made its recommendations to the Government. As a result of a new order promulgated by the Central Government called the Textile Industry Rationalisation of Production Order, manufacturers are required to take prescribed measures with effect from June 1st 1945, designed to increase the output of utility cloth comprising mostly dhoties, sarees, longcloth, shirtings, drills, etc. Under the order, it will be incumbent on the mills to utilise at least 90 per cent. of their present capacity devoted to manufacture of civilian goods to the production of utility cloth. The number of varieties to be produced by the manufacturers will, hereafter, be strictly limited. Of all the orders hitherto issued by the Government, this is probably the most important as well as useful from the standpoint of the general public. It is believed on all hands that, as a result of the order, the present famine in cloth which the ordinary consumer experiences will be ended very soon, although the distribution aspect of the question is still not being tackled in a comprehensive and foolproof manner.

* * * *

It is said that only a very small fraction of the manufacturing capacity will be devoted to production of finer varieties of cloth. The mills and the textile trade in general in the country are fortified in this by the assurance of the Government that imports of these finer styles will not take place on any substantial scale so long as the Indian mills are under obligation to produce utility cloth. In one sense, restriction on the production of fine cloth will, at least for a time, be likely to help greater blackmarketing. For, it is in these varieties that the worst orgies of blackmarketing have been indulged in by the traders. Because of the great scarcity in these lines, in the first place and of the irrepressible hunger of the public (including the poorest among them) to buy cloth which is of high quality and is mercerised and so on, it is necessary that the authorities should take steps to collect all the existing stocks. The authorities should be in a position to know the precise stocks in these varieties.

* * * *

Conflicting statements have appeared both in the press and from the mouths of the spokesmen of the industry in regard to standard cloth. Time was when it was said that the standard cloth, which could be ushered into the world only after so much travail, was reported to be almost unsaleable in view of its extreme coarseness and even the Industry's Committee of the Textile Control Board was reported to have pressed for a cut in the total production of standard cloth. These reports were also in accord with existing conditions and Sir Shree Ram himself was heard to say some time back at a press conference that too much of unwanted standard cloth was being produced. Now, however, it has been stated in the press, no doubt under official auspices, that standard cloth continues to be popular and that the provinces and the States are extremely anxious for the continuation of the standard cloth scheme. Ever since the mills were asked to produce standard cloth 2½ years ago, the output of standard cloth has been 1,130 million yards of which only a little more than half is said to have been distributed so far. I learn on reliable authority that large stocks of standard cloth have been allowed to pile up in the Punjab, in Madras and in other places where people and the retail trade have been experiencing no demand for standard while they are clamouring for supplies of better qualities of textiles. Whether demand for standard cloth is genuine or not is more than anyone can say at the moment. But if what is said even by officials is correct, then it is high time that a scheme of even distribution of the accumulated stocks of standard cloth was evolved. Now that the utility cloth is going to be a practical proposition, the output of standard cloth might be reduced, at any rate, until the existing surplus stocks have been distributed. A certain amount of compulsion may even be necessary in pushing sales of standard cloth and in this, the schemes of clothrationing might come in handy. It is said, for instance, that in Bombay the authorities are going to make it compulsory on each individual to take a part of the total ration in terms of standard cloth. Thus out of the individual quota of 30 yards per year, it may be that a person is obliged to take a few yards of standard cloth along with utility cloth.

* * * *

The preparations for the introduction of rationing in the city are in full swing. As a preliminary measure, the Provincial Textile Controller issued two orders recently by which approved cloth shops have not been allowed to sell or dispose of any varieties after May 7th without the permission of the authorities; and by another order, all persons holding stocks of mill cloth falling under the rationed categories are required to state their stocks. This applies not only to the quotaholders and others included in the general scheme of control but also every single retail shop. As already stated, the ration will be on the basis of the food ration cards and for the first six months, it is expected that an adult would be allowed 16 yards of the rationed categories dhoties, sarees, coating, mulls, voiles and shirtings though the maximum quantity which a person can take in each variety has not yet been fixed. 400 approved cloth shops which are to distribute utility cloth will serve 10 lakhs of families in the city and people have already registered their clothing coupons with these shops. It is doubtful if the number of approved shops will be sufficient to ensure easy distribution. It has not yet been decided as to what should be done with the stocks of cloth of fine varieties which have been frozen with the non-approved shops. It is greatly to be desired that no confusion will prevail in respect of distribution of rationed and non-rationed varieties.

* * * *

Meantime, the Textile Commissioner is reported to have taken his drive against black marketing a step further by the reported order asking all mills to close their retail shops. It is well-known that these have been the spouts through which blackmarketed cloth has been poured out to a greedy public and certain mills which have to their credit output of a large quantity of fine cloth, have been caught redhanded while selling their production at more than the controlled price. The mills have none but themselves to thank for this latest order from Textile Commissioner. After the introduction of rationing these mill shops have really no reason for existence.

* * * *

None will grudge Mr. D. M. Passmore his well-earned leave which he is to spend in England. As additional Textile Commissioner, closely associated with many of the decisions of the Government of India, particularly on the technical problems confronting the industry, Mr. Passmore was of immense help to the Textile Commissioner and the T. C. B. His intimate knowledge of the industry's problems is responsible for the leaven of practicability seen in the scores of control orders issued. True to the traditions of the business clan, Mr. Passmore always avoided publicity, and it often was a job for pressmen to contact him. The Textile Commissioners's office wished him *au revoir* in a fitting fashion. On his return, Mr. Passmore will rejoin his original firm Binny & Co. at Madras.

South India

(From Our Correspondent)

MADRAS, May 22

A number of prominent men in the Mysore State have founded a new institution called the Gokhale Institute of Public Affairs. The work of the Institution will be non-partisan and non-communal. It will promote the scientific and systematic study of all questions pertaining to the wellbeing of people of Mysore in particular and the people of India in general. Its aim is to develop an All-India nationalism which should expand into world-wide internationalism The Institute as such will not take part in elections or support any particular person or party, but will educate the public in the correct principles regarding elections and in short facilitate the free, well informed and conscientious exercise of democratic citizenship. The most important feature of the Institution is that its members will not seek office.

A proposal to municipalise under a ten-year plan all important public utility services in the Bangalore City such as transport, milk supply, was approved of by the Municipal Council. The Council has decided to augment its income and proposes to impose taxation on advertisements and instruments of transfer of immoval property, to enhance the tax on vacant sites, to welter all water connections and withdraw exemptions of tax granted to property and vehicles of the Government and the Palace. The income from these will be considerable and will go some way to improving the amenities of the citizens.

Following the representations made to the Industries and Excise authorities by the South Indian Swadeshi Match Manufacturing Association, Sattur, Ramnad District, regarding the sudden stopping of wagons for the consignment of finished goods of matches, the District Industrial Officer concerned was deputed by the Government to study the situation and collect particulars regarding the amount of production of match goods and how much of such goods were being sent outside the Madras Province during the past years. It is stated that about one lakh gross of matches are lying idle in the godowns on account of the sudden stoppage of wagons by the Regional Controller of Priorities Railway, Madras and about 6000 skilled labourers have been thrown out of employment. In the circumstances, the manufacturers have not taken delivery of the large consignment of match sticks, raw material for producing matches, lying in the Sattur Railway Station. Though the Collector of Central Excise, Madras assured the merchants of his help nothing has come out. Large numbers of merchants from North India who have come to Sattur and Sivakasi to arrange for the quick despatch of goods have been disappointed.

With a view to guaranteeing fair prices for agricultural products in the postwar period and regulating the crops, the Government of Madras are considering the establishment of suitable machinery. Representatives of the interests concerned would be invited shortly for a discussion on the subject with the authorities. Judging from the experience of the last war, it is felt that the prices may continue to be at a high level for at least two or three years, after the end of the war and thereafter, there will be a fall. The Government want to prevent a sudden drop in the price level and a possible setback to agriculturists who are at present concentrating on intensive and extensive cultivation following the "Grow-more-food" campaign. The machinery that is to be established will have for its main object the fixation of equitable prices so that the agricultural industry might develop and the purchasing power and standard of living of the grower would improve in the postwar period.

The possibility of locating a radio manufacturing industry in Mysore by the end of 1945, it is understood, was discussed between the Managing Director of the Philco electrical and engineering radio group of Great Britain and the representatives of Mysore Government. At a public meeting the Managing Director, Mr. Bennett, expressed the hope that before long Mysore would possess telephone dial wherefrom one could get into touch with any place in the world in a second.

It is understood that the Orissa and Madras governments have arrived at an agreement about the working of the Duduma hydro-electric scheme over which several conferences were held in the past two years. Under the agreement, energy generated by the Station will be shared equally by Madras and Orissa and both will contribute equally towards capital investment.

Resume of Commodity Markets

The feature of the week is again the strength of the bullion market. The confused international situation and continued investment buying have been mainly responsible for the further improvement in values. The raw jute market is quietly steady while the jute manufactures market is better on bazar covering. In the raw cotton market prices are higher on reports that exports to the Continent might be on a larger scale and that greater interest taken by the U. S. in the Indian cotton market might help the disposal of large accumulated stocks. In the piecegoods market unsettled conditions continue to prevail.

While considerable importance is attached to the proposal of the Indian Central Jute Committee to have planned production of the golden fibre in the post-war period, in order to maintain output of jute goods at a particular level and at the same time ensure proper prices for the jute grower, the market is at the present moment concerned only with the immediate future as the problems of the jute industry seem to be incapable of a satisfactory solution in the absence of any co-ordination between the different parties concerned.

* * * *

The coal position is still far from satisfactory though the Coal Control Board has been proclaiming that efforts are being made to increase coal supplies as far as possible to the jute industry. There is also the problem regarding labour. It was pointed out last week that the scarcity in respect of labour is so acute that even with the improvement in the coal supplies, there has been no net addition to the total output. When the steam-driven units start the foster units, which have been drawing on the labour from the idle mills to a certain extent, have to reduce output to a corresponding degree. The difficulty in this respect however, has been pronounced only in the last two months though with the higher wages and provision for the payment of *Koraki* and other allowances, even when labourers were idle, there was greater tendency for absenteeism. It should be said that the industry was not prepared for such a situation. Unless efforts are made in proper time to recruit more labour and keep them at the mills, it would be very difficult to bring about an increase in jute manufactures when it is badly needed.

* * * *

Mills are naturally not keen on effecting further purchases of raw jute with the prospect of a larger new crop, sowings being reported above last season's acreage. Sellers have been very keen to do business and offer a discount in rates. Only a few weeks back the new crop was offered at a premium of 8 annas while at the present moment a discount of 4 annas is available.

In the hessian market, with the reserved attitude of mills there was some covering but prices are still at a discount and bazar operators are free sellers for forward positions. If there is a further decline in prices for raw jute it can be expected that goods prices also will move lower.

* * * *

The United States Office of Price Administration established ceiling prices on 16th May for domestic sales of new military sandbags and burlap sheets imported to the United States from India. Prices range from 6.30 to 6.85 cents f.o.b. at a United States port. The Foreign Economic Administration has arranged with the Government of India to purchase 30 million surplus sandbags by the United States importers.

* * * *

The cotton market has been fluctuating in narrow limits though in the latter half of the week, a firmer tendency has been noticeable on reports that larger exports of cotton will be made to the Continent and the U. S. A. would be consuming greater quantities of Indian cotton. The U.S.A. War Production Board has announced that the application for the importation of raw cotton from the Indian West Coast may be filed by any person wishing to import this cotton.

* * * *

The strength of the bullion market has baffled every one. It was very confidently expected that with the cessation of hostilities in the West, prices would come down and the general trend would be downward even though with the resistance to selling pressure by bulls the decline in prices would be only gradual. The expectations, however, have not come true as losses on the announcement of peace in the West have been more than regained and quotations are at the highest levels for the year. In the silver market especially very firm conditions are noticeable and there is no suggestion of an early decline in prices. The Reserve Bank has been accused of being helpful to the bulls as sales in recent weeks have been rather poor and on most days were suspended owing to the rejection of all tenders. It is said that the fears regarding a possible break between the Allies over the settlement of peace problems have been mainly responsible for the upward trend in the bullion market and that unless the international situation is clearer and closed market conditions do not exist there is no possibility of any substantial decline in prices.

* * * *

The Textile (Rationalisation of Production) Order, 1945 has been promulgated by the Central Government and published in the Gazette of India Extraordinary, of May 18, 1345. The Order requires all manufacturers to take certain measures from June 1, 1945 calculated to increase output of utility cloth, consisting mostly of dhoties, sarees, longcloth, shirtings, drills, twills, etc. The Order lays down that manufacturers shall utilise not less than 90 per cent of their civilian production capacity on the manufacture of utility cloth. The Order also limits the number of varieties to be produced by the manufacturers.

* * * *

Preliminary estimates for this year's Baisaki lac crop for the whole of India stand at about 75 percent of the previous five years' average, states the report of the Crop Statistician, Indian Lac Cess Committee. This estimated decrease can be explained as due to the scarcity of Katki brood-lac which serves as seed to the Baisaki crop and infection of host-trees of lac, which could not be carried out satisfactorily, with the result that many host-trees were left blank. The final yield of the crop depends mainly on the climatic conditions in April-May. With favourable climatic conditions, the yield of the crop may be somewhat greater than the present estimate. It is yet too early to estimate quantitatively Jethna, the other summer lac crop. A comparative statement in maunds of the Baisaki crop is given below :

Previous five years' average 739,850 mds.

	Preliminary Baisaki 1945	Final Baisaki 1944	Final Baisaki 1943
Bengal ...	23,000	37,000	11,000
Bihar ...	350,250	527,750	224,000

Comilla Banking Corporation :

Comilla Banking has made impressive progress in the past decade and it is gratifying to note that the balance sheet total is now very nearly Rs. 10 crores. The all round improvement reported in 1944 is not any special feature of the Comilla Banking but it is satisfactory that it has been possible to find profitable employment for additional funds and that there is a large increase in the earnings for the year. As the paid up capital has increased by Rs. 15.52 lakhs to Rs. 45.90 lakhs the dividend is lower at 7 per cent. tax-free against 7⅜ per cent. It would have been possible to maintain the dividend but the directors have preferred to strengthen the position of the Bank, there being an allocation of Rs. 1.1 lakhs to Reserve.

Deposits were higher by Rs. 2.5 crores at Rs. 8.16 crores and Cash Balances by Rs. 89 lakhs and investments by Rs. 1.08 crores. Advances showed a rise of Rs. 81 lakhs to Rs. 2.37 crores. It will be noted that the liquid position of the Bank is very strong. Investments, which are mostly in giltedged securities, are shown in the books at considerably below market value.

India United Mills :

Following Sir Victor Sassoon's speech at the meeting of the shareholders of Edward Textiles Limited held recently Rai Bahadur Rameshwar Prasad Bagla also spoke optimistically regarding the future of the cotton textile industry. He is confident that it will not have to face the vicissitudes with which it was beset after the conclusion of World War I. The India United Mills Limited has been able to report a satisfactory year of working and the reductions in earnings is only due to the decrease in ceiling prices effected during the year. Out of the net profit of Rs. 2.45 crores, before providing for taxation and depreciation, Rs 1..72 crores has been provided for taxation and Rs. 38 laks for E.P.T. compulsory deposit. The dividend on ordinary and deferred shares has been maintained at fifteen annas and three annas respectively but no bonus is to be paid.

Rai Bahadur Bagla spoke favourably about the 'Utility' cloth scheme and was able to claim that the units of the India United Mills had balanced production and that it would be possible to increase output considerably, if other mills also are able to report a similar experience it would go a long way to relieve the cloth scarcity.

(*Continued from page 700*)

solely because of the handicaps that Britain herself imposed on our industrial development. In the face of the findings of the Parliamentary Committee on national expenditure, it would appear impossible for even the most rabid and purblind opponent of India's claims to suggest that India's sterling balances originated either in inflated prices or in pegged exchange. British public opinion has no longer any excuse for looking at the sterling debts to India as a piece of ingenious fraud or perverse dispensation. Since the merits of this question have been decided, India is entitled to demand that the desultory controversy of the past shall cease and that Britain makes clear how India stands in this regard. Let us have the last word about it. If Britain means to pay, let us be assured that she will not lack the will to pay, though necessarily the means must depend on a variety of factors which cannot now be foreseen. Let there be no transparently clever attempts to make distinctions beween ordinary commercial debts and other debts. India will be prepared to accommodate herself to the circumstances in which Britain may find herself in the post-war years. But such readiness would be too much to ask, if Britain should continue to question the very basis of these obligations. It is extremely fortunate that the public document which settles most of these issues originated in a British Parliamentary Committee rather than on a Committee of any other nationality or a Committee with less authority.

"EAVESDROPPER".

APPLICATIONS ARE INVITED FROM distinguished graduates in Commerce, Banking, Arts or Science for recruitment to the Officers' and Assistants' grades as follows :—

Class I :—Stipend for one year for period of training Rs. 150/- p.m.

On Confirmation.

Rs. 250-20-330/ E.B. /350-30-650/E.B./700-50-1,000/- exclusive of allowances.

Preference will be given to Graduates with Economics & Banking qualifications. Second and Third divisioners need not apply. Security Deposit Rs. 1,000 bearing interest @ 3% p.a.

Class II :—Training Period—One Year. Stipend Rs. 100/- p.m.

On Confirmation.

Rs. 150-15-210 E.B. /250-20-490, exclusive of allowances. Will be eligible for promotion to Class I. Security Deposit as above.

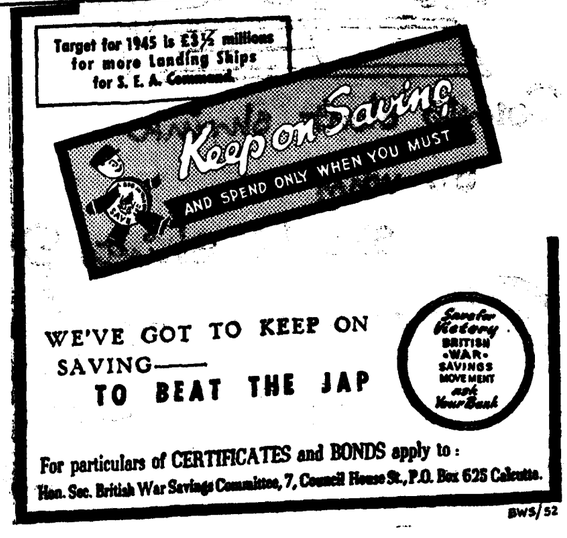
Only graduates with a brilliant academic career need apply.

Officers of the above two categories will be required to pass both the examinations of the Indian Institute of Bankers.

Assistants.

Qualification :—Intermediate in Arts, Science and Commerce.

Stipend during training period of one year—Rs. 50/- p.m.



on Confirmation.

Rs. 75-8-115/E.B. /120-10-220/- Exclusive of allowances.

On passing both the examinations of Indian Institute of Bankers, will be eligible for promotion to Officer's Grade Class II.

Security Deposit Rs. 500/-

Apply by 15th June, 1945 on prescribed form to be obtained from the Head Office of the Bank to the Managing Director. Hindustan Commercial Bank Ltd., Cawnpore.

Jute and Jute Manufactures

(From Our Correspondent)

Special to "Indian Finance".

Calcutta, May 24.

It is reported that at a meeting held recently the Planning Sub-Committee of the Indian Central Jute Committee reached decisions which enabled them to formulate proposals for the planned production of raw jute on a short-term basis and first affecting the crop to be grown in the season 1946-47. That proposals for long-term planning could not be put forward is due, we understand, to lack of sufficient data. The Committee's recommendation may be summarised under three main heads, viz.:—

(1) An all-India production figure for raw raw jute

(2) The division of (1) into target figures for each Province concerned in the growing ing of the fibre

and (3) The steps which will be necessary to achieve (1) and (2).

It was agreed that the all-India crop should be 100 lakhs bales per annum and that 34 lakhs acres should be licensed to attain that yield. On this basis the yield per acre works out to 2.94 bales which would appear to be slightly on the high side as we find that in Bengal the average yield per acre for the year 1941, 1942 and 1943 was 2.77 bales, 2.97 bales, and 2.83 bales respectively. However, it is said that the decision to raise a crop of 100 lakhs bales on 34 lakhs acres was taken after study of data with regard to production, consumption, etc., over the past thirty years and after taking into account stocks on hand and probable carry-over at the end of seasons 1944-45 and 1945-46. Still, it might be said that 34 lakhs acres leaves little or no safety margin for the attainment of the target production. Therefore, it might be wiser to increase the acreage figure and so anticipate the lowering of the yield per acre due to damage by flooding and other causes.

In setting up a target of 100 lakhs bales per annum the Committee has estimated that mills will consume 66 lakhs bales; that export will account for 28 lakhs bales; and that the remainder, i.e., 6 lakhs bales, will be absorbed locally in various ways. The estimated consumption by mills is quite likely to be very close to actuality and as a basis for comparison we have calculated that if the mills were provided with sufficient coal and thereby were enabled to reach their target of 1,00,000 tons of manufactured goods monthly they, i.e., the Associated Mills, would require in the season 1945-46 nearly 66,36,000 bales of jute. The figure of 6 lakhs bales for internal consumption is probably quite a fair estimate too although we would be inclined to place it at something higher, perhaps about 8 lakhs bales. It may be expected that opinions will differ with regard to the adequacy or otherwise of the estimated demand for export. A gradual expansion of the export trade to Europe can be confidently expected and to us it appears that requirements might easily reach anything between 16 lakhs and 20 lakhs bales during next season. By 1946-47 the position will have improved further and no doubt the estimated figure of 28 lakhs bales for export will prove to be not far off the mark.

Referring to the second recommendation of the Planning Sub-Committee namely the division of the all-India production figures into target figures for each Province concerned with jute cultivation, the Committee is reported to have decided that apportionment of Acreage should be on the basis of area and production during the last fifteen seasons, i.e., between 1929-30 and 1943-44.

As to the steps necessary to ensure the achievment of the whole plan it is recommended by the Committee that the Provincial Governments concerned should begin by taking action as follows:—

(1) Guarantee to the growers an assured market and a remunerative and stable price.

(2) Provision for the maintenance of "buffer-stocks" to ensure stability of price, such stocks to be accumulated at times when prices reach a prescribed minimum level and it is necessary to support the market, to be released when prices reach the prescribed maximum level and jute is in short supply.

(3) Development of a suitable marketing organisation to provide for the sale of jute and to ensure the maximum possible return to the producer.

(4) Prescription of suitable standards or grades for jute fibres and the enforcement of such standards in marketing the fibre.

(5) Establishment of regulated markets for jute, the adoption of standard grades and contracts and the regulation of areas.

Although the Planning Sub-Committee confined its recommendation to a short-term five-year period commencing with the jute crop year 1946-47 it also recognised that with the gradual return to normality the present outlook may change appreciably and consequently any target fixed to-day may not prove suitable for a period covering five years. It considered it necessary, therefore, that the targets now fixed should be reviewed in November of each year so that any changes considered desirable could be made well ahead of the next sowing season.

The Sub-Committee recommended that the proposals be circulated immediately to the Governments concerned and the latter be invited to intimate their acceptance of the proposals or, if not acceptable to them in the present form, to intimate such modified recommendation as the Provincial Governments concerned consider desirable.

Much can be said in favour of some of the proposals but we hink adoption in their entirety under present conditions would raise difficulties which could not be easily overcome. The establishment of markets in convenient centres and the acquiring of storage accommodation to fit in with the general scheme would in themselves cost a great deal of money to say nothing of the cost of the governmental machine which it would be necessary to create and which would require substantial funds to finance the purchase of jute in times of stress. It is also pertinent to enquire how and by whom prices for the purchase of raw jute will be fixed and whether very careful consideration will be given at the same time of all the economic factors involved, not the least of which will be the price obtainable in the world's markets for the manufactured article, bearing in mind the fact that the jute industry holds the position it does chiefly due to its ability to produce the world's cheapest wrappers and containers designed for specific purposes.

JUTE

(By Our Staff Correspondent).

Calcutta, May 24.

Rather quiet conditions have been noticeable in the raw jute market during the week. With the difficulties of mills regarding labour and coal and the uncertainty in the hessian and heavy goods sections mills have not been keen to purchase raw jute. Stocks of jute are rather ample at the present moment though it would be wise to continue purchasing jute when the internal transport situation is easier. But with the expectations of a large crop for the next season and the scarcity of labour it is felt that there is no immediate need for effecting additional purchases. Further developments in the industry in the next few months will determine the attitude of mills. The recent thunder showers have been very helpful for the standing crop and reports from the mofussil areas have been rather encouraging. In most of the areas the acreage is on the level of last year. In certain districts it is even more. So that the estimates regarding the yield may be five to ten lakhs bales higher.

In the loose jute section business passing has been small with mills keeping out of the market. New crop Supervised Jat Middles and Bottoms have been done at Rs. 15-8 and Rs. 12-8 per maund. Indian District Tossa have been done at the same rates. There are not many sellers for old crop.

In the pucca bales section export business has been restricted with Outport Daisee at Rs 77 per bale. Mills again purchased Cuttings N.C. and M.C. at Rs. 43 and Rs. 42 per bale.

JUTE MANUFACTURES

Calcutta, May 24.

The jute manufactures market has been uninteresting. Overseas enquiry has been rather poor. The announcement of ceiling prices for burlap and sandbags by the United States allows for a certain adjustment in costs of production. It has not had any effect on the market here. Mills are awaiting further developments. With bazar operators prepared to discount prices for all positions it has not been possible to do any large business. 9 Porters May|June are quoted in the bazar at Rs. 27-14, July|September at Rs. 27-6 and October|December at Rs. 26-12. Slightly steadier conditions have been noticeable in the heavy goods section on the reports that further orders have been placed by the Government. Trade demand also has been satisfactory. B Twills for ready delivery quoted Rs. 65-8 and October|December Rs. 60-4.

PIECEGOODS

Calcutta, May 24.

Private trading is at a standstill. It has been decided that there should be no sale of mill made cloth for retail purposes and that pending the introduction of the rationing scheme only the approved shops acting on the recommendations of the ward committees should function. At a meeting held this week by the Director General of Enforcement to consider the complaints from the public regarding the operation of the interim rationing scheme, it was agreed that there were numerous defects in the present system and that the relief afforded was not adequate. Suggestions were made for more regular supplies of cloth to the approved shops and the removal of discrimination between Hindus and Muslims. Arrangements for the full rationing scheme are still being made. Beyond the assurance that the scheme will come into effect in the very near future the Director of Enforcement had nothing else to say.

Stock Markets to-day and to-morrow:

JUTE INDUSTRY PROSPECTS

Quite firm conditions were noticeable in the stock exchanges both in Calcutta and Bombay till Thursday, this week, though business was mostly on professional account and there were no important fluctuations in prices. It looks as if markets have adjusted themselves to the changed conditions and are awaiting fresh developments. On Friday, however, a slightly hesitant feeling was noticeable on the expectations that important developments might take place in the international situation and that they might affect, to a great degree, the course of markets. Mr. Churchill's resignation and the reports regarding important missions by the U. S. Administration officials to London and Moscow have naturally induced a note of caution but the hesitant tone of the markets has not resulted in any appreciable decline in prices.

A significant feature of trading in recent weeks is the complete reserve shown by investors and the absence of any genuine outside selling. As the bullion market also has been very firm and the expectation of bears regarding a sharp fall in prices have been defeated, it is felt that there is no justification for any big drop in stock exchange values. If there are no untoward developments in the international political situation the upward trend might be resumed. The happenings in the next few weeks will thus determine the future course of prices.

* * * *

The statement that the jute industry is suffering from acute shortage of labour and that it would be difficult to bring about any appreciable increase in production, even with larger supplies of coal, has been taken rather seriously by the market. The publication of accounts for the half-year ended March, 1945 by four important companies reporting a decline in earnings, due to payments to the industrial pool and the increase in the cost of production, have also had a restraining influence. But the faith of the Calcutta investor in a bright future for jute shares is still unshaken and the popular shares, with the exception of Howrahs, which have been marked lower with selling by a particular operator, are quoting around the levels touched last week.

The net profit of *Bally Jute Company Limited*, for the half-year ended March, 1945, is Rs. 14,48,915 against Rs. 16,58,218 for the previous six months. As the provision for taxation is very much lower at Rs. 9.5 lakhs (Rs. 14.5 lakhs) it has been possible to maintain the dividend on ordinary shares at Rs. 4 per share. After setting aside Rs. 50,000 (same) for depreciation and Rs. 1 lakh (nil) to reserve, the amount carried forward is not very much changed at Rs. 69,182 against Rs. 70,267 brought in.

* * * *

Gourepore Company, Limited for the same half-year, has earned a net profit, before providing for taxation and depreciation, of Rs. 21,16,160 (Rs. 25,30,606) for the previous half-year. Provision for taxation is Rs. 4.25 lakhs, but it has not been possible to avoid a reduction in the ordinary dividend to Rs. 12-8 per share from Rs. 15 per share. Even in the previous half-year the dividend was paid by drawing in on the amount brought in from the previous account. Even with the reduced payment the amount carried forward is lower at Rs. 1,41,757 against Rs. 2,05,097 brought in.

* * * *

Nuddea Mills Company, Limited, also reports an appreciable decline in earnings, the net profit for the same half-year being Rs. 15,03,494 against Rs. 20,78,845. The provision for taxation is very much lower at Rs. 11.75 lakhs (Rs. 17.3 lakhs). The dividend is unchanged at Rs. 4 per share. The amount set aside for Depreciation is Rs. 75,000 (same). The amount carried forward is slightly lower at Rs. 95,773 against Rs. 1,09,460 brought in.

* * * *

Khardah Company, Limited, also has reported a decrease in earnings for the same period, the net profit being Rs. 23,79,209 against Rs. 31,78,498. Taxation accounts for Rs. 17.5 lakhs (Rs. 23.8 lakhs), and depreciation Rs. 29,765 (Rs. 29,840). The ordinary dividend is maintained at Rs. 15 per share while the amount carried forward is higher at Rs. 5,22,722 against Rs. 4,90,330 brought in.

* * * *

A large increase in working expenses has resulted in a decline in earnings of the *Bengal Paper Mills Company, Limited*, for the half-year ended December, 1944, in spite of the output being fairly well maintained. Government continued to take the major portion of the mills' production at prices slightly more favourable as compared with the last three months of the previous half-year, but the cost of production, as remarked above, continued to show an upward tendency owing to the high prices offered for raw marterials, chemicals, etc.

The net profit, as a result, is the very small sum of Rs. 8,87,211 against Rs. 13,03,381 for the previous six months. In the half-year ended June, 1943, total earnings were as much as Rs. 27.68 lakhs. As provision for taxation is only Rs. 4,28,897 (Rs. 8,30,225), the decrease in earnings has not affected shareholders in any way. After setting aside for depreciation Rs. 1,80,733 (Rs. 1,97,995) the dividend and bonus has been maintained at 22½ per cent. The amount carried forward is slightly higher at Rs. 1,96,263 (Rs. 1,92,182) brought in. If the earnings of the current half-year are even maintained at the level of the latter half of 1944, it might not be possible to pay the same dividend and bonus though the omission of the transfer to Contingency reserve might well make the payment of the same dividend and bonus possible.

* * * *

Consent has been given by the Examiner of Capital Issues to the flotation of Prem Nath Transport Company, the Central office being in Calcutta. This concern is of special significance as operating one of the largest fleets of motor transport, and as a prominent entity in the proposed combine among the Railway Board, Provincial Governments and private owners to operate road transport. The assets purchased from the vendors include 200 motor vehicles as well as a large stock of spare parts, tools, plant and machi-

FREE EXPERT ADVICE ON ROPEWAYS BY BIRD & CO., Calcutta

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, May 25.

Quite steady conditions have been noticeable on the Calcutta Stock Exchange during the past week. Business was on a slightly higher scale though mostly on professional account. The continued reserve of investors and the hopes that the war Against Japan will be continued to a finish were mainly responsible for the strength of markets. The easier tone noticeable at the end of last week on reports of Japanese peace efforts have, therefore, been short-lived. In the last two days, however, a slightly irregular tendency is noticeable with the confusion in the British political situation and the anxiety to await further developments. The general undertone continues steady and quotations at the time of writing are slightly below the highest levels for the week. Jute and coal shares were prominent while in the Engineering section only popular counters were in good request. Cotton and Sugar shares were neglected.

The giltedged securities section is better with greater investment buying mainly by banks. 3½ per cent Paper was done up to Rs. 100-4 and 3 per cent Paper at Rs. 91. Terminable loans also are higher with 3 per cent 1949-52 at Rs. 100-3, 3 per cent 1953-55 Rs. 100-10 and 3 per cent *1963-65 Rs. 99.* 4 per cent 1960-70 were Rs. 112-11 and 5 per cent 1945-55 Rs. 101-10. No business has been recorded in provincial loans.

Business in bank shares has been on a smaller scale but rates have been fully maintained, *Imperial Bank* fully paids being Rs. 1,970, *Hindusthan Commercial* Rs. 52-10, *Reserve Bank* Rs. 133 and *United Commercial Bank* Rs. 20 premium.

In the Cotton section, there was a small demand for *Elgin* and the quotation was marked higher at Rs. 64, *Cawnpore Textiles* were Rs. 12-6, *Bengal-Nagpur* Rs. 40 cum-dividend and *New Victoria* Rs. 7-5.

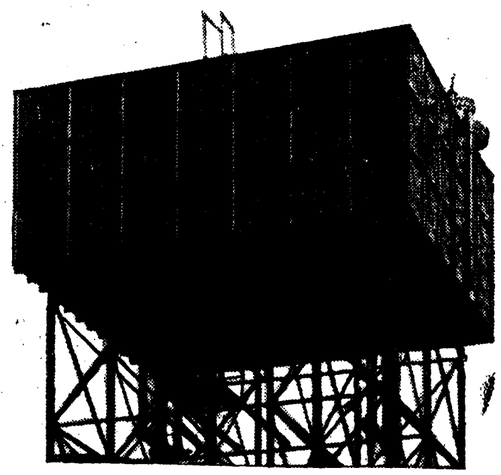
Coal shares, as pointed out above, have been prominent during the week, expectations of further higher dividends being mainly responsible for the improvement in values.

Burrakurs and *South Karanpura* especially were in good request, the quotation being done up to Rs. 41-4 and Rs. 30-8 respectively. There was some selling at the higher levels and prices came down to Rs. 40-12 and Rs. 29-12 respectively, but the announcement that South Karanpura is paying a dividend of 8 annas per share for the latest half-year has had a stimulating effect on prices *South Karanpura* are now quoting Rs. 30-8. *Raneegunge* were better by 3 points at Rs. 54-12 while *Bengal* were 5 points higher at Rs. 692. *Bhalgora* were rather quiet at Rs. 19-13 and *Bokaro and Ramgur* Rs. 47. *New Beerbhoom* were in good request at Rs. 41-10 and *Sendra* Rs. 22-14. *Standard* were very steady at Rs. 42-8.

In the Jute section, *Howrah* were sticky at Rs. 94-8 with small activity by prominent operators. *Other shares* are a shade better, *Anglo-Inida* being Rs. 472 ex-dividend, *Champdany* Rs. 268, *Kamarhatty* Rs. 725, *Kanknarrah* Rs. 611 and *National* Rs. 34-6. *Nuddea* were unchanged at Rs. 132-4 and *Presidency* Rs. 12-5. Reports that mills are suffering from acute scarcity of labour have prevented a further appreciation in values.

In the Engineering section, nearly all the shares have been in good request though Indian Irons and Steel Corporations have been fluctuating in narrow limits and quotations are not very much changed on balance. *Indian Iron* were Rs. 40, *Steel Corporation* Rs. 33, *Kumardhubi Engineering* Rs. 9-14 and *Marshalls* Rs. 5-4. *Jessop & Co.*, were better at Rs. 24-8 and *Saran Engineering* Rs. 10-6.

Sugar shares were quiet. *Balrampore* were sticky at Rs. 15-9, *Buland* Rs. 40-12 and *Cawnpore* Rs. 37-12. *Ramnugger Cane and Sugar* also were easier at Rs. 15.



Not many transactions have been recorded in Tea shares, *East India* being Rs. 17-2, *Rydak* were Rs. 100-8 and *Patrakola* Rs. 1,310.

In the Miscellaneous section, *Burma* shares were steadier with *Burma Corporation* being done up to Rs. 5-12. *B. B. Petrol* were active and were marked higher by 8 annas to Rs. 6-4. *B. I. Corporation* were unchanged at Rs. 6-4. *Indian National Airways* were strong at Rs. 24-12 as also *Assam Bengal Cement* at Rs. 19-12. *Dalmia Cement* (Ordy.) were uninteresting at Rs. 17-2. There was good enquiry for *Midnapore Zemindary* and the quotation was higher by 4 points to Rs. 174. Among Paper shares, *Titaghur* were unchanged at Rs. 27-4 and *I. B. P.* at Rs. 216-8. *Assam Saw* were quiet at Rs. 5-15. There was a jump in *I. G. N.* to Rs. 190.

THE INDIA UNITED MILLS, LIMITED

SATISFACTORY WORKING IN 1944

CHAIRMAN ON THE WORKING OF CLOTH CONTROL

Presiding at the 25th Ordinary General meeting of the India United Mills Ltd. held on 11th May Rai Bahadur Rameswarlalprasad, as Chairman said :—

Before I proceed to deliver my customary speech today, I hope you will permit me to say that the two days of jubilation and rejoicing which we have just witnessed following the happy culmination of the European war, will be the forerunner, before long, of the equally happy vanishing of the clouds in the Far East as well. I am sure you will agree with me when I add that the present c happily coincides with our Annual Meeting will usher in an era of prosperity and betterment for the Industry as a whole and will ensure for it its just annd rightful title to be India's greatest national industry. Gentlemen, let us now proceed.

The Report of the Directors to the Shareholders together with the Company's Balance Sheet at that date have been in your hands for some time and I propose, with your permission, to follow our usual custom and take them as read. Before proposing their adoption, I should like to review the results briefly.

A perusal of the Directors' Report would have revealed to you that Ceiling Prices were fixed for all varieties of cloth and made effective from December 1943 under the Cloth and Yarn Control Order. You would also have observed that successive cuts were made under that Order, unaccompanied by any concession or relief. These periodical cuts were made, first in March 1944 by a reduction of 1½ annas in the rupee, then again in June 1944 by 1½ annas in the rupee, and finally in September 1944 by 1 anna in the rupee, *with the inevitable consequence of reduction in turnover.* It is necessary in this connection to bear in mind possibilities of further cut in prices of cotton manufactures with little chances of any relief either in the incidence of taxation or in the existing rigid system of collecting taxes.

Thus the year which has gone records a lower profit since the reduction in Ceiling Prices, referred to above, was not also fully off-set by a corresponding fall or reduction in costs of production which continued to be relatively high. The year under review discloses a profit of Rs. 2,45,54,897 before providing for Taxation and Depreciation. You will notice that provision for Taxation has been made absorbing Rs. 1,72,00,000 from the Profit. It will also be seen that the compulsory deposit of our Excess Profits will absorb no less a figure than Rs. 38,00,000. If and when Government refund the portion of the Excess Profits Tax we have paid, such refunds, when received, will be liable to Income-tax and Corporation Tax, because Excess Profits Tax is deducted in full when arriving at the profits which are assessed to income-tax and Corporation Tax.

The Directors have been able to recommend Rs. 28,12,500 for payment of dividends. You will thus find that as a result of your Directors' judicious conservation of war-time profits, the Company's finances have considerably improved. This will also be manifest from a casual analysis of the past three Balance Sheets.

You will also notice that the figures of dividend recommended by the Directors from the Profit of 1944, of fifteen annas on Ordinary Shares and three annas on Deferred Shares, free of Income Tax, are equivalent to returns of 9.38 per cent on Ordinary Shares and 18.75 per cent. on Deferred Shares. Unlike, however, as in the former year, no bonus is proposed by the Directors for the year under review but you will doubtless appreciate that, among other factors, the three basic reductions which were effected in 1944 under the Cloth and Yarn Control Order were primarily responsible for the reduction in the return to the Shareholder. Moreover, you are all aware of the general trend of drastic cuts in dividends of cotton Textile Companies.

Throughout the year 1944, all the Company's Mills worked to the fullest capacity and with the coming into force of the new scheme of Standardisation and Rationalisation for increased output of cloth production, our aim is to continue to maintain a high standard of our production. The introduction of "Utility" Cloth scheme curtails the number of sorts manufactured as a means of meeting the acute shortage of cloth. Such concentration on a limited number of sorts has enabled us to balance production and all your machinery is used to the best and fullest advantage.. Such "Utility" schemes in Textiles have been successful in England and America and they have extended during the last year in range of specifications, qualities and kinds of goods, and in volume.

Although sacrifices cannot all be one-sided, I welcome the Bombay Government's decision to ration mill-made cloth of the varieties in common use from next month. The announcement will go a long way in a rational distribution and at the same time it must be borne in mind that for any scheme of rationing to be effective and really successful, the consumer must be imbued with a spirit of willing co-operation and must not hesitate to make a form of personal sacrifice by reducing the quantity of cloth he uses.

Towards the end of May 1944, an order of the Textile Commissioner was served on the Agents of the Company controlling distribution of the Company's production. I cannot help stating, Gentlemen, that the order was issued for reasons best known only to Government. However, I am now glad to inform you that the side order has since been rescinded with effect from the 3rd March 1945.

The names of the Mills owned by your company were changed with effect from the begining of this year from the *Jacob Sassoon Mill, The Alexandra Mill, The E. D. Sassoon Mill, The Rachel Sassoon Mill, The Manchester Mill, The E. D. Sassoon Turkey Red Dye Works*, to The India United Mills Ltd., No. 1 Mill, The India United Mills Ltd. No. 2 Mill, The India United Mills Ltd. No. 3 Mill, The India United Mills Ltd. No. 4 Mill, The India United Mills Ltd. No 5 Mill, The India United Mills Ltd. Dye Works, respectively.

Before I conclude, I must thank the Company's Staff at Head Office and the Mills for the strenuous work and willing co-operation which they had cheerfully extended during the year. I am also happy to record that our happy and cordial relations with our labour force have continued throughout the year.

One word more. As far as can be seen, the future for some years after the war present a bright picture; and the Industry may not have to face the vicissitudes with which it was best after the conclusion of World War I.

Before putting the adoption of the Directors' Report and Accounts to Vote. I shall be only too pleased to answer question arising out of the Report and thhe Statement of Accounts.

Presenting

THE POST-WAR DRINK!

(Ladies) & Gentlemen, on the left we present Binnie's Silver Stamp Dry Gin. The right thing to do now is to go all out & get it! This Dry Gin is so good and so genuinely smooth we believe you'll like it. It's the drink of to-morrow presented to-day.....the drink for almost any occasion any time, manufactured by experts in the modern and hygienic plant of the Jagatjit Distilling and Allied Industries Ltd., Hamira, (Kapurthala State.)

NEW ASIATIC INSURANCE CO., LTD.

SUCCESSFUL WORKING OF LIFE DEPARTMENT

Chairman on the future of General Insurance Business

Speech delivered by Mr. L. N. Birla, Managing Director, New Asiatic Insurance Co., Ltd. at the Annual Meeting held on 24th May, 1945.

Gentlemen,

I am presenting the Directors' Report and Audited Accounts of the company for the year ending 31st December, 1944. I shall with your permission, take the Report and Audited Accounts as read,these documents having been circulated to the shareholders well ahead of this meeting.

2. In the Life Department the upward tendency of business continued and the results of this year's working have been quite satisfactory. There are about 350 life offices working in India and if we take them in order according to the amount of business completed by each company in the preceding year, we occupied the 16th position. But in the year under report we have gained 3 places and now we occupy the 13th position which reflects considerable credit on a company so young as our own.

3. The paid up capital of the company has been increased from 14,45,430 to Rs. 20,00,000. The Life Fund now amounts to Rs. 31,12,026 against Rs. 21,71,831 in the preceding year.

4. We should like to be judged; however, not only by the amount of business written but also by the quality of the service rendered to our policyholders. In view of the recent epidemic in Calcutta, we arranged for the free inoculation of our policyholders against Cholera and Typhoid and thus did something by way of discharging the duty which every Life Insurance Company owes to its policyholders. We intend now taking another step forward by providing in Calcutta in the first instance, a new form of Insurance under which the policyholder will benefit by receiving, in case of illness medical aid from some of the best specialists available, with a great saving in cost to himself.

5. On the General insurance side, there has been already progress and I am glad to inform you that during the year we extended our underwriting to Marine and Accident Insurance as well. Despite adverse factors, such as restricted shipping facilities and shrinkage in the number of vehicles on the road due to war conditions, the first year's working of these two new Departments has been quite encouraging.

6. Although the results of our General Insurance have been quite gratifying, our profits this year have been seriously affected by claims arising out of the Bombay explosion. In spite of weighty legal opinion, that insurance companies were not liable for these losses under the terms of their policies and that it was entirely the liability of the Government as established by precedents in other countries, hhre in India we have been called upon to share with the Government 12½% of the losses.

7 I take this opportunity to observe that in the field of Marine Insurance, the Indian Insurance Companies have a very poor share of the total marine premium returns in the country. In 1943 the total share was only Rs. 61 lacs i.e. 15.7% approximately. This insignificant share of the Indian companies is due largely to the unsympathetic attitude of foreign banks who accept marine policies only when they have been taken from foreign insurance companies. This discrimination by foreign banking institutons has prevented the growth of Indian underwriters in the realm of overseas trade handicap. Apart from this restrictel share in Marine Insurance, we are experiencing another handicap. For the Dollar areas, the Banks insist that claims should be made payable in Dollars. If these conditions were to be complied with, the Insurance Companies need funds in Dollars. But the rigidity of the Reserve Bank in releasing Dollars is well known. However, I hope that forign banks would adopt a more helpful attitude towards Indian Insurance companies and the Reserve Bank would liberalise its policy in allowing improved Dollar facilities to aid the growth of the Indian Insurance Companies.

8. Recently a number of companies have come into the field of insurance and there is growing competition to secure the limited business available which naturally results in a high expense ratio. It is high time therefore, that insurance companies might continue on sound financial ground. If we compare our expenses with those of British Insurance Companies, we shall find that even the best of the Indian Life Offices compare very unfavourably with the British Life Offices of the same standing. The following figures will illustrate:

EUROPEAN COMPANIES

Name	overall expenses 1943
1. Royal	14%
2. Norwich Union Life	12%
3. Commercial Union	12%
4. Royal Exchange	13%

INDIAN COMPANIES

Name	expenses overall 1943
1. Oriental	22.74%
2 Hindustan	29.83%
3. New India	29.16%
4. Bombay Mutual	27.90%
5. National	27.90%

The difference in expenses, as will be apparent, is so large that if a saving can be effected, it will be enough to meet, to a very large extent, the bonus requirements of the policyholders and in addition to pay some dividents to the shareholders.

The Insurance Associations, both Life and General, have made suggestions in this direction, but unfortunately they have not yet been passed into law. I hope that no further delay will be caused in placing them on the Statute Book.

But the lowering of expenses by itself will be suffice to make the insurance policy what it ought to be—a real service policy. What is required in addition is a lowering of the mounting toll on taxation. Even the rate of 63 pies in the Rupee fixed by the Government for Insurance Companies is unduly on the high side, and it is absolutely necessary in the interest of Insurance institutions that this should be reduced to at least the pre-war figures.

I should like, before bringing my remarks to a close to express our deep appreciation of the service rendered to the company by its staff and agents, who continue to do their very best for it and for the policyholders.

With these remarks, Gentlemen, I thank you all.

(*Continued from page 709*)

nery and a number of well-equipped workshops for servicing the vehicles. Besides their own fleet of 200 vehicles, the vendors have the use of several other vehicles operating transport services in Bihar, Bengal and Assam. These, too, will pass on to the new company. So also will the remunerative contracts with Government. Above all, the Company can count on the valuable experience and organisation built up by Mr. Prem Nath. For a project of such present size and future potentialities, the Capital has to be on the large side. The issued capital is Rs. 25 lakhs, of which, when the prospectus is released to the press, the amount thrown open to the public may turn out to be less than Rs. 8 lakhs. The directorate is strong, and comprises, among others, Sir Teja Singh Malik, Hon. Sir Sobha Singh, Rai Bahadur P. Mukerjee and Rai Bahadur Ganga Saran.

New Asiatic Insurance Company Limited in recent years. The progress of the Life department has been very satisfactory and the company is one for the first fifteen companies in this country doing a large amount of business. As Mr. L. N. Birla said at the annual meeting held this week out of 350 life offices working in India the New Asiatic occupies the thrteenth place which reflects considerable credit on a company so young in years. The paid up capital has increased to Rs. 20 lakhs from Rs.14.45 lakhs. The life fund has increased during the year by Rs. 10 lakhs to Rs. 31.12 lakhs.

On the General insurance side the Company has extended its activities to Marine and Accident Insurance as well. Despite difficult conditions it was possible to report a small profit. But for the claims on account of Bombay explosions the results of the General Insurance department would have been more gratifying

WATCH-DOG.

THE SONAKUNDA BALING CO., LTD.

NOTICE is hereby given that the Annual Ordinary General Meeting of The Sonakunda Baling Company, Limited, will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, at 10-45 a.m., on Saturday, the 26th day of May, 1945, for the purpose of receiving the Directors' Report, passing the Audited Accounts for the year ended 28th February, 1945, declaring the Dividends recommended by the Directors, electing Director and Auditors and for transacting any other ordinary business of the Company.

Audited accounts for the half-year ended 31st March, 1945:

The Revenue Account, after deduction of Insurance, Commission to Staff, etc., shows a profit of Rs. 23,13,582-6-6; Adding the amount carried forward from last half-year Rs. 4,90,329-11-8; Sale proceeds of Obsolete Machinery Rs. 65,625-0-0; The total is Rs. 28,69,537-2-2; From this sum there has to be deducted:—Reserve for Taxation Rs. 17,50,000-0-0; Amount written of Furniture, Cars and Lorries Rs. 765-6-0; Kutcha Cooly Lines Rs. 29,000-0-0; Leaving an available balance of Rs. 10,89,771-12-2; which the directors recommend should be dealt with as follows:—

For payment of the Dividend for the half-year on the Preference Shares at the rate of 6 per cent per annum, without any deduction in respect of Income-tax paid by the Company Rs. 27,000-0-0. For payment of a Dividend for the half-year on the Ordinary Shares of Rs. 15 per share, without any deduction in respect of Income-tax paid by the Company Rs. 5,40,000-0-0; to be carried forward Rs. 5,22,771-12-2; total Rs. 10,89,771-12-2.

In the previous report the directors referred to the establishment by the Indian Jute Mills Association of the Mills Industrial Pool, operative as from 1st July, 1944. In the interval coal supplies to the Jute Mill Industry have continued inadequate with consequent interruption of normal working in the steam driven mills. The mill, being electrically driven, has been able to work without interruption and during the half-year to 31st March, 1945, the Company's contribution by way of loom hour cess to the Mills Industrial Pool has been Rs. 2,73,350-14-0. During the months of October, November and December the Company purchased 88,740 loom hours from the Pool and these hours were worked off in production before the requisitioning for Military purposes of the No. 2 Mill from December and this means production has been maintained with little loss beyond that attri-

BOUQUETS & BRICKBATS

(From our Readers)

Decimalisation of Coinage:

I read the Government of India's proposals regarding Decimalisation of Indian Coinage. It appears that you were also from a much earlier period in favour of such change in our monetary system.

In an illiterate country like India, I wonder how such a system can be useful when the units of other measurements are correlated with the present coinage system. Any illiterate woman knows that the cost of any thing which sells at Re. 1/- per Seer or per Yard will be an anna per Chatak or per Girah respectively.

I shall be glad if you would publish this letter in your valued columns and also write your views in the matter.

Satgur Das.

Decimals are in fact easier to understand than the present system, only novelty standing in the way. Our correspondent exaggerates the nature and significance of illiteracy in India.—ED. *I. F.*

Retired officials of Imperial Bank:

Your correspondent Fairplay's letter under the above caption in your issue of 5th May is likely to mislead your readers to suppose that retired officers of the Imperial Bank are treated in the same way as Government pensioners re-employed. The rule for the latter is that their pay on re-employment *plus* pension should not ordinarily exceed the pay drawn immediately prior to retirement. This is quite different from saying that the re-employed Government Official "does not, while so employed, draw any pension." To take an example, an officer's pension is say, Rs .350/- p.m. while his pay in Government service before retirement was Rs. 800/- p.m. If he is re-employed on Rs. 600/- p.m. he can draw a pension of Rs. 200 only out of the Rs. 350, due to him or he can draw the full pension of Rs. 350, his pay being then limited to Rs. 450 p.m.

Further, the important point is that the re-employment must be *under Government*. There is no restriction in drawing pension if such re-employment is not paid for, from General revenues. One can understand the Imperial Bank's rule if in their retired officials' case the re-employment is under the Imperial Bank itself. Why should the rule apply to such employment under other Banks?

"Government Pensioner"

PBS Manufacture:

As Chairman of the Indian Jute Mills Association Research Institute and also as Chairman of the PBS Executive Committee I am compelled to comment upon certain remarks made in connection with PBS as described in the articles under "Jute and Jute Manufactures" in your issues of 5th and 12th May.

Firstly, the description of this product as given in your earlier issue is not a correct appreciation of actual facts and is very misleading. Secondly, with regard to the views expressed in your later issue I would, in the first place, quite definitely state that the possible origin of PBS did not result from any experiments carried out and commented upon by the Manager of the Technological Research Laboratories of the Indian Central Jute Committee who have had no official connection with this manufacture.

Details with regard to the development and manufacture of PBS in India are not yet available for publication but I would clearly state that the Indian product has been the result of co-operative efforts made by the Technical Adviser and engineers of the Engineer-in-Chief's Branch, New Delhi and the Indian Jute Mills Association. The technical staffs of three mills in the membership of the Association pioneered this work through its early stages under advice from, and in collaboration with military technical experts, the work of co-ordination being done through the Research Institute of the Association. One of these mills was the Howrah Mills Co. Ltd. As a result of this pioneer development work designs and plans for standard plant were drawn up and the plants were built partly by the mills themselves and partly by firms associated with mill Managing Agents. The choice of mills for installation of plant was decided by the military authorities in conjunction with the Chairman of the Indian Jute Mills Association.

It has been my proud privilege to have been Chairman of the Indian Jute Mills Association Research Institute throughout the war years and in such capacity it has been part of my responsibility to co-ordinate the work of producing many speciality jute products required for the war effort such as for example, rotproofed sandbags, camouflage materials, Jutlac and PBS, to cite only a few. I have at all times received the fullest co-operation from every member of the Association and our Research Institute in all experiments, development work or production management so as to make our contributions to the war effort worthwhile, and no one associated with me in any capacity has sought publicity or self advertisement for work which has been first, foremost and all the time, team work of the highest order. In due course the industry's part in the war effort will be made public, but by those who know the facts, and in our unity of purpose it is essential that credit be given to all branches of the industry, head office staff, managers, engineers, technicians, chemists, mill clerks and workmen themselves. I must also pay tribute to the magnificent support the industry has had from the technical officers and experts attached to different branches of the military and with whom it has been our pleasure to work and associate. The late Chairman of the Association did not exaggerate when in his last speech he declared that the jute industry had manufactured stores varying from parachutes to tea chests and from 5 gallon drums to aeroplane runways. I have mentioned that in due course the full story of what the Indian Jute Mills Association has done for the war effort will be told and when this is done a tribute will be paid to all those whose efforts and work can be singled out as worthy of special mention. In the meantime however, no member of the Association either asks for or wishes to have any measure of publicity apart from sharing in any general appreciation which might be given to the Associaton as a whole and of which they are proud to be members.

I trust therefore you will suitably publish this in your column "Jute and Jute Manufactures" so as to remove any erroneous impression that may be created with regard to PBS.

J. B. Walker
Chairman, I.J.M.A.

Fact Parade

Ship-building in U.S.A.:

U.S. shipping losses, which since 1939 totalled 6,500,000 tons, more than half the entire pre-war fleet, have been made up seven times over by construction in U. S. shipyards of approximately 56,000,000 dead-weight tons, stated Rear-Adm Emory A. Land, Chairman of the U.S. maritime Commission recently.

Adm Land estimated the total American shipping available after the war at about 61,500,000 tons, of which he proposed to operate 17,000,000 tons, assign 6,000,000 tons for military service, scrap 7,000,000 tons as obsolete, sell 10,000,000 tons to foreign lines and maintain 21,500,000 as a "national defence reserve."

* * * *

British Locomotives for India:

The North British Locomotive Co. it is reported, has received an order for 110 eight-coupled locomotives and tenders for India and 60 locomotives and tenders for South Africa. The company at present is completing a large order for Government.

* * * *

Petroleum and Mica in Afghanistan:

Petroleum fields and mica mines are reported to have been tapped by the Afghan Government in Afghanistan. Specimens of these ores have been sent to the research laboratory in India for quantitative and qualitative analysis. If the results prove according to expectations, Afghanistan besides being able to meet her own requirements, will be able to spare large quantities for export.

* * * *

Britain's Debt to Egypt:

The Finance Minister states that Britain owes Egypt about £300,000,000.

He said that no agreement had been reached about the settlement of the debt, but it was suggested that Britain might make repayment in machinery and finished products.

Similarly the net receipts of the Egyptian State Railway rose from £E. 813,396 in 1938-39 to £E. 3,869,873 in 1941-42. The Egyptian Government has recently placed orders for rolling stock and locomotives in Britain, totalling £4,000,000. The expenditure constitutes the biggest wartime bulk order for railway stock, but in view of the Egyptian railways' contribution towards Allied war effort, special endeavour will be made to meet all Egyptian requirements.

* * * *

Mechanised Cultivation in U. P.:

About 142,000 acres of land in the United Provinces will come under mechanised cultivation, according to the agricultural plan of the Provincial Government for the post-war period. The Government propose to import 140 tractors with the aid of the Central Government to cultivate this land. The tractors will be utilised for breaking up new land in Terai and Kheri. Additional land of 4,000 acres in Bundelkhand will also be ploughed for the removal of "kans" (tall thin grass) in that area.

* * * *

Excess Profits Tax for Mysore:

The Mysore Government have, by a Gazette extraordinary, promulgated recently the Excess Profits Tax (Emergency) Act 1945, which, in the main, follows the British Indian legislation. The Act, which comes into force at once, shall remain in force for a period of six months.

Under the Act, except under certain circumstances, a tax equal to 60 per cent of the excess of profits over the standard profits earned by any business concern to which this Act is made applicable, has been imposed.

The tax shall not be levied on any profits, which are under Section 4 of the Mysore Income-tax Act exempt from Income-tax and profits from life insurance business.

The Act shall apply to every business of which any part of the profits made during a chargeable accounting period is chargeable to Income-tax. The standard profits shall be taken to be Rs. 36,000. The profits accrued from July 1, 1944, will be subjected to tax under this Act.

* * * *

Controlled Price of Umbrellas:

It is announced by the Bombay Government that about 13 lakhs of umbrellas will be available in the market at controlled rates within the next, few weeks. The Controller-General of Civil Supplies has approved the maximum retail selling prices chargeable by dealers in respect of men's umbrellas of eight ribs of 25 inches long. Umbrellas of this quality have been classified into four categories for purposes of price and the retail selling prices will range from Rs. 4 to Rs. 8-15.

* * * *

Food Index:

The Economic Adviser's All-India index of Wholesale Prices of Food Articles (Base: last week of August 1939=100) worked out to 234.1 for week ended May 5, as compared with 234.7 for the previous week. Between the two weeks 'Pulses' declined by about 7 points, while 'Cereals' and other Food Articles remained stationary.

New Malaria Drug:

Sydney University research laboratories have discovered a synthetic drug, Moncrim, which may be the most effective treatment yet found for malaria and chronic infected wounds, the Australian radio reported today.

Moncrim is reported to be more effective, than Pencillin in some cases.

TREASURY BILLS

Central Government:

Tenders for Rs. 2,00,00,000 of three months' Government of India Treasury Bills were opened on Tuesday, the 29th May, 1945. Total amount offered was Rs. 7,38,00,000. Tenders at Rs. 99-14-6 per cent were accepted in full and those at Rs. 99-14-3 per cent were allotted approximately 72 per cent. Lower tenders were rejected. Total amount accepted as Rs. 2,00,00,000, the average rate of accepted tenders being Re. 0-6-0 per cent per annum.

Tenders for Rs. 2,00,00,000 of three months' Government of India Treasury Bills will be received on Tuesday, the 5th June, 1945 at Bombay upto 11 a.m. (Standard Time) and upto the close of business on Monday, the 4th June, 1945 at other centres. Successful tenderers should make payment on Friday, the 8th June, 1945. Other conditions are as usual.

During the week ended the 25th May, 1945, Government of India Treasury Bills for Rs. 2,31,25,000 were sold in favour of the Issue Department of the Reserve Bank of India.

backed by

INDIA'S WEALTH

Over Rs. 112 Crores were invested in less than eleven months in the First 3% Victory Loan (1957) withdrawn during February 1945.

The investment of so large a sum in so short a time was proof of the First Loan's soundness and the public's confidence in Government Loans. The 3% Second Victory Loan offers you the same excellent terms—half-yearly dividend less Income-Tax sent to your address, guaranteed repayment at par not earlier than 15th August 1959 and not later than 15th August 1961, no limit to the amount purchasable, security of your capital, ready salability in the market at any time, and refund of Income-Tax if you are not liable to it or liable at a lower rate. Investment in the 3% Victory Loan assists the war effort and helps to counter inflation. It keeps your savings safe from depreciation and gives you a handsome return year by year.

To buy this Loan, apply to your Bankers, or to the Reserve Bank of India at Bombay, Calcutta, Madras, Delhi, Cawnpore or to the Branches of the Imperial Bank of India in other places or to any Government Treasury

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

Extremely easy conditions have continued to prevail in the money market and call money rates are quoting ½ per cent in Calcutta and ¼ per cent. in Bombay. With the further increase in the working capital of banks and the suspension of sales of certain tap loans by the Reserve Bank there has naturally been greater anxiety to place funds either in treasury bills or gilt-edged securities. At the auctions held this week there was, therefore, very keen bidding and the total amount of applications was very much higher at Rs. 7.38 crores against Rs. 5.42 crores in the previous week and the average discount rate fell by one anna to 6 annas per cent. The offer for next week has been maintained at Rs. 2 crores. As treasury bills maturities are Rs. 4 crores from next week it stands to reason that there would be a further reduction in the average discount rate.

The returns of the Reserve Bank for the week ended May 25 show no further expansion in currency, the slight increase in total of notes issued to Rs. 1,137.38 crores from Rs. 1,137.23 crores being due to the inflow of rupee coin. There is acutally a big decrease in notes in circulation to Rs. 1,121.02 crores from Rs. 1,125.38 crores. Notes in the banking department, as a result, are higher at Rs. 16.63 crores against Rs. 11.85 crores. Sterling securities are unchanged at Rs. 1,019.33 crores while rupee coin are Rs. 14 lakhs higher at Rs. 15.79 crores.

In the banking department, Central Government balances are lower at Rs. 266.51 crores against Rs. 268.25 crores. There is an increase under all other heads. Other Government deposits are Rs. 2.88 crores higher at Rs 21.9 crores. Bank balances are Rs. 7.4 crores higher at Rs. 91.38 crores and Other deposits Rs. 2.58 crores higher at Rs. 28 89 crores. Foreign balances have improved by Rs. 6.3 crores to Rs. 392.4 crores. There is an increase in investments by Rs. 22 lakhs to Rs. 21.62 crores.

The Imperial Bank's statement for the same week shows an increase in deposits to Rs. 234.28 crores from Rs. 231.95 crores: investments are unchanged at Rs. 142.96 crores while there is a decline in advances to Rs. 69.08 crores from Rs. 70.71 crores. Cash balances are, therefore, higher at Rs. 32.33 crores against Rs. 28.33 crores. The figures relating to the Imperial Bank statement thus reflects fully the easy conditions in the money market.

The statement of the scheduled banks for the week ended May 18 also makes similar reading. Demand liabilities have increased to Rs. 612.03 crores from Rs. 607.9 crores and Time liabilities to Rs. 229.74 crores from Rs. 228.85 crores. Cash on hand was slightly higher at Rs. 31.12 crores against Rs. 30.72 crores as also balances with the Reserve Bank at Rs. 82.16 crores against Rs. 80.82 crores. As there is a slight decrease in both loans and advances, it is clear that greater interest has been shown by banks in the gilt-edged market.

The strength of the gilt-edged securities section in the past few days is rather significant. 3½ per cent. paper at Rs. 100-9 are quoting at the highest level for all time. It is stated that the Reserve Bank has not been a keen seller above par as on former occasions and that the suspension of sales of other loans also has imparted a steadier effect to the market. There are rumours in the market to the effect that the new Finance Member might formulate some proposals for the conversion of the large amount outstanding in 3½ per cent. paper to dated stock. The proposal has been advocated in these columns on more than one occasion. If market rumours prove to be correct, the basis of the gilt-edged market will be considerably strengthened and the Central Government would be able to effect large savings in interest payment.

The exchange market has been steady with rates unchanged. Only a small remittance business is reported.

Punjab National Bank:

"Banking service throughout the length and breadth of the country". That was the claim the Chairman was able to make for the Punjab National Bank speaking at the annual general meeting of the shareholders held recently. The Punjab National is notable for the strident progress made in recent years. Last year witnessed the largest increase in the number of offices of the Bank, the total at the end of 1944 being 163 against 119 at the end of the previous year. Fifteen more branches have been opened since the close of the year. The balance sheet discloses all round progress. With the further call on partly paid shares and the additional issue of capital during the year the paid-up capital was higher at Rs. 63 lakhs. Total deposits increased from Rs. 26.43 crores to Rs. 37.75 crores in 1944. Loans and advances showed an increase of Rs. 2.06 crores to over Rs. 10 crores and were 27.2 per cent of deposits. Investments were very much higher at Rs. 22.86 crores against Rs. 13.9 crores. It is noteworthy that the market value of investments was considerably in excess of book value and liquid assets were as much as 76 per cent of deposits. The interests of depositors cannot be better safeguarded and Lala Yodhraj is to be congratulated on his inspiring leadership.

Rationalisation of Cotton Industry

There is a lull in the spate of gratuitous advice tendered to the Textile Commissioner as to how cloth control can be perfected. Till the end of April, both in the press and on the platform, the sufferings of the public had been duly ventilated. People inveighed against the apathy of the mills, the laxity of control and the black marketeer. The curve of public dissatisfaction rose sharply. Nothing could do greater damage to national morale than the impression that, with official acquiescence or complicity, criminal fortunes are being amassed by racketeers too powerful to arrest. There is no doubt a large amount of 'easy money' going round, thanks to inflation, and a large amoral class of people who are abettors in the crime against society as a whole. But in assessing the blame to be laid at the door of the authority which directs control, or the trader who deals in the goods, certain aspects are all too often forgotten.

If we examine objectively what is meant by the black market, as scientific men once examined witchcraft or sorcery, we shall find that it is simply the criminal fringe to a universal market, artificially stimulated by war scarcity, in which human greed exerts itself for profit. It is the inevitable cancer in the body of an acquisitive society and even the advanced social systems of the west, let alone India, are not free from it, as witness the reports of black marketing in Britain. The truth is that rationing and price control, because they greatly restrict our freedom in the quest for necessities and comforts have exposed, as perhaps few social phenomena have done before, the conflict between the individual and the community in a competitive society. Dives says "rationing and points are good, inflation would ruin me." Lazarus chimes in: "they are good, the poor will at least get what they are supposed to get." And both proceed to augment their share by every device and not every opportunity. They are uneasily aware that they are behaving amorally and cannot quite succeed in rationalising their uneasiness by the defence of "human nature." Hence comes the psychological urge, to which everybody not excluding the Press is pandering, of finding a demonological scapegoat—the black marketeer—against whom can be vented all the emotions composed of an uncomfortable sense of personal guilt, and disregard of social discipline. The super-racketeer in cloth, in food or in any commodity, thus serves as the focus for mass indignation and an excuse for the extra yard of cloth or measure of rice, and up starts the great hunt with its tumult and shouting with the quarry running furtively with the hounds. It is a queer thing, this mass anger against the black marketeer, when you come to analyse it.

In the words of Mr. Vellodi, "the position is that persons living in Bombay City, for example, who are glad to get rice of the second sort which Providence and the Supply Commissioner in their infinite mercy give them must have the finest dhoties and sarees that the mills in this country could produce. One fruitful source of scarcity is thus the increased demands from the public and its apparently incorrigible habit of buying without any thought of one's neighbour. . . .Textile control cannot, any more than any other control, succeed without the active co-operation of the public and it is extremely doubtful whether, in this matter, the members of the public in this country can be said to have realised their responsibility . . .Metaphysical doubts do not enter into the problem of purchasing cloth and yarn and here at least is one type of control where the public could afford to go without the article controlled rather than pay black market prices." To cite these words is not to deny that cloth is utterly in short supply. It is only to point out that the negligence of the public has been a contributory factor in the failure of textile control. One has only to remember that millions of yards of standard cloth which could be produced only with the greatest difficulty, are lying unused in all corners of the country while stark scarcity is stalking the entire land.

A few figures as to supply will put the matter in correct perspective. According to the Industry's Committee of the Textile Control Board, the position as regards cloth supplies before the war was that the mills produced 4 000 million yards of cloth, handlooms produced 2,000 million yards (much of it from imported yarn including art yarn) and imports of cloth mostly of finer counts, totalled 600 million yards and thus there was a total available supply of 6,600 million yards of which 200 million yards were exported. In the early part of 1939, the mill production was not being fully consumed and even reduction of working hours was under consideration as stocks of cloth were accumulating with the mills. After a time-lag, however, cloth demand became active and the Industry realising the responsibility that was being placed upon it, raised its production gradually, despite very serious handicaps of various kinds, to 4.800 million yards of cloth. The weight of yarn actually produced, on which depends the production of cloth, increased from 1234 million lbs. in 1939-40 to 1620 million lbs., in 1944-45. It will be realised that no new productive machinery could be obtained and no addition could be made to plant either for fine cloth, coarse cloth, or yarn. This is the position even to-day. Out of the present limited supplies, no less than 600 million yards per annum is being legally exported. It is difficult to say whether additional cloth is still smuggled out of the country, and if so how much. The present reduced demand for Defence purposes is still on the basis of 750 million yards In addition, Government take a further quantity of 23 million lbs. of yarn, which is the equivalent of about 100 million yards of cloth. One the one hand then, there is a much smaller quantity of cloth available for civil requirements and on the other hand, there is much greater demand owing to the very welcome increase in purchasing power of various large classes of population. There is money to spend and in many cases, cloth is the only article which could be bought. The position, difficult enough in all conscience on account of shortage of supply, has been made unbearable by the serious failure of distribution. The crucial question, therefore, is how to make more cloth The machinery in the country could produce 6,000 million yards of cloth and perhaps some more yarn under certain conditions which, as we shall see below, include three shift working of mills necessary facilities therefor.

In April, matters came to a head so to speak, and both the Government and the industry became acutely aware that a complete re-orientation of production policy was imperative if the simmering public distress was not to boil over. Accordingly, the Industry's Committee of the Textile Control Board appointed a Rationalisation and Standardisation Sub-committee to make proposals for increasing production. In a circular letter to all the member mills sent on 4th May, the Chairman communicated the proposals of the Industry's Committee as regards rationalisation and standardisation. It had been agreed that the scheme framed by the Sub-committee should come into operation on the 1st June, and mills were requested to adjust their programme of production of cloth and yarn on the basis of the proposals given below: The main features of the Sub-committee's proposals are these:—(a) mills are restricted to spin a limited number of counts according to the number of spindles installed; (b) mills are required to set apart 90 per cent. of their looms for the production of "Utility Cloths" which are specified in Paragraph 13 of the report of the Sub-Committee; (c) mills will be required, at the request of the Chairman, to set apart 50 per cent of the maximum capacity in all widths of looms from 48 to 58 inches (both inclusive) for the production of sarees and dhoties; (d) mills are restricted to manufacture at one time not more than three sorts for 100 looms per month which include both "Utility and non-utility cloths"; and (e) mills are not permitted to change more than one sort for 100 looms per month. The mills were requested to submit to the members of the respective Panels before 20th May (1) the counts they will spin (2) the types of utility and non-utility cloths they will manufacture and (3) the number of of looms they can employ for each type of utility and non-utility cloths Mr. Thackercey had also stated in the circular to the mills that the Industry's Committee have given an assurance to Government that, by the adoption of the measure suggested in the scheme, it would be possible to obtain an increase in production of at least 10 per cent over the 1944 figure He therefore appealed to the mills to submit their figures of monthly producion of cloth and yarn for 1944 to the Panel members of the respective areas, and the mills have already submitted their plans for production, and will shortly be submitting the particulars of manufacture required for the calculation of ceiling prices.

In its report, the Rationalisation Committee had stated that increased output can be obtained by multiple shift working to the fullest extent and by rationalisation of production; adding that, for these two to be effective, the primary conditions are: (a) adequate and regular supply of power or of fuel (b) adequate supply of cotton (c) adequate supply of all essential stores, raw materials etc. (d) sufficient coal (e) full supply of labour and settled conditions to ensure uninterrupted production. These bottle-necks ought to be removed. The coal supply position is simply shocking and in 1945, it appears that 48 million yards production has been lost by closure of mills due to short supply of coal. It also appears that the quality of the coal, which has much to do with the production factor, is disgraceful, about 130 tons being now utilised to do the work for which in normal times 100 tons of coal sufficed. The limiting factors in plant capacity and the potentialities of increased shifts here also engaged the attention of the Committee. The key to the whole situation lies in yarn production which is limited by (a) blow-room and card-room capacity and (b) spinning capacity. The relative inadequacy of the former has been aggravated to a great extent by the coarse nature of the large supplies purchased by government for Defence requirements. The mills are at present called upon to work too many different counts and mixings, and it is therefore essential, before

production can be increased, that the supply Department specifications should be altered, so that no mill has to work more than 2 counts of warp and 2 counts of weft on Supply Department's production. The Committee, it is significant, recommended a survey of production, by sending out a questionnaire to the mills with the aim that all mills should spin reasonably near to the average counts on which they are balanced, so as to avoid bottle-necks in process which reduced the overall weight produced. These matters will be directly under the supervision of the Panel members. It is not suggested that mills should spin only one count, but it is well recognised that a great gain in the production will result if a reasonable limit were placed on the total number of counts spun per 10,000 spindles; and to that end, the Committee had suggested a schedule of counts which may be spun.

From the public point of view, the interesting and important aspect of the Rationalisation Committee's proposal concerns 'utility cloth' for which mills will be required to devote 90 per cent of their loom capacity. The utility cloths have been stated as dhoties, sarees (printed included), long-cloths, shirtings, chaddars, sheetings, voiles and mulls. drills and twills, tussores and coatings and towels. To ensure the best use of all yarn woven by mills into cloth, the maximum density of any utility cloth which a mill may manufacture has been prescribed, with suitable modifications for the cloth destined for export. In view of the great famine of dhoties and sarees, a word or two about these may not be out of place. The mills are to manufacture dhoties and sarees upto 50 per cent of their maximum capacity in all widths of looms from 48 to 58 inches, and limits have been laid down for borders. Every mill is restricted to manufacture at one time not more than 3 qualities for 100 looms installed. No mill can change in any month more than one quality for 100 looms. Full details are laid down for the reeds and picks for utility cloths in all types of weave.

The above recommendations of the Rationalisation Sub-committee and the endorsements of the Industry's Committee thereon have been more or less accepted in entirety by the Government of India and on May 18, the Central Government under the Defence of India Rules has passed an Order the Textile Industry (Control of Production) Order 1945. Suffice to say that in material particulars, the proposals of the Industry's Committee have been accepted. The Order has come into force with effect from 1st June 1945. It is expected that, as a result of this rationalisation, the total production will increase by 400 million yards, provided the stipulations are complied with. There are some who believe that, inasmuch as the mills had even before the promulgation of the Order resorted to some forms of standardisation, the benefit of higher production may be even less than 400 million yards. An awareness of this is necessary, otherwise there will be terrible disappointment later. It should be distinctly understood that the extra production so gained is a mere drop in the total of scarcity; and it is possible that the merit of the standardisation scheme resides less in the extra yardage of cloth it might make available to the population than in the fact that it underlines quality and the equality of sacrifice which the scheme as a whole implies. After all, there is some satisfaction to be gained in the thought that what is one's privation is not another's delight.

Post-war Civil Aviation

The Press Note of the Government of India explaining their post-war plans for Civil Aviation for this country, is bound to cause disappointment for several reasons. The general policy of the Government regarding civil aviation has been only vaguely outlined and the progress of planning in respect of aerodromes, licenses, financing of air services, etc., have not even to-day, come anywhere near a stage of finality. On several vital points like aeroplane manufacure the present Note keeps silent. It reveals, however, that the postwar air services in the initial postwar period will cover a mileage of 11,000. They will be operated with aircraft having a passenger capacity of twelve to twenty and carrying both mail and freight. From the tone of the Communique which says, "it should be understood that this is a plan for the initial postwar period only and it is not the intention that there should be no further planning for either external air service or for additional internal air service" it is clear that the Government of India are apologetic about their target and the speed with which they are carrying the country to postwar conditions of economic progress. We are told that planning for India's external service is now on hand and no one knows how long it will remain so. The Government seem to be confident that the international trunk air service would stimulate private initiative for operating feeder air lines to serve the local needs. They further state that plans have been prepared and approved for the construction of the necessary aerodromes and connected buildings and for the organisation of air routes. Here, again, the details are not placed before the public. In order to implement the air transport plan, which the Government of India have in mind plans are stated to be in preparation for the necessary works organisation, tele-communications organisation, headquarters organisation and the training institutions.

Explaining the policy of the Government of India regarding the development of Civil Aviation, the Press Note states that the Government are prepared to "promote the development and operation of services internal and external by a limited number of sound and reliable commercial organisations with their own capital and operated under normal commercial principles." The idea, therefore, is to leave civil aviation mostly in the hands of private enterprise, though the Government would take a financial interest in some selected areas. Sir Frederick Tymms' argued, some time ago, that the number of aircraft required by India would be too small to enable private aircraft building enterprise to function successfully. It has been pointed out by the commercial bodies in India that it is precisely because of this reason that the State should step in and establish a concern for the manufacture of aircraft and also run it as a State enterprise. The importance of aviation in promoting the material and non-material benefits in a continental country like India need not be emphasised, and if the target is adequate, and the aim is service for the masses and not merely for the upper classes, it should be possible for the Government to have an ambitious plan for both production of planes and running the air services. In none of the Dominions can one hear from the Director of Civil Aviation that "there is no prospect of air travel for the masses." Here in India the target to be achieved is kept pitiably low, and the war effort has not been so organised as to serve the peacetime requirements of India. On the one hand the Government refuse to give facilities for aircraft production, and on the other they make bold to say that there are no planes to serve all our internal requirements. Just contrast this policy with that adopted in foreign countries in this respect. America has come out with global schemes of air transport to serve her military and commercial ends. Sometime ago, a New York cable stated that nearly 100 American companies had already applied for authority to the United States Civil Aeronautic Board to serve more than 500,000 miles of foreign air routes covering nearly all the world centres. America also has schemes and designs by which air taxis may be in daily use even for short distant transport in the United States, thus introducing air service as a sort of competitor to motor service throughout the length and breadth of that country. Great Britain cannot on the strength of her resources pretend to world ambitions in this respect, but she is talking of Empire routes, for herself. She does not propose to be content with catering to her own national requirements; she wants to have a strong and ever-expanding aviation industry. Although she can be effectively served by about 2,000 planes, the technical minimum of her aircraft industry exceeds that figure and therefore she wants external expansion. Some of the spokesmen of the British industries clamoured for participating in international lines and went so far as to argue that the fact that the U.S. possessed the largest number of air transport vehicles was just an accident and but for the fact that England was engaged in manufacuring fighters to serve the interest of the Allies, her production would have been so great as to equal America's and that, therefore, Britain's pre-occupation in war should not be made a postwar handicap for her aviation industry. They even suggested that America's transport planes must be pooled equitably among the Allies and balance in civilian planes as between one another established.

Taking Canada for comparison, we find that Canada's aircraft production received a tremendous fillip during the war and production in 1942 was more than two and a half times that of 1941. Canadian planes, within three years of the declaration of war, served on the European continent and over the British skies.

With regard to Australia it is well-known that the progress achieved in aircraft production has been so remarkable that the British Press Delegates who visited Australia under the leadership of Sir William Layton were amazed at the incredible success which Australia recorded to her credit in the manufacture of planes and organisation of air services. The

Rail Intervention in Road Transport

Implications of Post-War Plan

By Prof. L. A. Natesan

The statements of policy and memoranda which have been coming forth with unusual prolixity from the Central and Provincial Governments of late denote a radical departure from the past record in this country. Such questions as nationalisation, tariff policy, direct assistance to industry, etc., used to be regarded in the past with a superior detachment, and dealt with, if at all, in a manner supremely non-committal. There were, of course, some exceptions to this attitude in the inter-war period, but the policy of the thirties seemed to imply that Government had gone as far as they could. The Government has travelled a long distance from this attitude during the last five years. One need only study the Second Report of the Reconstruction Committee of Council or the recent statement on industrial policy to see the radical change in the outlook. Gone are the days when the economist and the politician had to insist "ad nauseum" on the State abandoning "laissez faire" and taking an active part in the promotion of industrial development and nationalising the key industries. The plans contemplated and outlined in the recent memoranda proceed far beyond what the previous generation might have dreamed of in terms of public works, industrial advance or social welfare schemes. The politician might well feel that the wind has been taken out of his sails, but he has surely to fall into line in view of the importance of the proposed policy and programmes.

The schemes outlined in some directions have assumed such grandiose dimensions that one is led to doubt whether the framers have not used an unconscious multiplier. The value of conservative estimating consists not only in averting disappointment of hopes hastily aroused, but also in reassuring one of the practicability of the proposals themselves. The latter raises some difficult questions: whether the Government as at present constituted can accomplish the tasks and whether the economic organization can stand the acceleration involved? The implications of these questions can be best discussed by an examination of one or two plans on which decisions are expected to be taken shortly.

The professed readiness of the State in India to take the initiative and implement the schemes is in keeping with the general world trend towards State control and extension of notionalisation. The Russian experiment of planning has had a special appeal for this country and the advent of the State in the realm of industry will come to many as the realization of a long-cherished ideal. The State has consequently a powerful propaganda value in India, and State management of an industry tends to be taken, unconsciously, as an argument in favour of it. There are doubtless good reasons for this attitude, but it is not clear if it reflects a correct understanding of what the State in India precisely means. Does the State management of all our railways at the present time, for instance, mean exactly what the formation of the French National Railways in 1938 did in France? It is over twenty years since the policy of State management has come into operation and a generation would seem to be ample to have achieved Indianisation at the top—a consummation devoutly wished for over fifteen years ago. It would be interesting to analyse what essential difference has come about in the railways which have been recently taken over by the State and what changes have been observed by the average user. It is not just the State so much as the character of the State that matters. Loose talk of the advantages or superiority of State management in this country is mere twaddle, if this fundamental fact is missed.

The basis of the present Government and the extent of its responsibility to public opinion has come so much under fire in recent discussions that it hardly needs a mention. The abstention of the main political parties in the Central Legislature until recently and the adminstration of most of the Provinces by the Governors have had other consequences besides political frustration. In the economic and social sphere, this has meant the transfer to officials, not only of administrative responsibility, but the formulation of policy as well. In this task, in the circumstances prevailing, care has been taken to consult experts, start investigations and associate representatives from interested groups in advisory committees. But in the sense of adequately representing public opinion, these gentlemen cannot pretend to take the place of popularly elected Governments. For they carry no mandate from a constituency and owe no allegaiance to any but their own interests —in the larger sense, of course—and what they conceive to be good for the community as a whole. The older expedient of a commission, despite its time-consuming processes of taking evidence and making recommendantions has at least the merit of a direct approach to the public. In the peculiar conditions under which Central and Provincial administration dominated by wartime demands has had to be carried on, the choice of alternatives is limited. But the proper course is to restrict the tasks assumed to the minimum needs of efficient administration. Problems coming up in the immediate future cannot be neglected: they have, indeed, to be studied and the implications of the policy likely to secure the largest social gain may even be indicated. But it is not for temporary administrations of a professedly unrepresentative and caretaker character to make large-scale and permanent commitments which would create new vested interests and make it difficult for the popular Governments in the future to reverse it if they fail to receive public support for such a policy. Wartime administration of currency and food, two problems of vital importance, has been sufficient to dispel any illusions of bureaucratic competence, efficiency and foresight.

It is on these considerations that one feels disturbed about certain decisions of policy which are being made at the present time. An illustrative case is supplied by the road development and road transport plans. The technical committee of the Chief Engineers two years ago envisaged an increase of the total road mileage of the country to 400,000 at a cost of Rs. 450 crores. The poverty of road communications in a large country like India and the need to meet satisfactorily the transport requirements of rural areas combine to make road transport a nation-building work of far-reaching importance. Quite correctly, the Second Report of the Reconstruction Committee endorses the recommendations and approves of the plan for evolving a properly designed road system consisting of national, provincial, district, and village roads initiated by the Centre in consultation with the Provinces and States. The recommendations regarding construction and finance from the point of view of Indian industry and labour leave little to be desired and sound principles have been enunciated in respect of motor vehicle taxation, control of fares and traffic, particularly in respect of motor transport, etc. The enthusiasm for road transport has had to be tempered by the concern for railway finance and no one will object when the committee desire that railways should closely co-operative with road transport. But it gives one an uncomfortable jolt to see the railways hoping ultimately to acquire a commanding interest in road transport.

It is difficult to understand how this conclusion came to be reached. There is a case for private enterprise in road transport; there is equally another for State management. But the intermediary type of railways acquiring a "commanding interest" is fantastic. The principal argument urged in its favour is the policy of the British Railways. In that country the striking expansion of the automobile industry aided a rapid development of highly organised largescale road transport undertakings. Under pressure of severe competition, railways sought to retain their business by improving rail services and rendering them more attractive to the public. Finally, through a limited financial participation in road transport undertakings, railways hoped to share in their prosperity, but they sedulously avoided any attempt at controlling road transport. There is nothing in the Indian picture to suggest a parallel. The State here is an interested party, whereas in Britain it is not. The road transport industry in India is still in a development stage, pioneering in its attempts, unpaid by any organized automobile manufacturing industry. Control of the character now contemplated at this stage would stultify the future of road transport which promises, in view of the comparatively low road mileage in India, to serve the rural areas far more satisfactorily than railways can ever hope to do. A question of this character undoubtedly calls for a more extensive survey of public opinion and a definite popular support for the policy. Equally important is a comprehensive traffic survey. A few reports and meetings of officials or advisory committees take one nowhere. The consultations with the Provinces, which under the present constitution have the control of road transport and are mostly administered under Section 93, amount only to one more exchange of views between officials and not deference to the wishes of popular Governments. It is surprising that important decisions of policy are contemplated in all seriousness without any section of organised public opinion to back them.

OUR LONDON LETTER:

RE-ALLOCATION OF MAN-POWER

YEAR OF BOTTLENECKS

INDUSTRY PREPARES FOR TRANSITION

London, May 18.

During the past week, there has been a marked shift and interest to transition—that vast, complex phase of current history that appears nebulous because it is so vast and complex. This interest is combined with a general let down, that is the reaction from the end of the European war and the subsequent excitement of the victory celebrations, many of which did not terminate until this week. The stock market has been trying to get up steam, but cannot. Early in the week, there were indications that it was acquiring tone and trend. It was only an illusion, though. The international political tangles seem to be exerting an influence nearly as strong as that of the domestic political uncertainties. And now the Whitsun holiday period comes to check activity. The Stock market remains quiet, and it is heard in the City that this quiet may persist a while longer.

The most topical of this week's transition developments was the Minister of Labour. Mr. Bevin's speech during a debate on demobilisation. Mr. Bevin calls it "re-allocation of man-power" which is a more apt phrase. The government's intense desire to muster men out of the army and out of defense jobs into civil employment as quickly as possible was reflected in Mr. Bevin's statement. One hears the complaint, however, that the Government, despite its will to release men, has tarried too long in mapping out a re-allocation programme. Mr. Bevin said that the Government's decisions concerning the transfer of industry to civilian purposes would be ready soon. These decisions presumably will determine to what extent the release of men and women from war activities is re-allocation and not merely casual demobilisation. The feeling is strong that speed should be the prime factor in demobilisation. The influential "Financial News" declared. "No one should be kept in the forces for a day longer than is absolutely necessary from the military standpoint. Above all, releases should not be held back merely to conform to a lengthy "orderly" plan of demobilisation or the immediate availability of civilian jobs." The indications are that speed will be respected. The outstanding plans call for the release of 750,000 men by the end of the year.

The complaint voiced loudly in the street and in the press is that the Government has given much less attention to the plan for the re-absorption of men than to the means of mustering them out. Although Mr. Bevin may catch some of the criticism if the reabsorption is faulty and slow, there is a tendency now to blame the Board of Trade as being partially responsible for delayed planning. The criticism is likely to be even more heated if industry finds it difficult to absorb men and women released right away from the services and other war work. It is true that there is a lot of back and forth in a criticism of that type. The Board of Trade contends that it must depend on the Labour Ministry for man-power, and they claim that the latter ministry is reluctant to release men because they are afraid that they could not get them back immediately if an emergency arose and they were needed again.

Another factor which is bound to influence the type of cutbacks is availability of raw material. Until the allocation of raw material is worked out, it will not be known exactly which types of factory will be able to cut back or to what extent.

If it turns out that the planning has been delayed too long, as critics contend, it seems inevitable that there will be transition bottlenecks similar to those which hampered production early in the war. For instance, it will be necessary not to attempt to expand the manufacture of finished goods before output in the earlier stages has increased. As would be expected, most of the complaints originate in industrial quarters. Presumably, they are either trying to needle the Government into action or take certain precautions in the event of a hitch in the period of re-allocation of manpower.

Industry has been looking forward to the transition period for some time and now is talking about it. Two outstanding industrialists told me this week how they feel about the future. Sir Malcolm Stewart of London Brick said, the postwar policy for brickmakers is the restoration of freedom for competitive prices such as pertained to the pre-war, a freedom tempered by one control, and that is, of the maximum prices so as to protect the consumer against exploitation". Sir Allan Macdiarmid of Messrs Stewarts and Lloyds, iron and steel industry, said that his company is planning assiduously for post-war expansion and intends to spend a lot of money on deferred repairs, on alterations and on new developments.

City traders looking to the future are aware that Britain's exports may be tightly restricted for some time after the war. Since Britain's indebtedness already is tremendous, the Government does not want to saddle the country by covering this prospective deficit by contracting further loans abroad. Traders are hopeful that overseas countries which supplied Britain before the War will resume sending goods to this country in the post-war period even if Britain's foreign exchange position should prevent immediate settlement of their claims. They suggest that they accept, at least for a while, blocked sterlings in settlement of their export surpluses. They adopt the attitude that Britain has sacrificed her whole trade in order to wage and win the war, the fruits of victory of which have their advantages for countries that played a less important role. Before the war Britain was a good customer, and hopes to be a good customer again. Now is the time for the friends to stand by her and help tide her over the temporary shortage of foreign exchange. The traders shrewdly observe that Britain will remember the countries willing to make things easier for her and will also remember any countries which try to take advantage of unsettled conditions to drive a hard bargain at Britain's expense. They suggest a "black-list" of unco-operative nations which will be earmarked for least-favoured nation treatment when better times return.

(Continued from page 724)

Prime Minister, Mr. Curtin, has recently stated that Australia is manufacturing heavy bombers of several varieties. Even from the beginning of this war, Australia has been working for complete self-sufficiency in aeroplane manufacture and civil aviation and her war effort has been geared accordingly. Recently, Mr. Curtin announced that the Australian Government intened to go on with plane manufacture to make the Australian Commonwealth independent of outside sources of supply. Mr. Arthur Drakeford's scheme for Australia clearly indicated that all small towns will be linked up by air and that there will be aerodromes every 150 to 300 miles. Australia has a national air policy with the object of ensuring that no two towns in that counry shall be more than 24 hours apart by air.

The contrast between India and other free countries is, therefore, very sharp and to the nationalist the indifference of the Government of India in evolving a bold and adequate national air policy looks unpardonable. The only achievement indicated in the Press Communique seems to be that when licenses are issued for air transport service care will be taken "to ensure the safety and reliability of service, to eliminate uneconomic competition, to prevent exploitation of the public and the utilisation of national resources and effort for the maximum benefits of the country."

It is quite gratifying to note that all licensed operating companies will be obliged to admit, in any of their training schemes members of all communities but here, again, the virus of communalism is surreptiously introduced. It is stated that the admission of trainees will be in accordance with the prescribed communal proportion. To introduce communalism in a highly technical service like the air transport may serve the British political interest in India to divide and rule but cannot pave the way for greater efficiency in India's civil aviation.

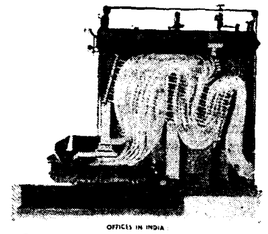
The Press Note further has failed to clarify the extent of State assistance to air transport services though an assurance is offered that a complete scheme for this purpose will be drawn up in due course. A broad hint is given that State help "will be based on a system of target operating costs (which will not include the return of the capital invested) and target revenue designed to reward the efficient operator to reduce his cost and increase revenue by commercial enterprise and development of traffic." Owing to the fact that already non-Indians are enjoying a considerable slice of air traffic in India, this statement will not fail to cause apprehension in some circles. The public, therefore, need an assurance that all the companies licensed for post-war air development in India will be under Indian management and control. The public will resent any interference with the legitimate rights of the Indian nationals either in the name of efficiency of service or under the pretext of abiding by the clauses in the Government of India Act which provide for safeguards for foreigners at the expense of the sons of the soil.

Editorial Notes

Wartime Forestry in Canada:

The part played by wood in speeding up Allied victory is not sufficiently understood by the ordinary man who has not thought of the gigantic proportions of the Allied operations, defensive as well as offensive. Germany which assiduously prepared for war for long could not produce artificial wood and fortunately the Democracies possessed the bulk of the forest wealth of the world. Russia, Canada and the United States held the key to the largest soft wood resources, and global war could be supported by the combination of these three powers for huge construction programme. Canadian timber served to sustain top-speed construction of ships, displaced the use of heavy metals in several lines and supplied soft wood for the construction of aircraft. When supplies of natural silk from European countries and the Oriental sources had temporarily ceased and when the nylon plants had not been brought to general use the forests of Canada and the U S. yielded rayon pulp and filled the gap in the civilian supplies. Forests actually became important war factories when wood pulp came into quite general use as an explosive, displacing to a great extent cotton dellulose. The responsibility of filling the gap created by the stoppage of supplies of pulp wood and processed pulp from Scandinavia and Finland fell on Canada and the task was borne with striking success.

Under the stress of war wood was also made to help in the manufacture of power alholol, dyestugs, paints, plastic fillers and bases, inks and many other materials, and the post war value of the forests of Canada has therefore increased considerably. Though the capacity of the U. S. lumber industry is greater than Canada's the pulp and newsprint industry of Canada is greatest in the World. Just before the war the forest industries of Canada were working below capacity, and foreign competition and low prices were the chief handicaps. Thanks to the war a powerful fillip was given and according to the Monthly Commercial Letter of the Canadian Bank of Commerce (March 1945) 3¼ billion cubic feet of timber was cut for 1942 of which 90 p. c. was processed. Though 1943 recorded slight decline owing to the scarcity of labour, the next year saw rapid recovery. The lumber allotment to the U. S. in 1944 has marked a striking increase over the previous year and it is estimated that over 690 million feet B.M., of lumber was demanded for crates and boxes alone for armaments abroad. Canada took care to reserve nearly 30 p.c. of all the primary forest for civilian purposes.



A target higher than the one for 1944 has been fixed for the current year. 160,000 men have been mobilised, huge stocks of lumber have been accumulated. Canada, it is gratifying to note, is fully prepared to meet the peacetime demands on her forest wealth and extensive plans are reported to be ready.

Foreign Trade in January:

The upward trend in imports noticeable in recent months has been evident in January of this year also. The figures relating to foreign trade for that month, published recently, show that while imports have increased further the improvement in exports has been in proportion. So that the favourable balance of trade has declined for several months in succession. If the present increase in imports is maintained the favourable balance of trade may be wiped out. It is to be expected, however, that imports will be at a very high level for sometime as with the encouragement given to consumers goods to meet unsatisfied demand the total of imports might be even more than exports. It should, therefore, be made sure that in their enthusiasm to import foreign goods to combat inflation the authorities do not discourage Indian industries. There is already a fear that the increase in imports might affect adversely the interests of the newly started industries and industrial development will be arrested. While it should be said that there is need for an increase in the supply of consumer goods to relieve the scarcity in respect of the various items the occasion should not be utilised to smother nascent industies. The only increase under imports of manufactured goods that should be welcomed is under machine tools as this provides a measure of the rate of industrial development in this country as would an increase under imports of machinery and other items.

Total imports in January showed an increase over the figures for the previous month by Rs. 2.49 crores to Rs. 18.20 crores Exports, on the other hand, declined to

Rs. 19.47 crores from Rs. 20.72 crores. The favourable balance of trade was thus the small sum of Rs. 1.27 crores against Rs. 5.01 crores. Imports for the ten months ending January, 1945 were as much as Rs. 163.12 crores against only Rs. 95.01 crores in the corresponding period in 1943-44 while exports were Rs. 193.65 crores against Rs. 170.0 crores. It would thus be clear that the increase in imports is very much more pronounced than exports.

In January 1945 there was a large increase under Food, drink and tobacco to Rs. 2.02 crores from Rs. 1.19 crores in December and under cotton to Rs. 17.35 crores from Rs. 14.9 crores. Among exports, jute manufactures were further higher at Rs. 5.20 crores against Rs. 4.47 crores but there was a drop under cotton textiles to Rs. 2.15 crores from Rs. 3.34 crores. Exports of Tea, mica and oilseeds and other items were lower.

Russian Industrial Development:

The European war is over, and Russia has time enough to plan her industrial structure. At the time of the German invasion, several great industries were moved to the East. Now these industries are not to be removed back but new plants are to be established thereby completing the Russian industrial picture. The movement of industries eastward in Russia has been one of the greatest industrial feats requiring 1.2 million railroad cars. Among the new plants set up in the East are high quality steel plants at Chebarkul and Chelyabiusk and an iron and steel plant at Segovat. Machine building plants now dot the Urals and Siberia and towns which were hardly known sometime ago are great industrial centres. Locomotives, cranes and agricultural machinery are being made at Krastoyarsk. At Rubtsovsk tractors, argicultural machinery and coke-chemical implements are being made. Tashkent Orsk and Barnaul are turning out aeroplanes, diesel locomotives and boilers respectively.

