Either you must be incapable of understanding the conditions of the world, or you must be some other thing. Do not stand by formalities, do not stand by false prestige—which I am told has led to the cancellation of recognition. You are not dealing with scavengers or with other workers. You are dealing with a very intelligent, high qualified organization, and if you cancel their recognition, they also know better how to meet you. They will certainly meet you, and the way in which you have been behaving in the past in this matter clearly shows that you will not be able to meet the situation unless you adjust yourself. Again, Sir, Committees and Cabinet Committees have been appointed. The word 'Cabinet' has a history, and the Cabinet Ministers, even from Parliament have not done well. I wonder whether this Cabinet Committee, after so much elaborate enquiry, has given only Rs. 3. Do you know the value of those Rs/ 3 in this land? Either the Ministers must be very careful in their calculation or they will have to face, in the future, a trouble which they will not be able to settle. I appeal that a further Committee of representatives of this House be appointed to go into the matter, or you must meet the demands and give relief with retrospective effect."

* SRI N. S. VARADACHARI:—" Mr. Speaker, Sir, I have a very peculiar responsibility to discharge in this matter since most of my constituents are non-gazetted officers. I am not going to plead their cause to-day. I have done that, Sir, to the extent possible during the budget debate, and I shall not repeat my arguments on this occasion. I am one who deprecates all strikes in essential services. I do not like servants of Government to strike. I will also add this caution that non-gazetted officers will not help themselves if they strike. But I must say and I must plead that they (Government) should choose discriminatingly between remedies, especially when more than one remedy is available. They must make the force of the power of persuasion felt in this matter rather than resort to measures like withdrawing recognition from what I do not personally consider a trade union. Government servants do not form a trade union nor did Government servants over claim that they were a trade union. In fact this act of withdrawal of recognition has now raised them to the status of a trade union, which I do not like. I do not propose to say a single word in respect of salaries themselves and the increases granted now by Government—they call it interim concession. Since I do not want it to be understood as complaint, I deliberately refrain from doing so. It is for those affected and the public to agitate and secure redress of the grievances. I shall do my part. All I wish to say is this, that after announcing the Government's decision on the main question they should not have come out with a statement that they have withdrawn recognition to the Non-Gazetted Officers' Association. This Association has been working for 25 years not in the spirit of a trade union. It is true they have talked of direct action. We politicians must

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

There is a slight hardening in the conditions in the money market though call money is quoting ½ per cent in Calcutta and ¼ per cent in Bombay. But the slight tightening in conditions has been due more to the year-end adjustments and the decrease in deposits of banks as a result of large tax payments. It is true there has been an increase in the demand for funds, particularly on account of the movement of cotton crop, but such a demand cannot possibly have any effect on interest rates as the total cash balances with banks are still very large. Only there is a tendency on the part of lenders to await further developments. It is not clear whether the decrease in the working capital of banks, even with the expansion in currency to the extent of Rs. 33 crores in a month, will be a temporary feature as with the pressure of tax payments and increased expenditure on consumer goods, there may not actually be any large increase in savings. But it can be definitely said that in a few months banks will again be bothered with large deposits and with the possibility of continued expansion of currency there will be no dearth of funds. It should also be remembered that the pressure on account of tax payments will be less after sometime. At the moment, ratepayers have to pay tax both on last year's earnings as well on current income. This process will get itself adjusted in the next six months.

In the last two weeks it has not been possible for the Central Government to get its requirements of treasury bills in full. Owing to the undue increase in the tender rates a good portion of the applications had to be rejected. Two weeks back applications received were Rs. 8.59 crores against the offer of Rs. 6 crores but bidding was less keen. Even with the accepted amount of Rs. 2.53 crores there is an increase in the average discount rate to 8 annas 10 pies per cent per annum to 8 annas 3 pies per cent. At this week's auctions applications were sharply lower at Rs. 2.31 crores and the amount accepted was only Rs. 1.41 crores. The average discount rate was slightly lower at 8 annas 8 pies per cent per annum. The offer for next week has been maintained again at Rs. 6 crores. It is satisfactory, however, to note that the authorities have decided to keep down the yield on treasury bills especially as the ways and means position is very sound.

The returns of the Reserve Bank for the week ended December 29, show a large increase in the total of notes issued, there being further expansion of currency for Rs. 13 crores. The heavier treasury bills maturities and the larger expenditure has naturally resulted in further additions to the note issue. Notes in circulation were Rs. 1,009.6 crores against Rs. 999.9 crores. Sterling securities were Rs. 13 crores higher at Rs. 904.33 crores and rupee coin Rs. 5 lakhs higher at Rs. 14.68 crores.

In the banking department, Central Government's balances were nearly Rs. 6 crores lower at 241.54 crores. Other government deposits were Rs. 12.57 crores against 13.24 crores and Bank balances with the Reserve Bank were Rs. 75.91 crores against Rs. 76.33 crores. Other deposits have increased further to Rs. 20.83 crores from Rs. 19.55 crores. As a result of the transfer of Rs. 13 crores to the issue department foreign balances are lower at Rs. 342.34 crores against Rs. 352.84 crores. There has thus been a net receipt of sterling for Rs. 2.5 crores during the week.

From the returns now available for the whole of 1944 it will be interesting to make a study of the important changes relating both to the issue and banking departments. Total notes issued have increased by Rs. 170.85 crores to Rs. 1,021.25 crores and notes in circulation by Rs. 168.8 crores to Rs. 1,009.6 crores. There is an expansion of currency for Rs. 169 crores, rupee securities for Rs. 49 lakhs being cancelled. Rupee coins are higher by Rs. 1.86 crores. In the year 1943 notes issued increased by as much as Rs. 258.36 crores and notes in circulation by Rs. 262.55 crores. Sterling securities in the issue department increased by Rs. 322.01 crores but as rupee securities for Rs. 64.02 crores were cancelled, expansion in currency was for Rs. 258 crores. Thanks to the large gold sales and the vigorous anti-inflationary programme of the Government, it was thus possible to prevent large additions to the note issue though in the last quarter of the year the efforts of the Government were not quite successful and additions to the note issue had to be made to the extent of Rs. 60 crores. Of this the sum of Rs. 33 crores was in respect of December alone.

In the banking department there is a sensational rise in the amount of deposits held by the Central Government, the figure at the end of the year being Rs. 241.54 crores against only Rs. 13.87 crores at the beginning, an increase of Rs. 227.67 crores. That this increase in cash balances was due mainly to foreign credits will be clear from the rise in the figure under this head to Rs. 342.34 crores from Rs. 120.6 crores. Bank deposits are Rs. 14.26 crores lower at Rs. 75.91 crores but Other deposits have shown an appreciable increase to Rs. 20.83 crores from Rs. 7.17 crores.

The total of sterling receipts during the year was Rs. 391.23 crores against Rs. 376 crores in 1943. Besides, the sterling receipts we have to take into consideration the gold sales amounting to over Rs. 100 crores. Even after allowing for the repatriation of sterling debts early in 1943 it will thus be clear that sterling receipts have been on a very much larger scale.

The return of the Imperial Bank for the week ended December 29 shows a decrease in deposits to Rs. 234.22 crores from 236.36 crores. Investments are sharply lower at Rs. 147.9 crores against Rs. 141.28 crores while advances have improved further to Rs. 64.1 crores from Rs. 62.57 crores. In the week ended December 22, there was a jump under this head to more than Rs. 7 crores, loans Rs. 2.5 crores and cash credits Rs. 4.5 crores. As a result of the increase in advances, and the decrease in deposits, cash balances have declined to Rs. 32.23 crores from Rs. 33.99 crores. The drop would have been more pronounced but for the realisation from investments.

The exchange market has been steady with few export bills showing.

TREASURY BILLS

Central Government:

Tenders for Rs. 6,00,00,000 of three months' Government of India Treasury Bills were opened on Wednesday, January 3, 1945. Total amount offered was Rs. 2,31,00,000. Tenders at Rs. 99-13-9 per cent and above were accepted in full. Lower tenders were rejected. Total amount accepted was Rs. 1,41,00,000, the average rate of accepted tenders being Re. 0-8-0 per cent per annum.

Tenders for Rs. 6,00,00,000 of three months' Government of India Treasury Bills will be received on Tuesday, January 9, 1945, at Bombay up to 11 a.m. and up to the close of business on Monday, January 8, at other centres. Successful tenderers should make payment on Friday, January 12. Other conditions are as usual.

During the week ended December 29, 1944, Government of India Treasury Bills for Rs. 1,95,00,000 were sold in favour of the Issue Department of the Reserve Bank of India.

Assam Government:

Tenders for Rs. 1,00,00,000 of three months' Assam Government Treasury Bills were opened on Thursday, the 28th December, 1944. The total amount offered was Rs. 1,25,00,000. Tenders at Rs. 99-13-9 per cent were accepted in full and those at Rs. 99-13-6 per cent were allotted approximately 75 per cent. The total amount accepted was Rs. 1,00,00,000, the average rate of accepted tenders being Re. 0-9-9 per cent per annum.

By Special Cable.

Ascent of Shares Values in 1944

Causes and Consequences Examined

London *(By Cable)*.

Opinion seems agreed that there has been overmuch speculation on the Stock Exchange in the past year despite the efforts of both Government and the Stock Exchange to discourage speculation.

There is the age-long tendency of Britain to blame foreigners for any undesirable domestic manifestations—such as black markets or crime waves,—hence it is not surprising to find the conservative financial editor of the Edinburgh *Scotsman* blaming "Syndicates largely composed of Continental financiers who have come to this country as war refugees. They certainly have ample resources at their command, but it is questionable whether their activities are for the good of the Stock Exchange in the long run."

Actually taking the stock exchange as a whole it is doubtful whether all securities in the past twelve months have risen more than 2 per cent or 3 per cent but during the first eight months there were sharp rises in individual issues suggesting powerful manipulation without any obvious *raison detre*.

Thus apparently it is chiefly absence of any market-wide agreement regarding the future which has made these sporadic speculative operations the source of irritation.

For the truth is that investors *en masse* seem to be completely uncertain regarding the future. The conumdrum facing them can be stated clearly. Everything suggests that the post-war era will be a "capital-hungry" period and British experience over the past 70 years has uniformly been that prices of shares fall during such a period. Accordingly some knowledgeable investors including institutions who judge the future by the past have been selling freely. On the other hand, it is obvious that there has been very great inflation of credit during the war. In December 1938 when the world was more or less at peace deposits with London Clearing Banks totalled £2,254 million; at the end of November such deposits totalled £4,398 million which means an increase of 95 per cent.

But this increase of bank credit has therefore not been allowed to influence share prices to the full extent. *The Financial Times* index for leading industrials at end of 1938 stood at 98.6; it is closed at the end of 1944 at 140.4 showing a rise of 42 per cent. Thus those bullishly inclined argue that the slightest relaxation of Government control over investment after the war will release such pent-up buying power as would drive stock prices skyward.

Both schools tacitly assume there will be no fundamental changes in Britain's economy, that the national income will be largely produced by activities of capitalists operating primarily for profit and that the Western World can, and will, continue to have an effective *cordon sanitaire* around ideas.

Need for an Economic Service

In the second of this series of articles on the subject of the human factor in economic planning, we observed that the first requisite of sound and successful planning is a political constitution properly geared to an efficient administrative system. We have in the last three issues dealt with the relation between planning and politics in general and the political constitution in particular. We expressed the view that the acceptance of planning as the all-absorbing object of public policy in the future must go a long way towards mitigating, if not eliminating, inter-Provincial and inter-communal suspicions and jealousies and that propaganda designed to bring home to the average citizen the impact of planning on politics can remove many of the obstacles in the way of installing a genuine National Government at the Centre. We emphasised also that, if the political parties pay greater regard to expert knowledge in matters connected with planning and less regard to qualities highly valued hitherto in political circles, co-operation among different political units will be easier to achieve. Co-ordination of plans is to be sought rather by this method than by sacrifice of the advantages which a federal constitution holds out to this country in its present position. Planning thus provides not only the occasion, but also the means, of unravelling some of our knotty political and constitutional problems. But nothing can be done if the public mind continues merely to enthuse over the prospect of doubling the per capita income without being taught to consider the implications of planning in the political sphere. Education of the public in this regard is the responsibility of the Press and of those who have made planning practical politics. We trust that the authors of the Bombay Plan will not be content to see it imprisoned in the vicious circle formed by the mutual inter-dependence of national Government and economic progress. Planning would be a vain hope if we fail to create the conditions in which major political parties will not feel compelled to re-state their position in relation to the political requirements of economic planning.

We may now turn to a consideration of the administrative system required for successful economic planning. Here the experiences of the war period are even more illuminative than the example of Soviet Russia and her five year plans, because the former draws attention to the defects of the pre-war administrative system when it is called upon to tackle new tasks in the economic sphere. All the countries on the allied side, excepting, of course, Soviet Russia, have felt the need to strengthen the normal administrative framework with men of experience of large-scale business and of high academic attainments in economics. The change is less marked in the U.S.A. where the administration had even before the outbreak of the war undergone many changes in this direction as a result of the New Deal. Since production programmes during a war are the common concern of Government and industry alike, the two are naturally and inevitably drawn together; and the difference between businessmen who are formally drafted to Government service and those who simply co-operate with them is from a practical point of view inconsiderable. In any case, it is clear that the normal administrative system is by no means equal to the tasks which it will have to tackle during a regime of economic planning and that in the war period the need is not so much for additions in numbers as for the command of new kinds of administrative ability. This need also extends to men with more and better knowledge of academic economics. The part played by economists like Lord Keynes and Prof. Lionel Robbins in the evolution of the present system of war finance is well-known. The assistance of less eminent economists has, doubtless, been availed of for lesser tasks.

In India, there have been similar developments throughout the war period. The Supply Department is manned to a considerable extent by men with business experience. The Government of India have been taking more and more economists under their employment. At the same time, the permanent services are endeavouring to equip themselves with the knowledge necessary for the new tasks. All these changes, however, will not suffice to meet the requirements of economic planning. The economic problems which the administration has to tackle during the war period are different from those with which planning will confront us. The Indian Civil Service, in spite of the extraordinary adaptability it has shown in the past, can no longer be expected to meet the major requirements of the country. The basis of recruitment in the past was the assumption that success in a competitive examination is evidence of a nimble brain which can adapt itself readily and well to a wide variety of administrative tasks. That assumption has been proved valid to a surprising degree. Members of the I.C.S. have been found equal to a wide variety of tasks. But the need to supplement this backbone of the administrative system was recognised long ago. Services of more or less equal prestige, status and emoluments have been created during the last ten or fifteen years, in addition to the Indian Audit and Accounts Service. The State Railways had to constitute a number of cadres for traffic, engineering and the like. Forestry, Income-tax and Police have all-India services of comparable importance. The need for trade commissioners and quasi-diplomatic representation abroad has led to the creation of a new type of officials. But all these developments have been unrelated and do not even touch the fringe of the problem of fitting the administrative system for the tasks ahead.

The problem cannot be solved till due emphasis is placed on the equipment of economic knowledge and technical training necessary in the various branches and cardes of the permanent services. We may reasonably presume that the requirements of the engineering and other technical services will be duly met. Indian science has also woke up to its social obligations; and the progress of science in its relation to industry can be counted on if the fortunes of the nation as a whole do not suffer an untoward turn. It is the general administration that calls for a new orientation in its equipment and outlook. Time was when proficiency in the classical languages was regarded as the common factor of the various public services. The shift from classics to more utilitarian knowledge was effected slowly and over a long period. But the subjects offered for choice to the candidates for the public services form a wide range and include many which have no bearing on the tasks to which the candidates will eventually be called. The time is come when primary importance should be accorded to the social sciences generally and economics in particular. But the knowledge required in officials who will carry on the administration during a regime of planning extends far beyond the syllabus set for university degrees in economics.

Economics, from the modern standpoint, is as wide and complicated as are economic problems in our time. No longer will a knowledge of the formulae of equilibrium economics suffice for grappling with the economy problems that exercise the minds of modern communities. And that hardly means that the science of economics as it has been built up till now can be neglected. Like every other science in its higher reaches, economics, too, has to clarify its links with other branches of human knowledge and be ready to revise its notions and conclusions in the light of the findings of other sciences. Economics must recognise that it belongs to the family of social sciences. It has to impart reality to its basic concepts by correlating them to the study of history and of political science and to the needs, wants and aspirations of man as an individual and as a social being. The economist has to ensure accuracy by adhering to the apparatus of thought developed by academic economists since the time of Adam Smith. He has to study the conditions that obtain in every branch of economic life, acquire the scientific knowledge relevant to the various productive processes and be able to guide the community as a whole in the immensely difficult task of seeing its needs and aspirations in relation to its resources and helping it to retain a lively and effective sense of the distinction between what is technically possible, what is socially desirable and what is, in the full and true sense of the term, "economic".

Such an "economic" sense must be widespread and deep-rooted in the country as a whole, if planning is not to open the floodgates of individual privations and social chaos. And for this condition to be satisfied, the study of economics in the universities and outside will have to be more carefully re-orientated and organised. It is unfortunate that on this question there has not only been a great deal of loose thinking, but a number of ill-thought out generalisations have gained currency. The capacity for coherent economic reasoning and thought is rated less than knowledge of facts picked up in the course of one's day-to-day work. If economics is something more than mastery of standard books on the subject, it is not anything less either. The truth is that we have need for a large army of economists who will not be handicapped by lack of any branch of ancillary knowledge. As it is, most students of economics have little or no attainments in mathematics.

The earlier articles of this series appeared as leading articles in the issues of December 9, 16, & 23 last.

With economics divorced from mathematics and the authorities utterly indifferent to the accumulation of figures relating to the economic life, statistics, which is the foundation of useful economic studies, is non-existent. The Universities must revise the conditions and courses of study for the award of degrees in economics.

We are aware that we have somewhat digressed from our main theme. But we trust it will be recognised that the Economic Service, which the Government will surely need during the days of planning, cannot be constituted except in conditions in which economics is properly studied both within and without the Universities. In such conditions, the syllabus for the various competive examinations can attach due importance to economics and ensure that every official in the country, who has to make decisions of some significance to the national economic life, brings a duly trained mind to bear on his special as well as day-to-day tasks. A special economic service together with the insistence on a background of economic knowledge in the other services should enable the administration as a whole to rise equal to the tasks of economic planning. But at the moment the paucity of economists of even present day standards threatens not only the progress of planning but the equally important task of training new generations of economists in this country.

The Future of Indian Insurance

The formal review of insurance companies' consolidated results provided by the Superintendent of Insurance is accompanied by a general survey of the possibilities which is of exceptional importance because it is both candid and accurate. Suggestions as to further development in the direction of economy and efficiency figure along with hints as to the development of oversea business. It is therefore advice of high value to insurance companies that the 1944 edition of the Indian Insurance Yearbook contains. If the emphasis is again on expansion with special reference to quality, it is because the Superintendent realises that the cream of life business is still skimmed off by non-Indian companies. If there is place for difference of opinion as to the necessity for new companies in India it is manifest that observations as to the issue of capital, the dividend policy to be pursued and the class of business that must be eschewed are of vast importance to Indian insurance companies. If the record of 1943 is wholly commendable, as an increase of over 50 per cent in new business assets, the obligations that must be shouldered by insurance companies are becoming clearer. Legislative amendments are on the way, but the companies have been reminded that service must improve and extend, that policy conditions must be liberalised and also that companies can make a departure in regard to policies for Rs. 1.000 without medical examination.

There is perhaps no business in which cooperation for common purposes is more feasible. During the years when the Act was in the making Indian insurance companies built up a cohesive. collective personality of their own. That sustains hope as to internal development along lines indicated already. In an earlier edition reference to the falling yield on the funds produced arguments as to the need for adjustment of premium rates and the basis of valuation. The arguments recur since the net yield on life insurance companies' funds has fallen to 3.88 percent in 1943 while the expense ratio has risen slightly owing to the increase in new business from Rs. 42.83 crores to Rs 72.12 crores The majority of Indian life companies are still handicapped by a high expense ratio and the need for raising premiums, adjustment of participating premiums, and a strict limitation of bonus is obvious to other besides the Superintendent of Insurance. Though 1943 was an exceptional year in many ways the mortality experience of Indian companies was eminently reassuring. Claims by death took Rs 2.27 crores only out of the total premium income of Rs 15.9 crores received by Indian offices. The addition of Rs 8.29 crores to the Total Life Funds reflects the increase in business like the improved share of total business secured by Indian companies in 1943 competing as before with strong, well placed rivals.

The results of individual companies for 1943 indicated that the problems of rapid growth and adjustment thereto were manifest. They faced as in 1942 a fall in interest income and the justness of the observations made in the Yearbook for 1943 as regards the rate of interest is strengthened by what is said again as to the need for absolute security of the money due to policyholders. Insurance is readily distinguishable from all other business; and risk-taking would be an illegitimate element. Statutory provisions for the investment of life funds acquire their justification from the need to protect policyholders. It is held that insurance companies must look upon a falling rate of interest as natural, and can look forward only to a gross return of 4½ percent. Forecasts of cheaper money are familar, but there is the further point that large-scale borrowing is to be undertaken after the war for India's development. Banks, it has been pointed out, dealt with the problem of cutting down the rates of interest allowed on deposits and insurance companies have to fall in line at some time. Unusually low yields are not peculiar to insurance companies. Private investors certainly face the same fall and are apparently reconciled to it. The universal disposition to avoid anything like monetary stringency must be thus reckoned a potent factor for the future. Recalculation of premiums is suggested on the ground that inequity between variations and durations should be avoided. The argument is strengthened by reference to the level of taxtation enforced by the war. The suspension of bonus declarations is upheld for the reason that valuation surpluses would diminish.

The outstanding features of 1943 were not the increase in business and resources. It was the fall in the lapse ratio. Detailed statistics have been compiled to elucidate the trend. Insurers have been asked to watch the trend and to conserve business.. The marked improvement in new business arising from the expansion of money incomes is not ragarded as sufficient to warrant the belief that a permanent drop in the lapse ratio is assured. It is apparent that wide variations are the rule and the only conclusion desirable is that the uncertainties which affected life insurance in 1942 did not interfere with the normal operations of the fall in the lapse ratio.

The reviewer of the year in Insurance passes to a consideration of the lessons of the Bombay disaster of April last. Insurers' own mistakes including their failure to reinsure are apparent to the authority which emphasises the need to disribute risks The only material conclusion is that Reserves for unexpired risks must be on an ample scale. It is not desirable to concentrate on any field and the too close connections between insured and insurer receives rather strict notice. But what the disaster indicated most was the need to obtain the protection of insurance. Persons and property of any value should be insured. The official enquiry does no detract from the finding that real losses could have been avoided by many through the simple precaution of insurance.

The consequences of the falling rate of interest extends to insurance companies' shareholders. It has been urged cogently that extreme conservatism is dictated by circumstances. Strong reserves must be created before dividends are declared and a self-denying rule enforced by associations of insurers is recommended. Till a company is mature, reserves must have the first claim on profits, and it is noteworthy that well-established companies have adopted a strict rule as to dividends. It is hardly necessary to add that appreciation over a long period constitutes the return to the shareholder in such cases. Insurance shares certainly have not lagged behind in the march of share values in 1944.

Some advice as to policyholders also appears in the Yearbook. The optimum cover for an individual is described as being three years gross income. If every policyholder adopted the advice to take policies for long terms, with premiums limited to the active-earning period, there would be material improvement. Objections to short-term endowment policies particularly those designed to avoid taxation, are advanced in the course of a review dealing with the relative merits of whole life and endowment policies. Since bonus attractions are receding, it is perhaps necessary to say that preference for whole life policies would develop. To his observations the Superintendent adds a statement of Sir Ernest Benn to the effect that an increase in whole life business is probable. There is a radical difference between insurance and investment though the former too is concerned with the probable return on capital. If insurance becomes the principal, and not the alternative method of saving for many, there may be a vast increase in the number of policies issued and the sums assured. There is, however, no need for a multiplication of companies. In the Year-book it is insisted that agricultural and industrial development does not call for new companies but for improved administration through a trained staff and field force able to help the individual policyholder. The bracing effects of the advice tendered can only be noted in the future, but it must be said here that the chart of progress is simpler to read since our insurance companies have a list of Do's and Dont's.

By Special Cable

U. S. Bankers Critical of Stabilization Fund

WASHINGTON (*By Cable*).

The past fortnight has witnessed new criticisms of the Bretton Woods proposals, which are significant inasmuch as they provide clues as to the stand the banking community will take when the matter comes up for consideration early in the new Congress. Well-known financial authorities have stressed in general that they favoured a Bank for reconstruction and development but opposed the Stabilization Fund. Their proposal, in broad outline, was that such stabilization functions as are necessary should be accomplished through a separate department of the Bank. It was reported in addition that two important banking groups namely, the American Bankers Association and the New York State Bankers Association which have been studying the proposals for many months completed reports generally favourable to the Bank but unfavourable to the Fund. It was said their reports will be published later on, apparently, when they will be most effective in relation to Congressional consideration of the matter.

The critics who were most recently outspoken were Mr. Beardsley Ruml, Chairman of the Federal Reserve Bank of New York, Mr. John H. Williams, Vice-Chairman of the New York Reserve Bank and Dean of the Harvard School of Public Administration, and Mr. W. L. Hemingway, President of the Mercantile Commerce Bank and Trust Company of St. Louis.

Mr. Ruml told questioners in Washington that bankers had serious misgivings that the monetary fund might fail to achieve its objectives in respect of currency stabilization during the immediate post-war period. He said that bankers feared there would be disastrous international consequences should such stabilization machinery be established and the idea fail.

Mr. Hemingway writing in "Banking" and Mr. Williams in "Foreign Affairs" have recommended that the Bank's functions be expanded to perform those of stabilization and have appealed that agreed action on the Fund should be deferred. Mr. Williams proposed that the Bank should have "an exchange stabilization loan department". And said "as this would operate selectively and provide exchange only where needed it would require a much smaller sum and at the same time be probably much more flexible and effective than the proposed Monetary Fund" and he stressed that the Bank at any rate would have to accomplish the lion's share of international adjustment. "If that work is well done, monetary regulation will be less difficult and less costly."

Mr. Hemingway listed four reasons for assuming that "it was generally agreed an international financial institution is desirable": firstly it would provide a common forum for discussion of international financial problems and conditions; secondly, it would gather and disseminate statistical information very helpful to Central Banks and persons interested in foreign business; thirdly, it would stabilize currencies with limited capital, once they were brought into equilibrium; fourthly, it could act as an originator of loans. He is of opinion that private investors and direct Government lending could take care of all "worthy loans".

OBJECTS.

The Company has been formed generally for the purpose set forth in the Memorandum of Association which is annexed hereto and primarily with the object of acquiring and working the Byrekhan and Dodkhan Estates in Mysore, belonging to the Kathlekhan Estates, Limited, Edinburgh.

PARTICULARS OF ESTATES.

Acreage:

Coffee Arabica	.. ..	418.25 acres	
„ Robusta	.. ..	108.00 „	
„ Excelsa	.. ..	4.50 „	
			530.75 acres
Cardamoms	... ..	..	11.25 „
Jungle land suitable for coffee	..	..	300.00 „
„ „ „ cardamoms		..	30.00 „
Waste land, etc.	.. ..	..	396.00 „
	Total	..	1268.00 acres

With the exception of 150 acres of Arabica, the balance of Arabica and all the Robusta and Excelsa areas have been planted during the years 1929-40. The estate consists of two divisions, Byrekhan and Dodkhan and the reserve land comes in between these two divisions.

Situation.—The property is situated in the Kadur District of Mysore at the northern end of the well-known Bababudin Hills, which is reputed to be the best coffee growing area in South India. The elevation of the property ranges from 3,200 ft. to 3,500 ft. Health is satisfactory. The land is freehold and the annual tax payable is Rs. 2,200.

The Post Office is Kadur.

Crop.—The crops and rainfall for the past four years are as under:—

	Coffee.	Cardamoms.	Rainfall.
1940-41 ..	966-1-25 cwts.	8 cwts.	87.01"
1941-42 ..	2748-0-18 „	14 „	97.30"
1942-43 ..	1725-0-16 „	13 „	91.87"
1943-44 ..	1100-0-0 „	12 „	70.72"

The average crops for the past four years work out as under:—

Coffee	.. .. ..	1635 cwts.
Cardamoms	.. .. ..	11¾ „

The estimated crops for 1944-45 are:—

Coffee	.. .. ..	2000 cwts.
Cardamoms	.. .. ..	15 „

Factory and Buildings.—There is a first class Bungalow, two pulper houses, quarters for staff and also lines for labourers, bazaar, etc. The pulping houses are equipped with engines and pulpers.

Cost of Production.—The expenditure on the estates for the past three years, was as under:—

1941-42	.. .. ..	Rs: 56,611
1942-43	.. .. ..	„ 47,410
1943-44	.. .. ..	„ 44,823

CAPITALISATION.

The purchase price payable to the Vendors, The Kathlekhan Estates, Ltd., is £30,000.

	Rs.
which at current rate of exchange works out to about	4,00,000

and the value can be divided as under:—

418.25 acres of Coffee Arabica at Rs. 725 per acre	..	3,03,231
108.00 „ of Coffee Robusta & 4.50 „ of Coffee Excelsa at Rs. 690 per acre	..	77,625
11.25 „ Cardamoms at Rs. 400 per acre	..	4,500
726.00 „ Reserve Land at Rs. 20 per acre	..	14,520
Total	..	3,99,876

OR SAY Rs. 4,00,000.

Bababudin Coffee & Produce Co., Ltd.—*Prospectus Contd.*

PROSPECTS.

Although the crop for the year is estimated at over 100 tons, for the purpose of our calculation we are taking the average at 80 tons per annum, and the average price at Rs. 1,800 per ton or Rs. 90 per cwt.

	Rs.	Rs.
i.e. 80 tons or 1,600 cwts. of coffee Rs. 90 per cwt. ..		1,44,000
Less Estimated Expenditure on Estate ..	50,000	
Directors' and Managing Agents' Remuneration and other charges	24,000	74,000
		70,000
Less Dividend on Preference Shares at 6 per cent ..		18,000
Balance ..		52,000

which is equivalent to 26 per cent on the Ordinary Shares Capital of the Company.

The income from the cardamom area has not been taken into account.

MINIMUM SUBSCRIPTION.

The minimum subscription on which the Directors may proceed to allotment is shares of the nominal value of Rs. 5,00,000.

DIRECTORS' QUALIFICATION & REMUNERATION.

Every Director shall be the holder in his own right of shares of the nominal value of Rs. 1,000 in the capital of the Company.

The remuneration of the Directors shall be such sum or sums as may from time to time be determined by the Company in General Meeting. Until otherwise determined, such remuneration shall not exceed Rs. 1,000 per annum for all the Directors together.

The Directors are also entitled to their travelling and other expenses incurred by them in attending meetings of the Board of Directors or of committee meetings, etc.

INTEREST OF DIRECTORS.

Messrs. A. V. Thomas and K. V. Venkataraghavan are Directors and members of Messrs. A. V. Thomas & Co. (Mysore), Ltd., who are the Managing Agents of the Company and are interested in the remuneration payable to the Managing Agents. The other directors are not interested in the promotion of the Company except to the extent of holding shares in the Company and the remuneration payable to them as Directors.

Messrs. A. V. Thomas and K. Venkataraghavan are Directors of Messrs. A. V. Thomas & Co., Ltd., who have entered into an agreement with the Kathlekhan Estates, Limited, for the purchase of the Byrekhan and Dodkhan Estates and Messrs. A. V. Thomas & Co., Ltd., are interested in getting back £3,000 paid as advance deposit.

UNDERWRITING & BROKERAGE.

The entire issue of Ordinary and Preference Shares amounting to Rs. 5,00,000 has been underwritten by Messrs. R. K. Murthy & Company, Stock and Share Brokers, Narasimharaja Mohalla, Mysore, for a commission of 2½ per cent.

The Directors are of the opinion that the resources of the underwriters are sufficient to discharge their underwriting obligations.

The Company will pay brokerage to other share-brokers at 1 per cent on allotments made against applications bearing their stamp.

PAYMENT TO VENDORS & DISPOSAL OF CAPITAL MONEYS.

The sum of Rs. 5,00,000 is proposed to be distributed as under:—

	Rs.
For the purchase of the Byrekhan and Dodkhan Estates £30,000 or say	4,00,000
For Preliminary Expenses, registration, stamp duty, travelling expenses, etc.	50,000
For working expenses including cost of stocks ..	50,000
Total ..	5,00,000

PRELIMINARY EXPENSES.

The preliminary expenses inclusive of underwriting commission are estimated at Rs. 40,000 and will be borne by the Company.

	Rs.
Brokerage. Underwriting and Advertising	30,000
Conveyance and stamp duty	10,000
Total ..	40,000

VOTING RIGHTS

On a show of hands every member present shall have one vote. On a poll every member shall have one vote for every share held by him, whether Preference or Ordinary.

TRANSFER OF SHARES

The Directors may decline to register any transfer of shares to any person whom the Directors do not approve of, but the Directors shall not be bound to state their reasons for refusing to register any transfer. The Directors may also decline to register any transfer of shares on which the Company has a lien.

MANAGEMENT

Subject to the general control of the Directors, the affairs of the Company shall be managed and carried on by Messrs. A. V. Thomas & Co., (Mysore) Ltd. who will be the Managing Agents of the Company for a period of ten years.

The said Managing Agents, while in Office, shall be entitled to a remuneration of 10 per cent of the net annual profits, subject to a minimum of Rs. 9,000. The net profits of the Company shall be calculated as per provisions of subsection 3 of Section 87(c) of the Mysore Companies Act, of 1938.

CONTRACTS AND INSPECTION OF DOCUMENTS

1. Agreement of sale of property dated 21-8-44 between the Kathlekhan Estates, Ltd., and A. V. Thomas & Co., Ltd., Alleppey, whereby the former has agreed to sell the Byrekhan and Dodkhan Estates to the latter or their nominees for a price of £30,000.
2. Letter dated 30th July, 1944, whereby A. V. Thomas & Co., Ltd., have agreed to assign their right, title and interest in the agreement mentioned in (1) to this Company, free of consideration.
3. Draft Managing Agency Agreement between the Company and Messrs. A. V. Thomas & Co., (Mysore) Ltd.
4. Underwriting agreement between the Company and the underwriters Messrs. R. K. Murthy & Company, Mysore.

Copies of the above documents and copy of the Memorandum and Articles of Association of the Company are available for inspection during business hours at the Registered Office of the Company, and at the offices of the underwriters, during the period the subscription list is open.

GENERAL

Application for shares may be made in the attached form and forwarded with remittance payable on appliction to the Company's Registered Office or to the underwriters. Where no allotment is made pro rata the surplus remaining thereafter will refunded from the Registered Office of the Company.

Editorial Notes

Prices in 1944

Public opinion concerning the price-level has been seldom reluctant to express itself. But 1944 has seen fewer changes to sustain the anxiety so patent when the first instalment of anti-inflationary measures was adopted. Leaving bullion aside as sui generis it is necessary only to look at the behaviour of commodity prices to realise that the rupee is not falling. Such a favourable conclusion is based on sound evidence. The Calcutta wholesale index may not be enough or even the working class cost of living indices for various cities excluding Calcutta. What one can look at is the trend of wholesale prices in various markets, to realise that the strain is past, even if production has not risen swiftly. What has contributed largely since April to increase Government's revenue receipts and totals for borrowing is the sheer stability of commodity prices. The admissions of unpreparedness in 1943 notwithstanding, there is much to prove that Controls have worked. Variations between April and December are not of much importance as it is evident that prices of imports have not moved up. Examples of heartening stability in prices may be found in many markets. In eight months yarn and cloth prices have been lowered twice by order. Hides have been unchanged in prices while skins have advanced slightly in price owing to export revival. Iron and steel prices are maintained by Control but the drop in quotations for galvanised sheets is significant. Jute manufactures like jute are subject to price control, but the market has at present attained something like independence of all outside speculative activity. While the operations in the Philippines have not affected copra and coconut oil prices, which are higher towards the end of the year, other oilseeds e.g., castorseed and groundnuts have gone down in price. Linseed has been singularly steady, and rapeseed has fallen back after a brief rise. If it is obvious that wide fluctuations in the rates for vegetable oils occurred in spite of the ban on forward trading, the crop forecasts, with the exception of the official estimate as to the cotton crop, are suggestive of an increase in production. This must have the usual effect on the price-level. Vastly more important is the decision to leave the prices for the Kharif harvest unchanged. Wheat prices have actually fallen in spite of the apprehended decrease in Indian supplies. The quotation at Lyallpur was Rs. 9/8 per md. in April and the price in December was around Rs. 8/8 per md. This certainly signifies that previous control of the trade has yielded valuable results. Though rationing precludes considerable changes in prices at intervals, it is clear that prices in 1944 did not keep rising. They stood, so to say, on a plateau with a definite inclination to descend. This inference, at once hopeful and logical, indicates that intervention in the consumer's interest has been fruitful. But as between Provinces, differences may linger and the precaution of monopoly purchase of foodgrains may be dictated by circumstances. If there is experience to illuminate policy complete independence of imports may be desired in the case of foodgrains. Imports have certainly assisted in keeping wheat prices at a level to encourage the use of wheat in place of rice. That too, may be viewed as an alleviating factor when imports of rice are impossible.

Trade With Canada

India's trade with Canada in 1943 has been reviewed by Mr. Ahuja, the Indian Trade Commissioner at Toronto. It is noted that the increase apparent up to 1942 did not continue. Canada exported less though her exports to British India stood at 4.5 percent of the Canadian total. Her imports in relation to her exports to India were inconsiderable though India occupied again the fourth place in Canada's foreign trade. The leading features of Indo-Canadian trade in 1943 were the increase in wood, wood products and paper and in non-ferrous metals and products and the decrease in exports of iron and steel and rubber manufactures from Canada. In relation to Canada particularly India's adverse balance of trade in the war period marks a new development. The principal imports from India were tea and jute manufactures which accounted for 90 percent of the imports in 1943 valued at $17 million. Shipping difficulties and import control reduced Canadian imports of nuts, leather and vegetable oils. The chief import as usual was jute and jute manufactures. Imports of mica fell away as Canada developed home supply and took mica from the U.S.A. Chrome shipments from India also were lower in 1943 while development of substitutes for shellac led to a decrease in trade.

Enquiries as to openings increased nevertheless as Canadian firms manifested unusual interest in postwar opportunities and sought also to obtain direct trade instead of importing through the U. K. or the U. S. A. The enquiries ranged from leather to carved woodware. Canadian firms put many questions as to sources of supply and forwarded samples of the goods required. Enquiries in respect of the principal items, jute and tea, were fewer than enquiries for coir, minerals, sports goods, and spices. What Indian importers sought in Canada cannot be ascertained from the report. There is no mention of the exchange difficulty arising from Canada being outside the sterling area. If there is always one explanation for conspicuous changes in Indo-Canadian trade, it is well to note that the Canadian equivalent of the rupee is 33.59 cents. As Canada's trade with New Zealand and Egypt in 1943 fell shipping and import restrictions may have been the principal factors in the decline. The pronounced increase on the prewar figure however supports the hope of early improvement in the trade in food products. It has been recorded that canned and processed foods shipped in 1943 from Canada to India were of a wide and varied nature. In view of the Mutual Aid agreement an increase in approved exports may be predicted; but the reopening of the Pacific route alone can lead to uninterrupted increase in India's trade with Canada. More recent figures show that trade with the U.S.A. and Canada has increased to some extent but the fluctuations in Canadian manufacturing output in 1944 must not be disregarded.

Import of Capital Goods

In regard to postwar requirements of capital goods Government has propounded schemes of registration. During the discussions of the Reconstruction Policy Committee in October 1944 mention was made of the need for advice from industrial panels and Mr. Ghulam Mohamed then urged that demand for capital goods should be co-ordinated. According to Mr. Ghulam Mohamed the real difficulty is in regard to prices, apart from the question of priorities. Agents of certain manufacturers abroad had sought to book orders for capital goods placing the purchaser completely at their mercy. Sir R. K. Shanmukham Chetty dealing with orders for textile machinery said that the manufacturers' agents demanded an advance of 5 percent of the cost which would be forfeited if the intending purchaser did not accept within 15 days the price quoted by the manufacturer when the latter was in a position to supply machinery. This complaint regarding makers of textile machinery was referred to the India Office, while the Member for Planning offered to discuss the question of prices for capital goods with a deputation from another Committee and promised also priority for import of capital goods in accordance with its principles of development. The scheme for registration follows the discussion and opinions have been invited. It is the intention of the Government that industrialists should place orders for rehabilitation and expansion of industry. In the case of capital goods due to be shipped before July 1 and obtained under the usual license there is no provision for registration, and if machine tools valued less than Rs. 10,000 are wanted or if other goods valued at Rs. 25,000 or less are needed, the procedure of registration is not necessary. The Chief Controller of Imports is designated the authority to deal with applications. An inter-departmental committee is to assist him in dealing with applications. If the Government objects to registration, the applicant is to be informed. If no question is raised within three months registration is to be assumed while orders placed before December 23 and accepted by the suppliers, are also to be taken as orders duly registered. Registration has to be renewed if the order for goods has been accepted by the supplier. The reasons given in connection with the scheme formulated are that import trade control will remain for some time after the

war and goods can be obtained only under licenses, that foreign currency other than sterling will be scarce for some time and that foreign exchange must be utilised to the best advantage of the country. For those who register according to the rules laid down there is promise of assistance in regard to the procurement and shipment, and wherever it is possible, priority grading will be given by arrangement with the source of supply. The scheme is interesting because it confers some freedom on the prospective purchaser to define what he wants, and from where. From the terms in which the scheme is framed, the familiar assumption that in regard to textile machinery replacements, India would be forced to take what is available appears to have no basis. Where neutral shipping is available for carriage of goods from neutral countries, there is an incentive to order from neutral countries because of the possibility that capital goods are distinguished from other imports. Export recovery in Britain may derive some support from the modification of import control.

Basic Requirements

The Indian chemical manufacturer's requirements were formulated by Dr. Ghosh at the Association's annual meeting on December 13. He asked for the speedy establishment of basic chemical industries in addition to the manufacture of fertilisers. For the further growth of chemical and pharmaceutical industries, a fertiliser plant, able to provide nitric acid and other by-products is required. In his opinion coal tar distillation must be speedily encouraged, and he criticised the Gowing Mission's report since it failed to recognise the connection between the two branches of chemical industry. The manufacture of cheap solvents such as alcohol and its derivatives must be set up. Since the raw materials for manufacture are available only the import of plant has to be arranged. Dr. Ghosh expects that the arrangements can be made. The industrialist's view as to the fertiliser manufacture plan is indicated in the advocacy of four separate factories for India that would yield a sufficient quantity of hydrogen, ammonia and nitric acid in addition to sulphate of ammonia. The sale of by-products alone is likely to ensure success and lower the cost of manufacture. Combination with a coaltar distillation plant would be a means to the same end. How new chemical plants should function was indicated by Dr. Ghosh when plan for rapid development is that for new industries the State should provide 20 per cent of the capital and offer a guarantee as to minimum dividend to the shareholders providing 80 percent of the capital. Complete State ownership and management is not required, and the new doctrine of partnership admits the technical expert to a share in the control of enterprise along with the owners of capital. This view does not conflict with the independence given by the Government of India to provincial panels to propound plans for industrial advance. No indication of the sums needed for the fruition of the proposals that India's chemical manufacturers favour at present was given. But the sums required would be large and in any case, chemicals, on the analogy of fertilisers, must be treated as an All-India subject. It is in that view that tariff protection up to the point of success is requested. The high cost of local manufacture is attributed to the high cost of raw materials and one of the conditions for the success of manufacture is a guarantee as to postwar import policy. As regards tariff assistance and the working of import control in the future certain statements suggest that manufacturers' desires will be met.

Forward by the Left

Mr. Morrison's arguments concerning the maturity of private capitalism in Britain as distinct from the vigour of U. S. capitalism, like his pleas for State ownership of coal mines, merely reflect his Party's opinion as to the changes in control. The resolutions adopted on Friday do not altogether leave aside the question of planning which was advocated in the Fabian Society's latest proposals for the control of industry. But the resolutions generally seek to retain the controls imposed for the sake of the war effort in order to advance welfare and wealth in the future. Though the Labour Party is pledged to support the coalition until the dissolution it is still bound to the doctrines of socialism as the Executive's resolution shows. Control of both currency and credit in the interest of full employment and the control of trade with due regard to international obligations are demanded along with State acquisition of monopolies. Mr. Shinwell is against a return to freedom of enterprise because of the workers' fear that their interest might suffer. The other resolution, disapproved by the Executive but adopted by the conference, is almost a draft programme for the next election as it asks for the immediate transfer of land, heavy industries, banking and transport to the State.

While the conference said nothing as to the Bretton Woods agreement, Mr. Noel Baker's objections to a return to the Gold Standard are interesting as proving that Labour officially has no criticism to offer either to the Treasury's policy or to the Bretton Woods Conference which almost in the terms of the Labour Party resolution dwelt on the need for development of backward regions. It is, however, difficult to predict whether the plan for complete economic control will mark off the Labour Candidates from the Conservatives at the next election. Ostensibly, the Labour plans for the control of investment, the location of industry and full cooperation with the United Nations do not endanger the formation of the present Coalition, but the strict Socialist view that Mr. Shinwell and Mr. Noel Baker adhered to in their speeches can only mean that the chief issue in the next election may not be the use to which Victory is put but the other one of control. The Ministry of Reconstruction apart from the proposals for the extension of social insurance and avoidance of unemployment has offered nothing more than a plan to regulate building in war-damaged areas. The recent resolutions therefore mark Labour's impatience with the Ministry's failure to produce schemes for State ownership. They also indicate that the trade unions are not so backward as to prefer an indefinite gradualism to the radical changes prescribed. The Fabian view is spreading to the rank and file.

Dindi Project

A description of the Dindi Project in Hyderabad State completed in three years at a cost of Rs. 40 lakhs is welcome since the dam that has created a lake in the famine zone is modelled on one that was made in the 16th century. The dam across the Dindi river in the Nalgonda District is made up of a masonry spillway 1,000 ft. long flanked by two earthern embankments 2,600 feet long. The latter are faced with mortar slabs on the up-river side to prevent erosion. The spillway, 80 feet high, is regarded as an original feature as it enables the river to receive the water without scouring of the bed. Experiments were carried out with a working model before the design was settled. The composite dam is regarded as a success because the cost was reduced substantially. The P. W. D. workshops manufactured the shutters of the sluices for the canal. The project is meant to irrigate 47,600 acres by a canal 28 miles long serving 34 villages. On this canal there are two falls suitable for generation of electricity. In regard to land grants in the newly irrigated tract the State has decided that scheduled castes must be given preference. The economic holding for a family in the canal area has been fixed at two acres of wet land and eight of irrigated land. Local cultivators whose holdings are less than the area fixed are to be shown special consideration when land is assigned. A beginning has been made with irrigation of 10,000 acres in the air season and 500 acres in the tabi season. Hyderabad revenue officials expect that after the concessions in regard to assessment the demand for irrigation will in crease. A colony run by the co-operative societies is to be a demonstration centre for rural developments. The Dindi project is expected to increase the supply of castorseed in the State. A mill to crush castorseed is to be set up at Dindi. Electricity for the area is to be provided by the project. Though the project is not on the grand scale, it is noteworthy that it was planned before the present emergency and is different from the restoration of a previously existing source of irrigation. As the project seeks to use water and electricity for an intensified experiment in village uplift, its resemblance to far more famous works should not pass unnoticed.

Additions To Debt

The increase of public debt in recent years is not confined to countries at war. Figures relating to several countries indicate that the permanent as well as the floating debt rose in 1944 as in 1943. The expansion of the floating debt to deal with the increase in note circulation was characteristic of Swedish monetary policy up to the begining of 1944. Sweden did not escape a regular increase in her consolidated debt between 1941 and 1944 as available figures show that the debt increased by 300 percent. The reduction in external debt which took place in 1943 did not continue in the case of Uruguay and Colombio. Germany also shared the experience of countries at war. In 1943-44 there was a monthly addition of six to seven milliards to the Reich's debt. Though efforts were made to expand the floating debt concurrently by extending the use of tax prepayments the steady borrowing raised the internal debt from 44,639 million marks at the end of 1939 to 274,110 marks at the end of March 1944. In the same period, Britain's internal debt rose from £7,783 million to £18,304 million. Proportionately, German borrowing was greater and the absorption of superfluous currency in war outlay was more successful. It is known that bank deposits were immediately diverted into Treasury Bills or Work-creation Bills and the ten-fold increase in Germany's floating debt during the war period shows how the entire financing of the war effort has passed from private enterprise to public authority. In Britain, too, the floating debt expansion has taken place in 1943 and after. But the increase covers treasury deposits of the clearing banks. The increase under temporary borrowing explains how treasury deposits have come to take the place of the principal asset in bank balance-sheets. A result of the increase in short-term borrowing to the extent of £537 million in January-June 1944 was that the consolidated debt rose in the first half of 1944 by only £525 million. U. S. borrowing in the war period accounts for the increase in the federal debt from $64.344 million to $202,626 million by the end of June 1944. The U. S. floating debt underwent even more marked expansion in the war period as the excess reserves of banks required special treatment. The figures relating to Japan show that the borrowing policy of the belligerents is cut to the same pattern. Occupied countries as compared with countries at war reported even larger additions to debt since they had to pay occupation costs. Belgium, Holland and France experienced the same budgetary strain leading to an increase in debt. Progressive additions to debt besides furnishing proof of the curtailment of non-essential expenditure in countries at war indicate how far the cheapening of money has sustained increased public expenditure.

DISCOUNT BUSINESS

In order to enable customers to work to the full potential of their business capacities, the Hind Bank is always keen to discount Documents of Title to goods in transit, or those which represent goods supplied or services rendered, besides the normal *Hundi* business. Discount of Government Bills is of course a substantial part of this service.

Progress in Sind

Agricultural progress in Sind after the construction of the Lloyd Barrage has been impressive. Since the average rainfall is 5½ inches per annum, Sind is singularly dependent upon irrigation. The Indus runs for about 400 miles through the length of Sind and the floods from May to August have been all-important. Before the Barrage was constructed Sind relied almost entirely upon the Kharif crops, mostly millets, though the soil was alluvial for the most part. A great change came after 1932 when the canal system was adapted to new uses. The Lloyd Barrage serving eight million acres has led to a great increase in the cultivation of wheat and cotton. The direct results of the irrigation system are the increase in cultivation of long-staple cotton and an increase in the average yield of both wheat and cotton per acre. By 1940-41 the cultivated area increased by 1.9 million acres and further increase is likely as cultivable waste is passing under cultivation. Only 19 percent of the cultivable soil will lie fallow as compared with 62 percent before the Barrage was constructed. Perennial irrigation accounts for the large increase in the cultivated area from 38 percent to 81 percent in Sind since Rabi crops are grown on a large scale. Rice, cotton and wheat have benefited from the extended use of improved seed to which the work of two research stations at Sakrand and Dokri has contributed. In his article in *Indian Farming* Mr. Vachhani deals with possibilities of improvement through green manuring and scientific rotation of crops. The Agricultudal Department in Sind advocates increased cultivation of oilseeds like rape, linseed and mustard in Sind during the winter. Great faith is placed in the existence of 8 million acres of cultivable land and the probable supply of Indus water for 2.5 million acres. Mr. Vachhani draws attention to the lack of agricultural labour and advocates extensive adoption of time-saving implements and improved methods. Estate farming under Government supervision is recommended for the same reason. Since 1940-41 when the net area sown was 5.37 million acres there has been extension of cultivation of food with the result that Sind's surplus has become an important matter for the Central Government. The discharge of the Barrage debt is a consequence of the extension of canal irrigation for which the limit is believed to be 6 million acres.

Today's Prospectus

To those interested in a modest planting issue with ordinary capital duly subordinate to the preference capital the prospectus of Bababudin Coffee and Produce Co., Ltd., may be commended without reservation. The acquisition of an estate in the Kadur District of the Mysore State led to the formation of this company. The reserve area is large, while the capital cost per acre planted is reasonably low. Details relating to location, crops harvested in consecutive years and equipment are as important as the ratio of production costs to prices realised. As important as the estimate of crops for 1944-45 is the wholly secure outlook for Indian coffee and cardamoms in the future. The promoters, on a conservative estimate of crops and prices, expect a net profit of Rs. 70,000 on the capital invested, and assume that a dividend of 26 per cent on the ordinary shares can be paid. The most relevant fact for the investor is that the coffee estate is in bearing and a return is available from the time of allotment. Since Messrs. A. V. Thomas & Co. are sponsoring the present issue, there is an assurance of safe and skilled management. It is evident that in the conversion of sterling companies into rupee companies Messrs Thomas & Co. remain pioneers. The offer to Kathlekhan Estates and the latter's acceptance shows that the process of voluntary acquisition is by no means at an end. There is much to be said for the from and shape it has taken while the extension of Messrs. Thomas' interests in coffee planting should evoke satisfaction, particularly as the shares of low denomination devised for a large community of small investors have established themselves as dividend payers from the inception of the companies. As a proportion of the issued capital is found by the Directors and their friends the success of the present issue seems assured. If reference to the success of Mysore issues in general appears unnecessary it must be said that Haji Baba Budan is the eponymous ancestor of East Indian coffee.

Clive Street Gossip

It is some time since the turn of the year ceased to have much significance to the markets. Formerly, the approach of the year-end would induce banks to prepare for their window-dressing and in India, it coincides with the peak of the busy season. But now the turn of the year has significance only to the psychology of the public. By some strange logic—I am loath to call it, superstition—people have come to believe that when you tear down the calendar on the wall and put a new one in its place. you are ringing out all the troubles of the old year and ringing in a year of singular good fortune. That feeling has, of course, little warrant in experience. And if it has persisted in spite of it, it is only because the optimism of the human mind is irrepressible and makes the most of the least chance it has for re-asserting itself. Thanks to this widespread feeling of optimism at the beginning of a new year, columnists like me get the chance to be cheery without being thought to indulge in cheap sentimentality.

INDIAN FINANCE KERALA RELIEF FUND

Contribution to the Kerala Relief Fund may be sent to the Editor and will be acknowledged in this column. Our target is Rs. 10,000.

Editor "Indian Finance".

More than five years have passed since the scourge of war descended on the world. It has passed through many vicissitudes. Many a nation has had its pride humbled. Nearly all have seen the dread hand of Nemesis in one way or another. Large masses of the world's population have suffered, though in varying degrees, from the common blight. All the belligerent nations have tasted more or less equally the bitterness of reverses and the elation of recovery. There is no walk-over for either side and neither side can talk of keeping to a schedule. The end of the war, which seemed so near a few months ago, has receded again; and the eye can take no measure of the increased distance. Ideals have suffered as many ups and downs as the fortunes of the belligerents. The Atlantic Charter, conceived in the stress of untoward developments, was slowly whittled down and has now vanished altogether. With Germany pressed back to within her frontiers, the professions of the Allies have been put to the test. Soviet Russia has busied herself with building up a number of friendly and dependent States to serve as a buffer against future aggression from the West. Never too loud in her professions of love for the freedom of other peoples, she has felt even less compunction than others in completing her plans for self-defence, while Britain with a cynicism, carefully cultivated through centuries, prepares the ground for the pursuit of her own selfish interests. America looks on, dazed as much by the turn of events in the liberated countries as by the scale and force of the counter offensive.

* * *

Such, in the main, has been the course of events in the last five years and more of the present war. They have been a cold douche alike for idealism and cynicism, for cant and for pessimistic realism. They have dealt hard knocks to one and all, to those who talk of one world, not less than those who would pursue national plans as if nothing had happened to bring the peoples of the world together. What, then, has 1945 in store for us? Another chain of inconclusive, see-saw developments? As I began with saying, the calendar is sanction for more or less restrained optimism. If the old year ended with the counter offensives of Germany and Churchill in full swing, the new year may not take long to reveal substantial and almost conclusive gains for the forces of progress, as well on the battle-fields as in the councils of the allied nations. The two are, indeed, related in no inscrutable way. The check to Allied arms has more than once coincided with the ebb of Allied enthusiasm for the freedom of enslaved peoples. And now, too, talks of release of Congress leaders and establishment of National Government in India have revived. Past experience does not encourage one to attach much value to these talks. But one important difference between the position today and any comparable position in the past is that this time the Labour Party has taken a stand and it is an Under Secretary of State that has taken up the question. One might also add the decline in Mr. Churchill's prestige as a politician. Mr. Wells' denunciation of the Premier finds an echo in the hearts of many Britishers, who may be more inclined to support a change of policy because of the debacle in Greece. Support for the Indian cause is gathering mass and momentum, though within the country, there has been little or no change. Mr. Bhulabhai Desai's meeting with Sardar Patel is made much of—trifles, light as air, are to the hopeful proofs of holy writ. But all reports need not be equally discredited. And it is not quite reasonable to discount all chances of the Indian problem being solved with outside help. After all, India occupies a crucial position, in many ways, in the dialectic of current world developments. The New Year may not belie hopes, if we are not content merely to hope.

* * *

A pertinent question is, when does the new year cease to be new and transform itself into the current year. For my part, the change becomes marked and indubitable when the Finance Members and Finance Ministers—the latter are still all too few—make their budget speeches and force us for weeks together to speak of the current year. Already there is a forecast in the Press preparing the public for a phenomenally large surplus in the Punjab Budget. What Bengal has in store, I shall not attempt to predict. But, generally speaking, the era of large revenues has by no means neared its end. All the Provinces should be able to put by large amounts for post-war reconstruction; and this should prove another spur to progress in the drawing up of plans for the post-war period. Doubtless the Finance Member will have more to say of planning. And if the Budget session of the Central Assembly should be attended by a fuller complement of members of the Congress Party, which is by no means unlikely, the next session should prove more interesting and perhaps more constructive, too.

* * *

Besides the Budget, the Assembly will also have to consider two very important measures of new legislation, one, the new Banking Bill and the other the Amendment to the Insurance Act. Experience of the working of the Insurance Act is fair warning against hasty legislation in this regard. Both the Bills have to go through careful consideration, particularly by the parties directly affected, before they can be proceeded with by the Legislature. So far as the Banking Bill is concerned, the fact that it is intended to do for banks what the Insurance Act has done for the Insurance Companies is not an argument in its favour. Because there is general agreement that the Insurance Act has as a whole acted to the detriment of the Insurance Companies. No one should forget that this position is due primarily to the fact that interest rates have suffered a steep decline since the passing of the Insurance Act and that the restrictions imposed by it have proved to be serious handicaps. I mention this only to suggest that before enacting a similar measure for banks, we ought to see the main trends of banking in the future. The Banking Bill seeks to provide certain

safe-guards in the interest of the depositors. It prescribes salutary restrictions on capital and investments. It empowers the Reserve Bank to inspect the accounts of banks. But, though it is a truism to say so, it does seem to need saying that the best of laws cannot make up for the lack of character and tradition. The Reserve Bank has been endeavouring to make its guardianship of member banks a reality instead of a respectable fiction. More formal powers should, no doubt, be vested in the Bank. But it should not be forgotten that an enquiry by the Reserve Bank would prove the death-knell of a bank, unless a routine enquiry to which all banks are subject is also enjoined on the Reserve Bank. This simple truth seems to have been overlooked. Such a routine enquiry may well serve to create precedents, traditions and a spirit of co-operation which may obviate the need for some of the provisions of the Bill. However, I have no intention of discussing the Bill at this stage and must leave full consideration of it to a later issue.

In the Honours list on New Year Day one rightly expects to find famous and familiar names, not merely those of safe placemen, and this year at least expectation has been fulfilled. How the citations at the investure will read cannot be anticipated here but public, rather than euphemistically political, service is admittedly the prime qualification for the disposal of several knighthoods. Jamshedpur's first citizen is duly remembered as the first to take over from American hands the effective conduct of what is known as the largest steel works in the British Empire. Not for the first time has Mr. J. J. Ghandy's work won official approval but on all occasions, the compliment has been apt and timely. His knighthood must mark more than formal satisfaction with the running of the plant so essential to industry in wartime. Mr. Justice Divatia is a new knight. The Industrial Court in Bombay is largely his creation. He has legislated for the Bombay textile industry in more ways than one and sensed, like some modern American jurists, that Law cannot be divorced from Life. Mr. Doak has became the master spinner of the South; and the Madura Mills to-day count on more than an expert accountant in the Managing Director. Long and distinguished service in three Indian States still counts for much as is proved by the bestowal of a knighthood on Mr. S. P. Rajagopalachari. Among the new Companions of the British Empire is Mr. J. B. Ross described in the list as Regional Food Commissioner, but better known as the European Group's leader in the Bengal Council, and for long, the authoritative spokesman for the coal-mining industry. The Ford Motor Company's work in war is acknowledged in the title conferred on Mr. Stevenson. More than one commercial organisation dealing strenuously with problems of supply and shortage has depended much on its executive, and it is all the more pleasing to find that Mr. Fairbairn, the Secretary of the Bengal Chamber is among the new Companions of the Indian Empire. Three Judges, two Vice-Chancellors and some active leaders of industry give both weight and balance to the latest Honours list. The new Departments like Supply and the old like the Medical are adequately represented this time. Of Members of Council there is one, Sir Sultan Ahmed, now reported to be convalescing satisfactorily may find that his term as Member for Information and Broadcasting has led to honours, heightened by his spirited advocacy of the Indian minority in South Africa.

If the Rotary movement and its ideals are occasionally ridiculed in a subdued key its fine work in bringing East and West together has seldom passed unnoticed. During the famine it set an example in relief work that secured viceregal notice and Calcutta's citizens came to realise that the Club twenty-five years old does more than hold weekly luncheons. If Rotary's example in service has not impressed the popular imagination as yet, its ideals must be shared by a million of Calcutta's fortunate citizens since the Governor of Bengal drawing a picture of contrasts in the Province wants effective pioneering in philanthropy. It is difficult to say how far immediate response would justify a plan for the 'adoption' of districts and villages by the well-to-do minority. In any case there are well-to-do immigrants who must combine for good works but what they would do for the Province of their adoption or domicile depends upon certain factors independent of the energetic and successful efforts of the Bengal Government. They may well urge that Bengal's difficulties are recent and exceptional, and also that their own contribution to private enterprise for betterment has been substantial. Much depends too upon the example set by the European community; but more depends upon the acceptance of austere living in wartime, and beyond, by the fortunates. There are certainly other ways of getting the money for sound reconstruction schemes than getting a voluntary levy for the private ventures. How existing agencies draw support from Authority does not require investigation, because the call to the fortunate million is really one for the wise use of wealth. If there is an urgent plea for work for welfare from Mr. Casey it is well to add that welfare leads to the creation of wealth. Planners are not letting social services fall behind in their own list of immediate requirements.

BOMBAY MARKETS

BULLION

Bombay, (*By Cable*).

Bullion markets this week developed an uncertain tendency despite favourable war news and heavy currency expansion. Gold forward opened at Rs. 73-8 on Monday but shot up to Rs. 76-12. On Tuesday, when the Reserve Bank accepted tenders at Rs. 74-11 but only for 15,000 tolas the chief bull who was overbought with 2 lakhs tolas unloaded freely and the price declined to Rs. 75 the same evening. The slackening in demand to 15,000 tolas per day coupled with arrivals increased stocks to 3 lakhs tolas. Hence the undertone is quiet. The Bank sold 29,000 tolas at Rs. 75 on Wednesday and 37,000 tolas to-day, but the rate after touching Rs. 75-12 is declining especially as bazar operators are disinclined to follow the market upwards. The Bank has invited tenders for 50,000 tolas for Friday. Operators have been kept guessing throughout. The general belief is that as only Durban gold is offered now-a-days American stocks are inconsiderable. However, since genuine demand is nil the uptrend is checked. A similar situation prevails in the silver market with local stocks about 1,500 bars.

"Agents to book orders (wholesale or retail) for teas of all grades available with our firm. Very good remuneration.

LOW LIFE ASSURANCE RATES

have been made possible partly by the economical management of the Society, the expense ratio being lower than that of the majority of the larger life assurance companies in India.

Taking the first fifteen Indian insurance companies in order of their total business in force, the Society's premium rates for life and endowment policies are among those of the four companies who charge the lowest rates.

Rebates allowed by the Society on the premium rates include: 2½% for annual payment; 5% to 10% for residence in healthy climates; 10% to employees of Municipalities, Schools and other departments insuring through their employers; and As. 8/- and Re. 1/- per thousand for single policies of Rs. 10,000/- and over and Rs. 20,000/- and over respectively.

The Society's life and endowment policies offer the best value to those who look for a large company with economical rate schedules. A copy of the 1944 Prospectus and Tables of Rates will be gladly supplied on request.

(FROM OUR CORRESPONDENT)

NEW DELHI, Jan. 1

The year ended in Delhi with debates on political and economic reconstruction—the Sapru Reconciliation Committee trying to find a generally accepted basis for a new constitution and leading economists discussing future economic planning. 1944 had only deepened the country's sense of frustration. The prospect of a unified national purpose is now more distant than ever. The raw deal India received at international conferences had vividly emphasised the fact that without a solution of her political troubles her economic salvation too would remain a mere dream. The Non-Party Leaders' reconciliation Committee which met during the week-end to diagnose the nation's political illness worked under severe handicaps. The non-co-operation of Mr. Jinnah and Dr. Ambedkar will naturally detract a good deal from the usefulness of the committee's findings, for, in political matters it is not ultimately the theoretical soundness or rightness of a scheme that counts but its practicability and that means the support such a scheme can obtain. But any attempt, however feeble, to create order out of the present welter of political confusion should be welcome and the committee's analysis of all the available political data should provide a convenient starting point for future discussions. The committee has already drafted a comprehensive questionnaire on all the major political issues agitating the public mind—Pakistan, alternatives to Pakistan, Cripps scheme, nature and types of Provincial and Central executives, the future of States, the machinery for enacting the new constitution and last, but not the least, the needed changes in the composition and working of the Viceroy's Executive Council till the new constitution is enforced. Four sub-committees have been formed to deal with the general basis of the constitution with special reference to Hindu Muslim relations, the scheduled castes question, the problem of the other minorities and the economic and financial aspects of the future constitution. The members of the Committee have no strong party affiliations and include some prominent jurists. As Sir Tej wrote to Dr. Ambedkar: "I have taken good care to exclude men who belonged to either the Congress, the Muslim League or Hindu Mahasabha. It would be impossible for me to find persons who have not at one time or another expressed some kind of opinion, but the point is whether these persons can approach the question now with a free mind. There are four retired judges and I have no doubt that they will play a great part in weighing documents and coming to certain conclusions". The Committee has decided not to approach the Government to be allowed to see the Working Committee members who are in jail.

* * * *

The proceedings of the Indian Economic Conference which also met during the week-end have been dominated by the issue of planning. Sir Ardeshir Dalal in his inaugural address to the conference made the welcome announcement that the Government soon proposed to set up a National Institute of Economic Research and a small sub-committee of non-official economists to meet once a month to give advice to government. Sir Ardeshir replied to the critics who were impatient with the slow progress of government planning and with the failure to fix an over-all target in respect of increase in national income which it was intended to achieve during a given period. Such targets, he said were fixed and reached only in Russia but at the cost of the "most rigid regimentation of every aspect of the country's life and acute tribulation to a large number of persons accompanied with serious loss of life." This even a National Goverment in India was not likely to attempt. I understand that Prof. C. N. Vakil is likely to be the head of the new institute "which will be an autonomous body, mainly non-official in its composition and management but having at its disposal funds provided by Government which will be utilized for carrying out systematic, scientific and impartial research into various problems connected with the task of planning and economic development in India". The new organisation will be the economic counterpart of the Scientific and Industrial Research Institute.

* * * *

Almost every address at the Economic Conference dealt with one aspect or other of planning. Prof. L. K. Hyder in his presidential address envisaged an era of state capitalism in India. "The state shall have to advance more and more in the direction of state capitalism", he said. "Some industries the state might own and operate itself, others it might own but manage through statutory public bodies and leave a portion, steadily decreasing, of the field to private enterprise". Sir Theodore Gregory in a broadcast talk on planning dealt with the problem of priorities and pointed out how the intensive industrialisation, improvement of agriculture and development of social services must all go hand in hand if disastrous results were to be avoided. As for priorities within industry itself—whether capital goods industries should be developed at the cost of consumer goods industries—"it is a question of how much self sacrifice should be imposed on this generation for the benefit of improving the lot of the next one", Another paper dealing with the future of war industries in post-war trading pleaded for an all-round protection to national industries. "Protection is necessary in our country to save our industries, but this must not be confined to mere tariff protection" and must include control of currency, exchange and transport to promote industrialism.

* * * *

The Indian Institute of International Affairs last week published a number of interesting pamphlets dealing with current political and economic problems. Sir Theodore Gregory and Mr. N. R. Sarker have dealt with the problems of Indian currency and exchange in two separate booklets. Sir Theodore examines the difficulties of keeping the rupee permanently linked to the sterling, or linking it to the dollar in any formal way and of putting it on a formal gold standard basis. "If the relationship with gold were purely *de facto* and not *de jure* i.e. if no obligation to sell gold were assumed but the rupee were merely stabilised in terms of gold, the resulting situation might not differ markedly from that which would prevail if the rupee were linked to the U. S. dollar, so long as the latter was also pegged to gold, formally or informally". Sir Theodore comes to the conclusion that though "a 'free' rupee might be preferrable to a rupee stablized *de jure*, the balance of advantage lies in the *de facto* stabilisation". Mr. N. R. Sarker says "India has been successfully baulked of a sound system of currency and exchange, her industrial development and economic progress were retarded and her banking system was ill-developed; so that on the whole she was ill-fitted either to serve herself or make her proper contribution to the progress of world economy" and concludes that "if India is to make her contributions to international financial regulation, she must insist on acting as an independent entity and not as an inconsequential appendage of Great Britain."

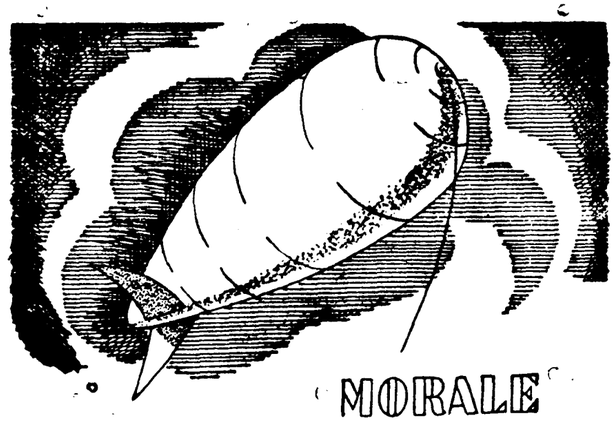
(From Our Correspondent)

BOMBAY, Jan. 2

In his address to the 23rd annual general meeting of the East India Cotton Association, Sir Purshotamdas Thakurdas paid a graceful compliment to the Government of India for the part played by the official purchase scheme—the first in the history of Indian cotton—in keeping the cotton market on an even keel. The total of such purchases was 2,77,920 bales. Although, in connection with the working of the cotton control and especially the fixation of rates, the E.I.C.A. Board could not see eye to eye with the government on many points, the working of the scheme was on the whole smooth. Sir Purshotamdas also gave expression to the Board's recognition of the promptness with which the Government of India had deputed an expert to visit America and impress upon the U. S. Administration the adverse effects on Indian cotton of the U. S. subsidy plan for exports. It is hoped that the expert will also visit Liverpool and London to arrange for disposal of the enormous stocks of cotton lying idle in India as a result of the loss of the Continental markets. The planning of the cotton crop as suggested by the Planning Sub-committee of the Indian Central Cotton Committee will, it is hoped, commend itself to the Government. There is no doubt that, if those recommendations are accepted, the burden on the cotton market would be appreciably lessened. The long-term planning aspect has been deliberatively deferred since there is no purpose served by drafting such a long-term blueprint when we have no linking as to what will be the final stage of the war and what the United Nations' policy towards raw materials would be. As regards the persistent opposition of some people to the functioning of a futures market in cotton, Sir Purshotamdas said that the latest move in Liverpool to resume forward trading is the best answer to those who are irrationally critical of the efforts of the East India Cotton Association to obtain the best price for the cotton grower. What is necessary for a merely consuming centre like Liverpool is *a fortiori* 100 times more so for producing, distributing and consuming centres like Bombay and Karachi. After all, looking to the trend of prices in the Cotton Contract during the past year as compared to 1943, there would be none who can dispute the fact that cotton prices have been well held on the whole and that at every stage there have been healthy checks on any run-away market. It is upto everybody in the cotton trade and Government of India to see that the Contract is worked in the correct spirit in which it was conceived.

* * * *



One other important aspect was appropriately stressed by the President of the E.I.C.A. Should the Government accept the cotton crop plan advocated by the Central Cotton Committee and the cotton crop be adjusted to domestic needs, certain changes in the structure of the Future Contract would be necessary. For when the Contract was evolved, there was the prospect of a crop of 60 lakhs bales as against the possible consumption of 40 lakhs bales; and in order that the Contract may not become a bear contract, the provision for a 12½ per cent discount on varieties other than Jarilla was deliberatively introduced. If the crop outturn is brought into close relation with the consumption of raw cotton, the continuance of this provision could only result in a squeeze in the Contract. No doubt, other details have also to be worked out, and it is just as well that Sir Purshotamdas has emphasised even at this stage the need for members of the cotton trade giving their attention to the problem of effecting the necessary adjustments in the hedge contract to suit changing circumstances.

* * * *

The School of Economics and Sociology of the Bombay University is to be congratulated on its move to enquire into the effects of inflation and price control on lower middle class families in the city. A questionnaire has been drafted and postgraduate students of the school will approach middle class families in different parts of the city for information. It is expected that the public will give the necessary data readily and that the results of the enquiry will lead to definite conclusions regarding the impact of prices and inflation on the economics of middle class families. Indeed, in India we cannot have too many of these surveys, especially as the true position is very often obscured by exaggerated claims for price control administration on the one hand and, on the other, by too lurid pictures painted about the ravages of inflation. It would indeed be no easy job to assess the effect of the war on the national income and other kindred subjects. Conditions in metropolitan and rural areas differ greatly. On the whole, the former have been more hit by inflation than the latter; and the setting up of an economic institute envisaged by Sir Ardeshir Dalal encourages one to hope that, in the next year or two, proper appraisals will be available. The universities, for their part, cannot give a better training to their students than to institute systematic economic surveys. In fact they would furnish the best corrective for the exaggerated academic bias only too obvious in present day teaching of economics. The only snag, I am afraid, is that the universities are being denuded of all the best professors of economics, without whom no proper direction can be given to economic studies. I mention this with reference to a strong rumour here in Bombay that Prof. C. N. Vakil will be joining the Planning Department of the Government of India as an adviser. The latter have already drawn the cream of professional talent in the country to themselves, which, though it may be with the best of intentions, is nevertheless apt to render university study of economics poorer. Dr. Thomas and Dr. Lokanathan, Dr. V. K. R. V. Rao and now Prof. Vakil most probably —the defection of these eminent economists from the universities will leave a void hard to fill.

* * * *

The 1st of January has come and gone and many textile dealers have been caught napping. They are already appealing to the Textile Commissioner for extension of the time limit for the disposal of cloth and yarn which became time-barred. The Commissioner does not propose to give any extension whatever. The authorities are seizing all such cloth and yarn and licenses of dealers who failed to comply with the provisions of the order may either be suspended or cancelled. The provincial authorities are expected to take the necessary legal steps and to confiscate such goods. There is no doubt that the control authorities mean business this time. The Textile Commissioner has also notified that all manufacturers should submit to him, on or before 15th of each month, a return of sales of fine cloth made by them in the preceding month, giving details of the bales of fine cloth delivered to him against the quota. Fine cloth has been defined as cloth in which the count of the warp yarn is 36s and more whether single or folded.

MORALE
THE LAST WORD IN DEFENCE

Defence of a country, particularly in modern warfare, largely depends on the excellent morale of the people, irrespective of whether they are directly engaged in warwork or not. It is the unshaken morale of the people of Great Britain that helped in the magnificent defence against the terrible Air Bombardment by Germany and gave the Germans the first setback. It is the knowledge of every individual and the satisfaction that their country is well defended that creates such morale. In the defence against Air Raids Baloon Barrage plays an important part. So also the efficiency of the fire fighting services and the Rescue parties. All these need—and an essential need of course—suitable and strong ropes. Hartons play the leading role in these supplies. Whatever the kind of quality in ropes may be Hartons have the variety to choose from.

61, HARRISON ROAD, CALCUTTA.

Markets in 1944

The year that has just ended was important in many ways. It witnessed a striking change in the fortunes of the war, the Allies being victorious on every front. With favourable developments in the several theatres of war the Government of India was naturally successful in its anti-inflationary programme, though there is still room for criticism of the manner in which Government have controlled the prices and distribution of goods. As in the year 1943, there was, however, not much of speculative activity in the markets though there was always a disturbing influence in the increased volume of funds, particularly black money, seeking channels of evasive investment.

The year is notable for the successful administration of the Cotton Cloth and Yarn Control order and the successive reductions in ceiling prices for cotton cloth and yarn. By the end of 1944 ceiling prices had been reduced by nearly 40 per cent. The cotton grower was perhaps not quite happy over the developments during the year especially in the last six months. The reduction in ceiling prices for cotton goods, the larger 1943-44 crop and the lower level of consumption by mills were mainly responsible for the decline in prices. Prices were nearer the floors than the ceilings and with the revision of the floors in September, the spot market grew weaker. It was only towards the close of the year that there was a rise in prices on expectations of a smaller crop for 1944-45.

The bullion market was very active throughout the year and turnover both in the silver and the gold markets was on a large scale. The fluctuations in the silver market, however, were wider and bears found themselves in an unenviable position throughout the year. Large sales of gold kept down prices though closing prices are higher, owing in the main to the slowing down of the progress of the Allies. Silver sales after the receipt of lend-lease supplies have had not any appreciable effect on prices and the spot position is still unrelieved.

The jute market was quite firm till August; but the continued difficulties of mills regarding coal supplies and the pressure on godown space as a result of requisitioning resulted in a decline in prices and by mid-October prices for all grades of jute were quoting at the minimum levels. The jute manufactures market was very firm and mills had no difficulty in selling their output; but the heavy goods market struck a bad patch in the last quarter of the year. The suspension of official buying created some uncertainty regarding the future outlook. Mills were anxious to do business in heavy goods and sales were effected below the maximum rates. There was a slight improvement in the tone of the market in December, but there has been no substantial change in the general situation. We shall now attempt a detailed survey of the conditions in the different markets in the last year.

Jute

The jute grower was perhaps in a strong position at the beginning of the year 1944. With mill consumption around 5½ lakhs bales per month and the expectations of a smaller crop for the current season the ryot was confident of being able to get the maximum prices fixed by the Indian Jute Mills Association. It was generally expected that there would be an increase in exports with an easier shipping position and that fresh war orders might be forthcoming. Only there was the criticism that jute prices were unofficially controlled by the Indian Jute Mills Association and that the maximum prices fixed by the Association had no statutory sanction. Eventually the Bengal Government announced maximum prices which were the same as those fixed by the I.J.M.A. when the decision regarding the size of 1944-55 crop was made. Though the area under the crop was fixed at eight annas the basic acreage of 1940, the area sown was not equal to the licensed acreage as there had been considerable diversion of land for the cultivation of food crops. The final forecast estimated the yield of the crop at only 55 lakhs bales against 77 lakhs for the previous season. Prices were fully at maximum rates and there was great difficulty in getting bottom grades. It was reported that balers were even prepared to pay higher rates as the maximum prices for pucca bales had been fixed relatively higher and there was a greater margin of profit. But after August there was a change in the conditions in the market. The continued difficulties of mills in respect of coal supplies and the requisitioning of further mills affected output. There was a slowing down in the rate of official buying. Mills wanted to await new crop arrivals. Meanwhile the position in the heavy goods market grew worse. As facilities of jute for inland transport had improved and there was free movement of the crop sellers were anxious to do business. The technical position in the market was not quite satisfactory. Mills had to be induced to buy jute with a reduction in rates. Gradually prices came down to the minima. It was feared that the provincial government might be obliged to enter the market to stabilise jute prices in pursuance of the undertaking given earlier in the year. The Central Government was consulted on the subject and there were reports of negotiations with mills for the purchase of specified quantities of jute in a specified time and at specified rates. But as the mills were not agreeable to the purchase of jute in any quantity without assurances from the Central Government regarding a redressing of the grievances of the industry, there was no settlement. The announcement regarding the immediate setting up of the Jute Purchasing Panel was made. There has been no occasion so far for this panel to function, as with the resumption of buying by mills and the reports regarding the possibility of an improvement in exports, prices towards the close of the year were higher than the minima and no official interference was called for.

Jute Manufactures

The jute manufactures market was very firm throughout the year and prices for hessian were at the maximum levels. Mills had no difficulty in selling their hessian output. In fact, there was very little surplus production after satisfying the requirements of the United Kingdom and the United States. With the lack of adequate fuel supplies mills could not possibly sell freely. Even though mills were free to work 54 hours per week throughout the year the steam-driven units suffered considerably. Many loom hours were lost. In order to offset the loss in production on account of the stoppage in the steam-driven units with the shortage of coal and the requisitioning of further mills, it was proposed to work the electrically driven units double shift. To keep the affected mills going the industrial pool scheme was evolved and it came into effect on July 1, 1944. The position in regard to coal has not improved very much in the latter half of the year, but the successful working of the foster mills has resulted in a slight increase in production in the last quarter.

The lower output of jute goods in the latter half of the year was perhaps a blessing in disguise. Even with the easier shipping position there was no large increase in the off take and it was at best only equal to the production. Prices declined as there was a drying up of enquiry for heavy goods and as there was no possibility of an increase in offtake of heavy goods. The expectations of a large order from UNRRA did not materialise. Only after the deterioration in the conditions in the jute manufactures market were some orders placed. There was some criticism that minimum prices for jute manufactures had not been fixed. The Jute (Price Control) Order of April, 1944, fixed only the maximum and minimum prices for jute and the maximum prices for jute goods. At the time the order was passed it was not considered necessary to fix minimum prices for hessian and sacking goods as the demand was more than the mills could possibly meet and it was never at any time feared that it would be extremely difficult to dispose of goods. Even in the last quarter of the year when conditions in the goods market were not quite satisfactory, there was no serious agitation for the fixation of minimum prices. The future outlook is not yet quite clear, but trade circles are inclined to feel that there might be a substantial improvement in the demand for jute goods after June, 1945 and that if the necessary shipping could be found it would be possible to dispose of a larger production. Efforts are being made to restore trading through private channels as it is felt that uncertainty regarding official buying policy seems to have an exaggerated effect on values. The developments in the current year might prove to be very interesting.

Cotton

The past year has been uneventful for cotton. 1943 was characterised by violent fluctuations in prices. With the general improvement in commodity prices and the large consumption of mills there was great speculative activity and Jharilla was done as high as Rs. 673. The lowest rate was Rs. 389. Against this wide fluctuation in prices, there was a range of less than 100 points in 1944. The lowest level touched by Jharilla March was Rs. 391 in October and the highest level Rs. 489 for Jharilla January 1944. The lack of speculative activity in the cotton market was due to the smaller interest taken by mills, the larger 1943-44 cotton crop and the lower consumption on account of the frequent stoppages in production with a shortage of coal supplies. The Government of India had fixed ceiling and floor prices in November, 1943. But when the need for official buying came in July, 1944 with the slump in prices for cotton in the Broach districts support was not whole-hearted and even the little support that was afforded came very late. Government had said that they would enter the market as buyers only when the quotation for Jharilla in futures market was below Rs. 400 though they had the option to purchase when the rate was below Rs. 420. This encouraged speculators to keep up prices for Jharilla in the futures market while the spot market prices for other varieties were substantially lower. The decision to allow futures trading in new crop was very much delayed and there were reports that there might be a change in the basis of contract. But eventually futures trading was permitted though contracts for Jharilla January, 1945 were not allowed as it was expected that there would be considerable delay in the movement of the crop. Ceilings and floors were reduced though for Jharilla only the floor was reduced by Rs. 50. The continued weakness of the ready market and the reports regarding the American subsidy proposal had a depressing effect and the quotation came down to Rs. 398. Only the expectations of a short crop for the current season and large scale buying by a certain section of the market resulted in a rally in prices in December. The close was on a rather cheerful note though profit-taking at the higher levels had reduced the gains.