The hundreds of rivers large and small that fall from the mountains into the valleys of the Central Asia are estimated to have a potential capacity of 16 million kilowatts and hydraulic power plants are in construction in all the Central Asian Republics. In the Tashkent region alone five new hydraulic power plants have been constructed during the war years besides the many smaller ones resulting in almost double the prewar power output. A number of power plants are also being erected in Kirkhizia, Tadjikistan, and Turkemania. The wonderful progress made in such a short time is full of significance. The traditional division as great industrial centres and agricultural regions disappears. Russia becomes more fully industrialised. It is not too much to expect that Russia will want a place in International trade.

Sugar Problems:

Despite Government's help by way of protection and the efforts of the Central Sugarcane Committee, the problems that confront the sugar industry are too many. Some of the old problems still remain unsolved or partly solved. Experts anticipate acute shortage of sugar in the world during the period immediately following the cessation of hostilities. For, more than one-third of the world's sugar production has been ruined by the ravages of war and it would take years before rehabilitation is effected. There would, therefore, be giant demands on Indian production and if Indian sugar industry can rise to the occasion, it will be a source of strength to Indian economy.

The present also has many problems for the sugar industry. Even though cane price was fixed as high as 14 annas, factories have not been able to give adequate cane supplies with the result that in the U.P. the crushing season closed with 93.7 days working as against an anticipated 115 days and in Behar the season closed with 72 days to the anticipated 85 days. The short crush really implies grave handicaps for the industry. As a matter of fact, the 10 percent profit on the Block Formula which took shape in the Tariff Report eight years ago, really leaves nothing for the industrialist at the present moment what with the E. P. T., Income Tax and Surcharges. One of the reasons for the unsatisfactory crush was the inability of the factories depending on railborne supplies of cane to switch on to motor transport for the simple reason that petrol and tyres were difficult to secure. Again, the release of large quantities of gur at the commencement of the season for import on account of gur accumulation had the effect of drawing away a lot of cane into gur. As a result of all these, production in the two provinces declined from 9.4 lakh tons in 1943-44 season to roughly 7.1 lakh tons in the current season. The sugar industry in the U.P. and Behar works under provincial control. But because there is no centralised control so far as other provinces are concerned, measures taken by other provinces land the industry in the U.P. and Behar in dislocation. These are some of the problems to which Lala Karamchand Thapar referred to in his address to the Indian Sugar Syndicate the other day.

Swiss National Economy in 1944

Although Switzerland was not at war with any country, her national economy faced difficulties as any other country at war. Imports receded and exports were almost entirely interrupted. Neither the manufacture of goods for the replenishment of stocks, nor the stable and relatively favourable conditions on the home market could defer the falling off of industrial production. The Swiss motor-truck transport service between Spain and Switzerland was entirely suspended. From January to November '44 foreign trade decreased 26 per cent in value and imports showed the greatest drop both in real and relative value. The decrease in the country's trade balance deficit is, therefore, not a sign of improvement on the export side, but is simply due to regression of imports. Switzerland's industrial activity always depends largely on the export trade. The impossibility of obtaining raw materials has aggravated the situation.

The machine, electro-technical and iron and steel industries have suffered the most, although the home market has, to some extent, offered certain sales possibilities wherever renovation or modernization of industrial plant has been undertaken. The textile industry in general has suffered even more severely from the raw material shortage. Cotton spinning mills have been obliged to reduce their output to 25 per cent of their capacity. The manufacture of worsteds has fallen to less than half the normal output. Conditions are much worse in the linen industry. The rayon industry is in a somewhat better position thanks to the production of the required raw materials, but Switzerland can only supply part of the heavy domestic demand for rayon and staple fibre. Despite the circumstances, all branches of the textile industry are testifying to their indomitable vitality and are actively preparing even now for the time when export can be resumed. The allied industries such as the textile finishing and outfitting trades are naturally influenced by this movement. The raw material shortage and manufacture for the home market have contributed to the small export of Swiss footwear. The building trades have been occupied chiefly in the erection of national public works and also of government-subsidized living premises in the larger towns. Industrial buildings and renovations have been deferred. Hotel trade statistics show increased activity which must be attributed to a rise in the home tourist traffic. Foreign visitors are few, in fact, their number has fallen to the minimum. The Federal Government has wisely taken steps to safeguard the hotel trade which forms a most important element in the Swiss trade balance; loans are to be granted in view of facilitating modernization and renovation wherever necessary. Although weather conditions were rather unfavourable last year, Swiss agriculture registered good harvests in the main. Still heavier demands will be made on farming circles unless imports increase. Important public works of national interest together with agriculture, which alone absorbed 20,000 auxiliary workers, largely contributed to relieving the labour market. This brief survey of the situation during the past year leads to the conclusion that military and political events exercised a deterrant influence on Switzerland's economic development.

Inches from Eternity!

There is no room for excuses in executing war transport jobs. Over plains and hills, even mountain tracks — where a miscalculation of inches would send a vehicle hurtling into eternity — our transport fleets travel and arrive at their destination within stipulated time. We have gathered our experience in a hard school, it has taught us many lessons. We know now that it is not enough to have a large fleet of vehicles and a set of carefully trained drivers. In addition efficiency depends on first class maintenance and careful planning. Our experience in handling transport plus the largest fleet of transport vehicles in India enable us to undertake any transport job anywhere in this country with complete confidence. Whatever may be your requirements — goods or passenger — we are in a position to handle the job for you. We invite your enquiries.

The Directors have the pleasure to submit to the Shareholders the Balance-sheet and Profit and Loss Account for the year ended 31st December, 1944.

The Net Profit of the Bank for the year including the sum of Rs. 789-11-0 brought forward from the previous year's account amounts to Rs. 1,18,936-1-10. The Directors now recommend that this sum may be appropriated as follows:—

	Rs.	A.	P.
To pay Dividend at the rate of 6 per cent per annum, free of Income-tax for the year ended 31st December, 1944, amounting to ..	51,562	2	0
„ Provision for Taxes	50,000	0	0
„ Place to Reserve Fund (raising it to Rs. 87,000)	15,000	0	0
„ Place to Dividend Equalisation Fund ..	2,000	0	0
„ Carry Forward	373	15	10
Total Rs. ..	1,18,936	1	10

21ST REPORT OF THE BOARD OF DIRECTORS:

The Bank rate remained unchanged at 3 per cent during the year.

The business of the Bank during the year has been extremely satisfactory and the Bank has once again earned a record profit.

During the year under report a Branch at Tenali and a Sub-Office at Anakapalli were opened. Another significant event in the history of the Bank is the opening of the Bank's Madras Branch on the 7th February, 1945. In view of the rapid progress and with the improvement in its status your Directors are contemplating to open more offices, thereby increasing the Bank's sphere of usefulness to the business community.

At the close of the year under report the term of your Managing Director, Sri T. Sriramulu Garu, expired and your Directors decided to discontinue the Honorary Managing Director's post from the current year onwards in view of the appointment of your present General Manager who is highly qualified with banking experience of a varied character. The very valuable services rendered by our colleague during the three years of his Managing Directorship are well-nigh within your knowledge and we are sure that the shareholders gratefully acknowledge the same.

The new issue of share capital for which permission was granted during the year was heavily over-subscribed.

Four of your Directors, viz., Rao Saheb T. Perayya Naidu Garu, P. Parthasarathi Naidu Garu, T. Sriramulu Garu and D. Viswesswara Rao Garu, retire under Article No. 94 of the Articles of Association and they are eligible for re-election.

You are requested to appoint Auditors for the current year and to fix their remuneration.

Directors' Report

Gentlemen,

Your Directors beg to submit their Tenth Annual Report together with the Audited Balance Sheet and Profit and Loss Account for the year ended 31st December, 1944.

	Rs.	A. P.
The Profit and Loss Account after meeting all expenses and after adjusting Profit and Loss on sale of car and investment shows a profit of ..	69,41,741	1 2
To which Balance brought forward from 1943 is added	3,06,920	7 4
Total	72,48,661	8 6
Against above, your Directors have made the following provisions:—		
Provision for Depreciation .. 1,75,000 0 0		
Provision for Taxation .. 52,90,000 0 0		
Reserve Fund (E.P.T. Deposit) .. 10,00,000 0 0	64,65,000	0 0
Leaving the balance of	7,83,661	8 6
Which your Directors recommend to dispose off as under:—		
To Payment of Dividend at the rate of Rs. 4 per Preference Share (free of Income-tax)	19,200	0 0
To payment of Dividend at the rate of Rs. 20 per Ordinary Share (free of Income-tax)	4,80,000	0 0
	4,99,200	0 0
To be carried	2,84,461	8 6
Total ..	7,83,661	3 6

TRADING CONDITIONS.—There were three successive reductions in cloth prices during the period under review; Since the cost of production did not show a corresponding decline, the profits were bound to be somewhat affected.

The Directors hope that the results shown under the circumstances will be regarded as fully satisfactory.

A certain portion of the Company's production continues to work on Defence Service and Standard Cloth Orders.

The cloth scarcity is getting more and more acute and even with the approaching end of the war, the cloth supplies are bound to remain short of demand for some considerable time. Due to the successive cuts in cloth prices the profits for the current year must be further affected.

CAPITAL.—As per Resolution of the shareholders of the Company passed at an extraordinary general meeting of this Company held, on the 21st day of June, 1944 your Directors have capitalised a sum of Rs. 4,80,000 by issuing 4,800 4 per cent Redeemable Cumulative Preference Shares of Rs. 100 each fully paid up, out of the Reserve Fund of the Company. The consent of the Government of India was obtained for this issue.

TAXATION.—The Company's liability to Income-tax, Super-tax and Excess Profits Tax for the period upto 31st December, 1943, has been settled. The necessary provision for Income-tax, Super-tax and Excess Profits Tax for the year under review and for compulsory E.P.T. Deposit have been made as mentioned above.

The sum of Rs. 9,00,000 provided last year under the head "Reserve for Compulsory Excess Profits Tax Deposit" has also been transferred this year to the General Reserve Fund of the Company.

INSURANCE.—The Company's Plant, Buildings and Stocks as at 31st December, 1944, are insured against loss by Fire and All Riot Risks for Rs. 2,10,54,213. Buildings, Machinery and Stocks are also fully covered under the Government of India War Risks Insurance Ordinances. The Profit and Fixed Charges have been also insured for Rs. 65,00,000 against stoppage by Fire and all Riot Risks.

	Rs. a. p.	Rs. a. p.

Clive Street Gossip

Even from the early stages of its session, the Frisco Conference had come to be known among its numerous detractors as the Fiasco Conference. It is not alone the euphonic kinship of the two words but a deep rooted scepticism of the value of all peace Conferences that must account for the Conference at San Francisco being dubbed with so uncomplimentary a name. This scepticism dates back to the earliest days of international action to secure peace among the nations. I do not know if there are earlier instances of such action in history. But since nationalism, as it is understood nowadays, is not very old, the attempt of the crowned heads of Europe to save the world for monarchy after Napoleon and the French revolution had been finally crushed must be deemed to be the earliest of its kind. The Council of Four at Versailles after the end of the last war can be reckoned as the second, and the third and the last one being the one at San Francisco today. Neither of its two predecessors can be said to be conducive to confidence in the last. Everytime mankind engages in large scale warfare, not only do the interests of the contending powers tend to be represented in terms of high sounding principles, but the world at large almost persuades itself that the last of the great wars has been seen and the future has nothing but peace in store. Psychologically, it is perhaps nothing more than a strong reaction from the hopelessness which modern war induces in the average mind. The European democracies were no more successful in 1918 in saving the world from war than their monarchic counerparts of a century before. And, what is more, the public today in all countries is more clearly appraised of the devious ways of diplomacy and power politics than it ever was before. It is increasingly distrustful of the claims made by the diplomats at international conferences for their work therein. And it does not take long for the event to expose their pretensions. Munich was not a milestone in the path of peace, but a nail in its coffin. It is natural therefore that, when the nations meet before the war in the East is yet done with, there should be general derision for what goes on in San Francisco.

* * * *

Yet, it is not only uncharitable to the delegates of the San Francisco Conference but also uncomplimentary to one's understanding of affairs to profess to see no difference between the three great international conferences of recent history. There are certain obvious differences between the San Francisco Conference and the earlier ones, the significance of which it would be wrong to under-rate. The Conference which met after the battle of Waterloo was frankly and fully couter-revolutionary. The Council of Four at Versailles was, if anything, more cynical in its allegiance to power politics. Neither Lloyd George nor Clemenceau felt any compunction in bringing a fierce vindictiveness to bear upon their fallen foe. The discomfiture of President Wilson had put the lid on the reaction from the idealism which became expedient for the Allied nations to profess in order to win general moral support for their war effort. The Kaiser was by no means the same threat to the freedom of the nations as Hitler proved to be till yesterday. Germany did not overrun the whole continent, nor overawe her allies to the same extent as in this war. Europe was not then the Nazi fortress that it was in this war till the landing on D Day. The forces that have brought together the rest of the world in a more or less sincere and determined attempt to secure peace and freedom have, to that extent, been far powerful in this war than during the last. If we overlook the somewhat freaky declaration of President Wilson, there was nothing during the last war to compare with even the Atlantic Charter. There were no United Nations whose territories, so to say, girdled the globe as when the U.S.A., Britain, Russia and China constitute the big four among the Allied nations. Roosevelt's declaration, that those who did not declare war on the Axis countries by a certain date cannot expect to be invited to the San Francisco Conference, is not a mere tactical device on the part of the President of the U.S.A. to secure support for himself and his allies, but is really significant of the extent to which the Axis threat unified the other nations of the world. And there is, above all, the warning which the League of Nations signifies to all architects of peace, a warning, which is far more valuable than any example.

* * * *

The San Francisco Conference has thus not a few advantages over its historical precedents. Let no one miss the fact that, while the League of Nations was the handiwork of France and Britain, alone among the nations of the world, the San Francisco Conference comprises the representatives of over 50 nations ready to put their hands to the formulation of an international organisation that will work, if not with impassioned zeal, at least with realistic comprehension of the pitfalls to be avoided. In this view, a certain amount of progress in the furtherance of peace is inevitable in the work of the San Francisco Conference. However sinister or sordid the Conference may be, it cannot but register an improvement on the disastrously hollow pretences of the old League of Nations. To judge the work of the Conference it is necessary to see how far the creative forces latent in an apparently destructive world war have been allowed to bear fruit in international plans and policies and secondly to what extent the Governments of the world have shown themselves responsive to, and appreciative of, the ideals of human freedom to which the last two wars must be said to have lent some substance.

* * * *

Taking the first question, the unctuous cant which led to the League of Nations of old has given place to a new realism, which, sordid and cynical as it may seem at first sight, is indeed far more dependable in the long view. The San Francisco Conference has the advantage of coming in the wake of the Dumbarton Oaks Conference, where a group of hard-headed experts tackled the tasks with patient application and without fear of premature publicity. The experts at Dumbarton Oaks foreswore all the old shibboleths and recognised frankly that, while all the nations will doubtless have to take their share in the task of preserving peace, the burden of protecting it in the

face of aggression must necessarily fall on the great Powers. The distinction between small nations and big was therefore treated not only as real but also as essential and useful. The plan they formulated contemplated a World Assembly, a Security Council and a World Court each with carefully devised links, but distinct for practical purposes and functioning in separate spheres of action. It contemplated a decisive voice for the Great Powers in the matter of the employment of force against a disturber of international peace, but assigned the World Assembly wide powers of discussion and decision. The constitution was of course meant to be of a tentative kind, liable to alteration by the ensuing international Conference. With a plan of this kind put in its hands the San Francisco Conference was saved from having to plough the sands for a long time before being able to attempt anything useful.

It is not strange, but something to be confidently expected, that every major hitch in the progress of the San Francisco Conference should have arisen over some provision or other in the Dumbarton Oaks Plan. There is first of all the question of the membership of the Conference. The broad principle of eligibility for membership was decided by President Roosevelt when he said that only those nations, which have lined up with the Allies against the Axis, are entitled to participate in the Conference. The ready acceptance of this principle was seen in the alacrity with which Argentina declared war on Germany on a hollow pretext, and Spain hurried to classify herself as a belligerent against Japan. But while there was unanimity about excluding Spain from the Conference, the case of Argentina was different in that the Latin American countries are directly interested in her membership of the Conference and Russia sought to utilise this opportunity for certain major gains for herself. There is also the fact that, in between Dumbarton and San Francisco, there were the Yalta talks by which, while Britain and the U.S.A. agreed to the admission of the Ukrainian and the White Russian Republics, the case of Poland was left hanging in the balance. Russia made much of the fact that Poland which in this war occupied the same place as Belgium in the last is unrepresented at the Conference, though for Poland's absence Russia had more than her share of responsibility. This point was at one stage so important that M. Molotov was said to have contemplated an unceremonious walk-out.

However, from the point of view of the actual work of the Conference the differences over membership seem to be of comparatively little importance. What is more important is that the Conference adopted the main framework of the Dumbarton Oaks Plan and at the same time made valiant attempts to make changes in significant details. The Conference also attempted to raise the general moral tone of international effort in the cause of peace. These attempts somewhat threw into relief the distinction between big nations and the small. In fact, San Francisco may be said to have done what no previous international conference ever did, namely, bringing the great powers face to face with the numerous small nations for whose freedom the Powers so often professed great respect. At one stage, the view prevailed among the 50 small nations that Dumbarton Oaks and Yalta represent the decisions of Great Powers, while the task of the Conference was to bring them into proper relation with the desires of the small nations. One offshoot of this trend was the desire of countries like New Zealand and Australia that there should be recognition of a third class of medium powers and their special rights. These differences, however, did not become prominent. Generally speaking, the small nations stood together where questions affecting their rights as against those of the Great Powers were involved. It is in this view, and not in a spirit of partisanship for or against Soviet Russia, that one should regard the refusal of the Conference either to leave out Argentina or take in the Lublin Government. Here the stand was against Soviet Russia. But the other Powers too came in for stiff resistance, when the right of the world assembly to discuss disputes and attempt conciliation was questioned. The small nations rightly maintained that, while the responsibilities of the Great Powers for military action against an aggressor cannot be questioned, the right of the Assembly to discuss these problems and to push matter to the point of failure or success of conciliation must remain inviolate.

Of a piece with this is the problem of the veto which every member of the Security Council was sought to be invested with. The term, "veto", has always had unsavoury historical associations. And it is not less repugnant to one's democratic sense in the context of the San Francisco Conference. The exact significance of the veto cannot be understood except in the light of application to concrete, though hypothetical, instances. What Russia sought to secure at one stage was the right of anyone Great Power to nullify the general decision that a specific question is "procedural" and therefore open to a general debate in the world organisation. The effect of the Russian proposal would be that the veto would be applicable to much else besides military action. For in the case of a dispute between two small nations, with its usual propensities to develop into a world conflagration, anyone Power could stop all enquiry into the dispute and any Power could, when war broke out, prevent the victim of aggression from receiving aid under the charter of the new organisation. It meant that, if the five powers did not act together, not only would the victim of aggression receive no help, but such

(*Continued on page 741*)

Olympus

(FROM OUR CORRESPONDENT)

New Delhi, May 29.

The Annual Reports of the Representative and the Agent of the Government of India in Ceylon for the year 1943 have just been published. Indian population in Ceylon numbers 7,50,000 out of a total population in the Island of 61,97,000. The bulk of the Indian population is made up of estate labourers; Chettiyars doing financing business, Baluchi money-lenders and Sindhi, Gujrati and Borah merchants compose the rest of the Indian population.

Ceylon is dependent on other countries for her food supply and the responsibility of feeding her has, on the outbreak of the Japanese war, had to be borne by India. This was the position until November 1943 when conditions at home rendered it imperative, to stop all export of foodgrains and a prohibition had, therefore, to be placed on the export to Ceylon of Indian foodgrains. India is now practically the sole supplier to Ceylon of sheep and goats for mutton, of curry-stuffs, of eggs, of dried fruits, onions, potatoes and textiles.

The Government of India have fixed the annual export quota of textile goods to Ceylon at 44 million yards, the bulk of which consists of handloom products.

Estate labourers and their dependents number as many as 6,72,196 out of the total Indian population of 7,50,000. The following extract provides an illuminating commentary on the moral and material condition of the estate labourers:

"Moral adjurations to eschew drinking and gambling cannot have any effect on the labourer as there is lacking in him the psychological situation favouring a tendency to save. The prospect of acquiring a piece of land or a home where he has toiled a lifetime is not for him; to make the pot boil, he must send his child to work as soon as he is of an age at which he may legally engage in labour; the competitive urge for social betterment by which his progeny, if not he, may rise a step in the social ladder, does not animate him as he knows that few of his ilk can emerge from the line soon into the other world beyond the estate; he has no desire to save, even if he had a surplus to save out of".

The Report mentions that the Indian estate labourers were estimated to have remitted to India a sum of Rs. 37,96,448 in the year 1943. For a total of 4,38,937 Indian men, women and child workers in the Island, this works out to an average of less than Rs. 10 per head per year.

Figures relating to the overseas trade of India in the month of January 1945 are now available. Imports of foreign merchandise for the ten months ended January 1945 were of the value of Rs. 168 crores as against Rs. 95 crores and Rs. 92 crores for the corresponding periods in 1944 and 1943 respectively. Exports of Indian merchandise during the same period were of the value of Rs. 181 crores compared with the corresponding periods in the two immediately preceding years of Rs. 160 crores and Rs. 157 crores respectively. In spite of the fact that it was a war period, the shipping position appears to have materially improved rendering a substantially larger volume of trade possible. Increased imports were recorded in consumer goods as well as in capital goods. Among exports, tea accounted for almost Rs. 34 crores in the ten months' period, cotton yarn and manufactures to about Rs. 32 crores and jute manufactures to Rs. 52 crores. The prospect of increased revenue in the years immediately ahead under "Customs" appears to hold much promise.

A new Division has just been set up in the Food Department charged with the responsibility (!) for handling problems connected with fresh and protective foodstuffs. The object is that the Food Department should give assistance to Provincial Governments to increase production, ensure supplies and control distribution of eggs, poultry, fish, milk, livestock, fresh fruit and vegetables and edible oils. The bacillus of bureaucracy is an extremely fecund organism and can give points to any known to medical science in respect of the capacity to multiply. Playing up to the tradition of every Government Department, the Food Department which came into existence from the 1st December 1942 has increased its personnel to many times the strength of even old established Departments.

The present object is a laudable one indeed, but in the case of the Food Department something attempted is not always something done but is frequently something bungled. The question of increasing the production of these goods is not a new problem: it is basic and fundamental to our economic well-being. Investing a time-worn and age-old problem with a new and impressive phrase does not make it any the more recent. Profession and performance are two very different things and in matters pertaining to the Food Department, past record leaves one somewhat sceptical. As an excuse for spending the taxpayer's money it might pass but one wonders what the Education, Health and Lands Department and the agencies under it such as the Imperial Council of Agricultural Research, the Animal Husbandry Department etc. will now have left for them to do. The public have yet to hear how overlapping and duplication between these two Departments are proposed to be prevented.

Government have also announced during the week their post-war planning policy relating to civil aviation and the prospect it holds of quicker mail services and civilian transport within this vast sub-continent is indeed alluring. The services planned provide for the operation of daily services, on a series of trunk routes radiating from the air ports of entry and exit at Karachi and Calcutta, supplemented by routes radiating from the capital at Delhi and from Bombay and Madras.

Ordinances continue to rain thick as the autumnal leaves in Vallambrosa and among those promulgated this week is one amending the Indian Mines Act requiring provisions of creches in mines. Why Government cannot take these powers when the legislature is in session passes comprehension unless it be that they seek to make a convenience of the legislature to suit their purposes and to ignore it when it is likely to be critical. The purpose of the amendment, it is not disputed, is commendable but an amendment of the Act by the normal methods would have been preferable to the employment of emergency legislative powers.

BHARAT BANK LIMITED

***Head Office:—*DELHI**

Chairman: **SETH RAMKRISHNA DALMIA**

DIRECTORS' REPORT.

The Directors have the pleasure in presenting to the shareholders, the audited Balance sheet and Profit and Loss Account of the Bank for the year ended 31st March, 1945. The gross earnings amount to Rs. 83,97,146-2-9 and the total expenses amount to Rs. 66,69,914-1-11, including all expenses incurred in establishing and organising new offices opened during the period under review, thus leaving a balance of Rs. 19,27,232-0-10. After adding the previous balance of Rs. 91,005-9-1 the total amount available for appropriation comes to Rs. 20,18,237-9-11.

The Directors recommend the above sum of Rs. 20,18,237-9-11 to be appropriated as under:—

	Rs.	A.	P.
1. To transfer to General Reserve (raising it to Rs. 18 lakhs)	8,00,000	0	0
2. To payment of dividend at the rate of 6 per cent per annum, less income-tax on 53,572 Cumulative Preference Shares upto 31st March, 1945	2,26,006	14	0
3. To provision for income-tax	8,00,000	0	0
4. To Bonus to Staff	1,10,000	0	0
5. To carry forward	82,230	11	11

The growth of the Bank during the year has been quite satisfactory. Its working capital exceeds Rs. 26 crores, which shows increasing confidence in the Bank on the part of its constitutions and patrons.

With a network of Branches all over India, the Bank is fully equipped to offer banking facilities of all types to the public in general and to the mercantile community in particular.

The Directors place on record their deep sense of gratitude to the constituents and the shareholders of the Bank for their unfailing patronage and co-operation in its successful working and appreciate the loyalty and devotion to duty of the officers and tthe staff of the Bank. They thankfully acknowledge the valuable assistance rendered by their colleagues on the various Local Boards.

Dated, 5th May, 1945. R. DALMIA, *Chairman.*

(From Our Correspondent)

Madras, May 30.

The proposals for ameliorating the condition of the agricultural labourers made in the Blue Book, prepared by the Madras Government, for post-war reconstruction are rosy as any other. But nevertheless the real condition of the agricultural workers has never been studied and no concerted attempt has so far been made to redress their long-standing grievances. Many of the landless labourers have joined the army and the scarcity of labour has led labourers to demand higher wages. But the persistent refusal of their demands by the landlords has often resulted in tension. And, not long ago, the Collector of Tanjore had to intervene on behalf of the landlords and put some restrictions on agricultural labour leaders. Official interference and threat of the use of law cannot give permanent cure to these troubles. The lot of the agricultural labourer has to be improved. Despite the Madras Government's legislation in 1940 to abolish the 'Gothi' in the Andhra agency, semi-slave labour continues in some form or other in different parts of the province. Wages are doled out to farm labourers with false measures and Government should see that standard measurements are substituted. The provisions of the Debt Relief Act must be applied to the landless agricultural labourers as well. For, even to-day, in the villages cent per cent rate of interest called 'Namli' is being collected. Minimum wages for day labourers and farm servants must be fixed on the basis of efficient and healthy living, prices of foodstuffs and also the yield of the soil. Wage boards in the form of Panchayats composed of landlords, peasants and village officials might be set up to decide disputes. All available land with the Government must be parcelled out to co-operative land labour colonies where landless labourers might be asked to settle. Agricultural labourers are afraid that as soon as the war is over lands cultivated at some expense and trouble under the "grow-more-food" scheme would be taken away from them and handed over to the demobilised soldiers. The Government should state clearly that these lands would not be taken away but separate provisions would be made to the soldiers.

"Controls and restrictions must continue to remain only to the extent they could be justified whether in business or other walks of life" said Dr. R. M. Alagappa Chettiar, the newly elected President of the Madras Yarn Merchants' Association. The business community and also the public have passed through a period of controls and however well worked, controls are bound to be irksome. The technicalities that often enter the Government system of controls must be freely relaxed and there must be more humanising of the system of technicalities for, in the sphere of business in particular, these technicalities would act as a great handicap to incentive and advance. What was needed was not severity of control, but an assured supply of yarn and cloth to the people and it was with that view that the Government must tackle the problem. In this province, there are more than thirty textile mills mostly found in the districts of Coimbatore and Madura. It was sad, said Dr. Chettiar, that the control office should be in the Madras City causing great inconvenience and handicap to most of the dealers and millowners. The Government should realise this or, at any rate, appoint suitable officers in these districts with powers to pass orders to mitigate the hardships of businessmen.

The Government has sanctioned the payment of Rs. 74 lakhs as grants to local bodies in the current year towards the difference between the toll compensation actually disbursed and the maximum toll compensation payable to local bodies for the ten years from 1931-32 to 1940-41. Since the commencement of the Madras Motor Vehicles Taxation Act, the amount of toll compensation actually distributed to local bodies every year out of the proceeds of the Provincial Motor Vehicles Tax has fallen considerably short of the maximum amount of compensation due to them under the Act. As a measure of financial assistance to local bodies 'exgratia' annual grants have been given to them from the Provincial Funds since 1941-42 in order to make good the deficiency in the maximum toll compensation payable to them under the Act. The share of the Madras Corporation in the sum of Rs. 74 lakhs will be Rs. 3.7 lakhs. The Government has directed local bodies that the grants should be utilised for wiping out of the deficit in the general and elementary education accounts and for meeting expenditure on the improvement of village roads and conservancy.

The Coir industry of Travancore, the importance of which in the economic life of the State cannot be over-emphasised, has passed through several vicissitudes in recent years. The Supply Department has now placed orders for Travancore Coir and this will be welcome help to those engaged in the trade. Over 300,000 families depend on the industry. In 1938-39 coir, yarn mats and mattings exported from Aleppey and Cochin amounted to 841,251 cwts., 157,856 cwts and 10,164,040 sq. yards respectively. After the loss of Manila, an important producer of ropes, the importance of the Travancore industry increased. Recently, the representatives of the Government visited Trivandrum and discussed with the Dewan and other officials the question of the supply of coir and coir products to the Supply Department for war purposes.

"It is a matter of pride to us all that the demand for complete independence was first made by the Muslims when the Indian National Congress was only asking for Dominion Status and later on, Swaraj. At the same time, it is a matter of shame and grief to me that to-day Muslims who belong to a party which claims to speak on behalf of one million Muslims in India, declare that they would not accept independence and would prefer slavery unless their claim which is summarised in a single ambiguous word is accepted by the present masters of Muslims and non-Muslims alike" said Maulana A. M. Khwaja Saheb, presiding over the first Kerala Majlis Conference held at Calicut. The aims and objects of the Majlis, he said, were to revive the true spirit of Islam among the Muslims and persuade them to live up to its ideal, to achieve complete independence for India and to safeguard the religious, political, economic and other interests of Muslims and strive for their unity.

refusal to assist the victim would be legitimised by the terms of the world constitution. In other words, it would be repeating all the follies of the old League of Nations without any of its excuses and pretexts. Considering it in proper perspective, the fight which the small nations have put up against this principle must be deemed a highly heartening feature of the international Conference that is now drawing to its close.

As the Conference is yet to tie up the loose ends of its work no final appraisement of it can be attempted. But it would be wrong to miss the spirit in which the Conference as a whole has taken up its work. The proposals for an international bill of rights, the drawing up of a world charter, the careful scrutiny of the provisions in regard to the trusteeship and administration of Mandated territories, the emphasis laid on independence as the ultimate goal of the Colonial areas, all these show that the third estate in the society of nations is slowly but surely coming into its own. I have often expressed the view in these columns that the society of nations has a dialectic of its own comparable in many ways to the dialectic discernible in the affairs of individual communities. There is not a little in the doings of San Francisco which go to buttress this conviction of mine. It is of course, more common for people to read in all contemporary developments the machinations of power politics, and to believe that nothing counts in world politics except the will of the great dictators, masked and unmasked. It would, no doubt, be wrong to contend that such a reading is wholly invalid. But it is by no means impossible that, just when power politics is reaching its climax, the opposite forces are also beginning to gather strength. The distinctive feature of power politics is its lack of freedom from cross purposes. This is most clearly brought out in the differences among the Great Powers on the question of Lebanon. The unambiguous warning which Britain has given to France and the firmness with which America has supported Britain in this attitude show clearly that imperialist domination as we have known it till now will before long become wellnigh impossible. I refrain, from extending this line of reasoning to cases in which wishful thinking is difficult to avoid. But the coincidence of differences among the Great Powers with the growing consciousness of solidarity among the small nations points to the possibility of better times than most of us dared to hope for.

Britain is unique among the nations of the world in possessing companies whose history is the history of the particular branch of business in which each is engaged. The story of the Royal Insurance Company which celebrates its centenary to-day makes up in large part the history of insurance as such. It began in the days when Liverpool was riding the hightide of prosperity which the Industrial Revolution brought to the whole of Great Britain. The docks cried loudly for expansion; new railways were being laid; trade was expanding; and the need for insurance was universally felt. By its motto "Tutum te sistem," the Royal offered to place all business in safety. It is strange that the inauguration of so important an institution did not hold the attention of the contemporary world. But the Royal has followed a regal course of progress from year to year, till to-day it has its branches all the world over, with a staff numbering well over a ten thousand. Such institutions must be deemed to transcend narrow distinctions of race or nationality.

Protect YOUR FAN AGAINST MONSOON DAMPNESS

The monsoon is near and you must remember to get your fans thoroughly cleaned and oiled. This is very important now as the entire production of quality fans is requisitioned for the essential services.

Ring up your electrician and get him to check up on the wiring and switches. Thus you can be assured of the services of your existing fans until we can bring you new "Orients"

"Orient" fans are specially made to give noiseless and uninterrupted service. The regulator supplied with each fan will guarantee positive selection of four speeds.

Arrangements are now being made to supply in full post-war demands for "Orient" fans.

Call in a Mechanic:
- when noise develops
- for regular oiling and cleaning
- to inspect the wiring and switches.

CALCUTTA, 31st May 1945.

Reports from the mofussil regarding the new crop continue to present a favourable picture. At the moment prospects for next season are very good indeed as in most districts the crop is showing excellent progress with the earlier plants five to six feet high. Taking last year's sowings as 16 annas the new crop sowings are estimated at 18 annas. As our readers are aware, the official estimate of the 1944-45 crop was approximately 55 lakhs bales, but with the arrivals for the first half of May estimated at 2.35.000 bales the total arrivals for the current season up to mid-May now amounts to 56,98,000 bales. Taking into account the well grown nature of this season's jute indicating a yield above the average, the latter figure may well reach a total of 65 lakhs bales or more of old crop and therefore a two anna increase in sowings should produce, under favourable conditions, a crop of about 74 lakhs bales in season 1945-46. With this figure an interesting comparison may be made in an analysis of the official estimated distribution of the 1944-45 jute crop. This estimates the seasons' total supply (i.e the 1944-45 crop plus total carry-over at the beginning of that season) at 96.55.379 bales of which 75 lakhs bales represent the estimate for local consumption in various directions and including exports leaving 21.55.379 bales as the estimated carry-over at the end of this season. According to the official estimate of the distribution of the 1944-45 crop mills in the Indian Jute Mills Association will consume 56.00.000 bales; outside mills will require 3.00.000 bales and domestic consumption and Export will account for 6 lakhs bales and 10 lakhs bales respectively. It would appear that, although the figure of 21½ lakhs bales estimated as the carry-over at the end of this season will in all probability be substantially exceeded the increase might well be off-set by an increase in exports next season and by a higher consumption of jute by mills aided by enhanced supplies of coal and an improvement in the labour position. Therefore we conclude that a crop of 74 lakhs bales in season 1945-46 will be in no way excessive but might on the other hand be short of actual requirements.

Imports of raw jute into Calcutta during April declined by 5½ lakhs maunds compared with March but the total imports for the season during the period July 1944 to April this year still show a substantial increase over the imports for the same period in the previous season that is to say season 1943-44; being 2,67,77,000 maunds as against 2,22,22,000 maunds. This increase reflects in a marked manner the greatly improved facilities for the shipment of jute by rail during the current season as the quantity of jute carried to Calcutta by the railways between July 1944 and 1945 was almost 55% more than the quantity imported by this means during the corresponding period of the preceding season.

The average number of wagons arriving daily at the Indian Jute Mills Associations Dump during the week ending 26th May 1945 was fifty. At time of writing a further improvement is in evidence and so far a daily average of about 70 wagons have arrived at the Dump this week. However any sustained improvement in the supply of coal to the industry must now be looked upon with mixed feelings by the mills as even a plentiful supply would not enable them to work to capacity due to a shortage of labour in nearly all mill areas. It is hoped that the number of absentees will begin to decrease after July next with the return from the mofussil of workers who have left the factories to assist their families with the tilling of the soil and the sowing of the crops but even so it is extremely doubtful whether under present circumstances mills will have a call on their full complement of hands to keep looms working to capacity.

The Indian Jute Mills Association have issued the following statement of the total reported sales for the week-ending 19th May 1945:—

	May/June 1945 Yds.	Forward Yds.
Hessian	20,50,864	37,38,317
40" 8 oz Hessian (included in above)	40,000	15,000
Twills	8,64,763	46,99,732
Plains	11,82,066	43,20,827

In general, markets for both raw jute and manufactured goods have been dull and featureless with mills continuing to sit out. Transactions in manufactured goods have been mainly confined to the bazar where rates are well below maximum for the forward positions.

In the Pucca Bale market the demand for export has been negligible; only small lots of European marks being reported done for America for May-June delivery. A small quantity of Dundee Daisee 2/3 was sold to mills at Rs. 77 per bale and Lightning were done at Rs. 74. New Crop firsts were reported done by mills at Rs. 79 for August/September shipment. With the exception of S. M. Rejections and Cuttings there are sellers for other grades at minimum prices both for old and new crop. S. M. Rejections are quoted at Rs. 59 per bale and Cuttings are offered at maximum rates; N. C's at Rs. 43 and M. C's at Rs. 42 per bale.

The Loose Jute market has been quiet with only very small business passing. Sellers are now keen for business and rates have been discounted in most cases to -/4/- above the minimum. Supervised Jat came to business at Rs. 15-4 and Rs. 12-4 for Middles and Bottoms and earlier in the week a small lot of this description sold at -/4/- more. Supervised District Tossa was done at Rs. 15-8 and Rs .12-8 for Middles and Bottoms with a small quantity of Tops at Rs. 16-8. Indian Jat white middles alone sold for Rs. 15 and Bottoms alone were done at Rs. 12-12 per maund, all old crop.

Quotations for manufactured goods as at 31/5/45 are as under:—

	Ready	June	July-Septr.	Oct.-Decr.
Hessians 8 oz.	Rs. 22-2	22-2	22-0	21-14

JUTE

(By Our Staff Correspondent).

Calcutta, May 31.

The raw jute market is rather quiet with a small amount of businesss passing. Mills are not taking any interest as with the expectation of a large yield from the new crop and the difficulty in the transaction of business in the goods market, there is no inclination to enter into fresh commitments for additional quantities of jute. There has been keenness on the part of sellers to do business both in old and new crop and a good discount in prices has been offered. It should be said that for most qualities prices are at the minima. There may not be any further decline in prices till the arrival of the new crop in July. Even a slight support from mills might push up prices if labour difficulties are got over and coal supplies continue to be on a large scale. Exports also have not been satisfactory so far but there is a feeling that the United Kingdom might take greater interest. If the shipping situation warrants any large increase in the exports of raw jute Balers might ask for a slight increase in rates At the moment, with the exception of cuttings, prices are barely around minimum levels.

In the loose jute section, as said above, business is restricted with Supervised Jat Middles and Bottoms at Rs. 15-4 and Rs. 12-4 per maund. Middles alone were at a discount of 4 annas while for business in bottoms alone a premium of 8 annas was demanded.

In the pucca bales section only a small business has been reported in outport Dundee Daisee at Rs. 77 per bale and Lightnings at Rs. 74 per bale. Firsts were done at 79 per bale. Mills purchased cuttings N.C. and M.C. at 43 and 42 per bale.

JUTE MANUFACTURES

Calcutta, May 31.

In the Jute manufactures market slightly steadier conditions were noticeable in the latter half of the week though business was mostly on account of inter-bazar operators. Mills were disinclined to sell below maximum rates. With the need for month-end adjustments there has been a slight appreciation in quotations for near positions but the general trend, so far as the bazar is concerned, is still bearish and a substantial discount is available for the far forward positions. 9 porters ready are quoting Rs. 28, July-September Rs. 27-6 after being lower at Rs. 27-2 and October-December Rs. 26-14.

In the Heavy goods section, relatively steadier conditions have prevailed as with the larger trade demand and Government orders mills have not been very keen sellers. "B" twills ready quote Rs. 64-12 and October-December Rs. 60-4.

WHEAT

Calcutta, May 31.

The All-India first wheat forecast for 1944-45 estimates the acreage at 34,136,000 against 32,583,000 (revised) in 1943-44. The increase in the wheat acreage is to be welcomed as with the drought in Australia and the commitments of the U.S.A. any additional production of wheat within the country will make the solution of the food problem more easy.

RUBBER

It was said earlier in these columns that the rubber bonus scheme had not been received well and that the treatment meted out by the authorities to the planters was not satisfactory. The arrangements for receiving deliveries of rubber were not complete and the difficulties of planters in providing accommodation for accumulated stocks were not appreciated properly. As such, many of the small planters could not take advantage of the bonus scheme. In order to encourage further production and satisfy the claims of rubber growers for additional remuneration it is now announced that the Government of India would not renew the rubber production bonus scheme after June 30, but would thereafter pay a flat rate of Re. 1 per pound for Group 1 rubber delivered at the Government godowns at Cochin.

It is claimed that the price fixed now, although lower than the highest price paid under the Bonus Scheme, is sufficient to provide the maximum incentive.

WINNER OF Rs. 50,000 PRIZE
SAYS
"I am exceedingly pleased"

Among the many people who glanced with interest at the published results of the January 1945 Prize Bonds Draw was Mr. B. Mitter of Calcutta, son of Sir B. L. Mitter. To his surprise he saw that he had won a First Prize of Rs. 50,000.

Mr. Mitter made his purchase of Prize Bonds because he felt that in addition to his money being absolutely safe there was the chance to win one of the many Prizes. "I naturally did not rely on winning a Prize," he said laughingly, "but as I have been lucky I am, naturally, exceedingly pleased." Possessing an even temperament and a well-balanced mind, Mr. Mitter has wisely made no sudden change in his life as a result of his good fortune. "But who knows," he says, "this Rs. 50,000 may one day be devoted to something really worth while."

PRIZE BONDS are of two denominations—Rs. 100 and Rs. 10. For each series of one lakh pieces of Rs. 100, 1st Prize Rs. 50,000, two 2nd Prizes of Rs. 20,000 each, two 3rd Prizes of Rs. 5,000 each. For each series of one lakh pieces of Rs. 10, 1st Prize Rs. 2,500, two 2nd Prizes of Rs. 1,250 each, five 3rd Prizes of Rs. 500 each, ten 4th Prizes of Rs. 250 each. Prizes drawn half-yearly until January 1949 when all bonds will be redeemed in full. Each Bond has eight more chances of winning; the same Bond can win several times over. No Income Tax, Super Tax, Excess Profits Tax and Corporation Tax payable on Prize money.

AGENCIES IN ALL IMPORTANT CITIES OF INDIA

Time marches on. And, with Time, the country's progress also. The India of 100 years ago has changed so very much that today industry has almost as important a place in India's scheme of things as agriculture.

India's industry is today on the march—a march that is destined to bring a general increase in the standard of living of the country's teeming millions. In keeping with the country's march of progress, both industrial and agricultural, the 60-YEAR-OLD-FIRM of Herman & Mohatta, Western India's pioneers in the Iron and Steel Industry, are now busy manufacturing goods for agriculture and industry.

Stock Markets to-day and to-morrow:

STEEL CORPORATION MAINTANS FINAL DIVIDEND

Steady conditions have been noticeable in the stock markets in both Calcutta and Bombay and business has shown signs of expansion. The slightly irregular tendency noticeable at the end of last week, due to the anxiety over the European political situation and the confusion in British politics, is not now in evidence as it is felt that any major developments will not have any upsetting influence on markets and that the ideas of operators regarding the possibility of prices being maintained at high levels, with the prospect of large-scale postwar industrial development, remain good. In Bombay with the strength of both the bullion and cotton markets better conditions have been noticeable though no sensational rise in prices has been recorded. In Calcutta generally steadier conditions were witnessed with Coal and Jute shares in better demand. But there were quite a few counters which came in for special buying and a sharp rise in prices has been recorded. Ondal on reports of the profitable disposal of a portion of its properties improved by four points to Rs. 28; Satpukuria and Asansol on cornering have been marked higher at Rs. 13, while Walford Transport on reports of better prospects rose by 8 annas to Rs. 4-2. Among Jute shares there was cornering of certain counters, Lothian particularly recording a rise of 200 points to Rs. 625. It is stated that the managing agents are endeavouring to prevent the control passing into other hands. Already large parcels have been secured by a particular group of operators in the stock market. Reliance and Firebrick also seem to have come in for special buying. Apart from these counters there is nothing of importance to be recorded though, it should be said, that Coal shares are definitely better on the declaration of a dividend of eight annas by South Karanpura.

The important event of the week is the declaration of a final dividend of 8 annas per share by the *Steel Corporation of Bengal Limited*, for the year ended December 1944 against the same distribution for 1943. This final dividend makes, with the interim dividend of 6 annas per share already paid, a total of 14 annas per share for the whole year the same as for 1943. A certain section of the market seems to have been disappointed over the maintenance of the dividend at the previous level as it was expected that a higher dividend would be forthcoming. There were reports that the company was doing better and there was an increase in production. That is the reason why the quotation for the shares has come down to Rs. 33-4 from Rs. 33-8 after the dividend announcement. The market, however, has no reason for disappointment as the Chairman made it very clear in his statement to the shareholders in the last report that with the heavier incidence of taxation and the need of additional funds for extension purposes, there was no possibility of an increase in the distribution to shareholders. It will be remembered that the dividend was reduced to 14 annas per share from Re. 1 per share in 1943 not because earnings were lower but that larger provision had to be made for taxation and E. P. T. compulsory deposit. The accounts, when published, will make the position clear.

Shree Niwas Cotton Mills has done well in 1944. In spite of the reductions in ceiling prices for cloth and yarn during the year earnings are fairly high at Rs. 69,41,741. After setting aside Rs. 1,75,000 for depreciation, Rs. 52.9 lakhs for taxation and Rs. 10 lakhs for E. P. T deposit a dividend at the rate of Rs. 20 per ordinary share is to be paid. The newly issued redeemable preference shares also are eligible for dividend. These shares were created as a result of the capitalisation of Rs. 4.8 lakhs from reserves and were issued free to the shareholders in the proportion of two shares for every ten shares held.

Bharat Bank has made further progress in the year ended March, 1944. The balance sheet, published elsewhere in this issue, discloses an increase of as much as Rs. 6.5 crores in deposits to Rs. 20.41 crores during the year. It has been possible to utilise satisfactorily the increase in working capital, advances being higher by Rs. 2.37 crores at Rs. 8.02 crores. There is an increase in both investments and cash balances. Total investments were Rs. 9.5 crores and cash Rs. 4.45 crores. The total of the two combined showing an increase over the previous year's figure by Rs. 3.75 crores. As a result, earnings have increased to Rs. 20,18,233 including the balance brought in from previous accounts. The directors, however, have not decided on the payment of ordinary dividend to shareholders. Instead, they have strengthened the financial position of the Bank by transferring Rs. 8 lakhs to General Reserve raising it to Rs. 18 lakhs. A similar sum is provided for taxation. After the payment of the preference dividend and bonus, to the extent of Rs. 1.1 lakhs to staff, the amount carried forward is slightly lower at Rs. 82,131.

After it became a scheduled bank the *Andhra Bank* has made spectacular progress, there being an increase in deposits in 1944 by over 50 per cent to Rs. 1 crore. The paid-up capital also is higher at Rs. 10 lakhs. It would have been even higher but for the restrictions imposed by the Government regarding the new issue of capital. The Bank appears to be gaining in confidence in the areas of its activities. This is evident from the high proportion of time liabilities to total deposits. As a greater proportion of deposits is on a fixed basis with the Bank, and as the Bank has been only experiencing seasonal demand for its funds, the management has very prudently decided to place large sums in giltedged securities and have recourse to overdrafts whenever there was need for seasonal funds

The gross earnings show a satisfactory increase from Rs. 3.18 lakhs to Rs. 4.76 lakhs. The net profit is Rs. 1.18 lakhs. Of this sum after providing Rs. 50,000 to taxation the usual dividend of 6 per cent is paid.

Bharat Insurance Company has done very well in the past year like other prominent institutions engaged in life insurance business. In 1944, 11,370 policies assuring a sum of over Rs. 3 crores were issued, an increase of Rs. 85 lakhs over 1943. The company has been selective in its business and the increase

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, June 1.

Generally steady conditions have been noticeable on the Calcutta Stock Exchange in the past week and business passing has been on a larger scale. With the expectations of a larger Steel Corporation dividend, which however did not materialise, and with a more hopeful view regarding the outlook for coal shares, a moderate rise in prices was recorded by the popular counters. The news that there will be an early meeting of the Big Three and that party politics would not be allowed to defeat war aims, were also responsible for the general strength of markets. In the coal section Burrakurs were quoting Rs. 42 and South Karanpura Rs. 30-5 while among Engineerings Indian Irons were Rs. 40-5 and Steel Corporations Rs. 33-8. Howrahs also improved from Rs. 92-12 to Rs. 93-10. In other sections there was nothing of interest to be reported. The general undertone was steady.

The Giltedged securities section has been definitely firmer with the suspension of sales by the Reserve Bank in respect of certain tap loans. There are rumours that the Central Government might attempt to convert the large amount outstanding in respect of 3½ per cent Paper into dated stock. 3½ per cent Paper was done as high as Rs. 100-8 against only Rs. 100-2 at the end of last week. Among terminable loans, 3 per cent 1953-55 were Rs. 100-10, 3 per cent 1963-65 Rs. 99 and 3 per cent 1966-68 Rs. 98-5. 4 per cent 1960-70 were Rs. 112-11. There is nothing of importance to be recorded in Provincial Loans. Easy conditions continue to prevail in the money market and the average discount rate has come down to 6 annas from 7 annas last week.

Bank shares have been steadier in sympathy with the giltedged securities section. *Calcutta National Bank* changed hands at Rs. 15-12 and *United Commercial Bank* at Rs. 20-8 premium. *Reserve Bank* were unchanged at Rs. 133 while *Imperial Bank* fully paids were done at Rs. 1,790.

Cotton shares were rather neglected, *Bengal-Nagpur* being the exception done up to Rs. 42-8 ex-dividend. *Cawnpore Textiles* were sticky at Rs. 12-7 as also *Elgin* at Rs. 63-8. *New Victoria* were Rs. 7-4.

In Coal shares, the popular counters have been in good request. The announcement of 8 annas dividend by South Karanpura Coal Company led to expectations of a higher dividend in the case of other companies also. *Burrakur* improved from Rs. 41-4 to Rs. 42-2 and *New Beerbhoom* from Rs. 41-4 to Rs. 42. *Raneegunge* were firm around Rs. 54-8 and *Equitable* Rs. 68. There was a sudden rise to Rs. 28 from Rs. 24 in *Ondal* on reports that the company was able to effect a profitable sale of a portion of its properties. On profit-taking the quotation is slightly lower around Rs. 27-8. *Satpukuria and Asansol* improved to Rs. 12-8 on buying from particular quarter, while *South Karanpura* fluctuated around Rs. 32. *Standard* were rather firm at Rs. 43-8 and *Talcher* at Rs. 12-6.

There is nothing of interest to be recorded in Jute shares though the bigger denomination shares have maintained the small gains. *Howrah* came down to Rs. 92-14 in sympathy with the general tone of the other markets but have improved later to Rs. 93-14. *Anglo-India* were 5 points higher at Rs. 473, *Champdany* Rs. 269 and *Kamarhatty* Rs. 725. The Yule group of shares were in particular request, *Delta* being noted at Rs. 595 against Rs. 586 last week. *Lothian* were Rs. 535 against Rs. 410. There is a further jump in the quotation with the efforts of the cornering operator to Rs. 625. Scrips are very much in short supply. *National* were not very much changed at Rs. 34-6 and *Megna* at Rs. 126-12. *Nuddea* were steady at Rs. 131-3 and *Reliance* at Rs. 78.

In the Engineering section, Indian Irons and Steel Corporations improved to Rs. 45 and Rs. 33-8 respectively, but after the announcement of the final dividend by Steel Corporation, which has been maintained a only 3 annas per share, quotations are slightly lower. *Indian Iron* were Rs. 40-1 and *Steel Corporation* Rs. 33-3. *Braithwaite* improved to Rs. 12-10 from Rs. 11-12 and *Kumardhubi Engineering* from Rs. 9-12 to Rs. 10-7. *Marshalls* on the publication of the report are a shade better at Rs. 5-6. There were some transactions in *United Iron and Engineering* around Rs. 9.

Sugar shares were rather neglected in the early days of the week, but in the last two days greater interest has been shown. *Cawnpore* are higher by one point at Rs. 38-12, *Carew* by 8 annas at Rs. 27-6 and *Champdany* by 12 annas at Rs. 38. *Darbhanga* were steadier at Rs. 26-8 and *United Provinces* at Rs. 25-1.

In the Tea section, business has been restricted. *East India* changed hands at Rs. 172, *Teloijan* at Rs. 15-8 and *Tumsong* at Rs. 22-14. *Loobah* were Rs. 18-10.

(*Continued from page* 745)

has not been achieved with larger policies. The average sum per policy is still at the level of 1943 so that the risk is spread over a larger number of insurers. Total business in force at the close of the year was Rs. 11.44 crores against Rs. 9.39 crores at the end of 1943.

Income from all sources was Rs. 71.1 lakhs of which Rs. 60.06 lakhs was on account of premium. Claims paid during the year were mostly on account of maturities, the total in respect of both maturities and death claims being Rs. 28.78 lakhs. Claims on account of death were Rs. 9.37 lakhs and maturities Rs. 19.41 lakhs. After providing for all outgo there is an increase in the life insurance fund by Rs. 19.16 lakhs to Rs. 3.02 crores. The total of the balance-sheet is very nearly Rs. 3½ crores.

PUNJAB NATIONAL BANK LIMITED

LARGE EXPANSION IN BUSINESS 44 NEW BRANCHES OPENED IN 1944

Presiding at the 98th Ordinary General Meeting of the shareholders of the Punjab National Bank, Ltd., Mr. Yodh Raj, Chairman, said:—

The General business and working capital of the Bank has continued to increase during the year under report. In pursuance of the programme of expansion launched upon after careful consideration the Bank opened as many as 44 new Offices in 1944, of these as many as 21 were opened outside the Punjab. The total number of the Banks' branches at the end of the year was 163 against 119 at the end of 1943.

Since then 15 more Offices have been opened including one at Madras. With such a large network of branches the Bank has attained a position whereby it is able to offer to its customers banking service almost throughout the length and breadth of the country.

ALL ROUND PROGRESS

The Balance-sheet now presented to the Shareholders, discloses a very satisfactory state of affairs. It records an all round progress.

Owing to a 20 per cent call made on partly paid-up shares and to further issue of 25,000 shares of Rs. 100 each at a premium of Rs. 100, our paid—up capital now stands at Rs. 56,10,439-2-6 while the Reserve Fund now amounts to Rs. 63,00,000.

To the total of paid-up capital and Reserve Fund amounting to Rs. 1,23,26,558 must be added what I prefer to call 'invisible capital' in order to get a clear idea of the captial structure of our Bank. The total of this invisible capital or hioden reserves is Rs. 57,82,363-11-1 appreciation on investments and Rs. 15,04,859-4-4 appreciation on Bank premises and property. The total invisible capital of Rs. 72,87,222-15-5 is a useful first line of defence against odds and ends and against any depreciation that may occur in the post-war period. The end of war in Europe has, however, not justified the fears of those who foretold a slump in securities market. With a currency yet expanding and War in the East still going on, we can look forward to the maintenance of conditions wherein market for Government securities will remain strong. The total of paid-up capital and Reserve, visible and invisible comes to Rs. 1,96,13,780 which gives a percentage of 5.2 to the total deposits. I am not giving this figures to show that there is any scientific relationship between the total deposits of a Bank and its total paid up capital and Reserve. No rigid ratio between the two can be laid down The factors making for the growth of one e.g. war-time prosperity and creation of enormous credit are not necessarily the factors on which a permanent enlargement of the Capital structure of a Bank should take place. For bigger Banks in particular it may not be possible to do so. The figures are given only to emphasize the rate of progress during the year under report. Last year this percentage was 4.6.

HIGH LIQUIDITY OF OUR ASSETS

A wise distribution of assets and their high liquidity in the last resort are the best protection a Bank can offer to its depositors. In the case of our Bank our liquil assets give as high a percentage as 76 to our total deposits. Our total deposits increased from Rs. 26.43 Crores to Rs. 37.75 Crores during 1944 while the increase in our liquid assets was from Rs. 18.20 Crores to Rs. 28.68 Crores In other words, while increase in deposits worked out at 42.9 per cent, the increase in liquid assets was higher being 58.2 per cent. As against a percentage of 76 of our liquid assets to our total deposits the Scheduled Banks ratio for the week ending December 29, 1944 worked out at 69 per cent.

The increase in deposits has been consonant with the expansion of currency and credit in the country and conforms closely to the general trend of banking. We have shared in this common trend and if we have obtained more than our proportionate shares, it only speeks of our popularity with the depositors and of the confidence they repose in us. The rates of interest on Fixed deposits were lowered by a quarter per cent during the year. In view of the affluent money market conditions it should be possible to bring it further down to a lower level.

OUR PROFIT

The transactions for the year under report have resulted in a Profit of Rs. 22,93,045-7-5. The Directors propose to credit to General Reserve Rs. 5,30,505-3-3. The depreciation on sale of properties and bad debts written off account for another Rs. 5,01,235-15-9. Bouns paid to staff comes to 14.4 per cent of the profit and after allowing far charity of Rs. 50,000 the balance carried over to annexed balance-sheet is Rs. 3,31,737-2-11 which sum is a little less than the bonus paid to staff.

LIBERAL AND SYMPATHETIC TREATMENT OF STAFF

The expenditure on Establishment and Provident Fund Allotment is Rs. 43,15,973-6-8 as against Rs. 29,18,052-0-8 during, 1943. The increase in expenditure under this head works out at 59.6 per cent over 1943 figure. The increase in the total working capital of the Bank during 1944 was 50 per cent. The increase expenditure is thus partly due to increased strength of staff necessitated by the opening of new Offices and expansion of our business and partly due to liberal increase in salaries and allowances. Our treatment of staff is most liberal and sympathetic. We expect in return full and whole-hearted attention to work on their part and I am quite confident that we will be fully re-paid in due course in terms of more efficiency, more business and more profits.

I would like to bring to the notice of the Shareholders our constant efforts to improve the quality of our staff by giving them thorough training before we put them in independent charge of an Office, we also encourage them by grant of liberal promotions to qualify as certified associates of the Indian Institute of Bankers Bombay. I may mention that as many as 93 of our managers are graduates of Indian universities and 90 of our employees have already qualified as C.A.I.I.B's.

I will draw your attention to the item of Rs. 4,16,171-10-1 in the Profit and Loss Account to 'Provision made against bad debts written off'. The main item in this sum is due to a suit arising out of the dishonouring of a cheque marked 'good for payment' by the Bank of Baroda which commenced in 1939 and which was decided in our favour by the High Court of Calcutta but went against us in the Privy Council on purely technical grounds.

The demand loans and advances have exceeded the 10 Crores limit and show an increase of Rs. 2,05,75,394 over the figures for 31-12-44. Our total demand loans and advances are 27.2 per cent of our total deposits.

Debts considered bad or doubtful have been fully provided for. Of the debts considered good, there is not a penny due either by Head Office Directors or by firms or Companies in which a director of the Bank is a partner or Guarantor. In the last year the debts, due by Head Office Directors were nil but debts due by firms or companies in which a Director of the Bank was a partner or Guarantor was Rs. 15,40,440. Of the total sum due by branch directors and the staff of the Bank only 2.1 per cent is against personal security while the rest is fully secured.

The value of properties owned by the Bank now stands at Rs. 19,64,827-15-8, which is only 43 per cent of our total assets. Of this, properties worth the book value of Rs. 15,20,490-15-9 are being used in the housing of Bank's own Offices both at Lahore and at 12 of our Branches. Excluding those propreties which the Bank proposes to retain for its own use and build up suitable accommodation when conditions permit, there would remain non-banking property or assets of the value of less than a lac only which is an insignificant amount in a total of Rs. 46 Crores of assets.

The following comparative table shows the extent of improvement in the Bank's affairs since 31st December, 1943.

		31st Dec. 1943	31st Dec. 1944
1.	Capital and Reserve	63,12,939	1,21,10,439
2.	Deposits ..	26,43,15,859	37,75,81,550
3	Demand Loans and Advances	8,19,43,574	10,25,18,968
4.	Investments ..	13,91,07,018	22,86,43,669
5.	Cash at Call and with Scheduled Banks and Reserve Bank ..	4,29,00,281	5,82,03,891
6.	No. of branches ..	119	163
7.	Total establishment	3277	4041
8	Total Working Capital	30,54,52,400	45,79,01,928

GOLDEN JUBILEE CELEBRATED

The Bank completed its fifty years of service on 12th April, 1945 and celebrated it in a benefitting manner at the Head Office and at Branch Offices all over India. A full history of the growth and the many sided activities of the Bank has been chronicled in an illuminating and interesting manner in Golden Jubilee Souvenir Volume by Prof. A. N. Bali, our Economic Adviser. The Bank's working capital exceeded Rs. 50 Crores on the Golden Jubilee day.

INDIAN COMPANIES' BILL

I have explained the salient points in the Balance-sheet and Profit and Loss Account which are before you to-day for adoption. But before I sit down I must refer to the proposed Banking Companies Bill which has been introduced in the Central Assembly. Some of the provisions of the bill require modification. others require strengthening. Section 28 laying down conditions under which inspection of Banks will take place has to be made less ambiguous but I don't agree with the critics of the Bill who in the first place want that there should be no inspection by the Reserve Bank at all and in the second place maintain that if an inspection is to take place it should not be an examination of a Bank's affairs which has made default in certain respects but a universal routine inspection of all Banks carried out once in every two or three years. Apart from objections to such a course on general grounds, the impracticability of such a proposal and the heavy cost it will involve will become clear when we know that the number of Scheduled and non-Scheduled Banks with their branches is well over three thousand. From where will the army of highly trained bankers who will act as Inspecting Officers come? Even at present the paucity of trained hands is acting as a brake on the development of sound banking in the country.

The first duty of the banks is to keep themselves fully protected against risks of capital loss whether by bad and doubtful debts or depreciation of investments. This is the primary obligation arising from their custody of the funds belonging to thousands of customers large and small. Any legislative measure therefore which aims at protecting the interests of the depositors should be welcome.

Since 1935 the Government of India have enacted badly needed legislative measures for better control of public companies. The amendments made in the Indian Companies Act 1936 and the passing of the Insurance Act in 1938 were both designed to promote healthy development along sound lines with proper safeguards for everyone concerned. The Banking Company's Bill now in the legislative Assembly aims at the protection of the interests of the depositors just as the Indian Companies Act did for protection of the interests of the Stock-holders.

In addition to Government securities, port trust debentures and municipal loans, the investment portfolios of Banks contain preference and ordinary shares of Joint-stock Companies, approved by them. Our holding of such shares is only a small percentage of our total investments. But the total holding of such shares of the Scheduled and non-Scheduled Banks cannot be an insignificant amount. All Banks big and small, however go in for a considerable proportion of their loans and advances against the security of such shares. The Banks are thus deeply interested in the stability of the share market in the country both as holders and as pledges of such shares. Any violent convulsion in the share market would react unfavourably or the business of the Bank. There is no doubt that like your Bank other banks must also be following a policy of prudence in making advances against shares on ample margin of safety. The war-time prices of these shares must have been heavily discounted by all good banks in doing this business. A not very violent changes in share values will not affect them. But when all is said and done it must be agreed that all such factors as lead to a disturbance in share values are injurious both to the share-holders, the companies whose shares undergo fluctuations, and to the banks.

One of the important factors that bring about such fluctuations is the speculation in stocks and shares. A highly developed stock-exchange and legitimate speculation by experts would no doubt promote price steadiness in the long run. but with ill-devoleped stock exchanges, unlicensed brokers and the gullible public animated with the desire to get rich quick, there is danger of spread of a speculation mania in the country in the immediate postwar period. There is plenty of inflation money in the country. When the peace returns and no sooner than the control of Capital Issues is relaxed and laissez faire is permitted in the promotion of public companies an era of industrial boom is sure to be ushered in.

THE ANDHRA BANK LIMITED

Estd :-1923

Head Office :—MASULIPATAM

Presiding at 21st Annual General meeting of the Andhra Bank, Ltd., held on 27th May, 1945, Mr. K. Ramabrahmam, the Chairman, said:—

I have great pleasure in presenting to you this evening the Directors' Report and Accounts of the Bank for the year 1944. The figures which have been in your hands for some time now show an all-round progress and the profits of this year have been the highest since the inception of the Bank. I need not recount to you that though the Bank was founded in the year 1923 and has been declaring good dividends ever since, a systematic policy of organisation and expansion was undertaken only in recent years. The Bank became a Scheduled Bank over an year ago and our paid-up capital now is about Rs. 10 lakhs. But for their restrictions imposed by the Government for the issue of new Capital by existing Banks we would have been able to strengthen our capital structure to a much greater extent.

DEPOSITS

The growth of banking habit in our Province has not kept pace with others. Capital is rather shy and literacy amongst the merchant class is lower than elsewhere. Our businessmen and agriculturists are not able to think of proper avenues for their surplus funds. They have not been able to take up their proper place in the industrial picture of the country in spite of the wealth they possess. This tardiness in the growth of banking habit necessarily limits the scope of investment even though our deposits have increased from Rs. 66 lakhs at the end of last year to Rs. 1 crore which is an increase of over 50%. We have been able to keep up a better proportion between Time and Demand liabilities, and the increase in our Time Liabilities shows the confidence and popularity that the Bank enjoys in these districts. The comparatively low proportion of Demand Liabilities has enabled to invest our funds to a much greater extent than is the case with the other bigger Banks and this has enabled up to show the maximum profit turn-over. Out of our total deposits of about Rs. 1 Crore, only about Rs. 50 lakhs represent Demand Liabilities. It is true that the rate of interest is the material consideration for several depositors, but this consideration will not weigh so much in future.

LIQUID ASSETS AND ADVANCES

You will observe that as against this Demand Liability of about Rs. 50 lakhs our cash on hand and balances with other Banks amount to Rs. 22 lakhs. Our investment in Government Securities has also increased from Rs. 16 lakhs to Rs. 29 lakhs.

Trade in these districts is mainly seasonal and there is always a glut of funds in the slack season. It has therefore been thought alvisable to invest more in Government securities with the object of borrowing against these securities during the busy season when there is a strong demand for funds. You will therefore find that there is a liability due to Banks secured by part of our investments to the extent of nearly Rs. 20 lakhs. The liquid position is therefore about 38 per cent to our total deposits or 76 per cent. to our Demand Liabilities.

Inspite of the tightening of the various control measures there was greater economic activity and movement of produce was quicker during the year. Our total advances have gone up from about Rs. 47 lakhs to about Rs. 77 lakhs. Out of these, Rs. 56 lakhs are against approved securities with prescribed margins and the balance on the security of two good signatures. We have always discouraged advances against a single signature, and the taking of an indepenlent and substantial co-obligant practically puts these advances also on the level of secured advances.

PROFIT & LOSS ACCOUNT

Turning to the Profit & Loss Account you will observe that the gross earnings of the Bank increased from Rs. 3,18,000 to Rs. 4,76,000. There is also a consequent increase in all the various heads of expenditure which include expenses incurred in the organisation of new Offices. Under the present circumstances our expense ratio should be considered small and you will agree with me when I say that the Bank is being run on very economic lines.

APPROPRIATION OF PROFIT

Out of the Net Profit of Rs. 1,18,000 a substantial portion has been provided for taxation. Last year's provision was just enough, and we trust a provision of Rs. 50,000 this year will be sufficient. The Net Profit has been arrived at after making full provision for all contingencies and you will observe that there is no bad or doubtful debt not provided for.

PROPOSED BANKING LEGISLATION

You are all aware that the Banking Bill was introduced in the Assembly in November last and the same is now under circulation for eliciting public opinion. Just as the Insurance Act is intended to safeguard the interests of the policy-hollers, the proposed banking legislation attempts at safeguarding the interests of the depositors. Sound legislation that takes into account the difficulties of credit institutions of all sizes is no doubt very healthy, but any legislation which is likely to hamper the growth of Institutions established long ago is fraught with grave risks and should be met with concerted opposition. The prescription of minimum capital standards as also the prohibition of banking companies from undertaking other activities are no doubt very essential. Old and established institutions though small in size must necessarisly be given the time and opportunities to organise themselves so that they may be able to stand the competition of some of the bigger and newly established Banks. The Reserve Bank through the machinery of inspection must be a source of guidance than a source of interference. The Bill requires a certain proportion of the deposits to be in the form of cash and unencumbered securities and the exclusion of balances maintained with other Banks in computing this figure appears to be rather unfair. Institutions operating only in a particular locality or Province do maintain large credit balances with other Banks and if these balances are excluded the medium sized and small Institutions will not be in a position to profitably invest their funds.

THE FUTURE

Hostilities in the West have already come to an end and the complete and final victory is well within sight. All the reconstruction plans of today will have to be the realities of tomorrow as otherwise the present industrial structure will not be able to sustain such a large number of banking offices that have come into being during recent years. Though difficult times are ahead, Bank deposits may not and need not decline. In spite of the new big banks that have come up, the number of banking offices in this country when compared with others in hopelessly small. There is no reason why we should not have a bank in every important village and town. The scope of development for medium sized Institutions like ours which maintain an intimate contact with the constituents is very wide. It would be in the interests of all the bigger banks to see that cheap credit percolates to all the nooks and corners of the country through the medium of smaller institutions. Intensive banking development can only be successful through the medium of the small local and provincial institutions. The Goodwill established by the Bank during the last 21 years is very valuable and with the co-operation and support of the public that it has always enjoyed it should be possible for the Bank to make rapid strides of progress in the immediate future.

After the first decade of its working the Bank refused to be merely a local Institution. Now it is on the threshold of becoming one of the premier Banks in this Presidency. I hope that within a very short time this Institution would be able to increase its sphere usefulness to a much greater extent and take its rightful place amongst credit institutions in this country. Lastly, I would be failing my duty if I do not make a mention of our staff at the Head Office and Branches who have served the Institution with great zeal and efficiency. It is needless for me to assure them that the prosperity of the Institution will certainly mean their prosperity as well and that there would be no occasion for them to repent for the loyalty towards the Bank they have always shown.

Gentlemen, I now propose that the Director's Report and the audited Balance Sheet of the Bank for the year 1944 be adopted.

(Continued from previous page).

NEED FOR ALL INDIA LEGISLATION

There will be the danger of the growth of restoration of normal trade. Something must be done to prevent such a situation arising in the country. I would sugggest an All-India legislation for the regulation of Stock Exchanges. Except in Bombay, Calcutta and Madras where the Stock Exchanges are well established their development in other parts of the country is not altogether on lines which one would consider satisfactory. But for the action that has been taken under Defence of India Rules to prohibit speculation in several commodities and shares dealing in future in almost all commodities were becoming popular in all parts of the country. The development of industry has made Indians now much more 'share-minded' than they were say 3 decades ago. The dealings in produce Exchanges and in Stocks and Shares are bound to increase greatly with the lifting of Government restrictions and with the taking in hand of plans of industrialisation. There is also more money with the people to invest. Something therefore must be done to save the public from the uncrupulous gamblers, who await them round the corner.

SOME SUGGESTIONS

The need for a separate Stock and Produce Exchanges Act is imperative. (i) The Exchanges to be established under the Act must not be merely shareholders' shows. Important interests like Banks, Companys' directors and industrialists, agriculturists, economists and independent public men all must find representation on their Boards of management. (ii) Not more than one Stock Exchange should be permitted to be established in a given area. (iii) Shares to be quoted on the Stock-Exchange must first be approved by the committee of the Exchange which should warn the investing public against dealing in unapproved stock. (iv) All brokers should be licensed and their accounts subjected to compulsory audit. (v) They must deposit a heavy security with the Stock-Exchange which the latter should be empowered to forfeit in part or in full in case of deaults by the former (vi) Brokers should not act as jobbers and if they do so it must be publicly advertised and brought by them to the notice of their clients. These are some of the suggestions I would like to put forward for the law for regulation of Stock Exchanges in India. The control of Capital issues has served a useful purpose by encouraging those industries whose enterprises are directly assisting in aiding the war effort or are in a position to embark upon production of essential consumers goods at an early date. This capital control should be replaced by a law regulating Stock Exchanges. Such an Act will assist in aiding the peace effort of the nation if I may use this phrase, by promoting investment through healthy channels and by safeguarding the investors' interests.

SAUGOR ELECTRICITY SUPPLY COMPANY, LIMITED.

NOTICE is hereby given that the Twenty-seventh Ordinary General Meeting of the above-named Company will be held at the Registered Office, No. 12, Mission Row, Calcutta, on Wednesday the 20th June, 1945, at 11-5 A.M. for the purpose of receiving and considering the Directors' Report, the Statement of Accounts and Balance Sheet for the Half-year ended 31st December, 1944, and to transact any other ordinary business of the Company.

The Share Transfer Books of the Company will be closed from the 14th to the 20th June, 1945, both days inclusive.

By Order of the Board,
MARTIN & CO.,
Managing Agents.

*The dividend as recommended by the Board, if passed at the General Meeting, will be paid to Registered Shareholders on and after 20th June, 1945.

Dated, Calcutta,
the 2nd June 1945.

KUMARDHUBI ENGINEERING WORKS, LIMITED.

Audited accounts for the year ended 30th November, 1944.

The Profit and Loss Account, including the credit balance of Rs. 1,01,894-15-10 brought forwad from the previous account and after allowing for Sundry Charges, Depreciation, Taxation, etc., and placing Rs. 50,000 to Stock Adjustment Reserve, shows a credit balance of Rs. 2,80,936-14-8 which the Directors propose to dispose of as follows:—

In paying a Dividend on the Preference shares at the rate of 5 per cent. per annum without any deduction for Income Tax paid by the Company, Rs. 60,000; in paying a Dividend on the Ordinary shares of annas five per share without any deduction for Income Tax paid by the Company, Rs. 1,59,375; and in carrying forward Rs. 61,562.

The Works were busy throughout the year, engaged almost entirely upon contracts for Government.

War Contracts are now easing off and the Works are in a position to undertake orders for Government Post-War Schemes and Industrial Concerns.

Prospects for the current year are favourable provided raw materials are made available.

Labour.—The supply of labour has been satisfactory throughout the year, but the Company has felt the effects of competition from Military and Government Contractors for the limited supply of labour available in the District.

Transport.—There has been a considerable improvement in the wagon position.

Coal Supplies have been most difficult throughout the year.

Capital Reconstruction.—The Scheme of Capital Reconstruction of the Company was approved by the Ordinary and Preference Shareholders and having been duly confirmed by the High Court of Calcutta, the old Company went into voluntary liquidation on 5th October, 1944. The new Company bearing the same name and style as that of the old Company was incorporated on the 7th October, 1944. Applications for shares in the new Company have been received from the vast majority of shareholders in the old Company.

Profits.—The balance of the profits as at 30th November, 1943, and also the proportion of profits for the year ended 30th November, 1944, earned by the old Company have been made over to the new Company and are available for payment of dividends or other income purposes.

*After taking into credit Rs. 1,88,000 being surplus taxation of previous years.

Audited accounts for the year ending 30th September, 1944.

The Revenue Account shows a credit balance after writing back the surplus provision for taxation, making the special Reserves referred to below, placing Rs. 1,10,000 to Reserve, and providing for Depreciation, Interest, Income Tax, Excess Profits Tax, etc., shows a credit balance of Rs. 1,19,421, which the directors propose shall be disposed of as under:—

In paying a Dividend on 295,052 Ordinary shares at the rate of As. 6 per share (without any deduction for Income Tax paid by the Company) absorbing **Rs. 1,10,644;** and in carrying forward Rs. 8,777-14-1.

The Reserve for post-war contingencies has been increased by the estimated amount of the compulsory deposit to be made in respect of Excess Profits Tax for the year under review.

It has also been deemed advisable to increase Reserve for the benefit of aged and infirm workers by a further sum of Rs. 40,000.

The result of the Company's appeal for an rease in the Standard Profit for Excess Profits Tax purposes has now been received from the authorities and the assessment in respect of Income Tax and Excess Profits Tax payable up to 30th September, 1943, has been finalised. As a sult of that decision the amounts provided in previous years have proved to be in excess of the sums now payable and the surplus has been credited to the Profit and Loss Account.

The results for the year under review were satisfactory. The sales for the current season ending 30th September, 1945, have had to be restricted because of a shortage of timber due to the difficulty in obtaining sufficient forest labour and to the shortage of forest transport. The additional 8 miles of tramline referred to in the Directors' report for the year ending 30th September, 1943, has been obtained and is now being despatched to the Mills. It is hoped to have part of this tramline laid in the coming season which will ease extraction difficulties.

BHARAT INSURANCE COMPANY, LIMITED

RECORD NEW BUSINESS IN 1944

Speech given by Seth Jaidayal Dalmia at the 49th Annual General Meeting of the Shareholders of the Bharat Insurance Company, Limited, on 30th April, 1945, at 4 p.m., at Bharat Buildings, Lahore.

Gentlemen,

The Annual Report together with the Audited Revenue Account and balance-sheet for the year ended 31st December, 1944, has been in the hands of the shareholders, and I, therefore, take the report as read.

The most distinguished feature of the working of the Company during the year 1944 is the amount of new business completed. While speaking to you last year, I had occasion to remark that the new business of about Rs. 2,15,00,000 completed in 1943 was a record business in the history of the Company. I am glad to be able to say that the Company set up a new record last year by completing over three crores of business, showing an increase in new business of 85 lacs over the figures of the previous year. A further business of Rs. 10,64,791, on which premiums were received at H.O. by 31st December, 1944, was completed during the first week of the current year but could not be accounted for in 1944 as the books had been closed punctually on 31st December, 1944. And what is more gratifying is the fact that this substantial increase has not been achieved by the concentration of greater than usual proportion of business in policies of large amounts which is borne out by the average per policy remaining the same as in the previous year. I am also glad to say that the total number of policies in force as on 31st December, 1944, is 55,909 assuring with bonus additions a sum of Rs. 11,44,42,152 as compared with 48,290 policies assuring a sum of Rs. 9,38,87,984 as at the end of 1943, thereby showing an increase of about two crores and six lacs. This is indicative of the fact that quantity of new business written and also that necessary measures have and are being taken to check lapsation. The flow of business during the current year has so far been very satisfactory and I can confidently hope that the Company will be able to reach four crores mark this year.

The net interest yield on the funds of the Company in 1944 is 3.1 per cent. During the last few years, interest yield of practically all the Insurance Companies has been showing a decreasing tendency. It is, in my opinion, due to provisions of law requiring 55 per cent. to be invested in Government and other approved securities yielding low rate of interest, the crushing burden of income and super tax at 63 pies in a rupee and the difficulty in securing remunerative investments for the new funds of the Company. In our case, the yield has been particularly low as no dividend was received during 1944 on a substantial amount of over 50 lacs invested in the shares of the Lahore Electric Supply Company, Limited. As you know, the Government is shortly purchasing the Lahore undertaking and it is proposed to send the Lahore Electric Supply Company, Limited, into voluntary liquidation and to distribute the entire assets to the shareholders as capital return. Even when that happens and the money thus received is reinvested, we cannot hope to get a net average yield of more than 3½ per cent. on the existing funds of the Company. In spite of strong representations, the Government of India seems to be in no mood to either relax Section 27 of the Insurance Act regarding investments or to grant the much-desired relief in the matter of taxation and, so long as the present conditions continue, an Insurance Company cannot hope to earn more than 3 per cent. net rate of interest on the new funds. Our premium rates, as I understand those of most of the Companies, are based on 3½ per cent. interest assumption and unless a Company earns the minimum rate of interest, in which the premiums have been calculated, it only implies that either that Company is eating away the provision for bonus made in its with profits policies or is making up the deficiency in the interest earning by more favourable experience in the matter of mortality and/or expense over the one provided for in the premium rates. Be that as it may, it is but fair to the existing policyholders, that, under the present circumstances, the premium rates of our Company should be based on a rate of interest which can easily be available on the new funds of the Company in the years to come. After matured consideration, therefore, your Directors decided the other day, to revise the premium rates at 3 per cent interest assumption. The new rates will also be based on such mortality and expense assumptions as to ensure that no loss will be incurred from these sources either. It is hoped that this step being taken in the interests of the Company and its existing policyholders, will be duly appreciated by all concerned.

The expense-ratio for the year under review, according to Rule 28 of the Insurance Rules, works out at 12.8 per cent. The expense-ratio for the preceding year was 12 per cent and for the year before 19.1 per cent. A substantial fall in the expense-ratio in 1943 was partly due to the increase in new business but also on account of business written under short-term policies. In spite of a substantial amount having been spent during the year under review in giving further relief to the staff in the form of allowances and practically no business having been written under short-term policies, it is gratifying to find the expense-ratio at that level. It is hoped that if favourable business trend continues, the expense-ratio, in the years to come, will show a further decrease.

As you might be aware, there was a move to fix by Legislation the over-all cost for Insurance Companies, but it is rumoured and also reported in the papers that, due to pressure being brought to bear upon the Government by foreign and other interests, the Government has postponed consideration of the bill to further amend the Insurance Act until the next session of the Assembly. There has been noticed a tendency on the part of Insurance Management to pile up new business figures at any cost and thereby enter into an unhealthy cut throat competition among themselves. In order to bring Indian Insurance on more stable footing, the proposal to limit the over-all cost is a step in the right direction. It is, therefore, hoped that the Government will not succumb to any influence antagonistic to the healthy development of Insurance in India and will do all they can to see that a reasonable limit for over-all cost for Insurance Companies is fixed.

It is refreshing to note that the Government of India has, as in many other branches, set up a Post-war Insurance Committee. Not only there is yet tremendous scope for further development of Insurance in this country, but there is also a necessity for its advancement on modern lines. In some of the advanced foreign countries like Great Britain and America, policies under group insurance and without medical examinations are being issued. A suggestion has been made by the Superintendent of Insurance in his Report in the latest Insurance Year-Book about the desirability of introducing the system of insurance without medical examination. The Insurance agents need to be properly trained before they are sent out for canvassing in the field. It is also time that the Insurance Department of Government of India took some tangible step to check the evil of rebating. A joint mortality investigation is yet another necessity. I hope that the Post-War Insurance Committee will look to these and other allied matters so as to ensure the development of Indian Insurance on healthy and modern lines.

Before concluding, I should like to express our appreciation of the work of the agents, inspectors and Branch officials in the field, staff at H.Q. and Branches, medical examiners, policy-holders and other well-wishers of the Company for their work, service and co-operation without which it would have been impossible to achieve such splendid results.

Gentlemen, with these words, I propose that the Annual Report together with the Audited Revenue Account and Balance-sheet for the year ending 31st December, 1944, be adopted.

THE CHUNDEECHERRA TEA COMPANY, LTD.

THE Annual Ordinary General Meeting of the Shareholders will be held at the Registered Office of the Company, No. 14, Old Court House Street, Calcutta, on Tuesday, the 19th day of June, 1945, at 3 p.m., for the following purposes:—

NOTICE is hereby given that the Thirty-second Ordinary General Meeting of the above-named Company will be held at the Registered Office, No. 12, Mission Row, Calcutta, on Wednesday the 20th June, 1945, at 11-0 A.M. for the purpose of receiving and considering the Directors' Report, the Statement of Accounts and Balance Sheet for the Half-year ended 31st December, 1944, and to transact any other ordinary business of the Company.

The Share Transfer Books of the Company will be closed from the **14th** to the 20th June, 1945, both days inclusive.

By Order of the Board.
MARTIN & CO.,
Managing Agents.

*The dividend as recommended by the Board, if passed at the General Meeting, will be paid to Registered Shareholders on and after 20th June, 1945.

Dated, Calcutta.
the 2nd June, 1945.

THE INDIAN TRADE & GENERAL INSURANCE CO., LD.

NOTICE TO THE SHAREHOLDERS.

NOTICE is hereby given that the First Ordinary General Meeting of the Shareholders of the Company will be held at the Registered Office of the Company at 5 Royal Exchange Place, Calcutta, on 23rd June, 1945 at 12-30 P.M. to transact the following business:

(1) To receive and adopt the Directors' Report, the Audited Revenue Accounts and the Balance Sheet of the Company for the period ended 31st December, 1944.

(2) To elect Directors in place of those retiring by rotation, who are eligible and offer themselves for re-election.

(3) To appoint Auditors for the ensuing year and to fix their remuneration.

(4) To confirm the appointment as Chief Agents of the Company of Messrs. Karam Chand Thapr & Bros. Ltd., Messrs. Purshotamdas Ishwardas & Co., Messrs. Universal Cotton Trading Co., Messrs. Sir Abdulla Haroon & Co., in which Lala Karam Chand Thapar, Mr. Purshotamdas Ishwardas, Mr. Sankal Chand G. Shah and Mr. Yusuf Abdullah Haroon respectively Directors of the Company, are interested as Directors or Partners.

(5) To transact such other business as may be brought before the Meeting by the Chairman.

The Share Transfer Books of the Company will be closed from 10th June to 23rd June, 1945.

By Order of the Board of Directors,
H. D. Varma,
Secretary.

Dated, 24th May, 1945.
Calcutta.

THE SIEEL CORPORATION OF BENGAL LIMITED

NOTICE

In view of the uncertainty of mails from and to the United Kingdom the publication of the Directors' Report and the Accounts of the Steel Corporation of Bengal, Limited, for the year ended 31st December, 1944, which are to be published simultaneously in India and England, will be delayed. All possible steps are, however, being taken to have matters expedited. In order to enable shareholders to obtain payment of their dividends as soon as possible, however, the Directors have sanctioned the payment by way of an ad-interim dividend of Eight Annas per share on the Ordinary shares of the Corporation ranking for dividend for the year ended 31st December, 1944, which shareholders must understand, will be the final dividend for the year. The Transfer Books of the Corporation will be closed from 22nd June to 6th July, 1945, both days inclusive. Payment will be made on and after 20th July to those members or their mandates whose names appear in the registers on the 31st June, 1945.

By Order of the Board,
BURN & CO.,
Managing Agents.

BOUQUETS & BRICKBATS

(From our Readers)

Change in the Coinage:

In your note under the above caption, you seem to argue in favour of a change to the decimal system. You have underrated the strength of a very strong argument in favour of the existing system in your bald statement:—"The present system under which the rupee is divided into 16 annas and each anna into 12 pies, though by no means ideal for calculation, has stood the test of time and people have got accustomed to it." The fact, however, is that the existing system has been in vogue for a very long time and not found to be defective or difficult. Then why should there be a change? You cannot minimise the force of this argument. Further why do you assume that the present system is by no means ideal for calculation? All boys, who have had any kind of national education know by heart the tables giving the multiples of ½, ¼, ¾, ⅛, 1/16. And, naturally, they have found no difficulty in calculation of rupees, annas and pies. On the other hand, the system proposed is likely to cause hardship in calculation both to the illiterate as well as to the literate. As every schoolboy knows to his cost, has not decimal been his nightmare? The imaginary satisfaction that we will fall in line with many other countries of the world by adopting the new system cannot balance the untold hardships likely to be caused to the millions of illiterate people in this country.

A. S. Nath.

Agricultural Income-tax for Madras:

Your note on Agricultural Income-tax for Madras is, to say the least, one-sided. You cannot browbeat people by citing the names of 'veteran administrators'. Being wealthy landowners who will be affected, you cannot call them disinterested. Admitting as you do the iniquity of the present land revenue system how can you object to the more well-to-do being taxed more? How is it possible to exempt or at least to lighten the burden on the poor peasant if the Government is not assured of its revenue? You say that the present Government has no business to levy the tax. Elsewhere your correspondent charged the present Government with deriving the benefits of a tax measure which the Congress Ministry brought forward incurring the odium of the people. Now you must congratulate this Government for coming forward to incur the displeasure of the people by this taxation proposal and allowing the future popular Government to benefit by it. That the budget happens to be surplus is no argument against this taxation. For you plead day in and day out for planning. How can plans be carried out without finance? You cannot take any stick to beat your opponent.

K. Srinivasan.

"White washing"

Allow me to refer to your well-written note "White Washing" appearing in your issue dated, May 26, 1945. It is only on rare occasions that Government spokesmen admit irregularities in their departments. The admission shows that the malpractice is too well-known and too far beyond the shadow of doubt to be hushed up. What has come out of the "personal attention" devoted by Sir M. Usman to this serious defalcation?

It is certainly not creditable that this should have happened and the men should have got off with it for this length of time. At least, let us hope a good post mortem examination will be conducted and the offenders brought to book without any more delay.

J. B. Lal.

* * * *

The public are indebted to you for your note 'White Washing' appearing in your issue of May 26, 1945. It is thoughtful of you to bring back to the minds of the public such serious irregularities and defalcation in the Government Department which is a fraud on the entire people of India.

The other day, after your note appeared, we read a news item in the papers to say that the matter is being investigated. How long will the investigation take and what will come out of it, the public are anxious to know. As Sir Muhammad Usman's reply is thoroughly unsatisfactory, we trust you will persist in ventilating the matter and thus do a real service to the public.

D. S. Asanullah.

Supply Side Of Economists

I have read your note 'Supply side of Economists' as well as the letters of Mr. Kripalani and Mr. Hari. Frankly, I do not accept the views of any one. Like the Curate's egg each one is good only in parts I do not agree with your statement 'In this country we have no more of gradation of educational attainments than of grading of commodities.' I could not see what other grading there could be than what exists today, B.A., B.Sc., M.A., M.Litt., Ph D DLitt etc. You have, of course, hit the nail on the head, when you say, 'And it is far from rare for preferment to go by letter and affection rather than by merit.' I do not think higher mathematics is necessary for a good statistician of an Economic Bureau, though mathematics may be useful.

Mr. Hari remarks, 'Perhaps, you do not know that the Mysore and Madras Universities have courses in mathematical statistics and Economic Statistics.' How is it both the Editor, who lives in Calcutta and Mr. Hari do not know that the Calcutta University teaches mathematics and Economics as optional subjects in the B.A.?

Mr. Kripalani seems to be a Gandhian better than even Mr. Gandhi. He does not face facts. In a capitalist society, such as the one in which we live, I do not see how all the Economists could be bound hand and foot and thrown out of the window. How is an Economist less useful than a mathematician or any other pure scientist? Merely because there are pick-pockets you cannot abolish all pockets.

M. K. Ranade.

Demobilisation of officers

Inter-departmental consultations seem to be in progress at the Imperial Secretariat to consider ways and means of demobilising huge number of officers and staff increased manifold during the war. Judging from outward signs, means are being tried to absorb as many as possible particularly in post-war planning department. For instance, Sir A. Ramaswami Mudaliar has left strict instructions that no officer of the highly expanded Supply Department should be retrenched without his express approval.

Apart from disposals and salvage which would be needed for a long time to come decisions are awaited for the future Supply Department which may become an important department for the execution of post-war plans and securing supplies for civilian needs and may absorb the civil Supplies Department, the industrial side of which may either revert to Commerce or be absorbed in Planning Departments. Defence and Civil Defence might probably be abolished, but Information and Broadcasting will remain.

Shortly a decision would be taken to bifurcate Education and Health sections from the Agricultural Department and separate departments will be created for them. Large personnel would still have to be retrenched and for that purpose inter-departmental consultations seem to be in progress in advance of setting up a permanent Retrenchment Committee to decide the necessity or otherwise of high-salaried officers although the Secretariat believes in slow process.

Indirect Taxes in Australia Doubled:

Australian shoppers, beer-drinkers and smokers are paying nearly twice as much in indirect taxation as they were before the war. In the current financial year, it is estimated that the Government will get £96,400,000 from indirect taxation of all types, including customs, excise, sales tax and flour tax, compared with £58,749,000 in 1938-39. In 1943-44, the Australian public paid £97,141,000 in indirect taxation.

The most startling increases have occurred in excise charges which have risen 300 and 400 per cent. Examples quoted by the Australian Treasury are.

Beer, £7,280,000 in 1938-39 to £21,700,000 (estimated) this year; spirits, £1,604.000 to £5,300,000.

Manufactured tobacco, £3,868.000 to £8,600.000; cigars and cigarettes, £2,419.000 £7,900,000.

Sales tax jumped from £9,308.000 to £27,500,000.

Total indirect taxation for the war years has been 1939-40, £68,507,000; 1940-41 £75,071,000; 1941-42, £85,263,000 1942-43 £95,433,000; 1943-44, £97,141,000.

The Belgian Franc not in danger.

The Belgian Minister of Finance, speaking in the Chamber of Representatives, stated that up to now Belgium had advanced to the Allied armies 12,425,000 francs. He reminded the House that by virtue of the Lend-Lease and Mutual Aid agreements concluded with the United States, Great Britain and Canada, the part of that amount which was used for the payment of soldiers would be repaid in dollars and sterling. That fact enabled him to announce that the currency note circulation, which amounts at present to 49,000,000,000 francs, is covered by gold to the extent of 45,000,000,000 francs.

The expression employed by certain persons who urge that it is necessary to "save the franc" is, therefore, entirely misleading, said the Minister. *The Belgian franc" is not in danger, and does not need saving.* All that is required is to avoid another inflation by taking care to keep the advances to the Allied armies within reasonable limits.

The Minister of Finance went on to say that in addition to the 12,425,000,000 francs advanced to the Allied troops, Belgium had disbursed, 5,600,000,000 francs in hte provision of goods and services making a total of more than 18,000,000,000 francs. It is evident, he added, that it is incumbent on the Allies, in the general interest, to reduce as much as possible the burdens resting on Belgium.

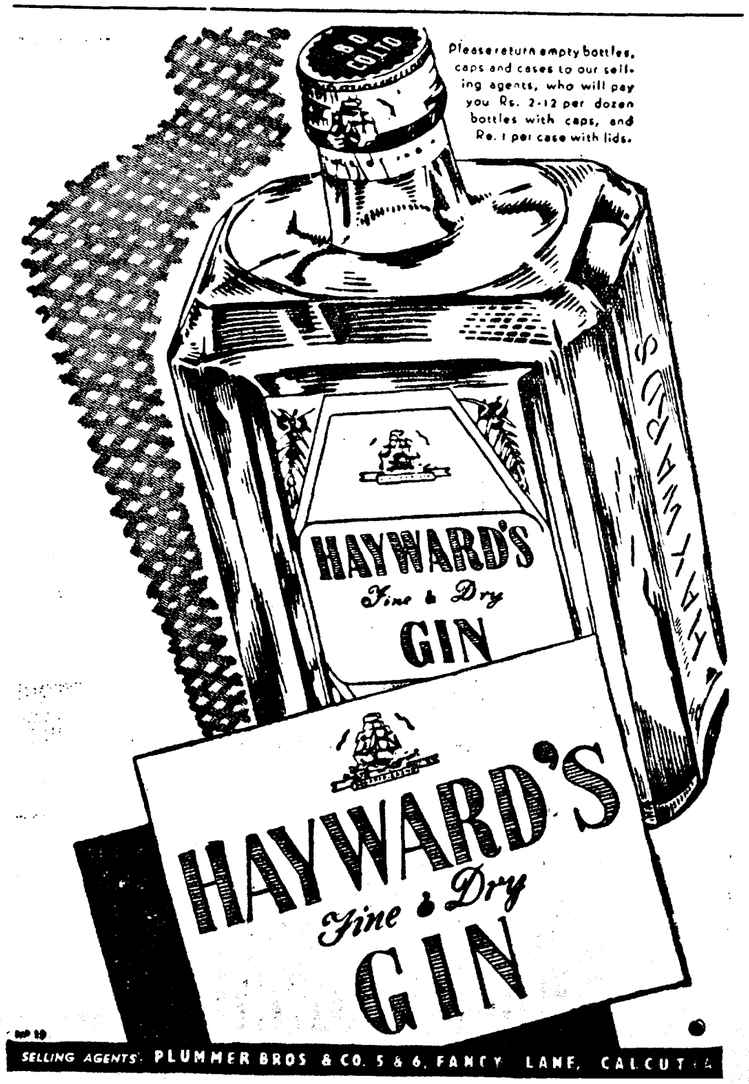
* * * *

Oil from Kuwait

The Gulf Oil Corporation announced that the first shipments of oil from the Kuwait field, in which the Corporation shares ownership with the Anglo-Iranian Oil Co., and which is considered potentially one of the world's major reserves of petroleum, will be made in the first quarter of 1946. Nine wells had been completed when the war suspended work on the tents. These drillings proved that sizeable reserves of crude oil existed.

Recent geological estimates indicate that Kuwait has about 25 per cent of the developed reserves of crude oil in the Middle East. The wells already started in Kuwait are considered to have demonstrated that there is underground oil totalling around 400,000.00 barrels, which further exploration might increase.

* * * *



New Oil Zone In Mexico

A rich oil zone has been discovered near Tuxpan, in Ceracruz State, which, it is reckoned, will yield 200,000,000 barrels. The first well was dug 40 days ago. It produced high quality oil, free from sulphur, at a rate of 150 barrels per day.

FACT No. 1

THE age of miracles is past. If today India's cotton textile industry was not producing an adequate yardage of cloth, then, however great our need of dhoties, sarees, towels, sheets, shirts and other essentials, our demand must go unmet.

Is it a fact that India's cotton textile industry is not producing cloth in adequate quantity?

No. The fact is that the Industry produced on an average, before the war, 3,800 million yards annually as against 4,800 million yards now. If the production of the cotton handloom industry is also included, and if allowances are made for the cloth sent out of the country and supplied against defence requirements, there was available in the year 1943-44 5,868 million yards, as against the prewar average of 6,260 million yards, a reduction of only 6% from peace-time supplies.

These figures convincingly prove that the responsibility for the current shortage assuredly does not lie at the door of the Indian cotton textile industry. The industry has adequately met the wartime challenge to produce enough for the Services and civilians alike.

One of a series of statements of fact for the information of the public.

ISSUED BY
THE MILLOWNERS' ASSOCIATION
BOMBAY

pany, said that foreign Governments had encouraged cartel arrangements some of which were the direct result of Russia flooding the oil market at low prices in order to obtain foreign exchange. As a result, "some countries had enacted legislation providing for some form of market control, others were planning to adopt such measures and still others had used pressure on the industry to put its house in order. From all this evolved the cartel." Mr. Levi declared that the inescapable fact was that if American companies want to continue to carry on business abroad, they must be in a position to meet in each particular country conditions existing there.

Silk Indusry in Italy and China

The *Manchester Guardian* writes that two silk producing countries have just taken steps to revive silk production on the greatest possible scale. The Italian Government gave silkworm eggs immediately to breeders in all the silk-growing provinces and the breeders are urged to make an intensive effort to re-establish silk growing as one of the predominant branches of Italian agriculture. Economic production for the Germans had ended and silk producers have been told they can count on an excellent market at prices well above the present fixed rates.

In Free China, four Government banks have just approved a loan of 1,200,000,000 Chinese dollars to the Szechwan silk industry, which has recently made very great progress and is capable of further expansion. The loan is granted on the initiative of the Finance Minister who has reported to the Government that the Chinese silk industry can count on good prospects in the overseas market both now and after the war.

American gold for China

Quoting high financial circles, the World Daily News reports that 700,000 ounces of gold will be brought from America to China before the end of July.

The newspaper said that Chinese and American financial and transportation authorities decided on this step to relieve financial strain on China.

* * * *

Ban on coconut oil export

The United Provinces Government have banned the export of coconut, oil and oil cake from their province in order to conserve supplies for use within the United Provinces.

* * * *

Ceylon May Ban Importation Of Jewellery

The Government of Ceylon may soon completely ban the importation of gold jewellery from India it is understood. This step will make an extension of further co-operation with the Government of India in preventing the export of gold from India.

* * * *

Mines Ordinance

The Governor-General has promulgated the Mines (Amendment) Ordinance, 1945, requiring among other things, the maintenance in mines, wherein any women are ordinarily employed, of suitable rooms to be reserved for the use of children under the age of six years belonging to such women.

CLIVE BUILDINGS, 6, CLIVE ST., CALCUTTA

"Oranges and Lemons....

. . . . say the bells of St. Clements ". So runs the nursery rhyme. The church is the ancient one of St. Clement Danes in London's Strand — one of the 182 London churches destroyed or damaged by enemy action. Its bells now ring no more, and oranges and lemons are rare indeed. In 1753 James Lind, a Scottish naval doctor, first showed how scurvy could be prevented by lime juice. Since then science has proved that the health-giving properties of the citrus fruits derive from their richness in Vitamin C. Which is why oranges are specially needed for little children. No crop is more dependent on the chemist for its cultivation, transportation overseas and final distribution. The citrus trees need bud-grafting waxes and chemical fertilisers. They must be protected from frost by blankets of smoke and oil and from pests by a barrage of sprays and dusts. The scale insect, worst of all citrus pests, is destroyed by covering the trees with tents which are then filled with hydrogen cyanide gas. But for this routine treatment many first-class groves would have had to be abandoned. Chemical means are necessary to prepare the fruit for market. Oranges may be dipped in borax or other antiseptic to prevent mould, washed in dilute caustic soda and sprayed with water-wax emulsion before being wrapped in special sulphite papers or transparent cellulose wrappings. Fruit may be harvested green and allowed to ripen on voyage or treated with ethylene gas to help it change colour. Finally, wastage is reduced by keeping the fruit in cold storage or in an atmosphere of carbon dioxide gas. The work of the research chemist and the products of the British chemical industry can ensure that oranges and lemons, limes and grape fruit are firmer in body, better in flavour and more attractive to the eye than Nature unaided could achieve.

By Special Cable.

De-Controlling of Industries

AUTOMOBILE PRODUCTION TO BE RESUMED

Washington, by Cable.

The War Production Board has begun during the past fortnight to implement the policy of removing Government controls over industry as swiftly as war circumstances would permit. This policy is to be continuous. The industry received assurances from the War Production Board Chairman, Mr. J. A. Krug that the Government will remove all possible controls after the defeat of Japan "and by so doing automatically lift the ceiling on initiative, imagination resourcefulness —the very qualities the country will need most if we are to have a resilient expanding economy." In one field, in particular —that of reconversion of the automobile industry—the industry during the fortnight began a cautious but definite programme aimed at the production of 200,000 cars this year and another 1,000,000 by the middle of 1946. The first model following the War Production Board's announcement of the permission for the industry to go ahead with the planning for automobile production was displayed, as might have been expected, by Mr. Henry Ford. It is Mr. Ford's first car since February 1942 and is expected to be in production within 60 to 90 days. It features several re-styling design alterations and mechanical improvements over his latest pre-war model.

The General Motors Corporation also announced that it was ready to resume production but cautioned that cars priced as low as 500 dollars will not appear until sometime in post-war and said that entirely new models would not be available for two years because forward engineering has just begun.

The industry sources estimated that exportation of automobiles would begin on a very small scale towards the end of this year and would begin to pick up considerably during 1946. It is estimated that it would be four years before foreign demand can be fulfilled. The industry feels that India—with the demand stimulated by new roads and presence, during the war of many American military vehicles—will be a good market for this country's automotive output.

The Administration received encouragement in its foreign economic policy proposals during the fortnight from a series of congressional actions as follows:—Firstly, the House approved the renewal of the Reciprocal Trade Act for three years with authority to reduce tariffs by 50 per cent.; Secondly, the House Banking Committee approved the Bretten Woods legislation by 23 to 3 without any changes in principle; Thirdly, the Senate Finance Committee began action looking to repeal the Johnson Act.

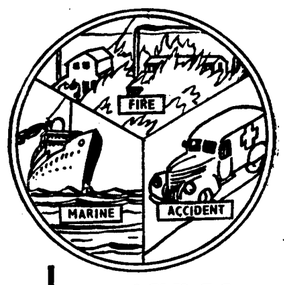
WORLD OF INDIAN FINANCE

CALCUTTA, Friday Evening.

Extremely cheap conditions prevail in the money market and call rates are quoting nominally ½ per cent. in Calcutta and ¼ per cent. in Bombay. There is such a plethora of funds that banks are eager to place their funds either in giltedged or short-term bills. As in this week treasury bills maturities were Rs. 4 crores against the offer of Rs. 2 crores there was very keen bidding and applications were as much as Rs. 8.86 crores the average discount rate has sharply declined to four annas and eleven pies per cent from six annas per cent. The drop in the discount rate to below five annas per cent, has come about after two years. It appears that the authorities are not anxious to take advantage of the present conditions in the market as the offer has been maintained at only Rs. 2 crores and for several weeks maturities are Rs. 4 crores per week. It would perhaps be possible to report a record low rate for short term borrowing if the present conditions continue to prevail in the money market.

The returns of the Reserve Bank for the week ended June 1 do not show any important change, notes issued being only slightly higher at Rs. 1,137.43 crores with the increase in the amount of rupee coin to Rs. 15.84 crores from Rs. 15.79 crores. Notes in circulation have improved to Rs. 1,123.61 crores from Rs. 1,121.02 crores There is no change in either giltedged or rupee securities.



In the Banking department, Central Government balances are not very much changed at Rs. 266.26 crores even with the month-early disbursements. In the absence of any large sterling receipts the maintenance of government deposits at high levels should be due to the larger subscriptions to government loans. Other government accounts are lower at Rs. 18.31 crores against Rs. 21.90 crores. The fall in bank balances with the Reserve Bank to Rs. 90.86 crores, even with the smaller demand for funds, lends confirmation to the reports in recent weeks that banks have taken a large interest in the giltedged market. Foreign balances are only slightly higher at Rs. 393.54 crores against Rs. 392.40 crores.

The statement of the Imperial Bank for the same week shows that deposits are virtually unchanged at Rs. 234.26 crores. As there was smaller demand for funds the Bank has thought it wise to place larger sums in giltedged securities. Investments were Rs. 143.19 crores against Rs. 142.96 crores. Advances were lower at Rs. 68.87 crores against Rs. 69.08 crores. Cash is slightly lower at Rs. 32.23 crores against Rs 32.32 crores.

The statement of the Scheduled banks for the week ended May 25, 1945 confirms the prevalence of easy money conditions though it would appear from the rise in total cash balances that banks had not made up their minds to dispose of their funds in giltedged securities or shares. Demand liabilities were 620.54 crores against 612.03 crores. Cash on hand is lower at 31.08 crores against 31.12 crores but there is a jump in balances with the Reserve Bank to 92.28 crores from 62.16 crores. There is a small decrease in both advances and bills discounted.

It is significant of the twilight period of the war that it witnesses still an abnormal degree of speculative vigour in all markets. Gone is the myth of falling values after the war. On the other hand, the weight of money and the readiness to gamble is such that prices are trending upward stronger than ever. The strength of the bullion market is now a commonplace. Share than anything else, the exceptionally heartening performance of giltedged is the highlight of the market. The present week can truly be called a giltedged week and, rarely if ever, has such a volume of enquiry for all securities been seen. While all the loans without any exception have moved up, the performance of 3½ per cent Rupee Paper has been outstanding. In fact, there is such a rush to buy and naturally such a scarcity of scrip that the quotation is literally going up by leaps and bounds. In midweek, 3½ per cent. Paper touched Rs. 101 and finance brokers are talking it up to Rs. 102: Not all the money that has flowed into Paper is real investment money; we hear there is a lot of gambling going on, and the money market is very easy at the moment. Yet, might one draw an inference or two from this episode? The Funding Loan is quoted at Rs. 98-8 and such is the enquiry that the Reserve Bank has, we understand, had plenty of enquiry for even the 3 per cent. 1970-75 Development Loan. After all the government has about Rs. 13 crores of this Loan tucked within its investments, and the present is a golden opportunity to issue these to the market. Whether this steady and heady upswing in the price of non-terminables can really be taken to indicate a decline in the long-term interest rate is more than any one can say at present. The authorities ought no longer to persist with 3½ percent. Paper, but should really cash in at this moment with a grand scheme for conversion to a lower rate of interest. In these conditions, the tax-payer ought not to be called upon to pay 3½ per cent. on a Loan whose yield has so rapidly declined in the past few weeks.

The exchange market is steady with rates unchanged.

ANNOUNCEMENT

(THIS IS AN ANNOUNCEMENT AND NOT A PROSPECTUS)

The Subscription List will close on the 15th June 1945, or earlier at the discretion of the Directors

THE STANDARD REFINERY & DISTILLERY LIMITED

(Incorporated under the Indian Companies Act VII, 1913)

AUTHORISED CAPITAL - - Rs. 20,00,000/-

DIVIDED INTO (a) 5,000 five per cent Cumulative Participating Preference Shares of Rs. 100 each.

and

(b) 1,50,000 Ordinary Shares of Rs. 10 each.

ISSUED CAPITAL — Preference Shares—Rs. 5,00,000/- in 5,000 five per cent Cumulative Participating Preference Shares of Rs. 100/- each.

Ordinary Shares — Rs. 12,00,000/- in 1,20,000 Shares of Rs. 10/- each.

ALREADY ISSUED AND SUBSCRIBED — 66,778 Ordinary Shares of Rs. 10/- each.

PAID-UP CAPITAL — Rs. 3,33,865/- @ Rs. 5/- per share paid.

PRESENT ISSUE:

(a) 5,000 five per cent Cumulative Preference Shares of Rs. 100/- each, issued at a premium of Rs. 2-8 per share, Rs. 52/-8/- per share being payable with application and Rs. 50/- per share on allotment.

(b) 53,227 Ordinary Shares issued at a premium of Re. 1/-per share; Rs. 6/- being payable with application and Rs. 5/- on allotment.

Of the above issue, the entire 5,000 five per cent Cumulative Preference Shares have been agreed to be taken up by the Directors and their friends. The balance 53,227 Ordinary Shares (of which also 30,000 shares have been promised to be taken up by the Directors and their friends) are offered to the public for subscription.

The present issue of the Ordinary Shares shall rank *pari passu* with the existing ordinary shares for dividends that may hereafter be declared. The Preference Shares carry no voting right.

DIRECTORS:

1. LALA KARAM CHAND THAPAR—Managing Director, Karam Chand Thapar & Bros., Ltd., Calcutta.
2. SETH JAMUNA DAS KHEMKA—Merchant & Banker, 63, College Street, Calcutta.
3. SETH HANUMAN PRASAD PODDAR—Banker & Merchant, 119-B, Chittaranjan Avenue, Calcutta.
4. Mr. R. K. JAIDKA—Merchant, 132, Russa Road, Calcutta.
5. Mr. B. M. THAPAR—Merchant, 35-1, Ballygunge Circular Road, Calcutta.

Managing Agents :—KARAM CHAND THAPAR & BROS. LIMITED.

Bankers:—1. THE PUNJAB NATIONAL BANK LTD., CALCUTTA.

2. HINDUSTAN COMMERCIAL BANK LTD., CALCUTTA.

Auditors:—Messrs. R. B. BOSE & CO, 10, HASTINGS STREET CALCUTTA.

Registered Office: 5, ROYAL EXCHANGE PLACE, CALCUTTA.

The Company is established particularly to carry on the business of distillers and sugar manufacturers and refiners in all its branches. The Company was incorporated on the 18th December 1942. It took over as a going concern the business of Unao Distillery Limited and also purchased the Sugar Refinery situate in Unao for Rupees Five and a half lacs. The Distillery has been working from 1st January 1943 while the vacant possession of Sugar Refinery was got in February 1944. The present issue is made with a view to paying off the Bank mortgage loan as also for adding a Cane Crushing Plant to the Refinery and adding further machinery to the existing Distillery Plant with a view to increasing its present distilling capaciy and efficiency. It is proposed to purchase a Cane Crushing Plant as soon as one is available at a suitable price and to add it to the Refinery. In the meantime, application is being made to the Government of U. P. for the grant of Crushing Licence and there is every hope of the licence being granted. In case, such sanction is not forthcoming, it is proposed to shiftt the Refinery Plant to some State or Province where there is no such restriction and which is otherwise suitably situate from the point of view of cane. It is also proposed to work the Sugar Refinery and Government has been approached for grant of suitable subsidy so as to make the working economical and there is every hope of the request being favourably considered.

With the sound and scientific lines on which the Indian Sugar Industry is established and the high level of efficiency which has been obtained around, the Indian Sugar Industry may be expected to hold its own futures. A considered progress has been made in the manufacture of foreign liquors during the last few years. The Gin and Rum manufactured by our Distillery have also found really a regular market.

THE COMPANY HAS SINCE INCEPTION BEEN PAYING REGULAR DIVIDENDS AT 5 PER CENT PER ANNUM TO ITS SHAREHOLDERS FROM THE WORKING OF ITS DISTILLERY DEPARTMENT ONLY. WITH SUGAR MANUFACTURING SECTION ALSO WORKING, THE MANAGEMENT IS CONFIDENT OF REGULAR DIVIDEND PAYMENTS TO THE COMPANY'S SHAREHOLDERS ON THIS INCREASED CAPITAL.

"Consent of the Central Government has been obtained to this issue of Capital, subject t tohe condition that so much of the capital as cannot in that Government judgment be properly expended until some uncertain future date is invested and kept invested in prescribed securities which will not be released until the Central Government, (in consultation with the Crown Representative if any Indian State interests are involved), is satisfied that the time has come to make corresponding payments for purposes which are consistent with the enforcement of any measures of control or restriction that may be in operation at the time when such release is applied for. It must be distinctly understood that in giving this consent the Government of India do not take any responsibility for the financial soundness of any schemes or for the correctness of any of the statements made or opinion expressed with regard to them."

The Prospectus has been filed with the Registrar of Joint Stock Companies, Bengal, and copies thereof may be obtained from the Company's Registered Office.

APPLICATION FOR SHARES

Form of applications for shares can be obtained from the Registered office of the Company at 5, Royal Exchange Place, Calcutta, or from the Company's Bankers.

BROKERAGE

A brokerage of Re. 1/- per share in case of Preference Shares and As. 4 per share in case of Ordinary Shares will be paid by the Company to the approved brokers and Banks for the number of Shares allotted on the application received through recognised brokers and Banks and bearing their stamp.

Rationalisation of Cotton Industry-II

In the previous article, we discussed the Textile Industry (Control of Production) Order 1945 which aims at rationalisation and standardization of mill production as a step towards increasing production of cloth of the varieties most needed by the public. We emphasised that the advent of 'Utility cloth' cannot change the situation overnight and that the expectations of improvement resulting from it should not be pitched too high. It is essential to recognise that adequate supply of coal and power and the creation of conditions favourable for maximum production will determine the success or failure of this interesting experiment. The Government of Bombay have already proposed declaring one 'power holiday' in a week in addition to the Sunday and other usual holidays; the proposal suggests a naive indifference to the Herculean efforts made by the Textile Control Board to step up production and it forms an instance of the utter lack of co-ordination typical of officialdom. We should have expected that the Provincial Government on the other hand would try to create the optimum conditions for increasing production.

The order for reduction of picks in the cloth to be produced from June 1st does not appear to be well advised. Its effect might be to make utility cloth something of an oxymoron, for a reduction in picks, though it might improve the yardage produced, will surely impair the durability of utility cloth, with the result that more cloth will inevitably be consumed over a period; and after taking all these pains, we shall end up by being where we were with additional frustrations. Moreover, the increased yardage will also entail the production of more warp yarn by the mills. It is said that the mills might be able to produce the extra warp yarn required, but this would definitely mean a reduction in the quantity of surplus yarn made available to the Provincial Governments under a recent order. Suitable modifications in the yarn distribution scheme will, therefore, be necessary. Nor can provincial governments hereafter insist upon the supply of particular counts of yarn as under the rationalisation scheme, the mills have to adjust their productions in such a way that they spin reasonably near to the average count on which their equipment is balanced, so that delays in changing may be avoided. These, to mention only a few, are some of the consequences flowing from the adoption of the standardisation scheme in addition to those of a purely technical nature concerning the manufacturing side.

An aspect which is of vital importance to the industry concerns the import policy of the Government. Under the present scheme, the mills can put only 10% of their productive capacity to the manufacture of finer varieties which they have been making all along and which has enabled the industry to stand up to competition from imports. The standardisation scheme involves a sacrifice on the part of the industry and it is with not a little misgiving that the industry has agreed to put aside the production of fine cloths. It is entitled to a quid pro quo from the Government, that imports of cloth of varieties whose manufacture has been discarded by the mills will not be permitted hereafter. So far, there has been no such affirmation of policy from the authorities, to our knowledge, though Sir Akbar Hydari was reported to have given a verbal assurance to that effect early in April. Since then, the press has carried many reports about large quantities of piecegoods being likely to be imported from abroad; and though world cloth shortage seems an undeniable fact, we in India can never entirely divest ourselves of the fear of large-scale dumping. It is therefore imperative that the policy should be enunciated beyond doubt and the Indian industry suitably reassured. The present doubt and confusion on this question is undesirable from every point of view, else the standardization scheme will tend to be regarded as the thin end of the wedge of the foreign producer, and nothing can be more fatal to the success of the scheme than any such lingering doubts regarding bona fides.

For our part, we welcome standardisation as a move in the right direction alike from the point of view of present exigencies of cloth shortage and of the immediate future of the industry. We shall develop this idea at a little length. Utility cloth is in the first place, a proper successor to standard cloth. In fact, the Government of India conceived it well in 1943 though their ideas of its precise value were a little blurred. The mistake they made was in pitching upon a quality which was not only too coarse in itself but took little note of the change in the taste and preference of the people brought about by higher money incomes. When Government first placed an order with the mills for 1000 million yards of standard cloth, the mills rightly pointed out that to make the whole lot of one quality, and a very poor one at that would be a mistake. The mills had suggested a slight diversification of types, but in the atmosphere of distrust which then prevailed, the suggestion was not acted upon. But the mistake has come home to roost since a good deal of standard cloth is said to be remaining undisposed of; and the Industry Committee of the Textile Board has often urged a reduction in the output of standard cloth. Unfortunately, standard cloth was regarded merely as an interlude—the Government regarding it as a sop to the people to mollify them and the industry grudgingly taking it up on account of the pressure brought to bear on it. Nobody really thought then in terms of giving the country a cloth it most wants and in the requisite quantities. It took a whole year (1944) of unparallelled misery and a lot of shouting in the country for both the Government and the industry to realise that a concentrated attack on the production of a few varieties was the best way to relieve scarcity and that, in short, the standard cloth experiment must be projected in a more universal and flexible form. Hence was born 'Utility cloth' which received its baptism on the first June.

Utility cloth is, however, something more than an experiment in austeriy, something else than a merely brilliant improvisation to meet a passing need. We should like to believe that the mills will take to standardisation kindly, with zest and in an attitude of lively anticipation of he shape of things to come. For, if the post-war planning schemes result in a sizeable increase in mass purchasing power, the very size of the domestic market, which is the sheet anchor of the textile industry, will compel the mills to consider the aspect of mass production with becoming gravity. In that event, a complete reorientation of production policy might well be necessary, with possibly a greater accept on efficiency and lower costs of production. In that, American industry has a lot to teach the rest of the world, including Lancashire. As the much-discussed Platt Report revealed, Lancashire is miles behind American industry in all respects. The superiority of the latter is attributed to the unremitting emphasis on standardisation which is applied to the plant, the worker and the product The mills over there concentrate on mass production of a few varieties of yarn and cloth, and over a number of years stick to them, thereby establishing effective cost and quality controls. In Britain, standardization was absent and frequent changes in quality and style often led to loss of production and complications in internal costing and organization. So set in the decadence of the British Textile industry. Today, it is arguable that our mills, like Lancashire, are making too many kinds of cloths which, in the order of things, must tend towards a lower all round efficiency and output. Our mills must so plan for the future that they would be ready to face up to any situation that may arise, whether it is a demand on a mass scale for cheap cloths or for specialised styles. The point is that standardization has immense relevance to the Indian context and it may well be worth the while of our textile industry to give a thought or two to it..

The fight for volume is the main feature of modern American industry which has made such a success of standardisation. As the 'Economist' has observed, "Large output with small margins is felt to be a more secure and more defensible basis for high profits than high margins on a small output." That dictum is of great applicability to the Indian textile situation as it is today and as it will be tomorrow. It would be no hyperbole to say that the future of the industry is bound up with the success it achieves in mass production. The process by which mass production has succeeded in its objectives is vividly outlined by Lewis C. Ord in his book entitled the "SECRETS OF INDUSTRY". He says:

> Even more important to the success of mass production than great volume is lack of variety. American firms did not achieve that great output of a single product without change of design or of type which has been the foundation of their greatest success merely by realizing its value and desirability. Their customers wanted variety. They disliked the obvious limitations of standardization. They would only drop their insistence on variety at a price. *It was only by reducing the price of the standardised articles so far below the price of variety that customers were won over.*

The development of mass production will, to a great extent, be helped by the existence of a large and fairly well protected home market. In our view, our mills have all along been imposing upon the public a degree of variety that is both uneconomical and unsatisfactory in relation to the genuine customer's wish. It is high time that they began to think in terms of effecting savings in the amount of both the productive labour required for a given output and unproductive labour. Standardization need not limit unduly the consumer's choice. The technological difficulties cannot be underrated but the present experiment should be the beginning of preparation for the problems of tomorrow. In that spirit, we trust, rationalisation and standardization will be striven for. They have an importance that transcends the present phase.

The War and Indian Rural Economy

(By our Staff Correspondent on tour)

In my last article I pointed out that the majority of the ryots who could afford a surplus have been showing themselves eager to pay off their debts. There are two limiting factors to this. It will be recalled that the war came at a time when the Debt Relief legislation all over India had already initiated a system of instalment repayment of debts which had made the ryots' position considerably easier. This factor also accounts in part for the progressive shrinkage in the number and volume of mortgage loans since the war. Even in the repayment of debts, it is not entirely from surpluses earned from the sale of produce but by the disposal of the part of the debtors' permanent assets (mostly land) that the debts are cleared. As land values have gone up far out of all proportion to the price of agricultural produce, it is natural that many find themselves tempted to sell part of their property and to release the rest from mortgage. Such transactions are frequently come across in Mysore, Madras and Travancore, particularly among the smaller land-owners

It should also be noted that a very large section of the ryots still continue to borrow and the investigations conducted by the Central Land Mortgage Bank in this respect bear clear testimony to this. The Chairman of the Bank in his annual address to the Bank remarks "it was expressed in some quarters that the rise of prices for agricultural commodities due to abnormal conditions now existing has improved the economic condition of the ryots and that they have been able to reduce their indebtedness considerably without recourse to further borrowing. But the average ryots whom I met loudly complained that the rise in the price of agricultural commodities did not improve their condition at all, as they did not grow much above their needs in their limited and small holdings and that with the enormous increase in the prices of articles which they have to purchase, their condition is becoming worse. Such ryots with lands enough to maintain their families readily admitted that the rich agriculturists who could grow more than their ordinary requirements had really become more prosperous."

With a view to test the two versions given to me, I called for statistics relating to the number of mortgage documents registered and the total amount borrowed on these documents from the Sub-Registry offices of some 24 taluks from which no loan applications were received either in the Bank or in the Primary Societies (who first receive, and then forward, the applications to the Bank). The statistics received from 19 of such offices for the last three years are as below:

Year.	No. of mortgages.	Amount involved
1941-42	13.307	Rs. 25.27.667
1942-43	15.688	Rs. 30.64 295
1943-44	20 166	Rs 44.51.353

The figures for sale transactions in landed property for these 19 taluks are also given below:

Year	No. of transactions	Amount
1941-42	25.036	Rs. 72,55,390
1942-43	30.332	Rs. 1,32.59.807
1943-44	31,771	Rs. 1,00,93,744

These figures show that the indebtedness of large sections of the ryots in the area investigated and probably in the whole of Mysore is on the increase. From Madras and Travancore, however, one gathers a different impression Enquiries in more than one sub-registry office in Travancore reveal that, while sale deeds have increased since the war, mortgage deeds which were uniformly heavy before the war, are now few and far between. The volume of remittances from those in war service seems to be comparatively heavier in Travancore than in Mysore and generally speaking, the individual paddy and cocoanut holding in Travancore is much smaller, and consequently more uneconomical than the bulk of Mysore holdings. The extra inducements to part with land are therefore greater in the case of the former, where there is also a very large section of small businessmen-cum-agriculturists who have acquired very heavy profits since the war and are keen on putting all these on land, in the absence of equally safe alternative investment. Whatever might be the differences in the economic background, the Travancore ryot seems to be wiser in that he decides to dispose of his property at a time of big prices rather than borrow or mortgage to face the obligation of repaying under conditions much less favourable

The most remarkable feature about land values, of which again some of the most quixotic examples are witnessed in Travancore, is the utter lack of proportion between the price of land and the price of its produce. And one searches in vain even to discover a general level of land prices. To cite an example, an acre of cocoanut garden in a Travancore village which could fetch Rs. 2,000 pre-war was sold for Rs. 4,000, at a time when the price of cocoanut moved up from Rs. 3 per 100 to Rs. 9. The price of land has not kept pace with the price of the produce. Almost simultaneously, a neighbouring plot of the same yield sold for Rs. 10,000 per acre. Such wide disparities in price do not lend themselves to rational explanation. The vast and swelling stream of cash surpluses widely distributed among the community and springing from war profits, service remittances and landholders' gains, refuses to be canalised by savings campaigns. Finding no other outlet for investment, it rushes inevitably and pushes its price to foolish and unimaginable heights These prices, however, bear a close relationship to the Black market price of the respective produce—though even here one should amend the phrase "Black market price" into Black market Prices, because a price, that is determined solely by the personal sympathy and consideration the seller bears to the buyer, is bound to be more capricious and to differ with different transactions.

Incidentally, it is one of the ugliest consequences of this war that every villager, be he agriculturist or a petty shopkeeper, has imbibed the spirit of habitual fraud which the term "Black market" symbolises; and this spirit is visible in every type of dealing and the conduct of every section of the people from the milkman, who lavishly charges for milk and lavishly adulterates it, to the Booking clerk in the Railway Station who connives with doubtful characters to realise a small commission on tickets sold to passengers.. The Black market attitude will be one of the most hideous legacies of the war and is not likely to leave us soon.

The question how far the increase in cash income has resulted in the improvement in the standards of life of the masses may also yield some interesting answers. It is here that the increased status and emoluments of labour becomes most conspicuous. The labouring class in India seems to be economically the greatest beneficiaries of the war, especially agricultural labour.. It is from this class that recruitment to the army and quasi-military service has largely taken place; and the increased demands for urban labour consequent on the war have also drained the rural areas of thousands. This has resulted in making labour scarce and self conscious. It is a desirable development, but one is afraid that a monetary value has been placed on labour which it would be difficult to maintain after the war and whose disturbance at the same time may not be so easy. For the agriculturist it has also created a veritable problem. The ryot does not get enough labour for his purpose. Secondly, it is the good horses that have gone away leaving the lame and sickly behind; and it is these that claim a wage that the average ryot can ill afford. And even at the highest rate, the ryot cannot get the number of men he needs. At any rate the remnant of the labour class left in the villages is getting wages which have not only conspicuously improved its standard of life but have enabled it to mix as social equals with erstwhile superior sections. A government employer with Rs. 25 and Rs. 7 dearness allowance finds it hard to put on the same airs as before to a manual labourer who now receives anything from Rs. 1-8 to Rs. 2 per day. The cost of living index for essential commodities has been fluctuating around 200 and the average worker has a considerable cash surplus after covering this rise; the rise in agricultural wages in South India is roughly three to four hundred per cent and it does not appear to be much less in other parts of India. In Madras and Mysore, I find, there has been a marked change in the diet of the working class in the direction of an increased consumption of coffee and tea. The compulsory purchase of sugar according to rationing rules in Travancore has given a fillip to the use of these drinks; and it is even found that a large number of persons—not working-class who used to take rice thrice a day are now living on one rice meal and twice coffee. This section is largely drawn from the small income groups who are unable to maintain their pre-war standard of diet and have thus gone on partially liquid diet! Coming to the working class again, more than any other single group, they account for the crowds in the theatres, the restaurants and the public conveyances, frequently to the chagrin and embarrasment of those who hold themselves socially superior. The Travel Less Campaign has its worst enemies from this section and all pre-war schemes for pilgrimages, courtesy visits to distant relations, etc., are being fulfilled in wartime and the discomforts of travel and the appeals of the authorities have

scarcely any effect as deterrants. If an investigation were to be undertaken into the purposes of railway journeys, it is very likely that the results will show 25 per cent of passengers in the "non-essential" list.

I also made some casual enquiries about the growth of the drinking habit since the war. The Budget figures of almost all Provinces and States show an alarming rise in Excise revenue. Liquor shops that used to go in auction for Rs. 500 or Rs. 600 are now fetching Rs. 4,000 to Rs. 5,000. But these figures themselves need not imply that the drink habit has also expanded, because the price of toddy and arrack has also shot up to dizzy heights; and the quantitatively civilian consumption of liquor has not registered a rise; for, if at all, there was a change in the quantity of liquor produced, it should be on the downward direction. Still the testimony of liquor shop owners and the devotees of bacclus themselves is that the number of the latter has gained at least sporadic additions. In spite of the forbidding rise in liquor prices, enquiries in several villages in South India reveal that drink has gained fresh adherents in all those places. The explanation lies in the fact that, though more people drink, each person drinks much less of genuine liquor and much more of adulterants and water than before the war—some solace for Prohibitionists!

SPECIAL ARTICLE :

Rail Intervention in Road Transport-II

Danger of Hasty Planning

By Prof. L. A. Natesan

The first part of the article, which appeared last week referred to the importance of a correct appraisal of the real implications of State planning in this country and the limitations of the present official methods of dealing with post war problems. Illustrating these by an examination of the road transport policy proposed to be prosecuted by Government, the propriety of the principle of the financial contract of road transport undertakings through rail investment was questioned.

The motive behind all this haste and anxiety as regards road motor transport is supplied by the real concern on the part of the railways to stave off the inevitable repercussions of postwar road competition on railway finances. The large number of vehicles and personnel expected to be released from the military departments at the end of the war combined with the projected road developments do indeed raise a spectre of competition never previously dreamt of by the railways. The demobilisation plans need to be carefully worked out with a view to resettling men returning from the defence services and using the vehicles to the best advantage of the country. Railways have indeed to prepare to meet this situation. But the policy that is now beginning to manifest itself is open to criticism on grounds of both procedure and policy. The tactics adopted deserve to be studied if only to know how the official mind works and how it is likely to tackle other problems. The idea of railways participating in road transport undertakings was not implied in last year's budget proposals. That appeared to be an afterthought. There is intrinsically nothing wrong about after-thoughts: some of them indeed prove an undoubted gain. The usual procedure in the case of a new proposal involving expenditure is to submit the scheme with a full financial justification to the Railway Standing Finance Committee for their approval. It is only after this that railways may take steps to implement it even if funds may have been voted by the Legislature. The importance of this is even greater when the proposal involves any question of policy.

The road transport experiment on railways appears to have gone through no such formality. The first adventure in rail participation in road transport was ostensibly sponsored on a State railway as a wartime measure to relieve congestion in certain sections. The experiment appears to have ended in smoke and the marriage of the railway administration and the private company is reported to have broken down on temperamental grounds. Official references even before budget time strongly favoured the idea of railways acquiring a considerable interest in road transport undertakings, but these could hardly be treated seriously as not only was public opinion on the new policy not ascertained, but the Legislature and its Committees as well have had no opportunity as yet of expressing their views. There was still an uncertainty as to whether this rail activity in road transport was a war transport measure or a new item of railway enterprise. Meanwhile, the Railway Budget estimates revealed an additional expenditure of Rs. 34½ lakhs for last year and Rs. 82 lakhs for the current year on road services without any explanation or justification. The watchfulness of the Railway Standing Finance Committee is testified by their approving the entire grant without a single comment. It was only in the Assembly debates that the item was questioned and rejected, necessitating a parley with the leaders of the principal groups and a reintroduction of a supplementary demand. There was hardly any dissent to it on the ground of relieving congestion. But along with this was also coupled the policy of road-rail coordination and from the acceptance of the demand, Government, according to the War Transport Member, "would assume the general agreement of the Legislature to it". The relief to congestion and the post-war transport policy are really two separate questions and should have been treated as such; and curiously enough a decision on the latter is supposed to be inferred from that on the former.

If the policy is sound, there is no point in making much ado about the parliamentary tactics by which it was sought to be carried. But what is the policy? The main features were restated by Sir Edward Benthall in his speech introducing the demand. The Central Government will sponsor the formation of road transport companies in which railways, Provincial Governments and road operators will each have a financial interest. Repudiating any intention of railways securing a "dominating interest", Sir Edward explained that "all that they seek is an interest sufficiently substantial to make it worth their while co-operating financially". That, of course, does not exclude a major interest in a particular company "where the Provincial Government is in agreement and/or sufficient capital is not forthcoming from the public." He made it quite clear that railways did not seek to dominate road transport policy in any way, that joint companies would come under the Provincial Transport Authority under the Motor Vehicles Act, and that an agreement would be sought with the provinces on a code of principles to govern the operation of road services. The sentiments underlying these assurances are impeccable. But they do not add up to the requirements of a comprehensive and coherent scheme calculated to evolve a national transportation system designed to meet the prospective demands of the country. Let us examine the case presented here more closely.

The term "an interest sufficiently substantial to make it worth their (railways') while co-operating financially" eludes definition. Again, recent events have shown that the co-operation has been of the railways' own seeking. Neither the Provincial Governments nor the road transport agencies appear to have asked for it. Nor do they seem to be troubled about the financing of road transport development. If there was really any request for financial assistance, the plea of the Central Government to lay down conditions is understandable. But there has been, so far as we are aware, nothing more than a unilateral urge for the Central Government's co-operation and investment on road transport.

Secondly, an investment calls for assurance of a proper return thereon. The financial justification of this species of investment does not seem to be seriously regarded as is clear from the fact that investment of State funds is contemplated even where capital from the public is not forthcoming. There can conceivably be only one reason for this, namely, doubts as to the successful working of the particular service. Is it contemplated that railways and the Provincial Governments will be induced to put out money on doubtful schemes?

Further, the acquisition of a financial interest in private business generally raises suspicions of covert control. The State may claim to be exempt from the motives which induce private businesses to resort to this device. But the object here also is to secure control over policy more than participation in profits. The disclaimer of dominating road policy does not exclude some attempt to influence it. What character that influence may assume it is difficult to state now. That it cannot be positive is certain: the railways' contribution is likely to be negative, that is, it will tend to concentrate more on the protection of their interests than on promotional activities in road transport. How, again, are these projected companies to be operated? The alternatives are to leave the direct management with the private element or with the entire board repre-

OUR LONDON LETTER:

General Election Prospects

Stock Markets React Adversely

London, May 25

War and transition have been subordinated in Britain to the general election and the attendant electoral campaign which is expected to be one of the most heated in years. It took so sensational a story as the Himmler suicide to displace election news in the London newspapers.

The stock exchange has been heavy since the Churchill-Attlee correspondence made a general election this summer a certainty. The turn taken by markets this week is an example of what usually happens when neither investors nor speculators can see way, in the opinion of market experts. It is about two months between now and July 26 or 27, when the election results will be announced, and that is a long time if it means that uncertainty will prevail in The City until the victory has been proclaimed. It is more than likely, however, that a number of people will have made up their minds before then; that should start a trend of security prices which may well be upward as downward. For the time being there is a feeling of helplessness because the material for forming judgment on the election issue hasn't appeared yet. Since it is the market's duty to discount events in advance traders believe that when the market has made up its mind, it won't be far wrong.

Ordinarily, the outlook of a general election would have produced a strong adverse pressure on sterling, if a free foreign-exchange market had been in full swing. Some of the monied people, playing for safety, would have tried to "insure" themselves against the possibility of a Labour government by transferring some of their liquid resources abroad. Under the gold standard; this would have led to a heavy outflow of gold and a corresponding contraction of credit. Present circumstances rule out this possibility because the almost foolproof exchange control prohibits transfer of capital out of the country. Sterling is pegged solidly, and its exchange rate cannot be affected though it is possible that the quotation of the pound note in neutral countries may ease after its recent rise. It is virtually impossible to hedge against the possibility of a Labour victory through the acquisition of gold or dollars. Theoretically, it would be possible to take some precautions but it would cost a lot of money. For instance, a person could purchase valuable works of art and nick-nacks like that with the idea of circumventing a potential capital levy. But the prices on those articles have sky-rocketed in recent years. It is doubtful that it would be worth a person's bother to invest huge sums in articles marked at exorbitant prices especially in view of (1) the possibility that those prices may be deflated eventually, (2) the absence of any indication that a capital levy is prospective, and (3) the fact there is no certainty that Labour will earn the majority.

A stock broker has put out an interesting summary of factors which, apart from election politics, govern the post—VE outlook. The brochure lists the following points as "knowns": (1) that security prices are on the average at peak 1936 levels, with numerous groups such as cotton textiles far higher; (2) that sterling depreciation will lead to permanent and substantial increase in national money income; (3) that the pent-up demand for goods and services, cheap money and war-time advances in production technique should insure high and prolonged industrial activity; (4) that reductions in taxation will be limited by increased domestic and overseas indebtedness, plus demands for social and national security. The "unknowns" are listed as follows: (1) the duration of the Pacific war and the future World security organization; (2) the political complexion of the government which will introduce the next budget; (3) the proportion of future industrial profits which will go to the equity holder as residuary beneficiary in holdings; (4) the fate of certain industries, such as railways, electricity and coal, which may be the subject of political pressure; (5) the possible development of anti-cartel and anti-big business propaganda which may affect some companies. The brochure warns against speculative investing at the present time but thinks that the serious permanent investor may do some good for himself by considering that he may lose less by buying now than waiting and recommends that the prospective investor concentrate on market leaders which seem to have special possibilities from taxation reductions.

Growing concern over the slumping coal production is reflected in company reports. Lord McGowan, in his "victory report" on I.C.I.'s war-time performance, said that the transition from war to peace production "will involve little delay as far as I.C.I. is concerned." He said the chief raw materials of the chemical industry are coal, air and water. He explained that coal is the most important of the three, adding, "I need not remind you that coal is the one product about which at the present moment there is most uncertainty as regards both supply and price. Sir John Craig, chairman of Colvilles, Ltd., the great steel-making concern, emphasized in his report on the company's work that the prospects of the coal business are uncertain. He pointed out that no dividends had been realized from coal for several years.

A firm tone of optimism regarding the future is prevalent despite the factors of uncertainty. However, the question of export is one that is being eyed with a certain amount of apprehension because of the impossibility of drafting a definite programme. Craig said, "The question of export involves so many national problems that there is nothing definite that can be said of it until some information is obtained regarding international settlements as to the basis of exchange, both on a money basis and the interchange of goods. However, we feel that, if the same spirit is applied to peace as was applied to war, the problem should be capable of solution."

(Continued from page 763)

sentative of the participating interests. The experiment of the State as a partner in private business has, as has been so clearly demonstrated in our Company-managed Railways, never proved a satisfactory arrangement and it is indeed surprising that it is again being attempted in another field of transport.

In all these discussions the user of transport has been left out of count altogether. The travelling public and the trader would seem to exist after all only to provide traffic to the rail and road transport undertakings and need hardly be taken into official confidence in the determination of policy. Popular Governments in the provinces, now under Section 93, might have given them a voice, but with these out of the picture, circumstances appear to be favourable for carrying out measures without giving weight to their case. It is clear that the problem of post-war road transport has been viewed through railway spectacles. The framers of the present policy have shown an imperfect appreciation of the fact that railways and road transport form part of the larger question of national transportation and should have been discussed as such without being obsessed by "*too much*" concern for the future of the railways.

The surprise is that the leaders of the principal parties agreed so readily to the implications of this policy. They appeared so much weighed down by the fear of outside control, domination of capitalist interests, threat of monopoly, the future of the present operators, resort to managing agents, and adverse effects on bullock carts, that an assurance on these points by Government sufficed to break down all opposition. But even while the assurance was being given, the possibility that some commitments might have been entered into in certain provinces was not ruled out. The danger now is that the vote of the Assembly is likely to be capitalised by railways and the plea that the proposed policy has the support of the main parties in the Central Legislature may be exploited by them in their negotiations with the Provincial Governments. The appointment of Road Transport officers on railways, even without the specific approval of the Railway Standing Finance Committee, savours too much of a **fait accompli**. It is time the public had full details of the rail activity in this direction.

Editorial Notes

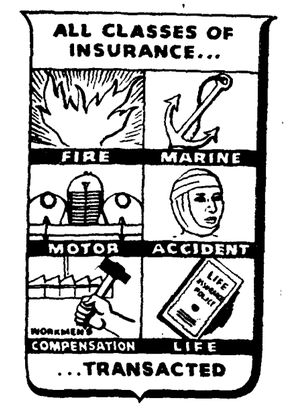
Telegrams by Post?

Complaints against delays in the despatch of inland telegrams have been a common feature of the war period. In our direct experience, telegrams sent by persons from Bombay or Madras to Calcutta intimating their arrival here have been received hours after they have reached home. And the same thing has happened to people proceeding from Calcutta to other distant cities. One is, no doubt, prepared to make an allowance for the load that the lines have to bear and try to make up for it by making the message an express telegram or by handing it considerably earlier, or both. But all these precautions can be of no avail, if it is true that the telegraph offices are allowed, when there is no chance of the messages being wired, to send them by ordinary post, to be copied out in telegraph forms at the other end and handed to the addresses as if they came on the wires. Such a course of action would amount to a fraud on the public, even if some good reasons can be adduced for not publicising the state of traffic and frankly declining to receive telegrams. In wartimes, there is hardly a hardship which the public will not bear without undue grumbling; and if so important a branch of Government as the Telegraphs Department cannot perform the service which is expected of it and which it is paid for at twice the usual rate, it is far better to tell the public so, than to raise expectations which have no chance of being fulfilled. The troubles of a new comer to a city or a party of ladies who expect to be escorted home in response to a timely despatch of a telegram but who find they have to shift for themselves, are easily imagined the more easily because they are now an increasingly common occurrence. It is time that the authorities told the public where they stand and put right abuses in whatever form they may be present.

Gold Production and Reserves.

To those interested in the short-term and long-term trends of the bullion market and for the speculators who are nosing for more information on the production and distribution of the yellow metal the latest Monthly Bulletin of the League of Nations' Economic and Financial Department at Princeton would be of great interest. The future of the international gold standard depends upon the constitution and the popularity of the International Monetary Fund and the World Bank which would change the implications of the production as well as the distribution of gold. It is nevertheless essential to understand the vital changes brought about by the war with regard to the production and accumulation of reserves. The Monthly Bulletin reveals that the reserves of the U. S. declined—by $2,000 million during the past three years. Part of the U. S. gold went to swell the reserves of the Latin American countries and the European neutrals like Switzerland, Sweden Turkey, and Spain and the Union of South Africa. It is also interesting to note that the net increase of approximately $700 million in recorded gold reserves absorbed only about ¼ of the estimated gold production outside Soviet Russia during the period from 1941 to September, 1944. Most of the gold produced during the war has thus accrued to unrecorded reserves. The consumption of gold for industrial purposes has been quite negligible.

With regard to production it is to be remembered that Russia does not place her cards before others and the gold production of the rest of the world increased from $1,044 million in 1937 to $1,290 million in 1940 and the total fell to $950 million in 1943. This declining tendency continued in 1944 and there are no indications to show that this tendency would shortly be stopped. The gold producing countries have all recorded declines during the war. The South African production came down from $504 million in 1941 to $448 million in 1943. Canadian production fell down from $187 million to $128 million while the U. S. recorded a reduction from $166 million to $48 million in the same period. Australia witnessed a decline from 52 to 26 million and the Gold Coast from 31 to 20 million U. S. dollars.



Before America entered the war the tendency was for greater and greater accumulation of gold in that country, but since 1941, the situation changed. Between December 1938 to December 1941, the total recorded gold reserves in the world rose from 25,200 to nearly 29,900 million U. S. dollars while the reserves of the U. S. alone increased by $8,225 million and the reserves of other countries decreased by $3,525 million. During the period from December 1941 to September 1944, the U. S. experienced a decline of 9 per cent and the Netherlands showed a decline of 13 per cent, but most other countries swelled up their stocks. The South American countries made remarkable accumulations. Though even to-day the U. S. claims a huge block of the world's gold reserves the changes which happened during the past three years are not without direct reference to the post-war reconstruction ambitions of several countries that look to the aid of the American capital to lay the foundations of their postwar industrial progress.

Mysore Finances

The statement by the Dewan of Mysore on the State finances for the year 1944-45 serves to give a clear picture of the financial prosperity of the State during the five years of war. Revenues have swelled up to respectable amounts, innovations in the tax system introduced, post-war development fund accumulated and, above all, the present has not been neglected on the pretext of preparing for a post-war mill. From about Rs. 4 crores before the war the revenues of this progressive State have come up to Rs. 9.2 crores at present and, before one year is out, the ten-crore mark will be reached.

The accounts for 1943-44 closed with a surplus of Rs. 2.8 lakhs, the total receipts for the year being Rs. 857.29 lakhs and the expenditure Rs. 854.49 lakhs. Revised Estimates or 1944-45 revealed satisfactory trends and the increase under Forests and Income-tax has been noteworthy, though the revised figures of net revenue from Hydro-electric Works recorded decrease owing to the recent accident at Sivasamudram. The revenue from Gold Duty has gone above the original estimate of Rs. 100 lakhs by Rs. 10 lakhs and *ex gratia* payment of Rs. 13.33 lakhs has been granted for the Mysore, Ooregaum and Nundydroog mines to enable them to carry on with development work. On the side of Expenditure also there has been a marked increase. An actual increase of Rs. 131 lakhs over the Budget Estimates of Rs. 816 lakhs has been reported. The budget position for 1945-46 is stated to be as follows: Total Revenue Rs. 926.7 lakhs, Expenditure Rs. 918.2 lakhs, Revenue Surplus Rs. 8.5 lakhs.

That the nation building services have not been starved is clear from the statement of the Dewan. He pointed out with pride, "Between 1939-40 and 1945-46 the expenditure on Education has risen from Rs. 54 lakhs to Rs. 111 lakhs, on Medical Relief from Rs. 16 lakhs to Rs. 29 lakhs, on Public Health from

Four of the many LUCKY PRIZE BOND WINNERS

Be one of them next time!

DELHI POSTMAN WINS Rs. 250

"For a man in my position, it was indeed a godsend to win a prize of Rs. 250. I feel a new man with this money," says Syed Shamsuzzman of Delhi who holds a Rs. 10 Bond and was one of the winners in the January 1945 Draw. "I believe Prize Bonds are the finest investment," he adds.

BOMBAY WINNER OF Rs. 250 HOPES TO WIN AGAIN

Mr. George C. Gracious of Bombay won a prize of Rs. 250 on a Rs. 10 Bond. "I am more than satisfied," he says, "and who knows but I may win again with eight more draws!" Mr. Gracious has invested half of his winnings in more Prize Bonds.

Rs. 2,500 WINNER "ASTONISHED" "I was happy as well as astonished when I read out my number," says Mr. Satya Paul Gupta of Jagraon, Punjab.

FAMILY MAN GETS UNEXPECTED Rs. 500

"I was not expecting or dreaming that good fortune would come my way," says Mr. Dina Nath Sharma of Sialkot. "To all I would say invest in Prize Bonds"

PRIZE BONDS are of two denominations—Rs. 100 and Rs. 10. For each series of one lakh pieces of Rs. 100, 1st Prize Rs. 50,000, two 2nd Prizes of Rs. 20,000 each, two 3rd Prizes of Rs. 5,000 each. For each series of one lakh pieces of Rs. 10, 1st Prize Rs. 2,500, two 2nd Prizes of Rs. 1,250 each, five 3rd Prizes of Rs. 500 each, ten 4th Prizes of Rs. 250 each. Prizes drawn half-yearly until January 1949 when all bonds will be redeemed in full Each Bond has eight more chances of winning, the same Bond can win several times over. No Income Tax, Super Tax, Excess Profits Tax and Corporation Tax payable on Prize money.

BUY PRIZE BONDS

Rs. 4,00,000 PRIZE MONEY LAST DRAW!

NEXT DRAW JULY 1945

You can buy Prize Bonds from any Branch of the Reserve Bank of India or the Imperial Bank, and from Government Treasuries and Sub-Treasuries everywhere. There is no limit to the quantity purchasable

Rs. 2 lakhs to Rs. 8 lakhs, on Veterinary services from Rs. 4 lakhs to Rs. 8 lakhs, and on Sericulture from Rs. 1 lakh to Rs. 4 lakhs."

Even allowing due margin for the increase in the prices of articles, it can be safely asserted that very few of the Provinces can claim a record equal to Mysore's in this respect. The Administration has handled the food front with skill and sympathy for the poor and a five-year programme comprising 28 works of irrigation has also been drawn up. The industrial advancement of Mysore during the war years is well known. Mysore has ambitious plans for the future and it is noteworthy that Mysore is ready to co-operate with British India in the difficult task of evolving a comprehensive economic development plan for the whole country considered as one unit.

The special feature of this year's budget is the levying of the E.P.T. Mysore has reaped the benefits of not levying the E.P.T. for the past few years and has now come forward to fall in line with British India to achieve two objectives at the same time, viz., pleasing the Government of India who, presumably, have brought pressure on the State to fall in line with the British India in the matter of tax reform and creaming more funds for post war purposes.

A National Patents Trust

Few research institutions in this country have the necessary personnel to advise them on the commercial possibilities of inventions. Many inventors have not the means, convenience or experience to obtain proper protection for their inventions or to contact financiers for exploiting them commercially or to settle terms fair to both parties. Many research workers in academic and other institutions have been indifferent to patents so far. The result will be that the invention would be lost to the public notwithstanding the anxiety of the inventors to exploit inventions. The result of research will remain unfulfilled to a large extent if maximum utilization of patents in the best interests of the country is not made. With the recent increase in research supported by public funds and the resultant increase in patents the necessity of a National Patents Trust which the Government intend to establish, cannot be over-emphasised. The Trust should be a broad-based central organisation, unattached to any particular research institution. It should be empowered to deal with inventions or patents dedicated to the public, even though the inventions did not originate from any recognised research institution.

The proposed N.P.T. will be similar in many respects to the Research Corporation Inc. America. This institution acts for many universities and other bodies, including the Massachusetts Institute of Technology, has rendered invaluable service to the country and is willing to co-operate with similar bodies in other countries.

The constitution and finance of the National Patents Trust are not known in detail. The Trust would include representatives of Government Departments controlling the activities of research institutions, the Economic Adviser, the Industrial Adviser, the Controller of Patents and Designs, Chief Controller of Purchase, Director of Scientific and Industrial Research and representatives of learned and commercial bodies. A smaller executive body would be needed to conduct the detailed work of the trust and two sub-committees one for valuation and the other for negotiation would be constituted. In the initial stages capital and running expenses for the first five years would have to be provided from the Central Revenues. The return of the capital should be made the first charge on the income of the Trust.

The Trust in due course should be able to pay its own way and be independent of public funds.

It is no exaggeration to say that such an institution when established would not be established a moment soon. It is hoped as the Journal of Scientific and Industrial Research points out that the scheme would receive the attention of all-interested in the industrial future of the country.

Indian States and British Plans:

Suspicion is gaining ground that attempts are being made in certain circles in Britain to make use of the present constitutional deadlock in India for accelerating penetration of British capital in India. Indian capitalists have now grown stronger than ever before and on the basis of the co-operation given for the successful prosecution of the war effort the industrialists have built a strong case for Indianisation and tariff protection. Political agitation has not in anyway subsided and the prospects of America coming to the aid of this country is another factor influencing certain sections of British industrialists. The policy of divide and rule can now be applied by cultivating the Indian States for convenient industrial co-operation. It is true that some of the States are under an apprehension that all India planning may eventually lead to pressure from the British India; but none of the States have expressed unwillingness to fall in line with British India for purposes of common economic progress. Attempts at driving a wedge between the States and British India are not a new game and the recent instance is a statement by Sir William Barter, former resident in Baroda, that "The States generally will look to Britain for supply of the equipment and technique they will need in carrying out their industrial programmes and they would be reluctant to conclude with British India an agreement that might in any way impede British co-operation." It is also reported that Sir William has outlined a £300 million development programme for the S. Indian States. It is clear that such schemes for N. Indian States would follow. The motive is clear. The treaty obligations are sought to be used for establishing British vested interests in the States before any political settlement is reached. Sir Ardeshir Dalal has made it plain that the job of planning for India is proceeding on the assumption that the whole of this coun-

Available at all leading stores. If you have any difficulty in obtaining TIMS Products, write to us direct.

BOOKS BUILD NATIONS

Books are the channels through which the knowledge gained by a country's scientists and philosophers passes into general currency. Book-production of high standards in India is enabling Indian thought and discoveries to take their place in the world—abroad as well as at home.

Titaghur provides paper for text and illustrations and also has a large range of cover-papers with which publishers in India can produce reference and text-books or children's books in brilliant colours worthy of permanent places in any library. Pamphlets and novels, of more ephemeral value, are also printed on Titaghur paper to satisfy the general reader in India's fourteen printed languages.

OTHER TITAGHUR PRODUCTS

Papers and boards for writing, and typing, duplicating, packing, box-making and labelling.

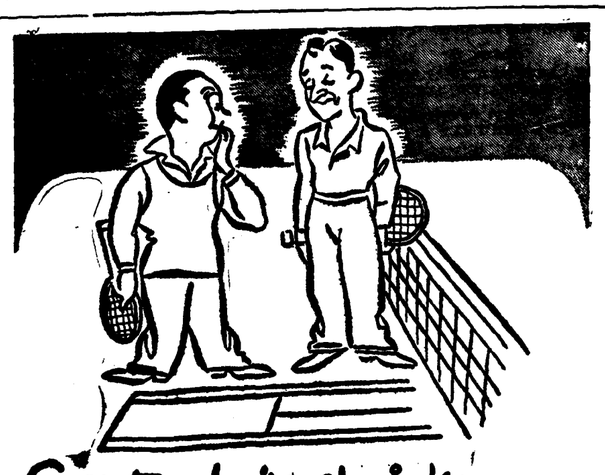
try is treated as one unit. The recent debates in the Assembly on the question of Commercial Safeguards should also be a definite reply to those who think with Sir William Barter. Nationalist India will not tolerate the surreptitious penetration of British Capital in the least troublesome and least protected areas of the Indian States with the ulterior motive of nullifying the benefits of a policy of tariff protection that may be initiated by the Government of India in the years to come. Sir William may not be very influential in those circles which to-day govern the India Policy but his statement serves to warn the Indian industrialists and the Planning Department that they should beware of the British diplomacy by-passing the sincere efforts of the Government of India for evolving an all round development plan for the welfare of the Indian masses.

British Labour and India



The Times' anxiety for a decision on India within such a short time is perhaps intended to counter a possible Labour move to exploit the Indian question for election purposes. For, nothing has happened now, which had not happened in the last five years when Churchill was head of a coalition Government, to force him to settle the Indian question. This question apart, importance has been attached to Bevin's speech more than it deserves for if history is any guide, Labour's policy towards India in the past has been not much different from that of any other party. Laski's words that Bevin's remarks on India are not to be taken as an authoritative statement of the views of the Labour Party executive, do not encourage entertaining high hopes. C. R. says in tune with his recent expressions of views that "it would be unfair to belittle Mr. Bevin's statement merely because such language has been used before and much has not come out of it." If language is no indication of thought, then what is? Bevin's statement has been, if anything, delightfully vague. Labour, he says, would add to the responsibility of the Government of India year by year which is little better than the preamble to the Government of India Act 1917 which speaks of 'progressive realisation of responsible government. More than that, is the psychological conquest he wants to achieve by closing the India Office and transferring the work to the Dominion Office which would become the Office of Commonwealth Overseas. One cannot do better than quote Bernard Shaw on this point. "That is not going to mean much. It is nothing more than crossing the street. In fact, it means nothing." So what is required is that the India Office should go lock, stock and barrel and all the powers should be transferred to the Government of India. Assuming, if not admitting, the validity of the argument of Sir Maurice Gwyer in his speech to the Indian Council of world affairs, Delhi, the other day, that by the growth of unwritten conventions just as the King of England possesses his powers only in theory so also will the Governor-General in course of time, is it not necessary that the powers of Whitehall be transferred to Delhi, if Labour means to do anything for India?

Electricity-Irrigation Plan for U.P.:

The chances of employing large numbers of demobilised soldiers in works connected with the generation of electricity and expansion of irrigation are very rosy in the U.P. Several important schemes have been hanging fire for some years past, and now the Government have come forward detailing a five-year electricity development and irrigation plan. Among the major works are mentioned the following four projects:—(1) the Nayar Dam (2) the Sarda Canal (3) the Rihand Project and (4) the Tons-Giri Dams. The Nayar Dam in the Dharwal District will impound 1.4 million cubic feet of water in the valley of the river. When complete the scheme will yield a primary power to the extent of 30,000 kw and 70,000 kw of secondary power and 8 lakhs cubic feet of water will be made available for irrigation. The power and storage schemes cost Rs. 10 crores and the irrigation channels are expected to cost another Re. 1 crore. 18,000 acres of rabi crops will be brought under irrigation in this scheme. The Sarda Canal Hydro-electric Electric scheme will have a total generating capacity of 55,200 kw and this scheme, together with the high-tension transmission lines, is expected to cost Rs. 575 lakhs. This would provide power for all the towns and the large villages of 11 districts besides serving the Rampur State. Irrigation facilities will be provided for about 1.2 million acres. The Rihand scheme will generate power to the extent of 1,50,000 kw and the cost comes to Rs. 6 crores. This scheme, if completed, would serve the South Eastern Districts of the U. P. and Bihar, the C. P., Rewa and the Eastern States Agency. The irrigational needs of the Sone canal in Bihar would also be successfully met. The fourth scheme, namely, the Tons-Giri Project, involves the co-operation of the Punjab and U.P. Governments and is still in the process of investigation. Great importance is attached to immediate execution of these four projects because, besides increasing the agricultural potentialities of the province, the works would give profitable employment to about 80,000 demobilised military personnel.

Fisheries in Madras:

Thanks to the severe crisis in the food front the Governments of the provinces, especially the coastal provinces, have learnt the supreme importance of fisheries as the second line of defence. The craze for post war development and the anxiety to do some good to the fishermen communities who heartily co-operated in this war have resulted in greater attention being paid to exploit the resources of the sea. The memorandum on the Administration Report on Fisheries in Madras records creditable progress within a short time of two years. Nine promising shark-fishing grounds have been located, five on the West coast and four on the East. From July 1943 deep sea fishing operations have been conducted for increasing the catches of shark and thus ensure abundant and continuous supply of shark livers to the Government Oil Factory at Calicut. The total quantity of shark oil extracted increased from 3,575 gallons last year to 6,805 for the current year. Over 22 lakhs maunds of fish have been brought to the 108 fish curing yards in the province. The Madras Government have also sanctioned for the manufacture of smoked fish for the civilian population and the army. Inshore fishing will be conducted in two centres at Bhadagara and Tellicherry in order to ensure regular supplies of fish for smoking. A Special Officer has also been appointed for the orderly development of fish manuring industry. Already as a result

of the activities of this Officer the dealers in fish oil, fish manure and fish guano have realised the advantage of converting all surplus fish into guano and fish meal instead of making them into crude manures. The 51 fishery schools on the West Coast have more pupils this year and the number of co-operative societies engaged in the welfare of the fishing communities has increased to 60. Greater exploitation of the fisheries will shortly be taken up by the two Fisheries Development Boards formed during the year and when, the boats and other materials necessary for conducting the fishing experiments are available, it is hoped, Madras will produce adequate quantities of different kinds of fish so that the people would be relieved of the present acute shortage of this vital foodstuff and a shark liver oil industry established. Unless the fisheries are well organised the thousands of people who belong to the fishing community cannot hope to see any improvement in their standard of living.

Rice Mills in Bengal

The presidential address of Mr. Sarat Chandra Sawoo at a recent annual general meeting of the Bengal Rice Mills Association refers to the extent of damage caused to the public for want of a popular policy of procurement dveised in order to subserve the diffffferent interests connected with the production and distribution of rice. Mr. Sawoo criticises the system of procurement through four Chief Agents and the appointment of a Purchasing Board dominated by the Chief Agents from which representatives of the rice milling industry has been excluded. The Chief Agents themselves being competitors in the field should not have been trusted with the job of controlling the lower fry in the same field and there is ample evidence to show the lack of mutual trust and co-operation between the rice mills and the Chief Agents resulted in the procurement of hand-pounded rice of low keeping quality and rice and paddy of bad quality. It is reported, the output of mills had also decreased by 50 percent. While in other provinces the rice mills come directly under the control of government officials, the Chief Agents interfere in Bengal. A plea is entered by Mr. Sawoo that in the matter of procurement of foodgrains the Bengal Government should fall in the line with the other provinces and abolish the system of monopoly procurement through the Chief Agents. The rice mills of Bengal did their best to alleviate the famine conditions but Bengal obviously requires more mills than she has. While this province with 26 million acres under rice can boast of only 475 power-driven mills, Madras, for instance, has only 10 million acres under rice but claims 3000 rice mills. Comparison with other provinces like Bombay, Central Provinces, Sind and the Punjab underlie the same fact.

Another defect which the Bengal Rice Mills Association deplores is the uneven distribution of mills in the province; West Bengal is better provided than East and North Bengal. Burma is now reconquered and the despatches from the Burma front point out that Burma rice will be flowing into the country during 1946. The danger of many mills being closed down is considered real. The urgency for evolving a careful postwar plan for Bengal Mills need not be over-emphasised and successful and harmonious co-operation between the paddy growers, the mills and the Government would be essential.

Want of storage facilities has led to enormous wastage of foodgrains in Bengal during the days of famine and even in normal times India, it is estimated, loses three million tons of foodgrains through damage by rats, insects and moisture. The Bengal Government owes a duty to the public in avoiding this wastage and they must come forward to give all facilities for the storage of rice and paddy in all the agricultural areas. The Association has already evolved a scheme for this purpose. Rice ranks foremost in Indian agriculture and, from the point of view of acreage as well as total value of production, it is as important as jute or tea but yet there are no special representations of the rice mill industry in the legislatures. The Association strongly urges that greater importance should be given to this industry than in the past. We hope that the Government of India and the Bengal Government, who claim to place great importance on the production and satisfactory distribution of foodgrains, would do well to consider the demands of the Association and help this industry in reorganising itself to face the future.

Indians in Ceylon:

The condition of Indians Overseas is a standing reminder of the helplessness of Indians at home. Particularly unenviable

GOVERNMENT OF INDIA
WAR TANSPORT DEPARTMENT
Intending importers of specialised garage equipment and tools, from the United Kingdom, are invited to submit indents, in triplicate, covering their immediate requirements, with an application giving value in pounds sterling of their imports of these materials from the United Kingdom during each of the years 1938, 1939, and 1940. Indents should show the quantity, description, value (F.O.B. and C.I.F.) and weight of each item separately. Applications with indents should be submitted to the Provincial Motor Transport Controller concerned before the 25th June 1945, positively.
NEW DELHI
Dated, the 30th May, 1945.
S. D. GUPTA,
Controller of Motor Transport, (Supply.)

is the lot of the labourers in the estates of Ceylon and other places. The population in the Ceylon estates was 672,196—438,937 workers and 233,259 dependents. Though a statutory minimum wage rate operates in the island, changes made in computation in April '43 resulted in a loss of Rs. 2.3, million to the wage bill. The law provides for the education of workers' children, but the education imparted is of a very low standard. Both Government and estate owners maintained dispensaries but adequate and prompt medical attendance can be assured to the worker only if well-equipped hospitals are established at short distances. The controller of Labour has said, 'despite food difficulties and rise in the cost of living the Indian labourer has worked cheerfully and as hard as previously.' Working so hard the poor Indian labourer is bound to lose his health with the small weekly ration allowed.

While this is the treatment meted out to Indians in Ceylon it is not inappropriate to point out the dependence of Ceylon on India. Acute shortage of consumption goods made Ceylon depend more and more on supplies from India. But even here, the Ceylon Government intervened to the detriment of Indian importers. Great shortage of cloth resulted in Ceylon becoming more or less entirely dependent on Indian textiles.

The Labour Adviser to the Colonial Office points out that the migrant Indian labourer in Ceylon is increasingly tending to become stabilised and resident in Ceylon. But the Ceylon Government would not allow Indians who developed the country at the sweat of their brow to settle down but would repatriate them when no longer required. It is easy to recognise how far the demand of Ceylon Indian Congress 'Our first demand is for citizenship rights in this country (Ceylon)' is justified. The differences of opinion between the two Governments on this question have continued to remain despite the exchange of representatives.

When Ceylon felt that it could not, without difficulty, build the economic life of the island, the Government gave an undertaking that Indians and Sinhalese would be treated equal. (And even the Governor promised so in a message to the State Council in 1941. But from the proceedings of the Soulbury Commission one goes with the impression that justice has not been done to Indians in Ceylon. The Government of India did not present their view to the Commission. In the absence of effective action by the Government of India, Indians in Ceylon could only trust the good sense of the Ceylon Government.

Scarcity of milk in Bengal

Bengal has faced for some decades a real shortage of milk. In normal times the per capita availability of milk was 2.8 Ozs per day only while according to Indian standards it should be 15 Ozs for adults and 29.25 Ozs for babies of 6 months to 6 years. The Annual production of milk in Bengal was estimated to be 429.39 lakh maunds in normal times. The net import into Bengal in various forms is very small. The total production would be sufficient to satisfy the minimum requirements of children aged 0-5. But mal-distribution has accentuated the problem. The disparity in income between different families is responsible for the mal-distribution.

The Scarcity of milk which was felt even in normal times because of inadequacy and mal-distribution has now assumed alarming proportions, due to the loss of cattle in 1943-44 and decline in lactation period and yield in the surviving illnourished cattle. It is important to note here that the loss of human beings in 1943-44, though very heavy, was less than the loss of cattle. The peasants had to choose between feeding themselves and their cattle. To ensure their own survival the peasantry cut down expenses on cattle food and allowed the cattle to die of starvation. Wiser folk among them sold them to military contractors to be slaughtered. The much advertised import of milk powder and milk foods was but a drop in the ocean. The mal-distribution of milk caused by disparity in income is still as bad and possibly worse. Milk which is the only food which can sustain and nourish the babies, and bring them back to health after

a period of starvation, has grown from a serious want to a serious problem. Cases of adulteration of milk have increased to an alarming extent. 65 per cent of the samples were found by the Calcutta Corporation to be adulterated. It is high time milk is rationed in Calcutta. Rationing by itself will not solve the problem. And the experience of rationing of other commodities makes one more sceptical about the result of Rationing.

The problem cannot be solved unless plans are made and put into effect for improving the production and distribution of milk. Dr. Burns, Special Officer in the Education and Health Department of the Government of India has shown in his memorandum that milk can be increased by 75 per cent in India by proper feeding and management of cattle and control of diseases.

Bengal's annual requirement of milk is estimated at 2708.30 lakh maunds. By importing more cattle and better breeding and feeding it should be possible in course of time to increase milk production. Distribution of milk at small cost or free if necessary to young children and expectant mothers should be undertaken. This is both a long range and short range problem and co-ordinated action of both Central and Provincial Governments alone could solve it.

Inter state Commerce Commission

The Inter-State Commerce Commission in the United States recently took action to equalise freight rates, on a mileage basis, between all sections of the country, except mountain-Pacific territory. The practical effect of its ruling is that, wherever manufacturers are situated, at the same distance from a given point, they would each pay the same rate. To bring about this equality, rates in the South and West have been reduced as from August 30, by 10 per cent., while rates in the Northeast will be put up by 10 per cent. The reason for seeking equality in this two-fold way is to be found in the fact that the rail-roads of the South and the West have much less traffic and cannot bear a reduction of as much as 20 per cent. The significance of this change has been described by 'Time' as an alteration of the geographic shape of the U. S. such as could have been done by 'a convulsion of Nature.' The action of the Inter State Commission brings out clearly the power of the State to determine the distribution of industry by alterations in the rate structure of the Railways. India may have need for such measures, though it is difficult at this stage to foresee their exact scope.

Flood Control:

One of the modern engineering achievements and proof of the fact that modern engineering science can conquer nature is provided by the permanent removal of the flood menace to the city of Hyderabad. Even though it is a matter of legend now, citizens of Hyderabad have heard of the disastrous flood of 1908 in the river Musi. The destruction that was caused to property was incalculable and thousands of human beings lost their lives. The most pathetic sights were seen. The actual extent of the loss of life and property caused by the Musi flood has never been ascertained. Nearly Rs. 16 lakhs were collected for affording relief to sufferers. About 18,000 people received financial assistance. Remission of balance of loans was allowed in several cases. Apart from the immediate relief measures, permanent measures which were taken prevented the recurrence of that disaster. It was decided to construct two storage reservoirs, one on the Musi river 8¼ miles above

PROSPECTUS:

The Company has been formed for the purposes set out in the Memorandum of Association (a copy of which together with the names of the signatories is annexed to and forms part of the Prospectus) and in particular for starting (1) A Starch Factory and (2) A Wollen Druggets (Carpets) Factory.

(1) *Starch Factory:*—Capital Rs. 3 lakhs. Tapioca is used by Textile Mills for sizing and finishing clothes manufactured by them. Before the war this starch used to come from Singapore, Java and Sumatra but on account of stoppage of imports, the Textile Mills are dependent on indigenous products. Before the war manufacture of this starch was unknown to Indians. This starch is in great demand but is being supplied in limited quantities from South India.

The Company proposes to set up a Factory with a production capacity of 10 tons per day. The machinery and the equipment required for the factory are estimated to cost on a Post-War basis Rs. 2¼ lakhs, leaving for working Capital, Rs. 75,000. The war in Europe is over and we hope manufacturing of starch will be undertaken with the latest machinery as soon as possible. The Company wants to manufacture starch with the best machinery available and produce it efficiently and cheaply. At present it is being manufactured on a Cottage Industry basis and the mills are using the products available now for want of better qualities.

The Government of India are committed to a policy of protection and support for the Starch Industry in India as per a Commerce Department Resolution announced through the Press on 25-8-44.—

"The Government of India, have decided to give an assurance to the Starch industry in India that it will, by such measures as Government may devise, be protected after the war against unfair competition from abroad, provided it is established that the industry is and has been conducted on sound business lines."

Though at present in starch manufacture the margin of profit is enormous, we would like to view it, on a post-war basis. The Starch industry has great prospects after the war.

The result of the working of the Factory may be summarised as below:—

Pre-war cost of production of tapioca starch was about Rs. 10 per cwt.

The starch could be sold to the Merchants at a cost of Rs.. 15—Rs. 17 per cwt. and to the Mills at a cost of Rs. 17—Rs. 22 per cwt.

Taking a low estimate of the sale price at Rs. 14 per cwt., the profit is Rs. 4 per cwt.

Thus the profit on a day's production of 10 tons is Rs. 800.

The factory may be working only for about 9 months for full time production of starch as raw materials are available only for nine months in the year. Taking 250 working days in the year, the Profit for the year is Rs. 2,00,000.

Commission to merchants, incidental expenses and miscellaneous charges are expected to absorb Rs. 75,000 leaving a net profit of Rs. 1,25,000.

Note.—The present price of tapioca starch varies from Rs. 40 to 50 per cwt. according to quality. The cost of production is also higher, but the prices give a very good margin of profit to the manufacturer, ,at a rate very much higher than the above estimate.

THE ORIOL INDUSTRIES LIMITED

(Continued from previous page).

If after the war, the cost of production is higher, the price of starch also will be correspondingly higher, with perhaps a higher margin of profit to the producer.

The above estimate of Profit is taken from the manufacture of tapioca starch alone. It is also intended to manufacture Sago which gives a higher margin of profit than starch. Glucose also rould be manufactured as a bye-product. And when their production is undertaken at a later stage, a much higher margin of profits can be expected.

Thus the profit from the starch factory may be even more than the above estimate of Rs. 1,25,000. But taking starch production alone into consideration now, the net profits are expected to be Rs. 1,25,000 per year.

(2) *Woollen Druggets (Carpets) Factory.*—Capital Rs. 2 lakhs. This is an industry that has been existing in India for centuries. Indian Carpets have earned a world name also. Woollen Druggets are manufactured from coarse wool and cotton yarn of the lower qualities. The Company proposes to begin working with about 200 looms with a production capacity of 400 sq. yards per day. The looms are hand-worked and so no great machinery is required for working this factory. The equipment required for the factory is expected to cost about Rs. 50,000 the factory and premises are expected to cost Rs. 50,000, but the Company proposes to construct a pucca factory only after the war, when material and labour will be cheaper. The balance of Rs. 1 lakh is for working Capital for the Factory.

The result of the working of the factory may be summarised as below:—

The cost of production of carpets is about Rs. 3 per sq. yard.

The Carpets could be sold at a price of Rs. 4 to Rs 6 per sq. yard.

But taking the low estimate of the selling price at Rs. 4 per sq. yard, the profit is Re. 1 per sq. yard.

The profit on a day's production of 400 sq. yards is Rs. 400.

The factory can be worked for the whole year without break, but taking 300 working days in the year, the profit for the year equals Rs. 1,20,000.

Commission to merchants, incidental expenses and miscellaneous charges are expected to absorb Rs. 50,000, leaving a net profit of Rs. 70,000.

Thus the net profit when both the factories are working is expected to be Rs. 1,95,000 per year.

Minimum Subscription.—The minimum subscription upon which the Directors may proceed to allotment is shares of the nominal value of Rs. 50,000, which amount has already been subscribed.

Directors' Quilification and Remuneration.—The qualification of a Director, other than a Director Ex-officio or Alternate Director, shall be holding of at least shares of the nominal value of Rs. 3,000 in the Company.

The remuneration of each Director shall be at the rate of Rs. 50 or such other sum as may from time to time be determined by the Company in Ordinary General Meeting for each meeting of the Board attended by him. The Directors shall be entitled to travelling, hotel and other expenses incurred in connection with the business of the Company. If any Director is called upon to perform any extra or special service for the Company, the Company may pay such additional remuneration, as determined by the Directors.

The Directors shall be paid such further remuneration per annum as the Company in General Meeting shall be from time to time determine and such further remuneration shall be divided among the Directors in such proportion and manner as the Directors may from time to time determine and in default of such determination within the year shall be divided equally.

Underwriting and Brokerage.—The entire issue of Rs. 5 lakhs has been underwritten by Messrs. Poddar, Chacko & Co. The underwriting commission payable by the Company to the Underwriters is 3 per cent on the nominal value of the said issue of Rs. 5 lakhs. Out of the said 3 per cent the underwriters have agreed for payment of brokerage at 1 per cent on allotment made in respect of applications bearing the stamp of recognised Brokers or Banks.

Management.—Messrs. Poddar, Chacko & Co., have been appointed under the Articles Managing Agents of the Company for a period of 20 years from the date of the incorporation of the Company on a remuneration consisting of

(1) an Office allowance of Rs. 1,000 (One Thousand) per month, and

(2) a Commission of 10 per cent (ten per cent) on the annual net Profit of the Company calculated in accordance with Section 87 C of the Act.

The remuneration *does not provide* for a minimum payment in case of absence or inadequacy of Profits, but *the said office allowance* is exclusive of all incidental expenses payable for carrying on the business of the Company including rents, salaries, wages, etc.

The Managing Agents have the right from time to time to nominate two persons to be Ex-officio Directors of the Company.

Interest of Directors.—Mr. Keshavdeo Poddar & Mr. M. J. Chacko are partners of the firm of Messrs. Poddar, Chacko, & Co., and are interested in the Underwriting commission and the Managing Agency remuneration payable by the Company.

Mr. M. J. Chacko shall be paid Rs. 5,000 from the funds of the Company as compensation for loss of business while he was touring on behalf of the Company, and as consideration for the help he has rendered in promoting and floating this Company.

Voting Rights.—On a show of hands every member, not indebted to the Company in respect of his shares who shall be present in person shall have one vote. Upon a poll every member who is present in person or by proxy shall have one vote for every share held by him.

Transfers.—The Directors may decline to register any transfer of shares whilst any member executing the same is indebted to the Company unless the Directors in their absolute discretion approve such transferee. No reason need be given by the Directors for such disapproval.

Preliminary Expenses.—It is estimated that the preliminary expenses of the Company (exclusive of Brokerage and underwriting commission) is not expected to exceed Rs. 15,000.

Contracts.—The following contract will be entered into:—

Managing Agency agreement between the Company and Messrs. Poddar, Chacko & Co., appointing the latter Managing Agents of the Company.

Copy of the above document may be inspected at the Registered Office of the Company, at any time during the usual Office hours on any working day.

General.—Application for shares can, be made on the form accompanying the Prospectus, or on a similar form with a remittance of the sum payable on application to the Registered Office of the Company, or to the Underwriters or the Company's Bankers.

Where no allotment is made, the deposit will be returned in full, and where the number of shares allotted is less than the number applied for, the balance of deposit will be applied towards the amount payable on allotment on shares allotted, the balance, if any, will be returned. Failure to pay any amount on any shares allotted, when due, will render previous payments liable to forefeiture. The shares when issued will be subject to the Memorandum and Articles of Association of the Company, a copy of which can be inspected at the Registered Office of the Company at any time during office hours, on any working day.

Copies of the Prospectus and Application Forms can be obtained from the Imperial Bank of India, Calcutta.

FORWARD.

In India agriculture is the basic Industry. The technique of Indian Agriculture has deteriorated not so much from want of knowledge as from want of the necessary facilities. For instance, the use of Chemical and artificial manures are practically unknown to our peasants. Large scale manufacture of fertilizer and ample supply of the same are the primary needs of the Farmers and agriculturists.

Having in view solving this great problem of country's development, the Managing Agents of the Company contemplated producing fertilizers in a large scale and approached Dr. A. KARIM, B.Sc. (Cal.), Ph.D. (Lond.), D.I.L., A.I.C., Chem.E., DIRECTOR OF INDUSTRIES & INDUSTRIAL ENGINEER, GOVERNMENT OF BENGAL, with a request to help the Company with a suitable scheme. They are now glad to announce that Dr. Karim has not only favoured the Company with preparing the novel scheme for manufacturing fertilizers from the Calcutta Sewage sludge but also very kindly assured his valuable guidance and patronage in successfully working out the same. This covetable association of a man of great an experience and highly esteemed position, as Dr. Karim, is undoubtedly a matter of great opportunity and fortune for any Industrial concern.

OBJECTS.

Objects of the company included those mentioned in the Memorandum of Association and in particular to manufacure fertilizers and bye-products, including Gases, to run Saw mills and to carry on business of Farming. Managing Agents made all preliminary arrangements in order to give immediate effect to those objects of the Company.

SAW-MILLS & TIMBER WORKS (RUNNING)

Saw-mills and timber works factory at Beliaghata equipped with machinery and power connection has been purchased by the Company in perfectly running condition. It is now working day and night and executing Government contracts.

FERTILIZERS SCHEME & SPECIAL FEATURES.

The Scheme is based on the result of systematic study and investigation by Dr. Karim of the possibilities and manural potentialities of the sewage sludge for the last 25 years, supplemented by the information gathered by other competent authorities on the subject. The scheme also presents great possibilities of manufacturing Gas & Cement as bye-products from the same source.

It is also noteworthy that the scheme is not only pioneer in India in respect of producing wealth out of waste, but also is expected to be the largest fertilizer manufacturing concern in Bengal.

OUTLINE OF THE SCHEME.

The sewage water will be drawn directly from the Corporation pumping stations into a series of precipitating and settling tanks, where practically the whole of the solid constituents of the sewage will be thrown down. Clear water, free from all matters liable to cause pollution will be run out through suitable channels into any available water ways. Sediments will be recovered, sterilized chemically and reduced into dry powder.

AGRICULTURE.

Side by side with the fertilizer Scheme the Company will readily start agricultural works on a wider scale. Negotiations for acquiring One thousand Bighas of land in a single plot for starting agricultural works is in progress. Acquirement of further Ten thousand Bighas of land is under contemplation. Tractors and other power implements are being arranged for, to conduct the agricultural works most scientifically in order to achieve maximum results at a minimum cost.

APPLICATION FOR SHARES.

Application for shares should be made in the accompanying Form and returned to the Managing Agents or to its Brokers and

Clive Street Gossip

Writing on the San Francisco Conference last week, I said that no appraisement of its work could be attempted, since it was yet to tie up its loose ends. The ends since then seem to have been lost. On the veto question, compromise appears to be wellnigh impossible. President Truman, who was preparing to fly to San Francisco to conclude the conference, is now in consultation with Mr. Churchill on the advisability of their making a joint personal appeal to M. Stalin for accommodation on the question of the veto. Prospects of a favourable response from the Soviet Dictator can hardly be said to have improved during the last few days, since other differences between Russia and the Anglo-Saxon powers have arisen in the meanwhile. Even on the announcement made by the three great powers on the issues arising from Germany's unconditional surrender, Marshal Zhukov has raised a disturbing point at the last minute. But a matter of graver import is his refusal to discuss details of any question till "all outstanding questions have been settled." It is said that the main question which the Russians have in mind is the dispersal of the forces of the two principal western powers, namely, Britain and the United States. Marshal Zhukov is unwilling to discuss anything further until American troops move out of the proposed Russian zone of occupation and British troops withdraw from the area east of the Elbe. To this, it has been said that the dispersal of divisions in the American and British areas cannot be completed till the boundaries of the various zones of occupation are announced by the four governments concerned.

* * * * *

The demand and the answer are suggestive of a deadlock not dissimilar to the deadlock on the question of the veto. But this development would appear to throw some light on the motives behind Russia's demand for a veto. For, both the demands are suggestive of a deep-rooted distrust of the Western Powers. Russia is known to have entertained such distrust for a long time. One would have thought that five years of comradeship in the war with Germany would have done something to weaken it. Not only would Britain and America have done something to disarm that fear but Russia, too, could have grown less suspicious. But there has apparently been no improvement in either respect. It may be recalled that there are some even in Britain and the States who do not rule out the possibility of a serious clash between Russia and the Western Powers. To men like Pritt, it is almost a certainty. One need not go to that extreme to appreciate the difficulties in the way of a satisfactory post-war settlement, whether as regards the vanquished foe or as regards the world as a whole. Anti-Russian feeling has only been kept under control for the sake of the war; and little or no attempt has been made to eradicate it in the interest of peace. When Germany invaded Russia and brought about the alliance between Russia and the Allies, Mr. Churchill declared that he would not unsay a single word he had uttered in the past about Soviet Russia. All those words stood; and now they move about. In the case of America, Big Business looks wistfully on the possible profits of trade with Russia and at the same time dreads the prospect of Russia extending her influence westward. But the dominant psychological note is one of antipathy. The war has been on the whole powerless to create any positive goodwill between Russia on the one hand and the Western democracies on the other. Co-operation never got beyond essential supplies. I have heard it said that in taking these supplies, the Russians were careful not to let foreigners know anything much about their methods of warfare or about their preparation for it.

* * * * *

The actual course of the war, too, has revealed how careful Russia has been to secure herself against any external enemy. In the pact that she had with Germany, there was provision for the occupation and control of the eastern half of Poland; and as soon as Germany crushed Polish resistance, Russia moved in to appropriate her share of the conquered territory. Though this occupation of Poland did not help her to stem the tide of German invasion when it came, it must have enabled her to make the contacts and the organisational spadework which bore fruit long after in the Lublin Government. The methods she adopted against Germany when she was a Russian ally, Russia did not forsake. For with Soviet Russia, it has been a cardinal principle of foreign policy that every foreign country is a potential enemy. All precautions which the contingency of war would suggest have been treated as urgent imperatives.

* * * *

The course of the war in Europe since Russia's entry into it has also brought out these features of Russian policy. The Russians appear to have been careful not to increase unduly the burden of the war on themselves. The fact that a large part of Russia was over-run and occupied by the Germans did, of course, throw the war on the Soviet Republic. But within the limits set by stark necessities they have been careful to time their big offensives in relation to the developments on the Western Front. It has been suggested by some critics that Russia did not always make the advance that was possible for her to make at each stage. The long months that she spent at the gates of Warsaw are said to be due to political motives. It may be recalled, too, that an American columnist suggested that American and British troops advanced on Berlin but were obliged to withdraw owing to Russian remonstrance. This report, which seemed mischievous and untrue at the time it was made, now appears to have a grain of truth. If today Marshal Zhukov can insist on the withdrawal of American and British troops from the proposed Russian zones of occupation, he could as likely have protested against other nations trying to occupy Berlin, when the German capital city was in every way marked out as the prey of the Red Army. All these moves clearly suggest that Russian distrust of her allies has not weakened a whit during the war years, that she is more particular than even before about not leaving any advantage to Britain and America and that, both in the Japanese war and in the constitution of the world organisation, she is extremely watchful about her interests.

* * * *

Now, on this question of the veto, I confess, I am unable to see clearly what the game is all about. The Russian demand for unanimity in the Security Council seems prima facie unreasonable, inimical to the interests of world peace, and in a way a sinister move on the part of the Soviet. But it is hard to believe that Russia has some fell designs on world peace and is anxious to disable the Security Council in advance. Russia's action is generally defensive rather than offensive. And if she is anxious that the Security Council should not act except unanimously, then she is considering the contingency of majority decisions being made and acted on to her detriment. Of the nature of such contingencies, the war with Finland may be said to have given a faint glimpse. The war between Russia and Finland is easily the most misunderstood and the most misrepresented of the

REGISTERED OFFICE:

21, Thalakwadi, Belgaum.

OBJECTS:

The Company has been formed for the purpose of carrying on business of producing raw silk and for the objects set forth in the Memorandum of Association of the Company.

SCOPE AND PROSPECTS:

The Belgaum-Dharwar area where the Company is to start its operations is best suited for the sericulture industry, both climationally and commercially. The Government of Bombay, who sanctioned the establishment of a silk farm at Belgaum as a result of experiments carried out there, have come to the conclusion that the industry can be developed on a commercially basis and have decided to offer the following concessions and facilities to the Company.

1. Recommendation to the proper authorities for the inclusion of the Company in the Government of India Silk Filature Expansion Scheme.
2. Recommendation for grant of priorities in regard to the supply of materials for construction of buildings and erection of machinery and other equipment.
3. Acquisition of a suitable site for the Company's factory at the latter's expense.
4. Nomination of the Director of Industries, Bombay, on the Company's Board of Directors
5. Permission to use river and other stream waters under Government control under certain conditions.
6. Guarantee that similar concessions will not be given to any concern in Belgaum and Dharwar districts so long as the Government are satisfied with the Company's progress.

In order to ensure the minimum production of cocoons to feed an economic filature unit of 100 basins to start with, the Government have directed their Director of Industries to proceed with the organisation of the cottage Industries Section for rearing silk worms and sanctioned a total expenditure of Rs. 1,33,220/- made up of a recurring expenditure of Rs. 48,480/- and a non-recurring expenditure of Rs. 84,740/-. Further, the Government have agreed to grant interest free Tagai loans in all of Rs. 1,50,000/- for 1,000 families out of which one third will be remitted if each family brings three acres of land under mulberry cultivation within two years of the grant of the loan.

This industry has commercially proved a great success in Mysore, Bengal, Madras and Kashmere and is now more in an experimental stage. Mr. E. S. Ramanath who made a survey and reported on the possibilities of sericulture ndustry in the Bombay Province stated that the Province is quite fitted to take up the industry and capture the market as certain tracts in it are climatically ideal as any other silk producing tract in India

It deserves particular mention that India is today the only raw silk producing country in the whole of the British Empire. It enjoys Tariff protection. Further, the present war has established that the silk is not only an article of civilian consumption but a very important war material.

events of recent times. Even with the full might of the Axis powers threatening them all equally, the democracies could not resist the temptation to misrepresent Russia or give Finland what help they could. Past history has shown that the Western Powers employ small nations for administering pinpricks to Soviet Russia and hurting her substantial interests whenever possible. The presence of a world organisation and its possession of an international force in the future would make a huge difference in this game, if the constitution did not provide sufficient safeguards. This, it seems to me, is the reason why Russia insists on the power of anyone member of the Council to veto action by the Great Powers.

• • • •

But this demand is undemocratic since it impinges on the right of the World Assembly to discuss a dispute which is likely to lead to war and inaugurate negotiations which will either effect conciliation or bring the dispute to the point of effective armed intervention by the Security Council. That the General Assembly of nations should have this power seems indisputable. But it is well not to feel cocksure about the beneficient nature of armed intervention by the Great Powers, who are certain, for some time to come, to look at a dispute more from each one's special interests rather than the interests of peace or the world at large. If Russian apprehensions are justified, armed intervention in cases in which the Security Council is not unanimous is more likely to develop a world war than to nip it in the bud

• • • •

Since writing the above, the news has been received that, after a momentous meeting lasting more than an hour, "the Big Five" have reached complete and unanimous agreement on the interpretation of the Yalta voting formula. "The Log Jaw has broken," a high American official is reported to have said at the end of the meeting. In the words of the United States Secretary of State, Mr. Edward Stettinius, "an agreement was reached, which preserves the principle of unanimity of the permanent members of the Council in all actions taken by the Council, while at the same time assuring freedom of hearing and discussion in the Council before action is taken." Under the terms of the agreement, unanimity of the permanent members of the Council is required as proposed in the Crimea agreement in all decisions relating to enforcement of action and—except as to the parties to the dispute—in all decisions for a peaceful settlement. "But this requirement of unanimity does not apply to the right of any nation to bring a dispute before the Council and no individual member of the Council can alone prevent consideration and discussion by the Council of the dispute or situation thus brought to its attention.

• • • •

The agreement appears to represent a genuine compromise on the interpretation of the Yalta formula. The original British and American proposals at Dumbarton Oaks suggested the exclusion of the votes of interested parties from decisions taken by the Security Council in international disputes. The Russians for their part, proposed that veto should always be reserved for the permanent members of the council. The small nations which met at San Fransisco proposed that the permanent members of the Council should exercise no veto on the discussion of disputes between smaller powers. Apparently, Russia meant her original stand to be a kind of prelude to an oriental bargain. She now appears to be satisfied with the insistence on unanimity on "action" proposals. In the world at large, what matters is that the efforts to secure a world organisation have not broken down. In spite of the upsets it has suffered and the obstacles that may lie in its path, the San Francisco Conference is far from being the fiasco that it is thought to be in certain quarters.

THE BOMBAY SILK FILATURES LTD.- *Contd.*

The promoters who have a very long experience of the various branches of the silk industry feel confident that the Company will earn a decent return on its capital. Though to start with, the Company will have a unit of 100 basins, they expect that in the near future here will be many more such units. The Company will start production by the end of this year.

UNDERWRITING AND BROKERAGE

Brokerage: Brokerage at the rate of two annas per share will be paid to recognised Brokers, Banks or other authorised persons on allotment made in respect of application received through them.

Underwriting Contract. Messrs. Lokkur & Co., Stock and Share Brokers, Bangalore City, have underwritten 80,000 shares of Rs. 10/- each out of the present issue of Rs. 10,00,000/- (ten lacs) The underwriting commission payable by the Company to the said Underwriters is one per cent on the nominal amount of these 80,000 shares exclusive of the brokerage payable on shares which will be received through them.

MANAGING AGENTS

The general management of the Company is vested, subject to the supervision of the Directors, in Messrs. N. G. Naik & Co., Ltd., Managing Agents, of the Company on the terms and conditions of the agreement between them and the Company for a period of twenty-years (from the date of registration of the Company) providing the following remunerations:—

(a) An allowance of Rs. 600/- per mensem from the date of registration of the Company with an increase of Rs. 100/- per mensem or each additional unit of 100 basins over and above the first 100 basins, subject to a maximum of Rs. 1,200/- per mensem, and

(b) a commission at the rate of ten percent of the net profits of the Company (as defined in Sec. 87 of the Indian Companies Act).

APPLICATION FOR SHARES

APPLICATION FOR SHARES SHOULD BE MADE *ON THE BASIS* OF THE PROSPECTUS WHICH MAY BE OBTAINED AT THE REGISTERED OFFICE OF THE COMPANY OR AT ALL THE OFFICES IN INDIA OF THE COMPANY'S BANKERS AND BROKERS AND SENT IN ACCORDANCE WITH THE DIRECTION CONTAINED THEREIN WITH A REMITTANCE OF THE AMOUNT PAYABLE ON APPLICATION.

INSPECTION

A copy of the Company's Memorandum of Association and the Articles of Association and a copy of the Managing Agency Agreement can be inspected at the Registered Office of the Company, the offices of the Underwriters and Brokers during business hours.

Olympus

(From Our Correspondent)

New Delhi, June 4.

The announcement has been made this week that recruitment of candidates with approved war service to fill "war-reserved" vacancies in the Indian Civil Service and in the Indian Police will shortly be carried out on the basis of the pre-war ratio between British and Indian recruits. It was in March 1941 that the Government of India decided with the approval of the Secretary of State to leave 50 per cent of the annual vacancies in these two services unfilled with a view to their being made available after the war to be filled with candidates with war service. In the following year the Secretary of State decided to reserve all vacancies in these two services for war service candidates and suspended normal recruitment during the period of the war. This decision was influenced by the consideration of attracting young men of a suitable type for emergency commissions in the Defence Forces and to ensure that they were not placed at a disadvantage compared with those who sought civilian employment. The present decision maintains the previous Indo-British ratio, which was decided upon as a result of discussions at the Round Table Conference. The scales of pay which have now been fixed for these war service candidates are such as will not only attract the right type of candidates, but also such as approximate to present day service conditions and prospects. The relative merits of a short term engagement and long term contract have been given careful consideration in the scheme, and the decision now reached provides for the payment of a gratuity in cases of premature termination of the contract of engagement. Adequate warning has been given to these candidates that their employment might have to be terminated in the event of constitutional changes, as the Secretary of State cannot bind the future Government, to which freedom of action will have to be given.

This scheme applies only to vacancies which have arisen during the period of the war and normal methods of recruitment will be restored at the end of the war. The practice of rewarding men with war service to their credit by providing appointments in the civilian services of the country would appear to be an established one, to which strong exception cannot now be taken, although it might be felt that such recruitment to the services is likely to bring about a deterioration in the standard of the services. The scheme necessarily involves the watering down of the high standards which have been set up and rigorously adhered to in normal times, but as these conditions of recruitment affect only a small proportion of the services it is hoped that no pronounced tendencies of this nature will be felt.

Coming to the vexed question of Indianisation of the services, in which non-official opinion considers that progress has been slow and halting, it has been emphasised by Government that the present decision which maintains pre-war ratios between British and Indian recruits in filling "war-reserved" vacancies does not in any manner prejudice decision on the question of the policy to be adopted in filling post-war vacancies. We may, therefore, reasonably hope that the old ratio will be liberalised in favour of the Indian element in post-war recruitment to the services.

The position of the cattle resources of this country, as a result of the war time necessity to provide meat for the Army, has exercised the attention of the public and the authorities. India has the largest cattle wealth of any single country in the world, but the milk yield is the poorest. The only advantage which the country has been deriving from such a large cattle population is that India has been able to export twenty million hides a year, which makes her the largest exporter of cattle hides. Any step which would result in preserving the cattle wealth at least numerically, if not qualitatively, is therefore, welcome and the increased imports of frozen meat which have been received in recent months must be a helpful factor. Along with these increased imports, cold storage facilities have also been considerably improved and the figures now available of purchases of cattle for supplies to troops have shown an appreciable reduction. Comparative figures for the first three months of this year show that the number of cattle procured by the military in Bengal has gone down from 2,158 in January to 1,433 in March. In Bihar the decrease has been from 2,228 to 559 and in Orissa from 1,417 to 30. The question of improving the quality of the cattle, the milk yield, etc. is a vital one which is receiving, we hope, the attention of the Food Department and the Education, Health and Lands Department. The post-war reconstruction policy of the Government of India does give an important place to these questions, but this is not the first time in our experience that schemes which appeared sound and beneficial on paper had gone awry or remained only in paper.

A part of the scheme of rehabilitation of demobilised personnel of the Defence Services seems to be well on its way of execution. Managers are to be taught problems of demobilisation, re-settlement and employment and to be equipped with a general background of happenings in other fields of labour activity. Along with instruction on subjects like peace-time employment opportunities and employment exchange procedure, there will also be lectures on labour legislation, wages, trade unionism, labour statistics, social security and factory welfare. The course of training has been designed to lay the foundation for the successful functioning of the Exchanges which will become a permanent feature of the industrial life of the country.

The Council of Scientific and Industrial Research continues to do silent and unostentatious good work, and recent researches evolved in its laboratories open up prospects of profitable industrial ventures.

A new type of flux, which has been found by experiment, for the welding of aluminium and its alloys is claimed to be superior to expensive imported brands of fluxes. Another successful experiment relates to silica fibre suspensions required for scientific instruments. These have hitherto been imported, but now it is claimed that they can be produced in this country. The need for a more comprehensive All-India organisation to safeguard public interests in industrial property and at the same time promote industrial advancement of the country appears to be receiving earnest attention and suggestions have been made for a National Patents Trust and this question will naturally claim far greater attention as a result of the post-war industrial expansion schemes that it has received in the past.

The problems of post-war commercial policy have been recently discussed by Mr. B. N. Adarkar. The Second Report of the Reconstruction Committee of Council did not deal elaborately with the question of post-war commercial policy. This was to some extent natural, as India policy will have to be framed in the light of international policies. Recent literature on the subject of post-war reconstruction has tended to foster the belief that India can afford to be an isolationist country and that all that is necessary is to make her industrially self-sufficient.

the city and another on the East at a distance of about 6½ miles above the city. The two streams unite at the foot of the Golconda hills about 3 miles above the first bridge of the city.