Piecegoods

As mentioned earlier, 1944 is notable for the successful administration of the Cotton Cloth and Yarn Control Order. The maintenance of production at a fairly high level in spite of the difficulties in respect of labour, mill stores and coal, the regulation of exports and the changes in the methods of distribution and the provision of adequate transport facilities considerably relieved the shortage. The reductions in the ceiling prices for cotton cloth and yarn also brought great relief to the poor consumer. But the bottlenecks in respect of transport and the confusion in the distribution of mill production afforded continued scope for the profiteer and very often the goods did not reach the consuming centres in time. Some members of the industry also encouraged black market activity. There was a large movement of goods to the Indian states where they were sold at high rates. The need for licenses before movement of goods by rail, road or sea and the limitation of the sale of goods by mills to dealers who were in the business in 1940-41-42 on a quota basis largely discouraged activity; but the indiscriminate despatch of goods and the lack of proper supervision in the provinces still gave scope for the black market operator. A new scheme for distribution of goods on a population basis has now been devised. Greater attention also is being paid to the distribution of goods by dealers. It is expected that there would be a considerable improvement in the conditions of trading owing to the greater vigilance of the authorities.

In the absence of any imports from outside centres this country will continue to feel the shortage of cotton goods and per capita consumption will have to be lower. The shortage of finer goods especially is keenly felt as the production of these goods is only 8 per cent of the total output. Mills are being encouraged to produce finer goods on a larger scale and for this purpose mills might be paid higher rates. With the smaller output of standard cloth and the vigorous efforts to unearth hoarded stocks it is hoped that it would be possible for the average consumer to get his requirements at the ceiling prices.

Bullion

The salient features of the year are the small measure of success that attended the official gold sales policy, the resumption of official sales of silver after the lapse of two years following the receipt of lease-lend supplies for coinage purposes and the prevention of undue rises in prices for the white metal. Earlier in the year large sales of gold were made at fixed prices in the open market, and as there was large investment buying and hoarding by black market traders several lakhs of tolas were sold on a single day. The bulk of the sales were made at Rs. 71/2. A slight reduction in the selling rate caused a setback in prices but the increases in the offtake at the lower levels and the reduction in the amount of gold offered by the Reserve Bank caused a rise in prices in March to Rs. 81/4. Comparatively quiet conditions were noticeable in the second quarter of the year. There was a tendency for prices to rise in the third quarter. In July and August quotations were higher at Rs. 75 but the reports regarding an early peace had a depressing effect in September and values were marked down. The reopening after the Diwali holidays was, however, marked by aggressive buying and fresh expansion of currency whetted the appetite of speculators. The Reserve Bank had to increase its offers and in the last six weeks sales were 75,000 tolas daily. The increase in sales initially resulted in decline in the quotation for gold ready to below Rs. 60; but expectations of a prolonged war and the continued expansion of currency caused prices to close higher on balance, gold ready being quoted as high as Rs. 76 towards the close.

The silver market has been more active. A heavily oversold position on expectations of official sales kept up prices and bulls had the upper hand all the time. The opening for the year was quiet around Rs. 120 but there was a gradual rise in prices and the peak was touched in March at Rs. 143/4. The quotations wavered within wide limits till June when with the announcement regarding receipts of lend-lease supplies it was expected that there would be official sales of silver. But there was considerable delay before the Reserve Bank entered the market and bears were obliged to cover their positions owing to the heavy backwardation charges demanded by bulls. It must be said, however, that the successive reduction in prices when official sales were made had a discouraging effect on bull activity and a quotation of as low as Rs. 112/8 was touched for silver forward. But the resumption of buying and the increase in the offtake again caused a rise in pices. Originally 100 bars of silver were sold every day but it was slowly increased to 300 bars a day. Even the larger sales have not left any impression on the market and closing prices are more than ten points higher on balance.

Sugar

It is rather significant that there was not much complaint regarding sugar distribution and that even with the destruction of foodgrains and sugar stocks by the explosion at the Bombay docks, it was not diffi-

(Continued on next page)

SPIT AND POLISH....

. . . might today be more correctly described as " Chemical research applied with elbow grease." We feel better if we know we look well. The self-respecting citizen sees that his boots are polished, just as the good soldier looks to the lustre of his badges and buttons. For the same reason we use polish at almost every turn in our home life — on fire-grate and furniture, bathroom taps and table silver, motor car or push-bike. Polish is the preparation of a surface so that it reflects light evenly. Each surface, each material needs a different type of polishing agent. Many of us remember when boots had to be polished with that sticky preparation known as " blacking," reputed to have consisted of lamp or bone black, molasses, sulphuric acid and stale beer! A shine was obtained only after much energy, assisted by more spit! The research chemist has helped to remove such drudgery. Now, the modern boot polish — made of natural and synthetic waxes, solvents, oils and dyes — not only gives a more brilliant shine in a fraction of the time, but keeps the leather more pliable and waterproof. Metal tarnishes chiefly through the chemical actions of the air, the tarnish being really a thin film of some compound of the metal. This is removed and the polish restored by carefully selected abrasives combined with a suitable lubricant and a chemical which reverses the tarnishing action. Polishes for metal are a study in themselves since they must remove the tarnish without scratching the surface of the metal. For glass and china British chemical manufacturers had before the war evolved new compounds which, dissolved in water, instantly removed all grease and left glassware or crockery gleaming like mirrors. When next you grouse at the necessary daily " Spit and Polish," remember it would be far more of a drudgery but for the efforts of the chemist and the British chemical industry.

IMPERIAL CHEMICAL INDUSTRIES (INDIA) LTD.

Jute and Jute Manufactures

(From Our Correspondent)

Special to "Indian Finance".

CALCUTTA, Jan. 4

It was with sincere regret that his many friends heard of the death in Scotland, after an operation, of Mr. Percy Macdonald, for many years a prominent figure in the jute Industry, and greatly liked and highly esteemed by all with whom he came in contact. Trained in Edinburgh as a solicitor, he served through World War I and thereafter joined Messrs. Thomas Duff and Co. Ltd., in Calcutta, in their accounts department. In the fulness of time he rose to be the head of the Calcutta office and also took his share on the administration side of the Jute Industry by serving for a number of years on the Jute Mills Committee. For two years he was Chairman of that Committee, and exacting years they were, pregnant with great possibilities for the welfare of the Industry. For it was during that period that the Working Time Agreement was negotiated, an act of statesmanship which has been of immeasurable benefit to the Mills in the critical times through which they have recently passed. Much of the credit for the successful piloting of this measure of co-operation amidst many opposing interests was due to Mr. Macdonald's calm and level-headed persuasiveness during the protracted negotiations. On the outbreak of World War II, Mr. Macdonald was appointed Controller of Jute Purchases, when that office was created by the Government of India. He was on his way home to take up an appointment with the Dundee office of his firm when he was recalled to India to serve on the Roger Commission, and in recognition of his valuable work in that and other directions, he was awarded the C.I.E. Mr. Macdonald finally left India in 1941 and his demise at the early age of 54 is much to be deplored.

At a time like the present one is prone to cast one's mind back over the year just ended and attempt to strike a mental balance of the pros and cons. It has been a record of many difficulties, some of them overcome only partially overcome, others like the coal problem, very much still with us. Drastic requisitioning of Jute Mill premises has been palliated to a large extent by the process of "doubling up", by working double shifts, but at the same time this has accentuated rather than otherwise the shortage of godown accommodation. Nor could anything be done to make up for the Press House accommodation requisitioned, though there is still actually more than sufficient remaining to provide for all the export demand which comes along these days. The transport position shows at present a much more satisfactory aspect than it did some months ago, though the improvement cannot be relied upon to continue in the face of possible war exigencies. A great deal of the outstanding back-lag in jute shipments from up-country has been cleared up and the delivery of contract jute has again assumed an almost normal appearance. The supply of railway waggons has improved out of recognition, and though the railways have not been remarkable for their cooperation with the trade in many respects, one ought to be thankful for any mercies however small, from that direction. Better coordination of the River Transport service holds out promise of improved service to the trade from that angle and, in justice, it ought to be on record that co-operation from the Carrying Companies has been all that could be desired. If in practice, there have been shortcomings, these have been mainly local and have been corrected when attention was drawn to them.

The main difficulty which is [illegible] with us is that of coal supplies. [illegible] promises could serve as fuel, then every mill would be working full time. [illegible] omises there has been no lack, but [illegible] erial fulfilment the picture has been very different. Almost at no time has the supply been more than two thirds of actual requirements, not seldom less than one half; and it not infrequently happens that when supply increases quality deteriorates in equal or greater proportion. We hear that one specific colliery has now been allotted to supply Jute Mill requirements. We do not know the capacity of the colliery nor the class of coal it supplies, but we shall be agreeably surprised if in either respect it will measure up to what might be called a square deal. Experience so far indicates that the Jute Industry is considered by the Supply Department as a suitable dumping ground for otherwise unsaleable rubbish.

Although a fortnight has elapsed since we last reported, there is little to record in the way of business in any section of the markets. Only now is the holiday feeling beginning to wear off locally and there is little indication yet of any revival of interest from outside markets. Export Jute is virtually at a standstill. The only business which has been going on is on direct offers from Balers to the Jute purchase Control in Dundee, and that at rates which work out below the parity of the controlled rates ruling here. Shippers are consequently frozen out altogether. Balers are freely offering all grades bar [illegible]ings at minimum prices and only a very limited business with Mills has resulted, in Dundee Daisee at Rs. 77/- in Lightnings at Rs. 74/- and in Straight Morahed Rejections at Rs. 57/-. Press Mistries and coolies have been on strike for a fortnight but it is understood that the dispute is now settled.

Interest in Loose Jute offerings has been very meagre. Between shortage of coal supplies and lack of orders for fabrics, there has been little inducement for Mills to increase their holdings of jute. Nevertheless the market is quite steady in tone and there is no inclination to discount prices in order to secure business. The main reason for this is the shortage of imports at upcountry hauts and the consequent firmnes of prices there. With the Paddy harvest practically over, it might have been expected that jute imports would have shown a tendency to increase, but that has not been the case. We do not know if the Christmas fairy story recorded in the Indian Central Jute Committee December Bulletin, about jute in the Argentine having fetched the equivalent of Rs. 261/- per maund, has anything to do with this. But some of our Bengal Legislators must be marvelling at their moderation when they recently demanded a minimum price of Rs. 28/- (or was it Rs. 36/-?) a maund for jute for their cultivator constituents. The only moral to be drawn from the story is that jute locally grown in the Argentine is still an exotic product, as the total proceeds of the sale were some Rs. 1043/- and were presented to charity! We should not be surprised to learn that the contract was autographed by a local Film Star, possibly Carmen Miranda. Of local business in Loose Jute there is little to record. Indian Mills have been showing a limited interest in Indian Jat marks at Rs. 16/- and Rs. 13/- for Mids and Bots with four annas more paid for Supervised Jat. Earlier, a little Indian District Tossa was reported, first at Rs. 15/8 and Rs. 12/8 and later at four annas more. European packing is quoted at Rs. 16/8 and Rs. 13/2 for Mids and Bots.

In the fabrics section there is little sign as yet of any revival of demand from overseas markets. The removal of restrictions on various imports into Middle East markets may bring out some orders from Egypt which are reported to be pending, but much depends on whether shipping quotas will be available. Mills are reported to have sold some July/September Hessians, both nines and elevens, at maximum rates with the bait of some near hessians to make the transaction workable to the Bazar operator, for near hessians stand at some premium over maximum rates in the "Black Market". Otherwise quotations stand at ceiling levels for delivery up to March, beyond which there is a small discount. Similarly there has been reported some combined business in Heavy Goods, "B" Twills at Rs. 65/- along with nine porters for near delivery. There was also a report of Mills having sold to the Bazar Liverpool Twills at Rs. 69/- and Cornsacks at Rs. 62/- for April/June shipment. The usual inter-Bazar transactions in "B" Twills have been recorded from day to day, rope-bound "Bs" standing at a premium of one rupee to Rs. 1/8 over iron-bound bales for near shipment, owing to the demand being exclusively for the country trade. Otherwise the markets are dull and featureless.

(Continued from previous page)

cult for the Government of India to provide the necessary fresh allotment. The proper allocation of wagons to the different consuming centres and the introduction of rationing in the more important urban areas have been mainly responsible for the success of the Sugar Control Scheme in the last season. It would perhaps have been possible to take a more confident view of the future if the authorities had taken care to ensure the necessary supplies of cane to the sugar factories in the current season. It is feared that the Bihar factories especially will be affected by an acute shortage of cane supplies as the diversion of land for the cultivation of foodgrains and increased production of gur from sugarcane will result in a very much smaller amount of cane supplies to the crushing factories. Unless the authorities make sure that factories are enabled to continue working for a longer time, similar mistakes might create fresh difficulties in the next season.

Foodgrains

The Government of India have to be congratulated on their efforts to improve the situation in regard to foodgrains. There is still a large deficit to be met but the substantial imports of wheat from outside have been very helpful. It has not, however, been possible for rice imports to be secured and it is found necessary in certain areas to introduce wheat rationing in place of rice. With the easier shipping position, large shipments of wheat are expected in the near future. As the authorities have gained greater experience and arrangements have been made for bulk storage, it is to be expected that any hardships in respect of food supplies during the current year will not be so keenly felt.

Oilseeds

Even with the smaller buying by the British Ministry of Food, oilseeds markets were very firm throughout the year, especially linseed. Greater demand for edible oils and the increase in the consumption of castor and groundnut oils for industrial purposes accounted for the consumption of all the available supplies. There was for a time a slump in groundnut prices on the reports that the area under the groundnut crop in Madras Presidency had considerably increased but with the resumption of buying by the British Ministry of Food and the large demand for oilcakes the decline in prices proved to be only temporary.

Consumer Goods

The large import of manufactured articles in the latter half of the year from the U. K. and the U.S.A. has relieved to a great extent the scarcity in respect of certain supplies. The arrangement for orderly distribution of imported articles by the Controller General of Civil Supplies led to regular distribution at controlled rates and also to de-hoarding.

From the foregoing it will be clear that the worst phase of the war period has been got over. The year 1944 has been a school alike for the Government and industrialists to study control problems. Though many mistakes have been committed it should be said that a large measure of success has been achieved. If only the Allies prove to be successful in the Burma operations, difficulties regarding food supplies will be to a large extent solved. More effective control of essential commodities, larger imports of manufactured articles and larger supplies of foodgrains should thus result in a considerable improvement in existing conditions and a decline in the cost of living. However, a complacement view of the immediate future would not be justifiable as with the greater requirements of operations against Japan, new problems might arise. The Government should not be caught again unprepared.

JUTE

(By Our Staff Correspondent).

Calcutta, January 4.

The raw jute market has been quietly [illegible] with a small volume of business passing but the general undertone is firm. With arrivals to mofussil centres still on a small scale, there is no disposition on the part of dealers to enter into further contracts. But for the stress in the press houses in Calcutta, it has created an unwillingness on the part of balers to purchase more jute, a higher level of prices would perhaps have been recorded. With the reports regarding the improvement in the coal position it can be confidently expected that there will be demand for all the jute offering. The reopening for the New Year, though not quite cheerful, can thus be said to be under satisfactory circumstances. As the season progresses the market might move upwards.

In the loose jute section only a small amount of business has been reported. Indian District Tossa Middles and Bottoms being sold at Rs. 15-8 and Rs. 12-8 per maund and European packing Middles and Bottoms at Rs. 16 and Rs. 13 per maund respectively.

In the pucca bales section expert business is still poor and shippers are reported to have purchased small quantities of Lightnings at Rs. 74 and Hearts at Rs. 68 per bale. The quotations are nominally around minimum rates and dealers are free sellers. Mills are taking very little interest in the market but it is said that there will have to be larger buying before long.

JUTE MANUFACTURES

(By Our Staff Correspondent)

Calcutta, January 4.

In the jute manufactures market business passing has not been very large, but mills have been able to sell freely at maximum rates for March delivery though a slight discount is asked for positions beyond March. That there is a large demand for near deliveries will be evident from the combined business for hessian and heavy goods. During the week business has been done in 9 porters combined with heavy goods for delivery April-May.

In the Heavy Goods section there is nothing of importance but quotations are fully maintained, "B" twills being quoted at Rs. 62-8 for iron-bound and Rs. 63-8 for rope-bound.

PIECEGOODS

Calcutta, January 4.

In the piecegoods market steady conditions have continued to prevail. It has been reported that there has been a speeding up of supplies to the Calcutta area by sea and dealers have taken advantage of the offer by the Government of India to undertake the war risk in respect of piecegoods transported by sea till the middle of this month. The position, however, is not very easy. The shortage in respect of finer goods is greater than ever before owing to the restrictions that have been placed on dealers regarding the disposal of these goods.

COTTON

Calcutta, January 4.

The Provincial Textile Controller has issued an order under the Bengal Cotton Cloth and Yarn Control Order, 1943, that licencees under the said Order shall not dispose of or deliver any of the mill-made goods which are specified in the schedule that have arrived or may be arriving in Calcutta and the Industrial area without a permit in writing issued by him. Quota-holders attached to Bengal Mills who do not receive their cloth and yarn by rail or steamer but by some other method are required to report the arrivals of their consignments into their godown immediately they receive the same and not to dispose of the freezable varieties of cloth and yarn without special permission from the Provincial Textile Controller, Bengal. Such cloth and yarn will be distributed in the same manner as the goods of those dealers which arrive by rail or steamer. In the cases of arrivals in areas other than Calcutta and the Industrial area, receive details of the arrivals should be submitted to the sub-divisional officers. The Order comes into effect immediately. Any infringement of this Order will render the licencee liable to cancellation of his license beside any other that may be deemed proper.

Stock Markets to-day and to-morrow:

A. C. C. ACCOUNTS

The Subsidiary Company, the Patiala Cement Company Limited, has done well in the year ended March, 1944 and the net profit is higher by more than Rs. 1 lakh.

There have been persistent rumours regarding the possibility of a new issue on bonus terms to shareholders but there is no reference to this effect in the directors' report. The Company does not appear to be in immediate need of funds and the changes in the balance-sheet during the year seem to indicate that the directors consider the present resources of the Company sufficient for expansion purposes. The Chairman of the Company might perhaps have something to say at the annual general meeting of shareholders called for next week.

The balance-sheet shows liquid assets at Rs. 5,62,17,913. Deducting sundry liabilities, including taxation and dividends, the net liquid assets are Rs. 2,48,09,522. As there has been an increase in stocks and shares and as the directors have thought it necessary to have large cash balances there has been liquidation of investments to the extent of Rs. 60 lakhs. Holdings of Government Securities were Rs. 37,07,021 against Rs. 97,26,300. The profit on sale of investments amounting to Rs. 1,84,820 has been credited to the Investment Depreciation Reserve Fund account. Cash balances are ample at Rs. 86,99,861 against Rs. 31,60,604.

* * * *

The Calcutta Tramways muddle has not yet been satisfactorily solved. There are no further reports regarding negotiations for the formation of a Transport Board. It is said that the Calcutta Tramways is keen on a compromise formula and that, given the goodwill on every side, a satisfactory solution could be reached. Meanwhile on the Calcutta Stock Exchange business in Calcutta Trams has been suspended owing to the difficulty in adjustment of outstanding transactions.

WATCH DOG.

The New Year has opened well in the stock exchanges in both Calcutta and Bombay. The favourable developments in the war theatre nearer home and the checking of the major counter-offensive by the Germans have encouraged speculative activity. There has not been much of outside support but the general tone of the market is steady. Bombay operators used to push up prices with fresh additions to the note issue. Calcutta operators also are now adopting similar tactics and with the publication of the latest return indicating an increase in the note issue by Rs. 13 crores there was greater activity in Thursday's session. It is true that inflationary conditions tend to have a stimulating effect on share values but with controlled inflation and the greater scope for expenditure now there is no reason why there should be unrestricted rise in prices. With the rise in prices as at present there is practically no consideration regarding return on investments. Newly earned money in the war period is perhaps exerting its pressure but there has so far been no sustained buying support and unless there is proper control of the activities of the stock exchange its usefulness will not be served. The small investors will have to be careful. It cannot be definitely said whether the rise in prices would be sustained as even now the yield on first class industrials is less than 3.5 per cent tax-free in most cases.

* * * *

In Friday's session the Calcutta Stock Exchange was a shade easier but the Bombay market rallied on the news that the Allies had occupied Akyab.

The feature of the week is again the rise in prices for coal shares. There seems to be a feeling that collieries have great scope for an increase in earnings and that with the sure prospect of relief under E.P.T. there is a possibility of larger dividends. To what extent the expectations of the market will be fulfilled remains to be seen. The rise in prices in the past six weeks for selected counters will be evident from the table given below:—

	Dec. 1st.	Dec. 22nd.	Jan. 2nd.	Jan. 4th.
	Rs. A.	Rs. A.	Rs. A.	Rs. A.
Amalgamated	47 2	50 8	—	51 0 (x.d.)
Bengal	658 0	710 0	717 0	714 0
Bhalgora	17 8	17 12	18 3	18 12
Bokaro	41 1	45 11	46 2	47 5
Burrakur	41 10	44 0	45 0	46 4
Deoli	15 3	24 9	25 2	24 12
Equitable	64 15	69 12	70 12	71 8
New Beerbhoom	38 2	40 1	40 2	41 6
N. Damuda	12 10	14 1	14 8	16 4
Raneegunge	53 6	54 12 (x.d.)	54 8 (x.d.)	54 12
Sendra	25 0	26 4	26 10	26 8
S. Karanpura	23 1	27 9	28 12	30 8
W. Jamuria	58 8	60 8	62 8	63 4

Even speculative counters are now quoting three to four times the face value and it remains to be seen whether dividends to justify the present levels will be paid.

* * * *

The balance-sheet of the *Associated Cement Companies Limited* for the year ended July 1944 has been published. In spite of a smaller output of cement, on account of the difficulties in respect of coal and transport, the company has been able to report a higher level of profits. Perhaps, for the first time in several years the directors have struck an optimistic note in their report to shareholders. There is demand for all the cement that could be produced. If larger supplies of coal were received it would be possible to report a substantial increase in earnings especially as the company has been able to secure a more equitable contract with the Government of India.

The net profit, before providing for taxation and depreciation, is Rs. 1,71,13,418 against Rs. 1,44,14,462 for the previous year. The bulk of the increase in earnings has naturally been taken up by additional provision for taxation and E.P.T. compulsory deposit. The amount transferred to Taxation Reserve is Rs. 64,12,000 (Rs. 47,23,000) while the provision for depreciation is Rs. 40.17,595 (Rs. 39,25,230). The amount written off buildings, machinery, furniture and equipment etc. is Rs. 7,18,465 (Rs. 2,42,782). After transferring Rs. 7 lakhs (same) to the Reserve Fund the dividend has been maintained at Rs. 7 per share. The amount carried forward is higher at Rs. 4,08,370 against Rs. 1,38,159 brought in.

MARKET GOSSIP

By "Bear-Bull"

[The following is gossip in the literal sense of the term. The markets sway to and fro not in response to facts and developments, but in response to khabbar, true and untrue and slightly true and largely untrue. "Bear-Bull", right in the heart of the Exchange Ring, will relay, periodically, such gossip as has caused gyrations in prices and changes in sentiment. Ed.—I. F.]

Neither the expected issue of additional capital by the Indian Iron & Steel Company nor the announcement regarding some concession to coal companies in respect of Excess Profits Tax has materialised upto the time of writing. But in spite of this the market continues to advance and prices in all sections have registered a fair rise.

The main immediate cause of this rise has been the steady expansion in the volume of currency that is taking place.

Whatever may be the ostensible reason for the rise in shares the real fact is that people have a large amount of idle money on their hands and there is no channel for its employment except the stock exchange.

I was talking the other day to an old operator on the market. He said "Conditions on the Calcutta Stock Exchange have changed so much in the last, three or four years that it is almost impossible to judge the market. In the old days if a broker who called on some people connected with managing agency firms received some order he would walk leisurely inside the Exchange talk to several parties interested in the particular security he was interested in and then buy what he had to buy. Shrewd operators would keep a watch as to who was buying and who was selling and regulate their operations accordingly. But now-a-days if you talk inside the Exchange you will find that it is almost like a Tower of Babel. A large number of people are simultaneously shouting the names of different concerns and it is not possible to know as to who is interested in what. The volume of transactions that takes place is something collossal. A new class of youngsters have got into the market who themselves or whose family have made fabulous profits in the last three years and these youngsters think nothing of buying up the entire shares of a company. A bid of 25,000 or 50,000 shares has been a common thing in the market. If coal shares have gone up as a result of buying by one group of operators then the other group extends its attention to cotton shares and a third to jute. No one stops to think about or study the intrinsic position of the company whose shares he is buying. They just descend like hungry wolves and devour all that they can lay their hands on. The result is that the prices of many shares have been forced upto a level which is almost equal or in some cases even lower than the return on Govt. Securities. How long can this go on God alone knows. The present market is not a market for shrewd speculators who always study the pros and cons of everything that they interest themselves in. The present market is for people who can rush in blindly and follow the current view. It is only such people who can make money."

I perfectly agree with the views expressed above. Take for instance some of the leading shares, say, Howrahs, Irons, Steels, and Burrakurs. According to the latest dividends paid by these companies the return on these shares is approximately 4%, 4.1%, 2.5% and 2.5%. Some of the coal shares have gone up so much that the rise in them has discounted all possible future favourable factors.

One should therefore pause and take stock of the situation. This does not mean that one should be in a hurry to dispose of his holdings. But I would advise all shrewd investors to thoroughly examine the prospects and dividend paying capacity of each and every share.

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, Friday evening.

THE reopening of the Calcutta Stock Exchange after the long X'mas and New Year holidays has been very cheerful and as the week progressed, a substantial rise in prices has been recorded with a large volume of business passing. The successive additions to the note issue in recent weeks has led to an increase in speculative activity. Coal shares have again been the feature of the week with a larger number of counters being dealt in and a general rise in prices recorded. Cotton shares also have registered a late rally but there is a significant broadening of interest in the jute section. Engineering issues have improved further while there is nothing of importance in the other sections to be recorded though a generally better tone is in evidence.

The Giltedged securities section has continued steady though business passing has been restricted and there is no important change in prices. 3½ per cent paper has been quoting around par while among terminable loans *3 per cent 1946* was Rs. 102-10, *3 per cent 1951-54* Rs. 101, *3 per cent 1966-68* Rs. 98-6 and *3 per cent 1953-55* Rs. 106-6. *3½ per cent 1947-50* were Rs. 104-6 and *4 per cent 1960-70* Rs. 113. *4 per cent 1955-60* changed hands at Rs. 117 and *5 per cent* 1945-55 Rs. 103-6. The only transaction to be recorded in Provincial Government loans was *3 per cent U. P. 1956* at Rs. 99-6.

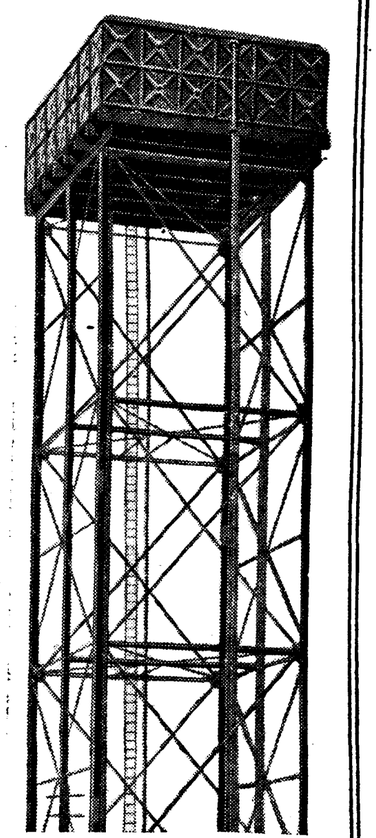
With the approach of dividends Bank shares have been better, *Imperial Bank Contributories* being Rs. 510 and *Fully-paids* Rs. 2015. *Cal. National Bank* were steady at Rs. 15 while *Hind Bank* were Rs. 57-12. *Hindustan Commercial Bank* were Rs. 8-12 premium, *Reserve Bank* were unchanged at Rs. 135 and *United Commercial Bank* Rs. 37 premium.

Cotton shares were uninteresting in the early part of the week but on reports that there may not be any further appreciable reduction in the ceiling prices, there has been a late rally and *Elgins* in particular have been done up to Rs. 72-8 from Rs. 68. *Cawnpore Textiles* also are more than a point higher at Rs. 14-3, *Kesoram* were steady at Rs. 17-12 and *New Victoria* Rs. 8. *Mahaluxmi* came in for attention after a long time at Rs. 36-8. *Benares cotton* were dealt in at Rs. 14 and *Basanti* Rs. 12-10.

The coal section has been very active with a further substantial rise in prices for selected counters. *Bengal* are not very much higher at Rs. 714 against Rs. 712 before the holidays but *Burrakurs* have improved to Rs. 46-4 from Rs. 44. There is a sensational rise in *Bokaro & Ramgur* to Rs. 47-5 from Rs. 44-8. *Equitables* were Rs. 71-8 against Rs. 69-12, *Bhalgora* Rs. 18-12 against Rs. 17-10 and *New Beerbhoom* Rs. 41-6 against Rs. 40. *North Damuda* have been in great request and the quotation of as high as Rs. 15-8 has been recorded. *South Karanpura* were very active being dealt in very frequently. The publication of the report for the half-year ended August 1944 has created a good impression on the market and the quotation is nearly three points higher at Rs. 30-8. *Talcher* were Rs. 12-12 against Rs. 11-9, *New Manbhoom* Rs. 78-12 against Rs. 77.

The general strength of the market, on reports that the coal situation has considerably improved, has led to a renewal of interest in the jute section and the bigger priced shares quoted 15 to 20 points higher. *Anglo-India* being Rs. 480 against Rs. 475, *Alliance* Rs. 621 against Rs. 610, *Champdany* Rs. 273 ex-dividend against Rs. 264, *India* Rs. 732 against Rs. 705, *Kamarhatty* Rs. 697 against Rs. 672 and *Standard* Rs. 325 against Rs. 305. Among other shares *Megna* are nearly 10 points higher at Rs. 128, *Nationals* two points higher at Rs. 35-8, *Nellimarla* five points higher at Rs. 38-12 and *Presidency* two points higher at Rs. 12-15. *Howrahs* were very steady at Rs. 87-8 against Rs. 83-14 while *Reliance* improved to Rs. 72 from Rs. 69-8.

In the Engineering section *Indian Irons* have improved by one point since the reopening of the holidays to Rs. 42-8 while *Steel Corporations* were done up to Rs. 34-14 from Rs. 33-12. *Burn & Co.*, have been uninteresting at Rs. 420 but *Bhartia Electric Steel* are higher at Rs. 21-13. There has been some buying of *Jessop & Co.*, and the quotation is nearly one point higher at Rs. 25-8. *Marshalls* were Rs. 5-2; *Kumardhubi Engr.* were easier at Rs. 10-11.



Sugar shares were neglected for the first part of the week but a slightly better feeling is noticeable at the time of writing. *Balrampore* being noted at Rs. 17-8 and *Ramnugger Cane & Sugar* at Rs. 13-14. *Belsund* were Rs. 16-4 and *Champarun* Rs. 38-12.

Not much of business has been reported in tea shares but quotations have been well maintained, *Tezpur* being Rs. 21, *Banarhat* Rs. 917 ex-dividend, *East India* Rs. 17-12 and *Hattikhira* Rs. 29-8.

In the Miscellaneous section business in *Calcutta Trams* has been suspended and no quotation is available. *B. I. Corpn.* were sticky at Rs. 6-8, *Indian Wood Products* were a shade better at Rs. 33-6. *Dalmia Cement* were unchnged to Rs. 17-9 and *Alkali & Chemical* were put through at Rs. 17-12. *Balmer Lawrie* were Rs. 477. It is rather surprising that *Bararee Coke* have not improved further even with the higer prices in the coal section, the quotation at the time of writing being Rs. 34-4. Paper srares have been very firm, *Titaghur* paper were higher by 2 points at Rs. 30 while *India Paper Pulp* have improved by 6 points to Rs. 229. *Sri Gopal* were Rs. 19-12 ex-dividend and *Star paper* Rs. 17-4. There has been a revival of interest in *Midnapore Zemindary* and the quotation has improved to Rs. 185 while I. G. N. were active around Rs. 188.

BRAITHWAITE PRESSED STEEL

TANKS

This Braithwaite Pressed Steel Tank provides lofty storage and holds 33,600 gallons of water at a height of 101 feet.

Braithwaite's Pressed Steel Tanks can be erected on the ground or at any height and can be designed to suit any site. This shows the adaptabiliy of steel to all conditions.

NATIONAL SAVINGS BANK LIMITED

STRIKING PROGRESS IN 1944

GENTLEMEN,

We have assembled here on the occasion of the Third Annual General Meeting of the Bank. The Directors' Report and the Balance Sheet, together with the Profit and Loss Account duly audited by the auditors has been in your hands for over a fortnight and I presume all of you have read the same. Without taking your time in going over it again, I trust I have your permission to refer to the steady progress made by the Bank during the three years of its existence.

From a small beginning with a paid-up capital of Rs. 94,000 and about 15 lacs of deposits on the 8th of September, 1941, your Bank has progressed from year to year and we now have a paid-up capital of Rs. 18,67,000 and a total Working Capital of about Rs. 4 crores and 57 lacs.

Your Bank has made steady advance during the three years past and there are clear indications of its being already on the forward move in the coming year. You are aware we have received the consent of the Government of India for a further issue of capital to the extent of Rs. 20,00,000 consisting of 40,000 Ordinary shares of Rs. 50 each, and your Bank will soon have a paid-up capital of Rs. 28,67,000 and a Reserve Fund of about Rs. 5,00,000. You are also aware that the Paid-up Capital could at any time be increased to Rs. 46 lacs by calling up the balance of Rs. 25 per share. During the year under report the Bank's gross earnings have reached Rs. 11,56,039. The Net Profit amounting to Rs. 2,35,343 is this year available for disposal and I am sure you will consider this to be a very satisfactory result.

During the year under report, many questions of financial importance to the Banks were under discussion. The Sterling Balances amounting to over 1,200 crores now lying in London have been a subject of anxious consideration by the Indian public. These balances are likely to be blocked or frozen for some years to come and if the press discussions are any indication of the intentions of the British Government, there is reason to apprehend that these balances may not be available to India in full. The repercussions of such a contingency are not easy to imagine or provide for.

Hopes of early peace have vanished and the Allies are now preparing themselves for a continuance of the war for some years. The apprehensions of post-war depression have been considerably discounted and any interference with the Sterling Balances or repatriation thereof is, therefore, necessarily postponed, as such steps are not considered feasible during the continuance of the war.

Plethora of lendable funds persists in the money market. Government loans have shown a definite improvement in the level of prices. The prices of industrial securities have also been on the increase to such an extent that popular and well-established shares are now being quoted on the basis of a dividend of less than 4 per cent, Reserve Bank rate continues at 3 per cent, but the the atmosphere is tense with rumours of a reduction in the Bank rate. Trade demand for funds shows little improvement and the returns on Bank's loans or advances as well as investments have suffered a set-back in the case of all Banks and it is becoming unprofitable to Banks to accept deposits at previous levels of interest rates.

Owing to the high level of prices now obtaining in India and owing to the difficulty of getting suitable staff, expenditure on salaries and dearness allowances has increased, with the result that the margins of profit between interest received, and interest paid and expenses incurred for the management of the institution, have been materially affected. In spite of these adverse factors resulting in lower income and higher expenditure, your Bank has made remarkable progress.

Government of India has been forced to extend the control over goods to a larger number of commodities during the year under report. Imported commodities are also included in the list. Scarcity of goods on the one hand, and the existence of control on the other, has contributed to the commodities being financed with funds otherwise than through Banks, Advances against bullion and Government Paper are discouraged as a matter of policy, with a view to check speculation in them. Even the movement of agricultural produce from the villages to the towns is partly financed by Government and a very narrow field has thus been left open to the Banks. Branch Banking has, therefore, assumed greater importance in the working of all Banks during the recent period. Your Directors have visualised the situation in its true perspective and have decided to open more branches in the rural commercial centres. The total number of offices now stands at 18 and more will be opened during the course of this year.

The total number of Bank offices in India now exceeds 2,400, as compared to about 1,200 two years before. The development of Banking in India makes an impressive reading. We find that time liabilities of the Scheduled Banks of India have now reached 200 crores as against 102 crores in 1939. The demand liabilities now stand at 610 crores as against 134 crores in 1939. Loans and advances have reached 203 crores as against 102 crores in 1939. There is still scope for development of Banks in India, as the Banking habit is not as yet instilled into the rural population. It must be the aim of all Banking institutions in India to extend their services to the agricultural community in India and the accomplishment of this huge task will yet require a large number of Banks. There is no fear whatsoever of there being a surfeit of Banks for some years to come.

The Government of India has now embarked upon a scheme of post-war reconstruction. Huge schemes are under contemplation, requiring finances in astronomical figures, Indian industrialists are not behind the mark in preparing colossal schemes for starting important industries. The Indian public is becoming industry-minded in-as-much as the Provinces, the States and the educated classes are all busy with the idea of starting new industries in India. All these efforts will mature into concrete plans requiring huge financial assistance and the Banks have to get ready to assist the Indian people in the accomplishment of their most important objective, viz., the industrialization of India. Even though the Banks are to-day finding it difficult to find suitable employment for funds in their possession, the future is in no way disappointing and the Banks may legitimately expect a share, in the remunerative employment of funds in the new era of post-war reconstruction and industrialization.

The new Banking Bill has been introduced into the Legislative Assembly. It contains some important features establishing control over Banks through the Reserve Bank of India. The provisions regarding capital and voting power already conform to the new requirements to a certain extent and it is hoped that in course of time our Subscribed Capital will be increased to half of our authorised capital within the period of two years allowed under the legislation on the anvil. We have already reached a Paid-up Capital of Rs. 18,67,000 and we shall soon reach Rs. 46,00,000. Your Bank, therefore, has no limitations in respect of the expansion of your Bank's business. With the increased capital, your Bank will now proceed on its programme of expansion, without any handicap or difficulty in the matter.

Coming back to the Balance Sheet and the Profit and Loss Account, you will note with satisfaction that there are no advances to the Directors, no advances against personal security and, above all, no borrowing from any other Bank. The cash maintained has always been at a high level of over 30 per cent and every precaution has been taken to meet every kind of emergency. It is noteworthy to remark that the entire investin Government securities is unencumbered.

Incidentally, I would like to refer to the proposals for the amendments in the Articles of Association, for which an Extraordinary General Meeting is to be held immediately after this and have to point out that these amendments were considered necessary in order to bring the Articles of Association in line with the modern trend of thought and recent legislation. I have great pleasure to inform you that all the amendments are in the best interests of the shareholders.

While thanking my Colleagues on the Board for their uniform co-operation, I would express my sense of high appreciation of the services rendered by our Managing Director, Mr. N. C. Khorana, in the management of the business of your Bank and I do place on record that the Managing Director's untiring energy and devotion to the institution have been greatly responsible for the progress accomplished within such a short period of three years. Before I conclude, I would like to express my appreciation of the wholehearted devotion with which officers and staff of the Bank have carried out their duties in the year under report.

I would now request Mr. N. C. Khorana, the Managing Director, to place before you, gentlemen, some facts and figures regarding the working of your Bank.

THE TITAGHUR PAPER MILLS COMPANY, LIMITED

NOTICE is hereby given that the One Hundred and Twenty-fourth Half-yearly Ordinary General Meeting of Shareholders will be held at Chartered Bank Buildings, Calcutta, at 3-30 p.m., on Wednesday, 31st January, 1945 for the following purposes:—

1. To receive the Directors' and Auditors' Reports and pass the Accounts for the half-year ended 30th September, 1944.
2. To declare Dividends.
3. To transact any other ordinary business that may be brought before the Meeting.

The Share Transfer Registers of the Company will be closed from the 16th January, 1945, to the 31st January, 1945, both days inclusive.

By order of the Directors,
F. W. HEILGERS & CO.,
Managing Agents.

Calcutta, 22nd December, 1944.

Printed copies of the Report and Accounts will be despatched to Shareholders on or about the 6th January, 1945.

INDIAN TEA LICENSING COMMITTEE

Export Quota 1945-46

TEA PRODUCERS IN INDIA ARE HEREBY reminded that in terms of Rule 8 of the Indian Tea Control Rules, 1938, as amended, Tea Estates desiring to be allotted an export quota for the year 1st April, 1945, to 31st March, 1946, are required to submit an application for such which must be filed with the Indian Tea Licensing Committee not later than the 1st of February, 1945. No export quota shall be allotted unless application under this rule is duly filed. Application forms have already been issued to all registreed Estates, but the Indian Tea Licensing Committee will not hold themselves responsible for any omission in this respect, and Proprietors, Agents, Managing Agents or Selretaries who have not received the application form are requested to apply for these, in the case of Estates situated in North India to the Joint Controller, Indian Tea Licensing Committee, 1, Council House Street, Calcutta, and in the case of Estates situated in South India to the Joint Controller, Indian Tea Licensing Committee Coonoor.

W. D. BRYDON,
Assistant Secretary.

SAVINGS BANK ACCOUNTS.—Opened at Delhi, Simla and Howrah.

The Bank undertakes TRUSTEESHIPS AND EXECUTORSHIPS.

A. P. POWLES, *Manager.*

CLIVE BUILDINGS, 8. CLIVE ST., CALCUTTA

WHO'S GOING TO PAY?

Goods worth thousands of rupees are transported daily. Some go by rail, some by motor trucks and some go sailing the high seas, at the mercy of the waves. Do they reach their destinations safely? Well, sometimes they don't. There is an accident on the road or rail; or the ship sinks. And when they do get lost, who pays? Surely the trader cannot bear the loss. But the STERLING will make it good. It's the STERLING's business. All you have to do is to take out a STERLING MARINE POLICY and STERLING will pay you with a smile.

Besides MARINE the STERLING transacts LIFE, FIRE, ACCIDENT, WORKMEN'S COMPENSATION, and other insurance business.

THE GOLDEN RULE OF LIFE IS THE STERLING LIFE POLICY

Stock Markets to-day and to-morrow:

COAL INDUSTRY PROSPECTS

In spite of the continued strength of the Bombay market a slightly irregular tendency has been noticeable on the Calcutta Stock Exchange in the past week. As on the last occasion, the latest addition to the note issue has not had any stimulating effect on prices and the close on Friday in the Calcutta market should be said to be on a definitely subdued tone. In the absence of any large investment buying by outsiders, operators seem to be more keen to realise their profits at the higher levels. Thus, even the Coal section has been erratic. In the latter half of the week the publication of satisfactory earnings reports has not had any effect on prices. The latest reaction in prices is to be welcomed especially as there was a feeling last week that the rise in prices had been overdone to a certain extent. Bombay operators do not seem to be very much worried and are still bullish. It would be interesting to note that Calcutta shares offer a relatively higher return. If there is an uninterrupted rise in prices in the Western Capital it goes without saying that values on the Calcutta Stock Exchange should tend to be upward, especially as developments in the Burma theatre are progressing very satisfactorily. Genuine investors, however, would do well to buy shares which have assured prospects and which afford a relatively higher yield.

* * * *

Among the bunch of reports published by coal companies during the week, the accounts relating to *Bengal Coal Company, Limited*, make very interesting reading. With the continued scarcity of mine labour there was a fall in raisings to 723,283 tons in the half-year ended October 1944 from 762,537 tons in the previous six months but despatches were considerably higher at 11,90,749 tons against 913,398 tons. The difference between raisings and despatches has been accounted for by the purchase of coal. The net profit, before providing for taxation and depreciation, is the highest in recent years, the figure being Rs. 51,55,593 against Rs. 26,30,419. Total sales were Rs. 1.65 crores against Rs. 98.95 lakhs. Provision for taxation, as usual, accounts for the bulk of the increase in earnings but there is still a large balance left for shareholders to be distributed by way of dividends. Actual provision for taxation is Rs. 38 lakhs against Rs. 17,66,374 while the amount set aside to depreciation is unchanged at Rs. 3 lakhs. The sum of Rs. 1 lakh has been transferred to reserve for amenities to miners and Rs. 2.25 lakhs to a reserve for reduction in the valuation of stores. The dividend has been maintained at Rs. 10 per share but the bonus has been increased to Rs. 6 per share from Rs. 2 per share on the former occasion. Even after the larger allocations, the amount carried forward is very much higher at Rs. 272,478 against Rs. 183,485 brought in.

* * * *

The prospects for the current year should be regarded as satisfactory as it is hoped that mining machinery, for which the Company is waiting, will arrive and be put into use in the current year. It is expected to have a beneficial effect on production. On the publication of the report there has been an increase in the quotation to Rs. 730 from Rs. 700. Even at the present levels the shares would appear to have scope for further appreciation. The return on the basis of the latest distribution is 4.5 percent taxfree.

* * * *

New Beerbhoom Coal Company Limited, has also done well during the same half-year, total sales being higher at Rs. 26.5 lakhs against Rs. 20.9 lakhs. Raisings were 208,377 tons against 192,655 tons in the previous half-year while despatches were 213,476 tons against 188,854 tons. The net profit, before providing for taxation and depreciation, is Rs. 7,18,848 against Rs. 4,61,557 for the previous six months. After setting aside Rs. 1,06,368 (Rs. 89.136) for depreciation and providing Rs. 4,67,783 (Rs. 2,62,255) for taxation the dividend on ordinary shares has been increased to 7½ percent from 6¼ percent. The amount carried forward is Rs. 58.241 against Rs. 50,761 brought in.

* * * *

In spite of the difficulties regarding production, *Titaghur Paper Mills Company, Limited*, has been able to report satisfactory earnings for the halfyear ended September, 1944. During part of the halfyear under reference, mills had to restrict production considerably on account of the reduced coal quota, two machines being out of production for several months, but mills are at present working their full output. Manufacturing costs increased further due to continued rise in prices of raw materials, particularly bamboo, which has now to be brought in from areas much farther afield than formerly in order to meet requirements.

With all these difficulties it is evident, however, that output of paper was higher than in the previous halfyear. The total value of sales is Rs. 1.42 crores against Rs. 1.33 crores. The increase in manufacturing expenses kept down earnings, the net profit, before providing for taxation and depreciation, being Rs. 49,37,250 against Rs. 40,47,926. The amount set aside to depreciation is Rs. 3,91,792 against Rs. 399,459 previously. Provision for taxation is Rs. 32,77,402 against 24,56,189. Allocation to funds is the same at Rs. 6 lakhs. The dividend and bonus on A and B ordinary shares is 12 annas per share. The amount carried forward is increased to Rs. 3,01,684 from Rs. 2,64,228. With production at full capacity it can be expected the profits will increase further during the current halfyear though with a further rise in working expenses and the lower level of output in the last quarter of 1944, it cannot be expected that profits would revert to the level of the halfyear ended September, 1943. The Directors, in any case, will be averse to any increase in the dividend to shareholders. But the strengthening of the financial-position, as a result of a large increase in E.P.T. deposits and the possibility of substantial tax refunds, should not be overlooked. The compulsory E.P.T. deposits paid now amount to Rs. 26,60,076 including a sum of Rs. 14.84,375 on account of the liability to E.P.T. for the year to 31st March last, which has since been finally agreed. In addition, a voluntary E.P.T. deposit of Rs. 7,48,555 was paid in 1942. Against this obligation a further sum of Rs. 2,50,000 has been set aside in Provision for Deferred Mill Renovations, thereby earmarking this amount for future capital deplacements. No credit has been taken in the accounts for amounts which will be repayable by Government from E.P.T. on account of Optional Deposit made in 1942 or in respect of Compulsory Deposit made or to be made. Further, no credit has been taken for interest accruing on these deposits.

Speaking at the annual general meeting of the shareholders of the *Associated Cement Companies Limited*, Sir Homi Mody had some encouraging remarks to make. He expressed satisfaction on the working results of the past year, and spoke encouragingly of the bright future for the industry. In order to meet the increasing demand for cement and

Regional Planning and Industrial Location

Both in conception and ultimate execution economic planning in a country as vast as India has to be largely regional. This simple fact is often ignored partly for reasons of sentimental allegiance to the unity of India and partly because of the proneness to regard the economic life of the country and the various Provinces and States as being true to one uniform pattern. There is also the fear that, once the difference in position and needs is heeded to, the door might be opened for inter-Provincial jealousies and conflicts, which may jeopardise the working of a concrete economic plan and also the political future of the country as a whole. But cold appraisement of the tasks on hand and their businesslike accomplishment are of the very essence of planning. The attitude to the economic problems which fights shy of some of the crucial realities of our economic life is patently out of place. It is only to be expected prima facie that, just as the climate in India varies from that of the Punjab to that of the South, natural resources and practical potentialities are also bound to differ. In addition to these are the differences in the economic development of the various Provinces and States which are due to a variety of historical circumstances. But once the Government and the people set out on a plan of increasing the national income so as to enable every citizen to have a minimum of the necessaries of life, the conditions in every part of the country have to be studied carefully before the tasks in repect of each area can be clearly set out.

The authors of the Bombay Plan, though they do not deal with this aspect of planning in India, accept the principle in broad terms when they recognise the need for regional plans, and for the general over-riding of conflicting political jurisdictions in the interest of the working of the plan. The Reconstruction Committee of the Government of India have gone farther along these lines. They have indicated that the Provinces and the States should in the first instance formulate plans of their own which will then have to be put together and re-adjusted to yield a plan for the whole country. The idea of Regional Councils and of the provision of special authorities for the execution of plans common to more than one political unit has also gained in currency, though suspicions about the ultimate result of such innovations persist in the quarters concerned. But it need hardly be said that regional plans are of necessity different from the plans that Province or State may formulate for itself in the light of its special conditions. For, the regional plan refers to the area which may be considered by reason of the nature of its resources to be a single economic unit regardless of whether it is subject to one or more political authorities. But it may be presumed that regional plans are such as can be expected only in a later stage of the progress of planning and that in the earlier stages every distinct political authority in the country has the duty to clarify its needs, possibilities and intentions so far as the matters under its direct charge are concerned.

So far, however, Provincial and State planning has made little progress. Only a few of the Provinces and States have come forward with definite plans. But as has been hinted already, the Reconstruction Committee of the Viceroy's Council has emphasised that the formulation of plans for the Provinces and the States is the primary responsibility of the Governments concerned. The Government of India will provide the technical assistance necessary. They have also made it clear that the appointment of Development Commissioners in the Provinces will not absolve the departments of the Central Government of the responsibility of developing the plans in respect of matters under their direct charge. The Provinces and States should therefore lose no time in drawing up an economic plan fo rthe post-war period. But Provincial planning would be futile and meaningless if each Provincial authority does not bear in mind from the beginning the conditions and potentialities of other Provinces and the lines on which they are likely to formulate their plans and objectives. In other words, the demand for Provincial and State plans should not be interpreted as an invitation to indulgence in narrow Provincialism. Provincial plans on the other hand have to be drawn up with the consciousness that ultimately they are to form parts of a common plan for the whole of India and that the general principles of division of labour and fair exchange between different parts of the country must have rational application to Provincial and State plans.

However, it is a legitimate and necessary function of Provincial plans to provide, by conscious Government effort, the corrective to differences in economic or industrial development which are not justified by differences of natural resources. Just as economic planning in the case of India seeks to remove the handicaps which historical accidents have imposed on this country as a whole, Provincial planning also should seek to make up for the accidental backwardness of some areas within the country in relation to others. Though the problem comprises many indirect issues and has wide ramifications an attempt may be made here to stress some of the disparities in this regard and to indicate the nature of the problem as a whole.

The first step in this regard is to recognise that there is one part of economic planning in India which is the direct concern of the Central Government. The organisation of transport and communications and the establishment of industries directly concerned with defence form obvious instances of such subjects. It may also prove practically expedient for the Central Government to increase its authority over other sectors of planning partly with a view to secure uniformity and partly because the necessity for financial aid from the Centre may carry with it certain corollories on the administrative side. Leaving this part of planning, the other subjects may be said to fall under agriculture and industry. Differences of development between Provinces and States are as a rule less serious in agriculture than in industries. Backwardness in agriculture is more often traceable than in industry to differences of natural conditions. Of these conditions, facilities for irrigation are indeed the most notable. But here the problem is considerably simplified by the vast development of irrigation in recent times. The spread of irrigation in the past has been checked less by the development of engineering technique than by the fact that in judging schemes for irrigation the authorities had been prone to lay down unduly severe standards of productivity. Since interest rates, too, ruled very high in the past, the schemes that satisfied the canons of financial soundness were all too few. Now that the period of high interest rates seems to have been left behind for good and since the criteria of productivity have been revised to accord with more enlightened economic ideas, it may be said that the Governments of Provinces and States can plan for further development of irrigation and of cultivation. This might be done without fear of one Provincial plan clashing with another. So long as the food position with the country in relation to the requirements of the population continues as it is, the fear of a glut of agricultural production, particularly in foodstuffs, can be dismissed as chimerical.

Agricultural planning for the Provinces will largely be a matter of devising new schemes of irrigation where there is scope, therefor, of raising the yield per acre of the principal crops to the levels indicated in the Burns Report and of readjusting the acreages according to the state of popular consumption, utilisation in industry and changes in export demand. It need hardly be said that in the case of those agricultural products which are India's export staples and are therefore important not only to the growers but also to India's position in international finance, provincial plans will from time to time have to be changed according to the directions of the Central planning authorities, but in regard to food grains it may be assumed that what are now deficit areas will endeavour to reduce the size of their deficit, while in all areas alike a higher level of average consumption will be striven for.

It is only in the case of raw materials for industry that the Provincial authorities will feel the need to co-ordinate their agricultural and industrial programmes. Of the various industries which are in existence in India today and which have good prospects of further growth and development, cotton and sugar are specially important in that they are grown over wide areas in the country, that they form the link between agricultural and industry in every Province and State and that cotton goods and sugar are articles of common consumption for all classes. But the spread of cotton textile and sugar industry has not been as even as one would expect from the basic conditions. Indeed, industrial development in India can hardly be said to have been an accordance with the distribution of basic natural advantages. In the earlier decades of this country, the development of industries has as a rule been governed primarily by proximity to the great trading centres of Bombay and Calcutta. The diffusion of industrial production did not occur till long after the last war and even today the development of over the various other parts of the country have not detracted from the overwhelming importance of Bengal and Bombay. While the natural factors, which make for the concentration of the jute industry in Bengal, are no doubt there, the distribution of industrial workers over the various Privinces in India shows a lop-sided development for which there can be no permanent justification in the distribution of natural resources.

The percentage of industrial workers in large establishments of various Provinces and States in the various industries is as follows. Bengal had in 1939, 23.7 per cent of the total number of industrial workers and Bombay 23 per cent while the percentage of Madras came only to 9.7 and that of the U.P. 8.9. As between British India and Indian States the latter had only 15.1 per cent against 8.9 per cent in 1921. Of the various industries in India only in the cotton textile industry has there been a notable increase in the number of workers. Between 1925 and 1935 the number of workers in Ahmedabad increased by 45,657 and that in Coimbatore and Cawnpore by 25,000 ,and 21,000 respectively. while in the older centres like Bombay the increase in numbers was more or less negligible. In the case of the Sugar industry the overwhelming importance of U.P. and Bihar is too well-known to call for more than a reference. The U.P.'s share of workers was 55.4 per cent as against its share of the total population of 14.1 per cent. The correspoding figures for Bihar are 19.6 per cent and 9.4 per cent. Special mention of these two industries has been made as they are bound to figure a great deal in the plans that the Provinces and States may make for themselves for the post-war period. In the case of other industries the distribution of natural resources is by no means even. But in so far as one of the more important natural advantages is proximity of demand the rise of demand in every locality for the ordinary comforts and necessaries of life conditions will make for a more even distribution of industrial prodution than we have been content with so far.

The Jute Industry in 1944

(CONTRIBUTED)

Any review of Industry in war time must be, almost of necessity, a record of difficulties to be overcome, of new problems to be solved and of adjustments to be made to meet unexpected and changing conditions. In this respect the experience of the Jute Industry in India over the past year has been no exception, but we venture to think that few industries can look back with greater satisfaction on the manner in which difficulties have been surmounted and adjustments made, almost wholly, be it said, of their own initiative and with little if any help from outside or official quarters. This achievement is largely due to the organisation of co-operation and co-ordination within the Industry itself, whereby it has been able to escape the bugbear of rationalisation being imposed on it from outside and probably by an authority utterly ignorant of the potentialities and requirements of Industry. Certainly there is the other side of the picture in that, whenever the Powers-that-be require workshop or storage space, it is on the Jute mills that they pounce to supply it. Never does it seem to occur to erect premises for themselves so long as Jute mill buildings are there to be requisitioned. In the last resort, jute goods are a not unimportant munition of war, and both H.M.G. and the Indian Central Government have agreed that a target production of 100,000 tons per month should be aimed at. On the other hand, by stinting coal supplies and by the requisitioning of mill premises by the military authorities, it has been made impossible for the Industry to achieve this production even with the best will in the world.

Requisitioning and Coal have been the major headaches during the past year. On a loomage basis, the space requisitioned now amounts to over 20% of the total productive capacity of the Industry and to all appearances the limit has not yet been reached. On a floor space basis, the area requisitioned is considerably greater. Not all of that percentage of production has been actually lost, for by working double shifts in half the remaining area, or by working two units in the premises of one, the potential loss in production has been avoided, or at least minimised, though not without much inconvenience to the units concerned. Where the shoe pinches in not a few cases is that, owing to godown accommodation having already been requisitioned, a "doubled-up" concern finds itself compelled to work the equivalent of two mills with half the godown accommodation designed for one mill. What is interesting to note is that the ethics of rationalisation apparently do not enter into the calculations of those authorities who requisition space, for one sixth of the loomage requisitioned was electrically driven, while there are still steam driven units left undisturbed to make what they can of the meagre coal supplies allotted to them.

All this requisitioned space might well be credited to the Industry as a contribution to the War effort, for the recompense is so negligible as to be discounted straightaway. Rs. 3 per hundred square feet per month rental for premises such as Jute mill buildings and godowns can only be considered a token payment, but the mills have not cavilled at it. When it comes however to handing over space to our American Allies on a Reverse Lease-lend basis, it might not be unreasonable to hope that a rate more commensurate with realities should be debited.

Throughout the year Coal has been an acute anxiety to all mills which produce their own motive power. By the enforcement of the strictest economy in all directions, the Industry reduced their requirements of coal by no less than 20 per cent in an endeavour to relieve the position. Their minimum requirements thus became 75 waggons per day and it was promised that this supply would be maintained. So far as we are aware, only on two weeks throughout the year was this figure attained. For the remaining 50 weeks, supplies varied from two thirds to one third of the minimum requirements. Thus only such units as draw their power supply from Public Electric concerns have been able to run to their full capacity. Fortunately they represent a considerable proportion of the Industry. Latterly supplies of coal became so limited that distinction had to be made between coal consumers who were working double shift and those working single shift, the former getting priority of what was available; and even so, stoppages have been recorded in these so called "foster" mills. The quality of the coal supplied has often been the cause of bitter complaint. It might be thought that under conditions of restricted transport, only the best quality was worth carrying. This, alas, was far from being the case. Valuable freight space has been devoted to the carriage of thousands of tons of incombustible rubbish incapable of heating bath water, let alone raising steam for motive power. Hopes were raised that some improvement be looked for when Coal raising and distribution were taken over by the Central Supply Dept. Numerous Controllers and Commissioners were appointed and promises freely made of an early bettering of conditions. After several months of waiting, no improvement is perceptible and coal supplies still remain probably the major, and still unsolved, problem of the Industry.

The Jute Industry has always been more considerate of its Labour force than others. It was the first to introduce subsidised food supplies when prices began to soar. These have been maintained, at a cost of untold lakhs of rupees to the Industry. Then came the problem of labour thrown out of employment by requisitioning of premises and also of labour spasmodically idle through stoppages from lack of coal. It was agreed that, when wages earned did not amount to Rs. 4-4 per week, this minimum sum should be paid to all workers, and of course their subsidised food supplied at concession rates as well. It was obvious from the start, of course, that this scheme would bear harshly on a certain class of units as compared with others, and to equalise the burden over the whole Industry, the Industrial Pool was evolved, to take effect from 1st July 1944, and to run for a year with the possibility of further extention. In broad outline the scheme consists of a levy of two annas per loom-hour worked to which is added all rentals paid by Government for requisitioned premises. Any mill idle through lack of coal may sell its lost loom-hours to the Pool which again can sell these hours to such units as can absorb them by working longer hours than the statutory 54. The first charge on the funds of the Pool is the payment to idle mills of the Rs. 4-4-0 per head due to the enforcedly idle labour, also, the reimbursement of all losses incurred by the sale of foodstuffs to the labour at concession prices. Any funds remaining will go to the extinguishing of excess working hours not absorbed by working mills. The rate per loom-hour current so far is twelve annas and it is satisfactory to know that, for two recent months the Pool paid its way and showed some surplus. This is just another instance of the manner in which the Jute Industry has solved its own domestic problems by spreading the burden of hardship over those more happily situated to the relief of such as are subjected to suffering through no fault of their own, while at the same time saving the Government from possible embarrassment by discontented labour force.

One of the earliest episodes of the year was the conference in Delhi to decide the area to be planted under jute for the season. With contending demands of the "Grow More Food Campaign" against a sufficiency of raw material for the Jute Industry, it was finally agreed that eight annas of the registered acreage should be licensed. Forecast estimates are so notoriously unreliable that it is virtually impossible to say what acreage was actually put under jute, but it is the general opinion of the trade that the margin of carry-over has been allowed to drop to a dangerously low level and that the crop for the coming season should be not less than 12 annas of the registered acreage. Growing conditions for the crop were generally favourable and prospects looked good till harvesting was due. Then a prolonged period of drought caused a drop in the river levels and scarcity of steeping water, with the result that much of the crop was allowed to stand after it was ripe for cutting. This, while it undoubtedly added weight to the crop, detracted greatly from its quality.

Another important happening of the year was the statutory fixation of maximum and minimum prices of Jute, as well as maximum prices for Jute Goods by the Jute (Price Control) Order in April 1944. This of course was largely the legalisation

of the schedule of maximum rates already enforced by the Mills themselves, with the addition of Minimum rates for Jute as a sop to the Bengal Government. As a corollary to this legislative action, Government is empowered to requisition either Jute or Jute Goods at the fixed maximum rates if necessary, while Government also undertakes to purchase Jute if necessary to maintain the price at the minimum. Action has not been taken under either of these heads so far. Loose Jute opened around the maximum rates and though prices declined later, the minimum has only been touched for a very brief period, after which a recovery set in. Jute in Pucca bales on the other hand seem to have been over-valued in the original schedule for almost all grades have been available at minimum rates for a long time past. So far as Jute Goods are concerned, for quite a while all grades of Hessian and almost all grades of Sacking goods were quoted at higher than the maxima. Hessians still maintain their maximum prices but somewhat of a slump set in for Sackings, and quotations have ruled considerably below what would be the relative minima, though no low limit was set for Jute Goods in the schedule. Probably the reason for these phenomena is that there is really no free market for Jute Goods in the present conditions. Purchases on behalf of Government have been alloted to the trade at rates which have had no relation to the ruling market prices. Purchases for export have to a very large extent been canalised through official channels and distributed to regular shippers for handling. The way has thus been reopened for Fatka operators and black marketeers who have not been slow to take advantage of the opportunity when it offered, while enterprise on the part of genuine shippers has been stifled. The position, perhaps inevitably imposed by war conditions, is nevertheless an unhealthy one from the point of view of the well-being of the Industry.

Statistically the Mills are in a sound position. At the beginning of the year, stocks of goods in godowns amounted to 221,500 tons. By the end of January they had increased to 232,000 tons after which a progressive decline set in, till at the end of the year stocks stood at 169,000 tons. Offtake has thus been greater than production by 63 000 tons during the past eleven months. The reduction however has been entirely in Hessians. stocks of which have been reduced by almost half since the beginning of the year, largely due to the offtake of Government goods. Stocks of Sacking at the end of the year were 7,500 tons higher than they were at the beginning. These figures point not only to a consistent demand for Jute goods but also to a good supply of freight space to carry them to overseas markets. Final production figures are not yet available ,but poor coal supplies have caused a falling off in the second half of the year. The first six months averaged over 90,000 tons per month but the second half will not probably reach an average of 84,000 tons. The stock figures indicate that offtake has exceeded production by something like 4,500 tons per month. With many old markets still virtually closed to imports either by war conditions or by shortage of shipping, the statistical position suggests that the prospects before the Jute Industry are by no means unhopeful.

Of inconveniences from restrictions in various directions the Industry has had its full share. Internal transport has at times been a grave anxiety but at the close of the year this angle is less acute than for a long time. The Railways seem to have been able to dispose of more wagons to the carriage of jute, though some of the accompanying regulations are as vexatious as they seem unnecessary. The pooling of all river freight space and a proper administration of the quota system should eliminate many of the complaints which have been common of unfair discrimination in these respects. Tribute should be paid to the ready co-operation of the River Carriers to suggestions by the trade as compared with the dictatorial attitude commonly adopted by the Railways. Transport within the Port limits of Calcutta often presents bottlenecks and it seems doubtful if the Lighterage Pool is always worked to its maximum efficiency.

The loose Jute trade in the mofussil has suffered also in the matter of requisitioning of premises, both by military and the Civil Supply Depts. and dealers have consequently had to work under handicaps, but on the whole have survived the ordeal well. They have however a wellgrounded complaint at the ridiculous wage rates which these authorities have been paying coolie labour, so that a working day of two hours would suffice to provide his daily rations. It is notorious that "sufficient unto the day" is the 'good' thereof according to the average coolie's belief, so that it is practically impossible nowadays to get a reasonable days work out of labour even at the enhanced wages demanded.

There was a notable change on the administrative side of the Jute Mill Association during the year. In addition to the Chairman and Deputy Chairman, a Vice-Chairman was appointed, and the new office evolved upon a representative of the Indian-managed Mills. Both the Chairman and the Deputy Chairman are believed to be retiring from India within the next few months and the Industry will have to find new incumbents for the onerous duties of these offices.

In their contribution to the War effort, the Indian Jute Mills, besides providing the requisitioned space noted above at a purely nominal rental, have supplied large quantities of goods to Government at little over cost—far below the current market values. They have also devised and produced new and special fabrics and specially treated fabrics to fill essential requirements. In addition they have contributed generously to Public Funds.

The Jute Mills Research Department has continued to justify its existence and has been of material assistance in solving many immediate problems as well as in paving the way for new avenues for the utilisation of Jute products in the Post-war world.

No record of the year in the Jute Industry would be complete without some remark on the able manner in which the affairs of the Mills have been conducted by the Committee and in particular by the Chairman, whose job in these days, combining as it does the office of Adviser on Jute Supplies, must be almost a full-time one. Mr. Walker's skilful handling of the reins has kept a not always tractable team pulling together. He has probably incurred the odium of officialdom by the insistence with which he has maintained the claims of the Industry to recognition in the face of official indifference. He deserves well of the Industry for the work he has put in on its behalf during his long term of office and his place will be by no means easy to fill.

Editorial Notes

The Insurance Bill

The Select Committee which met in Delhi this week to consider the Insurance Act Amendment Bill has a weighty duty to perform. The Committee is no doubt aware that insurance circles are very critical of some of the proposed amendments, specially of those that affect the interests of chief agents. The Chief Agents' Association, the Indian Merchants' Chamber and others have forwarded their views to the Committee. On behalf of the chief agents, it is contended that the organisation of life through chief agencies is really more economical than any other method and that it is altogether erroneous to think that the principle of effecting economy in the working life offices could be achieved by statutory interference with existing contracts. The Chief Agents' Association Committee has prepared a table showing the ratio of expenses on the renewal premia of several leading life offices working on the chief agencies model and the ratio obtaining on other methods of organization. It is felt that the increasing tendency to interfere with the organization and internal questions of life offices is not conducive to smooth working. The suggestion has been made that economic working of life offices in the interest of policy-holders can be secured by limiting by statute the percentage of the first year's renewal premium incomes which the companies might be left free to spend. This, it is argued, will obviate the need for further and irksome interferences, while at the same time life offices will be free to develop on individual lines. A conference of representatives of the various companies in this regard seems to be very desirable. Equally stout opposition exists to the proposal for restricting the period of the chief agency to a maximum of ten years. It is said that ten years would hardly be sufficient to bring a worker to the stage of undertaking the organization and development of business in a new territory and particularly for a new company. The amendment increasing the minimum limit of a life policy to Rs. 1,000 with a corresponding increase in the maximum limit of a policy with provident fund societies to Rs. 750 is considered both uncalled for and ill advised. The arguments are that the facility of obtaining insurance at a cheaper rate which is available from a life office will be denied to a large number of persons and would amount to an unwarranted hardship. Secondly, quiet a large number of life companies doing insurance are still in their infancy and depend to a large extent for their business on the poorer classes. The proposed amendments will deprive them of the staple business. It is suggested that help to provident societies may be offered, and their limit may be increased, but not at the expense of life insurance offices who had best be left alone so far as the minimum value of a life policy is concerned. Finally, with regard to the amendments seeking to confer authority on the Superintendent of Insurance to sanction the merger of provident societies, the tendency to transfer matters under the jurisdiction of the judiciary to the executive is deplored. If life companies can only amalgamate with the sanction of a court of law, it is asked, why should provident societies be treated on a different footing? These are only a few of the questions on which the insurance community is entertaining strong views in connection with the amending bill. Whatever the government may do, it is hoped that nothing will be done in indecent hurry or by flouting legitimate claims.

COLLECTIONS OF OUTSTANDINGS

Customers of the Hind Bank are encouraged to make use of the service developed by the Bank in collecting payments of their bills. This service is available not only at stations where the Hind Bank is established, but also at outstations anywhere in India. This is another aspect of the Hind Bank's policy of extending its customers' credit facilities.

Lancashire's Difficulty

Messages concerning Britain's decision to relax restrictions on exports continue to appear but only two appearing last week have special interest for India. The Cotton Board asked that mills shut down under the concentration scheme of 1941 should be reopened on a certain date when the labour supply permitted the reopening. Mills at work declared however that labour shortage would remain an obstacle and the reopening of selected mills except when circumstances allowed should not take place. The same message indicated that until the war in Europe ends, cotton mills could not reopen though a few could benefit when munitions factories closed down. The Minister for Labour is known to have conferred with the Cotton Trade Board about the shortage of labour. Remedy proposed is the opening of one or more training centres for textile operatives so that the concentrated industry could get 17,000 workers. Mr. Bevin's statement to the press said that 175,000 workers had left the cotton textile industry since the war and the difficulties of meeting post-war requirements of personnel were enormous. Though messages dealing with quarterly export quotas especially for African markets testify to Lancashire's interest in export trade, it is clear that the experience of concentration must prove decisive. When the Platt Mission advocates efficiency up to U. S. standards, it is clear that not all units can get back to work. This fact must affect both output and exports after the war. Trade agreements may not help Lancashire to keep former markets in tow since the latter have developed textile production during the war and added greatly to the range of manufactures. Though textile shares have risen steadily in London during 1944 on familiar calculations as to export revival, it is clear that an industry for which the reforms schemes proposed are diverse cannot stand up to the strenuous rivalry of protected industries especially in neutral markets. An increase of finer goods produced by Indian mills despite the voluntary cut in exports may lead to the winning up of foreign markets at the expense of Lancashire. The

Aid to America

Figures as to reverse Lend-Lease aid show that Britain spent over £1079.6 millions up to June 1944. The chief beneficiaries were the U.S.A., Russia and Poland whose Army was re-equipped at a cost of £120 millions. It has been pointed that the real value of Mutual Aid is greater as Mr. Norman Crump refers to the services including many inventions placed at the disposal of Britain's allies. Though U.S. expenditure on Lend-Lease exceeds U.K. outlay there is the fact that Britain has been at war longer than other countries. U.S. forces in Europe were provided with a base, and Britain arranged for essential services including transport. Invasion in June was possible because landing craft was water-proofed by the British sheet steel industry. To build the pre-fabricated harbours Britain provided 100,000 tons of steel and 600,000 tons of concrete and the cost was £25 millions. The allies of America find the oil wanted for the U.S. forces. Pooling has been the rule, and it is widely known that reverse Lend-Lease aid given by India has led to an increase in oil supplies for the forces while India's own imports have increased as a result of Allied requirements for the war. Half a million women added to the Services and 2.1 million women to munitions-making and essential industries show that the increase in Britain's own war production was the basis of the increase in Mutual Aid. The Dominions, of course, have given reverse Lend-Lease supplies independently, but their programmes are hardly influenced by the war in Europe to the same extent as Britain. Current aid may affect calculations as to returns in the future but the U.S. President's budget message makes no reference either to the new Lend-Lease agreement or to the probable assistance in the Pacific from Britain.

Changes in Wartime

In the League of Nations statistical bulletin appear graphs illustrative of the simultaneous growth of note circulation and bank deposits in many countries. The rate of increase varies but the trend was clear in 1944. What is most obvious is that inflation is the rule but the increase in currency is least where measures have been adopted to deal with the jump in prices. Since bank money is as important as currency for most countries, the bulletin sets out the increase under both notes and demand deposits. India comes

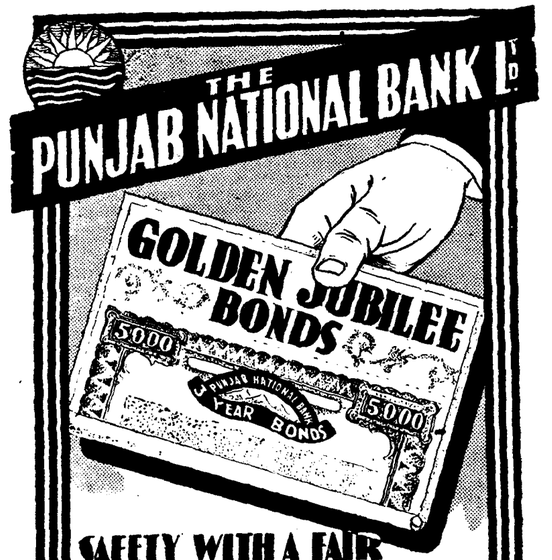
after Iraq and Hungary in the matter of currency expansion but the difference is vast in regard to changes in the price level. The increase in the U.K. as compared with India was quite moderate because more than half the national income was taken up for public purposes. Banking expansion within the U.S.A. was slower than in the U.K. last year because the public kept back more money to deal with the rise in the cost of living. The main conclusion to be drawn is that rapid additions to bank deposits are not enough to deal with the rise in prices since Mexico and Portugal report larger increases in deposits than Britain or the U.S.A. and both have suffered to an unusual extent from the abundance of money. Allied war expenditure accounts for the expansion of currency recorded in Iraq and India. The expansion in such cases rested on additions to overseas assets but the experience of Occupied countries was worse as blocked balances in Berlin led to additions to note issue in Denmark, Holland and other countries. Investments in German treasury bills for an augmented clearing balance provided no solution, for the crucial factor was the decay of German export trade, not the overvaluation of the Mark. The apparent exception is Finland but Finland's debt started to fall in 1943-44. While levy of occupation costs limited the growth of balances abroad, it did not retard the steady increase in circulation, for which Belgium alone has applied the drastic remedy of deflation and freezing of private bank accounts. The analysis of the universal increase in the means of payment indicates that the sight deposits have grown least where public expenditure (though not for war) has really increased. Eire and Sweden offer examples of moderate expansion but the distinctive case is Switzerland where the return of funds from abroad did not lead to any large increase in banks' sight deposits.

Plans for Australia



The Indian industrial mission to Australia —the composition of which has been announced lately—should be able to study projects under consideration as well as those already executed. The Australian post-war development programme covers the construction of large electricity generating plants, the erection of inter-State transmission lines, the establishment of large-scale water schemes for domestic and industrial purposes and irrigation. Governmental planning takes account of long-term development schemes and expenditure on the plan now prepared is expected to total £193 million. The National Works Council has classified other schemes according to three priorities. These cover housing, public buildings, sewage, drainage and forestry. Subsequent schemes will entail the investigation of the problem of using resources in the interest of either the Commonwealth or States. The planning is to commence as soon as Governments can divert the necessary skilled personnel. Consideration of the materials required so that stocks can be built up in readiness is already undertaken, and orders for plant, local and foreign, are being placed. An idea of the materials required is given by a statement that construction of public buildings will require 162 million bricks and 101 million square feet of timber. Equipment is to be obtained for construction from the surplus stocks of the Disposals Commission when the latter sells them. Australian development plans include prospecting for oil. When conditions permit large companies will resume exploration. Intensive prospecting has been carried out in New Guinea, Queensland and Western Australia while drilling in a field in Victoria has led to the location of an area of eight square miles at an average depth of 1,200 feet. Conversion has been initiated in Australia as civilian production is being enlarged through factories which were previously on war work. It is claimed that, in spite of the diversion of both resources and labour, munitions output has not fallen and in regard to shipping there will be a considerable addition to output in 1944-45.

Company meeting.

ASSOCIATED CEMENT COMPANIES, LTD.

SATISFACTORY WORKING IN 1943-44

Chairman on the hopeful outlook for the Industries & Plans for expansion

Presiding at the Eighth Annual General Meeting held on 12th January, 1945, Sir Homi Mody, Chairman, Associated Cement Co., Ltd., said:—

Ladies and Gentlemen.

The results for the year under review as compared to those of the previous year may be considered satisfactory. Despite material decreases in production and despatches and certain other adverse factors, such as transport difficulties, labour and coal shortage, higher costs and increased taxation, the profits have shown an improvement over the figure of the previous year. This was due in the main to the sales realisation being higher, and to the company having secured a more equitable contract with the Government of India.

Owing to the increased manufacturing cost, your Directors had to raise the public price of cement during the year under review. The ceiling price has now been fixed by Government at Rs. 68-12-0 per ton, with a provision for reconsideration every six months. Your Directors are conscious of the considerable inconvenience caused to the public on account of the severe rationing of consumption of cement imposed by Government arising from their own heavy demands on the industry. We have been continually urging Government to release a larger quota to the public, but it is doubtful if the situation will materially improve for some time to come.

At the last Annual Meeting, I informed you that your Directors had under consideration a somewhat comprehensive scheme of labour welfare which it was hoped to carry through by successive stages. A beginning has been made in the year under review, but on account of inadequacy of materials and labour, progress has had to be slow. Our object is to make provision for housing, education, medical relief and recreational facilities on a much larger scale than has been undertaken in the past. We have also decided to set aside every year a fairly substantial sum to be utilised for labour welfare. You will find an item of Rs. 55,200 under this head in the accounts before you. In pursuance of our policy of maintaining an efficient and contented labour force, we have, during the year, granted further increases in wages and dearness allowances, and have paid special attention to the maintenance of cheap grain and cloth shops which play an important part in the economic life of the workers in these days of scarcity. In spite of all this, we are still faced with the problem of securing adequate and suitable labour on account of the general scarcity of foodgrains in industrial areas and the recruitment of labour for military requirements.

India, like many other countries, is thinking in terms of a rapid and large-scale development of her resources. Planning has become the order of the day, and blue-prints of a post-war expansion in every field of activity are being produced by the score. There has been a great deal of loose thinking on the subject and an inadequate appreciation of the difficulties which must beset every large-scale planning which has for its object a substantial raising of the standard of life through increased production and more equitable distribution. We must reckon on progress being slow. In the meantime, we have to face the possibility of indiscriminate expansion in many fields of industry. It is a matter of satisfaction, however, that so far as the Cement Industry is concerned, owing to the urgency of the demands which will be placed on it in the immediate post-war years, the orderly planning of future development is under the active consideration of Government. Your Company has carefully worked out a programme of expansion which has behind it years of investigation and preparation, and you may be sure the Company will be fully equal to whatever demands may be made on it from time to time. The erection of a factory at Chaibasa embodying several new features was undertaken during the year under review, and sanction was obtained for extensions to two of our existing works.

There are several factors which incline your Board to view the future with a certain measure of assurance. Cement will be in the forefront of the industries whose rational development is regarded as essential in the national interests. Large-scale projects for roads, irrigation, public works and the like will be undertaken in the immediate post-war period, and the needs of devastated areas in neighbouring countries will call for a greater export demand, at least until such time as their own cement factories are in a position to supply their requirements. As I have said, this Company is fully prepared for a considerable expansion of its capacity, based on plans which have been carefully worked out. Its plant, its technical personnel and its financial resources all afford an assurance of the maintenance of the important position it holds in the industry, and the long-term prospects may therefore be regarded with quiet confidence. It is timely, nevertheless, to sound a note of warning against haphazard and ill-conceived expansion, such as was allowed to occur in the decade following the conclusion of the first World War, when investors in the industry had to suffer considerable losses. It is to be hoped that history will not be permitted to repeat itself, and that only the most carefully prepared schemes for industrial expansion, backed by the knowledge, the resources and the ability to implement them, will receive consideration and support.

I wish I could say something definite about the prospects for the current year. As is the case with other industries, coal is our greatest headache, and until the situation with regard to this essential raw material and in respect of transport improves, it is not possible to speak with any assurance about the present position. For your information, I may add that our contract with the Government of India, who have been for a long time our largest individual customer, has been recently renewed on the same terms as in the previous year, including adjustment of price to take care of any increase in the cost of manufacture, and if production can be maintained at anything like the level of our capacity, the profits for the year should be satisfactory. I am not taking into account, of course, the heavy inroads which may be made on them by the Excess Profits and other taxes.

I shall end by an acknowledgment of the very valuable and loyal co-operation rendered by Labour at the Works, the mines and the quarries, and by the Staff at the Head Office and at other places. As a recognition of their good work, the Board have recommended the payment of a bonus equivalent to two months' salary, and I am confident you will unhesitatingly vote them this payment, in view of the results which their efforts have enabled the Company to show, and of the very trying living conditions prevailing these days.

IT'S A FACT—

that more than 90% of India's teeming millions never save a rupee of their earnings. Money borrowed at fantastic interest cripples them financially for life. An account with the Palai Central Bank safeguards you from debt and worry—it puts success within your grasp.

PROSPECTUS

(A copy of this Prospectus has been filed with the Registrar of Companies, Bombay, as required by Section 92(2) of the Indian Companies Act VII of 1913).

Consent of the Central Government has been obtained to this issue under the Defence of India Rule 94-A. It must be distinctly understood that in giving this consent the Government of India do not take any responsibility for the finacial soundness of any scheme or for the correctness of any scheme or for the correctness of the statements made or opinions expressed with regard to them.

The Subscription List will open on Thursday the 4th day of January, 1945 and will close on any day at the discretion of the Directors.

THE KARNATAK INDUSTRIAL AND PLYWOOD COMPANY LIMITED

	Rs.	Rs.
AUTHORISED CAPITAL:—		
5,000 (five thousand) 5% (tax-free) cumulative Preference shares of Rs. 100 each	5,00,000	
50,000 Ordinary shares of Rs. 10 each	5,00,000	**10,00,000**
ISSUED CAPITAL:—		
2,000 5% (tax-free) cumulative Preference shares of Rs. 100 each ...	2,00,000	
50,000 Ordinary shares of Rs. 10 each	5,00,000	**7,00,000**
SUBSCRIBED CAPITAL:—		
41 5% (tax-free) cumulative Preference shares of Rs. 100 each ...	4,100	
19,591 Ordinary shares of Rs. 10 each	1,95,910	**2,00,010**
PAID-UP CAPITAL:—		
41 5% (tax-free) cumulative Preference shares of Rs. 100 each fully paid-up	4,100	
19,591 Ordinary shares of Rs. 10 each fully paid-up ...	1,95,910	
Less: Share amounts in arrears 8,822	1,87,088	**1,91,188**
As regards the balance of the Issued Capital of Rs. 7,00,000 viz. Rs. 4,99,990 consisting of—		
1,959 5% (tax-free) cumulative Preference shares of Rs. 100 each ... and		**1,95,900**
30,409 Ordinary shares of Rs. 10 each		**3,04,090**

Which has remained unsubscribed it was resolved at the Extra-ordinary General Meeting of the Company held on the 4th day of December, 1944, that the same be offered for subscription at par in such manner and to such persons as the Directors may determine without offering the same to the existing shareholders of the Company.

The Directors and their friends have agreed to take up 15,000 Ordinary Shares and the balance of the said 30,409 Ordinary Shares, viz., 15,409 Ordinary Shares of Rs. 10 each and 1,959, 5 per cent (tax-free) Cumulative Preference Shares of Rs. 100 each are now offered for public subscription.

The amount payable in respect of the said 1,959 Preference shares and 30,409 Ordinary shares is as follows:—

Class of Shares.	On Application.	On Allotment.
Preference ..	Rs. 50	Rs. 50
Ordinary ..	Rs. 5	Rs. 5

The rights following are attached to the shares aforesaid:—

(a) Clause V of the Memorandum of Association of the Company provides as follows:—

"The Share Capital of the Company is Rs. 10,00,000 ten lakhs as follows:—

(i) 50,000 Ordinary shares of Rs. 10 ten each.