The construction of the first reservoir Osmansagar, took five years and at a cost of Rs. 58 lakhs. The Reservoir can hold a total capacity of 10,568 m.c. ft of water part of which is used for irrigation and water supply and the other part for silting purposes. The second Reservoir, Himayat sagar, was built later at a cost of 91 lakhs of rupees and with a capacity of 7095 m.c. ft used for flood protection, irrigation purposes and silting purposes. Hyderabad is thus free from the danger of floods and is also assured of pure drinking water for its growing population.

Bombay Silk Filatures:

Thanks to the large demand for silk for war purposes the silk industry in India has made rapid progress in the war period and it can now be said that it has definitely passed the experimental stage. Mysore, Bengal, Madras and Kashmere are now important producers. With all the increase in the production of silk there is an acute shortage. After intensive research it has been found that the Belgaum-Dharwar area is ideally suited for the rearing of silk worms. The Bombay Government is interested in the development of the industry in the province and have therefore offered substantial concessions to the new company named Bombay Silk Filatures Company Limited (the prospectus appears elsewhere in this issue). The promoters have considerable experience of the silk industry. As the Directors of Industries, Bombay is on the Board of Directors and as the minimum production of cocoons to feed an economic filature unit of 100 basins will be ensured by silk work rearing on a cottage industry basis the company is assured of a successful career. Mr. Naik of the Managing Agency firm is a director of three silk companies in Mysore.

The authorised capital of the Company is Rs. 20 lakhs, all of them in ordinary shares of Rs. 10 each. The issued capital is Rs. 10 lakhs of which 20,000 shares have been taken up by the directors, the managing agents and their friends. Applications have already been received for 30,000 shares. The public is, therefore, asked to subscribe for only 50,000 shares. 80,000 shares are underwritten. As it has been proved that even with war contracts it is possible to report a profit of 50 per cent on working capital the present issue is a very profitable proposition for the investor.

Oriol Industries:

Production of starch and manufacture of woollen carpets are rather an unusual combination in business. But as both of them are profitable propositions Messrs. Poddar, Chacko & Co., have perhaps done well in promoting the Oriol industries Limited. The prospectus estimate of earnings, which it is said is given on a post-war basis, speaks encouragingly of the prospects for the company. The issued capital is Rs. 5 lakhs divided into 2,000 six per cent tax-free cumulative preference shares of Rs. 100 each and 30,000 ordinary shares of Rs. 10 each. The whole of the issue is underwritten by the Managing Agents who are also the brokers for the Company.

Standard Refinery and Distillery:

For improving the financial position of the Company and adding a cane crushing plant to the refinery the Standard Refinery and Distillery Limited, is issuing additional capital for 10,32,270 in 5,000 five per cent cumulative preference shares of Rs. 100 each and 53,227 ordinary shares of Rs. 10 each. As the company has been regularly paying a dividend of five per cent on the ordinary shares, the preference shares are issued at a premium of Rs. 2-8 per share and the ordinary shares at a premium of Re. 1 per share. Lala Karamchand Thapar, a prominent figure in the sugar industry, is a partner of the Managing Agency of the Company. The Company is therefore assured of a bright future.

British Insulated Cables:

The wartime record of companies manufacturing electrical goods in the United Kingdom is amazing as under very difficult conditions they have produced remarkable results. The British Insulated Cables had record production in 1944 though the net profit was slightly lower on account of the increase in working expenses. Sir Alexander Roger, the Chairman, spoke confidently of the prospects in the post-war period and the steps taken by the Board of Directors for transition from war to peace.

Since the meeting of the shareholders took place news has been received of the amalgamation of the British Insulated Cables with the Callenders Cables Construction Company Limited. As both the companies, while working in competition, were carrying on certain activities for many years with their own methods of manufacture it was felt that the amalgamation of the two companies would help maintain trade in the post-war period and ensure employment. After an investigation certain provisional agreements have been concluded subject to the approval of the shareholders.

The Issued Capital of the new company at its inception will be as follows: 933,334 3 per cent first cumulative preference shares of £1 each fully paid £933,334; 1,045,455 5½ per cent 2nd cumulative preference shares of £1 each fully paid £1,045,455. 9,240,386 ordinary shares of £1 each fully paid £9,240,386; Total £11,219,175.

The two companies B. I. C. and Callender Cable and Construction Company, Limited will be wound up voluntarily and the shares of the new company will be offered to the shareholders of both the companies at the following rates:

B. I. Cables:

One 6 per cent first cumulative preference share in the new company for each £1 6 per cent cumulative preference share in the present company.

Three ordinary shares in the new company for each £1 of ordinary stock in the present company.

Callenders Cables:

Thirteen .. per cent cumulative preference shares in the new company for each £1 of 6½ per cent cumulative preference stock in the present company.

Fifteen 5½ per cent 2nd cumulative preference share in the new company for each £11 of 7½ per cent "B" cumulative preference stock in the present company.

Twenty-seven ordinary shares in the new company for each £10 of ordinary stock in the present company.

The new company will issue Callenders Cable Trust Limited, 205,812 ordinary shares as consideration for trade investment to be acquired from them.

The share capital of Callenders Cable Trust Limited, consisting of 525,000 shares of £1 fully paid, will be distributed to ordinary shareholders of Callenders Cable Construction Company, Limited.

Further details of proposal scheme for amalgamation will be sent to the shareholders together with a notice convening the necessary meeting.

Consent of the Central Government has been obtained to this issue under Defence of India Rule 94A. It must be distinctly understood that in giving this consent the Government of India do not take any responsibility for the financial soundness of any schemes or for the correctness of any of the statements made or opinions expressed with regard to them.

PYRETHRUM PRODUCTS (INDIA) LIMITED

Authorised Capital - - Rs. 25,00,000

Divided into 1,00,000, 5½% Preferred Ordinary Shares of Rs. 5 each and 2,00,000, Ordinary Shares of Rs. 10 each.

Issued Capital - - - Rs. 10,00,000

Divided into 60,000, 5½% Preferred Ordinary Shares of Rs. 5 each and 70,000, Ordinary Shares of Rs. 10 each.

In respect of the Preferred Ordinary Shares Rs. 1-4 per share is payable on application and Rs. 1-4 per share on allotment and the balance in two equal instalments at the discretion of the Directors at an interval of not less than two months. In respect of the Ordinary Shares Rs. 5 per share is payable on application and Rs. 5 per share on allotment.

The Preferred Ordinary Shares are entitled to a cumulative dividend of 5½ percent tax free and to a right in winding up to be paid all arrears of the preferential dividend whether earned or declared or not, down to the date of winding up and to priority for return of capital. They participate in further 2 per cent dividend in the event of a dividend above 7 per cent being declared on Ordinary Shares. Such Preferred Ordinary Shares carry voting rights also.

PRESENT ISSUE.

60,000 Preferred Ordinary and 70,000 Ordinary shares are being issued at present, out of which the Directors, Managing Agents and their friends have agreed to take 24,000 Preferred Ordinary and 28,000 Ordinary shares to the value of Rs. 4,00,000. Besides, a further number of 15,000 Preferred Ordinary and 17,500 Ordinary shares have been kept reserved for the "bona fide" residents of Assam. The balance of the issue, viz., 21,000 Preferred Ordinary and 24,500 Ordinary shares are now offered for public subscription.

OBJECTS:

This Company is being formed to carry out the objects set out in the Memorandum of Association, and in particular, to acquire the Laikroh and Laitlyngkot Pyrethrum Estates in Khasi Hills together with valuable concessions from the Government of Assam for the production of Pyrethrum.

The scientific world has, for many years, been researching to find a really effective and cheap prophylactic suitable for universal application in the way of mass drive against tropical disease such as malaria, yellow fever, kalazar, etc. Such a prophylactic has now been discovered in Pyrethrum, the flowers of which contain an alkaloid chemically known as Pyrethrum. This active principle of the Pyrethrum flower is the most potent insecticidal agent so far discovered. Disease-carriers like mosquitoes, bugs and cockroaches are instantaneously killed by a spray of a highly diluted solution of Pyrethrum. The universal use of Pyrethrum in India will mean the saving of two million human lives every year and the prevention of over 50 million malaria cases. In terms of money, the annual saving will run into several crores of rupeees.

The President of the Rockefeller Foundation in his review of 1942 activities, referred to the success attending the use of Pyrethrum (as spray in fluid medium) in following words:—

"The 45 year-old battle against malaria and the mosquito is being won in India. American soldiers and millions of civilians are being benefited by an anti-malaria weapon which is known in Indian villages as 'Sweat Mist.' It is Pyrethrum spray, which is harmless to human beings but deadly to mosquitoes."

But when the active principle of Pyrethrum is released in an aerosol (a gaseous medium such as Freon) its insecticidal potency is intensified several times as is proved by the following extract from the "Popular Science Monthly" of America:

"Pyrethrum, most deadly of insecticides to mosquitoes, if released in an aerosol is many times as effective as the oil spray used in the common household spray gun. Five milgram—one very small drop—of the extract will in one minute kill every mosquito—in a room 12 feet square and seven feet high."

Pyrethrum is commercially grown in Japan and Kenya. In pre-war period, Japan used to produce 25 million lbs. of dried Pyrethrum flowers per annum; and 90 per cent. of this output went to the United States. Since Japan started hostilities, the only supply for the Allied countries has been from Kenya, where Pyrethrum is regarded as one of the most flourishing industries. From all points of view, the cultivation of Pyrethrum in India is of urgent and imperative significance to the war effort, besides being the one and only prophylactic for the diseases from which India has long suffered and for which war-time research has thrown up effective relief at a cost with the reach of the masses.

The Government of India have been much concerned on account of the world shortage of Pyrethrum and have been encouraging the Provincial Governments of Assam, Madras and the Punjab to introduce and extend Pyrethrum cultivation as speedily as possible; and, towards this end, the Government of India expressed willingness to offer suitable inducements so as to give some kind of adequate guarantee to the growers against any possible loss.

Though the war is nearing its end, there is ground to hope that the Central Government's interest in the development of Pyrethrum will continue.

The Government of Assam have already offered the following concessions:—

(a) Acquisition of 500 acres of land, out of which 450 acres are on a rental basis of annas 12 per bigha per annum plus the valuation of timber standing on the land as assessed by the Government: the rent on 50 acres, is yet to be fixed up.
(b) Lending the services of Government experts.
(c) Supply of seedlings and seeds of Pyrethrum at cost price.
(d) Priority in the matter of transport.

It has been found also that Pyrethrum flowers that grow in the Khasi Hills contain about the highest percentage of Pyrethrum in the whole world, that is to say, the flowers in Assam contain 1.4 per cent. of Pyrthrin as against 1 per cent. in Kenya, 1.1 per cent. in Japan and from 6 per cent. to 1.1 per cent. in other parts of India. It is important to know that elevation is a factor of dominant consideration in Pyrethrum plantation: the higher the elevation, the better the crop. This Company is fortunate in securing 500 acres of suitable land at an altitude of over 6,000 feet near Shillong on the trunk road connecting shillong, Sylhet and Gauhati.

The lands selected for cultivation have been inspected by Dr. H. K. Nandi, M.Sc., Ph.D. (Loudon), the then Economic Botanist of the Government of Assam and Dr. S. D. Chaudhury, Ph.D. (London), the present Economic Botanist of the Government of Assam who are satisfied that the elevation, soil, rainfall and other conditions are quite suited for Pyrethrum cultivation.

Since acquiring the Estates, development work under the supervision of an experienced European Manager has been actively pursued; clearing the jungles, levelling, terracing, bunding and planting the land with Seedlings from the Department of Agriculture Assam, as well as laying out of nurseries with Seeds from the same source.

It ought to be mentioned here that the area put under cultivation last year has already begun coming to flowers and the seed-beds successfully germinated.

While 500 acres of land is already acquired and in the process of cultivation, negotiations for acquiring further lands are proceeding and the Company hopes to acquire another 500 acres to open out two plantations of 500 acres each. From the data available, the yield of 1,000 acres of Pyrethrum plantation is expected to be half a million lbs. of dried flowers. The profit on such an output is estimated at roundabout Rs. 2½ lakhs. This profit will be further augmented when the Company sets up its own plant for distilling Pyrethrin from Pyrethrum and for manufacturing various other kinds of insecticides.

TAXATION ADVANTAGES

It is of particular importance to investors that the income of this Company, being derived from agriculture, is not subject to Excess Profits Tax or income-tax but only to the Assam Agricultural Income-tax which is 2 annas 6 pies in the rupee

COMMISSION AND BROKERAGE

The Articles of Association provide for payment of commission not exceeding 2½ per cent. of the nominal value of the shares and a brokerage of 2½ per cent of the nominal value of the shares.

The Directors have decided to pay brokerage at 2½ per cent. to authorised brokers and bankers on allotment made in respect of applications bearing the stamp of such brokers or bankers.

PROMOTION:

No promotion money is being paid by the Company nor is any business being taken over.

PROPERTY AND VENDOR

The two Estates herein mentioned are being purchased by assignment of lease, inclusive of all rights and privileges from Mr. R M. Purkait, the Vendor, at cost, which will cover the cost of development of the Estates, salaries of the Manager and the staff, cost of plantation and travelling and all other out-of-pocket expenses up to date. Such expenses amount to about Rs 40,000 as on 15th March, 1945. The Government of Assam did not charge any Nazar or Salami for the land.

MANAGING AGENTS:

The Articles of Association provide for the appointment of Messrs. Roy & Purkait Ltd. as Managing Agents of the Company from the date of the incorporation of the Company for a period of 20 years on the following remuneration:—

(1) An office allowance of Rs. 1,000 per month; and
(2) A commission of 10 per cent. on the net annual profit of the Company as defined in Section 87C(3) of the Indian Companies Act before setting aside for taxes. The aforesaid commission or profits shall not be payable in those years in which the company does not earn net profits equivalent to at least 5 per cent., tax-free on Ordinary shares.

SHARE LIST OPENS ON 15th JUNE, 1945, AT 12 NOON AND CLOSES IMMEDIATELY THE ISSUE IS SUBSCRIBED.

BRITISH INSULATED CABLES LIMITED

RECORD PRODUCTION

STATEMENT BY CHAIRMAN SIR ALEXANDER ROGER, K.C.I.E.

This review of the Company's Accounts and activities for the year to 31st December, 1944, is being sent to Stockholders with the Directors' Reports and Accounts, and at the Annual General Meeting on the 19th April I will suggest that this statement be taken as read.

PROFIT AND LOSS ACCOUNT. Mainly as a result of changes in war-time demands during 1944 there have been further alterations in the types of our turnover and a relatively small decrease in total. These features, coupled with higher costs, have, after drawing on the E.P.T. "cushion" available from earlier years, left Trading Profit lower by £43,054. As interest and Dividends from Subsidiary and General investments have increased by £19,159, the total Profit for the year is down, on balance, by £23,895.

Depreciation of the Company's manufacturing assets has again been determined after taking into account their operation under war-time conditions. The amounts provided are substantially in excess of the allowances at present granted for taxation purposes, and the Company welcomes the proposed legislation now before Parliament providing more adequate allowances in the future.

Income Tax, although requiring less than the previous year, still absorbs a very substantial proportion of profits.

£100,000 has been transferred to strengthen what was formerly the War Contingencies Reserve Account. It has been deemed advisable to broaden the scope of this reserve to cover contingencies which may arise in the immediate post-war years under the heads of Rehabilitation, Re-organisation and Development and the designation has been enlarged to the more appropriate one of "Reserve for War and Post-war Contingencies."

After providing for a final distribution on the Ordinary Capital at the same rates as have been paid for some years, there is left available from the year £19,383 which, added to the balance brought forward from 1943, leaves £409,867 to be carried forward to 1945.

BALANCE SHEET. In order to present the position more clearly than hitherto to Stockholders, the gross book value of the fixed assets is now shown, and also the depreciation provided thereon to date. It is of interest to note that the latter amounts to some 57% of the gross book value.

Neither Subsidary Companies nor General Investments show any material change. A valuation made of all investments at 31st December, 1944, shows an excess over Balance Sheet values.

Although in total Net Current Assets are only up by £50,058, there are substantial changes in the individual items of Current Assets and Liabilities due to normal trade fluctuations.

WAR TIME ACTIVITIES. For reasons of security I have been prevented in recent years from informing you of our activities, but the curtain can now be partly raised. It is impossible to refer in detail to the magnitude of the war-time effort made by your Company and its Subsidiaries, but the following outline will convey in some measure what has been accomplished.

Modern warfare in its many phases involves the use of electricity to an ever-increasing degree, and in consequence vast quantities of such main products of your Company as cables, insulated conductors, wires and various electrical components are required.

Our production of cables and insulated conductors has been enormous and for such widely diversified uses as in tele-communications, ship, aircraft, tanks and all other mechanical vehicles; in the equipment of munition plants and airfields; and in the maintenance and extension of essential electricity supply services. In addition to our ordinary Construction Department we have maintained, in this country, a service organisation for the repair of essential underground cables and overhead transmission lines damaged by enemy action, and the fact that these have been so quickly restored after severe blitzes has been due in no small measure to the part played by our own and other similar organisations not always, I regret to say, without loss of life, from time to time we have also been called upon to meet new and changing Government demands, as for example in the days of the magnetic mine, when it became evident that only a full scale introduction of de-gaussing cables would serve to protect our vital shipping, and when with the same object in view large quantities of a special type of buoyant cable were urgently required. In both cases the Company went into immediate production and all the demands made upon it were met. I can now also inform you that the Company supplied, at short notice, cable installations for the now famous "Mulberry" Ports.

Our production of insulated wires has been astronomical; in five years approximately 18,000,000 miles have been supplied to the Services for use in electrical apparatus, instruments, mines and even dam-busters. Some of these wires have been of extremely fine gauge and even after being covered with five or six coats of enamel insulation the diameter has been less than one-half of that of a human hair. The finer gauges of wire are drawn through diamond dies which, before the war, were produced mainly in France, Belgium and Holland. When in 1940 these countries were over-run by the enemy supplies of these dies were no longer available to us, and the British wire-drawing industry had to take steps to manufacture in this country. Intensive effort and experimentation, in which your Company played a leading part, resulted in the development of equipment and skill comparing favourably with the long-established Continental practice. This instance of the closing down of pre-war avenues of supply leads me to refer to the successful application of such substitute insulants as synthetic rubbers and thermo-plastics inplace of natural rubber, and rayon instead of natural silk.

The Company has also achieved an equally impressive output of condensers and other components for radio, telephone and telegraph equipment, aircraft navigating instruments, anti-submarine devices and mines; of moulded plastic products for use in many types of Service equipment; and of electric welding machines and magnetic moulding machines for the equipment of Munition Factories. We have also produced large quantities of such essential war-time products as shell and bomb cases and a variety of shell bands, fuses and primers.

All this activity has only been possible through organisation of the highest degree and the complete co-operation received from all ranks in the Company's service in difficult and ever-changing conditions. The Company and its Subsidiaries are giving employment to nearly 18,000 people, of whom approximately 8,000 are women. Many of the latter had previously no factory xperience and the zeal and diligence with which they undertook their war-time work is worthy of the highest commendation.

SUBSIDIARY COMPANIES. This short review of our war-time activities covers our Subsidiary Companies but I wish to pay a special tribute to the important part they have played. The manufacturing units have been exclusively engaged in developing and supplying essential war-time products and all have made a magnificent contribution to the war effort. As a matter of particular interest, reference may be made to British Copper Refiners Limited who have, during the war period, refind large tonnages of Empire blister copper imported from Northern Rhodesia, without which production this country would have been placed in a most difficult position.

EDUCATION. For many years we have had in operation an educational scheme administered by a voluntary Committee. This has been very successful, but in view of the growth of the organisation and the increasing importance we attach to education in the widest sense of the term, the Company has recently appointed a full-time Education Officer.

We believe that for youths who enter our organisation provision should be made not only to guide their careers along well-defined lines, having regard to the increasing complexity and specialisation of industry, but also to assist in building up their character. Schemes have been prepared which should attract a flow of young people, who will be trained to take their proper places both in the higher branches of our organisation and, what is equally important, as responsible citizens of this country.

As a matter of local interest, the Company has made provison through the Prescot Grammar School Scholarships Foundation Fund for scholarships to pupils of that School, a number of whom find employment in the Prescot Works of the Company.

Close contact is also maintained with various Universities and Research organisations.

EMPLOYEES ON NATIONAL SERVICE. We are not forgetful of our 2,200 employees who are on National Service, and we look forward to their early return to the Company. Some months ago a letter and questionaire was sent to each of them seeking information as to their technical and other progress since undertaking National Service, with a view to their most suitable reinstatement in the Company's service. The response has been most gratifying and in many cases has been accompanied by helpful comments from senior officers. In addition to the men whose Service training has improved their knowledge, there will be those whose training was interrupted by the call-up and who have had no opportunity to study since the day they entered upon National Service. All employees will receive individual consideration, and, where desirable, will be given facilities for commercial or technical education.

I wish to record our indebtedness to all our employees on National Service. Eighty of them have made the supreme sacrifice. We deplore their loss and to their relatives we extend our deepest sympathy. Thirteen of our employees have been reported missing and forty-five are prisoners-of-war, all of whom we sincerely trust will safely return to their families in the very near future.

THE FUTURE. We shall continue to devote our maximum energies to work essential to the successful prosecution of the war, but with the prospect of an early victory, particularly in Europe, we are giving an increasing amount of thought to the post-war era.

Domestically our organisation is constantly being reviewed and strengthened, new developments and methods are being perfected and every step possible under existing conditions is being taken to ensure that your Company will be well equipped to play its full part. Plans for the resumption and maximum expansion of home and export trade cannot, however, be finalised until the uncertainty is removed as to the basis on which industry is to be conducted in the future and in particular the degree to which controls are to be applied. The continuation of certain types of control is admittedly necessary for the time being, but in the words of our great Prime Minister, "No restriction upon well-established British liberties that is not proved indispensable to the prosecution of the war and the transition from war to peace can be tolerated. Control for control's sake is senseless". The aim should, therefore, be to attain as quickly as possible the ideal relationship between Government and Industry, which as I see it involves that whilst Government and Industry must be complementary, the primary duty of the former is in solving, in collaboration with the other trading nations of the world, such problems as international currency and international trade, leaving industry to carry on with the operation and enterprise.

This position can and should be achieved, and provided we in industry tackle out post-war problems with the same inventiveness, skill and energy as we have devoted to our war-time difficulties, I look forward with complete confidence to this country achieving the volume of export business so essential to its future and to that full and gainful employment desired by us all.

TRIBUTE TO STAFF. I would ask all Stockholders to join with me in expressing thanks to Mr. T. H. Martin-Harvey, our Deputy Chairman, Messrs. Aldridge, McFadzean and Waine, our Executive Managers, and to all our staff and workpeople, for their strenuous and successful work of the past year.

ALEXANDER ROGER.

EAST INDIA RAILWAY

TENDER NOTICE.

Class I Contract.

General Manager, E. I. Railway, Calcutta, invites sealed tender No. S|SP|EBI|Buffer Parts|A.

Tender form at Rs. 2 per copy can be had from the Controller of Stores Office, E. I. Railway, Calcutta.

Firms outside Calcutta, may remit the amount direct to the Controller of Stores. No refund is permissible.

Closing date 29th June, 1945.

EAST INDIA FUND

Receipts for week ending 31st May, 1945 Rs. 4,302

Total to date - Rs. 1,50,770

Contributions may be sent for the general purposes of the fund or earmarked for the following specific charities:—

1. H. E. the Governor of Bengal's War Purposes Fund for Amenities for Troops.
2. King George's Fund for Sailors.
3. The Lord Mayor's National Air Raid Distress Fund.
4. Jt. War Committee of the Indian Red Cross and St. John Ambulance.
5. British Red Cross.
6. Royal Indian Navy.
7. Merchant Service in England.
8. St. Dunstan's Fund.
9. High Commissioner for India's Comforts Fund for Indian Troops.
10. Royal Air Force Benevolent Fund.

Send your contributions to:

EAST INDIAN RAILWAY.

Special Item Costing Over Rs. 8,000, Class I Contract.

Sealed tenders are invited for the following and will be received in the General Manager's Office, East Indian Railway, 105, Clive Street, Calcutta, before 12 noon on 6th July, 1945.

Tender No. SP|B|Gb2|388A for the supply of 3,100 lamps Hand Signal Tricolour complete with burners and reservoirs.

Tender forms with full particulars can be had from the office of the Controller of Stores, East Indian Railway, 105, Clive Street, Calcutta, on payment of Rs. 2 per copy, to the Treasurer, East Indian Railway, 105, Clive Street, Calcutta, and on production of his receipt when applying for same.

D.C.M.E., Lillooah's Drawing No. P.L.388A and 7158 may be purchased from D.C.M.E. Lillooah, at Rs. 1-8 per copy and Drawing E. I. Railway (S) A2844 from Chief Engineer, Calcutta at As. 8 per copy on production of Treasurer's receipt.

Firms outside Calcutta may, however, remit the amount to the above respective offices by money-order. Once this document is issued, no refund is permissible.

Sealed Tenders delivered by hand should be presented for registration in the General Manager's Office and then put into the tender box outside the Deputy General Manager's (Works) room by the tenderer or his representative.

Tea and Industrial Output

Few matters have received such detailed attention since the war began as the efficiency of industrial production. In India the problem has been greater than in most other countries because, to meet the basic needs of the fighting forces, a great new industry has had to be created without the help of either a large machine tool industry or a large mass of skilled labour accustomed to factory conditions.

That tea—India's own product—has played a valuable part in achieving unprecedented output figures is a matter for no small satisfaction. The part that tea has played—is playing, and will continue to play—is to promote concentration. In the old days it was accepted throughout the world, as an unavoidable fact that output would fall towards the end of a working shift. Today this is no longer accepted, because it has been proved over and over again that tea served to the workers on the job renews concentration and flagging energies with the result that output remains at its peak level *right to the end of the shift*.

To those interested in this subject much valuable advice and assistance will be gladly given by the Indian Tea Market Expansion Board, 101, Clive Street, Calcutta.

(From Our Correspondent)

Karachi, June 2.

The second batch of the industrial delegation to the United Kingdom and the United States passed through Karachi. Till the last, it was uncertain whether Mr. G. D. Birla would accompany the delegation, in view of Gandhiji's comments and the controversy that followed in the press. Dr. P. S. Lokanathan, Economic Adviser to the delegation who also acts as Secretary because of the dropping out of Mr. Majumdar, I.C.S., originally proposed as Secretary, did a lot of propaganda to dissipate the impression created in the minds of the public about the delegation, after Gandhiji's statement. He repudiated the suggestion that the industrial mission was officially sponsored. They have no terms of reference, no directions or sugestions from government, whose only role was to afford them facilities for such contacts as they may ask for. The delegates only wanted to study the industrial organisation and the technical advances made by the United Kingdom and the United States, so as to enable them to draw up their own individual plans of development in the light of the new knowledge gained and to present a picture of the type of development which may be most valuable to our country.

Mr. Birla refused to go into the details of the delegation. Asked as to what extent foreign capital in India would be welcomed and to what extent, it should be discouraged, he replied: "In the first place, due to the fact that we have a sterling balance of nearly Rs. 1,300 crores due to us, I do not think that we would need any foreign capital, in the near future at any rate, if the British government decides to discharge its debt. If after that, we need any foreign capital, it would be the business of our national government to borrow money on its own terms. But it should be made perfectly clear that it should not have any political or economic control attached to it. It should be a free business undertaken in a free market."

Replying to a question about the implementation of the Bombay plan, of which he is one of the signatories, Mr. Birla stated that a national government was the first essential for implementing the Bombay plan and there was no other method of doing it.

To encourage the systematic growth of villages, towns and cities in Sind, the authorities are contemplating to give government waste land to the sanitary committees, notified areas and the municipalities at concession rates with the proviso that the lay out of such expansion of the local areas should previously be approved by the government. Such government land will be permitted to be sold at a higher price to intending purchasers for building purposes by local bodies who would be asked to earmark the profit so made on the land as compulsory capital reserves which may be useful for construction of roads, parks and other civic amenities. The government would also fix the floor price under which the local bodies would not be permitted to dispose of the land. To afford expert advice to local bodies as regards lay out of towns and villages, the government have decided to increase the staff of the Consulting Surveyor's office.

The government of Sind have issued the Sind Cotton Cloth (limitation of possession) order. Under this order, any person or organisation in possession of cotton cloth in excess of the limits prescribed shall be liable to a penalty, unless a report of the total quantity of cloth held is made on or before June 1, to the Additional Director of Civil Supplies. Further, under this order, no householder shall have in his possession or in the possesison of any other person or organisation at any time cotton cloth greater in total quantity than ten yards for every member of his household and that no institution, trading company or group of persons other than a householder shall possess on behalf of others any cotton cloth for any purpose without the required permission. This limitation shall not apply to stocks of cotton cloth held by any licensed under the Sind Cotton Cloth Licensing order or by any government or military store or supply organisation.

An interesting lecture on countrycraft was delivered at the local Rotary Club by Seth Haridas Lalji, Honorary Secretary of the Buyers and the Shippers' Chamber. He gave a lucid account of the sway of countrycraft in ancient times. Citing an entry in a 190-year-old book of a Karachi firm, Seth Haridas stated that two centuries ago, countrycraft loaded with merchandise sailed from Karachi to Calicut and there were firms even then which not only arranged for the freight, but also for the indigenous system of insurance which had been in existence in India from ancient times. A countrycraft from Karachi started on its round from Muskat from where it brought dates. They were then taken to Rangoon. From Rangoon, the countrycraft took odds and ends of merchandise for Nikobar where it bartered them for coconuts. And it completed its round by unloading its cargo of coconuts in India. Seth Haridas was confident of the future of the countrycraft. War or no war, they played an important part in the realm of commerce and they were bound to be there. The age of steam could not displace these voyagers of the sea.

That the general situation of food grains in the country had improved considerably and was still going to improve further was the opinion expressed by a government spokesman. He said that the Punjab had an excellent wheat crop this year and as a result of the tightening up of its procurement policy, the government would be in an advantageous position in regard to the distribution and export of wheat. In Sind, the fixed price policy was showing good results and so far, 50,000 tons of wheat had been purchased by the government.

The United Sind-Punjab Bank will shortly start to function with its headquarters at Karachi. The object of the promoters of the enterprise is to serve effectively the predominantly agricultural areas of the Punjab and Sind and play a useful part in the large mandis. The Board of Directors of the new Bank consist of prominent men in the two provinces. The authorised capital of the Bank is one crore in one lakh shares of Rs. 100 each. Of this 50 thousand shares are issued.

The United Commercial Bank have applied for 20,000 shares and will be allotted in full. Further application for 30,000 shares have been received which the Directors propose to allot at their discretion.

Jute and Jute Manufactures

(From Our Correspondent)

Special to "Indian Finance"

Calcutta, June 7.

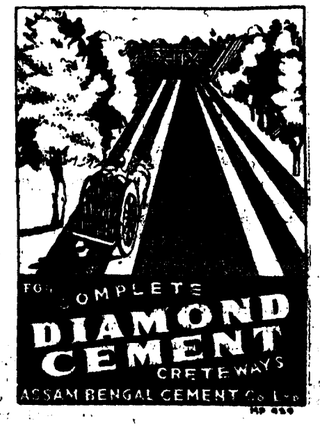
Arrivals of Jute in May this year have been estimated at 4,97,000 bales. This figure together with the arrivals during the period July 1944—April 1945 (i.e. 54,63,000 bales) brings the total arrivals for the current season to 59,60,000 bales. The official estimate of the size of the 1944-45 crop therefore has been exceeded so far by approximately 4¼ lakhs bales with, no doubt, quite considerable quantity of the old crop still to be accounted for. As stated last week, we expect the old crop to yield at least 65 lakhs bales if not more.

A few weeks ago we referred to the efforts now being made by the Government of the Argentine to encourage the cultivation of the jute plant in that country. It is reported that action to intensify the production of raw jute in their country is also being taken by the Brazilian Government, especially within the States of Para and Amazonas. It has been suggested, however, that the entire production of raw jute in Brazil will not be sufficient to meet even their own requirements of the fibre for some time to come but a responsible official of the State of Amazonas is reported to have said that, if Government plans are carried into effect, Amazonas State alone will be in a position to supply all the jute requirements of Brazil in a matter of relatively few years. It has been learned also, that the manufacture of bagging and sacks from cotton has ceased almost completely because it has been proved that cotton does not give the required strength and that a mixture of cotton and jute is not altogether satisfactory. At the moment therefore it would appear that, when shipping permits, imports of jute into Brazil will show a sharp increase.

It is announced from the office of the U.S. Price Administration that with effect from 15th May 1945, uniform ceilings for prices have been established for the sale of raw jute imported from India. Ceiling prices will primarily apply to importers who sell to industrial users but will also apply to any sales by intermediate distributors. These prices will be the sellers' net landed cost based on Indian Government ceiling prices as at 1st March 1945 plus 3½ per cent. Representative June importers were consulted regarding the new uniform prices and have generally approved them. As raw jute has been in short supply in the U.S.A., its principal uses have been limited to the manufacture of rope, wrapping twine, yarn for electrical purposes and roping for military and essential Civil requirements. For some time the U. S. Government have had in effect a buying programme in connection with raw jute and jute Cuttings which were distributed by the Defence Supplies Corporation from stocks. This programme has been discontinued and private importers have entered the market again.

The I.J.M.A. have issued the following statement of total reported bales for the week ending 26th May, 1945:—

	This and next month yds.	Forward yds.
Hessian	25,30,796	34,72,780
8 oz/40" Hessian (included in the above)	Nil	Nil
Twills	23,51,966	1,20,06,919
Plains	13,80,369	42,07,899



Markets in general have passed another quiet week. The raw jute market continues weak with sellers eager for business but at present there are in evidence too many factors of a bearish character to provide anything other than a depressing view of the immediate prospects of this market. The dullness of the manufactures market and more especially that of the heavy goods market does not encourage mills to commit themselves to further purchases of raw materials although during the course of the week prices of heavy goods in the bazaar hardened on reports of the placing of a moderately sized order for sacking with bazaar sellers. Other discouraging factors are shortage of mill labour and poor coal supplies, both of which prevent mills from reaching their full productive capacity. Add to these the facts that there is general expectancy of a plentiful crop of jute in the coming season; that storage accommodation at mills is already sorely taxed due to requisitioning of Godowns by the Services and it should be readily understood why buyers are difficult to find even though in many cases both old and new crop jute is on offer at minimum rates.

Business reported in Pucca Bales has been confined to a small lot of Lightnings sold for local consumption to Mills at Rs. 78½- per bale. Dealers are free sellers for all descriptions with the exception of S. M. Rejections and Cuttings. The latter are quoted at the maximum rates and S. M. Rejections are on offer at Rs. 50/- per bale. There are no reports of any business having been done for overseas markets during the past week.

Loose jute prices for the old crop are on the basis of Rs. 15/- and Rs. 12/- for Jat Middles and Bottoms respectively but in some cases 4 annas higher is quoted for Supervised Jat marks Likewise, new crop is on offer at Rs. 15-8 and Rs. 12-8, Middles and Bottoms. Early in the week some small business was done in European Bottoms alone at Rs. 13/4. New Crop Supervised Jat 50-50 assortment sold at Rs. 15-8 and Rs. 12/8 Middles and Bottoms but the business was not extensive. A small quantity of Supervised Jat, old crop, came to business at Rs. 15-4 for Middles and Rs. 12-4 for Bottoms and. Assam Bottoms alone have been reported done at Rs. 11/8. Supervised District Tossa is also reported done Middles and Bottoms at Rs. 15-8 and Rs. 12-8 respectively, new crop.

The Hessian market remains practically unchanged with only slight fluctuation in rates for the forward positions. Hessian 10 oz. 40 ins. is quoted Rs. 28 (nominal) for May/June delivery with prices for July/Septr. ranging between Rs. 27/8 and Rs. 27-12. Oct.-Dec. 10 oz./40" hessian has fluctuated between Rs. 26/14 and Rs. 27/4. Although no actual business has been reported yet it is hoped that orders will soon be forthcoming as a result of a recent enquiry from the U.S.A. for a fair quantity of all descriptions of 9 Porter and 11 Porter hessian.

Business in Heavy Goods has been confined chiefly to inter-bazaar transactions. In the course of the week Ready B Twill prices in the bazaar improved from Rs. 63/4 to Rs. 65/- but are weaker again at time of writing having receded to Rs. 64-8. Mills, however, are not sellers below the maximum rate. For Oct/Decr. shipment B Twills are now quoted at around Rs. 60-8 having at one time touched Rs. 60/12.

SWASTIK OIL MILLS LTD., BOMBAY 15.

N.A.S. 576

JUTE

(By Our Staff Correspondent).

Calcutta, June 7.

The raw jute market has continued quiet with small interest taken by mills. With the extremely favourable prospects regarding the new crop, it being reported that the total area under the crop is as much as 20 annas in certain districts (base 16 annas last year) and the continued difficulties regarding labour, mills are not at all anxious to enter into fresh commitments. The difficulty in doing business in the goods market at maximum rates, has also not created any need for accumulating stocks of jute. If there is no improvement in the conditions in the goods market mills will be obliged to reduce rates and jute will have to be purchased in larger quantities. This position would arise after four or five weeks. Till then, prices will be fluctuating around present levels. Already most of the quotations are around minimum prices and only bottom grades are commanding a premium and that too only for business done exclusively in these varieties.

In the loose jute section business has been restricted. Mills, as said above, are taking very little interest in the market Supervised Jat Middles and Bottoms were done at Rs. 15-4 and Rs. 12-4 per maund with Middles alone at Rs. 15 and Bottoms alone at Rs. 12-12 per maund. District Tossa also were done at the same rates.

In the pucca bales section a certain amount of business has been reported in Outport Lightnings and Twist at Rs. 88 and Rs. 77 respectively. Mills bought S. M. R. at Rs. 54 per bale and Cuttings N.C. and M.C. at Rs. 42 and Rs. 43 per bale.

JUTE MANUFACTURES

Calcutta, June 7.

There is nothing of interest in the jute manufactures market, mills still being able to reduce rates. Most of the business was done on account of inter-Bazar operators. Reports regarding the enquiry from the U.S.A. for 27 crores yards of hessian created a better feeling. The quotations for near positions are very near the maximum rates, June Rs. 28, July-September Rs. 27-14 and October-December Rs. 27.

In the Heavy Goods section steady conditions have been noticeable, towards the close especially. The undertone is firmer on reports that the Government have placed a large order for "B" twills. "B" twills Ready quoted Rs. 65 and October-December at 8 annas discount.

PIECEGOODS

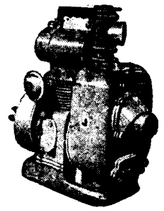
Calcutta, June 7.

As a result of the complaints made regarding the working of the Ward Committees, the Director of Enforcement has been more vigorous in his efforts to distribute cloth to a larger number of needy consumers according to the interim cloth distribution scheme. As the Ward Committees have been afforded greater facilities and as the preliminary work in this connection has been completed, it is believed that the relief afforded might be appreciable.

(*Continued from page 780*).

for it ignores the fact that in certain commodities like jute, raw cotton and shellac, export trade is vital to India. In an interview which Mr. J. R. D. Tata is reported to have given to the press, he is stated to have expressed the view that India does not wish any influx of foreign capital.

* * * *



This represents one school of economic thought, and that represented by Mr. Adarkar can be said to believe in India making her progress along the lines of international co-operation rather than of isolation. What international trading policy is going to be, we have not enough data to judge at this stage. It is only after the rehabilitation of war-ravaged countries and the establishment more or less of stable conditions of international trade that one can with any degree of accuracy determine what policy for individual countries would be best.

½ YEARLY DIVIDENDS

–delivered to your door

Over Rs. 112 Crores were invested in less than eleven months in the First 3% Victory Loan (1957) withdrawn during February 1945.

The 3% Second Victory Loan (1959-61) is issued on attractive terms similar to the First, and is today's soundest investment for the big or small investor. *There is no limit to the amount you are permitted to invest.*

The Loan is backed by India's wealth, and Government has guaranteed to repay at par not earlier than 15th August 1959 and not later than 15th August 1961. If between now and then you wish to realise your capital, the Loan is readily salable in the market at all times.

Interest at 3% per annum less Income-Tax will be paid half-yearly on 15th August and 15th February and the dividend warrant will be sent to your address. You can cash it just like a cheque, and you have the satisfaction of knowing that your investment is helping India's war effort, counteracting inflation, and earning for you a good return.

To buy this Loan, apply to your Bankers, or to the Reserve Bank of India at Bombay, Calcutta, Madras, Delhi, Cawnpore or to the Branches of the Imperial Bank of India in other places or to any Government Treasury.

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, June 8.

Very firm conditions have been noticeable on the Calcutta Stock Exchange in the past week. From Monday onwards there has been a regular uptrend in prices especially in the Coal and Jute sections. Closing quotations are at the highest levels for sometime. The generally better tone of the market is due to the activities of big speculators and the greater support from the investing public. There seems to be a feeling that share prices will be maintained at high levels and that surplus funds will seek refuge in the stock markets. In the Coal section there has been a rather sharp rise in the quotation for Raneegunge on special buying to Rs. 63-4. South Karanpura on the publication of an encouraging report have improved to Rs. 32-10. In the Jute section, Howrahs have been neglected but others are steadier in sympathy with the Coal section. In the Engineering section, Indian Irons have improved on speculative buying the quotation is more than a point higher at Rs. 41-10 ex-dividend. Sugar shares also have been firmer but there is nothing important in other sections.

In the giltedged securities section, very firm conditions were noticeable and business has been difficult owing to the scarcity of sellers. The persistent rumours regarding the conversion of 3½ per cent Paper into dated stock and the persistence of easy conditions in the money market have been mainly responsible for the greater interest in the giltedged market. 3½ per cent Paper is at the highest level for sometime at Rs. 101. There are few sellers for short and medium dated so that interest has extended to the long-dated loans. 3 per cent Paper also is higher at Rs. 91-14. Among terminable loans, 3 per cent 1951-54 were Rs. 100-12, 3 per cent 1953-55 Rs. 100-10, 5 per cent 1945-55 Rs. 100-10 and 5 per cent 1945-55 Rs. 101-8. 4 per cent, 1960-70 were unchanged at Rs. 112-15 and 3 per cent 1963-65 Rs. 99.

Bank shares have been higher with the better tone of the giltedged market, *Reserve Bank* being three points better at Rs. 136-8. *Calcutta Naional* were very steady at Rs. 15-12, *United Commercial Bank* at Rs. 21 premium and *Hind Bank* at Rs. 52.

Cotton shares were neglected with the exception of *Bengal-Nagpur*. *Basanti* were a shade better at Rs. 13-1, but *Cawnpore Textiles* were rather quiet at Rs. 12-2. *New Victoria* changed hands at Rs. 7-5 and *Elgin* at Rs. 63-8.

Coal shares, as said above, have been the feature of the week. *Raneegunge* recorded the biggest rise to Rs. 63-4 with the attempts at cornering. *Bengal* are fifteen points higher at Rs. 718, *Burrakur* are steady around Rs. 42-11, while *New Beerbhoom* were in good request and done upto Rs. 43-4. *South Karanpura* were rather quiet early and the publication of the report has had an encouraging effect. The quotation has improved to Rs. 32-10 from Rs. 30-1. There was special buying of *Satpukuria and Asansol* and a rise has been noted to Rs. 13 from Rs. 10-8. *Samla* also moved upto Rs. 10-8 from Rs. 9-12. *Bhalgora* were active at Rs. 21 and *Talcher* at Rs. 12-12. *Standard* were very firm at Rs. 44 and *West Jamuria* at Rs. 66.

The Jute section has been firmer with a rise in the bigger denomintion shares by ten points but there have been no particularly favourable developments. It is felt that the labour position will be easier in another month and that the larger supplies of coal should see an increase in production. *Howrah* were rather quiet at Rs. 93-8 owing to the lack of speculative activity but *Kamarhatty* were done upto Rs. 743, *Anglo-India* were Rs. 482, *Megna* Rs. 130 and *Reliance* Rs. 79-12. *Lothian* were quieter at Rs. 595. *National* were steady at Rs. 34-13, *Presidency* at Rs. 12-9, and *Nuddea* at Rs. 132-8.

The rise in Indian Irons in the Engineering section, it is said, is mainly due to the activity ties of a prominent speculator. As there are not many scrips in the market the quotation has improved from Rs. 39-12 ex-dividend to Rs. 41-12 x.d. *Steel Corporation* also have moved higher to Rs. 34-4 and are now quoing Rs. 34-2. *Braithwaite* were steadier at Rs. 13-2, *Marshalls* Rs. 5-3, and *United Iron and Engineering* at Rs. 10-6.

In the Sugar section, *Cawnpora Sugar* were in request at Rs. 39-14. There was a sudden rise in *Carew* to Rs. 28-14. *Ramnugger Cane and Sugar* remained firm throughout the week at Rs. 15-12. *Balrampore* were Rs. 16-10 and *Belsund* Rs. 15.

Business in the Tea section has been very restricted, *Tezpore* being Rs. 21-12, *Hattikhira* Rs. 25 and *Hasimara* Rs. 79.

In the Miscellaneous section, Burma shares were rather quiet with *Burma Corporation* at Rs. 5-12 and *B. B. Petrol* at Rs. 5-14 *B. I. Corporation* are better at Rs. 6-7. Large transactions have been reported in *Indian Aluminium* upto Rs. 180, initial transactions being recorded at Rs. 155. *Bararee Coke* were two points higher at Rs. 34-8, *Indian Wood Products* improved from Rs. 28-4 to Rs. 29-6. Among Paper shares, *Titaghur Paper* were firm at Rs. 28-12 as also *India Paper Pulp* at Rs. 234. *Midnapore Zemindary* improved by nearly ten points to Rs. 186. *I. G. N.* also increased to Rs. 196 from Rs. 188.

THE DALHOUSIE JUTE COMPANY, LIMITED.

NOTICE is hereby given that the Eighty-third Ordinary General Meeting of THE DALHOUSIE JUTE COMPANY, LTD., will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, at 11-45 a.m., on Saturday the 30th day of June 1945, for the purpose of receiving the Directors' Report, passing the Audited Accounts for the half-year ended 31st March, 1945, declaring the dividends recommended by the Directors, electing Directors and Auditors and for transacting any other ordinary business of the Company.

COMPANY MEETING.

ASSOCIATED CEMENT COMPANIES LIMITED

A. C. C. IS NO MONOPOLY

Sir Homi Mody's Protest Against Government Policy

RECORD OF FAIR DEAL TO CONSUMER

Presidency at the Extraordinary General Meeting of the Associated Cement Companies, held in Bombay on Friday, 25th May, 1945, the Chairman, Sir H. P. Mody, said:

GENTLEMAN,

The present Authorised Capital of the Company is Rs. 8 crores, and it is proposed to raise it to Rs. 16 crores. The Subscribed Capital which is today a little over Rs. 7.05 crores is proposed to be raised by Rs. 3.52 crores and odd, making altogether Rs. 10,58,13,200. We propose to issue one share for every two shares held by a subscriber.

EXPANSION PROGRAMME.

The reason for expansion of the Capital has been outlined in the notice which has been sent to you. It arises from a programme of expansion which the ACC have been considering for quite a long time. As you are aware, when we started this combine, the total annual capacity was 10.22 lacs tons. In spite of the intervening war years, we have been able substantially to increase that tonnage and today, we have, including the Patiala Factory, a capacity of something like 17 lacs of tons. We have, in addition, a new factory going up at Chaibasa, projected at first for a capacity of one lac tons which, with the permission of Government, is now being duplicated. We have also undertaken an expansion at our Kymore Works. That will give us, when completed—which will be perhaps in 18 to 24 months' time—nearly 2½ lacs additional tons. The programme which Government have sanctioned in addition is for 11½ lacs tons. So altogether, when the whole scheme is completed, the A.C.C. and the Patiala Company, between themselves, will have a capacity of over 30 lacs tons. We propose to set up four new Works, and for the rest, most of our existing factories will be duplicated. The cost of all these extensions is estimated to be in the neighbourhood of Rs. 8 crores, out of which as much as 57% will be incurred in India.

The period that might elapse before all these schemes are completed at six years. We, hope, when all the extensions are carried out to effect a substantial saving in the cost of production.

EXPANDING NEED FOR CEMENT.

The only other thing I have to mention in this connection is that the prospects of the industry so far as one can figure them out, are quite good. The offtake is likely to be considerable; not only has a great deal of civilian demand been held up in the last few years, but there are prospects of enormous developments in every field in this country and of a large export market for some years. Altogether, the Government of India estimate that India's capacity needs to be raised by 30 lacs tons. You will thus see that so far as the demand for our product is concerned, it is bound to be sustained for some years.

CRITICISMS OF GOVT. POLICY.

I have nothing more to say on the proposals before you, but there is one matter which I would like to take this opportunity of touching upon, as briefly as I can, and that is the statement of policy which has been recently issued by Government. At the outset, I shall admit that they have given us a substantial share of the new business, but so far as the second phase of the expansion is concerned, Government have laid down that they will not entertain any more applications from either ourselves or Dalmias. I do not know what constiututional authority Government have for taking up this position. The reason given against any further expansion on the part of the ACC would appear to be that Government do not wish to see monopolistic conditions created in the Industry. I say this is an entire misreading of the position of the ACC., and we have lodged a strong protest against it.

We sent up to Government in August last a full statement of our plans showing the investigations we had carried out at various sites over a period of years, and the raw material resources we commanded. From our past record, we had a right to expect that any proposals we put up would receive a favourable consideration. Not only has this not happened, but we have actually been sought to be barred from any further expansion. It has come to this that even if Government found that we had a sounder scheme to offer, from the technical, geographical and every other point of view, than any of our potential competitors, we would have the door shut against us. I shall not dwell on the economic consequences of a policy so novel and ill-conceived; my only concern is to point out the injustice that is being done to us. Government seem to have all too quickly forgotten the way we have dealt with them during all these war years, when other industries were making very considerable profits out of their supplies to Government. From the first, we have been content with a very modest return on the capital employed in the business, as can be verified by the results we have shown and the dividends we have paid in the last few years. We have dealt with the general consumer equally fairly. Not only have we sold our product at a reasonable rate, but we have placed at the service of the public an organization which, by propaganda and field demonstration, has shown the many uses to which cement can be put and how it can best be used. If we have created a dominant position for ourselves in the Industry, I claim that Government and public have greatly benefitted by it.

THE GANGES ROPE COMPANY LIMITED.

NOTICE.

NOTICE is hereby given that the Eighty-fifth Ordinary General Meeting of the Shareholders of the above Company will be held at the Registered Office of the Company, No. 2 Fairlie Place, Calcutta, on Thursday, the 21st day of June, 1945 at 12-10 P.M.

THE MERCANTILE BANK OF INDIA, LIMITED

SIR CHARLES INNES' VIEWS ON INDIAN DEVELOPMENTS

The Fifty-second Annual General Meeting of the Mercantile Bank of India, Limited, was held on 17th April, 1945, at Winchester House, London, E.C.

The following is the statement by the Chairman, Sir Charles A. Innes, K.C.S.I., C.I.E., on the report of directors and balance-sheet for the year ended 31st December, 1944, which were circulated to shareholders—

The accounts for 1944 are very similar to those of the previous year, the main difference being a further increase of nearly £3 millions in our Deposits, due chiefly to the continued large volume of war expenditure in India and Ceylon. On the Assets side there is a corresponding rise of nearly £2 million in our Securities and an increase of nearly a million in Loans and Advances. Bills show a further small decline for reasons explained in previous statements, and no real improvement can be expected in this respect until the shipping position improves and trade is allowed to return to its normal channels. I should mention perhaps that our Securities stand in our books at redemption value or at cost whichever is lower, and that our premises have been written down well below their real value.

I have been at some pains to compare the balance-sheet for this, the sixth year of the war, with that of 1938, the last pre-war year. I need not set out the figures, but the results of the comparison are just what one would expect. In spite of the fact that seven of our Branches have been over-run by the Japanese, our Resources show a considerable increase. We are much more liquid than in 1938, and our holding of Government Securities has more than doubled. On the other hand a much smaller proportion of our funds is laid out in Bills and Loans and Advances, that is in the finance of industry and trade. Our experience in fact is much the same as that of other Banks. As the result of the war, we have larger funds at our disposal, but the normal outlets for these funds have been circumscribed partly by the claims of Government finance and partly by the extension of Government trading in the country in which we operate. Moreover, we work on much finer margins. This is mainly due to the policy of cheap money in force here and in India, but in the latter country competition from the many new Banks recently established is increasing.

FOOD AND INFLATION IN INDIA

I referred last year to two problems of pressing in India, the critical food situation and the danger of inflation. The year has witnessed improvement in both respects. It is true that food prices still remain inordinately high and that much hardship is caused thereby but in other respects the situation seems to be pretty well in hand. Rationing has been extended to cover some 42 millions of people, an administrative fact of no mean order; considerable success has attended the ment procurement schemes, and large im-; Grow More Food campaign and the Governports of wheat have been secured. The position will be still better when the shipping position improves and Burma rice is again available in quantity, but the food problem of India is likely to become increasingly important. Not only have the authorities to budget for a rapidly increasing population, but as they recognise themselves, the problem of the under-nourishment of some 30 per cent. of the people must be tackled. As regards the other problem, the Government have succeeded in checking by various measures the spiral of inflation, but as the Finance Member has himself pointed out, the problem of the inflationary gap still remains, nor have the Government succeeded in bringing down prices to any appreciable extent.

INDIA'S CHANGED ECONOMIC POSITION

As regards the future, the first thing we have to remember is that politically we are approaching the end of an epoch. Economically, too, the position will change in an almost equal degree. India's war effort has been magnificent, but her war expenditure is reatively light. For next year it is estimated at less than a million a day compared with the £13 or £14 million a day which the war is costing this country. Moreover, she has sustained little war damage, and she will emerge from the war with her economic position immensely strengthened. For the first time in her history she will be a creditor country. The war has given a tremendous impetus to her industries, and even more important is the impact of the new ideas which are circulating in India as in other countries. The whole problem of reconstruction and rehabilitation is being studied in all its aspects with the ultimate objective of raising the standard of living of the people as a whole and of ensuring employment for all. It must be a long time before these vast plans can be translated into full effect, but it may be taken as certain that great developments will take place in the immediate post-war years and that as soon as the markets of the world are again open to her, India will make heavy demands on them not only for consumer goods but also for capital equipment. This country should be able to play its part in meeting these demands. It is true that there will be increased competition from the United States of America and that the process of reconverting our industries from war to peace may be a more troublesome job than in the United States owing to the fact that a far greater proportion of our production has been geared to the war effort than has been found necessary in the States. On the other hand our manufacturers have the initial advantages of established connections with India and long familiarity with the Indian market, and already there are signs of fruitful collaboration between Indian industrialists and manufacturers in this country. In this connection one may hope that a satisfactory solution will be reached on the formidable problem of India's large sterling balance in this country.

I have left myself little space to deal with other matters. You will have noticed with regret and sympathy that Mauritius has recently been devastated by two severe cyclones. The sugar crop has been damaged and I am afraid that the prosperity of the island in the coming year will be materially affected. The experience of Ceylon during the year has been much the same as that of India. The war has brought temporary prosperity to the Island. She has received large payments for her tea, rubber and plumbargo, and large sums have been spent in the Island by the Imperial Government. Money is plentiful but consumer goods are in very short supply with the result that there is a very real degree of inflation, and in spite of all efforts to control them, prices, especially of food and clothing, are very high.

STAFF PROBLEMS

I am afraid that I have little fresh to tell you about those of our staff who have the misfortune to be prisoners in the hands of the Japanese. One can only hope that the day of their release is not far off. Certainly the omens are more favourable than a year ago we dared to hope. But it must be remembered that when the time does come for us to reopen our branches in Burma, Malaya and the other occupied countries difficult problems will present themselves for solution. All I can say is that as far as lies in our power we are making preparations to meet these problems. In particular it has been our policy all through these war years to strengthen the internal resources of the Bank. One of the most difficult of these problems will be that of staff. I often wonder whether people realise what difficulties the Banks have had in respect of staff during the war. It is bad enough in Head Office where we have now only 36 per cent of our permanent staff at the biginning of the war, but here we have had the assistance of temporary hands who have rendered us very valuable service. The position is worse in the East where we employ our trained exchange bankers, the men who make our money for us. We have now only 42 per cent. of our pre-war Eastern staff still working for us. The rest are either prisoners of war or are ill in the Forces, and it is not going to be an easy task to staff our branches when we reopen them in the occupied countries. We hope that as I said last year, the authorities will recognise the importance of easing our men from the Forces as soon as possible.

From these remarks you will see that it has not been an easy year for Mr. Crichton or for the rest of the staff, and I will again conclude these remarks by expressing on behalf of my colleagues and the whole Bank our deep sense of our obigations not only to Mr. Crichton but also to our Managers in London and in the East and to all our staff.

CLIVE MILLS COMPANY, LTD.

(Continued from page 789)

put forward by others. If the plans of the A.C.C. are in accord with the Ceneral Government regarding control of key industries there cannot possibly be any objection in furthering the cause of the cement industry by recognising the claim of A.C.C.

* * * *

As expected the accounts of the *South Karanpura Coal Company Limited* for the half-year ended February 1945 make excellent showng. The increase in raisings to 1,09,220 tons from 53.853 tons in the previous half-year has resulted in a substantial increase in earnings for the half-year. As assistance was continued to be provided in the removal of overburden in the quarry by the military authorities and by Gorakpori labour it was possible to bring about an increase in raisings to a record level in the history of the company. The net profit, before providing for taxation and depreciation, is Rs. 4.40.952 against Rs. 2.06,011 in the previous six months and Rs. 34,785 in the corresponding period in 1943-44. As the Company's appeal against the standard profits alocated to it was considered favourably a substantial measure of relief was granted. As a result there is no need for any provision for E.P.T. in the accounts under review.

As the assets of the Company had not been depreciated adequately in previous years the directors have utilised the present occasion to make full provision under this head. Accordingly, depreciation is as much as Rs. 1,36 000 against Rs. 73,000 on the former occasion. The provision for taxation is Rs. 1.9 lakhs (nil) and the transfer to Stock Adjustment Reserve is Rs. 10,000 (nil) Of the disposable amount, a dividend of 5 per cent against. 1½ per cent. is to be paid. The amount carried forward is very much higher at Rs. 18,985 against Rs. 1 533 brought in.

The prospects for the current half-year appear to be rosy. The directors themselves have pointed out in the report that the sum of approximately Rs. 2 lakhs, which is not subject to income-tax and E.P.T., will be earned in the half-year ended 31st March 1945 and included in the next half year's amount after the figures have been agreed with the Government. As a further concession to the industry has been announced in recent months it is expected that a substantial sum will be earned in addition to the figure mentioned above under the new bonus scheme, for the same half-year. This also will not be subject to E.P.T. Thus, as against the target bonus of Rs. 50,595 in the half-year ended February 1945, a sum of over Rs. 3 lakhs will be earned as bonuses. It will be possible to pay a much higher dividend, may be more than one rupee per share. It is not surprising there, fore, that there has been an improvement in the quotation for the shares of the Company from Rs. 30-1 a few days back to as high as Rs. 33 on Friday.

The results of the South Karanpura Coal Company have naturally had a tonic effect on the coal section. It is generally expected that Companies similarly placed will be able to report a substantial increase in earnings especially as the shortage of plant and equipment is expected to be relieved by the import of mining machinery from the United Kingdom, thanks to the Hydari Mission.

A new company named *Pyrethrum Products India, Limited*, has issued its prospectus this week. The authorised capital is Rs. 10 lakhs divided into 1 lakh 5½ per cent. Preferred Ordinary shares of Rs. 5 each and 2 lakhs ordinary shares of Rs. 10 each. The company has been promoted with the object of producing dried Pyrethrum flowers for the manufacture of Pyretarin which is acknowledged to be the most effective antiseptic suitable for universal application in the way of mass drive against tropical diseases such as malaria, yellow fever, etc. The production of pyrethrum on a commercial scale has not been hitherto undertaken in India, such being confined only to Japan and Kenya in prewar years. As there is an acute shortage of pyrethrum at present, Japan being out of the picture for our purposes, and as there is need for prevention against tropical diseases on a large scale, the Central Government have been anxious to promote the cultivation of pyrethrum in this country and have sought the co-operation of the Provincial Governments for this purpose. It is stated that Assam is best suited for the cultivation of pyrethrum flowers. The new company has been successful in acquiring estates in the Khasi Hills where experiments have been successful in growing pyrethrum flowers containing the active principle of Pyrethrum to a greater extent than in any other part of the world. The Assam Govt. has given special facilities for promoting this enterprise. As the Estate has already commenced production and as the earnings of the company are not liable for E. P. T. and income-tax, being only obliged to pay agricultural income-tax, intending investors would not have to wait long for the payment of a satisfactory dividend.

* * * *

In his address to the shareholders of the Mercantile Bank of India, Limited, Sir Charles Innes, its Chairman has given a rapid survey of the accounts and events of 1944 and the effect of the latter on the former. The balance sheet for the sixth war year is much more liquid now than in 1938. He hopes there would be collaboration between Indian industrialists and British Manufacturers and also a settlement of the thorny question of sterling balances. Speaking on the difficulties of having adequate staff he says that the Head Office at present is working with 36 per cent staff and only 42 per cent of the Far Eastern staff are with them. He emphasised the importance of releasing men from the forces when they reopened branches in occupied countries.

* * * *

A good proposition is at once recognised by the discerning investor. There was such an overwhelming response to the issue of new capital by the Indian Aluminium that, it is reported, only small allotment has been given to investors in respect of both ordinary and preference shares. It appears large parcels of shares have been taken up by the Travancore Government and others. The aim of the directors appears to be to give as wide an allotment as possible. Naturally, on the floor of the Stock Exchange transactions were begun at Rs. 155 for the ordinary shares and there was a further rise to Rs. 180. In view of the large demand and the scarcity of sellers there might be a technical rise in prices. But in view of the fact that no large dividends could be paid in the next few years any big jump in prices would not be desirable.

BOUQUETS & BRICKBATS

(From our Readers)

"White Washing":

From the number of letters that appear in your esteemed column 'Bouquets and Brickbats' I am really pleased to find that the public are righteously indignant at the irregularities reported in the Posts and Telegraphs Stores at Calcutta. The caution that might be taken now is but closing the door after the horse has been stolen away. But still any vigilance that Government might show may prevent recurrence of such shameful breach of trust.

But what action has Government taken to bring the offenders to book and give them exemplary punishment? The delay is discomforting as the seriousness of the crime will not be realised by passing of time. Procrastination is one form of 'White Washing.'

K. B. Mathias.

The attention of our readers is invited to a note entitled 'No White Washing' appearing elsewhere in this issue where Sir G. Bewoor assures us there is no 'White Washing'.

Ed.

Telegrams by Post:

Allow me to thank you heartily for your excellent note under the above caption appearing in your issue of June 9th. To those who have sent ordinary telegrams and planned their programme on the supposition that the telegrams will reach the destination, be it a little late,—and their number is not small—you have made a revelation and given a useful warning.

What a hoax has the Government been playing on the people, if the allegation is true? I have no reason to think that the allegation is unfounded; for, on several occasions, I know telegrams have reached the destination days later, and on some occasions never at all. Why should not Government tell the people that ordinary telegrams will reach as late as letters or later? Why should they charge annas 12 for a service for which they themselves charge annas 1½ under another name? How many women and children had been stranded in unknown and far-off railway stations, hoping against hope, their telegrams would have reached their people and males would come to take them home?

The people have been wronged. It is inexcusable if Government do not come out with a clear statement of the position and make suitable amends for the wrong done.

Jaswant Singh.

Eavesdropper's Optimism:

Eavesdropper deserves high praise for taking the hopeful view of the United Nations' work at Frisco, in his feature of June the second. For, just at that time, there was general despair about the goings on at Frisco. Latest news off the beam (I am writing on June 8) suggests that he has the laugh on his side, as mostly ever. The news item says that the vexed question of veto has been satisfactorily solved.

But whether or not Eavesdropper's optimism is borne out by results, in a particular instance, it certainly does one good to read him. One cannot help wishing there were more columnists as intent on marshalling facts that support the hopeful view. To pour through page after page of gloomy forecasts, however ably argued, without a refreshing column or so from the pen of a born optimist, makes the depressed reader feel that he is being ill-served. For obvious reasons, Jeremiahs are not an uncommon phenomena in our country. But it would help the reader very much to arrive at his own conclusions, if there was a nice balancing of optimism and pessimism at least in print. The press may usefully adopt a method similar to the communal ratio to ensure this. Besides, a set of optimists through the press might breed more optimists. What may not optimism achieve? To give further point to this view, I may recall the story of a columnist with a strong bias for pessimism who, when obliged to do duty frequently for an optimist, found he had become a convert.

"Depressed"

Change in the Coinage:

What have you to say to the points raised in Mr. A. S. Nath's letter appearing in your issue of the 9th June? I fail to see why Government should introduce a change in the coinage when the existing system which has stood all this time is not found to be defective or wanting.

Even Great Britain, who is the inspirer and guide for this unfortunate country, has not changed to a decimal system. Then where is the hurry for India? You say in your note 'By adopting the decimal system India would rank as one of the countries having a simplified coinage system.' You talk as though Indian currency is independent. Pray, don't forget that the fate of your currency, at least in international dealings, depends on Sterling? Free yourself from it and only then can you think of change in the coinage.

Kapur Chand.

Agricultural Income-tax for Madras:

Mr. Srinivasan's letter published in your issue of June 9, 1945 shows what a champion the Madras Advisory Government has. It might reward him if it knows it has such a champion in Mr. Srinivasan. Let me reply Mr. Srinivasan's argument. He says 'you say that the present Government has no business to levy the tax. Elsewhere your Correspondent charged the present Government with deriving the benefits of a tax measure which the Congress Ministry brought forward incurring the odium of the people. Now you must congratulate this Government for coming forward to incur the displeasure of the people by this taxation proposal and allowing the future popular Government to benefit by it.'

The present Advisory Government has no business to levy the tax on the fundamental principle accepted in England and elsewhere "no taxation without representation". That the present Government is enjoying the benefits of the Sales Tax without enforcing prohibition is a mistake. That wrong cannot be set right by another wrong, levying another tax, may be, a popular Government may benefit by it later. Nobody asks this Government to levy a tax and become unpopular—as if it has anything of popularity—and leave legacy to the popular Government.

A. S. Nath.

Manufacture of Locomotives:

Mr. Masani's fear expressed in his letter on the above subject appearing in your issue dated May 26, 1945 is fully justified by the news item appearing in your 'Fact Parade' in "Indian Finance", dated June 2, 1945 under the caption 'British Locomotives for India', where it is reported that a British Company has received orders for manufacturing 110 locomotives for India.

But at the same time one is tired of reading in the newspapers the news in different form from different places that the Tatas are starting to manufacture locomotives in this country and orders to import machine-making machines have been placed in England and other countries. Is this a post-war plan—one of the convenient procrastinating tricks? Or are token and toy locomotives to be manufactured in India while most of the locomotives will be imported from abroad. The public are anxious to know the Government's policy in this matter.

M. R. Chandra, M.A.

Anomalous Import Control:

May I bring to your notice the anomalies one finds in the application of the Import Control Order to different business interests? I am making a specific reference to the import of heavy chemicals.

The basis, according to the order, on which import licences can be granted is the past imports of a particular firm in a particular item. This, however, in practice, does not seem to apply to the imports of the Imperial Chemical Industries, for their imports lately are a number of times more than their past imports. Besides, for most of the items the I.C.I. import, the Government see that the order is so applied that the I.C.I. hold the monopoly.

Now taking the Open General Licence recently issued by the Government, one finds that certain heavy chemicals can be imported by anyone, though only from U.K., but each packet of these chemicals should not exceed 28 lbs. No reasonable justification could be found for this clause. But the policy of the Government is clear from this clause. The fact is, most of these heavy chemicals are not available in U. K. in 28 lbs. packing, for the simple reason that the manufacturers, due to shortage of packing materials, have stopped supplies in 28 lbs. packing.

OBJECTS:

The Company was incorporated as a Private Limited Liability Company on the 28th September, 1939, with an initial capital of Rs. 5,00,000 with its main object as manufacturers of glassware products. This entitles the Company to 12½ per cent of its paid up capital as "Standard Profits" in the calculation of the Excess Profits Tax. This places the Company in an advantageous position. The Company was later converted into a public limited liability company on the 24th of August, 1944.

Production commenced in October, 1942 as a result of subsidy from the U. P. Government and under the guidance of the Glass Technologist to U. P. Government with up-to-date furnace and machinery imported from the U. K. and the U.S.A. The factory is situated in the suburbs, so as to say of Delhi at Malaknagar, on the Grand Trunk Road between Delhi and Ghaziabad. It holds 68 acres of land which is sufficient for any future expansion an its complete colonisation.

For the years ending 31st March, 1943 and 31st March, 1944, the Company paid to its shareholders dividends at the rate of 6 per cent per annum, free of income-tax and in December, 1944, the company issued one Bonus Share for every share held to the then sharehloders.

Fact Parade

Australian Aid to U. S.:

Reverse Lend-Lease aid from Australia to the United States of America reached a total value of £201 million by October 1st last.

The outlay under most of the sections was maintained at a high rate during the first three quarters of 1944—the total for the period being £88 million. Australia spent as much for food for the U. S. forces in the quarter ended September 30th as in the preceding 6 months.

Total to Oct. 1st 1944.	£ mil.
Foodstuffs	46.2
Air Force supplies ...	15.8
Other military supplies ...	42.6
Ship services and building ...	18.2
Construction ...	41.5
Transportation etc. ...	37.2
Total ...	201.5

Trade Pacts in Mid-East:

Direct steps have recently been taken to develop inter-Arab trade. The Alexandria Chamber of Commerce has received a proposal from the Aleppo Chamber of Commerce that attempts should be made to organise an economic conference to be attended by representatives from Egypt, Iraq, Palestine, Syria, the Lebanon and Saudi Arabia. The conference will study the economic situation of these countries and co-ordinate its policy with that of the new economic policy of the world. This policy will be a prelude to trade agreements between these countries. The conference will very likely lead to the formation of a joint Chamber of Commerce, which will be the vehicle of economic co-operation.

Another example of this inter-economic collaboration is the recent meeting of the Prime Ministers and Foreign Ministers of the Levant States at Shatoura to discuss economic questions of mutual interest. Syria has also entered into a trade pact with Iraq. In accordance with this agreement Syria will export to Iraq 500 tons of soap, 2,000 tons of cement, 420 cases of matches, 30 tons of silk textiles, 74 tons of cotton textiles, 100 tons of rope, 20 tons of leather, 2,000 dozens of stockings and 20,000 neckties. In return Iraq will send to Syria 130,000 head of cattle and 1,000 tons of rice. Negotiations are also going on between Iraq and Turkey to sign a trade agreement.

* * * *

Fall in value of Chinese Dollar:

The black market value of the American dollar passed 1,000 Chinese dollars for the first time in a sharp spurt and showed signs of rising still further. One reason for the rise was believed to have been speculative buying caused by insistent rumours that the Chinese Government intend to increase the official rate to 680 Chinese dollars to one American.

Despite a Government disclaimer of any such plan, the rate started spurting from around 700 on Wednesday to more than 1,000 today. Some transactions were reported to have been effected at a rate of 1,000 to one. Many quarters viewed the trend with concern, fearing that the present astronomical prices would climb still further.

Meanwhile, Chinese reports from Shanghai said there had been a terrific decrease in the value of the currency of the puppet Government there in view of the intensified bombings of Japan, signs that the Okinawa campaign was ending in success for the Americans and contraction of the Japanese lines in China. The puppet Chinese dollars which originally were on a par with the Chinese national dollars, sagged to the record low level of 180 to one.

* * * *

U. S. Army Post-war Plans:

The U. S. war Department wants a post-war peacetime standing army of 500,000 regulars backed up by 4,000,000 active reserves.

The army's post-war plans were outlined at a closed session of the House Military Affairs Committee by Brig-Gen Edward A. Evans of the Army General Staff Committee.

Committee members said army plans, based on the assumption that Congress will approve compulsory peacetime training, would give the nation a total of 4,500,000 trained men who could be thrown into the field in approximately 120 days.

The total of 4,500,000 men asked by the army would include 500,000 regulars, 400,000 to 500,000 men who would be in the compulsory training programme at any given time, as well as active reserves who had completed their training and probably the National Guard.

Committee members were presented with a memorandum dated Aug. 25, 1944, by the Chief of Staff, Gen. George Marshall, who said the nation could choose between two types of military establishments after the war; (1) a large standing army; (2) a standing army "no larger than necessary to meet normal, peacetime requirements," but backed up by competent citizen soldiers who had acquired experience through temporary training.

Gen. Marshall said that the large standing army system is "the type used by Germany and Japan and "has no place among the institutions of modern democratic States based upon the conception of government by the people."

Branch in Orissa:—Sambalpur.

THE CAPITAL GLASS WORKS LIMITED—(Continued)

With the addition of the new 10 tons Regenerative Furnace the capacity of the plant becomes 22 tons per day which is nearly double of what we have been so far working, i.e., 12 tons per day from our previous three furnaces. The Company has in hand fairly large number of running contracts from the Civil Market as well as from the war supply department.

SPECIAL FEATURES.

The factory is locaetd within easy reach of one of the biggest markets of Northern India and some big Distilleries and Toilet Works are located within 200 miles of radius of the factory. The Company has already received large orders for toilet, pharmaceuti- cal and Excise bottles from these concerns. The orders already in hand are enough to consume the production for many months to come and we are forced to decline to accept orders every day. The Company has now started manufacturing tableware in addition to bottles.

Another important feature of the Company is that it possesses a complete Mechanical Workshop and Foundry, capable of not only meeting their own requirements, but also supplying moulds, semi-automatic, blowing and other finishing machines to other glass factories in India.

Arrangements for plastics, starting with cap making are well in hand and the Company proposes to extend this line as well one of the most promising industries of the day.

The Company has a carefully thought out postwar programme and its realisation has begun by negotiations with Government authorities and machinery and plant makers in the U. K. and the U.S.A., and has already placed an order for Automatic Bottle Making Machine.

The production of Soda Ash—the costliest ingredient of glass in India itself (so far always imported) completes the availability of all major raw materials in the country and harbingers cheaper production, thus bringing Glass Industry in India on par with that in other countries.

Glass Industry in India will evidently have a brighter future as its main competitor—Japan—which supplied nearly 75 per cent of the total glass imports, will be no more in the field in that preponderating condition.

The capital now being issued will in no way affect the dividend paying capacity of the Company because out of this Rs. 10,00,000 about Rs. 9,00,000 will be used to liquidate the existing loans of the Company from banks, etc., which amounts have been utilised to put up another 10 tons furnace and extra machinery and buildings for the same. The Company thus stands in a better position to pay dividends to its new shareholders also, not only from its regular profits, which also are expected to be greatly increased due to nearly dobuling the production but also by the transfer of the interest now being paid to the bankers its shareholders.

MINIMUM SUBSCRIPTION.

The minimum subscription on which the directors may proceed to allotment in respect of the present issue to the public is shares of the nominal value of Rs. 2,00,000.

of business, and which effectively ends the favourite dodge for evading Income Tax.

They have banned the cashing of crossed cheques worth over 10 sterling.

Black-marketeers had kept their transactions secret from investigating agents by making payments in cash, but on April 30 Government withdrew from circulation all bank notes over five pounds and these notes ceased to be legal tender.

Black marketeers replied by taking payment in crossed cheques, which they could either cash themselves or through friends, in either case without any record of the deal appearing in their banking accounts.

Now this has been stopped. Virtually, the only cheques on which the bank will pay cash are uncrossed ones presented by the drawer or his known agent, so that the black marketeer is now either forced to have a record kept of his dealings or attempt to handle thousands of pounds involved in huge numbers of single notes.

Drug Control Order Amended:

By an amendment to the Schedule to the Drugs Control Order issued on 2nd June 1945 in the Gazette of India the maximum wholesale and retail prices of a number of drugs and medicines have been reduced. The reductions in prices will take effect from 2nd July 1945. Retailer licensees will shortly be supplied with copies of amendment for display in their shops along with the price schedule.

* * * *

New Drug for Typhoid:

Streptomycin, the germ-killing properties of which were revealed only last year, has been used successfully in the treatment of typhoid, for which there has hitherto been no known positive cure, says the Journal of the American Medical Association.

Although the research is still in a purely experimental stage, streptomycin is said to present the first good approach to a typhoid cure.

The new experiments indicate the possible effectiveness of streptomycin in combating bacteria against which penicillin has been unsuccessfully used.

* * * *

Europe's Cotton Shortage:

The Wall Street Journal reported that the Lend Lease administration, through the offices of the United Nations Relief and Rehabilitation Administration, may give away low grade cotton to ease Europe's textile shortage. However, opponents of this move argue that it would offend other cotton nations, the journal said.

* * * *

Import of Indian Jute:

The War Production Board recently announced that manufacturers of jute and jute products in the United States can now apply for authorisation to import Indian raw jute and jute butts for the July-September quarter shipment.

The announcement said that authorisations will be granted on the basis of the applicants' average consumption in 1939, 1940 and 1941.

* * * *

Mercury for India:

New Zealand is in a position to supply 1,000 lbs. mercury to India immediately and thereafter 1,000 lbs. per month, the price being 20 shillings (New Zealand Currency) per pound F. O. B. Auckland.

The Government of India have expressed their willingness to grant the necessary import licences on receipt of applications.

TREASURY BILLS

Central Government:

Tenders for Rs. 2,00,00,000 of three months' Government of India Treasury Bills were opened on Tuesday, June 12, 1945. Total amount offered was Rs. 5,51,25,000. Tenders at Rs. 99-15-0 per cent were allotted approximately 99 per cent. Lower tenders were rejected. Total amount accepted was Rs. 2,00,00,000, the average rate of accepted tenders being Re. 0-4-0 per cent per annum.

Tenders for Rs. 2,00,00,000 of three months' Government of India Treasury Bills will be received on Tuesday, June 19, 1945, at Bombay upto 11 a.m. (Standard Time) and upto the close of business on Monday, the June 18, 1945, at the centres. Successful tenderers should make payment on Friday, the June 22nd, 1945. Other conditions are as usual.

During the week ended June 1, 1945, Government of India Treasury Bills for Rs. 4,56,50,000 were sold in favour of the Issue Department of the Reserve Bank of India.

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

There is a glut of funds in the money market and call rates are nominal being ½ per cent in Calcutta and ¼ per cent in Bombay. With a continuous improvement in the working capital of banks and a stationary level of advances, banks have been bothered with a surplus of funds. As short-term borrowing of the Central Government is on a very small scale and there is no great anxiety on the part of banks to place all the surplus money in giltedged securities, there has naturally been keen competition for the small offer of Central treasury bills. If the total amount of applications at the auctions held this week was very much lower at Rs. 5.51 crores against Rs. 8.86 crores last week, it is due to the anticipation of a small allotment and a drop in the average discount rate. There is a decline to 4 annas per cent from 4 annas 11 pies per cent last week. The offer has not been increased and is again Rs. 2 crores for the next week with maturities at Rs. 4 crores. The total amount of floating debt is now the very small sum of Rs. 42 crores against the peak of Rs. 130 crores early last year. It should be said that the funds released, as a result of the reduction in the floating debt, have found its way into Government loans. But as new subscriptions were not on a very large scale, the Central Government have not succeeded in taking full advantage of the conditions in the money market. Rather they have lost their grip on the anti-inflationary drive. It remains to be seen whether full advantage would be taken of the present conditions and subscriptions to loans could be stimulated to a greater extent.

The returns of the Reserve Bank for the week ended June 8, show an expansion in currency for Rs. 10 crores against sterling securities. Total notes issued were Rs. 1,146.27 crores against Rs. 1,137.43 crores. The increase in notes in circulation is more pronounced, the latest figure at Rs. 1,136.61 crores showing a rise of Rs. 13 crores over the figures for the previous week. Notes held in the banking department, as a result, are lower at Rs. 9.66 crores against Rs. 13.82 crores. Sterling securities have improved by Rs. 10 crores to Rs. 1,078.74 crores. Rupee coin have declined further to Rs. 14.69 crores from Rs. 15.84 crores.

In the banking department, Central Government balances are appreciably lower at Rs. 251.42 crores, a drop of nearly Rs. 15 crores. It is perhaps due to the large month-early disbursements and interest payments. But there is no corresponding increase in bank balances with the Reserve Bank, such being only Rs. 1.05 crores higher at Rs. 91.91 crores. Other Government accounts show a rise of Rs. 1½ crores at Rs. 19.83 crores. Foreign balances are Rs. 4.6 crores lower at Rs. 388.72 crores. If the transfer to the issue department of Rs. 10 crores is taken into consideration there is a net receipt of Rs. 5.4 crores. There is no important change in investments held by the Reserve Bank.

The returns of the Imperial Bank for the same period does not show any important change in deposits. Investment also are not very much higher at Rs. 143.65 crores. But advances are more than Rs. 3 crores lower at Rs. 65.71 crores. Cash balances, as a result, have improved to Rs. 35.7 crores from Rs. 32.23 crores.

The statement of scheduled banks for the week ended June 1, shows an increase in both Demand and Time liabilities. The rise in Time liabilities on the present occasion is even more pronounced. Demand liabilities are Rs. 625.65 crores against Rs. 620.54 crores on May 26, and Time liabilities Rs. 232.66 crores against Rs. 230.67 crores. Both cash on hand and balances with the Reserve Bank are lower, the total being nearly Rs. 2 crores lower. As there is only a small increase in advances a large sum appears to have been placed in investments perhaps in giltedged securities.

When the Government of India decided to stop forward transactions in bullion, they obviously took this step with the object of discouraging speculation. In the then prevailing circumstances, the authorities believed that, if facilities for forward dealings were not available and if deliveries were confined to cash, speculation would be checked; and this would have the effect of preventing speculators from forcing up prices too high.

But, unfortunately, this action of the Government has had quite an opposite effect. The system of weekly settlement of outstanding transactions, combined with the scarcity of available supplies, has provided a powerful weapon to bull speculators. Instead of an occasional squeeze of bear operators, there is now a weekly squeeze, and, during the last 18 months, the bear operators have, every week, to pay a heavy premium for the privilege of transferring their sales to the next week. If a man had bought silver two years ago and if he had continued to transfer his purchases from one week to another, he would be now making not less than seventy to eighty rupees per 100 tolas, so that his purchase price would be such that he will not be a loser even if there was a sudden collapse in the price of silver.

In the last 18 months, the general opinion regarding bullion has been bearish. But, some big professional speculators, who had made crores of rupees, have been able to bleed bears white.

As a result of weekly squeezes, some of the bullion exchanges have limited the weekly carryover charge to one rupee per 100 tolas. But, even that is a great encouragement to bull operators. If a bull makes Rs. 4 per month on his purchase and if he can carry forward his transactions for twelve months, he can reduce his purchase price by almost Rs. 50 per 100 tolas.

From enquiries made in the market, it has come to our knowledge that forward dealings are now carried on in more than 200 towns in British India and Indian States. If speculation is carried on in more than 200 centres, a stock of a few thousand tolas is no load on the market.

The general public is bearish in its ideas about the future of bullion. It is the professional speculators who are successfully keeping the market up, due to the weekly premium of one rupee that they are mulcting.

If the Government are at all anxious to bring down the price of silver or to discourage speculative buying of silver, they ought to remove the ban on forward dealings. If transactions can be started on a three months delivery basis, it will be a great discouragement to bull operators and will also have the effect of bringing down prices as a result of speculative sales. At present, the bull operators can buy large quantities because they know that they have no chance of losing. No large stocks can be thrown on the market in one week and, if the price goes down, they can effect a corner.

The Government should either stop all speculation in bullion or they should remove the present restrictions regarding forward dealings.

Need for Popular Direction

Lord Wavell has fulfilled the expectation which "Indian Finance," almost alone in the Indian Press. expressed when he took office that he would before long succeed in placing before the country a practical scheme for resolving the political deadlock. At the time of writing this article, hardly any of the great political leaders has expressed an opinion on the new proposals and the public mind, too, is yet to be made up. In the case of political powers of more or less equal status the limits of compromise and the chances of the ultimate arbitrament of war are alike clearly, though instinctively, understood by the contending parties. The merits of particular proposals are judged in relation to the criteria which are determined objectively and not arbitrarily. But in the case of the long and, for all practical purposes, indeterminate, disputes between Britain and India, the help which objective conditions give to forming the criteria of judgment is almost negligible. Past experience has taught us that the first impulse alike of Congress leaders and of the average Indian is to look at any set of official proposals as if they represent delivery of goods against a previously accepted order and to look for accordance with given specifications. The idea that at some date in the future, which cannot be fixed beforehand, Britain must feel compelled to fashion Swaraj according to our tastes and offer it on a plate to India's national leaders, though it, no doubt, seems ludicrous when stated in such bald terms, is entertained in different forms by different parties and individuals.

The reason is not far to seek. It lies in the utter absence of definite criteria of judgment formed in reference to objective conditions which by themselves make clear the advantages and disadvantages of alternative courses of action. The consequences of rejection of an offer are thought in terms of the possible return of Congress leaders to jail and not of missed opportunities for building up the nation and preparing it for the great role which we like to think India can play in the life of the nations. Nor are the advantages of acceptance reckoned in terms of the vantage that the Congress will get as against the anti-national forces within the country or abroad. Where realistic apprehension either of the immediate obstacles or of the opportunities ahead, not to speak of the chances of serious setback, is more or less totally lacking, practical propositions are naturally judged in reference to abstract concepts and impractically lofty ideals.

In a special contribution to the "Eastern Express" of Tuesday last, Prof. Laski refers to the "arid conceptualism of the Germans". This arid conceptualism is, in fact, common to the Hindus and the Germans, who are the two races on earth who have seriously taken to philosophical monism and tried to apply it to practical life. While the German took it to the sphere of politics and indefatigably evolved first the Hegelian, and then the Hitlerite, State, the Hindu diverted it to the evolution of the detached individual. The individual, who is a limb of the Hitlerite State, is in practical life, the very devil himself. In the other case, where detachment is a delusion, the individual becomes the greatest obstacle to social progress. All of which explains why the Germans have ended up as a menace to the whole world and the Hindus as a menace to themselves.

In both, the same arid conceptualism and the proneness to be spell-bound with the beauty of one's own ideas are at the root of the trouble. To continuously etch in our mind our concept of Swaraj, adding new lines of grace and beauty, is no great help in its translation into concrete reality. On the other hand, it turns the inevitable imperfections of the real thing into a repulsive ugliness and impels us to reject the very raw materials of our works of art. It is not a sordid spirit of bargaining but the undisciplined working of profound impulses that must explain the tragedies of recent Indian history.

Recent Indian history is not, however, less tragic for that reason. The toll of suffering which the rejection of the Cripps proposals has taken on the people at large is not easily reckoned. Much speculation is, doubtless, involved in any such reckoning. But it will not be gainsaid that the presence of responsible Indians in the Councils and Ministries during the food famine and generally during the days of painful and costly adjustment to the demands of a prodigious war effort would have made a vast difference to the well-being of the common man. The same may be said of the present period, which is crucial from the point of view of post-war development, the same as the last two years were critical in wartime development. Lord Wavell has emphasised on more than one occasion the importance of popular leaders taking over the tasks of economic development in the years to come.

In these columns, it is apposite to lay stress on the economic aspects of the national problem today. Even for the layman, it should not be difficult to grasp the main features of the transformation which has come over the national economy during these years of the war. The most striking feature is, of course, the glaring contrast between the big rise in the money incomes of all classes of people and the fall in the available stocks of consumable goods and services. The lower classes, it is a matter for gratification, have benefited to some extent by their being enabled to consume goods made available to them by the cut which rationing has effected in the consumption of the higher classes. This, however, is true almost solely of foodstuffs. A similar advantage in clothing has got out of reach owing to the increasing gap between normal consumption and present day production. For the hardships of day-to-day life there is for the present a certain mental satisfaction in that large numbers of people have sizeable savings after paying off long-standing debts. But the value of present savings depends, not on present conditions, but on the conditions and trends of the future. A slump may conceivably force people to live on their savings; or we may continue in the same conditions of rationing and paucity of consumer's goods; or savings may have to rust for lack of opportunities of investment. All the three contingencies have to be provided against. There is a fourth, too, which is in some ways more dangerous than any of the others, a ruinous plenitude of goods brought about by large-scale imports from abroad. Thanks to wartime inflation, a position has been brought about in which the common man will have to go to the wall, unless his interests come under the protection of popular leaders placed in positions of power and responsibility. Political life in India is not so well organised that the alternative to popular leaders has to be found only in foreign officials. Indians with varying pretensions to a representative character are always found ready to execute policies which are not in the popular interest. Their presence in the Government not only helps to disarm foreign critics of British policy in India, but also to spread the tentacles of corruption over the whole of public administration and public policy.

The stage has come when it can be confidently asserted that India has before her only one of two chances. Either the affairs of the people are taken charge of by a body of representative leaders and shaped in increasing accordance with the people's will, or the forces of disruption and disintegration are let loose on the whole country. With the best will in the world, a foreign Government cannot adequately sense our needs and aptitudes and fashion policies and practical measures to our permanent advantage. The alternative course of looking after their own interests and preserving order only to the extent necessary therefor will be too alluring to be resisted. Politically and economically alike, these observations hold true. They represent the hard core of the present situation which the Congress and the League alike can ignore only at their peril.

The merit of the Wavell Plan is that it affords a springboard from which to pounce on problems which are not now within the range of our attack. It by-passes or shelves many an embarrassing problem and provides the conditions in which their solution over a period can be attempted with comparative confidence. It evades a number of awkward issues and effectively places in the forefront the more imperative and the more urgent of the tasks on hand. Doubtless, established habits of political thinking have to be shed if the Wavell Plan is to be seen for what it is. It is encouraging that Mahatmaji's statement on the Viceroy's broadcast talk contains nothing to raise the fear that the Plan may be rejected. May the best counsels prevail!

Britain's War Expenditure in India

It is often pointed out that the subordinate position in which the Government of India is placed has been fully exploited by His Majesty's Government for controlling Indian industries during the war and purchasing British war requirements from India to Britain's advantage. The commercial bodies in this country have represented that the war contract rates have been fixed so low as to benefit H. M. Government's purchases irrespective of the sacrifices to be incurred by the Indian civilian public. They have also submitted that special concessions have been given for the purchase by His Majesty's Government and very often His Majesty's Government interfered in the Indian market, almost by-passing the Government of India. They further pointed out that if India had been a free Government, the co-operation in the war effort against the Axis countries would have been done on a better footing, producing more in quantity and without involving the civilian population in untold miseries, as it actually happened in India. The rapid growth of sterling balances and the consequent galloping inflation in India have added further interest to the problem of British purchases in this country. While Indian businessmen have been murmuring that the wartime industrial development of India has been deliberately curbed by a do-nothing-policy of the Government of India, some powerful sections of the British press started a loud and sustained campaign for the revision of the Indo-British Financial Settlement of 1939 and openly asserted that India profited by British purchases in India and the war contract rates at which India's raw materials and other supplies were made available for His Majesty's Government were much above what should have been in fairness to Britain's contribution to India's defence. Consequently, there was a wave of consternation in our business circles that the sterling balances would not be repaid as early as India required and even if repaid, it would be done in a way which is harmful to this country's future. Credit goes to Sir Jeremy Raisman for placing India's case in a convincing way before His Majesty's Government and Lord Keynes' assurance that Britain does not contemplate any high-handed repudiation of India's sterling balances with England has set Indian anxiety temporarily at rest.

The Fourth Report of the Parliamentary Committee on British expenditure in India, extracts from which are now available for the Indian press, has now come out with a clear verdict on the much-discussed question of British purchases in India during wartime. The Committee examined the different channels of purchases from India, have calculated prices and have taken a broad survey of facts ascertainable from responsible Departments in this country. Their main task was to examine (1) whether supplies obtained from India on British account have been economically procured; (2) whether the greatly increased British expenditure in India has aggravated the tendency towards inflation and whether this could have been avoided and (3) the arrangements for the disposal of the large sterling balances which have accumulated to the credit of the Government of India as a result of British expenditure in India. The Committee have given answers for the first two questions but omitted the third as outside the terms of reference given them. They say, "taking all circumstances into consideration, fair prices have, on the whole, been secured for war stores and for food bought by this country". With regard to the second, it appears that clear evidence has not been available to the Committee to conclude that the expenditure under the control of British departments has been a major factor, which contributed to inflation but the Committee admit that "the free flow of exports unbalanced by imports which British war purchases for war purposes has stimulated must, in some degree, have been contributory to the inflation of the Indian currency which now exists."

It is well-known, and the Committee know this very well, that the Government of India's purchases on behalf of His Majesty's Government and the British Ministry's direct purchases in India, were made at controlled rates while the Indian public had to pay for the same commodities "commercial prices" which soared to inconvenient levels as months and seasons passed on. The Committee, it is interesting to note, are satisfied that over a wide range of stores India's prices have been seldom higher (in some items were actually below) than the market prices. But even in those cases where the prices have been higher, the reason was not profiteering but the fact that the articles for which such prices were charged were manufactured in India for the first time. Those who accuse India of profiteering when Britain was engaged in war are told by this Committee that as against five times the prewar prices which Indian civilian consumers had to pay for their cloth, the Government paid for its war purchases no more than twice the prewar rate. Such instances can be multiplied but the point to be borne in mind is that India's contribution to the war effort has to be assessed not only in terms of the quantity of raw materials and other vital supplies given, not merely in terms of the value of such articles as priced by the Government of India and His Majesty's Government but also as against the fact that India was not allowed to develop her own key industries during the war which is a great opportunity for industrialisation and the purchases went on almost callously when civilians in millions suffered untold miseries throughout the length and breadth of this country. A free country would have first taken care to develop her resources and increased its industrial potential, would have dictated its own terms in buying and selling and would have made careful arrangements for the recovery of her assets. Australia and Canada are cases in point. If the Rupee-Sterling exchange rate had been allowed to be governed by the laws of international trade or by the exigencies of national policy there would have been more imports or less exports during the war and civilian suffering would have been far less. British purchases in India functioned mostly as a case of one-sided commerce, though money is supposed to have accumulated on India's behalf in bank accounts. Five years of development work have been stopped and when peace comes again India finds others more prepared for postwar progress than herself. It is only against such a background that the real implications of British purchases in India are to be assessed. The public in India should feel grateful that the Parliamentary Committee have at least now come forward to admit officially that India has not profited at Britain's expense, that the sterling balances really represent the sweat and toil of India's masses. India's war contribution deserves to be considered against the background of her poor capacity to pay. We hope the campaign against India would stop with the convincing proof contained in the Report of the Parliamentary Committee of His Majesty's Government's expenditure in India.

Special Article

Insurance Companies and Industrial Development

Need to effect low interest rates

By S. S. SHUKLA.

The Post War Reconstruction Sub-committee appointed by the Government to investigate and report on the conditions of Insurance in India is shortly going to submit its report. At this moment it is necessary that the difficulties which this important social industry has experienced in the past and the factors which have gone to limit its expansion in this country be fully discussed so that they may not escape the attention of the committee, and the members may know how the general public thinks about those matters.

I agree, the basic principle of Insurance still remains the same, i.e., distribution of risks among a group of persons called the policy holders. But modern society wants more. It demands that Insurance should be a paying proposition too. If we want to popularize Insurance in this country, we should make it cheaper. At present, it is too costly for a poor country like India.

Now let us consider what are the factors which make it expensive. First is the high expense ratio of the Insurance Companies and the second the low interest yield.

There is much agitation in the public and the Insurance Department of the Government of India also does not miss any opportunity to impress upon the Insurance Companies, the necessity for minimizing their expenses. I admit there is much scope for improvement in this direction; but I feel that by concentrating too much on this item, we have lost sight of the other factor altogether. Why not improve the interest earning power of the Companies?

The factors which limit our capacities in this direction are firstly, the provisions of Section 27 of the Insurance Act which make it compulsory for the companies to invest 55% of their funds in Government Securities; secondly, this high rate of taxation which the Companies pay on their earnings; and thirdly, the conservatism of the insurance companies in the matter of their investments.

If the various schemes put forward for the amelioration of the condition of the masses of India are to be pushed forward, then we cannot expect much relief from taxation for some time to come. The State will require large funds to carry out these measures and these funds will have to be raised by taxation.

Much has been said in the Press as well as by the Insurance Companies for the release by the Government of more of the funds of Insurance Companies for investment in channels other than Government Securities. But this alone will not take them very far. It is the reorientation of their whole investment policy which is required.

There is at present great opposition from the Government as well as from the side of the public to the idea that in the matter of their investments the Insurance Companies should follow any path other than the beaten track of giltedged securities. Some of the older and well established life offices in India also subscribe to this view and vehemently oppose any deviation from the old path. In their anxiety for the security of their investments, the companies have side-tracked the question of sufficiency of income, so much so that now this factor is endangering their very existence. The premium tables of the Insurance Companies in India are prepared at the assumed rate of 3½% interest but a glance at the Annual reports of the various Companies will show that their average yield is not more than 3%. Now to meet this loss, the Insurance Companies are resorting to all sorts of harmful practices. Some of them have eaten a part of their capital as will be clear from the valuation reports of the different companies and others are revising their premium tables and increasing the already too high premium rates. This experience should teach the Insurance Companies that, simply by making their investments in safe channels, they cannot hope that all will go well. They should learn that they cannot afford to sacrifice the profitability of investments at the altar of security. They should choose their investments in such a way as to secure highest yield so that they may furnish insurance to their policy holders at low cost.

Then the Insurance Companies have a duty towards the public also. After all, the funds at their command are public funds and public funds involve public interest. Insurance Companies command huge funds and enormous financial resources. The fact is that the financial importance of the Insurance Companies has not been realized in this country. If all these resources are harnessed to the good of the people, the whole economic life can be revolutionized as has been done in some of the foreign countries.

India is preparing for an Industrial Revolution. So many plans are being prepared to raise the general standard of living of the people. For some time to come, all our resources will have to be diverted to that end and if the Insurance Companies keep aloof, it will be a tragedy. Till the apalling poverty of the masses is removed, there cannot be much scope for Insurance in this country. It will remain the privilege of the few.

The funds of Insurance Companies are quite suited for long term investments; on an average, insurance policies mature for payment after 12 to 15 years. And then these funds need not be so mobile. Generally, Insurance Companies meet their normal demands from their yearly incomes.

One argument which is advanced against Insurance Companies investing in stock market securities is that they are so intimately connected with political and economic conditions that a slight change in these conditions has serious repercussions on the capital values of those securities. But are not Government securities subject to these same factors? With the decrease in the interest yield from these securities there has been a decrease in their capital values also. It is estimated that between the year 1914 and 1929, the Indian Insurance Companies lost about 2½ crore of rupees on this account. Since 1929 the decrease has been still more marked.

Another argument against the principle of investment of Insurance funds in Industrial concerns is that the Insurance

OUR LONDON LETTER:

Biggest Decline Since "Invasion Scare"

Stock Market Worried Over Election Prospects

London, May 25

The Stock market is doing its best to pretend that the forthcoming General Election has no terrors for the investing classes. The "Financial Times" index of leading industrials fell in a few days from the peak level of 146.83 to 136.71 which decline has not been paralleled since the "invasion scare" of June, 1940. This was a drop of almost 7 per cent in market values. But during the past week prices have moderately recovered though commentators agree that there has been no "big money" going into investments for good many weeks which suggests that further recessions as election approaches are not impossible.

There are at least three somewhat lurid possibilities in Britain's unknown future as well as, fortunately, many which are more humdrum and unexciting.

The first possibility, which is discussed privately but never publicly, is that the rift between Russia and the two Anglo-Saxon Great Powers will widen to a point where Russia will feel justified in scrapping "Yalta" and going all out to establish Communist Government in Germany and France, not to mention Eastern Europe. Such a development would shock the leaders of the British Labour Party almost as much as it would terrify the Conservatives for British trade unionists like Sir Walter Citrine and Ernest Bevin and British labour politicians like Attlee, Morrison and Dr. Dalton have made it plain that they are anti-Communist,—possibly more anti-Communist than "anti-capitalist". Could they enlist their rank and file in the crusade against further extension of "Bolshevism" Only future can tell.

The second lurid possibility is that the Conservatives will win the election but fail to establish "full employment" within that pattern of "private enterprise" to which they are committed. So long as the boom lasts "full employment" should not be difficult though they will find it difficult to solve such urgent problems as housing if they refuse—as they seem inclined to refuse—to control prices of building materials and land. But once the boom began to taper off and unemployment begin to emerge, then, according to this lurid view, there may be greater social and political tension within the country than ever was known before.

The third lurid view is that the Labour Party wins but proves unable to stand up to those powerful financial and industrial forces which have dominated the home and empire and foreign policy. Certainly throughout the life of the Coalition Government the present leaders of the Labour Party have not shown much capacity for standing up to the Conservatives; on Greece, Belgium and Italy they have seemingly seen eye to eye with Mr. Churchill; they have tacitly sanctioned "Vansittartism" and "non-fraternisation;" in their party publications they have pointedly omitted any applause for "partisans" and "irregular forces" which have been battling in all occupied territories; on the Beveridge Plan, they have defended substantially whittling down that famous scheme. Thus their past suggests that they have very little fight left in them but if they forfeit the confidence of the country, what sort of mess will that cause?

Perhaps the most reassuring possibility is that in the event of the Labour Party victory, there will be formed a strong "Left Coalition" which will include such figures as Sir William Beveridge from Liberals, Sir Richard Acland from the strongly Left Wing "Common Wealth" Party, and perhaps representatives of Communists and Independent Labour Party. Such assemblage of Left talent might prove considerably stronger than would the Front Bench composed of elderly Labour politicians and trade union worthies. But the whole situation, both at home and abroad is confusing.

The City, however, is content with small mercies these days. There has been great applause, for example, over the choice of directors for the Government-sponsored "Finance Corporation for Industry, Ltd." These are headed by Lord Hyndley, one of the biggest colliery magnates of the country and one of the directors of the Bank of England and consists in addition of five big financiers, Sir Jeremy Raisman, a professor of physics from King's College and a highly conservative Labour Peer, Lord Westwood. What the City likes is that there is no representative of the Treasury appointed on the board and no economist with "academic" ideas about controlling investments as one of the means of promoting "full employment". In other words, this new Corporation for furnishing new capital to the industries which find ordinary capital market over-expensive will be run by businessmen for businessmen which suits the City perfectly.

The delegation of Indian industrialists has apparently caused considerable stir among their contacts in the United Kingdom. For one thing, they were blunt and more downright on the subject of Indian independence, its urgent necessity, than London, which has thus far seen more of Indian businessmen, had expected. Secondly, the fact that they are proceeding to the United States for similar exploratory tour injects a novel element of rivalry into the situation. Thirdly, they have not hesitated to protest against the action of the British Treasury in placing Indian-owned dollars in the "Empire dollar pool" and assigning only a portion of these dollars to Indian use. Thus individually and collectively they are proving a considerable surprise to their hosts.

The "Manchester Guardian" greets them cordially and appreciatively but suggests that the United Kingdom assistance entails some obligations. "As our visitors object strongly to setting up of subsidiary companies by British firms and insist upon full Indian control of any joint enterprise, will they offer other arrangements which would safeguard the interests of the exporter for a reasonable period? Will the industrialists use their influence to prevent any discrimination against the British firms which may be participating in the schemes for technical modernisation of India? The paper adds that Indians can expect only a moderate share of Britain's output of capital goods over the next year or two and when they visit the United States "will find that congestion is just as great over here."

(*Continued from previous page*).

Companies with their increased stake in those concerns will be tempted to take active part in the management and thus there will be a divergence in their activities which will be detrimental to the interests of Insurance. This possibility can be avoided by the formation of separate bodies by the Insurers either singly or in groups and the matters of investment may be left to these bodies. There is no dearth of suitable persons in this country who are very well versed in Industrial finance and their services can be utilized either in an advisory capacity or for actual administration of these funds.

In this connection, it will be interesting to note how large a part foreign Insurance Companies have played in the welfare of those countries and how at the same time they have built an impregnable position for themselves. In America before 1903, a net-work of railways was being spread. At that time Railway stocks and shares were much in favour with the Insurance Companies. After that public utility concerns, such as water supply and electric supply, came into the picture and their shares loomed large in the investments of the Insurers. To-day the bulk of the funds required for Federal Farm loans in America is provided by the Insurance Companies.

In Canada where Insurance is in a highly developed state, more than half of the local funds of the Companies are invested in Industrial concerns. Railways and other public utility services. In Germany, Life Insurance funds are the main source of state organized Mortgage Credit. Of late mortgages on Farm property have assumed prominence there.

The best way of helping industries by the Insurance Companies is to form Industrial Banks as in the U.S.A. or financing corporations as in Germany and Italy. Suitable organisations such as Co-operative societies, etc. may also be formed to help cottage industries and agriculture. In the beginning, the Insurance Companies should invest in shares and debentures of these concerns and later on when they get more experience in the line, they may set up their own separate organizations.

The guiding principles of Insurers in India in the matter of their investment policy should be (1) To keep capital secure (2) To make Insurance profitable to the policy holder and (3) To make it conducive to the National interest. In the good of the public is included the good of Insurance Companies.

Editorial Notes

What to call It? Black Market?

During the last three years or so, the phrase "Black Market" has become so common that even an illiterate rustic from the remotest village in India knows what the word means. As commonly understood, the "Black Market" means the market in which profiteers sell goods at a price far higher than the maximum price that they are allowed to charge in the open market. But, if there exists a market wherein the seller tries to sell his goods at a price lower than the minimum price at which he is allowed to sell his goods by the law of the land, we wonder whether we should call that market a "Black Market" or a "White Market" or a "White-Black-Market". It may be news to our readers that such a market does exist in India for raw jute. It is a matter of common knowledge that the current prices for various grades of jute are, in many cases, considerably below the minimum prices fixed by the Government of India. Sellers dodge the law by either making some refund in cash or by entering into some fictitious contract with the purchaser showing a loss on the sale and purchase of jute. We believe raw jute is the only commodity in which such conditions prevail.

After the entry of the U.S.A. in the present struggle, there was a sharp rise in the price of jute manufactures. As the U.S.A. had fixed ceiling prices for all commodities and as American buyers of hessian were not in a position to pay a price higher than the ceiling fixed by the U.S.A. Government, the Government of India fixed maximum prices for all qualities of jute manufactures which were in parity with the U.S.A. ceiling prices.

To protect the interest of both the jute manufacturers and jute growers, the Government of India also fixed maximum and minimum prices of raw jute. They declared their intention of making the maximum and minimum effective by acquiring all available supplies at maximum prices in case sellers refused to sell them and to buy all jute tendered to them at the minimum prices.

It may be added that, in fixing the maximum prices of jute manufactures and that of raw jute, the Government of India were partial to the manufacturing industry. Whilst current quotations for jute manufactures were fixed as the maximum, in case of raw jute the maximum prices fixed were about three rupees per maund lower than the current quotations.

It is regrettable that, beyond the setting-up of a Board ostensibly for the purchase of raw jute at the minimum prices, the Government of India have failed to make the minimum effective, with the result that sellers are forced to sell at a lower price.

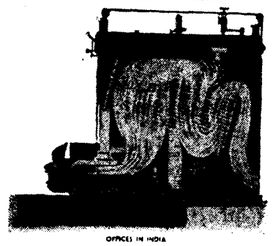
We give below a few quotations to show the differences in the officially fixed minimum prices and the current prices at which jute is available:—

Quality.	Minimum price. per md. Rs. As.	Current price. Rs. As.	Rs. As.
Jat Middles ..	15 0	13 4	to 13 8
Dis. & North Middles	14 8	13 0	to 13 8
Tossa Jat Bottoms ..	15 8	14 0	
Dis. & North Tossa	15 0	14 0	sellers
Pucca Bales M. ..	79 0	76 0	
Short Group ..	85 0	78 0	
Reds	89 0	83 0	
Dundee Hearts ..	95 0	86 0	

It may be interesting to know that, whilst in the case of jute manufactures, certain qualities are being sold in the black market at prices above the maximum, practically all other descriptions are being dealt in at the maximum or near the maximum prices.

In a speech delivered by Mr. H. P. Bagaria at the Rotary Club of Calcutta many years ago, he showed how, owing to the organised state of the jute manufacturing industry and the disorganised condition of the jute growers, the burden of all unfavourable developments is passed on, almost in its entirety, to the jute growers. The present state of affairs is the most convincing proof of Mr. Bagaria's statement.

Whilst cultivators in other parts of India have been able to realise good prices for their produce, the poor cultivators of jute in Bengal have been hard hit. In 1943, due to poor rice crop, they had to purchase rice at a very high price; and, the next year, they had to sell their rice crop at the officially controlled price. They have not been able to get even the officially fixed minimum for their jute.



It is a deplorable state of affairs. The Government of India and the Bengal Government cannot shut their eyes to the present conditions in the jute market.

Whilst the jute manufacturers are making fat profits, as can be seen from their balance sheets, the jute cultivators are being forced to sell their jute at below the minimum.

Removal of Controls:

If the institution of economic controls in India has created a lot of inconvenience for the Indian industrialists, businessmen in general and the consuming public, their

premature abolition would be no less damaging to India's industrial future. The question of controls is directly and vitally linked with the successful initiation of an all-round post-war economic development plan. Controls are an instrument of national economy against the onslaught of foreign vested interests, provided they are used in a way as to maximise the benefits that may accrue to Indian industries during the war. Agitation for premature abolition of controls will endanger the successful prosecution of post-war development schemes. Mr. G. D. Birla, speaking at Manchester, commenting on the British Government's decision to remove restrictions on export and production is reported to have said "it is all very well for controls to be removed in Britain, but until corresponding controls are removed in India, the British action cannot be of much help to us. The question of the removal of these controls in India is an urgent one and should be dealt with at once." Individual industrialists who have got ready post-war plans for expansion in their own interests are, on the one hand, agitating for the early abolition of wartime controls while those who are interested in the all-round development of the Indian economy insists that the abolition of controls should come only when the Government of India, the Provincial Governments and the Indian States are fully prepared to initiate their post-war development schemes. In other words, preliminaries for planning should be over and the process of decontrol itself should be adjusted as to facilitate the industrial expansion of this country. Are the Government of India ready to abolish import control for the safe flow of goods from abroad?

Controls were instituted just after the beginning of this war primarily to facilitate the organisation of war effort and to conduct the economic warfare, against the Axis powers. As more countries were involved in the hostilities export controls at one end involved the import controls at the other. Since 1943 the extreme scarcity of essential commodities in India, brought about partly by the short-sighted policy of the Government of India, necessitated the relaxation of import controls. Then, again, as the shipping position improved after the fall of Germany, there has been further relaxation. The Hydari Mission would lead to further flow of goods into India to relieve the present scarcity of consumer goods and also for supplying some of the vital industrial needs of India. The next step is the complete abolition of controls. But unless India is ready with her plans to safeguard her economy against the early penetration of cheap foreign goods, the future will be jeopardised. We hope the Government of India would speed up their work of planning, finish the preliminaries and get ready for planned restoration of the normal channels of trade.

No White Washing :

Dear Sir,

Will you please refer to your Editorial Notes on page 692 of the issue of "Indian Finance", dated the 26th May, 1945?

I wish to inform you that the matter has already been put in the hands of the Special Police since the month of March, 1945 and is at present under active investigation The public may rest assured that there is no question of white-wash and that every step will be taken to bring the offenders to book. I may add that certain measures have been taken since some months to prevent the possibility of the occurrence of frauds of the nature that have now come to light. This Department is

Sd. G. V. Bewoor.

India and the U. K. C. C. :

Indian businessmen would welcome the news that the Government of India have decided to close down the Indian Offices of the U. K. C. C. "as soon as conveniently possible." The official statement mentions that alternative arrangements are being made by the Department of Commerce for the procurement of supplies for Russia which has formed the bulk of the corporation's work in India. The activities of the U. K. C. C. have come in for severe criticism at the hands of Indian industrialists in the past and the Government communiques purporting to answer the popular criticisms and allaying the general suspicions have not convinced the Indian public that the continuation of the U. K. C. C. is anything but injurious to the permanent interests of Indian trade. Actually since the U.K.C.C. was carrying on the economic warfare against the Axis powers, very little of its activities is known to the general public. It was often used as a spearhead of British commerce and it was trying to lay the foundations of postwar British drive for more exports besides achieving the wartime purposes of pre-emption. Indian exporters have lost part of their markets which they could have exploited but for the activities of the U. K. C. C. subsidised by the British Government and helped by the Government of India. The present announcement by the Government of India that the Indian offices of this organisation would be soon closed down does not give an indication as to the date of this happy event. Nor is there any hint as to what exactly the alternative organisation the Government have in view. Controls are being relaxed in other countries, and there is no reason why the normal trade channels should not be utilised for sending supplies to Russia. As regards the alternative organisations there has been a persistent agitation for the formation of an Indian Commercial corporation to work independently or in co-operation with the U.K.C.C., so that Indian trade can be best organised for postwar purposes. But nothing has yet been done. If the U.K.C.C. offices are to be closed down the time is now oppertune for organising an Indian Commercial corporation which should be used for cultivating foreign markets for Indian products. The alternative organisations should be Indian in personnel and should function under Indian control. The U.K.C.C. was foisted upon India without the consent of the Indian commercial public and, at least, the new organisation which the Government propose to form should come into existence only after a close consultation with business bodies and representatives of the Indian public so that Indian interests in future can be safeguarded.

Sugar Merchants' View :

A case for increase in the acreage under sugarcane has been made out by the Cawnpore Sugar Merchants' Association in their memorandum to the Government of India on the five-year plan of development for sugar for which suggestions were invited. If consumption is improved, as it ought to be, there will be great internal demand for sugar for which the present acreage under sugarcane is insufficient. The per capita consumption in India is only 20 lbs. inclusive of gur and rab while in Britain it is 112 lbs. Indian population is increasing rapidly and if marketing problems are properly handled the scope for more production is indeed bright. The Sugar Merchants' Association feels the Millowners do not look to the distribution side as much as they care for prices and profits. Accusing the Indian Sugar Syndicate of monopolistic activities they plead that the marketing of sugar should be left to the trade channels. It is alleged that the Syndicate once pushed up the price and created artificial scarcity when convenient but when the situation turned against them went in for more Government help. If the manufacturers are to be prevented from exploiting the consumers and the cultivators of sugarcane the distribution should be left to the bona fide traders only. A plea is also entered for planning not only for sugar but other products of sugarcane as well. The import-

THIS IS ONLY AN ANNOUNCEMENT AND NOT A PROSPECTUS.

The subscription List will open at 11 a.m..on 15th June, 1945, and will close as soon as it appears that subscriptions for the amount herein invited have been received, but not earlier than 21st June, 1945.

"Consent of the Central Government and Travancore Government has been obtained to this issue under Defence of India Rule 94A and Defence of Travancore Rule 94B respectively. It must be distinctly understood that in giving this consent neither the Government of India nor the Government of Travancore take any responsibility for the financial soundness of any schemes or for the correctness of any statement made or opinions expressed with regard to them".

THE BHAVANI TEA & PRODUCE COMPANY LTD.

(Incorporated under the Indian Companies Act VII of 1913 with liability of Members limited).

(The Company has established no place of business outside British India).

Authorised Capital - - - - - Rs. 25,00,000

(Consisting of 2,50,000 Ordinary Shares of Rs. 10 each)

Present Issue - - - - - - Rs. 11,00,000

(Divided into 1,10,000 Ordinary Shares of Rs. 10 each)

PAYABLE AS FOLLOWS:

On Application Rs. 5 per share.

On Allotment Rs. 5 per share.

Debentures.—Rs. 11,00,000 divided into 11,000, 5 per cent British Income-tax-free ten-year Bearer Debentures of Rs. 100 each payable in full on application.

The Debentures would be secured by a first mortgage charge on the immovable properties and a floating charge on all the other assets of the Company, under a Trust Deed to be executed by the Company in favour of the Trustees named below, subject to the terms and conditions specified in the Trust Deed. The Debentures are Bearer Debentures repayable on 1st January, 1955. The Company, however, reserves to itself the option to repay the Debentures in whole or in part by giving 6 calendar months' notice after 1st January, 1950. The Company also reserves the option to buy from the market these Debentures at discount, par or premium. No further issue of Debentures will be made ranking in priority to or pari passu with the present issue of Rs. 11,00,000. Interest on the Debentures will be paid half-yearly on July 1st and January 1st. The first payment of interest will be made on January 1st, 1946 with interest up to date from the date of allotment.

The Underwriters have procured subscription for Rs. 7,00,000 Debentures and since the Directors have agreed to give full allotment, the balance of Rs. 4,00,000 alone is now offered to the public.

OBJECTS:

The Company has been formed for the purpose of carrying on all or any of the objects set out in the Memorandum of Association which is annexed hereto and in particular to acquire the following estates.

Clovelly Estate.
Tuttapullum Estate.
Achilleston Estate.
Banagudi Estate. } in the District of Nilgiris.

And

Siruvani Estate.
Varidymallay Estate. } In the District of Malabar.

PARTICULARS OF THE ESTATES:

The first group of Estates, which are in the Nilgiris District are situate on the side of the Mettupalayam-Kotagiri Trunk Road on the 10th mile, 14th mile, 15th mile and 18th mile. These form almost a compact unit, particularly the Achilleston and Tuttapullum Estate having the same boundary. The second group, viz., Siruvani and Varadymallay Estates are in the Attapadi Valley. Walluvanad Taluk, Malabar District. These Estates are approachable by road from Coimbatore town and lie at a distance of 30 miles from the town. The acreages of both the groups are as follows:—

	Acres.
Rubber	242.64
Tea	770.53
Coffee	542.68
Cardamoms	52.28
Reserve	1,858.45
Total ..	3,466.58 Acres

All these estates were visited by Mr. P. F. H. Crowther in July 1944 and his valuation is as follows:—

	Rs.
Clovelly Estate	1,40,812
Tuttapullum Estate	9,00,000
Achilleston Estate	2,18,000
Banagudy Estate	35,000
Siruvani Estate	6,15,000
Varidymallay Estate	4,22,500
Total ..	Rs. 23,31,312

These estates were purchased by the Be Be Rubber Estates Ltd. in the following order at the prices noted against each:

Name of Estates.	Date of purchase.	Purchase price paid to the Vendors exclusive of stamp value and development and other capital charges
		Rs.
Clovelly ..	1937	64,400
Achilleston ..	1942	2,00,000
Siruvani ..	1943	1,97,000
Varidymallay ..	1943	3,75,000
Banagudi ..	1943	23,000
Tuttapullum ..	1944	6,85,000
Total ..		Rs. 15,44,400

ance of the utilisation of molasses has been pointed out and since this bye-product is used for preparing heavy chemicals it should receive special consideration in any post-war plan for Sugar. The Association also urge that the railway freight should be so adjusted as to make Indian sugar reach port markets on nominal charges so that the foreign sugar may be driven out. The loss to the Railways may be made up by adjusting the rates charged for internal movements.

New Chapter in Labour Policy:

"The opening of Employment Exchanges on the scale contemplated will be the beginning of a new Chapter in labour policy" said Mr. Lall, Additional Secretary to the Labour Department, addressing the officers for training as Managers of Labour Exchanges. Thirty-one officers are being trained in the first instance and in addition two nominees of the Trade Union Congress, three of the Indian Federation of Labour and one from Hyderabad State are attending the course. The object of the training course is to acquaint the managers with problems of demobilization, resettlement and employment. The course of training will also equip them with general background of what is happening in other fields of labour activity. In short, the intention of the training course is that managers should be in a position to fully appreciate how their own work fits into the complex pattern of labour economics. With this aim in view lectures will be delivered on subjects like demobilization, welfare of exservicemen, peacetime employment opportunities and Employment Exchange procedures, labour legislation, wages, trade Unionism, labour statistics, social security and factory welfare. Theoretical training at the centre will be followed by useful practical training at regional exchanges and visits to important centres.

The opening of these exchanges is due primarily to the obligations which Government owe to the demobilised personnel of the Defence Services and to other discharged war workers. But the Employment Exchanges will not guarantee full employment to the workers but they are needed to help workers to find the most suitable employment, to assist employers to secure the most suitable workers, and available jobs and available workers are brought together as promptly and as satisfactorily as possible. The Exchange machinery will enable Government to know whether the level of employment has risen or fallen. The machinery will help Government in correlating post war planning and employment. The number of Exchanges will be small to begin with But the beginning seems to be satisfactory. But those who man the Exchanges should realise that this is a sphere where human element is involved and mere red-tape or rule of thumb will spoil the whole machinery.

Film Industry in India:

A delegation from the Indian Film Industry which has recently left this country for the U. K. and the U. S. A. is said to study the latest developments in the manufacture of films. The delegation has planned to visit important film production centres and collect data with a view to improving the technique of film production in India. That the delegation has left this country not a moment too soon will be obvious when we remember the great strides the industry has made in the U. S. A. and the U. K. and the serious handicaps to which the Indian Industry is subject. Great Britain, it is said, has always envied the strength of the American film industry not least because of the vast propaganda support it gave to the sale of American products. When such a well developed industry as the British, is not sure of its place in a competitive market, Indian industry cannot make any headway unless immediate steps are taken to place it on a sound basis. And it is gratifying to note that the question is engaging the attention

THE BHAVANI TEA & PRODUCE COMPANY LIMITED, ANNOUNCEMENT—*Contd.*

The estimate for 1945-46 is as follows:—

Tea	3,50,000 lbs.
Rubber	50,000 lbs.
Coffee	45 tons
Cardamoms	3,000 lbs.

ESTIMATED PROFITS.

			Rs.
Rubber	50,000 lbs.	at 8 As. per lb. nett ..	25,000
Tea	3,50,000 lbs.	at 6 As. per lb. nett ..	1,31,250
Coffee	45 tons	at Rs. 1,000 per ton nett ..	45,000
Cardamoms	3,000 lbs.	at 8 As. per lb. nett ..	1,500
Minor produces		.. .. ..	3,000
Tea export quota sales		.. .. ..	7,250
		Total ..	Rs. 2,13,000

PROFIT APPROPRIATION:

Interest on Rs. 11,00,000 Debentures at 5 per cent ..	55,000
Debenture redemption fund	50,000
Provision for tax	32,000
Managing Agents Commission	10,000
Total ..	Rs. 1,47,000

leaving a balance of Rs. 66,000 which works out to nearly 6 per cent tax-free on the Ordinary capital.

VALUATION:

	Rs.
Rubber 242.62 acres at Rs. 750 per acre	1,81,900
Tea 770.53 acres with 2 tea factories at Rs. 1,500 per acre	11,55,800
Coffee 542.68 acres at Rs. 800 per acre	4,34,100
Cardamoms 52.28 acres at Rs. 500 per acre	26,100
Other products and Reserve 1,858.45 acres at Rs. 100 per acre	1,85,800
Total ..	Rs. 19,83,700

It may be noted in this connection that as against the valuation of Mr. Crowther at Rs. 23,30,000 the valuation arrived as above is only Rs. 19,83,700 and the vendors are passing on this property to the Company at Rs. 19,00,000. Although the price actually paid by the vendors to their sellers is less than Rs. 19,00,000 the vendors have made very valuable and substantial improvements in this property and as such the book value of these properties is more or less around the present purchase price. To take a concrete example, the Siruvani Estate was bought at Rs. 1,97,000 and a further sum around Rs. 1,50,000 has been spent by the vendors for the development of the estate.

MANAGEMENT:

Messrs. United Agencies Ltd., Punalur, Travancore, a reputed firm of Managing Agents are appointed as Managing Agents for a period of 15 years on a monthly remuneration of Rs. 500 and a commission equivalent to 7½ per cent of the nett annual profit of the Company in such years the Company is in a position to pay a dividend of 5 per cent per annum.

UNDERWRITING AND BROKERAGE:

The entire Debenture issue has been underwritten for a commission of 3 per cent. The entire issue of Ordinary Shares has been underwritten by the vendors themselves at the rate of an underwriting commission of 3 per cent. Messrs. Concord & Co., have underwritten half the Debenture issue, viz., 5½ lakhs and Mr. P. R. Subramanyam, M.A., has underwritten the balance half of 5½ lakhs for a commission of 3 per cent as mentioned above. The Directors are satisfied that the resources of the underwriters are sufficient to discharge their obligations.

The underwriters have agreed to pay a brokerage of one per cent on Debentures and 1¼ per cent on Ordinary Shares to certified brokers on allotment made on applications bearing their stamp.

PARTICULARS OF AGREEMENTS AND INSPECTION OF DOCUMENTS:

Copies of the following documents are open for inspection during regular office hours at the Registered Office of the Company or at the Office of the Managing Agents at Punalur or at the Offices of the underwriters during the period the subscription list is open.

1. Memorandum and Articles of Association.
2. Agreement, dated 21st August, 1944, between the Be Be Rubber Estates Ltd. and the West Coast Planters Agencies Ltd.
3. Draft Managing Agency Agreement.
4. Agreement relating to Preliminary Expenses.
5. Indian Companies Act.
6. Underwriting Agreement by Messrs. Concord & Co., Madras.
7. Underwriting Agreement by Mr. P. R. Subramanyam, M.A., Bombay.
8. Underwriting Agreement by the Be Be Rubber Estates Ltd., Punalur.

Applications for Debentures and shares are invited on the basis of the prospectus which may be obtained from the Underwriters or the Registered Office of the Company or the Office of the Managing Agents.

of people who are actively connected with post war industrial planning and people in the industry. It is necessary to cultivate the national talent by founding an Academy for training purposes.

A Central Research laboratory to carry out pilot plant investigation for developing the feeder industries and training of technicians is absolutely necessary. Manufacture of cine film stock, photographic material, cameras, projectors, sound recording and other equipment should also be undertaken. The move to found a Film Academy and a Central Research Laboratory taken by the Independent Film Producers' Association, Bombay, under the lead of Sir Homi Mehta is really encouraging. Sir C. V. Raman, the great Indian scientist, is setting up a research laboratory at Bangalore for this purpose. The popularity of cinema is growing in the country. The income by way of an entertainment tax is considerable and will increase with the increase in the number of cinema theatres. Annually about Rs. 1.25 crores is being remitted to the U. S. A. and the U. K. for film materials. If the industrialists on return succeed in manufacturing raw films and photographic materials at home, there will be lucrative employment for many people, Government will be benefited by getting more revenue and less money need be remitted abroad.

Punjab Economic Survey :

It is reported that the Punjab Board of Economic Enquiry is contemplating a comprehensive Socio-Economic Survey of Lahore. The town has a population of nearly one million and covers an area of 140 square miles. The growth of population, food water supply, housing conditions, small-scale industries banking institutions, trade and transport, health and education, recreational facilities, family budgets, social and religious institutions will all be dealt with in the proposed enquiry. The Punjab Board of Economic Enquiry has experience in conducting such surveys and since it consists of economists, professors, research scholars with experience in field surveys there is no doubt that their findings would be of great use for postwar reconstruction of Punjab. The Punjab Government have given a grant of Rs. 75,000 to this Board and the cooperation from non-officials would be forthcoming in ample measure. If similar surveys are conducted in other important towns and cities of India we have no doubt that the statistical material necessary for conducting economic research would be ready for use. The inadequacy of the Government statistical publications are wellknown and the survey that is to be conducted in Lahore would fill this important gap.

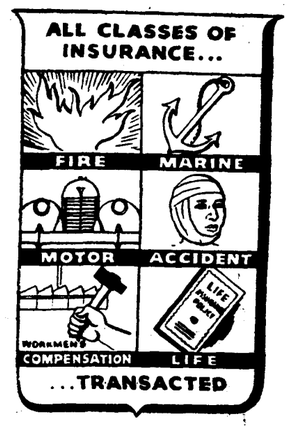
Bhavani Tea and Produce :

The Bhavani Tea and Produce Co., Ltd., has been formed to acquire six estates in the Nilgiri and Malabar districts in fully developed condition. The B. B. Rubber Estates Ltd., is disposing of these estates in order to avoid the difficulties regarding taxation in respect of properties in British India. The latter mentioned company is registered in the Travancore State. The first group of four estates are in the Nilgiris District and the second group of two estates in the Malabar District easily accessible from Coimbatore by motor. The estates produce tea, rubber cardamoms, coffee and minor produce. Against the expert valuation of Rs. 23.3 lakhs, it is proposed to pay the vendors only Rs. 19 lakhs. The prospectus estimate profits of earnings of Rs. 2.13 lakhs is on the basis of a sale price of 8 annas for rubber and 6 annas for tea and Rs. 1,000

(*Continued on page* 817).

Clive Street Gossip

Economic planning, while it may be expected ultimately to solve many problems, has already given rise to other problems in the political and administrative spheres. The Second Report of the Reconstruction Committee of the Viceroy's Council has given a fair idea of the non-economic problems which economic planning gives rise to. And the Government of India's statement on the industrial policy of the future represents an attempt to solve such problems. It is by no means surprising that we have to face these problems at the start. For, planning implies the co-ordinated effort of all units of the body politic; and if the political system is not used to working in co-ordination and, if on the other hand, it has been functioning with the utmost friction and has even been at cross purposes, steps have to be taken to eliminate the cross purposes and the sources of friction. It is in this view that the Second Report emphasised the importance of developing and working out regional plans without regard to whether a given economic region is under one or more political jurisdictions. In the case of industries which are spread over many parts of India and cannot therefore be comprised by any one economic region, there is need to treat them as subjects for central direction and control. The Government of India's statement on industrial policy was drawn up with a view to secure such centralisation of the industries concerned, though it also referred to the need for consultation with Provincial and State Governments. Before the country can embark on economic planning, we have to be certain that the necessary preliminaries in regard to constitutional and administrative readjustments have been completed.



These problems, however, are not easily solved. After all, India is neither constitutionally nor administratively a simple unit. Apart from the threat of bifurcation into Hindusthan and Pakistan, there is the division between British India and Indian India. British India is not one unit. Thanks to the uneven economic development of the various Provinces, there is a Provincial consciousness also to reckon with. As for Indian India, it is a congeries of good-sized kingdoms and petty principalities, where the ruling princes, if not the people, have clung jealously to their own separate political identity. From the political standpoint, the British Government were ready for a long period to wink at the imperfections, and even the iniquities, of personal rule. The economic policy of the Government of India was not such as to call for interference in the affairs of the States. The States continued in their isolation. When the time came for formulating a common political constitution for the whole of India, the Princes expressed an initial enthusiasm for the ideal and then withdrew into their shell. They were standoffish towards the Federation. The result was that the Government of India Act had to be brought into force only in parts. The Federation had to wait and ultimately the whole of the Government of India Act became more or less defunct. But while it is true that at one stage Lord Linlithgow exerted himself a great deal to secure from the States the minimum of support necessary for the inauguration of the federal constitution, events tended to make him altogether indifferent to changes at the Centre on the lines contemplated in the Government of India Act.

* * * *

It is far otherwise in the case of centralisation for purposes of economic policy. A war is always a powerful urge towards concentration of power. Apart from that general truth, the conditions created by currency inflation, large scale war expenditure and increasing taxation impelled the Central Government to scrutinise the position in the States relatively to the position in British India. Constitutionally, not only the Indian legislature cannot legislate for the whole of India, but the Crown Representative, too, cannot proclaim ordinances which will be automatically applicable to the Indian States. Whenever uniformity is required in British and Indian India the Government of India are obliged to resort to the tortuous ways of the Political Department. In the pre-war years, the complications introduced by the Virangam customs line were the first instance of a conflict between a State and the Government of India in the economic sphere. But such instances have been steadily increasing during the war period. Sir Jeremy's policy of fighting the effects of inflation instead of inflation itself required far closer co-operation between the States and British India than could be obtained at short notice. For, the anti-inflationary measures were aimed at the absorption of redundant currency, so that it may not exert its usual upward pressure on prices. The principal means of such absorption are direct taxation, and deposits with the Government of either a forced or a voluntary kind. The Excess Profits Tax Act with its provision for a high level of direct taxation as well as compulsory deposits is typical of the anti-inflationary measures on which Sir Jeremy had pinned his faith. There was also the level of ordinary income tax and super tax which has been steadily raised during the war years both for finding revenue for war expenditure and for fighting inflation.

* * * *

In all these matters, the States have not taken the cue from the Government of India with any alacrity. Taxation in the States had been on comparatively lower levels, if only because economic life in Indian India has been even more backward than in British. In an overwhelmingly agricultural economy, public finance relies in the main on land revenue

Save for Victory BRITISH WAR SAVINGS MOVEMENT

NC/18

and indirect taxation. In addition to this general and natural cause, there was also the circumstance that some of the States had embarked on a policy of industrial development by offering special inducements to entrepreneurs in British India to set up mills and factories in State territory. Such inducements were necessary in most cases as they were all late in the field excepting a few like Mysore and Baroda. The financial policies and administrative actions of the Central and Provincial Governments were also helpful to such developments. While the Provincial Governments of the U.P. and Bihar embarked on a policy of price fixing for sugar cane, the Central Government has gone on raising the level of taxes which have a special incidence on industry. What with new handicaps in British India and special inducements in the States, industrialists have not been averse to turning their affections to the States.

* * * *

The concrete results of these developments can, however, be easily exaggerated. For the share of the States in industrial production in India is by no means proportionate to the population, though the rate of increase in industrial workers in the States was higher during the prewar years than that of British India. Indian India has still a great deal of leeway to make up if it is to attain even the very low standards that obtain in the Provinces.

* * * *

But the differentials of taxes were felt keenly by the Government of India only when the success of the fight against inflation became a matter of paramount importance. The Government chafed against their inability to order matters in Indian India with a stroke of the pen. They had an irksome precedent in the negotiations of earlier days for equalisation of excise duties. Appeals were made to the States to bring their taxes on a par with those of British India. These appeals are not easily heeded to, since in the matter of taxation a number of other considerations have to be given due weight and equality with taxes in other, though contiguous, political units is after all an extraneous consideration.

* * * *

The changes that the Government of India have been asking for have not therefore been readily forthcoming. While the States are naturally conscious of their own special conditions and apprehensive of the consequences that might follow their acceptance of the Government of India's demands, the Government of India have become increasingly keen on what they have set their mind on. The acceptance of economic planning as the established official policy and the approach of the period of planned development have helped the Government to place their side of the case in the wider setting of the requirements of planning. In this setting, it is not alone a question of removing differences in tax levels or lining up with British India in this matter or that. A more direct and more comprehensive uniformity of economic conditions is asked for. The States are asked, even like the Provinces of India, to be prepared for regional planning and to bow to its requirements in the matter of administrative and other arrangements. They are asked to agree to the industries in their territory being treated in the same way as the corresponding units in British India. No longer is it a question merely of raising the level of taxes.

It is hardly to be expected that the States can make up their minds on all these varied questions in so short a time. But the Government of India is apparently in no mood to respect the doubts and susceptibilities of the States. When the control of new capital issues was instituted, they found in it an invaluable means of exerting indirect pressure on the States. The old trend towards the investment of British Indian capital and enterprise in the States could, it was found, be held up by the simple process of withholding the consent necessary for making a new capital issue. When inordinate delays induced enquiries about the reason therefor, it is understood, the opportunity was availed of to raise all the ancillary issues; and these ancillary issues again have got mixed up with the problems arising from the acceptance of planning. But progress in the settlement of some of these questions is sought to be made by administrative measures. While at one time the authorities sat over applications for new issues with a view to bring the issue to the fore, they are now eager to decide it by their own action.

I have recently come across a case in which consent to a new issue has been given on the explicit condition that the Company shall not apply for or accept any exemption from taxes on income or excess profits tax in the State concerned. Not content with this stipulation on the Company, it appears that the Durbar too has been requested firstly to impose upon the Company, income tax, super tax and E.P.T. at rates substantially equal to those in force in British India or, in the alternative, to ensure that the Company invests annually in British Indian securities an amount equal to what would be realised by such taxation; and secondly not to grant the Company by agreement with them or otherwise any exemption or immunity from any tax on income that may be levied by the State. The Durbar has also been requested to let the British Indian authorities know the action taken by it in this matter.

* * * *

It is not known what action the Durbar has taken. That it raises an issue of common concern to all the States cannot be doubted. Nor can it be gainsaid that it is closely mixed up with other crucial questions regarding the relation between the States and British India in matters of economic policy in general and in particular the adjustments necessary for all-India economic planning. Considering that the States have no reason to be lukewarm towards planning and that, on the other hand, they have more need for it than most parts of British India, the attempt to solve on the administrative plane problems which call for negotiation and mutual understanding must be deprecated. Perhaps, the acceptance of the Wavell Plan and the inauguration of a National Government at the Centre will make a difference, even though the relations between the Crown Representative and the States are not affected by the present offer.

"EAVESDROPPER".

IT'S A FACT—

that more than 90% of India's teeming millions never save a rupee of their earnings. Money borrowed at fantastic interest cripples them financially for life. An account with the Palai Central Bank safeguards you from debt and worry—it puts success within your grasp.

per ton for coffee. The present price for both rubber and tea are considerably higher than the figures assumed in the prospectus. Even on the basis of these profit estimates, after providing for debenture interest, allocation to redemption fund, taxation and commission, the balance left will be enough to pay a dividend of 6 per cent tax-free on the ordinary capital. The issued capital is Rs. 11 lakhs in ordinary shares of Rs. 10 each and Rs. 11 lakhs in debentures of 5½ per cent British income-tax free 10-year bearer debentures of Rs. 100 each. Both the ordinary and debenture issues have been underwritten. Out of the debenture issue applications have been already received for Rs. 7 lakhs and the directors have agreed to give full allotment. The balance of Rs. 4 lakhs in debentures and Rs. 11 lakhs in ordinary shares is offered for subscription to the public. With a regular provision for debenture sinking fund and with the prospect of a decent ordinary dividend from the beginning, it need not be emphasised that the interest of both ordinary and debenture shareholders have been fully secured. After the redemption of the debentures it will be possible to pay a substantial dividend on ordinary shares. Thus for the conservative investor the British income-tax free 5 per cent 10-year bearer debentures offer first-class investment while the ordinary shares offer good scope for capital appreciation.

Nath Bank Ltd.:

The year 1944 should be considered very important for the Nath Bank from every point of view. It is in this year that it has been possible to report a record increase in deposits and make a successful new issue of capital to shareholders at a premium of 20 per cent. The Bank extended its activities to the Western Presidency by opening a branch at Bombay. With an increas in working capital by nearly Rs. 3 crores there is however no corresponding increase in the profit for the year which is only Rs. 3.4 lakhs. Working expenses are rather high and one is also left with a feeling that funds at the disposal of the Bank have not been properly utilised. Against the increase in deposits from Rs. 4.04 crores in 1943 to Rs. 6.76 crores in 1944, advances are only slightly higher at Rs. 2.01 crores against Rs. 1.86 crores. Investments are Rs. 1.81 crores higher at Rs. 2.61 crores.

The dividend has been maintained at 8 per cent. Reserves have increased from Rs. 2.97 lakhs to Rs. 6.33 lakhs as a result of the appropriations from last year's earnings and the premium realised from the issue of new shares. The paid up capital at the end of 1944 was Rs. 34.94 lakhs against Rs. 20.21 lakhs at the end of the previous year.

Capital Glass Works:

The additional issue of capital by the Capital Glass Works Limited, for Rs. 10 lakhs, Rs. 5 lakhs in 50,000 Redeemable Preference shares of Rs. 10 each and Rs. 5 lakhs in 50,000 ordinary shares of Rs. 10 each at par, in the case of a company which is on a profit-earning basis should be considered attractive from the investor's point of view. In the war period the Glass Industry has made very good progress and it has been said that it will be accorded suitable protection by the Central Government in the postwar years. The Board of Directors consists of very prominent men like Lala Karamchand Thapar, Mr. N. K. Jain and others. The Company is favourably placed in respect of standard profits, being eligible for 12½ per cent of the paid-up capital as a company registered in September, 1939. The present issue is for liquidating the loans incurred in the erection of a new furnace which has very nearly doubled the capacity of the works. As there will be a considerable saving in interest charges and an increase in earnings at the same time, it will be possible to pay the same dividend on the increased capital. Perhaps more. The Company is very busy on war orders at present and in the postwar period is assured of substantial support from distilleries and toilet works in the area in which the factory is situated.

(FROM OUR CORRESPONDENT)

NEW DELHI, June 13.

The week has been notable for the removal or relaxation of a numbr of wartime controls. Notifications have been issued repealing the Cotton Baling Hoops Order, the Aluminium Control Order and certain other minor restrictions. The supply position in respect of these seems to have improved and succeeding months will probably make it possible for industry and trade to carry on with a smaller number of irksome regulations. It is not to be hoped that the end of the Eastern war would mean the disappearance of all controls. This certainly will not be the case and we have had ample warning that in the post war planned economy, controls, perhaps of a different sort, must be an *integral feature.*

* * * *

An announcement of particular siguificance to the rural population is the decision by the United Kingdom to permit additional exports of up to 10,000 tons per month of kerosene oil. The present supply comes to roughly 50 per cent. of the 1941 level. This is one of the results of the Hydari Mission's negotiations for more kerosene supplies for the use of the civilian population.

* * * *

Commercial exploitation of Indian forest resources would appear not to have received any serious attention hitherto, but the war has stimulated efforts to utilise some of them. New uses have been found for many kinds of timber, and tests carried out by the Forest Research Institute at Dehra Dun show that even inferior timbers, provided they are used as laminated and compressed wood, have a commercial value. Wood treated in this manner has been successfully used for aircraft propellers, textile mills accessories, the needs of the electrical and chemical industries and for a number of other purposes. The Government of India constituted some time ago a Committee known as the Utilisation Committee for Forest Products. This Committee has, of course, done some useful work, but there are a number of minor forest produce awaiting exploitation. Post-war reconstruction plans envisage a more intensive and a wider use of these products than has been attempted hitherto, and the public will await with interest a more precise definition of Government's policy in this matter and of the steps they proposed to take to achieve the objective.

An announcement which will be received with some satisfaction by Indian exporting interests is the decision to close the offices in India of the United Kingdom Commercial Corporation. This corporation has been a thorn in the side of Indian exporting interests, not a few of whom have found their occupation gone as a result of the Corporation's activities. It is stated that alternative arrangements are being made by the Commerce Department for the procurement of supplies to Russia, which formed the bulk of the Corporation's work in India. Non-Official opinion in the Assembly and Indian commercial interests have during the past four or five years been very critical of the Corporation's activities and it is to be hoped that the business hitherto carried on by the Corporation will now pass into Indian hands.

* * * *

A 'United Press of America' message from London quotes a London financial paper as saying that machinery worth £25,000 for locomotive manufacture has already been ordered from the United Kingdom by the Government of India. This question of locomotive manufacture has been a hardy annual for a number of years past and no general debate on the railway budget has missed criticising Government's policy in not setting up the industry in India. That such manufacture is feasible has been established by technical enquiries and committees. The Second Report on Reconstruction Planning stated that Government's post-war plans included the establishment of workshops for the manufacture of locomotives, boilers and other railway equipment in India and that plans were in hand for commencing the manufacture of locomotive boilers as soon as possible after the war. Presenting the Railway Budget in February last the War Transport Member stated as regards the manufacture of locomotives and boilers in India, that it was hoped to complete the agreement with Messrs. Tatas at an early date, and to hand over the Singhbhum shops to them on April 1, 1945. It is expected that the output of the Singhbhum workshops transferred to Tatas early this month will be a minimum of 50 locomotives per year, and that India will be producing her full requirements of locomotives with a possible export margin in the not distant future.

* * * *

Government's conclusion regarding the post-war strength of the Royal Indian Air Force has been announced during the week. It is Government's intention to maintain the Royal Indian Air Force at not less than ten squadrons, plus the necessary training and other ancilliary units. The annual expenditure of these eight squadrons is expected to be about eight crores. An air force of this strength will, it is believed, need between 500 to 600 officers.

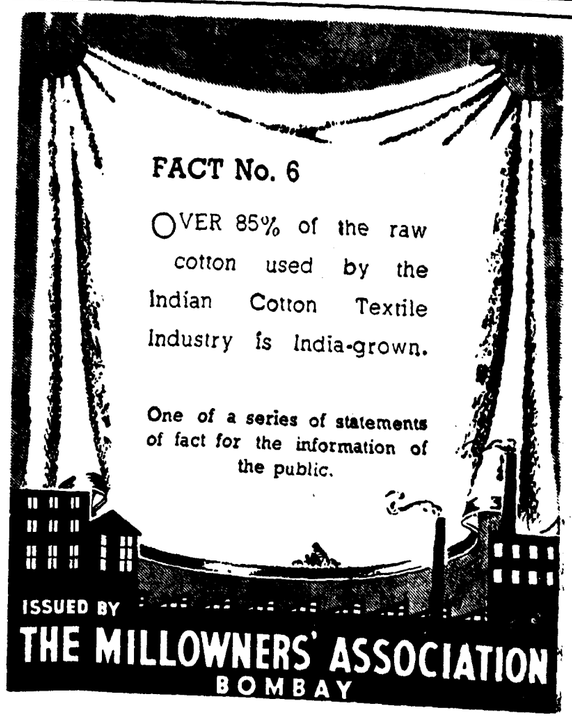
* * * *

The need for reminting the coinage after the war has been sought to be taken advantage of to introduce the decimal system in the coinage. Suggestions have been made to the Government that for purposes of accounting and calculation the decimal system has merits which are absent in the present system. The change is a revolutionary one and Government do not propose to embark upon it unless they are convinced that public opinion is very strongly in favour of the proposed change. The advantages of the system are apparent, namely, a certain ease and convenience in compiling accounts, but as against this it is to be borne in mind that vast masses of the Indian population are illiterate, to whom the proposed change may not be easily intelligible. By force of tradition they understand the present system and it may take a long time for them to adjust themselves to any change, and the transition period may be found to be a difficult one.

* * * *

The report of the Parliamentary Committee on war expenditure in India has been published, and it deservedly praises the Indian industry's services in response to the call made on it for supplies. The report acknowledges that Indian prices were generally appreciably lower than prices in Britain, that prices charged for war contracts were fixed at controlled rates, which were below civilian prices, and that Indian industrialists, far from making undue profits, must have given up a margin of their profits otherwise obtainable, because while they adhered to low ceiling prices their own manufacturing costs were partly subject to the effects of inflation. This is indeed high praise, and when we consider that the total of Britain's war expenditure in India runs to nearly £1,000,000,000, it disproves the allegation that Britain's war debt to India has been swollen by the inflated prices charged to Britain.

* * * *



The Government of India appears to be "welfare conscious" in every Department. Reference was made last week to the ordnance requiring coal mines to provide creches for children of miners, and this week we find that under the Director of Welfare an Indian Command Branch has been set up at G.H.Q., New Delhi, to look after the welfare of the families of fighting men serving overseas.

* * * *

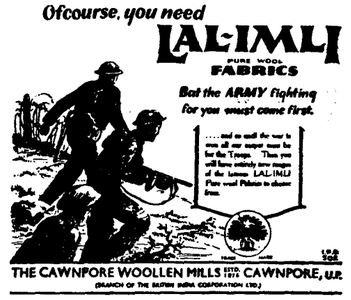
How the Government does not neglect, in the midst of the more important war work and duties, matters of minor importance is illustrated by the announcement that a training course has been introduced to train students in archives preservation in the Archaeological Department.

'Hill Bird'

South India

(From Our Correspondent)

Madras, June 12



The Government of India and the Burma Government stationed in Delhi are taking vigorous steps to resume Indo-Burma trade. In this connection a Committee consisting of 23 leading businessmen in India having large interests in Burma has been accorded permission to visit Rangoon to study the conditions prevailing there and report to the Custodian of Properties in Burma. Three important businessmen, Mr. C. G. Krishnaswami Naidu, The Raja of Chettinad, and Mr. Vellayan Chettiar will represent this presidency. They will leave in the first week of next month for Rangoon where they are expected to stay for more than a fortnight. A large number of Indian evacuees from Burma staying in the city and mofussil have applied to the Government of India for permission to return to Rangoon and other places in Burma. It is not known whether such permission has been granted. What the Government should have done is to issue a declaration that all those who have permanent interests in Burma will be given all facilities to re-establish themselves in Burma. Indian labour will also be required for reconstruction of Burma. The Government of India should use this opportunity to settle all questions remaining unsettled between India and Burma. After all, all that is asked for Indian nationals is equal treatment, privileges and opportunities with the Burmese.

The United Planters' Association of Southern India, Coonoor, which is an influential and organised agricultural body in South India, in a memorandum submitted to the Government of Madras, on behalf of the plantation interests in South India, criticises some of the provisions of the Agricultural Income Tax Bill and points out that the ordinary basis of assessment, viz., income of the previous year, is quite unsuited to agricultural enterprises like coffee and cardamoms, which fluctuate very widely in crop yields. Figures of crop yields during a period of six years in the case of a coffee estate taken at random, and 11 years in the case of a cardamom estate, show variations of 300 per cent and 1,200 per cent respectively. Therefore any basis of assessment which pre-supposes interrelation between the income and expenditure during a particular period will be wholly incorrect in the case of these crops. The Association thinks that a rational basis of assessing income from these agricultural products would be to follow the system adopted in Kenya where coffee is the most important agricultural industry. The Bill allows deductions for replacements but not for depreciation of plant and buildings as allowed by the Indian Income-Tax Act. The Association urges that the computation for assessment should not be different from that for ordinary income-tax. The absence of any provision for the grant of relief in respect of double taxation is a glaring omission in the Bill. As cases of competing fiscal jurisdiction and double taxation are likely to arise as between Provinces, States and the Central Government the principles of relief from double taxation should find legislative recognition in the Bill. Some of the other points urged in the memorandum are; (1) agricultural income from building which are purely 'notional' should not be assessed, (2) the principles and concessions recognised by the Indian Income tax law should be adopted in toto and (3) property held for the furtherance of agricultural scientific research should be exempt in the same way as property for religious purposes.

Inaugurating this evening a series of lectures on journalism arranged by the Mysore State Journalists Association Mr. Bulusu Sambamurthi, Speaker of the Madras Legislative Assembly said that to-day the whole of India was under an expectation of something from Great Britain which Lord Wavell had brought to New Delhi, something which was still kept under lock and key. He said that nothing short of a scheme that guaranteed independence to India at the earliest possible moment would be acceptable to India. After all the troubles that India passed through, nothing short of a practical scheme that would develop into a full independent unit in a world federation would be acceptable. What the Indian nation was contemplating was a World Federation of free and independent units of which India would be one. Dealing with the question of what part the States would have to play in the evolution of Indian independence. Mr. Sambamurti said, the whole of India was to work together hereafter. There would be no British India or Indian India. Those distinctions should disappear from politics and there would be an Indian Federation and the States would be merged into an all-India Federation. The interim scheme that might come to-day should be left aside. After the close of the war, the Constituent Assembly was sure to meet and forge a constitution for the whole of India including Indian States. The Constituent Assembly would ask for nothing short of a republican constitution for India. Talking of world federation, Mr. Sambamurthi said that with the various modern devices by which distance had been overcome, a sense of neighbourhood had come over the various nations and it was only a question of decade when a world federation would be set up. However much the big powers in San Francisco might try to retain powers they could not do so for long.

The Southern India Chamber of Commerce, making representations on the subject of decimalisation of coinage to the Government of India, has suggested that the proposed change in coinage system has to wait till a change was brought about in the British unit of currency, weights and measures. The Chamber has stated that, while it appreciated the Government of India's point of view in introducing decimalisation in coinage in order to facilitate simplification in accounting and calculation, it felt that the form of coinage should be handled as a single problem and that the present proposal for decimalising the subsidiary coins of the country was not going to carry it very far in the direction of currency reform. It felt that 'pies' still performed an important role in the economic structure of this country and that as the standard of living had not yet shown any rise and as land revenue cesses, daily wages, railway rates and freights were expressed in terms of 'pies' the proposed cent would have nearly double the value of 'pies', the decimal system should be introduced in weights and measures also. Till these reforms were carried out and till there was a change in the British unit of currency, weights and measures, the proposal could well be deferred.

Presiding over the first anniversary of the medical branch of the Salem City Co-operative Stores, Limited Mr. Sathianadhan, Registrar of Co-operative Societies, said that it was indeed a record of voluntary service unparallelled in the history of the consumers' co-operation in the whole of British India. Referring to post-war work he said it was essential that consumers' societies should take steps to establish themselves firmly during the period of control and to gain the loyalty of their members and customers.

Controller of Motor Transport, (Supply.)

Call in
A
MECHANIC TO
CLEAN YOUR FANS

Oiling and cleaning at regular intervals are essential to every mechanical appliance. To-day it is doubly so in respect of electric fans as the entire production of recognised brands is requisitioned for the essential services.

Get a mechanic to service your fans regularly. Let him carefully inspect the wiring and switches. Thus your existing fans can be made to last until we are in a position to supply you new "Orient" fans.

Specially made to suit Indian demands "Orient" fans are noiseless and can be depended upon to give uninterrupted service for years. Positive selection of four speeds is guaranteed by the regulator supplied with each "Orient".

We are planning ahead to meet in full all post-war demands for "Orient".

ALWAYS...
- .. use a switch and regulator.
- .. start at lowest speed.
- .. switch off when leaving the room.

Orient FANS

8, ROYAL EXCHANGE PLACE, CALCUTTA.

Resume of Commodity Markets

The feature of the week in the commodity markets is the announcement by the British Treasury regarding the increase in the official purchase price of 168s. per ounce to 172s. 3d. Though it was stated that this adjustment in the Treasury's purchase price was only due to the decrease in insurance and transport costs and the desire on the part of the authorities to pass on the benefit of the decrease in costs to the producer there was a sentimental effect on prices in the Bombay market. The quotations are at the highest level for some time. The raw jute market has been rather quiet while the jute manufactures market has been uninteresting. The raw cotton market has been fluctuating in narrow limits but the quotations have been well maintained with the strength of the bullion market.

Jute and Jute Manufactures:

The raw jute market has been very quiet as reports regarding the progress of the new crop continue to be satihfactory, and it is expected that the yield will be very much higher than market expectations. Estimates regarding the size of the old crop also are being revised so that the total available supplies for 1945-46 might exceed consumption by mills and exports if scarcity of labour continues to be acute. The placing of fresh orders for hessian by the U. S. A. has not resulted in any increase in buying by mills. As there is continued difficulty in doing business at maximum rates in both hessian and heavy goods mills are not keen on purchasing further stocks of jute. Sellers have naturally not been anxious to do business and all varieties are quoting at minimum rates. Old crop Supervised Jat Middles and Bottoms were done at Rs. 15 and Rs. 12 per maund with new crop quoting 8 annas higher. Assam Bottoms were done at Rs. 11-8 per maund.

In the pucca bales section export business continues to be poor with only a small transaction being reported in Dundee Daisee at Rs. 77 per bale. Mills also have not been keen to buy First Marks. Only S.M.R. and Cuttings continue to be in demand, S.M.R. being quoted at Rs. 56 per bale and Cuttings N.C. and M.C. at Rs. 43 and Rs. 42 per bale.

In the jute manufactures market also quiet conditions have prevailed. The slightly steadier feeling noticeable with the placing of fresh orders by the U. S. A. has evaporated. Other enquiry is poor. Bazar rates are still at a discount over mills selling rate. No large business has thus been possible. Production figures for the last month show an increase in output in spite of the scarcity of labour which has had a discouraging effect. 9 porters May-June are quoting Rs. 28 July-September Rs. 27-14 and October-December Rs. 27.

In the heavy goods section, the bazar is still inclined to be bearish regarding the immediated outlook and free selling has resulted in a decline in prices. "B" twills are quoting Rs. 64-12 or Ready and Rs. 64-4 for December.

The stocks figures for the month of May published during the week, show a slight increase in hessian expressed in tonnage. Sacking are very much higher at 102,203 tons against 99,205 tons. Hessian stocks, on civilian account, were 38,439 tons against 37,036 tons and, on military account, 37,264 tons against 38,535 tons. It is satisfactory to note that there is a decline in stocks on Government account. Sacking, on civil account, were 90,020 tons against 86,759 tons and, on military account, 12,188 tons against 12,446 tons. It will thus be seen that the increase in sacking stocks is mostly on commercial account. The production figures for the same month makes rather satisfactory showing, there being an increase of 8,281 tons over April to 88,704 tons. Offtake also has been satisfactory though it has not been possible to absorb the whole of the increase in production. It was higher by 8,741 tons over April. The increase in output by over 8,000 tons is equally divided between hessian and sacking, the total on account of hessian being 37,353 tons and sacking 47,954 tons. Other manufactures were 3,397 tons.

Bullion:

The feature of the week, as stated above, is the announcement by the British Treasury regarding the increase in the official price of gold to 172s. 3d. per ounce from 168s. which was the price ruling throughout the war years. The increase in the British Treasury's price was anticipated to a certain extent as even two or three weeks back it was reported that the British authorities were contemplating such an increase and that the adjustment in the purchase price was mainly due to the decrease in costs of transport and insurance and the desire on the part of the British Government to attract gold as far as possible to London. The theoretical parity price on the basis of sterling-dollar exchange is 173s. 8d. So that the increase in the price to 172s. 3d. does not mean that there has been a change in the exchange policy or in the exchange rate. Ordinarily, this change could not have affected the Bombay bullion market but with the continued demand for both the yellow and white metals, this change has

Jute and Jute Manufactures

(From Our Correspondent)

Special to "Indian Finance".

Calcutta, June 14.

The total reported production of jute goods manufactured on civil and military accounts during May 1945 amounts to 88,704 tons; an increase of 9,281 tons over the preceding month. Goods manufactured on military account amount to 13,478 tons or 15.2 per cent of the total productions; this represents an increase of 4,483 tons on the corresponding production figure for April 1945. The production of manufactured goods of all descriptions during the period July 1944 to May 1945, now totals 9,05,628 tons giving a monthly average during the current season of 82,330 tons. In May 1945 the production of hessian was 14¼ crores yards, equalling 37,353 tons of which 165¼ lakhs yards or 4,935 tons was on military account. For the same period, the production of sacking amounted to about 11¼ crores yards or 47,954 tons of which about 1¼ crores yards or 8,167 tons was on military account. Other manufactures which are unspecified accounted for 3,021 tons and 376 tons for Civil and Military accounts respectively. The increase in the tonnage produced last month is shared almost equally between hessian and sacking. There is a notable increase in the yardage of hessian produced last month on military account —165¼ lakh yards—being more than double the yardage woven on military account during April 1945. The improvement in the total production for May represents an increase of 11.7 per cent on the April figure and no doubt reflects the corresponding improvement in Coal supplies noticeable recently. Mills, however, are still handicapped by shortage of labour.

For the third month in succession Mill stocks of manufactured goods show an increase. Last month's increase of goods in stock is entirely confined to Commercial hessians and sacking: the amount of goods held on Government account having decreased during the month. Commercial hessians are higher by 1,403 tons or 47¾ lakhs yards while an increase of 3,261 tons or 86¼ lakh yards is recorded in commercial sacking stocks. Government held descriptions are all lower, notably hessian bags, cloth and canvas which declined by 924 tons; the total decrease in this section being 1,529 tons. The net increase in stocks compared with the April position is therefore 3,135 tons bringing the gross weight of manufactured goods in stock to 1,77,911 tons which, roughly speaking, is about two months' production under present conditions.

A very interesting and informative addition to the statistical records of the jute industry is contained in a recent publication issued on the authority of the Committee of the Indian Jute Mills Association. The publication concerns loom statistics showing the distribution of Hessian. Sacking and other looms according to reed space and Mills and gives the position of such corrected up to 30th June, 1944. It records on an All-India basis looms and reed spaces employed in the industry giving the names of all jute mills in the country and the number of looms possessed by each mill—hessian, sacking and others with their reed spaces. There is also a table showing the number of looms which the mills inside and outside the I.J.M.A. possess and what their reed spaces are. A number of appendices show the percentage relations and distribution of looms as between mills inside and outside the Indian Jute Mills Association: mills inside and outside Bengal: Mills under European and Indian Managing Agencies, etc. Tables are also given showing the growth of the number of looms within the I. J. M. A. for which records go back to 1895. The distribution of looms, as far as is known, in countries outside India is also tabulated.

Further to our remarks last week in connection with reports of the intensification of jute cultivation in Brazil, an article has appeared in the May Bulletin of the Indian Central Jute Committee giving further details of the position as regards the growing of jute in that country. According to this article, the head of the fibres section of the office of the Brazilian Economic Co-ordination has predicted that jute grown in Brazil will soon supply their domestic needs. He said this was possible because of the impetus given to jute production in Amazonas; adding that Brazilian jute production is up by sixty-one per cent. It appears that 8,500,000 Kilos of jute grown in Amazonas State was consumed during the last twelve months. "Given progress in Amazonas production" said this official, "We can expect in the near future complete emancipation in Brazil from importation of this raw material. Thus Brazil will be the first nation of the world outside of India to become self-sufficient in jute production." According to the Indian Textile Journal of March 1945, jute can be produced in Brazil at 3 to 4 cents per pound but cost of transportation to mills often amounts to as much as the cost of production. It is stated that two crops can be grown annually, the first harvest being in March to June, the second in October and November. Government loans are available to independent growers. Substantial quantities are being produced and increasing quantities of jute products are being exported to the United States.

There is nothing of importance to record in the Pucca Bale market. Small business in S. M Rejections at Rs. 56 per bale has been reported, otherwise the market has been idle. Dealers are free sellers for all grades, both old and new crop, at minimum rates with the exception of Cuttings which are quoted at Rs. 42 for M. Cs. and Rs. 43 for N.Cs.

In the loose jute market prices for the old crop are at the minima without attracting much interest. There was small business in Assam Bottoms at Rs. 11-8 and Supervised District old crop Middles and Bottoms were done at Rs. 14-8 and Rs. 11-8 respectively. Sellers are pressing for business in both old and new crop but chiefly due to the paucity of business in the fabrics markets, Mills are continuing to look on meantime.

The hessian market is easier again after the placing of business by the U. S. A. as a result of a recent enquiry from that quarter. B Twills and other Sacking steadied on the placing of an order in the bazaar for about 18,000 bales of B Twills for June/July shipment but the improvement was only temporary. Forward quotations in the fabrics markets are showing a discount but mills are very reserved. The following are the quotations on Thursday 14th June:—

	June	July-Sept.	Oct.-Dec.
	Rs. As.	Rs. As.	Rs. As.
8 oz./40 ins. hessian	22 2	21 13	21 9
10 oz./40 ins. hessian	28 0	27 10	26 12
10½ oz./40 ins. hessian	29 0	28 12	28 0
B Twills	64 0	61 10	60 4
Heavy Cs.	64 8	63 8	62 0
Liverpools	69 0	68 8	68 0
Sacks	64 0	63 0	62 0

(*Continued from page* 821).

had a psychological effect and the quotation for gold has improved by more than one rupee to Rs. 78-10 for ready. Beyond the fact that the decision of the British Treasury has been a tool for the bull operators on the Bombay bullion exchange to push up prices for gold, it cannot be said to have any effect so far as this country is concerned. With exchange control still in force and the difficulty in regard to imports of gold, the Reserve Bank will be the only seller on behalf of the Allied Nations

* * * *

The All-India Final Sugarcane Forecast for for 1944-45 published during the week estimates the area under the crop at 41,34,000 acres against 42,34,000 acres in 1943-44 or a decrease of 2 per cent. The yield is estimated to be 54,22,000 tons against 58,48,000 tons or a decrease of 7 per cent. It will be seen that the decrease in yield is more than the decrease in acreage. It is reported that the crop has been affected by unfavourable weather conditions in places though its condition on the whole is said to be fairly good. Even during the current season sugar output has been short of total consumption and rationing in Bengal had to be curtailed further If the prospects for the next season are not favourable the position might grow worse. There is no prospect of imports from abroad Even if it were possible to reconquer the Dutch East Indies, what exactly will be the state of the sugar industry in those islands it is not possible to say at the present moment.

A survey of the position for all sugar-producing areas for the week ending May 31, 1945, shows production up to the end of May at 9,67,265 tons. Despatches during the week were 31,763 tons making a progressive total of despatches up to May 31, 1945, to 4,46,993 tons or 46.2 per cent of total production. Balance stock as at the end of that month was 5,20,372 tons which included 6,147 tons of 1942-43 and 1943-44 season's sugars.

(*Continued from page* 802).

Griffin, Chief Commissioner of the Indian Railway Board.

Sir Arthur said that experts are working on designs for the passenger-train engines which India will require in quantity very very soon.

United Commercial Bank

A branch of the United Sind-Punjab Bank Ltd., which was recently started in Karachi, was opened at Nawabshah on the 7th instant. A large gathering attended the opening ceremony. Zamindars of the place, as well as the general public welcomed the branch of this bank because they were sure that it would give useful and efficient banking service. The Directors and the executive of the bank are well-known people and therefore there will be mutual understanding between the bank and its clients in regard to its banking business. What has impressed the people of the place more than anything else is the spirit of service in which the Directors and the executive of the bank have started this bank. Not only the Directors are not charging any fees for attending the Board Meetings but even the Technical Adviser, Mr. B. T. Thakur, the General Manager of the United Commercial Bank, has informed the Board that he would not like to accept anything for his services until the bank came on a paying basis. Even the local advisers of the branches of the bank will work free until the bank stands on its legs.

When the Directors and workers are inspired wtih such lofty ideals, the public feels that the bank must in a very short time prove a tremendous success.

Vol. XXXV. No. 24 SATURDAY, JUNE 16, 1945 Price Re. 1

Stock Markets to-day and to-morrow:

BIRD-HEILGERS JUTE GROUP RESULTS

Stock exchanges both in Calcutta and Bombay were very firm in the early part of the week. It looked as if the upward trend would continue uninterrupted though a certain section of the market was of the feeling that the rise in prices had been rather abrupt and that a reaction would put the market in a healthier state. With the speculation regarding the political proposals and a tendency to take profit at the higher levels in midweek there was general selling and prices tended to come down all round. The downward movement was noticeable on Thursday also but in Friday's session the close is quite steady. In the early hours a rather hesitant tone was noticeable with the tendency of operators to await the reception to the Viceroy's proposals. It is said that some progress will be made as a result of the Conference in the last week of this month between the leaders of the various political parties and the Viceroy and that post-war planning would be more vigorous under the new "National" Government if it were formed. Which means that the political settlement would prove to be a further bullish factor for stock markets. If the efforts fail no appreciable reaction, is however, expected. As the recent upswing in prices has been mostly due to the weight of surplus money seeking investment and as shares are in very strong hands there is no possibility of any sudden drop in prices. The developments in the next few days will clearly show whether a further rise in prices can be expected.

It should be pointed out, however, that for most of the shares prices are rather on the high side and that unless the market reconciles itself to a lower interest basis, it will not be justifiable to expect that present prices will be maintained. As for Coal shares the yield, in some cases, is very low.

* * * * *

The accounts of the Bird-Heilgers group of jute companies for the half-year ended March, 1945, have been disappointing to a certain extent to the market as with the exception of Kinnison, which has been able to report a higer level of profits due to special reasons, a general decline in earnings is noticeable and in some cases it has been necessary to reduce the dividends to ordinary shareholders. Where the dividends have been maintained it has been possible only due to the smaller provision for taxation. The foster mills have been affected by the increase in working expenses and the lower average prices realised on the sales of heavy goods even though it were possible to maintain continuous working. But the coal-driven units have suffered very badly, Lansdowne, Lawrence, Naihati and Union being able to utilise only a very small proportion of the working hours. Lansdowne worked only 216 hours, Lawrence 270, Naihati 368 and Union 321 out of a total of 1,374 hours each. Auckland was not affected as it was an electrically-driven unit. Standard and Dalhousie as foster units were able to report continuous working.

The aggregate profit for the group, as a result is very much lower at about Rs. 51 lakhs against Rs. 86.42 lakhs for the previous six months.

Auckland is paying a dividend of Rs. 5 per share (same), Clive 12 annas per share against 7 annas per share, Dalhousie Rs. 5 per share (same), Kinnison Rs. 5 per share (same), Lansdowne (nil) Re. 1 per share, Lawrence Rs. 2 per share against Rs. 4 per share, Naihati Rs. 2 per share against Rs. 4–8 per share, Northbrook 6 annas per share (same), Standard Rs. 4 per share (same) and Union Rs. 7-8 per share (same). It will be noted that only in the case of Lansdowne, Lawrence and Naihati there is a decrease in dividends. Even for these distributions substantial sums were written back from the provision for taxation in the previous half-year. Small sums have been also transferred from reserves. The only company to pay a higher dividend, even with a lower level of profit, is Clive. What is the reason for the increase in distribution by as much as 5 As. per share is not clear.

The net profit of *Clive Jute Mills Company, Limited*, for the half-year is Rs. 7,66,038 against Rs. 11,04,102 for the previous six months. Provision for taxation is Rs. 5.3 lakhs against Rs. 8 lakhs and depreciation Rs. 55,143 (same). Transfer to other funds is only Rs. 17,129 against Rs. 1,29,155. The ordinary dividend, as mentioned above, has been increased to 12 annas from 7 annas. The carry forward is lower at Rs. 18,188 against Rs. 25,186 brought in.

* * * *

As a result of the utilisation of working hours of 144 more looms by the Standard Jute Mills Company, Limited, the *Kinnison Jute Mills Company, Limited* is able to report a higher level of profit for the same half-year. The net profit before providing for depreciation and taxation is Rs. 9,24,347 against Rs. 8,91,892 for the previous six months. Provision for taxation is lower at Rs. 6,12,833 against Rs. 6,23,689 as also that for depreciation at Rs. 37,129 against Rs. 43,960. The War Contingency Reserve receives Rs. 70,000 against Allocation to Welfare Reserve at Rs. 17,414. The dividend has been maintained at Rs. 5 per share. The amount carried forward is slightly higher at Rs. 16,122 against Rs. 14,432 brought in.

* * * *

Both the Cawnpore Textiles and Elgin Mills have been able to report only a lower level of earnings for the half-year ended March 1945, due possibly to the further reduction in ceiling prices. The dividends in both cases are lower. The market however, has not been affected adversely.

NOTICE

PYRETHRUM PRODUCTS (INDIA) LTD.

Attention is drawn to the following sentence appearing in the Announcement of PYRETHRUM PRODUCTS (INDIA) LTD.

"While 500 acres of land is already acquired and in the process of cultivation, negotiations for acquiring further lands are proceeding.....".

In the above sentence read "contracted" instead of "acquired"

As a matter of fact, there has been a slight recovery after the publication of the balance-sheets it being argued that the earnings are quite satisfactory having regard to the present conditions in the industry and that with the introduction of the Utility Cloth Scheme they can be even expected to improve.

Cawnpore Textiles Limited has earned a net profit, before providing for taxation and depreciation of Rs. 10,82,430 against Rs. 11,28,167. Provision for taxation is very much lower at Rs. 7.7 lakhs against Rs. 9.5 lakhs. The amount set aside to depreciation is Rs. 1 lakh against Rs. 1.5 lakhs and the transfer to Debenture Sinking Fund Rs. 6,250 (same), Stock and Store Reserves Rs. 51,717 (Rs. 70,000), General Reserve Rs. 48,283 (nil). Even with the disposable balance it would have been possible to maintain the dividend at 3 annas per share but the directors have been prudent and have decided to pay 2½ annas per share instead of 3 annas. The amount carried forward is higher at Rs. 38,729 against Rs. 26,314 brought in.

Elgin Jute Mills Company, Limited, has earned net profit for the same half-year before providing for taxation and depreciation, of Rs. 32,71,857 against Rs. 35,40,408 for the previous six months. After providing for axation Rs. 23,85,000 (Rs. 25,77,085) and setting aside for depreciation Rs. 2.5 lakhs (same), General and Stock and Store Reserves receive only Rs. 3 lakhs against Rs. 3.5 lakhs. The dividend on ordinary shares is slightly lower at Rs. 1-4 per share against Rs. 1-8 per share. The amount carried forward is higher at Rs. 1,27,575 against Rs. 1,07,017 brought in.

* * * *

Thanks to larger coal supplies *Titaghur Paper Mills Company, Limited,* it is reported, has been able to earn as much as Rs. 60 lakhs for the half-year ended March, 1945. In the half-year ended September 1944 the net profit was Rs. 49.37 lakhs and in the half-year ended March 1944, Rs. 40.48 lakhs. The lower level of earnings in the two previous half-years was mainly due to the difficulties in respect of coal supplies and the increase in the cost of bamboo for the production of pulp. With all the machines now working and the possibility of a reduction in working expenses, it can be expected that the earnings would revert to the level of the half-year ended September, 1943, when it was as much as Rs. 80 lakhs. The shareholders, however, would not benefit to any extent from the higher level of earnings as the dividends on the A and B shares have been almost stabilised at 30 per cent per annum, this dividend being paid since March 1941. But one important fact should not be overlooked. Besides being the premier producer of paper in this country, the company has improved its financial position to a great extent as a result of large allocations to reserve. The tax refunds also can be expected to be on a substantial scale as big sums have been paid by way of Excess Profits Tax.

* * * *

Better news, however, is reported to be in store for the shareholders of Carew & Company. It is stated that it has been possible to earn the profits for 1943-44 in the ten months of the current financial year that is the year ending June 1945 and that it would be possible to pay a dividend of Rs. 1-4 to Rs. 1-8 per share against only Rs. 1 per share on the former occasion. The increase in earnings must have been due to the better working of the distilleries as the directors, in their last report, were not quite satisfied regarding the prospects for the sugar factories, the main difficulty being, as usual, cane supplies.

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

CALCUTTA, June 15.

Very steady conditions were noticeable on the Calcutta Stock Exchange in the first three days of the week, and business passing was on quite a large scale. Coal shares again led the market. On Wednesday and Thursday, however, there was considerable profit-taking and quotations were marked lower all round. The feeling that the rise in prices had been uninterrupted and that a re-action was overdue and the anxiety to await the Viceroy's announcement were mainly responsible for the selling in the latter half of the week. At the time of writing slightly steadier conditions are noticeable. The reactions to the new proposals for the solution of the political deadlock are still awaited. The undertone is steady and it may be that the ground gained is consolidated and the upward trend resumed.

In the giltedged securities section very firm conditions were noticeable with 3½ per cent Paper done up to Rs.. 101-12, a record for all time. Terminable loans also were in good demand with few sellers. 3 per cent Defence Bonds 1946 were Rs. 102-3, 3 per cent 1951-54 Rs. 101-1, 3 per cent 1953-55 Rs. 100-15, 3 per cent 1957 Rs. 100-6, 3 per cent 1963-68 Rs. 98-7 and 4 per cent 1960-70 Rs. 113-6. Quotations for all the loans are 6 annas to 8 annas higher over last week. Only towards the close 3½ per cent. Paper closed easier at Rs. 101-6. Extremely easy money conditions prevail in the market and there has been a further drop in the discount rate on treasury bills to 4 annas from 4 annas 11 pies per cent last week.

In sympathy with the higher giltedged market Bank shares have naturally been steady, *Reserve Bank* being done up to Rs. 137 cum-dividend. *Calcutta National Bank* where Rs. 15-14, *Imperial Bank* contributories Rs. 495, and *United Commercial Bank* Rs. 21 premium.

Cotton shares were rather quiet. The publication of the reports of *Cawnpore Textiles* and *Elgin Mills* for the half-year ended Marc, 1945 do not seem to have had a discouraging effect on the market. The reduction in dividend was anticipated but the decline in earnings has not been to the extent expected. After the publication of the report, *Cawnpore Textiles* improved from Rs. 12-2 to Rs. 12-14. In sympathy with other sections they are quoting lower at the time of writing at Rs. 12-10. *Elgin*, likewise, improved from Rs. 63-8 to Rs. 66-4. *New Victoria* improved to Rs. 7-12, but are now quoting Rs. 7-5. *Bengal-Nagpur* were Rs. 44-6. *Dunbar* Rs. 314 and *Kesoram* Rs. 17-13.

Coal shares have again been in the limelight ,further buying of the popular counters leading to fresh gains. *Burrakur* were marked up to Rs. 43-15 from Rs. 42-6 last week, *Equitable* to Rs. 70 from Rs. 68-2, *Dhemo Main* to Rs. 30-4 from Rs. 28-3, *East India* to Rs. 42-11 from Rs. 41. *South Karanpura* were in request up to Rs. 33-4 and *Standard* up to Rs. 46-4. In the last two days, however, there has been a drop in prices. *Bengal* have come down from the highest level of Rs. 730 to Rs. 723 and *Amalgamated* from Rs. 57-4 to Rs. 56-4. *Burrakur* have slipped back to Rs. 42-2 from Rs. 43-13. *New Beerbhoom* have shed 1 point to Rs. 42-10, *Raneegunge* 2½ points to Rs. 60-12, *Satpukuria and Asansol* one point to Rs. 11-12, *South Karanpura* to Rs. 30-2 and *Standard* to Rs. 44-8.

There is not much activity in the Jute section though earlier, with the strength of the Coal issues, bigger denomination shares were 5 to 10 points higher. *Anglo-India* were Rs. 485, *Howrah* Rs. 94-2 cum-dividend, *India* Rs. 715 and *National* Rs. 35. *Howrah* are now quoting Rs. 91-6 ex-dividend, *Anglo-India* Rs. 478, *India* Rs. 708, *National* Rs. 34-12 and *Kamarhatty* Rs. 741. *Reliance* have been rather steady around Rs. 78 and *Presidency* at Rs. 12-8. The reports of both India and Megna and the Bird and Heilgers Group of companies emphasise the difficulties of jute mills. There is a reduction in the dividend to ordinary shareholders in most cases. Clive, however, is the only exception with an increase in its dividend to 12 annas per share from 7 annas.

In the Engineering section Indian Irons were very active being marked up to Rs. 42-4 from Rs. 41-4 last week and Steel Corporation to Rs. 34-4 from Rs. 33-12. *Indian Iron*, however are now quoting Rs. 41-10 and *Steel Corporation* Rs. 33-12, *Jessop* were steady at Rs. 25-10. There was some buying of *Kumurdhubi Engineering* and the quotation is more than one point higher at Rs. 11-4. The highest touched during the week was Rs. 11-12. *Burn and Co.* changed hands at Rs. 415, *Bhartia Electric Steel* Rs. 22-15 and *Arthur Butler* Rs. 25-8.

In the Sugar section, there was a rise in *Carew* to Rs. 29-4 on reports of a higher dividend for the current year, profit-taking, however, has resulted in very nearly the whole of the gains being lost. The close is rather quiet at Rs. 28. There was speculative activity in *Ramnugger Cane and Sugar* with buying from special quarters. The quotation has jumped to Rs. 19 from Rs. 15-12 on Tuesday. Since then prices have been fluctuating in wide limits and the close is rather quiet at Rs. 17-12. *Balrampore* were Rs. 16-4, *Belsund* Rs. 15-2 and *Champarun* Rs. 38.

In the Tea section, there was not much doing on most days of the week though towards the close there has been broadening of interest in *Central Cachar* at Rs. 114, *Phaskowa* Rs. 119, *Teen Ali* Rs. 18-8 and *Tengpani* Rs. 27-12.

In the Miscellaneous section, in sympathy with the rise in Indian Aluminium to Rs. 210, *Aluminium Corporation* were quoting Rs. 16-12. On reports that the necessary legislation will be completed for the formation of the Passenger Transport Board to take over the Calcutta Tramways, before the end of the year, *Calcutta Trams* improved to Rs. 51-2 from Rs. 48-4. *Dalmia Cement* were unchanged at Rs. 17-11 with *Reliance Firebrick* in good demand at Rs. 22-4. Burma shares were unchanged, *Burma Corporation* quoting Rs. 5-11 and *B. B. Petrol* Rs. 5-14. *Indian Copper* were better at Rs. 3-4. *Midnapore Zemindary* shed 3 points to Rs. 183. Among paper shares, *Titaghur Paper* jumped to Rs. 30-10 from Rs. 28-12 on reports of higher earnings for the last half-year, but the quotation is now Rs. 30-1. *Humayan Properties* were steady at Rs. 17-14 while *Assam Saw* were quiet at Rs. 5-10.

NATH BANK, LIMITED

EIGHTEENTH ANNUAL REPORT OF THE DIRECTORS

To

THE SHARE-HOLDERS,

LADIES & GENTLEMEN,

Your Direcors have much pleasure in placing before you the duly audited Balance-sheet and Profit and Loss Account for the year ended 31st December, 1944.

Deposits have risen from Rs. 4,03,80,854-12-9 in the year 1943 to Rs. 6,75,53,153-3-0½ in the year under report and substantial addition has been made to the paid-up capital of the Bank which is Rs. 34,13,792-11-2 in comparison with the preceding year's figure at Rs. 20,20,732-8-9. We are pleased to report that the shares of the Bank were sold at a premium of 20% and the premium-receipts were transferred to the Reserve Fund. While comparing with the last year's Reserve Fund it will be observed that the Reserve Fund has marked a striking increase from Rs. 2,96,950-0-0 to Rs. 6,33,360. The total net profit for the year under review after writing off bad debts amounts to Rs. 3,39,536-13-3 including the last year's surplus profit of Rs. 26,173-13-2. Out of this the Directors propose to transfer to the Reserve Fund a sum of Rs. 65,000 provided for income-tax Rs. 60,000, to set apart a further sum of Rs. 336 for charity and bonus and recommend a dividend of 8 per cent per annum, subject to Income-tax leaving the Balance to be carried forward.

The review of the Balance Sheet will indicate a remarkable increase in Bank's total business and the sound liquid position of the Bank. The management adopted all through a cautious and prudent policy, as will be evident from an examination of the balance-sheet. The services of the staff during this period of emergency are specially appreciated. During the year three new offices were opened, which are now full of promise. At the time of writing two new offices have been started, one in Bombay and another at Bhagalpur. Since the opening of Bombay branch, the business of the Bank has obtained a strong support.

Messrs. P. D. Himatsingka and Jagannath Kolay who were elected directors to fill up casual vacancy in the Board and Mr. G. V. Swaika retire and being eligible offer themselves for re-election.

The Auditor Mr. S. C. Dutt retires but offers himself for re-election.

Calcutta,
2nd May, 1945.

AUDITOR'S REPORT.

I beg to report that I have audited the Balance Sheet as on 31st December, 1944, and Profit and Loss Account for the year ending 31st December, 1944 of NATH BANK LIMITED, as overleaf and in attached sheet set-forth respectively with books and accounts of the Head Office and returns of the Branches and have obtained all the information and explanations, I have required.

In my opinion, the Balance Sheet and Profit and Loss Account as referred to in this report are drawn up in conformity with the law and such Balance Sheet exhibits a true and correct view of the state of the Bank's affairs according to the best of my information and explanations given to me and as shown by the books and accounts as kept by the Bank as required under Section 130 of the Indian Companies Act VII of 1913.

Dated, the 2nd March, 1945.

98-4, Clive Street, Calcutta.

(Half-yearly General Meeting on 30-6-1945 *at* 11-40 *a.m. Books closed from* 15-6 *to* 30-6-1945).

Audited Accounts for the half-year ended 31st March, 1945.

They show a profit of Rs. 8,57,379-12-9. After providing Rs. 5,90,894-0-0 for taxation (including Excess Profits Tax), Rs. 1,05,374-0-0 for depreciation and placing Rs. 15,319-0-0 to Welfare Reserve and Rs. 20,000-0-0 to War Contingency Reserve, there is an available balance at credit of Profit and Loss Account of Rs. 1,41,319-9-11 which includes Rs. 15,526-13-2 brought forward from last half-year.

The Directors propose to dispose of this as follows—In paying a Dividend on the Preference Shares at the rate of Rs. 7 per cent per annum, without any deduction for Income Tax paid by the Company Rs. 35,000-0-0; In paying a Dividend on the Ordinary Shares of Rs. 5 per share, without any deduction for Income Tax paid by the Company Rs. 1,00,000-0-0; and In carrying forward Rs. 6,319-9-11; Total Rs. 1,41,319-9-11.

Stocks of jute have been taken at or under cost price and manufactured goods at contract rates.

In accordance with the working time agreement of the Indian Jute Mills Association the normal working hours of 54 weekly, with all looms operating, continued throughout the half-year and it is satisfactory to record that the mill, by reason of its being electrically driven, has operated in full and no working hours have been lost.

During the half-year mills have been able to effect all their hessian sales at maximum selling prices as fixed by the Government of India Ordinance and future prospects in this market are reasonably good. In sacking however the absence of good demand from our Overseas markets influenced values to a considerable extent and the bulk of business done was put through at prices below the fixed maxima. The outlook in this section of the industry remains uncertain. In the raw jute market mills have at all times been able to cover their requirements at rates below the Ordinance maxima and while transport of jute from up-country stations has presented little difficulty the question of shortage of storage space at mills continues one of concern.

The labour position in the mill is still far from satisfactory and the management continues to find great difficulty in obtaining the necessary numbers of skilled workers to replace those who have left the employment of the Company.

The Company has throughout the half-year continued to supply all workers with essential foodstuffs at rates below Government controlled prices and the regular amenity allowance of Re. 1-4 a week has been increased to Rs. 2 a week.

A further deferred bonus equal to one week's basic wages has been credited to every worker other than those employed only temporarily. The bonus has been debited to Welfare Reserve.

The previous five-year Working Time Agreement between members of the Indian Jute Mills Association expired in December last and a new Agreement, also for a period of five years, has been entered into.

(Half-yearly General Meeting on 30-6-1945 *at* 12 *noon. Books closed from* 15-6 *to* 30-6-1945).

They show a profit of Rs. 7,67,273-14-8. After providing Rs. 5,30,000-0-0 for taxation (including Excess Profits Tax), Rs. 55,143-0-0 for depreciation and placing Rs. 17,129-0-0 to Welfare Reserve, there is an available balance a tcredit of Profit and Loss Account of Rs. 1,90,188-0-5, which includes Rs. 25,186 -1-9 brought forward from last half-year.

The Directors propose to dispose of this as follows:—In paying a Dividend on the Preference Shares at the rate of Rs. 6 per cent. per annum without any deduction for Income Tax paid by the Company Rs. 24,000-0-0; In paying a Dividend on the "A" Preference Shares at the rate of Rs. 7 per cent. per annum, without any deduction for Income tax paid by the Company Rs. 28,000-0-0; In paying a Dividend on the Ordinary Shares of As. 12 per share, without any deduction for Income Tax paid by the Company Rs. 1,20,000-0-0; and in carrying forward Rs. 18,188-0-5; Total Rs. 1,90,188-0-5.

Stocks of jute have been taken at or under cost price and manufactured goods at contract rates.

In accordance with the working time agreement of the Indian Jute Mills Association the normal working hours of 54 weekly, with all looms operating, remained in force.

The Old Mill was requisitioned on and from the 26th October, 1944, and in order to utilize all loom working hours the New Mill with a proportionate number of looms worked 108 hours weekly by means of a double shift and, being electrically-driven, no working hours have been lost.

In connection with the requisitioning of the Old Mill Government have agreed to refund all expenses incurred by the Company in connection with the dismantling of machinery, removal of stocks, etc., and after the requisitioning period is ended to return the mill in the same condition as when it was taken over, fair wear and tear excepted, in addition to bearing the cost of re-erecting machinery, returning stocks, etc. The machinery is meanwhile stored in a portion of the mill buildings set apart for this purpose and ample facilities are afforded the staff for inspection and maintenance purposes. During the period of occupation Government will accept all liability for damage in respect of war risks to the property requisitioned, for which therefore no premium will be paid by the Company. Certain responsibilities have also been accepted by Government regarding the reimbursement of the Company for any deterioration to machinery during storage and for loss by theft.

In accordance with the arrangements made the Company has paid to the Mills' Industrial Pool a cess of annas two per loom-hour worked.

Audited Accounts for the half-year ended 31st March, 1945:

They show a profit of Rs. 10,25,525-5-4. After providing Rs. 7,18,602-0-0 for taxation (including Excess Profits Tax), Rs. 69,004-0-0 for depreciation and placing Rs. 75,000-0-0 to War Contingency Reserve, there is an available balance at credit of Profit and Loss Account of Rs. 1,74,615-1-2 which includes Rs. 11,695-11-10 brought forward from last half-year.

The Directors propose to dispose of this as follows—In paying a Dividend on the Preference Shares at the rate of Rs. 7 per cent per annum, without any deduction for Income Tax paid by the Company Rs. 52,500-0-0; in paying a Dividend on the Ordinary Shares of Rs. 5 per share, without any deduction for Income Tax paid by the Company Rs. 1,12,385-0-0; and in carrying forward Rs. 9,730-1-2; Total Rs. 1,74,615-1-2.

The mill has been in continuous production throughout the half-year and has worked 108 hours weekly thus utilising all the loom-hours that both the mill and Northbrook Mill were entitled to work, and also the equivalent of 199 looms belonging to The Kinnison Jute Mills Co., Ltd.

The financial arrangements between the Company, The Northbrook Jute Co., Ltd. and The Kinnison Jute Mills Co., Ltd., for the distribution of profits earned by your Company have continued during this half-year.

*After taking into credit Rs. 70,000 being E.P.T. excess provided in previous accounts.

(Half-yearly General Meeting on 30-6-1945 *at* 11-0 *a.m. Books closed from* 15-6 *to* 30-6-1945).

Audited Accounts of the Company for the half-year ended 31st March, 1945:

They show a profit of Rs. 9,24,347-0-7. After providing Rs. 6,12,833-0-0 for taxation (including Excess Profits Tax), Rs. 37,124-0-0 for depreciation and placing Rs. 70,000-0-0 to War Contingency Reserve, there is an available balance at credit of Profit and Loss Account of Rs. 2,18,622-6-1 which includes Rs. 14,232-5-6 brought forward from last half-year.

The Directors propose to dispose of this as follows—In paying a Dividend on the Preference Shares at the rate of Rs. 7 per cent. per annum, without any deduction for Income Tax paid by the Company Rs. 52,500-0-0; In paying a Dividend on the Ordinary Shares of Rs. 5 per share, without any deduction for Income Tax paid by the Company Rs. 1,50,000-0-0; and in carrying forward Rs. 16,122-6-1; Total Rs. 2,18,622-6-1.

In accordance with the arrangement concerning the transfer of lost working hours, the Standard Mill has continued to absorb the equivalent of 650 looms and also since the 4th December an additional 144 looms, out of the total of 1,250 and the Dalhousie Mill has absorbed the working hours of a further 199 looms. No means have yet been found of making up the working-time lost in respect of the remaining 257 looms neither has the question of compensation from Government for these idle loom-hours been resolved. It should be remembered, however, that these unworked loom-hours are accumulating to the credit of the Company.

The financial arrangements between the Company, The Standard Jute Co., Ltd., and The Dalhousie Jute Co., Ltd., for the distribution of profits earned by these two Companies have continued during this half-year.

A further deferred bonus equal to one week's basic wages has been credited to every worker other than those employed only temporarily. The sum involved has been recovered from The Standard Jute Co., Ltd.

Mg. Agents.—Messrs. F. W. Heilgers & Co.

*After taking into credit Rs. 4,69,041 due by Industrial Pool.

(Half-yearly General Meeting on 30-6-1945 *at* 11-50 *a.m. Books closed from* 15th *to* 30th *June,* 1945).

Audited Accounts for the half-year ended 31st March, 1945:

They show a profit of Rs. 99,242-12-7. After providing Rs. 81,814-0-0 for depreciation and placing Rs. 14,815-0-0 to Welfare Reserve, there is an available balance at credit of Profit and Loss Account of Rs. 6,318-1-10 which includes Rs. 3,704-5-3 brought forward from last half-year.

This balance the Directors propose to carry forward.

Due, however, to the inadequacy of coal supplies the mill worked only at intermittent periods throughout the six months and out of the total permissible working hours of 1,374 only 216 could be utilised. This has seriously affected the results of the half-year.

In the report for the previous half-year, details were given of the formation of a Mills' Industrial Pool. Briefly the basis of this scheme was the payment by all mills into the Pool of a cess of As. 2 a loom-hour actually worked during any given month. The following disbursements from the Pool were to be made to those mills which owing to coal shortage were unable to work their full permissible hours:—

1. The amount the closed mill paid out to its workers for any such complete week's closure.
2. An amount equivalent to the loss sustained by the mill in issuing rations at subsidised rates to its workers during any such complete week's closure.
3. A certain sum per loom-hour lost to those mills qualifying for payments under (1) and (2) above. This payment was to vary but for the three months July to September, 1944, it was fixed at As. 12 a loom-hour.

The success of this scheme was dependant upon the quantity of coal which could be made available to the mills and unfortunately during the half-year under review, coal supplies have been considerably below expectations. The result has been a serious curtailment of the hours worked by coal-burning mills and the income of the Pool has also fallen correspondingly. The disbursements by the Pool on account of (1) and (2) above have been met in full but the balance has been insufficient to reimburse the affected mills under (3) above to the extent of As. 12 a loom-hour. The *Indian Jute Mills Association* has therefore re-calculated this benefit at As. 6 a loom-hour from 1st July, 1944, to 31st December, 1944, and this has been paid. In computing the accounts of the Company for the half-year ended 30th September, 1944, benefits at the rate of As. 12 a loom-hour were taken as an asset and in the accounts for the half-year under review, it has therefore been necessary to make an adjustment for this earlier period in order to re-calculate the benefit at As. 6 instead of As. 12 on the number of loom-hours lost. For the period under review these benefits have been calculated at As. 6 a loom-hour lost up to 31st December, 1944, and at As. 4 a loom-hour lost for the remaining three months ended 31st March 1945. The prospects of the Company ultimately obtaining benefits to the full extent of As. 12 a loom-hour unworked depend entirely upon the improvement in supplies of coal. Strong representations continue to be made to the Government of India and they are constantly kept fully aware of the present serious position.

Audited Accounts for the half-year ended 31st March, 1945.

They show a profit of Rs. 4,44,567-12-10. After providing Rs. 1,88,826-0-0 for taxation (including Excess Profits Tax), Rs. 62,533-0-0 for depreciation and placing Rs. 25,149-0-0 to Welfare Reserve, there is an available balance at credit of Profit and Loss Account of Rs. 1,89,315-6-10, which includes Rs. 21,255-10-0 brought forward from last half-year. The Directors propose to dispose of this as follows: In paying a Dividend on the Preference Shares at the rate of Rs. 7 per cent. per annum, without any deduction for Income Tax paid by the Company Rs 21,000-0-0; In paying a Dividend on the Ordinary Shares of Rs. 7-8 per share, without any deduction for Income Tax paid by the Company Rs. 1,34,857-8-0; and in carrying forward Rs. 33-457-14-10; total Rs. 1,89,315-6-10.

In accordance with the working-time agreement of the Indian Jute Mills Association the normal working hours of 54 weekly, with all looms operating, continued throughout the half-year and it is satisfactory to record that the North Mill, by reason of being electrically-driven, has operated in full throughout the period and no working hours have been lost. Due, however, to the inadequacy of coal supplies the coal burning South Mill worked only at intermittent periods throughout the six months and out of the total permissible working hours of 1,374 only 324 could be utilized. This has seriously affected the results of the half-year.

Agricultural Income-tax for Madras:

I am sorry Mr. Nath should indulge in personal attacks against me. I hold no brief for the Madras Government. The argument "no taxation without representation" sounds all right in theory, but no more. And what about the Central Government? Does my friend refuse to pay Central taxes because an irresponsible Government levies them? When Advisers can carry on the administration of the Province, I don't see why they should not levy a new tax. It is a very wrong argument to say that the present Government has no business to enjoy the benefits of the sales tax without enforcing prohibition. Except that the Sales Tax was levied on the occasion of enforcing prohibiton there is no connection between prohibition and sales tax. Will my friend agree if I say that the Congress Government should not enjoy the benefits of taxation measures brought before it came to power? Whether prohibition was there or no, the present Government would have levied the sales tax.

The justification for the new tax proposal is this: Agriculturists (especially those with vast lands) have more income than before. The Government wants money for post-war plans. So it has brought forward this measure. My friend should remember that if the present Government does not levy the tax when the agricultural incomes are more he will turn round and say that the irresponsible Advisory Government let a splendid opportunity to tax, go. Besides will he not appreciate that a Government, which, assuming it is unpopular, is ready to become more unpopular for doing a right thing, is sincere?

K. Srinivasan.

Telegrams by Post:

As soon as I reached my office on the morning of the 19th June, a colleague handed me a telegram saying that it was received the previous night, that is, on the 18th. When I opened it, I found, the date on which the telegram was sent from Madras was the 15th. It was an ordinary telegram. Ordinarily, a letter posted in Madras on the 15th reaches Calcutta on the 17th. If the train happens to be late, definitely the letter is delivered on the 18th morning. Here is a telegram for which Rs. 1-2-0 twelve times the postal rate, has been paid only to reach me a day later than an ordinary letter.

I, therefore, have no doubt that ordinary telegrams are posted as you wrote in your note dated June 9th. What is more, this is a reply paid telegram. My consent for settling a marriage was asked by wire. The other party was to leave for Bombay in three days after hearing from me. Not hearing from me within three days or even four days, sure to say, the party would have left. Hindu marriages have to be celebrated on auspicious days and in auspicious months which are few and far between.

What a lot of time has been wasted and what an expenditure am I to incur telegraphing (hereafter express) getting the consent of people and asking people to attend the marriage, all through the grace of the Posts and Telegraphs Department! All I ask the Post Office is 'Do tell the public that their ordinary telegrams will reach later than letters.' Let not every citizen be made to learn by experience. It is too costly.

V. R. Charl.

Change in the Coinage:

I am in favour of a change in the coinage and I congratulate you on your well reasoned note in support of the Government's proposal. There is no point in saying that England has not got a decimal coinage. It is high time we stop drawing our inspiration from England. Much more than half the world has adopted the decimal system of coinage, Russia, Switzerland, Poland, Italy, Crete, China, Mexico, to name some.