(ii) 5,000 Preference shares of Rs. 100 hundred each.

(iii) 5,000 Preference shares hereinbefore stated shall be entitled to a cumulative preferential dividend of 5 per cent (tax-free) per annum, and to priority for arrears of dividend.

The Company shall have power under Section 50 of the Indian Companies Act, 1913, to increase or reduce the said Capital, and issue any part of its Capital original or increased, with or without any preference, priority or special privilege or subject to any postponement of rights or to any conditions or restrictions and so that unless the conditions of issue shall otherwise expressly declare, every issue of share, whether declared to be preference or otherwise shall be subject to the power, hereinbefore contained".

(b) Article 110 of the Articles of Association of the Company provides that the profits of the Company which it shall from time to time be determined to divide in respect of any year or other period shall be applied first in paying the cumulative dividend on the Preference Shares to the close of such year or other period and then on the Ordinary Shares. The Company in General Meeting may declare dividends to be paid to the members accroding to their respective rights and interests in the profits of the Company. No dividend shall exceed the amount recommended by the Directors of the Company, but the Directors may declare a smaller dividend. No dividend shall be paid otherwise than out of the profits of the year or any other undistributed profits.

(c) Article 113 of the Articles of Association of the Company provides that the Company may pay dividends in proportion to the amount paid up or credited as paid up on each share where a larger amount is paid up or credited as paid up on some shares than on others. The declaration of the Directors as to the amount of net profits shall be conclusive.

(d) Article 153 of the Articles of Association provides as follows:—

"If the Company shall be wound up, and the assets available for distribution among the members as such shall be insufficient to repay the whole of the paid up capital, such assets shall be distributed so that, as nearly as may be, the losses shall be borne by the members in proportion to the capital paid up or which ought to have been paid up, at the commencement of the winding up, on the shares held by them respectively. And if in a winding up the assets available for distribution among the members shall be more than sufficient to repay the whole of the capital paid up at the commencement of the winding up, the excess shall be distributed amongst the members in proportion to the capital at the commencement of the winding up paid up or which ought to have been paid up on the shares held by them respectively. But this is to be without prejudice to the rights of the holders of shares issued upon special terms and conditions.

Save as hereinbefore mentioned there is no express provision made in either the Memorandum or the Articles of Association of the Company regarding the rights of the holders of Preference and Ordinary Shares in respect of the capital of the Company and the same will have to be determined according to law as and when occasion may arise, though the Company is advised that in view of the above, the Preference shareholders have not any priority in respect of repayment of capital and have a right to participate-in surplus assets along with the Ordinary shareholders.

PROSPECTUS.

OBJECTS.—The Company has been formed generally for the purposes set forth in the Memorandum of Association and in particular to engage in the manufacture and marketing of plywood and allied wooden materials and generally with the object of harnessing the forest resources of India in the development of industries.

Plywood is in considerable demand for the reason that it offers greater resistance to warping, contraction and expansion and is utilised wherever lightness and strength are required in woodwork. It is used in the construction of motor cars, planes and allied industries. In the year 1938-39 the total imports of plywood into British India in the form of Tea Chests and boards were of the value of Rs. 1,05,61,000 which is exclusive of the import Duty thereon. This figure does not include imports through non-British India ports. Since that year there has been a considerable augmentation in the demand for plywood.

For the manufacture of plywood certain types of wood lend themselves eminently.

This Company has acquired the exclusive right of exploitation over a vast area of forest situate in North Canara District of Bombay Presidency comprising about 183 square miles, that is to say, about 1,15,000 acres of well-wooded forest under an Order of the Government of Bombay, dated, 28th August, 1943. The Supa Forest as this area is called, abounds in large varieties of wood and the Conservator of Forests, Dehra Dun, after a most extensive and careful survey of the resources of the Forest has found that one particular species of wood with which the Supa Forest is richly endowed would yield about 2 lakhs of tons. The Forest Utilisation Office of Dehra Dun has after an investigation of the properties of this particular species of wood which is in such abundant supply come to the conclusion that this would be very suitable indeed for the manufacture of plywood. It is expected that this estimated quantity of 2 lakhs of tons could be utilised over a period of 40 years which is to say that about 5,000 tons of this wood can be used annually.

The factory belonging to the Company for the manufacture of plywood is situate at Supa and has, therefore, the unique advantage of being right in the middle of the area where practically a perpetual supply of raw material at the cost of the factory is assured. The factory is at a distance of about 15 miles from the Londa Railway Station and is served by an excellent P.W.D. Road. The situation of the Factory is at the junction of two rivers which do not dry in any part of the year. The Company also holds under the terms of concession granted to it by the Government of Bombay the license to utilise water for transport of materials free of cost. The harbour of Marmagoa is about 86 miles from Londa Railway Station and Supa is connected with the harbour by a first class metalled road.

The preparatory machinery is at Supa and the finishing machinery will be at Dharwar, where the Company will get all the advantages of labour, transport and trade facilities that that place offers.

The concession granted to Company by the Government of Bombay has a long tenure of 40 years and this also confers on the Company full right to extract timber and such other forest producer anywhere within the area specified in the concession. Under the draft Agreement hereinafter mentioned royalty is payable for the grant of concessions for extraction of diverse trees at the rate of Rs. 1 per ton of 50 cubic feet liable to revision at every ten years. For extraction of certain other goods certain amounts are payable to Government at the current market rates minus cost of transport and at Rs. 20, Rs. 10, Re. 1 per ton subject to revision at the termination of the present war. Government has also agreed to grant a lease for factory site and for soft wood plantation with a right to extract trees at the rate mentioned therein the rent of annas four per acre per annum, is payable for the area and for the factory area cleared soft wood plantation.

The Company has been fortunate in being able to secure through the Supply Department of the Government of India valuable American machinery for the manufacture of plywood and this machinery has already reached the factory premises in Supa and Dharwar and is in the process of erection. It will thus be seen that this Company has been able to acquire:—

(*a*) A very valuable concession for exploitation of the forest resources over a large area in North Canara District; and

(*b*) the necessary machinery and locate the factory in a convenient place within the Supa Forest at the junction of the rivers of Kali and Pundhri which do not dry in any part of the year and which are easily accessible by first class roads leading to the Londa Railway Station as well as to the Marmagoa harbour, and also at Dharwar very near the Railway Station.

The Directors are convinced that these advantages should ensure the Company being in a position to market its products at rates which will prove to be quite competitive compared to the prevailing rate. The Company's factory is already engaged in the manufacture of Tea chests and cutting planks. It is expected that by the beginning of April 1945 the erection of the American plant would have been completed and the plant would go into commission thereafter. This will enable the Company to produce not less than 20,000 square feet of larger sized boards per day as against the present output of 8,000 square feet a day of smaller sized boards.

The Supply Department at New Delhi is prepared to purchase the major portion of the output of plywood at remunerative prices and is anxious that the Company shall start full production at an early date.

The purchase of the American plant, etc., has been financed by loans and advances by the Directors and Bankers of the Company. The present issue of Rs. 4,99,990 is expected to be utilised, therefore, in the discharge of these advances by the Directors and Bankers to the Company and for the purchase of certain other capital equipment, all of which will absorb Rs. 3,50,000. The balance of Rs. 1,50,000 is required as working capital for the Company. The following are the particulars of the capital equipment:—

	Rs.
Purchase of machinery (two Peeling machines, two clippers, one hydraulic machine and one boiler)	1,50,000
One Coe Dryer (under Lease-Lend)	97,000
Hydraulic Press and miscellaneous items of machinery and equipments	20,000
Six Lorries (Chassis)	36,000
Cost of Building Bodies to Chassis	9,000
One Motor Car	5,000
Urgent Extensions to Buildings	23,000
Total Rs. ..	3,50,000

The purchased equipment includes Coe Dryer and four Motor-Lorries on usual Lease and Lend conditions.

The following is an estimate of the Company's working. After the American plant has come into full commission it is expected that the total daily manufacturing capacity of the fatory would be 20,000 square feet or alternatively 1,000 boards of 4'×5'. Even allowing for a high and liberal margin of 20 per cent for rejections and calculating on the remaining 800 boards the profit per day would be a minimum of Rs. 500. This estimate of profit has been made most carefully and in consultation with Experts and with those in intimate knowledge with the plywood market in India. On the basis of 300 working days the profit should be in the neighbourhood of Rs. 1,50,000. Abundant provision has been made in the above calculation for the overheads, depreciation and contingencies. Profit from timber sales have not been taken into account in computing the profits.

In this connection it will be interesting to note that 19,590 acres of valuable timber area has been reserved by the Government for exploitation by this Company and the Company has already taken 500 acres at a nominal rent of Rs. 6/- per acre for exploitation. Hence by timber sales alone in the next few months, the loss incurred in the last three years can be made good and over

Karnatak Industrial and Plywood Co., Ltd.—*Prospectus Contd.*

a period of twelve months the Company will be in a position to earn substantial profits from timber sales.

It is expected that after payment of the preferential dividend, the net profits of the Company will be sufficient to yield a return of about 20 per cent on the Ordinary capital. However, in the first few years amounts will have to be reserved for writing off preliminary expenses. It is expected that the Company may be in a position to pay even in the very first year a maiden dividend of about 7½ to 10 per cent.

UNDERWRITING COMMISSION

2. The Articles of Association of the Company provide that the Company may at any time pay a commission to any person for subscribing or agreeing to subscribe (whether—absolutely or conditionally) for any shares in the Company or procuring or agreeing to procure subscriptions (whether absolute or conditional) for any shares in the Company, but so that if the commission shall be paid or payable out of the capital the statutory conditions and requirements shall be observed to comply with and the commission shall not exceed 5% on the nominal amount of the shares in each case subscribed or to be subscribed. The commission may be paid or satisfied in cash or in shares, debentures or debenture stock of the company.

3. Out of the present issue of Rs. 4,99,990/- 15,409 Ordinary shares and 1,959 Preference shares have been underwritten jointly by Mr. P. R. Subramanyam and Messrs. Manmohandas Nemidas on the terms and conditions contained in an agreement constituted by the letters from the Underwriters dated the 16th and 23rd of December 1944 addressed to the Directors of the Company and the Company's letter dated the 23rd day of December 1944, addressed to the Underwriters. In the opinion of the Directors the resources of the said Underwriters are sufficient to discharge their underwriting obligations.

4. The underwriting commission payable to the Underwriters is 3% in respect of the amount of shares underwritten by them. The underwriters have agreed to pay a brokerage of 1 per cent to certified Brokers on allotments made on applications bearing their stamp.

MANAGING AGENTS:

5. Messrs. V. Loganadham and Company, Ltd., have been appointed Managing Agents of the Company under the terms of the below mentioned Managing Agency Agreement for a period of 20 years from the 4th day of December 1944 upon the following terms as to remuneration and other terms and conditions appearing in the said Agreement:—

(*a*) A fixed monthly remuneration of Rs. 1,000/-.
(*b*) A commission at the rate of 10% on the annual net profits of the Company.

For the purpose of clause (*b*) above the "net profits" means the profits of the Company as defined by sub-section (3) of Section 87C of the Indian Companies Act VII of 1913.

Following is Clause 4 of the Managing Agency Agreement:

"The said remuneration and commission payable to the said Managing Agents shall be exclusive of and shall not include any remuneration or wages which shall become payable to the Bankers, Solicitors, Engineers, experts, managers, commission agents, dealers, mukadams, clerks, servants, workmen, brokers or other officers or employees who may be employed by the said Managing Agents for and on behalf of the Company or for carrying on or conducting the business of the Company nor any rents, taxes, costs, postage, printing or stationary or other office expenses nor any travelling charges and expenses incurred by the said Managing Agents in connection with the business of the Company all of which remuneration, salaries, wages, costs, charges and expenses shall be borne and paid by the Company".

Following is Clause 13 of the Managing Agency Agreement:—

"During such time as the Managing Agents or its successors and assigns shall be the Managing Agents of the Company, the said Managing Agents or its successors and assigns shall subject to the provisions of sub-section (2) of Section 83B of the Companies Act be entitled to appoint such number of Directors (not exceeding two) as shall not exceed in number one-third of the whole number of Directors as provided by Section 87-I of the Companies Act and to remove them or either of them from office and on a vacancy being caused in such office from any cause whatsoever by death, removal, retirement or otherwise, they shall have right to appoint a director or directors to fill in such vacancy.

The Directors appointed under this Clause are herein referred to as "the Ex-Officio Directors". The term "Ex-Officio Directors" shall mean and include the Director or Directors for the time being in office appointed under this Clause. The Ex-Officio Directors shall not be liable to retire by rotation or be removed from office except by the said Managing Agents or its successors and assigns as aforesaid. The Ex-Officio Directors shall not be bound to hold any qualification shares. The Ex-Officio Directors may at any time by notice in writing to the Company resign their office. The right of appointment by the said managing Agents of Ex-Officio Directors subject as aforesaid shall not be affected or determined by any change in the name, style or constitution of the said Managing Agents."

Corresponding to the above is Article 75 of the Articles of Association of the Company.

CONTRACTS

6. (A) The following contracts have been entered into:—

(*a*) Agreement dated the 14th day of December 1944 between the Company and Messrs. Loganadhan and Co., Ltd., appointing the latter Managing Agents of the Company.

(*b*) Agreement between the Company of the one part and Mr. P. R. Subramanyam and Messrs. Manmohandas Nemidas of the other part constituted by the letters from the Under-writers dated the 16 and 23rd day of December 1944 addressed to the Directors of the Company and the Company's letter dated the 23rd day of December 1944 addressed to the Underwriters providing for the underwriting arrangement.

(*c*) Agreement, dated, 29th to 30th May, 1944, between the Governor-General in Council (through the Supply Department, having its office at New Delhi) and V. L. Venugopal a Director and nominee of the Company under which certain Plant and machinery have been purchased by the Company, which Plant and machinery have been taken delivery of by the Company and for which the Company has paid to Government a sum of Rs. 1,69,775 by way of provisional price subject to the adjustment of the final price after the actual cost in worked out by Government under Clause 8 of the Agreement, it being agreed thereunder that the final price is not to exceed 5 per cent of the provisional price.

(*d*) Contract, dated, the 31st day of March, 1942 for the purchase of certain machinery between the Company and Messrs. Rays Machinery Mart and M. I. Corporation Limited of 104, Utaganda Road, Calcutta, at or for the Price of Rs. 66,700.

(B) The following contract will be entered into:—
Agreement dated the.....day of.....to be entered into with the Governor of Bombay (having his office at the Secretariat, Bombay) by the Company in connection with the acquisition of the connection, etc., granted by by Government for the consideration aforesaid in terms of the drafts which has been submitted by the Government as approved by the Company with such modifications as may be ultimately settled.

Copies of the said documents and order may be inspected at the registered office of the Company at United India Building, Sir Pherozeshah Mehta Road, Fort, Bombay, at any time during the usual office hours on any working day.

TECHNICAL ADVISER

7. According to the resolution passed by the Board of Directors of the company on the 17th day of March 1944 Mr. M. Vithal Rao has been appointed as a Technical Adviser during his life time on—

(*a*) Monthly salary of Rs. 300/-.

(*b*) 4½% of net profits of the Company as defined in sub-section (3) of Section 87C of the Indian Companies Act provided however that the total amount of the remuneration payable as per aforesaid two clauses shall not in any event exceed Rs. 1,200/- per month whatever may be the profits of the Company.

The said Mr. Vithal Rao has been acting as a Technical Adviser under the said terms but no formal Agreement of such appointment embodying *inter alia* the said terms has been entered into between the said Vithal Rao and the Company.

The said resolution appointing Mr. Vithal Rao as Technical Adviser may be inspected at the registered office of the Company at United India Building, Sir Pherozeshah Mehta Road, Fort, Bombay at any time during the usual office hours on any working day.

INTERESTS OF DIRECTORS

8. (*a*) Mr. V. L. Venugopal is a member and Managing Director of the Managing Agents of the Company and is interested accordingly.

(*b*) Mr. Vithal Rao one of the Directors of the Company is interested as the Technical Advisor of the Company in the remuneration by way of monthly salary and commission payable to him by the Company as aforesaid.

PROVISIONS IN THE MEMORANDUM AND/OR ARTICLES OF ASSOCIATION

9. The Articles of Association of the Company provide as follows:—

DIRECTORS' QUALIFICATION AND REMUNERATION

(*a*) The qualification of every Director other than the Ex-Officio Directors, Debenture Director or the alternate Director shall be the holding whether solely or jointly of shares of the Company of a nominal amount of

Karnatak Industrial and Plywood Co., Ltd.—*Prospctus Contd.*

Rs. 2,500/-. A Director may act before acquiring his qualification, but shall in any case acquire the same within two months from his appointment.

(b) The remuneration of the Directors shall be a sum of Rs. 30/- per each meeting attended by him or such other sum as the Directors may from time to time fix.

(c) The Directors may out of the funds of the Company allow and pay to any Director who shall travel for the purpose of attending a meeting of the Board or Committee of Directors such sum as they consider reasonable and fair compensation for his travelling, hotel and other expenses, in addition to his fee or remuneration for attending such meetings as above.

(d) If any Director being willing shall be called upon to perform extra services or to make any special exertions in going or residing away from the place of his residence for the time being for any of the purposes of the Company or gives special attention to the business of the Company as a member of a Committee of Directors, the Company may remunerate the Director so doing either by a fixed sum or by a percentage of profits or otherwise as may be determined by the Board and such remuneration may be either in addition to or in substitution of his remuneration above provided. The Directors shall also be entitled to be repaid any travelling or other expenses incurred in connection with the business of the Company.

VOTING RIGHTS AND RESTRICTIONS ON TRANSFER

(e) Upon a show of hands, every member present in person shall have one vote and upon a poll every member present in person or by proxy shall have one vote each for first ten Ordinary shares and further one vote for every ten Ordinary shares and one vote for each Preference share. Where a corporation being a member if present by a proxy who is not a member, such proxy shall be entitled to vote on a show of hands.

(f) No member shall be entitled to be present or vote at any General Meeting either personally or by proxy or as proxy for another member unless all calls or other sums presently payable by him in respect of any of the shares of such member in the Company have been paid.

(g) The Directors may at any time in their absolute and uncontrolled discretion and without assigning any reason decline to register any proposed transfer of shares whether the transferee is a member of the Company or not.

(h) No restrictions are imposed under the Articles of Association upon the Directors of the Company in respect of their power of management except such as are imposed upon them by law.

10. Rs. 5,877-4-0 were paid as commission for subscribing or agreeing to subscribe or procuring or agreeing to procure subscriptions for the shares of the Company during the last two preceding years.

REPORT OF THE AUDITORS UNDER SECTION 93(1) (a) OF THE COMPANIES ACT.

11. We have examined the below summarised statements of the working of the Karnatak Industrial and Plywood Co. Ltd., for three financial years commencing from 12th February 1942 and ending 30th June 1944 and of the particulars relating to the share capital of the Company and found the same to be correct. The expenses are shown in the above statement after adjusting some portion therefrom to the Capital Expenditure, as per note below. As the Company has not made any profits, no dividends are declared on any shares.

Year ended.	Income from Company's working.	Other sources.	Total.	Total expenses including Director's fees and Managing Agents' remuneration (less capitalised).	Losses without provision for Depreciation.	Amount brought forward from previous year.	Losses, Total	Shares Capital & Dividends paid. Paid up capital ordinary shares.	Dividends paid.	5 p.c. cumulative preference shares paid up.	Dividends paid.
For the period from 12-2-42 to 11-7-42	Nil	95-10 (Interest)	95-10	7405-15-9	7310-5-9	Nil		130902	Nil	2350	Nil
30-6-42	Nil	50-10 (Interest)	50-10	4197-2-2	4146-8-2	7310-5-9	11456-13-11	185553	Nil	4100	Nil

Bombay, 18th December 1944.

Sd. Kulkarni & Khanolkar,
Registered Accountants.

NOTE.—The portion adjusted in capital account is as under:—

1941-42	.. .. ..	Rs. 6,182 8 9
1942-43	.. .. ..	„ 15,997 10 10
1943-44	.. .. ..	„ 33,748 7 11
Total	..	Rs. 55,929 11 6

12. Applications for the shares, Preference and/or Ordinary should be made on the respective forms accompanying this Prospectus which may be obtained at the registered office of the Company or at the respective Head Offices of the Bank of India Ltd., Bombay and Indian Overseas Bank Ltd., Bombay, and sent in accordance with the directions therein contained with the remittance of the amount payable on application. Where no allotments have been made the deposits will be returned in full and where the number of shares allotted is less than the number applied for the balance of the deposit will be applied towards the amount remaining payable on the shares allotted and any balance thereafter remaining will be returned.

13. Failure to pay any moneys due on shares allotted when due will render previous payments liable to forfeiture. The shares when issued will be subject to the Memorandum and Articles of Association of the Company a copy whereof can be inspected at the registered office of the Company at any time during office hours on any working day.

14. Attached to this Prospectus and forming part of it is a copy of the Memorandum of Association of the Company with the names, descriptions and addresses of the signatories and the number of shares subscribed for them.

15. Copies of the Memorandum and Articles of Association of the Company and the Balance Sheets of the Company are available for inspection at the Company's office.

16. Aplications will be made to the Native Share and Stock Brokers' Association, Bombay, and the Madras Stock Exchange Association, Madras, in due course, for a quotation of the shares.

Clive Street Gossip

One is apt to relate the various Provincial crises to the national deficiency as regards food. Others are still apt to look upon the food situation as part of the problem to be dealt with by planning when the latter is ready for its own special job. The emergence of differences does not obscure the similarity in origin and scope of merely all Indian problem. Ineffective or incomplete utilisation of resources is generally regarded as the basic cause of poverty in India and the most conspicuous symptom of poverty is the shortage of food for areas and classes. What may be called peculiar to famine is a chronic condition and the remedies that are applicable to this condition cannot be altogether sought from experience alone. Admittedly valuable advice leading to the 1,000 crore plan for Indian agriculture has been obtained but the bearing of reports and memoranda on immediate necessities is not obvious.

* * * *

In this field originality has found full scope but it is not necessary to look beyond the bare bones of the problem to get at its nature. It is always a case of addition to supply. In regard to cloth only the increase in mill output sustained the success of Control. In the case of food procurement so far has taken precedence over distribution though the Grow More Food campaign started in the middle of 1942. In the third year the published results do not correspond to reality since the closely inter-twined problems of high prices and black markets persist against the energetic exercise of authority. Though Government has leaned towards the humanitarian side since 1943 and put food ahead of all imports in respect of shipping space there are awkward corners to be turned Against the familiar view that a Government monopoly of the grain trade and a long spell of rationing would yield all the results wanted may be entered the objection that rationing is not meant for normal times, and supplementary production is more imperative than the perfection of administration. It is in regard to improvement of inspection the addition to storage facilities and improved transport that changes have been promised after a year of food control. These are minutiae in the control programme but the goal must be different.

* *

When the possibility of raising crop outturn by 15 per cent is repeatedly referred to it is admittedly strange to find representations and replies concerning imports. Grain imports were recommended for the immediate crisis of 1943 not as a permanent solution. For, one thing made plain by the war is that Europe will require more and more food supplies from the New World and the East will have to seek self-sufficiency at any price. It is the same problem for China, Japan and India. The second has always been in the grip of a crisis, due however, not to a material gap between supply and demand but to low prices. The first has ample experience of Nature's caprices and if one looks only at recent disclosures China has fared worse than Occupied countries. The three major countries of Asia resemble one another in lack of outlets for emigration, the pressure of peasant agriculture on the soil, and the marked concentration of wealth in large cities. Collectivisation would not be in such cases the most convenient means of maximising the efficiency of land and labour.

* * *

If the Pacific Relations Conference did not go over ground covered at an earlier conference at Hot Springs it is essential to recall that in regard to rice both China and Japan were ordinarily self-sufficient on account of the high yields per acre. It is India with a backward peasant economy that looked for rice to Burma, like Europe, and has found that an assured market for textiles in Burma can be had at too high a price. As in regard to rice India has developed a deficiency in relation to wheat. It would be a mistake to regard this merely as a consequence of the war. For the wheat situation in any year outside the four main exporting countries seldom achieves true balance and it would be hard for India to square an increase in food imports with a fall in manufactured imports in the future. Little attention has been bestowed on the chances of developing Indian agriculture during a period of high prices, guaranteed by a prospect of scarcity in post-war Europe.

* * *

Participation in conferences and organisations has little or no connection with a review of opportunities. But the opportunities must be sought at home and an exportable surplus, destined primarily for an increase in home consumption, and secondarily for relief in special cases, is still the convenient ideal to work up to.

* * *

It is easy to count the bare bones of the agriculture—foreign trade problem in our day. There is no getting beyond the doctrine of self-sufficiency to which the food shortage is linked in every way, not merely because previous independence of imports would have relieved India of the burdens of war but helped the Middle East's point of view, India is merely a source of manufactures and a market for oil and cotton (commodities subject to world influences in many ways) not a source of food, and to that extent India's influence in the affairs of Asia may be limited. The growth of secondary industry in many countries may heighten the importance of trade in raw materials and create conditions so different from the Depression as to defy recognition. In such a context, dependence upon food imports even of canned fruits or fish may prove inconvenient and the most stolid memoranda dwell on what could be done about dairy farming and fruit preservation in terms suggestive of the blandest optimism.

* * * * *

Established importers of food have drastically reduced intake of food during the war and have given agricultural protection a secure basis. The point has not been overlooked in the plans for crop restriction and land reclamation but its main value lies in regard to the future. Tropical or sub-tropical agriculture can no longer afford to specialise, least of all to rely on a guaranteed supply of food from abroad to meet local requirements. In

K. N. DALAL, *Managing Director.*

such a case the direction of development is more important than the targets conventionally set in our Grow More Food plans. The expansion of production was by diversion of acreage from commercial crops raised for export. The more important recommendations as to irrigation and manure are concerned with the enlargement of cereal production while advocates of nutrition largely think in terms of protective foods. But the grain that can be used for feed represents an important addition to food, apart from its probable value in promoting the economic security of traditional markets for food exports. What Japanese occupation has done for Malaya and Java is to cut at the roots of the export trade, not to bring about any drastic impairment of the standard of living unless it be that a shortage of imports has created difficulties of another kind. This may not be readily inferred from tales of discontent in Siam and the Indies but it is remarkable that delegates at Hot Springs have not examined the changes that have put sugarcane among the sources of alcohol and almost destroyed the world trade in rice.

* * *

What lends weight to the argument for self-sufficiency is the problem as solved for the neighbouring countries. S.-E. Asia is logically more attached to China than to India and it requires no excess of imagination to construe the prevalence of self-sufficiency there as an additional argument for getting imports out of the way. Recurring difficulties as to transport by sea are not the only reason for accepting views which were compendiously expressed in a resolution sponsored by the Northern India Chamber of Commerce concerning the food problem at the Associated Chambers' annual session. The resolution of Lala Shankarlal dwelt first on the need for self-sufficiency and secondly on the need for improved distribution. It looked upon imports as temporary and embarrassing, and advocated only a real addition to home production. It took care to insist that rationing and other arrangements were not an end in themselves; and provided one more illustration of how the Indian industrialist today views the question of adding to agriculture's efficiency. Some may look upon the problem as one of organisation or rather of getting the personnel and capital out on to the land. The latter must encounter obstacles for many of the intractable and unalterable characteristics of small scale agriculture are impervious to the expert's handling. It is however not suggested that improvement cannot come from below, if adequate and direct assistance is available. In the Provincial reconstruction plans agriculture is assigned as important a place as may be desired but the means of improvement are not always at the disposal of the promoters of agricultural development. Yet the decay of world trade in food (not counting relief supplies) is the most solid single argument for increased food production. It is not easy to perceive any enlargement of U. S. exports on the score of a recent increase in production and the common view today is that U. S. export subsidy plans for the post-war period are meant for the adjustment of home prices to costs.

The consideration of more conspicuous changes in war leads only to the conclusion that jobs on the land are as important as any. How many can hold down their jobs without difficulty, and what kind of labour reserve, seasonal or other, what sort of security for the landed and landless can be had, are yet queries difficult to solve until the development is actually under way. In so far as high prices make for additions to purchasing power urban industry might count upon expanding markets and give relief to the surplus of materials or men that may arise. Little more can be said with precision except that agriculture would provide the market for fertilisers, imple-

(From Our Correspondent)

NEW DELHI, Jan. 8.

The proceedings of the consultative Committee of Economists attended by about 90 persons which met here last week was wholly preoccupied with the progress made by planning. Almost all members had something to suggest about some aspect or other of planning. The Government's plans are still in a state of undefined purposes. Government planning still suffers from the handicap of a lack of adequate data. As Sir Ardeshir Dalal pointed out "one of the Government's greatest troubles is the absence of statistics and the absence of adequate data and it is not possible within the immediate future to deal with this deficiency adequately". The Government, it was announced, intended to set up a "Economic Brain Trust" for India by constituting a general Purposes Committee of the consultative Committee of Economists. Sir Ardeshir also announced that schemes for a full survey of resources were already under way. The Government intended to greatly increase the strength of the Geological Survey, undertake soil surveys and also have a census of production. Sir Ardeshir expressed the view that "the first priority, barring the immediate period of transition, should be given to capital goods and power". As regards the targets for various industries he proposed to set up 29 panels to deal with the question of development of different industries.

* * * *

Sir P. M. Khareghat, Additional Secretary, Education, Health and Land Department, answered the critics of the Government's agricultural plans. He announced the setting up of a Board of Agricultural Economics to study agricultural employment problems, conditions of agricultural labourers and the effects of land tenure on agriculture. The Government, he said, intended to carry out "experiments in different places in collective and co-operative farming and farming by the State and capitalistic enterprises and see which of them results really in increased production." The Government proposed to set up a land utilisation committee and a committee to enquire into agricultural debt. Dr. Khareghat was of the view that there is no reason whatever to restrict population in India provided we devote our attention to the adequate increase of agricultural production." His disclosure that most of the Provincial Governments were reluctant to undertake enquiries into the land tenure system just now "as the only result might be to embitter relations between landlords and tenants was rateher shocking because this fear of emittered relations might hold up a much-needed reform for ever. Sir Ardeshir however, made it clear that "something or other will have to be done to the system of land tenures and perhaps a systematic enquiry into land tenures in the different provinces is absoultely necessary. Sir Ardeshir did not however indicate as to how long the Government proposed to wait.

* * * *

Opposing views were expressed at the meeting about the scale of Government and public expenditure during the period of transition from war to peace. Sir Ardeshir and most of the economists thought that the current high level of expenditure must be maintained if a disastrous slump was to be avoided. Maintenance of such a high level of expenditure means that the Government must be ready with their development and public works schemes. Some of the economists thought that more comprehensive action was needed than a mere maintenance of public expenditure at the present level if slump was to be avoided. There must be co-ordinated policy regarding Government expenditure, level of internal prices, currency policy and an orderly liquidation of sterling balances. All stressed the need of a more positive Government policy.

* * * *

There is general regret here that while other governments are going ahead with their plans to develop their post-war trade, the Government of India have not formulated any comprehensive policy yet regarding their post-war exports. It is interesting to compare the India Government's apathy with the anxiety of the Dominion Governments to expand their export markets. The Australian Government has already set up a departmental committee to develop export trade. The Australian Trade Commissioner in a recent note says: "Australian post-war trade is likely to be more diversified than at any time in the country's history. The Government's aims, in preparing for the development of post-war trade, will include supply of information to exporters and are designed to place manufacturers in touch with potential importers, to strengthen the Australian Trade Commissioner Service and, where diplomatic missions exist, to appoint commercial councellors for commercial secretaries. Other aims will be to effect lianison between the Australian Department of Commerce and manufacturers in all States in Australia and the development of overseas trade publicity as a means of assisting the Export Marketing Boards to advertise primary products and to assist campaigns undertaken by exporting firms." The Australian Government proposes to review the list of controlled goods with a view to removing restrictions on export where adequate reasons no longer exist and restraining export by the establishment of the cenral point of reference for the problems of exporters." Why cannot the Central Government also take action on these lines? It is pertinent to recall in this connection that while little is being done to push up the country's post-war exports, imports have been steadily going up. The latest figures available show that imports in August amounted to Rs. 17 crores, more than double the amount for July, 1943 whereas the export figure is only a little above that of the corresponding results last year.

* * *

Details about the mission of Sir Akbar Hydari to London show that apart from the question of Civil Supplies, he will discuss several problems connected with military purchases in India on behalf of the British Government, particularly in connection with the Burma campaign and needs arising from the Burma reconstruction programmes. Sir Akbar will be accompanied by the Supply Secretary and a high military official. The Commerce Secretary Mr. N. R. Pillai, who is already in Britain may also join the delegation.

Hill-Bird.

Captain A. N. Bali, M.A., Economic Adviser, The Punjab National Bank Ltd., writes: "The working of the Punjab National Bank for the year ended 31st December, 1944 has resulted in a net profit subject to audit, of Rs. 23,47,239-8-9 (Rupees twenty-three lacs, fourty-seven thousand, two hundred thirty-nine, annas eight, and pies nine only)".

(From Our Correspondent)

BOMBAY, Jan. 9.

With characteristic gusto and energy, Sir C. B. Mehta has been unburdening himself of his impressions about the attitude of U. S. businessmen towards India's economic problems. The Indian delegation of which Sir Chunilal was the leader applied itself to the task of putting forth India's case in unequivocal manner and the Americans, true to their nature, seem to have fully appreciated the point of view of India. Dr. Henry Grady, the author of the shrewd and unpalatable report, which gave the Government of India such an uncomfortable time that it was quietly put into cold storage, has made the remarkable admission that the Indian delegation "not only twisted the lion's tail but made the eagle scream." The opportunity for placing the Indian viewpoint was therefore fully taken advantage of, and it would have been a pity if out of squeamishness or other reasons Indian businessmen had not made the trip. Specially noteworthy was the fact that the Indian delegation even at the plenary session of the conference proposed a rider to the report on the commercial policy of nations to the effect that economic competition by means of export subsidies was not desirable. The rider was passed by a great majority. The subject of cartels loomed large but the Indians stoutly opposed this form of exploitation of the weak by the strong.

* * * *

At a press conference held here on Wednesday, Sir Chunilal brought out a skeleton from the government cupboard when he stated that important persons at the New York conference had informed him that a draft commercial treaty with the United States was sent to the Government of India in 1939, but that after sleeping on it for seven months, the Government of India, for reasons best known to themselves, had regretted their inability to proceed with the subject during the war. Sir Chunilal stated that the U. S. authorities were much surprised by the Indian Government's attitude. Even at this belated hour, he said, a treaty with the U. S. could be negotiated in respect of commerce. Such a treaty would incidentally also remove many of the handicaps under which Indian businessmen were suffering both in India and in the U. S. A. The question of plans would probably depend to a large extent on purchases of machinery from the U. S. The Government of India owe this country an explanation for the unceremonious way in which the offer for commercial treaty with the U. S. was brushed aside in 1939.

Nothing is more significant than the frequency and the number of references both in India and in the U. S. A. to Indo-U. S. post-war trade problems with industrialists, financiers, exporters and importers, this seems to be a foremost thought. The New York "Journal of Commerce" recently seems to have made a reference to the establishment of automobile assembly plants in India and to the forthcoming visit of an important group of Indian businessmen representing the steel, textile, chemical and pharmaceutical industries. Mr. J. R. D. Tata's name has been specifically mentioned. It is well known that the upper ten of Indian Industry have been planning to visit Britain, and it had been conjectured that they would also visit the U. S. A. and complete plans for the purchase of machinery. The tempo of discussion of Indo-American commercial relationship has certainly quickened.

* * * *

It was rather a strange coincidence that Mr. A. D. Shroff in an address to a public meeting in Ahmedabad should also have adverted to the same theme. Only, Mr. Shroff was bold enough to make the suggestion, which many merely prudent men would have been content to regard as being out of court, that the Government of India should raise a loan in America against the sterling balances, in order to purchase capital goods. Mr. Shroff apparently thinks that America would readily advance the loan on the basis of such a collateral, but does America set the same store by it? It is true that the credit of India has risen sky high in the international market, but does Mr S.hroff seriously believe in the feasibility of his suggestion, statesmanlike as it is?

In Madras, the post-war Reconstruction Committee is going ahead with daring and wise plans for the future. Here in Bombay, the authorities believe in going slow but steady. A Post-war Reconstruction Committee would be appointed soon to coordinate the activities of the various authorities in the city so far as post-war development is concerned. Housing, town planning, traffic problems, suburb development etc. will be the subjects the Committee have to deal with. Panels will be set up to advise the Committee on all these. The Committee will include an Adviser to the Governor, the General Managers of the Railways, Chairman of the Port Trust and others from mercantile bodies. The first meeting will come off startly. .

* * *

Reports from piecegoods merchants encourage the hope that, in spite of the tightening of the sales and purchases under the latest phase of textile control, the requirements of traders will be satisfied to a greater extent very soon and that the black market will be extinguished. The quota holders who are now no longer free to sell to upcountry markets have filed the declarations of stocks held by them and are expecting directions from the Textile Commissioner to resume transactions with consuming centres. The several Group Committees should be able to manage sales and distribution on an efficient scale. Some scope has been allowed to the stranded merchants without a quota, as holders of stocks are allowed to sell 20 per cent of their holdings to the former who have a Bombay license but are not retailers. The large margins of the middleman have been curtailed by the fixed prices for the export trade. More and more shops are being opened in large centres to enable retail buyers to satisfy their needs. Meantime, the provincial Textile Controller has got ready the arrangements for confiscating time-barred cloth. A squad of inspectors will be swooping down on the wholesale and retail dealers who have failed to comply with the disposal order. Imports of cloth and fabrics are rising and the arrangements for price fixing and stamping of the same have been completed. An Import Price Committee assists the Provincial Controller in the job. The broad lines of fixing prices for imported cloth have already laid down by the Department of Industries, but the Provincial Textile Controller has given sufficient discretion to fix prices. The Bombay Government have also evolved a yarn quota holders are to place all their stocks at the disposal of the Provinncial Controller who will direct their release. Members of the Yarn Dealers' Association and Yarn Exchange in the city had a talk with Mr. Thakore on the subject. They expressed their approval of the scheme and hoped that the efforts of the government to keep the power and handloom weavers from the starvation line would meet with success. To sum up, the textile position in the province encourages hopes of early improvement, thanks to the series of steps taken by the Central and provincial authorities.

Opening Possibilities for New Industries

ALUMINIUM HYDROXIDE & OXIDE

of very high grade now in production.

● **ALUMINIUM HYDROXIDE:** Used in the manufacture of Aluminium Compounds for textiles, dyeing, paper, printing ink, water purification and as a catalyst in synthesising acetates, tannates, etc.

● **ALUMINIUM OXIDE:** Manufactured in several grades for decolourising and deodorizing solutions, grinding and polishing metals, manufacture of abrasives, grinding wheels and high grade laboratory ware, etc.

● *Sodium Aluminate & Aluminium Sulphate are also manufactured at our works.*

(From Our Correspondent)

Special to "Indian Finance"

Calcutta, Jan. 11.

Stocks of goods in Mill godowns at the end of December were recorded as being 13,977 tons lower than at the end of the previous month. This on the face of it looks extremely satisfactory, were it not that the reduction is almost certainly due to poor production owing to stoppages for lack of coal, rather than to any increase in off-take or to freight being in better supply. The reduction in goods on Commercial account was actually 16,139 tons, but goods on Military account showed, on balance, an increase of 2,162 tons. Of commercial goods, Hessians were lower by 7,736 tons or 268 lakhs yards while Sackings were lower by 8,403 tons or 187 lakhs yards. Stocks of Government Sandbags and scrim cloth were both slightly reduced but other items, Hessian cloth, bags and canvas and Sacking Bags and cloth were all higher. Overhead, the stocks amounted to 169,012 tons at the end of the year of which 30,576 tons or 1,097 lakhs yards represented commercial hessian, 36,532 tons or 1,532 lakhs yards Military hessians, 89,214 tons or 2,139 lakhs yards commercial sacking goods and 12,690 tons or 302 lakhs yards military sacking goods. The aggregate stocks of Hessian cloth were thus 2,630 lakhs yards or 67,108 tons, while the aggregate Sacking stocks were 2,441 lakhs yards or 101,904 tons. It may be of interest to note that over the year, Hessian stocks had declined from 127,000 tons to 67,000 tons, while on the other hand Sacking goods showed a small increase over the same period, from 94,500 tons to 102.000 tons. This is a pretty clear reflection of market conditions, where Hessians have continued in good demand but enquiry for Heavy Goods has slackened off almost to vanishing point. Stocks however have touched the lowest point recorded for nearly 3 years, which must be something of a boon to mills, one of whose chief anxieties these days is to find a sufficiency of storage space, owing to so many of their godowns being occupied for military purposes.

The year has started badly from the coal supply angle. On two days during the past week no coal was delivered at all and on some other days the total was only 10 wagons. Whatever the cause, this is deplorable, and if it were not for the fact that the Mills, of their own initiative and out of their own funds, recompense the labour force for enforced unemployment by reason of stoppages due to this cause, the authorities might be faced with a very serious situation. One might imagine that Governments, both local and central, would be grateful to the industry for saving them the embarrassment of an idle, possibly starving and certainly discontented mass of operatives demanding bread and circuses, and in return would use every endeavour to see that the industry was kept supplied with the wherewithal to keep the labour employed and contented. Far otherwise, the official attitude seems to be. The Jute Industry looks after its own labour force. What we must do is to see that other industries who are not so considerate of their labour are put in a position to keep their labour fully employed so as to avoid any troubles to us resulting from unemployment. The proverb that "Heaven helps those that help themselves" should be modified for Indian conditions to read, "Heaven help those that help themselves". Supplies of coal have been so meagre that even coal consuming "foster" mills have been stopped, so the outlook for coal users on single shift is bleak in the extreme.

A conference between representatives of the Local and Central Governments took place in Delhi this week to decide on the extent of the acreage to be licensed for jute sowings during the coming season. Trade interests were also represented. Up to the time of writing no official information is available as to the result of the conference, though as usual there has been the inevitable crop of Bazar rumours. Whether these are founded on information, or merely on intelligent anticipation, it is impossible to say, but as they vary, they cannot all be right. It is, of course, known that the trade interests would advocate that twelve annas of the registered acreage should be sanctioned, as it is their considered view that, with reasonable prospects of the war in the West finishing this year, the margin of carry-over is already dangerously low and wants to be reinforced out of the coming crop by an ample margin over and above local requirements, so that probable outside demands may be taken care of. On the other hand certain sections of the Bengal Government, obsessed by the idea that any fantastic price is justifiable for jute in present or any, circumstances, and under cover of the "Grow More Food", slogan, have been agitating that the past year's meagre area of reputedly eight annas of the registered acreage should be still further reduced to six annas. The only figures with regard to the Jute Crop which can be relied on are those which record the actual arrivals into Calcutta and these cannot give full information till the conclusion of the season, and even then the carry-over left up-country can only be guessed at. It must be admitted that arrivals are coming along much better now than earlier in the season and are now well ahead of last year. Arrivals for December were estimated to be 6,45,000 bales against 3,16,000 in December 1943. And the total arrivals now amount to 34,04,000 bales for the first six months of this season as compared with 28,65,000 bales for the first half of last season. These figures, however, merely indicate, in our opinion, that shipping facilities have recently been available in much more ample measure. We noted recently that the supply of Railway waggons for jute was much improved, and river transport space has also been adequate to all requirements, with the result that the back-lag of old contracts has been practically cleared and current contracts are well in hand. Consequently it must be taken that no small proportion of the arrivals credited to this season consists really of jute contracted for out of last season's crop but not then shipped. The heavier ratio of arrivals therefore should not be taken as an indication that the current crop is turning out heavier than forecast. It probably is, but to what extent would be dangerous to calculate. If one were to take the present position in up-country markets as a criterion, one would almost be justified in thinking that the crop was at the point of exhaustion, for imports are extremely small even for this time of year. But that is not to say that plenty of jute is not held up in the interior, in the expectation of better prices perhaps, possibly even till the result of the acreage conference is known.

The Fatigue Factor

The ideal length of a working shift for various types of work has been, and still is, a matter of considerable thought and research. The International Labour Office at Geneva has in particular paid a great deal of attention to the subject. Many factors have to be considered in addition to that of the nature of the work concerned. Type of workers, factory conditions, physical strain, mental strain, rest pauses and many others. Of recent years it has been particularly noted that even during a shift well within the physical powers of the workers output frequently falls during the middle portion. Formerly this fall off was termed the 'fatigue factor', but modern industrialists now know that it is not due to loss of physical energy but to falling concentration.

One of the most valuable means of combating falling concentration is tea. Hot tea served to the worker on the job is eliminating the 'fatigue factor' completely in many thousands of factories throughout the world. To those interested in this subject much valuable advice and assistance will be gladly given by the Indian Tea Market Expansion Board, 101, Clive Street, Calcutta.

BOMBAY MARKETS

BULLION

Bombay, Jan. 11.

Gold forward price, which declined from **Rs. 74-9** on Saturday to Rs. 72-14 on Monday **opening** on reports of the fall of Akyab, has **progressively** risen during the week, thanks **to** the Reserve Bank's policy of limited sales **at** lower levels. A strong bull operator **bought** heavily on Monday and helped the market improve to Rs. 73-7 the same even**ing.** A slightly improved offtake and war **news** caused firming to Rs. 74-14 on **Tuesday.** The market is steady to-day at **Rs.** 74-12 despite stocks of 3½ lakhs tolas, **Bank's** sales since Monday were respectively **10,000** tolas at Rs. 74,19,000 tolas at Rs. 72-10, **25,000** tolas at Rs. 74-10 and 14,000 tolas at **Rs.** 74-7. The market is dependent entirely **on** Bank's sales and acceptance rates.

Silver jumped from Rs. 128-6 to Rs. 130-8 **to-day** as a prominent bear was buying **freely.** Two consecutive tenders of 300 bars **were** purchased by him. Stock is 1,500 bars. **The** undertone is steady.

COTTON

Cotton March Contract is quoting Rs. 457 **to-day** on reports of crop damage, owing to **cold** wave. Market favours the construc**tive** approach of the Government. Steady **conditions** are anticipated. Government are **taking** advantage of firmness in upcountry markets and tenders for their cotton stocks **have** been invited from mills. Such tender **rates** may decide the next cloth price fixing.

(*Continued from page* 48)

ments, and packing materials. It is perhaps vain to calculate the limit of expansion but an industry like oil-crushing would attain maturity rapidly if that branch of agriculture is stabilised. Ordinarily it may mean that production of oilseeds would not recover to prewar proportions, but under-consumption is so patent in regard to oils and fats as well as milk that one must resist pessimism in regard to agriculture's possibilities. In regard to limited dependence on outside supplies and immediate capital requirements agriculture offers certain essential advantages from the official view while the traditional view as to maintenance of export trade is met. But few will care nowadays to look for recovery in exports at the expense of consumption and India which has seen how well certain foreigners fare should have concrete ideas of what is meant by a higher standard of living.

* * *

A fortnight is long enough for small investors to make a beginning as regards investment in giltedged; for, one thing that war has really taught us is that giltedged is not the preserve of the institutional investor. Thrift can be diverted advantageously to the giltedged market, which means in this case every post office, to bring security and a regular return on capital within the small saver's reach. In peacetime savings certificates were unknown to India and P. O. cash certificates had a limited appeal. Since June, 1940 it has been an object of Government's borrowing programme to get the support of the small investor, but until 1944 it could not be said that the whole drive had got anywhere. Results for the first half of 1944-45 are however good enough to justify the special effort that started on Monday. Advance publicity in the form of meetings and posters etc. for a national campaign was impressive enough to produce the right effect though until the January figures come out, it may be hard to measure the success of Savings Fortnight.

* * *

The Indian State Railways' publicity has been nothing if thorough but the latest departure in publicity is really one meant to show how the biggest railway works and how human the administration tends to be. Memories of the Central Publicity Bureau's enterprise—the too-arty magazine for foreign tourists—are not revived by the appearance of the East Indian Railway's house organs, for it is meant primarily for the staff and it is meant to stimulate their awareness of things outside. Success is certainly ensured by Sir R. S. Sarma's association with the new magazine. The first number (out this month) fully accords with anticipations as production is equal to the varied and interesting matter—much of it contributed by those who know the Railways from within.

JUTE

(By Our Staff Correspondent).

Calcutta, January 11.

The raw jute market has been quiet with not much of business passing. Mills are inclined to await further developments. In spite of the reports that there has been an improvement in the coal position in recent weeks, the sharp reduction in local stocks for the month of December would appear to confirm the fears of the market regarding a lower level of production with the lack of fuel. Even in the absence of any large-scale buying by mills, prices in the Calcutta market have been fairly well maintained as mofussil centres have been very firm and imports for this time of the year are on a rather small scale. There was some anxiety regarding the decisions of the conference of Bengal and Central Government representatives about the size of crop for the next season. So far no official announcement in this connection has been made, but press reports say that the area under the crop has been fixed at 10 annas of the basic acreage for 1940 as against 6 annas suggested by the Bengal Government. It is said that with the possibility of a large increase in the demand for jute and jute goods in the latter half of the year, a larger crop is needed. But without any appreciable improvement in the coal situation it cannot possibly be expected how the whole of the increase in the crop can be fully utilised. It is interesting to note that so far the reports regarding the possibility of a bigger crop in the next season have not had any effect on the market.

In the loose jute section business passing has been very small with sellers not very anxious to do business. Buyers are not prepared to enter the market unless there is any discount in rates. Sellers are unable to offer any inducement to consumers as there is no possibility of covering their purchases at remunerative rates in the mofussil.

In the pucca bales section export business has been small with Dundee Daisee 2/3 done at Rs. 77 per bale. Mills also purchased this quality at the same price and Lightnings at Rs. 74 per bale. Good business is reported in Rejections.

JUTE MANUFACTURES

(By Our Staff Correspondent)

Calcutta, January 11.

The jute manufactures market is firm with good enquiry for near deliveries. Hessians are in short supply for deliveries this side of March and it is reported that higher rates than the maxima are being offered for immediate deliveries. The reports regarding a lower level of production have been mainly responsible for the strength of the hessian market. Mills have been able to take advantage of the position by compelling consumers to take Heavy Goods so that as in last week some combined business has been reported.

For Heavy Goods alone, however, mills are prepared to consider a slight discount in rates. Hessian prices are at the maxima for positions up to June.

The local stock figures for the month of June should be considered satisfactory as with the latest reduction in both hessian and sacking, stocks are at the lowest level for nearly three years. It is not clear whether the decrease in stocks has been wholly due to the lower level of production. Hessian stocks, cloth and bags, on civil account, were 10.98 crore yards against 13.65 crore yards at the end of the previous month while, on military account, were 15.33 crore yards against 15.35 crore yards. Sacking stocks on civil account were 21.39 crores against 23.26 crore yards and on military account 3.02 crore yards against 2.69 crore yards. Total of hessian stocks expressed in tonnage was 67,108 tons against 73,932 tons and sacking 101,904 against 109,057 tons. Figures are given below:

Total reported stocks of manufactured goods exclusive of Government Orders.

Description.	31-12-1944	30-11-1944
Hessian cloth and bags—		
Yards ..	10,97,55,355	13,65,40,274

N.B.—December stock figures include returns of Gagalbhai in addition to those of member mills but contain an estimate of the stocks of Calcutta, Kedarnath. Katihar and Maheswari Devi. Against these are shown the actual stocks of member mills and Gagalbhai but an estimate of stock of Katihar Jute Mills for the month of November, 1944.

PIECEGOODS

Calcutta, January 11.

The piecegoods market remained steady with good demand for all styles but supplies are not freely available. With the recent intensification of control measures, however, it is possible to get goods at ceiling prices. A drive is being made to unearth hoarded stocks of undisposed goods which were manufactured between August 1, 1943 and January 1, 1944. It is reported that large stocks have been seized in the drive that was conducted in Bombay.

The yarn market has been very firm throughout the week and prices have been fully maintained. There is an acute shortage of all descriptions and it is reported from mofussil centres that a very large number of looms are idle on account of the shortage of supplies. There is good enquiry for fine counts but dealers are unable to meet demand as most of the goods are frozen by the Government.

THIS IS SAVINGS FORTNIGHT

8th to 22nd January

Many years from now, you can look back on this fortnight and congratulate yourself—"That was the time I built the foundation of my fortune, assured my own future, guaranteed my children's education..."

But make certain your savings are SAFE. Invest in Government securities. Here is important information about them:—

SAVE ALL YOU CAN... invest ALL YOU SAVE IN-

NATIONAL SAVINGS CERTIFICATES
You can buy up to Rs. 5,000 worth and encash after 3 years.
You get Rs. 15 for every Rs. 10 after 12 years. *This is equal to* 4½% *interest.* INCOME-TAX FREE.
Available at Authorized Agents appointed by Government, Savings Bureaux or Post Offices.

VICTORY LOAN
Unlimited as to amount purchaseable.
Repayable at par on maturity.
Pays 3% interest.
Always easy to sell if necessary.
Applications received at any Indian branch of the Imperial Bank of India, Reserve Bank of India, Government Treasury or sub-treasury.

Now is the time to Save

MARKET GOSSIP

By "Bear-Bull"

[The following is gossip in the literal sense of the term. The markets sway to and fro not in response to facts and developments, but in response to khabbar, true and untrue and slightly true and largely untrue. "Bear-Bull", right in the heart of the Exchange Ring, will relay, periodically, such gossip as has caused gyrations in prices and changes in sentiment. Ed.—I. F.]

The markets during the week under review were inclined to be easier due to profit-taking by bulls. There is also a feeling in the market that due to rapid expansion of currency that is taking place, the Government of India may try to counter inflationary tendency by either increasing taxation or adopting some other measures. In any case, I now find that experienced operators are advising caution and it will be advisable to liquidate one's holdings in all strong markets and to purchase them back when the markets are weak. From now on till the budget is out of the way I expect a fluctuating market. No sharp rise or fall is expected unless the war situation takes a sudden turn. These expectations are, however, liable to be upset by the operations of that new class of operators to which I referred in my last week's gossip.

There is a Marwari saying that to a man who is born in the month of SHRAVAN everything appears green. This new class of operators, from the business point of view was born in a period of unprecedented prosperity and easy money making. They have no idea that there is something called "Depression" when one is forced to sell one's holdings for a mere song. That there are times when the industries that had been producing money start swallowing it back. They do not know that after the post-war boom of 1920 prices of many shares came down to ridiculously low figures. To give only one instance, the price of E. D. Sassoon United shares which sold up to Rs. 17 per share came down to only about a fourth of a rupee. But the man who has seen these ups and downs cannot go on buying shares blindly without paying any heed to the return and the future prospects of the security.

Returning to the Stock Exchange I find that a certain group of operators is playing a very profitable game to themselves but which will ultimately prove very dangerous for the small and uniformed operators. This group first buys up quietly a fair sized block of shares in a particular concern and then starts tipping all the sundry both here and in other centres that it is good to buy this particular security. Nothing succeeds like success. As this group has been successful in pulling up prices of the securities recommended by them by the sheer weight of their purchases or due to favourable circumstances, the result is that many people now follow them blindly without waiting to examine the relative merits of the shares that they are buying. The large number of underbrokers and assistants who secure business from their clients pass on the tip to their clients and so the ball is set rolling. The group unloads its purchases at a handsome profit and then transfers its operations to another security. But as I have said before, the period of rising prices cannot go on indefinitely. Those who buy blindly will find that they will lose in one deal what they have made in ten.

Sometime back, I recommended a purchase of Bengal Coal, and Equitables. I expected a substantial increase over the last dividend. During the week under review, the Bengal Coal Company has declared a dividend of Rs. 16 for the half-year. Regarding future prospects the directors in their report referring to the question of raisings say: "It is hoped that mining machinery for which your company in waiting will arrive and be put into use during the coming year and that this will have a *beneficial effect on production*. One cannot be wrong in expecting even a higher dividend for the next half-year.

(Continued from previous page)

the possibility of a large increase in consumption in postwar years, the Company has well-laid plans for stepping-up production of cement. Already, one factory is in construction in Chaibasa and sanction has been obtained for extension to two existing plants. On the subject of finance, the Chairman said that existing resources were enough to meet all expenditure. The expectations of the market of an additional capital issue on bonus terms have, therefore, been belied. I remarked last week that having regard to the changes in the balance-sheet during the year there was no possibility of a new issue on bonus terms. My anticipations have therefore been fully confirmed.

* * * *

As regards prospects for the current year it is expected that earnings will be very much higher though with the provision for E.P.T. and compulsory deposits the portion left to shareholders will be such as not to admit of any big increase in dividends. If coal supplies in adequate quantities are available, it can however be expected that the directors would make every effort to increase the distribution to 8 percent the same as for 1941-42 which is the highest in the history of the Company.

* * * *

Forest concessions in North Canara support the claims made on behalf of Karnatak Industrial and Plywood Company published today. Advance information as to the Company's objects and proposals has been provided in this journal, and investors will recognise this as a promising issue with good connections, for the Board combines age and youth, knowledge and experience to ensure early and complete realisation. If plywood rather than timber enjoys a vogue to-day, it is altogether to the advantage of the company which is already established in business and is increasing its capital to expand production, primarily at the instance of the supply Department. Both public and private objects are secured by the extensions to plant decided upon. As the preference shares like the ordinary shares are offered at par, and the earnings cover for the preference dividend exists already, it is clear that the 5 per-cent taxfree preference shares are expectionally advantageous.

* * * *

The House of Jaipuria sponsor a new company formed to set up a cotton mill in Jhalawar State. The Prospectus appearing to-day describes the privileges conferred by the State including exemption from taxes and duties subject to payment of a royaley. The State too is represented on the Board of Sri Bhawani Anand Mills and the important advantages claimed are reciprocated by preference for State subjects in the matter of allotment. The cotton mill industry in Central India and Rajputana is developing and the present issue at par may go down well with the investors in view of the heavy premiums at which most mill shares stand to-day. The shares are of the popular Rs. 2-8 type and the interval between issue and erection cannot be very long as the war situation changes in favour of the Allies. Hope of securing equipment generally for the new mills is sustained by reference to the progress of building construction at Bhawanimandi.

* * * *

Vita-Milk is well set and its maker, National Nutriments, Limited, reports satisfactory growth of business and profits. The Chairman's statement relating to the accounts for 1943-44 refers to the improved results for the year and the generally satisfactory outlook. Dividends on the Ordinary and the Preference shares are recommended in the annual report. There is reference to plans in the making. Manufacture of butter is to follow the acquisition of a dairy herd meant for the making of powdered milk.

Bombay Investors & Indian Stock Exchanges.

TATA STEELS AT NEW HIGH LEVELS

GENERALLY BULLISH OUTLOOK

(BY ANALYST)

Bombay, (*By Wire*).

With the New Year there was boomlike activity in Dalal Street as well as Lyons Range. In Bombay, *Tata Steel* deferreds and ordinaries and *Bombay Dyeings* led the market almost every day. Despite heavy profit-taking the market has registered gains and the closing this week is very nearly the highest touched. A couple of days ago, in the case of Steels the rates touched, namely, Rs. 2,427-8 for Tata deferreds and Rs. 153 for ordinaries, though only for a few seconds, break all the previous records. In the boom of 1937 deferreds touched a high of only Rs. 2,390 and ordinaries Rs. 447. Even last year the high for deferreds was Rs. 2,235 and ordinaries Rs. 435. In view of the meteoric rise in *Tata Steels* genuine investors, I mean holders of shares, have liquidated their holdings this week and I personally feel that this was a wise move on the part of the holders. Speculative activity is, however, on the increase and many professional operators seem to be bullish and are talking of very high levels for Tata Steel deferreds. Apart from the favourable points like inflation and prolongation of war, speculators argue that deferreds have touched a new high level showing that the major trend is bullish. There is a certain amount of truth in this argument but even though the major trend is bullish the rise has been so rapid in the last one month that one would most probably be correct in expecting a technical correction by a shake out ranging from 5 to 10 per cent.

Coming now to the Textile Section, *Bombay Dyeing* have again led the market and touched a high of Rs. 2,017-8 as against a quotation of Rs. 1,900 before the X'mas holidays. Of course, Dyeings touched last year a high of Rs. 2,208-12 and the high touched this year is very much lower than last year's record. But operators are talking that previous highs will be broken. In the case of Textiles, however, it should be borne in mind that the dividends that are likely to be declared in the coming months will be lower than those paid in 1944, I expect a cut of at least 25 per cent. I am unable to understand the argument that these shares—say Dyeings—could cross Rs. 2,200. Since, on the expected dividend basis of Rs. 75, the shares will give an yield of only 3 per cent when the market moves up to that level. The weight of black money in the market might, however, pull up the shares to Rs. 2,100 or so but I would prefer booking profits. As for other textiles in Bombay I would sell out even at current levels, the only exception being Azamjahis and Osmanshahis of Hyderabad State. I would even recommend fresh purchases of Azamjahis and Osmanshahis at current market levels. I hear in the case of Azamjahis that the issue of bonus shares has been decided upon by the directors in their board meeting last month and that they have applied for permission to the Government for issue of shares to the shareholders. Azamjahis are quoting around Rs. 710 and Osmanshahis Rs. 340.

Madras was lifeless and the only two scrips which were active were Buckingham and Carnatic and Maduras. They moved up to Rs. 340 and Rs. 73-8 respectively. Holdings may be retained but there is no hurry to make fresh purchases. I recommend

(Continued on next page)

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, January 12.

After the spectacular rise in prices in the first week of the year slightly irregular conditions have been noticeable on the Calcutta Stock Exchange in the past few days and business passing has been definitely on a smaller scale. There is no weakness, however, and the general undertone is steady. There has been a tendency to realise profits at the higher levels as it was felt that in certain sections, the rise in prices had been overdone. Investment buying also has not been very large. Cotton shares were uninteresting while Coal shares are easier now after being firmer earlier in the week. The Jute section is quietly steady. In the Engineering section prices have been fluctuating around last levels. Sugar shares have firmed up suddenly on the reports that the crushing season started rather well. There is not much business in the Tea section. Among Miscellaneous shares, Burma scrips have been in request with the spectacular progress of Allied troops in Burma.

The giltedged securities section has been quietly steady with business on a restricted scale. In the absence of any investment buying, prices have been barely maintained. 3½ per cent Paper was even quoting below par for a time. The quotation is now fully at par. Among terminable loans, 3 per cent Defence Bonds were Rs. 102-7. 3 per cent 1949-52 Rs. 101-11; per cent 1953-55 Rs. 100-10 and 3 per cent 1963-65, Rs. 99-6. 3½ per cent 1947-50 changed hands around. Rs. 104-6 and 4 per cent 1960-70. Rs. 113. Among Provincial Loans, 3 per cent U. P. 1958 were Rs. 99-6.

Conditions in the money market have firmed up and there has been more demand for funds. It has not been possible for the Central Government to get again its requirements of treasury bills in full. Even the smaller amount of accepted tenders resulted in an increase in the average discount rate to 9 annas per cent per annum.

On the publication of satisfactory earnings by banks for the year ended December, 1944 quotations are slightly higher. *United Commercial* were quoted Rs. 42-8 premium, *Imperial Bank* fully paids Rs. 2,015 and Contributories Rs. 508. *Reserve Bank* were sticky at Rs. 143-8; *Hindusthan Commercial* were done up to Rs. 14 premium.

Cotton shares were a shade easier, the only exception being provided by *Dunbar* with a rise in the quotation from Rs. 315 to Rs. 333. *Cawnpore Textiles* were lower at Rs. 13-12 and *Elgin* Rs. 70-6. *Kesoram* also receded to Rs. 17 from Rs. 17-12 and *New Victoria* to Rs. 7-12 from Rs. 8-1.

In the Coal section speculative activity has been on a smaller scale though there has been special buying of some counters. *North Damuda* were done up to Rs. 19 from only Rs. 16 at the end of last week and *New Manbhoom* Rs. 88 against Rs. 79. The Bird & Heilgers group of shares are a shade easier. *Burrakur* were done up to Rs. 44-6, but the quotation at the time of writing is not very much higher at Rs. 44-10. *Bengal* on the publication of a satisfactory report have risen to Rs. 728 from Rs. 710 while *Amalgamated* were slowly absorbed. There is a rise of nearly 2 points to Rs. 53-6 in the course of a week. *Bhalgora* were lower at Rs. 17-14 while *Bokaro and Ramgur* were unchanged at Rs. 47-1. On the publication of a disappointing report *Deoli* were marked down to Rs 21-14. *Nazira* were firm at Rs. 19-6 while the increase in the dividend for *New Beerbhoom* to 15 per cent. had no effect on prices, the quotation now being Rs. 39-14. South *Karanpura* fluctuated around Rs. 29 and *Talcher* Rs. 11-12. *Equitable* are more than a point lower at Rs. 69-2.

Jute shares have not been active and there is no important change in prices. As a matter of fact *Howrah* are even lower at Rs. 86-5 and *India* Rs. 725 against Rs. 731 while *Anglo-India* were Rs. 482 against Rs. 480. *Kanknarrah* have improved further to Rs. 592 and *Kamarhatty* to Rs. 697. *National* were easier at Rs. 34-13 and *Presidency* Rs. 12-12. After improving to Rs. 74-8 earlier in the week, *Reliance* are now quoting Rs. 73. *Megna* fluctuated within narrow limits around Rs. 127 while *Nuddea* were Rs. 133 against Rs. 135.

In the Engineering section, no further rise in prices has been recorded in Indian Irons. As a matter of fact the quotation is lower now, at Rs. 41-12. Nothing is known regarding the issue of additional capital on bonus terms to shareholders. Steel Corporations, on the other hand are better at Rs. 35-6. There has been some delay in the announcement of the interim dvidend for the last year. The market seems to be of the opinion that the same interim dividend might be declared. *Jessop* and Company, were better at Rs. 25-8 while *Burn and Company*, were unchanged at Rs. 422. *Bhartia Electric* were Rs. 22-4 and *Arthur Butler* Rs. 23-12. *B. I. Electric Construction* improved to Rs. 19-4 from Rs. 18-6. *Kumardhubi Engineering* were quiet at Rs. 10-11 earlier in the week but there is a sudden improvement in the latter half of the period to Rs. 12-12.

Sugar shares, as indicated above, have come in for better attention, *Balarampore* recording a rise of 3 points to Rs. 19-8. *Belsund* were Rs. 17-4 against Rs. 16-4 while *Carew and Company*, were Rs. 30 against Rs. 27-14. *Cawnpore* were 3 points higher at Rs. 42-12 and *Champaran* one point higher at Rs. 40-14. *New Savan* were quoting Rs. 23 against Rs. 20-10 and *Ramnugger Cane and Sugar* Rs. 15 against Rs. 13-4. *U. P. Sugar* were Rs. 31-4 against Rs. 30-4.

Tea shares were quite steady with *Tezpur* at Rs. 21-6, *Eastern Cachar* at Rs. 13 and *Namburnadi* at Rs. 12-4.

In the miscellaneous section, *Bararee Coke* after being higher at Rs. 36, are now quoting Rs. 35-12. There has been greater activity in Cement shares, Assam Bengal being Rs. 1-6 against Rs. 17-12 and Rs. 18-2 against Rs. 17-2. *Alkali and Chemical* were one point higher at Rs. 30-8. *National Insulated Cables* changed hands at Rs. 14-8 and *Midnapore Zemindary* improved to Rs. 185.

Paper shares continued firm, *India Paper Pulp* being done up to Rs. 223 and *Star Paper* Rs. 18-6. *Titaghur Paper* were unchanged at Rs. 29-12. There is a sudden rise in I.G.N. to Rs. 199 from Rs. 189,

(Continued from previous page)

liquidation of the other mills shares even at current market levels.

Burma scrips came in for attention again with *Bombay Burmah* around Rs. 559. *Burma Corporation* were Rs. 4-14 and *Petrols* Rs. 4-5. I look for a substantial rise in Burma scrips on the termination of hostilities.

Bikaner State has come out with a State Bank with a paid-up capital of Rs. 1 crore. Since this is a state bank I recommend investment purchases.

OBJECTS OF THE COMPANY

The Company has been formed with the objects set out in the Memorandum of Association and in particular for the purpose of carrying on business as Cotton Spinner, Linen and Cloth Manufacturers, Yarn Merchants, Bleachers, Dyers, etc.

PROSPECTS

Jhalawar State has got vast resources for development of Industries.

The State has agreed to grant a monopoly to the Company for establishing at Bhawanimandi a spinning and weaving Mill inclusive of dyeing and bleaching processes in respect of Cotton, Wool, Silk, artificial silk and for manufacture of hosiery. Further, the State has agreed to grant to the Company for mill purposes free of charge or at concessional rate land 300 bighas or more at a site chosen by the Company.

The State has also agreed to forego duty, tax or cess in the export from, import into, or sale within the State of Jhalawar of the goods of the Company. In this way the Company shall be able to offer its manufactured goods at a very favourable rate within the State as well as in other parts of India.

MINIMUM SUBSCRIPTION

The minimum subscription on which the Directors may proceed to allotment is fixed at Rs. 5,00,000/- i.e. 50,000 shares of Rs. 10/- each.

AGREEMENT WITH THE JHALAWAR STATE

An agreement between the Government of H. H. The Maharaja of Jhalawar and the Company has been entered upon. Under the agreement the State would grant 300 bighas of land or more for mill purpose free of charge or at concessional rate. No tax duty or cess whatsoever shall be levied by the State on importation of any raw material such as Cotton, Wool Silk, or Artificial Silk, Building Material, Machinery, Plant, Coal, Millstores or any other material for the construction of the building and/or factories or for the running of the mills.

Similarly no tax or duty whatsoever shall be charged or levied by the State on the export of goods or other materials wholly or partly manufactured by the mills and the sale for consumption of such goods within the State are also exempted from any duty or tax.

It has been also agreed that the State shall not charge or impose any Income Tax, Supertax, Surcharge, or Excise duty or any federal tax on the Income or profits of the Mills, their employees

BROKERAGE

The Directors have decided to pay brokerage of As. -/4/- per share for all allotted shares, applications wherefor shall be received through recognised brokers.

DIRECTORS' QUALIFICATION

The qualifications of a Director (other than an ex-officio Director) shall be the holding of the shares in the Company of the nominal value of Rs 5,000/- on which all calls shall have been paid.

DIRECTORS' REMUNERATION

Each Director shall unless otherwise determined by the Company in general meeting, be paid a sum of Rs. 32/- for every meeting of the Directors, he attends.

The Directors, may allow and pay to any Director who for the time being is resident out of the place at which any meeting of the Directors may be held and who shall come to that place for the purpose of attending such meeting, such sums as they may consider fair and reasonable for his expense and loss of time.

If any Director being willing shall be called upon to perform extra service or to make any special exertions for any of the purposes of the Company, he shall be entitled to be remunerated either by a fixed sum or percentage of profit or in any other manner as may be determined by the Directors in addition to the remuneration above provided.

The Directors shall also be entitled to receive by way of additional remuneration a commission of 2 per cent on the nett profits of the Company.

VOTING RIGHTS

On a show of hands every member entitled to vote and present in person or by proxy shall have one vote and upon a poll every member entitled to vote and present in person or by proxy shall have one vote for every share held by him.

RESTRICTIONS ON MEMBERS AS TO VOTING

No members shall be entitled to be present or to vote on any question either personally or by proxy or as proxy for another member at any General Meeting or upon a poll or be reckoned in a quorum whilst any call or other sum shall be due and payble presently to the Company in respect of any of the shares of such member.

TRANSFER OF SHARES

The Directors without assigning any reason for such refusal, may decline to register any transfer of shares upon which the Company has lien, or to a person who has not been previously approved by them.

INSPECTION

The Memorandum and Articles of Association of the Company and agreement entered into between the Company and the Managing Agents may be inspected at the Registered Office of the Company at Bhawanimandi (Jhalawar State). The Memorandum and Articles of Association of the Company and copies of said agreement will also be opened for inspection at Jaipuria House, 51, Vivekananda Road, Calcutta, and at Jaipuria House, Kalbadevi Road, Bombay.

PLACE OF BUSINESS IN BRITISH INDIA

It has been decided to make a Principal Branch Office of the Company at Calcutta and other Branches will be situated at Bombay and Ahmedabad.

APPLICATION FOR SHARES

Application for shares may be made upon the form accompanying the prospectus or a similar form and application money may be paid to the Bankers of the Company and/or at any Jaipuria Concerns or at the Registered office of the Company at Bhawanimandi (Jhalawar State).

In case no shares are allotted, the whole of the deposit will be returned, and if the number of shares allotted is less than the number applied for, the surplus, if any, will be refunded.

Prospectus and forms of applications for shares can be obtained at the Registered Office of the Company or from all Bankers of the Company or from any of the Jaipuria Concerns.

Dated 10th Jan., 1945.

CALCUTTA

Directors' Report and Accounts for the period ending 31st March, 1944

Gentlemen,

The accompanying accounts for the year ending 31st March, 1944 will reveal to you that the optimism resonant in our last year's report has not been in vain and that Providence have not belied our expectations. A nett profit of Rs. 1,75,475-14-11 may not be astounding in itself, but may be taken as an achievement when you take into consideration the fact that all this is on the working of one unit only. Further we had overcome the major difficulty of securing Railway Booking for carrying our product from Benares to Calcutta, the main Sale Station. The new plant referred to in our last report could not be installed to working order before July, 1944 inspite of our leaving no stone unturned in the direction. Naturally the profit though handsome, has not been sufficient for maintaining our previous rate of Dividends.

We recommend the distribution of Dividend in the following way after reserving Rs. 80,000 for taxes etc.

To Dividend account

10% Tax-free Dividend on the paid up capital to all ordinary shareholders who have no calls in arrears as on 31.3.44 25% Tax-free Dividend on the paid up capital to all deferred shareholders who have no calls in arrears as on 31.3.44.

The preference shareholders will get their fixed quota, i.e., 7½% Tax-free dividend with all their dividends accumulated so far.

The present position of the company is really encouraging. The loan taken from Messrs. Bengal Share Dealers' Syndicate Ltd., has been wiped off and not only that our Company now stands as a creditor in respect of the Managing Agency firm and a sum of Rs. 8,000 has been transferred to reserve fund previous terms' Profit account.

The two factories are now smoothly steaming on and the sales so for have exceeded the sales of the outgoing year and now that the milk-season is in full swing we may safely expect to get a production of at least twice this year's sale by the time, the present financial year closes.

Scarcity of packing materials is really the greatest handicap, under which we are to move. The booking difficulty still exists, furthermore 'VITA-MILK' produced at our Dum Dum Factory cannot be despatched outside the province under orders issued by the Provincial Government. Naturally the entire production of the factory must be sold within the province and you shall be glad to learn that we have at present a monthly standing order of 60,000 pounds (i.e., almost the entire production of Dum Dum Factory) of VITA-MILK from different State Railways and Provincial Governments.

The Benares Factory left alone, can hardly cope with even a part of the demand of the rest of the country. Now, gentlemen, let us give you the happy news that another two sets of plants are on way from abroad and by the middle of 1945, the production rate of VITA-MILK is going to be doubled when 4 factories shall be working simultaneously.

Future of the Company is more promising than it was before—this can be iterated, without any fear of making an idle astrological prophesy. Post war planning of the Central and Provincial Governments are going to lay tremendous stress on the Dairy and Agricultural problem of the country and our Company being the pioneer of Dairy industry, is sure to get a reckoning. 'Produce more milk' shall be a slogan of the nation. Dairy Farming and Dairy industry—must be developed side by side for increased production and profitable utilisation of milk. Milk can only be cheaply produced on the countryside and raw milk cannot be transported for city-supply if it is not converted into the handy powder form. Naturally all producers of raw milk for better and profitable utilisation of their produces must depend on people like us people with technical skill and experience or we shall have to take up Dairy Farming in right earnest.

Very soon, your Directors shall be placing before you a plan and scheme for providing ourselves with the raw milk that we in from our own Dairies. Four Factories will require about a Thousand Maunds of m.. daily and that means a capital layout of at least Rupees Fifty Lacs on animals and sheds made on the scientific model. Thus done, the company shall on Milk account alone, save at least Rs. 2,000 (at Rs.2 per md.) daily, that means a saving of about Seven Lacs a year.

Further we intend to take up Butter making in right earnest very soon. Your Technical Adviser is acquainted with the most modern machineries for manufacturing Butter and we are already communicating with our overseas Agents for two sets of this New-way Butter plants.

In conclusion, let us congratulate ourselves that ours is a business, which besides returning handsome to the shareholders, has opened up an entirely new line for accumulating wealth for the country by exploiting resources hitherto ignored. We are not merely a band of participants in a new profiteering scheme but we are serving the country in our might, by producing complete and scientific food for the babies of the country where infant mortality is at its highest, and lack of proper nourishment is invariably the prime cause for this alarming rate. Full return on your investment you will get only on that day when no baby will succumb in its mother's arms for want of nourishing foods. We hope to be reaching that stage when we shall be in a position to offer every baby of the country its full quota of milk at the most accommodating price.

Now gentlemen, we hope, you will join us in thanking the managing agents represented by Mr. S. Chatterji for all that has been achieved by your Company so far. Thanks are also due to the Technical Adviser Dr. D. N. Ganguli for this increased output and the huge demand created by VITA-MILK for its superb quality.

THE MYSORE SPINNING AND MANUFACTURING CO., LTD.

Notice of 64th Dividend

NOTICE IS HEREBY GIVEN that the Directors have determined to pay an Interim Dividend of Rs. 2 and a Bonus of Rs. 4 per share of Rs. 50 for the half-year ended 31st August, 1944. WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

The latest return of Scheduled banks indicated that the increase in the demand for funds had abated to a certian extent and bank deposits were again on the upward trend. But there has been no appreciable change in the conditions in the money market. The recent demand for funds has been mainly on account of cotton and sugar. In the absence of any net increase in the working capital of banks, over and above the increase in advances, the Central Government has naturally been unable to get its requirements of treasury bills in full and for three weeks in succession only a very small proportion of the offer has been accepted. Even on the small amount of accepted tenders an increase in the average discount rate had to be conceded. The yield on treasury bills this week is thus higher at 9 annas percent per annum against 8 annas 8 pies percent last week. The offer for next week has been maintained at Rs. 6 crores. The total amount of applications this week was very much lower at Rs. 1.39 crores. The amount accepted was Rs. 1.24 crores against Rs. 1.41 crores last week. The offer for next week has been maintained at Rs. 6 crores but it is very doubtful whether under present conditions it will be possible for the Government to get the full amount.

The seeming unwillingness of institutions to place their money in short-term bills in the face of continued expansion of currency, is not quite understandable. Neither the absence of any large increase in both Demand and Time liabilities of Scheduled Banks. Normally, one would have expected that with treasury bills maturities equal to the amount of offer, there would have been no difficulty whatever in respect of short-term borrowing. As was pointed out on an earlier occasion the money market is passing through an interesting phase and it would be worth while to watch the developments in the next few weeks. The intensification of the Savings drive at the present moment is to be welcomed. A large amount of money has gone into circulation in recent weeks and the only way of absorbing money from the small investor will be by the inauguration of a Savings fortnight as has been done by the Government authorities. The success of this drive will give an indication of the general mood of investors.

The return of the Reserve Bank for the week ended January 5, 1945 shows an increase in total note issue by Rs. 9.21 crores to Rs. 1,030.46 crores, there being expansion of currency by Rs. 10 crores against sterling securities. The increase in notes in circulation is even more pronounced, the latest figures being Rs. 1,021.01 crores against Rs. 1,009.6 crores. Sterling securities are higher by Rs. 10 crores at 914.33 crores but there is a decrase in rupee coin to Rs. 13.8 crores from Rs. 14.68 crores.

In the banking department, Central Government balances are lower by Rs. 10.33 crores at Rs. 231.2 crores, due perhaps to the month-early disbursements but Other Government accounts have increased to Rs. 16 69 crores from Rs. 12.56 crores. Bank deposits are sharply lower at Rs. 67.71 crores against Rs. 75.91 crores while Other deposits have continued to increase. Foreign balances have declined to Rs. 332.68 crores on account of the transfer to the Issue Department the net receipt of sterling during the week being Rs. 60 lakhs. There is a decrease in the amount of investments held by the Reserve Bank to Rs. 14.8 crores from Rs. 16.08 crores.

The statement of the Imperial Bank for the same week shows a decrease in deposits to Rs. 233.03 crores from Rs. 234.22 crores. Investments were higher by Rs. 90 lakhs at Rs. 149.83 crores while advances declined by Rs. 56 lakhs to Rs. 63.53 crores. As a result of the increase in investments and the decrease in deposits, cash balances have declined to Rs. 31.11 crores from Rs. 32.28 crores.

The statement of scheduled banks for the last week of the year 1944 is now available. It is rather satisfactory to note that the latest increase in Demand liabilities puts the total figure at the highest level for the year. It should be said that the decline in Time liabilities by over Rs. 2 crores was to a certain extent unexpected. Demand liabilities on December 29, 1944 were Rs. 616.09 crores against Rs. 605.9 crores, an increase of over Rs. 11 crores. Time liabilities, on the other hand, were lower at Rs. 202.92 crores against Rs. 205.12 crores. Cash balances were Rs. 32.47 crores against Rs. 28.99 crores while balances with the Reserve Bank were Rs. 73.6 crores against Rs. 75.73 crores. Advances have improved by over Rs. 7 crores to Rs. 235.8 crores. Bills discounted also showed a small increase to Rs. 13.41 crores from Rs. 13.11 crores.

It will be interesting to make a study of the progress made by Scheduled Banks in the past year now that the full figures are available. Demand liabilities increased by Rs 116.27 crores to Rs. 616.09 crores and Time liabilities by Rs. 45.6 crores to Rs. 202.92 crores. Against the increase in the working capital by Rs. 161.91 crores, advances and bills discounted were higher by Rs. 80.61 crores at Rs. 248.21 crores while total cash balances decreased by Rs. 10.13 crores. Investments by banks, which must be mostly in giltedged securities, were thus Rs. 91.43 crores. In 1943 there was an increase in the working capital by Rs. 209.33 crores but advances were higher only by Rs. 66.68 crores. As banks wanted to build up an impressive cash position, there being an improvement of Rs. 55.06 crores in total cash balances, total investments amounted to only Rs. 87.59 crores. It would thus appear that even with a similar increase in the total amount of working capital, there has been no slowing down in the rate of investments of Scheduled banks.

The exchange market has continued steady with a good number of export bills.

Bank's buying 90 days/St. at 1s. 6¼d., for 1 and 2 months; Bank's buying 90 days/St. at 1s. 629/32d., for 3 to 6 months.

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

There has been a further increase in the demand for funds particularly on account of sugar and cotton, but there are signs that the peak period has been passed and that in the next one or two weeks it will be possible for the Central and Provincial Governments to get their requirements of treasury bills in full and at cheap rates. Call money remains unchanged at ½ per cent in Calcutta and ¼ per cent in Bombay. At the auctions of treasury bills held this week, the amount of applications was higher at Rs. 3.28 crores against Rs. 1.39 crores, but the total amount of accepted tenders did not show a corresponding improvement, being only Rs. 1.58 crores against Rs. 1.24 crores. The average discount rate was unchanged at 9 annas per cent per annum. The fact that applications have been on large scale and it has been possible to get a larger amount at the same rate suggests that banks have now surplus funds to be placed in short-term bills. The Bengal Government is asking for Rs. 5 crores of treasury bills and the Assam Government for Rs. 2.5 crores. The offer of the Central Government for next week has again been maintained at Rs. 6 crores.

The returns of the Reserve Bank for the week ended January 12, 1945, shows a further increase in notes issued, the latest figure showing a rise of Rs. 9.12 crores to Rs. 1,039.59 crores. There is a similar increase in notes in circulation to Rs. 1,030.13 crores from Rs. 1,021.01 crores. Expansion of currency has been affected against sterling securities for Rs. 10 crores, the total under this head in the issue department being Rs. 924.33 crores against Rs. 914.33 crores. Rupee coin has further declined to Rs. 13.01 crores from Rs. 13.88 crores.

In the banking department, Central Government deposits have sharply improved to Rs. 256.37 crores from Rs. 231.21 crores mainly as a result of the receipt of large sterling balances during the week. Other Government accounts, however, have declined to Rs. 10.53 crores from Rs. 16.69 crores. Bank deposits show a small increase to Rs. 68.72 crores from Rs. 67.71 crores as also Other deposits to Rs. 21.44 crores from Rs. 21.03 crores. Balances held abroad were Rs. 19.42 crores higher at Rs. 352.1 crores even after the transfer of Rs. 10 crores to the Issue Department. There is a decline of nearly Rs. 1 crore in investments to Rs. 13.81 crores.