In your note you have said that it is unnecessary to have a half cent coin, as its counterpart, the pie, disappeared during the war period. I agree. But you have, it seems, approved the idea of having 25 cents coin to replace the quarter rupee. A truly decimal coinage should in my opinion have 20 cents between 50 cents, and 10 cents and not 25 cents. Of course the existing ¼ rupee coins may be valued at 25 cents till they circulate. But there is no necessity to have new 25 cent coins. We shold have a truly decimal system if we are to have one at all.

S. P. Banerjee.

No White Washing:

Accept my congratulations. You have done your job very well. You wrote without fear of official displeasure a strong note entitled "White Washing" bringing out the defalcation and serious misappropriation in the Telegraph Stores, Calcutta. The people were righteously indignant at the way Government department has been working when Sir Muhammad Usman gave the age-old promise 'he will look into it'. He was looking into it for 2½ months. Public memory is short. And people had almost forgotten the whole affair. But *Indian Finance* was awake and asked Sir Muhammad Usman, on behalf of the public, how things stood. And glad to say readers of Indian Finance took a welcome interest in the question. You have got an assurance from Sir Gurunath Bewoor that there will be no 'White Wash' and the matter has been put in the hands of the police. I hope when the whole affair is known you will give us the result of the enquiry in your 'Fact Parade'.

Inayat Karim.

What to Call it? Black Market:

In your note under the above caption, in Indian Finance dated June 16, you have put a very strong plea for the Governments of India and Bengal, coming to the aid of the jute grower to fix reasonable prices for his produce. Without having any advantage for having the jute monopoly for the whole world, the poor jute grower actually gets a price less than even the controlled price. The grower's suffering is not new. War or no war he has suffered. And appeals on his behalf have been made to Governments—Local as well as Central—for a long time and still continue to be made. As Eavesdropper points out in his To-day's Gossip in the "Eastern Express" dated 17th June, C. R. Das was the first politician to realise this. He wished to start a corporation to buy jute from the agriculturists and compel the buyers to pay a fair price. He carried on propaganda among jute growers to grow less jute.

But the lot of the jute grower today is as bad as ever. Even commodities which are not monopolies fetch a much better price than this monopolistic commodity—as if to falsify the economic theory that the monopolist can fix any price he likes. A remedy has to be found. One cannot do better than quote the words of Eavesdropper on this point.

"The best memorial to the Deshabandhu will be the concretisation of his dream to make this Province's monopoly in jute a vital, profitable and fruitful factor in the economy of the Province and in the economy of each jute grower." Will the Central and Local Governments take some steps?

Amal Karkoon.

FACT No. 2

HERE and there, where the cause of the present cloth 'famine' is discussed, the point is often made that the situation would improve if India's handloom industry were supplied with adequate supplies of yarn with which to produce cloth to supplement the output of the mills.

Is it true that the handloom industry is not receiving adequate supplies of yarn? Indeed, no! More than 500 million pounds of yarn, representing about 31% of the total yarn output of the Indian Cotton Textile Industry, is now available to the handloom weavers and other users as against an average of 398 million pounds pre-war. The handloom industry can produce, with the yarn now available, about 2,500 million yards of cloth which represents an increase of a little over 30% on its pre-war average production.

These facts and figures demonstrate that India's cotton textile industry now provides more yarn for the handloom industry than before the war.

One of a series of statements of fact for the information of the public.

ISSUED BY
THE MILLOWNERS' ASSOCIATION
BOMBAY

Fact Parade

Aid to British Cotton Industry :

Under a regulation, recently issued, the British cotton industry will get its fair share of increasing supplies of new cotton textile machinery now beginning to be manufactured.

Mr. Oliver Lyttleton, Minister of Commerce, gave the House of Commons this informaton in reply to the question what steps the Government was taking to help the Lancashire cotton industry to re-equip itself for post-war trade.

The questioner had pointed to reports that Brazil had opened negotiations with the United States for delivery of 9,000,000 new spindles in the next four years, which would quadruplicate Brazil's spindleage.

* * * *

Birla and Light Cars :

The establishment of from 10 to 20 new cotton mills in Bengal is contemplated by Mr. N. R. Sarker, the Indian industrialist now in Britain.

"There is still room for them," he told Reuter. He also announced that he had asked Platt Brothers, a British firm, to quote for textile machinery to give effect to these plans.

"There is a big market in Bengal," he said. His plans for establishing these new mills represent in part his share in the policy to expedite the industrialisation of India.

Mr. G. D. Birla, the Managing Director of Birla Brothers, Limited, revealed that after inspecting the Nuffield organisation in England he is preparing to mass-produce light cars of up to ten-horse power which he thinks will have a ready demand in India.

The Hercules Bicyle factory is also to be visited by him with a view to increasing Indian output of cheap bicycle.

* * * *

Automobile Factory for India :

Mr. Lalchand Hirachand told the Associated Press that the Premier Automobiles Company which has been formed with the object of manufacturing motor cars in India, would go into production some time in the second quarter of 1946. The programme of the company was to manufacture their own parts in India and produce automobiles within three years of starting the factory. The capital, control and management of the factory would be entirely in the hands of Indians.

* * * *

Agricultural Statistics in Orissa :

The Government of India have sanctioned a grant of Rs. 3,00,000 to meet two-thirds of the cost of a scheme for improving the methods of collecting agricultural statistics in Orissa during the year 1945-46. It is understood that the Central Government will not continue the grant to the Provincial Government at this rate in future years and that the aim would be to make the entire cost of the scheme a charge on the provincial revenues.

* * * *

Employment Exchanges :

In connection with the setting up of a network of employment exchanges for demobilised soldiers in the country, it is learnt that the Government of India will shortly invite to Simla representatives of employers' organisations having intimate knowledge of particular industries to assist the Government by suggesting civil equivalents for each of the services, trades and occupations.

Indianisation of the Imperial Bank :

The Karachi Indian Merchants' Association, in the course of a lengthy communication to the Finance Member, Government of India, strongly urges Indianisation of the Imperial Bank of India. The Association demands an immediate change of the present policy in this regard and adds that all disabilities imposed on the Indian assistants and other staff should be removed and that there should be no bar to their being promoted to higher grades.

* * * *

Country Boats on Bengal Coast :

The military authorities have agreed to a substantial relaxation of the restrictions of the movements of country boats in Noakhali and Chittagong districts in order to assist the economic situation in East Bengal and to stimulate the fishing industry, states a Press Note issued by the Government of Bengal.

* * * *

Central Glass and Ceramic Institute :

It is learnt that the Government of India have sanctioned Rs. 10 lakhs for the establishment of a Central Glass and Ceramic Institute at Jadevpur near Calcutta.

Fertiliser Plant for Travancore :

A synthetic fertiliser plant to cost 7,000,000 dollars will be built in Travancore. It was announced by Edward C. Pawley and Lewis C. Magarty, President and Vice-President of the Intercontinental Corporation. The new plant will have a capacity of 5,400 tons. When the two executives arrived by plane from England they said that 4,000 Engineers and workmen would be employed in construction of the plant. When completed the fertiliser plant will employ 5,000 persons.

* * * *

Research work in Engineering :

The Nizam's Government has sanctioned a scheme proposed by Nawab Zain Yar Jung Bahadur, P.W.D. Member of the Nizam's Council, for the establishment of a Department in Engineering Research estimated to cost about Rs. 6 lakhs. Dr. S. P. Ragu, Principal, Osmania Engineering College, has been appointed as its head, and he has been asked to draw up a five-year programme in this connection. The subjects coming within the scope of this Department include irrigation, soil mechanics, building materials, building and housing problems road research, public health engineering, hydraulic machinery, agricultural engineering, and industrial psychology.

Questions & Answers...

India Coffee House, Albert Hall, College Square.

Reason?

In its new address, the India Coffee House is better, brighter and bigger than ever.

Surely, not so central as in Central Avenue?

You wouldn't say so if you visited the new place. It is, so to say, in the heart of Calcutta. Centre of whatever is lively and vivacious. Easily accessible.

But. I suppose, there is not that variety of visitors?

People will travel far to get the admittedly and inevitably good coffee that you can, every time and at all times, get at the India Coffee House. The old patrons are all still there—and will ever be there—and many, many new patrons. Remember, it is a bigger, better, brighter place.

TREASURY BILLS

Central Government:

Tenders for Rs. 2,00,000 of three months' Government of India Treasury Bills were opened on Tuesday, the 19th June, 1945. Total amount offered was Rs. 4,11,25,000. Tenders at Rs. 99-15-3 per cent were accepted in full and those at Rs. 99-15-0 per cent were allotted approximately 95 per cent. Lower tenders were rejected. Total amount accepted was Rs. 2 crores, the average rate of accepted tenders being As. 4 per cent per annum.

Tenders for Rs. 2,00,00,000 of three months' Government of India Treasury Bills will be received on Tuesday, the 26th June, 1945 at Bombay upto 11 a.m. (Standard Time) and upto the close of business on Monday, the 25th June, 1945 at other centres. Successful tenderers should make payment on Friday, the 29th June, 1945. Other conditions are as usual.

During the week ended the 15th June, 1945 Government of India Treasury Bills for Rs. 8,11,00,000 were sold in favour of the Issue Department of the Reserve Bank of India.

Assam Government:

Tenders for Rs. 1,50,00,000 of three months' Government of Assam Treasury Bills will be received at the offices of the Reserve Bank of India, Bombay and Calcutta upto 11 a.m. on Wednesday, the 27th June, 1945.

Successful tenderers will be required to make payment and take up their bills on Friday, the 29th June, 1945.

Indian Industrialists in U.S.A.

Sir Ardeshir's Official visit to the States

U. S. Opinion on Wavell Plan

Washington, June 20

Action to pave the way for strengthened economic relations between India and the United States began this week with the arrival of Sir Ardeshir Dalal of the Viceroy's Council. Sir Ardeshir is expected to go forward on another plane when the Tata Birla mission arrives in a few days. The purpose of his ocfficial visit is "to investigate certain problems concerning post-war development in India, particularly in industrial field" and he will "acquaint himself, at first hand, with the situation regarding the availability capital goods, expert advice as well as training Indian students as technicians." The Tata-Birla mission is unofficial but the State and Commerce departments made arrangements for them to visit any of the United States industrial establishments of their choosing. It is expected that it will survey the possibilities of making arrangements with the United States industries to purchase capital goods and obtain technical assistance for planned post-war ventures.

* * * *

The United States Government withheld comment on the Wavell Plan but privately there is hope that the Viceroy's proposals would be accepted. The issues are apparently regarded as too delicate for the United States officials to make public comment. However, personal feeling among the authorities here is that the acceptance of the Viceroy's plan would enable Indian leaders to get into power and go forward towards increasing self-government and eventual determination of the country's final political status. Aside from the fact that the authorities believe such action would have salutary effect on India's internal situation they appeared to believe that it would also make for closer economic and political relations between India and the United States on a long range basis. It was noted that India would control external affairs and a large measure of power apparently would be invested in industrial leaders who are now seeking strong ties with this country. The authorities also opined that currency problems might be more easily solved. But the principal means of over-coming India's dollar exchange problem, in the opinion of the officials here, is Bretton Woods machinery.

* * * *

It is expected that the Civil Aeronautics Board with presidential approval will soon announce the names of American air carriers which will fly the North Atlantic routes. One of these will be certificated to fly in India after suitable arrangements are made with that country. The line most prominently mentioned for India is the Pan-American Airways which hopes that within a few years after the war to fly around the world with 100 to 200 passenger planes. The Pan-American Airways urged for chosen instrument policy on Congress but it now appears certain to be rejected in favour of regulated competition.

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

Easy conditions continue to prevail in the money market with call money rates very nominal at ¼ per cent in Calcutta and ¼ per cent in Bombay. One would have expected keener competition at the auctions of Central Treasury Bills but last week's yield is considered unattractive even with the plethora of funds in the market. As a result with a further decline in the amount of applications to Rs. 4.11 crores from Rs. 5.51 crores the offer of Rs. 2 crores has been accepted at the previous week's rate of 4 annas percent per annum. In spite of the lack of interest shown by banks in treasury bills at the present rates and the excess of treasury bills maturities over sales, the Central Government has not increased the offer. In the past three weeks there has been a progressive reduction in the floating debt by Rs. 2 crores every week, the amount outstanding now being Rs. 40 crores against Rs. 46 crores at the beginning of the month. The Reserve Bank has, however, considered it advantageous to raise the short-term requirements of provincial governments at the present cheap rates. Accordingly, the Assam Government has come in the market for Rs .1¼ crores of treasuries. Applications will be received at the office of the Reserve Bank. Calcutta and Bombay, up to June 27, 1945. There will be only a nominal increase in the average discount rate and it may be possible for Assam to get the whole amount at, say, 4 annas 2 pies per cent.

The policy of the Central Government in respect of short-term borrowing and raising of permanent loans is not clear. With the progressive reduction in the floating debt one would have expected an increase in the subscriptions to government loans and larger open market sales by the Reserve Bank. But in recent weeks, in spite of the strength of the giltedged market, the Reserve Bank has not been tempted to sell large parcels of either 3½ per cent paper or shart dated loans. As a matter of fact it is reported during the week that sales of 3 per cent 1966-68 have been suspended; from all of which one is led to think that the authorities are preparing the market for the reception of a new loan the terms of which might be announced next month.

Earlier in the week it was rumoured that conversion terms may be offered to holders of 3 per cent. non-terminable loan and there was a jump in the quotation from Rs. 92/4 to Rs. 94. The rumours, however, have not materialised so far and profit taking at the higher levels has resulted in a setback to Rs. 93/4. 3½ percent Paper has been done at Rs. 101/8 for the most part of the week and there is not much of speculative activity. Rumours regarding the possibility of conversion of non-terminable loans into dated stocks are still persistent but there is no disposition on the part of operators to push up prices further as it is not known definitely how the conversion operations will be carried out, if at all.

* * * *

The returns of the Reserve Bank for the week ended June 15, 1945 do not show any important changes in the issue department, there being no further expansion of currency. Total notes issued at Rs. 1,146.11 crores show only a small decline due to the reduction in the amount of rupee coin from Rs. 14.69 crores to Rs. 14.55 crores. There is no important change also in the figure of notes in circulation at Rs. 1,136.52 crores.

In the banking department, Central Government balances are sharply higher at Rs. 261.28 crores against Rs. 251.42 crores while other Government accounts are lower at Rs. 16.82 crores against Rs. 19.83 crores. With the decrease in sterling balances to Rs. 386.44 crores from Rs. 388.72 crores and a big drop in other deposits to Rs. 20.68 crores from Rs. 28.67 crores it appears that there have been inter-governmental adjustments on a large scale especially as bank deposits with the Reserve Bank do not show any important change at Rs. 91.82 crores. The decline in sterling balances must be due to some payments in connection with repatriation operations.

The statement of the Imperial Bank for the same week shows an increase in deposits to Rs. 237:16 crores from Rs. 234.48 crores. Investments are not very much changed at Rs. 143.66 crores. Advances are lower at Rs. 64.26 crores. As a result cash balances are appreciably higher at Rs. 39.82 crores against Rs. 35.93 crores.

* * * *

The drop in Demand liabilities of scheduled banks according to the statement for the week ended June 8, 1945 must have also been due to month-early disbusements. Time liabilities on the other hand, have improved further to Rs. 233.99 crores from Rs. 232.67 crores. In spite of the smaller working capital cash on hand is higher at Rs. 31.52 crores against Rs. 30.99 crores and balances with the Reserve Bank at Rs. 90.59 crores against Rs. 90.32 crores. There must have been some liquidation of investments, perhaps of 3½ per cent. paper, and this might have been responsible for the drop in the quotation last week from Rs. 102 to Rs. 101-6. Advances have declined from Rs. 276.6 crores to Rs. 274.88 crores and bills discounted to Rs. 13.45 crores from 14.05 crores. Against the decrease in the working capital by over Rs. 5 crores total cash balances are higher by Rs. 79 lakhs while advances and bills discounted have declined by only Rs. 2.32 crores. There is thus a sum of Rs. 3½ crores to be accounted for.

(*Continued from page 837*)

U. S. Machine Tools for Australia:

Australia is negotiating with the American authorities for the straight-out purchase of all machine tools delivered under Lend-Lease arrangements.

Straight-out purchase is desired because one of the conditions under which these machine tools were supplied to Britain and her Dominions stipulated that the plant was not to be used for the purpose of manufacturing goods which would compete with American exports.

Recently a deal was completed between the British and American Governments for the purchase of £7,845,000 of American machine tools delivered to Britain under Lend-Lease. This price has suggested that the goods had been subjected to a very heavy rate of depreciation and the sale was regarded as a very generous gesture on the part of the American Government.

American machine tools represent probably a substantial, although not major part of Australian industry's stock of such equipment, and so long as this equipment is subject to the restrictive provision that it must not be used for the manufacture of goods for export, the long-term post-war planning will become exceedingly difficult—if not impossible.

OLD MOTHER HUBBARD

FEW middle-class homes in India are today without their emergency stock of canned, bottled or preserved foods. None should be, for total war makes "iron rations" necessary for civilians as well as for fighting men. Thanks to the great strides in the science of food conservation, the housewife now enjoys an increasingly wide choice of nourishing and palatable foods that will keep for long periods. Although she can use many home methods (runner beans in salt, eggs in "water-glass" and other chemicals, and fruit and vegetables either bottled in presence of sulphur dioxide as a preservative or in vacuum jars) it is on the canning industry that she largely relies. Canning in its turn relies largely on the chemist and the chemical industry to maintain its high standards of pure and wholesome food. This involves incessant research for example, into the acidity of different foodstuffs, special linings for the containers and how to preserve both the vitamins and the appearance of canned foods. In India great strides are being made in the drying of vegetables. The necessity of war has given urgency to food conservation. Chemistry is also showing how, by dehydration and other methods, allied ships can carry to the war fronts the greatest possible amount of nutriment in the shape of meat, milk, eggs and vegetables in the smallest possible bulk. The credit for this must go not only to the allied farmers and merchant navies but also to the British Research Chemist who has so simplified the transportation of food.

Available at all leading stores. If you have any difficulty in obtaining TIMS Products, write to us direct.

Man and Machine

The effect of recent technical advances on the post-war world is the subject of much anxious thought both among technicians and among the great captains of industry. The basis of that thought is the assumption that no problems will be solved by pleas for a return to a simple life and that the clock cannot be put back. But can the clock be slowed down or accelerated according to our capacity to keep abreast of technical advances? In other words, can industry or the community as a whole pick and choose from the available new devices, put some in cold storage, increase the use of others and bring about an adjustment which Nature, outraged by the presumptuous interference of one of her creatures, would not bring about by herself? The idea has its attractions Indeed, there have been instances of big business acting on this idea which it has instinctively evolved and adopted as being in its own interest. Patents, which would have played havoc with more than one established industry, are known to have been acquired by the threatened interests and deliberately allowed to fall into disuse. On the face of it, it appears selfish and anti-social, in so far as the new inventions are capable of adding to the amenities of life and cheapening the costs in toil to society as a whole. But the defensive tactics of big industry is not necessarily a malevolent interference with the natural pace of progress. It may also be viewed as part of the natural forces that determine that pace. Not every new invention is assured of immediate applause and widespread adoption. It is a long way from the laboratory to the workshop or the factory and from the workshop or the factory to the market place. And many an invention has dropped down on the way for lack of adaptation to the environmental changes at every stage. One could well imagine a world of inventions—and it wouldn't be an unreal one—in which new ones are jostling with and elbowing out old ones with varying degrees of success, where a law of survival of the fittest obtains, not dissimilar to what man is familiar with in his own social life. In that view, the forced disuse of some of the new inventions is part of the inscrutable workings of a law of Nature.

To accept such a view is, in the eyes of many, to acquiesce in a fatalism that would be fatal to progress. Industry is as unfit to make the choice of new inventions as to determine the scale of output or wages or anyone of the many things in which the judgment of private industry has proved disastrous to public welfare. When the whole idea that the profit motive is the best mentor of economic life has been abandoned as a hollow myth, it is meaningless to revive it in the case of the choice of new inventions for adoption in industry. In fact it is the impact of scientific inventions on social life as a whole and economic life in particular that forms the larger part of the case against laissez-faire. Left to itself, industry fails both to maximise the material benefits of technical advances and minimise their consequences in social unsettlement. The murder of new inventions comes on top of a long record of inefficient and malevolent bungling on the part of industry.

It is urged, therefore, that the adoption of new inventions and technological improvements with a view to maximise production and minimise social unsettlement is not the least, and is, in one view, the most arduous of the responsibilities of a system of planned economy. The problem retains its formidable character, even after its solution is taken out of the hands of private industry. In fact, it becomes more complicated in so far as private industry has the means of judging the costs and possibilities of a new invention by the yardstick of money. But a planning authority will feel all at sea when it is called upon to decide between a natural product and an ersatz. For, on the one hand, there is the loss consequent on the scrapping of old equipment to be considered, on the other, the probable costs and satisfactions of adopting the new process. For, ersatz does not mean the creation of something out of nothing, but the substitution of one kind of raw material for another. And the substitute is not in surfeit. The extent to which the new raw material will be required and the repercussions of this demand on other industries have all to be carefully estimated. And, more than all this, the social consequences of reducing employment in one industry and its ancillary crafts and trades have also to be considered.

Another important consideration is that the invention of ersatz owed its impetus to the ideal of national self-sufficiency. This ideal was strengthened by two different forces. One is the loosening of the bonds of international trade, the increasing difficulty of securing imports of raw materials and foodstuffs and the consequent pressure of necessity to find substitutes which will not simply meet a temporary emergency but may serve to build up a fairly independent national economic system. The other force is represented by the exigencies of a world war. Both have had free play during more than a decade and a half. And it will be some time before the world can appraise the effects of wartime ersatz on world economy and international trade.

It is necessary, however, to recognise that national self sufficiency cannot always have the same appeal or value. Its value as a corrective to exaggerated notions of the importance of international trade based on laissez faire and free trade is already on the wane, since the function has been largely discharged. As for its appeal, the spirit of internationalism generally gains some strength after a world war; and policies which are apt to dislocate the economic life of more than one nation are not likely to find much favour. The ground for such disfavour may not be sentimental, since, to take an instance, America may have more to gain by reviving support to Malayan rubber than adopting a substitute which will put her corn and wheat to comparatively uneconomic uses. Ersatz impinges on commercial policy in a way that other inventions do not. What each nation will do to the substitutes that have been evolved during war-time will depend upon the amount of capital sunk in them and the advantages that revival of pre-war trade has to offer.

The problem set by technical advances is, however, a matter of deciding which of the new developments should be adopted for purposes of the production schedule. Even where a new invention does not seek directly to provide a substitute, there is something of the ersatz character. Rayon displaces cotton or deprives it of its scope for expansion. Plastics have their threat to some metal industries. Pre-fabricated houses will not be welcomed by timber, steel and concrete interests. There is also, of course, the conflict between the older and the newer forms of transport. Progress in most of these has been forcibly held up, first by the action of vigilant self-interest, and secondly, by the conditions of the war period. It remains to be seen how far national Governments and international authorities, pledged as they are to freedom from want, will resort to new inventions in order to redeem their promise.

Within the sphere of each national economy, the most revolutionary of the directors of economic planning will be reluctant to scrap existing equipment in order to make way for a new invention. Where there is old machinery to be abandoned, private industry with all its shortcomings is apt to act more quickly than a planning directorate since it is engaged all the time in providing depreciation and knows its mind as to when and how to abandon obsolescent plant. But when existing equipment is insufficient to meet consumer demand at what is considered to be the minimum level, the State will be found ready to adopt new methods, in the first instance, as supplementary to the old, and latterly in supercession.

But production for current consumption is perhaps the least of the many considerations that should decide the choice of new inventions. Once we have outgrown the old conditions in which inventions, so to say, chose themselves through natural selection, we have to do our best to take all relevant circumstances and considerations into account and decide as best as we may. Return to nature or to simplicity is as much out of the question here as in wider spheres. In fact, even the emergence of new inventions may no longer be in obedience to a generally felt necessity; for, the popular view that all new inventions were due to the freaky brain waves of the inventors concerned is, in fact, not quite tenable. It is part of the materialist interpretation of history that, freaky and fortuitous as they may seem, inventions as a rule followed the major needs of the time and of progress in the stage immediately ahead. This may be said as much of Arabic numerals as of the Mariner's compass, of gun-powder and the printing press, as well as of aeroplanes and ersatz. But to the extent that research claims tens of thousands of active workers in various parts of the world devoted to aims as different as pure science, murderous warfare and mass production of consumer's goods, the impact of new inventions on the economic structure and on the social life of man becomes a far more complicated matter. The apparatus of natural selection must break down, the more so, because research and its consequences refuse to be compartmentalised though research workers regard themselves as belonging to particular branches of specialised work.

If new inventions in our time refer to a wide variety of productive processes and occur in inconveniently large numbers, it is reasonable to infer that the need of our time is a radical transformation of the very basis of social life and economic organisation. From this point of view it may be useful to attempt the apparently hopeless task of classifying new inventions into those which affect the productive processes and those which affect the basis of social life. In the past, the former have been more revolutionary in their effects, in as much as changes in the productive process affected employment, location of industry and distribution of population.

But in an age in which the more important of new inventions refer to transport and communications, sources of power and sources of raw material for industry, the effects are unprecedentedly revolutionary. For they tend to reverse some of the economic trends of the past. The geographical distribution of production is altered both in the international and in the national sphere. With power made available all over the country, the raw materials of every district finding some use or other in industry and transport rendered easy, quick and cheap, the trend towards large concentrations of population in cities is effectively reversed. The daily life of the average man, too, becomes subject to important changes. The housing problem loses its terrors, with the breaking up of cities into groups of related colonies. And since technical advances continue to be made in productive processes, drudgery in the household is progressively minimised and large numbers of people will be emancipated from work that is both hard and humiliating.

While each invention considered by itself sets up more problems than it solves, the problem of choice of new inventions can be tackled in reference to definite plans of economic organisation and patterns of social life. The old yardstick of money costs can no more apply to the value of new inventions than Newtonian laws to Einstein's problems. Inventions have to be adopted or rejected according as they reduce or increase the basic resources of our economic life and fit into the pattern of life which we contemplate for the average individual. For, Man is the measure of all. In the past, inventions were almost identical with new machines which threatened to deprive the individual worker of his employment and of his bread. But to-day inventions are not merely a matter of new machines that can supplant manual labour. Their target now is old established industries, old methods and old social trends. The problem they raise is vaster, but not necessarily more complicated. But their simplicity will depend on the ability of the powers that be to shed the last vestiges of the strenuous scarcity economy of old and visualise a happy plenitude for all. It is not utopian; in fact, "utopia" should cease to be a term of reproach and begin to be regarded as the rousing call of a brave new world.

The War and Indian Agricultural Economy—III

(By Our Staff Correspondent on Tour).

In any other country, a rise in agricultural prices would mean increased income and prosperity for the agriculturists as a class as well as for most individual ryots. In India on the other hand, it means only increased income only for a small section, consisting of the Zemindars, pattadars and the bigger landowners. The progressive subdivision and fragmentation of land has made wartime prices an illusory advantage to the vast majority of Indian ryots. Among the producers of food crops, who have benefited most since 1939, a substantial percentage consists of those who produce just enough for their needs (food only) and a considerable proportion among others even less. In Bezwada and Tanjore, two of the richest rice-producing areas in South India, less than two acres of the best wet land will not support a family of four or five members with the even bare comforts. And for dry land, six to seven acres is the corresponding minimum. In the Maratvada Districts of the Nizam's Dominions not less than ten acres of dry land of average fertility are necessary to sustain a small family. Data are not available to know precisely the percentage of uneconomic holdings in the different parts of India. But holdings of less than an acre are quite common even in the less fertile wet regions in South India, though as far as dry lands are concerned, fragmentation seems to be relatively less acute.

A fair indication of the position is available through the village surveys undertaken by experts. In his survey of the villages of Pimpla, Sandagar and Jategaon Badruk, Dr. Mann has found that "77 per cent of the holdings are now less than twenty acres in size and 48 per cent are less than 10 acres"; and according to Dr. Mann the minimum economic holding in these villages would be 20 acres. Mr. V. G. Ranade in his "Social and Economic Survey of a Konkan Village" finds that of a cultivable area in the village of 192 acres, 24 non-agriculturists owned among them an area of 113 acres, while the remainder was shared among 28 agriculturists. While the non-agriculturists' holdings averaged 471 acres, the average holding of an agriculturist was 2.85 acres. Mr. Ranade estimates that 77 per cent of the holdings in the village are uneconomic. In my own survey of a Travancore village, I have found that within the last thirty years, more than fifty per cent of the paddy fields has passed over to non-agriculturists hands and of those who still possess land who number about thirty, hardly three command an yield which gives them a surplus over their food requirements. More than 75 per cent of them purchase paddy or rice for a part of the year. These estimates are symptomatic of conditions all over India, and to this vast section who consume what they produce and often find their production insufficient even for their needs, the rise in agricultural prices is either an irrelevant circumstance or a positive disadvantage.

Above this group is another which consists of cultivators who have a small surplus over their food requirements and which they dispose of to purchase other necessaries of life. In estimating the position of this section a comparison between the prices of agricultural produce and the cost of living index (excluding food) would reveal that both have been running parallel and, if there has been a difference, it is in favour of the latter. (The prices of non-food necessaries are relatively higher). The official cost of living index itself is not a reliable guidance because the villager purchases many of his necessaries in the Black market; though sometimes he himself disposes of his produce at Black market prices and goes in for the same stuff at controlled prices.

The cost of cultivation also has only kept a little ahead of the price index. Wages have shot up by 3 to 4 times for male labour and more than twice for female labour. While one could perceive an all-round decline in the efficiency of agricultural labour now available, the colossal exodus of labour from the villages to urban and military centres accounts for this. Livestock has shrunk in supply for more reasons than one. Cattle follows man in the wartime migration from village to town and while men mostly go back, the cattle seldom do. In U. P. I gather that there was for a time a large scale and continuous transport of cattle including milch cows to places like Calcutta, at fabulous prices. And once they leave the interior, even milch cows seldom return; their return transport becomes relatively uneconomic and are therefore permanently lost to the rural folk. In Mysore, the price of working animals has gone up roughly five fold; in Travancore the rise is even higher. A buffalo which used to sell at about Rs. 80 before war cannot be had now for less than Rs. 500. At Pollachi (near Coimbatore) for a pair of bullocks costing Rs. 70 to Rs. 120 pre-war Rs. 200 to Rs. 550 is demanded. At Ranipet they have gone up from Rs. 120 to 200 in 1939 to Rs. 550 to 1,000 in 1944 while in Vizianagram, the corresponding rise is from Rs. 100 in 1939 to Rs. 400 in 1944. Manure has also registered similar jumps in prices. Under these conditions, it is foolish to imagine that the average Indian ryot has been having a golden time during the war. On the other hand, for very considerable sections, the war has meant economic deterioration.

The condition of the producers of cash crops (non-food crops) though singularly enough sugarcane, potato, etc., are officially classified under this head, is clearly better, not because they enjoy a higher price, but the average holding is more economic and many of the groups are organised, in some way or other. Some of these commodities like cotton and coffee faced temporary crises, owing to the loss of foreign markets; but these were overcome through prompt diversion and discovery of new markets and often the recovery more than compensated the temporary dullness experienced. Restrictions of production also effectively assisted the position of these groups. In the Grow More Food Campaign, cotton has yielded place to cereals more than ony other single group, though in spite of a favourable balance of profit through the conversion, most cotton cultivators have been reluctant to give up cotton for cereal crops. The reason for this lack of enthusiasm is to be sought in the certainty that any day they will be called upon to go back to cotton and some fear that this will happen even during the war, and that the change back would be under worse conditions. In the C. P. one gentleman depicted the attitude of the cotton producers subject to conversion thus: "Nobody likes to have an acting appointment for an unspecified period in a post which carries with it the certainty of abolition without warning. But in spite of this grudging attitude on the part of the growers, and in spite of the absence of compulsion Bombay is the only Province where the campaign is backed up by compulsion" There have been large conversions from cotton to cereals in the C. P.

In the C. P. the cotton acreage went down from about 35½ lakhs acres in 1940-41 to 28 lakhs acres in 1944-45. Much less tempting has been the conversion of land used for certain other non-cereal crops. For example, in Mysore, the cultivation of mulberry which increased from 30,000 acres in 1939 to 75,000 acres in 1944 has to be arrested by a Special Permit System introduced last year. Mulberry was enjoying Government patronage and was yielding sumptuous profits. Nothing less than the acute food distress would have persuaded the Government to check the growth of a profitable cottage industry like sericulture.

Our American Letter

American Wool Growers Fight Imports

(By Our Special Correspondent)

American sheep men, alarmed at a prospective post-war wool glut and at impending tariff cuts are seeking a way to exclude foreign wool from the United States. Their latest proposal to this end is a four point "import quota plan" which would hold post-war imports to a percentage of pre-war importations.

The plan is backed by the National Wood Growers Association, American Wool Council, Textile Workers Union and other groups and would apply to wool, wool wastes yarns and woven and knitted textiles. It was authorised by Curt E. Forstmann, president of Forstmann Woolen Co. Copies have been mailed to all members of Congress.

The wool industry fought tooth and nail against the renewal of Reciprocal Trade Act legislation which would allow President Truman to make a further fifty per cent cut in tariffs on, among other imports, wool and sheep. Now that congressional approval of this legislation seems certain, wool men are seeking another avenue of attack.

They have some reason to fear foreign competition. At present American woollen mills are still working to capacity and military orders as expected to continue at peak for some time. But middlemen already see the writing on the wall and have begun to buy only on a hand-to-mouth basis. Meanwhile wool growers costs—mainly for labor and feed—have skyrocketed because of wartime manpower shortages.

Costs of foreign sheep raisers are considerably less, especially in Argentina and Australia. Carpet wools from India are aslo an increasing threat. High grade Australian wool can pay the current duty of $34 a pound and still undersell the United States product in its own market. American wool purchases in Australia and New Zealand have totalled over 25,000,000 pounds since August 1, 1944, compared to purchases of only 175,000,000 pounds in the same market in a comparable period of the previous year. Meanwhile, United States production has been going down.

During the early war boom the sheep population of the United States went up by 3,000,000 head, or seven per cent, while at the same time a record supply of meat and wool was garnered. But a decline set in early in 1942 and by January 1, 1945, the Department of Agriculture reported a 17 per cent drop since January 1, 1942. Sources in the sheep industry say the loss is even greater, some estimating it as high as 25 per cent.

They blame high costs, low tariffs, and fear of the fast growing synthetic textile industry. Unless the government protects them against foreign competition, wool men assert, sheep raising will soon be a thing of the past in the United States and millions of American acres suitable for no other use will lie fallow.

They point to surpluses dammed up in many producing countries by the wartime shipping jam as a reason for immediate apprehension. Their longer term fears are prompted mostly by the development of nylon and other new fibers as well as by the fact that world production of rayon, principal pre-war competitor of wool, increased from 53,500,000 pounds in 1934 to 1,350,000,000 in 1941.

But their greatest wrath is reserved for the government's tariff policy. Wool growers have no sympathy for the argument that the United States must import other countries' products if it wants to export its own—at least not if this leads to the conclusion that Americans must buy raw materials in order to sell manufactures. A typical recent editorial form the American "Wool and Cotton Reporter", an organ of the industry reads:

"Living standards must not sacrificed to meet this foreign competition. The proposed legislation which will result in a reduction of tariff rates should be fought to the last ditch, not only for the protection of the wool growing industry but for the salvation of the wool industry as a whole" "The Wool and Cotton Reporter" warned that sheepmen are already decimating their herds and asked for not only a full restoration of the tariff but an additional subsidy for wool growers.

On Argentine wool, another industry spokesman, the "National Wool Grower", had the following to say.

"The agreement with Argentina which reduced duties on wools not finer than 44's an average of 44 per cent was not made until 1941 and has not been permitted to operate with that country. But now that Argentina is again included in the 'family circle', and as shipping facilities increase, undoubtedly these wools will come in under the lower duties" It also expressed fear of increasing imports of lambs from Argentina, Mexico and Canada as a result of reciprocal trade agreements with those countries cutting the tariff on lambs by the full 50 per cent allowable. If the reciprocal trade policy is renewed, it was pointed out, there might be a further cut bringing the lamb duty down to 25 per cent of the original figure.

For the moment the American grower can sell all the wool he can produce at ceiling prices. But his fears of the future are affecting his operations. The Bureau of Agricultural Economics recently reported: "The drop in sheep numbers was the largest in any year of this century." This was followed by a Bureau prediction that the United States wool clip in 1945 will be the smallest since 1928. The Bureau forecast a figure of 320,000,000 pounds, 6½ per cent below the peak in 1942.

That is the problem as wool men see it That is the tendency the Forstmann plan is designed to solve. If it were adopted, raw apparel wool could be imported in any given year only up to 30 per cent of the preceding years raw wool consumption at present duty rates of $.34 per clean pound.

Any additional imports would be at the old tariff rate of $.44 a pound. Wool waste imports would be limited to 25 per cent of the poundage brought in the previous year. Woven apparel cloth and articles made from it would be limited to 2½ per cent of domestic cloth production the previous year. Wool yarn and knit goods would be held to 1½ per cent domestic production the previous year.

Chief opposition to the plan came from the National Association of Wool Manufacturers, naturally interested in cheap wool and plenty of it. Its president, Arthur Besse, predicted that Forstmann's plan "would periodically produce a temporary premium on spot wool until the quota for the following year became available, at which time the wool market would slump considerably and have an unfortunate effect upon the piece-goods market."

Whether the United States government can be induced to consider such a plan probably depends on whether sheep ranchers make good their threat to liquidate their herds. If the present downward trend continues so far that the country might be caught without a minimum supply of this strategic material in some future military emergency, the government will undoubtedly step in with some form of quota or subsidy plan. That is, unless synthetic developments have meanwhile made wool superfluous.

Neither of these eventualities seems probable in the near future.

(continued from previous page)

In discussing the wartime condition of the Indian ryots, one circumstance which is not so obvious should not be missed. Whatever might be their economic condition, there is no doubt that they are uniformly much happier to-day than at any time during the last three decades. The secret is price and money income. Whether he ultimately gains or loses on the whole, whether he saves or runs into debt, the ordinary Indian villager is happy to have more money in his hands and that, the war has given him in an abundant measure. He feels prouder when he gets more cash for his produce and perhaps feels equally proud when he pays more cash to his neighbouring storekeeper. He is never bothered about theories of purchasing power. The homage paid to money by our agriculturists is important justification for high prices.

That India is on the whole in deficit in point of food materials is another circumstance which has not only created colossal problems for the State, but has made life for the Indian villager high-strung and unsettled. The history of the control, decontrol and recontrol measures imposed by the Central, Provincial and State Governments is full of tragedy and pathos, though of late brighter chapters appear to have opened. One is happy that the country was saved more calamities of the type of the Bengal famine. At least in South India particularly Malabar, the food position was at one time verging on a large scale calamity. And the situation was relieved only by the prompt and gigantic efforts of the administrations concerned. During his visits to Mysore, Cochin and Travancore Sir J. P. Srivastava paid a deserving tribute to all these Governments on the success with which they tackled the food problem. Though the Delhi Food Member may be seeking in vain for admirers of his own achievements, tapioca and Sir C. P. Ramaswami Iyer saved Travancore from starvation and for a time both the cultivation and price of tapioca as well as the reputation of the Dewan were rising fast. The latter keeps its level even now. While the former apparently due to over production seems to be having a slide-down. Incidentally, if the Central Government had treated 'food' as a part of the general military problem, the position would have been much more favourable all along. But instead of that, we were being treated to pompous lectures by Provincial patriots on Provincial rights and the implied imbecility of the Centre to which lesser fry (the chota surplus units) gave their selfish applause.

Editorial Notes

Post-war Planning in Bengal:

Towards the close of last year Sir Ardeshir Dalal urged the Bengal Government to hurry up with their reconstruction plans and get ready as soon as possible. The war in Europe has come to a close and the war in the Far East will also end in the course of a year or six months. All other provinces in India have outlined their postwar requirements and development schemes except Bengal which is still lagging behind. It is not because the Bengal Government have been keeping lazy but the difficulties of drawing up a workable postwar scheme in this province are acute and require cautious handling. Famine has shaken the different sectors of Bengal economy and plunged provincial finances in chaos. Bengal has been an operational base and there has been no stable government. Technical experts could not be had for considering detailed schemes and, above all, Bengal has to devise a postwar plan which will be a continuation of the rehabilitation scheme that has been put into execution to alleviate the distress created by famine and its aftermath.

The Rowlands Committee, however, drew pointed attention to the inordinate delay on the part of the Bengal Government in drawing up postwar plans. With a view to implementing their recommendations a Post-war Reconstruction Board has been now set up as an interim measure. Many Departmental schemes, it appears, are ready, though a well condinated plan for Bengal has not yet been published. The functions of this Board will be to prepare for consideration an integral postwar reconstruction plan for Bengal. They will endorse, modify or co-ordinate the plans of individual departments or draft proposals of their own. They will also decide the question of priority as between the various schemes and advise on the best methods of converting the plans of each department into a territorial plan for each region or district to which the plan should apply. This Board will also exercise general supervision for the preparation and execution of the reconstruction plans of each department. Questions relating to the necessary technical personnel, adequate provision for its training and whether the cost involved will be justified by results will also be examined by this Board.

The local Government asked for an extension of time twice before and at the end of June they must finish the preparation of postwar schemes but obviousiy they have not done so. It is expected that this Development Board will speed up the work and publish a satisfactory development plan for this province at an early date.

Sir Jeremy and Indian population:

The British imperialist die-hards are never tired of referring to India's population as the chief reason for her poverty. It suits them to forget that foreign rule can itself generate forces which lead to accelerated growth in the population of the ruled areas. Sometime ago Mr. L. S. Amery told the British public that Bengal famine was partly due to the tremendous increase of population in India and in that region in particular. Some of the American magazines also contain articles blaming India for her population. Now comes the report that Sir Jeremy Raisman, the ex-Finance Member of the Government of India, in an interview with Reuters Special Correspondent in London, expressed his opinion that "the regulation of Indian population is of great importance than planning to house, clothe and feed those already living." He said that the population of India is increasing at the rate of approximately 10,000,000 per year (which is double the figure generally admitted in this country) and characterised post-war planning before regulation of population as building "a house to accommodate ten people knowing full well that by the time it is finished the family will have increased to twelve." His remedy is popularising birth control amongst the men and women of India.

Sir Jeremy would have done a service if he had referred to birth control only without linking it with the problem of economic planning for India. It may be flattering for some to be told that India's ills are due to her teeming millions but those who have studied the demographic forces operating in different areas under different circumstances know very well that extreme poverty and illiteracy are themselves the cause of increase in the rate of human reproduction and with a drive for higher standard of living the rate would decrease to safe proportions.

"The rich become richer, the poor beget children" said Karl Marx and this applies to Europe as to Asiatic countries. Capitalism has a tendency to increase the population of the poorer sections of the society. If Sir Jeremy takes the trouble of comparing the population growth of the important countries of the world with that of India, not for a restricted period of thirty or forty years but over a good sweep of a century he would find that the white population grew faster than the rest during the period 1700-1900 and since 1900 India is showing signs of growing faster than before. If the average density of population in India is compared with those of other countries it would be clear that the situation is not so bad as many paint it to be. While Indian population is no doubt a problem for the economic planners they know that planning is the best way of regulating it. The Bombay plan is drawn up to tackle this problem of demographic pressure. Birth Control, as Sir Jeremy himself knows, cannot, under the present conditions prevailing in India, produce the desired results: it can only help to reduce the quality of the population. Indian population is now felt as a burden because of extreme concentration of

3. THE UNITED COMMERCIAL BANK LTD.,
4. THE PUNJAB NATIONAL BANK LTD.,
5. THE BANK OF JAIPUR LTD.,
6. THE HINDUSTAN COMMERCIAL BANK LTD.

REGISTERED OFFICE:

HAMBERS, Nicol Road, Ballard Estate, Bombay.

1. OBJECTS OF THE COMPANY.

The Company has been formed for the purpose of carrying on all or any of the objects which are set out in the Memorandum of Association of the Company (copy whereof together with the names, addresses and description of the signatories and the number of shares subscribed by them is annexed herewith and forms part of the Prospectus) and in particular to acquire the lands, buildings, machinery, plant, stocks, stores and goodwill, etc. of W. Leslie & Co. (Punjab) Ltd., W. Leslie & Co. (Bombay) Ltd., and Kamani Enamel Industries Ltd.

2. PRESENT MANUFACTURING ACTIVITIES, ETC.

Lahore Factory.—The Factory of W. Leslie & Co. (Punjab) Ltd. is at present manufacturing all kinds of hand tools and implements such as Hammers, Augers, Bandsaws, Handsaws, Pickaxes, Felling axes, Showels, Powrahs, Vicas, Springs for Motor cars and Trucks, Motor and Lorry Jacks, Cooking Ranges, etc. The factory is equipped with Muffle furnaces, Pyrometers and up-to-date equipment for Heat Treatment of the tools and implements. There is also rolling and drawing of Brass and Rods of Copper, Brass, Steel, etc. upto 3" size.

Bombay Factory.—The Factory of W. Leslie & Co. (Bombay) Ltd. is maufacturing various kinds of Hollow wares and Utensils from Brass, Copper, Aluminium, Tinned Sheets, etc. as well as ammunition boxes, Camp kettles, Mess tins, Water bottles, etc.

Kalyan (Bombay) Factory.—The factory of Kamani Enamel Industries Ltd. at Kalyan is manufacturing all kinds of Enamel ware such as basins, Mugs, Jugs, Soup plates, Hospital ware, etc.

The Lahore factory is situated on an excellent site and has land and buildings of its own and the entire layout of this factory is modern and up-to-date. The two factories in Bombay will be centralised at Kurla (Bombay) where the necessary land has been purchased and the buildings are under construction.

The sale value of productions of all the three factories is approximately Rs. Forty Lakhs per annum.

The said W. Leslie & Co. (Punjab) Ltd. was started as a Private Limited Company and the trading results show that during the 3 years of its working, it has yielded a net return of about 7½% after providing for taxation and depreciation. The said Kamani Enamel Industries Ltd. was started as a private limited company and after the initial inevitable stage of about 2 years of experiment and research in the highly technical field of Enamelling, the trading has been put on a profitable basis now yielding about 10% after providing for taxation and depreciation, and the Company has come to be recognised as an important unit of its kind in India which caters at present to urgent Operaional demands of Government. The said W. Leslie & Co. (Bombay) Ltd. was started as a private limited Concern and the trading results show that during the 3½ years of its working it has yielded a net return of about 6½% after providing for taxation and depreciation.

3. NEW DEVELOPMENTS.

The Government of India have already sanctioned a capital expenditure of Rs. 17 lakhs for new development schemes for the three factories, which includes Rs. 7½ lakhs for machinery to be imported from abroad. The new development schemes, which have already made considerable progress and which are already under construction are as follows:—

1. The manufacture of Agricultural implements and malleable castings at Lahore.
2. Electrical Steel Furnace for the manufacture of machinery and machinery parts at Bombay.
3. A Modern Enamelling Plant at Bombay.

The necessary applications for the import licence for the various machineries for the above mentioned schemes have already been made and it is hoped that new machineries will be imported within six to twelve months.

4. FUTURE PROSPECTS.

The Company is acquiring all the aforesaid lands, buildings, machinery, plants, etc. of the three factories in efficient working condition, and the Management of the factories will be in the hands of persons who have considerable experience in the respective lines.

There is a very great field in the country for the manufacture of Agricultural implements, especially in the Punjab. Similarly with the rapid industrial expansion in the country there will be very great scope for the manufacure of machinery and machinery parts and the Company can depend on a continuously expanding market. There are very few firms in India manufacturing malleable castings which are in great demand by the Railways and Industries and this line also offers a promising held to the Company.

The Enamel Industry in India has largely come into existence during the war. The demand in the country for enamelware is large and is expected to grow after the war. The possibility of export to nearby countries also cannot be ruled out.

The Kamani Engineering Corporation Ltd. can expect to play a prominent part in the Engineering future of the country with the varied experience and resources already at its disposal right from the commencement. The Company is espected to earn sufficient profits to pay a good dividend in the very first year of its working.

that in giving this consent the Government of India do not take any responsibility for the financial soundness of any schemes
e or opinion expressed with regard to them.

TUS OF

ORPORATION LIMITED

ompanies Act, 1913).

5. AGREEMENTS.

The following Agreements have been entered into by the Company:

1. *Managing Agency Agreement*: Pursuant to Article 4(1) of the Articles of Association, Messrs. Kamani Brothers Ltd. have been appointed Managing Agents of the Company for a period of 20 years from the date of incorporation of the Company by the Managing Agency Agreement dated the 22nd day of May, 1945 on the following terms and conditions amongst others:
   (a) That Company agrees to pay each year to the Managing Agents commission at 10 (Ten) per cent on the net annual profits of the Company and also a monthly office allowance of Rs. 2,000 (Rupees Two Thousand only). The term "net profits" in this connection means the net profits of the Company as defined by Section 87(c) of the Indian Companies Act.
   (b) The Managing Agents are entitled to nominate ex-officio Directors not exceeding One-third of the total number of Directors.

2. *Vendors Agreement.*—According to Article 4(2) of the Articles of Association and Clause 3(1) of the Memorandum of Association, the Company has entered into the Vendors Agreement dated 22nd day of May, 1945 with Messrs. W. Leslie & Co. (Punjab) Ltd., W. Leslie & Co. (Bombay) Ltd., and Kamani Enamel Industries Ltd., all having their registered office at 17-B, Elphinstone Circle, Fort, Bombay for the purchase of all the lands, buildings, plants, machineries, stocks, stores, and goodwill, etc., belonging to each of the three Companies respectively as on 31st March, 1945. The purchase price to be paid by the Company for the said assets, other than stock-in-trade and stores of each of the Vendor Companies is the book value of the said assets as on 31st March, 1945, after deducting the amount of Depreciation Reserve standing in the books of the accounts of the said Vendor Companies from costs certified by Messrs. Dalal & Shah, Auditors, and in respect of stock-in-trade and stores the book values being at cost as per the books of account of the said Vendor Companies as on 31st March, 1945, and certified by the said Vendor Companies. The assets of the three Companies to be acquired with the value for them are as follows:

	W. Leslie & Co. (Punjab), Ltd.			W. Leslie & Co. (Bombay), Ltd.			Kamani Enamel Industries Ltd.

The said Vendors have also agreed that they will respectively transfer the goodwill of their business and connections in respect of the business carried out by them and the right to the Company to represent itself as carrying on the business in succession to them and all the trade marks and patent rights within one year from the date of the Agreement above referred to and thereupon the Company shall pay to W. Leslie & Co. (Punjab), Ltd., Rs. 1,00,000, W. Leslie & Co. (Bombay), Ltd., Rs. 50,000 and Kamani Enamel Industries Ltd., Rs. 50,000 in cash in consideration of such transfer as aforesaid.

6. DIRECTORS' QUALIFICATIONS AND REMUNERATIONS:

The qualification of a Director other than Ex-Officio Director or Special Director or Debenture Director or Technical or Expert Director shall be the holding of shares in the Company at least of the nominal value of Rs. 10,000 registered in his name solely or jointly with any other person or persons.

A Director may act before acquiring his qualification, but shall in any case acquire the same within two months from his appointment, and unless he shall do so, he shall be deemed to have agreed to take Ordinary Shares of the nominal value of Rs. 10,000 from the Company, and the same shall be forthwith allotted to him accordingly.

The remuneration of a Director shall be such amount not exceeding Rs. 100 as the Directors may from time to time fix, for every meeting of the Board attended by him.

The Directors may allow and pay to any Director for the purpose of attending a meeting such allowance as the Directors may consider fair for his travelling and other incidental expenses, in addition to his fee for attending such meeting as above specified.

If any Director shall be called upon to go to reside out of his usual place of residence on the Company's business or otherwise perform extra service (which expression shall include work done by a Director in signing Certificates of shares or debentures issued by the Company, or work done by him as a member of any Committee appointed by the Directors in the terms of the Articles of Association), the Directors may arrange with such Director for such special remuneration for such services either by way of salary, or commission or by a percentage of profits or the payment of a fixed sum of money, as may be determined by the Directors, and such remuneration may be either in addition to or in substitution of his remuneration above provided. The Directors shall also be entitled to be paid any travelling or other expenses incurred in connection with the business of the Company.

7. RIGHTS OF PREFERENCE SHARES:

The following rights shall be attached to the Redeemable Preference Shares aforesaid:

The said Redeemable Cumulative Preference Shares shall confer on the holders thereof the right to receive in priority to all other shares in the Capital of the Company out of the profits of the Company from time to time determined to be distributed a fixed cumulative preferential dividend at Five and a Half per cent and also the right in a winding up priority to all other shares to repayment of all arrears and accruals of the said cumulative preferential dividend down to the date of commencement of winding up (whether earned or declared or not), but shall not confer any further right to participate in profits or assets. The said cumulative Preference shares shall be issued upon the terms that, they are at the option of the Company liable to be redeemed at any time after five years from the date of incorporation of the Company at 5 per cent premium upon six months' notice being given for such purpose to the holders thereof in any manner authorised for the time being by the Articles of Association and so that such option may be exercised in respect of the whole of the Cumulative Preference Shares for the time being issued, or in respect of such number, or numbers of shares as the Company may from time to time previously determine and ascertain by drawings to be made in such manner as the Board of Directors shall think fit. Such notice to be given as aforesaid shall fix place for payment of the redemption monies, and delivery of the Certificates relating to the Shares to be redeemed and on the date fixed for redemption, each shareholder whose shares are to be redeemed shall deliver to the Company the Certificate for such shares in order that the same may be cancelled, and from such date no dividend shall be payable in respect of such share. If any share so drawn for redemption comprises a part only of the shares represented by any Certificate, a new Certificate shall be issued for the undrawn balance of such shares.

8. RIGHTS OF VOTING, ETC.

On a show of hands every member present shall have one vote, and upon a poll every member present in person or by proxy shall have one vote for every share, other than Preference shares held in the Company except (1) when the dividend is not paid and is in arrears for a period of 3 months after the same has become due, (2) any alteration in the Memorandum and Articles of Association affecting the rights of the Preference Shareholders is proposed, (3) any resolution for winding up is proposed in which cases holders of the Preference shares shall have 10 votes for each Preference share.

Where a Corporation or an Indian State or Rule or an Indian State being a member is present by proxy or a representative, who is not a member such proxy or representative shall be entitled to vote on a show of hands.

No member shall be entitled to be present, or to vote on any question, either personally or by proxy, or as proxy for another member, at any general meeting, or upon a poll, or be reckoned in quorum, whilst any call or other sum in respect of any of the shares of such member either solely or jointly with any other person shall be due and payable to the Company.

9. RIGHT OF TRANSFER OF SHARES:

The Directors may at any time in their absolute and uncontrolled discretion and without assigning any reason decline to register any proposed transfer of shares, whether the transferee is a member of the Company or not.

industries in a few areas and the undeveloped nature of the nation's resources. The remedy lies in political self-government for this country to have a free hand for initiating planned industrial development. Instead of reiterating the weight of Indian population and suggesting wrong remedies the ex-Finance Member of the Government of India would do better to throw the weight of his great influence for a liberal India Policy and for an Indo-Britsh co-operaton on a safe and sound footing.

Minimum Prices for Farmers:

The working of wartime controls has convinced the commercial bodies in this country that State intervention is no better than laissezfaire conditions. The Government of India have instituted controls at wrong times, often began at the wrong ends and certainly bungled to the despair of the parties concerned. Controls, to be successful should be all-round, based on adequate data for fixation of prices, should be flexible to adjust according to changing circumstances and should be enforced by a Government deriving its power and sanction from the people. The public have learnt, at great cost, that these conditions are absent in India. It is but natural, therefore, that the Southern India Chamber of Commerce, in their reply to the questionnaire issued by the Director of Agriculture regarding price fixation of agricultural products, underline the special difficulties of fixing minimum prices for farm products. They point out that the working of wartime controls only arouses pessimism and that legislative attempts even in U.S.A. and Japan have not been successful. Prices of agricultural, mineral and industrial products are interacting and the prices of many export items are governed by international forces. Fixation of both internal and external prices, they point out, is very difficult. They suggest that instead of pursuing an impracticable and controversial scheme the Government would do well to attempt at fixing the prices of foodstuffs, particularly rice and wheat, "in order to adjust schedules of tariff rates to internal prices so that free imports might be permitted when internal prices rise beyond limits and free exports permitted when prices sag below economic level." The need for a new incentive for more agricultural output is appreciated and the Chamber suggests the resuscitation of subsidiary industries for increasing the income of the agriculturists. Even those who favour fixation of fair prices would admit that the immediate future is full of uncertainties and the preliminary requisites for enforcing a successful price control programme are yet absent in this country.

Science in War Time:

Perhaps the most fascinating invention of the war is the application of radio to the location of enemy planes and submarines. The importance of the invention is said to be so great that the credit of winning the Battle of Britain is given to the scientists who perfected and operated the Radar. While British scientific men were active in developing large scale use of the Radar the I.C.I. and their scientists were engaged on producing an extraordinary plastic material called 'polythene'. This product has outstanding electrical properties, great toughness and flexibility coupled with lightness and extreme water resistance. It has found immediate uses in telephone, telegraph and submarine cables and more especially in high frequency electric circuits.

Another plastic material which bids for supremacy and which is also a war baby is popularly known as "Silicone". The plastic "Silicone" is used chiefly as an insulating varnish and bids fair to revolutionise the electrical industry.

The Japanese war, particularly in the tropical jungles, created a demand for a powerful insecticide to protect the troops against the mosquito and the lice. This led to the production on a large scale of the famous product DDT and some other products of a similar nature such as Gammexane and Phenoxetol. The first full scale application of DDT in a war section was reported in 1943 when in Naples a whole population of a million and a quarter people were threatened destruction by the typhus epidemic. The successful fight against the mosquito is an epic achievement. DDT is already used in conjunction with pyrethrum in anti-mosquito sprays.

Mention must be made here of the outstanding discovery of the anti-bacterial action of certain moulds which has culminated in the production of the wonder drug pencillin. The drug has effected miraculous cures in cases of blood poisoning and pneumonia and all sorts of staphylocci infections. In the category of promising anti-bacterials may be mentioned the work on phenoxetol conducted by the College of the Pharmaceutical Society of Great Britain. Great as the achievements of Science are in the fields described above and in such other fields as operational research, new building technique, and new methods of housing, transport and preservation of food, there is no doubt that the greatest achievement of Science during the war which will be remembered by posterity is the creation of an entirely new outlook on Science by Society. And no planning and development by any Government of the world will henceforth be undertaken, as Sir S. S. Bhatnagar pointed out in a radio talk recently, without the fullest consultation and active participation of the scientist. Another important development of the war is that even hard boiled industrialists of this country are now beginning to realise the value of pure research. This happy collaboration between pure and applied research will have far-reaching effects on human progress.

Coal Famine in Europe:

The prospects of rapid industrial recovery in Europe in the near future cannot be encouraging since coal, the motive power for industries, is dangerously in short supply. Now that Germany has fallen the final stock-taking of the coal position for the European Continent is possible and the facts reveal that Europe which is generally not self-sufficient in coal has to depend upon imports from Great Britain and other countries. Before the war there was a net import of 21¼ million tons into Continental Europe, this being 7 per cent of the estimated consumption of 300 million tons. Excepting Germany and Poland no other European country could boast of self-sufficiency in coal supplies. Russia's sphere of influence has now extended very much in Central Europe and she is likely to make use of the coal mines of Silesia and Poland to make up for the damage done to her own mines as a result of Nazi invasion. Part of the German coal and the whole of the Polish coal would be diverted to Russia. The Scandinavia and the Southern and Western Europe, which depended upon Polish coal, will have to depend more on France where the position is, to say the least, discouraging. For the coming year France can hardly produce

ANNOUNCEMENT

THIS IS AN ANNOUNCEMENT AND NOT A PROSPECTUS.

THE SUBSCRIPTION LIST WILL CLOSE ON 18th JULY 1945 or earlier at the discretion of the DIRECTORS.

NATIONAL OIL REFINERIES & CHEMICALS LIMITED

(Incorporated under the Indian Companies Act, 1913.)

AUTHORISED CAPITAL - - - Rs. 25,00,000 (Rs. 25 lacs)
ISSUED CAPITAL - - - Rs. 25,00,000

Divided into 5,000 six-half per cent tax-free cumulative Preference shares of Rs. 100/- each (Redeemable at par) and 2,00,000 ordinary shares of Rs. 10/- each: Rs. 2/8/- being payable per share with application, Rs. 2/8/- per share on allotment and Rs. 5/- per share by two equal instalments on call. An admission fee of Re. 1/- is also payable with each application.

Of the above issue the entire 5,000 six-half percent tax-free cumulative preference shares and 1,00,000 ordinary shares of Rs. 10/- each (at par) have been agreed to be taken up by the Directors and their friends.

The balance 1,00,000 ordinary shares of Rs. 10/- each (at par) are offered to the public for subscription.

DIRECTORS:

1. **Mr. J. C. Mukherjea,** Managing Director, Villiers Ltd.
2. **Mr. Sunder Lall Daga, M.L.A.** (Central) J.P.,
3. **Sir A. H. Ghuznavi,** Kt., M.L.A. (Central).
4. **Mr. K. C. Sen,** Managing Director, Hazradi Bank Limited.
5. **Mr. B. N. Maulik,** Director, City Oil and Flour Mills Limited.
6. **Mr. B. K. Mitra,** Merchant.

MANAGING AGENTS:

Maulik Bros., 37, Canning Street Calcutta.

PROPOSED BANKERS:

1. Imperial Bank of India.
2. Bank of Commerce Limited.
3. The Hazradi Bank Limited.

AUDITORS:

Mr. N. C. Choudhury, B.Sc., A.S.A;A; (Lond;), R;A;, Incorporated Accountant, (Lond.), Registered Accountant, 26-C, Creek Row, Calcutta.

REGISTERED OFFICE:

37, Canning Street, Calcutta.

OBJECTS AND SCOPE OF THE COMPANY.

The Company has been formed to carry out the objects set out in the Memorandum of Association and particularly for the manufacture of vegetable Ghee, all kinds of oil, chemicals and acids in oil and fat.

LAND AND MACHINERIES.

The Managing Agents of the Company have already arranged for a suitable plot of land in Santragachi opposite Railway Station.

The Company has already secured the services of competent technical staff to fabricate almost the entire machineries in Calcutta.

MANAGEMENT:

The business of the Company will be carried on by the Directors through Messrs. Maulik Brothers, who are appointed as the Managing Agents of the Company.

The remuneration of the Managing Agents will be a monthly allowance of Rs. 500/- till the plants and machineries are installed in the factory and thereafter Rs. 1,000/- per month as allowance and a commission of 5 p.c. on the nett yearly profit of the Company calculated according to the provision of Section 87C(3) of the Indian Companies Act 1913. The Directors have power to increase the remuneration from time to time.

QUALIFICATION AND REMUNERATION OF DIRECTORS.

The qualification of a Director shall be the holding of ordinary and/or Preference shares to the face value of Rs. 10,000/- in the Company. Each of the Directors shall be paid out of the funds of the Company by way of remuneration of his service at the rate of Rs. 16/- for each meeting attended.

APPLICATION:

Application for shares should be made on the share application form together with a remittance of the amount payable on the application and the admission fee. Where on allotment is made the deposit will be returned in full and where the number of shares allotted is less than the number of shares applied for the balance of the deposit will be applied towards the amount payable on the allotment. Failure to pay the amount due on allotment will render previous payments liable to forfeiture.

DOCUMENTS:

A copy of the said Memorandum and Articles of Association of the Company can be inspected at the Company Office at 37, Canning St., Calcutta, at any time during office hours on any working day while the subscription list is open.

Application form for shares can be had from and application for shares may be sent to the Registered Office of the Company or at any branches of Hazradi Bank Ltd., who are authorised to receive payments on behalf of the Company.

Consent of the Central Government has been obtained to this issue of Capital, subject to the condition that so much of the Capital as cannot in that Governments judgment be properly expended until some uncertain future date is invested and kept invested in prescribed securities which will not be released until the Central Government, (in consultation with Crown Representative if any India State interests are involved), is satisfied that the time has come to make corresponding payments for purposes which are consistent with the enforcement of any measures of control or restrictions that may be in operation at the time when such releases is applied for. It must be distinctly understood that in giving this consent the Government of India do not take any responsibility for the financial soundness of any schemes or for correctness of any of the statements made or opinions expressed with regards to them."

Consent of the Central Government has been obtained to this issue under Defence of India Rule 94(A). It must be distinctly understood that in giving this consent the Government of India do not take any responsibility for the financial soundness of any schemes or for the correctness of any of the statements made or opinion expressed with regard to them.

(A Copy of this Prospectus has been filed with the Registrar of Companies, Bombay).

Application in due course will be made to the Stock Exchanges in Bombay and elsewhere for placing the Shares of the Company on their list. SUBSCRIPTION LIST WILL OPEN ON 25TH DAY OF JUNE, 1945, AND CLOSE ON 2ND DAY OF JULY, 1945.

5. THE BANK OF JAIPUR LTD.,
6. THE HINDUSTAN COMMERCIAL BANK LTD.

REGISTERED OFFICE:

KAMANI CHAMBERS, Nicol Road, Ballard Estate, Bombay.

1. OBJECTS OF THE COMPANY.

The Company has been formed for the purpose of carrying on all or any of the objects which are set out in the Memorandum of Association of the Company (copy whereof together with the names, addresses and description of the signatories and the number of shares subscribed by them is annexed herewith and forms part of the Prospectus) and in particular to acquire the lands, buildings, machinery, plant, stocks, stores and goodwill, etc. of W. Leslie & Co. (Punjab) Ltd., W. Leslie & Co. (Bombay) Ltd., and Kamani Enamel Industries Ltd.

2. PRESENT MANUFACTURING ACTIVITIES, ETC.

Lahore Factory.—The Factory of W. Leslie & Co. (Punjab) Ltd. is at present manufacturing all kinds of hand tools and implements such as Hammers, Augers, Bandsaws, Handsaws, Pickaxes, Felling axes, Showels, Powrahs, Vicas, Springs for Motor cars and Trucks, Motor and Lorry Jacks, Cooking Ranges, etc. The factory is equipped with Muffle furnaces, Pyrometers and up-to-date equipment for Heat Treatment of the tools and implements. There is also rolling and drawing of Brass and Rods of Copper, Brass, Steel, etc. upto 3" size.

Bombay Factory.—The Factory of W. Leslie & Co. (Bombay) Ltd. is maufacturing various kinds of Hollow wares and Utensils from Brass, Copper, Aluminium, Tinned Sheets, etc. as well as ammunition boxes, Camp kettles, Mess tins, Water bottles, etc.

Kalyan (Bombay) Factory.—The factory of Kamani Enamel Industries Ltd. at Kalyan is manufacturing all kinds of Enamel ware such as basins, Mugs, Jugs, Soup plates, Hospital ware, etc.

The Lahore factory is situated on an excellent site and has land and buildings of its own and the entire layout of this factory is modern and up-to-date. The two factories in Bombay will be centralised at Kurla (Bombay) where the necessary land has been purchased and the buildings are under construction.

The sale value of productions of all the three factories is approximately Rs. Forty Lakhs per annum.

The said W. Leslie & Co. (Punjab) Ltd. was started as a Private Limited Company and the trading results show that during the 3 years of its working, it has yielded a net return of about 7½% after providing for taxation and depreciation. The said Kamani Enamel Industries Ltd. was started as a private limited company and after the initial inevitable stage of about 2 years of experiment and research in the highly technical field of Enamelling, the trading has been put on a profitable basis now yielding about 10% after providing for taxation and depreciation, and the Company has come to be recognised as an important unit of its kind in India which caters at present to urgent Operaional demands of Government. The said W. Leslie & Co. (Bombay) Ltd. was started as a private limited Concern and the trading results show that during the 3½ years of its working it has yielded a net return of about 6½% after providing for taxation and depreciation.

3. NEW DEVELOPMENTS.

The Government of India have already sanctioned a capital expenditure of Rs. 17 lakhs for new development schemes for the three factories, which includes Rs. 7½ lakhs for machinery to be imported from abroad. The new development schemes, which have already made considerable progress and which are already under construction are as follows:—

1. The manufacture of Agricultural implements and malleable castings at Lahore.
2. Electrical Steel Furnace for the manufacture of machinery and machinery parts at Bombay.
3. A Modern Enamelling Plant at Bombay.

The necessary applications for the import licence for the various machineries for the above mentioned schemes have already been made and it is hoped that new machineries will be imported within six to twelve months.

4. FUTURE PROSPECTS.

The Company is acquiring all the aforesaid lands, building, machinery, plants, etc. of the three factories in efficient working condition, and the Management of the factories will be in the hands of persons who have considerable experience in the respective lines.

There is a very great field in the country for the manufacture of Agricultural implements, especially in the Punjab. Similarly, with the rapid industrial expansion in the country there will be very great scope for the manufacure of machinery and machinery parts and the Company can depend on a continuously expanding market. There are very few firms in India manufacturing malleable castings which are in great demand by the Railways and Industries and this line also offers a promising held to the Company.

The Enamel Industry in India has largely come into existence during the war. The demand in the country for enamelware is large and is expected to grow after the war. The possibility of export to nearby countries also cannot be ruled out.

The Kamani Engineering Corporation Ltd. can expect to play a prominent part in the Engineering future of the country with the varied experience and resources already at its disposal right from the commencement. The Company is espected to earn sufficient profits to pay a good dividend in the very first year of its working.

5. AGREEMENTS.

The following Agreements have been entered into by the Company:

1. *Managing Agency Agreement*: Pursuant to Article 4(1) of the Articles of Association, Messrs. Kamani Brothers Ltd. have been appointed Managing Agents of the Company for a period of 20 years from the date of incorporation of the Company by the Managing Agency Agreement dated the 22nd day of May, 1945 on the following terms and conditions amongst others:
   (a) That Company agrees to pay each year to the Managing Agents commission at 10 (Ten) per cent on the net annual profits of the Company and also a monthly office allowance of Rs. 2,000 (Rupees Two Thousand only). The term "net profits" in this connection means the net profits of the Company as defined by Section 87(c) of the Indian Companies Act.
   (b) The Managing Agents are entitled to nominate ex-officio Directors not exceeding One-third of the total number of Directors.

2. *Vendors Agreement.*—According to Article 4(2) of the Articles of Association and Clause 3(1) of the Memorandum of Association, the Company has entered into the Vendors Agreement dated 22nd day of May, 1945 with Messrs. W. Leslie & Co. (Punjab) Ltd., W. Leslie & Co. (Bombay) Ltd., and Kamani Enamel Industries Ltd., all having their registered office at 17-B, Elphinstone Circle, Fort, Bombay for the purchase of all the lands, buildings, plants, machineries, stocks, stores, and goodwill, etc., belonging to each of the three Companies respectively as on 31st March, 1945. The purchase price to be paid by the Company for the said assets, other than stock-in-trade and stores of each of the Vendor Companies is the book value of the said assets as on 31st March, 1945, after deducting the amount of Depreciation Reserve standing in the books of the accounts of the said Vendor Companies from costs certified by Messrs. Dalal & Shah, Auditors, and in respect of stock-in-trode and stores the book values being at cost as per the books of account of the said Vendor Companies as on 31st March, 1945, and certified by the said Vendor Companies. The assets of the three Companies to be acquired with the value for them are as follows:

	W. Leslie & Co. (Punjab), Ltd.	W. Leslie & Co. (Bombay), Ltd.	Kamani Enamel Industries Ltd.
	Rs. A. P.	Rs. A. P.	Rs/ A. P.
1. Land ..	14,880 10 0	89,531 8 0	...
2. Buildings ..	2,74,970 4 3	1,98,700 8 0	...
3. Shed and Furnaces ..	...	76,531 12 6	1,80,844 9 6

7. Furniture ..	31,433 9 0	29,160 4 0	7,850 0 0
8. Fixture and Fittings ..	...	34,417 12 0	9,670 0 0
9. Vehicles ..	11,359 7 3	16,903 6 0	5,970 0 0
10. Stock-in-Trade	4,36,359 0 6	3,47,355 11 0	1,85,450 6 0
Total ..	10,98,049 12 6	10,48,464 1 6	4,48,548 12 3
GRAND TOTAL ..	Rs. 25,95,062 10 3		

The purchase price payable to each of the three Companies respectively will be as follows:

	In Ordinary Shares. Rs. A. P.	In Cash. Rs. A P.
W. Leslie & Co. (Punjab), Ltd. ..	4,90,000 0 0	6,08,049 12 6
W. Leslie & Co. (Bombay), Ltd. ..	4,70,000 0 0	5,78,464 1 6
Kamani Enamel Industries Ltd. ..	2,40,000 0 0	2,08,542 12 3
	12,00,000 0 0	13,95,062 10 3
GRAND TOTAL ..	Rs. 25,95,062 10 3	

The said Vendors have also agreed that they will respectively transfer the goodwill of their business and connections in respect of the business carried out by them and the right to the Company to represent itself as carrying on the business in succession to them and all the trade marks and patent rights within one year from the date of the Agreement above referred to and thereupon the Company shall pay to W. Leslie & Co. (Punjab), Ltd., Rs. 1,00,000, W. Leslie & Co. (Bombay), Ltd., Rs. 50,000 and Kamani Enamel Industries Ltd., Rs. 50,000 in cash in consideration of such transfer as aforesaid.

6. DIRECTORS' QUALIFICATIONS AND REMUNERATIONS:

The qualification of a Director other than Ex-Officio Director or Special Director or Debenture Director or Technical or Expert Director shall be the holding of shares in the Company at least of the nominal value of Rs. 10,000 registered in his name solely or jointly with any other person or persons.

A Director may act before acquiring his qualification, but shall in any case acquire the same within two months from his appointment, and unless he shall do so, he shall be deemed to have agreed to take Ordinary Shares of the nominal value of Rs. 10,000 from the Company, and the same shall be forthwith allotted to him accordingly.

The remuneration of a Director shall be such amount not exceeding Rs. 100 as the Directors may from time to time fix, for every meeting of the Board attended by him.

The Directors may allow and pay to any Director for the purpose of attending a meeting such allowance as the Directors may consider fair for his travelling and other incidental expenses, in addition to his fee for attending such meeting as above specified.

If any Director shall be called upon to go to reside out of his usual place of residence on the Company's business or otherwise perform extra service (which expression shall include work done by a Director in signing Certificates of shares or debentures issued by the Company, or work done by him as a member of any Committee appointed by the Directors in the terms of the Articles of Association), the Directors may arrange with such Director for such special remuneration for such services either by way of salary, or commission or by a percentage of profits or the payment of a fixed sum of money, as may be determined by the Directors, and such remuneration may be either in addition to or in substitution of his remuneration above provided. The Directors shall also be entitled to be paid any travelling or other expenses incurred in connection with the business of the Company.

7. RIGHTS OF PREFERENCE SHARES:

The following rights shall be attached to the redeemable Preference Shares aforesaid:

The said Redeemable Cumulative Preference Shares shall confer on the holders thereof the right to receive in priority to all other shares in the Capital of the Company out of the profits of the Company from time to time determined to be distributed a fixed cumulative preferential dividend at Five and a Half per cent and also the right in a winding up priority to all other shares to repayment of all arrears and accruals of the said cumulative preferential dividend down to the date of commencement of winding up (whether earned or declared or not), but shall not confer any further right to participate in profits or assets. The said cumulative Preference shares shall be issued upon the terms that, they are at the option of the Company liable to be redeemed at any time after five years from the date of incorporation of the Company at 5 per cent premium upon six months' notice being given for such purpose to the holders thereof in any manner authorised for the time being by the Articles of Association and so that such option may be exercised in respect of the whole of the Cumulative Preference Shares for the time being issued, or in respect of such number, or numbers of shares as the Company may from time to time previously determine and ascertain by drawings to be made in such manner as the Board of Directors shall think fit. Such notice to be given as aforesaid shall fix place for payment of the redemption monies, and delivery of the Certificates relating to the Shares to be redeemed and on the date fixed for redemption, each shareholder whose shares are to be redeemed shall deliver to the Company the Certificate for such shares in order that the same may be cancelled, and from such date no dividend shall be payable in respect of such share. If any share so drawn for redemption comprises a part only of the shares represented by any Certificate, a new Certificate shall be issued for the undrawn balance of such shares.

8. RIGHTS OF VOTING, ETC.

On a show of hands every member present shall have one vote, and upon a poll every member present in person or by proxy shall have one vote for every share, other than Preference shares held in the Company except (1) when the dividend is not paid and is in arrears for a period of 3 months after the same has become due, (2) any alteration in the Memorandum and Articles of Association affecting the rights of the Preference Shareholders is proposed, (3) any resolution for winding up is proposed in which cases holders of the Preference shares shall have 10 votes for each Preference share.

Where a Corporation or an Indian State or Rule or an Indian State being a member is present by proxy or a representative, who is not a member such proxy or representative shall be entitled to vote on a show of hands.

No member shall be entitled to be present, or to vote on any question, either personally or by proxy, or as proxy for another member, at any general meeting, or upon a poll, or be reckoned in quorum, whilst any call or other sum in respect of any of the shares of such member either solely or jointly with any other person shall be due and payable to the Company.

9. RIGHT OF TRANSFER OF SHARES:

The Directors may at any time in their absolute and uncontrolled discretion and without assigning any reason decline to register any proposed transfer of shares, whether the transferee is a member of the Company or not.

KAMANI ENGINEERING CORPORATION LIMITED, PROSPECTUS—Contd.

10. MINIMUM SUBSCRIPTION.

The Directors shall not make any allotment of shares unless shares of the nominal value of Rs. 35,00,000 at least shall have been subscribed for.

11. PRELIMINARY EXPENSES:

Preliminary expenses exclusive of brokerage but inclusive of transfer charges, such as stamp, registration, etc., are not expected to exceed Rs. 50,000.

12. INTEREST OF DIRECTORS:

Raja Ratna Ramji Hansraj Kamani and Poonamchand Ramji Kamani, Esq., are Directors and Shareholders of W. Leslie & Co. (Punjab), Ltd., W. Leslie & Co. (Bombay), Ltd., and Kamani Enamel Industries Ltd., Bhaichand Gopalji, Esq., is a Director and shareholder of W. Leslie & Co. (Punjab), Ltd., Kamani Enamel Industries Ltd., and shareholder of W. Leslie & Co. (Bombay), Ltd., and Nyalchand Moolchand Sheth Esq., is a Director and shareholder of W. Leslie & Co. (Punjab). Ltd., Ratilal Odhavji Zatakia is a shareholder of W. Leslie & Co. (Punjab), Ltd., and as such they are interested in the said Vendors agreement for the sale of the land, buildings, machinery, etc., of the said Companies' to the Company and payment of the Company to the said Vendors as per the said agreement. Raja Ratna Ramji Hansraj Kamani, Mr. Ratilal Odhavji Zatakia, Lala Chhabildas Jhamb, Mr. Bhaichand Gopalji and Mr. Poonamchand R. Kamani are the Directors and Shareholders of Messrs. Kamani Brothers Ltd., who are appointed as the Managing Agents of the Company and who are entitled to the remuneration as stated in the Managing Agency Agreement mentioned above and as such are interested in the same.

13. BROKERAGE:

Brokerage will be paid at 2 per cent on Ordinary Shares and 1½ per cent on Preference Shares on application received through approved Brokers.

13. INSPECTION:

Copies of the Agreements above referred to and prints of the Memorandum and Articles of Association can be inspected on working days during office hours at the Registered Office of the Company.

15. APPLICATION FOR SHARES:

Application for shares shall be made (in units of 25 or multiples thereof only in respect of Ordinary shares) on the applications hereto annexed or copies similar to them along with the application moneys and may be paid either in cash or in cheque at the Registered Office of the Company or with the Company's Bankers. In case no shares are allotted, the whole of the deposit will be returned and if the number of shares allotted is less than the number applied for, the surplus, if any, will be utilised for the payment of monies payable on allotment and balance, if any, refunded.

Prospectus and Forms of application for Shares can be obtained at the Registered Office of the Company and from the Company's Bankers.

Dated, this 20th day of June, 1945.

Hindusthan Buildings, Calcutta

two-thirds of her pre-war production. Belgium can hardly achieve 50 per cent of her pre-war record and Holland is still struggling to achieve a third of her pre-war production. Though the Saar mines have been captured more or less intact by the Allied armies, the miners have fled and hardly one million tons can be raised as against 16 million tons produced for the year ended March 1944. The other mines of Germany are under damaged conditions and even if transport difficulties are overcome, very little coal from Germany can be sent to other parts of Europe. Since Great Britain's production also is on the decline, she cannot help the Continent, at least not for a year.

Drastic action for this desperate position is suggested by the Economist (April 28, 1945). Three lines of improvement are suggested: (1) France, Belgium and Holland should concentrate on speeding up their output. These countries have suffered from shortage of manpower, want of housing facilities for the miners and shortage of equipment and stores. These have to be tackled effectively and without delay. (2) An Allied Coal Council should be formed for increasing the output of mines in Western Germany. The supplies available should be "pooled and distributed according to need with priority for the armies and for the Allied countries." (3) Imports of coal into Europe should be arranged for. England cannot come to aid now and therefore the Continent should look to the U.S.A. and South Africa for this purpose. It is estimated that the U.S.A. can supply at least 18 million tons, equivalent to 3 per cent of American production, if economies in consumption are enforced. Unless final aid comes the next European winter would be too severe for the civilian population and the problem of reconstruction—let alone initiation of new industrial schemes for post-war development—would be seriously delayed. Europe has adequate coal deposits for her own requirements considered from a long-term point of view, but the immediate coal famine is so serious and experienced in every part of Europe that a heavy responsibility lies on America to minimise the coal shortage in Europe.

Indo-Australian Trade:

The Indian Industrial Mission, said Sir Datar Singh, one of the Members, is visiting Australia with the aim of developing greater balanced trade between the two countries. In the past five years imports of civilian goods from India to Australia have increased by 315 p.c. and Australian exports to India by 410 p.c.. Although both these countries produced raw materials, the Mission was impressed with the possibility of increasing a balanced trade between the two countries. A commodity like wool would probably always be imported by India. Post-war self-sufficiency was neither expected nor sought by India, added Sir Datar Singh. Machine tools and machinery for industrial development, equipment for the textile industry and many types of woollen goods, wheat and dairy products, these would be required in considerable quantities in India. And India would be able to offer to Australia jute, cotton, hides, lac, timber, tea, coffee, vegetable oils, minerals and drugs. The two lists show at once that the trade will not be quite balanced and that Australia would be one more country supplying finished products to India. The Mission expresses surprise at the amazing industrial development in Australia and particularly in connection with the expansion and development of irrigation projects. For Australia, when the war began, was almost in the same position as, possibly less equipped than, India industrially.

In settling the future trade relations between Australia and India it is perhaps worth while remembering certain facts. During the five years of the war India has served as a supply base for Australia and other middle east countries. Australia is nearer to India than any country of the West. It is, therefore, in the interests of both these countries that the future trade should be based on reciprocal amenities granted to respective businessmen. Looking at the recent development of Australian industries it is possible that Australia will be able to assign to India several capital goods which could be economically imported into India for establishing her own industry. The system of tariff rates prevailing in Australia demands attention. This is divided into three classes, namely preferential treatment, intermediate tariff and the ordinary tariff. India is being treated in the second category, just as

THEIR NEEDS *never ignored*

As in every necessity of life, in clothing too, the peasant class is nowadays badly affected. The question of paying any price is an impossibility with them. They don't want to put up a show: what they need is durability and cheapness. Apart from the varieties of finer clothing we, also manufacture clothing of medium but durable texture which are available at a considerably cheaper price.

Our specialities :— DOUSCHETE CHEQUER, Mock Coating, Thana Coating, Printed Mock Coating, Thana Chequer, Border Sarees, etc.

Moon MILLS LTD.

Managing Agents: **ASIATIC TEXTILE COMPANY, LIMITED.**

General Assc. Buildings, Fort, Bombay.

Japan was, before she entered the war. In view of the services rendered by India during the war, it is not too much to expect that Indian goods should be given the same preferential treatment given to British goods.

In an article specially contributed for the Indian Textile Journal, May 1945, Mr. Michael Brown, Hon. Adviser to the Indian Industrial Delegation to Australia, has expressed his opinion that the chances of increasing Indo-Australian trade in postwar years are bright. He has cautioned Indian millowners and other exporters to improve the quality of their products and grade them so that the Australian market can be happily cultivated. The danger of competing with Lancashire goods does not arise because India will be called upon to fill the gap created by the exit of Japan and not to compete with the products of Great Britain. Australia's present consumption is below normal and her textile policy is not meant to reduce further imports of textile goods. Whether Indo-Australian trade agreement is to be concluded or not the scope for complementary trade relations is great and ought to be cultivated by our Indian businessmen and industrialists, particularly by those who are interested in the exports of Indian cotton manufactures.

Rail-Road Co-ordination :

The Bombay Government's two schemes, Railway Relief Scheme, intended to offer immediate relief to congested sections on Railways and the long term Rail-Road Co-ordination scheme are consistent with the Government of India's scheme that railways should participate in road operation not only to ensure reasonably profitable operation for both railways and road transport but also to ensure that companies in which railways participate would regulate their activity strictly as public concerns.

The long term scheme aims at unified control of transport and its orderly development with a view to preventing the prewar unregulated and disastrous competition and rate war with Railways.

The longterm scheme is intended for both passenger and goods traffic, the service being only from railway station to railway station. The scheme will be put into operation through contract with and under the supervision of the Railway and the operation will be through an existing or a new operator.

The province will be divided into zones, each zone will be operated by a limited company, in which the road operators, railways and Provincial Government, will be the shareholders. The existing operators will have 25 per cent of the shares, promoters 10 per cent, Railways 30 per cent and Provincial Government 35 per cent. There will be no Managing Agents, but nine directors, there will be, six elected by the shareholders and three nominated by the promoters.

These companies will not deal with passenger services and goods services in Bombay City. While one will generally agree with the scheme contemplated one feels that some concession for free competition may also be made.

Clive Street Gossip

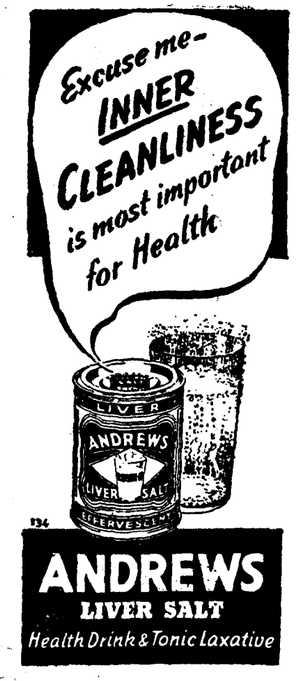
With the acceptance of planned economic development as the paramount aim of public policy all over India, the problem of the relations between British India and the States must be said to have changed its complexion. For, the needs of economic planning provide a standard of reference for every proposal for change. Formerly, there was an utter lack of such objective criteria. The British Government indulged in a lot of unctuous cant about its responsibility for the well-being of the people and its regard for its treaty obligations. With these two principles it forged a weapon which was expected to be equally effective against the claims of an all-India federation to dominate over the States and the claims of the Princes to a measure of independence from the British Government. The Butler theory of paramountcy being paramount was a notorious tautology meant to serve a number of different and even incompatible purposes. On the one hand, they wanted to be able to tell the Congress that the States are independent political entities which they cannot coerce into joining the Federation; on the other, they wanted to retain the right to impose their will on the States when it suited their purpose to do so. On their side, the States have been equally incapable of defining their position. In spite of the Chamber of Princes having functioned for a number of years, the idea of the States acting together as a sort of the Estate of the Realm, either for entering into commitments or for negotiating with others has not been readily accepted by all. On the other hand, the notion that each State has a treaty of its own with the Paramount Power and therefore specific rights and obligations thereunder has not lost its fascination. Many States prefer to deal with each issue as it arises and tackle the Government of India each by itself. The Government of India Act, while ostensibly a help to the formation of the Federation, confirmed the States in their ideas of separateness, the result being that conjoint action on the part of the States in their own interests has been rendered somewhat difficult. The tendency has been strengthened by differences in the status, prestige and influence of the various States.

* * * *

Opinion in British India, too, as represented by the Congress, has also shown itself incapable of defining or clarifying itself. The attitude to the States varies from eagerness to wipe them out to tolerance mixed with hopes of fitting them into the political life of the whole country. The Congress did not a little of wobbling in this matter. But when the Federation receded and the war broke out and the Congress got itself tied up in so many knots, interest in the problem of the States was visibly on the wane. Political parties in British India almost forgot the existence of the States. It is not a little significant that the Wavell Plan for ending the deadlock has no provision which will directly affect the States. In fact, in his broadcast talk announcing the Plan, Lord Wavell made it clear that the relations between the States and the Crown Representative are not affected.

* * * *

While this is in accordance with the theories evolved since the time of the Second R. T. C., it ignores the actual developments of recent times, viz., the calculated efforts of the Government of India to bend the States to their will in many financial and economic questions. It is strange but true that these attempts were made precisely when British Indian interest in the affairs of the States was at its lowest ebb. But that enhances, rather than detracts from, their significance. For the attempts have been made in the name of causes and purposes which are the concern, not of the Crown Representative with his nebulous rights and obligations, but of the Governor-General-in-Council. It was Sir Jeremy Raisman, the Finance Member and Sir Ardeshir Dalal, the Planning Member, who were most concerned to bring the States into line with British India in matters of taxation and industrial control. The fact that specific questions like equal taxation were followed up by the general question of preparation for planning both in the constitutional and in the administrative side shows that the problem of the relations between the States and British India will hereafter have to be tackled in the light of the requirements of planned economic development. No more groping in the twilight of obsolete or unrealistic political theories and fond political predelictions. The Viceroy's affirmation that his proposals do not affect the relations between himself as the Crown Representative and the States, while it is constitutionally sound, will in practice be found to be a material misstatement. If the Simla Conference should prove successful and a National Government be duly installed at the Centre, then the successors of the present Councillors—it is not improbable that Sir Ardeshir Dalal will be asked to continue—will almost certainly take up the threads where they were left by their predecessors; and conferences with the States' representatives over this question and that are bound to be revived.



* * * *

If a National Government in British India were to take up with the States the problems that have till now been dealt with unilaterally by the present Viceroy's Council or officials working on behalf of the Crown Representative, the change would be an advantage in some respects and otherwise in certain others. On the one hand, it is unlikely that a representative British Indian Cabinet will take a high line with the States, especially as the Crown Representative is likely to interfere with their decisions and actions. On the other, the Congress and other groups are apt to bring into play their deep-rooted antagonism to the Princes.

It is in these circumstances that one must welcome the advent of economic planning as the paramount aim of public policy in the years to come. For, as I started with saying, the requirements of planning provide a standard of reference. When the aim is to raise living conditions in the whole of India, every change proposed must be supported or condemned

according as it will help or hinder the progress of planning. Inroads into the political authority of the States merely for the sake of spiting the Princes would be wholly indefensible. Likewise, it would be unreasonable for the States to resist necessary measures of economic co-ordination and uniformity of administrative methods, even though such resistance may mean the continuance of the States' subjects in the old conditions of poverty. But there is no reason to think that such an unreasonable attitude will be taken up by the States as a whole.

BY INVESTING IN WAR LOANS ASK YOUR BANK

Instances of rulers who are indifferent to the well-being of the people under their charge may not be wanting. There may be instances, too, of rulers who seek personal profit out of disordered economic relations between the States and British India and would not like to be deprived of such opportunities of profit. But speaking of the States as a whole, the prevalent notion that the States Governments are indifferent to economic progress and would much rather suffer their people to wallow in poverty than accept any infringement of their special powers is unfair to the Princes and their Governments.

* * * *

Owing to the conditions created by the war and the demands made upon each State government in respect of social progress, the Princes are eager to expand the revenues of the State; and since that is impossible without increasing the incomes and the taxable capacity of the people, they cannot be averse to schemes of new development. The more progressive States like Mysore did take to industrial development earlier than British India. The later entrants offered special inducements to British Indian industrialists. There are contractual obligations entered into by the States with particular commercial institutions operating in their territory in regard to the use of land on favourable terms or exemption from income-tax. Such special inducements were given at a time when nobody saw anything wrong in such a policy. They were not materially different from the aids given by other governments to nascent industries in their territory. As a result of the inflation and high taxation of the war period, this differential treatment of industry in British and Indian India has come to be felt as a hardship for the former and for the Government of India. But it can neither vitiate the origin of these special measures nor suggest an attitude of obstructive aloofness in the States in regard to economic planning.

* * * *

So far as can be gathered from official statements and reports in the press, the principal issues outstanding between the States and the Government of India refer to the disparity in the levels of taxation and the problems of industrial control raised in the Government of India's statement on the industrial policy of the future. I referred last week to a recent attempt on the part of the Government to employ its power to withhold the permit for new issues to impose its own conditions on the company and the State concerned. In this case, the Government of India have probably succeeded in preventing the grant of relief in taxation to one Company. But this is no solution of the problem of securing equal incidence of taxation on industry. The method adopted implies that, if new enterprises should be floated with the funds of the subjects of the State, then the Government of India would not be able to secure compliance with its demands. What the Government of India was keen on at the outset was to check the flow of capital from British India into the States. Not only was this idea formed without any reference to the flow of capital from the States into British India in the past, but the volume of funds now finding their way to the States was greatly exaggerated; and so were the consequences of this efflux. But from the point of view of the Government of India and British Indian industry the importance of equal competition cannot be denied. At the same time, it would be unfair to overlook the backwardness of the States in industrial development and their need for providing special aids to their nascent industries, similar to the aids provided in British India in accordance with the policy of discriminating protection. What is more important is the fact that the majority of States are not big enough to form by themselves sufficiently big markets for their indigenous industries. If the States should attempt to develop their industries by enabling them through various aids to compete in British Indian markets, they can be justly held to be guilty of dumping But in that case, British India as a separate political unit would be entitled to resort to anti-dumping measures rather than have the big stick of Paramountcy wielded in the name of the Crown Representative. To insist on tax levels being raised in the States and generally to incapacitate the States Governments for providing their industries the aids which they require would be a dangerously onesided solution.

The real solution lies in the creation of an economic authority which will ensure the development of all backward areas according to the resources which they possess, and not their political affiliations. If industries are developed in India according to the resources and consumptive capacity, at various stages of development of each region, then the special measures called for in each area could be adopted without occasioning any injustice. Such economic regions are unfortunately no respectors of political boundaries. Directors of regional plans will be helpless in executing their policies if their authority and administrative competency are to be delimited by political boundaries. With their recent experiences of the Government of India's zeal for uniformity, the States are bound to look askance any proposal to set up regional planning authorities which will not respect political boundaries. It is necessary therefore to disarm the fears that have been so heedlessly aroused before more effective and more constructive steps are taken to ensure the smooth working of plans and the just distribution of their benefits all over the country. Estimates of needs and resources and practical schemes must be made for all parts of India by a separate body, while at the same time, the Provinces and States and British India make separate plans for themselves. It is only in the light of such exploratory work that preparations for real development can be made to take the place of the present disputes between the States and British India.

The States have, indeed, a great deal of such work to do, on their own initiative. While it is true that some States, big and small, have formulated post-war plans of their own, the more fundamental enquiry into the nature and incidence of taxation in the States, the elasticity of revenue, the potentialities for increase and the adequacy of revenue for purposes of post-war development, particularly for education, public health and other nation-building objects has not been carried out. No serious attempt has been made to rationalise the system of public finance and render it fit to shoulder the burden of expenditure on economic planning, though under pressure from the Government of India E.P.T. has been introduced and income-tax raised. Both the Government of India and the States must turn their attention from the problems that have somehow come up to the surface to the problems that are basic.

One regrettable omission of last week in these columns is the reference to the Birthday Honours List; and it is better made up late than never. During these strenuous years of the war, claims to recognition by the award of titles are more or less a matter of general knowledge. Those who are in the official hierarchy get their honours according to the positions they occupy. But it would be hardly invidious if I were to single out Sir Jeremy Raisman as having an outstanding record of service and achievement as Finance Member during the greater part of the war period. Sir Edward Benthall's duties were as taxing and onerous; and it is no surprise that the two of them come in for special recognition. In the world of business, Mr. Kenneth Mealing has received a well-merited knighthood. It might seem to many a matter of routine that the President of the Associated Chambers should be knighted towards the end of his term. But then only men with a long record of service are chosen for the place; and the present head of Andrew Yules has been far more than a partisan spokesman of the interests of British business in India. Likewise, the award of a C.B.E. to Mr. Baker of Imperial Tobacco will be applauded by his numerous friends who, let it be remembered, are not confined to his community. And so will the knighthood awarded to Mr. H. G. Misra whose factories in Cawnpore have numbered so long and so well in the cause of the war effort.

"EAVESDROPPER".

Why give "13" a bad name? Is it that "13" is peculiarly unlucky while other numbers are not? That's all rot. Any day, any minute and any second may be unlucky. Bad luck does not come through the trick of the calendar — it is always there, ready to come upon you like a hawk on its prey. But you can off-set the brutal blunderings of chance by that incomparable human device — Life Insurance. It can make "13" or any so-called unlucky moment loss-proof and bereft of its unlucky character.

NEW BUSINESS (1944) over Rs. 10 crores.

A Hindusthan Policy, with its complete circle of protection, gives you the added service of a company which is the last word in life insurance service.

PRICE WATERHOUSE PEAT AND CO.

Registered Office:

RAMPUR, RAMPUR STATE

The Company manufactures Vegetable Oils and Soaps, and processes Dhals and Rice And, for these commodities, the company is operating under State monopolies.

The progress of the Company is shown in the following table:

Year	Paid-up Capital	Net Profit	Dividend	Reserve
	Rs.	Rs.		Rs.
1943	1,29,905	43,646	20 per cent	35,262
1944	2,43,154	1,03,807	22 per cent	1,14,925

The proceeds of this issue will be utilised for expansion of the Company's existing businesses, as well as for cultivation of potato for seeds and their economic conservation through cold storage. It is well-known that all wastage is eliminated by cold storage preservation of seeds, and that the margin of profits in seeds is very satisfactory.

The Company has been accorded consent by H H.'s Government of Rampur and the Government of India to issue additional capital.

The capital to be issued consists of 5 per cent tax-free Preference shares and of Ordinary shares. Applications for new shares from existing shareholders will receive first preference Applications are also invited from the general public subject to the understanding that they will be considered in respect of that portion of the new capital which is not taken up by existing shareholders.

Enquiries may be addressed to the company at the registered office.