In the six weeks ending January 12, there has been an expansion of currency by Rs. 53.71 crores and almost the whole of this amount has gone into circulation. In the same period Demand liabilities of scheduled banks have decreased by over Rs. 5 crores to Rs. 606.9 crores while Time liabilities are only Rs. 2½ crores higher at Rs. 204.02 crores. Advances and bills discounted were higher by Rs. 29.52 crores. So that use has been found for as much as Rs. 75 crores in the short period of six weeks. What exactly is the reason for such a large absorption of currency and a sudden spurt in loans and advances is not quite clear. If these conditions continue to obtain further large additions to currency cannot be prevented especially as payments in sterling have been very large and the increase in total balances is as much as Rs. 62.85 crores.

The statement of the Imperial Bank for the week ended January 12, 1945, shows a further decrease in deposits to Rs. 228.73 crores from Rs. 233.02 crores. Investments are Rs. 3.1 crores lower at Rs. 145.72 crores while advances show a rise of over Rs. 1.2 crores to Rs. 64.96 crores.

The statement of the scheduled banks for the week ended January 5, 1945, reveals that the rise in Demand liabilities in the previous week was temporary there being a drop of over Rs. 9 crores to Rs. 606.9 crores in the latest figure. There is, however, an improvement in Time liabilities by slightly over Rs. 1 crore to Rs. 204.02 crores. Cash on hand have decreased to Rs. 30.29 crores from Rs. 32.47 crores as also deposits with the Reserve Bank to Rs. 67.02 crores from 73.6 crores. Advances were Rs. 5.2 crores higher at Rs. 241.0 crores while bills discounted were Rs. 73 lakhs higher at Rs. 14.15 crores. With the increase in advances and bills by Rs. 5.94 crores and the decrease in working capital by Rs. 8.09 crores there should have been a decline in cash balances by over Rs. 14 crores. As total cash, shows a drop of only Rs. 8.75 crores it should be said that excess of treasury bills maturities over sales has been very useful. There might also have been some realisations of investments. In this connection it is interesting to note that in the three weeks ending January 12, 1945, there is a decrease in investments of the Imperial Bank by nearly Rs. 5.5 crores. It is not clear whether the whole of this decline was due to maturing treasury bills. If that were the case, one would have expected the Imperial Bank to have shown greater interest in treasury bills auctions in recent weeks.

Call money quoted ½ per cent in Calcutta and ¼ per cent in Bombay. 3 to 5 months ½ per cent; 6 to 11 months ¾ per cent and 12 months 1¼ per cent.

White House Busy with Post-war Monetary Plans

Washington, January 16.

In Washington the President conferred with Mr. Stettinius and Mr. Morganthau although neither would comment on the talks thereafter. The President had seen earlier the Chairman of the Senate Banking Committee, Mr. Robert Wagner, who will present the Administration's case and also be a delegate to the monetary conference. Other Whitehouse callers who said they discussed "international economic matters" were Mr. Eric Johnson, President, United States Chamber of Commerce and Mr. Winthrop Aldrich, President, Chase National Bank and President, International Chamber of Commerce. Mr. Aldrich proposed that Bretton Woods measures be thrown out and key countries approach be adopted. Mr. Roosevelt in his message said that a programme for monetary financial co-operation at an early date was essential. He therefore said, "The need for international investment is already becoming acute." He spoke of the needs of liberated countries for reconstruction and longterm developments in various parts of the world. Other administrators also last week spotlighted this need and listed three fundamental propositions sponsored by the Executive. Firstly, the earliest adoption of international monetary bank proposals, secondly, expansion of the lending powers of the United States Export Bank and thirdly other means of making credits available specifically for the purchase of United States goods.

The Administration at Washington is preparing to press further the efforts to win Congressional endorsement of the Bretton Woods Act. Last week the stage was set in Mr. Roosevelt's Budget message to Congress. He has called for eighty-three billion dollars in his Budget for the next fiscal year in which seventy billion dollars are for war expenditure. Mr. Roosevelt, paradoxically, devoted only about one-fourth of the message to war expenses. Such expenditures as will become necessary in the next eighteen months were admittedly difficult of prediction and having outlined them as accurately as possible at the moment, the President turned his attention to problems of finance which was to be dealt with on the approach of peace and remobilisation of civilian economy. This is described in Bretton Woods measures—Bank and Fund—as "the integral parts of the broad programme for co-operation among the United Nations in those areas of economic co-operation where the failure to adopt common policies will result, in spite of economic fences, in economic waste and economic warfare." Earlier in the week the President held conferences with principal Congressional and departmental leaders who were concerned with economic and financial matters and it was assumed that Bretton woods and the methods of presenting the case to Congress were taken up.

The Bombay Plan—Part II

The Second Part of the Bombay Plan, which the public was expecting for some time, will be welcomed widely as both opportune and apposite. With the first part of the Plan, its authors rendered the inestimable national service of teaching the public to regard planning in concrete terms of minimum standards of living and doubling the per capita income in a specific period. And what is even more remarkable, considering the political status of the country and the propensity of public opinion to sterile distraction, the authors of the Bombay Plan succeeded, alike by the soundness and simple intelligibility of their proposals and by their standing in our public or business life, in making planning practical politics. More could hardly be achieved by a single pamphlet; in fact, to attempt more might conceivably have jeopardised the achievement that now stands to their credit. By minimising room for controversy and widening as much as possible the appeal of the aims they set before the country, they assured their Plan of almost universal acceptance. But the Plan has not suffered from lack of criticism, and even opposition. The fact that the signatories are drawn from front rank business and industrialists is a provocation to suggest that the motive behind the Plan is the further enrichment of the rich rather than the amelioration of the poor. It was likewise suggested that industry and not agriculture was meant to be the primary beneficiary of planning. Such criticisms. though not the necessary offshoot of rival plans, have determined much of the contents of the Second Part of the Bombay Plan. But the Second Part must be judged by what was promised in the first part and by what may be deemed to be the need of the present stage of the evolution of planning rather than by the general need to answer the criticisms made during the last one year.

In the first part of the Bombay Plan, the authors stated clearly both their immediate purpose and the purport of the second part:

> Our object is merely to put forward, as a basis of discussion, a statement, in as concrete a form as possible, of the objectives to be kept in mind in economic planning in India, the general lines on which development should proceed and the demands which planning is likely to make on the country's resources. It contains no reference to such essential matters as the organisation methods and technique required for carrying out a plan. For instance, neither the problem of distribution, which is vital to any scheme for raising the standard of living, nor the allied question of the control to be exercised by the State over economic activities are discussed in it. These matters, the importance of which is fully present to our minds, are at present under examination by us. The results of this examination will form the subject of a separate report which we hope to issue at an early date.

It may be inferred from the above that the Second Part would be devoted to a discussion of the organisation methods and technique, the problem of distribution and the allied question of State control over economic activities. To some extent these three questions are inter-related; but they are separable and call for separate treatment. The authors of the Bombay Plan have, however, chosen to overlook the first question and address themselves to the more closely allied problems of distribution and State control. How far this is a matter of choice and how far it has been forced on them by the trend of adverse criticism, it is not easy to say. Indeed, we are left guessing as to how, in their own opinion, the authors of the Bombay Plan stand in relation to the progress of planning in India. The fact that at present no further publication is promised suggests that they have done their part in giving the cause of economic planning in India a good and sound start. No body of private individuals, however eminent, can do more than state the broad objectives and the broad principles of planning. The choice of Sir Ardeshir Dalal, one of the signatories to the first part of the Bombay Plan, for the Reconstruction portfolio of the Viceroy's Council absolves them of the responsibility of further developing the Plan, in detail; that is, to the extent that it is suggestive of a broad common ground between the authors of the Bombay Plan and the Government of India. However that may be, the main purposes of the Second Part must be to consolidate the general support which the first part had gained for the Plan, by clarifying doubts, correcting misapprehensions and giving the lie to such misrepresentations as the opponents of the Plan may have made. By doing so. the signatories complete the task which they set themselves, by setting forth principles, which will command the widest objectives and by indicating the kind of co-operation between the State and private enterprise which will provide a working compromise between the rival social ideologies which have torn other countries asunder and which should bewilder the Indian public all the more because of their strangeness.

Judged by this criteria, the Second part of the Bombay Plan may already be pronounced a remarkable success. It not only takes the wind out of the sails of sentimental or histrionic leftist criticism, but it commits the foremost industrialists of the country to an acceptance of far-reaching inroads into private capitalism over which their compeers in other countries are yet to make up their minds. The authors of the Bombay Plan have declared themselves unequivocally against serious inequalities of income; and it is worthy of note that, if they are in favour of giving private enterprise a wide scope, it is not so much out of ideological bias, as for reasons of practical expediency. Their observation on the recent trends of democratic capitalism and totalitarian communism to discard some of their pet principles and make a nearer approach to each other deserve to be studied with special care by that large body of the intelligentsia in India which is familiar with the vocabulary of communism but has had little time to judge its meaning and content. Inequalities, whether in political, economic or social life, are a function of the worth and stature of the average man more than of the malevolence of men in power. In a country like India where economic progress has to start from scratch, a premature and uncritical worship of equality can only pave the way for cynical dictators and tyrants in every rung of social and political power. No true equalitarian will thus cavil at the proposal of the Bombay Plan that, while nothing should be done to forego the motive power of private profit or advancement, the whole fiscal system and the system of economic controls must operate towards narrowing the disparities of wealth and income. The concrete proposals to this end are the adoption of death duties, with levies rising according to whether the inheritance passes to a second or third generation. progressive taxation with a further emphasis on the distinction between earned income and income from property, State control of industries varying according to circumstance, limitation of dividends and control of price policy in the light of expert cost accounting.

The proposals are sufficiently radical to disarm most of the leftist critics of the Bombay Plan. The point has, however, been made that the Bombay Plan is biassed in favour of industry and to the detriment of agriculture and the agriculturists. Apart from the need to answer this criticism, the place of the agriculturist in a plan in which industrial development inevitably looms bigger is a subject calling for special attention. The Second Part of the Bombay Plan deals with this mainly as a problem of distribution. Here, as in industry, there is a class problem to be dealt with in the first instance. The Bombay industrialists are in favour of the proposals which have been familiarised in Bengal by the Floud Commission. The system of land tenure has to be revised so as to bring the actual farmer more directly in touch with the State, the Zemindari intermediaries being slowly squeezed out of the organisation of our agriculture. Such measures, however, are only in the nature of clearing the deck for the attack on agricultural poverty. Real improvement in the lot of the agriculturist can come only with the increased yield of land and by measures which are calculated to secure for his products. These measures have long been part of the common pool of ideas regarding the improvement of the agriculturist. Multipurpose co-operative societies, the dissemination of information about prices, the provision of storage and finance to enable the farmer to hold out for the best price, these have secured general support. The Bombay Plan goes further and recommends regulation of prices in consideration of the cost of living of the agriculturist and the provision of a National Relief Fund which will cushion the effects of a crop failure or similar calamities on the wellbeing of the average cultivator.

The fullest success of the measures referred to above will, it will be recognised, still leave a part of the problem of the agriculturist unsolved. For this springs from the fact that cultivation is a seasonal vocation and cannot give full employment to the cultivator. Even the fixation of minimum wages for agricultural labour can do little to bridge the gap between rural and urban wages since the period of employment varies so vastly. The Bombay Plan suggests the introduction of mixed farming, cultivation of more than one crop and the provision of subsidiary industries. It is to be regretted that the corollary of the last mentioned is not explicitly recognised. If the cultivators in India are to ply a number of subsidiary occupations with profit to themselves and to the rest of the community, then our policy in regard to industrial development must leave scope for production of an industrial kind by individuals who are cultivators by their primary vocation. The authors of the Bombay Plan probably envisage the organisation of these subsidiary industries on lines comparable to those adopted in Japan and China, when they emphasise that capital equipment per individual worker must be maintained at a low figure. However. it is well to have it widely recognised that industrial development is not to lead to the wiping out of the rural industries which are essential for pulling up the standard of living of the agriculturist.

As regards organisation methods and technique, it is not surprising that the authors of the Plan put great emphasis on the importance of constituting an Indian Economic Service, the members of which will be equipped with the knowledge and training essential for administering the complicated system of controls. Such a service is the necessary preliminary to the assumption by the State of wide responsibilities regarding the direction of the nation's economic life. But, we are relieved to note, the Second Part of the Bombay Plan puts less emphasis on controls as they affect the common consumer. On the other hand the authors of the Plan are more concerned to stress the importance of freedom and aver that a democratic framework of society and active pursuit of planned development are not incompatible. The reconcilation is sought in the willing acceptance of controls by the public and in the indubitably representative character of the Government which lays down the objectives of the Plan and the restrictions necessary for their effective realisation. The antithesis between freedom and organisation is eternal; and only the robust commonsense of the common people is competent to effect a shifting adjustment of their rival claims. Of the fact of our backwardness and the need for organisation, there can be no question. And there is even less scope for doubt that the people must be prepared to pay the price of progress. What is apt to be forgotten is that, while the expedients of organisation may fill the armoury of demagogues, planning is a handy pretext for the worst forms of social tyranny. The Second Part of the Bombay Plan holds out the hope that unlike in politics, in the economic sphere our leaders have the eye for essentials and the gift for quick and graceful compromise. That, if nothing else, should augur well for our economic planning of the future.

Shipping Plans and Problems

The strong revival of popular interest in shipping policy after the war proceeds from a knowledge of what is contemplated as regards pooling of resources during the transition to peace and Allied intentions as regards enemy shipping. National ambitions are again formulated with an eye on the future and these determined the outline of what is possible (rather than probable) presented last month by the Commerce Member. Though it cannot be said that the conference at Bombay resulted in preliminary agreement, reiteration of the views recorded in the Second Report on reconstruction makes it clear that considerable expansion and improvement is desired. The delegates to the conference have to wait for another meeting in April to find whether their own views have made any impression on the authorities. It is, however, important to note that prescriptions as to ways and means of enlarging the mercantile marine have appeared betimes. In any case the consciousness of weakness has proved a spur to action. The maritime Indian States apparently share the views expressed regarding the development of an adequate fleet to serve overseas commerce. The British Indian delegates' views were more than endorsed by Sir C. P. Ramaswami Ayyar who must have remembered the promises made in 1932 and 1933 concerning the adequate development of the Indian shipping industry by the Central Government.

During the war period the dependence of India's trade upon foreign shipping has proved a source of weakness. It is not surprising that opinion as to the development of both shipping and shipbuilding has now taken a definite form as may be inferred from the speeches made in December at Bombay. At the outbreak of war India had 30 ships totalling less than 150,000 tons. In the view of naval chiefs India can and must develop the mercantile marine as a second line of naval defence. But the ships when they come must count upon employment, and for this purpose, the Policy Committee advocated acquisition of an adequate share in the near trades in addition to an increased share in coastal trade which at present is less than 25 per cent or varies between 20 and 30 per cent, to quote the latest official estimate. The last war gave India no chance to get going as a maritime nation. The Central Legislature set up committees to review the problem but the only results were the establishment of a training ship and an award as to the sharing of coastal trade.

For the situation during the war when control has led to major changes the Government cannot disclaim the responsibility. From the hints as to postwar policy there are definite objects to pursue and the aims concerning a share in trade with the Orient and Europe are sufficiently precise to give Indian shipping greater scope. Shipping, both riverine and ocean-going, is required to deal with the increase in traffic. Organisation of country craft has proved useful in recent years to make a demand for its retention after the war intelligible. In the two paragraphs of the report referred to setting out the limits or lines of development the positive claim as to an increased share in coastal and oceanic trades recur. Britain's shipping industry has extracted assurances from the Government regarding replacement, and has prepared to deal with problems of competition. The shipping industry in Britain has set out the case against subsidies while propounding its own views as to replacement of lost tonnage. Indeed the General Council of British shipping has looked beyond the pooling arrangements for the transition to the restoration of a powerful marine able to hold its own against the greatly expanded fleet of the U.S.A. A claim as to diversion of surplus tonnage for the benefit of India and other backward countries has been advanced even as it has been said that independent plans for the purchase of U. S. ships are under consideration both by private interests and by the Government.

There is no way of indicating the proportion between new construction and war losses or of evaluating its effect on postwar shipping policy. We are not immediately concerned with the disposition of the surplus for the benefit of Norway or Greece; countries which ordinarily depend to a considerable extent on their shipping rather than trade but with the means that should be adopted for the realisation of the fairly precise objectives—an enhanced share of the carrying trade for Indian vessels. A rigid definition as to Indian has been supplied by Mr. Walchand Hirachand in his speech to the Postwar Shipping Policy Committee but it will be agreed that his arguments relating to previous mistakes on the part of the Government have greater force than his citation of requirements. Indian shipping could not cut into the oversea carrying trades and had to take an award as to the Haj traffic. These unfortunate experiences certainly justify conclusions as to Government having developed something worse than actual indifference to Indian shipping. But what has been said by the Commerce Member about consultation again with official and non-official interests should suggest that the control would not only be relaxed but adapted to the development of a mercantile marine. It has been duly made known that Indian shipping has to receive due compensation for its wartime sacrifices and the kind of reward sought has the merit of conforming to what has been said about a substantial share for Indian shipping in the near trades and a fair share in the Atlantic and Far Eastern trades. The most interesting claim made in this behalf is that shipbuilding in India is now a full-fledged industry but is not allowed to build ocean-going ships. Elucidation of this charge, and its grounds, will certainly be required before the next meeting for one of the non-contentious conclusions reached after the meeting in December is that India must build rather than buy ships in the future.

During the Bombay discussions little was said about what the State could do. Dominion example in regard to shipping and shipbuilding was passed over (not inadvertently, we hope). A national maritime commission empowered to deal at the outset with the tricky problem of reservation of coastal traffic would be welcome for the reason that its motives and policy would not be challenged by the vested interests against which many tilt. Shipping is still a business that can be run on safe routine lines if the initial large investment can be made, but we may note in passing that the shipping Policy Committee excluded altogether the acquisition of vessels by the State. A State line indeed would leave no room for controversy over mail subsidies or the conduct of ancillary air lines. But the maritime Indian States would look for a share in this case, and if their own example offers some guidance at present it is not yet clear how they would accept British Indian predominance in the matter of State shipping. As transport is nationalised to a large extent, it may be possible to reconcile all just claims with the requirements of the future. There is an insistent need for development. There is a surplus of Allied tonnage to be disposed of rapidly after the war. There is also the capital that can be invested in an industry with tangible postwar prospects. To these favourable conditions may be opposed the usual arguments for freedom of enterprise, but attention must be drawn here to the lack of any private plants for development beyond the trite demand for special protection. It is useful to add that combined ownership of steamers and railways is not uncommon, and any special encouragement to local shipbuilding that may be given could certainly be expected from a semi-public, statutory corporation. Departures in State control and operation, over and above the necessities of war, deserve study owing to the real difficulty of acquiring ships from abroad unless the demand emanates from the Government. Under State auspices the shipping industry's accelerated development would not excite disapproval from any quarter and the nucleus of a control organisation already exists for vessels on the Indian register are not subject to outside authority at present. Given the conditions that may exist after the war, it would be preferable to rely on State organisation in this case, and the semi-independent status given to the Railway Board indicates how an organisation should take shape in this case.

Editorial Notes

September Trade Returns

The growth of India's import trade is certainly indicated in the totals for the six months ending September. It is only in the last month of the half-year that re-exports were considerable. Imports in the six months April-September amounted in value to Rs. 93.9 crores and exports were valued at Rs. 114.3 crores. The totals under both imports and exports show an increase on the comparable periods of 1943 and 1942. The increase in imports from the U. K. during 1944 has directly contributed to an increase under exports while imports from Britain and the Empire have increased by Rs. 12 crores as compared with 1943. Imports from April to September from foreign countries have risen by Rs. 29 crores nearly but of this increase Iran claims by far the largest share. Imports from Iran valued Rs. 18 crores exceeded imports from all other countries trading with India. Increased takings of goods from the U.S.A. account for the substantial increase under imports as well as exports in the first half of 1944-45. The figures for seaborne trade in September, however, show that the rest of India's markets are still of limited importance for the latest totals are Empire Rs. 72 crores and Other Countries Rs. 37.2 crores. It may be added that India imported Rs. 56.16 crores worth of goods from non-Empire countries so that the balance of trade is negative. The increase in imports from Egypt and Iran does not however appear unusual as India is now an importer of essential raw materials although her own imports of manufactures rose by Rs. 8.68 crores owing to increases under machinery, cutlery and hardware, chemicals and medicines. It may be noted here that the recent increase under Imports is mainly under the heads, food-grains, mineral oil and raw cotton which are needed by India at present. The increase under exports points to the recovery under cotton and shellac but little else. On the other hand, increases under exports of jute manufactures and cotton yarn and piece-goods in 1944 appear to be substantial .In view of the paper economy orders in force the increase under paper and stationery exports will attract notice suggesting as it does that essential exports are permitted. The decrease under imports of raw wool is less important than the increase under exports of wool and woollen goods from India. Regulations relating to rationing have evidently helped to raise the export total. Owing to the increase under cotton and jute manufactures referred to, tea takes the third place among India's exports at present. The most welcome indication provided by the returns is that manufactures accounted for nearly 60 per cent. of India's export trade in April-September 1944. The increase under raw cotton is significant, but far more significant is the increase under exports of Indian rubber manufactures. In the export trade figures is found a clue as to canning progress as considerable increases are noted under fish, fruits and vegetables. The slight increase under coal exports is of little consequence as compared with the increase in production since June last.

Universal Changes

Graphs to illustrate the rise in the cost of living and wholesale prices since July 1938 published in the League of Nations' statistical bulletin show that in a country of inordinately high prices dependent on a single export industry prices have risen least. In Venezuela, the rise in four years was limited to about 25 per cent. while the rise in China was infinitely greater. For most countries, the real rise started only in 1942 but inflation was more acute in Turkey and Iran than Egypt and India. Neutrals shared the experience but in their case the cost of living rose to a less extent than wholesale prices, while it was the other way about in respect of Palestine and Iran. Superficially, Germany has remained immune from the familar effects of scarcity and additions to currency. More distinctive is the U.S. record which shows a rise of 30 per cent. only in the cost of living up to the middle of 1944 while prices had risen by 40 per cent. only. The rise in the cost of living was almost the same in Britain, but prices were higher and consumer subsidies were the rule. The war has forced up prices in Argentina and Chile as well as Central American republics as all Latin American countries experienced shortage of imports and found home industry inadequate for requirements especially after 1941 when the U.S.A. and Japan were out of reach for oversea customers. Since 1939 increases in industrial production outside the U.S.A. and Canada were not considerable. Europe as a whole had more money than goods after 1941. The situation has been calamitous for the majority in the countries like China where the price level (as measured by the Chungking index) rose in two years (1941-43) by 500 per cent. In comparison with several countries India shows a very moderate increase and the trend of prices in 1944 was favourable for the consumer as price control and anti-inflationary measures increased in scope and vigour during 1944.

Mill Hands' Bonus

The Bombay mill industry has again announced its willingness to share its prosperity with workers. In November the Millowners' Association promised a war bonus to workers in all member mills. The conditions fixed were the same as for 1943 when two months' earnings were distributed as bonus to all permanent workers. Substitutes who had put in not less than 75 days' work in the year were eligible for the bonus and the notice as to bonus payment covers workers who were retrenched if they could show they had worked for 75 days in the year. The bonus equal to one-sixth of the total earnings from 1st January to 31st December is to be calculated on earnings exclusive of dearness allowance but in the case of women maternity allowance drawn is to be treated as part of wages paid. The bonus is as before payable in two instalments—the first on Saturday, January 20 and the second on Saturday, March 24. For temporary workers and **retrenched workers eligible for bonus,** the payment is to be made in one instalment on February 19 provided claims are submitted ten days prior to date of payment. Lower prices under Control have not influenced employers in regard to maintenance of the war bonus at the rate adopted in preceding years, and the optimists may draw the same conclusions, from the bonus decision as from the announcements as to interim dividends. Hope springs afresh as is evidenced by the sustained rise in textile shares in the Bombay market since November.

Indian Copper

Copper occurs in only one area in India and mining is the function of one company only. The Indian Copper Corporation has lately given an account of its own work. Prospecting was complete in 1914 and production soon started. Mining fell upon bad times but a new era began in 1927. John Taylor and Sons of Kolar fame had more than formal connection with copper mining which was put upon a strong foundation in 1928 and strengthened further in 1931 when technical management passed into ex-

Rs. 250.—Series AA. 094046, 057751, 065417, 050360, 006849, 049366, 016360, 020496, 039561, 044376; Series AB. 063540, 054392. 507226, 059258, 095931; 041068; 081837; 041417; 028508; 084968; Series AC. 046537, 083339, 070465, 040294, 056146, 040296. 073583, 009971, 026555, 041562; Series AD. 07700, 025263, 046953, 073230, 069035, 034933, 058208, 081669. 093500. 015322; Series AE. 042448, 036419, 015638, 066102, 084564, 014318, 006356, 031116, 022410, 066210; Series AF. 056568, 089656, 002148, 041899, 006824, 033228, 047515, 044091. 019599. 068248; Series AG. 066332; 057642; 080286; 097430; 071020; 050962; 074537, 059175, 058467, 034123; Series AH. 056765, 038242, 088614, 030499, 066064, 036101, 078497, 046086, 034901, 053018; Series AJ. 011761, 091605, 010411, 034965, 060025, 076698, 009838, 037913, 039871, 037476; Series AK. 043543, 026834, 043992, 039312, 014716, 079964, 008653, 082888, 047790, 058730.

Prize Bonds are now again on sale at all Treasuries and Sub-Treasuries and Indian Offices of the Reserve Bank of India and Imperial Bank of India.

All Bonds purchased participate half-yearly with an equal chance of winning prizes in all draws until 15th January 1949, when all Bonds will be redeemed in full.

Next draw, July 15th 1945, time and place to be announced.

Invest in Prize Bonds and buy a chance to win a substantial cash prize.

ISSUED BY THE FINANCE DEPARTMENT, GOVERNMENT OF INDIA

AAA 1610

perienced hands. At the last meeting the chairman of Copper Corporation referred to an expert's verdict upon the ore reserves and the further possibility of development. The Corporation began to produce yellow metal in 1930 when a rolling mill was set up. The plant was extended in 1933. Since 1929 the Corporation has melted 3,894,980 long tons and produced 78,333 long tons of refined copper. In the article to appear in the Dictionary of Economic Products of India, the Corporation described the work carried on at Mosaboni and other mines. The crushed ore is carried by an Aerial ropeway 6 miles long carrying 60 tons per hour to the concentrate mill at Maubhandar. The main power plant is also at Maubhandar where the smelter is located. The whole process is automatic and the company's product assays from 99.2 per cent. to 99.6 per cent. of pure copper. The ingot production is put at 500 tons per month and this is supplemented by the larger output of yellow metal blooms, circles and sheets made up of 62 percent copper and 38 percent zinc. Copper for the Indian mints is drawn from the Corporation's smelters. The entire output reaches the Indian market from Ghatsila on the B.N.R. main line. The water required for the mine and the camp comes from the Subarnarekha river and the coal for the furnaces is pulverised. According to the note cited the Corporation employs a total of 5,900 persons of whom 4240 are engaged in the mines and workshops at Mosaboni and the remainder of 1660 are employed in the reduction works and rolling mills at Maubhandar. The Corporation has an issued capital of £900,000 and block expenditure up to December 31, 1942 totalled £1,258,826. Profits have fluctuated from year to year and the Corporation's last year appears to have been 1937 when it may be recalled the 2 shilling shares quoted as high as Rs 5-8.

Co-operators' Hopes

The Bombay Provincial Co-operative Institute reviewing postwar tasks and opportunities had outlined a scheme for a provincial industrial co-operative federation equipped to carry out mechanisation of rural industries. Departments of Government have to aid the federation which would be both purchase and sale agency for small-scale industry. Examples from Europe are cited to show that if cheap power is available rural industry can thrive assuming that electric appliances are sold through the co-operative agency. Mr. David Lilienthal in his account of the T.V.A. says that in the States served by the power from the waters of the Tennessee, the use of electricity rose in eight years by 196 percent taking into account only the rise credited to the 12 original distributors. The extraction of cotton seed oil successfuily is a development attributed to the T.V.A. expansion. The efficiency of wood working industries has risen. Sir J.A. Madan and his colleagues look beyond agriculture to a revival of rural industry Co-operatives to run creameries, to extend dairy farming, to set up weaving factories and to hire machinery are envisaged. All this must rest on a strong financial basis apart from expert assistance and it is more important for credit societies to gather savings. Instead of making loans for discharge of debt over co-operatives must attract long-term capital through the issue of debentures. Controlled credit is assigned again a special place in the whole development plan and how the movement should attract resources is the central problem. The co-operatives' capital remains small for the big tasks suggested. It is remarkable how little new capital has been secured by cooperative agencies when commercial banking flourishes vigorously. Cooperative banks have to improve greatly and approximate in nature and function (though not clientele) to commercial banks. If producer's co-operation is to succeed adequate finance would be needed at all stages and the co-operators looking for regeneration must put the increase of share capital first.

Helping the Middle East

Britain through the Middle East Supply Centre has approved the substantive relaxation of import control in Egypt. The agreement follows the economic conference which dealt with inflation in the Middle East while its connection with Britain's export recovery plans is obvious. Certain goods are expected but the purpose of the agreement is to let Egypt use her oversea assets for getting goods that can be had. Egypt raised the subject of blocked balances at Bretton Woods and has since obtained an agreement with Britain concerning the projected increase of 50 per cent in oversea supplies for the Middle East including Egypt. Gold sales have apparently failed to bring down prices

GOODS SHIPPED

to any part of the world, whether by ocean-going vessels or coastal steamers, are insured by the Society against all risks and at lowest tariff rates.

Other forms of transit insurance—such as goods despatched by rail, trucks and lorries; parcels sent by post consigned by any of these transport services—are also undertaken by the Society.

Rates and particulars can be ascertained from any of the Society's Offices or Agencies. While consultation costs you nothing, it may often prove of advantage.

and the new cure for scarcity is the provision of many consumer goods. The two methods have been applied already in India but a question will certainly be asked as to the necessity for showing preference to Egypt. There are two points to consider. After the dismissal of Nahas Pasha the political outlook has been clouded. The Ministry sponsored by the Palace has to make good, and an economic and financial agreement may provide a good talking point for the general election. There is the other point as to Arab union and Middle East federation, at least the creation of the economic framework. The Supply Centre had to take note also of Egypt's own plans framed in 1943 for the development of irrigation and civil aviation. The cabled messages, however, do not refer to the Wafd's development, plans but only to the withdrawal of control by the Supply Centre over the foreign trade of the Middle East. Trade Commissioners' reports indicated that controls prevented the expansion of trade, for example in tea and textiles, between India and Egypt. If the consideration shown for the Middle East really springs from the Anglo-American oil agreement there will be little argument over India's claim to her share of the Empire dollar pool. There is little doubt as to the Middle East as a whole being treated as a unit partly because the whole area is backward to an unusual degree and the war has caused greater strain. In view of Sir John Anderson's defence of the U.K.C.C. it is manifest that British export trade would be directed by the new agency. It is to be hoped however that Indian trade with the Middle East would not suffer from pre-emptive restrictions. In regard to textiles an attempt must be made to link India's purchases of raw cotton with textile exports when the importing countries are disposed to relax control. Relaxation of export control in the U.K. affords a guide to trade policy, apart from the door being now ajar in the Middle East. Reference must be made here to an equivalent concession as regards capital goods to be imported in the future by India, also to India's increased share of Middle Eastern trade in the war period. The latter will suggest that in Egypt the interest in Indian-made goods will not flicker out merely because alternative sources are available. The first step taken towards ensuring convertibility of sterling balances is, however, the most important aspect of the agreement. It will help to show that balances are not blocked and bilateral negotiations can result in satisfactory adjustment.

Claims Against Japan

Why there should be unofficial discussion of the terms of the peace settlement with Japan may seem hard to understand, especially, when the conference at Cairo in December 1943 dealt in detail with territorial redistribution. The non-official delegates to Hot Springs failed to reach an agreement though they agreed that military and economic disarmament is necessary. The same differences of opinion as to reparations have developed for the spokesmen of planting industries cannot forget that Japan was a big market for natural rubber. The U.S. view obviously is different from those of Sir Eric Macfadyen who objected to reparations and declared that Japan must keep or get back export markets. Possibly, quota restrictions will be imposed as in the past, but the main idea appears to be to give Japan outlets for manufactures. From long experience it may be urged that Japan's imports can be controlled in order to check aggression. It is considered necessary to cut off oil supplies in the future by the transfer of South Saghalien to Russia. But that is a private view. Indian delegates to Hot Springs significantly declined to accept the harsh doctrine of complete economic disarmament while the British delegates notified the U.S.A. that Japan could provide only labour, not raw materials like coal or iron ore, if asked to pay reparations. In Colonial markets Japan is not to be shut out in order to satisfy the usual demand for Preference or Protection. Reports as to Dutch opinion have not appeared because the Dutch case for reparations is the justest and the Colonial Empire has attained equality with the home country. The British delegate's statement concerning Japan's need of markets accords substantially with the general opinion held in India as to the need to re-establish commercial relations with Japan, the chief customer for raw cotton and a supplier of other manufactures besides textiles. His argument rested largely on the need to restore the rubber industry in the Colonies but it is useful to note here that Britain's balance of payments would be altered if tin and rubber did not figure among U. S. imports after the war.

Clive Street Gossip

Not many days of the New Year, it will now be seen, were needed to bring about a striking change in the outlook of the war, whether in the East or the West. In war, the lay mind is, as a rule, unprepared for quick turns of fortune and is apt to assume that a string of successes for the winning side is the likeliest course that events must be expected to take. Of course, there is at the back of every one's mind one's sympathy or admiration for one side or the other and the proneness to wishful thinking. But, apart from this, the normal tendency in the face of a sharp turn in the course of the war is to assume that a new factor has suddenly been brought into play and that it is capable of bringing about a reversal of past developments and even a speedy decision. This tendency, I have found, is not partial to either side. It is perhaps an expression of the eagerness of the average man to pay his tribute to success. But whatever it is, it is, as I said, impartial. When the Allies effected the landing in Normandy and scored some signal successes, there was no disposition to consider even the remote possibilities of an appropriate revision of

Editor "Indian Finance".

German plans and provision for adequate defence, not to speak of an offensive, at more suitable points. The talk was of the war being over before Christmas. But when the air borne expedition at Arnhem failed and there was found to be more than mere resistance at Ardennes, doubts crept in. And when Rundstedt launched his counter-offensive, the old ideas of the course of the war were discarded.

In the case of German recovery, men's reactions are not only sharper but also stronger. For, Germany has come to be credited with the possession of secret weapons, which, once they are brought into play, can change the whole course of the war. The average man seizes the fact that the check to allied arms in Western Europe coincided with the appearance of the V1 and V2 bombs. Once the process of rational appraisement on the basis of known facts is suspended, imagination gets free reins. The place and role of the new bombs are exaggerated and one relies for his forecast of the course of the war on all manner of unknown factors. In other words, one begins to argue on the assumption that the war will be decided away from the battle fields. But the fact was there for all to see that, if there was a reverse, it was caused not by the secret weapons but by the offensive launched by Rundstedt against a carefully chosen spot. And this fact should suffice to remind people that, whatever flutter secret weapons may cause now and again, the issue of the war, is decided by the movements on the various theatres of war.

Those who had their minds engaged in the contemplation of secret weapons had their attention called to the great winter offensive launched by the Red Army in Eastern Europe. The doings of the Soviet had for some time been somewhat of a mystery to most people. For the last few months the Red Army had nothing to show by the side of the sensational 400 mile advance achieved by their last offensive. The outskirts of Warsaw were reached months ago; and while the world waited for the fall of the Polish capital into Russian hands. it saw only the discomfiture and virtual extinction of the patriots inside the city. Budapest occupied the foreground from which Warsaw was pushed back. Here, too, the story was one of heroic fights for blocks rather than of gigantic pincer movements which pinched large forces of German troops out of existence. This slow down was generally regarded as being politically motivated. The differences between the Kremlin and the Polish Government in London were sufficient to cool down Russian enthusiasm for the capture of Warsaw. At the same time, Russia could conceivably be anxious to consolidate the ground won by the previous offensives. It is, of course, too soon to say whether the developments of the last week have cleared up all the points of doubt that there have been till now. But it is certain that there is closer understanding between Mr. Churchill and Marshal Stalin than many would have thought possible. At any rate, the place of political motives in the slower advance of the Red Army was certainly exaggerated. An even more satisfying explanation is that with the end of the last offensive and with the approach of the Red Army to the soil of the Reich, there was need for preparations far more thorough and on a far larger scale than in the previous offensives. The scale and scope of the Russian attack show clearly that, what time the outside world was being puzzled by the quietness of the Red Army and was even looking for political motives to explain it, the Soviet Government was really preparing for an offensive that must take the Red Army on to Berlin. Warsaw has fallen and at more than one point the Russians are near to the German border. Both the Moscow Radio and Goebbels talk of more forces being ready to be thrown into the attack. Dr. Goebbels raises even higher hopes than the spokesmen of the Russian army. There is no doubt that the successes of last week are a prelude to more to come.

But, then, the question must be asked whether we are not committing just the mistake which we started with condemning, the mistake of expecting a prevalent trend to continue to the very end. There is no gainsaying the possibility. But in this instance, the Russian offensive is unique in that it signifies the synchronisation of the attack from the East and the West which the Allies have been valiantly striving for ever since the entry of Russia into the world war. It has been said in well informed quarters that such a synchronisation was decided on at the Teheran Conference. But it could not become a practical possibility till the Allied landing in Normandy. Once that

landing was effected, the spectre of a war on two fronts which had for ever haunted the German High Command became very near a reality. Having failed to prevent the landing, the German High Command could only think in terms of preventing the synchronisation of high pressure offensives on both the fronts. It is said by some that Rundstedt's success is attributable, to some extent, to lack of foresight in the Allied command. But whatever that might be, its significance lies in upsetting the Allied schedule in the West even to the point of causing consternation. Its significance to the future might have been even greater if the Soviet offensive had not begun at the time it did. Now that Rundstedt has been halted and the British forces have launched a new offensive and large Soviet armies are converging on Silesia, the setback to synchronisation caused so brilliantly by Rundstedt has now been got over. It is in this significant respect that the recovery of the Allied forces in the West and the offensive of the Red Army in the East are different from apparently similar turns of events in the past. The main task of the British and American forces in the West is to engage every part of German resources in that area, so that Germany will not be free to transfer any of her forces to the East to stop the advancing Red Army. The next few weeks will be fraught with great significance to the future of the war in Europe.

If these hopes are not belied, then we may witness the re-emergence of post-war problems in the sphere of serious discussion and active consideration. It is remarkable, that, while other countries react more quickly and strongly to the shifting fortunes of the war, particularly in regard to their interest in post-war problems, Great Britain has always had the same concern and care for her own problems of the post-war period. While she is not counting the costs of the war in a metaphorical sense, she certainly is, in a literal sense. At every stage of the war, British economists have been carefully estimating the exact extent of the loss of her foreign investments and the possible consequence of this loss on her future trade and standard of living. Foreigners are not naturally interested in the accuracy of these estimates as much as the general results that may be expected from the developments of the war period. But a recent estimate which puts the value of foreign investments lost during the war period at the truly astronomical figure of one million million pounds sterling will be felt by all to be staggeringly high. It is not clear on what basis this estimate has been made. British overseas investments used to be estimated in the pre-war years at about £3,750 million of which about 40 per cent represented loans to Central and local Governments. Nearly a third of this amount was accounted for by investments in British Companies operating abroad; and about 400 million was put down as not coming under any of the bigger groupings. It is difficult to see how £4,000 million can be multiplied so many times over to make up a thirteen digit figure. It is possible to effect a substantial increase by providing for an increase in capital value consequent on the lower interest rates of the present day and to make provision for the higher yield of British capital invested abroad. According to the pre-war estimates of Sir Robert Kindersley income on foreign investments as per centage on capital varied between 4.08 and 6.18 The present interest rates may therefore warrant an increase in the estimate of the value of foreign investments; and the resulting figure may be stepped up further to provide for the fall in the purchasing power of money. In any case, a figure of one million million would be fantastic. It is human nature to exaggerate the value of a lost patrimony; and Britain is perhaps exhibiting this common failing.

* * * *

But as I said, the consequences of this loss of foreign investments are far more important than the exact estimate of their value in pound sterling. These consequences are not difficult to imagine. Britain's income from foreign investments was the principal prop of that system of multi-lateral trade relations which enabled almost every country in the world to be indifferent to adverse balances of trade with one or a few countries. Since there was one country which could stand an adverse balance of trade to the tune of £400 million by reason of her invisible exports, the squaring up of trade balances was a simple affair. If Britain should fail to sustain an import trade of the old dimensions, she will naturally cease exporting on the old scale and a radical redistribution of productive activity among the nations must be deemed to be in prospect. If such developments happen, they will not be sudden. For the trend has been in that direction ever since the last war, a trend which was arrested by the adoption of Imperial Preference and by the constitution of the sterling area. If these expedients of arresting the decline should prove difficult of adoption, then, no doubt, Britain will be forced back on economic self-sufficiency and the attendant decline in her standard of living. But it is in her economic life, more than her political, that Britain is truly diehard. Her best brains are already applying themselves to the problem; and it would be wrong to underrate their power to overcome obstacles.

"EAVESDROPPER".

NUMBER, PLEASE!

REDUCED telephone staffs strive to uphold the old standards of service and civility. It is our duty not to add to their work by unnecessary calls. Whenever we use our telephone we benefit by the work of the British chemical industry, and not least of that section which produces plastics. Plastic materials went to make your telephone instrument and the plugs the operator uses at the switchboard. Plastics, indeed, are almost daily finding new applications in the home and in Industry, ranging from fountain-pens to electric cables, from nursery crockery to aircraft gun turrets. What are these plastics? Put in simple terms they are synthetic organic chemicals extracted usually in the processing of coal, each different and each possessing different qualities but all of which can be moulded under heat or pressure into any shape. A few of those already well-established are phenol-formaldehyde (from which your ash-tray, or an R.A.F. pilot's seat may be made), urea-formaldehyde (the raw material for those nursery cups), the vinyl products (used extensively for electric cables) and the acrylic resins. The best known acrylic plastic is Perspex, a British discovery of which transparent parts of British aircraft are made. Plastics are today not only doing work formerly done by metals, glass, wood, pottery, rubber or gutta-percha. They are extending these uses as well as suggesting entirely new ones of their own. In the post-war world they are destined to play a leading part. Plastics are a field in which British research chemists and physicists and the British chemical industry have always been to the fore. We can be sure that they will maintain this position. The enormous development in the use of plastics over the past twenty years is sufficient guarantee that the chemical industry can be relied upon to produce the volume and variety of plastics needed not only to meet the present needs of War, but the wider ones of Peace.

New Delhi, Jan. 15

The second part of the Bombay industrialists' plan dealing with the distribution of national income is expected to be published this week. With the common over-all aim of a planned economy, the raising of the general standard of living and the prevention of gross inequalities of income, "the distinction between capitalism and socialism is in general overdone" point the authors. The authors' proposals include a general reform of the land tenure with abolition of the Zamindari system, imposition of death duties, decentralisation and regional distribution of industries, widespread distribution of shares in joint stock companies, development of cooperative enterprises, improvement in urban and rural wages and free social services like education and medical relief. To provide the agriculturist with work during his short period of unemployment, the planners propose (1) introduction of mixed farming; (2) cultivation of more than one crop in the year; (3) provisions for subsidiary industries like weaving, soap and paper. The authors recognise the positive role of the State in the direction and development of economic resources but vote against State ownership except in cases where it is absolutely necessary. They prefer State control which should include not only fixation of prices and limitation of dividends but also prescription of work and wages for labour and nomination of Government directors. The authors go quite far in their proposals to achieve a more equitable distribution of wealth within a capitalist framework. In their proposals they have tried to by-pass socialism.

* * *

The Federal Court to-day upheld the decision of the Bombay High Court that the Indian legislature has power to levy income tax on the total income of a company. "A person who receives a substantial business income from a country may well be regarded as receiving the protection of its laws and administration in the same degree as a person who resides there or carries on business there", said the judgment. "And if a person resident in a country for six months can be fixed even in respect of his foreign income earned, it may be, during the remaining six months, it is difficult to see anything inherently objectionable in adopting the basis when a person derives more than half of his total income from business in a particular country. It is the person who is subjected to taxation in either case and his connexion with the taxing country is as substantial in the one case as in the other, to warrant both cases being treated alike". The Federal Court granted leave to appeal to the Privy Council.

Professor Ogner, Chairman of the Central Institute of Higher Medical Training in the U.S.S.R., is at present in New Delhi. This Russian health expert was to have visited this country along with the other six foreign experts who came here some time back but had to postpone his visit. An officer has now been deputed by the Bhore Committee on Public Health to accompany the Russian expert on his tour. Professor Ogner does not know English and Mrs. Gladyshev, wife of the Tass representative in Delhi, will act as his interpreter. Prof. Ogner has already visited some of the local hospitals, a slum area and a village. He will be here for another five days.

* * * *

The Central Government, I understand, have come to tentative conclusions regarding the fertilizer industry. It is feared that due to the unexpected prolongation of the war in Europe, the execution of the order for the plant in the U.S.A may be delayed and it may also be difficult to obtain the necessary shipping priority. According to the Government decision production will be divided over two plants—one with an annual capacity of 350,000 tons to be located in the United Provinces and to serve the needs of the north and the other to produce 100,000 tons of ammonium sulphate for the needs of the south. For the northern plant the Central Government will subscribe most of the capital while for the southern plant it will be shared with the Governments of Madras, Bombay, the Central Provinces, Hyderabad, Mysore and Cochin. Travancore already has a plant of her own. Concentration of production in one huge plant in the north will add to the transport difficulties and costs and will not be advisable from the defence point of view but it will lessen the cost of production a good deal and require less of initial capital outlay. The Gowing (Fertiliser) mission and calculated that spreading of a production of 350,000 tons over six plants will increase the costs by Rs. 40 per ton and will require an initial capital outlay of Rs. 20 crores as against Rs. 10 crores for one plant of the same total capacity. With the plant in the north, the product is expected to cost only Rs. 126 per ton (as against Rs. 240 now charged by the Imperial Chemicals). Government feel that the costs will still be too high for the average agriculturist and expect the province to subsidise its supply to their rural areas. It is expected to fix quotas for the various provinces.

The trade figures for September, now available, show a sudden change in the imports which fell by about Rs. 4 crores compared to August. July with Rs. 19 crores had recorded the highest figure during the last three years. Exports seem to have been almost stabilised at Rs. 18 crores a month. The total exports for the first half year (April to September) is Rs. 109 crores as against Rs. 94 crores of imports. It is felt that the fall in imports during September does not indicate permanent tendency but entirtly due to the fluctuations in the shipping situation. Imports from Britain are expected to go up as a result of the Hydari mission.

* * * *

Details of recent industrial research work in India reveal scope for many new industries. Research into insulating materials has shown that compared to imported materials three or four types of locally produced material, (Bakelite, porcelain, shellac moulded paper and board), show fairly good dialectric property. It is also shown that the *Mahua* tree—found in North and Central India—can be industrially utilised for the production of power alcohol. It is calculated that 50,000 tons of *mahua* flowers can yield 3.25 million gallons of alcohol.

Gateway of India

(From Our Correspondent)

Bombay, January 16.

In many matters, this province has stolen a march over the others. The Bombay Government is adding a fresh feather to its cap by its forthright agricultural policy. The mechanisation of Indian agriculture is no longer a dream, but a practical proposition, as the Bombay Government is trying to show. Six high speed diesel oil tractors for speeding up seasonal ploughing and increasing food production have already arrived. They are to be followed by many more very soon. Telegaon, 20 miles from Poona, will witness the first operation with these tractors which are said to be capable of ploughing up 15 acres in one day. Colonel Bates will be in charge of the scheme. He is stated to have received a number of enquiries and is confident that the cultivators in the province are all agog to discard their old methods in favour of the tractor, provided it was brought within their reach. Obviously, only the owners of large scale farms would be able to make use of the tractor, but it is to be hoped that, at least as a first step in popularising the use of mechanised agricultural equipment, the Government would have a scheme by which all can make use of the tractors. It would appear that these tractors would be first employed to reclaim some six lakhs acres of land in the Dharwar and Belgaum divisions for growing of food crops. The idea is very laudable and deep ploughing will go far to increase the output of crops, especially food.

Meantime, the rural development programme has ben drawn up with a view to the spending of Rs. 60 crores in the first quinquennium after the war. The local government is working out the financial shape of things to come and considering the proposals emanating from the Central Government to the effect that the centre would subsidise the provincial programmes to the tune of Rs. 275 crores in all. As Sir A. Dalal has stated that the subsidy would be related to the population in each province, Bombay might expect to get about Rs. 22 crores in addition to its share from the fund now being built up to finance the settlement of demobilised soldiers. It is figured that in addition to these contributions, the provincial government will be faced with the problem of finding an additional Rs. 40 crores within the 5 years after the war, on the assumption that budgets will be balanced as of old. A sum of Rs. 8 crores stands already in the Special Development Fund. There seems little doubt that the province will yet have to cast about for ways and means of raising finance through taxation and borrowing. The proposal for levy of estate duties, for which legislation will be introduced before long, is satisfactory from the provincial point of view since the proceeds of the duties will be handed over to each province. There is no means of estimating the yield therefrom, and it is significant that official circles here are looking up to larger yields from the sales taxes. One warning cannot be out of place in this connection. It is that the goose that lays the golden egg should not be stifled to death. Also, governments should remember that their planning schemes are nebulous inevitably and that there is the danger that the strain on the people may become too great when the load of taxation is suddenly raised to levels at which alone the financing of the ambitious plans seems possible. In short, there is the greatest need for proceeding gradually and to feel the way as we go up the ladder of planning.

They say nothing succeeds like success. That, at any rate, is how the bull clique in the Bombay cotton market must be chuckling among themselves. They succeeded in pulling up the I.C.C. March Contract from Rs. 392 to the present level of around Rs. 450 and in imparting to the market a generally steady tone. It is perhaps beside the point to say that most of them have liquidated their holdings and got out, for the fact remains that they have succeeded in effecting a wonderful transformation in the complexion of the cotton market. Another factor which has helped steady conditions is the certainty of a smaller crop, of which an idea is given by the crop forecast indicating a decrease of 23 per cent in acreage. What is more significant is the fact that uncountry markets are moving in line with the Bombay forward market. In fact, extensive buying in upcountry markets by mills and even, mark you, by investors is reported, bringing about a sharp advance in the premia of all varieties. Meantime, as may be expected, spot trading is quite lively and old crop is selling about Rs. 100 over the prices quoted some time ago. A hesitant trend noted in the futures market in the last few days is ascribed to the existence of speculative positions and to the fear that the holders will try to sell out as hedge pressure increases and the maturity date of the March Contract draws near.

A very pleasant surprise has been the fact that presentiments about bearish influence of the standards prepared this year on the Contract have proved to be entirely wrong.

ANNOUNCEMENT

This is to notify that the STERLING GENERAL INSURANCE COMPANY LIMITED has taken over all the business of the former STERLING INSURANCE CO., LTD., covering life only, in accordance with a scheme accepted by the Superintendent of Insurance.

The former STERLING INSURANCE CO. LTD. has ceased to exist and its registration has been cancelled.

The STERLING GENERAL INSURANCE CO. LTD. was registered in 1943 with an authorised capital of Rs. 50 lacs out of which Rs. 25 lacs was issued and fully subscribed. 50 percent of the issued capital has been paid up. The amalgamation of Sterling General with Sterling Insurance was sanctioned by the Court a few months ago.

The STERLING GENERAL INSURANCE CO. LTD. has already deposited with the Reserve Bank of India the maximum security of Rs. 4½ lacs. It is now carrying on business in all departments including Life, Fire, Marine, Accident, Workmen's Compensation, Etc.

STERLING GENERAL INSURANCE CO., LTD.
NEW DELHI

The opposite effect has been noticeable. This year the Standards Committee were asked to get their samples tested at the Technological Laboratory before making up the standards although the Committee was not to be bound down by the laboratory test. The result was a lowering of standards as compared with last year, but this had the effect of bringing our staple more in line with universal staple standards. Formerly, our ideas of staple length were far stricter than the universal staples standards of the U.S.A. current throughout the world. The immediate reaction of this was that the basis of Khandesh cotton which used to sell Rs. 100 OFF the Contract has improved substantially. Investors and gin owners got encouragement to buy cotton in Khandesh and Berar freely in the certainty of their cotton getting passed at the hands of the Super Appeal Committee. This has led to a wave of general buying as a result of which Berar Jarilla, which at one time was selling at distress prices of Rs. 30 OFF the Contract, is now quoted about Rs. 25 ON. It is to be hoped that those concerned will not forget the lesson to be drawn from this.

The Government of India's Cotton Adviser is reported to have returned to London from his visit to the United States. So far, the cotton trade has been looking in vain for a substantial improvement in the exports of raw cotton although it is months since France and other countries were liberated. The Cotton Adviser will no doubt be doing his best to secure a market for the accumulated surpluses of the war years, about which Sir Purshotamdas Thakurdas made mention in his recent speech to the E.I.C.A. What is disturbing is the reports of large American shipments of cotton to France, Spain and other countries. While no one can dispute the claim of the U.S.A. to send its cotton where it likes, especially when it can well command the bottoms in which such exports can be effected, it is not unreasonable to hope that countries like India which have been hard hit by the loss of export markets would not be forgotten by the Allies and that, even if it were a crumb, something would be coming the way of the Indian cotton exporter now and then. The Government of India should bring pressure to bear upon London and Washington to recognise the essential justice of the Indian viewpoint on this question.

Wealth for Welfare

Dr. R. D. Tiwari's account of Our Economic Resources' (New Book Co., Bombay, Rs. 7-8) may be described as an essay in defence of planning rather an encyclopaedie survey of the factors of production. A skilful use of available statistics leads to the conclusion that India's development is urgently necessary. Imperfect use of resources accounts for the low standard of living to which attention has been directed for a year. Wartime changes in industry and trade receive due notice in the review of possibilities. Scrutiny of policy in the making impels Dr. Tiwari to advocate vigorous pursuit of reconstruction schemes. It is, however, surprising to find the earlier investigations as well as the two reports of the Policy Committee almost ignored in a book published in 1944. But the objectives here defined are common to all proposals for planned development. If the author's survey of deficiencies leads to no striking suggestions for progress it is welcome to find that he shares the faith and hope of the eight leading industrialists who put together human needs in relation to future policy.

BOMBAY MARKETS

BULLION

Bombay, January 18.

The Bullion market was weak to-day on news of the Russian capture of Cracow. Forward silver declining to Rs. 128-6 as against Rs. 130-7 on Monday. Silver, however, firmed up to Rs. 130 in the evening thanks to heavy support by a prominent bull. The market rose to Rs. 130-7 on Monday as a result of 400 bars despatched upcountry, but fell to Rs. 128 on Tuesday noon. At that stage heavy buying by bulls combined with steady off-take induced recovery to Rs. 129-12 by Wednesday. The firmness noticed to-day was a mere flash in the pan. Gold undertone was very quiet since market was overbought and bulls liquidated at every rise. After opening at Rs. 74-15 off Monday gold ready dropped to Rs. 74 the same evening and Rs. 73-8 on Tuesday. The sustaining factor was the Reserve Bank's sales since Monday of 23,000 tolas at Rs. 74-15 of 14,000 tolas at Rs. 74-1 on Tuesday and Wednesday and only 6,000 tolas at Rs. 73-10 to-day. The floating stock of Rs. 2½ lakhs of tolas and diminished off-take explain the quieter undertone, price being Rs. 73-9 now.

By Special Cable.

"BIG FIVE" PROFITS

London, January 16.

Legal and business circles heard remarkable rumours that Lord Simon, Lord Chancellor and head of Britain's judicial system, is quietly engaged behind the scenes in drafting a scheme which will cut out of the legal system the enormous amount of redundant and more or less obsolete laws into line with the ancient Common Law.

What effect this would have upon property rights and relationships is quite unknown, but naturally the subject is interesting to speculate upon.

It is recalled that the late Lord Stowell accomplished single-handed a somewhat similar feat in building up what is known to-day as "Maritime Law" which Parliament has been quite content to leave alone because the principles laid down seemingly satisfy all those engaged in shipping and overseas commerce.

Business and other propertied groups would presumably not be sorry to see a similar cleaning up of the present jungle of Statute Laws through which only a few Common Law paths are still visible.

* * * *

The annual profit statement of the "Big Five" again inspire commentators, though long ago, it was generally agreed tht published figures mean little since nobody outside the various directorates have any knowledge of what deductions have been made before the profits are declared.

However, it is plain that banks' profits though increasing are not increasing at the same rate as their working capital. In other words, their deposits. The combined profits of the Big Five in the last four years have been £6,000,844.3, £7,000,260.5, £7,000,687.7 and £8,000,004.7. Taking 1941 profits as equal to 100 then the profits for the three subsequent years have been 106, 112.3 and 117, but the average of the combined deposits for these three years similarly stated in percentages with 1941 figures equal to 100 have been: 110.3, 123.8 and 139.7.

The explanation lies in the fact that Government through the device of Treasury deposit receipts has taken an increasing proportion of these deposits, as much as 60 per cent last year, on which it has given a very low fixed return.

The Chairman of Barclays Bank in a circular to the shareholders again stresses the Bank's anxiety to assist the small businessman who reportedly badly needs short-term and medium-term capital. But banks cannot invest their demand deposits in assets not quickly realisable unless the community is prepared to support such efforts.

This is exactly the point reached without result in similar discussions in past years.

The stock exchange opened for the New Year with prices at the highest level for a long time, but there is still no particular unanimity in sentiment regarding the postwar outlook.

Madras, January 15.

The Government of Madras have invited Mr. F. L. Savage, Chief Designing Engineer, U. S. Bureau of Reclamation, who is in this country, to visit this province. It may be mentioned that Mr. Savage is reputed to be the world's foremost engineer and has to his credit sixty dams in connection with huge projects, irrigation, flood control, hydro-electric, etc. He visited the headworks of the Polavaram project and Poondi reservoir. He said that the potentialities of the Godavari were very great. He stayed in Madras for a few days to write a report on the proposed irrigation and hydro-electric projects. Before leaving for Delhi he proposes to visit the Mettur project, the Jog project in Mysore and various other irrigation and hydro-electric projects in the State.

That in any scheme of Post-war Reconstruction the improvement of health of the people in India should occupy an important place has been recognised by the Government of India by their setting up the Health Survey Committee with distinguished personnel and an able Chairman in the person of Sir Joseph Bhore. The report of this committee is eagerly awaited. Improvement in health can be achieved by prevention and cure of diseases. An ambitious scheme to combine the two in one and bring medical aid to villagers has been drawn up by the Hyderabad Government. Two mobile health-cum-medical relief units at an initial cost of Rs. 3 lakhs and a recurring expenditure of a similar sum are contemplated under the scheme. These will be moving hospitals with all facilities, accommodation for 100 beds and with provision and staff to render almost every kind of treatment medical, surgical, dental, opthalmic, etc. There will also be specialists in health, sanitation, maternity and child-welfare. The experiment is new and its progress will be watched with interest. If the results are encouraging Hyderabad would have set an example for the other parts of India in providing medical relief for the villages.

The energetic Commissioner of the Madras Corporation, while busy collecting funds for the Commissioner's Poor fund, is also pushing through measures for the early construction of dwellings and tenements for homeless workers and pavement dwellers. The tenements are to be constructed in different parts of the city so that workers could reside near their workspots. Each family will be allotted a separate tenement. In tackling the more difficult question of beggar problem, the Commissioner has been promised public support (moral and financial). The assurance that Government would give the necessary support for this noble cause was given by Sir Norman Strathie, Adviser to the Governor of Madras presiding over a function in aid of the Commissioner's Poor Fund. The difficulties of the task are no doubt great. But with the promise of support from all sides they may not be insurmountable. By achieving this the Commissioner would have done a task both noble and urgent.

The Government have appointed Khan Saheb Syed Abdul Quadir as Special Officer for waste and fallow lands, who will investigate the causes for the large acreage of waste and fallow lands. So far lands have been classified in the traditional way as fallow, cultivable waste, land available for cultivation, etc., and this is the first attempt to see how much of the lands of the first two categories could be cultivated and what the causes are for their lying fallow. At a conference convened in the Cuddalore Collectorate the Special Officer said that 9 million acres of dry land were lying fallow every year and by granting subsidies owners might be induced to grow food crops like Varagu, Cumbu, Cholam, etc. If stock were taken of the marginal lands there will be at least 10 to 15 acres in each village and roughly 1,000 acres for each taluk on which food crops could be grown during the coming season. Special staff, he said, would be appointed for this purpose. This will augment the millet supply of the district. If subsidies were paid for one year in the subsequent year a remunerative yield might be expected, he added.

It has often been said that to solve the food problem in the country land should be intensely cultivated and also more land should be brought under the plough, and the attempt now made is in the right direction.

Meetings have been organised, one in Madras and the other in Salem, to raise suitable memorials to the memories of two leaders from South India—the late Mr. S. Satyamoorthy and the G. O. M, of South India, Dr. C. Vijayaraghava Achariar. The South Indian public realised the full greatness of Dr. Achariar only from the praise that came from all parts of India. Mr. M. S. Aney who presided said that the numerous messages read on the occasion would bear ample testimony to the great regard and respect commanded by the intellectual giant and great son of India irrespective of caste, creed and colour. An All-India National Memorial Committee with Mr. Aney as President has been formed for raising a suitable memorial to the memory of Dr. Achariar. Funds are being collected to erect a suitable memorial for Mr. Satyamoorthy.

Resume of Commodity Markets

The feature of the commodity markets in the past fortnight is the strength of the cotton market. The bullion market also has been able to retain most of the gains in the latter half of December 1944 as offerings of gold by the Reserve Bank in the New Year have been on a very small scale. The jute market has continued steady in spite of the small interest shown by mills while there is good demand for hessians for positions up to June. The Heavy Goods section however is quiet.

There does not seem to be any great anxiety regarding the Government's announcement about the size of the crop for the next season though there is a tendency to wait for further developments before entering into fresh commitments. Against the reports of a 10 annas crop last week, it is now said that the Bengal Government might decide only on the maintenance of the acreage under the crop as in the last season. The refusal to agree to an increase in the area under the crop for the next season is perhaps due to the lack of assurance regarding adequate supplies of coal to mills in order to enable them to absorb the whole of the available jute supplies and to the disinclination of overseas consumers to give any undertaking to the Government of India to absorb such increase in mill output as was brought about by the larger jute crop. The delay in the announcement is not quite clear. Perhaps there is a further exchange of views on the subject. Anyway, in mofussil districts dealers do not seem to be particularly worried about the Government's decision especially as they are confident that even with a large licensed area sowings might not be on a larger scale next season especially as prices for foodgrains are still at a high level and the return on the production of other crops is still attractive. There is a tendency on the part of ryots to keep back their supplies for higher prices. If, as a result of the negotiations between the Indian Jute Mills Association and the Supply Member regarding a speeding up of coal supplies there is an increase in production to the target of 100,000 tons per month there might be larger buying on behalf of mills.

The Indian Central Jute Committee at its meeting in Calcutta on Wednesday decided to approach the Government of India to create a jute fund and to allocate to it Re. 1 per ton out of the existing export duty on jute goods and place the entire proceeds of the fund at the disposal of the Committee. The Indian Central Jute Committee has done useful work in the past few years and technical research has definitely proved that jute can be put to more uses than it was thought possible before. In order to be able to extend its activities and pursue its work more vigorously, the Committee ought to be given every encouragement.

The raw cotton market has been very firm in recent weeks as a result of large buying in the Spot market and the hopes of an increase in exports in the near future. The fears that the recent cold wave might affect the quality of cotton had also a bullish effect on the market but it is now said that the standing crop has not been affected to any great extent and that the adverse weather conditions have only resulted in a delay in the movement of the crop. The bullish fervour has also been chilled by the frequent reports regarding the stoppage of mills on account of the shortage of coal supplies. There was a feeling that the enthusiasm shown by mills in respect of its purchases earlier in the spot market and the eagerness to absorb Government cotton at higher rates was due to the need for preventing any further reduction in prices for cloth and yarn especially as it was said that the prices at which mills purchased their cotton would determine the prices for cloth and yarn at the next quarterly revision. If that is the case, one cannot possibly expect that the improvement in prices will be sustained.

It was reported during the week that a good quantity of Indian short-staple cotton had been exchanged for Californian long staple cotton and that with the large requirements for the liberated countries on the Continent, further deals might be put through. There has also been some enquiry from Liverpool recently. If, as a result of these developments, there is a large increase in exports, it will help to a great extent the problem of disposing of the huge surplus stocks of short-staple varieties.

The Second All-India Cotton Forecast was published earlier in the week and there is a decline of 23 percent over the corresponding forecast for 1943-44. The first forecast showed a decrease of 24 per cent. Figures are given below:

All-India (in acres) 12,957,000. Trade descriptions. Bengals 1,661,000; Americans 3,363,000; Oomras 3,631,000; Broach 430,000; Surti 79,307,000; Dholleras 759,000 and Others 2,806,000.

The forecast relates to the period upto the end of October 1944 in the case of Hyderabad State and up to the end of September or beginning of October in the case of other tracts. The total area shows a decrease of 23 per cent.

The policy of the Reserve Bank in regard to its sales of gold and silver in the last two weeks is not calculated to bring down prices. Since the beginning of the year 300 bars of silver have been offered daily but tenders for gold below a particular price have been rejected and the daily sales have been on a very much smaller scale. With the local stock position easier and a slackening in the demand for the yellow metal, one would have expected that the Reserve Bank would have depressed prices by effecting sales of gold at least on the former scale. It is not clear whether the unwillingness of the Reserve Bank to sell freely is due to the shortage of supplies.

THE EASTERN BANK, LTD.

(Incorporated in England)

BATTERIES

AND

SPARK PLUGS

for CHEVROLET TRUCKS

BATTERIES

Batteries and spark plugs for essential Chevrolet vehicles are now available through gazetted Chevrolet dealers at Government-controlled prices.

In order that the existing supply of batteries may last as long as possible, owners of Chevrolet vehicles should observe the following rules:

1. Top up with distilled water only.
2. Don't abuse the self-starter.
3. Keep terminals clean.

SPARK PLUGS

Have your spark plugs cleaned and re-gapped regularly. Why not consider the installation of a complete new set *now*? It may be good economy.

Consult your nearest Chevrolet dealer.

Jute and Jute Manufactures

(From Our Correspondent)

Special to "Indian Finance"

Calcutta, Jan., 18.

As we forecast, the production returns for the month of December are very disappointing, being only 73,962 tons as compared with over 88,000 tons in the previous month, a reduction of 16 per cent. This off-take of goods shows a shortage from the target figure of no less than 26 per cent.., and is solely attributable to the scanty coal supplies with which the industry has been, and continues to be furnished. For the situation is little, if any better this month so far. It is announced that the Supply Member of the Central Government is in Calcutta to preside over the meeting of the Coal Control Board and it will be interesting to learn if he has anything to say on the subject as it affects the Jute Mills. Of the total production, 10,788 tons were on Government account, equal to 14½ per cent., a much higher proportion than has been usual of recent months. In detail, 26,785 tons, representing 1011 lakhs yards was commercial hessian, while 4,012 tons or 131½ lakhs yards was Military hessian, making a total hessian outturn of 30,797 tons or 1,143 lakhs yards. On the Sacking side, 33,894 tons, of 806 lakhs yards was on commercial account and 6,281 tons or 145 lakhs yards on military account, making a total Sacking production of 40,175 tons, or 951 lakhs yards.

Statistics for the first six months of the seasonal year can now be set out. Total production for the half-year amounts to 496,855 tons, or a monthly average of 82,806 tons against the target figure of 100,000 tons per month. Consumption of jute on the December out-turn figures amount to 4,09,000 bales making a total jute consumption for the six months of 27,48,000 bales.

With Stocks reduced at the end of December by almost 14,000 tons, despatches of goods during that month must have totalled almost 88,000 tons which is by no means an unsatisfactory figure. That brings the despatches for the half-year to 523,000 tons, 26,000 tons greater than the production, and giving an average rate of despatch over the period of 87,000 tons per month. The only satisfactory feature which can be extracted from the figures, and that in a left-handed way, is that, had coal supplies been such as to permit the target figure being more nearly approached, the position of the market—particularly as regards Heavy Goods, might have been much more gloomy and depressed than it actually is.

Exports of Baled Jute during December are returned as 75,000 bales as against 72,000 bales in the previous month and also the same quantity in December 1943. In December 1942 the total was 1,70,000 bales. For the six months July to December totals for the past three years are, 1944, 4,30,000 bales. 1943, 4,76,000 bales. 1942, 7,95,000 bales, whereas for the last pre-war year, 1938, exports amounted to 38,79,000 bales during the six months.

Detailed arrival figures for jute into Calcutta are now available for December and they show that the Railways are now carrying up the largest quota of arrivals and keeping up a much better average than last year. December rail-borne jute is returned at 15¾ lakhs of maunds which is better than the previous month if not quite so good as in October. But it is more than three times the quantity carried by rail in December 1943. River borne jute is also higher than the previous month and only slightly short of the peak month, October. It also is better than the corresponding month of last year by more than 50 per cent. In fact the position has switched over from very acute shortage of inland freight a few months ago to a situation in some shipping stations at least, of surplus freight which cannot be utilised where it is offering. Possibly lack of tonnage power causes mal-distribution, for there are some stations still crying out for freight space.

Up to the time of writing no official pronouncement has been made with regard to the results of the consultation in Delhi on the subject of the acreage to be licensed for Jute in the coming season. It is not even known if the Bengal Government has come to a final decision in the matter. What seems to emerge with reasonable clarity however is that the acreage to be licensed will be neither less nor greater than eight annas of the registered acreage, which would mean an area of 27 lakhs of acres. This figure of eight annas is the same as sanctioned last year when, owing to the greater claims of paddy growing, application was not made for the full licensed acreage and not more than 17 lakhs of acres was estimated as having been actually sown. The impression for the coming season seems to be that, whatever acreage is ultimately sanctioned, licenses for the full area will be applied for and approximately the full area will be sown. So, granting average weather conditions, the prospects of a larger crop in the coming year seem to be reasonably favourable. An early pronouncement of Government intentions seems desirable with a view to the release of much jute at present held up in the districts in the expectation of higher prices, and which holders do not seem willing to part with at the moment at rates on a parity with maximum prices in Calcutta.

There is nothing fresh to report on the perennial subject of coal supplies. They have again been far below requirements during the past week and even "Foster" mills are merely working from hand to mouth, always on the brink of stoppage. It is understood that the Chairman of the I.J.M.A. did not neglect to take up the matter strongly with the Supply Department when in Delhi, and that prospects of improvement during the coming six months were forecast. But we have had so many promises in the past that the receipt of something more combustible would be appreciated. We mentioned before that a specific colliery had been allotted to provide the requirements of the jute industry. If and when this comes into force, it should at least guarantee greater uniformity of quality, which has left much to be desired in the past, and it is to be hoped that the quality will be of a more respectable grade than much of the rubbish which has been supplied to Mills.

The difficulties over the peremptory routing of jute via Khulna from certain stations, which normally are served by the all-river route, are not yet completely resolved though there are hopes that universal through-booking will be functioning as from 1st February. Meanwhile, on the Transport Member's dictum that shippers should not suffer from discrimination in varying freight rates in cases where the route is not of their selection, it is understood that Mills have undertaken the liability for any excess freight and the shipper will only be liable for the standard rate of freight on which he calculated when making his contract.

The Export Jute market is dormant. The Jute purchase Control in Dundee does not seem to be interested in any shipment position earlier than May/June, and this is further ahead than Balers, encumbered as they are with ready stocks, care to look. So even the direct business which was passing has faded out, and shippers are getting no enquiries at all. Mills also have taken only the most casual interest in Pucca bale business, small sales of Firsts at Rs. 79 combined with Mixing Cuttings at Rs. 52 having been reported, also some Dundee Daisee at Rs. 77. The Rear account in Cuttings would seem to be reaching a most unwieldy size and when it is likely to be liquidated must offer a serious problem if Mills are looking to secure their contract quantities in the near future.

Only a very moderate interest has been shown in Loose Jute by Mills, and mainly in Tossa grades, Indian District being reported at Rs. 16/4 and Rs. 13/4 for Mids and Bots, Northern at four annas less and Assam at Rs. 15/12 and Rs. 12/12. Indian Mills are reported to have bought small quantities of Indian Jat at Rs. 16 and Rs. 13 to four annas more according to marks. While upcountry markets remain firm at or over maximum equivalents and imports there are on a very limited scale, Sellers at the close are showing more anxiety to get fresh business on their books as, with freight in good supply, existing contracts are being rapidly completed. So far however the firmness upcountry precludes rates locally being discounted.

The Hessian section of the Fabrics market rules quite steady at maximum levels for all positions up to June, with the earlier months standing at a premium in the Black Market. Small sales have been recorded aslo in July/September eleven porters at maximum rates but the turnover altogether has been limited. In the Sacking section, the market is still very bare of any outside enquiry unless for a few specialities. Mills are reported to have made sales to the Bazar in the April/September and April/June positions on the basis of Rs. 69 for Liverpool Twills and of Rs. 61 for Cornsacks. The usual transactions in "B" Twills have been reported from day to day with the premium for rope-bound bales showing some contraction towards the close. Rope-bound "B" Rs. 62/12, Iron-bound Rs. 62/4.

JUTE

(By Our Staff Correspondent).

Calcutta, January 18.

The raw jute market has continued quiet with mills taking only small interest. The continued difficulties regarding coal supplies and the anxiety to await the announcement by the Bengal Government regarding the size of the crop for the next season have been responsible for the reserve shown by buyers. But even with the poor demand for jute prices have been fully maintained and the reports from upcountry centres are encouraging. Arrivals are still on a very small scale in the mofussil and there is a tendency on the part of holders to await further developments. It is generally felt that it might be possible to get higher prices in the next season. In spite of the reports that the authorities might endeavour to put a larger area under the crop next season, they are confident that the whole of licensed area will not be under jute. As the returns on foodgrains is still attractive there will be a tendency on the part on everyone to grow more foodgrains instead of jute. Thus, in Calcutta while sellers have been rather keen for business they are not in a position to offer any inducement to mills by discounting rates as it will not be possible for them to cover their purchases in the mofussil centres.

In the loose jute section some business has been reported in European Middles and Bottoms at Rs. 16-8 and Rs. 13-8 per maund and in Indian District Tossa Middles and Bottoms at Rs. 16 and Rs. 13 per maund respectively. It is reported that buyers have paid 4 annas more in the latter half of the week.

In the pucca bales section business for export has been poor. Mills have purchased Lightnings at Rs. 79 and S.M.R. at Rs. 56. Export business has been directly placed with balers at lower rates and it is expected that with the efforts made by Dundee Mills to increase production there might be greater enquiry in the near future.

JUTE MANUFACTURES

(By Our Staff Correspondent)

Calcutta, January 18.

The jute manufactures market has continued steady though no business of importance has been reported. There are good buyers for hessian up to June at maximum rates. Mills are not very anxious to enter into further contracts for hessian goods as they are very well sold. In the absence of any definite assurance regarding adequate supplies of coal, it is feared it might be difficult to effect deliveries in time.

In the Heavy Goods market demand is still poor and quotations are not very much changed, "B" twills for ready delivery being sold at Rs. 62-8. There is a substantnal discount for forward positions. If only mills can do larger business by a small discount in rates they would be too glad to reduce prices.

PIECEGOODS

Calcutta, January 18.

The piecegoods market has been steady in the past week and business is again restricted by the scarcity of supplies. Efforts are being made to make an equitable distribution of available supplies and also to expedite the despatch of goods to the various consuming centres from the producing areas. Considerable difficulty is being experienced on account of winter styles and the recent cold wave increased the hardship of consumers. The Provincial Textile Controller, Bengal, has issued the following *communique* in order to make sure that fresh supplies are marketed directly by the quota holders without giving any scope for black market trading: "All quota holders and importers carrying on business in the city of Calcutta and in the industrial areas are hereby directed to submit to the office of the P.T.C. on each Monday a weekly statement of the goods in different varieties in their possession in the past week and the allocation of those goods proposed to be made by them to the dealers on their books in the years 1940, 1941 and 1942 under the quota system introduced under this Office Order No. 8084 (140) CY, dated, November 16, 1944. as amended under Order No. 8864 (130) CY, dated, December 6, 1944. The first statement in this respect covering all stocks in hand should be submitted on January 15, 1945. The quota holders and importers shall not sell or deliver any cloth or yarn in their possession or under their control until and unless they have submitted the statement noted above to this office and have received a receipt to that effect. This refers to stocks in hand and also those arriving on their behalf from time to time".

Stock Markets to-day and to-morrow:

BANK PROFITS IN 1944

After earlier firmness a quieter tendency is noticeable in both the Calcutta and Bombay stock markets and there has been a keenness on the part of holders to take their profits. The intervention of holidays in the Calcutta market has been mainly responsible for the smaller interest shown by operators. It is now felt that the spectacular success of the Russians on the Eastern front and the resumption of the offensive by the Allied armies in the Western front might hasten the end of the war in the West. Developments in the war against Japan also have been satisfactory. It is thus feared that, with fresh restrictions on stock exchange business and a shortening of the duration of the war, speculative activity may not be on the same scale as before. It is, however, believed that the long-term outlook is satisfactory especially as the authorities only recently announced that industrial panels would be set up to help bring about a big increase in the output of major industries. Considering the large needs of the postwar planning programme of the Government of India, prices might thus be stabilised around present levels. Once the Budget is out of the way, bullish conditions might again prevail especially if there are any special concessions under E.P.T. to particular industries. In this connection, the decisions of the Conference between the Supply Member and the Coal Control Board in the current week are eagerly awaited.

I have been pointing out in these columns on more than one occasion that the end of the war might not necessarily mean a reduction in the rate of industrial activity and consequently of earnings of existing industrial units. On the other hand, it is said that with the need for reconstruction in the devastated countries and the large expenditure on planning in the postwar period in this country, there might even be a larger demand for goods than we can produce.

FREE EXPERT ADVICE ON ROPEWAYS BY BIRD & CO., Calcutta

The announcement made this week by the Government that 29 industrial panels will be set up by the Planning and Development Department to take care of the industrial needs of this country in the postwar years confirms my expectations. The setting up of these panels, it is said, will mark the first state in the preparation of a detailed plan of industrial development for the first effective five-year postwar period. A hundred per cent increase in production of iron and steel and cement and a 50 per cent increase in textiles are prepared to indicate further development. The panels will be supplied with factual information by Government. In the case of new industries, the information will consist of a general survey of the industry and the importance of starting it in India, the availability of raw material, power requirements, demands of the Indian market and probabilities of exports. In the case of existing industries, the information will naturally be more comprehensive; it will indicate, in addition, the location of existing units, the types of goods produced, total production under each category and the assistance, if any, given by the Government.

* * * *

Each panel will be required to report on the scope and extent of development; whether the industry should be State-owned either on grounds of national interest or because private capital is unlikely to take it up, the capital required for development; the extent to which technical advice from abroad may be necessary; the manner and degree of co-operation with foreign firms both as regards capital and management; the location of the industry; the nature of assistance required from the Government in the form of protective duties, bounties, research grant, expert advice, etc.; the control that Government should exercise in the case of private ownership; whether the industry should cater for the export market and whether it should develop as in Japan on the cottage industry basis, and if so, to what extent.

It is understood that joint meetings of the panels will be held wherever possible to secure co-ordination, particularly where the processes and products of one industry are connected with those of another.

It need not be emphasised, therefore, that existing companies will play a very important part in the initial stages of any plan of postwar reconstruction.

* * * *

The results of important banks have been published in the past few days and needless to say, earnings in almost all cases, for the year 1944, show a rise over the figures for 1943. A glance at the statement of scheduled banks will show that there has been a large increase in the working capital of banks thanks to continued expansion of currency. It has been possible also to utilise to a greater extent the surplus funds. But for the lower return on treasury bills and giltedged securities and the sharp increase in working expenses it would perhaps have been possible for the important banks to register even a bigger rise in earnings.

The *Imperial Bank of India* has earned a net profit of only Rs. 80.83 lakhs after providing for a bonus to the extent of Rs. 17 lakhs and for taxation and other contingencies. The profit for the year 1943 was Rs. 81.38 lakhs after providing for bonus for Rs. 8½ lakhs and taxation and other expenses. In the absence of any figures regarding the exact provision for taxation it cannot be said what exactly is the improvement in net earnings though the balance-sheet for the year might show the increase in gross income. After making allocations to funds the dividend has been maintained at 12 per cent.

* * * *

Bank of India, however, has done very well in the past year, the net profit, before providing for taxation, being Rs. 65,37,436 against Rs. 43,01,248. Earnings for 1942 were only Rs. 24,52,924. There has thus been a spectacular increase in earnings in the past three years mainly due to the higher level of deposits. The larger net profit, however, has not been distributed by way of bigger dividends to shareholders. Provision for taxation is Rs. 31 lakhs against Rs. 15 lakhs. A sum of Rs. 4 lakhs has been placed to Reserve Fund against Rs. 2.5 lakhs; Rs. 3.5

FREE EXPERT ADVICE ON ROPEWAYS BY BIRD & CO., Calcutta

Bombay Investors & Indian Stock Exchanges.

MARKETS GENERALLY EASIER

(By Analyst)

Bombay, January 19

In last week's gossip, while discussing the boom-like activity in Dalal Street particularly in Tata Steels, I mentioned, "The rise has been so rapid in the last one month that one would most probably be correct in expecting a technical correction by a shake-out ranging from 5 to 10 per cent". I was looking forward to such a reaction, but did not visualise that the drop of nearly 7½ per cent would materialise in a few days. The fall has been attributed to various reasons like early termination of the war, dividend restrictions, a new Stock Exchange act, etc. But I personally feel that the reaction is due to a heavy over-brought position in the market and the fall to-day in Tata Steel Deferreds to about Rs. 2,240 i.e., about 190 points from the peak touched last week has made the technical position of the market very healthy. Tata Ordinaries also have declined by about Rs. 33 points at Rs. 420. Even Indian Irons which were done a couple of days ago as high as Rs. 42-10 followed in the wake of Tata Deferreds and closed at Rs. 41-4. Bengal Steels declined from Rs. 35-8 to Rs. 34-6. There is no hurry to replace holdings. It is just possible that Tata Steels might improve again to-morrow or early next week due to bear covering but one should take such an opportunity for selling out if he has not sold out his holdings last week.

The Textile section also suffered a setback. *Dyeing* fell from a high of Rs. 2,017-8 to Rs. 1,887-8 and *Kohinoor* from Rs. 653 to Rs. 626. *India United* ordinaries fell by about a rupee to Rs. 15-14. *Apollo* lost four annas at Rs. 4-4. *Azamjahis* were the only scrip that remained steady around Rs. 710 though closed a little quiet at Rs. 700.

In Madras, too, in an otherwise weak market in textiles, *Buckingham* and *Carnatic* were the only exception to move up to Rs. 345. Among Calcutta scrips, *New Victoria* (ordinaries) are again down at Rs. 7-5 and *New Victoria* (preference) are quiet at Rs. 9-6.

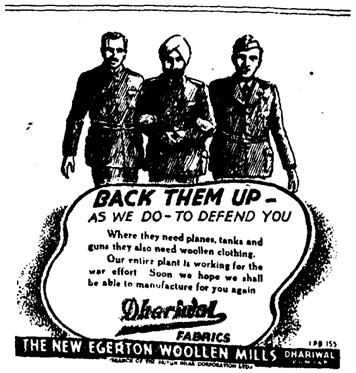
The giltedged market this week was very quiet with Rs. 3½ per cent Paper declining to Rs. 99-11 due to liquidation by tired bulls as well as people, who bought last month, with a view to collect tax vouchers. I personally feel that the liquidation is very nearly over and that the market has again steadied up to Rs. 99-12-6. It is reported that Oriental Government Security Life Assurance Co., Ltd., bought a big block of paper on Wednesday around Rs. 99-11. I look for a gradual and slow improvement in 3½ per cent paper Among the medium-dated securities, I would recommend 3 per cent 1957 Victory Loan quoting around Rs. 99-9 as against the Reserve Bank's issue price of Rs. 100. Of course, among the long-dated loans I prefer 3 per cent 1966-68 which also is lower at Rs. 98-1.

Tea shares in Calcutta have moved up further and Central Cachars, which I recommended some time ago, have improved from Rs. 115 to Rs. 127. Bombay is still a buyer and I look upon Madras shares as cheap since there has been no improvement despite Calcutta showing a stronger tendency. My favourites are Peermade, Highland, Haileyburias among teas, and Ouchterlony Valleys in the tea-cum-coffee group.

I hear Messrs. Parkins Ltd., Managing Agents of Haileyburia Tea, Emerald Valley, and Coorg Tea have bought the estates of Talliar Estates Limited, a sterling Company for Rs. 26 lakhs and are floating the Talayar Tea Compny, Limited with a capital of Rs. 30 lakhs. The capitalisation is Rs. 10 lakhs in debentures, Rs. 7½ lakhs in 6 per cent Travancore tax-free cumulative preference shares of Rs. 10 each and Rs. 12½ lakhs in ordinary shares of Rs. 10 each. The estates are reported to be first-class being situated in Devicolam Taluq amidst the well-known Kannan Devan Hills (Travancore State). The total acreage is 1,017.50 acres of tea and 718 acres of coffee (Arabica). The entire issue, has been underwritten by a Bank as well as leading brokers in Bombay and Madras.

Messrs. Aspinwall & Co., Ltd., Managing Agents of Peermade Tea Co., Ltd., who recently floated the Travancore Rubber and Tea Company, Limited have bought over the properties of the Central Travancore Rubber Co., Ltd. and the Vellani Tea Estates Ltd. for the Travancore Rubber and Tea Co., Ltd. at a price of Rs. 32 lakhs and are issuing Rs. 34 lakhs capital as follows: Rs. 5 lakhs in debentures, Rs. 8 lakhs in preference shares of Rs. 10 each at a premium of Re. 1 and Rs. 21 lakhs in ordinaries of Rs. 10 each at par to the existing shareholders and, of course, the shares, not taken up, will be offered to the public. The acreage acquired from the Central Travancore Rubber Co. and the Vellani Tea Estates Ltd., is 1,363 acres of rubber and 1,202 acres of Tea. Thus the total acreage would be 3,508 acres of rubber and 1,885 acres of tea. The total paid-up capital is Rs. 67 lakhs inclusive of debentures. The Managing Agents themselves have underwritten the entire issue.

BHARAT COLLIERIES LIMITED



NOTICE

is hereby given that the Statutory General Meeting of Bharat Collieries Limited, will be held at the Registered Office of the Company at Dalmianagar (Bihar) on Saturday, the 10th Febuary, 1945, at 4 P.M. for the purpose of passing the Statutary Report as on the 31st December 1944 and transacting any other business that may be brought forward.

The share transfer register will be closed from the 5th to 10th February, 1945, both days inclusive.

By Order of the Board,
SHANTI PRASAD JAIN.
Managing Director.

Dalmianagar:
The 16th January, 1945.

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, January 19.

The Calcutta Stock Exchange has been quietly steady during the past week with business passing on a slightly smaller scale. Profit-taking at the higher levels and discouraging advices from Bombay were mainly responsible for the slightly easier tone in the markets, but there is no appreciable change in prices on balance and the undertone remains steady. The proposals for increasing substantially the capacity of the major industries in the postwar period have been welcomed by the market and it is now generally felt that, war or no war, demand for the products of all industries will be at a high level and that the existing enterprises will be able to maintain earnings.

The giltedged securities section, however, has been easier securities section, however, support and a hardening in conditions in the money market. 3½ per cent. paper was lower at Rs. 99-12 while among terminable loans 3 per cent 1953-55 were Rs. 100-7, 3 per cent 1963-65 Rs. 99 and 3 per cent, 1966-68 Rs. 98-4. 3½ per cent 1947-50 changed hands at Rs. 101-4 and 4 per cent 1960-70 at Rs. 112-11. 5 per cent 1945-55 were easier at Rs. 103 as the maturity date is getting nearer.

The satisfactory showing of Bank profits for the past year has had a stimulating effect on bank shares. But with the exception of the Bank of Baroda there has been no increase in dividends. *Imperial Bank* Contributories were Rs. 503 cum-dividend while *Reserve Bank* were sticky at Rs. 143-8. *United Commercial Bank* were Rs. 141-8 and *Hindusthan Commercial Bank* Rs. 10 premium. *Bharat Bank* ordinary were Rs. 109-8 and *Central Bank* Rs. 87.

With the exception of *Bengal-Nagpur* in the Cotton section there is nothing of importance to be recorded. The expectation of a higher dividend was responsible for the rise in the quotation of *Bengal-Nagpur* to Rs. 44, but the quotation at the time of writing is Rs. 43-4. *Elgin* were quiet at Rs. 17-8 and *Cawnpore Textiles* at Rs. 13-8, *Kesoram* were a shade better at Rs. 17-13 while *New Victoria* were neglected at Rs. 7-10.

In the Coal section, a small rise in prices has been recorded for selected shares. There is anxiety to await news of the conference between the Government representatives and the members of the coal trade this week. It is felt that some announcement might be made regarding the grant of further concessions in E.P.T. for the collieries which are able to report a large increase in raisings. The statement by the Secretary of the Department of Industries and Civil Supplies that the mission to the U.K. would explore the possibilities of raising coal production in this country and arrange for the necessary import of machinery has also been viewed with satisfaction. *Amalgamated*, after being higher at Rs. 53-14, are now quoting Rs. 53 while *Bengal* were easier at Rs. 711. *Bhalgora* were fluctuating around Rs. 17-8, but *Bokaro and Ramgur* were in great request and were done up to Rs. 49-5. *Burrakur* have been fluctuating in wide limits. After being higher

(Continued on page 94)

(Continued from page 89)

lakhs to reserve for Head Office new property account against Rs. 6.5 lakhs; and Rs. 7 lakhs (nil) to Investments Depreciation Reserve. A sum of Rs. 3 lakhs was placed to Bank's Property account on the last occasion. The dividend has been maintained at 11 per cent and the bonus at 1 per cent. It should be remembered, however, that the final dividend and bonus are payable on an increased capital, there being a new issue of shares, on bonus terms, to shareholders during the year. The additional sum needed for this purpose is nearly Rs. 3 lakhs. The amount carried forward is higher at Rs. 14,61,395 against Rs. 13,45,827, subject to the payment of a bonus to the staff.

* * * *

Bank of Baroda has earned a net profit for the same year of Rs. 22,62,682 against Rs. 17,00,692 for 1942-43. After providing Rs. 10 lakhs against Rs. 8 lakhs for taxation, the dividend of 10 per cent is to be paid but there is a bonus of 1 per cent in addition so that the total distribution for the year is 11 per cent against 10 per cent. This dividend is also payable on the increased capital. The amount carried forward is Rs. 4,54,588 against Rs. 3,86,423 brought in.

* * * *

United Commercial Bank has been able to report a jump in earnings to Rs. 11,99,553 for the nine months ended December, 1944 against only Rs. 3,80,835 for the period ended March 1944. Prudently enough, the Directors have decided to conserve the resources of the Bank in order to strength its financial position in the early stages. After providing Rs. 5.25 lakhs for taxation a sum of Rs. 7.5 lakhs has been transferred to Reserve Fund. The amount carried forward is Rs. 48,012.

BANK PROFITS
IMPERIAL BANK OF INDIA

We are informed that the Directors of the Imperial Bank of India at the Meeting of the Central Board held at Calcutta on Monday, the 15th instant, declared a dividend to shareholders for the half-year ended 31st December, 1944 at the rate of 12 per cent per annum, payable on and after the 22nd January, 1945.

The profits available, including Rs. 42,55,800 brought forward from the previous half-year, amounted approximately to Rs. 94,36,300 which sum was disposed of as follows:—

	Rs.
I. Payment of a Dividend of 12 per cent per annum, free of income-tax	33,75,000
II. Transferred to Reserve Fund	7,50,000
III. Transferred to Pension Funds	1,06,400
IV. Bonus to Staff	8,50,000
Carried forward to next half-year	43,54,900
Total ..	94,36,300

The average rate for Demand Loans during the half-year was 3½ per cent.

THE BANK OF BARODA, LTD.

The profits of the Bank of Baroda, Ltd., for the year 1944, subject to audit, including the sum of Rs. 3,86,423-3-0 brought forward amounts to Rs. 27,50,104-13-5 which the Directors have disposed of as under:—

	Rs.		
An *ad-interim* dividend was paid for the half-year ended 30th June, 1944 at the rate of 10 per cent per annum, free of income-tax which absorbed	4,85,527	2	11
Provision for taxation ..	10,00,000	0	0
Bonus to staff ..	2,10,000	0	0
Total ..	16,95,527	2	11

The Directors now propose to pay a final dividend for the half-year ended 31st December, 1944 at the rate of 10 per cent per annum, free of income-tax amounting to Rs. 4,99,990 and a bonus at the rate of 1 per cent per annum, i.e., As. 8 per share, free of income-tax amounting to Rs. 1,00,000 and to carry forward Rs. 4,54,587-10-6 to the next account.

THE UNITED COMMERCIAL BANK LIMITED.

The net profit subject to audit for the nine months ended 31st December, 1944 including Rs. 1,73,458-6-6 brought forward from the previous account amounts to Rs. 14,58,011-10-6. The Directors propose to make the following appropriations out of the net profit—to transfer to Reserve Fund Rs. 7,50,000; to provide for taxation Rs. 5,75,000; to pay bonus to staff Rs. 85,000; to carry forward to next year's account Rs. 48,011-10-6.

N.B.—Closing transactions for each day and the lowest and highest figures for the period are given.

(*Continued from page 91*)

at Rs. 49-8, the quotation is now Rs. 44-4. *Deoli* were a shade better at Rs. 22 while *Equitable* were easier at Rs. 68-4. There is a small rise in the quotation for *Ghusick and Muslia* to Rs. 17-5 from Rs. 14-14, but they are now quoting Rs. 16-4. *Nazira* were higher by a point at Rs. 20-15 while *New Beerbhoom* were done at Rs. 40-8. *North Damuda* have encountered some selling and are now quoting Rs. 18-2 against the highest level touched last week of Rs. 19-8. *South Karanpura* improved to Rs. 29-8, but have again receded to Rs. 28-9.

In the Jute section there is nothing of importance, the publication of the production figures for the month of December having a discouraging effect. *Howrah* were Rs. 86-4, and *Anglo-India* Rs. 474. *India* were unchanged at Rs. 725 and *Kamarhatty* at Rs. 691. *Megna* were steady at Rs. 128-8 and *Nuddea* Rs. 133. *Presidency* fluctuated around Rs. 12-12 and *Reliance* Rs. 74.

In the Engineering section, *Indian Iron* were fluctuating between Rs. 41-8 and Rs. 42-8, but closed steady at Rs. 42-2. *Steel Corporation* were a shade easier at Rs. 34-12 as also *Jessop & Co.*, at Rs. 24-11. *Marshalls* were Rs. 5-1 and *Saran Engineering* Rs. 10-8. *Burn & Co.*, were steady at Rs. 425.

Sugar shares have shown a tendency to recover, *Balrampore* being done at Rs. 19 and *Champaran* Rs. 44. *Cawnpore* were Rs. 41-4. There was good enquiry for *New Savan*. the quotation being more than a point higher at Rs. 24-6. *Carew & Co.*, were Rs. 28-3 and *Darbhanga* Rs. 30.

There has been good enquiry for Tea shares from Bombay, but sellers are not inclined to part with their holdings at the present prices. *Central Cachar* improved to Rs. 125 from Rs. 119-8, *Hasimara* quoted Rs. 81-8, *Sapoi* Rs. 23 and *Patrakola* Rs. 1,265. *Tezpur* were unchanged at Rs. 21-4.

In the Miscellaneous section, *Burma Corporation* were steady around Rs. 4-15 and *Indian Copper* Rs. 3-2. *Alkali and Chemical* were Rs. 30-12, *Dalmia Cement* Rs. 18-6 and *Assam Bengal Cement* Rs. 18-8. *B. I. Corporation* changed hands at Rs. 6-12. *B. B. Petroleum* were further higher at Rs. 4-12, *Midnapore Zemindary* remained steady at Rs. 185. There was good demand for Shipping shares, *Calcutta Landing and Shipping* being put through at Rs. 37-10 and *Bengal Assam Steamship* at Rs. 345. *I. G. N.* have improved by nearly 15 points in the past two weeks to Rs. 202-8. Paper shares continue steady with *India Paper Pulp* at Rs. 240. *Star Paper* were Rs. 17-12 and *Titaghur* Rs. 29-12.

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

Definitely easier conditions have been noticeable in the money market and call money rate is again nominal at ¼ percent in Bombay. It was reported last week that there was a temporary rise in the rate to ¾ percent. In Calcutta, however, there was no change, the rate being ½ percent as usual. The easier conditions have not enabled the Central Government to get its requirements of treasury bills in full though, it should be said that the response at the last auctions has been more encouraging, and the Provinces were unable to get their offers fully accepted. Against the Central Government's offer of Rs. 6 crores, applications amounted to Rs. 5.55 crores against Rs. 3.28 crores last week. That there has been keener bidding is evident from the increase in the amount of accepted tenders to Rs. 4.77 crores from Rs. 2.58 crores. The average discount rate is the same at 9 annas percent per annum. The Bengal Government's offer of Rs. 5 crores secured applications for Rs. 5.1 crores and the Assam Government's Rs. 3.4 crores. In both cases, the average discount rate was 10 annas that is, 1 anna more than the Central Government's rate. The acceptance of the offers of the two Provincial Governments in full was perhaps due to the maturing of treasury bills for similar sums. The Central Government's offer for the next week has been reduced to Rs. 4 crores from Rs. 6 crores.

The returns of the Reserve Bank for the week ended January 19, show that there has been a slowing down in the rate of expansion. The Savings drive should have brought in a large sum especially as it was reported that the quota in respect of Punjab was Rs. 1.32 crores and that satisfactory progress had been made in other provinces too.

In the banking department, Central Government balances actually showed an increase to Rs. 259.71 crores from Rs. 256.32 crores and Other Government accounts to Rs. 14.83 crores from Rs. 10.53 crores. Bank deposits with the Reserve Bank also were only Rs. 30 lakhs lower at Rs. 38.42 crores. The jump in Other Government accounts is perhaps due to the payments from the Centre their share of income-tax receipts.

In the issue department, notes issued were Rs. 1,041.15 crores against Rs. 1,039.59 crores and notes in circulation Rs. 1,032.35 crores against Rs. 1,030.13 crores. Expansion has been for Rs. 2 crores against sterling securities, the total amount of these securities in the issue department being Rs. 926.33 crores against Rs. 924.33 crores. Rupee coin declined further to Rs. 12.57 crores from Rs. 13.01 crores. Sterling payments continue to be on a large scale. Even with the transfer to the issue department of Rs. 2 crores there is a rise of nearly Rs. 4 crores in the banking department.

The return of the Scheduled Banks for the week ended January 12, shows a further decrease in Demand liabilities to Rs. 602.02 crores from Rs. 606.9 crores though Time liabilities are Rs. 1.97 crores higher at 205.98 crores. Advances have further improved to Rs. 245.57 crores from Rs. 241.00 crores while Bills discounted show again a sizeable increase to Rs. 14.68 crores from Rs. 14.15 crores. Against the increase in advances and bills discounted by Rs. 5.1 crores there is a decrease in working capital by Rs. 2.92 crores. As total cash balances are only Rs. 1.49 crores lower, there is a sum of Rs. 6.53 crores to be accounted for. Even if it were assumed that the whole of the maturing treasury bills were utilised, it would have been necessary to realise Rs. 53 lakhs by sales of investments. As, in that week, a sum of Rs. 1.24 crores was accepted by the Reserve Bank against the Central Government's offer, there should have been substantial discounting of maturing treasury bills or overdrafts against giltedged securities by the Reserve Bank or the Imperial Bank.

The statement of the Reserve Bank for the week ended January 12, however, does not show any increase under treasury bills. As a matter of fact, there is a decline of nearly Rs. 1 crore in investments to 13.82 crores.

The statement of the Imperial Bank for the same week also does not show any rise under bills discounted and purchased. Investments also are lower by Rs. 3.1 crores at Rs. 145. 72 crores. There is an increase, on the other hand, in loans, cash credits and overdrafts by Rs. 1.25 crores. It is clear, therefore, that on balance there has been some liquidation of investments in giltedged securities.

The statement of the Imperial Bank for the week ended January 19 shows a rise in deposits by over Rs. 4 crores to Rs. 232.74 crores. There is a further decrease in investments to Rs. 142.78 crores from Rs. 145.72 crores while advances are again higher at Rs. 66.28 crores against Rs. 64.75 crores. As a result of the decrease in investments and the increase in deposits cash balances are Rs. 3.02 crores higher at Rs. 32.99 crores, even with the increase of Rs. 1½ crores in advances.

The exchange market has been steady with a few export bills showing.

Call money quoted ½ per cent in Calcutta and ¼ per cent in Bombay. 3 to 5 months ½ per cent; 6 to 11 months ¾ per cent and 12 months 1¼ per cent.

A Crucial Stage in Planning

With the publication of the Second Part of the Bombay Plan, one distinct stage in the progress of the country towards economic planning may be deemed to have reached its end. That stage consists in economic planning being placed before the public under influential auspices as the policy best suited to the conditions of the country and in the establishment of a general consensus of opinion on the broad aims and principles of planning. The readiness with which the Bombay Plan has been welcomed and accepted by public opinion in this country may well serve to obscure the importance of what has been accomplished. Not all that is obvious to the intelligent individual is accepted as such by the public as a whole. And if it is remembered that planning implies a truce to the ideological war—and ideological warfare is always extremely bitter—then it is something to be grateful for that the Bombay Plan has occasioned far less controversy than any public issue of comparable importance. The significance of the Second Part lies in widening the basis of the agreement to cover some of the most vexatious problems of distribution that modern times have been confronted with. Here again the concord now established is apt to have its value underrated. If planning as such is readily acceptable to all sections of opinion, it is because the main controversial issues are shelved rather than solved. In fact, the rise of rival plans in the wake of the Bombay Plan gave the public an inkling of the differences that might, in other conditions, have widened and continued to distract the country. Much credit is due to the authors of the Bombay Plan not only for their skill in placing the issues of economic planning before the public in the way they did, but also for the sincerity and sweet reason with which they have disarmed all suspicions about their motives and the motives of big business in this country. By accepting and recommending without reservation some of the most far-reaching modifications of the system of private capitalism, they have left no room for misrepresentation or misapprehension. If the main differences between the Bombay Plan and other plans are in the matter of bias for the masses and fanciful appropriations for particular parts of the Plan, the former has no longer any validity and the latter is to some extent, both in the Bombay Plan and in its rivals, a lamentable pre-judgment of the issues involved. There is no more sanctity or practical value for the total of Rs. 15,000 crores of the Roy Plan than for the ten thousand of the Bombay Plan. And this applies to the allocation out of the total to each important head. In fact, the issues which seemed for some time to provide room for controversy have been given a decent burial by the Second Part of the Bombay Plan. The stage has arrived when the public can recognise that, if the plans of the future should prove to be weighted in favour of the rich, the fault cannot lie with the originators of the policy and that, at any rate, whatever may be the motives of the authors of the Bombay Plan, it is up to the public to ensure that economic planning serves the broad national interest and not narrow sectional ones.

Even more important than the closing up of differences between various sections of public opinion is the establishment of implicit concord between the Government of India and the authors of the Bombay Plan. The stages by which this concord was established are too well-known to call for recapitulation here. It is well to note here that in a speech at Nagpur Sir Ardeshir Dalal was even explicit on this point. Indeed, it is hard to see the room for difference of opinion, at this stage at any rate, of the evolution of planning in this country. For, the emphasis at this stage necessarily falls on the necessity for improving the standard of living; and, up to a point at least, there can be no two opinions about the methods by which this task can be accomplished. The issues on which an unrepresentative Government of India is apt to differ from the nationalist-minded public will not be reached till a late stage in the formulation of the plan, though some of these issues may be of immediate importance to particular sections of businessmen. While, therefore, there is no need to overlook the differences or to underrate them, it would be unfair and unwise to deny agreement where it exists and fail to make the utmost use of it from the point of view of the ultimate good of the country. We imagine that it is in this or a similar spirit that Sir Ardeshir takes his duties as Member for Planning and does not spare himself in the securing the progress of planning in this country. And so long as there is one high-placed official who is keen on the progress of planning, we have reason to regard the future with greater hope and cheer. It should not be forgotten that only under official auspices can planning be expected to make any considerable progress. No non-official agency, whatever its resources, can do much to take planning to the stage of concrete plans. That the Government of India are keen on pursuing planning is, in spite of so many other discouraging circumstances, a highly heartening factor.

Once this concord of opinion is established, the question arises, what next? In our last week's comments on the Second Part of the Bombay Plan we expressed our feeling that its authors do not contemplate doing anything more about planning, if only because there is substantial agreement between the Government of India and themselves and that one of them is in charge of post-war planning and reconstruction. As for the Government of India, Sir Ardeshir Dalal has of late been touring the Provinces to ensure that the Provincial Governments do their part and that the progress of planning does not suffer from the negligence of the Provincial authorities. It must also be remembered that at the Centre, the work has reached the stage in which the Centre has to look to the Provinces and the States for further impetus. That work comprises the reports of a few special kind, the formulation of plans in regard to certain specific subjects like education, roads, agriculture and railways and the drawing up of the two reports by the Reconstruction Committee of the Viceroy's Executive Council. The last mentioned, it should be remembered, was more concerned to emphasise the responsibility of the States and the Provinces than to indicate the lines on which further progress can be expected to be made independently at the Centre. It will thus be seen that planning is now in a phase in which the danger of stagnation is neither remote nor unreal. If the post-war period is to find the country ready with its plans for economic development, then progress has to be made without a pause in a number of different directions. Planning has to progress both on the popular and on the official fronts. On the popular front, we have to secure a degree of informed and purposive enthusiasm for planning without which planning will degenerate into mere slave-driving. On the official side, there has to be a quickening of the effort to form provincial and State plans and to correlate them in regional and central plans. The conditions necessary to ensure progress on both these fronts have to be thought out and ensured.

It is for this reason that we have more than once emphasised that the authors of the Bombay Plan should not rest content with what they have done, but must continue their efforts to ensure the necessary conditions on the popular side. These conditions range from the improvement of the prospects of a National Government to the appreciation by each individual citizen of what planning can do for him and what he can do to ensure the success of the Plan. From this point of view, a great deal of popular books and pamphlets drawn up with specific purposes in mind and with the utmost literary competency possible is clearly needed. We recognise that a beginning has been made in the admirable little booklet prepared by Mr. M. R. Masani on "Your Food'. The technique of popular exposition is the same as that followed in his well-known work, "Our India". Mr. Masani's gift for presentation, at once arresting and accurate, should stand the country in good stead in most of the work that still awaits doing. Clearly, a popular booklet on planning from the point of view of the average individual in this land of colossal unemployment of mind and body would go a long way to familiarise the public with the issues and to teach it to accord a proper priority to economic problems over political. This is the responsibility of non-official sponsors of planning.

As for the official front, one suspects from the frantic tours of Sir Ardeshir Dalal that the Provinces, not to speak of the States, are lagging behind in the matter of planning for the post-war period. Though some Provinces have drawn up certain plans for particular subjects, Provincial planning as such has been neglected. While Provincial Governments should, no doubt, have been more alive to this most important development of our time, it must be recognised in fairness to them, that the Central Government had given the impression of leaving little for others to do. At any rate, their promptings came at a very late stage. Even now, there is need for the Centre to instruct the Provinces as to the main principles that they should follow in formulating their plans. It still seems a moot question whether the plans should be drawn up without regard to the ways and means of financing them. Nor is it clear what the Provinces should do in regard to matters which are the subject of all India plans already formulated by Central Committees. The system of Provincial finance which we have at present is utterly unsuited to planned development by the Provinces of subjects which are

now under their charge. How far these uncertainties have been cleared up by Sir Ardeshir in his meetings with Provincial Ministers or Advisers we do not know. But it is time that the country was told how the Centre expects the Provinces to go about their work in this regard. The position is even more unsatisfactory in regard to the States; for the States' Governments have in addition to the difficulties of the Provinces, their own special problems. It is widely known that the Government of India are exerting pressure to secure uniformity between British and Indian India in economic matters. While such uniformity is needed, nothing is gained by a flat denial of the differences in circumstance. The States need an assurance about their political integrity. They need, too, a reassurance that the regime of planning will hold out advantages which will compensate them for conformity with British India. The aim at this stage must be the speeding up of Provincial and State plans so that the stage of correlation and readjustment will not be indefinitely postponed. We trust that the next report of the Reconstruction Committee will throw light on this aspect and will not be long in coming.

Rubber Requirements

Though little is known as to the findings of the Rubber Study Group which met in Washington this week, its composition is known and the composite Group's concern with post-war prospects for rubber is probably attuned to the British delegate's speech at Hot Springs. Sir Eric Macfadyen spoke lately of the need to bring back prosperity to the rubber plantation industry as he had in mind the growth of synthetic rubber production in the war and the emergence of the U.S.A. as a producer of rubber (She has always been the world's leading consumer of rubber. taking usually about half the world's total). A cabled message early this month set out the outlines of the problems for rubber-growers who were reminded that a surplus of natural rubber might be a legacy of the war. This is less encouraging than the efforts to stimulate rubber production for the war. A recent decision to increase the bonus paid to planters suggested that Government adhered to the policy framed in 1942 in order to compensate planters for slaughter-tapping while keeping to the schedule of prices fixed in the control order.

The Study Group's function in relation to the Combined Materials Board which is to work after the war in Europe ends may be more easily grasped if due regard is paid to the participation of both the Dutch and British Governments and the abandonment of the International Regulation agreement last year. The end of restrictionism must satisfy the U.S.A. to the point that it can even overlook the achievements made as regards synthetic rubber during the war. Surveys of the rubber problem dwell on the use made of coal and oil as sources of carbon in connection with rubber and the W.P.B.'s own success in developing synthetics on the German and Russian pattern. It is legitimate to expect that if Germany and Russia give up synthetic, the U.S.A. too could afford to do so and the main issue posed now is the future of the synthetic industry in which the U.S.A. Government is directly interested.

Discussions on a technical level with special reference to longterm prospects have been mentioned in the message from Reuter's Washington office without any hint as to negotiation for an inter-Governmental agreement concerning rubber though it will be agreed that the Colonial Office which is going to review measures for increasing the rubber output of Ceylon (as the deputation of Sir Clifford Figg suggests) has a strong case to place before the Group and indirectly before the United Nations Government. Indeed the Pacific Relations Conference was reminded of the obligations to small producers and the need to salvage British, Dutch and American investments in the Far East when the British delegate raised the question of rehabilitating the plantation industry. Since the bulk of the world's supply was withdrawn from the market by Japanese conquest the economics of rubber has changed rapidly and greatly. Figures as to production cannot be cited though the tendency to increase is manifest as regards India's exports of raw rubber, suggestive of an increase in planted area and the success of conservation measures. Though it is inferred that a critical shortage cannot develop even in the U.S.A. the position of the older planting industry requires notice as it is likely that rubber must live on export markets like Germany, Britain and Japan; and if Germany were to get rid of synthetics there would be a natural desire to ask for similar sacrifices of the U.S.A.

It is not certain whether there will be room for both synthetic and natural rubber and application of the Atlantic Charter's provisions as to open access may entail special consideration for natural rubber. Britain's present readiness to acquiesce in U.S. arguments over the oil of the Middle East may support the claims made known. It would not be enough to rely on the natural increase of consumption. If there is any question as to costs, the requirements of labour in S.-E. Asia must be noticed, and the easiest line of approach for both may really be a levelling up of prices for natural rubber. If immediate prospects for rubber are satisfactory, and producers respond to the call for steady increase in production, a guarantee as to the future may be properly sought in the colonies which depend upon rubber and tea exports. Free competition may not be enough and the Colonies may have to look for guarantees for both estate and native producers. It has been estimated by an American authority that Malaya and the Indies would be able to ship 1.4 million tons (a quantity exceeding the presumed total for synthetic) shortly after the war and British interests. bent on return to Malaya are therefore interested in a solution that may fix the proportions for synthetic and natural rubber.

To let competition develop on familiar lines must be far from the intentions of the Allied Governments who must aim at stability of prices. adequacy of stocks and adjust the conflict of interests by creating a buffer pool. Provided the U.S. Government has a hand in laying the foundations of a regulation scheme, that would perhaps let synthetics thrive without a tariff, it should be possible to get U.S. approval for a solution that would not seek to push prices upwards. Present prices under control are distinguishable from the prices paid for synthetic rubber. The latter's survival is admittedly not objected to by the British and Dutch Governments which only look to the interests of peoples in Malaya and the Indies. While tin stands secure like rice, both sugar and rubber would require special consideration from traditional importers including Britain. The U.S.A. may have to relinquish its desire for self-sufficiency in order to help the Colonies by limiting subsidised synthetic production, letting in duty-free imports of natural rubber, and participating on a full basis in any new commodity schemes. If the rubber Study Group aims at enlisting the support of the U.S.A. the planting industry in India, directed since 1943 to expand production, would always have to look primarily to the home market. Progressive expansion of the rubber planting industry to which an A.I.M.O. monograph refers affords an assurance that rubber produced in India would be cheaper than the article subject to an export duty. The competition of synthetic may affect only India's rubber exports and in any case the growth of manufactures is not affected by the excise or the prospect of competition after the war, as the home industry would get its raw material cheaper than its rivals. Since the international scheme related to export quotas is done away with, there might be only limited interest in the probable adjustment of the U.S. and British views, but one should not forget that Indian estate labour in Malaya requires a fair degree of economic security. If the U.S.A. has a share in the supervision of Colonial administration generally, a less jaundiced view of the Colonial system might prevail and hopes in this regard are sustained by the trend of unofficial discussions at Hot Springs when the requirements of peoples, as distinct from rulers, elicited consideration from the delegates.

What form the international agreement should take is readily described. It should be left to a Board that would prevent fluctuations and keep rubber prices low enough to prevent suspicion as to the bolstering up of inefficient producers. There must be a rule as to further development of rubber in new areas like the Congo and Latin America and the limitation of output in the event of depression ordinarily must cover synthetic as well as natural rubber. It is certain that the Washington discussions would prevent the development of unrestrained competition although the rise of a synthetic industry credited with an output of over 1 million tons per annum is primarily a problem for others than the U.S.A. Military co-operation postulates economic co-operation with the British and Dutch Governments and a promise as to equality in compensation or further opportunities in S.-E. Asia might well lead to the shaping of compromise. Two brief cabled messages suggest little as to the lines of forthcoming agreement, but it is useful to remember that the copper, tin and tea agreements have been given up and the war altered the nature and scope of the rubber agreement.

PROSPECTUS

TALAYAR TEA COMPANY LIMITED

(INCORPORATED IN TRAVANCORE, UNDER THE TRAVANCORE COMPANIES ACT IX OF 1114.
THE LIABILITY OF MEMBERS IS LIMITED).

The Company has no place of business in British India.

Sanction for this issue of capital in British India has been obtained from the Government of India under order, dated 13th November, 1944 and from the Government of Travancore under order, dated 7th August, 1944. A copy of this Prospectus has been filed with the Registrar of Joint Stock Companies, Trivandrum and copies have been delivered to the Registrar of Joint Stock Companies, Madras and Bombay.

The list will open on 24th January, 1945 and will close as soon as it is estimated t at the shares offered for public subscription have been applied for and in any case not latter than Ten days from the opening date.

AUTHORISED CAPITAL	.. ..	Rs.	30,00,000
1. 2,00,000 Ordinary Shares of Rs. 10 each	.. ..	,,	20,00,000
2. 1,00,000 Preference Shares of Rs. 10 each	.. ..	,,	10,00,000
PRESENT ISSUE:			
1,25,000 Ordinary Shares of Rs. 10 each	.. ..	,,	12,50,000
75,000 Preference Shares of Rs. 10 each	.. ..	,,	7,50,000
		,,	20,00,000
And			
2,000 5% Travancore Tax free Debentures of Rs. 500 each	.. .. ..	,,	10,00,000
		,,	30,00,000

The entire Debenture issue has been taken up.

The whole value of the Shares and Debentures applied for is payable in full along with application.

The Directors and their friends have applied for Rs. 3,50,000 worth of Ordinary Shares, Rs. 2,50,000 worth of Preference Shares which will be allotted in full. The balance of Rs. 9.00,000 worth Ordinary Shares and Rs. 5,00,000 worth Preference Shaers alone are now offered to the public for subscription.

PREFERENCE SHARES

The Preference Shares will entitle the holders thereof to a fixed Cumulative Dividend of 6% per annum free of Travancore Income Tax on the amount paid up thereon, and the right in a winding up to payment of Capital and arrears of Dividend, if any, whether declared or not, in priority to the Ordinary Shares but shall not have the right to any further participation in profits or assets.

DEBENTURES

The Debentures offered are First Mortgage Bearer Bonds, carrying interest at the rate of 5% per annum, Travancore Tax free. Interest will be paid half yearly, the 1st of such payment to be made on 30th June, 1945 calculated from the date of allotment, and thereafter half yearly on 31st December and 30th June every year. The Debentures are Redeemable on 1st of January, 1955, but at the option of the Company they are liable to be redeemed before that date by annual instalments of 10 per cent every year, commencing from 1st of January, 1950, such Debentures for redemption to be drawn by lots, subject to three months' notice. The Debentures will be secured as a first charge on the immovable properties of the Company, under a Trust Deed to be executed by the Company in favour of the Trustee named below, subject to the terms and conditions specified in the Trust Deed.

No further issue of the Debentures will be made ranking in priority to or *parri passu* with the present issue of ten lakhs of rupees.

APPLICATION AND ALLOTMENT

Applications for less than 50 Shares either Preference or Ordinary will not be considered. In case of over-subscription allotments will be made in units of 50 shares for both Preference and Ordinary Shares.

Each Shareholder will be entitled to One Share Certificate for the Ordinary and One for the Preference Shares allotted to him. Debentures will be issued in the form of Bearer Bonds for Rs. 500 each.

TRUSTEE FOR THE DEBENTURE-HOLDERS

Rao Bahadur U. S. Desai, Chairman, Bombay Mutual Life Assurance Society Ltd., Bombay.

The said Trustee shall Ex-Officio be a Director of the Company.

DIRECTORS

1. Rao Bahadur U. S. Desai, M.A., Chairman, Bombay Mutual Life Assurance Society Ltd., Bombay.
   Director: Graxalt Refineries, Ltd., Karachi and
   Member: Native Share Brokers Association, Dalal Street, Fort, Bombay.
2. J. C. Thakkar, Esq., Managing Director, International Bank of India, Ltd., Bombay.
   Chairman, East and West Insurance Company Ltd., Bombay.
3. D. N. Rao, Esq., B.A., A.S.A.A., Incorporated Accountant and General Manager, International Bank of India Ltd., Bombay.
4. K. V. Venkitasubramoney Iyer, Esq., Land Lord, Kytharam House, Parippu, Kottayam.
   Director: Haileyburia Tea Estates Ltd., Allepey.
   Investment Corporation Ltd., Kottayam.
5. Sri S. Ramaswami Naidu, "Bakthi Vilas", Thyagarayanagar, Proprietor, Messrs. Ramlal & Co., Stock & Share Brokers, Members, The Madras Stock Exchange Association Ltd., Indian Bank Buildings, North Beach Road, Madras.
   Director: Emerald Valley Estates, Ltd., Madras,
   Coorg Tea Company; Limited, Madras.
   Asoka Plantations, Ltd., Trichinopoly,
   Haileyburia Tea Estates, Ltd., Alleppey.

   Dierctors Emerald Valley Estates, Ltd., Madras,
   Coorg Tea Company, Limited, Madras,
   Haileyburia Tea Estates, Ltd., Allepey.

BANKERS

International Bank of India, Ltd., Bombay and Branches.
The Indian Bank, Ltd., Madras and Alleppey.
The Indian verseas Bank, Ltd., Bombay and Allepey.
The Travancore Forward Bank, Ltd., Kottayam.

LEGAL ADVISER

Messrs. Thomas and Nayar, Advocates, Trivandrum.
G. N. Chary, Esq., Advocate, Madras.

AUDITORS

Sri G. M. Dandeker, B.A., A.S.A.A., R.A., Incorporated and Registered Accountant, Madras.
Sri P. R. Hariharan, G.D.A., R.A., Registered Accountant, Narasimharaja Mohalla, Mysore.

BROKERS AND UNDERWRITERS

1. The International Bank of India Ltd., Bombay.
2. P. R. Subramanayam Esq., M.A., Stock, Share & Finance Broker, 61, Stock Exchange Buildings. Apollo Street, Fort, Bombay.
3. Champaklal Devidas, Esq., Stock, Share & Finance Broker, Agakhan Building, Dalal Street, Fort, Bombay.
4. Messrs. Ramlal & Co., Stock & Share Brokers, Madras.
5. Messrs. Raman & Co., Stock & Share Brokers, Beach Road, Alleppey.

MANAGING AGENTS

Messrs. Parkins, Limited, Kottayam, Travancore.
Managing Agents of:—Emerald Valley Estates, Ltd., Madars,
Coorg Tea Company, Ltd., Madras,
Haileyburia Tea Estates, Ltd., Alleppey.

REGISTERED OFFICE

Kottayam, Travancore State, South India.

OBJECTS

The Company has been formed for the purposes set forth in the Memorandum of Association (a Copy whereof tgether with the names of the signatories thereto is annexed hereto and forms part of this prospectus) and primarily with the object of acquiring the Tea and Coffee Estates known as 'Talliar', 'Chattamunnar', 'Pambhumalai' and 'Craiglamont' in Devikulam Taluk in Travancore State, owned by "Talliar Estates, Ltd.", a Sterling Company incorporated in Great Britain and working and developing the same.

ACREAGE OF ESTATES

The total area of the Estates is as under:—

		Acres.
1. Tea in Bearing	.. .. ..	1,017.50
2. Coffee in Bearing (Arabica)	.. ..	718.55
3. Gum Clearings	.. .. ..	53.32
4. Reserve Land	.. .. ..	397.71
		2,187.08

SITUATION

The Estates lie amidst the well known Kannan Devan Company's Estates in Devikulam Taluq, Travancore State. Talliam Estate is 15 miles from Munnar and 30 miles from Udumalpet and lies alongside the Northern outlet Road leading to Udumalpet and Coimbatore. There are four Divisions. Talliar, Craiglamont, Chattamunnar and Pambumalai; but for easy working they are classified into two, viz.. Talliar and Chattamunnar. Talliar and Craiglamont are the top divisions and Chattamunnar is five miles down the Northern outlet Road, from the Talliar Tea Factory. Pambumalai is on the opopsite side of the river passing along the eastern side of Chattamunnar. Between Talliar and Chattamunnar divisions lies the Lower Vagavarai Estate of the K. D. H. P. Company, Limited. The top portion of Talliar Division borders are Upper Vagavarai and Sottuparai Estates of the K. D. H. P. Company, Limited. The whole Estates lie between an altitude of 3,750 feet to 5,500 feet above mean sea level. The Talliar Post Office is in the Estate itself.

DESCRIPTION OF PROPERTY

Mr. A. R. St. George, Manager, Stagbrook, Maimallay and Woodlands Estate, Peermade, an experienced and well-known planter, visited, valued and reported on the Estates on 23-7-1944, extracts from whose report are given below:—

"The lie of the land is very favourable throughout. Most of the Tea on Talliar and Chattamunnar is of the China Hybrid variety and this seems to thrive, one field on Talliar giving 1,500 lbs. of made Tea per acre last year, and this without the aid of any artificial manure. Pambumalai is a first-class little place, the Tea here being younger and planted with better jat.

The whole Tea area is well shaded, grevillas and Dadaps, being most conspicuous. It is true that in some places shade is too dense. There is a shade tree on Talliar and Chattamunnar which I have not seen before, called Dalbergia Assamica, and this has the appearance of being a very promising tree.

There were very few weeks to be seen anywhere. Drymaria was much in evidence, and this acts as a very good ground cover and is encouraged.

The prunned Tea I saw carried excellent clean wood and I noticed very little signs of disease throughout the whole area. Some fields have vacancies and I see from the Manager's Monthly Report that supplying where necessary, has again been attended to this year. Plucking is carefully supervised.

I consider the whole Tea area to be a valuable property and capable of much increased yields, if artificial manures are applied."

FACTORY AND BUILDINGS

"These consist of a Manager's Bungalow, Assistant Manager's Bungalow, Factory, outside withering sheds, Factory Material Store House, Officers, Quarters School, Hospitals, one on Talliar and one on Chattamunnar and Staff Quarters. They are all well constructed buildings. The Factory is a building of 150 feet with 3 withering lofts. It has reversible withering.

The Machinery consists of 6 Rollers, 2 Roll Breakers, I Four Feet E. C. P. Drier, 1 Paragon Drier, 2 Sifters, one of which is Chota Moore, Tea Cutter, Packer, etc. Water Power is used throughout the year, there being no engine in the Factory, only a Pelton Wheel for the water Power. There is an outside withering shed capable of taking 10,000 lbs. green leaf at 1 lb. to 9 square feet and this with the withering space available in the factory enables the factory to deal with 20,000 lbs. green leaf per day. The other smaller withering shed is now not of much use. There are 318 Line Rooms and many of these are modern, especially so at Talliar and Pambumalai.

The Hospital on Talliar is a very well-kept building and has two wards and in-door sanitation.

The Post Office is an Estate building for which the Postal Authorities pay a rent of Rs. 5 per mensem.

All buildings excepting Cooly Lines have electric Lights which is a real asset. Power comes from the Pallivasal Hydro-Electric Scheme.

A Pulp House has recently been built and this is really a fine building and I believe the only one of its kind in South India. There is also a suitable Store House.

The Factory is provided with stand by Power derived from the Pallivasal Hydro-Electric Scheme, to be used in an emergency.

Water is laid on to all the buildings in the Estate including Cooly Lines, on both Talliar and Chattamunnar."

EXPORT QUOTA

The crop basis for the Estate as allowed by the Indian Tea Licensing Committee is 6,42,210 lbs.

CROP

The crop figures for the previous four years are given below:—

	Made Tea.	Coffee.
1940-41	5,46.786 lbs.	109.60 Tons
1941-42	5,00.772 „	65.70 „
1942-43	6,00,361 „	47.10 „
1943-44	6,38,312 „	110.00 „

Estimates for the season (i.e. from 1st January 1945 to 31st December 1945) is 7,00,000 lbs. made Tea and 90 Tons Coffee.

PROSPECTS

The following is a conservative estimate of profits from working the Estates for the Season beginning with 1st January 1945 and ending with 31st December 1945.

	Rs.	A.	P.	Rs.	A.	P.
7,00,000 lbs. of Made Tea at 15 as. (the contract price) per lb.	6,56,250	0	0			
Less—Cost of Production at 7 as. 9 pies per lb.	3,39,062	8	0			
	3,17,187	8	0			
Add—90 tons Coffee at Rs. 1,200 per ton *nett*	1,08,000	0	0			
				4,25,187	8	0
Less—Depreciation on Buildings and Machinery	20,000	0	0			
Directors Sitting Fees, Establishment Charges and Travelling Expenses	7,500	0	0			
Managing Agents Commission ..	19,282	8	0			
Managing Agents Office Allowance	12,000	0	0			
Income-tax, Agricultural Tax and Surcharge	35,000	0	0			
Interest on Debentures ..	50,000	0	0			
Dividend on Preference Shares	45,000	0	0			
Sinking Fund	50,000	0	0			
				2,38,782	8	0
Balance				1,86,405	0	0

This Balance of Rs. 1,86,405 which is available for distribution to the Ordinary Shareholders will work out to around 15 per cent on the Ordinary Share Capital of the Company. The above calculation of Profits from Tea is based on Current Contract prices to the Ministry of Food, London. As per the recommendation of the U. P. A. S. I. the price of Tea per lb. is to be enhanced by 2d. from the 1st of January, 1945, to cover the extra cost of production and the Company can confidently hope to earn extra profits on account of the increment in the Contract prices.

CAPITALISATION.

The purchase price payable to the Vendors for the Estates including all plantations, Buildings, Cooly Lines, Bungalows, Tea Factory, Machinery, Coffee Pulp House, equipments, furniture, fixtures, etc., etc., is Rs. 26,00,000. The consideration payable has been allocated as under:—

	Rs.
1,017.50 acres of Mature Tea planted area at Rs. 1,350 per acre	13,73,625
718.55 acres of Mature Arabica Coffee planted area at Rs. 700 per acre	5,02,985
397.71 acres of Reserve Land suitable for Tea and Coffee Plantation at Rs. 300 per acre	1,19,313
53.32 acres Gum Clearng at Rs. 350 per acre ..	18,662
Tea Factory, Cooly Lines, Coffee Pulp House, Bungalows, Machinery and other equipments ..	5,85,415
Total ..	26,00,000

PAYMENT TO VENDORS AND DISPOSAL OF CAPITAL MONEY.

The proposed allocation of the issued and subscribed capital is as follows:—

	Rs.
I. Purchase Price payable to the Vendors, Talliar Estates, Ltd., London	26,00,000
II. Preliminary Expenses including Brokerage, and Under-writing commission of Rs. 90,000 but excluding conveyance	1,20,000
III. Value of Stocks and Stores on Estates (estimated)	1,50,000
IV. Working Capital	1,30,000
Total ..	30,00,000

DIRECTORS' QUALIFICATION AND REMUNERATION.

The qualification of a D,rector other than an Ex-Officio Director shall be the holding in his own name or in the case of a corporation in the name of such corporation of shares in the Company of the aggregate nominal value of not less than Rs. 5,000 and no other person than an Ex-Officio Director shall act as a Director unless he or the Corporation, if any, holds such share qualification.

The articles provide that the Directors shall be paid out of the funds of the Company such remuneration as may be fixed by the Company in General Meeting. Each Director will also be entitled to receive reasonable travelling and other expenses and hotel charges incurred in attending meetings of the Board of the Company.

If any Director is appointed to advise the Company as an expert or is called upon to perform any special service in the interests of the Company, the Board of Directors may specially remunerate him, as it shall think fit.

INTERESTS OF DIRECTORS.

Of the first Directors, Mr. S. Ramaswami Naidu is interested as the Proprietor of Messrs. Ramlal & Co., who is one of the Brokers underwriting the issue for a commission at the rate of 2½ per cent. Mr. K. N. Narayana Iyer is interested in the remuneration payable to the Managing Agents, of which he is the Managing Director. No other Director has any other interest in the formation of the Company, except to the extent of his holdings in the Company.

EX-OFFICIO DIRECTOR.

The Managing Agents shall have the right to nominate one Director, who will be styled as the "Ex-Officio" Director and he shall not be liable to retirement by rotation by an 'Extra-Ordinary Resolution'.

MANAGEMENT.

Subject to the control and supervision of the Board of Directors the General Management of the business of the Company shall be in the hands of Messrs. Parkins, Limited, Kottayam, who will act as the Managing Agents of the Company, for a period of Ten years from the date of incorporation. The Company in securing the services of this Company has the satisfaction that this Company is already the Managing Agents of Three other well-known Tea Concerns and whose experience and intimate knowledge of the industry will be available for the management of this Company's affairs too.

The Company will enter into a Managing Agency agreement with the said Messrs. Parkins, Limited, in terms of the draft agreement which for the purpose of identification is subscribed to by Mr. G. N. Chary, M.A., B.L., Advocate, Madras.

Subject to the provisions in Clause 3 and 4 below, the remuneration of the Managing Agents is fixed to be:—

(1) A sum of Rs. 1,000 per mensum as Office Allowance, payable from date of taking charge of the Estate, and

(2) a commission of 5 per cent of the Nett Profits of the Company. "Nett Profits" shall have the meaning given to it in Section 106(3) of the Travancore Companies Act.

The remuneration above mentioned shall be exclusive of and shall not include any remuneration, salaries, wages, which shall be payable to Bankers, Solicitors, Engineers, Commission Agents, Dealers, Brokers, Officers, Clerks, Servants, Workmen and other employees who may be employed for or on behalf of the Company or for carrying on and conducting the business of the Company or any rent, Post and Telegram expenses. Printing and Stationery or any other expenses, or Travelling charges and expenses incurred in connection with the business of the Company.

VOTING RIGHTS.

On a show of hands every member present in person shall have one vote. On a poll every member shall have one vote in respect of each share (whether ordinary or preference) held by him.

TRANSFER OF SHARES.

The Directors may without assigning any reason whatsoever decline to register any transfer of shares to any person of whom they do not approve and may also decline to register any transfer of shares on which the Company has a lien.

PRELIMINARY EXPENSES.

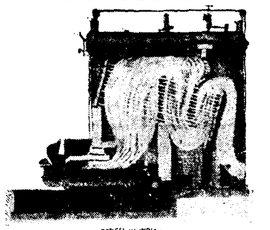
Editorial Notes

Morris and Hindustan

This week's announcement connected with India's potential automobile industry is calculated to surprise many who believed that American aid alone was sought. The first messages spoke of an assembly plant in which the Nuffield Organisation was interested and of the sending of British technicians to India. The later message brought the Nuffield Organisation and the Birla-sponsored together, and indicated that the car made here would be a 10 h. p. car. It is evident that Morris design is to be incorporated in the new motor cars made in India. The reports as to the previous missions and enquiries in the U.S.A. cease to have any significance in view of the announcement that a contract has been made between Hindustan Motors and the Nuffield Organisation which stands for the largest unit in the British motor industry which is admittedly keen on developing overseas markets after the war The interpretation that the market will place upon the news must be favourable while the manifestation of British interest in India's industrial advance should go far to remove doubts as to the possibility of partnership on a basis of equality without awkward conditions. The immediate result should be the disappearance of the discount on the new Hindustan Motor shares while the distant results might include abatement of the claim for 7½ percent tariff preference for British-made cars exported to India. The choice of a small four-cylinder vehicle for the first stage in production is unquestionably linked with road improvement and fuel economy in India. The number of competing vehicles of the 10 h.p. type should be fewer than in the higher-powered category so that India-built cars should command a ready market from the outset.

Indian Soap Industry

The Indian soap industry, well set before the war, has responded to the increase in demand noted during the war though its total output is lower, in comparison with what was recorded previously. The raw materials needed are oils and fats and caustic soda. Where oil is refined and turned into vegetable ghee, the oil waste is ordinarily utilised for soap making and soap factories have become useful adjuncts of the vegetable ghee industry. The main difficulty for soap-makers has arisen from the shortage of caustic soda which is needed by the textile industry as well as other industries at present. Soap production fell off in 1942 and from 1943 soap factories have obtained only 50 percent of their caustic soda requirements. The ration has been increased to 75 percent but four manufacturers who produce glycerine are able to obtain 100 pecent of their caustic soda requirements. The Army is at present an important customer and in 1942 took 11,000 tons of soap with the result that the quantity available for India's civilians was considerably reduced. There is an important cottage industry but its output is not known. The greater part of the factory production comes from Bombay where the output has fallen less than in Bengal, which leads both U.P. and Madras in the number of factories. Imports of soap in the first half of 1944-45 appear to be considerable while exports also showed a considerable reduction. The latest estimate of production assigns existing factories an output of 130,000 tons as compared with the prewar output of 157,000 tons. As to technical progress the satisfactory quality of toilet, washing and household soap produced in India is a clear guide. The industry has shown recovery since 1943 as regards output and has no special problems except that arising from the shortage of caustic soda. Of the secondary industries that throve since 1929 without tariff assistance soap-making is the chief but how much of its success is due to the immigration of foreign capital and technical skill cannot be indicated with certainty. The postwar prospects appear to be considerable in this case since exports in the war period have been reduced only to meet home requirements. Reports agreed that in Colonial markets Indian soaps sold well and, in any case, the improved standard of living in India must raise the demand for soap.



No Real Increase

Changes in India's imports during September are few as compared with the decrease in value compared with the four preceding months. If the seaborne trade figures show an increase as compared with September 1943 in respect of precious stones, cotton chemicals, dyes and tea chests, the main items of manufactures imported show no increase although the totals for six months point to an increase under machinery, metal and paper as well as in cotton and mineral oils. As compared with 1943 and 1942 there was a substantial rise in India's imports of precious stones and pearls. The recovery in imports of liquors is less interesting than the increase recorded under salt and tobacco. The only raw material imported in reduced quantity was raw wool. India's own woollen industry happens to be dependent upon imports of wool for Indian wool is suited mostly for making blankets and rugs. The increase under imports of woollen goods may not appear important as compared with the fall under raw wool since the manufacture of the civilian quota by mills still under Government control cannot proceed successfully if the raw wool imported falls A marked deficiency of supplies in spite of fixed prices has been experienced and the reason is obvious.

The import returns bear witness to a fall under imports of non-ferrous metals and a very moderate increase in takings of iron and steel. Existing industries, however, should have benefited from the increase shown under bobbins, jute mills' equipment, and electrical instruments. Actually, the relaxation of import control has not led to any pronounced increase in imports of consumer goods for the available figures show that, except for drugs and medicines few items have undergone expansion to any extent. Chemicals generally represent a raw material for industry and the increase recorded since April only means that textile, paper and other industries would have been better placed as regards essential supplies. In the main, Indian imports of manufactures increased more slowly than India's own exports of manufactures and the big increases under imports are not calculated to jeopardise industries for grain, oils, and raw cotton must be obtained from abroad to meet exigent requirements. A consequence of this increased buying of oil and cotton has been the increase share of both Iran and Egypt in the import trade of India.

Cotton Seed and Oil

The average annual production of cotton seed is estimated at two million tons by an oil expert who suggests in *Indian Farming* that more seed can be crushed with advantage. The Punjab, C.P. and Berar, Bombay and Hyderabad are always important producers of cotton seed. Since exports of cotton seed have fallen away steadily since 1925 and only 300,000 tons are at present crushed for oil and 200,000 tons used as seed there is a large quantity of seed whose quality is pronounced satisfactory though the oil content is apt to vary from 11 to 25 percent according to the results obtained with 88 samples tested for the purpose. About three-fourths of the cotton seed produced in India is suited for crushing. At present, the husk is used as cattle feed though cake would be better as being free from lint. The average yield of decorticated cake is put at 37 percent and its oil content is enough for cattle. The use of refined oil for manu-

facture of vegetable ghee and margarine is well known while the husk can be used as fuel or as fertiliser. It is believed that 1.1 *million* tons of cotton seed can be crushed for cake and the oil extracted would be available for export or use at home. Additional equipment required for oil mills crushing cotton seed includes a *delinting* machine. As cotton seed oil is acid it has to be refined and supplementary plant is required. The chief argument in favour of cake is that the protein content is much higher in the case of decorticated cake. Though cotton seed is used as direct feed in India it is urged that cake containing 7 percent oil from oil mills would prove much better. Until 1937 there was only one mill treating cotton seed but now there are two big mills crushing about 100,000 tons of seed per annum in addition to several medium and small mills which crush about 200,000 tons per annum. It is believed there is vast scope for the development of mills in many Provinces and States which are able to get cotton seed. In the outline of prospects for the industry reference is made both to the wastefulness of using seed and to the advantages of getting by-products like lint that can be used for paper-making, the manufacture of artificial silk etc. The survey leads to the conclusion that propaganda for oil-cake in preference to cotton seed must be undertaken in order to develop the oil-crushing industry. The useful beginning made is regarded as sufficient to warrant hope of rapid development.

Mild Punishment

According to an announcement from Allied capitals, the provisional government of Hungary has agreed to pay £75 million as reparations under the armistice signed on January 20. The sum is payable in commodities such as machinery, rivercraft, grain and livestock to be furnished over a period of six years. Russia is to receive £50 million and the balance is payable to Czechoslovakia and Yugoslavia. The reparations clause is similar to that figuring in the Rumanian Armistice signed in September but the other points in the agreement are, in effect, the restoration of the frontiers of 1938 for Hungary. The provisional government is to have no authority over the area of military operations and certain contions in the armistice agreement suggest that the new Control Commission will have a large say in Hungary's affairs for some time. In addition to the reparations payable Hungary has undertaken to pay compensation for losses sustained by other Allied States and their nationals. Since the provisional government declared war on Germany it is bound to surrender German arms and equipment, and by the truce has to provide no less than eight infantry divisions for use in accordance with the Allies' directions. Hungary's new government has undertaken to withdraw troops and officials from the former Czech, Yugoslav and Rumanian territory and to repeal all legislature and administrative provisions relating to annexation. The most important gainer by this provision appears to be Rumania whose claim to Transylvania has been duly recognised. The frontiers imposed by the Treaty of Trianon are reimposed and the undoing of aggression is completed by a condition as to supplies for relief and rehabilitation in Czechoslovakia and Yugoslavia. Hungary's shipping is to be turned over to the Allies for their use. Russian claims in the past to a share in the control of the Danube have received notice in view of the clause in the armistice. Restoration of loot, assistance in the prosecution of those accused of war crimes and the acceptance of a control commission are points in the agreement which provides for penalties proportioned to the errors of a country which put the anti-Comintern Pact higher than its obligations to neighbours. The provisional government has declared for domestic reforms including new labour welfare laws, the dissolution of Fascist parties and repeal of anti-Semitic measures. An agrarian programme similar to that adopted already in Poland was promised and Hungary's conversion is complete with the armistice. The losses sustained by German interests who developed Hungarian industries for their own purposes may more than balance the compensation payable to the Allies and their nationals.

Export Trade Plans

Following Mr. Harcourt Johnstone's estimate of British disinvestment during the war and the requirements of Britain's balance of payments in the future, there has

come a reconstruction plan for British export trade though it has no striking features. Lord Woolton's plan to stimulate export after the war merely covers the adaptation of the old system of export credits and the new system of export groups representing manufacturers. There is no plan for direct subsidies and there is no hint of reciprocity for Britain's customers. To this extent, there may be dissatisfaction with the scheme of credits for exporters. The functions of the Department of Overseas Trade would not change greatly under the arrangements described by Lord Woolton at Bristol. As for the co-operation required of traders the export revival planned this year may yield informative lessons. In view of the official trade mission to Britain from India intended to limit strain on local supplies the British export plans following the appointment of an official from the Middle East to promote trade with the East may lead to renewed examination of the connection between the Indian plans for import of consumer goods and the British plan to increase exports. Though the market research described is of the familiar pattern, it is important to remember that the many wartime trade controls are imposed entirely at Britain's instance and can be taken off as soon as export capacity is restored. To persevere with the present plan to increase Britain's exports by 10 percent is the intention of Lord Woolton whose proposal for raising the limit for export guarantee to £200 million indicates how India must adapt her own policy to the changes in demand and destination for exports. Trade Commissioners' work has led to a consideration of future requirements and a financial scheme meant to help Indian shippers would probably command wide approval since it would help war-ravaged countries and assist Indian manufacturers to keep new markets secured during the war.

Shortages in France

Since September the shortage of raw materials in liberated France has been featured in the news. Incidents of the Occupation, black markets and barter, lingered and even the shortage of coal is not peculiar to Belgium. Shortage of materials arises from the end of import trade after 1940 while the claims for relief have been duly supported by reference to war damage in France. It is known that France lost two million tons out of the three million tons of shipping she had before the war. The Allies have decided to allot a certain number of ships for urgent French requirements. In October, officially requests for wool, jute and jute cloth were made to the U.K. but supplies were not made available. It is believed that U.N.R.R.A. could bring help only after the danger on the border ends. Allied recognition of the future military contribution of France has not led to any changes that would make the over-valuation of the franc tolerable. If it is inferred that Europe must be satisfied first in regard to consumer and capital goods current fears as to a flood of foreign imports in India would seem to lack a basis. When Normandy was taken, the shortage of food was not in evidence but after Paris was captured, it was clear that distress in France would be the major problem of the Government organised in September.

Less than one third of France's industrial equipment can be put to use according to an estimate because of its lack of raw materials, coal and transport. The presumed abundance of power alcohol and the nationalisation of certain factories obviously provide no guarantee of industrial recovery though the present shortage may be cited in favour of reparations in kind or even for transfer of the Saar Basin to France. The cabled messages in November suggested that France would recover quickly. Two months after appear messages wholly destructive of earlier optimism. How France can pay in gold or goods is a less difficult issue than the question of shipping. Claims on the postwar shipping pool threaten to be numerous but it is easy to decide that import requirements should determine the tonnage allotted from the surplus. A material factor would be

PROSPECTUS

A copy of this Prospectus has been filed with the Registrar of Joint-Stock Companies, Bengal.

"Consent of the Central Government has been obtained to the issue of Capital, subject to the condition, that so much of the capital raised by the issue of prescribed securities which will not be released until the Central Government (in consultation with the Crown Representative if Indian State interests are involved) is satisfied that the time has come to make corresponding payments for the purposes which are consistent with the enforcement of any measures of control or restriction that may be in operation at the time when such release is applied for. It must be distinctly understood that in giving this consent the Government of India do not take any responsibility for the financial soundness of any schemes or for the correctness of any of the statements made or opinions expressed with regard to them.

The Subscription list will be opened on 1st February 1945 and closed on 22nd February, 1945.

Application will be duly made to the Committee of the Calcutta Stock Exchange Association Ltd. for the quotation of the shares of the Company in its official list.

BENGAL COTTON MILLS LIMITED

INCORPORATED UNDER THE INDIAN COMPANIES ACT, 1913.

AUTHORISED CAPITAL - - - - - Rs. 50,00,000

Divided into 3,50,000 Ordinary shares of Rs. 10/- and 15,000 Preference shares of Rs. 100/- each.

The holders of Preference shares shall be entitled to be paid out of the profits which the Directors shall determine to distribute by way of dividend a fixed cumulative preferential dividend at the rate of 5 per cent per annum, tax free and to a right on winding up to be paid all arrears of preferential dividend, whether earned or declared or not down to the commencement of the winding up and also to be repaid the amount of the capital paid up or credited as paid up on the preference shares held by them respectively in priority to any payment in respect of the ordinary shares, but shall not be entitled to any other rights in the profits or assets of the Company.

PRESENT ISSUE ... ... **Rs. 30,00,000**

Divided into 2,00,000 Ordinary shares of Rs. 10/- each and 10,000 Preference shares of Rs. 100/- each to be issued at par payable as follows:—

Ordinary Shares—Rs. 2-8 on application and Rs. 2-8 on allotment.

Preference shares Rs. 25/- on application and Rs. 25/- on allotment.

The balance in respect of both the classes of shares in such calls as the directors may determine.

Out of the present issue the promoters, the directors and their friends have agreed to take up 50,000 Ordinary shares and 3,000 Preference shares.

PROSPECTUS:

The Company has been formed for the purposes specified in the Memorandum of Association and in particular for the purpose of establishing cotton mills in Bengal. The Company will carry on business of spinning, weaving, dyeing, bleaching, marcerizing and printing of cloth and yarn and intends to specialise in finer varieties of yarn and clothes. The site proposed to be acquired for the mills of the Company is situated at Sodepur only about 10 miles from Calcutta and easily accessible to Calcutta by motor, rail and river. Trained and efficient labour will be assured; coal will be available in any quantity from the neighbouring Bengal and Bihar coal-fields; raw cotton will also be easily available as Calcutta already imports a large quantity of various kinds of cotton. Bengal and specially Calcutta, is a big centre for consumption of cloth and yarn of the various counts and varieties and the local mills are quite insufficient to meet the demand. The war has proved conclusively that the present cotton mills in India, even if they work up to capacity are unable to meet the internal demand of cloth and yarn and specially of the finer varieties. Bengal is particularly lacking in this respect. The few mills situate in Bengal are wholly insufficient to meet the demands of Bengal. If there had been more mills in Bengal it would not have to pass through the cloth famine through which it is passing now. For a requirement of about 1,000 million yards of cloth Bengal produced only 200 million yards during April 1943 to March 1944. There has always been a good demand for the products of Indian Mills from the neighbouring countries and due to the devastation caused by the war and owing to the big reconstruction programmes of the various countries such demand is likely to increase to a great extent after the war. The cotton mills especially those in Bengal, have a very bright future before them. Calcutta has all along been one of the important centres for supply of yarn and cloth both for internal consumption and for export, and its importance is likely to increase after the war. The existing mills are not equipped with the latest machineries. The company propose to equip its mill with about 40,000 spindles and 800 looms and with the latest types of machineries incorporating the improvements which the accelerated research during the war has made possible. Provisional orders for part of the machinery have already been placed and every effort is being made to import the machineries as early as possible. With the prospect of an early termination of the European war in favour of the allies, it is expected the machineries will arrive shortly and the Company therefore propose to purchase land and to construct the buildings at an early date so that no time may be lost in erecting the machineries after they arrive in India. It is expected that the erection of the mills will be completed and the mills will start working within about a year after the termination of the war and it is expected that the company shall start paying dividend shortly thereafter.

PRELIMINARY EXPENSES

Preliminary expenses including registration fee and printing charges and other incidental expenses are estimated not to exceed Rs. 25,000.

MANAGING AGENTS REMUNERATION

Messrs. More Bhadani & Co., Ltd., have been appointed Managing Agents of the Company and their remuneration as provided for in the Articles of Association is as follows:—

A commission at the rate of 10 per cent on the net yearly profits of the Company within the meaning of Section 87C(3) and an office allowance of Rs. 2,000 per month exclusive of any remuneration, salaries, wages, which shall be payable to the Bankers, Solicitors, Engineers, Commission Agents, Dealers, Brokers, Officers, Clerks, Servants, Workmen and other Employees who may be employed by the said Managing Agents for or on behalf of the Company for carrying on and conducting the business of the Company or any part, post and telegram expenses, printing and stationery, or other expenses or any travelling charges and expenses incurred by the said Managing Agents in connection with the business of the Company all of which rent, remuneration, salaries, wages, costs, charges and other expenses shall be paid by the Company. The Managing Agents have, however, agreed not to charge any remuneration until the mills of the Company start manufacturing goods.

MINIMUM SUBSCRIPTION

The minimum subscription on which the Directors will proceed to allotment is shares of the nominal value of Rs. 6 lakhs.

VOTING RIGHTS

On a show of hands every member present in person shall have one vote and on a poll every member present in person or by proxy shall have one vote for every share held by him provided, however, the holders of Preference shares shall have no right to receive notice or to be present or to vote in person or by proxy at any general meeting of the Company by virtue or in respect of holding any Preference share.

RESTRICTIONS ON TRANSFER

There are no restrictions on transfer of shares, but the directors without assigning any reason may decline to register any transfer of share not fully paid-up or on which the company has a lien or to any person not approved by them.

DIRECTOR'S QUALIFICATION AND REMUNERATION

The qualification of a director other than an ex-officio director shall be the holding of shares of the value of Rs. 25,000/- in the Company. The remuneration of the director shall be Rs. 64/- for each effective meeting of the Company attended by him. A Director residing out of place at which any meeting of directors is held may also be paid travelling and other expenses for attending such meeting. A director rendering any extra service to the Company may be paid extra remuneration.

INTEREST OF DIRECTORS

Messrs. Gurusharan Lall, Laxmi Narayan Bhadani and Chandiprosad More three of the directors of the Company are also directors of More Bhadani & Co., Ltd., who are the Managing Agents of the Company and as such are interested in the remuneration payable to the managing agency of the Company.

BROKERAGE

Brokerage will be payable to *bona fide* brokers at the rate of Re. 1/- per Preference share and four annas per Ordinary share.

GENERAL

A copy of the Memorandum and Articles of Association of the Company can be inspected at the Registered Office of the Company. A copy of the Articles of Association can be obtained at the Registered Office of the Company on payment of Re. 1/-.

APPLICATION FOR SHARES

Application for shares should be made on the form accompanying the Prospectus and sent to the registered office of the Company or the Company's bankers.

Where no allotment is made the deposit will be returned in full, and where the number of shareh allotted is less than the number applied for, such sum received in excess of the amount required on application will be returned.

Application for lots of less than fifty Ordinary shares or ten Preference shares will not be entertained. A brokerage of four annas for each Ordinary share and Re. 1/- for each Preference share on all allotted shares will be paid to *bona fide* brokers on applications bearing their stamps.

Application forms are obtainable from the Company or from the Company's Bankers.

the use of French ports by Anglo-American forces since June. The trade treaty negotiated with Spain might help in dealing with the coal shortage but Spain is not a source of raw materials, textile or other, and everything apparently depends upon the supplies from the U. S. A. to which the revival of U-boat activity constitutes a menace. For France today the immediate problem is said to be unemployment though many able-bodied prisoners of war and workers are kept out of France. If the labour welfare measures of Vichy stand, the unemployment may not be a serious problem. Trade with the African colonies cannot provide an immediate solution for the shortages since mineral and agricultural imports must be ordinarily paid for in manufactures and France must for some time put the war before her own export trade revival.

Developing Transport

Separate reports on road-building, road-rail competition and the Railways' own plan for development regulate current thinking on transport problems in India. Sir Edward Benthall has informed the appropriate Policy Committee that development rather than control is to be the chief aim in the post-war period. That means branch line extension or restoration would be put aside in favour of strengthening services on the main lines. In describing the Railways' 100 crore plan Sir L. P. Misra has defined the limit of extension dwelt on the increase in rolling stock for the Railways from home sources. Sir Edward Benthall has referred to intensive development of traffic on the railways and referred also to Provincial Governments' present partiality for road construction. The most important conclusions desirable from the outline of Governments' acceptance of a fixed limit to railway extension is that road-building will have to be financed here after largely by Central grants though motor transport, if allowed to develop without restriction, may contribute additional revenue. Another conclusion is regarding a continuous expansion of motor imports and the simultaneous opportunity for projects of manufacture of vehicles or spare parts. A further consequence of road-building (mainly on Provincial account) would be a stabilised demand for contract labour. Some Provinces have already drawn up schemes for road development after the war and assigned a special place for village roads used by animal transport. The Central Government's view, however, suggests no departure in finance. It is obvious that the Road Fund cannot stand the very large drafts in the future and much depends upon the special Reserves of the Provinces themselves. In regard to new construction generally Local Authorities would probably have limited functions and qualify for larger grants in regard to expenditure on upkeep. Recognition of the Provinces' separate interest is not altogether new but the Transport Member's recommendation in favour of road-building and improvement suggests acceptance of the role of public works in relation to the trade cycle.

Swiss Experience

The invasion of Italy led to the contraction in foreign trade. That is a leading feature of economic changes in 1944 in Switzerland. A fall of 50 percent under imports as compared with 1938 is referred to in an official survey. The adverse balance of trade was much lower in January-June 1944 than in the past but Switzerland's tourist traffic was at an end and her investment income also was reduced by the war. The fall in trade affected Swiss customs revenue. Shortage of food supplies leading to rationing has been reported long ago but domestic food production has been increased steadily. Agriculture has been developed to meet the great fall in foreign trade, but Switzerland still reports a shortage of oilseeds and fats. A large addition to cultivated area has led to the growing of some oilseeds as well but the bigger thing for the flourishing dairy industry is the increase in growing of fodder crops. There was no unemployment in Switzerland because the army was partially mobilised and agriculture too claimed more workers than ever. Though export trade fell on account of the war, Swiss industries were doing well, and trade fairs at Basle, Lausanne and Lugano showed that Swiss industries were efficient and adaptable. The industrial production index was above the 1943 average. An increase in wages was a result of the improved activity and the rise in individual and national income accounts for the increase in railway passenger traffic as well as the moderate prosperity of the hotels deprived of foreign custom as the figures show that in April to June only 18,000 foreign tourists were registered. The outstanding feature, however, is the absence of conflict in a period of economic strain. There is a five-year convention to safeguard industrial peace. Like other neutrals Switzerland reported some increase in foreign assets while the National Bank acquired gold in addition to dollars which could be used for increasing the country's imports in the future. The gold cover for the note issue

Clive Street Gossip

One effect of the favourable turn in the war is to bring post-war problems nearer. A new feeling of urgency about such problems suddenly arises in the minds of many. While at the time of the Bretton Woods Conference, post-war financial problems were discussed with an academic aloofness which made the discussions seem unreal, today there is almost a fear that we may be caught napping by the sudden onset of peace. So far as economic problems are concerned, however, the "cease fire" order does not denote a sharp change from war to peace. The position in regard to supplies, in all the various stages from placing orders to actual consumption at different places, undergoes no dramatic change over-night. And as for changing the economic organisation and the economic life from a wartime to a peacetime basis, it is now recognised that this has to be a very slow, gradual process, in which each step has to be carefully deliberated on beforehand. The economic measures for the post-war period have in that sense less urgency than say, plans for occupation and military administration of enemy territory. Nevertheless, it is necessary to recognise

that we may have less time than we have thought till now for clarifying our ideas and formulating our policies for the post-war period. This is even more true of our monetary and exchange policies than of our plans for the reconstruction of agriculture, or the establishment of new industries or the expansion of our public education. For the latter involve various stages in the development and execution of particular policies and the questions are such that the first few steps are more or less the same, whatever may be the measures in the subsequent stages of their development. But in monetary and exchange policy, almost quite the opposite may be said to be true. Every step at every stage has to be carefully related to well-chosen ultimate objectives. Whether it is currency and credit regulation or prices or transactions in the exchanges, there is little scope for mere drift without risk of prejudice to ultimate ends. It is in this sense that the need to have clear ideas about our post-war problems in regard to money and exchange has been rendered more urgent by the turn of events in Europe.

* * * *

One should, therefore, welcome the attempts of academicians like Prof. Vakil to elucidate the main issues and considerations in this regard. The little booklet entitled "The Future of the Rupee" by C. N. Vakil and J. J. Anjaria (pages 39: price Re. 1-4 Popular Book Depot, Bombay) is deserving of a wide public. While saying this, I have no desire to conceal the fact that the pamphlet is inconclusive. It is largely a presentation of the historical background against which the future of the rupee has to be examined and an exposition of all the relevant factors and considerations. From the point of view of the education of public opinion, that is a merit rather than a defect. For it is far more important that the public should be appraised of the important considerations which should govern our future policy than that cut-and-dried solutions should be rammed down its throat. In India, there is need for such an educated public opinion, though the place of the public in deciding currency and exchange policy is increasingly narrowed, even in the advanced democratic countries of the west. For, in this country we have to think not only of the introduction of the wisest and the most suitable policy, but also of resistance to dangerous policies which may not be due to mere errors of judgment on the part of their authors. And past history has taught us that, however patently harmful a policy may be, there will always be scope for controversy and means will be found for misdirection of certain sections of the public. After all, the rupee problem is always with us. While in olden times India was the only country, which had cut its silver moorings but would not ride into the haven of a gold standard, now all the countries of the world are equally adrift and the exchange rate is a worry common to all, with the difference that in India the direction of policy is not in our hands.

* * * *

While there is need for general public appreciation of the issues involved, we must also recognise that never were monetary and exchange problems as complicated as they are today. They never, in fact, were simple. Even in the comparatively simpler conditions of the 'twenties, it was hard to prove to the hilt the overvaluation or undervaluation of the rupee. The utmost that could be done was to present the conclusion as an obvious inference rather than by any direct method. If we were out to prove that the value of the rupee had been artificially raised, we had to show how the country was starved, over a period, of the normal expansion of currency. We had to point to the various measures of deflation and the tightening of the monetary screw as proof of the overvaluation of the rupee. The idea that economic theory by itself could deliver a decisive verdict on the exchange controversy had to be slowly abandoned after more or less bitter disillusionment. But the problem as it faces us at the present moment is far different. When the war will be over, we shall have an enormously bloated currency circulation, a high level of prices even within the scope of the controls, a large programme of new investment and fresh expenditure and the need to correlate all these in a suitable currency and exchange policy. We shall have to decide in the first place about the internal value of the rupee. Here, one important point to remember is that the war, so far as our currency is concerned, will not end with its end in Europe. That is, we have to think of the war with Japan, which will, in this sense, be more with us than with the U.S.A. and Britain. Since India will form the principal base, all the forces which have operated during these years on our currency will be strengthened and accelerated rather than reduced by the end of the war in Europe. And that would mean that our present circulation, which stands well over a Rs. 1,000 crores, will rise to even higher levels and that by the time we put our hands to the problem of post-war currency reconstruction it might conceivably stand at Rs. 1,500 crores. In that case what will the problem be like? At the moment, official circles are prone to pat themselves on their backs for keeping prices under control and keeping down the price level. What has been possible with the circulation below 1,000 crores may not be equally feasible when the circulation will have risen by another 50 per cent. The price level will have risen still higher; and the first point to be decided in regard to our post-war policy will be the price level. It may be said without hesitation that, whatever may be the suitable level of prices, neither the pre-war prices nor the prices at the end of the war will serve. Prices will have to be brought down to and maintained at a level somewhere between the two. Since in any case a lowering of the price level would require contraction of currency, and since lower circulation and falling prices are

not helpful to economic development. we shall be faced with a set of incompatible objectives. While these tasks can be taken in an order which will reduce their incompatibility, we must be clear about the level of prices which we should maintain in the post-war period. The level of prices must be such as will be in equilibrium with costs, leave the present margin of agricultural profits largely unchanged and will be in accord with price levels in other parts of the world.

* * * *

All this is easily said. The uncertain factors are legion. What guess can we make of the price trends in foreign countries? At the present stage, we may take note of the fact that controls in Britain and U.S.A. have been far more effective than in India and that the rise in prices is far less. Whether there is real equilibrium between costs and prices, it is difficult to say. But we must take account of the possibility that Britain and the U.S.A. might be able to export at prices not very much higher than their pre-war prices and this possibility is of fundamental importance to our policy in regard to prices. For, our price levels will determine the competitive capacity of our export trade and on this competitive capacity will depend our ability to maintain a fair balance of trade. To my mind, this must be regarded separately from the fate of our sterling balances. While the rate at which we can secure repayment of our sterling balances will affect our rate of development of particular new industries, nothing should be done to impair the normal position of our trade balances.

* * * *

The whole question is a cluster of baffling uncertainties. All that can be done at present is to make up our minds that certain known dangers should be rigorously avoided. Messrs. Vakil and Anjaria insist in the first place that the rupee should be de-linked from sterling, a step for which the uncertainty of the future of British export trade and of sterling is a strong prima facie argument. Secondly, they ask for a bilateral settlement on the question of sterling balances, one that will not leave the whole burden of war expenditure on this country. Thirdly, they ask that the Reserve Bank should form a tentative idea of the optimum price level to be attained in this country as soon as the war will be over. Such price level should be decided after taking into account all the considerations that have been referred to. Fourthly, they insist on proper safeguards against a reckless import of foreign goods. And lastly and this is the most important—they emphasise the folly of haste in fixing the parity of the rupee. They observe:

> We are in a regime of what may be called oligopolistic competition in respect of foreign exchanges, and, under such conditions it pays to be a follower rather than a leader. Premature attempts at stabilisation in terms of any parity, the existing one or a new one, are fraught with danger. So long as important currencies like sterling have not found their moorings and comparative stability in international relations has not been achieved, we shall be subjected to powerful and rapidly changing world forces in our economic life if we hasten to fix the parity of the rupee either with sterling or gold. We have merely to recall our own colossal blunder and misfortune after the last war when

Olympus

(FROM OUR CORRESPONDENT)

New Delhi, January 22.

A most welcome week-end development was the slight beginning of a move to break the accumulated ice of the political deadlock. Mr. Bhulabhai Desai, leader of the Congress Party in the Central Assembly, met the Viceroy on Saturday to explore the possibilities of a new interim government on a representative basis. The germ for such a solution was found on the hint in the Viceroy's speech to the Associated Chambers last month that a more representative Government at the centre would be desirable because the efforts we have to make now and in the future, demand considerable sacrifices. "The average man is not willing to surrender comfort and income for the benefit of those poorer than himself or of future generations, unless he is coerced by a dictatorship or led by those in whom he has great confidence". The Viceroy, however, had made it clear that "if it were possible to form such a National Government during the war, it would quite clearly and quite definitely have to function under the existing constitution," no material change being possible during the war. It was the intention behind those remarks that the congress party leader wanted to assess at its true value. There was a frank exchange of views. It is of course realised that if the Viceroy's suggestion is to hold good, all the larger controversial issues—complete independence, the form of the new constitution, Pakistan and other minority demands—have to be shelved for the present, The biggest hurdle in the way of the change, as far as the Congress is concerned, is of course, the continued detention of congress leaders. The League attitude to such an interim arrangement has still to be made clear though there should be no difficulty in the way of League participation in such a government if it still sticks to its resolution of August, 1942. The League was then ready and willing to co-operate with other parties on the basis that a real share and responsibility is given in the authority of the Government at the Centre and in the province with the framework of the present constitution, but without prejudice to the major political issue involved in the framing of the future constitution. The real test of the sincerity of the Government's intention will be whether they are ready to transfer the maximum power to popular representatives which is possible even within the framework of the present constitution. Bhulabhai Desai-Wavell talks are the merest beginning to resolve the deadlock and it will be months before they lead to something tangible.

* * *

The war is already costing this country more than a crore a day. The continuous rise in the cost of defence services almost leads one groping. An analysis of the exchequer returns for the first seven months (April to October) shows that 200 crores have already been spent on defence during this period though the total defence cost from the year had been estimated at Rs. 275 crores. At the present rate the defence bill is expected to be somewhat between 350 crores and 400 crores, a figure which must be considered staggering in the history of India's finances. Happily the revenue receipts have been unusually buoyant though increase in defence expenditure has swallowed up the whole increase in revenue and more. Customs receipts show the most unexpected increase, having already risen to four times compared to the average for the previous year (from Rs. 2 crores to Rs. 9 crores a month). Instead of the estimated 28 crores for the whole year this source may now bring about a hundred crores. Income-tax and corporation tax receipts also continue to rise and the collections have already amounted to 150 crores with another 200 crores expected for the remaining five months. Despite the phenomenal increase in the revenues the new budget is expected to contain additional tax burdens. Taxation surprises apart, currency inflation remains the most alarming feature of the financial situation. In December alone there was an increase of 45 crores in currency. The need for currency expansion at this rate only shows that a realistic solution of the financial problem is still lacking.

* * * *

The picture of railway finances is much brighter. For the railways it has been a period of unprecedented boom. The gross earnings from April to November alone amount to 137 crores—Rs, 20 crores more than the total for the previous year. At the present rate the gross income for the year should touch at least 200 crores. With a record income of Rs. 200 crores the Railway Member may perhaps be able to show a much bigger surplus than any other railway in the world. Most of the surplus will be reserved for post-war building and reconstruction programmes and the travelling public can expect little relief in fares or rates. Curiously enough no sooner has the Government's purchase of almost all company-managed railways been completed the Railway Member has come out as a loud spokesman for company management in preference to state ownership. In a speech at the Railway Association Conference the other day he referred to the danger of state ownership resulting in immense power at the top killing local initiation. "It may seem heresy to some opinion to say so" asserted Sir Edward Benthall "but I would not be surprised if political and other experience did not ultimately result in a reversion of public opinion towards company management under central guidance". Sir Edward was confusing state ownership with bureaucratic control. The fault does not lie in state ownership but in the nature of the state which is not yet amenable to popular control. The Railway Member also hinted that till the new constitution was known there could be no "final conclusion on the subject of rates machinery". He, however, intended to appoint a rates expert as Director of Rating and form a permanent rates committee for the major railways.

HILL BIRD

(Continued from page 104).

nection with the formation of the Company, but exclusive of conveyance and connected expenses and registration of the Debenture Trust Deed will be borne by the Company and they are estimated to be Rs. 1,20,000.

BROKERAGE AND UNDERWRITING COMMISSION.

The entire issue of Debentures, Preference and Ordinary Shares of 30 lakhs has been underwritten among the following for an underwriting commission of 2 per cent on Debentures and 2½ per cent on Preference and Ordinary Shares:—

1. The International Bank of India, Ltd., Bombay.
2. Messrs. Champaklal Devidas, Bombay.
3. Mr. P. R. Subramanyam, Bombay.
4. Messrs. Ramlal & Co., Madras.
5. Messrs. Raman & Co., Alleppey.

The Directors consider that the resources of the underwriters are sufficient to discharge the underwriting obligations.

The Company agrees to pay a brokerage of 1¼ per cent, i.e., 2 annas for Preference or Ordinary Shares to certified Brokers or Bankers on allotments made on application bearing their stamp.

MINIMUM SUBSCRIPTION.

The minimum subscription on which the Directors may proceed on allotment is, Ordinary Shares to the nominal value of Rs. 12,50,000 and Preference Shares to the value of Rs. 7,50,000. The balance amount for the purchase of the Estates, preliminary and other expenses and working capital will be found from the proceeds of the Debentures.

CONTRACTS.

1. Agreement of Sale, dated 21st August, 1944, made between the Talliar Estates, Ltd., London by its Agents, Messrs. Peirce, Leslie & Co., Ltd., Calicut of the One part and Mr. N. Krishna Iyer, M.A., B.L., Advocate, Kottayam of the other part, by which the former agreed to sell the Estates for Rs. 26,00,000 in cash to the latter.

2. Agreement, dated 11th December, 1944, between Mr. N. Krishna Iyer of the one part and Messrs. Mascot Agencies, Trichur of the other part by which the former agrees to transfer his Rights to the latter on payment of Rs. 2,60,000 (the amount paid by him as advance) with interest at 6 per cent per annum, till the date of payment.