(FROM OUR CORRESPONDENT)

NEW DELHI, June 20

The Conference of leaders of political parties convened by H. E. the Viceroy for the 25th instant will, it is almost certain now, take place as arranged in spite of seeming obstacles. The parties invited seem eager to co-operate, a welcome sign that the political stalemate has pleased no one. We have therefore the prospect of an interim Government as national as the framework of the Government of India Act of 1935 would permit. Much time and thought have been given to post-war planning and it has been taken for granted that as soon as the Pacific war is over, the plans will be taken in hand and proceeded with. It has not been appreciated widely enough that a national Government is a pre-requisite to any planning and that a political settlement is a condition precedent to economic development. Differences of race, religion and caste and sectional interests have all tended to create politicians of the "Little India" school who think only in terms of their communities and not of the homogeneous India within which their interests lie.

* * * *

The decision of H. M. Government to appoint a United Kingdom High Commissioner for India to represent her particular interests so as to relieve the Viceroy from possible embarrassment is a step which supposedly raises India's political status to correspond with that of the Dominions. The discrimination clauses in the Government of India Act and the provisions regarding grant of subsidies and protection without distinction effectively safeguard British financial and trading interests operating in India.

* * * *

The departure of the Finance Member to England to discuss matters connected with Britain's war purchases in India and the liquidation of the steadily mounting sterling debts might, with advantage, have been postponed. Doubtless there are a number of issues requiring clarification which necessitated the visit but it would have been a step of wise statesmanship if the questions had been left over to be settled by an Indian Finance Member. The departure of the Finance Member on his mission on the eve of the Conference to be held on the 25th instant is apt to raise a suspicion in the minds of some whether the visit was not designed with the purpose of concluding arrangements before a national Executive Council came into office. It will be recalled that some years ago there was much public discussion on the question of India's national debt and on the legality and propriety of the inclusion of some loans in the Public Debt. It was never any party's intention to repudiate the debts that had been incurred though it was suggested that certain items should be investigated. A British Finance Member, however conscientious, impartial and determined to hold the scales even, is in the public eye and belief supposed to be influenced by natural loyalties and affiliations and it is precisely for this reason that we should have welcomed the handling of the subject of sterling assets acquired by India, by an Indian Finance Member. As the prospect of an Indian taking over the finance portfolio was so near, the question might well have been left to him. It is not our intention to suggest the Finance Member's visit is calculated to rush a settlement through before the new Council comes into office; even so, the public would have appreciated it if the discussions had been left over to the Indian Member.

* * * *

The Government of India in the Food Department are understood to have addressed a communication to Provincial and State Governments asking for information regarding the difference in the present cost of a 'balanced' diet as compared to pre-war years in the principal rationed towns of their respective areas.

* * * *

It was Sir John Orr who directed public attention to this aspect of national nutrition. The Allied Nations Conference last year at Hot Springs gave a good deal of thought to this matter and carried it a step further. In our own country Sir Joseph Bhore's Committee on Public Health is expected to make a useful contribution to the solution of the problem. The Famine Enquiry Commission also took this question into consideration although only in an incidental way. If one could evaluate national loss as a result of the population being half-starved and under-nourished and of the weakening of vast numbers of people and of generations yet to come, it would doubtless be of an order which would stagger imagination.

* * * *

The Nutrition Advisory Council are reported to have composed a 'balanced' diet for an adult per day which consists of cereals 14 oz., pulses 3 oz., vegetables 10 oz., fruits 3 oz., milk 10 oz., sugar and gur 2 oz., vegetable oil or ghee 2 oz., fish and meat 3 oz., and one egg. How many or rather how few get a diet of this kind is a question which it is unnecessary to answer as it is within public knowledge.

* * * *

It is believed that some relaxation in capital issue control will shortly be made. An issue of not more than Rs. 1,000 can now be made without a reference to the Examiner of Capital Issues and the proposal would appear to be to raise the limit to Rs. 1,00,000. The corresponding British scheme of capital issue control has recently been considerably modified and the Government of India in sympathy are understood to be contemplating a relaxation and the exemption limit would, it is believed, be fixed at Rs. 1,00,000.

'Hill Bird'

Here's a thickener that gives better results and better output at lower cost—a natural, perfectly neutral and mucilaginous product for use as a highly powerful thickener in sizing and finishing all textiles fabrics, for printing, dyes and as an auxiliary in many other industries.

GUM LOCUS does not veil or impair the colour or brilliancy of fabrics, thus rendering it specially valuable for mercerised, bleached or dyed cloth.

(From Our Correspondent)

Madras, June 19.

In a communication addressed to the Director of Agriculture on the issue of fixing fair prices for agricultural produce in accordance with the recommendation of the Policy Committee on Agriculture, the Committee of the Andhra Chamber of Commerce observe that they do not oppose stabilisation of prices as such, but would emphasise that the Government should adopt a policy of abundant caution in their endeavour to fix prices of agricultural produce. The fixation of prices in one sector, while prices in other sectors are left as they are, is neither practicable nor desirable. The price structure should be held as one composite unit and the interdependence of prices under different groups of commodities should be realised. Unless adequate and effective steps are taken to stabilise the price structure as a whole and check the operation of forces which may culminate in a depression in the post-war period, the Government should not meddle with the prices of agricultural produce. The prices of major agricultural commodities are governed by international conventions and internal control could not be effective to any large degree in that direction. Moreover it is not possible to ensure markets at the controlled prices to commodities like oilseeds which depend more on external markets than on internal consumption. In the opinion of the committee, the real handicaps that operate against the securing of fair prices for agricultural produce are the inadequate marketing facilities, the want of proper financing sources particularly at the time of harvest and the insufficient storage, godown and ware-house accommodation. The Government should take serious steps to remove these handicaps.

The Southern India Chamber of Commerce have addressed the Government of Madras urging that the term of the present Council of the Madras Corporation should not be extended by another year as indicated in the Government order passed recently. The Chamber say that the present Council was constituted in 1937 and its normal life should have ended in 1940. The reasons for extending its life during the war period have now practically disappeared and the Council, whose life has been extended from year to year from 1940, has ceased to be representative of public opinion. Fresh electoral rolls were being prepared for the Central Legislature and there should be no difficulty in preparing fresh electoral rolls for the conduct of municipal elections between now and the time of expiry of the present Council in November 1945.

In his address to the Travancore Assembly Sir C. P. Ramaswami Aiyar, the Dewan-President gave a bird's eye view of the economic condition of the State. Referring to the food situation in the State, he assured the House that the Government now had an aggregate of 1,55,475 tons of rice, sufficient for the next six or seven months apart from supplies, which had been promised by the Government of India. The Dewan said that the over-crowding in the State transport system had resulted in accidents and he wanted the House to consider whether in the interests of public safety, it was not desirable to impose drastic restrictions on purposeless travel till the emergency was over and conditions became normal. He expressed regret that the malaria epidemic in the State was rather serious till some time ago. Control measures had been actively taken in the affected areas and with the outbreak of the monsoon and the energetic steps taken by the Public Health Department he hoped the epidemic would soon be under control. The State Government had been approached for the supply of coir and coir products not only to the War and supply Departments but also to other countries. They had represented to the appropriate quarters that while they were ready to supply War Department at controlled rates, they should be free to sell at the best available rates to other countries. As a result of the recent conference held in this connection the Government of India had agreed with the view of the State Government. The Dewan, in this connection, warned the House against the activities of certain vested interests who were active in the State recently. They were importing jute into Travancore and manufacturing jute mattings etc. to the detriment of coir taking advantage of the cheapness of labour in the State compared with Bengal. He condemned this as unsocial and unpatriotic and said that steps would be taken to see that no hardships were placed in the way of a key industry in the State. On the subject of industrial development, he said that the Government of Madras had provisionally agreed to take shares to the value of Rs. 20 lakhs in the fertiliser and chemical concern promoted by the State and take a certain proportion of the produce of the Company. The Aluminium Company had issued fresh capital to the tune of Rs. one crore of which Rs. 15 lakhs had been taken by the State. With regard to the mineral sands, the Government had taken steps to see that exports were allowed only to the extent necessary to meet war needs while in cases where they could be exploited locally no further exports would be allowed pending negotiations now in progress. The Dewan assured labour of Government support in all its legitimate demands.

Speaking on the city's water-supply Mr. Shenoy, the Commissioner said that the construction of the Poondi Reservoir had not brought into the City a single extra ounce of water. The Corporation to-day was supplying the same 24 million gallons per day as it did before although the City could well do with another six million gallons per day. The Corporation could not supply more because the one existing conduit was unable to bring in more water. It was unfortunate that while Rs. 30 or 40 lakhs had been spent on the reservoir the construction of a second conduit to augment the supply brought into the city was not taken up. The Corporation, he said, was doing its very best to make Government to take up this work and pressing them not to postpone it till after the war. People complained that they had no water even to wash, much less for flushing latrines; and he thought the complaint was 'legitimately reasonable'. Every house holder, he added, should be provided with a tap so as to enable him to consume as much water as he liked.

Resume of Commodity Markets

The important event of the week is the announcement regarding the possibility of imports of Burmese rice at an early date. Though there is not much satisfaction with the reported arrangements and the mode of purchase for acquiring Burmese rice, the fact that large quantities can be expected in this country from Burma should be regarded as very encouraging. The bullion market has been very firm and a further rise in prices has been recorded during the week. The raw jute market has continued quiet while the jute manufactures market has been uninteresting. The raw cotton market was listless.

The bullion market has continued very active and a further substantial rise in prices has been recorded. The uncertainty regarding the Reserve Bank's sales policy and the growing belief that ultimately, the Reserve Bank might suspend gold and silver sales have resulted in a squeeze in the market. But for the reports that the U.S. Government will give permission for the mining of gold as from the beginning of the next month the reaction in prices on Wednesday would not have come about. In the silver market, especially, very firm conditions have been noticeable on large-scale buying on behalf of an Indian State in the South. The demand for the white metal at a particular time was so great that even a prominent bull operator who sold ready and bought forward was in a squeeze and had to adjust his positions. Offtake is satisfactory in spite of mofussil arrivals of five to ten thousand tolas of gold and twenty to fifty bars of silver daily. While the mofussil is convinced of lower prices for the precious metals ultimately, the chief manipulators still seem to be of the opinion that they could control prices in the bullion market in any manner they like.

The table below will show that since the beginning of this month there has been an uninterrupted rise in prices both for gold and silver and that in the silver market the premium for ready has considerably appreciated, indicating the tightness of the Spot position. The vagaries of the Reserve Bank will also be evident from the same table. There is a progressive reduction both in the case of silver and gold. It need not be emphasised that the daily sales of 20,000 tolas of gold and 100 bars of silver do not satisfy the present needs of market requirements.

	Gold		Silver	
	Ready	Forward	Ready	Forward
Date	Rs.	Rs.	Rs.	Rs.
19-6	78-4	78-2	137	135-14

13-6-45	95	133-14
11-6-45	145	133-14

The raw jute market has been very quiet with only a small business passing. With the continued difficulty in respect of business in the hessian market mills are not prepared to enter into further commitments for raw jute. Reports regarding the new crop continue to be favourable though it is said that in East Bengal dry conditions will be welcome. With the pressure for godown space and the anxiety of sellers to dispose of the old crop before the new crop arrives, there is a substantial discount in Calcutta for old crop supplies. But mills are taking very little interest as they have ample stocks and there would be no need for buying further quantities of jute unless there was a substantial improvement in production and it were possible to increase sales in the fabrics market. It appears, however, that there is no possibility of a substantial improvement in the conditions in both the hessian and heavy goods markets for some time.

As the bulk of the crop has moved out from the mofussil and the balance stocks are in strong hands, similar conditions do not prevail in up-country centres and in certain districts prices are above Calcutta parity levels.

In the loose jute section old crop Supervised Jat Middles and Bottoms were freely sold at Rs. 15 and Rs. 12 per maund it being even reported that a discount was offered in cash in certain cases for taking a larger assortment of higher grades. It is rather suprising that business should be done in the jute market below official minimum rates even with the existence of the Jute Purchasing Panel what time mills are insisting on maximum rates for hessian. It is stated that in the last two days slightly more interest was taken in the jute crop and that a slight premium is being offered. District new crop is available at minimum prices but Supervised Jat is not sold freely.

In the pucca bales section export business has been restricted. Mills have purchased S.M.R. at Rs. 56, Special N.C. at Rs. 47 and N.C. & M.C., at Rs. 43 and Rs. 42 respectively.

In the jute manufactures market also dull conditions continue to prevail. There were reports of more American orders but these have not made any difference to the market and second-hand sellers are still prepared to accept business at a discount over maximum rates. Mills have not yet made up their minds as they have a feeling that it would be possible even under the present circumstances to dispose of hessian production at maximum rates, though for such a disposal there will have to be a substantial improvement in the shipping position of which there are as yet no signs. A slight improvement in the quotation for forward positions is noticeable but for October-December the discount is still appreciable. 9 porters ready are quoting Rs. 28, July-September Rs. 27-10 and October-December 27.

The heavy goods section was weak with no business of importance B. twills ready quoted Rs. 64 and October-December Rs. 60.

Perhaps the most important announcement from the point of view for the average citizen is the news regarding the possibility of early imports of rice into this country from Burma to the extent of 500,000 tons per annum. It need not be said that this quantity would be very welcome as it would considerably relieve the scarcity in respect of the staple commodity and prices will be brought down considerably. It is not clear when the rice imports will be available as it was said earlier that it will not be possible to export from Burma large quantities of rice before the new crop arrives. Unofficial reports suggest that local stocks even at the present moment are ample. If only the necessary transport could be made available Burmese rice could be had even now.

With the reconquest of Burma, the question of safeguarding Indian interests in that country and the participation in business activites by Indians on the pre-war scale has naturally assumed importance. The arrangements for importing Burmese rice have been criticised. It is reported that an Agricultural Purchasing Board vested with the monopoly of purchasing all surplus rice available in Burma will be formed and that exports will be made at a fixed price. This means that Indian traders will be ousted out and that the position that existed in 1941 before the entry of Japan into the war will again prevail. The Indian Merchants Chamber, Bombay has addressed the Government of India in this connection and has said that suitable representations should be made to His Majesty's Government to safeguard the interests of Indian rice merchants in the Burmese trade and utilise their trade organisation in as useful a manner as possible.

The British Ministry of Food will buy rice from the Agricultural Purchasing Board and be responsible for exporting it. The financing of these operations will be undertaken by the exchange and other banks who were interested in the rice trade before the outbreak of war. The scheme stipulates that the food department of the Government of India will be expected to negotiate for the Ministry of Food for the Indian requirements of rice. This arrangement, according to the information available at present, is expected to continue for at least two years after the Civil Government in Burma begins to function.

Need for Popular Direction:

I do not know whether I should give you a Bouquet or a Brickbat for your leading article 'Need for Popular Direction' in the Indian Finance dated June 16. For one thing, I felt the heading was misleading. I would prefer to call it 'Accept the Wavell Plan'. You have made a good case for acceptance and rightly, then why not say it straight? For another, you have taken a page for what you could have said in one paragraph. I will quote lines from the article which in my opinion brings out your theme. "The toll of suffering which the rejection of the Cripps proposals has taken on the people at large is not easily reckoned.....It will not be gainsaid that the presence of responsible Indians in the Councils and Ministries during the food famine and generally during the days of painful and costly adjustment to the demands of a prodigious war effort would have made a vast difference to the well being of the common man. The same may be said of the present period which is crucial from the point of view of post war development... .....Political life in India is not so well organised that the alternative to popular leaders has to be found only in foreign officials. Indians with varying pretensions to a representative character are always found ready to execute policies which are not in the popular interests. Their presence in the Government not only helps to disarm foreign critics of British policy in India, but also to spread the tentacles of corruption over the whole of public administration and public policy..... India has before her only one of two chances. Either the affairs of the people are taken charge of by a body of representative leaders and shaped in accordance with the people's will or the forces of disruption are let loose on the country....." Admirable expressions, these are. Sensible direction. Editor, you have given; then why ask for a *popular* direction?

This is a bouquet or brickbat, I know not, but like the Wavell plan it is open to you to take it or leave it.

Amal Karkoon.

COAL-TAR DYE-STUFFS

ARE NOW MANUFACTURED IN INDIA

INDTHOL DYES

have exploded the myth that fast and standard dyes cannot be manufactured in this country on a commercial scale.

Experts in the Textile mills of Bombay and Bengal have appraised the quality and price of INDTHOL DYES and have found them favourable on both counts as compared to imported dyes.

The manufacturers of INDTHOL DYES regret their inability to cope with the huge demands but they wish to assure the consumers of dye-stuffs that every effort is being made to increase the production.

It is important to remember in this connection that dye-stuffs worth over 3.5 crores on an average are consumed in India every year.

Jute and Jute Manufactures

(From Our Correspondent)

Special to "Indian Finance"

Calcutta, June 21.

The estimated arrivals of jute for the first half of June amount to 2,20,000 bales bringing the total arrivals as from July 1944 to mid June 1945 to 61,67,000 bales which, so far, exceeds the official estimate of the current season's crop by over six lakhs bales and is almost ten lakhs bales more than the arrivals for the same period of the 1943-1944 jute season. Therefore with expectations of a fairly large carry-over to the coming season and with further favourable reports coming in regarding the progress of the new crop, Mills are not at all anxious to enter the market. In the past week there has been no change in the depressed condition of the raw jute market and holders have very little prospects of an early improvement in prices unless mills come in to buy and unless exports show a substantial increase. It seems to us that for some weeks at least there is very little chance of any appreciable increase in the consumption of raw jute as local mills are still handicapped by shortage of labour and coal. It is hoped that there will be a considerable influx of labour to mills in July after the harvests are over and this will determine the ability of the mills to take advantage of any increase in coal supplies. If present conditions continue to prevail when heavy arrivals of the new crop begin to appear in August or September then it may become necessary for the Jute Purchasing Panel to commence operations to stabilise prices as without this influence it is quite likely that attempts might be made to depress prices still further. The fabrics market, too, is almost stagnant and disappointment seems general regarding the lack of orders for sacking from abroad which were more or less confidently expected after the cessation of hostilities in the west and following the reconquest of Burma. The trade may be said to be passing through one of its duller periods and its immediate future appears to be very uncertain. All things considered he would be a bold man who would subscribe to any definite view under existing circumstances.

Jute imports into Calcutta and the Mills' stations during May viz. 23,34,085 maunds, were higher than the April figure by nearly two lakhs maunds but were about 2½ lakhs maunds below the average imports for the ten months July 1944 to April 1945. In May the arrivals by boat again decreased sharply, amounting to only 16 p.c. of the average monthly imports for the previous ten months. Arrivals by vessel and rail also declined from the average maundage imported monthly during the previous ten months by about 7 p.c. and 12 p.c. respectively. However, the total imports upto May this year compares favourably with the total imports for the same period in season 1943-1944 being 2,91,50,979 maunds as against 2,43,60,242 maunds.

During May 96,000 bales of jute were exported from Calcutta bringing the total exports for the eleven months of the current season to 9,36,000 bales. This compares with 9,00,000 bales exported during the period July 1943 to May 1944. As pre-war exports of raw jute during a full season were almost four times these figures it can confidently be expected that exports in the coming season will appreciably increase but of course much may depend on shipping facilities. At time of writing a report is current in the bazar that shippers have today done a fair business in top marks for export to Dundee markets but details are not available to us at the moment.

Deliveries of coal at the Indian Jute Mills Association dump for week-ending 16th June averaged 45 wagons daily; a distinct improvement on the preceding week's sorry showing of only 33 wagon loads per day. The improvement has been maintained this week, the average for the first five days being 48 wagons daily. Deliveries, however, are still well below Mill's requirements and the position is unsatisfactory.

A Bengal Government press communique issued by the Department of Agriculture states that, as in previous years, district figures of jute acreage in Bengal and the Provincial figures of Assam, Bihar and Orissa, Cooch Behar and Tripura will be published at 4 p.m. on the 3rd, 4th, 5th and 6th July and at 12 noon on Saturday the 7th July 1945, in the Western Arcade of Writers' Buildings, Calcutta. A printed forecast showing the figures of the jute growing districts in the four provinces of Bengal & Orissa, Cooch Behar and Tripura with remarks regarding the condition of the crop and weather will be published at 12 noon at Writers' Buildings on Friday, 13th July 1945.

The Indian Jute Mills Association issued the following statement of total reported sales for the week ended Saturday 9th June 1945:—

	This & next month Yds.	Forward Yds.
Hessian	32,17,600	38,63,110
9 oz 40" Hessian (included in above)	20,000	16,000
Twills	23,80,063	39,69,410
Plains	11,51,919	27,72,459

There is nothing of importance to record in the Pucca Bale market over the past week but small business was done with local Mills in S. M. Rejections at Rs. 56/-, Special N. Cs at Rs. 47/-, N. Cs at Rs. 43/-, and M. Cs at Rs. 42/-. Dealers are free sellers for all descriptions both old and new crop, at minimum rates except in the case of Cuttings which are quoted at maximum prices.

In the loose jute market sellers are pressing for business and offering old crop in quantity at minimum prices but without attracting much interest from buyers. Old crop middles alone were done at Rs. 15/- for Supervised jat marks and small business was also done in supervised jat, new crop, at minimum rates. Bengali District jute has also been done at minimum rates. Sellers, however, are not offering new crop supervised jat so freely but there is quite a lot of supervised District new crop on offer at minimum prices.

Acceptances of further hessian business from the U. S. A., reported recently, had little effect on markets and there is only small business to report in odd sizes. Mills are very reserved.

Heavy goods business has been chiefly confined to inter-bazaar transactions. There is very little demand and prices for the forward positions show a substantial discount.

Quotations in the manufactures markets as on 21/6/45 were under:—

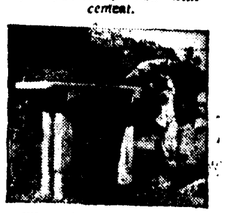
An Ounce of PRACTICE..

A permanent grain silo.

Concrete trackway for single wheel bullock-carts, hand-carts, cyclists, &c.



Concrete drinking fountain, improvements to the village well and concrete approach way.

Dharamsala flooring after concreting.

All-weather creteway—the villagers' highway.

Close-up of the model village house.

Clean and dustless market platforms paved with cement.

Way-side concrete platforms for off-loading and re-loading without other assistance.

.....is worth a pound of theory. Improvement of the villagers' lot has rightly been given the first place in all post-war plans and believing that a practical demonstration showing how village conditions can be improved would be of some assistance to the Government and the public alike, we recently carried out certain *concrete* improvements at Virar—a village 38 miles from Bombay.

These comprised the construction of a new village house, a demonstration length of all-weather creteway, a permanent grain silo, clean and dustless market platforms, a drinking fountain, a single narrow trackway suitable for hand-carts, cyclists, single wheel bullock carts, a novelty in the process of development. It is hoped that a Public Service of some value would be discharged by this kind of demonstration.

Our pamphlet "Dawn of the new era" containing a full description of this demonstration will be supplied on receipt of the attached coupon and stamps for annas 2.

The Concrete Association of India,
Victoria House, CALCUTTA.

Dear Sirs,

Stock Markets to-day and to-morrow:

POLITICAL MARKETS

Markets, both in Calcutta and Bombay, were rather irregular and business passing was restricted. As pointed out last week the anxiety over the developments in the internal political situation and the feeling that there was need for consolidating the ground already gained, were mainly responsible for the indifferent tone of markets. It was soon apparent that the general undertone of markets was quite steady and that with the extremely cheap conditions in the money market and the large volume of funds seeking investment, there could not be any appreciable setback in prices. As it was felt that the Viceroy's proposals would have general acceptance and that the Simla conference might succeed the upward trend was resumed though, it should be said, that there has been no vigorous rise in prices and there might not be any jump in the quotations for two or three weeks. That is till the results of the Simla conference are fully known.

It was feared for a time that the popular governments might have different notions regarding industrial development in the postwar period and that, State interference might result in a decrease in earnings of industries. While, after several years of independence, Leftist views might possibly assert themselves, it should be said that there is no danger of any immediate discouragement to private enterprise and that, as Friday morning's reports confirm, Congress, more than any other body, is interested in the rapid industrialisation of this country and that the new "National" Government will afford every encouragement possible for the promotion of new enterprise. Which means, as emphasised last week postwar development will be a reality and existing companies stand to benefit to a great extent The general tone of markets on Friday is rather satisfactory and prices are very near the highest levels for the week.

BIRD & CO., Calcutta

The accounts of three more jute companies show that even the foster units have their own difficulties and that the higher level of working expenses interfere with earnings. Alliance and Champdany Jute Mills are foster units. Alliance is working the loom hours of the requisitioned Alexandra Mills and also Craig. Champdany is also a Foster unit. The Wellington Mill has been working the loom hours of the Hastings Mill. Continuous working was maintained at both the mills during the halfyear ended March, 1945 though shortage of labour in the *Champdany Jute Company, Limited*, accounted for a slight reduction in earnings.

The net profit of the Aliiance Jute Mills, *Limited*, for the six months ended January 1945 is Rs. 17,20,607 against Rs. 27,19,690 for the previous six months. The amount set aside to depreciation is Rs. 1,25,000 (Rs. 1,50,000) while the provision for taxation is Rs. 12,30,367 (Rs. 20,85,000). The sum transfered to Reserve for Machinery Renewals is Rs. 1 lakh (Rs. 1.5 lakhs). In the previous half-year a sum of Rs. 14,000 was set aside to reserve for furlough passages. The dividend on ordinary shares has been reduced to Rs. 15 per share from Rs. 17-8 per share for the previous six months. The amount carried forward forward is slightly lower at Rs. 36,535 against Rs. 4,01,275 brought in.

The company's mills worked double shift from the beginning of August, 1944 in order to absorb the loom hours of the requisitioned Alexandra and Craig Mills. The number of looms in Alliance is greater than both the looms of Alexandra and Craig together and therefore more looms were available than is permissible to use for double shift working. The surplus capacity was, therefore, utilised to a certain extent for making the lost loom hours of both the requisitioned mills referred to above. The decrease in earnings for the half-year is due to the decreased relative productive capacity and the payment of Rs. 2,12,826 to the Indian Jute Mills Association being the company's share of profits to the Industrial Pool.

* * * *

Alexandra Jute Mills Company, Limited, like the Kinnison Jute Mills has been fortunate in making up its arrears of loom hours to a certain extent, the arrangements with the Alliance Jute Mills thus proving profitable. The net profit, before providing for taxation and depreciation, is slightly higher at Rs. 5,13,627 against Rs. 5,07,933. The amount set aside to depreciation is higher at Rs. 50,000 (Rs. 25,000) while the provision for taxation is slightly lower at Rs. 3,57,102 against Rs. 3,72,999. The amount transferred to Reserve for Machinery Renewals is Rs. 30,000 (nil). The General Reserve receives Rs. 23,587 against Rs. 25,000. The dividend has been only maintained at Rs. 5 per share.

Production at the mills of the company ceased at the end of July 1944 on being requisitioned by the Government. Arrangements were made for loom hours to be worked by the Alliance Mills. In addition to the loom hours in respect of current working some of the arrears of loom hours also was made up.

* * * *

Champdany Jute Company, Limited, has earned a net profit before providing for taxation and depreciation for the half-year ended March, 1945 of Rs. 11,22,067 against Rs. 13,07,671 for the previous six months. The decline in earnings is mainly due to the scarcity of labour and the increase in working expenses. The amount set aside to depreciation is Rs. 1,98,353 against Rs. 1,88,757 while the provision for taxation was lower at Rs. 6.75 lakhs (Rs. 8.9 lakhs). The dividend has been maintained at Rs. 4 per share. The amount carried forward is higher at Rs. 20,150 against Rs. 8,092 brought in.

There is a reference in the report to the manufacture of Pre-Fabricated Bituminised Surfacing about which so much has been published in recent weeks. The company is working the loom hours of Hastings mills which has been requisitioned by the Government. As the requisitioning of Hastings mills is not entirely subject to the general terms of settlement as agreed upon between the Government of India and the Indian Jute Mills Association, but for special treatment, it has not yet been possible to assess definitely the amount of Wellington Mills'

liability towards Hastings. Pending the settlement, however, a sum of Rs. 8.04 lakhs has been paid on the basis of the Industrial Pool arrangement.

Almost all the tea companies which have published their balance-sheets in the past few weeks have been able to report only a lower level of earnings. The dividends have been reduced in nearly every case. The difficulty has been mostly on account of labour and stores and spares. As a result, the crop turned out from the estates was smaller. But for the increase in the average price realised the decline in earnings would have been more pronounced especially as cost of production showed a tendency to increase further.

* * * *

Hantapara Tea Company has reduced its dividend from 60 per cent. to 50 per cent., Kingsley-Golaghat from 35 per cent. to 12½ per cent. and Northwestern Cachar from 27½ per cent. to 20 per cent. Among the more important companies Teliapara has been able to maintain the dividend at 40 per cent. owing to the smaller provision for taxation and the transfer to reserves.

Gielle Tea Company is perhaps one of the very few exceptions to be able to pay a higher dividend in respect of 1944, 12½ per cent. against 10 per cent. Favourable weather conditions resulted in an outturn of 247,191 lbs. The realisation of the higher average sale price of 16.55 annas against 15.48 annas per lb. with a reduction in working expenses have naturally resulted in an increase in the net profit to Rs. 70,423. After transferring Rs. 15,000 to reserve for Renewals and Additions and providing for taxation Rs. 18,767 the dividend on ordinary shares has been increased to 12½ per cent. from 10 per cent. The amount carried forward is not very much changed at Rs. 19,844.

(*Continued on page 871*)

THE auctioneer's monotonous yet practised voice drones on. With consummate skill he plays upon human weakness, extolling his wares, calling for a bid, sometimes here, sometimes there, and up and up goes the price. When the hammer falls at last, the hopeful bargain-hunter pauses and thinks for a moment....Have I paid more than I should have? He has at least paid more than he wanted to! Do you ask yourself the same question whenever you make a purchase? Perhaps you do not realise that in these days every time you buy something you are participating in an auction. It is common knowledge that goods are in short supply and that buyers are many. Maybe for each article there are dozens, perhaps hundreds of buyers, all anxious to secure it. The sellers know it and take advantage of it in the same way as the auctioneer. Do not buy at inflated prices. Be wise and postpone your purchases till after the war and save money now.

PLAN TODAY FOR TOMORROW
SAVE ALL YOU CAN

But remember to invest your savings where they will be safe, and waiting for you when you need them.

Avoid buying land, buildings, commodities, manufactured goods or jewellery. Their prices are very high and likely to depreciate as time goes by. Today's best investments are Insurance, Co-operative Societies, Savings Bank Accounts, Post Office Savings Bank Accounts and best of all National Savings Certificates and Government Loans. SAVE SAFELY FOR THE FUTURE

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, June 22.

Rather quiet conditions were noticeable earlier in the week on the Calcutta Stock exchange and business passing was restricted. The anxiety regarding developments in the political situation and an inclination to await the decisions of Simla Conference resulted in a sharp drop in prices towards the close of last week. But as it was known during the week that there would be a general acceptance of the Viceroy's proposals and the Simla Conference might succeed, prices recovered though it should be said that the upward trend has not been fully resumed Markets will be again active only in the middle of the next month. Coal shares have very nearly recovered the lost ground while Jutes have tended to be higher towards the close on reports that American orders will be forthcoming on a larger scale and the trend of consumption in the United States will be higher. In the Engineering section Steel Corporations were steady though Indian Irons were fluctuating in wide limits owing to the manipulations of a prominent operator. The undertone in all the sections is quietly steady. Markets were closed on Monday to celebrate the release of Congress leaders.

The giltedged securities section has not been active and 3½ per cent paper was rather sticky at Rs. 101/8. Terminable loans, however, remained steady as the suspension of tap sales of 3 per cent. for 1966-68 led to some buying and investors also were inclined to buy more liberally the long-dated issues. 3 per cent. Paper improved to Rs. 94 on speculative buying but the close is lower at Rs. 93-4. 3 per cent. Victory Loan 1957 was Rs. 100-6, 3 per cent. 1970-75 Rs. 97-1.6, and 4 per cent. 1960-70 Rs. 112-15. 3 per cent. 1966-68 was better at Rs. 98-9 and 3 per cent. 1953-55 at Rs. 101. No transactions have been recorded in Provincial loans. Easy conditions continue to prevail in the money market and the Central Government has again been able to get its requirements of treasury bills at a discount of 4 annas per cent.

Bank shares have continued firm with *Reserve Bank* further higher at Rs. 138-8. *Calcutta National Bank* were Rs. 15–12 and *United Commercial* Rs. 22 premium.

Cotton shares have been quietly steady, *Bengal-Nagpur* being Rs. 44-6. *Cawnpore Textiles* Rs. 12-7, *Elgin* Rs. 66 and *Kesoram* Rs. 17-13. *Dunbar* changed hands at Rs. 3-15 and *New Victoria* Rs. 7-8.

In the Coal section, as remarked above, rather quiet conditions were noticeable earlier in the week. *Burrakur* were noted lower at Rs. 42-5, *South Karanpura* at Rs. 31-12 and *Bengal* at Rs. 722. Quotations, however, are higher at the time of writing though there is always a tendency to take profits at the higher levels. *Burrakur* after improving to Rs. 43-12 are now quoting Rs. 43-1, *South Karanpura* Rs. 32-3 after being Rs. 32-10, *East India* Rs. 41-12, *Equitable* Rs. 69-12 *Pench Valley* Rs. 56-8, *Raneegunge* Rs. 61-12 and *Talcher* Rs. 12-8.

There was nothing of importance in the jute section earlier in the week. But in Thursday's session a rise in prices was recorded all round. The expectations of an improvement in exports were mainly responsible for the improved tone of the markets. *Chitavalsah* and *Nellimarla* in particular, were in request, the quotation being nearly 2 points higher at Rs. 36-2 and Rs. 37-6 respectively. *Anglo-India* improved to Rs. 491-8 from Rs. 482. *India* to Rs. 709 ex-dividend from Rs. 705 cum -dividend. *Kamarhatty* Rs. 750 from Rs. 741 and *Kanknarrah* to Rs. 627 from Rs. 622. *National* were steady at Rs. 34–14 and Reliance at Rs. 78-10. *Presidency* were a shade better at Rs. 12-4.

In the Engineering section, *Indian Iron* improved to Rs. 42-4 from Rs. 41-10 but liquidation by a prominent operator resulted in a setback to Rs. 41-10. *Steel Corporation* are now quoting Rs. 34-3 after being higher at Rs. 34-8. *Kumardhubi Eng.* were fairly steady at Rs. 11-4 and *Braithwaite* at Rs. 12-12 *Jessop* were unchanged at Rs. 25-8.

Sugar shares are a shade better with *Balrampur* at Rs. 17-4 and *Purtabpore* at at Rs. 22-14. *Carew* are quiet at Rs. 28-8 as also *Ramnugger Cane and Sugar* at Rs. 18-2.

There is not much business in the Tea section *Hattikhira* were Rs. 25-10, *Moheema* Rs. 14 and *Tezpur* Rs. 21-12.

In the Miscellaneous section Burma shares are quiet with *Burma Corpn* quoting Rs. 5-8 and *B. B. Petrol* Rs. 5–12, *Alkali and Chemical* are higher at Rs. 31-1 and *Aluminium Corpn.* at Rs. 16-3. *B. I. Corpn.* were sticky at Rs. 6-8. *Titaghur* were steady at Rs. 31 and *Midnapore Zemindary* at Rs. 185-8. *Assam Saw* are quiet at Rs. 5-9. Shipping issues were better with I.G.N. further higher at Rs. 206 and *Calcutta Landing and Shipping* at Rs. 38-8. *Assam Bengal Cement* were steady at Rs. 19-11. There is a further rise in *Reliance Firechicks* to Rs. 23-2.

THE ALKALI & CHEMICAL CORPORATION OF INDIA LTD.

The Share Registers of the Company will be closed from 10th July, 1945, to 16th July, 1945, both days inclusive.

By order of the Board.
IMPERIAL CHEMICAL INDUSTRIES (INDIA) LTD.
Secretaries.

Calcutta, 18th June, 1945.

BURN & COMPANY LIMITED.

NOTICE.

NOTICE is hereby given that the Board of Directors of this Company has sanctioned payment of the usual Dividend on the Preference Share Capital of the Company for the half-year ended 30th June. 1945. Payment will be made on or after the 10th July, 1945, to those shareholders whose names appear on the Company's Registers on the 30th June, 1945, or in accordance with their instructions.

By Order of the Board,
BURN & COMPANY,
Managing Director.

12. Mission Row,
Calcutta,
The 18th June 1945.

CALCUTTA CLOTH RATIONING

For people who draw their food ration from Employers' Shops, full-fledged cloth rationing has come without any question of selection or priority. CLOTH RATION (A) will be distributed through the Employers' Shops to all —men, women and children—on the basis of their FOOD RATION CARDS. Ration for children (below 12) is smaller. Only, those who have already got their first ration (CLOTH RATION A) cannot get a further quantity just now.

Distribution of cloth through the Employers' Shops will cover about a million and a quarter of people which is roughly one-third of Calcutta's population. The rest, for the present, will get their cloth through the Ward Committees.

The Scheme applies generally only to employers who run their own Food Ration Shops or Stores under the Food Rationing Scheme. All Employers of labour within the Extended Food Ration Area may now indent for supply of cloth for the issue of Cloth Ration (A) to their employees and their dependents registered at their Shops or Stores. Forms of indent, with necessary instructions have been sent to them by the Directorate of Textile and, after being filled in, must reach that Directorate by 30th June, 1945.

Employers who fail to get the Indent forms and instructions by the 25th June, 1945, should get in touch with the Directorate of Textiles (Phone Cal. 1696).

DEPARTMENT OF CIVIL SUPPLIES, BENGAL

ANNOUNCEMENT
GAYA SUGAR MILLS, LIMITED

In the report and statement of accounts for the year ending 30th September 1944, in which, however, an account of the difficulties was set in the report such as low recovery of 9.2 p.c. due to varietal defect of Sugarcane and the increase of the prices of cane by As. 2/- per maund and the cess by 3 pies per maund and correspondingly with no increase in the price of sugar being controlled and distributed by the government and also the quantity of cane crushed was 54.2 p.c. of normal crush and the cost of raw material, labour charges and dearness allowance becoming higher, the gross profit for that season was lower, the directors noted with great regret not to pay any dividend to their shareholders who were being paid the dividend from the very inception of the factory from 1934 maintaining the standard of 8 p.c. Now they have before them the figures subject to audit for the working of the season 1944-45 the accounts of which close on the 30th September 1945. The Directors therefore take pleasure in announcing to their shareholders, both old and new an ad-interim dividend of 3 p.c. per share on the Ordinary shares and to pay the Dividend on preference shares till March '45. In view of the increase of capital which was formerly only Rs. 8,47,400/- but which has now been increased to Rs. 23,47,400/- for purpose of erecting a second factory in Warsaliganj, the Directors further hope that the final dividend will not be less than the ad-interim dividend.

The issue of further capital is needed in putting up a sugar factory with a capacity to crush 2,000 to 2,500 tons of cane per day at Warsaliganj which according to the Government of Bihar is the best cane growing area in Bihar. The works at Warsaliganj for the new factory have already started and a suitable site of 45 acres has already been purchased and building work will be started as soon as plan is received. The company has also made arrangements to supply water in an area of 100 square miles for cultivation of cane and 200 wells well fitted with electric pumps are being proposed to be put up. Further under the supervision of its development department which consists of several agricultural graduates it will greatly improve the quality of cane and actually speaking the development work has already been begun for the season 1945/46, and the Company expects to get 8 lakhs mds. of improved variety of cane over and above the supplies that will come from the reserve area of the existing factory.

Plant. The Company has already placed an order for the plant with one of the best sugar machinery makers in England and also sending a competent officer of the company to England to discuss further about the latest machine with the manufacturers and also to come into contact with other machinery makers. Needless to mention that the plant will be a most up to date, automatic and electric driven plant.

Prospects of the New Factory. It is safely expected that the Warsaliganj factory shall crush 80 lakhs maunds of cane apart from the crush of 26 lakhs maunds in Guraru. It will, therefore, crush over a crore of maunds of cane in a season. With this huge crushing and the manufacturing cost going down it is expected that the profit of the company when the factory starts working will be several times much more than the present profits. The plant is scheduled to arrive at the beginning of the year 1946 and it is sure that the season 1946-47 will be caught with ease. We can assure our shareholders that provided things go according to plan they can depend upon a very good profit and better dividend. Since the cultivation of a cane in the Guraru Mill area is good it is expected that the coming season should be a much better season.

G. S. LALL,
Managing Director.

15, Clive Street, Calcutta,
June 19, 1945.

WAR TRANSPORT DEPARTMENT

NOTICE.

The understand has addressed all known importers of motor cycles from the U. K. direct in regard to the remaining demands for the import of motor cycles from the U. K. for 1945 and 1946. Will any firms importing motor cycles pre-war who have not been addressed, and who are interested in this matter, communicate with the undersigned as soon as possible?

Controller of Motor Transport,
(Supplies).

(Continued from page 866)

Discussing the results of the South Karanpura Coal Company, Limited in the issue of "Investor's Supplement" dated June 9, 1945 on page 795 it was mistakenly stated that the target bonus is not liable for income-tax and E.P.T. Bonus payments to collieries are subject to income-tax and super-tax but not to E.P.T. The calculation regarding the bonus payments that would be earned by the Company, Rs. 3 lakhs, is my own. The Directors have only stated in the report that "a sum of approximately Rs. 2 lakhs which is subject to income-tax and super-tax will be earned during the half year ended 31st March, 1945 and will be included in the next half-year's accounts after the figures have been agreed with Government." Referring to the fresh concessions announced by the Government the directors state "a substantial sum will be earned by the Company under this additional bonus scheme for the half year ended 31st March, 1945.

* * * *

Kamani Engineering Corporation Limited is perhaps the first big enterprise of its kind floated in the war period. The three units which are to be taken over by the new company as going concerns have also had their existence under war conditions but the progress made by them under the enterprising directors has been so convincing that the companies, inspite of their being entirely engaged on war contracts and doing entirely new kind of work, are on a paying basis. All the three companies are on the government lists for contracts and are getting every manner of assistance from the authorities. In the prospectus it is stated that W. Leslie & Co. (Punjab), Limited is earning 7½ per cent. after providing for taxation and depreciation. Kamani Enamel Industries, Limited, Kalyan, 10 per cent. and W. Leslie & Co., Limited (Bombay) 6½ per cent. These three concerns are to be taken over at a cost of Rs. 40 lakhs. Besides all contracts Goodwill and other assets are to be handed over to the new company within a period of one year from May 22, 1945, in return for an additional Rs. 2 lakhs payable to the three companies. Expansion projects have been already been sanctioned and as it is proposed to amalgamate, under the new management, the two factories in Bombay it is expected that there would be a large increase in earnings with the continuance of present conditions. In the postwar period the company is assured of protection

The authorised capital of the company is Rs. 1.5 crores of which Rs. 60 lakhs is issued in 15,000 five and half per cent. cumulative redeemable preference shares of Rs. 100 each, redeemable after five years at 5 per cent. premium at the option of the Company and 4,50,000 ordinary shares Rs. 10 each. Of the ordinary shares Rs. 12 lakhs will be allotted to the vendors and further shares of Rs. 5 lakhs preference shares and Rs. 8 lakhs ordinary shares have been agreed to be taken up by the directors and their friends. The balance of 10,000 preference shares and 2,50,000 ordinary shares are offered for public subscription. The issue of redeemable preference shares at par with the prospect of dividends from the beginning is sure to attract the attention of the discerning investor while the ordinary shares have scope for capital appreciation.

* * * *

Rampur Industries, Limited, is making an issue of additional capital for extending the activities of the company. Already the Company has got State monopoly for the conduct of business in its line. In 1943 and 1944 good profits were reported and a dividend of 20 and 22 per cent. was paid in respect of the two years. The new capital will be in the form of 5 per cent. preference shares and ordinary shares. It will be offered in the first instance to shareholders. Any balance not taken up by them will be offered to the public. As the company is already paying satisfactory dividends it should be expected that the capital will be subscribed by the shareholders. If any balance is offered to the public they should consider themselves lucky. It would be interesting to note in this connection that shares of companies registered in the Rampur State are doing very well and their shares are quoting many times their face value.

DAGGER I T BRAND
HIGH SPEED
TWIST DRILLS
REAMERS & CUTTERS
ITM is the hallmark of quality, dependability in Twist Drills, Reamers and Cutters. BOUQUETS & BRICKBATS
(From our Readers)

Thief of Health:

Writing under the above title in your issue of May 5, you had emphasised the need for Government to get the Vanaspati Ghee plants into production at as early a time as possible. The necessity of immediate and quick action by the Government was in the genuine interest of the masses who are greatly affected by this ghee famine in the country.

I am writing this specially because, since you wrote the above no progress has been made by the Government in carrying out this scheme. On the contrary the Government are actually delaying matters without any appreciable reason. Let me explain how, according to the position as it stands today, the actual production of Vanaspati Ghee under the above scheme is not likely for another twenty-four months.

The machineries are not likely to arrive in India before another twenty months at least. Reason: The Government have not issued any import license to those who have been selected to start these factories in the places chosen by the Government. It is not likely even if the Import licenses for procuring the machineries from U.K. are granted now, that they would be for the period July-December this year, or even for the period January-June next year. For none of the manufacturers in U.K. are in a position to supply the complete plant with Turbines before eighteen months from the date of placing the orders on them. Presumably on this assumption the Govt. will issue the license for importing these plants only for the period July-December next year. Therefore, even granting machineries are exported from the U. K. by end of December next, which would be the earliest without allowing any time for the Govt. of India's lethargy in issuing the necessary permits, the actual production will be possible, after allowing time for transportation, erection of the plants, etc. only by middle of 1947, viz. after twenty-four months from now.

If, however, the Government have the interest of the suffering public at heart, it can be arranged that Vanaspati plants are erected in this country in about ten months from now. For this, the government should issue the license for the import of machineries here and now, and for the period July-December this year. Excepting Turbines, the machineries, if ordered now, can be got manufactured in U.K. before December. It is only Turbines that the U.K. manufacturers are not able to get ready before 18 months from the date of placing the order. These however are offered by manufacturers in Switzerland within six months from the date of placing order. Therefore without the Government insisting that all the machineries should be imported only from U.K. they should make an exception in the case of Turbines and thus allow the firms who are selected to get all the machineries before end of this year. Thus by about April next year all the firms will be in a position to produce the ghee.

Thus, if the Govt. do not arrange to set the ghee produced in ten months, it will be beaause they will follow the rule that all the machineries should be brought only from U.K. and nowhere else, however much it may seriously delay carrying out this scheme. This will be an outstanding example of Govt.'s insincerity and unsympathetic attitude to the suffering masses in this country.

Procrastination, as you said, will be the thief of health. Will the Government realise this now at least, though so late?

P. K. Subrahmaniam

Agricultural Income-tax for Madras:

I have been following with interest the exchange of bouquets or brickbats between Mr. A. S. Nath and Mr. K. Srinivasan. Doubtless, there are arguments for and against the proposed Agricultural Income Tax for Madras. But in their enthusiasm, both of them have advanced arguments which cannot stand a mement's analysis.

In his letter appearing in your issue of June 23, Mr. Srinivasan says: "Except that the Sales Tax was levied on the occasion of enforcing prohibition, there is no connection between prohibition and Sales Tax". Is it a travesty of truth or ignorance of fact. I do not know. The Congress Ministers, including C.R., as everyone in South India knows,who toured South India canvassing support for the Sales Tax. said that the Sales Tax was levied only to meet the deficit caused by the introduction of Prohibition. Mr. Nath. therefore, is perfectly right when he says that the advisory government has no business to enjoy the benefits of the Sales Tax when it does not enforce Prohibition.

K.A. Narayan

Change in the Coinage

It is alright for you to argue in theory that we should change to the decimal system of coinage. But, I am afraid the practical difficulties of the change are too many to offset any theoretical advantage. You know the Congress Ministers attempted standardisation of weights and measures but, as far I know, didn't succeed.

When popular mainistries did not succeed with this very good measure in provinces, will it not be very difficult for the Central Government without much popular backing to effect this revolutionary measure on a countrywide scale?.

But, perhaps, if the Executive Council is filled with representative Indians, the measure might receive more popular support.

S. D. Srivatsava.

Unpatriotic and Unsocial

May I refer to your South Indian Correspondent's interesting letter appearing in your issue of 23rd June 1945? He reports that Sir C.P. Ramaswamy Iyer, the Dewan of Travancore warned the Legislature against the activities of certain vested interests who were active in the State recently. Some people were importing jute into Travancore and manufacturing jute mattings, etc., to the detriment of the coir industry, taking advantage of the cheapness of labour in the State compared with Bengal.

One cannot but condemn this in the strongest terms. Just as jute is the important industry of Bengal, so also is coir an important industry for Travancore.

The Travancore coir industry will find it difficult to get labour. At the same time, the Bengal labourer is deprived of work. This may not be felt very keenly during the war, when work is available. But if this evil practice is allowed to go on, nobody but a handful of exploiters will benefit by this. On the other hand, the poor labourers of this Province will be hard hit. I hope the authorities in Bengal will take suitable action to prevent jute being exported for this purpose.

Investment of Insurance Funds

Mr. S. S. Shukla's article on the investment of Insurance Funds in more productive channels than the low-interest bearing gilt-edged securities, Government, Semi-Government, Railway and other "safe" bonds will be welcomed by all persons with the good of the society at heart. In the post-war development of India, the vastly accumulated Insurance Funds can provide the necessary capital if directed towards national interest. But there is a snag. The vastness of these funds is in itself an attraction to the not-so-scrupulous speculator who can divert them towards nefarious schemes and propositions in his own personal interest if allowed to do so without check. Even with the present restrictions the recently reported wholesale transactions of the shares of a few of the well-known and well-established companies has done anything but create fear in the minds of the average policyholders who looks upon insurance as the accumulation of his life's savings. So it seems that unless there is an independent Government or other responsible body to scrutinise the soundness of the schemes proposed to be financed from insurance funds the average policyholder would prefer to pay a slightly enhanced premium by having the funds invested in Government securities. It will certainly be a very sound proposition if the present provisions regarding 55 per cent of the Funds being invested in Government Bonds are amended so as to give elasticity

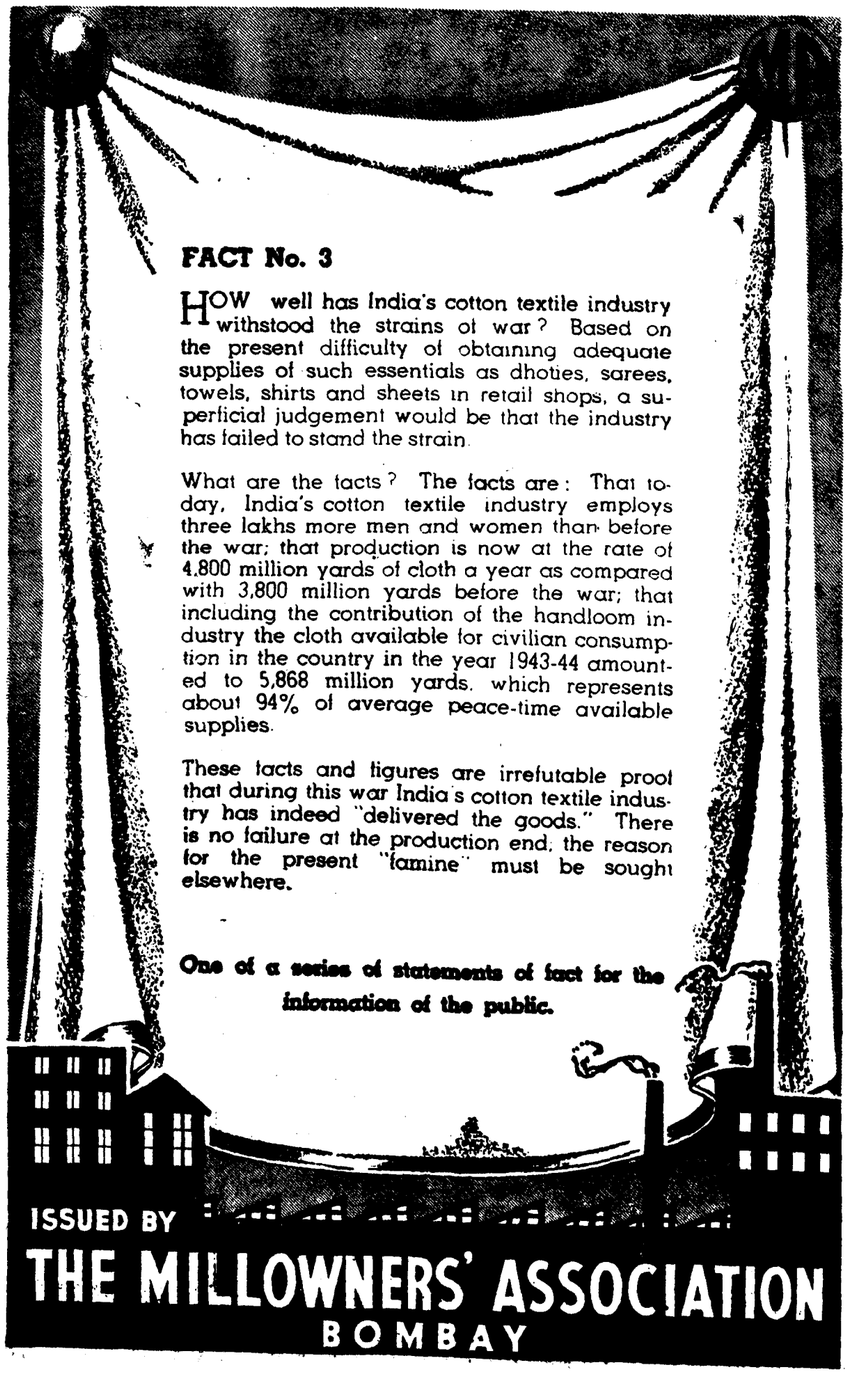
to their investment with suitable controls and safeguards for the soundness and safety of the Funds.

Sir Jeremy and Indian Population

The thanks of the Indian public are due to you for your well-written note under the above heading appearing in Indian Finance dated June, 23, 1945. No doubt it is true that planners should take into consideration the fact that Indian population has grown and is growing considerably in recent years. But the growth of population need not alarm us.



It is said that only poor people get many children. Possibly, if Indians became richer they may get fewer children. And there will be no necessity for any artificial birth-control.

I am reminded of the argument of, I believe, Mahatma Gandhi against birth-control, that the sixth or seventh child may be born a genius and if parents decide they will have no more than, say, four children, the country stands to lose.

I am surprised to read of the solicitude Sir Jeremy exhibits for India after retirement. Even for this we thank him. He should know there are several countries in the world which are alarmed at the declining population. And some Governments go so far as to give a bonus to parents who bring forth the largest number of children.

Also I read a report of a speech where Sir Ivan Mackay, the Australian High Commissioner in India, said that in post-war Australia, there would be more jobs than men. If Sir Jeremy really wants to do some good to India, let him use his good offices with his white brethern and allow Indians to go and settle in countries like Australia

Fact Parade

German Reparations

It is reported from New York that Marshal Stalin has proposed to Britain and the United States of America that five thousand million pounds be fixed as reparations that Germany must pay to the Allies and that half of this sum should go to Russia the remaining half to be divided among all other Allies.

It is understood that when the question of reparations was considered at the Yalta Conference of the "Big Three," M. Stalin first put forward the suggestion that Germany should pay a total of five thousand million pounds. President Roosevelt, it is said, expressed his willingness to accept this figure as the basis for future discussion and so far that has remained the American attitude to the proposal.

Mr. Churchill, on the other hand, is believed to have avoided committing himself and even to have abstained from discussion of the question. His attitude, it is understood, was that he had not given the subject sufficient consideration to warrant him doing anything that would in any way bind future British action.

The American newspaper 'PM' learns that M. Stalin proposes that Germany should pay half the amount of reparations in capital goods and the other half in consumer goods. The paper adds that the question of reparations will be at the forefront at the forthcoming meeting of the "Big Three".

U. S. Gold Situation

The Alexander Hamilton Institute, a research and survey organization, announced that with imports now exceeding exports, the United States is still losing gold, but that with rising exports predicted, the trend soon may be reversed.

* * * *

Reichsbank's Hoard

Foreign securities and gold and silver bullion valued at £1,000,000,000 (about 1,300 crores of rupees) are among the vast treasure-hoard found by Allied military Government officers in the vaults of the Regensburg Reichsbank, reports *Reuter*.

* * * *

Truman's Salary & Taxes

After President Truman pays federal and state income taxes out of his salary of 75,000 dollars a year he will have left only a little more than 25,000 dollars, tax experts estimate. They say it all depends on the extent of the tax exemptions but the "maximum" federal tax would be 46,600 dollars. The President's home State of Missouri also imposes a tax ranging up to four per cent on all over 9,000 dollars. That will take another thousand or more of the President's salary. The President has a 30,000 dollar fund provided by law for travel, medical and entertainment expenses but this is not taxable.

* * * *

U. S. War Casualties

The number of casualties in the United States armed forces from the outbreak of war total 1,023,453, the United States Office of War information announced.

This total, arrived at by combining the latest available United States War and Navy Department reports, is made up of 234,731 dead, 620,032 wounded, 50,864 missing and 117, prisoners of war.

* * * *

Russia and Civil Aviation

Barring fundamental change in the foreign policy, the Soviet Union will remain completely aloof from the international plans for post-war civil aviation, reports Mr. George Moorad, special correspondent of the 'Daily Mail' in San Francisco.

In fact it has already taken decisive steps to see that the buffer areas—like Finland, Rumania and other parts of Eastern Europe—do not come within any ambitious Anglo-American communications plan.

* * * *

Egyptian Cotton For India

Forty thousand bales of Egyptian Cotton are ready for shipment to India. Last month 36,000 bales were exported to India. The Cotton market at Minet El Bassal is very calm at the moment due to the fact that merchants are waiting to know the Government's policy over the new crop.

Egypt's new cotton crop is estimated at 4,640,262 Kanatars. And there is a carry over of ten million Kanatars accumulated during the war years.

Food Dept. & Balanced Diet

The difference in the present cost of a 'balanced' diet as compared to prewar years in the principal rationed towns and of their respective areas is the subject of a communication addressed by the Central Food Department to Provincial Governments and State Administrations.

It is stated that on the basis of replies received, the Planning Section of the Department would be in a position to assess the food requirements of the people, and formulated a plan for raising nutritional standards in the country.

According to the Nutrition Advisory Committee, the composition of a 'balanced' diet for an adult per day in ounces is: cereals 14, pulses 3, vegetables 10, fruits 3, milk 10, sugar and gur 2, vegetable oil or ghee 2, fish and meat 3 and 1 egg. As regards the last two items, a corresponding increase in the milk offtake is recommonded for those who do not take meat or eggs.

* * * *

War Injuries Ordinance

The War Injuries Ordinance has been amended so as to provide relief for physical injury or death caused by fire or explosion. A Press Note issued by the Bombay Government says that this step has been taken in view of the growing intensity of the war in the East and the amount of ammunition and explosive passing through this country.

THE HISTORY OF THE DEVELOPMENT OF THE BUSINESS.

India having no Dye industry of her own, practically the whole of her consumption of this commodity is imported from foreign countries, the bulk of which was supplied by Germany before the war.

The Company was started in 1939 with the idea of stopping this huge drainage by manufacturing dye-stuffs which could compete with the imported materials both in quality and price. The Managing Agents and their friends raised a modest capital and began manufacturing dyes in the Company's factory built on a spacious land measuring 28 bighas, at Behala in the suburbs of Calcutta.

It is gratifying to note that during the first two years the Company was in a position to supply about Rs. 2 lacs worth of dye-stuffs, in no way inferior to the imported varieties at competitive prices, to the textile mills of Bombay and Bengal.

The appreciation of the quality of some of the dyes manufactured by the Company, by the consumers and by such eminent personalities as Sir Ardeshir Dalal and Dr. M. S. Patel, Director of the Chemical Directorate, Delhi, and others has provided the management with additional impetus to carry on the production on a very much larger scale.

SCOPE OF THE BUSINESS.

The report of the Dye-Stuff Exploratory Committee created by the Board of Scientific and Industrial Research consisting of Mr. M. U. Pai and Dr. K. Venkataraman is also significant. After careful and thorough investigation the Pai-Venkataraman Committee have arrived at the conclusion that 50 per cent. of India's Dye-Stuff requirements can be covered with 51 Dyes and 49 relevant Dye intermediates. Out of these the Company has so far manufactured 5 Dyes and 15 intermediates. The purpose of increasing the share capital is to extend the plants and equipments so as to be able to manufacture all the Dyes and intermediates in a scale large enough to meet the country's post-war requirements.

The present project also envisages the manufacture of all the raw materials for Dye-Stuffs, so as to make the Company independent and self-sufficient as far as possible. It is proposed to manufacture Coal-tar Hydrocarbons by installing Coke Ovens, Sulphuric Acid and Olium by the contact process, Nitric Acid by Ammonia Oxidation, Caustic Soda, Liquid Chlorine and Hydrochloric Acid by the Electrolytic process. These cover practically all the raw materials necessary for the manufacture of Dye-Stuffs and with these available at cost price the Company confidently hopes to compete with any imported goods.

The Company has since paid a dividend of 20 per cent. and the management is confident of a similar dividend on the working up to May, 1945.

"Consent of the Central Government has been obtained to this issue of capital subject to the condition that so much of the capital as cannot in that Government's judgement be properly expended until some uncertain future date is invested and kept invested on prescribed securities which will not be released until the Central Government (in consultation with the Crown Representative if any Indian State interests are involved) is satisfied that the time has come to make corresponding payment for purposes which are consistent with the enforcement of any measures of control or restriction that may be in operation at the time when such release is applied for. It must be distinctly understood that in giving this consent the Government of India do not take any responsibility for the financial soundness of any scheme or for the correctness of any of the statements made or opinions expressed with regard to them."

Application Forms for Shares may be obtained from the Central Office: 8, ROYAL EXCHANGE PLACE, CALCUTTA or from the Registered Office : 8A, RASH BEHARI AVENUE, CALCUTTA.

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

Extremely easy conditions continue to prevail in the money market with call rates nominally quoting ½ per cent in Calcutta and ¼ per cent in Bombay. It should be said that funds are unusable. The Government could get more money at present on cheap terms if only they decide to increase the offer. Keener interest has been shown at this week's auctions of treasury bills and there was an increase in the amount of applications to Rs. 5.8 crores from Rs. 4.11 crores. There is a token decrease in the average discount rate to 3 annas 11 pies per cent per annum from 4 annas per cent., a new low record in the history of short-term borrowing of the Central Government. The offer for next week has been maintained at Rs 2 crores. The Assam Government was successful in getting its requirements of Rs. 1½ crores at 4 annas per cent and applications were as much as Rs. 4.1 crores. It will thus be seen that the difference between Provincial and Central Government treasury bill rates is only nominal. With the present conditions in the money market one could have expected that the giltedged market would be steadier, especially as considerable activity was noticeable sometime back and the quotation for 3½ per cent. Paper was pushed up to Rs. 102. It now appears, however, that the buying recently noticeable has not been entirely genuine and that speculators have manipulated prices to a certain extent and taken advantage of the improvement in prices. Apart from the fact that improved conditions in the giltedged market were utilised by the Reserve Bank to sell large parcels of 1970-75 it should be said that there has been no appreciable change in the general outlook and that banking institutions still prefer to wait for a clearer outlook regarding the future of giltedged prices. As for the rumours regarding the possibility of 3½ per cent. Paper being converted into dated stock nothing can possibly be expected just at the present moment as the Government will not do anything till the political settlement is reached and the views of the new Finance Member ascertained.

The authorities apparently are trying to force money into existing tap loans, investors being now offered the opportunity to subscribe for the Second Victory Loan 1959-61. The Reserve Bank is also a seller through the tap of 3 per cent. 1970-75, 3 per cent. 1949-52 and 2½ per cent. 1948-52. Banks are still interested in short-term securities.

The returns of the Reserve Bank for the week ended June 22, do not show any important changes in the issue department, notes issued being only slightly higher at Rs. 1,146.58 crores on account of the higher level of rupee coins. Notes in circulation are lower at Rs. 1,133.83 crores against Rs. 1,136.52 crores with a corresponding increase in notes in circulation to Rs. 12.75 crores from Rs. 9.59 crores. Rupee coins, as indicated earlier, show an increase to Rs. 15 crores from Rs 14.52 crores.

In the banking department, there was a jump in Central Government balances to Rs. 271.84 crores from Rs. 261.78 crores and Other Government accounts to Rs. 20.5 crores from Rs. 16.84 crores. As notes in circulation have declined and bank balances with the Reserve Bank are lower at Rs. 86.5 crores it appears that larger payments have been made towards taxes. Other deposits are further lower at Rs. 18.93 crores against Rs 20.68 crores. Balances held abroad are only Rs. 2 crores higher at Rs. 388.42 crores.

The statement of the Imperial Bank for the same period shows no important changes deposits being only slightly higher at Rs. 237.54 crores but advances were higher at Rs. 65.86 crores. As investments were slightly lower at Rs. 143.18 crores cash balances show only a token decline to Rs. 3975 crores.

* * * *

The statement of scheduled banks for the week ended June 15, shows a rather big rise in Demand liabilities to Rs. 624.25 crores from Rs. 618.95 crores in the previous week. Time liabilities are only Rs. 50 lakhs higher at Rs. 234.48 crores. Cash balances were Rs. 31.59 crores against Rs. 31.52 crores and balances with the Reserve Bank Rs. 92.21 crores against Rs. 90.59 crores. As advances were better at Rs. 276.71 crores against Rs. 274.88 crores investments in giltedged must be of the order of Rs. 3 crores.

* * * *

In the issue of "Indian Finance" dated April 21, 1945 we discussed the question of the revison of the Agreement between the Reserve Bank and the Imperial Bank regarding the remuneration for the transaction of Government business on behalf of the Reserve Bank. We said that the results of the investigation by the authorities for determining the new rates of remuneration and the actual revision in rates, if at all, had not been made known to the public. We also said that the agreement was liable for termination in 1950 and that the necessary notice of five years should have been given on April 1, 1945. The legal interpretation of section 45 of the Reserve Bank of India Act 1934 by the authorities concerned, however, was different and we were informed that the agreement was for a period of 15 years terminable with a notice of five years by either side. That is, the minimum period for which the agreement was in force was for 20 years.

The revised terms of remuneration are now available in a press communique issued by the Reserve Bank last week-end. We are glad that, as a result of the agitation carried out by the press, the authorities have agreed to make public the new terms on which the Imperial Bank is carrying on its business. We congratulate the Reserve Bank on its decision to issue the Communique.

The communique reads as follows:—

"Under Section 45 (1) of the Reserve Bank of India Act 1934 the Reserve Bank has entered into an agreement with the Imperial Bank of India which will remain in force until the 31st day of March 1955 and thereafter unless and until determined at, or at any time after, that date by five years' notice by either of the parties of its desire to determine the agreement.

With reference to clause 2 of the Third Schedule to the Reserve Bank of India Act, 1934, it has been agreed between the Reserve Bank of India and the Imperial Bank of India that the following rates shall be adopted for calculating the commission payable to the Imperial Bank of India on the turnover of Government account for the quinquennium 1st April 1945 to 31st March 1950:— On the first 150 crores at 1/16th of one per cent, on the next 150 crores at 1/32nd of one per cent over 150 crores, on the next 300 crores at 1/64th of one per cent over 300 crores, on the remainder of the total of receipts and disbursements dealt with annually on account of Government by the Imperial Bank on behalf of the Reserve Bank of India at 17128th of 1 per cent."

The new terms are a considerable modification of the previous rates which were based on a rough-and-ready calculation. Clause 2 of the Schedule stipulates the remuneration of the Imperial Bank which shall be for the first ten years during which this agreement is in force a commission calculated at one-sixteenth of one per cent. on the first Rs. 250 crores and one thirty-second of one per cent. on the remainder of the total of the receipts and disburse-

ments dealt with annually on account of the Government by the Imperial Bank of India on behalf of the Reserve Bank of India. At the close of the said ten years the remuneration to be paid by the Reserve Bank of India to the Imperial Bank for the performance of these functions shall be revised and the remuneration for the ensuing five years shall be determined on the basis of the actual cost to the Imperial Bank of India, as ascertained by expert accounting investigation, of performing the said functions. The remuneration thus determined shall thereafter be subject to revision in like manner at the end of each period of five years so long as this agreement remains in force."

The exchange market has been quietly steady with a few export bills offering.

(*Continued* from page 877)

tention. He added that opportunity would of course, be taken to establish good relations with manufacturers abroad so that they might be used for advancement of the industry in India.

The delegation is unofficial, and it is understood, each member will meet all his expenses himself. The delegation has been granted shipping priority, but the Indian Chemical Manufacturers' Association is trying for air priority. In any case the members hope to leave in the first week of August 1945. They are likely to stay in England and U. S. A. for about seven weeks.

Some of the members of the delegation are: Dr. K. A. Hamied (president of the Association), Dr. H. Ghosh, Mr. B. Maitra, (both of Calcutta), Mr. L Gupta (Amritsar), Mr. S. P. Sen (Calcutta), Mr. Venkatlal G. Pittie (Bombay) and Mr. M. L. Shroff of Birla Laboraties, Calcutta.

War Damage In Ukraine

The Soviet Army newspaper, "Red Star" estimated war damage in the Ukraine alone to be more than 100,000-000,000 dollars.

During 1944, restoration work went on in 220 of the biggest Donetz coal mines which were wrecked and flooded by the Germans. New methods of pumping water from the mines were devised and approximately 100 mines were pumped dry.

The "Red Star" report says these mines are producing more coal than any other basin in the country but that the output is only a little more than one-third of pre-war production.

The newspaper said that 35 Ukranian power stations have been repaired and put into operation by the end of 1944 and asserted that the great Dnieperges station would be in operation in less than a year.

Restoration of steel plants is proceeding with the Djerzinsky, Yenakiev and Mariupol plants already producing steel and pig iron.

The "Red Star" says that 35.000 kilometers of railroad track have been repaired in the Ukraine by the middle of 1944, as well as 3,500 railway stations and 7,000 medium and small size bridges.

The newspaper asserted that in 1944, farmer sowed 65 per cent of the pre-war acreage and that cattle herds increased substantially.

Soviet Request For Credit

The head of Russian section of the United States Foreign Commerce Department, commenting on the Soviet request for six billion dollars credit in the United States, which is still being discussed by United States financial circles, declares that Soviet Russia has proved to be one of the financially most reliable countries in the world, saying that he bases this statement on experience gained by United States financial circles in recent years.

TREASURY BILLS

Central Government:

Tenders for Rs. 2,00,00,000 of three months' Government of India Treasury Bills were opened on Tuesday, the 26th June, 1945. Total amount offered was Rs. 5,80,00,000. Tenders at Rs. 99-15-3 per cent were accepted in full and those at Rs. 99–15–0 per cent were allotted approximately 60 per cent. Lower tenders were rejected. Total amount accepted was Rs. 2,00,00,000, the average rate of accepted tenders being As. 3-11 per cent per annum.

Tenders for Rs. 2,00,00,000 of three months' Government of India Treasury Bills will be received upto 11 a.m. (Standard Time) on Tuesday, the 3rd July, 1945, at all centres. Successful tenderers should make payment on Friday, the 6th July, 1945. Other conditions are as usual.

During the week ended the 22nd July, 1945, Government of India Treasury Bills for Rs. 3,90,75,000 were sold in favour of the Issue Department of the Reserve Bank of India.

Assam Government:

Tenders for Rs. 1,50,00,000 of three months' Government of Assam Treasury Bills were opened on Wednesday, the 27th June, 1945. Total amount offered was Rs. 4,10,00,000. Tenders at Rs. 99–15–0 per cent were allotted approximately 97 per cent. Lower tenders were rejected. Total amount accepted was Rs. 1,50,00,000, the average rate of accepted tenders being Re. 0–4–0 per cent per annum.

Man and Machine—II

We examined in our last week's leading article the problem of man and machine, as it affects the world at large and the advanced industrial nations in particular. The problem as it confronts India is in many ways materially different. In the first place, the best minds in India have not ceased to regard modern industrialism as betokening a threat to the finer traits of our distinctive national culture. Secondly, India is not face to face with the question of whether or not to adopt the more revolutionary inventions of our time. Thirdly, to a large part of our national economic problem, the adoption of modern industrialism even in its comparatively out of date aspects is no solution and may well be a source of costly complication. The cultural objection to modern industrialism, so far as India is concerned, is apt to be regarded by most foreigners, either as an instance of sourgrapism or as proceeding from excessive sentimentality or temperamental reluctance to face the facts of our economic life. It is indeed difficult to credit all the Indian opponents of modern industrialism with a grasp of the realities of our economic life or ability to winnow the chaff of sentiment from the grain of reasoned preference among the various values of life. The charge of sourgrapism will of course be dropped as soon as India finds herself free to go as far forward as she chooses on the path of mechanised industrialisation. That stage is being reached faster than anybody would have thought possible a few years ago. With the acceptance of planned development as the foremost aim of public policy, and representative government in the Centre and the Provinces almost round the corner, there will be little or no obstacle in the way of our government industrialising the country to its heart's content. But it will be some time before the nation will set its heart on it without some mental reservations.

These reservations are to be attributed in part to the place which a highbrow contempt for the achievements of western nations had in the maintenance of our national self-esteem and in part to genuine doubts about the superiority, in the ultimate analysis, of the material plentitude of a mechanical age to the contentment and the joys of a simple natural life. That such doubt is genuine, only the extremely unsympathetic will question. Social thought and all the patterns of social life in this country have been based on a recognition of the superiority of simplicity, security and stability over elaborate interdependence, freedom of contract and the flux of social conditions without which progress as in the West is impossible. It is doing poor justice to the makers of our ancient civilization to think that they were blind to the value of divine discontent and were eager to sterilise social change and, for that reason, to forego all the benefits of social progress. The truth is that they were hard-headed enough to examine vigorously the content of social progress and sufficiently imaginative to see what contentment and security in regard to the physical needs of life can do to the true development of the individual. It is only now that the West has got over the incubus of thought left by the age of intensive economic competition and has come to recognise that to ask for security in economic life is not to crave for soft living. It may be unctuous to say it, but it is not less true for that reason that there are more instances of plain living and high thinking in this country than in all the rest of the world. It is natural that, in these circumstances, India, which regards Swaraj as a means of national self-realisation rather than national self-aggrandisement, should view modern industrialism askance and should have a somewhat restrained enthusiasm for its adoption in this country.

While all this is doubtless true, the stage at which preferences of this kind can determine the nature and pace of social developments has been left far behind. For one thing, the pressure of population on the natural means of subsistence is too high to let the old ways of life retain all the marks of cultural superiority. For another, the notion of a simple life is relative to the possibilities of each age. What was simplicity a century ago may be today a meaningless and even stunting asceticism. Thirdly, the tide of modern western ideology has swept over India for the last one hundred years and more. And the world is today such a small place that isolationism is no easier in the cultural, than in the political, sphere. To go more fully into these three points, it is impossible on the basis of the present productive efficiency of land and labour in this country to ensure the necessaries of life for the whole population which is many times the population of the days when the ideal of a simple life was evolved and held up to the devoted admiration of all classes. We might cut out motor cars and radio sets from our productive schedule. But machinery and industrialism would still be found indispensable for providing for all the minimum of food, clothing, shelter and all the four freedoms.

The opponents of machinery and industrialism overlook the simple fact that their objection cannot stand if the alternative they suggest is either not available or is incapable of yielding the same cultural benefits as in the past. The fact of the matter is it is both. When the average holding of land is insufficient to support the cultivator and his family, it is idle to talk of an idyllic village life. Four hundred millions connot live on the same natural resources in the same way as fifty or seventy millions of their forefathers. And the attempt to do so becomes even more desperate, when the four hundred millions are exposed to dangers of political and economic aggression from which the people of a distant past were safely sheltered. The simple life of the ancients was made possible because the ways of life of other nations were not far different. It should not be forgotten that India's economic decadance started with the competition of cheap machine-made goods. No system is sound which has no natural resistance to the dangers which the environmental conditions can throw up. There are thus sound and weighty reasons for India ceasing to cast longing, lingering looks at the simple life of a bygone age. Even the simplest necessaries cannot be ensured by adhering to the "simple" ways. And subjectively, the notion of simplicity in modern conditions includes many an amenity which cannot be foregone without a pang and which would be beyond reach if we were to accept modern industrialism with serious mental reservations.

However, the tepid enthusiasm India feels for industrialism is not without value. As the lukewarmness is felt by the most influential of popular leaders, it will ensure that industrialism is not heedlessly extended to all sectors of our economic life and, what is even more important, that careful attempts are made from the beginning to avoid the more well known evils of industrialism. These two tasks, in fact, constitute the problem of man and machinery as it affects India, since the impact of new inventions, which threaten established modern industries rather than handicrafts and cottage industries, will not be felt for a long time to come.

It is necessary, therefore, to consider what are the sectors of our economic life to which it would be unwise, from all standpoints, to apply the methods of modern industrialism. To divide the economic life into distinguishable sectors is itself no easy task. The broad customary division into agricultural and industrial, rural and urban, does not take us anywhere, since agricultural development waits so largely on the manufacture of fertilisers and the progressive adoption of mechanised cultivation. Whether we aim at adequate agricultural output or the maximum possible, it is certain agriculture will have to be levered up by industrialism. What is doubtful is the extent to which we can mechanise our methods of cultivation. For that is conditioned by the limits to which we shall be prepared to go in the reform of our land laws. If we look at the deplorably poor yield of land, and the difficulties of co-operative farming, the adoption of collective farming is commonsense. But the social unsettlement which a system of highly mechanised collective farming may cause is a powerful argument for going slow in this regard. If it is better to forecast likely developments than to discuss the pros and cons of mechanisation, it may be ventured that mechanisation will not be taken beyond the point necessary to ensure an increase in agricultural production necessary for our immediate purpose.

The position of industry in relation to modern methods of organisation and production is, of course, far different. We have, indeed, no option in regard to the basic, key and heavy industries. Nor have we any freedom of choice in industries of importance to defence and national security. Heavy chemicals and iron and steel do not lend themselves to small scale organisation. Ships, motor cars and other forms of modern transport, either we have these through the organisation of large scale modern industries, or we go without them. The same may also be said of cement and building materials generally. Doubt can cling only to such things as cotton goods, paper and other personal requirements. But, as we have mentioned already, cottage industries are not only wasteful, but they are in perpetual danger of being extinguished by a sudden upsurge of powerful foreign competition, while the organisation of large scale industries on modern lines ensures that productive processes keep abreast of the times. Efficiency and economy alike belong to large scale production in a way they cannot be said to belong to small scale methods. There may be some reason in sticking to hand-made paper and hand-spun and hand-woven cloth when our political status and the requirements of political agitation call for heroics of that kind. But it is thoroughly unconvincing, to say the least of it, to claim inscrutable, permanent virtues for coarse paper and coarser cloth. Since the purpose of economic planning is to secure a plenitude of material

goods of quality for all classes and at low cost, it would be legitimate for our National Government to refuse to set arbitrary limits to the extension of industrialism.

We say "arbitrary" advisedly; for there are limits which objective conditions and rational considerations can lay down from time to time. We have indicated in the foregoing the two extreme ends at which the need for the methods of modern industrialism is indubitable and more or less undisputed. One end is represented by the large scale industries and the minimum of mechanisation without which better agriculture would be impossible. At the other end lie the key and the heavy industries which have to furnish the fixed capital for a progressive communal life. Closely allied to the latter are the big industries which have already been well established in the country—cotton textiles, paper, building materials—but which have, or can conceivably have, a considerable counterpart in cottage industries. Between these two extremes lie the greater part of the economic life of the country, the innumerable crafts and trades which minister to the needs of the daily life of the masses. It is a vast uncharted sea, with its gales and doldrums, where the planner can feel utterly lost. For, a planner can only defeat his purpose if he proceeds as if he were only an efficiency expert. The ultimate tests of success in planning are far different from those applying to problems of mere efficiency. It will not do for a planner to introduce methods which may save time and material, but at the same time throw out men who will not be absorbed in employment elsewhere. To every individual worker, his work is a service not less to himself, than to his customer or employer. Every piece of productive work is a title to consumption, a coupon with which to get so many units of different kinds of consumer's goods. It would be folly to employ machines that will disemploy men and women and throw economic life into a chaos. In the conditions of India, it is impossible to be sure that unemployment created in one sphere by the use of machinery will be offset by increased demand for labour in another. Other nations went through the trials and travail of this process largely unconsciously. But such suffering would not be excused in a regime of conscious planning. For this reason, if no other, mechanisation has to go slow in the ground that lies between the two extremes we have indicated.

The War and Indian Rural Economy—IV

(By our Staff Correspondent on Tour)

One pathetic feature of food administration almost everywhere I have gone is that the common people are often called upon to consume deteriorated foodstuffs. The Gresham's Law operates here as in many other fields. Where sales are obligatory, the obligation is met by the delivery of goods of bad quality; while the good qualities go into the black market. And there are in addition such factors as delayed transport, bad transport and crude and inadequate storage. Among the reasons for the higher prices of "units" in Travancore, the Travancore Government mentions the considerable destruction and deterioration caused by the transport of food materials through canals and backwaters. This is another pointer to the need for inventing improved and safer types of boats that could be used for the expanding volume of water transport in the future. Foodstuffs have off and on been allowed to rot in many places, till they become "unfit for human consumption". This latter phrase itself has to be understood in a rather new light. Many things that nobody would have eaten before the war, are now being consumed in some form or other, often under disguised and aristocratic names. And if one examines the stuff that the authorities condemn as "unfit for human consumption", it will be found that it really means something which has become unfit for all animal consumption.

Another reason for the frequent loss in quality of food materials is the over-caution, the exaggerated rainy-day psychology of the deficit areas who always try to stock far ahead and go on releasing the older stock while fresh stocks continue to get spoiled. The result is that the consumer is always having supplies of unwholesome and sometimes even unusable material. There is a story current in Malabar of a Nambudri Brahmin's policy of taking betel leaves. He gets a small consignment every day; and this, he insists on; to avoid the possibility of a failure of supply, he always keeps a stock for three days. To avoid waste on the other hand, he eats from the three days old stock, which gives him only dry leaves, because betel leaves do not usually keep fresh for more than three days. Thus between over-caution on the one side and over-economy on the other, the poor man continuously feeds himself on old stock.

One cannot, however, say that this over-caution is wholly unwarranted. Even last year, the Director of Food Supplies, Cochin, in the course of a statement in the Legislative Council complained: "One supreme difficulty we experience in importing foodstuffs is to secure adequate shipping space for imports. Our quota of rice from December 1, 1943 to November 1, 1944 is about 42,706 tons. Out of this we have been able to import only one half; of the remaining quantity, a substantial portion has been purchased, but could not be brought to the State for want of shipping and wagon facilities. Large quantities of foodgrains purchased for Travancore and Cochin are now lying at Karachi for want of shipping space. Similarly, we could not transport in time from the Central Provinces, a large quantity of pulses purchased for the State due to the difficulty to get wagons".

Even in surplus areas like U. P. and C. P., merchants told me that inter-district transport has often been heavily handicapped for want of timely transport facilities. Viewed in retrospect, the occasions when the Food and Transport Departments have been showing singular lack of co-ordination should be fairly numerous.

In South India, there had also been an attempt to force wheat, maize and jowar into the middle class diet. In Mysore, Australian wheat seems to be popular. In Malabar bajra had only to be mentioned to frighten the people away; it was welcomed with as much affection as Churchill bore to Hitler. Lately, it has disappeared from the ration-mixture. In Madras, chappathi was introduced at a time when the Madrasi was being frequently complimented from the highest quarters for his till now unrevealed martial skill and prowess. But he was not induced by such flattery to take kindly to chappathi. Sometime ago, a cartoon in a well-known South Indian Weekly pictured a doctor who having pulled out a patient's teeth, feels helpless before a piece of chappathi that refuses to be evacuated from the patient's mouth. The cartoon illustrates the cordiality extended by the average South Indian to the enforced non-rice additions to his diet. These compulsions have, however, been subsequently withdrawn one after another.

The discussion on food leads me to the Grow-More-Food campaign. It has to be admitted that, though the targets aimed at by the various governments have seldom been realised, substantial additions to acreage under food crops have been made all over India. Two factors have helped the efforts of the Government in this direction. The first is obviously price. Though the temporary scarcity has induced an attitude favouring national self-sufficiency, patriotism could never have achieved the same results as high prices. In the deficit areas, fear of starvation impelled men to look for opportunities for land development, and the needs of survival are stronger than the hollow slogans of Government propaganda. In many places, the government campaign started late, the Departments concerned were understaffed and lack of adequate manure, implements and labour stood in the way of the maximum response from the people. It is easy enough for the Government to declare a target, to allot lands and to offer concessions. But many Governments had difficulties in moving the Centre for securing implements, fertilisers, etc., and after getting their quota, in moving them to where they were needed. I have been told of several instances where an unconscionable lapse of time occurred between the sanctioning of these facilities and their actual availability at the spot required. Here as in food movements, transport accounts for big gaps between hopes and achievements. Even when all facilities are adequately available, the ryot's initiative is not infrequently hindered by the innumerable administrative requirements which he has to satisfy before he could get possession of the land, implements and manure. In many places, competent cultivators are found to be reluctant to take over land from the Government on the stipulated terms. Their argument is that virgin land brought under cultivation will take three or four years to bear its maximum yield and who knows by the time the new price boom will not vanish? Under falling prices, much of the land now taken up will prove uneconomic and may have to be abandoned. This is a widely prevalent attitude.

In at least one instance, I also found the authorities taking the view: "we have land, but we have enough to eat and we are also doing something called the grow-more-food campaign. We anticipate a large increase in our population and the demands of our own self-sufficiency—(not of the present but of a problematical future)—would need conservation of our land resources rather than their immediate and indiscriminate exploitation." The necessity and the excuse of having to provide land for ex-soldiers when they come back are also factors that have adversely affected the Grow-More-Food-Campaign.

Our London Letter

Why & Wherefore of New Gold Price

More Women Votes for Churchill?

Moves for Leftist Solidarity

The British Treasury's unexpected decision to raise its buying price for Empire gold from 168 sh. per fine ounce to 172 sh. 3d., an increase of 2½ per cent, has caused flurry and discussion in financial circles.

There is no disposition to question the Treasury's explanation that the change was due solely to the desire to give Empire gold producers virtually full benefit of the vast reduction which the end of the war with Germany has brought about in the cost of shipping gold from leading Empire ports to London and thence to New York.

Before the war, the sterling price of gold was determined by two factors, the United States buying price of 35 dollars per fine ounce and New York-London exchange rate, in other words, the cost of converting dollars received into sterling. At the end of July 1939, these two factors gave sterling price for gold of 148 sh. per ounce.

When war actually began, the New York-London exchange rate was fixed at 4.03 dollars (middle price) which gave the theoretical price for gold of 173 sh. 8d., out of which British authorities must buy gold and pay the insurance and shipping costs of getting gold to New York. What these transit costs would be was any man's guess; but the Treasury experts, Bank of England experts, and bullion experts finally agreed that these transit costs might be roughly forecast at around 5sh. 8d. per ounce, leaving the buying price 168 sh. for gold delivered in London. This calculation of 5sh. 8d. was evidently highly conservative; for, without changing the buying price itself, the Treasury was able to be more generous and to pay this price for gold delivered at any port in the British Empire.

The Treasury has still a margin of 1sh. 5d., difference between 173 sh. 8d. which it receives at New York and 172 sh. 3d. which it proposes to pay for gold delivered at ports in the Union of South Africa, West Africa and West Australia.

The authorities strenuously emphasized that this change in the buying price of Empire gold has no significance regarding the foreign exchange value of the pound. The £ is still a £. This is true, but City commentators quickly concluded that the alteration is not without certain negative significance, in other words, if the British authorities had any reason to think that the present exchange rate of 4.03 dollars was likely to be changed in the near future, they would have waited until then before altering their buying price for empire gold. The fact that they made it now is construed as at least some slight evidence that they do not anticipate any change in the near future.

The Stock market is beginning to show symptoms of uneasiness regarding the General Election. There is a quiet tendency visible to switch from domestic issues into foreign issues, notably French railway bonds, Argentine Brazilian bonds and, in hit-or-miss fashion, Far Eastern issues. There appears to be a theory that, if the Labour Party victory should cause heavy stock exchange slump, these foreign issues would be relatively immune.

Some commentators report considerable evidence that Mr. Churchill, if he secures Conservative majority, will owe it mainly to women's votes. They say there was widespread admiration for the Prime Minister among women voters, a widespread feeling that he towers above any Labour Party leader, and that the country will be much safer under him in the post-war era than it will be under the Labour Front Bench with Mr. Attlee, Mr. Morrison or Mr. Bevin guiding the country. If this view is correct, this very important factor of women will slightly out-number men in most constituencies.

However, women are keenly interested in the housing question and the Conservatives seem to be fairly vulnerable on this issue. They have thus been far busier explaining why re-housing has been so slow than blowing their trumpets about the progress made.

Among the Left parties there have been two interesting and wholly unexpected developments. Firstly, in several constituencies the Local Labour party has withdrawn its candidate when it was clear that some other Left candidate, Common Wealth or Liberal, stood a good chance of defeating the Conservative, if the Left vote is not split. (This has not happened, thus far, in cases where there is a Communist candidate in the field and the assumption is that the Labour party would prefer to see the Conservative elected rather than have any increase in the Communist Party representation in the House.) This form of "Left Unity" has been strongly urged by the rank and file of the Labour Party Conference recently. The second significant development is visible within the Communist Party. Heretofore they have been publicising their demand for post-war "Left Coalition Government" which should be broad enough to include even one or two enlightened Conservatives, even Mr. Churchill himself. This has provoked fairly violent criticisms from all Leftist groups—not the idea of "Left Coalition", but the suggestion that Mr. Churchill or Mr. Eden should be allowed to join. It is noteworthy that in the Party's official election appeal it has conspicuously dropped the suggestion that Mr. Churchill or Mr. Eden should be co-opted.

Those who see "the hand of Moscow" in every move which the British Communist Party makes assume that M. Stalin dictated this; but a less romantic explanation is that the Communist Party leaders found that their own rank and file detested the suggestion.

The Barclay's Bank has pleased the Bank Officers' Guild, trade union of bank employees, by officially rescinding its long-standing rule that bank clerks must not participate in politics either national or local. This has been a sore point with the bank clerks in Britain for many years. It is still rigidly enforced by all British banks with the exception of Barclay's. Some years ago, there was a famous case involving the Nottingham branch of one of the "Big Five" banks. The wife of the local manager of the branch joined the Labour Party and was elected to the local Borough Council where she worked energetically on the Education Committee. Her husband took no part in her activities but, according to report prevalent then, local Conservatives secured her husband's removal to a far distant branch. Uproar!

Editorial Notes

Lunatic System!

India, like other countries where officers and men of the American army have been or are, has been wondering what will happen to all the goods and materials with which the Americans have furnished themselves in the land of their sojourn. And rumour has had it all along that to prevent these goods from spoiling the markets concerned the Americans intend to destroy them before they leave. Incredible as it is, this is precisely the course which a large American Hospital in North Hereford is reported to have done. Thanks to a message to the "Patrika" from its London Office, we learn that "a thousand sheets of blankets were put on a bonfire and burnt, tons of crockery were crushed by a steamroller and no fewer than seven grand pianos were smashed". Mr. J. B. Priestley, who cited this shameful fact in an electioneering speech wanted to make it clear that "no blame is attachable to the officers and men of the American army". The belief is widely held in England, as in India, that the United States Government have undertaken to destroy at the end of the war all the goods which are liable to compete with peacetime manufacture. It is not the apprehension of the manufacturers that is ununderstandable. But what is, is that their fears should impel them to insist on the deliberate desruction of these goods when the world has left field and factory lie fallow for nearly six years and there is a famine of every requisite of wellbeing. The spectacle of such destruction in India, if and when it should happen would be a thousand times more tragic and provoking than in other countries. Mr. Priestly in his electioneering speech denounced the "lunatic system of profit before distribution". But that lunatic has had a stern and considerate warden in the Government of every country; and if the warden, too, should partake of the characteristics of the ward then there is no hope for the world. The social conscience of the modern world was stricken when Brazil burnt her coffee in boilers and threw it overboard into the sea. The beginner in economics, when he was told about fishermen throwing the fish back into the sea, was also taught to regard it as exceptional and as illustrative of an abstract law. But if, after all that mankind has been through, crockery and pianos should be steamrollered in order to keep faith with manufacturers, then it can hardly be said that lunacy is the attribute of an impersonal system.

Global Target for U.K.

Britain needs to plan for a brave new world since much has happened since those days when she dominated the world industries and commerce. Five and a half years of war in Europe, the blitz' on England, the U-boat activities and many other things besides have changed the centre of gravity of world productive activity with probably serious implications for the future. England has been on the war path and even today she is not in a position to switch-over to peacetime activities owing to the grim battle that is going on in the Pacific against the Japanese. Still the cessation of hostilities in Europe is a signal for stopping talks and actually launching practicable schemes to rebuild British economy on a stable footing. It is well-known that exports have been the life-blood of the British nation and the standard of living of her people dependent upon the cultivation and maintenance of markets far and wide. Though the period of reconversion is not yet over and the problems of manpower, machinery, abolition of controls, etc., still remain to be tackled. British business has started planning for a sustained export drive.

The Economist (May 19, 1945) has suggested a global export target for Great Britain to be achieved in the course of a few years after this war; namely, an increase of 50 percent in volume over the exports in 1938. British exports were valued at £470 million in 1938 and, calculated on the basis of the 1938 price, the 50 percent increase would mean exports to the value of £705 million. In 1944, the volume of exports was only a third of the 1938 level; so the immediate need is to multiply the volume of 1944 five times to hit the target. If the experience of the last war is taken for comparison, it is found that the volume of British exports in 1919 was 45 percent less than in 1913. Even in 1920 it was 29 percent below the prewar level and the period 1920-22 was marked by a continuation of the fall. It is not, therefore, easy to achieve the prewar target but obviously it has to be done, as otherwise the standard of living for the British population will suffer and maximum social security cannot be guaranteed. A plea is entered for making an attempt to raise the average volume of exports during the coming one year from 31 percent of the 1938 volume, which was the average for 1944, to at least 50 percent.

Analysing the list of the chief products that Britain exported before the war, it is found that revival in coal will be most difficult. Exports of coal and coke which stood at £40½ million in 1938 came down to less than £6 million in 1944. Europe suffers from coal shortage no doubt but England lacks the capacity to increase production to meet the demand. Prospects, however, in potteries, steel and machinery are rated brighter. In 1944 exports of machinery was at the rate of two-fifths of 1938 exports; shipments during the next 12 months, the Economist urges should exceed the global minimum target of 50 percent of prewar exports. Some headway can immediately be made in electrical equipment and chemicals though pharmaceuticals do not lend themselves for expansion at present. In textiles and clothing the scope is discouraging. Shortage of labour and the decline in clothing stocks at home are mentioned as the chief reasons besides the pressure of military requirement. Motor cars offer the best chances for the starting of the export drive at present. It is estimated that overseas demand is likely to exceed production capacity of the exporting countries and the Home demand could be restricted for one more year in order to make way for the export drive.

The global target can be achieved only if a free hand is given for industry to "go out" and get orders. The Government cannot be an effective salesman for British industries in overseas markets and their sphere lies in arranging for the best possible way of recouping prewar industrial strength. It is not now possible to reckon with factors like balance of payments, import policy, further military expenditure, duration of war in the Pacific, etc., but a start is proposed to be made for achieving a sizeable part of the target fixed.

British hospitality and their anxiety to help Indian industries than about the supply items, their prices and dates of delivery. Yet it is clear that not much progress has been made even at this exploratory stage. The freezing of sterling assets and the unwillingness of Great Britain to release a substantial part of India's sterling balances for enabling her to purchase machinery from the U.S.A. has been the strong point for Britain. India urgently needs capital goods, technicians, patents and manufacturing rights. There can be no particular objection to taking them from England since she is a great industrial country. Further, Sir Ardeshir Dalal is reported to have said that prices on the whole are a little lower in Britain for the purchase of machinery, etc., though American goods are superior in quality. But from the latest reports we have had from London, it appears that while British politicians are trying to placate Indian public opinion, British big business represented by the Federation of British Industries stands solidly for intensifying the British commercial fetters on India. The Federation, the Indian delegation suggested, should agree to supply India with capital goods, technicians, patents and manufacturing rights on the basis of royalties and a share in the profits for a limited period not exceeding fifteen years, and shares to an extent of 25 to 30 per cent. Control of finance should be vested in Indian hands only. But the British wanted equality in shares and the ultimate control of heavy industries. They were willing to yield control of certain lines of consumer goods production, e.g. textiles Negotiations between Indian industrialists and the F.B.I. therefore it is reported, have broken down.

The demand of the Federation would surely be considered unreasonable and if they insist on such a large measure of control in the industrial progress of India at this stage such an attitude will fail to foster Indo-British commercial co-operation on fruitful channels. Mr. G. D. Birla did well in warning the British businessmen that co-operation should not be made use of for laying the foundations of further British capitalistic penetration into Indian economy He said "If British industrialists hope to exercise managerial control of Indian industries as part of the terms for providing machinery and technical skill, India will seek other markets." It is also quite relevant to remember that England even to-day is concerned with the manufacture of war materials for the prosecution of the war in the Pacific and it will take some years, say not before 1948, before British goods can be made available for India's use. The terms offered by the F.B.I. are a clear indication that in spite of enormous changes in the set-up of national and international economies, the big business of England still hopes to make use of political power for achieving their economic needs. The F.B.I. knows that India cannot at present get full co-operation from the U.S.A., because the long-term loans which she would require from the U.S. would materialise only after the formation of the International Monetary Fund and the dollar is still scarce. If Lord Wavell's offer is accepted and the deadlock in India is resolved it is possible that Indian industrialists will be able to bargain on better terms and procure the urgent capital requirements of India not only from England but from other countries as well. Political stability and tranquility in India will go a long way in raising the problem of Indo-British co-operation on a higher sphere of activity. British business will then learn to offer terms more in relation to the actual developments in the bargaining power of the Indian industrialists.

Sales Tax In Bengal

Sales Tax has come to stay partly because the inelastic provincial sources of revenue require additional support and also because this levy is felt to be necessary for financing the ambitious post-war plans of the provinces. Sir Jeremy Raisman suggested in his last budget speech that the Central Government may levy the Sales Tax on an all-India basis, collect the receipts and distribute them amongst the provinces. In Madras the Congress Ministry levied the tax a few years ago on the score that the loss in provincial revenues arising out of prohibition had to be made good. Subsequent increases in the tax were not related to prohibition, which was given the go-by, but anti-inflationary drive was chosen as the pretext. In Bengal the Sales Tax was levied in 1941 against the united opposition of the people's representatives and the Muslim League Ministry doubled the levy in 1944. Now the Governor has enacted the Bengal Finance (Sales Tax), Amendment Act of 1945 increasing the rate from ¼ to ⅜ anna in the rupee. At present the rate stands three times the amount originally levied and by comparison with other provinces, the Bengal Sales Tax is undoubtedly very heavy and, therefore, bound to be irksome. The Government justifies the enhancement on the score that the provincial budget for 1945-46 foreshadowed a deficit of Rs. 8½ crores and no stone should be left unturned to cover the deficit. Opposition to this measure has been gathering fast and the usual arguments are advanced but while prices and cost of living remain high in Bengal and a National Government seems to be round the corner the Governor could have waited for some more months before he chose to increase the burden on traders and consumers alike.