3. Agreement, dated 15th December, 1944, between Messrs. Mascot Agencies, Trichur of the one part and Mr. K. V. Venkitasubramoney Iyer, Kottayam acting on behalf of the Company of the other part, whereby the former agrees to procure the sale of the said Estates to the latter, on payment of Rs. 26,00,000 in cash.

4. Draft of the Managing Agency Agreement between Messrs. Parkins, Limited, and the Company, for identification subscribed to by Mr. G. N. Chary, M.A., B.L., Advocate. Madras.

5. Underwriting letter, dated 20th December, 1944, between Messrs. Ramlal & Co., Madras and Mr. K. N. Narayana Iyer.

6. Underwriting letter, dated 18th December, 1944, between Mr. P. R. Subramanyam, M.A., of Bombay and Mr. K. N. Narayana Iyer.

7. Underwriting letter, dated 18th December, 1944, between Mr. Champaklal Devidas, of Bombay and Mr. K. N. Narayana Iyer.

8. Underwriting letter, dated 18th December, 1944, between International Bank of India, Ltd., Bombay and Mr. K. N. Narayana Iyer.

9. Underwriting letter, dated 18th December, 1944, between Messrs. Raman & Co., Alleppey and Mr. K. N. Narayana Iyer.

INSPECTION OF DOCUMENTS.

Originals or copies of the agreements and underwriting letters above referred to and copies of the Memorandum and Articles of Association of the Company, the Travancore Companies Act IX of 1,114 including Table A are available for inspection at the Registered Office of the Company, and at the offices of the Company's Brokers.

GENERAL.

Application forms for Shares are appended hereto and additional copies of this Prospectus may be obtained from the Registered Office of the Company, its Brokers, Lawyers, Underwriters and Bankers.

Application for Shares must be accompanied by remittance in full, made payable to the Company or to the Company's Bankers, Underpriters, Brokers, or Managing Agents of the Company.

The Directors, however, reserve to themselves the right to reject any application without assigning any reason therefor. Where no allotment is made the deposit received will be returned in full. Where the Shares allotted are less than the number applied for the surplus will be returned to the applicant.

The Directors desire it to be clearly understood that in giving consent under the Defence of India Rule 94A and the Defence of Travancore Rule 94B to the promotion of this Company and the issue of this Prospectus, neither the Government of India nor the Government of Travancore take any responsibility for the financial soundness of the scheme or for the correctness of the Statements made herein or any opinions expressed in regard to them.

Gateway of India

(From Our Correspondent)

BOMBAY, Jan. 23

The second part of the Bombay Plan, admitted to be one of the most important economic documents of our time, was published last week, after an interval of a year since the first part was published. The present report, which deals with the aspect of distribution and the role of the State in a planned economy, is the outcome of a detailed study and analysis of a mass of information gathered during the past year. It reflects the anxiety of the authors to reply to the numerous criticisms that were levelled against the first part. But it is already evident that the second report has evoked widely differing reaction from the public and the press, ranging from approbation to keen disappointment. The framers of the plan have answered the cheap sneer that the objective of the plan is to make the rich richer. Mr. J. R. D. Tata and his colleagues made it clear at the press conference convened at Bombay House last Wednesday that the plan was drafted by them as citizens of the land, and that considerations of class had not coloured their approach to the question. Sir Purushotamdas declared that the authors had no mental reservations and were only stating their honest conclusions. The three points that were touched upon at the press conference were firstly, the role assigned to the State under the plan, agricultural development and the question of the abolition of inequalities. The authors have adopted a compromise formula on the first issue. They have not gone the whole hog in urging the complete replacement of capitalism. On the other hand, they have use for the merits of capitalism in so far as it gives scope for individual enterprise and initiative. As they say, "while it would be unwise to blind ourselves to the obvious weaknesses of the present system, it would be equally a mistake to uproot an organisation which has worked with a fair measure of success in several directions. We plan for change but we also plan for stability and orderly development." The middle path has thus been deliberately chosen. Probably that is the best recipe for a country like ours, if it is to be spared the delays, disturbances and the throes of collective planning on the first Russian model. It is rightly emphasised that only a National Government responsible to the people and commanding their full confidence can execute the plan. But they also believe that, contrary to the croakings of some, the plan could be executed without disastrous mistakes.

Dr. John Matthai elucidated the position of the planners vis-a-vis agriculture. The object of the plan is to make industrial development subsidiary to the development of agriculture and not the other way round. He observed that "the development of industries would provide....it (the agricultural population) with consumer goods at a cheaper cost and *create an atmosphere of organisation vitally necessary for the political progress of the country.*" Dr. Matthai with true insight has put his finger upon the national *malaise* and if the Bombay Plan did nothing else but create that "atmosphere of organisation," this country would have passed the first milestone on the road of economic progress and would have laid itself in a great debt to the planners. Equally noteworthy and courageous is the position taken by the authors that the complete abolition of inequalities, even if it were feasible, would not be in the interest of the country. Dr. Matthai pointed out that even the doctrine of international communism has assumed inequalities within bounds as both desirable and unavoidable. Subject to the provision for a basic minimum, the authors have felt it desirable to leave enough scope for variations in incomes according to ability and productivity, in order that they may provide the necessary incentive for efficiency which is an all-important element in a planned economy. In short, then, the second part of the plan represents an effort to profit by the lessons of contemporary experience in the economic field. The freedom from any hidebound preference to any particular ideology is its great merit.

What the country now requires is a popular campaign to make planning really popular, and to bring home to the mass of people at large the benefits of planned economy in ways they can understand. At present, the awareness of the fruits of planning is confined to the class with special economic knowledge. If planning is to go ahead with a swing in the country, popular exposition of what it is and what it will bring forth is needed. This aspect has not been forgotten. And before long, Mr. M. R. Masani, will be publishing a pamphlet with illustrations from the delightful brush of Acott.

One of the most memorable meetings of the Indian Central Cotton Committee is in session as I write. Planning, with a constructive kick in it, is in the air and our cotton planners are fully aware of their responsibility. Since July last the role of Indian cotton in the future agricultural economy of the country has been most vigorously engaging their attention. The sub-committee's plan for the regulation of cotton production, about which I have already mentioned in an earlier despatch, will, form the chief item on the agenda of this meeting over which Mr. H. R. Stewart Vice-chairman of the Imperial Council of Agricultural Research, is presiding. The members have been fully apprised of the general approach to the problem of production and distribution by suitable memoranda issued by the I.C.C.C. The opinions of the provinces as expressed through their Directors of Agriculture, as well as those of others, have been duly circulated and the statistical position in respect of the various varieties of cotton has also been detailed by the Secretary. There is indeed no dearth of preparedness on the part of the Committee or its members to tackle the problems facing cotton. It is expected that the deliberations will lead to the framing of a concrete plan. A number of interesting resolutions are expected to be brought forward, of which one will refer to subsiding exports of Indian cotton.

The members of the Bombay Stock Exchange were the recipients of a sharp rebuke from their President who warned them against the kind of excesses in which they indulged 10 days ago. Indeed, speculation and jobbing were carried to dangerous limits and the Board of the Stock Exchange seriously considered the advisability of compelling the declaration of holdings of each scrip. The knowledge of this meeting, combined with the heavy tide of favourable war news, was responsible for an avalanche of selling pressure culminating in a gigantic deflation in share values. The market is quite sober now. A by-product of the wreckless trading was the sudden stringency in the money market, to which the seasonal demand for money also partly contributed. In the result the giltedged market struck a dull patch and some heavy selling was witnessed in Rupee Paper and the Victory Loan, which declined to Rs. 99-11 and Rs. 99-9 respectively. All the loans were marked down. There was a slight improvement in the money market after the middle of last week and securities market was slightly better, but not very much. In fact, the market may not have improved but for the fact that some measure of official support was forthcoming. This helped to bring about some recovery. Paper improved to Rs. 99-13 while Funding Loan was quoted up at Rs. 99-3 and Victory Loan became steadier at Rs. 99-11. The market is still in the slough of despond and it is clear that if the money situation remains like this, it will continue to be in doldrums. There would have to be much more official support and on a broader front. The new banks have been the first to put up their rates for advances and the shrinking trend of deposits has made the banks eager acceptors of deposits. The

(From Our Correspondent)

Karachi, Jan. 17.

The working committee of the Sind Zamindar's Association, at a meeting held recently passed a resolution endorsing the view of the Central Government that the Sind government should never make any profit out of their sale of food grains to deficit provinces and that they should refund all such profits made in the past. The meeting, however, opined that in view of the fact that the Punjab growers are allowed by their government to sell their commodities at much higher rates than the Sind growers by their government, the profits so far made should be utilised for the Sind growers' benefit. The meeting exhorted the Sind government to treat the Sind growers in the matter of fixing the prices of agricultural produce in the same manner as the Punjab growers are treated by their government to ensure a fair deal. With regard to the government monopoly for the purchase of foodstuffs for export to deficit provinces, the meeting resoived that as the creation of any monopoly leads to corruption and favouritism, the proper course for Sind government would be to allow the deficit provinces to purchase their requirements in the open market by tender system.

The question of extending or discontinuing the war risks (factories) insurance scheme after 31st January, 1945 has come up before the government of India. In this connection, the Karachi Indian Merchants' Association state that having regard to the fact that the scheme has been in operation for three years and a huge amount has been made up from the collections, without any demand worth noting having been made on the fund, governments should not charge any premium from those who have already paid the full premia and they should be covered for the next year in respect of any risk without payment of any further premia as was done by the government of Australia last year when war damage insurance premium, paid for the year 1943, was extended to the end of 1944, without any further payment. Besides the huge amount already collected, which is expected to reach the 20-crore figure at the end of the current financial year, there is considerable easiness in the war situation and consequent elimination of risk to a very great extent. Bearing in mind the above factors, the Indian Merchants' Association hope that the government would agree to their suggestion.

As the result of wheat of superior quality having been supplied to Bombay during the current financial year, the Government of Bombay have paid Rs. 2,50,000 to the Government of Sind over and above the cost of exported wheat. In 1943-44, Sind exported wheat without charging the deficit areas anything more than the fixed rate, irrespective of considerations of quality. During the current year, however, the Bombay government, anxious to obtain food grains of good quality insisted on a mutual basis agreement, which has resulted in Sind receiving this additional grant, Sind has declared a further surplus of 10,000 tons of wheat, bringing the total exportable quantity to 160,000 tons during the present year.

In the matter of post-war reconstruction, Sind is still groping in the dark. But among the schemes in view is a 35-crore plan of road construction, which was presented by the Sind government spokesman who attended the Transport Conference convened by the government of India. This will ensure a network of roads linking the whole of Sind. The original plan was to construct unmetalled roads at a cost of ten crores, but this has been revised. With the construction of two new barrages and improved marketing facilities for the produce of the province, the need for means of transportation is paramount and this has been exercising the attention of officials and merchants for a long while. Sind will also press for a broad gauge railway link with Bombay, a scheme outside the scope of the present 35-crore plan.

The Municipal Corporation of Karachi is faced with a deficit of 9.33 lakhs in its budget for the coming year, 1945-46. This is the sixth wartime budget that the Corporation will sit to consider and the second deficit one after a succession of surplus budgets that the Corporation had had for six years before 1944-45. The war has seen the expansion of the finances of the Corporation by over fifty per cent, the income jumping from about Rs. 40 lakhs to Rs. 60 lakhs and the expenditure increasing even to a greater extent. The revenue estimated for the budget year is Rs. 64,30 lakhs against an estimated expenditure of Rs. 73,63 lakhs, leaving a deficit of about Rs, 9,33 lakhs. The Chief Officer of the Corporation has taken a grave view of the financial position of the Corporation, which he says in his note, while presenting the budget estimates to the Standing Committee, requires serious consideration. He has suggested among other things that a recommendation should be made to the government to claim an amount equal to the Corporation's expenditure on dearness allowance. He has also requested the Corporation to proceed with caution and adopt a self-denying policy of sanctioning any item of additional expenditure during the year.

There is a regular flow of consumer goods to Karachi and shipments are arriving in large quantities. The control authorities are seeing that there is an equitable distribution of goods to the various provinces served by Karachi. The normal trade channels have not been interfered with and because of the regular supply, the de-hoarding process is going on well. The arrival of some unknown brand of consumer goods and their invasion of market has resulted in some of the articles being sold at prices below the control level.

amounted to 100 percent in 1944. Bank deposits rose only moderately but credit conditions remained easy and the Federal Government found it easy to borrow on bills. Money rates were very slightly higher than in Britain, and definitely lower than in Germany; and the yield on bonds was actually lower than in 1943. The repatriation of Swiss capital was again reflected in the influx of gold and the marked decrease of foreign balances in comparison with the pre-war period.

New Planting Issue

In the prospectus of the Talayar Tea Company published today will be found a description of the property taken over by the new company from a sterling company which has disposed of tea and coffee estates in bearing. The report of an experienced Planter on the property in Travancore acquired with its Lines, Factory and Machinery shows that the company gets full value for the purchase price of Rs. 20 lakhs while the progressive crop yields support the estimate of profits in this case. It is believed that a dividend of 15 per cent on the ordinary shares will be earned though capitalisation per acre planted may appear to some rather high. The lists for both the ordinary and preference shares opened on January 24. The 6 per cent cumulative preference shares are free of Travancore income-tax like the 5 per cent debentures—the first and only issue contemplated—which have been taken up in entirety. The Talayar Tea Company's ordinary capital is small in proportion to the prior charges—Rs. 12½ lakhs as compared with Rs. 17½ lakhs—and this must appear wholly advantageous to the investors who apply for the ordinary shares. The present issue has been underwritten by well-known brokers of Bombay and Madras and the Directors and friends have taken up Rs. 6 lakhs of the present issue of Rs. 20 lakhs. The current rating of tea shares in all markets is commendably high and investors are duly appreciative of the high yield on capital that is still available. This alone should stimulate response to the Talayar Tea Company's issue. The ordinary shares now offered at par may be described as different from most previous offerings for the reasons that the gearing in this case is high and the tea outlook has undergone improvement in the light of the Food Ministry's decision to pay a higher price for Indian tea purchased this year.

Bengal Cotton Mills Limited

The subscription list for both ordinary and preference shares of Bengal Cotton Mills Limited, opens on February 1st and closes on February 22. The Company which is obviously connected with the J. N. Group (as well-known in Bengal as in Bihar) intends to set up a cotton mill at Sodepore in the 24-Parganas. Prospects are described with confidence though import of plant for a mill with 40,000 spindles and 800 looms depends upon the course of the war. The major advantage however may be described as the large market for textiles in Bengal which depends upon other Provinces for both yarn and cloth. Important business interests are represented on the Board of the new company whose objects are compendiously set out in the prospectus published today. The preliminary expenses are limited to Rs. 25,000 for the present issue of Rs. 30 lakhs. The managing agency agreement is of the usual kind, but real success for the new concern is ensured by the connections between the Directors and the important firms controlled by them. The future of cotton mills in Bengal is regarded as wholly reassuring, and the conditional sanction under the Capital Issues Control Order for the present issue will suggest that additions to the number of cotton mills in India are warranted by the gap between production and consumption observed last year.

Factory For Fertilisers

The decision of the Central Government to set up a fertiliser plant at Sindri near Dhanbad follows the report of the Technical Mission except in regard to the choice of site. The main advantage is said to be coal supply and the possibility of developing the by-products to which the Gowing Mission Report referred. The proposal to set up a second factory with a smaller output in the peninsula has not been negatived. As Government has pronounced in favour of a State-owned fertiliser industry existing producers who produce 28,000 tons of sulphate (or rather 10,000 tons only for the home market) would have to stand up to competition. Possible results of the addition of 350,000 tons of fertiliser have been indicated in 1943 when the Gregory Committee's report put the addition to rice supplies at 899,000 tons assuming that 8 to 9 million acres received the benefit of ammonium sulphate. A mission to the U. K. and U.S.A. to arrange for the import of plant has been mentioned along with a decision to provide for participation of all authorities interested in the execution of the scheme. Though the Central Government is to manage the factory as its owner, the distribution, price fixing etc.' are clearly matters for consultation with the States and Provinces.

As the fertiliser plant entails considerable investment, the decision to set up a State-owned factory implies anti-dumping regulation if necessary to supplement quota restrictions as to imports. Before the war imports, especially from the U. K., exceeded India's own production and appeared far more important since the plantation industries relied on synthetic manure. Whether guarantees as to offtake at pre-determined rates would be demanded of provincial governments cannot be predicted, but supply of fertiliser can be readily made to fit into the Provinces' agricultural improvement schemes. There will probably be distribution by quota and transport for fertiliser in bulk like storage arrangements may devolve upon a Central Agency though sale may properly be undertaken by the Civil Supplies Department or the Agricultural Department provided that the agencies handling other fertilisers are not prejudiced. While salt and opium offer adequate examples of State ownership and distribution, it must be remembered that their manufacture is subsidiary to taxation, whereas in the case of fertiliser a progressive reduction of prices must be the natural object of every large-scale State enterprise. The beginning made in fertiliser production would certainly put the Government ahead of private interests in the chemical industry. As prices have risen by 150 percent in the war period, the main concern of the consumer will be with prices, and enlargement of present production from coke-ovens may prescribe the level of prices charged by the Government.

There is nothing that adds more to the natural charm and beauty of a woman than does a saree. The grace and simple dignity that it gives the wearer is a striking tribute to this colourful costume which can flatter the most sylphlike figure. Lakshmiratan Cotton Mills' sarees are worked in designs simple yet striking and set off by pretty, gay borders. There is a wide and varied selection to suit all tastes. Also shirtings and suitings and other household fabrics —smart and of the finest quality.

Jute and Jute Manufactures

(From Our Correspondent)

Special to "Indian Finance"

Calcutta, 25th January.

There is remarkably little on which to comment with regard to the Jute markets this week. Nothing of interest has occurred during a period notable only as being flat, stale and uninteresting, not to mention unprofitable.

Nothing has transpired as to what may have happened at the meeting of the Coal Control Board last week and certainly the Industry is tired of specious promises, if the Board had nothing more concrete to offer them. When it is known that numbers of steam driven mills on single working have only been able to run for five to six weeks during the past seven months, it is only too apparent that the industry has had a "raw deal" which has become no less raw since the Supply Department took over control of Coal Production and Distribution. Even the so-called "foster" mills, concerns which are doubled up and working shifts and thereby secure priority of supplies for coal, are far from comfortably situated, having no reserves and relying on day to day supplies to keep them going. It looks like going back to prehistoric days to see stacks of logs of firewood in modern up-to-date mills, but to such stringent economies has the industry been reduced that for auxiliary and processing steam and at week-ends when the main plant is shut down, practically the only fuel permitted to be burnt is wood!

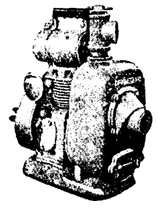
Over the past year the average daily supply of coal has been something like 53 waggons against the minimum requirements of 77 waggons, so that even the strictest economy cannot hope to make up the difference, and those unfortunate coal users who are not working double shift simply have to go to the wall. It is some weeks since we mentioned that proposals were afoot for coal supplies for the Jute Mills to be confined to one specific colliery. The underlying idea was of course to ensure the maximum economy in transport by running a shuttle service between the colliery and the dump from which mills receive their supplies. But though the idea received official approval, it is understood that even the six sample waggons which were to be sent to show the quality that was to be supplied, have not yet arrived. Truly the mills of Government grind exceeding slowly.

Not a few Mill Managers and Engineers must have read with melancholy interest an article on Fuel Economy in the last number of the Bulletin of the Indian Central Jute Committee. Fuel Economy when there is no fuel to economise can have scarcely even an academic appeal, particularly when even the experts were apparently unable to give a final decision on the question "To Bank or Not to Bank". The conclusion is that the only way really to settle the question is to try out the alternative methods of banking and drawing fires and thus find out which method consumes the least fuel for the same output.

Several matters of importance were discussed at the recent meetings of the Indian Central Jute Committee. In order that the Committee may be supplied with funds to carry on its experimental and investigating work on an adequate scale, appeal is to be made that, from the Export Duty on Raw Jute and Jute Goods one rupee per ton should be allotted to the Committee to finance its operations. This allotment would of course be liable to considerable variation from year to year but it certainly seems an appropriate source from which to draw funds. It was decided to study possible methods for arriving at data on which to plan future Jute production. The present empirical methods of the Bengal Government are certainly amenable to considerable improvement. The Committee also decided to start a farm for the multiplication of approved Jute Seed. If such seed could be widely distributed at small cost, it would undoubtedly be beneficial to the crop and to the cultivator as well. The periodical introduction of fresh seed is salutary, particularly when the ordinary method in vogue is to leave the poorest corner of the plot to provide the seed for the next. A study of the factors relating coal supplies to the purchase of jute does not seem to be very conclusive though in present circumstances there must be a very direct relationship.

Nothing has as yet transpired as to the decision of the Bengal Government with regard to the quota of acreage to be licensed for the coming Jute Crop. If a decision has not yet been arrived at, it should not be longer delayed. For the sowing season is approaching, and some time must be necessary for the process of issuing licenses if this is to be done with any semblance of regularity. The figure of eight annas of the Registered Acreage seems now to be accepted as the quota to be fixed, after which there remains the imponderable factor of which crop the cultivator thinks is going to pay him best, jute or paddy.

It is reported that Dundee Jute manufacturers have received instructions to switch off "standard" hessians, such as are generally manufactured in Calcutta mills, and to concentrate on Linoleum descriptions. In the meantime there seems to be demand for such cloth in the Home market, but the decision may also have been actuated by the desire to attempt a recovery of the U.S.A. market for such goods, It is known that various substitute fabrics have been introduced for this purpose during wartime in the U.S.A. and reports have been received that some of these have been found to be satisfactory. It will remain to be seen whether jute cloth can recover its position in the market as the principal packing fabric for linoleum in the United States.



A number of Government orders have been distributed to local mills during the past week, including nine porter hessians, Atta bags, 'A' and 'B' Twills, D.Ws and also a considerable quantity of Tossa Canvas. On the other hand it is reported that a fair quantity of eleven porters have been cancelled. In the aggregate, the orders are not large, but where they are for sacking descriptions, are none the less welcome. A somewhat curious feature within the last few days has been the recrudesence of demand for Cornsacks. Whether this is for covering is not yet apparent. It is scarcely likely that it is fresh demand from Australia which country can have scarcely any exportable surplus of grain this season. Owing to the severe and prolonged drought, the production of Australian wheat is estimated not to exceed 45 to 50 million bushels, less than half of last year's crop and less than one-third of that produced in the previous year. In fact, even with the carry-over in the country, the total quantity available will little more than suffice for Australian and New Zealand domestic consumption. Australia also has heavy commitments for supplies to the Pacific War Zone.

The Export Jute market presents no feature of interest. Dundee Jute Purchase Control only seems to be interested in shipment forward in May and June, while Balers here are looking for ready sales to relieve their over-stocked position. No business of importance has been recorded, either through shippers or direct with Balers. Local mills have only made small purchases of Dundee Daisee at Rs. 77 combined with Straight morahed Rejections up to Rs. 58 and Mixing Cuttings at Rs. 52. Some Special Lightnings were also reported at Rs. 75.

BWS/48

Very little interest has been evinced in Loose Jute offerings. Sellers are for the most part eager for fresh business as the improvement in the shipping position up-country has led to the rapid completion of existing orders and in some of the main stations there is freight *going abegging*. On the other hand, some of the less favoured stations in the matter of freight still complain that they cannot get sufficient space. The transfer of space from where it is not wanted to where it is wanted should not be beyond the wit of the Transport Control, unless it is that sufficient tonnage power is lacking. Imports are still small in most markets and prices high. In Calcutta a fair quantity of Supervised and Indian District Tossa was brought on the basis of Rs. 16 for Mids and Rs. 13 to Rs. 13/4 for Bottoms. Some Indian Jat was reported at Rs. 16 and Rs. 13 while Northern and Assam Bottoms alone sold as low as Rs. 11/8. A small turnover in European packing is reported at Rs. 16/8 and Rs. 13/8 for Mids and Bots.

In the Fabrics section, Hessians remain firm at or over Maximum rates. Dealers who had sold A/B group to shippers, and covered from some of the single-shift coal consuming mills which have been idle for want of coal, find themselves in the position of having to cover their commitments in the Black Market at rates which run to Rs. 1/8 over the maximum. Mills generally are reserved sellers of Hessians and hold any ready surpluses as bait for sales in the forward position. In this manner they have been able to secure maximum prices up to July/September. Except for a small miscellaneous enquiry from the U.K. there is a continued scarcity of overseas demand for Heavy Goods. We have noted Cornsacks, sold at Rs. 63 for January and at Rs. 62 for Feb./March. January 'B' Twills have also been sold by Mills at Rs. 63, while Bazar dealers paid Rs. 69 for Liverpools and Rs. 61 for Cornsacks for April/ September shipment.

(*Continued from page* 112)

the rupee was sought to be fixed at 2s. gold at a time, when the world currency situation was chaotic.

* * * *

There is one more lesson which the experiences of the past must yield to us. And that is the lamantable inadequacy of material on which to make a sound judgment. And everyone will heartily agree with Prof. Vakil when he says:

> The statistical material will have to be more comprehensive and more reliable than what is available at the present moment. Those concerned will do well to devise prompt measures by which the statistical machinery of the country is adequately expanded so that the necessary data are available at the right time for a correct judgment of these difficult problems in the national interest.

"EAVESDROPPER".

(*Continued from page* 114)

scarcity of credit in the midst of plenty and in the face of huge expansion of currency week after week is a conundrum for the financial pundits. Only six weeks back there was a good deal of discussion about the bank rate; and discussions of credit and monetary policy until recently were too often wont to assume that the fight for cheap money had been won and won for ever. It is too often ignored that over a wide part of the structure of interest rates, the benefits of cheap money have scarcely penetrated. The present state of the giltedged market is a sign that too much is being taken for granted and that the price of borrowed money can be dear.

The difficulties felt by the groundnut, linseed and other oilseeds trades were the burden of the grievances put forth by the Marwari Chamber of Commerce to Sir P. M. Khareghat, Secretary to the Department of Education, Health and Lands. The need for the revival of facilities for hedging was pressed on the Government spokesman. It is now nearly a couple of years since forward trading in oilseeds was stopped under an executive fiat. Doubtless, at the time futures contracts were banned, there was justification as markets were running amok. But now, the situation has changed in a number of ways. Owing to the great demand for oilseeds by the rapidly growing indigenous oil crushing industry and the possibility of increasing exports, the producer of the oilseeds has a right to expect the advantages of a futures market. The British Government's purchases are made not only for the needs of the U. K. Government but also on behalf of the dominions. It is hardly fair that the Ministry of Food should exploit its position as the chief buyer at the moment to secure the same rates for the dominions. Recently, Australia has been taking more. It is high time that the Indian trade was left free to negotiate directly with its customers without third party intervention. Also, facilities should be given to the exporter to regain contact with the markets in liberated countries of Europe. In fact, the question of exports needs to be gone into completely.

PACKING A NATION'S PRODUCTS

Manufacturers in India will prepare their goods for internal transit, display in the shops — and for export — more carefully than they did before the War. Paper wrappings, some of which will have to take coloured printing, in every substance from lightweight white printing upwards; pure pulpboards of different colours, weights and surfaces for outer containers, strong enough to stand rough handling — or flexible enough to be creased and bent into cartons and tubes . . . all these will be supplied by Titaghur.

The most advanced Manufacturers in India have always used Titaghur packing materials to give their goods a handsome setting and to deliver them to the consumer in perfect condition. The good printer or boxmaker is the best person to advise on the correct Titaghur product to use.

OTHER TITAGHUR PRODUCTS

JUTE

(By Our Staff Correspondent).

Calcutta, January 25.

The raw jute market has been quietly steady with only a small amount of business passing. The continued difficulties in respect of coal supplies have induced a note of caution on the part of consumers and there is no tendency to enter into fresh commitments pending further developments. It is feared that the continuance of present conditions might have a depressing effect on values, especially as there are signs of an increase in imports in the mofussil areas. So far no announcement has been made regarding the size of the crop for the next season. It may be that a greater proportion of the licensed area will be put under jute this year, especially as there are prospects of imports of rice from abroad with the successful progress of the Burma campaign. It is perhaps too early to say anything definite in this regard, but from the look of things it may not be impossible to bring in rice from the Arakan at least in small quantities. Sellers have been keen for business and are reported to have offered a slight discount in rates in the hope that the larger arrivals in the mofussil centres might have a depressing effect on values and it might be possible to cover their sales at a later date at lower levels.

In the loose jute section business was done in Indian District Middles and Bottoms at Rs. 16 and Rs. 13-4 per maund and European Supervised Jat at Rs. 16 and Rs. 13 per maund respectively. European packing Middles and Bottoms were Rs. 16-8 and Rs. 14-8 per maund with Tossa 8 annas higher.

In the pucca bales section, export business has been very poor. It is reported that Dundee mills are interested only for deliveries in May/June and after. Mills have purchased Firsts at Rs. 79 per bale, Lightnings at Rs. 74 per bale and Dundee Daisee at Rs. 77. Cuttings N.C. were sold at Rs. 54 per bale.

JUTE MANUFACTURES

(By Our Staff Correspondent)

Calcutta, January 25.

The jute manufactures market has been very steady following the publication of production figures for the month of December showing a decrease of over 14,000 tons during the month. The fall in output has been mainly due to the shortage of coal supplies. It is said that all the steam-driven mills, with the exception of the foster mills, have been unable to resume production since the beginning of the year and there is no sign of an early resumption of activity. The uncertainty regarding the level of production has naturally prevented mills from selling freely. There is good demand for hessians for all positions up to September and maximum rates are available.

In the Heavy Goods section business is still poor. With the lack of outside enquiry, mills are as keen as ever to put through business. Some transactions have been reported in Liverpool twills and "A" twills. A small order has been received during the week for "B" twills, "A" twills and D. W. flours.

The production figures for the month of December are given below:—

TOTAL REPORTED PRODUCTION OF MANUFACTURED GOODS.*

by the mills in the membership of the Association and also by Gagalbhai Mills.

PIECEGOODS

Calcutta, January 25.

In the piecegoods market there is still difficulty in concluding business. In spite of the threats by the Government authorities, black-market activities continue unhampered. There has certainly been an increase in arrivals in the past few weeks, but demand has been on a large scale and all the available supplies have been taken up. It is reported that at the last meeting of the Textile Control Board the various questions at issue were discussed and important decisions reached As a result of the new arrangements and the adjustment in trade margins to the various dealers, it is believed supplies will be reaching the consuming centres more quickly.

Stock Markets to-day and to-morrow:

PEACE PROSPECTS UPSET MARKETS

The third week of January always marks the turning point in the course of stock markets in the first half of the year. Speculation regarding budget proposals has generally a depressing effect on prices and until they are out of the way the general trend will be undetermined. This year there was a suggestion that things might happen in a different way but with the sudden developments in the war situation and the realisation that the Central Government might intensify taxation measures in pursuance of the anti-inflationary programme there has been a sharp reaction in prices in the past few days, especially as the earlier rise in prices had to a certain extent been overdone. Other developments also have not been quite to the satisfaction of the stock markets.

The statement by the Chairman of the Indian Iron and Steel Company Ltd. at the annual general meeting held this week that there was no possibility of an issue of additional capital on bonus terms to shareholders and the announcement regarding fresh concessions to the coal industry, which were below market expectations, had a depressing effect. Prices are substantially lower on balance though, it should be said that in the Calcutta market a definitely steadier tone is noticeable and there is no disposition to view the outlook with pessimism.

* * * *

At the meeting between the Supply Member and the representatives of the coal industry this week the following fresh concessions were announced:

(1) E.P.T. will begin to be calculated on profits of Rs. 72,000 instead of Rs. 36,000 but this will not apply automatically and companies must state a case under Section 26 (iii) of the Act and apply for the concession to be made on the grounds that they are mining a wasting asset. No application will be entertained if a company is not producing coal to its target figure.

(2) In order to encourage colliery undertakings to increase their raisings, an additional bonus will be paid at the following rates:

(a) for all colliery undertakings raising 10 per cent or above over their target figure, a sum equal to 5 per cent of the sale price of all coal raised;

(b) for raisings exceeding 20 per cent of the target figure; 7½ per cent of the price of all coal raised.

This bonus will be limited to a sum of Rs. 2 lakhs for any colliery undertaking; it will be free of E.P.T. but subject to income-tax and super-tax. This new bonus is in addition to the original bonus. No colliery can obtain both concessions, i.e., (a) a relief under Section 26 (iii) and (b) the additional bonus. The additional bonus will date from 1st October, 1944 and will run for the following periods:—(a) October 1944-March 1945; (b) April 1945-September 1945; (c) October 1945-March 1946.

The above concessions are intended mainly to encourage the small producers who are a rather large number in the coal industry. As the bigger collieries are at present working satisfactorily, it is felt that the small producers should be encouraged and that the total output of coal should be raised by all possible means. It is significant to note, however, that the concessions will not be available for anyone who is unable to report an increase to above the target level. The new concessions are in addition to those previously announced.

* * * *

With an increase in raisings to 79,259 tons during the half-year ended July 1944, as compared with 52,638 tons in the previous six months, and an increase in despatches, including purchased coal, to 143,574 tons against 111,205 tons the *Katras Jherria Coal Company, Ltd.*, has been able to report a substantial increase in the net profit before providing for taxation and depreciation to Rs. 5,23,333 from Rs. 1,54,566 for the previous six months. *Provision for taxation* has taken up as much as Rs. 3.45 lakhs against only Rs. 62,500 on the previous occasion. But after providing for depreciation Rs. 40,006 (Rs. 40,441) and transferring Rs. 50,000 (same) to reserve, it has been possible to increase the dividend to Rs. 1-12 per share from Rs. 1-4 per share. The amount carried forward is Rs. 40,503 against Rs. 39,672 brought in.

But for the Industrial Pool Scheme it would not have been possible for the National and Budge-Budge Jute Mills to report an increase in their earnings for the half-year ended October, 1944. The coal position deteriorated further and both the mills could work only three weeks in the last four months of the half-year under mention. The National Coal Company, Ltd., received from the Industrial Pool the sum of Rs. 1,98,506 on account of *Koraki* to labour and loss on foodstuffs and Rs. 475,416 in respect of loom hours purchased. As a result of these payments the net profit, before providing for taxation and depreciation, for the halfyear is appreciably higher at Rs. 4,13,145 against Rs. 1,81,913 for the previous halfyear. Provision for taxation is Rs. 1,97,000 (Rs. 10,000). The dividend on ordinary shares has been maintained at 10 annas per share. The amount carried forward is lower at Rs. 90,654 against Rs. 1,10,738.

The loom hours to be paid for by the Industrial Pool are cancelled under the Working Time Agreement but the Company is still entitled to make up a total of 732 hours which consists of 564 mentioned in the last report and 158 which were lost in May and June before the Industrial Pool became effective on July 1.

* * * *

Budge-Budge Jute Mills Limited received Rs. 2,70,152 for the same half year on account of *Koraki* to labour and loss on foodstuffs and Rs. 5,52,978 on account of loom hours purchased by the Industrial Pool. The net profit, before providing for taxation and depreciation, was Rs. 3,52,942 against Rs. 1,67,868 for the previous six months. Nearly the whole of the increase in earnings is taken up by the additional provision for taxation, Rs. 1,75,000 (Rs. 10,000). It has been possible to maintain only the ordinary dividend at 10 annas per share after drawing in on the amount brought in from the previous accounts. The

MARKET GOSSIP

By "Bear-Bull"

[The following is gossip in the literal sense of the term. The markets sway to and fro not in response to facts and developments, but in response to khabbar, true and untrue and slightly true and largely untrue. "Bear-Bull". right in the heart of the Exchange Ring, will relay, periodically, such gossip as has caused gyrations in prices and changes in sentiment. Ed.—I. F.]

The Russian offensive and the spectacular successes that are being achieved every day have brought about a complete change in the outlook of the operators on the Stock Exchange. The prevailing sentiment noted is that the end of the war is near. This coupled with certain other factors has brought about a sharp fall in the value of all securities. Indian Irons which touched Rs. 42-10 are down to Rs. 39-5 at the time of writing. Howrahs are Rs. 83 and Burrakurs Rs. 42-8.

Unless there is a sudden change in the fortunes of war, it is difficult to see any sustained rise in the prices of shares. Barring reaction I look for lower markets. In August last Irons came down to Rs. 36 and Steels to Rs. 29. If the war comes to a close I feel that we may see even lower prices.

My friend *Evesdropper* last year discussed this question in this Paper and tried to prove that even if the war comes to an end, it does not mean a depression. He believes that there is bound to be a tremendous increase in industrial activity and therefore shareholders have nothing to fear. The general view in the market is that if the war comes to a stop prices are bound to fall. So far as the behaviour of the markets is concerned, I always attach very great importance to public sentiment. When the war started in September 1939, although there was no additional demand for commodities the price of everything went up. That was due to the fact that everyone started buying anticipating a fresh demand. The mere buying sentiment caused a sharp rise. If the war comes to a close a similar movement in the reverse direction might take place.

The two important events during the period under review were a meeting of the Coal Board under the presidentship of the Hon. Sir Ramswamy Mudaliar and the Annual General Meeting of the shareholders of the Indian Iron & Steel Co., Ltd.

Although no official announcement has been made up to now it is believed that the coal industry will be given some additional concessions. All concerns that reach the target figure will have the E.P.T. computed above Rs. 72,000 instead of Rs. 36,000 as at present. A special production bonus of 5 to 7½ per cent of the value of the total production will be given to those companies that exceed 10 to 20 per cent of the target figure fixed for them, subject to a maximum of Rs. 2,00,000. This bonus will not be liable to E.P.T. This concession will be given for a period of 18 months commencing from 1st October 1944.

Unfortunately, the expected concession came at a time when a strong bearish movement had set in due to the changed outlook of the European war. If this concession had been announced about three weeks back it might have caused a sharp rise in the prices of all coal shares. But now it has had very little effect on the market.

The general meeting of the shareholders of the Indian Iron and Steel Company was held on Wednesday this week. For some time past there have been strong rumours in the market that the company intended to issue additional capital and that it would be offered to the existing shareholders on terms which on the basis of the present prices for these shares would give an advantage of Rs. 3 to Rs. 4 to each shareholder. Some shareholders had gone to the meeting with a view to elicit information on the point. But the Chairman at the very beginning in his speech said that the company had no intention of raising any fresh capital either in the form of ordinary shares or debentures. If they required money temporarily their bankers were quite prepared to oblige them. Reference was also made at the meeting to the dividend paying policy of the company. It was suggested that the first *ad interim* dividend should be a substantial part of the total distribution and not a small part as at present. The chairman promised to keep this in view.

As soon as it was known that there would be no issue of 'Bonus' shares there was selling and prices have come down by nearly a rupee.

* * * *

The market expected an *ad interim* dividend of As. 8 for the Steel Corporation. But a dividend of As. 6 only damped the enthusiasm of operators and Steels also came down along with other shares.

(Continued from next column)

Coming now to the Budget rumours though it is too early to make forecasts of what the Finance Member might do, I personally feel that there is not much scope for any increase in Corporation-tax or surcharge. There may not be any material changes in the taxation proposals. If the markets should be substantially lower genuine investors should take such opportunities for buying select equities mentioned above.

As for the future of our industries Sir Ardeshir Dalal in his recent speech at Nagpur said that almost every Indian industry will be given the necessary protection to give full scope for its developments in the post-war period.

THE HINDUSTAN COMMERCIAL BANK LIMITED

NOTICE is hereby given that the SECOND ORDINARY GENERAL MEETING of the shareholders of the HINDUSTAN COMMERCIAL BANK LTD., will be held at the Registered Office of the Bank, Marwari Library Building, Cawnpore, on Monday, the 12th February, 1945, at 4 p.m. to receive the Report of the Directors and the Audited Accounts for the period ended 31st December, 1944, to elect Directors in place of (1) Sir Padampat Singhania, Kt., M.L.A., (2) Sir Chunilal B. Mehta, and (3) Lala Gurusharan Lall, retiring by rotation and to appoint Auditors and fix their remuneration.

By Order of the Board,
M. L. GUPTA.
Secretary.

Cawnpore, 20th January, 1945.

Bombay Investors & Indian Stock Exchanges.

SLUMP IN PRICES

FEARS OF EARLY PEACE

(By Analyst)

Bombay, January 26.

Th successful Russian advance has made everyone feel that peace in Europe is likely to be a reality overnight. There are also talks that the German peace mission has already reached Moscow. Stock markets in Bombay, Calcutta as well as Madras are panicky, Tata Steel Deferred declined to Rs. 2,100 and the Ordinaries fell to Rs. 406. Indian Irons were done as low as Rs. 39-8 and Steel Corporations Rs. 32-12.

In the Miscellaneous section even a popular share like *Bombay Dyeing* declined to Rs. 1,797-8. *Kohinoor* were done as low as Rs. 605. There was utter absence of any support at the close and the market collapsed like a pack of cards. I would not be surprised if there is a further decline in prices since rumours of early peace still persist in the market. Calcutta also declined and *Howrah* were done as low as Rs. 83-8. Most of the Jute and Coal shares have declined and the only section that has not had a recession was the Tea section, probably due to investment buying from Bombay.

In Madras, there was further panicky feeling and the decline gained momentum due to a cable emanating from London stating that the cost of production of synthetic rubber is now 15 cents, i.e., very nearly equal to the cost of production of natural rubber. This must have unnerved the operators in plantation shares in Madras. There was frantic selling. Due to paucity of buyers, most of the shares quoting between Rs. 10 and Rs. 20 declined by 2 to 3 points.

I have been mentioning that the market was getting top-heavy and that the real reason for the reaction was the overbought position in the markets. There would have been a recovery, but for the peace rumours. Let us, therefore, take it for granted that peace is coming if not now at least in the coming few months. I do not expect any drastic fall, since in the last few days the percentage of decline is more than 10 per cent in a weak market. I would therefore watch the markets and suggest buying Steels, Cements, Jutes and Teas, from the point of view of postwar prospects. Of course, in the steel group I like Tata Ordinaries and Deferreds. In the Cement section Associated Cement is the best. It declined to-day to Rs. 235 and closed at Rs. 237. Around Rs. 230 they look a good buy.

In Madras, I like Peermades and Haleyburias.

In the Shipping section, Scindias look attractive at the current price of Rs. 35.

Coming to the Bank and Insurance group United Commercial have done well having shown a profit of Rs. 14 lakhs for the nine months. They are a good buy at the current price of Rs. 68-8. Centrals have declined to Rs. 83. They also look attractive for investment.

All the Burma scrips may be retained. I like retaining Bombay Burmahs, British Burma Petrols and Indian Coppers.

As for the Giltedged market 3½ per cent Paper looks to me attractive at Rs. 99-12. Among medium dated securities, I like 3 per cent 1957 Victory Loan and among the long-dated, 3 per cent 1966-68 deserve attention.

(Continued on previous column)

NATH BANK LIMITED

Mr. K. N. Dalal's Speech on the Opening of Bombay Branch

Ladies and Gentlemen,

On this happy occasion it has fallen to be my honoured privilege to welcome Mr. Nagindas T. Master to preside over the function and let me convey my hearty thanks to you all, for having found time to grace this occasion amid varied and multifarious engagements.

In a gathering like this, I hope, it will not be out of tune to say a few words regarding the present situation in the country, the future possibilities and the role of indigenous banking therein. As you know, banking is the pivot of national economy. No country in the modern world can expect to get a start on the high-road to prosperity unless its capital resources are properly mobilised so as to be available for productive investment. It is the banking system that renders this most useful service to the nation.

UNBALANCED ECONOMY.

But unfortunately, India is still a country of unprogressive economy with agriculture predominating to an extent that creates a natural unbalance in our national economy, disturbing any possible equipoise and thereby rendering the whole structure easily vulnerable to extraneous forces. The present war as well has brought in its wake no less painful experiences; and if counted in human values, the benefit accrued from the stimulation of industrial enterprises in the country makes a poor comparison with the loss that the nation has already suffered and is still suffering. Owing to the scarcity of food and clothes, the basic needs of human life, India as a whole has suffered terribly. Doubtless, all the provinces have been affected more or less, but in Bengal we have witnessed scenes too deep for tears. But I feel that other nations if they have suffered, they have suffered for something positive in ideal and and ideology, and if the world of to-morrow will not betray them all they have something to hope for, and their rewards in victory may well compensate their loss in war.

But with India the case is otherwise. The political dead-lock since the time of Cripps's offer has caused in the country a deep sense of frustration and the studied indifference of a foreign rule offers little ground to hope for the future. In a land of over 380 millions of people, a vast majority are ill-fed, ill-clothed and ill-educated and lie engrossed in mediaeval conservation. In fact, the poverty of the Indian masses has no parallel in the civilized world.

PRESSURE ON THE LAND.

The main cause of poverty of our people is the unbalanced nature of our national economy, which again is the direct result of excessive dependence on agriculture. It is generally admitted that to improve the standard of living of the mass people and even, to rationalise the system of agriculture, the first thing essential would be to relieve the land of its excess population.

The main cause of poverty of our people is the unbalanced nature of our national economy, which again is the direct result of excessive dependence on agriculture. It is generally admitted that to improve the standard of living of the mass people and even, to rationalise the system of agriculture, the first thing essential would be to relieve the land of its excess population.

NEED FOR INDUSTRIALISATION

But this can be effected only by rapid industrialisation of the country and thereby providing new avenues of employment to the vast population that would be released from the land. In India there remain considerable unemployment and underemployment, while the resources that still lie unexplored and unexploited promise immense possibilities of industrial development. If war has its needs, peace has its own and in fact, demobilization will raise problems more serious than what we have had to face in relation to mobiliza tion. This further reinforces the argument in favour of rapid industrialisation of the country and makes it imperative on the part of the Government to take immediate steps to devise ways and plans for the same.

PLANNED ECONOMY.

In the individualistic economy of the past era, industry and commerce were left entirely to private enterprise. But the inherent defects and vices of *laiesez faire* economy are to obvious to-day. The urge for planning and centralised control gains further strength when we consider the vast area of the country, its ever-growing population, their needs and requirements vis-a-vis the slow tempo of economic progress during the last few decades.

OBJECT OF PLANNING.

The end of all economic pursuits is to produce wealth for satisfaction of wants. Wealth is thus, but a means to an end and its real value lies in its capacity to satisfy human wants. Now the question arises, has this tremendous increase in production resulted in proportionate increase in real wealth—wealth that has yielded the full value of it in satisfying human wants? Unfortunately the answer is in the negative. We have found poverty amidst plenty, starvation in a world where millions of tons of foodstuffs are allowed to waste just to maintain the market price or made to disappear into secret hoardings of black-market racketeers. , Thus, increased production has failed to improve the welfare of the community and has defeated the very purpose of our economic pursuits. As an economist has very ably shown the four Great Powers of the world, viz., America, United Kingdom Germany, and France together containing only 300 millions of population consume nearly 50 per cent of the world's total production of goods and services. "More than half of the world's total population must immediately be placed in the poorest category of all, with a real income insufficient to provide subsistence".

While in U.S.A. the per capita income is as high as Rs. 1,406 per annum, the per capita income in India is only Rs. 65. This necessarily indicates how backward we are in both production and consumption. The figure of per capita income as it is calculated does not convoy the true meaning inasmuch as inequity of distribution of the national dividend causes wide divergence in the average income of different social groups. Now, therefore, it is universally conceded that the primary object of economic planning should be to raise the standard of living of the mass people

A NATIONAL GOVERNMENT FIRST.

The execution of a comprehensive scheme covering the entire field of the nation's economic activities would necessarily mean all-pervasive authority and control by the State. I doubt the possibility of successful execution of a gigantic scheme. affecting the life and living of 380 millions of our population, by any other agency except a properly constituted National Government.

DISTRIBUTION OF INDUSTRIES.

In India the evils of uneven distribution of industrial activity have received scanty recognition in interested quarters. As a consequence the few large scale industries that we possess have tended to gravitate towards particular localities with the inevitable result of ugly congestion in certain urban areas. The future scheme of national industrialisation must provide the necessary corrective measured by way of regional planning and gradual dispersal of factories and workshops from overconcentrated areas. Nevertheless, while planning for the future, we should aim not merely at the maximum efficiency of production, but also at an optimum distribution of industrial activity based on broader economic, social, and strategical consideration.

POWER SUPPLY.

This, however, directly leads us to the problem of power supply. As you would readily agree, no regional planning can be effected unless the problem of power supply is successfully solved. Recently, however, some attempts have been made to develop the hydro-electric resources of the country. In certain provinces like U. P. and Madras substantial progress has been attained. Where available the natural sources of water-power should be fully explored and developed. At other places big thermal stations should be installed in a way so that cheap power for industrial and other purposes may be had at convenient rates not only in towns and urban areas, but also over the major part of our vast countryside. In my opinion, the central and the provincial governments should jointly undertake the entire financial responsibilities involved. In case that be not possible, private enterprises should be encouraged by proper subsidy.

QUESTION OF TARIFF.

In regard to industries, tariff is another vital problem, and rapid industrialisation of the country would be possible only under conditions favourable for the growth of capital and enterprise, and this again would require liberal and scientific application of protective tariffs in favour of national industries. In this respect, however, the Government of India, have not been appreciative of the difficulties of indigenous industries. Though a number of Tariff Boards had been appointed from time to time to enquire into the conditions and requirements of different industries, Government have, more often than not, rejected the recommendations offered by such expert bodies or have been overcautious in their action. It would not be untrue to say that outside forces have often influenced their decisions and reasonable claims of our industries have been denied on flimsy grounds.

CONTROL OF FOREIGN CAPITAL.

Nevertheless, tariff though an essential part of a protective system is not complete in itself. We have already witnessed the growth of foreign enterprises styled as 'India Limited' and in futures, the influx of foreign capital, if left uncontrolled, would seriously hamper the growth of national industries. It must be clearly understood that I do not plead for complete boycott of foreign capital. Not very unlikely, we shall require short and long-term accommodations in the international money market; but I would prefer borrowing of capital from him, if need be, rather than allow the foreigner to acquire permanent interests in the country through industrial and commercial enterprises.

MOBILIZATION OF CAPITAL.

Now I shall come to the most vital of our problems, i.e. the problem of mobilising indigenous capital. It needs no saying that the plan of post-war reconstruction will require utmost mobilization and pooling up of the nation's financial resources. But this will require maintenance of conditions within the country favourable for active co-operation and understanding between banking houses and industrial organisations. We should better take a lesson from the prewar system of continental banking. I may point out that the tremendous industrial progress attained by Germany during the last decade was possible only through mixed banking. By way of interlooking of directorates, good faith was created between banks and industries to mutual benefit and interest. It will be noted that Indian banking practices have been evolved on lines of the conservative British system. How far this will prove helpful to future industrialisation of the country is a point extremely debatable. A reference may be made here of the Banking Bill recently introduced in the Central Assembly. On the first reading the bill appears to be a piece of helpful legislation likely to direct the growth of Indian Banking on sound and healthy lines. But on a scrutiny it will be found that certain provisions are likely to evoke keen controversy. Any rigid legislation regarding capital structure will jeopardise the smaller organisations, many of whom will not find it convenient to amalgamate amongst themselves. Moreover, it needs be appreciated that in a country like India, where small trades and cottage industries provide employment to a considerable percentage of our population, these smaller banks have an essential part to play. I would, therefore, plead for more lenient treatment of these banks that exist quite in numbers, particularly in Madras and Bengal.

ABOUT OURSELVES.

Before I conclude I should give you a brief history of our own Institution. In 1926, this

(Continued on next page)

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, Jan. 25.

Definitely easier conditions have been noticeable on the Calcutta Stock Exchange in the past week. With a smaller amount of business passing a decline in prices has been recorded all round. The general weakness of the market has been due to the rapid developments in the war situation in Europe and the hopes of an early termination of hostilities. There was also some disappointment over the announcement of further concessions for the coal industry as it was generally expected that the industry would derive substantial relief under E.P.T. The new proposals, however, are designed to help only the smaller collieries. Among the worst sufferers were *Coal* and Jute shares. Engineering shares also were lower due to the weakness in Indian Irons. The general undertone is quiet.

Giltedged securities have been steady and there is even a small rise in prices as conditions in the money market have returned to normal. 3½ per cent Paper quoted Rs. 99-14. Among terminable loans, 3 per cent 1946 were Rs. 102-8, 3 per cent 1949-52 Rs. 101-12 and 3 per cent 1953-55 Rs. 100-2. 3½ per cent 1947-50 changed hands at Rs. 103-12 and 3 per cent 1966-68 at Rs. 98-3. 4 per cent 1960-70 were a shade better at Rs. 113-4.

Bank shares also are slightly lower with *Imperial Bank* fully paids at Rs. 2,010 and *Reserve Bank* Rs. 133. *United Commercial Bank* were 3 points lower at Rs. 38-12 premium while *Hind Bank* were Rs. 53-12.

Cotton shares have not been very much affected and the quotations are not very much changed on balance. *Cawnpore Textiles* are Rs. 12-12 ex-dividend and *Elgin* Rs. 35-8. *Kesoram* were 10 annas lower at Rs. 17-12 while *Muir Mills* were steady at Rs. 455. *New Victoria* were easier at Rs. 7-2; *Bengal Nagpur* shed 2 points to Rs. 41-6 while *Dunbar* were 7 points lower at Rs. 319.

In the Coal section, popular shares have declined by 2 to 3 points, *Amalgamated* being noted at Rs. 50-12 against Rs. 53-4 earlier in the week. *Burrakur* were Rs. 43-12 against Rs. 44-12 and *Equitable* Rs. 67-10 against Rs. 68-12. *Central Kurkend* were sharply lower at Rs. 25-12 against Rs. 29-12 but *Bokaro & Ramgur* remained steady at Rs. 48-8. *Dhemo Main* were well held at Rs. 28-6 and *New Beerbhoom* at Rs. 29-4. *Nazira* came down to Rs. 20-4 from Rs. 21-12 at the end of last week. *South Karanpura* were Rs. 28-12 against Rs. 30. The rise in *Talcher* to Rs. 13-12 has not been maintained. The quotation is now Rs. 12-10.

The Jute section is weak following the publication of the production figures for the month of December. It appears that there will not be any early improvement in the coal situation. Business passing is very small, the bigger shares have dropped 10 to 15 points while other shares are 2 to 3 points lower. *Howrah* were Rs. 83-12, a decline of 3 points over the week while *National* were Rs. 33-4 against Rs. 34-2 and *Presidency* Rs. 11-10 against Rs. 12-12. *Reliance* were Rs. 70-12 against Rs. 73 and *Nellimarla* Rs. 33-8 against Rs. 35-10. *Nuddea* were 7 points lower at Rs. 126 and *Rameshwara* Rs. 21 against Rs. 22.

Engineering shares were weak following the drop in Indian Irons to Rs. 39-12 from Rs. 41-12. *Steel Corporation* were 2 points lower at Rs. 33. It was expected that at the Indian Iron annual meeting the Chairman would have something to say in connection with the issue of additional capital on bonus terms to shareholders. No reference, however, was made in this connection. *Burn & Co.*, quoted Rs. 400 against Rs. 425 and *Braithwaite* Rs. 11-14 against Rs. 12-6. *Jessop & Co.*, were steady at Rs. 24-8 while *Kumardhubi Engineering* were 1 point lower at Rs. 11-9.

Sugar shares also have been affected, *Balrampore* being quoted Rs. 17-12, *Belsund* Rs. 15-8 and *Carew & Co.*, Rs. 27-10. *Champaran* were 2 points lower at Rs. 38-14, *New Savan* were the only exception being quoted at Rs. 25-4.

Despite the general weakness of the market Tea shares have been steady. *Tezpore* were Rs. 21-12, *Central Cachar* Rs. 130, and *Killcott* Rs. 79-4.

In the Miscellaneous section, *Burma Corporation* were firm at Rs. 5-3; *B. I. Corporation* were neglected at Rs. 6-8; *Dunlop* were put through at Rs. 59 and *Indian Cables* at Rs. 26-8. *Midnapore Zemindary* declined by 10 points to Rs. 176-8. Paper shares also were lower, *India Paper Pulp* being Rs. 226, *Titaghur Paper* Rs. 28-14 ex-dividend and *Sree Gopal* Rs. 19-12. There has been some profit-taking in shipping shares and *I. G. N.* were as low as Rs. 184-8. The close is higher at Rs. 192.

(*Continued from page* 121)

amount carried forward is lower at Rs. 24,943 against Rs. 58,500 brought in.

* * * *

The profit of the *Central Bank of India Limited* for the year ended 1944 does not make as impressing a showing as the Bank of India Ld. Nevertheless, the total profit of Rs. 11.4 lakhs is higher at Rs. 1,16,48,823. The amount set aside for taxation of Rs. 75 lakhs against Rs. 60 lakhs takes up more than the increase in earnings for the year. As the final dividend and the bonus have to be paid on a capital increased by the issue last year, the allocation to funds is smaller. The amount transferred to Bank's investment is Rs. 4,00,000 (Rs. 5,00,000). On the former occasion the Reserve Fund received Rs. 12,00,000 and the Sinking Fund Rs. 3,00,000. The amount carried forward is substantially higher at Rs. 15,65,778 against Rs. 10,56,876 after paying a bonus to the staff of Rs. 8.05 lakhs (Rs. 6.6 lakhs).

The war has resulted in a large increase in earnings of the *Guzarat Paper Mills Limited*. In the year ended March, 1944 the net profit was Rs. 2,69,681 against Rs. 2,26,455 *in 1942-43*. After providing for taxation Rs. 1,84,000 (Rs. 1,25,000), Rs. 42,000 (Rs. 55,000) to Depreciation, the dividend of Rs. *10* per share and bonus of Rs. 4 per share is distributed on an increased capital. The last dividend was Rs. 10 per share and bonus Rs. 8 per share.

* * * *

The Nath Bank has made impressive progress in recent years and, it is in the fitness of things that the Directors have decided to open a branch in Bombay. The paid-up capital of the Bank was only Rs. 5.27 lakhs in 1937 and deposits Rs. 50.64 lakhs in 1944. There was an increase to over Rs. 34 lakhs and over Rs. 6.75 crores respectively in 1944. With the expansion in the activities of the Bank, it can be expected that it will grow further in stature. The Managing Director, Mr. K. N. Dalal, had some very interesting remarks to make at the opening ceremony of the Bombay branch on Thursday this week, regarding the post-war prospects and the important part that banks, big and small, have to play.

It has been announced that the interim dividend of the *Steel Corporation of Bengal, Limited* for the year ended December, 1944 is to be six annas per share, the same as on the previous occasion. Thus speculation regarding a higher dividend has been set at rest. The market has no reason to be dissatisfied with the dividend declaration especially as it had been made plain that tax requirements might prevent any increase in the distribution. As business has not been done in Friday's session it is not possible to judge the effect on prices for the Corporation's shares but the recent decline in prices might be said to have discounted to a large extent this factor.

* * * *

The accounts of *Reliance Firebrick and Pottery Company, Limited* for the half-year ended August 1944, show an increase in net profit, before providing for taxation and depreciation, of Rs. 1,14,039 from Rs. 1,06,818 for the previous six months. The sum set aside to depreciation is Rs. 25,281 against Rs. 27,700 while the larger provision for taxation takes away more than the increase in earnings, at 60,000 (Rs. 50,000). The dividend has been maintained at 5 per cent. The amount carried forward is lower at Rs. 13,168 against Rs. 14,410 brought in. It is satisfactory to note that there has been an increase in sales from Rs. 10.43 lakhs in the corresponding period of 1943 to Rs. 12.13 lakhs, but the sharp increase in working expenses has not resulted in a proportionate increase in earnings. As a matter of fact, the net profit for the latest accounting period is considerably lower than the figure for the corresponding period in 1943. In the half-year August 1943, there was a net profit of Rs. 1,51,419. After providing for depreciation Rs. 25,000, taxation Rs. 1 lakh and reserves Rs. 10,000, the dividend of 5 per cent was paid.

WATCH-DOG.

(*Continued from previous page*).

Bank was given an humble start at Noakhali, a muffussil town in Bengal, where its scope was limited and activities circumscribed. It was then not in a position to rent a house even. So this infant institution had to be nursed under the roof of a small tin shed of this humble self. As the resources were meagre, it had to be run with the help of a single clerk on a monthly salary of Rs. 15/- only. The assets then in the form of furniture were a small tin chair and a little wooden box. Though its outward form was not at all imposing its spirit was really holy and that is the spirit of public service. It is gratifying to note that the present paid-up capital of the bank—

PROGRESS OF THE BANK

Year.	Paid-up Capital. Rs.	Reserve Fund. Rs.	Deposits. Rs.
1937	5,26,575	45,000	50,64,034
1938	6,87,012	53,500	1,03,89,519
1939	8,60,528	75,000	1,17,68,339
1940	9,62,946	90,000	1,34,94,261
1941	11,07,007	1,10,400	1,43,04,328
1942	12,20,365	1,30,400	2,06,21,445
1943	20,20,732	2,96,950	4,03,80,854
1944	over 34,00,000	over 6,25,000	over 6,75,00,000

exceeds rupees thirty-four lakhs and in 1944 the total deposit exceeded six crores seventy-five lakhs. Encouraged by past success we have now come over to BOMBAY, India's premier industrial city and I hope we shall not fail to receive your co-operation and sympathy.

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

Easier conditions have continued to prevail in the money market though for a time in the western centre the demand for funds, on account of the sharp drop in bullion prices, caused a temporary rise in the call money rate to ½ per cent. The rates are again ¼ per cent in Bombay and ½ per cent in Calcutta. It was generally expected that the reduced offer of treasury bills by the Central Government would meet with good response and that it would be possible to get the whole amount at last week's rate. While it should be said that the response has not been discouraging, the amount of applications was only Rs. 4.01 crores against the offer of Rs. 4 crores and the amount of accepted tenders was short of the required sum for the fifth week in succession at Rs. 3.87 crores. There is a further reduction in the offer for the next week to Rs. 2 crores. As a result of the poor response at the auctions of treasury bills in recent weeks, there is a decrease in the total of the floating debt to Rs. 65.48 crores from Rs. 84 crores in December. That the Government of India have been able to effect such a big reduction in the floating debt is good testimony to the ways and means position of the Central Treasury but, as was pointed out on an earlier occasion, the continued poor response to treasury bills and the lower rate of subscriptions to Defence Loans have reduced the tempo of the anti-inflationary programme and there have been rumours during the week that the authorities might try to induce greater interest in Government loans by new methods. There is no suggestion of any impending loan as conditions in the giltedged market are not propitious and the authorities might wait for some time more to launch on a fresh loan programme. It should be remembered, however, that the 3 per cent 1957 Victory Loan was announced at this time last year, that is before the Central Budget and the token invasion of this country by the Japanese. There is evidence of official support to the market as in the latest return of the Reserve Bank investments show a large increase. Such support is perhaps to absorb selling by certain institutions. It can, however, be expected that a major development in the war situation in the West and further successful progress of allied operations in the Far East might be utilised for making the announcement regarding the terms of the New Loan on more advantageous terms to the borrower. Developments in the next few weeks are, from this point of view, very important.

The returns of the Reserve Bank for the week ended January 26, shows a further small increase in the total notes issued to Rs. 1,044.21 crores from Rs. 1,041.15 crores. Notes in circulation were Rs. 1,034.01 crores against Rs. 1,032.35 crores and notes in the banking department Rs. 10.2 crores agains Rs. 8.8 crores. Sterling securities were Rs. 3 crores higher at Rs. 929.33 crores and rupee coin Rs. 6 lakhs higher at Rs. 12.62 crores.

In the banking department, Central Government balances have increased for the second week in succession, the latest rise being more pronounced at Rs. 272.35 crores. Central Government balances are at the highest level for all time. Government of Burma and other accounts also show an increase, the former being higher at Rs. 1.14 crores against Rs. 30 lakhs and the latter at Rs. 20.71 crores against Rs. 14.83 crores. Bank deposits are not very much lower at Rs. 67.27 crores against Rs. 68.42 crores. Foreign balances show a rise of Rs. 11.56 crores to Rs. 374.61 crores. If the transfer to the issue department of Rs. 3 crores is taken into consideration total receipts during the week are thus Rs. 14.6 crores.

The statement of the Imperial Bank reveals a slight increase in deposits to Rs. 233.99 crores from Rs. 232.74 crores. Investments are higher at Rs. 144.43 crores against Rs. 142.78 crores, thus indicating greater interest in treasury bills and fresh investments in giltedged securities. Advances have further improved to Rs. 69.97 crores from Rs. 66.28 crores, most of the increase being under loans and cash credits. As a result of the increase in both investments and advances, cash balances are over Rs. 4 crores lower at Rs. 28.95 crores.

The statement of scheduled bank does not suggest any slackening in the demand for funds, total advances being Rs. 4.5 crores higher at Rs. 250.04 crores though bills discounted show a slight reduction to Rs. 14.33 crores. But side by side with the increase in advances, demand and time liabilities also are higher. The rise in time liabilities is more pronounced than demand liabilities. Time liabilities on January 19 were Rs. 207.81 crores against Rs. 205.98 crores and demand liabilities Rs. 609.05 crores against Rs. 602.02 crores. Cash was lower by Rs. 77 lakhs at Rs. 28.31 crores but bank deposits with the Reserve Bank were higher by Rs. 2.46 crores at Rs. 69.21 crores. The increase in total cash balances by Rs. 1.4 crores in the face of a rise in total advances by Rs. 4.25 crores, with deposits higher by only Rs. 2.85 crores, clearly suggests that scheduled banks have taken very little interest in treasury bills. They have also liquidated some of their investments in giltedged securities.

RETURN TO GOLD STANDARD

INTERNATIONAL EXPERT'S PLEA

Washington January 30.

Dr. Edwin W. Kemmerer, international gold expert, advocates return to an international gold standard as a substitute for the Bretton Woods proposal for an international monetary fund which he held would bring currency instability.

Speaking at the closing session of the Institute for Money and the Law recently, Kemmerer said he believed any money plan must be simple because people are suspicious of things they do not understand.

Its own complicated mechanism is sufficient grounds for junking the Bretton Woods money plan, which soon comes before Congress for ratification, he said.

To put the world on gold, he would call an international conference and once the international plan was devised, he suggested as little control as possible by political agencies. He urged elimination of tariff barriers to make for free flow of international trade, and advocated setting up of a central bank for the world as a central bank over central banks. This institution, he said, should not make loans or otherwise enter fiscal matters.

Several international economists held views similar to Kemmerer in their addresses before the two-session of the Institute which was sponsored by the New York University School of law and the Economists national committee on monetary policy.

Generally, the group denounced the Bretton Woods proposal for an international monetary-fund, but most of them accepted its allied agency—the international bank for reconstruction and development which was found less complicated and based on sounder principles of finance.

The economists for the most part urged a return to a genuine gold standard in which gold would be available instead of the nation's "hybrid" gold standard in force since the dollar was devalued on January 31, 1934.

Most of them held that currency reform must be based upon internal fiscal reform and stressed that a balanced budget was a first consideration to be achieved.

Kemmerer said the Administration's attitude that the nation must accept Bretton Woods proposals "tends to make the opponents of the Bretton Woods plan appear to be selfish isolationists, which most are not. In fact, nearly all of these opponents desire fundamentally the same end as do the protagonists of Bretton Woods, namely, a sound and stable international monetary system, efficient production, freedom of trade, and peace and comity among nations.

"It is precisely because so many of us believe that the Bretton Woods plan would be in conflict with these worthy objects, as that plan would actually work out in the kind of a world we shall be living in, that we oppose the plan", he said.

Harry D. Gideonse, President of Brooklyn College, warned the members of the Institute against the many conferences which are developing plans for new international agencies. He said that integration is needed. If we are to avoid rapid growth of economic agencies—each with its own staff, charter program and budget—the next few months will probably present the last opportunity for sound basic constitutional planning, he said.

The Banking Bill

The Banking Bill, which, it is expected, will be considered in the forthcoming session of the Central Legislature has, strangely enough, failed to excite as much public interest as a measure of such importance should. There has been nothing like the flutter caused by the Insurance Bill when it was first introduced into the Assembly. It will be remembered that there was more than one reference during the course of the debate on that Bill to the canvassing done by a large number of representatives of insurance interests who had planned a longish stay in Delhi for that purpose. At the moment, it seems extremely unlikely that the Banking Bill will lead to similar developments. The reason is not far to seek. For one thing, some of the main principles and even some of its provisions have been under consideration over a long period since the days of the Banking Enquiry. For another, though the Banking Bill has as wide a scope as the Insurance Bill, the provisions of the former are such that respectable and well established banks will not feel them to be a hardship and others cannot afford to describe them as such. Reputable banks cannot grumble about stipulations of percentage of cash to liabilities or similar provisions which can affect only small banks or new ones. It is precisely for these reasons that the general public interest in the Banking Bill should be more pronounced, so that the proposed legislation will be viewed not only from the angle of the big banks, but also of banking as such.

That there is need for separate legislation in regard to banking, few will question. As the statement of objects and reasons appended to the Bill points out, the needs in respect of banking cannot be met by the Indian Companies Act, since in the case of banks, it is the interests of the depositors that require to be protected, while in the case of other jointstock companies, it is the interests of the shareholders that must be deemed to be threatened. However, it is taking a narrow view of the purpose of banking legislation, if one should restrict it to the protection of the interest of the depositor. The aim of banking legislation should be either directly or indirectly to promote the healthy growth of banking and to ensure, in so far as legislation can, that the banking system serves the economic organisation as well as it should. Adequate protection of the interest of the depositor is a step towards the attainment of the wider objective. In fact, the tendency in the past was to assume that soundness and solvency of banks could be attained by ensuring through statute a minimum integrity in management and that a banking system, which comprises sound and solvent institutions, must of necessity do well by the economic organisation. In the early stages of the development of Indian banking, the principal obstacle to its growth was the proneness of Indian depositors to unreasoning panic. Later, the emphasis shifted to the competition of well-established foreign banks. Only at a comparatively late stage did the possibility of interested mismanagement begin to be reckoned with. These three weighed more or less equally with the Central Banking Enquiry Committee when it asked for special banking legislation. But the inspiration behind the present Bill is not that of the Central Banking Enquiry of a decade and a half ago but the Reserve Bank of India, which has a different approach to the problem. At this stage, at any rate, the difficulties which the Bank has been experiencing in making its guardianship of Indian banking as a whole effective naturally loom larger in its eyes. This guardianship of Indian banking, the Reserve Bank interprets in terms of (1) soundness at the start of the banking venture (2) rules to ensure minimum of soundness in subsequent developments and (3) effectiveness of the control and direction of the Reserve Bank whenever the Bank deems it necessary to exert them. Along with these three, the Bank has also had to consider in view of certain recent experiences the rationing of the process of liquidation. These four objectives determine the scope and purport of the new Banking Bill; and, broadly speaking, they apply as much to foreign as to British Indian banks. In judging a measure like this, it is necessary to consider whether the regulatory measures designed by the Bank may not have the effect of curbing the initiative and cramping the development of individual institutions and banking as a whole and secondly whether these measures are sufficient to ensure that business will be well served by banking.

On the former question, the banks themselves must speak, if only on the ground that they must know better where the shoe pinches. The experience of the Insurance Bill with its need for frequent amendment and revision is a warning against the danger of regarding all interested criticism as necessarily dishonest, and, therefore, not entitled to consideration. In fact, we would go so far as to suggest that, in this instance, the Government take the step of nominating one or two prominent and well-informed bankers to the Assembly, so that the banks will have their representatives actually participating in the Assembly debates and enlightening the legislators on points as they arise. The routine procedure of circulation of the Bill for opinion may not suffice to give the corrective to last minute amendments. This is not, however, meant as a reflection on the wisdom that has gone into the formulation of the Bill. The Reserve Bank has viewed the problem as one of ensuring that every banking company is a sound unit, that, as it expands its activities, it holds forth certain minimum proof of its ability to do so on healthy lines, that at all stages it complies with certain conditions necessary for its soundness and that the Reserve Bank has the means of satisfying itself about the position of a bank when, for any reason, it feels the need for closer scrutiny. All these objectives are strung with obvious logicality, though some details may leave room for difference of opinion. None can demur to the provisions regarding the relations between authorised capital and subscribed capital and paid-up capital. The suggestio falsi of huge figures of authorised capital should no longer be available as a means of imposing on an ignorant and gullible public. Likewise, it should not be open to any businessmen to mix up his speculative ventures with those of the Bank under his control and follow a "Heads-I-win-tails-you-lose" policy towards the Bank. This danger which was not widespread formerly may conceivably become so, as individual moneylending businesses are being converted into jointstock concerns. The Bill not only prohibits trading with a view to eliminate non-banking risks, but also provides that non-banking assets acquired by a banking company should be disposed of within seven years. Another familiar danger which the Bill seeks to prevent is the extension of branch banking without the necessary base to support it. The Bill lays down therefore that the minimum aggregate capital and reserves should be Rs. 20 lakhs for a bank which seeks to do business outside its Province or State, Rs. 5 lakhs in respect of a place like Bombay or Calcutta, Rs. 2 lakhs in respect of each town with a population of one lakh and over and Rs. 10,000 in respect of each place of business elsewhere. The maximum and minimum of capital and reserves are however fixed at Rs. 20 lakhs and Rs. 1 lakh respectively. In the case of banks registered elsewhere than in British India or the United Kingdom, the same object is realised by the insistence that such banks should keep with the Reserve Bank in cash or unencumbered approved securities the amount required under the section. The assets in British India of foreign companies should not be less than 75 per cent. of the time liabilities in British India on the 31st December of every year.

Other safeguards are the insistence on voting rights being strictly proportionate to the shareholder's contribution and the ban on the employment of Managing Agents. These provisions, it is expected, will secure adherence, to the minimum degree at least, to sound principles of banking. The returns which banks have to submit have been detailed in the Bill; and a glance at the new form prescribed for bank balance sheets will show that the Reserve Bank will have the means of assuring itself whether the provisions of the Bill are being adhered to by the various banking institutions.

As we have already observed, these provisions are well conceived and suited to the objectives so far as they go. Some points of detail may remain for discussion and even revision. One such is the provision of a minimum of one lakh of capital and reserve for banks in India. It has been suggested that for an undeveloped country like India, the minimum is too high and may be reduced to Rs. 50.000. No judgments on this question are possible unless we can be clear in our minds as well about the lines on which we would like our banking system to develop as about the effects of these provisions on the future development of banking. Will the stipulations about capital and reserve in terms of number of centres, population and extension beyond the State or Province lead to a broad division of banks in India into provincial and all-India and into urban and rural? If such a development is considered desirable, should not the figures laid down in that section be made more suitable to the particular types of banks? A bank with a large number of branches in small towns and villages all confined to a comparatively small and compact area should in this view have a lower minimum than banks spread over a number of biggish towns over a whole Province. Considering that in the post-war years the country is looking forward to a vast expansion of production and consumption in rural areas, the need to encourage such small banks should receive greater recognition. Reliance on co-operative banking will reduce the dependence on such banks; but there is little harm in providing the conditions in which small banks will seek to serve rural areas by displacing the old type of exorbitant money lender. The banking system of the country may conceivably consist of three strata, the big all India banks at the top, the small, but well-spread, rural banks at the bottom and, in between, the banks with a Provincial scope serving the interests of small towns. While one lakh is not a high minimum for a bank, in the case of certain types of banks the rate of increase should not be too closely related to the number of centres. No figure

of minimum capital and reserve, however high, can by itself be adequate protection for the interests of the depositor. It is the efficiency and integrity of management that alone can provide adequate protection and, where this is in doubt, we must have resort to the vigilance and control of the Reserve Bank as the best available substitute.

Perhaps, the most important part of the new bill is that which provides for an enquiry by the Reserve Bank. Section 23 lays down that the Central Government, virtually in its discretion, can direct such an enquiry to be made; and the result of the enquiry may range from exclusion from the second schedule of the Reserve Bank to winding up. This is, indeed, a drastic provision; but the need for such a reserve power, nobody will deny. But the point to remember is: what will be the effect of the various steps that may be taken under this clause by the Central Government? It is idle to believe that an enquiry can be ordered or its general conclusions reached by the Reserve Bank and communicated to the Central Government in an atmosphere of perfect secrecy. If it is known that a particular bank has come under such scrutiny, it will be sufficient to make the public restive and to cause the disturbing chain of consequence associated with a run. An enquiry may conceivably lead to a position which the Reserve Bank will be hard put to it to keep in hand. It would therefore be better to provide for a routine inspection to which all banks may be subject and for powers for the Reserve Bank to make a special scrutiny where the Bank feels that such a scrutiny is needed. This would help to avoid unmerited reflections being cast on particular banks merely by the fact of an enquiry being set afoot.

ANNOUNCEMENT

ARYAN PAPER MILLS LIMITED

Registered Office: **CHOWRINGHEE SQ., CALCUTTA**

AUTHORISED & ISSUED CAPITAL - - Rs. 50,00,000 (Fifty Lacs)

divided into 3,50,000 Ordy. shares of Rs. 10 each and
15,000 6% (Tax free cumulative) Pref. shares of Rs. 100 each.

Out of the issued capital 80,000 Ordinary shares and 2,000 Preference shares have been already subscribed by the Directors, Managing Agents, their friends, relatives & others and the balance 2,70,000 Ordinary & 13,000 Preference shares are now offered for public subscription, Payable (i) For Ordinary shares:—Re. 1/- per share with application Re. 1/- with in a month from the date of allotment and the balance in four equal instalment at Rs. 2/- per share and not less than two months from each call. (ii) For Preference shares:—Rs. 10/- per share with application and the balance within 7 days from the date of allotment. An admission fee of Re. 1/- is payable with each application for shares. The issue is on the basis of statement in lieu of Prospectus which has been filed with the Registrar of Joint Stock Companies, Bengal.

MANAGING AGENTS:
M/S. Aryan Planters' Agency,
12, Chowringhee Square, Calcutta.

AUDITORS:
M/S. H. C. Das & Co.,
Incorporated Accountant,
1/1, Vansittart Row, Calcutta.
and
M. K. Deb, Esq.,
Registered Accountant.
8/2, Hastings Street, Calcutta.

BANKERS:
The Comilla Union Bank Ltd., Calcutta.

BROKERS:
M/S. Bengal Share Dealers'
Syndicate Limited,
12, Chowringhee Square, Calcutta.

SOLICITORS:
M/S. Dutt & Sen,
"Temple Chambers"
6, Old Post Office Street, Calcutta.
and
S. N. Sen, Esq.,
9, Old Post Office Street, Calcutta.

OBJECTS:
The Company is established mainly to carry on the business of manufacturers of and dealers in all kinds and classes of Paper, Board and Pulp including writing paper, printing paper, News printing, Wraping Paper, Tissue Paper, Cover Paper, Filter Paper, Antique Paper, Ivory finish Paper, Coated Paper, Art Paper, Bank or Bond Paper, Badami or Brown or buff Paper, Bible Paper, Cartridge Paper, Clothlined Paper, Azure laid and wove paper, cream laid and wove paper, Grease proof or gummed paper, handmade paper, parchment drawing paper, kraft paper, Manilla paper, envelope paper, tracing paper, Vellum paper, water proof paper etc. etc. Paste board, card board, straw board, pulp board, leather board, mill board, corrugated board, box board, Post cards etc. etc.

PROSPECTS:
Demand for Paper is bound to grow with the growth of literacy and the few paper mills existent in India can hardly meet even a fraction of the present demand.

FACTORY SITE & LAND:
We dave already secured 3,000 bighas of land (147 miles only from Calcutta) near about Burrakar & Ranigunge where Bengal Paper Mills is situated. NECESSARY ADVANCE PAYMENTS HAVE ALSO BEEN MADE TO M/S. JAMES BERTRAM & SONS LTD. OF ENGLAND TO UNDERTAKE TO SUPPLY THE MACHINERY PLANTS AND TO TAKE UP CONSTRUCTION WORK OF THE MILLS . They are expert in the line and they supplied machinery plants and constructed the Titaghur Paper Mills No. 2 with success. The mill when complete will be in a position to manufacture 20 Tons of finished paper per day.

CARD-BOARD & STRAW BOARD MILLS:
We are also contemplating to manufacture Straw Board & Card Board and to give a definitive shape to this we are negotiating with a reputed firm to supply us complete plants immediately.

SABOI GRASS:
Cultivation of Saboi grass and other pulps essential for manufacturing paper has already been taken in hand under the supervision of experts in the line.

MANAGEMENT:
M/S. Aryan Planters' Agency have been appointed as Managing Agents. Nothing will be paid to them before tax free Dividend of at least 5% is paid to its Ordinary shareholders and 6% to Preference Shareholders.

DIVIDEND:
Good Dividend may be expected on the sale of Saboi Grass and other Pulps and on the sale of Card Board and Straw Boards alone before the installation of machineries for bigger plants.

SHARE SELLING AGENCY:
Influential agents wanted for the sale of the remaining shares of the Company.

APPLICATION FOR SHARES:
To be made either direct to the Company or to its Bankers or Brokers.

"Consent of the Central Government has been obtained to this issue of Capital, subject to the condition that so much of the Capital as cannot in that Government's judgment be properly expended until some uncertain future date is invested and kept invested in prescribed securities which will not be released until the Central Government, (in consultation with the Crown Representative if any Indian State interests are involved), is satisfied that the time has come to make corresponding payments for purposes which are consistent with the enforcement of any measures of control or restriction that may be in operation at the time when such release is applied for. It must be distinctly understood that in giving this consent the Government of India do not take any responsibility for the financial soundness of any schemes or for the correctness of the statements made or opinions expressed with regard to them."

Such a routine enquiry has a far greater importance to the other problem of ensuring that the banking system serves the economic organisation as well as it should. We have already expressed our view that the aim of banking legislation and of the Reserve Bank as the principal instrument of its execution should reach beyond the mere protection of the interest of the depositor. It should not be forgotten that the interest of the depositor, in so far as it lies in the maintenance of high percentage of cash, is not in accord with the interests of business expansion. The safeguard for the depositor lies less in a high cash percentage than in the ability of the Reserve Bank to prevent mismanagement and to prevent a sound institution being overwhelmed by unreasonable runs and panic. But the Reserve Bank must do more. The activities of banking institutions need to be co-ordinated from the point of view of the national economy; and for this purpose it is desirable that the Reserve Bank should have close knowledge of the working of banks. With the close knowledge which a regular enquiry may provide, despite its varying intensity, the Reserve Bank will be in a position in course of time to discharge its duties to the economic organisation as a whole. It may spot the areas in which competition is exceeding its healthy limits; and it is a question whether in certain circumstances the Reserve Bank should not be given the power to prevent new entrants into an already crowded sphere. It may be able by sweet persuasion to liberalise the policy of banks which may be inclined to be conservative or too restricted or even to afford invidious treatment to certain sections of their clientele. These are distant objectives which for that reason, should not be wholly overlooked.

Secondary Industries' Success

The rise of secondary, unprotected industries before the war demonstrated as much the potentialities of the Indian market in relation to consumer goods generally as the possibilities of encouraging local enterprise by a stores policy adapted to the requirements of industrial development. Since Germany and Japan have ceased to compete today it is possible that secondary industries which have been helped by specific duties in the past have found in wartime unusual opportunities though handicapped by lack of essential imports in some cases. The industries to which reference may be made are all older than the war, and not all of them have benefited to the same extent from the war. But the impression of prosperity through progress will remain since India's imports of soaps, paints, leather, glass and pottery have fallen during the war years and in regard to chemicals at least home production has acquired exceptional importance. In the field of smaller industries the usual comparison of profits by years cannot be made. The actual proportion of excess profits to standard earnings cannot be ascertained from the published company reports, and all that can be said about the quality and marketability of Indian-made goods must be found in the Trade Commissioners' advice as to foreign openings for Indian manufacture.

Secondary industries found a chance to develop when specific duties on Japanese goods were added to the tariff. The present emergency surcharge may have been as efficacious as import control in raising the proportion of Indian goods to foreign goods sold in India. For such industries as pottery, paint and glass, the availability of raw materials and the existence of the large home market have been long the decisive factors. What has been accomplished in regard to soap or paint may suggest that a revival of imports after the war cannot make much real difference to established Indian manufacturers. Though the disappearance of war orders will make much difference to the leather industries, it is apparent that foreign imports cannot reappear all at once, and the present controlled prices may stabilise both production and profit. In the Indian leather industry orders for millions of Army boots have expanded employment. Indeed it is believed that footwear will rank after textiles as a major industry. As the world's biggest producer of hides and skins, India can hope for a substantial export trade in addition to ample supplies for the leather industry. The assistance of the industry under control has been enlisted early and the regulation begins from the distribution of tanning materials. Though statistics cannot be cited the rise in Defence services' taking from 3.6 million pairs in 1941 to 6.6 million pairs in 1943 proves that production has risen. In the case of Cooper Allen day and night shift working (for 20 hours a day) has raised the output from 3,000 pairs to 19 000 pairs per diem. Another big company, the Bata Shoe Company is known to have doubled its prewar production. Exports are unnecessary for a shortage of footwear, and even of repairing materials, has been noticed and only a reduction in Defence purchases in 1944 has helped the civilian market. A vast increase in grindery follows the development of boot and shoe production. But survival of the ancillary industry in the absence of regular plant is uncertain. Harness and saddlery output also has increased in consequence of the war. In this case, too, Cawnpore is the focus and small manufacturers have been brought within the scope of war supplies. Postwar prospects must be related in this case to the apprehended shortage of leather in the world.

Prewar production of heavy chemicals including fertilisers (put at 30,000 tons per annum) reflected the industrial backwardness of India. Though natural protection was available for sulphuric acid, and important factories were planned before the war, India was sadly deficient in respect of chemicals. Since sulphuric acid production has risen as a result of the war, and the number of factories has increased, India is nearly self-sufficient. Auxiliary chemicals made from sulphuric acid have increased in number and quantity, though sulphur has had to be imported. Many industries have benefited greatly from the expansion of chemical output and the rise in sulphuric acid consumption from 16,690 tons to 73,500 tons in 1943 testifies to unusual progress. There is another branch in which production has risen. Caustic soda supplied may have to be supplemented by imports needed for an estimated consumption of 50,000 tons in India. The soap industry alone takes half the quantity and new factories for producing caustic soda are still needed. Serious difficulty in respect of bleaching powder and chlorine disappeared. It is presumed that a surplus for export will be available after the war in the case of chlorine. India is expected to produce more than half of the soda ash she may want as three major plants will provide 56,000 tons of soda ash per annum. If imports of soda bicarbonate are still wanted in India, there has been real success in regard to potassium chlorate. The match industry has set up its own source of supply and at present there are two factories producing potassimum chlorate.

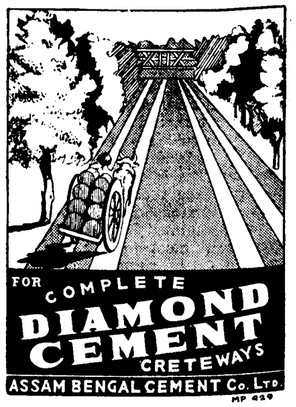
Though soap manufacture has suffered through shortage of rationed caustic soda four factories producing glycerine are favoured and India produces 130,000 tons as against the prewar estimate of 70,000 tons of soap. Before the war the soap industry was well set as it had at call vegetable oils and fats. Soap imports have fallen and consumption within the country has risen while the range of production has extended. Between the wars it rose by 250 per cent. According to one estimate a decrease has taken place owing to producers' difficulties, especially, in 1942 and 1943. Be that as it may, the elimination of Japanese competition will assist the industry after the war as it has no special problems and can get its trained technical personnel from India.

The prewar production of paints and varnishes in India was put at 500,000 cwt, approximately equal to two-thirds of Indian consumption. As linseed oil is the chief requirement progress was unusual and only some requirements had to be imported. The present situation under Control reflects war demand. The first paint factory was started in 1902 and local production advanced steadily. Bombay and Calcutta are the centres of industry and the availability of barytes has led to the setting up of two new factories in South India. Camouflage paints have been made during the war and only essential imports for the manufacture of special types have been imported. Nevertheless, production in 1942 totalled 30,000 tons of which 80 per cent went for war purposes.

India's glass industry is old but it failed to convince the Government that it had to be saved from competition. Dependent upon imported soda ash, it did not hold its own against imports though production rose by 250 per cent between the wars. The present war has changed all that and the range of products has greatly increased though the U. P. is still the chief producer of glass. Sheet glass is now made as well as hollow-ware Technical progress has been substantial and the cottage bangle industry has recovered vitality. Bottle factories have been kept busy and scientific glassware is being made along with bulbs for electric lamps. The fall in imports has stimulated production greatly, and postwar prospects have been assessed favourably though a limit to internal competition is imposed by conditions within the industry.

Though Indian clay found an application in the pottery industry only the common kinds of porcelain and electric insulators were made in India before the war. Japanese competition was very keen despite the growing efficiency of the Indian industry. While refractories, stoneware etc., were not challenged, the manufacturer of crockery had to withstand strenuous competition. When imports ceased, and military orders increased, the Indian manufacturer found his opportunity. In Bengal, Gwalior and Mysore production rose apace, and many new factories were established. Though quality has been missed, the manufacture of crockery has increased and if Japanese goods do not return it is possible that increased demand will be satisfied by Indian manufacture.

Business Efficiency



Business efficiency depends to a large extent on the state of your health. You can't afford to get ill NOW. The Spring will be here soon and they call for extra precautions. Ladcovine, the Portwine tonic can be most effectively used to revitalize the entire system and to build up your powers of resistance against illness and strain.

Editorial Notes

British Trade Unions

Mr. Bevin's proposal for wage councils to enforce agreements to keep wages up during the transition appeared this month. It is likely to be of great value for keeping employers appreciative of trade union's services. Gordon Schaffer describing the industrial progress in 1944 has announced that trade unions are stronger. The movement is more complete and effective than ever; with a membership over 7 millions it is stretching far beyond the industrial section of workers. The last organisation to be affiliated to the T.U.C. was the British air line pilots association. Trade unions have established their right to be consulted in respect of production. They are represented on Regional Boards concerned with postwar trade revival and on the joint production committee connected with factories on war work. Before the war the total membership in trade unions was estimated at 5 millions. The total did not fall during the Depression and has risen steadily during the war though the number of Unions has declined and the big unions have grown bigger. There are 14 unions with membership exceeding 100,000 today, the largest being the Transport and General Workers Federation though the Amalgamated Engineering Union is now likely to hold the first place. The increase in industrial activity has supported the growth of unions and the political power of unions has apparently grown in the same fashion. Women have a more important place as many trades have been thrown open to them by the war but the printing trades are still closed. The British trade union movement has increased its international contacts and the forthcoming conference may promote them greatly. Political influence has apparently increased and formal independence of the parliamentary labour party has been asserted in December. Trade unions are not part of the class war though the political aims are frequently apt to be precise despite the chosen leaders being usually non-unionists. The relative stagnation of the trade union movement in India despite its identification with militant Nationalism affords, properly speaking, a contrast of a familiar kind. There is little to show that unions have gained influence or powers, but official encouragement has been available of late and compulsory recognition may bring about many changes.

Amazing Growth

Once dependent on imports of plywood from the Baltic States and Japan, India is now producing enough plywood for her own requirements. Before the war, there were only three factories making plywood. Of these two were in Assam; the Assam Sawmills and the Assam Railways & Trading Co., together produced annually 720,000 teachests besides other plywood. They had timber at hand for the manufacture and a big customer in the tea industry. The third factory was in Malabar producing 3 million square feet per annum. The amazing growth of the plywood industry in wartime can be measured in the increase in India's factories from 3 to 27. There are many factories in Bengal and the U. P. and their total capacity put at 97 million square feet still exceeds production put at 60 million square feet put in 1944. Plywood is wanted for many things besides teachests at present but not all factories have the advantages of the older Assam enterprises as timber supplies for some factories are hard to get. Since India's estimated consumption of plywood came to 120 million feet, there is admittedly place for the great increase in output. India requires about 6 million teachests every year, the South India share of this demand is equal to 17½ percent of the total. Plywood factories largeiy use casein in place of glue. Estimated intake is 1.120 tons but it may be displaced by substitutes. Quality of Indian plywood has not been uniform and the lack of trained workers has been a major disadvantage in a promising industry for whose benefit essential machinery has been procured from the U.S.A. The Government's only takings of plywood at controlled prices have left enough for the tea trade. Some of the new factories have substantial productive capacity and it is believed that after the world prospects for Indian plywood are very good as tea exports on a larger scale may be expected. The smaller concerns labouring under the disadvantages described may not be able to stand up to competition of imports but much of the expansion promises to be permanent.

Canada's Non-ferrous Metals

Copper and other metals are getting more important than ever as new sources of production have been developed. In the Dominions, particularly Canada, non-ferrous metals have become a big branch of the mineral industry as capital investment has grown like the numbers employed within four years. The output doubled as Canada's nickel, lead, zinc and aluminium were wanted for the Empire's war industries. The value of ores treated rose from 155 million dollars in 1939 to 318 millions in 1943 while the only branch of the mineral industry to report a fall in output was gold mining. Prices rose only slightly while the output rose greatly. Before the war Canada led in respect of nickel and accounted for 11 per cent of the aluminium produced in the world. Owing to the increase in smelting and refining facilities locally, she produced more copper as well as aluminium. According to contracts made in 1939 Canada provided Britain copper, lead and zinc at fixed prices and the rise in costs has not led to the usual revision of prices. Nine companies running 16 plants had over 26,750 persons in employment whose total wages came to over 41.33 million dollars in 1943. Since March 1943 the output of non-ferrous metals has fallen but the Dominion is still a leading exporter of refined copper.

Most remarkable effect of the development has been the vast increase in Canada's own production and exports of electrical apparatus and supplies. During the last war Canada shipped ores; during the present ore metal products alone have been exported. It is presumed that Canada has made as much progress as the U.S.A. in addition to smelting and refining facilities and the small drop in production during 1944 was a result of the reduction in Allied demand for zinc and lead. Compared with 1929 both output and the prices obtained for 1939 naturally show improvement and one result of the war was the rapid clearance of stocks held in Canada before the war broke out. Canada's metallurgical progress outside iron and steel has been very considerable and what are classed as white metal allovs have become as important as aluminium, the production of which rose to a marked extent in 1942. The proclaimed deficiency of minerals has limited development in India and except for brass sheets from Indian copper non-ferrous metal production cannot possibly compete with

LOW LIFE ASSURANCE RATES

have been made possible partly by the economical management of the Society, the expense ratio being lower than that of the majority of the larger life assurance companies in India.

Taking the first fifteen Indian insurance companies in order of their total business in force, the Society's premium rates for life and endowment policies are among those of the four companies who charge the lowest rates.

Rebates allowed by the Society on the premium rates include: 2½% for annual payment; 5% to 10% for residence in healthy climates; 10% to employees of Municipalities, Schools and other departments insuring through their employers; and As. 8/- and Re. 1/- per thousand for single policies of Rs. 10,000/- and over and Rs. 20,000/- and over respectively.

The Society's life and endowment policies offer the best value to those who look for a large company with economical rate schedules. A copy of the 1944 Prospectus and Tables of Rates will be gladly supplied on request.

imports which during the war have been obtained through special agency for war purposes. But too much reliance on scrap is a feature. Except for the growth of aluminium manufacture in India however using imported bauxite as well as native bauxite there is no wartime development of real importance.

Post-war Employment

To stabilise employment and national income two private proposals were placed before the U.S.A. The President's own plan for 60 million jobs was anticipated by two politically-minded businessmen who suggested that tax revenues should equal expenditure only when there was full employment and advocated heavy spending on public works to maintain employment in specific trades on an even keel and urged in this connection that the Federal Government alone or aided by others should deal with employment and beat the trade cycle. Messrs. Ruml and Sonne put full employment ahead of all post-war objectives and in this respect copied British proposals. But they made no mention at all of social insurance contributions and payments, adjustable to good times and bad. Senator Murray's plan for full employment published in December dealt with precise planning of Government expenditure every year so as to prevent unemployment of veterans and looked beyond the conversion problems to the business of keeping problems to the national income at the high level of 1944. In the President's detailed message on January 8 the right to work was defined and accepted; so also the Federal Government's responsibility for full employment, noting clearly that productive jobs alone were contemplated. While private enterprise has to finance expansion, the Government according to President Roosevelt would recognise its responsibility for sharing part of any special or abnormal risk of loss attaching to such financing. Related to the promise of 60 million jobs for citizens in peace was a promise to make use of undeveloped resources and the creation of new projects similar to the T. V. A.

Coal Shortage in Belgium

The miners' strike leading to a serious shortage of coal in Belgium was political in origin following the resignation of the three Communists in the Pierlot Cabinet. Cuts in electricity and gas consumption have been ordered in Brussels on account of the shortage of coal. During the German occupation, coal output was deliberately curtailed as part of the silent resistance. M. Pierlot noticed the industry's position in a broadcast after liberation that took note of the grave changes. Belgian coal production in peace time amounted to 22 million tons yearly excluding the coal consumed on the spot. Since liberation coal output fell to 10,000 tons per diem and rose only to 25,000 tons equal to a monthly output of 625,000 tons only. The Belgian Premier said that it was only 28 percent of normal requirements. The collieries' difficulties arising from shortage of workers were mentioned. New miners were sought to deal with the shortage and the benefits promised to them included changes in workmen's compensation. Shortage of food for miners was one of the reasons for the difficulties reported in November. The Premier asked miners to help the Allies in the battle particularly as pit-props were procured by special measures. It was however noted that transport was short and Belgium could not use even the 600,000 tons then raised per month, a tonnage just enough to meet urgent domestic requirements. Though mines were in good condition and war damage was only superficial, the mining industry failed to respond to the appeal issued for more coal even in October. A strike in the Charleroi area leading to the loss of 10,000 tons per diem has been reported. Improved transport arrangements were made and it is possible that some coal can be had from Holland where the State Collieries are possibly open at present. The main difficulty first appears to have been transport and it was decided to shift coal from the Hainaut Collieries by means of barges but a severe winter has evidently prevented full use of water transport.

Death Duties

As the second reading in the Lords is over, it is to be assumed that the constitutional amendment authorising the levy of death duties is going to take place before the budget session of the Central Assembly. Lord Listowel's speech in favour of the proposal to add death duties to the existing taxes in India dwelt on the need to give the Provinces more fund for post-war development schemes but left out the question of reciprocity with the States. Possibly, the bigger States will copy British India and introduce taxes on inheritance. Whether the Provinces can levy a separate tax on land in the event of succession cannot be inferred from the authorised addition to the legislative list. The theory of State ownership stands in the way, at any rate, in the ryotwari province while in the case of Permanently Settled estates, the nazarana can be still treated as the equivalent of the estate duty. Lord Listowel's speech supports the general belief that a new revenue measure in addition to the Finance Bill will be considered by the Central Legislature next month.

Whether the Centre will retain a share of the revenue from death duties will be ascertainable only next month but the two exemptions advocated by Lord Strobolgi will probably be approved, though his own suggestion that a tax on capital must be devoted to special purposes only will not be accepted by the Provinces which will point to the Central administration. Though the income-tax department will probably collect the new duties the Courts will probably have an important part in defining the liability of those assessed to tax. The new tax will be an obligation like debts payable by the heirs. In the U. S. A. inheritance taxes vary from State to State. Exemptions for small legacies are common while the degree of relationship usually determines the rate of tax paid. Profits devised for charitable or other purposes is invariably exempt from taxation. In case of transfers made before death a tax almost equal to the estate duty is payable. Most of the States adopted inheritance taxes after the Federal Tax was imposed by the Act of 1926. The Federal Tax was increased in 1942 and legacy duty is at present graduated like the federal income-tax and surtax. Nevada enjoys the distinction of having repealed the tax on inheritance in 1925. Adjustment in respect of the federal tax payable on succession to property is provided for in the State laws and the federal tax allows deduction for State inheritance tax, usually calculated as a percentage of the value of estates of deceased persons. It is not likely that provincial autonomy will be permitted in regard to death duties since the main purpose of the constitutional amendment appears to be the distribution after collection by the Central Government. The most important consideration will of course be the presumptive yield. This will be determined wholly by the rates and rules of taxation. The second part of the Bombay Plan in para 31 refers to the advisability of taxing inherited estates more severely at the second and later transfers then at the first, carrying the familiar discrimination in favour of earned income and property a step further.

Rubber Supplies

The Washington Conference on rubber assigns natural rubber the importance it claims. While synthetic production on the presumed capacity of 11.3 million tons will enjoy a secure position in the future it has been agreed that rubber should recover its position in the economy of S.E.Asia. A gradual reduction of synthetic production is certainly contemplated as the present estimated consumption is only 1½ million tons and the survival of synthetic is dependent upon a steady increase in world consumption of rubber. Evidently the U.S.A. has accepted British and Dutch representations on behalf of natural rubber. Present estimates, however, may leave little scope for development in Ceylon. Burma or India though India's consumption in excess of rubber produced will appear a very considerable advantage for the planting industry. The study group's conclusions as to the shares of natural and synthetic in the future may carry with them obligations as to regulation of exports and prices, and a corresponding promise to limit acreage under rubber in reconquered territories, if necessary. The administration of a world cartel is apparently looked for in the case of rubber, and guarantees exchanged in this case may be adopted to tin, wheat, sugar or any other commodity which enters into world trade. Though market reactions to the discussions held at Washington cannot be indicated precisely. the agreement proposed on broad lines is certainly favourable to investors holding rubber shares for the challenge of synthetic is disposed of by preliminary agreement as to Colonial producers' requirements. While rubber shares have so far followed the general downward trend in markets, it may be expected that recovery would be prompt in view of the fact that the production bonus has been increased recently and food for labour on estates may not be a difficulty as in the past.

Stabilised Industry

Experience of the newspaper industry in India during 1944 suggests that under control of newsprint supplies full development has not been possible. Relaxation of the page-price schedule has been demanded on behalf of the industry which has accepted the quota scheme as inevitable. Increase in newsprint supplies has taken place but the original freedom to choose sources and suppliers can only return after the war ends. The stabilisation of revenue in a period of rising costs of labour and high taxation has not escaped notice. The industry is duly critical of the checks on circulation and advertisement tariffs. Its own view is in favour of maintaining present prices for newspapers—only 100 percent above the prewar price. Since the profit-earning position cannot be judged by dividends as in Britain only the improvement in news service etc. can be said to reflect rising revenues. Very considerable additions to news and features mark the average newspaper. The improvement proceeds partly from the improvement in the newsprint stock position and partly from the persistence of competition in urban areas. Though trade direc-

WHO'S GOING TO PAY?

'Fire! Fire!" . . . people shouted from the windows. The next minute tongues of flame shot out and the whole building was on fire. Just a lighted match carelessly dropped on the floor started the disastrous fire that reduced the edifice to cinders. The investment of a lakh of rupees going up in flames! Who's going to pay? The owner was wise. He had a STERLING FIRE POLICY. STERLING payment will help to build a new building. It pays to insure with the STERLING.

Besides FIRE, the STERLING transacts LIFE, ACCIDENT, MARINE, WORKMEN'S COMPENSATION, and other insurance business.

tories exist little is known as to the new capital that has found its way into the industry during the war. It must, however, be considerable, and the higher earnings may merely reflect the addition to capital in the case of the newspaper business. The lack of uniformity in regard to resources as between the units will, however, suggest that newspapers are far from real rationalisation at present. The situation may not evoke criticism, but it may well be asked why a free press resting on the investment of the public cannot be created in place of the fragmentation that characterises the press too in India. Obviously, a strong publishing side will have to be added to support a regular or considerable reform on capital. This may not entail drastic re-arrangement and the development may even help the growth of extra-local circulation in the future. The most secure foundation will however be independent newsprint manufacture in India, and the industry's lack of interest in the possibility of development will probably be attributed to wartime difficulties. It must be credited with a desire to proceed beyond the experiments with Himalayan softwoods carried out for the manufacture of woodpulp. The present co-operation on a unified basis may lead to positive proposals for expansion of the Indian paper industry. Postwar opportunities may create the demand for such expansion and independence of imports may be then regarded as an element in the independence of the Indian press.

Free Insurance

To relieve the pressure on the Railways, further measures to encourage sea transport have been introduced. An announcement last week dealt with war risks insurance for goods carried by sea. The effect of compulsory insurance hitherto has been to raise the cost of transport by sea with the result that goods were sent by rail. In order to equalise freight charges by land and sea, a scheme for use after February 1, has been prepared. Railway charges from port to port for certain goods will be raised so as to make them equal to coastal shipping freights. Free marine war risks insurance will be provided by the Government by arrangement with the underwriters on condition that ordinary insurance is effected by the consignors. The new scheme applies to the following commodities, which must be normally sent by sea from February 1. The chief commodities are salt from Karachi or Kathiawar to Calcutta and coal from Calcutta to all ports. The freight on coal will remain unchanged. Raw cotton, cotton yarn, piecegoods, tea, jute and jute manufactures, paper, coir and copra, leather and half-tanned hides are all meant to be transported by steamer or countrycraft and the cargoes are insured against war risks gratis. The consignor must declare the actual value at controlled prices plus freight and 10 percent profit in addition to ordinary marine premium. Claims arising in such cases are to be paid by the underwriters after deductions where permissible. As the new scheme is meant to limit underwriter liability besides encouraging the use of sea transport, it is very likely that it will be welcomed. The great changes in the war situation suggest that the Government will have to pay out little, and any money needed for meeting claims will be secured from the increase in rail charges. The latter along with the provision for marine insurance will, probably, occasion discontent but the present plan to encourage the use of coastal shipping will be appreciated. As war risks insurance was the chief difficulty regarding countrycraft, the latter too will enjoy more custom in consequence of the Government's new insurance scheme. The new arrangement may lead also to an increase in the tonnage of miscellaneous goods carried by rail for war purposes although coal for the railways' own use might as before be carried by rail. The complete control of both rail and coastal shipping freights makes for success and recent complaints heard as to higher freight on cotton imported for Bengal's mills will probably disappear in view of the extension of sea transport for both cotton and cotton manu- ctures.

REPORT OF THE AUDITORS

TO THE SHAREHOLDERS OF THE IMPERIAL BANK OF INDIA.

We, the undersigned Auditors of the Imperial Bank of India, elected under Section 58(1) of Schedule II of the Imperial Bank of India Act 1920, do hereby report to the Shareholders upon the Balance Sheet and Accounts of the Bank as at 31st December 1944.

We have examined the above Balance Sheet with the Accounts and Vouchers relating thereto of the Central Office and of the Local Head Offices and with the Returns submitted and certified by the Branch Agents, which Returns are incorporated in the above Balance Sheet, and report that where we have called for explanations and information from the Central Board such information and explanations have been given and have been satisfactory. In our opinion, the Balance Sheet is a full and fair Balance Sheet containing the particulars prescribed by the Imperial Bank of India Act 1920, and the Bye-Laws of the Bank, and is properly drawn up so as to exhibit a true and correct view of the information and the explanations given to us, and as shown by the Books of the Bank.

The audit of the Local Head Offices at Calcutta, Bombay and Madras, has been carried out by Messrs. D. Mitchell, B. S. Billimoria and C. Gill respectively.

D. MITCHELL,
B. S. BILLIMORIA,
C. GILL,
Auditors.

26th January 1945.

Trade with the Empire

India's trade with the Empire has certainly increased in 1944-45 owing to the rise recorded under both imports and exports in the first half of the year. Imports from the U.K. increased to a greater extent than India's imports from the Dominions or Colonies and nearly half the total imports came from the U.K. The increase in wheat imports has raised the total imports from Australia while cotton accounts for the rise in imports from Kenya and the Sudan. While exports to New Zealand have been higher than in 1943 the imports have been negligible. Imports from Canada did not increase since imports of vehicles did not increase. The increase in exports was not limited to Ceylon. It is however noteworthy that Ceylon takes the place of Burma as India's second largest market. In the September trade returns the total for imports from Burma in six months is shown as Rs. 10.54 lakhs. This must be due to diverted cargoes or re-exports from Burma as similar entries appear against Hongkong and British Borneo also. The Colonial markets which increased their purchases from India were Rhodesia and Nigeria. On the other hand foreign colonies e.g. the Belgian Congo and Portugese East Africa reduced their takings of Indian manufactures. Inda's balance of trade in relation to South Africa appears better than ever. This will suggest to some that economic sanctions must be avoided particularly in view of the possibility of obtaining gold after the war in return for sterling. The value of imports from Bahrein and Ceylon fell in spite of the increase under imports of oils, vegetable and mineral noted last year. In spite of the trade restrictions in force Indian exports to Kenya and Tanganiyika underwent expansion as compared with 1943-44. While India's exports to the Empire including the U.K. rose by Rs. 9 crores, the imports increased by Rs. 12 crores. The difference must be attributed to the increase in raw cotton imports last year rather than to any decisive increase in imports of manufactures. The increase in imports would perhaps continue as the relaxation of import control to reduce economic strain in India has been promised. As the Empire took about two-thirds of India's exports in the halfyear ended September, it is apparent that the loss of foreign markets has been made good by the British Empire. The increased share of foreign countries in India's import trade despite the tariff surcharge indicates that tariff preference does not stand in the way of trade developing. Foreign countries excepting the U.S.A. however sold more than they bought of India and this is perhaps to be expected as India's trade with Europe has disappeared owing to the war.

Civil Aviation

An increase in mileage flown on existing air lines is widely expected in India. Better aircraft with greater carrying capacity are in use and air lines' prospects are now determined by the reservation of internal traffic which was not objected to at the Chicago Conference. Air routes today cover about 7,000 miles and many pilots

have more than 10 years' continuous flying experience. Though civil aviation is subordinate to war effort, the increase in mileage from 1½ million before the war to over 2½ million this year deserves special notice. Airline pilots have a great record and demobilised officers of the air force are reminded that civil aviation will be developed rapidly and aero clubs will receive greater encouragement. The Government's are set up as contemplated, more pilots will provide jobs for over 100 pilots while private employment will probably increase at a great pace. If the overseas services are set up as contemplated, more pilots will be required and the estimate of 300 pilots for India's air lines may be related to the plans prepared in April last by the Air and Posts Department. The last review of what was got out of the recent conferences must be related to the air plans that India can adopt. Since bilateral talks are going to fix the limit for both reciprocal facilities and postwar expansion the internal development promised appears to be substantial. In a sense, civil aviation in India will be a protected industry though the aircraft must be imported like railway locomotives from North America or Britain.

Bengal Coal Meeting

The Chairman of the Bengal Coal Company Ld., in a review of the year's happenings in the coal industry dealt with the improvement in the labour situation, railway transport facilities and the cooperation developed under official control. These are highly satisfactory for the investor who is not disinterested in a complete evaluation of the Indian coal industry's future. The main argument against nationalisation has been indicated in the description of the confusing diversity of conditions in the mining industry. The very important differences between fields and companies were seldom apparent to followers of the boom. They now have reason to relate the cautionary observations in regard to labour, machinery, and stores for the mines. The revision of prices payable for coal should be regarded as a routine measure, not as a further concession to coal mining companies. If prospects are not so brilliant as believed formerly for the whole industry, for the oldest and greatest company the Bengal Coal Co. Ltd.—they appear to be extremely bright. The Chief Mining Engineer's successful mission in search of machinery and the hope of installation before the monsoon are highly relevant for an advance appraisal of Bengal Coal's results for the current halfyear. The very important extension to labour welfare follows the establishment of the Centenary hospital at Sanctoria, supplementary provision for education of miner's children like the provision of pithead baths for miners show how far the largest and best employer is ahead of the average employer in any Indian industry. Mr. Mealing's speech contains no figures to indicate the nature and scope of recovery but shareholders have reason to look only at the substantial increase in the bonus to measure the success of the Bengal Coal Company in dealing with its own problems last year. The provision for labour welfare made out of profits provides a pattern to work up to. Mr. Mealing drew attention to the miner's lot and the necessity for education. The generous provision for amenities should indicate what more is required of the employer.

WAR TIME *Saving Plan* FOR YOU

The first fourth of a man's income buys existence; the second quarter a few comforts; the third quarter lets him spread a bit; the fourth quarter should be used to guarantee the first quarter and as much as possible of the second and third.

"PENNY PLAIN....

. . . . twopence coloured!" was the cry of the London street seller of children's toys two centuries ago. Today may at first seem a paintless period, but paint itself can be penny-plain as well as twopence coloured. It can preserve and conceal as well as decorate. It can do more, it is indeed an essential munition of war, and more paint is being used now than ever before—for quite different purposes. Enormous quantities, for example, are necessary to protect tanks, guns, shells, petrol cans and other ordnance supplies from tropical sun or northern fog and snow; for the camouflage of buildings, camps, ships or vehicles. Millions of yards of fabric have to be treated for special purposes. Acres of metal have to be coated to withstand the juices or acids of preserved foods. The Royal Navy and the Merchant Navy alone demand vast supplies of paint, including special types designed to combat the growths which form on ships' bottoms. These growths may increase the fuel consumption of a 10,000 ton ship by as much as 14 tons a day, besides greatly reducing her speed — two very serious matters. Besides these ordinary uses of paint, there are all sorts of special uses — for the detection of dangerous fumes or poison-gas, for protection against incendiary bombs, luminous paints to guide pedestrians or traffic in the blackout and the "dopes" without which aircraft would be almost helpless. Into a tin of paint goes the product of the British chemical industry and the collective skill and experience of the research chemist, the colour expert and the paint technologist. Today all these are working at full stretch to see that paint plays its full part in a colourless war. It is to their credit that adequate supplies of paint are available for all the nation's war needs. It explains why "for the duration" you and I must do with faded distemper in our rooms and cracked paint on our window frames.

Clive Street Gossip

The Banking Bill, which I was for some time planning to discuss in these columns, is the subject of a leading article in this issue; and, though there are some issues connected with it which are more effectively considered in this section, I must turn, at least this week, to other themes. At the moment, no one thinks of anything except the speedy end of the war in Europe and the all too sudden impact of the approach of peace. As I pointed out a fortnight ago, the public mind reacts quickly and violently to changes in the course of the war. While a month ago, it was thought that Germany had regained control of the situation and the return of the Nazis to Paris was a matter of time, the Russian offensive swung men's minds violently to the other extreme. Though according to a report in the "Statesman," the British public is annoyed with Ilya Ehrenberg for his suggestion that allied commentators set little store by Russia, the truth is that, when von Rundstedt launched his counter offensive, there was little or no talk of the possibility that the loss of ground in the West might be compensated many times over in the Western theatre. I myself said a fortnight ago that there was no reason to think that the Russian halt before Warsaw was politically motivated and that a more appropriate reason for it could be found in the preparation for the offensive, the spectacular successes of which the whole world is now justly elated over. That has been borne out by what Ilya Ehrenberg and Paul Winterton have said. It is incorrect and unfair to suggest that the doings on the Western theatre have little importance merely because the extent of ground gained is not much. The fighting in the West has a large place in the advance of the Russian generals; and the sharp changes of sentiment only emphasise the importance of looking at the war as a whole rather than in terms exclusively of one theatre or another.

* * * *

Whatever that may be, the fact remains that, before the first month of the new year was over, Rundstedt was in retreat again, and the Russian armies had advanced to the Oder, which is the last great waterline before the capital of the Reich. The gaps between the advancing Russian armies are growing narrower. At one point, Zukhov's forces are said to be only 41 miles from Berlin. A few days ago the distance was as much as between Kharagpur and Calcutta; and now it has shrunk to the distance between Kalyan and Bombay. The Russian armies which have "Dayes Berlin" as their slogan may be feeling now just as passengers to Bombay from Calcutta feel when Kalyan is reached. The next stop is Berlin. But, then, time and distance are different. The same rate of progress cannot be counted on. As passengers have often found to their annoyance, there are long stops just a few miles away from the destination. Will the Russian armies have to suffer a similar halt when they are so near their destination? Paul Winterton in his despatches published in the "Statesman" recalls the fact that the last summer offensive of the Russians, which covered even more ground than the present winter offensive, ended with the establishment of a bridgehead on the Vistula and suggests the possibility that the present winter offensive may conclude with the establishment of a bridgehead on the Oder. At the moment of writing, it is still in doubt whether the Russian armies will be able to take the Oder in their stride or whether they will have to stop at this waterline and strain at it for some time to come. But there is no doubt that the position is much better than a few days ago. Moscow has always set its face against extravagant claims or optimistic forecasts; and there has been little or no reference to the crossing of the Oder at any point. But the Germans, who have nothing to lose, and have even something to gain, by erring on the side of exaggeration of the danger to the Reich speak as though the Russians have already gained a firm bridgehead. Though news reports contain some vague hints of a slow down of the Russian offensive, there still seems to be enough "go" in the Russian advance to give the Red Army more than a firm bridgehead. And there can be little doubt that once the Oder is crossed, the fall of Berlin is a matter of weeks.

* * * *

The Germans seem to have as little hope of stopping the Russians at the Oder as of holding them thereafter. The reports of German evacuation of the areas now overrun by the Russians and of Berlin are so strongly reminiscent of similar reports at the time of the Battle of France that one cannot help emphasising that this war of quick movements is also a war of quick retribution. Germany's Herrenvolk will now have the chance to reflect that it is easier to construct and, even believe in, theories of racial superiority than to force events to conform to them. In all my reasonings about the course of this war, I have stuck closely to a few crucial points and I have never wavered in my belief in those points. This world was not made for any one country or race to dominate over that, while conquests can be secured by the efficiency of the General Staff, Empires are a historical growth, for which the abiding qualities of the dominating race have to provide the necessary nourishment; and that the race or leader who makes one astounding bid for world domination overlooks this biological element and must inevitably lose the bid. History affords more than one illustration of these truths; and no blitz or secret weapon can ultimately negate them. The race is not to the swift; and world domination is not for the most military nation. The German craze for domination is the result of a narrow view of life. It comes of an exaggerated sense of value for the qualities in which the Germans excel all other peoples of the world. Their outlook is not rendered wider nor their understanding made deeper by Hitler hobnobbing with Haushofer or by the German Command making use of the findings of Geo-politics. Sociology is something far more than the sum of the sciences which form its parts. The failure of Hitler and the German war machine is a necessary lesson for the human race as a whole and the chauvinists in all countries.

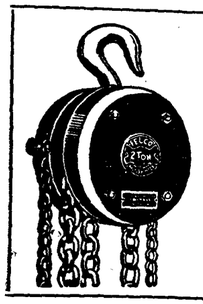
The next few days will show whether the war in Europe is a matter of weeks or months. They will also show whether the winning side will leave the lessons of the war as a monopoly of the vanquished or whether they will also try to imbibe them. The meeting of the Big Three is probably proceeding now; and press reports encourage the public to look forward to sensational statements. What the moves and motives of each of the Big Three are, it is useless to divine. The bolder features of the present war situation contain clear suggestions in this regard. This time the Big Three will have no long interval between their deliberations and the execution of their decisions. Nor, as in the case of the last meeting, is any part of their discussions of a highly speculative nature. On questions like the future of Poland which at the time of the last conference were somewhat distant, there has been, to some extent, a kind of fait accompli. Solutions are being improvised under the pressure of events. The fact that at the present rate the Russian Army may come to occupy far more of German territory than was allotted to Russia as her area of occupation in the Dumbarton Oaks agreement has also to be borne in mind. Other developments are the recovery of France to the point of forming an army that can advance at Colmar and even of an understanding between Marshal Stalin and General de Gaulle. It is significant that the inclusion of de Gaulle in the meetings of the Big Three is discussed in some press reports. It has been said that, while Marshal Stalin is in favour of it and Mr. Churchill indifferent, Mr. Roosevelt is believed to be opposed to it. Whether this is because of the apprehension that de Gaulle might throw his weight on the side of power politics in Europe or not is not clear. But it is certain that Mr. Roosevelt comes to Europe with a determination to do his best to prevent a relapse into such power politics. The American press has goaded him to a firm stand at his meeting with M. Stalin and Mr. Churchill. It was said some time ago that Mr. Churchill sought a preliminary meeting with Mr. Roosevelt before their meeting with M. Stalin and that Mr. Roosevelt was not agreeable to the proposal. This is perhaps indicative of the spirit of missionary zeal with which Mr. Roosevelt proceeds to Europe. But, as I said earlier, the pressure of events is providing in part the solution for most of the problems. It is a common failing among Indians to mention India at the end of any discussion of post-war settlement. I wouldn't like to betray that failing myself. But India has been mentioned in some news reports as likely to figure in the discussions of the Big Three. Personally, I attach no value to this report. But India is a relevant issue and has some importance, whether the Big Three recognise it or not. But the report of another meeting between the Viceroy and Mr. Bhulabhai Desai is better food for famished hope.



* * * *

The Bombay Plan has led to a spate of books on Planning with which I confess I am unable to cope. Like inflation a year ago, planning would seem to have extended lavish invitation to authorship. But unlike inflation, planning is a theme of unlimited scope; and those who fail to mark off definite spheres for themselves and wander about can hardly complain if they fail to interest the reader. Mr. S. R. S. Raghavan has been careful to avoid this error in his "Planned Economic Development for India." It is an unpretentious and therefore, distinctive study into some of the concrete problems to which our economic development can be reduced. Financial journalism and close touch with the material handled by the Information Department have enabled Mr. Raghavan to be precise and concrete, where many others might indulge in nebulous theory and generalisation. It is a little volume of 89 pages which will help the average student of planning to keep in touch with concrete facts and escape being lost in vague generalisation.

* * * *

I have always felt that black, coated workers tend to become the Cinderella of our modern economic organisation. While the capitalists and their superior staff are well able to look after themselves and the working classes have found in collective bargaining more than sufficient compensation for individual weakness, the black-coated workers have no means of ensuring good treatment. I am therefore inclined to hail with special delight the action of Mr. B. T. Thakur in letting the entire staff of the United Commercial Bank, down to the lowliest menial, participate in the bonus. What is more, Mr. Thakur has handed the bonus in the form of a cheque accompanied by a personal letter breathing a high spirit of fellowship between the boss and every member of the staff. The letter is not, however, empty sentimentality. While it records appreciation of the work done, it also emphasises the qualities which are needed to preserve this spirit of fellowship and take the institution to new heights. Mr. Thakur's spirit of comradeship, not unmixed, as it is, with appropriate firmness where necessary, should go a long way to make a splendid team of the men he has picked from all sources during a short period. I know that there are many who have a

(FROM OUR CORRESPONDENT)

New Delhi, January 29.

The All-India Food Conference opened here today attended by 80 representatives of the Central, Provincial and State Governments. The last Food Conference was held in October 1943, when Bengal was still in the midst of the most disastrous famine in her history. Members of the Famine Enquiry Commission also attended the first day's session as observers. The Food Member as usual made rather tall claims. "Considerable progress", he said "has been made in our procurement of supplies, in the distribution of those supplies to deficit areas, in the control of prices and in the extension of rationing". But he himself provided the corrective by admitting that "We have a long way to go before we can be satisfied either that the food available to the people in all parts of India conforms in quantity and quality to what we should wish, or that we can afford to relax for one instant our vigilence and our efforts to assure and improve supplies. In our work during the past 18 months we have encountered not only new difficulties with old problems but new problems altogether". Indeed so much ground still remains to covered that even the slightest dose of complacency may prove harmful. The Food Member himself admitted the necessity of improving and extending the existing controls. "Experience in other countries pointed and with other kinds of commodities", he pointed out "indicates that government controls which start with limited objectives are bound to widen their scope more and more so long as normal conditions are not restored. and in this Conference we shall be considering how to improve and widen our procurement of the principal foodgrains and how to turn the necessity for control to advantage by improving the constitution of diets in different parts of the country, and by making special provision to secure an adequate supply of the protective foods, especially to those sections of the community which stand most in need of them". As a matter of fact the problem of providing protective food for a devitalised population is as urgent as the provision of adequate foodgrains. The terrible toll taken by disease in the aftermath of famine has emphasised the necessity for this—though both the government and the press have so far neglected this problem. The Food Member pointed to the difficulties his department had encountered in "getting the surpluses of some of the important subsidiary foods, such as gram and pulses, and also the edible oils, moving into the deficit areas and into consumption there".

* * * *

Sir J. P. Srivastava rightly pointed out the need for better storage methods and the need for proper inspection at the time of purchase. "The provision of adequate storage and the inspection and regular turn-over of grain in that storage", he said, "is necessary to minimise loss and to conserve our resources, while finally the inspection and cleaning of grain before issue to the public when it goes to the retailer, is a duty which we owe to the consumer who has to take the grain which we offer him". While the Central Government had already established a Storage Directorate, he announced his intention to set up a parallel Inspection Directorate. "So far as the Province and States are concerned", he said "the function of these Directorates will. in the main, be advisory but they will also. I hope, prove of practical service in ascertaining your needs and helping us to give you the assistance which you require in the preparation of designs, in securing adequate priorities for the materials which you need for construction. and in providing any technical advice which you may need in the adoption of measures to prevent damage by climate or by insect or deal pests".

Several of the Provincial representatives spoke against a scheme of complete procurement at present. Madras wanted monopoly purchase to be restricted to deficit areas while Bihar considered it to be unsuitable for areas under permanent settlement.

* * *

The Central Government has formulated its tentative plans to help the provinces in their post-war plans. It is estimated that taxation on a wartime basis with the war expenditure all cut out should leave the centre with an annual surplus of Rs. 100 crores. The present plan is that one-half or two-thirds of the revenue surplus during the first five years (roughly Rs. 500 crores) should be allotted to the various provinces on a per capita basis. If it is finally decided to distribute two-thirds of the surplus that is Rs. 335 crores according to present estimates, it will work out at about Rs. 11 per head. If only half the surplus is given to the provinces the share per head will be reduced to Rs. 8. The Central Government have already informed the provinces about their plans. Of course the Centre might expect in return to have its say in the development plans of the Provinces to cut out overlapping and co-ordinate them with the all India projects. The Centre also expects that the provinces will not entirely depend on the Central subsidies but also supplement them by raising loans.

* * * *

The Power Development Policy Committee is expected to meet here next week. As the development of electricity supply must play a vital part in any industrialisation plans, the committee's decisions will be awaited with interest. It is realised here that as coal resources in India are limited to a few provinces, electric power development is necessary even from the defence point of view. India has tremendous potentialities for power development. In Russia intensive power development preceded even the first five-year plan. One of the questions that the Committee has to consider is the policy to be adopted regarding existing public utility concerns and the feasibility of this being taken over by the state on the expiry of their leases. This question is of great interest to Delhi where the lease of the Delhi Electric Supply Company is due to expire soon.

* * * *

Mr. A. M. Dave's resolution demanding the removal of restrictions on the movement of duty-paid tobacco by amending the Central Excise Rules has received the first place in the ballot for resolutions to be debated in the Assembly on February 9. The next two places were received by Mr. Dave's resolution suggesting the separation of Education and Health Departments and Prof. N. G. Ranga's resolution recommending the appointment of a committee to study the business side of nationalising banking and insurance industries.

* * * *

A number of other interesting resolutions have been tabled, but few are likely to be debated. Mr. Manu Subeder in the resolution has demanded that appointment of a retrenchment commission to examine the increase in the cost of industrialisation of each of the Central Government's Departments and to suggest ways and means of reducing expenditure. Another resolution demands the appointment of a committee of the Central legislature to report on the working of the food rationing scheme in the country. The only political resolution tabled by Sardar Mangal Singh—demands the release of all Congressmen detained without trial.

Chevrolet Armoured Car

Chevrolet's formidable mobile weapen, a high-speed armoured car called the Staghound, used effectively in spearheading recent spectacular United Nations' advances in the European theatre of war, came into the limelight recently, with the story of its achievement, released by M. E. Coyle, Vice-President of General Moters Corporation, and General Manager of the Chevrolet Division, sole producer of the vehicle in the United States.

Weighing fourteen tons, it carries a five-man crew at speeds exceptionally high for an armoured combat unit. Because of its speed and fire power, it has been particularly successful on the fighting fronts as a menace to enemy supply lines and in eliminating machine gun nests and light weapon emplacements.

Protected by heavy frontal armour plate and armour on the sides and rear, the vehicle mounts in the turret a cannon in combination with the machine gun. The latter weapon, firing tracer bullets, is used to find the exact range for the cannon, thus conserving cannon ammunition. In addition, another machine gun is mounted in the bow. Other weapons carried are a sub-machine gun and hand grenades. A smoke mortar for the laying of smoke screens is included in the equipment.

Unique among wheeled weapons in this war, the Chevrolet-built armoured car combines the features of a tank and reconnaissance car, and performs acceptably over a variety of terrains. Though low-slung, it can ford sizeable streams. The vehicle has an overall length of more than 17½ feet.

The armoured cars are powered by Chevrolet-built engines. They are four-wheel-drive vehicles, equipped with tyres nearly four feet high, which are said to be unusually shell and bullet resistant. Each car is radio-equipped, and all crew members can converse through an inter-communication phone system. Periscopes can be used to direct the driver and sight the guns when the vehicle is in action with all hatches and ports sealed. A complete fire extinguisher system is included. Among special equipment is an unusually powerful searchlight, with a flasher attachment for use as a signal light. Regular production of this vehicle by Chevrolet got under way in 1942 and has mounted steadily to a volume-output basis.

Gateway of India

(From Our Correspondent)

BOMBAY, 30th January.

The Textile Control Board at its meeting held last week had to grapple with a number of thorny problems which arose from the still flourishing black markets and the difficulties of increasing production. As is well-known, Sir Akbar Hydari's warning given in December was meant seriously and the poor measure of success which had attended the last distribution scheme left the control authorities no option but to evolve a new distribution plan by which the scope for black marketing would be utterly reduced and cloth could reach the remotest corners of the country under a system of quotas. The Industry Committee and the Distribution Committee of the Board had prolonged discussions with the representatives of government on these issues. At one stage ugly rumours were current in the city that the members of the Distribution Committee violently disagreed with the official proposals and were even for dissociating themselves from the Committee. That only showed how strongly the government spokesmen felt on the way the various controls had been defeated in their object. Fortunately, it was not long before better counsels appealed to both sides and after protracted discussions the scheme of distribution was agreed upon.

Under the scheme, each provincial or States government can depend upon getting its allotted quota from the Textile Commissioner at a given margin above the ex-mill price. The maximum margin to be allowed to dealers in the manufacturing centres on cloth intended for the deficit zones will not exceed 3% as against 4% now allowed. Instead of the one per cent now permitted to commission agents, the commission will not exceed half per cent. The net effect of these reductions will be to provide a slightly bigger margin for the distributing channels in the consuming centres. A reduction of five percent in the prices of cloth manufactured with war counts 50s and under and of 6¼ per cent in the ceiling prices of yarn ranging from 16s to 40s manufactured from Indian cotton will be made from 1st February. The prices of super-fine qualities of cloth and yarn have not been reduced partly because of the need to give an incentive to the mills to increase the output of these goods and partly because of the substantial increase in the price of Egyptian cotton.

In some ways, the speech of Mr. Krishnaraj M. D. Thackersey at the meeting of the Textile Control Board on Thursday last is very, very important. After referring to the cut in price noted above, Mr. Thackersey painted a frightening but none-the-less true picture of declining production. The frequent stoppages in the mills owing to shortage of coal is now well-known. The Government of India have not been able to supply coal even on the basis of the restricted quota of 155,000 tons per month fixed by them for the industry. The year ended September 30 showed a short fall of 209,869 tons. There was some improvement in October, but November deliveries of coal were short of the quota by 16,489 tons. The situation has considerably worsened since the last month, according to Mr. Krishnaraj himself. Whereas about 1,60,000 tons of reasonable quality coal are barely sufficient to keep all mills running in a normal month, at least 1,90,000 tons of reasonable quality coal per month are required to keep the mills going in the cold months from December to February. Last year, the mills were able to draw on their stocks during these critical months, but this year this has not been possible. The loss of production in December alone is put at 25 million yards. The position in January is sure to have been worse.

In spite of the best efforts of Sir Akbar Hydari, the coal supply has not improved. It is a social crime to deprive the mills of the means of producing more cloth when the country is so starved of cloth and when inflationary forces are still strong. There is little appreciation among the powers that be of the consequences of complacency in this matter and Mr. Krishnaraj has done well to warn them of the dangers. To take one aspect only, the enforced shutting down of mills compels many workers to remain idle; and with the cost of living being what it is the consequences of a fall in workers' wages cannot be contemplated with equanimity. One hopes that the authorities are not unaware of the need to put coal for the cotton mills on the highest priority basis by hook or by crook. The closure of the mills also means a needless fall in the amount of raw cotton consumed; and that, in view of the cotton surpluses, is a gratuitous addition to the problems with which raw cotton is already faced. It is a pity that there is not on the part of those concerned a keener awareness of the implications of enforcing the closure of mills. Or if there was, we have had so far no signs of it.

The Indian Central Cotton Committee at its half-yearly meeting held last Friday discussed, among other things, the proposals for a short-term cotton plan for the country. Earlier, on the 23rd January, the Planning Sub-Committee had considered the replies received from the Provinces and the States regarding the recommendations made by it at its November meeting for reduction of the staple cottons. Replies from all the provinces were received, except from the Punjab, but the Sub-Committee had however before it the views of the Director of Agriculture of that province. The Sub-Committee noted that, out of a total reduction of 31 lakhs acres proposed by it, the reduction accepted by the provinces and States who had chosen to reply amounted to about 18 lakhs acres. In the light of the information put before it by each province, the Sub-Committee arrived at certain conclusions, which may be briefly noticed here. Thus, with regard to the C.P. and Berar, discussions centred on the point whether the provincial government should be pressed to accept the recommendation of the Sub-Committee for a reduction of 2.5 lakhs acres under short staple Oomras. The provincial government had raised the question of surplus jowar, large stocks of which were held in the province, and had also expressed the view that the area of 6.81 lakhs acres under short staple was just sufficient to provide the minimum requirements for internal consumption and that the proposed cut to 4.4 lakhs acres would be inexpedient. The Sub-Committee could not accept this contention. The stocks of Oomras in C.P. and Berar and Hyderabad State were reported as 103,000 bales and 181,000 bales respectively on 31st August 1944; these figures indicated the scope for reduction. However, it was agreed that the reduction under short staple need only be one lakh acres so as to achieve the total acreage reduction target for the province, since the area under medium staples had already been curtailed by 4% lakhs acres in the current year from the 1942-43 acreage.

Similarly, there was a good deal of discussion on the Punjab proposal that, against the suggested reduction of 4 lakh acres under Punjab Deshi cotton and the British Punjab's share of 2.6 lakhs acres, the province should be asked to effect a cut of 93,000 acres only in 15 districts by persuasion. The proposal was supported by the argument that in the Punjab it is still more profitable to grow Deshi cotton than food and that, unless this

(From Our Correspondent)

Madras, January 30th.

Sir Ardeshir Dalal, Member for Post-War Planning, Government of India, who is touring the country was here on a three-day visit. The idea of the visit was to acquaint himself at first hand with the progress made by the province in formulating a five year post-war development plan. At a Press Conference at the Secretariat he denied categorically that there was any interference from Whitehall so far as the Government of India's planning was concerned. He said, 'I have had no suggestion or interference from Whitehall in regard to my planning and development. I have not communicated with London even in a single instance and I am free to plan.' For bringing the economic plans into operation, he considered a National Government necessary. By a National Government he meant a Government of all parties and with the full support of the people behind it. But he would not say when and how it would come though he thought it would come before the end of the war. The Member said that no negotiations had been started by the Central Government with the British Government on the question of sterling balances but there was nothing to show, he added, that the U.K. would not be able to supply capital goods required by India and at a rate cheaper than U.S.A. Sir Ardeshir said that the manufacture of boilers had been started and if this industry was properly established the manufacture of locomotives would be undertaken.

More than one thousand delegates and two thousand visitors attended the 21st Annual session of the All India Trade Union Congress held here. Mr. Qurban, who presided, said that the membership of the Congress had exceeded half a million and the All India Trade Union Congress could really claim to represent the voice of the entire working class of India. The President demanded the immediate release of Congress leaders and also the setting up of a National Government because 'it alone can save the people.' He referred to the wages of Indian workers and said it was the ill-paid mass of workers that had to face the growing burden of growing inflation and the enormous rise in cost of living. He considered it the duty of both the Government and the employers to see that workers were not penalised by the rising cost of living. Turning to the question of coal crisis and its consequent effect on workers he remarked that the vested interest in the mining industry was afraid of raising coal production for fear of a fall in the price of coal.

Several resolutions were passed, one of which placed on record its deep gratitude to the martyrs for Indian freedom and expressing its homage to their memory, another appealing to the Viceroy and the Governor of the C.P. to commute the death sentences passed on the accused in the Chimur and Ashti cases, while the main resolution, on the political situation in India, protested against the failure of the British Government to accede to the unanimous demand of Indians for the immediate transfer of power to the Indian people.

The tobacco merchants of South India met at a conference held in Trichy under the presidency of Mr. T. Krishnamachari M.L.A. (Central) to place their grievances before the authorities and get them redressed. It was pointed out at the conference that the Congress Ministry introduced the tax on tobacco with the ostensible purpose of making the province 'dry'. When the proceeds of the tax were not used for the purpose intended, there was no justification for the tax. What was more the way in which the measure was worked was so annoying that several merchants had to give up the business. The Central Government also levied a duty on tobacco in 1943 and the rate was increased in 1944. Besides the merchants had to take a license in addition to paying the tax. Lack of good transport added to the burden of the traders. The Act empowered Collectors to demand security from growers and curers which involved a lot of expenditure and worked hardship on traders. It was suggested that the question of surety or security should be given up and bond should be made executable on the personal surety of the licensee. The President suggested the formation of a advisory committee composed of men interested in the tobacco business, which should be the authentic body of the men engaged in the industry and which should meet frequently to ventilate their grievances.

The devastating floods of October 1943, when the streets and low lying areas of the city of Madras were flooded, served to warn the authorities of the dangers to which the city is exposed and steps have been taken to prevent flood damages.

The Commissioner of the Corporation has put up a scheme to organise emergency flood relief and to take necessary measures to relieve stagnation, clear obstruction, evacuate stranded people and feed them. The scheme also contemplates the division of the City into nine ranges, each range being in charge of an Assistant Engineer, who will have complete control over the measures. Cutting the bar at the Napier bridge, opening the Coum, the Adyar and Ennore locks whenever danger is apprehended is an important precaution. These measures have been found to be necessary by the sad experience derived from the last floods and the present scheme indicates the exercise of provisions calculated to bring relief the moment danger is anticipated.

The Corporation Council is planning for the milk supply of the city. A resolution was passed requesting the Government to sanction an annual grant of 20 lakhs for a scheme to provide every child under two years with 1 Ollock of milk per day and 1½ Ollocks of milk per day to children between the ages of two and five as well to expectant and nursing mothers.

BOMBAY MARKETS

BULLION

BMBAY (*By Cable*).

The Bullion market staged an inscrutable recovery to-day, forward silver and gold recovering from Rs. 117/8 and Rs. 63/4 on Tuesday to Rs. 121/4 and Rs. 67/13 to-day. Market is fluctuating widely. Thus, forward silver opened at Rs. 125/12 on Monday and declined to Rs. 122/12 the same evening despite support from the bull clique which was holding then 4,000 bars. The Russian advance on Berlin on Tuesday made hoarders panicky and stocks were disgorged resulting in a decline from Rs. 121/4 to Rs. 117/3 in a few hours. Bulls found themselves precariously placed and adopted Hobson's choice of buying fair amounts to support the market which recovered to Rs. 121 during the night. Thereafter, barring occasional selling, market recovered steadily. To-day, the Reserve Bank sold 300 bars at Rs. 120/4 contrasted with Rs. 125-12 on Monday. The undertone is uncertain since bulls have accumulated 6,000 bars

Likewise, gold prices gyrated wildly from Rs. 69/8 on Saturday to Rs. 63/4 on Tuesday but thereafter offtake of 60,000 tolas daily has brought about our improvement to Rs. 67/13. To-day, the Reserve Bank sold 10,000 tolas at Rs. 64 on Tuesday, 14,000 at 65/1 on Wednesday and 15,000 tolas at Rs. 66/9 today. The undertone is uncertain with stocks at two lakhs tolas. Offtake averages 40,000 tolas and arrivals 10,000 tolas daily.

THE BANK OF BARODA, Ltd.

Resume of Commodity Markets

The outstanding feature of the week is the sharp decline in prices for bullion, following the sensational advance of the Russian Armies on the Eastern Front and the flare-up in fighting in the west. The jute and jute manufactures markets have been quietly steady. The weakness of the bullion market has resulted in a decline in prices in the raw cotton market also and the quotation for Jharilla March is nearly 15 points lower in the past week. A fresh reduction in ceiling prices for cloth has been announced and came into effect from February 1, 1945.

The raw jute market has been quietly steady, business being still restricted. But there is no suggestion of a decline in values even with the poor interest shown by mills. It is rather surprising that mofussil markets have been able to keep up prices even without any support from Calcutta operators. Hopes regarding the possibility of a large increase in exports and the small size of the crop for next season have been mainly responsible for the strength of markets. It seems also rather surprising that even with the spectacular success of the Allied troops in Burma, the feeling has not yet gained ground that rice imports will be available and there will be a possibility of a reduction in prices for the staple commodity to encourage the growth of more jute. It is pointed out, however, that labour shortage will not be relieved and the reason for the smallness of the crop in the next season is more the fears in this regard than the disparity in prices between paddy and jute.

The announcement this week of a new order for 1½ crore yards of canvas Group C, 36 inches 19 ozs. has to be welcomed as evidence of the Government's desire to give support to the heavy goods market as far as possible. But it is pointed out that the order for canvas will create some difficulties especially for the steam-driven mills as the yarn needed for the execution of the order will have to be processed by steam which means additional coal supplies. The steam mills are already having difficulty in respect of coal supplies for running the machinery and it is doubtful whether they will be able to get the additional requirements of coal for the execution of the order. The electrical units also might have similar difficulties.

The uncertainty regarding the rate of production has been mainly responsible for the reserve shown by mills. It is very easy at the present moment to sell hessian at maximum prices for any position to the end of the year but there is no tendency to enter into fresh commitments for far forward positions as it is feared that coal difficulties and fresh developments in the market at a later stage might upset the calculations of mills. On the other hand, there is anxiety on the part of mills to dispose of heavy goods for early deliveries. Only combined business has been reported and there are not many buyers for Heavy Goods alone.

The raw cotton market was very firm a week back on heavy bull buying and the quotation for March Jharilla was done up to Rs 460. The Spot market also was firm but in the past week there has been a decline in prices for hedge contract in sympathy with the bullion and share markets. The ready market, however, has remained firm and mills are reported to be buyers of ali crop supplies. It is said that the Government of India has been able to dispose of half the amount of cotton that was acquired early last year when they came into the market for supporting cotton prices.

At the meeting of the Central Cotton Committee held sometime back the resolution of the Planning Sub-Committee of the I.C.C. was adopted to reduce acreage by 3.1 million to 16 million acres as against the suggestion of the Provincial and Indian States Governments to reduce the acreage by 2 million acres. It was also decided to recommend to the Government of India to raise the incidence of cess on Indian cotton exported or brought under process in the mills in British India from 2 annas to 4 annas per bale and to take steps to bring the mills in Indian States in line with those in British India in the matter of the payment of cess in order to enable the company to undertake more research work.

The Textile Control Board announced towards the close of last week a further reduction in prices to come into effect from February 1, 1945. These reductions affect only certain categories of cloth and yarn. In order to relieve the scarcity within the country it was also decided that there should be a reduction in the export quota of fine cloth. The schedule of ceiling prices has now been revised in accordance with the decision of the Industries Committee taken in October last. The present reduction is on the revised basic rates. This reduction, broadly speaking, is applied to all cloth manfactured with warp counts fiftys and under. In the case of yarn, the ex-mill ceiling prices of counts sixteens and over (and upto forty-five's) manufactured from Indian cotton are to be reduced with effect from the same date by one anna in the case of superfine qualities of cloth and finer counts or yarn owing to a substantial increase in the prices of Egyptian cotton and also for the reason that an incentive has been left for mills generally to increase

(Continued on Page 150)

A Pledge and a Promise

A lot is talked about stamped cloth and unstamped cloth. Look at the "INDU" stamp above and stamp it on your mind. It's the mark of quality in textiles. It is stamped on 91,660 miles of cloth produced annually by India's largest textile group—"INDU."

While nearly all our vast resources are now pledged towards winning the war, we promise you that in the wake of this war we will bring you quality textiles of remarkable durability. When better cloths are woven, the "INDU" trade mark will be stamped on the best.

Jute and Jute Manufactures

(From Our Correspondent)

Special to "Indian Finance"

CALCUTTA, Feb. 2

Samples showing the suggested Five Grade scheme for Loose Jute Assortment, worked out by the Jute Grading Sub-Committee of the Indian Central Jute Committee, are now on view to those interested at the offices of the I.J.M.A. and constructive criticisms are invited. We have referred before to the scheme which provides for five main grades, Tops, Inters, Middles, Bottoms, low bottoms, and beyond that a Rejection grade to cover all jute showing more than 70 per cent cuttings or sacking weft, or over 50 per cent of these if the colour is dark. But of the five main grades mentioned above, all but the Tops are subdivided according to cuttings and colour, Inters and Low Bottoms into two sub-grades, and Middles and Bottoms into three sub-grades each. It has not yet been officially intimated whether it is contemplated that the price should be varied for each sub-grade, or whether the sub-grades merely indicate the variations in colour and cutting which are permissible under the main grade. But as the arithmetical notation by which each sub-grade is identified gives the same valuation for each sub-grade, presumbly in marketing, the price will be fixed overhead for the main grade only. It will not be surprising if some practical spinners do not voice the opinion that too much emphasis is placed on colour at the expense of cutting in the sub-grading. It is doubtful for instance whether everyone will agree that a light coloured Bottom with cuttings running up to 70 per cent is of the same value to a mill as a sound spinning but dark coloured fibre with cuttings not more than 35 per cent. At the present time Cuttings by themselves are standing at a price relatively much higher than normal. The reason is that the lack of export trade in cut jute has so reduced the turn-over of Pucca Balers that the supply of Cuttings, which are largely taken up by local mills, is far below normal and far short of the demand. Hence the relatively high price. But when export trade is resumed after the cessation of hostilities it is to be presumed that Cuttings will again be in much more copious supply and the price will revert to its normal relationship with cut jute. Hence, while at the moment the very wide margins of cutting permissible under the suggested scheme, particularly in Middles and Bottoms, might be accepted as an experimental measure, if and when cut jute and cuttings revert to a more normal price relationship, we can foresee protests at the liberality of these margins. It has not been made clear whether the assortment of the main grades is expected to be elaborated into the sub-gradings in the up-country godowns. If so, it is inevitable that much closer supervision will have to be given to the assortment than is ordinarily the case, with consequently higher expense charges to the baler. Admittedly the baler will score by getting good coloured jute with heavy cuttings away into a higher grade than he does at present, and also admittedly it is not unusual for up-country baler to run two types of Middles simultaneously, a "burra" Mid and a "chota" Mid, and even the same with Bottoms. So it need not be considered impossible to educate assorters up to the requirements of the proposed grading scheme, if it is generally approved. But in the meantime what needs to be made clear is whether it is contemplated that each sub-grade should be packed up separately and any defined proportion of each sub-grade delivered under a contract for the main grade, or whether the sub-grades laid down merely define the variations of colour and cutting combinations which it is permissible to tender against the main grade. It is noticeable that the factor of faults in the fibre are not apparently taken into account except that of soundness. Speck for instance is a factor which varies widely from year to year and often from district to district and when of the hard "birds-eye" variety is a serious spinning obstacle. Incidentally this is a serious complaint in much of the jute this year due to the fact that much of the crop was allowed to stand till over-matured and had started to branch on the stemps. It will be interesting to hear the reactions of the trade to the proposed grading and it is to be hoped that full advantage will be taken of the opportunity for inspection and criticism.

No appreciable improvement can be recorded in the supplies of coal arriving and most of the single shift coal users are idle. The Chairman of the Bengal Coal Co at the annual meeting of that concern confirmed the opinion that the main cause for the shortage in supplies was shortage of labour, and further that raising the wages of the miners was no panacea in their present stage of development. The long expected arrival of coal-cutting machinery may relieve the situation, otherwise there seems little hope of early improvement so long as war demands take priority over those of industry.

We have been furnished with some further interesting notes on the subject of Jute cultivation in the Argentine. Progress does not appear to be rapid as the crop harvested in 1941-42 of some 150 tons of fibre had little more than doubled two years later, even under the impulse of demand created by the lack of imports from India due to war conditions, and the high prices which were therefore available for domestic fibres. It would appear that the methods of cultivation and preparation of the fibre closely resemble those practised in Bengal. But jute does not seem to be a very popular crop amongst the cultivators mainly an account of the unpleasant circumstances of the retting and washing processes. Officialdom seems to consider that some mechanical method of decortication should be devised, but none has so far been successful, at least not entirely so and it is of interest to note that the hand retted fibre fetches a higher price than that mechanically decorticated. Another factor detrimental to the spread of jute cultivation is that the circumstances of retting have caused an increase in malaria in the growing districts. An interesting suggestion is that the bundles of green jute should be placed vertically roots downwards in the water for retting and not laid down horizontally as is the generally practice. It is doubtful if this would be generally possible in Bengal but it would be an interesting experiment which the I.C.J.C farms might try out for comparison with the results of the ordinary method. The general results in the Argentine do not seem to differ greatly from those obtaining in Bengal. Only one weeding is carried out. Plants grow to a height of around six feet on the average with exceptions to nine feet. Yield of fibre to the green weight is approximately 5 per cent. Both Capsularis and Olitorius varieties appear to be grown, that is both "white jute" and "Tossa of Daisee" types The principal market for the locally produced fibre is the alpargata (rope-soled shoe) factories which do not require a particularly good type of fibre. But the prices paid of late have reached as high as the equivalent of Rs. 115/- a bale. Some Companies appear to purchase the green crop when harvested at around Rs. 9/6 per ton which may sound cheap, but at a five per cent yield of fibre plus the cost of preparation, it is by no means so. To encourage cultivation it is suggested that minimum prices should be guaranteed to growers on a basis which works out approximately to Rs. 23/8 per maund for 1st grade, Rs. 20/- for 2nd and Rs. 16/- for 3rd grade fibre delivered Buenes Aires. Finally it seems to be officially doubted whether it would be either possible, or economically advisable, for the Argentine to endeavour to compete with India in jute production in normal times.

their production as far as practicable with a view to meet the present acute shortage of such materials".

The bullion market has sharply reacted to the favourable war news. In the course of the week prices have declined by over six points for gold and 12 points for silver. The close, however, is slightly firmer on covering. The Reserve Bank has followed the market and has been selling freely but with daily stocks mounting and arrivals from upcountry centres, bulls have been placed in a bad position. Gold ready quoted Rs 64/12 against Rs 72/2 on Thursday last week and Silver ready Re 120 against Rs 132/12. The close on Thursday was better at Rs 66/2 for gold ready and Rs 120/4 for silver. It will be noted that the recovery in prices is more pronounced in the case of gold.

The All-India Second Sugarcane Forecast for 1944-45 shows a welcome increase in the acreage by 1 percent as compared with the corresponding figures for 1943-44. The acreage unded the crop is estimated at 4,024,000 against 3,967,000 (revised). The Forecast relates generally to information up to the period ending September 1944. The condition of the crop is reported to have been affected to some extent due to unfavourable conditions earlier but now appears to be fairly good on the whole.

(*Continued from page* 144)

grouse against him on this point. It is true Mr. Thakur has been able to gather a good band of officers and men around him by making attractive offers to them. But, then, is it not up to the old employers to keep their men by paying them their proper price? The latest action of Mr. Thakur shows that it is not alone a matter of offering high salaries, but that he has an enlightened policy towards the staff which others may profitably emulate.

"EAVESDROPPER".

Imperial Bank of India

Total deposits of the Imperial Bank advanced during 1944 to stand at Rs. 237.78 crores in the balance sheet as on December 31st. The figures published on another page point to a rise of Rs. 23.25 crores under Depositors as well as a rise in Reserves and Advances. The Increase under Investments to Rs. 148.63 crores indicates that the major portion of the increase in deposits is easily acounted for. The outstanding change compared with the position a year ago is the fall in cash. It will be noted that the Imperial Bank's cash ratio now approximates rightly to that of the *Big Five in Britain*, and a cash ratio of 10 to 11 per cent may be deemed wholly adequate for an institution that is readily distinguishable from Indian jointstock banks. The rise in Advances from Rs. 40.59 crores to Rs. 70.22 crores in a year may be said to reflect a general as well as local trend. The rise has taken place without any change in the proportion of Investments to other assets, and without any increase in Loans as distinct from Bills and Cash Credits and Overdrafts. The return of funds to preserve the highest degree of liquidity as before is ensured by the relative proportions shown as under assets. The Directors have reason to feel pleased with the results since a rise in profits despite a fall in the average return on Treasury Bills in 1944 followed the increase in resources described. The profit and loss account reflects only the changes relating to the staff bonus payment and the allocation to Reserve from the half-year's profits which in themselves have no effect on the sum carried forward. The dividend announced last month was 12 per cent as before and the Bank's profits struck for the half-year leave a larger margin as compared with the figures presented a year ago. This may not stimulate market optimism but should serve to indicate that the Imperial Bank's prosperous record compares very favourably with that of other banks in India. Though deposits did not rise at the same pace as in 1943 the figures cited are undoubtedly progressive, and it would be difficult to find a clearer indication of year-end changes in the money market than the rise under Advances and Bills and the fall in the cash balances to which reference has been made.

(*Continued from page* 146)

position was altered either by the grant of a subsidy for the diversion of acreage from cotton to food or by the fixation of higher prices for food grains, the target proposed by the Sub-Committee could not be attained. The Sub-Committee felt that the remunerativeness of growing Deshi cotton had perhaps been exaggerated, but the Punjab representatives stuck to their position. They seemed to feel that, if a subsidy of Rs. 10 per acre were granted, the proposed reduction could be achieved. Naturally, the Planning Sub-Committee could not bring itself to make a recommendation for Punjab alone especially as other provinces like the U. P., C. P., Bombay etc., in which conditions are similar, had agreed to reduce acreage without any subsidy. Of course, the Sub-Committee had no objection to the grant of a subsidy if the amount was met by the provincial government or from the Cotton Fund, but in the latter event the provincial government was to make the necessary approach to the Government of India. The views of Punjab were placed before the full Committee, which generally endorsed the recommendations of the Sub-Committee, especially as regards the target of reduction of the acreage next year to 16,100,000 from 19,200,000 acres in 1942-43. By way of implementing the plan, the Committee came to these conclusions (1) there should be no increase in acres under styles not proposed for reduction from the 1942-43 or 1943-44 acreage (2) irrigation water should be denied to short-staple cultivating tracts (3) any reductions proposed should be enforced compulsorily by the different administrations (4) mixing of cotton should be barred by legislation.

The Central Committee passed a resolution expressing concern at the American export subsidy plan and urging the Government of India to take up the matter with the American Government. Sir Shri Ram sponsored a resolution for the import of new or secondhand reconditioned machinery from the U.K. or the U.S.A.. so as to solve the twin problems of large surplus stocks of short staple cotton and of shortage of cloth in the country. The resolution further urged Government to grant adequate allowances to mills in respect of depreciation for the purpose of taxation and concessions in respect of E.P.T. The Committee considered the progress of the various research schemes, and in order to have the necessary wherewithal to enlarge them, it decided to recommend to the Government of India the enhancing of the cess on cotton exported or processed in mills from two to four annas per bale and to take steps to bring mills in the Indian States in line with those of British India in this respect. The gratifying feature about the work of the I.C.C.C. is the considerable progress it has been able to achieve in bringing different parts of the country together in regard to cotton problems and the very encouraging degree of success which it has had in getting its proposals accepted and implemented. Sir C. B. Mehta has again been elected Vice-President.

There is a great dearth of cloth of finer qualities. That is due to scarcity of stock of foreign cottons. Negotiations for purchase of East African cotton are still pending and the delay has led to the mills buying Uppers cotton at Rs. 1,090 and low grades of Karnak and Giza 7 styles at Rs. 1,000. The prices should have been below Rs. 900, but the delay in the negotiations has benefited Egypt. Of course, Sudan shipments are arriving, but it is understood that nearly 70 per cent is being given to mills for the manufacture of parachute cloth. Very little cotton remains for mills working on home orders, and even lower grades of Sudans such as G 5 L and G 6 L used for spinning 40s are hardly available for civil supplies. In fact. there is a shortage of 40s cotton.

JUTE

(By Our Staff Correspondent).

Calcutta, Feb. 1.

Quiet conditions continue to prevail in the raw jute market though mills have not yet shown any interest, there being still difficulty in respect of coal supplies. The strength of mofussil markets and the reports regarding a fresh order for 1¼ crore yards of canvas have been mainly responsible for the maintenance of prices around last levels. Sellers, however, are eager to do business and are prepared to offer a small discount if it would be possible to conclude large business but there is no disposition to effect a big decrease in the rates even if it would attract buyers, as it is feared that it would not be possible to cover the sales in the mofussil. It is rather surprising that even so late in the season imports from mofussil centres should continue to be on a small scale and the recent increase in arrivals has been only temporary. Holders are very firm in their ideas and are not prepared to part with their jute. As a matter of fact, there are even complaints about the quality of the raw material and the practice adopted by dealers in offering wet jute. No announcement regarding the size of the acreage for the next season has yet been made though it is now February and sowings in the lowlands will begin shortly.

In the loose jute section a good amount of business has been reported in European packing at Rs. 16/4 and Rs. 13/4 per md. with buyers over. Sellers have increased rates towards the close by 4 annas as floating supplies are rather small. Supervised District Tossa Middles and Bottoms were done at Rs. 16/4 and Rs. 13/4 per md. and Indian District Middles at Rs. 15/8 and Rs. 12/8 per md.

In the pucca bales section no export business has been recorded. Mills also have not taken any interest and only a small amount of business has been reported in Cuttings and Rejections.

JUTE MANUFACTURES

(By Our Staff Correspondent).

Calcutta, Feb. 1.

The jute manufactures market has remained firm on the announcement of a new order for Jute canvas and the reserve shown by sellers in respect of hessian sales. It was reported last week that for the forward positions mills are not prepared to accept orders to the extent of the full production as it is not possible now to have any idea as to what exactly will be the position in the latter half of the year both in regard to coal supplies and the state of the market if there was a cessation of hostilities. Some of the mills have taken advantage of the present conditions in the market by offering hessian in combination will B twills thus securing slightly higher rates for Heavy Goods.

In the Heavy Goods section there was nothing of importance to be reported apart from the combined business. B. twills are quoted in the bazar at Rs. 63 for rope bound and Rs. 62/8 for iron bound. The order for canvas is for 1½ crore yards and the delivery is from February to July.

PIECEGOODS

Calcutta, Feb. 1.

The piecegoods market remained steady with a slightly larger amount of business. The authorities have been seizing unsold stocks and vigorous arrangements are being made for the prompt disposal of these frozen stocks. A further reduction in ceiling prices has been announced as from today on certain kinds of cloth and yarn. In respect of new supplies arrangements are being made to deliver quantities in bulk to the nominee of the Provincial authorities so that it would be possible to check market trading more effectively. It remains to be seen what effect there will be to these proposals. The Bengal mills are still experiencing great difficulty in respect of coal supplies and the matter was discussed with the Supply Member when he was recently in Calcutta.

Vol. XXXV. No. 5 SATURDAY, FEBRUARY 3, 1945 Price Re. 1

Stock Markets to-day and to-morrow:

EARLY SLUMP IN PRICES: LATE RECOVERY

It is perhaps too early to form any definite opinion regarding the course of prices on the stock exchanges soon after the termination of hostilities though it can be said that our anticipations have been substantially confirmed by the behaviour of the bullion and stock markets in both Bombay and Calcutta in the past week. The sudden advance of the Russian Armies on the Eastern Front and the collapse of the German counter offensive in the West have changed the outlook completely and it is now generally felt that the end of the war is very near. Military critics say that Germany will collapse in another three weeks. The reaction to the favourable war news in both centres a few days back resulted in a sharp decrease in values in the early days of this week, the drop in values being more pronounced in Bombay. Selling, however, was mostly professional with prominent bears very active. From the table given below it will be seen that the downward movement has been in evidence from the middle of January and that the whole of the gains in the last quarter of the year 1944 have been lost, the lowest point being touched on Tuesday this week. Tata defds. came down to Rs. 2,050, Bombay Dyeing to Rs. 1760, Indian Irons to Rs. 37/4. Howrahs to Rs. 80/4. Burrakurs to Rs. 39/15 and Steel Corporation to Rs. 30/4.

* * * *

On Tuesday morning it looked as if the bears had gained their objective and that the bottom had been knocked out of prices. But developments in the last two days have been very different and a good portion of the losses has been regained with prominent bull buying and investment enquiry at the lower levels.

Whether the rally in prices in the latter half of the week has any significance cannot be said. But it has been proved that bulls and genuine investors will not yield ground easily and that every fall in prices will be contested.

It has been suggested in certain quarters that the future of stock market prices is bound up with the bullion market. The reaction in the Bombay bullion market early this week was similar to the stock markets, Gold ready coming down to Rs. 64/12 from Rs. 72/8 and silver ready to Rs. 117/8 from Rs. 132/12. But as in the stock exchange there has been a recovery in the last two days and silver ready is now quoting Rs. 120/4 and gold ready Rs. 67/4. It is said that the recent recovery in prices has been due to the manipulations of bulls especially in silver as large stocks are held by them and they are anxious to prevent an undue decline in prices lest investors should be frightened out of their wits. It cannot, however, be denied that in the postwar period when normal conditions of trade are restored, bullion prices will tend to be nearer the old parity levels. Even allowing for the possibility of depreciation in the value of the rupee, there is still scope for a large depreciation in the value of bullion prices. If there is no appreciable decrease in values for the precious metals, due to the refusal of hoarders to part with their holdings, the same must apply to stock markets as investment in securities yield an income and the appreciation in the value of the securities has not been to the same extent as for the precious metals. Also there is the important consideration regarding industrial development in the postwar period. Developments in the next few weeks will enable one to form a definite view of the future outlook.

* * * *

India Paper Pulp Company, Limited, has been able to report only a smaller level of earnings for the half-year ended September 1944 owing to the difficulty in respect of the supply of raw materials especially bamboo and this seriously affected costs. The increase in working expenses and the lower output has naturally resulted in a decrease in the net profit, before providing for taxation and depreciation, to Rs. 6,86,996 from Rs. 9,88,502. After providing for depreciation Rs. 82,996 (Rs. 1 lakh) and taxation Rs. 4.15 lakhs (Rs. 6.21 lakhs) the dividend has been maintained at 6 percent. But for the smaller provision on account of taxation it would not have been possible to maintain the dividend at the level of the previous half-year. The amount carried forward is slightly lower at Rs. 77,703 against Rs. 79,969 brought in.

* * * *

Bisra Stone & Lime Company, Ld., has in the same period been able to show a small increase in earnings to Rs. 3,14,859 from Rs. 3,10,708 in the previous six months. Thanks to the smaller provision for taxation of Rs. 1,45,000 (Rs. 1,68,000) and depreciation Rs. 5,000 (Rs. 7,019) it has been possible to increase the dividend to 15 percent from 13¾ percent. Even after the distribution of a larger dividend the amount carried forward is higher at Rs. 17,242 against Rs. 6,536 brought in.

* * *

The Capital of Aryan Paper Mills Ltd. consists of both ordinary and preference shares—total Rs. 50 lakhs. Particulars connected with the issue of capital appear today. The Company's objects are set out in relation to the establishment of a new paper mill in Bengal. The convenient method of paying by instalments is offered to subscribers to the new Company's share Capital.

MARKET GOSSIP

By "Bear-Bull"

[*The following is gossip in the literal sense of the term. The markets sway to and fro not in response to facts and developments, but in response to khabbar, true and untrue and slightly true and largely untrue. "Bear-Bull", right in tht heart of the Exchange Ring, will relay, periodically, such gossip as has caused gyrations in prices and changes in sentiment.*—ED. *I. F.*]

The end of the European war and the prospects on the Stock Exchange when the war comes to an end are the main topics for discussion in the market.

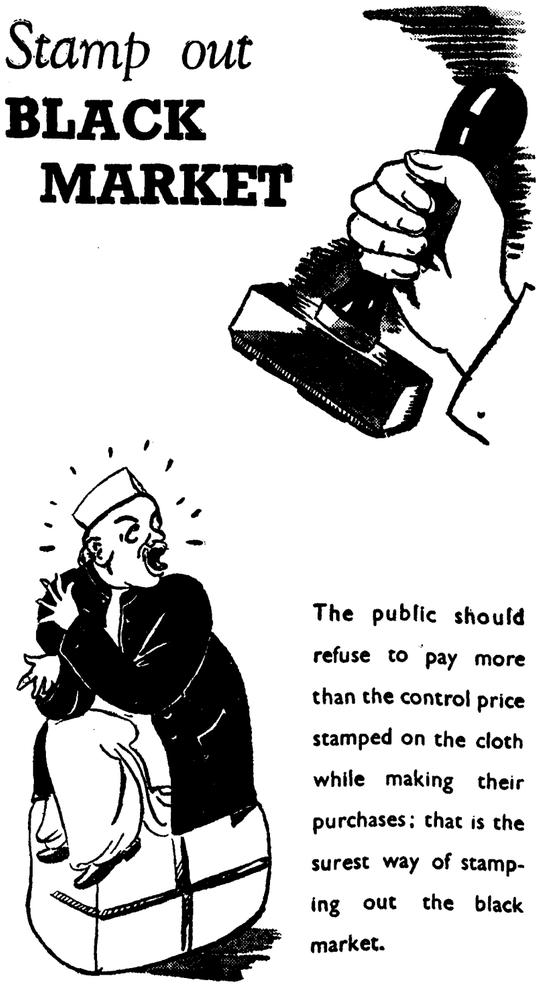
The week opened with a steep fall all-round. Business was done on Friday last in Irons upto Rs. 37-6, Steels at Rs. 30-8, Burrakurs at Rs. 39-15, Howrahs at Rs. 81-8. From these levels there was some recovery due to profit taking and fresh buying by some bull operators. Prices at the time of writing are Rs. 38-12, Rs. 31-12, Rs. 41-8 and Rs. 82-12 for Irons, Steels, Burrakurs and Howrahs respectively. There are rumours in the market that a bull syndicate has been formed to push up the price of shares. I do not think there is any such syndicate operating. A reaction was due and it has come.

Incidentally, I may mention here that ninety times out of hundred if the price of a commodity or security comes down or goes up by 10 to 12½ per cent of its value a reaction to the extent of one-fourth or one-third of the rise or fall is bound to come. It is only in exceptional circumstances that the market continues to rise or fall in that reaction. I have come to the conclusion after making very careful study of price fluctuations during the course of the last thirty years. If a man has the patience to wait till there has been a good rise or fall and then operate only on reactions he cannot be wrong. Nine times out of ten he will be on the right side.

Regarding the European war outlook, although there are still some people who believe that the war will not be over soon, the majority are inclined to think that Germany cannot last long. The Russians are almost at the gates of Berlin. Those who are inclined to think that the war will not end soon argue that Germans were at the gates of Moscow. That did not mean Russia was defeated. They believe that in the case of Germany a similar thing may happen. Whilst admitting that anything may happen, the parallel does not hold good for the reason that Russia had vast territories left to fall back upon while Germany has none. It will be prudent to base one's operations on the market on the assumption that the war is likely to come to an early end.

What if the war comes to a close? There was a panic some days back on prospects of the war coming to a close. But now I find some people regarding that the close of the war is no reason why the price of shares should come down. They believe that if the war comes to an end the E.P.T. will disappear and so will all price controls. There will be a great demand for all sorts of goods for reconstruction work and that Indian industries have nothing to fear by way of competition from abroad for a number of years to come. The post-war reconstruction plans all envisage a huge expansion in the consumption of goods and due to these reasons there is nothing to be afraid of about the profits of industrial concerns. It is said that so far as coal companies are concerned, due to the expected expansion in the industrial activity there is bound to be an increase in the demand for coal and therefore coal shares should not come down.

After careful consideration of all these arguments I am not inclined to agree with this view. First of all there is very little prospect of price controls and E.P.T. being removed. Secondly, once the war is over we cannot keep prices in India at a level much higher than that of U.K. or U.S.A. I shall discuss this question fully in my next week's notes. In the meantime, I would advise all investors to wait. I am sure if the war comes to an end there will be an opportunity to pick-up shares at a lower level.



THE RAWANWARA COLLIERIES LIMITED.

NOTICE is hereby given that the next Ordinary General Meeting of the members of the Company will be held at its Registered Office, 5, Royal Exchange Place, Calcutta, on the 20th February, 1945, at 4 p.m. for the purpose of receiving and adopting the Directors' Report and the audited Accounts of the Company for the year ended 30th September, 1944, electing Directors, appointing Auditors and to consider such other business as may with the permission of the Chairman be transacted at an Ordinary General Meeting. The Share Transfer Books of the Company will be closed from 10th February to 20th February, 1945, both days inclusive.

Favourable War News Upsets Markets

LATE RALLY AFTER EARLY SLUMP

(By Analyst)

Bombay, January 26.