Road Transport Taxation In India

The tax on a motor vehicle was on an average Rs. 509 in India annually or nearly twice as much as in the United Kingdom and ten times as much as in the United States. It is needless to point out that such heavy taxation inflates the cost of carriage and has a restrictive effect on commerce, agriculture and industry. In the opinion of the Post-war Technical Sub-Committee a reasonable tax on road transport i.e., to pay for its share of the cost of road construction and maintenance would be 1.65 pies per net ton-mile of load, as against a minimum of 6 pies now collected. After meeting the share of road costs, motor transport pays 18 per cent of its operating cost to the general revenues. The equivalent pre-war contribution to General Revenues by railways was 5.8 per cent of its working expenses. But the average rate of motor transport contribution is more than three times that of the railways.

Motor transport taxation consists of taxes levied by both the Central Government and Provincial Governments. Import duty on petrol, motor vehicles, parts and accessories and import duty on tyres are levied by the Central Government. Prior to the war, import duty on petrol was levied at the rate of 10 annas per gallon of which 2 annas were reserved for expenditure on road development. But during the war the rate of duty has been progressively increased to 15 annas per gallon but the expenditure reserved for roads is 2 annas still. If the general financial position will allow, in the post-war period, the rate of duty should be reduced. If not, a higher proportion of this duty should be reserved for road development. Prior to 1931 import duties on motor vehicles and parts were 20 per cent *ad valorem* on motor cars and 15 per cent. *ad valorem* on trucks and buses. Progressively they were increased to 45 per cent and 30 per cent respectively with preferential rates for U. K. at 36 per cent and 21 per cent. This heavy taxation imposes an unfair burden on motor transport and delays its proper development. The existing excise duty on Indian-made tyres which was imposed as a war measure should be abolished on the cessation of hostilities.

The Provincial Governments levy a provincial tax on motor vehicles, wheel taxes in certain municipal areas and tolls and petrol sales taxes. Taxes on motor vehicles in the Provinces and Indian States should be uniform. To secure this end and to prevent double taxation the solution would perhaps be to collect taxes centrally and distribute them to the provinces and States. If these taxes could not be central it should be definitely laid down that a single tax levied in the Province or State where the vehicle is registered should cover the operation of the vehicle anywhere in India and that no Province or State will have the power to impose an additional tax. If the Central Transport Budget is created, as recommended by the Technical Sub-Committee, the revenues received by the Provinces from the Centre will require adjustment and the equalisation of Provincial taxes will be all the more easy. The revenue from provincial taxes on motor vehicles is credited in many provinces to Provincial Roads Fund. This should be the universal practice. It is said that current road expenditure is largely due to bullock carts traffic and bullock carts should contribute towards such expenditure. Perhaps it is not desirable that the cultivators' bullock carts which may use public roads for short periods, as hauls from farm to market, should be taxed but there are a large number of professional carts plying for hire and a tax on such of them as are not fitted with rubber tyres would be justified.

Co-operation in U.P.

The Registrar of Co-operative Societies U.P. has appointed a Committee under the auspices of the *Provincial* Co-operative Union to collect relevant statistics in order to extend the sphere of the co-operative movement. The U.P. five years plan contemplates the formation of 15,000 new societies within the period and this will bring the total to 25,000. During the last five years the Co-operative Marketing and Credit Societies have done excellent work in the U.P. The cultivators have obtained great help from these societies in selling sugarcane, milk and other commodities. The remaining agricultural commodities should also be covered by the Co-operative Department.

Cultivators have been able to pay off their debts during the war period. But there is the danger that in future when prices fall cultivators may again fall into debt. In the Post-war period if cultivators are to improve their methods of cultivation they would require money for purchasing cattle, manures, etc. And co-operative credit Societies should come forward to lend adequate amounts of money at reasonable rates of interest.

The Reserve Bank has agreed to extend financial accommodation to the U.P. District Co-operative Banks at 1½ per cent. The Co-operative Societies could, therefore, reduce the interest they charge from 12½ to 7½ per cent.

An account of the progress of the Co-operative movement in the U.P. is not complete without a mention of the good work done by the U.P. Co-operative Development and Marketing Federation Ltd. As its second Annual Report points out the objects of the Federation are many and includes marketing and distribution. In 1941-42 due to scarcity of wheat in Meerut town the District Magistrate entrusted the distribution of this essential commodity to the Federation which did the work with marked efficiency. This success was contagious. The distribution of sugar in Bulandshah, Muzaffarnagar, Benares and Azamgarh was exclusively in the hands of the Federation. As the work expands and develops it should be possible to organise separate Federations for consumers' societies, for milk and ghee unions, etc. For the present the Federation has filled a distinct gap in the co-operative organisation of the Province.

Mysore's Industrial Development:

In the matter of industrial development Mysore could compare with any other province or State in India. The war afforded an opportunity to develop its industries which Mysore was not slow to utilise. Now that the war is coming to a close she is busy with her post-war plans.

In his address to the Representative Assembly the other day the Dewan outlined the plans in hand. There is a five-year programme for irrigation development comprising 28 works of irrigation calculated to irrigate 66,000 acres. The works cost Rs. 2 crores. Seven of these projects have been sanctioned and detailed estimates for others are under preparation. Along with this, a scheme for planting 4,500 acres has been sanctioned at an estimated cost of Rs. 2 lakhs.

Among the State's many nation-building activities, Hydro Electric development occupies an important place. Despite difficulties, much progress has been made in regard to the construction of the Jog Hydro-Electric Works. The outlay on civil works is about Rs. 179 lakhs. Work on the main dam and power canal as also the creation of pen stocks is progressing satisfactorily. Part of the plant has already arrived and erection work will commence as soon as the building for the generation station is ready. The generating capacity of the station will be 48,000 K. W. and will be increased to 120,000 K. W. The transmission system is also to be expanded and is likely to cost Rs. 5 crores to be spent over a period. The total capital investment in the State's electrical undertakings will reach Rs. 16 crores.

Development of minerals is the most important step in industrialisation. So the Mysore Geological Department is to be reorganised. Three territorial divisions will be constituted for intensive mineral investigation. Underground exploration for gold from the auriferous reefs at Bellara in Tumkur District, is to be undertaken.

O. THOMAS, Esq., B.Com., Camp. A. P. T. Kottayam.

BROKERS:

Messrs. RAMAN & COMPANY, Stock and Share Brokers, Beach Road, Alleppey.

OBJECTS.

The Company has been formed generally for the objects set forth in the Memorandum of Association and particularly to work the Factory, being erected at Chingavanom, about 6 miles from Kottayam, for the manufacture of Bonemeal and scientifically prepared manures for supply to the large number of estates in the State of Travancore and elsewhere. The Company has also been working a Crepe Mill consisting of four sets of crepe Rubber Machines.

It is also proposed to extend the activities of the Company to the following industries:—

(a) Plastics made out of Horn and Hoof.
(b) Charcoal Bones (Bone Ash).
(c) Bloodmeal.
(d) Fish Canning.
(e) Fruit Canning.
(f) Leather Tanning.

SITUATION OF FACTORY.

The Factory is situated at Chingavanam about 6 miles from Kottayam on the bank of Mulakanchira canal and the situation is specially advantageous to the Company in view of transport facilities by backwaters as well as road and being situated in the centre of Travancore the distribution of finished products to the estates and other consumers is greatly facilitated.

MACHINERY, FACTORY AND BUILDINGS.

The Company has already purchased the necessary Bonemeal Machinery and equipment at a cost of Rs. 51,000 and the same is in the course of erection. The erection of machinery is expected to be completed within a period of 3 months. The Company is negotiating for the purchase of additional machinery, electrical appliances, laboratory apparatus, etc., and these are estimated to involve a capital expenditure of Rs. 74,350 inclusive of cost of erection of machinery.

While the construction of the factory building is now completed and the expenditure of buildings so far is Rs. 23,598 necessary extension and additions to buildings are proposed to be completed at an estimated cost of Rs. 40,000 (inclusive of additional land intended to be acquired).

FACILITIES.

(a) *Raw Materials.*—In and around Kottayam in the heart of Travancore where the Factory is situated, there are a number of slaughter houses and altogether in the State there are over 17 Municipal slaughter houses, viz., at Nagercoil, Trivandrum, Quilon, Kottayam, Changanacherry, Alleppey, Alwaye, etc., and on an average, about 50 to 60 tons of bones are daily available from these places. Messrs. Cherian & Co., Ltd., the Managing Agents are well known Government Contractors and Transport Agents in the State with all kinds of transport vehicles and also backwater transport arrangements and therefore exceptional facilities are available to transport the raw bones and other raw products to the factory. Kottayam being well known for abundance of shell lime, sea-weed, oil-cakes, fish powder, etc., these raw materials can be acquired by the Company on advantageous terms.

(b) *Electric Power.*—The Company has already secured the necessary supply of electric power to a maximum extent of 150 K.V.A. from the Pallivasal Hydro-Electric project of the Travancore State.

(c) *Labour.*—Plenty of labour is locally available in the absence of other industrial concerns near or around Kottayam.

PROSPECTS.

Intensive agricultural cultivation has now become a necessity and "GROW MORE FOOD" campaigns are the order of the day. The demand for artificial manures has increased not only for the cultivation of paddy, potatoes, tapioca and other food products, but also for the large area of rubber and tea plantations in the State. To restore the vitality of the trees depleted by the present intensive tapping and for opening up new plantations scientifically prepared artificial manures of the kind which this Company proposes to manufacture are in great demand. Nitrogen, Phosphorous, potassium and other elements usually need to be supplied as manure to plants. Animal bones contain some of these essential plant foods; and bones and other raw products when powdered are converted into rich manure by adding other suitable ingredients and are used as fertilisers.

MALABAR FERTILISERS & INDUSTRIES LIMITED—*Contd.*

The Factory being situated near Kuttanadu area which is famous for paddy cultivation and in view of the existence of extensive plantations of Tea, Rubber and Tapioca, there is ample scope to market the products of the Company. The Directors of the Company being themselves in the planting line the consumption of the production of the factory is assured especially in view of the acute shortage of manures in Travancore State and in South India in general.

Estimated Profits.—On the basis of availability of raw bones in the State, the Company estimates to procure over 5,000 tons of bones in a year from the various slaughter houses of the Municipalities in the State and the following is an estimate of a year's working after the erection of machinery and equipment already on hand.

	Rs.	Rs.
Cost of collecting 20 tons of raw bones and other raw materials at an average price of Rs. 90 per ton for 250 working days in the year is 250×20=50,000 tons		4,50,000
Electrical energy, labour, establishment, handling charges, repairs and renewals, etc., at an average of Rs. 500 per day for 250 working days		1,25,000
Proceeds of 5,000 tons of powdered mixture at an average of Rs. 130 per ton (although the present price of Bone Powder is Rs. 200 per ton)	6,50,000	
Gross estimated profit on the conversion of 5,000 tons of raw bones and raw products a year into powdered mixture for manure		75,000
Total ..	6,50,000	6,50,000

It will be seen therefore from the above figure that the gross profits from the mere conversion of raw bones and other raw materials into bone powder alone comes to Rs. 75,000 which on the capital inclusive of the present issue (Rs. 2,50,000) works out to a gross return of about 30 per cent. After providing for the Managing Agents commission and Office allowance and writing off liberally for depreciation, a very substantial dividend could be paid to the ordinary share holders.

It should be borne in mind that the profits above estimated are on the basis of a turnover of 20 tons of raw product to powder per day while the actual capacity of the machinery on hand is over 40 tons per day. It should also be remembered that 5,000 tons of raw products powder could be converted into about 15,000 tons of manure by mixing with other suitable ingredients for which the Company has every facility and which the Company proposes to do.

Further with the rubber Crepe Mills mentioned above which the Company is working, the Directors propose to do a considerable business in converting rubber scrap into crepe for which there is a growing demand in the locality for war purposes.

Further more, the Directors have in mind a proposal to introduce the extraction of glue and steamed products and other industries.

MANAGING AGENTS.

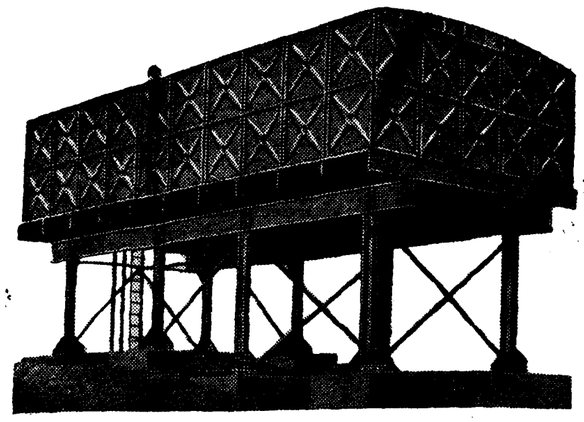
Messrs. Cherian & Co., Ltd., Trivandrum are the Managing Agents of the Company for a period of 10 years from the date of the incorporation of the Company on the terms and conditions set forth in the Articles of Association of the Company and the Managing Agency Agreement, dated, 23rd October, 1944. The remuneration of the Managing Agents is as follows:—

(1) An office allowance of Rs. 750 per month from the date of incorporation of the Company.
(2) A remuneration of 15 per cent of the Nett Profits of the Company, subject to a minimum of Rs. 3,000 per year in the event of absence or inadequacy of profits (net profits for the purposes of this calculation being 'Net Profits' as defined under Section 106(3) of the Travancore Companies Act IX of 1114).

The Managing Agents, however, have agreed to waive the the Commission, they are entitled to in terms of Clause 2 above till the Company is in a position to declare a dividend of 6 per cent on the ordinary shares.

BROKERAGE AND COMMISSION.

Messrs. Raman & Co., Stock and Share Brokers, Beach Road, Alleppey, are the brokers for the present issue of Rs. 1,48,700 on a commission of 4 per cent, but they will pay a refund of 2 per cent brokerage on applications received from other recognised brokers bearing their stamp only on shares allotted in respect of such applications.



APPLICATION FOR SHARES.

Application for shares should be made on the basis of the prospectus, copies of which may be obtained at the Registered Office of the Company or from the Brokers and Bankers of the Company in accordance with the directions contained therein with a remittance of the amount payable on application. Where no allotment is made, the deposit will be returned in full and where the number of shares allotted is less than the number of shares applied for, the balance of the deposit will be appropriated towards allotment amount and any balance left over will be returned.

BOOK REVIEW

Village Industrialisation

An attractively got-up brochure on 'Village Industrialisation' by Sir M. Visvesvaraya contains a detailed scheme for the development of rural industries in India. Efforts in this direction have hitherto produced only indifferent results. Sir Visvesvaraya has a plan under which villages with a total population of about fifteen thousand have to be grouped into units and a Committee placed in charge of each unit. This Committee comprising of the leading persons in the group will begin a drive towards industrialisation in a comprehensive, orderly and steady manner. The industries can be run by individuals, co-operative societies or joint stock companies as would be suitable in each case. Names of 124 possible rural industries are given in the book. The author believes that the leadership and the finance required will be forthcoming from the villages themselves; for he does not suggest any external assistance for these Committees though the scope of work they are asked to do is fairly large. These Committees will also have to undertake something like a periodical stock-taking of the progress achieved from time to time. If the suggestions given by Sir Visvesvaraya are to take shape, there is no doubt that there will be a radical change in our rural conditions. The brochure is published by the All-India Manufacturers' Association and is priced at Re. 1/4/-.

Our Food

Some useful suggestions for a planned food policy for India are given by Mr. S. C. Tiwari, Lecturer in Economics, Benares University in a small book "Food Policy for India" (Publishers: Nand Kishore and Bros., Benares, Price Re. 1/-). It is common knowledge that the vast masses of the country are seriously underfed and undernourished and the food to which large sections of people are habituated in many parts of India is deficient in many of the vital elements of a balanced diet. In the context of national planning, the problem has a special appeal. The author discusses it in a simple but comprehensive fashion and indicates how far an adequate and balanced food supply depends on a wise policy in respect of land tenure, methods of cultivation, transport and similar questions.

The Rye Conference Proceedings

The Federation of the Indian Chambers of Commerce and Industry have published a Report on the work of the Indian delegation at the International Business Conference. The Report gives a summary of the discussions that took place emphasising the role of the Indian delegates. Though the discussions were more or less exploratory in character and resolutions non-committal, the Indian delegates took the opportunity to present their case on most of the vital economic issues that need international action in the future. It can easily be seen that the complexion of many of the Resolutions adopted by the Conference would have been different but for the able way in which the Indian delegates argued their viewpoints. On more than one subject, the Indian delegates were able to challenge successfully the attitude of the British Representatives, and to convert the rest of the Conference to the Indian side.

Indian States

(By Sir C. P. Ramaswami Iyer.
Indian Council of World Affairs, New Delhi).

Extremist opinion there is, even now, in this country which feels that Indian States are an anomaly and an anachronism and have no right to exist and should simply go. Promptly came, the other day, the reply to this view. Logically and chronologically, it was argued, British Indian Provinces were the creation of the British and came into existence much later than the Indian States. Therefore, if one is to go, it is the provinces and not the States. Sir C. P. Ramaswami Iyer in his inaugural address to the Bombay Branch of the Indian Council of World Affairs has taken the correct view of this question. With his experience of the administration of both the provinces and Indian States, Sir C. P. Ramaswami Iyer has authoritatively and categorically said that such of the States which do not go up to a certain standard of development and refuse to move with the times do not deserve to exist—a view to which no one can take exception.

Though small in size the booklet contains a fund of information and deserves careful study.

Statistical Summary of the Social and Economic trends in India

(By the Economic Adviser to the Govt. of India. Manager of Publications, Delhi, Re. 1|8|- or 2s. 3d.).

This publication seeks to present, in the form of statistical tables and diagrams, the principal experience of India in the social and economic field during the period 1921-1939. The public who are now more planning minded than ever before would welcome the twentyone valuable tables because knowledge of the past is necessary for the correct shaping of the future. In his introduction Mr. Subramanian has taken pains to show that progress in social and economic sectors of our national life has not been inconsiderable. Development in industries is considered rapid and the broad changes that have come in the composition of Indian's exports and imports are shown to mean industrial progress within India. The increase of population receives extra consideration though reasons and remedies are not discussed. Absolute increase in the number of towns, hospitals, banks, mills eac., are not sufficient to warrant the conclusion that progress has been achieved. India's progress in any line has to be compared with that of other countries. Otherwise, foreign readers of this publication are likely to get the impression that British rule has done India much good. Acts of ommission by the Administration in India are many and if data were collected to note how many die of epidemics, how many handicrafts have been destroyed and how, and how many became landless proletariat during the inter-war period then a sobre view is likely to prevail. Demographic forces are shown to be active but it should be remembered that the public policy of the Government of India remains practically inactive. The publication, though valuable so far as it goes, seems to have been framed from the official point of view. Inaccuracies and insufficiency of the Government of India publications are many and vital and, therefore, caution is necessary in interpreting the figures shown. The book should have presented the progress achieved in India during the period between the two great wars against the background of achievements abroad. We suggest this should be followed by another publication giving us details for a few decades before 1920.

YOU MAY HAVE HEARD

* ...that the quality of our Rubber Stamps compares favourably with the finest hand-setting. But what we expect of you after this, is to place order for some and be convinced of the fact. We also manufacture Daters and Numerators—the twin adjuncts of office equipments—the quality of which is highly acclaimed of by a good many number of office managers. No catalogue is available. *

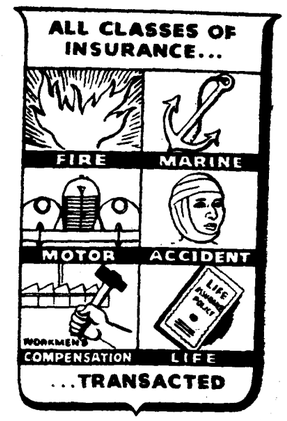
Clive Street Gossip

After having been glued, so to say, to Calcutta for an unusually long period, I had the chance to smell, breathe and enjoy the fresh air that greets you when the train speeds out of the station yard at Howrah or Sealdah. My readers will have no difficulty in guessing the reasons for which I had to curb the periodical upsurge of wander lust in me. What with a number of schemes on hand, all integrically related to my main purposes, it was not easy for me to stir out of Calcutta. Which makes the chance to go out all the sweeter. Seraikalla, the little State, 30 miles from Tatanagar, is a picturesque place with picturesque associations. It is one of the eastern group of small States, which have many economic features in common, the most important of them being their relation to the giant enterprise of the Tatas at Jamshedpur and the numerous industries which the steel works have brought up as a kind of outcrop. The whole area, it is well known, is rich in minerals waiting to be developed. Tatas themselves pay handsome royalties to States from whose territories they derive their raw material. But rapid as the expansion of Jamshedpur has been, the more important phases of its development are still ahead. It has to expand much more; and the little States of the eastern group are so placed and so endowed that further expansion must be to the mutual benefit of the States and the sponsors of the new enterprises. But the prosperity to come has its harbinger in the prosperity induced by wartime conditions. Seraikalla, like other State's has reaped a goodly harvest of wartime incomes. Not only the State's revenue but the income of the people have gone up. The Eastern States have helped not a little to relieve the rice scarcity of the present. And in doing so they have enriched themselves. One can see these economic changes on the faces of the people. But I must stop here reserving fuller account of this for a later occasion, since the doings of the Industrial Mission have prior claims to notice in these columns.

* * * *



I have said something about the destination. I should say something about the journey, too, before I take up my principal theme. My companions in the compartment were two British soldiers, officers both of them, free and easy conversation with whom did not have to pass through the initial stages of uneasy aloofness. For my part, I was eager to avail of the opportunity to have a glimpse of the mind of the British fighting forces abroad in regard to the forthcoming general election in Britain. The two officers were free with their political opinions, there being no taboo on that. It appeared to me that they are not the sort of half intellectual Leftists who join the war with the feeling that they are only choosing the lesser evil. They belong to the traditionally Conservative type. But they are clear in their mind that they will not vote for the Tories. Their votes are reserved for the Labour Party. When I asked them how far they are representative of their comrades, they were quick to answer, "Far more than any one outside the forces would think." I do not expect this reading to be accepted by one and all. But it seems to me that even more than the folk who have stayed at home, it is the soldiers and sailors abroad that have gone far away from pre-war political ideas. The soldier's vote, I believe, will be decidedly in favour of Labour; and the Labour Party too, judging by its choice of official candidates, seems to know it.

* * * *

Reports of the doings of the Industrial Mission now touring Britain and the U.S.A. strengthen the feelings that one had when its members left the country. I say 'feelings', because one could hardly give shape to them at that time. In fact, there was even a conflict of feelings. On the one hand, we felt that some such Mission had to go abroad, establish contacts, explore possibilities and clarify the ways and means of securing for ourselves necessary allies in the war which we have all unequivocally declared against poverty and suffering in this country. On the other, we also felt that the basic conditions for the success of the Mission were absent, that the Mission was a mere collection of disparate individuals, that it lacked a unitary character and, what is more important, a clear lead in regard to their functions and responsibilities. In these circumstances, there was lively apprehension that the Mission might be more in the nature of a business tour for its constituent members than of a Committee with well-defined responsibilities to the people and nation in whose name it was going abroad. These feelings, it is, that have now been confirmed. There is nothing to show that the Mission is going about as a disciplined, unitary body tackling problems of national importance. Negotiations would appear to have been carried on, not alone on particular business deals which affect the members of the Mission concerned, but on wide issues without much regard for what the country and its future Government may or may not have to say about those conditions. The common failing of prominent Indians, viz, that of being free with their personal views to newspaper reporters, is very much in evidence. And not one of the more important or crucial problems seems to have been neglected. Now it is the question of financial control of Indian enterprises which ask for and obtain technical assistance from a foreign country. More often it is the prospects of business deals in which one member of the Mission is interested. Put together, the statements of the members and the news reports about their activities abroad bring out the anomalous character of the Mission.

* * * *

Take first the question of status and sanctions. It is extremely unfortunate, to say no more, that the Mission should have left barely a month before the announcement of the Wavell Plan to end the

K. N. DALAL, Managing Director.

political deadlock. That is no fault of the members of the Mission. But if the Mission had given thought to it or if the Government, who must have known about the Plan to come, had given some consideration to the matter, the tour would have been postponed. The National Government would in that case have arrived at some definite decisions on outstanding issues and given the members of the Mission specific instructions about how to proceed. Some of these outstanding issues are, settlement about sterling balances, the form which big industrial undertakings should take in the future, the terms which, from the national point of view, the Government would permit to be given to foreign firms which will provide technical assistance and the like. Above all, the National Government would also decide the question of priorities in regard to various industrial undertakings instead of leaving it to the personal preferences of individual members of the Mission. As representatives of a National Government, the Mission would command more respect and would be able to arrive at satisfactory conclusions for their negotiations, instead of having to leave them off in the middle as in the case of the Federation of British Industries. One or two months would have made no great difference to the work. As nominees of an unrepresentative Government, the members of the Mission have been wholly incapable of the tone and bearing that the representatives of one of the greatest trading nations of the world should have adopted. Everywhere, every one talked of "help" to India in her industrialisation, as if it is all one-sided, as if the help that may be proffered is not going to be on a strictly business basis. If the Simla Conference should prove a success, it would not occur to its nominees to use such language and encourage a high and mighty attitude on the other side.

However, that is crying over split milk, a palpably futile thing to do. But one would have expected the Mission to react properly to "better news from home". With Lord Wavell's invitees gathered at Simla and in good mood, the members of the Mission might have changed their manner. So far, the only effect of the progress of the Wavell Plan is that big business in the U.S.A. has been told that their nervousness about political stability in India would no longer be justified. It is to be hoped that the Mission will be less of a mendicant in what remains of their tour.

* * * *

And when a Mission like the Indian Industrial Mission acts as individuals, the results are unimpressive and sometimes even harmful. Take the question of sterling balances which is both a delicate and a complicated problem. It is delicate because the other side does not yet know its mind, does not know how it will be placed in the post-war period, so far as capacity for repayment is concerned, and has not lost faith in the tactics of confounding the opponent by frequent shifting of the ground. One has only to follow, in their sequence, all that have been written and said in Britain on the question of India's sterling balances to realise that it is by no means easy to tackle the British in this matter. At one time they talked of these balances as a British gift to India. They did not go so far as to suggest that the whole gift should be withheld. At a later stage they emphasised that it originated in the blunder of a fixed exchange rate in the face of the fall in the internal purchasing power of the rupee. Finding all these methods of attack did not go home, they turned to nice and disingenuous distinctions between wartime balances and ordinary commercial debts. At all times, they have stressed the need for special negotiations and special arrangements for the return of our sterling balances. Now, in such a position, it is not easy for the Mission to tackle this problem during their sojourn in Britain. Sir Ardeshir Dalal is reported to have suggested that India would be ready to write off part of these loans to Britain. Of the other members of the Mission, a few seem to have insisted at every opportunity that "dollars and hard cash" must be made available according to our requirements of our sterling balances. And there was a report, too, that they had gained acceptance of their contentions. Now, the problem is not so simple that cut-and-dried solutions can be suggested offhand. What the Mission should have done is to indicate the volume of funds they would require in each currency for payment of the orders they contemplated.

But this, they could not do. For there is no basis on which to calculate our requirements of foreign exchange. The plans for specific industrial enterprises which we would like to embark on in the immediate post-war years are yet to be prepared. The Government of India's enquiries into planning have not proceeded to that stage. And as for individual industrialists, though they find it easy to frame a charge sheet against the Government with a number of counts, they cannot claim to have on their hands clear cut schemes for new enterprises. If they have, they have not let any body know of them. On the other hand, there is good ground to believe the contrary. When the Government of India issued a questionnaire to ascertain the needs of industrialists for machinery and plant, the response was most disheartening poor. It was, of course, said that the Government asked for firm orders without giving any indications of prices and other conditions. But one or two specific difficulties rarely prove to be insuperable obstacles. There was nothing to prevent our industrialists from indicating their requirements without complying with unreasonable conditions. The fact of the matter is that plans have not been got ready and no precise indications of requirements can be given. In these conditions, any attack on the problem of sterling balances and availability of foreign exchange can only be dangerously premature. That problem can be tackled only when the principal features of the international balance of payments in the post-war years will emerge more clearly to view. And, to some extent as part of that position, and to some extent independently of it, the trade and financial relations between India and Britain and the prospects of Britain's export trade will have to be clarified. And all these are tasks which the Mission cannot accomplish except by long prior preparation. The Mission must be content with the promotion of what might vaguely and safely be called goodwill.

* * * *

While the defects due to the absence of a National Government could not be avoided, the same thing cannot be said of others. It is doubtful if the Government of India took pains to give the Mission a definite lead. Though Lord Wavell referred to the Mission in more than one public utterance of his, the Government would seem to have attached more importance to the unofficial character of the Mission. Whatever was needed to be done for the country as a whole was perhaps meant to be looked after by Sir Ardeshir Dalal. There has been little said about Sir Ardeshir's doings in Britain. But in the U.S.A. he is looking primarily to the provision for training of Indian technicians in that country. But apart from this, the work of the Mission is only the sum of the activities of the individual members. It is as individuals that the Mission could discuss the problem of the sterling balances or the terms on which British industry would provide technical aid for Indian industries.

"EAVESDROPPER".

CLOTH FOR SHROUDS AND FOR MOURNERS

In consultation with the representatives of the various communities, Government have reviewed the scale and system of distribution of cloth for shrouds and for mourners and with effect from June 25, 1945, the following arrangements have been made:

COMMUNITY	SCALE & DISTRIBUTION
SUNNI MUSLIMS	**12 yards of Longcloth or Markin for a male dead body and 15 yards for a female.** Permits for cloth will be issued by the Ward Committees except in the case of unclaimed dead bodies, for whom cloth will be stocked and distributed by the Anjuman Mufidul Islam, 31, Mufidul Islam Lane, Calcutta.
SHIA MUSLIMS	**15 yards of Longcloth or Markin for a dead body.** Cloth will be stocked and issued by the Anjuman Murtazwi, 51, Ezra Street, Calcutta.
HINDUS	**Dhotis or saris or markin cloth up to a maximum of 20 yards—5 yards for enshrouding the dead body and 15 yards for mourners. Less cloth will be issued if less is actually required.** Permits for cloth will be issued by the Ward Committees except in the case of unclaimed dead bodies, for whom cloth will be stocked and distributed by the Hindu Satkar Samity, 5, Shambhu Nath Chatterji Street, Calcutta.
CHRISTIANS	Married persons over 8 years—11¼ yards of Longcloth and 4½ yards of Black Calico or Longcloth. Unmarried persons over 8 years—15 yards of Longcloth. Children below 8 years—7½ yards of Longcloth. Cloth will be stocked and issued by the following professional undertakers in Calcutta— Liewelyn & Co., 9-9-1, Waterloo Street. D. Swaries & Co., 16, Mango Lane. Lawrence & Co., 175/B, Lower Circular Road. Brown & Co., 93, Elliot Road. J. Madeira & Co., 13, Bowbazar Street.
PARSEES	**20 yards of Longcloth or Markin for a dead body.** Cloth will be stocked and issued by the Calcutta Zoroastrian Community's Religious and Charity Funds, 21, Parsee Church Street, Calcutta.
JEWS	Persons over 8 years—10 yards of Longcloth. Children below 8 years—5 yards of Longcloth. Cloth will be stocked and issued by the Oseh-Haised Jewish Burial Board, 6, Mango Lane, Calcutta.

So far as cloth for shrouds and for mourners is concerned, the Ward Committees will now issue cloth for Hindus and Sunni Muslims only (except for unclaimed dead bodies) and not for other communities who have undertaken distribution through their own organisations mentioned above.

DEPARTMENT OF CIVIL SUPPLIES, BENGAL

THE
BRAITHWAITE BURN & JESSOP CONSTRUCTION
COMPANY LIMITED
Mercantile Buildings, Lall Bazar, Calcutta.
ENGINEERS AND CONTRACTORS
GENERAL ENGINEERING CONSTRUCTION
INCLUDING
BRIDGES, JETTIES, PIPE LINES, FOUNDATIONS, Etc.

CROWN BRAND
ALUMINIUM IN ALL FORMS
Cooking Utensils; Tea Strainers, Tea, Desert, Table and Rice Spoons; Mess-Tins, Waterbottles, Vats, Tanks, Containers, Boilers, Bottles, Tea Basins; and Sieves; Latex Cups and Coagulating Pans; Refrigerator Lattice, & Cube Trays; Radio Loudspeaker Horns & Chasis; Electric Light Shades & Reflectors; Fan Blades, Regulator Covers & Canopies.
Office stationery equipments; Bath room fittings; Name Plates; Motor number Plates; Photo Frames; Suit and Document Boxes
Sheets; Circles; Wire; Rivets; Inset-Notched Bars & Circulated; Alloys & Special Castings to given designs for Engineering and Industrial purposes.
JEEWANLAL (1929) LIMITED

CALCUTTA; BOMBAY; MADRAS; RAJAHMUNDRY; DELHI; ADEN; RANGOON.

BUYING & SELLING
REVOLUTIONISED
It is with the intention of working up a common platform between buyers and sellers that we have equipped ourselves to act as Agents, Distributors, Manufacturers' Representatives, Commission Agents, General Merchants, Exporters and Importers. Industrialists as well as consumers will find our service invaluable. At present buying and selling of the following goods are undertaken:—
OIL
Mahua Oil
Linseed Oil
Groundnut Oil
SEEDS
Linseeds
Mahua Seeds
GENERAL
Electrical Goods
Agricultural Tools
Small Tools
High Chemicals
Jute Products
Bee Wax
Medicines
Cutlery
Books & Magazines
Hosiery
Toilets & Perfumery
Biscuits
Confectioneries
Condensed Milk
Tea
Barley
Convalescence Foods
Toys
REPRESENTATION
We also act as—LOCAL PURCHASING AGENTS
LOCAL DISTRIBUTING AGENTS
LOCAL ENQUIRING AGENTS
IN FACT REPRESENTATION OF ANY KIND.

BOMBAY MARKETS

BULLION

Bombay, June 28.

The Silver market is very nervous to-day on reports of Allied invasion of Japan and also of the better outlook of the Simla Conference. From Rs. 134 on Saturday, Silver Forward crashed to Rs. 128-12 to-day. The Bulls are unloading freely and bear pressure is severe. Arrivals of Rupee Coins from up-country were heavy sometimes while the off-take is poor. There is now a stock of 3,000 bars. The *Budlee* has disappeared against bears. The market became vulnerable because of the rumours of impending cessation of Silver sales by the Reserve Bank and the existence of a huge overbought position. The undertone is weak.

Gold is also weak in sympathy with Silver, Forward declining to Rs. 75-9 to-day against Rs. 78 on Saturday last. But demand averaging 30,000 tolas is a sustaining factor as also the Reserve Bank's offering of 20,000 tolas. Operators are, however, cautious.

Gold And Silver Sales

The following table shows daily sales of bullion by the Reserve Bank from 20th June, 1945:

Date	Quantity bars	Price per 100 tolas Rs. A.	Quantity tolas	Price per tola Rs. A.
28-6-56	100	131 12	20,000	77 5
27-6-45	100	132 0	20,000	77 8
26-6-45	100	134 2	20,000	78 0
25-6-45	100	133 14	20,000	78 2
22-6-45	100	136 10	20,000	79 6
21-6-45	100	138 12	20,000	78 8
20-6-45	100	136 12	22,000	78 7

Gateway of India

(From Our Correspondent)

BOMBAY, 26th June, 1945.

Spiritually and emotionally, the visit of the released Congress leaders to Bombay introduced a rejuvenation. The sense of frustration, of despair which had benumbed political consciousness has given place to a note of subdued optimism about the outcome of the Simla Conference. Mr. Bevin said sometime back that the Congress was a good agitator but rather jibbed at responsibility. The Congress is trying its best to refute this naive charge. Even Pandit Nehru seemed to have become chastened, and the thousands who flocked to hear him and paid their respects to this indomitable national hero came away with a feeling that, given the chance, the Congress would deliver the goods this time. It was a distressing sight to see Pandit Nehru's face tweaked into a lot of lines, the pitiless scars of incarceration. But even Nehru seemed disposed to join in the rhythm of hopefulness engendered by the Wavell Plan. In short, the tensions have relaxed; the charged atmosphere has changed and visions of fair weather and salubrious political climate are floating in the minds of the people.

A good deal of uneasiness is present in the mind of the consumer public at the way in which price control is operating with regard to imports of manufactured articles. The Central Government have, it is true, issued notifications under the Profiteering Ordinance fixing the prices to be charged by dealers, but one notices in many cases (e.g., electric bulbs, radio sets, etc.) that the selling price is fixed at a level which is disproportionately high compared to the actual landed cost of these articles. It is hardly necessary to affirm that profiteering is not less reprehensible when official sanction legalises it. The feeling is gaining ground that, although supplies increase, prices do not reflect the law of supply and demand and are artificially kept at high levels to favour the foreign exporter. Now that the curve of imports is steadily tending upward, it seems time that the question of import prices was gone into by a competent body apart from Government, so that the consumer public may have the satisfaction that it is not being fleeced. In the name of countering inflation, far too many sins can be committed with impunity; but such a state of affairs is bound to bring the import policy under suspicion, not to say condemnation, of the public. There should be a steadfast attempt to scale down prices as quickly as possible.

It is but natural that in the current formative period of trade and commerce, Indian commercial circles should view with distrust the moves of Government, unless it has specific proofs to the contrary. An instance of this is the case of Indian rice merchants in the Burma trade whose interests seem in danger of going by default. The Indian Merchants' Chamber has accordingly taken up the question with the Government of India. The position in brief is this: it appears that the Burma Government propose to set up an Agricultural Projects Board vested with the monopoly of purchasing all the surplus rice in Burma; the buying monopoly will be that of the British Ministry of Food. The latter will be responsible for exporting the rice to India. Thus, if India wants Burma rice, it is first to be bought by the A.P.B. mentioned above, which will sell to the Food Ministry which in turn will sell to India. Also, the financing of the movement of rice will be undertaken by the exchange banks. It appears also that the Government of India have to negotiate with the Food Ministry for Burma rice. This arrangement is, on the face of it, a closed circuit for British commerce and leaves no loophole for Indian merchants, who before the war, were prominent in the Burma rice export trade. It is nothing short of an attempt to oust the Indian merchants, of whom more than 200 thousand had earned their livelihood from the trade. No one will deny the need for proper organisation of distribution, but schemes of the sort noticed above are patent manifestations of monopoly.

The cotton trade has noted a message datelined from Alexandria that 40,000 bales of Egyptian cotton are ready for shipment to this country. That does not necessarily mean that they will be available, for freight is still hard to procure and allotments are not exactly satisfactory. While Egypt had a substantial surplus to spare, the Indian mills were starved of Egyptian cotton. Why is this? Does the explanation for the attitude of Government lie in the allegation one sometimes hears that the authorities have themselves bought on official account a good quantity of these cottons at high prices and first want to see them disposed of before importing more? Anyway, the mills are entitled to better consideration from the powers that be. A similar state of affairs prevails on the export side. If shipping space had been made available, the Indian cotton producer could with benefit have responded to the order for 80,000 bales placed by France some months ago; unfortunately, it was not to be and the U. S. exporter catered to the order, and India lost a good chance. This instance is trifling in itself, but it is obvious that we cannot afford to miss the bus every time as one fears we might.

The Bombay Government is collecting a census of unskilled labour and an order has been served on employers with more than 100 unskilled workmen to furnish every month a return showing the number of workmen employed, the daily average cash wages paid, the value of concessions in the matter of grain, fuel, housing or clothing and details of all other amenities provided. The employers are also to furnish returns of the labour personnel required for prospective new works in the coming months. These returns are to be supplied to the Regional Labour Supply Committee or the Provincial Labour Supply Committee as the case may be. The class of labour affected by the order is that from which technical personnel (as defined in the Technical Personnel Ordinance of 1940) is excluded. Of course, office staff and persons drawing emoluments of more than Rs. 100 per month fall outside the scope of the proposed census. The exact purpose behind this is not known, but it is presumed that it is in connection with the execution of housing plans and other constructive works for which unskilled labour will be required in large numbers.

Insurance Companies' Progress

The progress made by composite insurance companies in the last three years is gratifying. A large number of new institutions have been promoted under powerful auspices. If the present rate of progress is maintained Indian companies could compete on favourable terms with foreign institutions and thus partake of the growing volume of business in all the departments, accidents, marine, fire and other forms of insurance. That there is scope for all companies, old and new, cannot be denied.

The Indian Trade & General Insurance Company sponsored by a group of powerful Cawnpore interests, registered only in May last year, has been able to report satisfactory progress for the period ending December, 1944. The Company received its Certificate of Registration under the Insurance Act, as said above, early in May, 1944 and the gross premium income in all the departments for a period of a little over seven months amounted to as much as Rs. 8.75 lakhs. After deducting reinsurance the total net premium income is Rs. 2.81 lakhs. Interest on investments and miscellaneous receipts brought in Rs. 52,197 making a total net income of Rs. 3,32,853. Of this amount, Rs. 34,970 has been provided for by claims paid and outstandstanding and Rs. 1,65,882 for commissions and depreciation. There is a balance of Rs., 1,31,199. The directors have decided to transfer to reserve against unexpired risks as much as 52.2 per cent of the net premium income. They have also decided to wipe off completely preliminary and brokerage expenses. There is thus a debit balance of Rs. 35,881 to be carried forward.

That in a period of a little over seven months it should be possible for the Indian Trade & General to have a reserve of nearly Rs. 1¼ lakhs is credit-worthy. The Chairman's optimism, at the shareholders meeting held recently, that the Company could be expected to report better results is completely justified.

Oriental Life

The Premier Indian Life Office, the Oriental Government Security Life Company Ld., has a splendid record of business in the past few years. It has been breaking its own records in respect of new business every time. 1944 will perhaps stand out in the history of the Company as being the year in which the largest sum in respect of new business was underwritten by the Oriental and the figure was very nearly Rs. 22 crores. A target which has not hitherto been touched by any insurance company in this country and which could not be dreamed of a few years back.

In the past year 1,17,378 proposals were received for insurance amounting to Rs. 28.59 crores. Of this 87,398 policies assuring a sum of Rs. 21.84 crores were issued as compared with 58,012 policies assuring a sum of Rs. 15 crores in 1943. The income for the year amounted to Rs. 6.48 crores of which Rs. 5.29 crores was derived from premiums, the increase on the previous year's premium income being Rs. 77.44 lakhs. After providing for an outgo of Rs. 3.69 crores there is a balance of Rs. 2.79 crores which is added to the Life Fund. The Life Fund at the end of the year was Rs. 36.63 crores.

As the Chairman remarked at the annual meeting of th shareholders (the speech is published elsewhere in this issue) the claims experience of the company continues to be satisfactory being much below the mortality basis assumed in the tables. Total claims paid were Rs. 2.17 crores of which Rs. 90.74 lakhs was on account of claims by maturity. The ratio of actual death to claims in the year under review and those expected and provided for in the mortality basis adopted in the last valuation is 49.8 per cent as compared with 48.5 per cent. The increase in the expense ratio to 24.3 per cent from 22.4 per cent is mainly due to the increase in office work and the payment of the first year's agency commission. The difficulty of the company to dispose of satisfactorily funds at its disposal is reflected in the decrease in the interest yield to 3.4 per cent from 3.68 per cent. The company's financial position is very strong. The excess market value over book value was as much as Rs. 5 crores.

In view of the declining yield on investments it was found necessary to revise the premium rates. The Chairman rightly pointed out that the interest of the policyholders would be properly safeguarded and the results of the valuation which are to be made at the end of 1945 will be found satisfactory. It has been the practice of the Oriental to stiffen the basis of valuation as far as possible and this policy has proved beneficial to all concerned.

EAST INDIAN RAILWAY

TENDER NOTICE

Annual contract item costing over Rs. 8,000 Class I Contract.

Sealed tenders are invited for the following and will be received in the General Manager's Office, East Indian Railway, 105, Clive Street, Calcutta, before 12 Noon on 31st July, 1945.

Tender No. SP/E/Est/14/Gb8|Pt. II for the supply of 988 Nos. Chairs Teakwood office with arms. Tender forms with full particulars can be had from the office of the Controller of Stores, E. I. Railway, 105, Clive Street, Calcutta on payment of Rs. 2 per copy to the Treasurer, E. I. Railway, 105, Clive Street, Calcutta, and on production of his receipt when applying for the same.

Firms outside Calcutta may however remit the amount to the Controller of Stores, Calcutta by money order. No refund is permissible. Sealed tenders delivered by hand should be presented for registration to the General Manager's office and this put into the tender box outside the Deputy General Manager's (Works) room by the tenderer or his representative.

Central Oilseeds Committee to be Formed.

The enactment of an Indian Central Oilseeds Committee Bill, similar to the Indian Rice Committee Bill, is now under the consideration of the Government of India.

The Bill aims at introducing improved methods for the cultivation and marketing of oilseeds. It also provides for the constitution of a Central Indian Oilseeds Committee, including certain Government officials and trade personnel, to materialise its aims and place oilseeds research on a better foundation.

An independent source of income for the Committee's uses is to be furnished by a cess of one anna per maund of oilseeds crushed in power operated mills in British India.

FIXED DEPOSIT
Entire deposit money invested in land.

Airway Port

(From Our Correspondent)

KARACHI, June 22.

Mercantile circles in Karachi have become restive over the non-Indianisation of the services of the Imperial Bank of India, in spite of the fact that as far back as 1920, the Imperial Bank of India Act was passed, by which the Bank was to open new branches and Indianise the entire administration. "It is an irony that Indianisation policy has been set at nought and conveniently set aside as if the Imperial Bank is the exclusive preserve of the Europeans. The scrutiny of the personnel of the superior staff of the Bank amply proves that right from the top, that is, the Managing Director, to the administrative heads of first class branches, Europeans have been preserved all these years. The natural conclusion therefore is that the non-Indian element has been found uppermost in the minds of those responsible for the administration of the Imperial Bank. The Indian assistants have necessarily to languish all their life as assistants, though a very small fraction of the fortunate among them are promoted as last grade officers after serving the Bank for the best part of their life. Indianisation should be instituted at a rapid pace so as not to further alienate the feelings of the Indians. The Imperial Bank ought to have been by now thoroughly Indian in character and outlook. As a first step in the policy of administration, a suitable Indian should be put at the head of the affairs of the Bank after the impending retirement of the present Managing Director", says a statement issued by the local Indian Merchants' Association. The plea has further been reinforced by a powerful editorial in "Sind Observer", which says that in the coming times, business will have to be solicited by canvassing from house to house and for this, Indian officers are best suited.

Reports have reached Karachi of racial discrimination being practised against Indian merchants in Gibraltar Sind merchants who migrated there about fifty years ago have been badly affected. In 1923, an agitation was started to oust Indians from trade in Gibraltar, culminating in the promulgation of the Alien Traders' Ordinance, imposing certain disabilities on Indians trading in the port. The compulsory evacuation of the port as a result of war gave an opportunity to the white settlers to drive out Indians in order to monopolise the entire trade. With the end of war in Europe, reports reaching Karachi reveal that anti-Indian campaign has been resumed with renewed vigour by white traders so as to bring about complete extinction of the Indian element. Karachi Indian Merchants' Association have addressed a communication to the Secretary to the Government of India, Department of Commonwealth Relations, protesting against the treatment meted out to the Indian merchants. They ask "Is it fair that our nationals should be treated so shabbily without the Government of India doing anything to protect the rights of its subjects abroad? Our countrymen have sacrificed their lives side by side with the whites, in their fight against aggression to win democracy and preserve the unity of the Empire. Alas the reward of our service and sacrifice is all too humiliating"

It is understood that the Karachi Municipal Corporation is to run its own buses, which at present are being plied by the East India Tramway Company. The seven-year contract is ending in 1946 and the Corporation, it is learnt, will not renew the license. For this purpose, much spade work has been done. The necessary papers have been sent to the Legal Adviser of the Corporation, who is drafting the necessary notice for the tramway company, informing them about the decision of the Corporation not to renew the license and run its own buses.

It is understood that the current year's wheat crop in Sind is hardly fifty per cent and some of the districts are already finding it difficult to meet their requirements. Sind Government is therefore being urged to put an embargo on wheat export as the wheat crop this year will hardly be sufficient for the province's needs. It is further learnt that the government have purchased 47,00,000 maunds of wheat during 1944-1945, but this year, up to May 31, they have not been able to get 21,00,000 maunds. Consequent upon a representation to the government of Sind, that the export of wheat should be banned, it is learnt, government have asked for a report regarding the crop conditions from collectors of all districts of Sind. Figures are being collected to find out whether Sind has any spare quantity for export. The province's usual crop is 1,25,00,000 maunds out of which about 55,00,000 maunds are exported, leaving 70,00,000 maunds for provincial needs.

The statutory maximum rate of wheat has been reduced from Rs. 9—8as. to Rs. 8 10as. in the producing areas in Sind.

The dearth of consumer goods has given a fillip to cottage industries in Sind. In the local Government Industries Emporium, the sales reached a peak figure of Rs. 110,000 last year, which is about four times the sales figure of the previous year. The post-war prospects of cottage industries in Sind are not however very bright. Apart from the imports of foreign goods with which the markets in every province would be flooded, the Sindhi craftsmen would find it exceedingly difficult to compete with craftsmen in other Provinces.

Serious apprehensions are entertained by Sindhi merchants that their business interests have been jeopardised by the reported sale of 22 shops situated in Scott Market which are said to have fetched Rs. 37,000. No information about the auction was vouchsafed to Sindhi merchants who have vast vested interests there.

The Karachi branch of the Discount Bank was declared open by Mr. Jamshed Nuserwanjee before a large gathering of local businessmen and bankers on June 16. Mr. B.L. Punjabi, the Managing Director of the Bank said that the Discount Bank was the first Sindhi scheduled bank and was the first discount house in India. Mr. Jamshed was glad to say that the Discount Bank was well administered and he was more glad that it was being administered by a Sindhi.

The opening ceremony of the Karachi Commercial College was performed to-day by Rao Bahadur Shivrattan Mohatta. The Bombay University Senate has granted affiliation to the local Commercial College.

There is nothing that adds more to the natural charm and beauty of a woman than does a saree. The grace and simple dignity that it gives the wearer is a striking tribute to this colourful costume which can flatter the most sylphlike figure. Lakshmiratan Cotton Mills' sarees are worked in designs simple yet striking and set off by pretty, gay borders. There is a wide and varied selection to suit all tastes. Also shirtings and suitings and other household fabrics —smart and of the finest quality.

Resume of Commodity Markets

The feature of the week is the fall in prices for bullion on the fears that, with the formation of a popular government, conditions would be generally easier and that the keeping away of black market operators from the bullion market would result in lower prices. The raw cotton market has been steadier on the publication of the Fourth Cotton Forecast showing a decrease in both the area and yield. The raw jute market has been quietly steady while the jute manufactures market is better on the announcement of a large order for bags.

The fall in bullion prices has been rather abrupt in the latter half of the week. As there has been no change in the selling policy of the Reserve Bank it is not clear as to what exactly is the decline in prices due to. It is stated that bulls have a tendency to cash profits on the feeling that the present prices will not be available for long. It is not clear why the change in the outlook came about as nothing has happened to suggest that there will be an early decline in prices for both gold and silver to nearer the parity levels. There does not seem also to be any valid reason for the theory that the checking of black market trading, when the popular government comes into being, will result in a fall in prices for bullion. Though, of course, it may be said that substantial support will be withdrawn from the market if no illegal gains were made and no efforts were made to hide this money either in bullion or shares. But with the cornering of supplies in a few hands and the poor sales by the Reserve Bank there can be an appreciable fall in prices only when public selling is on a large scale. It is true that there has been an increase in arrivals from the mofussil in the past one or two weeks, but apart from the anxiety of a small body of investors to take their gains, demand for the precious metals for marriage and other purposes from the small consumer is still on a large scale and this will serve to keep up prices. It may be said, however, that if present conditions obtain for some time, the downward movement might continue.

But for the fact that large quantities are expected to be tendered for July contract, the publication of the cotton forecast figures for 1944-45 would have had an encouraging effect on the market. As a matter of fact, the quotation for forward has shown a tendency to improve and closing prices are higher. Except for the weakness of the bullion market the improvement would have been perhaps more pronounced.

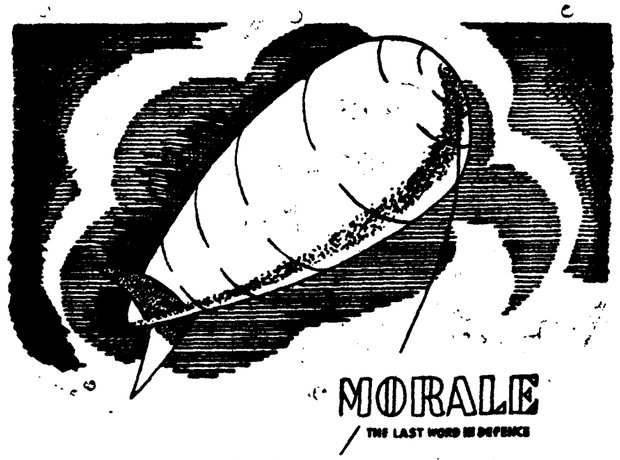
According to the figures supplied by the Department of Commercial Intelligence and Statistics, the All-India Fourth Cotton Forecast for the season 1944-45 reveals a decrease of 28 per cent in yield as compared with the corresponding revised forecast of last year. The figures are given below according to trade descriptions:

Description		Acres	Bales
Bengals	..	1,808,000	834,000
Americans	..	3,233,000	1,198,000
Oomras	..	3,496,000	554,000
Broach	..	520,000	129,000
Surti	..	323,000	64,000
Dholleras	..	920,000	129,000
Others	..	4,744,000	350,000
Total All-India	..	14,744,000	3,468,000

* * * *

The raw jute market has continued quiet, rates for both old and new crop quoting at minimum levels. Mills are inclined to buy only in small quantities. It was expected that the placing of a large order for bags by the Government would have an encouraging effect on the raw jute market but there has been no rush for buying jute so far. It now appears that both the old and new crop supplies will be in excess of mills requirements and that unless there is a large increase in exports and mill consumption, it could not possibly be expected that prices would improve appreciably.

In mid-week, however, a slightly steadier feeling was noticeable in the market especially for new crop as mills were inclined to buy small quantities at slightly higher rates. As interest died out prices are again back at minimum levels.



In the loose jute section Supervised Jat Middles and Bottoms were done at Rs. 15-4 and Rs. 12-4 respectively and European marks at Rs. 15-8 and Rs. 12-8 per maund. Middle weedings were paid Rs. 15-4 for District qualities Sellers are still keen on doing business in old crop at minimum prices.

In the pucca bales section not much business has been reported and shippers are keeping out of the market. Mills are only interested in S.M.R. and cuttinge N.C. and M.C. There has been an improvement in weather conditions in the mofussil. With dry weather in certain parts of the jute growing areas, the standing crop is reported to be healthy and satisfactory.

In the jute manufactures market slightly steadier conditions have been noticeable though there is no increase in business. The improvement in the heavy goods section, however, has had a steadying effect and quotations for forward positions have registered a rise, 9 porters July-September quoting Rs. 27-14 and October-December Rs. 27-6. Only two weeks back 9 porters October-December were marked as low as Rs 26-14. Mills are well sold till the end of September and it is confidently expected that by then there will be a large improvement in the shipping position and it will be possible to market all the output at maximum rates. It is reported that the rate of consumption in the U S. A. has been increasing in recent months. There is, therefore, no great anxiety on their part to do business.

The revival in the heavy goods section has been very opportune. As there was an oversold position the announcement of a large order for bags, believed to be 35 million, resulted in a slight squeeze in the market and prices were marked higher. B. twills were done up to Rs 65-4 from Rs. 64 a few days back and October-December to Rs. 63 from Rs. 60.

The new order is for delivery in July-October. As several mills had sold their output at slightly below maximum rates for delivery July-September the placing of this order might necessitate extension of deliveries in respect of contracts concluded earlier or the cancellation of the same. As it is expected that the grain trade will result in a demand for bags, even the cancellation of orders by the bazar might not have any adverse on values especially if the bazar contracts were on behalf of genuine consumers. The deferred demand would serve to keep up prices when the buyer is actually interested in the market. It has been criticised that the order for bags has been placed rather late in the market and that late deliveries would possibly delay the import of rice into this country in large quantities. From the point of view of the Government, however, it would not have been possible to get more advantageous terms. It is reported that already supplies of bags have been sent to Rangoon for bringing rice into this country and before long the Indian consumer will be getting Burma rice.

MORALE
THE LAST WORD IN DEFENCE

Defence of a country, particularly in modern warfare, largely depends on the excellent morale of the people, irrespective of whether they are directly engaged in war work or not. It is the unshaken morale of the people of Great Britain that helped in the magnificent defence against the terrible Air Bombardment by Germany and gave the Germans the first setback. It is the knowledge of every individual and the satisfaction that their country is well defended that creates such morale. In the defence against Air Raids Baloon Barrage plays an important part. So also the efficiency of the fire fighting services and the Rescue parties. All these need—and an essential need of course—suitable and strong ropes. Hartons play the leading role in these supplies. Whatever the kind of quality in ropes may be Hartons have the variety to choose from.

Jute and Jute Manufactures

(From Our Correspondent)

Special to "Indian Finance".

Calcutta, June 28.

The placing with mills of large Government orders for sacking goods last week-end imparted a considerable degree of buoyancy to the heavy goods market and was also responsible for a better feeling all round in other sections of the trade at the beginning of this week. Sellers of raw jute were not offering so freely at minimum prices in anticipation of purchases of jute by Mills against the Government order but expectations in this direction have not been realised to any great extent. Although there has been more activity during the current week than of late, buying of raw jute by Mills has not been on a large scale and at time of writing the tone of the market is again subdued. For our part, we fail to see how Mills can be reasonably expected to purchase jute in large quantities as long as they are handicapped in their efforts to step up production by lack of adequate supplies of coal. Until favourable conditions exist which will enable Mills to increase production of goods there can be no increase in their consumption of raw material no matter to what extent orders may be forthcoming for the manufactured article. It must not be forgotten either that the great majority of mills are not in a position to carry their normal stocks of raw jute due to the requisitioning of much of their godown accommodation. With regard to coal supplies, the number of wagons placed at the Indian Jute Mills Associations Dumps during the week ending 23rd June 1945 was again most disappointing; the average daily arrivals amounting to only 40 wagons. For the period 1st September 1943 to 23rd June 1945 the average daily arrivals of coal wagons at the Associations' Dumps was 52. We have not been able to ascertain the actual size of the order for sacking goods placed by the Government of India through the Adviser on Jute Supplies, but reports indicate that it may extend to over 1 lakh bales, i.e., more than thirty million bags. There has been little or no support from overseas markets for heavy goods for some time and this section of the market has been making very poor showing. The placing of such a large order by Government is therefore very welcome news at this time as, although mills have already sold most of their output up to September this year at around maximum prices, it has been difficult to effect sales recently in the more forward positions even at the discounted prices quoted by the bazaar. There can be no doubt that this Government order has, as far as sacking goods are concerned at any rate, created a healthier position up to the end of the year.

The India Jute Mills Association issued the following statement of total reported sales for the week ended Saturday the 16th June 1945:—

	This and next month Yds.	Forward Yds.
Hessian ..	29,88,000	3,78,71,168
40" 8 oz. Hessian (included in above)	31,500	6,00,000
Twills ..	16,74,748	33,21,248
Plains	8,21,990	1,59,600

Negotiations have been successfully concluded for the renewal, for a period of six months, of the agreement in regard to the Jute Mills Industrial Pool. The old agreement expires at the end of this month. The Pool has worked satisfactorily as far as mills are concerned but there is a large deficit in the fund due to the inability of mills which have been working to meet in full the commitments of the idle mills. For the Pool to be completely successful, Mills must have their full requirements of coal and production must be kept at a high level. Some time ago doubts were expressed as to whether, under present conditions, a renewal of the agreement to work the Pool could be obtained.

* * * *

At the time of the raising of the Black-out in Calcutta we referred to the vexed question of compulsory War Risk Insurance and to the remarkable figures revealed of the incidence of these insurance schemes on industry in general. We remarked then that the revelation of the very heavy impositions on industry suggested that the time had now come for the repeal of the War Risk Insurance schemes and free cover afforded to all such risks for the remainder of the war. It was noted that claims met under the Goods insurance scheme amounted to a little over Rs. 4 lakhs against premia collected of Rs. 17½ crores while claims met under the Factories scheme were just over Rs. 2½ lakhs against premia of Rs. 19 crores! We now hear that the Government of India has decided that all policies expiring on 30th June 1945 issued under the War Risks (Goods) Insurance Scheme will be extended to 30th September 1945 without payment of premium. New policies issued during the quarter ending 30th September 1945 will be at the premium rate of three pies per month, or part of a month, for each complete sum of Rs. 100 (Rupees one hundred) in respect of goods liable to compulsory insurance and six pies in respect of goods voluntarily insurable. The Government of India has also decided to waive collection of instalments due up to 1st September 1945 under the War Risks (Factories) Insurance scheme.

In the Pucca Bales market fair business was done for export to Dundee in Firsts, Lightnings and Daisee grades at minimum prices. New Crop Lightnings and new crop Dundee Daisee 2/3 were bought by local mills at minimum prices. At time of going to press there are unconfirmed reports of further enquiry from Dundee markets. Dealers are free sellers at minimum rates for all descriptions except special marks and Cuttings.

There has been some improvement in the loose jute market with mills taking a little more interest in offerings. Supervised jat, new crop, 50/50 assortment, came to business at Rs. 15-4 and Rs. 12-4 for Middles and Bottoms. Supervised District marks were done at Rs. 14-8 and Rs. 11-8 Middles and Bottoms. Business was also reported in supervised jat, new crop, at Rs. 15 and Rs. 12. Old crop Bottoms alone were done at Rs. 12-4 and old crop European Bottoms at Rs. 12-12. It is reported that European new crop was done at Rs. 16-8 and Rs. 13-8 for Middles and Bottoms.

Business in the Hessian market has been small. Maximum prices are quoted for the near positions and some business is reported done with mills at maximum rates up to December this year.

In the Heavy Goods section there was a sharp rise in prices following the placing of the Government order for sacking goods, B Twills recording a rise of about Rs. 2-12 in the Oct./Decr. position and sellers are more reserved. Mills, however, are content to look on meantime and are not interested in business below maximum rates.

Quotations as on Thursday 28th June, 1945:—

	Ready	July/ Septr.	Oct./ Decr.
Hessian 8 oz./40"	22 2	22 2	22 0
" 10½ oz./40"	29 0	29 0	28 10
" 10 oz./40"	28 0	28 0	27 10
Plain C's	66 0	65 8	64 8
B Twills	65 4	64 8	63 4
Sacks	65 12	65 8	64 8

Over Rs. 112 Crores were invested in less than eleven months in the First 3% Victory Loan (1957) withdrawn during February 1945.

The investment of so large a sum in so short a time was proof of the First Loan's soundness and the public's confidence in Government Loans. The 3% Second Victory Loan offers you the same excellent terms—half-yearly dividend less Income-Tax sent to your address, guaranteed repayment at par not earlier than 15th August 1959 and not later than 15th August 1961, no limit to the amount purchasable, security of your capital, ready salability in the market at any time, and refund of Income-Tax if you are not liable to it or liable at a lower rate. Investment in the 3% Victory Loan assists the war effort and helps to counter *inflation*. It keeps your savings safe from depreciation and gives you a handsome return year by year.

To buy this Loan, apply to your Bankers, or to the Reserve Bank of India at Bombay, Calcutta, Madras, Delhi, Cawnpore or to the Branches of the Imperial Bank of India in other places or to any Government Treasury

AGENCIES IN ALL IMPORTANT CITIES OF INDIA

Time marches on. And, with Time, the country's progress also. The India of 100 years ago has changed so very much that today industry has almost as important a place in India's scheme of things as agriculture.

India's industry is today on the march—a march that is destined to bring a general increase in the standard of living of the country's teeming millions. In keeping with the country's march of progress, both industrial and agricultural, the 60-YEAR-OLD-FIRM of Herman & Mohatta, Western India's pioneers in the Iron and Steel Industry, are now busy manufacturing goods for agriculture and industry.

Stock Markets to-day and to-morrow:

NEW ORDER FOR JUTE BAGS

Stock markets in both Calcutta and Bombay have been rather irregular in the past week and business passing has been restricted. The anxiety to await further developments at the Simla Conference and the weakness of the bullion market were responsible for the easier tone of the markets. There is also another reason. Operators are divided in their opinion regarding the effect of a political settlement on the course of stock exchange values. Friday's rally in prices, however, suggests that the market is not really worried in this respect and that such decline in prices as was noticeable earlier in the week was mainly due to the activities of bears and the tendency on the part of some to take their profits. The news regarding the adjournment of the Conference to July 14 came after the market was closed and could not have influenced the course of prices.

As has been pointed by me already there need not be any doubt that the effect of a political settlement, so far as the market is concerned, will be bullish as post-war planning will be more vigorous and industrial development will be more rapid and on proper lines.

It was reported a few days back that a big order had been placed with the jute industry for 35 million bags by the Government of India through the Adviser on jute supplies for delivery in July-October. This order was not unexpected as it was felt that with the need for bringing in large quantities of Burma rice into this country, there would be demand for bags and that the Government of India might place orders any moment. But the delay in the announcement of the order seems to have caused some inconvenience to particular mills as the output till September has been disposed of around Maximum levels and for the execution of this order it might be necessary to postpone deliveries to consumers or if the buyer so desires to cancel the contracts already concluded. This might result in some losses as the rate at which the Government order has been placed is lower than the price secured by mills on their sales. With the revival of expectations regarding an increase in trade with the Far Eastern countries in heavy goods, the prospects for jute mills, it should be said, have improved. The market naturally took a bullish view of the immediate outlook and, early this week, an all-round rise in prices was recorded. The bigger denomination shares were marked higher by 10 points. There was selective buying of small shares; Nellimarlas were marked up to Rs. 38-4 and Chitavalsahs to Rs. 36-4. There was heavy buying of Ganges and the quotation was higher at Rs. 630. In the last two days, however, a slight decline in prices has been recorded though the general undertone is steady.

If, as is generally anticipated, the shipping position improves after September, and the schedule regarding the reconquest of lost territories proves correct, the jute industry can be confident of better times. Only the labour shortage should be overcome and coal supplies be more regular.

That the industry is more hopeful and is convinced of the industrial pool arrangement is evident from the decision to extend the agreement for another period of six months. It need not be emphasised that, as a result of the introduction of the industrial pool scheme and the slightly improved coal position, the lost loom hours of many mills have been made up and the steam-driven units have not been made to work at a loss. The earnings of the industry are more evenly distributed and it has been possible in nearly every case to distribute satisfactory dividends.

Reflecting perhaps the improved arrangements regarding working, the *Hooghly Mills Company, Limited*, reports during the year ended March, 1945 a higher net profit, before providing for taxation and depreciation, of Rs. 11,88,653 against only Rs. 1,98,159 for the previous 12 months. The increase in earnings is to a certain extent due to the smaller losses on supplies of foodstuffs to workers, Rs. 1,70,158 against Rs. 3,71,126. But as against this, the contribution to the Industrial Pool was Rs. 37,730 (nil). The larger profits were, therefore, mainly due to larger sales and increased production. Total sales were Rs. 78.71 lakhs against Rs. 58.2 lakhs.

Of the net profit, the provision for taxation is Rs. 2,77,394 (Rs. 1,10,108) and for Excess Profits Tax Rs. 4,95,506 (nil). The sum set aside to depreciation is Rs. 1 lakh (nil). After paying a higher dividend of 50 per cent against 40 per cent the amount carried forward is slightly lower at Rs. 66,148 against Rs. 77,995 brought in.

Naranarayan Dye-Stuff and Chemical Works Limited, will be the first public enterprise in India to manufacture dye-stuffs and other chemicals which are badly needed by the textile and other industries. It is a matter of common knowledge that this country is dependent entirely upon imported dyestuffs and that large sums have been spent annually.

Naranarayan was started in 1939, and it should be said that products manufactured compare very favourably with the imported stuff and have drawn the appreciation of the Development Member and the Director of the Chemicals Directorate, Delhi. The present issue is for Rs. 30 lakhs in 5,000, 6 per cent. tax free cumulative preference shares of Rs. 100 each and 2½ lakhs of ordinary shares of Rs. 10 each at par is required for the expansion of the company's activities.

Malabar Fertilisers and Industries Limited is proposing to extend its activities by starting a factory near Kottayam for the manufacture of bonemeal, fish-powder, etc. With the emphasis on the grow more food campaign artificial manures are assured of a good market. As the company has the necessary facilities it is expected that it would be possible to earn decent profits even from the beginning. The prospectus estimate of Rs. 2.5 lakhs works out to 30 per cent. of the issued capital. The present issue is in 14.857 ordinary shares of Rs. 10 each at par.

Commenting on the prospectus of the *Kamani Engineering Corporation, Limited*, published in "Indian Finance" dated June 23, 1945 it was mistakenly stated that the purchase price payable for taking over the three concerns was Rs. 40 lakhs. The price payable is only Rs. 25.95 lakhs, Rs. 12 lakhs in ordinary shares and the balance in cash.

INDIAN TRADE AND GENERAL INSURANCE COMPANY, LIMITED

SATISFACTORY RESULTS FOR THE FIRST YEAR

Chairman on the Future of Composite Insurance Companies

Presiding at the First Ordinary General Meeting of the shareholders of the Indian Trade and General Insurance Co., Ltd., held on the 23rd June, 1945 at Calcutta, Lala Karamchand Thapar, the Chairman, said:

I have pleasure in submitting to you the Directors' Report, the audited statement of accounts and balance-sheet for the period ending 31st December, 1944; these have been in your hands for some time and with your permission, I will take them as read.

The Company received its Certificate of Registration under the Insurance Act early in May last year, and the accounts now presented cover a working period of a little over seven months. I think our shareholders may well congratulate themselves on the results achieved during this short period.

The gross premium income in all departments amounted in this short time to as much as Rs. 8,74,579 and after deduction of re-insurance our total net premium income amounted to Rs. 2,80,656. Interest on our investments (less income-tax) and miscellaneous receipts brought in Rs. 52,197, making a total net income of Rs. 3,32,853. Out of this amount claims paid and outstanding absorb Rs. 34,970. Commissions, expenses and depreciation amounted to Rs. 1,65,882 leaving a credit balance of Rs. 1,31,999.

In pursuance of their settled policy to build up adequate reserve—which policy I am sure our shareholders will strongly endorse—your Directors have placed Rs. 1,46,592 to departmental premium reserves, equal to 52.2 per cent of the Company's net premium income, and have further decided to write off entirely all preliminary and brokerage expenses which amounted to Rs. 21,290.

A debit balance of Rs. 35,881 is carried forward to the next account; that we have been able to build up a reserve amounting to Rs. 1,46,592 in so short a time is one of the most satisfactory features of the accounts now placed before you.

During 1943 and 1944 some 23 Indian companies entered the field of general insurance of which 9 were life companies who had extended their sphere of business, and the remainder were new flotations. I firmly believe that there is room for all of us, but I sincerely hope that the managements of these offices will curb the desire to show immediately large premium incomes which can only be procured at a cost so dangerously uneconomic as to invite eventual failure with inevitable repercussions on Indian insurance as a whole.

LOWER PREMIUMS EXPECTED.

There are to-day 46 Indian and 80 non-Indian companies underwriting general insurance business in this country; it is obvious, therefore, that we must be prepared to face keen, but, we hope, fair competition in the future; coupled with this feature declining values and rapid reduction in marine war risk rates must substantially affect the premium income of our fire and marine departments. To meet the difficult times which undoubtedly lie ahead, we must first of all build up sound departmental and general reserves, and whilst on this subject it is to be hoped that the Government will eventually entertain the many representations made to them by insurance bodies for taxation relief in respect of premium and general reserves: the Bombay explosion, which fortunately did not involve our Company, fully proved the need for much larger reserves than those presently allowed by the taxing authorities; conflagration and catastrophic hazards are ever present features of our business and adequate provision must be made to face them.

It is our endeavour to acquire a reputation for first class service to our insureds, of which the prompt settlement of claims plays no small part, and to extend our service to the industrial and trading community throughout the country as rapidly as possible whilst adhering to sound underwriting principles combined with economic and efficient management.

In addition to our offices and agency organisation in Calcutta and Bombay, we have established a branch in Lahore, where results are encouraging, and we have since opened another branch in Lucknow. We have efficient agency organisations in Karachi and Ahmedabad, and the results of these extensions of the Company's activities will be apparent in the accounts for the current year. Your Directors have, under active consideration, the establishment of further branch offices in other parts of India, and the pace of our expansions is only limited by considerations of acquisition cost.

THE INSURANCE (SECOND AMENDMENT) BILL.

The Insurance (Second Amendment) Bill, 1944, was not proceeded with at the recent Assembly Session, but I understand that it is likely to be brought up for discussion at the next session in November. Briefly, the Bill proposes to limit by law, (a) commissions payable to chief agents, and (b) management expenses of both life and general insurance companies operating in British India. The Manager of the largest Indian life office has publicly and unequivocally condemned the proposals as impractical and unwarranted. Although it might be desirable to limit the overall cost of general insurance companies, that is to say, the combined commission and management costs, I fully share the opinion that it is impossible to devise any formula which would operate fairly and equitably on all companies taking into account the different circumstances of each and every one of them; if, however, such a formula can be found, I would be prepared to support the proposal. It is, in my opinion, unfortunate that some Indian insurers have given the impression of having attempted to rush legislation through on such a highly controversial matter—legislation which may very well react to the detriment of Indian insurers *vis-a-vis* their foreign competitive. It is to be hoped that all thoughts of any such far-reaching legislation will be postponed until normal postwar conditions are established.

INSURANCE AND INDUSTRIALISATION.

Whilst I have already made reference to some of the adverse features which we may be expected to face in the next few years, and refer to them again later when I deal with the departmental accounts, I do so, convinced beyond any doubt that we shall be able to surmount them all and gather strength from year to year. There is no question whatever in my mind that with the growing industrialisation of this country, and with the great demand which is to be expected in the next few years for goods produced and manufactured in India, our Company will have ever growing opportunities of rendering insurance service to manufacturers and traders—service which will be backed by financial resources which cannot but inspire insurers with the utmost confidence in our ability to meet any engagements which we undertake.

The support which we have already received from our friends, both insured, chief agents and agents, has been encouraging and there are solid foundations for believing that this support is growing as we are becoming better known. I take this opportunity of asking all our shareholders and friends to assist in the future development of our business, and can assure them of our ability to handle their insurances in a fully satisfactory manner.

I will now comment on the departmental accounts:

FIRE DEPARTMENT.

Gross premiums amounted to Rs. 2,79,684, and after deduction of re-insurance, net premiums amount to Rs. 1,20,113. Claims paid and outstanding are Rs. 8,602, equivalent to 7.2 per cent of the net premium income, but it must be remembered in this connection that on such a short account there is a proportionately greater liability for unexpired risks. Commissions at Rs. 26,339 and management expenses at Rs. 35,492 represent 22 per cent and 29.5 per cent respectively of our net premium income. These ratios may be considered very satisfactory, bearing in mind the short period of trading. After providing Rs. 60,057 as reserve for unexpired risks, equivalent to 50 per cent of net premium income, a debit balance of Rs. 10,378-11-9 is transferred to profit and loss account.

Signs are not lacking that competition is likely to force up the acquisition cost of business, particularly in Bombay, but I have no doubt that the Chairman and the Committee of the Bombay Fire Insurance Association are aware of the dangers and will take such measures as may be necessary to control the situation.

MARINE DEPARTMENT.

The gross and net premium income amounted to Rs. 5,58,091 and Rs. 1,25,476 respectively. Claims paid and outstanding to Rs. 22,811 or 18.3 per cent of the net premium income. Expenses of management were Rs. 35,492.

The marine fund stands at Rs. 69,057, equal to 55.2 per cent of the net premium income.

With the end of the war in Europe and the successful development of the war against Japan, war risk rates have been greatly reduced; competition for business is on the increase whilst there is no diminution in the high ratio of marine claims, particularly theft and pilferage. Here again there are signs that all is not well with the tariff situation in Bombay. It is to be hoped that the Committee of the Bombay Underwriters' Association, who are to be congratulated on the manner in which they have controlled Bombay marine market during the difficult war years, will realise that more than ever before, it is essential that they should exercise the utmost vigilance and control, and guide the market during the difficult days of transition from war to peace. It would be deplorable if the Bombay carine market were to revert to the chaotic conditions which existed in 1937.

Your Directors are determined to build up an adequate marine fund in the shortest possible time.

Your Company is particularly well placed to handle the largest shipments to all parts of the world and we are anxious to further develop this branch of the Company's operations.

ACCIDENT AND MISCELLANEOUS

Gross and net premiums amounted to Rs. 36,802 and Rs. 35,066 respectively. Claims paid and outstanding amounted to Rs. 3,356 equivalent to 9.6 per cent of the net premium income; commissions and management expenses at Rs. 6,517 and Rs. 7,457 are equivalent to 18.6 per cent and 21.4 per cent respectively; these ratios may be considered satisfactory.

Reserves for unexpired risks at Rs. 17,535 are equal to 50 per cent of the net premium income.

I would like to thank my colleagues on the Board for their active assistance and support, and it is in no formal spirit that I ask you to join the Directors in thanking the officers and the staff of the Company for the efficient conduct of our business; I feel sure that shareholders will join me in this well deserved tribute.

AUDITORS' REPORT TO THE SHAREHOLDERS OF INDIAN TRADE AND GENERAL INSURANCE CO., LTD.

We have audited the Balance Sheet as at 31st December, 1944, of INDIAN TRADE AND GENERAL INSURANCE CO., LTD., as above set forth and the annexed Revenue and Profit and Loss Accounts for the period from 21st February, 1944, to 31st December, 1944, with the Books and Accounts as kept in Calcutta in which are incorporated the audited returns from Bombay and Lahore and have obtained all the information and explanations we have required.

We have verified the Cash and Bank Balances and the Investments appearing in the Balance Sheet and we report that in our opinion the Balance Sheet, Revenue and Profit and Loss Accounts are drawn up in confirmity with the Law and the Balance Sheet exhibits a true and correct view of the state of the Company's affairs according to the best of our information and the explanations given to us and as shown by the books of the Company. In our opinion Books of Accounts have been kept as required by Law.

We further certify that no part of any fund has been applied directly or indirectly for any purpose other than the class of business of which it is applicable.

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, June 29.

RATHER dull conditions have been noticeable on the Calcutta Stock Exchange in the past week. The rainy weather resulted in poor attendance on the Floor; the uncertainty regarding the political outlook and the weakness of the bullion market also had a discouraging effect and a decline in prices was recorded all round. The downward movement, however, has not been pronounced Fresh buying at the lower levels on the view that the political settlement, if it comes about, would turn out to be beneficial has resulted in a slight recovery though the general tone is still quietly steady and business is restricted. Jute shares were steadier on the announcement of the large order for bags while Coal shares were irregular. Engineering shares have been rather neglected with Indian Irons quoted around Rs. 41 for the most part of the week and Steel Corporations at Rs. 34. There are no interesting features in other sections.

In the giltedged securities section rather quiet conditions prevailed inspite of the easy conditions in the money market. It appears that the recent activity in this section was mostly speculative and banks are still undecided regarding the disposition of funds. 3½ per cent Paper has been quoting Rs. 101-8 for the most part of the week. There was a slight decline in terminable loans also 3 per cent 1966-68 being quoted at Rs. 98-7-6, 3 per cent 1959-61 Rs. 99-15, 3 per cent 1951-54 Rs. 101 and 3 per cent 1957 Rs. 100-2. 3½ per cent 1947-50 changed hands at Rs. 101-10, 3 per cent 1946 at Rs. 102-7 and 3 per cent 1951-54 at Rs. 101-3. 5 per cent 1945-55 were Rs. 101-5 and 4 per cent 1960-70 Rs. 113-4. No transactions have been recorded in provincial loans.

Bank shares are further higher with *Imperial Bank* contributories at Rs. 505 and fully paids at Rs. 2,010. *Reserve Bank* quoted Rs. 138 and *United Commercial* Rs. 21-4 premium. *Calcutta National* were unchanged at Rs. 15-14 and *Hindusthan Commercial* Rs. 54. *Hindusthan Mercantile* were Rs. 46.

Coal shares have been rather irregular though it should be said that the general undertone is steady and there has been an effort to stage a recovery in prices. *Burrakur* came down to Rs. 43 from Rs. 43-15 and are now quoting Rs. 43-4, *Bengal* shed 10 points to Rs. 720 and are again higher at Rs. 727, *Amalgamated* after being lower at Rs. 56-4 are now quoting Rs. 57. *Equitable* improved to Rs. 71-14 to quote lower again at Rs. 71. *New Beerbhoom* were very steady throughout at Rs. 45-12 and the decline in prices to Rs. 45-4 was only temporary. *Ondal* jumped to Rs. 40-4 on special buying while *Raneegunge* were steady at Rs. 62-10 and *South Karanpura* at Rs. 42-10. *Talcher* were firm at Rs. 13-8 ex-dividend. *West Jamuria* were unchanged at Rs. 66-2.

In the Jute section steadier conditions were noticeable earlier in the week on reports that a large order was placed with the jute industry for the supply of 35 million bags to be delivered in equal instalments between July and October. But for the easier tone of the markets prices would have been perhaps higher. *Nellimarla* improved further to Rs. 38-4, but are now quoting Rs. 37-4, *Anglo-India* have been steady throughout at Rs. 500. *Alliance* were outstanding with the quotation at Rs. 706; *Champdany* were 5 points higher at Rs. 220 ex-dividend. *Chitavalsah* closed rather quiet at Rs. 35-10. Large parcels of *Ganges* changed hands at Rs. 620, *Kamarhatty* were unchanged at Rs. 745, *Megna* Rs. 132, *National* Rs. 34-14 and *Nuddea* Rs. 133.

In the Engineering section, there is nothing of importance to be recorded, *Indian Iron* being rather quiet at Rs. 41 and *Steel Corporation* at Rs. 34. *Braithwaite* were steady at Rs. 12-8, and *Arthur Butler* at Rs. 25-12. *Kumardhubi Engineering* fluctuated around Rs. 28-4, while *Marshall's* recorded a rise to Rs. 5-13 from Rs. 5-4. *Jessop & Co.*, continued steady throughout at Rs. 25-8.

Business in the Sugar section has been rather restricted with no important change in prices. *Carew & Co.*, were reported at Rs. 28-4. *Cawnpore* at Rs. 38-8 and *New Savan* at Rs. 25-10. *Balrampore* were Rs. 17-4 and *Ramnugger Cane and Sugar* Rs. 18-4.

In the Tea section, there has been a slight broadening of interest in the latter half of the week, *Betjan* quoting Rs. 37-2 ex-dividend, *Hattikhira* Rs. 25-10, *Rydak* Rs. 101 and *Eastern Cachar* Rs. 12.

In the Miscellaneous section, *Aluminium Corporation* were further higher at Rs. 17-4 while *Calcutta Trams* were very firm at Rs. 52-8. *Balmer Lawrie* changed hands at Rs. 488 and *National Insulated Cables* at Rs. 13-14. Burma shares were quiet with *Burma Corporation* at Rs. 5-10 and *B. B. Petroleum* at Rs. 5-11. Midnapore *Zamindary* remained steady at Rs. 188 while *Assam Saw* were quiet at Rs. 5-8. *I. G. N.* were further higher at Rs. 209 and *Reliance Firebrick* at Rs. 23-8. Business in *Indian Aluminium* was reported up to Rs. 320. Some profit-taking at the higher levels has resulted in a set back in the quotation to Rs. 295.

THE GUNTUR TOBACCOS LTD.

(Agents: CHARI & CHARI LTD.)

2/6, SECOND LINE BEACH, MADRAS

The Directors have pleasure in Announcing the declaration of an AD-INTERIM dividend of Four per cent, TAX FREE, on the paid up value of the Ordinary Shares of the Company to all those Shareholders whose names appear in the Register of Members on 10th July, 1945.

The Dividend warrants will be posted on or after 31-7-45.

The Transfer Books will be closed for this purpose from the 11th to the 16th July, 1945 both days inclusive.

GOVERNMENT OF INDIA

DIRECTORATE GENERAL OF SUPPLY

FOR SALE

One small Sawmill equipped with a double chamber drying kiln, the whole plant extremely suitable for producing well-seasoned timber for high class woodware or sports articles.

This Mill is situated on Grand Trunk Road, at Chheharta (near Amritsar) and is erected inside premises of Messrs. Jawahar Singh Kirpal Singh. Interested parties may inspect on application to the "Mill Manager", Government Aircraft Timber Depot, Chheharta (Amritsar), who has a complete inventory of the Government plant available. The main items of equipment for sale are:—

(1) One double-chamber drying kiln, complete with vertical boiler, fans, two 5 h.p. motors, heating coils and all laboratory testing apparatus.

(2) One 36" Band Saw Machine with 10 h.p. motor drive.

(3) One 30" Band Saw Machine with 7.5 h.p. motor drive.

(4) One 30" Circular Saw Bench with 5 h.p. motor drive.

(5) One spare 5 h.p. motor.

(6) Office furniture with two ceiling and two table fans and a bicycle.

(7) Ten shouldaries and three office tents complete with bamboos, etc.

(8) One misc. lot of stores and workshop tools (including approximately 50 maunds of beta pack nails).

(9) One storage godown with G. I. roof and steel trusses.

(10) Two small vertical steam engines.

Tenders must be submitted to the Director, Timber Depots and Sawmills, Directorate General of Supply, Shahjahan Road, New Delhi, by the 15th July, 1945, and should cover the three following alternatives:—

(1) Purchase of all Government plant and equipment on the understanding that it will have to be removed from its present site within a period of one month after the sale and the buildings, etc., belonging to the landlord restored to their normal condition previous to the erection of the Government Aircraft Timber Depot.

(2) Purchase of all Government plant and equipment on the understanding that the prospective buyer is able to negotiate his own lease arrangements with the landlord and run the factory on its present site.

(3) Purchase of all Government plant and equipment on the understanding that Government assists the prospective purchaser to obtain a lease of the present premises for working the factory on its present site.

It is expected that the offers under condition (3) will be more than under condition (2) which in turn will be more than condition (1). Complete inventories of the plant and equipment can also be seen by permission in the office of the Director, Timber Depots, Shahjahan Road, New Delhi, and in the offices of the Controllers of Supplies, Lahore, Cawnpore, Karachi, Bombay and Calcutta. The offers should be kept open for a period of three weeks from 15th July, 1945.

ORIENTAL GOVT. SECURITY LIFE ASSURANCE

RECORD NEW BUSINESS IN 1944

CHAIRMAN ON THE INSURANCE AMENDMENT BILL

Presiding at the Seventieth Ordinary General Meeting of the Shareholders and Policy-holders of the Oriental Government Security Life Assurance Co., Ltd., held on the 6th day of June, 1945, at the Registered Office of the Company, Oriental Buildings, Bombay, Sir Cowasjee Jehangir, Bart., C.B.E., K.C.I.E., M.L.A., J.P. the Chairman said:—

"For the second year in succession the most outstanding feature of our operations last year is in the amount of New Business completed which at 87,398 Policies assuring nearly Rs. 2,184¼ lakhs shows an increase of 29,386 in Policies issued and over Rs. 683½ lakhs in the Sums Assured thereby as compared with the New Business of 1943, and, moreover, the same satisfactory feature of a low average amount assured per Policy issued persisted last year as was evident in the previous year's New Business indicating that our New Business is from well distributed sources and the very substantial increase in it has been achieved by a greater increase in the number of Policies than in the amount assured thereby.

Our total Premium Income last year was nearly Rs. 529 lakhs as compared with Rs. 451½ Lakhs in 1943, a record increase of Rs. 77½ Lakhs. This is partly accounted for by the continuance of a satisfactory lapse experience, almost as equally good as in the previous year.

Our Net Interest Income from all sources was nearly Rs. 118 Lakhs, only slightly more than the corresponding figure for the previous year, the lack of any appreciable increase being due to the conversions during the last two years of Tax-Free Government Securities into Taxable Securities combined with a fall in the interest on Policy Loans due to a large proportion of existing Loans having been repaid during the last two years and to the much smaller demand for fresh loans during that period.

Our Mortality Experience continues to be satisfactory. The Claims by Death last year amounted to Rs. 90¾ Lakhs showing an increase of over Rs. 13½ Lakhs on those of the preceding year while the Claims by Maturity at nearly Rs. 126 Lakhs show an increase of about Rs. 15¾ Lakhs on those of the previous year. The ratio of the Actual Deaths to those Expected and provided for by the Mortality Basis adopted in the last Valuation is 49.8 per cent. as compared with 48.5 per cent. in 1943.

The Expenses of Management last year worked out to a ratio of 24.2 per cent. of the Premium Income as compared with 22.4 per cent. in 1943. The increase in the ratio of 1.8 per cent. over that of the previous year is practically altogether accounted for by the increase in the First Year's Commission paid out in respect of the substantially increased New Business of 1943 and 1944 as compared with that of the immediately previous years and to the cost of procuring the largely increased New Business of last year including the expenditure on Medical Examination fees. The expenditure under First Year's Commission and Medical Fees taken together accounts for nearly half of the increase in the total expenditure of the Company last year as compared with that of the previous year.

As is stated in the Report, the aggregate Market Values as at 31st December 1944 of our investments in Stocks and Shares showed an excess over the aggregate Book Values of Rs. 497¾ lakhs and in this connection it will interest you to know that our holding in 3½ per cent. Government Paper in which Security 62 per cent. of the Company's Funds was invested as, at 31st December last then stood in our books at a value of just over 84 per cent.

The average Interest Yield on the Company's Funds during the year was 3.40 per cent. as compared with 3.68 per cent. in 1943 and 3.87 per cent. in 1942. This reduction is again partly due to the conversion of Government Securities with tax-free interest into Government Securities with taxable interest and the investment of new funds at the low rates of interest prevailing. It is not possible nowadays to invest our new money to yield even as much as 3 per cent. after allowing for the few concessions which have so far been granted by Government to Life Assurance Companies in the assessment of their income or profits to taxation.

As you are aware, in order to meet the situation which had arisen on account of the prevailing low rates of interest combined with almost annual increase in rates of taxation, we recalculated last year our rates of premium on up to date bases of mortality, interest and expenses. I may disclose in this connection that the rate of interest assumed in the calculations was only 2¾ per cent. so that prospective Policyholders may rest assured that whatever the future may hold, little loss if any is likely to be incurred through the investment of the premiums under their Policies even at the prevailing low rates of interest.

This brings me to the question of the next Valuation of the Company which falls to be made as at the end of the current year. As you are aware, the Company has progressively strengthened the Valuation bases at each of the last few Triennial Valuations and has made adequate provision for every foreseeable contingency and as premiums too have now been recalculated on an Interest basis of 2¾ per cent., I believe we can confidently look forward to the forthcoming Valuation disclosing a satisfactory Profit.

During recent months Life Assurance interests have been much concerned over the proposals of the Select Committee on the Insurance (Amending) Bill 1945 to reduce still further the maximum percentage of First Year's Commission which can be paid to Life Assurance Licensed Agents and to statutorily limit the percentage of First Year's and Renewal Premiums which can be spent by Life Assurance Companies in the conduct of their business. That the necessity for taking action of this kind in some measure has been borne in upon Government and the Select Committee is greatly to be deplored, and, though it may be considered necessary that some deterrent additional to existing legislative provisions should be placed on extravagant expenditure on the part of Life Assurance Companies in the conduct of their affairs this should not be carried to such an extent as to interfere unnecessarily with the freedom of the Directors of a Life Assurance Company against which no criticism of extravagant management can be made and which could therefore reasonably be trusted to continue economical management, to sanction at their discretion from time to time expenditure in the interests of the Company and its Policyholders which might on occasions be above the normal.

The Superintendent of Insurance has recently issued a questionnaire with a view to elicit the views of Insurance Interests on these and other matters arising out of the Insurance (Amending) Bill and you may be interested to know that in replying to that questionnaire your Directors have expressed the view that, with regard to Commission paid to Licensed Agents, no reduction in the maximum originally laid down by the Insurance Act of 40 per cent. of the First Year's premiums and 5 per cent. of the Renewal premiums can be justified, while with regard to the proposal for limitation of the Total Expenses of Management, your Directors expressed the view that this was only warranted if it were proposed to be applied in order to prevent Life Assurance Companies spending on the management of their affairs a proportion of the Premium Income which would sooner or later endanger the interests of their Policyholders.

In support of the argument that rigid control of expenditure of all Life Assurance Companies operating in India is necessary comparisons have been made between the Expense Ratios to Premium Income of British Life Assurance Companies and those of Indian Life Assurance Companies. Such comparisons are of no value unless due weight is given to the fact that the average amount assured per policy issued by a British Life Assurance Company is normally about three-and-a-half times the average amount assured per policy issued by an Indian Life Assurance Company and since, apart from the expenditure on Commission and to a certain extent on Medical Examination Fees, the cost of conducting the business of a Life Assurance Company depends entirely on the number of Policies existing on the Company's books and the number of new Policies secured annually and not on the Sum Assured thereby or the Premium Income therefrom, the expenditure on the conduct of the business of any Indian Company of approximately the same size as any British Company should be considered as not unreasonable, assuming the cost of labour and supplies to be the same in both Countries, even upto about three-and-a-half times the expenditure of the British Company. Fortunately, however, the cost of labour in this Country is not at present so high as the cost of labour in Great Britain, so it is possible for Indian Companies to conduct their business more economically under this head, and I believe it would be true to say that taking these facts into account the expenditure of Indian Companies of standing on the conduct of their business will bear favourable comparison with the corresponding expenditure of British Companies of similar standing.

It will interest you to know in this connection that so far as this Company is concerned, our annual expenditure on management, exclusive of commission, amounted to less than Rs. 12 per policy for a number of years prior to 1943, and only in 1943 and 1944 did this figure rise to Rs. 13 and Rs. 14 per policy respectively due to the steep rise in the amount of New Business written in these years while the corresponding figure of first class British Companies of similar standing ranges from Rs. 13 to Rs. 20 per policy. I think you will agree therefore that it is clear that although this Company's overall expense ratio is substantially higher than the overall expense ratios of the British Companies I have referred to, it does not follow that this Company is in any way less economically managed than British Companies of equal standing nor can it be argued that other Indian Companies, the overall expense ratios of which may be higher than ours so long as they are not unreasonably so, are being extravagantly managed as compared with the management of British Companies or the Companies of any other country whose average policy is so much higher than that of the Companies in India.

Gentlemen, you are aware that a Committee has been appointed by the Government of India to investigate into some trends and undesirable features in the management of Life Assurance Companies and to recommend measures that should be taken to check this evil, of which Committee I am the Chairman. Although this subject is a matter of importance in the Insurance World and has given rise to a considerable amount of criticism you will not expect me to deal with the subject on the present occasion in view of my position on the Committee.

In the course of the Chairman's Speech at the last Annual Meeting your attention was drawn to the fact that the Company had disbursed to its Licensed Agents during the year 1943 First Year's Commission amounting to Rs. 21¾ lakhs as compared with Rs. 13¾ lakhs in the previous year, and, it may interest you to know, that last year disbursements on this account amounted to nearly Rs. 32½ lakhs, an increase of about 140 per cent. on the figure of 1942 and, moreover, this amount was paid out to only a very slightly larger number of Licensed Agents than in 1942. Moreover, the Renewal Commission at just over Rs. 17½ lakhs paid out during last year showed an increase of 25 per cent. on the disbursements under this head in 1942. This is positive proof that our active Agents at any rate have done well from their connection with the Company during the last two years.

THE ALEXANDRA JUTE MILLS, LTD.

Audited accounts for the half-year ended 31st December, 1944:

They show a profit for the half-year of Rs. 5,13,626-10-8; *Add*—Balance brought forward from last account Rs. 12,757-3-5; total Rs. 5,26,383-14-1.; from this there has been placed:—To Depreciation Rs. 25,000-0-0; to Reserve for Taxation Rs. 3,57,101-13-0; to Reserve for Machinery Renewals Rs. 30,000; to Reserve Rs. 23,587-8-0; Leaving an available balance of Rs. 90,694-9-1; which it is proposed to distribute as follows: (i) In payment of the Preference Dividend for the half-year ended 31st December, 1944, at the rate of 7% per annum (free of Income-tax), absorbing Rs. 31,500-0-0; (ii) In payment of an Ordinary Dividend for the half-year ended 31st December, 1944, at the rate of 10 per cent per annum (free of Income-tax), being equal to Rs. 5 per share, absorbing Rs. 30,000-0-0; leaving a balance at credit of Rs. 29,194-9-1 to be carried forward to next account.

The stock of jute has been valued at or under cost price.

Production closed down at the end of July 1944, on the Mill being requisitioned by Government. Arrangements were made for the loom hours to be worked at Alliance Mills, where double shift working was introduced in order to absorb both the loom hours of this Mill and of Craig Jute Mill. In addition to the loom hours in respect of current working, some of this Mill's arrears of loom hours were also made up at Alliance. The amount received by the company from Alliance Jute Mills Co., Ltd., as its share on the profits of

THE MINERAVA MILLS, LIMITED.

Notice of Eleventh Dividend June 30.

(Continued from page 906)

Before concluding, though at the cost of repetition, I again wish to emphasize what has been repeatedly emphasized from this Chair in the past in regard to the necessity of Life Assurance for the Ordinary Man. A Life Assurance Policy is the finest form of provision for the financial security of one's dependents, providing as it does, in return for a small annual outlay, a capital sum payable immediately on the death of the Policyholder before he may have had time to acquire a sufficient fortune to place his dependents beyond the need for such protection. This principle of Protection as against Investment is the real object of Life Assurance and the prospective Policyholder should not in the best interests of his dependents be led to effect a Policy which will secure payment to him of the sum assured during his lifetime, after possibly only a comparatively short period of years, or at his death if sooner. Short-term Endowment Assurance Policies may be a satisfactory form of investment at the present time for wealthy individuals, taking into account the concession of income-tax rebate on the premiums paid thereunder upon the statutory maximum limit, but, such a Policy cannot, in the case of a comparatively young man who has to make his way in life, take the place of a contract whereunder the sum assured is payable at his death only while payment of the premiums is limited to a period during which he may with confidence consider himself able to meet it. Apart from this, the purchasing power of the Rupee is still less than half of what it was some years ago, and, in order to provide for the family in the event of one's early death protection of the same value at the present time as may have been considered sufficient before the War, it is now necessary to insure for at least double the amount one may have considered as sufficient before the War.