Markets were panicky in the beginning of the week. Due to short covering the close is better. There are many who want to know whether they could invest their monies at present market levels. It is just possible markets might improve a little more in view of the drastic fall already witnessed but on the day we hear that Berlin has fallen or the European war has come to an end there is likely to be further sentimental decline and I put that decline at about 10 per cent from the present levels. Therefore, there is no hurry to replace holdings sold out recently. Whenever there is a decline I would however request investors to watch and buy select scrips with post-war prospects. Last week, I had mentioned that as per a cable received from London cost of production of synthetic rubber was equivalent to 15 cents, very nearly the cost of production of natural rubber. I was amused when I had a telephone call from Madras that some operators were taken aback and sold their shares on the calculation based on 15 Colombo cents which means less than 1/7th of a Rupee. When we talk of cost of synthetic rubber we always mean American cents since America is the only country now producing synthetic rubber on a large scale. Hence 15 cents would mean roughly 1/7th of a dollar i.e., about As. 7 per lb. I feel that synthetic rubber can only be complementary to natural and cannot replace natural rubber for all use. Hence there is no reason to be so panicky as Madras has been in the last three days. Cochin Malabars have declined from Rs. 20 to Rs. 15/8, Midlands from Rs. 14 to Rs. 11/8, Rajagiri from Rs. 15 to Rs. 12/8, Malankaras from Rs. 85 to Rs. 75, Vaikundams from Rs. 24 to Rs. 19 etc.

Coming now to the Tea Section, Tea shares also suffered a decline due to weakness in Rubber shares but the fall in Tea shares was not so heavy as in Rubber shares. *Peermade* were nominally quoted Rs. 48. *Haileyburia* Rs. 34, whereas *Highland* suffered a steep decline from Rs. 36/8 to Rs. 31/12. *Outcherlong Valley* were done as low as Rs. 9. I had mentioned that the United Planters Association of South India had recommended to the Ministry of Food to put up the price of tea by 2d. per lb. and I hear that the Ministry of Food has agreed to this recommendation. I like tea shares better than rubber shares and I would suggest buying select tea shares in weak markets like the present.

Indian Irons and Steel Corporations also declined sharply along with Tata Steels in Bombay, but the decline in Indian Irons was due to the Company's announcement that there will be no bonus issue and the decline in Steel Corporation was due to the announcement of an interim dividend of only 6 annas.

Associated Cements declined to Rs. 225 on reports that a new cement company is to be started in Navanagar. I would however, watch this scrip and accumulate these shares whenever they react to somewhere around Rs. 220.

THE DACCA ELECTRIC SUPPLY CO., LTD.

The Preference Share Register of the Company will be closed from 8th February 1945 to 16th February, 1945.

A dividend at the rate of 6 per cent per annum, free of income-tax, on the Preference Shares of the Company for the year ended 31st December, 1944 has been declared payable on 16th February 1945.

Company Meeting.

THE BENGAL COAL CO., LTD.

A YEAR OF SATISFACTORY WORKING

CHAIRMAN ON THE INDUSTRY'S PROBLEMS

Addressing the Annual General Meeting of the shareholders of the Bengal Coal Co. Ltd., held in Calcutta on 30th January, 1945, the Hon. Mr. K. W. Mealing, the Chairman, said:—

Gentlemen, I propose as usual to take the Report and Accounts as read and with your permission, to give you a brief survey of the principal matters affecting the industry and your Company during the past year.

The accounts have been in your hands for the statutory period and I trust you will agree make very satisfactory reading.

We have had considerable anxieties throughout the year and the chief of these has been the fact that raisings have fallen so far short of the country's requirements. At the beginning of 1944 it was very clear that great hardship must inevitably be incurred by the many industries depending upon coal, and that unless conditions were to drift into a state of chaos, serious steps would have to be taken by Government firstly to assist the major units of the industry in increasing their production, secondly to encourage the smaller units of the industry to put greater enthusiasm into the business of winning coal, and thirdly to open up such new sources of supply as would, from a quality point of view, justify special and expensive measures. To this end the Coal Commissioner was appointed and Mr. P. C. Young has completed a year of hard work under most difficult conditions which may be regarded, I think, as the first step in the directions I have indicated above. To cope with the situation called for almost super-human attributes and if Mr. Young's endeavours have failed to reach the targets he himself desired, I do not think this is to be wondered at. Two aspects of government control have continued to function efficiently. I refer to those of Transport and Distribution, and a tribute is due to the officials responsible for this work. Fortunately for the industry, the responsibility for Coal passed to the Supply Member and Sir Ramaswamy Mudaliar became responsible in June by which time the position was becoming highly critical. Since then much has been done, but much yet remains to be done. It has become clear that the organization of governmental control to which I have already referred, requires expansion and greater collaboration with and use of the technical knowledge available in the coalfields and the release of the Regional Controllers from the incubus of paper work and red tape which has been stultifying their proper activities. The organization is now under way and I sincerely trust that the work done and experience gained during the past year will enable a really effective set up to be established which will have the result of improving raisings of those qualities of coal which are fit to be dispatched to industries, to a figure more nearly approaching the colossal demand at present existing for all purposes conected with the prosecution of the war effort and the provision of essential requirements of the civil population.

MORE WAGONS

I am glad to report that the wagon position has been satisfactory during the past half year. One important step towards improving the situation has been the further expansion of the available track between Calcutta and the coalfields and in other places, and the next step, as coal raisings increase, will be the provision of additional locomotives and wagons. The Transport Member has already indicated that arrangements have been made for 40,000 additional wagons and a considerable number of locomotives by the end of this year. I would like also to take this opportunity of saying a word in appreciation of the co-operation we have received from the staffs of the Railways serving in the coalfield areas. Both the E. I. and B. N. Railway officials have displayed the closest co-operation particularly in the matter of supply of open wagons which greatly facilitate loading, whilst railway representatives visit the collieries in order to investigate their difficulties and so far as lies in the Railway power, to assist them. This spirit of co-operation is greatly appreciated, although it must not be taken as implying that difficulties do not arise or that we are entirely without grouses from time to time.

I must now refer to two issues of importance to your Company—labour and nationalization.

In regard to the former. I would quote from the remarks of H. E. the Viceroy at his speech to the Associated Chambers of Commerce in December. He said:

"It is doubtful if the mining industry will ever be stable or contented until a real effort is made to establish a permanent labour force in good conditions." Now, gentlemen, this was a wise and true statement. We who are connected with many great industries, are fully aware of the desirability of a settled and contented labour force. If this can be brought about in the coalfields we shall welcome it. But there are certain fundamental factors in coal mining which are inescapable. These factors, in my view, are the following: firstly, to win coal necessitates working underground, the work is arduous and at times it is inevitably dangerous; secondly, working in semi-darkness by the glimmer of safety lamps, in conditions usually of dampness, humidity and restriction of movement, cannot be attractive to anyone. It differs greatly from the comparatively clean, safe work of a textile operative or other factory worker or even of ordinary coolie labour. Thirdly, no two coal mines are the same. In some the coal is easier to win, in others it is harder. In some the working face is farther from the pit. Some have far more water, others have steeper dips or gradients. Some mines are gassy, others are not.

In all these circumstances is it surprising that the business of coal mining is normally practised by comparatively few castes and tribes whose tradition it has become, who are of an independent nature holding themselves free to come and go, to work in one colliery for some time, then move to another, who hold themselves free to work until they have money in hand and then lay off until they feel like working again? We have been told that by paying higher rates we shall get more work. Unfortunately experience proves this to be the reverse of true. We would greatly like to see a settled labour force on whose regular and efficient work for really good wages we could depend. We would like to see our mining labour working hard and intelligently, raising more coal per head, maintaining a higher standard of living during their working life and saving money for old age. Obviously the first step is to inculcate this desire by education and we are endeavouring to do our share of this among the children of our present employees.

The supply of mining labour has undoubtedly been a major problem and a considerable handicap during this last year I have already indicated that the supply of miners—as distinct from other labour required in and about the collieries—is restricted as to type and the districts from which it is obtainable. Recruiting costs have been a rapidly increasing factor in our expenses and probably in those of all coal companies. Your company has always favoured the organization of recruiting within the industry on co-operative lines such as have proved so successful and economic in the Tea Industry, and we have more than once striven to foster such an organization. Conditions vary from colliery to colliery and district to district, but I am glad to say that in the district in which most of our company's collieries are situated the seed of organized recruiting on a co-operative basis has now germinated and though still in the embryo stage there are strong hopes that it will develop into a well defined organization. This is what the industry is doing to help itself in the matter of labour supply but I would like to pay a tribute while on this subject to the help we have been afforded by the energetic and realistic approach to the diversion back to the collieries of mining labour which had been attracted by higher rates to surface work in various extraneous undertakings by the Department of Unskilled Labour Supply under the direction of Brig Fisher.

Gentlemen, whether we like it or not, we are living in a changing world. Personally I regard war including civil war as one of the greatest curses besetting humanity—yet out of a great evil can sometimes be called a little good. Medical science, aerial development and a desire to improve the lot of the masses are among the activities of mankind which seem to me to make forward steps in wartime and out of this desire for progress which needs encouragement in this country, has arisen the urge to improve the standard of living and of education of the people. To what extent the plans now being laid can be implemented I do not know, but I do know that they necessitate high taxation which ultimately must come from the profits and earnings from industrial and agricultural enterprise. If the effect of education is to induce ambition and savings among workers and to raise their desires above the present basis of minimum work to provide a subsistence level, then higher remuneration may accompany higher industrial output which in turn may reduce costs and improve the standard of living.

NATIONALISATION

I would now refer briefly to the question of nationalization. This war-cry raised periodically and has recently drawn strength from three factors firstly the success of Russian Arms under a communist regime, secondly the general thesis that minerals should be State-owned, and thirdly the fact that Government have, in the past, failed to exercise that control over conservation which they should have exercised. Regarding the first factor. I do not propose to say much. We know little or nothing about Russia, nor ever whether communism is synonymous with totalitarianism, nor how closely the latter is allied to slavery. We have much to learn on these issues, but in the meantime and until we do know more about it, we cannot accept this as a valid argument for nationalization. But in passing I might point out that the little United Kingdom with a mere 45 million population and without nationalization, were after two years of war, shipping whole convoys of tanks aeroplanes and munitions in their own ships to help nationalized Russia with nearly ten times the population in 1942 and 1943. Moreover, the output of war material per capita is greater in the UK than any other of the Allies. The second and third arguments seem to me to be interlinked. If the mineral deposits are worked efficiently, without wastage or loss, and made available to the industrial needs of the country, there can be no justification for the State to involve itself in a business it is not qualified to undertake. That however does not mean that the State has no responsibility to prevent the destruction of coal reserves and to enforce the conservation of these reserves and the preservation of the greatest degree of safety which can be attained.

In a speech made in the Council of State last year, a supporter of nationalization cited the Railways and the Posts and Telegraphs as two highly profitable State concerns. Obviously the one and only factor which decides whether these monopolies work profitably or make a loss is the price charged to the public for their use. If, in the post-war period, the Railways have to reduce their rates to compete with air and road travel they may cease to make profits because their monopoly on transport will be affected. If the Posts and Telegraphs were not a State monopoly, competition might have the same effect. But in the meantime the public pays and there is no criterion of economic efficiency because there is no competitor and therefore no competition.

I have dealt with these questions at some length because we in the Coal Trade have somewhat bitter memories of our treatment during the last thirty years. In the last war we became of great temporary interest to Government. After the last war and until a couple of years ago we were apparently of little or no interest to Government. We passed through severe depressions made losses, could get little or no help or encouragement either from the distribution or any other point

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Friday, February 3.

The rapid march of the Russian Army towards Berlin and the flare-up in fighting on the Western front led to heavy selling on the Calcutta Stock Exchange early in the week and a substantial decline in prices was recorded in almost all the sections. There was aggressive selling by a certain section of the market and the lowest levels for the week were touched on Tuesday. In the past two days, however, a slightly easier tendency has been in evidence and there is good support at the declines. The Coal and Jute sections were affected to a greater extent in the early days, but towards the close jutes are better and some of the Coal shares also have recovered to a certain extent the lost ground. Indian Irons and Steel Corporations were 2 points lower while in the other sections, there were no important features. The undertone is quiet. There is a general tendency to await further developments.

The weakness of other sections was responsible for the slightly easier tone of the giltedged securities section and 3½ per cent paper was done as low as Rs. 99-4. Business has been restricted and the close is not very much higher at Rs. 99-6. Terminable Loans have not been affected to the same degree and 3 per cent Victory Loan 1957 was Rs. 99-6, 4 per cent 1960-70 Rs. 112-12, 3 per cent 1946 Rs. 102-4, 3 per cent 1953-55 Rs. 100-2 and 5 per cent 1945-55 Rs. 102-12. Among Provincial Loans, 3 per cent Punjab Loan 1958 quoted Rs. 99-4.

Bank shares also are lower. *United Commercial Bank* being Rs. 36-4, cum-dividend, *Hind Bank* Rs. 53-8, *Reserve Bank* Rs. 133-8 and *Imperial Bank* Contributories Rs. 490. *Central Bank*, in the absence of any increase in the dividend, have come down to Rs. 79-12.

In the Cotton section there are no important changes to be recorded. *Cawnpore Textiles* were Rs. 12-14 and *Dunbar* Rs. 392. *Elgin* were quiet at Rs. 63 and *Kesoram* at Rs. 16-12. *New Victoria* were easier at Rs. 7-2.

In the Coal section, *Amalgamated* were Rs. 15-10, *Bengal* Rs. 680 ex-dividend against Rs. 706 at the end of last week, *Bokaro and Ramgur* Rs. 46-12 against Rs. 48-8 and *Burrakur* Rs. 41-6 against Rs. 43-12. A quotation as low as Rs. 39-15 was touched during the week. *Equitable* were Rs. 66-4 against Rs. 67-10, *Nazira* Rs. 18-10 against Rs. 20-8 and *New Beerbhoom* Rs. 37-6 against Rs. 39-4. *Central Kurkend* were remarkably steady at Rs. 32-1, 2 points higher on balance. *Raneegunge* were 1½ points lower at Rs. 50-4. *South Karanpura* recovered from Rs. 27-4 to Rs. 28-8 in mid-week, but are again lower at Rs. 26-14.

In the Jute section, apart from the decline in prices reported earlier, there is nothing of importance to be recorded and quotations are not very much lower on balance thanks to the slight recovery in the latter half of the week. *Howrah* came down to Rs. 80-11 from Rs. 83-12 and are now quoting Rs. 82-4. *Anglo-India* touched a low of Rs. 440 and are now quoting Rs. 448. *Presidency* fluctuated in wide limits and there was good buying at the lower levels. They are now Rs. 11-3 against Rs. 11-14. *Hukumchand* were Rs. 42-10, *Kamarhatty* Rs. 668 against Rs. 676. *National* Rs. 32-12 against Rs. 33-4. *Rameshwara* were not very much lower on balance at Rs. 20-6.

In the Engineering section, *Indian Iron* came in for heavy selling and were marked down to Rs. 37-4, but bear covering and fresh buying at the lower levels have resulted in a recovery to Rs. 38-10. There was some disappointment over the interim dividend by the *Steel Corporation* to 6 annas per share for the year ended December 1944 and the price came down to Rs. 30-4 from Rs. 33-2. It is now Rs. 31-6. *Bhartia Electric Steel* were steady at Rs. 220-12, *Jessop & Co.* at Rs. 24 and *Marshalls* at Rs. 4-12. No business has been recorded in *Burn & Co.* in the last two days. Earlier in the week they were steady at Rs. 40-4.

Sugar shares have been uninteresting with *Balrampore* at Rs. 17-4, and *Carew* at Rs. 27-4. The feature of the week is the rise in *New Savan* to Rs. 29-2 on special buying. There was a setback to Rs. 27-4, but they have again recovered to Rs. 28-12. *Murree Brewery* were Rs. 27-10 and *Belsund* Rs. 15-6.

Tea shares were unaffected with *East India* at Rs. 70-8, *Bishnauth* at Rs. 45-4, and *Central Cachar* at Rs. 130. *Tezpur* were Rs. 21-12 and *Tukvar* Rs. 22-4.

In the Miscellaneous section, Burma shares were very prominent, *B. B. Petroleum* being done at Rs. 5-8 against Rs. 4-15 last week. *Burma Corporation* were very steady at Rs. 5-4 and *I. B. Petrol* at Rs. 96-8. Business in *Calcutta Tram* was resumed this week. On bear covering there was a rise to Rs. 50-4, but the close was easier at Rs. 50-12. *B. I. Corporation* after being lower at Rs. 6-1 are now Rs. 6-6. *Bararee Coke* were Rs. 33-8 and *Indian National Airways* Rs. 23-12. Paper shares were easier with *Titaghur* at Rs. 28-4 and *India Paper Pulp* at Rs. 220. *Sree Gopal* was Rs. 19-2. *Midnapore Zemindary* were as low as Rs. 164, but there was a rise to Rs. 170 in the last two days. *Assam Saw* Rs. 5-5 and *Calcutta Landing and Shipping* Rs. 37-8. *I. G. N.* was Rs. 82.

KANKNARRAH COMPANY, LIMITED.

NOTICE is hereby given that the One Hundred and Twenty-fourth Ordinary General Meeting of Shareholders will be held at the Registered Office of the Company, No. 4, Clive Row, Calcutta, at 12 noon, on Friday, 23rd February, 1945, for the following purposes:—

(1) To receive the Directors' and the Managing Agents' Report and the Auditors' Report and to pass the Accounts for the half-year ended 31st December, 1944.

(2) To declare Dividends.

(3) To elect a Director.

(4) As special business, to consider and if thought fit to pass with or without modification, the following resolution, namely:—

"That in compliance with the recommendation of the Committee of the Indian Jute Mills Association that the Company contribute to His Excellency the Governor of Bengal's Red Cross and St. John's Ambulance Appeal on the basis of Rs. 7-0-0 per loom, the Directors be and they are hereby authorised to make a donation of Rs. 10,689 to the said fund from the assets of the Company."

(5) To transact any other business that may be brought before the meeting.

The Share Transfer Books of the Company will be closed from 9th February to 23rd February, 1945, both days inclusive, and it is notified that dividend warrants will be issued and posted to registered shareholders only. Persons holding shares under blank transfer are advised to effect registration of scrip to their name as soon as possible, but not later than 8th February, 1945.

By order of the Directors,
JARDINE, SKINNER & CO.,
Managing Agents.

4, Clive Row,
Calcutta, 26th January, 1945.

(Continued from previous page)

of view. Our export trade had been killed by Government during the last war and we were left to struggle through and rebuild it as best we could. Then, in 1942, we came into the limelight because demand was increasing and as large numbers of our miners had been taken from us output was falling Government therefore began to take an interest in us again. Prices rose and the industry again became profitable, the lion's share of which profit go to the State. The help we have asked for is assistance in getting plant and machinery and the return of our mining labour, and our supervisory staff now on service. If Government will concentrate on these matters and on equitable and efficient distribution during the war and on control to conservation and safety after the war, much will be achieved. But as Chairman of this the oldest and greatest Coal Company in India, I sincerely trust that Government will confine their attention and plans to these important matters and not waste valuable time on grandiose schemes of nationalization or State administration and control.

NEED FOR MACHINERY

One of the most important impediments to increase raisings has been the difficulty in obtaining necessary plant and equipment from the UK. Your company has had plant estimated at somewhere in the neighbourhood of Rs. 18 lacs on order since 1943. As you know, your Chief Mining Engineer was granted a priority to go to England last year and in the course of his visit he put in a great deal of work in assisting not only the Government of India but also your Company in impressing upon the authorities in England the urgency of these requirements. In the UK coal is treated as a first priority and I believe the work that Mr. Barraclough did in impressing upon the authorities at Home the urgency of expediting plant and equipment for the industry out here has been of considerable value, and it will be a great disappointment to us if the plant under order has not arrived and been put into use before the monsoon breaks. This is particularly important because, as you know, during the monsoon a percentage of the labour returns to its homes for cultivation purposes, and raisings decline. This plant is urgently required for increasing production and I am in great hopes that the Supply Member has given to this matter will result in the industry receiving its essential equipment very shortly.

WELFARE FOR MINERS

Having in mind the satisfactory results for the half year your Directors have set aside the sum of one lac to be used for the provision of amenities of various kinds for your miners and their families. As you are aware, your Company is well to the fore in the provision of amenities and it is now proposed to add more. We have schools for all classes of children, that is to say, for children of the mining labour as well as the clerical and technical staffs at eight of our collieries. We have Baby Welfare Clinics for both the Dishergarh and Poniati groups we have a Leper Clinic, we have a first class central hospital at Sanctoria and feeder hospitals in all groups, dispensaries and a resident doctor at each colliery. We have recently introduced Tea Canteens at two of our collieries which however have not yet become as popular as we would wish. We have clubs for the junior staff, with wireless sets, etc. at several of our collieries and colliery football teams, first aid training and St. John's Ambulance teams, with competitions and prizes. We also have pithead baths for the miners at several of our collieries. We have a Technical Mining School with a 5-year course providing training from first principles up to a standard which equips students to sit for a first class mining certificate of the Mines Department. Nevertheless we realize that we have still only broken the surface of all that can be done to improve the miner's lot and to give him an incentive to better work and higher output and you may rest assured that the Reserve now made in the accounts will be well used to benefit our labour in ways which are right and proper, and in ways which we hope will provide that incentive to which I have just referred.

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

The tight phase of the money market appears to be over. Conditions are again normal with call money quoting ¾ per cent. in Calcutta and ½ per cent. in Bombay. The continued expansion in currency and the large maturities of treasury bills over sales have eased the position in the market. At the auctions this week there was better response, the amount of applications increasing to Rs. 7.28 crores from Rs. 4.01 crores. But bidding has not been very much keener, the average discount on treasury bills being unchanged at nine annas per cent. The offer for the next week has been maintained at Rs. 2 crores. Only with the appreciable reduction in the amount offered has it been possible to get the applications for the full amount on offer. It may be possible on future occasions to secure the requirements at cheaper rates.

Expansion of currency has continued at the rate of the last few weeks, as with the seasonal utilisation of funds at the credit of the Central Government and the smaller short-term borrowing it has been necessary to provide additional currency. Thus the return of the Reserve Bank for the week ended February 2 shows a rise in notes by Rs. 0.81 crores at Rs. 1,051.03 crores and notes in circulation by Rs. 8.94 crores at Rs. 1,042.95 crores. Sterling securities have increased by Rs. 7 crores to Rs. 936.33 crores while there is a small decline in the amount of rupee coin to Rs. 12.74 crores from Rs. 12.62 crores.

In the Banking department Government balances are appreciably lower at Rs. 256.69 crores against Rs. 272.35 crores. The decline is mostly due to the drop in foreign balances. It is clear that some payment has been made during the week amounting to over Rs. 10 crores as the transfer to the issue department is only Rs. 7 crores and the decrease in foreign balances in the Banking department is as much as Rs. 16.33 crores. There is no important change in other government accounts while bank deposits show only an increase of Rs. 4.27 crores. The payment has clearly some reference to repatriation operations. Other deposits are Rs. 2.19 crores lower at Rs. 19.49 crores. Investments held by the Reserve Bank have further increased to Rs. 20.31 crores from Rs. 17.50 crores. There must have been further large purchases of government securities during the week.

The statement of the Imperial Bank for the same week shows a decrease in deposits contrary to the indications in the Reserve Bank returns. Total deposits were Rs. 232.40 crores against Rs. 233.99 crores. Investments have declined to Rs. 143.49 crores from Rs. 144.43 crores. Advances are higher at Rs. 71.58 crores against Rs. 69.97 crores, so that cash balances are lower at Rs. 26.75 crores against Rs. 28.95 crores even with the reduction in investments.

The Statement of the scheduled banks for the week ended January 26, 1945 shows a good increase in both demand and time liabilities by Rs. 8.8 crores. Demand liabilities have risen after a break of three weeks. The latest figure at Rs. 608.44 crores shows an increase of Rs. 5.39 crores. Time liabilities are Rs. 3.41 crores higher at Rs. 211.21 crores. One would expect the larger working capital to be reflected in higher cash balances, but there is actually a decline in both cash on hand and bank deposits with the Reserve Bank. Total cash at Rs. 93.46 crores is lower by Rs. 4.05 crores. There is an increase in advances to Rs. 257.19 crores from Rs. 250.04 crores but bills discounted are Rs. 6 lakhs lower at Rs. 14.29 crores. Against the increase in advances and bills discounted by Rs. 7.09 crores, funds utilised amount to Rs. 12.85 crores so that fresh investments have been made for Rs. 5.76 crores. Having regard to the state of the market it is not clear whether the investments have been in giltedged.

Egypt is witnessing the same phase of the sterling balances controversy which India has left behind in disgust for, what a section of the British press was saying about India's sterling assets, Dr. Einzig is now saying of Egypt's. The gist of the argument is that while Britain purchases her requirements in terms of prices expressed in inflated currencies, the credits are accumulated in sterling at a stabilised exchange rate. It is no compliment to the intelligence of Britain's financial journalists to think that they believe in these arguments. They know only too well that the alternative to inflated prices and stabilised exchange rates is stable prices and their conversion into heavily slumping sterling. The third alternative in free conditions is that the goods and services would not be available at all. Dr. Einzig argues that Britain will be repaying many times the value of the goods that she got from Egypt. But on what premise? That the external value of sterling is just what the stabilised exchange rate of today indicated! It is quite a different matter if the whole controversy is shifted to the plane of moral obligations. But the arguments in this sphere should be no more conclusive or convincing.

BOMBAY MARKETS

BULLION

Bombay (By Wire).

Bulls in the Bullion market have brought about a miraculous recovery while bears are literally at their mercy. Forward silver declined from Rs. 122-6 on Saturday to Rs. 119 on Monday evening on news of Russian advance when a prominent bull tried to budlee his purchases at one rupee in his favour. The next delivery was then quoted Rs. 118-4, but purchases by another bull pushed up price to Rs. 119-3. Bull syndicate continued buying and despatching stocks away and reports of Calcutta squeeze put up price to Rs. 121 on Tuesday evening. On Wednesday, market opened at Rs. 122 and shot up to Rs. 124 when 2,000 bars were bought causing nervousness among bears. Large turnover of private trading occurred and higher offtake of 370 bars yesterday caused price to harden to Rs. 125-5. The closing quotation is Rs. 124-8 with spot six annas above. A terrific squeeze has been effected by bulls who are still loath to take profit despite high prices and war news.

In the gold market large demand averaging daily 10,000 tolas against Reserve Bank offerings averaging 12,000 tolas caused drying up of stocks. Price for forward has advanced continuously from Rs. 67-4 to Rs. 72-4 to-day, the highest for the week, closing at Rs. 71-14. Spot quoted Rs. 72-8. Market is steady though offtake is reported to be declining.

TREASURY BILLS

Central Government:

Tenders for Rs. 2,00,00,000 of three months' Government of India Treasury Bills were opened on February 6, 1945. Total amount offered was Rs. 7,18,75,000. Tenders at Rs. 99-13-9 per cent were allotted approximately 28 per cent. Total amount accepted was Rs. 2,00,00,000, the average rate of accepted tenders being Re. 0-9-0 per cent per annum.

Tenders for Rs. 2,00,00,000 of three months' Government of India Treasury Bills will be received on February 13, 1945, at Bombay up to 11 a.m. and up to the close of business on February 12, 1945, at other centres. Successful tenderers should make payment on February 16, 1945. Other conditions are as usual.

During the week ended February 2, 1945, Government of India Treasury Bills for Rs. 2,87,00,000, were sold in favour of the Issue Department of the Reserve Bank of India.

Tenders delivered by hand should be presented to the General Manager's Office for Registration and put into the tender box outside his office by the Tenderer or his representative.

Post-war Costs and Prices

The probable costs and prices in the postwar period has begun to exercise the minds of the public in general and the business classes in particular. The progress of the war in Eastern Europe has also served to quicken interest in the problem; and speculation about the future is never deterred by the uncertainties involved. The problem has a disconcertingly wide and unlimited scope. Even in conditions of planned economy and numerous and effective controls, the links between the price levels of different countries are not easily snapped; and currency and price policy in every country has to take account of prices and price trends in other countries. Nevertheless, the uncertainties involved are not a valid ground for not bestowing sufficient forethought on this problem. Nations are differently placed in respect of this, as of so many other, problems. The U.S.A. and Britain might try with more or less success to influence the general trends so as to bring them in greater accord with their own plans and policies. In the case of India, the opposite may be said to be true, inasmuch as we have to reckon with the possibility of our policies being shaped in the interest of others. But neither this danger nor our inability to influence international policies should prevent us from considering beforehand what the structure of costs and prices should be in the years following the war. The need for this is all the greater because of the unanimous acceptance of economic planning as the best policy for the first war period. There are clearly three stages in the discussion of this problem. Firstly we have to be clear in our minds about the social consequences of particular trends in prices within the country and the impact of such trends on our programme of planned development. Secondly, we have to consider the price levels and price trends which we may consider to be the most suited to our internal conditions in relation to our export trades and our foreign trade relations generally. Thirdly, we have to set side by side the policies suggested by the first two stages of such an enquiry alongside the requirements of our longterm planning, the policies of other nations and the possible trends in world prices and world economy as a whole. These three stages are not, of course, clear-cut and there is appreciable overlapping. But the three aspects have, indeed, to be considered separately.

Regarding the problem of prices from a purely national standpoint, one cannot help chafing against the immense harm that wartime inflation has caused, from the point of view of the currency and price policy of the future. It is true that inflation has led to the liquidation of rural indebtedness, the accumulation of savings in the hands of all classes of the population and the building up of large foreign assets. But, as has been said, inflation has queered the pitch for postwar currency policy. The prime requirement for postwar development is an appropriately inflationary policy which will give to the economic life the stimulus of a mild inflation of prices and of profits. Inflation has changed the practical problem from one of effecting inflation to one of contriving comparatively harmless measures of deflation. The deflationary process has to start with the mopping up of redundant currency which has not been roped in by the Government's new borrowings. The next step is to effect a contraction of currency that will affect the price level, bring it down to what may be considered a healthy level, either to maintain thereafter or to be altered according to the plans ahead. In other words, there is a problem of just offsetting the undesired effects of wartime inflation. In the nature of things, this is not the same thing as having a clean slate without the horrid scroll that there is now. We have to take the position as it is. We have to remember that not all the effects of inflation on prices are of the undesirable kind. Since inflation invariably affects the distribution of wealth and income and since the effects are of the mixed kind, our policy in the future has to be so designed as to secure the maximum of the desirable effects and a minimum of the undesirable. It is recognised on all hands that the rise in the price of agricultural products is of the desirable kind. Considering the prolonged period in which agricultural occupations were carried on at near to a loss, it is almost an injustice that the State should have interfered to limit the rise and prevent the agriculturists from having their turn at exploiting the situation. Deflation of prices would certainly tend to aggravate this element of injustice and push the agriculturist back into penury. At the same time, there is no means of varying the pressure of currency policy on the prices of different commodities. If it is indisputable that a lower cut in agricultural prices is desirable than in the prices of manufactured goods, the differentiation has to be effected by other means which a general State control of the price policy of industries can be trusted to provide.

The problem, therefore, resolves itself into one of determining the appropriate reduction in the currency circulation. It will, we trust, be generally agreed that the prewar figure was by all standards much too low. In relation to the national income as well as the per capita income and considering also the low velocity of circulation in a backward agricultural country, the total currency circulation in India was on the small side. A return to the prewar figure of note circulation is neither feasible nor desirable; and our ideas have to be adjusted to a new norm of about Rs. 500 crores. Even this level of circulation could be harmful if the country should fail to achieve before the second year after the signing of peace a substantial increase in production. The problem of postwar prices it should not be forgotten, has been complicated more by the absence of a general level of comparatively free prices than by the persistence of inflation. Inflation has exerted its pressure with more than usual unevenness on the whole range of goods and services. While control has failed to make a watertight compartment of any market, it is not easy for prices to find their level. In overcoming the effects of wartime inflation, therefore, the reduction of the note circulation is only a preliminary step. Big pockets of black money will continue for some time after the war like guerilla bands ready to ambush the plans of the authorities. But the main problem will be to help the revival of an organic costs and price structure without prejudice to the improvement in the position of the agriculturist. This problem cannot be solved unless the emphasis on controls is reduced and State authority takes the form of influential persuasion of producers not to take unfair advantage of temporary shortages. The idea that control implies monopolistic buying by the State of agricultural commodities and dictation to industry as to their production and price policies will call for substantial modification.

The relation which now subsists between costs and prices is of the greatest relevance in this context. And inasmuch as it is related also to the volume of currency, the following table giving the note circulation, the wholesale price index and the cost of living index will be found to be of interest.

RISE IN PRICES AND NOTE CIRCULATION

Wholesale Prices*: Week ended 19th August, 1939=100 (Average of Weekly Figures).

* Source: Office of the Economic Adviser to the Govt. of India. † Labour Gazette, Bombay. ‡ Seven months ended March, 1940.

It will be seen from the above table that the rise in the index figures is by no means commensurate with the increase in the note circulation. The disparity, while it is, no doubt, accounted for by controls, is also due to the fact that a considerable part of this increase in circulation is not exerting any pressure on prices. This circumstance suggests that postwar deflation can be carried on up to a stage without the fear that the adverse consequences of deflation on business activity and prices would be felt with disconcerting quickness. The most distinctive feature of the inflationary phenomenon of the present war period is that there is not only redundant currency, but that there are different types and classes of it. The last of the natural defences against deflation is provided by black money, which will trickle into the general monetary and credit system only slowly. There are large numbers of individuals who have saved up and are holding back their small savings for a more comfortable life during a period of lower prices. The banking system, too, has on this occasion roped in more

A NATION'S CORRESPONDENCE

The reorganisation of India after the War will devolve largely for execution, if not planning, on business houses. And it is impossible to think of National Planning to which the experience of business-men in India does not make the chief contribution.

Letters will suggest and confirm meetings, besides carrying routine correspondence. Minutes of Committees, Draft Schemes and Projects which have to be circulated will need duplicating paper. Titaghur will supply letter-papers in different weights and surfaces and duplicating paper through the best printers in India, whose advice on economical sizes and weights will always ensure the best value.

funds relatively to the total circulation than ever before. All these will help to cushion the effects of a deflationary policy. Besides this disparity there is also the other advantage that the increases in the index figures given in the table above are not too disproportionate. The highest increase is in the cost of living index amounting to 124 percent, the lowest being in raw materials at 74.78. Primary commodities and manufactured articles have both risen by a little over 95 percent. Since wages are generally related to the cost of living with a balance in favour of the worker, it seems valid to assume that the general balance of costs and prices has not been too rudely disturbed by the inflationary developments of the last five years, in spite of the fact that there have been many factors to prevent an even incidence of inflation on prices. It seems reasonable, therefore, to expect that deflation also will tend to effect a uniform reduction in prices.

But, if we consider the probable conditions of demand and supply in the postwar years in terms of groups of commodities, it would appear that such a uniform effect of deflation cannot be obtained, unless special efforts are made to balance supply and demand. It would be useful at this stage to consider the factors involved. On the side of supply, the principal factor to take into account is the disappearance of those obstacles to increased production which are attributable to the war. To the extent that producers are sure of a sudden expansion of demand in the first flush of peace, they will increase their production programmes. And if imports of spares and machinery and supplies of raw materials are available, an expansionist programme in existing industries may be counted on. On the demand side, the main question is whether the disappearance of army demand will be made up by the expansion of ordinary civilian demand. We are, for our part, inclined to the view that to a large extent it will be, in the initial years of the postwar period and that, if planning will not prove an idle dream, it will tend to expand thereafter. The diffusion of purchasing power during the war period and the scale on which purchases have had to be deferred are themselves sufficient to ensure a larger demand for consumer's goods of various kinds. We have also to take account of the fact that large numbers of people, who have found employment for the first time during this war, have now been habituated to higher standards of living and since they have also effected savings, they will continue to swell the demand. Some of the conventional necessaries and quality foods like milk, ghee and vegetables will doubtless call for significant increases in supply.

It will be seen from this that the currency and price policy of the future cannot succeed, unless it is supplemented by policies directed to overcoming possible shortages of particular lines. A general deflation to the point at which it will have no serious restrictive effects on business a readiness to promote the revival of an organic price structure by lightening the emphasis on controls, and plans to overcome shortages where they may be reasonably apprehended—these are the essential features of a suitable currency and price policy for the post war period, considered from the point of view of the position within the country. A study in relation to conditions abroad will be attempted in the next issue.

Cartels and Cases

More than legal issues are involved in the approach to the problem of cartels. Of German origin, cartels remain suspect for various reasons and last week's attempt by the U. S. Department of Justice to force the problem into the open reveals the nature of the differences between the British and American view of cartels. The immediate reactions leading to the suspension of business by the diamond interests concerned are not favourable to the U.S.A. It is to be remembered that both Allied and neutral concerns are involved in the prosecution but having regard to the precise and skilful side-stepping of the real issues in connection with an earlier attempt made against the I.C.I. to examine the ramifications of its own patent arrangements it will be generally agreed that prosecution would not be a satisfactory solution since the charge of control of prices and distribution is indirectly a charge against the British Government's own system of control. The diamond producers certainly raised their output for war purposes. They accepted control of gems as well as industrial diamonds, reorganised the cutting industry for war requirements, and certainly have indicated interest in the revival of Antwerp's cutting industry.

The request for an injunction against the trade agreement made of the New York court is a threat to others besides diamond-mines. The defence that may be entered does not concern us greatly; for it is really a question of what trade practices are fair and what are unfair, what is the degree of combination that can be tolerated, and why. The U. S. Department of Justice probably harks back to the T.N.E.C.'s activity against trusts at home. To justify its step probably counts upon increased production in Brazil to offset a threatened shortage of imports, and also counts upon the neutrality of the British and Belgian Governments in the matter. The prosecution rests entirely upon the selling agency arrangements in force. They were neither new nor unusual, and they had more than the sanction of custom as the South African and British Governments were interested in the schemes for the restriction of output, the revival of mining, with due emphasis latterly upon production of industrial diamonds for both tools and instruments, and the acceptance of improved labour standards in the mining industry. While the prosecution reveals the intimacy of relations between British and Belgian enterprise it raises immediately the question whether the Congo's part in the war has been appreciated at all.

Though comment would be inexpedient it is useful to remember that the Department's dealings with major U.S. oil companies in relation to its own reserves. The Anglo-American oil Agreement based on a proper appreciation of the U. S. companies' own case for retention of arrangements, essentially divergent from the doctrine of total freedom, was also a significant failure to make the Department's opinion that of the Administration. Declarations against cartels of any kind have been fairly common in the past year in both Britain and America but it is well to insist that Britain, in spite of an investigation into trade combinations refused to enact anti-trust legislation and the diamond producers' activities over a wide sphere cannot be described as extra-legal. There is however the prosecution reflecting U. S. opinion as to the necessity for curbing combinations in restraint of trade.

If we take the preliminary agreement as to rubber as a guide to future policy it is to be assumed that the U. S. view of producers' agreements has undergone real change. Once the consumer is assured of defence by governments which supervise agreements as to supplies or prices there can be no objection to arrangements which are a by-product of rationalisation. It is not impossible to regard the various trade federations in Britain as partaking of the nature of previously existing cartels. The Import Duties Advisory Committee has certainly encouraged the growth of associations in defence of trade interests just as the U. S. tariff fostered the growth of trusts. The actual failure of both the Clayton and Sherman Acts should be regarded as a warning against undue interference with business organisation in the modern world. Though railroad empires and utility empires have been broken during the New Deal, the NIRA assisted in the creation of new industrial agreements that regarded self-defence against militant Labour as only one of their objects. For total effort as for rapid recovery combination has become indispensable, and there is more than the sanction of custom, since concentration of the new style has entailed the adoption of rules as to output, margins and export quotas and all but the smallest producers had to organise.

While suspicion of Big Business at home always conditions the U. S. Government's view of cartels and rings the main argument may be based on the theory of equal access to raw materials. If diamonds hardly fall under the rubric at any time the general case against restriction agreements particularly those commodities which are privately regulated is part of the case against cartels. But so far only particular proceedings have been designated as opposed to public policy; there has been no straight case purely on the ground that cartels are out of place in a world of plenty. The point requires special notice for producer's agreements in the case of many commodities have been frequently stretched to limit increases in prices and buffer pools have been designed to limit fluctuations in prices mainly to the advantage of foreign consumers. Where native producers have suffered and foreign consumers have gained, as in the case of the Cocoa Ring, it is suggestive that cartels have not been denounced.

Measures of control, for instance, in regard to exchange of patents, registration of agreements relating to export and domestic prices and the prevention of export dumping have certainly much justification and advocates of the big, vertically integrated business, have not found it hard to accept the view that supervision is essential to prevent a charge as to sharp practice. Advocates of free competition have generally overlooked the virtues of combination and the genuine if gradual tendency for all manufacturing business to cooperate on an international plane. Where imports are immediately necessary private negotiation may be as successful as official missions and even wartime experience of purchasing missions does not detract from the argument that the leading examples of cartels are instruments of technical progress. There is nothing to suggest that powerful foreign trusts can hold up industrialisation or secure unusual privileges. Though the present Indian view of cartels is primarily shaped by experience of conference agreements in relation to the shipping industry, it is useful to insist that cartelised foreign business has secured the cooperation of Indian capital for locally organised companies. Many of the abuses incident to cartels may be expected to vanish since wartime control must have procured for Authority much knowledge relating to business.

Editorial Notes

Aid to Russia

To the reports that important U.S. banking groups were negotiating last year with Soviet representatives about the grant of large credits for reconstruction is to be added the subsequent report that arrangements have been made with the U.S.A. for billions of dollars' worth of heavy machinery and engineering service and equipment. America is said to be interested greatly in Russian timber resources in order to make good losses at home. An order for an entire fleet of ships for Russia has been mentioned in connection with reported negotiation of a U. S. ship-builder with Russian representatives. Though foreign assistance in the planning period was deliberately restricted in relation to available exports, it is now assumed that the U.S.S.R wants to develop Soviet Asia with U.S. aid. It is of course necessary to relate these plans to the scale of assistance available from the World Bank when that is set up but present Russian interest in getting assurances for Siberian development schemes suggests that Russia is not pinning her faith entirely to the proposed bank but wants to get the usual trade and credit treaty in place of what may be available from a mixed international board which would ordinarily limit assistance in relation to its own resources. What is apparent is that instead of relying on reparations the U.S.S.R. is anxious to borrow from others. Recognition of the U.S.S.R. in 1934 led to some questions as to the debts of Czarist Russia, but the memory of previous default has not prevented the more recent negotiations. How the negotiations would progress if lending powers are taken away from the Commerce Department to bring all such negotiations within the Senate's powers of review is not the only question that requires answer. The more important issue is the position of the U.S.A. as an importer. A Reuter message stated the U.S.A. would enter the picture as a consumer of Russian goods. This will certainly encourage all those who think that the U. S. A. as a creditor would take payment in goods.

No mention has been made of Lend-Lease assistance given during the war, but a more recent message dealing with the Russians desire for financing orders of essential plant from Britain has suggested that during the present talks with Marshal Stalin President Roosevelt may use his powers in connection with Lend-Lease to define the conditions of U.S. assistance. The agreement of June 1942 was of the usual kind ensuring return of unused equipment and reciprocal assistance. It made no mention of long-term credits which the U.S.S.R. sought in Britain unsuccessfully according to one report which put the total value at £750 millions. Britain's inability to meet the request in the form it was made is said to create an opportunity for the U.S.A. Obviously the 20 year credits for exports of capital goods would entail peace time borrowing and Britain's refusal is explicable on the ground that her war debts will have to be met first. The extension of Lend-Lease would require Congressional approval of the President's own opinion as to U.S. responsibility for reconstruction in Russia. If Lend-Lease outlives the war the British claim for a loan that would help to deal with her own import surplus and support the stabilisation of the dollar-sterling rate after the war must be strengthened. Britain offered assistance on a moderate scale to Russia which has to depend upon U. S. help. That it will be given, provided the foreign policy of the three Powers is the same, may be inferred. In the second period of the Plan the U.S.S.R. relied on gold exports to meet external obligations. It is obvious that Russia does not count upon gold as an important export item for some time. One result of the agreement may be that the U.S. Treasury would be able to keep the price of gold at 35 dollars an ounce and exchange stability could be ensured.

First Convoy

The recapture of Wanting led to the long expected junction of the Ledo and Burma roads. A road to supplement the new pipeline was regarded as the minimum requirement of Free China and the Allies' success in giving it has led to the naming of the road as the Stilwell highway. The arrival of the first convoy at Kunming on Sunday followed various forecasts as to the amount of essential supplies that China would get from her allies. The Road was declared open on January 23, and Gen. Pick was chosen to lead the first convoy of 113 vehicles which took 24 days for the trip. Actually allowing for halts journey appears to have taken 12 days only. The reopening of the road means that the back door Free China has been secured but the more important route, the Haiphong-Kunming railway is out of the Allies' control. Indo-China is lost and it is not only the French who want to get at the Colony. Attacks on Camranh Bay and Saigon have been reported so that the hope of reopening a second route into China will strengthen after the reopening of the first route. Prevention of the abuses rampant on the old Road has been promised after the Burma Road came into Allied control. The Chinese leader gave an assurance as to the volume and kind of supplies that would be taken for China's benefit. There have been lately no messages relating to inflation from Chungking but Army rations have been increased and pay has been raised for Chinese troops. Evidently there is a hope that essential goods brought from abroad would offset scarcity and reduce the price-level in China. The Chinese President gave no assurance as to civilian requirements but once the Army is able to get what it wants urgently increased war production in China would help the Chinese to get out of the mess that has been created by paper currency. The major consequences belong to the future, but Japanese failure to keep the road, for which there has been a struggle extending over two years, is certainly regarded as the chief result of Allied success in North Burma. There may be exchange of silk, tungsten, autonomy and tin from China and the Allies may be able to get rid of the shortage that has been manifest. Though the Burma Road led to Rangoon by way of Lashio in 1938 today it is a part of the overland route from India to China. Trans-frontier trade may make Bhamo in the future as important a mart as Peshawar where Central Asia meets India. Restoration of the wrecked railway built to help the Road might well open up possibilities of trade by land with China. The delay in taking Rangoon may influence the growth of trade across the N. E. frontier which compared with that on the N.W. frontier has been negligible.

Election in Canada

The crisis over conscription in December led to a vote of confidence in which many of Quebec's Liberals deserted the Ministry of Mr. Mackenzie King. The disturbances did not affect the position of Government which had only to find a seat in Ontario for General McNaughton. Both CCF and conservative candidates were set up against the new Defence Minister and the by election was held in spite of Mr. King's fear that defeat might spoil the Liberals' chances after two terms of office.

In the 1942 election which confirmed the Liberals in power the major issue was overseas conscription. Many changes have taken place; among them the liberation of France must take a place. Cardinal Villeneuve's visit to Europe and his political views may conceivably modify Quebec's whole attitude. Essentially the general election is meant to deal with the problem arising from the Liberals' failure to hold Quebec where M. du Plessis is back in office. There is the earlier problem of the C.C.F. ascendancy in the provinces for which Mr. King had been looking. The new strength of opposition parties like the split in Quebec creates a problem for the Dominion as distinct from the Provincial governments. Though foreign policy is not an issue and

the Liberals' anxiety to keep in with the U.S.A. is not at going to hurt the party as it did in Sir Wilfred Laurier's time the Canadian Liberals have to reckon with the advent of opposition governments in the Provinces of Alberta, Ontario and Quebec. In the U.S.A. the supremacy of the Republicans in several states causes no inconvenience to the federal government whereas in Canada (in spite of the referendum taken as to conscription) the Provinces are still political entities that can interfere with the government. It is very likely that Provincial rights submerged after the Roweli Sirols commission reported might become the principal issue. The Senate hardly counts; the House of Commons which is directly elected for 5 years had a very substantial Liberal majority in 1940 and after. After the French Canadian ministers resigned, the Liberal majority in the Commons has been steadily reduced and December's crisis revealed the differences in Quebec where the French developed independent views again as to the necessity for conscription. Col. Ralston's views were accepted by Mr. King only after he resigned and the need for reinforcing the expeditionary force by special steps was accepted by the House of Commons. In 1940 after Ontario attempted to censure Mr. King's conduct of Canada's war, the Liberal party triumphed in the general election. Possibly something of that kind is hoped for though the Conservatives did not attempt to overthrow the Ministry in December for having respected Quebec's susceptibilities too long. If the usual comparison with general elections in other Dominions cannot be confidently drawn, it is reasonably certain that the Government's encouragement of farmers by high prices for exports will be cited in its favour. Whether Mr. M. J. Coldwell's party can take the stage as a national party against the older Liberal and Conservative parties is the immediate issue arising from Mr. King's probable decision to hold an election—the speech on prorogation of Canada's parliament did not indicate that a general election was on the way.

Production and Imports

Cutbacks and adjustments leading to a fall in production were common to the U.S.A. and Canada where the total volume of industrial production fell slightly after the last summer. This was apparent in manufacturing industry rather than food production or mining where output in 1944 generally tended to be higher than in 1943. The fall in the total volume of industrial production arose only in part from manpower difficulties or shortage of materials. A fall in effective demand played a part in reducing the production of iron and steel in North America. The fluctuations in industrial output from month to month are not limited to India to judge by figures appearing in the League of Nations bulletin of statistics. Industrial production in Latin America did not expand in 1943-44 as expected even in the mining industry and the fall in imports did not produce any remarkable changes either in the volume or value of exports. Argentine meat production fell away in 1944 as compared with the previous year while that of the U.S.A. increased steadily. The recovery in U.S. coal output certainly appears to be the leading feature of 1943-44 during a period in which Britain's coal output fell off. America successfully enhanced output. Further, petroleum production in the U.S.A. kept step with the rise in coal output. The increase under other minerals was inconsiderable and actually the downtrend under zinc, copper and lead marked the curtailment of war demand in the USA A slight fall under the figures as to electric energy consumed during 1944 marks off the changed conditions in the U.S.A. and Canada. The movement of most index numbers indicates that the rapid industrial expansion of 1943 had been followed by stagnation at a high level in the USA. The same tendency may be noted as operating in India since production outside the textile field did not show the rate of growth desired. This may conceivably strengthen the case for imports of certain special goods—steel, cement and cotton cloth have been mentioned lately. The tendency towards increased imports in 1943-44 was not limited to Mexico. There was an increase in Canada's imports as also those of New Zealand. The question of relaxing import control in approved cases has been raised mainly in connection with the Hydari Mission's visit to Britain but the connection between the proposed export trade drive in Britain and India's immediate needs requires special investigation like the examination of possibilities in regard to import of capital goods for supplementing production capacity.

Tinplate in India

The tinplate industry of India has been described lately in an authoritative contribution to the Dictionary of industrial resources of India. Tinplate and tinned sheets are steel plates or sheets merely coated with a veneer of tin. The lack of an indigenous industry caused much difficulty during the last war when imports were almost entirely cut off. When the Indian steel industry developed the Burmah Oil Company and the Tata Iron and Steel Company sponsored jointly a company for the manufacture of the tinplate industry at Golmuri, the latter company being managed by Shaw Wallace & Company. At Golmuri the manufacture began in December 1922 and the whole plant was operating a year later. Skilled workers were brought from South Wales to train local labour. By 1926 it was established that Indian labour was hardy and adaptable, also that a greater output than that for which the plant was designed could be secured. The patience and resources of the promoters averted a crisis and the tariff policy came to the help of the new industry. During a decade and more the industry's progress doubled the original estimate of 28,000 tons planned for. The Golmuri

BOARD OF DIRECTORS.

The Directors have much pleasure in submitting to the Shareholders the First Balance Sheet and the Profit and Loss Account of the Hindustan Commercial, Bank Ltd.. duly audited by the Auditors of the Bank, for the period ending 31st December, 1944.

During the period under review the Bank opened 46 branches, sub-branches and pay offices. Due to the abnormal circumstances and in difficulties in securing premises some of the important branches, like Bombay, Ahmedabad, etc., were opened in the months of October and November, 1944, and the average period for which all offices have worked is approximately seven months.

The gross earnings for the period under review amount to Rs. 19,72,338-1-10. After providing for interest on deposits and payment of all working expenses including also about Rs. 1,31,000 being the expenses incurred in opening offices of the Bank during the period, the net profit amounts to Rs. 4,69,860-1-7, which the Directors recommend to be appropriated as follows:—

	Rs.	A.	P.
1. Towards writing off the entire Preliminary Expenses of the Bank .., ..	26,099	6	0
2. Towards writing off the entire Brokerage on Bank's shares	67,484	0	0
3. Towards Reserve Fund	1,00,000	0	0
4. Towards Sinking Fund for Building ..	30,000	0	0
5. Towards payment of bonus to staff ..	35,000	0	0
6. Balance to be carried forward to the next year's account	2,11,276	11	7
Total Rs. ..	4,69,860	1	7

The Bank has completed arrangements for its foreign exchange business with the National City Bank of New York and is fully equipped to transact all types of banking business.

The Directors extend their grateful thanks to the Bank's clients and members of the Local Advisory Boards at various centres for a very keen interest taken by them in the development and progress of the Bank's business.

The Directors also place on record their appreciation of the services rendered by the Managing Director, Lala Kishen Chand Puri, and other members of the staff at the Head Office and various branches for their strenuous efforts and loyal services.

In accordance with Article 107 of the Articles of Association of the Bank three Directors, namely—

1. Sir Padampat Singhania, Kt., M.L.A.
2. Sir Chunilal B. Mehta, and
3. Lala Gurusharan Lal.

retire by rotation and being eligible offer themselves for re-election.

The Shareholders are requested to appoint Auditors for the year 1945 and fix their remuneration.

PADAMPAT SINGHANIA,
Chairman.

Cawnpore,
The 20th January, 1945.

REPORT

The Bank is licensed by the Reserve Bank of India to deal in foreign exchanges in the Sterling area.

The liquidity of the fund is well maintained, as more than 64 per cent of time and demand liabilities are held in cash and unencumbered investments most of which are in short dated Government of India and Provincial Loans.

The Directors express their gratitude to the Shareholders and the numerous constituents for their support in the growth of the institution and also to the members of the Local Board for their valuable advice. They also record their appreciation of the loyal and efficient services rendered by the staff at Head Office and Branches.

Under the provisions of the Articles of Association of the Company Mr. K. P. Goenka, the Hon'ble Sir B. P. Singh Roy, K.C.I.E., and Mr. B. L. Jalan retire from the Board of Directors but being eligible offer themselves for re-election.

The Auditors, Messrs. K. N. Gutgutia & Co., also retire, but offer themselves for re-appointment.

Owing to their absence from Calcutta the Balance Sheet and Accounts could not be signed by Messrs. B. Kumar Birla and N. D. Bangur.

K. P. GOENKA,
Chairman.

Dated, Calcutta, the 24th January, 1945.

31ST DECEMBER, 1944.

ANNOUNCEMENT for ALUMINIUMWARE

LOVERS OF ALUMINIUM

To serve the best interests (1) of the newly started Aluminium Production Industry, (2) of the Utensils manufacturing concerns and (3) of the Consumer public, a scheme has been formulated by the Civil Supplies Department, in co-operation with the main Aluminium Industrial Interests, whereby the established manufacturers have agreed to obtain Aluminium controlled by the Government for Civil Supplies at an average price and in stated quantities according to their respective quotas every month to make into Cooking Utensils and to sell these from March onward with substantially reduced prices which will be stamped on them as in the case of Controlled Brassware.

About Ten Lakhs pounds of such cooking utensils will come into the market every month and will be sold at uniform stamped prices everywhere in India.

The possibility of a scheme like this was foreshadowed some months ago. Please wait for the next announcement to be published shortly with determined prices.

This modern wonder metal—ALUMINIUM—of unique importance has been made available in enormous quantities to win the War: it will be available now in similar quantities to win the Peace. Undoubtedly it is proved to be the Metal for the world to live in harmony and peace.

JEEWANLAL (1929) LIMITED

H. K. SHAH
Managing Director.

Manufacturers and Distributers of the famous 'CROWN BRAND' Utensils.

Calcutta: Bombay: Madras: Rajahmundry: Delhi: Aden: Rangoon.

works produced in 1939 ninty percent of the tinplate consumed in India. An output of 60,000 tons has been mentioned since in a documentary concerned with the all-purpose kerosene tin. During the war new sizes, gauges and qualities have been produced.

After the loss of Malaya the shortage of tin enforced the use of a mixture of lead and tin for terneplate and also the production of blackplate. The Tata Iron & Steel Company supplies steel, electricity and water to the Golmuri Works. The company employs 3,500 men who are housed comfortably and looked after in every way. Steel sheet bar of the right grade is locally available and Chinese tin has been latterly used. Specialised stores wanted for manufacture are palm oil, zinc chloride etc. and import difficulties have been encountered. Possibly they will disappear after the war. Sulphuric acid requirements are met from the Company's own acid plant. Rolling, preparation of the sheet, and coating with tin are the three parts of the manufacturing process. Thickness of plate and veneer alike varies according to the use to which it is put. The tin is laid on by automatic machines. The bulk of the demand is for petrol and kerosene tins, but large quantities are supplied for packing butter, biscuits, cigarettes etc. in tins. The Golmuri Works produce almost every size, gauge and quality for which there is demand in India. The only qualities not produced are the specialities known as taggers and hand-dipped sheets. Canning progress ensures an expanding market for tinplate during and after the war. Singapore is a likely market as also the Persian Gulf which will take oil containers. But the major consumers will be the oil companies though ghee and vegetable oils are also likely to call for increased supplies of tinplate. It is added that the advent of the Metal Box Company has led to the popularising of metal containers for a very wide range of products. Improved technique is foreseen but the main process is likely to remain the same so far as Golmuri is concerned.

Tax Relief vs. Allowance

The claim of the I.C.S. for a war allowance similar to that given by the Central and Provincial Governments to other Government servants arose from the Punjab Association's demand for a special scale of children's allowances. It is now known that Civil Servants in the Punjab were not alone in asking for an increase in their emoluments. The proposal has been described as belated while arguments advanced against the proposal are the omission of the I.C.S. from the emergency cut in pay imposed during the Depression and the arrest of the rise in prices. The lack of success of an official mission to make representations on behalf of the I.C.S. in the Punjab has been assumed in view of the Provincial Government's decision to refer the matter to the Central Government. The war allowance as distinct from the dearness allowance came into the picture very late. As a cost of living bonus it appears unexceptionable but it must be assumed that it is a gift that can be withheld or suspended for Government servants can never organise for collective bargaining and the I.C.S. should not act as a trade union even if allowed. Whether a claim for an allowance would lie must be determined by the Secretary of State. Discrimination in favour of earned incomes and a proper scale of refund of income-tax deduction at source as regards the number of minor children supported would certainly go far towards meeting the demand for war allowance. Reform in the matter of direct taxation especially after the increase in surcharge would satisfy the average citizen's claim for some rebates in addition to that provided at present. Prepayment must modify the present rule as to uniformity and if others besides Civil Servants get the benefit, the changes in direct taxation should appear unexceptionable.

Clive Street Gossip

I have been spending the last seven weeks in South Indian villages; and my readers may wonder why this column did not, as has been the custom, constitute a diary of my travels and observations in the South. The plain fact of the matter is that my mind was being subjected to riotous impressions which, I thought, I could organise and assimilate after, so to say, chewing the cud. The various aspects of planning for India have, for many months, been constantly in my thoughts; and, from time to time, some new aspect or other has been engaging my attention and study. As the weeks went, the Bombay Plan was announced, and a big question mark was raised by the public in general with regard to the colossal financial outlay suggested. The proposition which interested me greatly at that stage was that, however ambitious might be the schemes connected with comprehensive planning for India the raising of the finance required presented insuperable problems. It may now be said that all the parties, including the Government and the general public, are buoyed up by the assurance that it is not on the financial rock, that the ship of planning would be wrecked. Having, so to say, disposed of the bogey of finance, the next question which had been exciting my concern was the human element. "Indian Finance" has had discussions in its columns of the relationship of the human factor with the administrative machinery that will be needed to ensure the success of planning. There is another aspect of the human element which is of even more significance. What about the masses of the population and the raising of the standard of living which is declared and proclaimed to be the objective of all planning? In my movements in South India I kept posing this question again and again and in diverse forms. The reflections evoked by what I saw and noticed were, in the main, sad—I use the word "sad" both in the original sense of 'serious' and in the present sense of 'sorrowful'. In simple terms, I may state as conclusion that the objective of planning, which is raising the standard of living of the masses, cannot be achieved, unless and until there is a revolutionary change in the agencies through which schemes connected with planning are to be executed in the districts and in the villages, and unless there is a revolutionary change in the character and attitude of the masses.

* * * *

As I have believed and repeatedly stressed, planning is inevitable in India. A variety of schemes connected with planning are bound to be executed in the post-war years. The tempo of planning is such that no power on earth can arrest this onward march. It follows that colossal sums will be spent year after year on various projects, many of which will centre around and vitally concern rural India. The Second Report of the Reconstruction Committee estimates the annual outlay on planning at Rs. 500 crores. The cessation of war will witness one of the biggest booms in building in this country, as in many other countries. The amount of money that will be absorbed by extension and repairs for existing buildings and by new buildings may be of the order of Rs. 200 crores. Private industry and business may take another Rs. 200 crores per annum. Then there are the Indian States who are also busy preparing plans for their respective areas and peoples. Taken all in all, planning as such may well mean an annual outlay of Rs. 1,000 crores. Allowing for expenditure that will be incurred in connection with central services and in connection with industrial ventures, it may, in broad terms, be said that the amount spent in each district of India may be of the order of Rs. 3 crores per year. If this Rs. 3 crores is to be spent according to present methods and through present agencies, graft and corruption would take away a moiety of the total amount. That is to say, bribes paid to officials and fabulous margins extracted by contractors will eat away the major portion of the Rs. 3 crores disbursed on account of planning. The actual benefit to the peoples in whose interest planning is being designed may not be as much as 4 annas in the rupee.

* * * *

The first problem therefore is how to ensure the integration of the personnel in the administrative machinery and how to secure the execution of the schemes through agencies other than the old bandicoots? The next question is whether the people for whom all this is being done are of the calibre to derive and retain the benefits that are expected to flow from planning operations. There is a Sanskrit saying that, when you make a gift, you must make sure that the recipient is worthy of the gift. Even more important is it to bear in mind that the beneficiaries of planning are worthy of the benefits of planning. The village folk as we see them today are so passive, indifferent, unconcerned about anything and everything. They seem to be suffering from an inertia which cannot be removed. They are sunk in sloth. Grinding poverty and endless days without hope of any kind have killed in them all sense of vitality and urge and zest for joyful living. Planning in its application to the villages cannot attain success unless the masses in general know and appreciate how to co-operate in a successful working of these schemes. Such co-operation has to be active, energetic, vital, wholehearted and intelligent. The people as they are today cannot render this kind of co-operation. What are the steps to be taken to ensure a vital and effective interest on the part of the masses in schemes designed for the masses? —this is the crucial question which will determine whether all the grandiose objectives of planning are or are not to be successfully achieved.

* * * *

Let us not forget that the test of planning will not be whether more looms and spindles are added to our cotton mills or more amenities are provided for industrial labour and urban populations. The real test for planning is whether the lives of the millions inhabitating the seven lakhs of villages in India have been made to conform to reasonable standards of life, health and comfort. So far as our industrialists are concerned and so far as our urban populations are concerned, they have learnt apt lessons in

propaganda and education. They can mostly succeed in publicising their wants and securing redress. Our industrialists know how to command the capital market, how to humour the Government and how to establish relations with foreign compeers or rivals. Our cities and towns have already tasted what modern amenities are; and their appetite grows on what it feeds on. They may be depended upon to know what further amenities are possible and how to secure them. The millions in the villages are truly voiceless. Dumb millions is an accurate, though hackneyed, phrase. The working of social and economic plans is therefore to be studied first and foremost from the point of view of the dumb millions.

* * * *

The Gandhian Plan, it is claimed, is devised in the interests of the dumb millions. The advocates of the Gandhian Plan as well as those of the People's Plan charge the authors of the Bombay Plan with capitalist and industrial bias. The truth of the matter is that wisdom and prudence demands the successful examination and comparison of all these plans, the rejection of every scheme that is unwholesome and the assimilation and getting together of all the features that are wholesome in each of the plans. The plan for which Mr. J. R. D. Tata and his colleagues are responsible is useful for the clear statement of the objectives and for the targets to be aimed at. The plans prepared under official auspices will be useful as providing a detailed blue print which will provide the best basis for discussion and study of practical schemes for various aspects of our national economy. The Gandhian Plan will have the supreme virtue of securing for the seven lakhs of villages and their inhabitants their rightful place in All-India planning. By such a comparative study it will be necessary to arrive at what may be called the Master Plan for India. Such study and consideration will take some time; and the interval between now and the end of the war could most profitably be utilised for such consideration.

Meantime, this interval must also be efficiently and usefully employed for taking those measures which will ensure that every rupee spent in every village for planning gives sixteen annas value and that the masses for whom all this money is being spent really benefit to the full extent of the sixteen annas. I have today merely stated the headlines of the problem as I have formulated it from my observations of rural conditions in South India. In subsequent issues I hope to deal in detail with each of these three aspects: (1) co-operation of the masses for the success of planning; (2) agencies through which planning is to be executed and (3) concrete schemes to ensure satisfactory response from the people and satisfactory functioning of these agencies.

"EAVESDROPPER".

Hindustan Commercial Bank Limited

The very satisfactory figures contained in the statutory report sustained the belief that the Hindustan Commercial Bank would even in its first year make the progress to be expected of an institution planned on a large scale. The statements in the Directors' report relating to the opening of 46 branches, sub-branches and pay-offices, and their average period of working, viz., seven months, and the completion of arrangements for transacting all types of banking business are of great importance in relation to the profit returned. The gross profit for the period ended December 31 was Rs. 19,72,336-1-10 and the net profit after allowing for all expenses was Rs. 4,69,860-1-7. Of this sum Rs. 1 lakh is assigned to Reserve Fund and preliminary expenses including brokerage are wholly written off to leave a sum of Rs. 2,11,276-11-7 to be carried forward to the current year's account. Total deposits amount to over Rs. 9 crores and the beginning made as regards Bills, appears notable. The cash balances totalling Rs. 281.84 lakhs in proportion to Deposits (Rs. 9 crores) are as high as may be desired. That Advances exceed Investments by a substantial margin (Rs. 435 lakhs as against Rs. 251.54 lakhs) should be regarded as a significant feature in this case. If the distribution presents a conventional appearance, the ratio of Advances to working capital is commendably high. Though net profit, subject to provision for taxation, may not appear large the first year has witnessed a substantial increase under Deposits and the branch expansion has brought about an increase under Advances. The advantages of large capital for new, jointstock stocks are illustrated again in the balance-sheet since the expansion outside the United Provinces has been determined by the possession of a paid-up capital of Rs. 125 lakhs. While a bland uniformity marks off bank results for 1944, the Hindustan Commercial Bank's ability to put its natural advantages to good use has been demonstrated to good effect. The Directors in recording satisfaction with the progress have expressed appreciation of the services of Lala Kishenchand Puri, the Managing Director and the Bank's staff.

Olympus

(FROM OUR CORRESPONDENT)

NEW DELHI, Feb. 5.

The Central Assembly budget session starting on Thursday is momentous for several reasons. Not because the Railway and General Budgets threaten further burdens. The big question now is about the prospects of the united opposition front, which was maintained during the autumn session. The bigger and larger issue is of course relating to the Opposition's attitude to the budget this time. It is too early to forecast the shape of things to come—the real battle will be when the budget is introduced. And the circumstances now are also peculiar. Despite Nawabzada Liaquat Ali Khan's statement and Mr. Jinnah's attitude the facts are that the Desai-Nawabzada discussions did take place, Mr. Bhulabhai Desai did see the Viceroy on January 20 and the possibility of the formation of an interim government at the Centre was discussed. It is only when discussing the shape of this compromise, specially the preliminary conditions, that the fur begins to fly. A cryptic report from Lahore that a Punjab Minister, who recently met the Viceroy, had heard from Lord Wavell that within 10 days, if not a week, a startling political announcement was expected from Delhi, has only further puzzled the situation, though little importance is attached to this report of an announcement within "ten days, if not a week". There is a view all the same that before the budget is presented something will be known of the reactions of the Viceroy and the War Cabinet to Desai's efforts.

* * *

The Assembly session is scheduled to last 36 sittings, of which 30 will transact official business. There are six official and 13 non-official bills pending before the Assembly. Seven new non-official bills have been set down for introduction on February 14, the first non-official day for Bills. The number of adjournment motions so far tabled shows a considerable decrease from that on previous occasions. Mr. K. G. Gupta has tabled three adjournment motions, one seeking to raise a debate on the Government's "failure" to prevent road accidents due to military traffic, specially in Calcutta. The second seeks to discuss the Government's "failure" to supply yarn to the handloom weavers of various provinces, including 50,000 weavers in Bankura and other districts in Bengal while the third is to discuss the Government's "failure" to prevent "the use of Indian troops in Greece to suppress the freedom movement started by E. L. A. S. in Greece." The questions list covers a wide range of subjects and the question hours are bound to be breezy. On the opening day the Foreign Secretary, the Railway Member and the Supply Member have to answer a barrage of questions. The grievances of civilian travellers in trains these days have been fully brought out by a resolution demanding that half the total first class and second class accommodation and two-thirds of the total inter and third class in all mail, express and passenger trains should be reserved for civilians. Mr. Ram Ratan Gupta has put an interesting question to the Commonwealth Relations Member asking him whether he said at Nagpur that he was willing to resign the membership of the Viceroy's Executive Council the moment Congress came into office. Another question put by the same member to the overseas Member asks whether he characterized the Atlantic Charter as humbug and whether it was the opinion in his individual capacity or as member of the Executive Council and whether it is the opinion of the Government to which he belongs.

* *

Though there was an ominous sentence in Lord Listowell's speech on the second reading of the India (Estate Duty) Bill in the House of Lords—the Government of India, he said, would like to introduce a Bill imposing the new duties not later than March, as otherwise there will be a delay in the collection of the tax—it is certain that the proposed Estate Duty Bill is not to be enacted by the Central Assembly during the ensuing budget session. The draft bill is not yet ready. What should be the minimum value of property other than agricultural on which the duty is to be imposed has not been decided. Nor has the government fixed the basis of assessment. The draft Bill, it is gathered, will be introduced during the budget session and that the government will move for its circulation to elicit public opinion. A select committee may be appointed during the autumn session and the final reading taken up during next year's budget session. Several months will be needed thereafter to set up the administrative machinery to enumerate and assess property. It may thus be two years before the Bill becomes effective as a taxation measure.

* * *

As regards the duty itself, the principle underlying it is not disputed, but opinion here is that the proposal of levying the estate duty being very far-reaching, it should form part of only a national plan in which extra taxation and public expenditure are integrated. The essential preliminary to bringing the proposed duty into force is a change in the personal law of Hindus and Muslims by making probates and letters of administration compulsory. The views of political and commercial quarters in this country about the present government are well-known. According to them giving this government the right to levy this much-yielding tax is only like giving a profligate mahant further funds. Again applying the canons of taxation to the proposed measure certain fundamentals have to be considered. When Sir Jeremy Raisman mooted the proposals in his budget speech last year he stated that the Centre would collect the duty and distribute it among the provinces. But the question asked is what the basis of distribution will be. The proposed estate duty would, for instance, get substantial sums from urban property in Bombay and very much less from the agricultural Punjab. Is it intended that Bombay be taxed to finance the Punjab's development? Equity and fair play, it is felt here, require that all the provinces should be asked to levy estate duty on agricultural lands simultaneously with the imposition by the Centre of such duty on property other than agricultural. The proceeds from both the Central and provincial duties should then be pooled and a fair distribution based on the yield in the provinces and their needs arranged. The proposal merely to promote Central legislation is thus lopsided.

*

Proposals relating to the setting up of the Labour Investigation Committee to collect necessary data for drawing up a social security scheme for Indian labour, the reorganisation of the Indian Statistical Institute of Calcutta as recommended by the Economic Adviser to the Government of India, better geological survey to meet the needs of post-war industrial development, more staff to work out the post-war educational plan, continuance of grants-in-aid to certain cottage industries, further capital expenditure on the telecommunications and improvement of storage facilities for food grains were approved by the Standing Finance Committee which met here last week. The proposal to set up a Labour Commissioner's organization at an annual recurring expenditure of Rs. 1,70,000 and the setting

Bombay, February 6.

In his valedictory speech to the Indian Merchants' Chamber at the 37th Annual General meeting last week, Mr. Pranlal Devkaran Nanjee, the outgoing President, made a forceful plea for settling the question of Britain's sterling debt to India. Among other things, he also appealed to Sir H. P. Mody to go ahead with the founding of an Indian Banks' Association, without being deterred by the unhelpful attitude of some prominent banks. The new President of the Chamber is Mr. M. A, Master, whose association with the Scindia Steam Navigation Co., Ltd. and services to the cause of Indian shipping are well known. Mr. Master has, in fact, been a member of the Committee of the Chamber for the past 18 years and has rendered signal service in getting the lot of Indian seamen improved as well as in the cause of the Indian shipping industry. It is therefore fitting that Mr. Master should preside over the Chamber in a year, which by all tokens, bids fair to be one of the most crucial for Indian commerce and industry.

Much economic dope is of late being handed out to the people of this country, and the presence of Sir Ardeshir Dalal in the Centre has encouraged a generally facile optimism that Indian industries will be afforded due protection in every sense hereafter. This has been more so, as Sir Ardeshir has been fairly pervasive and emphatic in his assurances about official policy. Yet, there are many Jeremiahs who, not perhaps without justification, doubt whether in the Imperial shape of things to come there will be any provision or thought to temper the winds of foreign aggrandisement to the shorn lambs of Indian industry. Mr. Master is one of the foremost members of this school of thought. The travails and the vicissitudes of the Indian shipping industry have naturally hardened his heart against the powers that be, and dried up the fount of hope in him. Mr. Master has never lacked the courage of his convictions; and to those who know him, the key in which his address to the Chamber was pitched last week should not come as a surprise. He drew a vivid picture of this country groaning under the weight of defence expenditure (six times more than in the pre-war period), in addition to the job of finding Rs. 1,700 crores of supplies to the United Nations. And yet, in spite of the change in the creditor-debtor relationship, this country has been dictated to in the matter of the mode of payment, and has had to look on passively taking mere IOUs from Britain. Mr. Master was candid in expressing his view that, in spite of his best intentions, Sir Ardeshir Dalal would not be able to prevent the growth of new non-national vested interests in this country. Indeed the approach to the fertiliser industry and other signs suggest that Mr. Master may be right. Many would not perhaps agree with Mr. Master on his views regarding the necessity or feasibility of allowing foreign capital to enter India, nor with his view that Indian industry will not suffer from lack of capital, but the line taken by Mr. Master is an echo of the views of that hardboiled section of Indian businessmen who have learnt many bitter things in the hard school of experience.

* * * *

There is a report that the Government of India, as part of their policy of importing consumer goods have completed arrangements for imports of cement and steel at the rate of some 50 000 tons a month. The report is seemingly authentic. The markets wonder if this is the thin end of the wedge against Indian industry. No doubt there is something to be said for a policy of importing industrial goods to absorb surplus purchasing power and at a time when coal can ill be spared in this country and is needed by the textile and other important consumers' goods industries. If the United States, for instance, has surplus steel and cement, there is not much point in using up valuable coal in India to produce them here for war needs when they could well be imported from the U.S. Indeed, the coal supply position dictates the necessity for such imports. But the danger is that the process and the policy can be carried too far, to the ultimate detriment of Indian industries. It is absolutely essential that the contours of import policy should be fully understood by the public and by indigenous industrialists. The subject vitally concerns industry, and its full implications will no doubt obtain editorial notice.

A partial justification to the fears in this direction is already afforded by the imports of foreign bichromates by the government, to the extent of 2,000 tons. And yet, there are enough factories in India to meet the entire demand, civil and military; and the Indian bichromate industry came into being in 1941-42 at the sole request and desire of the Government of India who promised to extend full support and protection at the time. The imports from abroad have perturbed Indian manufacturers who have therefore formed an association, presided over by Mr. J. C. Setalvad.

* * * *

The ding-dong battle between the government and the cloth profiteer continues. Devilish ingenuity is brought into play to evade the rules of control. With production declining on account of coal scarcity, the job of cloth distribution and the eradication of black markets has become difficult enough in all conscience. In this context, one wonders whether a complete ban on exports would not be desirable, whatever its consequences to the export trade in textiles. After all, India has largest textile exports at the moment, and there simply seems to be no sense in permitting exports in this crucial phase of declining internal production and mounting gap between demand and supply.

The latest official scheme of distribution is also proving somewhat inadequate. The black market trade in Ahmedabad, Delhi, Cawnpore and other manufacturing centres is developing strength, as these centres are free from the application of such rigid restrictions as are operative in Bombay. It will be remembered that in the middle of December, the Textile Commissioner had by an order frozen 80 per cent of quota holders' stocks meant for export to other provinces They were directed to sell only to such recognised dealers and representatives of the provinces as had obtained permits to buy cloth from Bombay. The order thus put 80 per cent beyond the pale of the black market traders. The response of the quota

(Continued on page 182)

Man-hours

Given:

1 man in 1 hour produces x units

Therefore

100 men in 1 hour will produce 100x units

Similarly

100 men in 8 hours will produce 800x units

It reminds one of the old algebra problems, but in terms of day to day factory experience it does not always work out that way. In fact, energy flags as the day goes on and to keep it up is the factory manager's constant aim.

Tea is an important aid in the task. Hot tea very quickly increases concentration and stimulates increased energy. Thus, served to the worker on the job in the middle of a long shift, it has the effect of maintaining output at a high level. In a very great many factories throughout India this fact is being turned to good advantage in terms of increased output.

To those interested in this subject, much valuable advice and assistance will be gladly given by the Indian Tea Market Expansion Board, 101, Clive Street, Calcutta.

Madras, February 5.

A branch of the Indian Council of World affairs was inaugurated here the other day. The council, it is learnt, would devote itself to objective research and study of world questions in a dispassionate manner. With the march of time the world is facing new problems, world forces affect Indian questions, and an organisation for studying these forces is obviously necessary. In his inaugural address Sir. C. Ramalinga Reddi analysed world events and envisaged a new global order where new forces operate bringing about an enduring peace. In the light of the present day events, he said, the peace that would ensue after the war is likely to be either a 'red peace'dominated by Russia or a 'blue peace' dictated by the British aristocracy or a 'pink peace' framed by the United States but not a 'yellow peace' because China, though considered a fourth power, is not big enough. But there were other factors which were likely to be universal and effective in their operations in moulding the world of tomorrow he added. The development of air power which abolished all frontiers is one example. The disappearence of geographical frontiers which created nations and states is one of the developments leading to a world state or a global order, where the word 'nationalism' would be subordinated to a Government with a universal range.

On the economic side this factor has resulted in the deconcentration of Industries. Its influence on conceptions of International law, and neutrality is also marked. In the present war neutrality has been abolished, and International laws have been relegated to the limbo of oblivion.

Dealing with the economic repercussions of a new global order he said that America, from a purely national point of view, might desire to have the vast sums which she has lent to other countries, returned to her, but she would have to share with the other nations of the global order the burdens and profits. Referring to the sterling balances to the credit of India, he expressed the opinion that an economic adjustment on an equitable basis must be made at the ensuing peace conference.

As regards the more immediate problems of peace, he said the defeat of Germany was an essential condition of peace but the forces of evil should not be allowed to rise again. Imperialism of any kind, he asserted, must be destroyed. In his opinion Britain and Russia were imperialistic in many respects and the United States was the only non-imperialistic nation. Enduring peace in history was not possible on the basis of soverign states. But in the new global order nations have to make great sacrifices and be willing to subordinate their national claims. Looking ahead he thought 'England would have her empire and that Russia would expand on a federative basis. France would try to have her empire back. Holland would like to have Indonesia.

But what would United States get as a result of its great sacrifices, if it was not going to stand for a world order guaranteeting enduring peace? It had nothing material to gain commensurate with its gigantic sacrifices in men and material. 'It must therefore fight for a global order. If that could be secured undoubtedly the world would be in a better condition.' he concluded.

Various important subjects connected with the development, marketing, and research work on livestock in India were considered and a number of resolutions passed at the sixth meeting of the Animal Husbandry Wing of the Board of Agriculture and Animal Husbandry in India, held at Hyderabad. Among the recommendations made by the Wing the following are important. In order to avoid duplication of work and frittering away of financial resources, it considered that research in and development of Animal Husbandry should be organised and executed on a regional basis. For this purpose the country should be divided into three regions: the North-Western region, predominantly wheat producing area, Central region, mostly black cotton soil and millet producing area, and the area incuding the Lower Gangetic Basin and alluvial Coastal strips, largely rice producing. Each region is to have a regional committee on which all interests should be represented. On the question of increasing livestock production in areas of heavy rainfall, the Wing decided that it was necessary to determine definitely the part, played by food, disease, climate or a combination of these factors in limiting the production and rearing of livestock.

It was recommended that a development programme of various well-known breeds of cattle to improve their milk yields and draft qualities should be confined to home tracts of these breeds. In areas non-descript, cattle grading should be taken up with selected and well-established Indian breeds only. The Central Government should establish pedigree cattle breeding farms in home tracts of important breeds for the supply of pedigree bulls. Mass inoculation on a regional basis was recommended for the prevention and control of contagious diseases, especially rinderpest. The Wing decided that it was essential that an organisation for the prevention of ingress of rinderpest across the frontiers should be in active operation, and that it should co-ordinate and direct the effort to control the disease within India. On the question of the reorganisation of provincial marketing departments, it was recommended that the ideal to be aimed at was the setting up of a full-fledged marketing department in each Province and State to deal with agricultural and livestock commodities. But as this might take some time to achieve, it was desirable in the meantime that the marketing staff dealing with a particular product should form part of the department dealing with that product. It was also recommended that the standard of veterinary education should be raised. It was thought that a special committee should be appointed to consider the subject finally. The meeting reviewed the report submitted by Dr. Ralph Phillips, the American Livestock Expert, who visited India last year at the request of the Government of India and also considered the report on veterinary education in India submitted by the Committee appointed to review this quesion in 1943. The British Milk Marketing Expert, Mr. R. A. Papperall, gave an interesting discourse to the Wing on the activities of the Milk Marketing Board in England.

Speaking on 'Post-war finance' at the M.D.T. College, Tinnevelly, Mr. C. S. Rangaswamy, paid a warm tribute to Indian owned Joint Stock Banks, which are able to compete with foreign banks in soundness, efficiency, and business organization. He hoped that after the war the monopoly of agency work that the Imperial Bank was doing would not

The Romance of a Cotton Bud

Nature's bounty and man's ingenuity have given us many of the finer things of life. The inanimate and most unimaginative object—the cotton bud—gives man a great opportunity in fashioning for himself cotton materials rich in texture, and in a wealth of designs, to suit a variety of tastes and fancies. From sarees to shirtings, and bedsheets to several other household fabrics, the cotton bud is a faithful servant in the hands of man who can mould it to his liking.

The Lakshmiratan Cotton Mills are amongst the oldest textile manufacturers and it is their policy to apply their experience and resources to producing new and better fabrics to meet the requirements of one and all.

Special to "Indian Finance"

Calcutta, 8th February.

Stock figures for goods in mill godowns at the end of January show very little change from the previous month, indicating that despatches just kept pace with production. And as production is known to have been poor on account of irregular and scanty coal supplies, clearances could not have been up to average either. Whether this was due to shortage of shipping space or to mills being behind with deliveries and not having goods ready for shipment, is not clear. But the latter factor is bound to be having some effect on clearances of goods at present. The net reduction in stocks amounted only to 1,457 tons and calls for little analysis as variations were so inconsiderable. Commercial Hessians were lower by only 159 tons or less than six lakhs yards. Commercial Sacking goods showed a decline of 1,423 tons or 90 lakhs yards. Altogether on commercial account the reduction in stocks amounted to 1,582 tons. On Government account, Sandbags showed a satisfactory reduction by 922 tons but Hessian Bags, Cloth and Canvas on Government account increased by 2,005 tons or 65 lakhs yards. Sacking Bags and Cloth on Government account decreased by 880 tons or 23 lakhs yards. On balance therefore, goods held in stock on Government account increased by 125 tons. Gross stocks of good all kinds totalled 166,964 tons, consisting of 2.675 lakhs yards of Hessian descriptions weighing 68,049 tons and divided as to 1,098 lakhs yards or 30.608 tons of commercial goods and 1,576 lakhs yards or 37,441 tons of Government goods and 98,915 tons of Sacking descriptions consisting of 2,040 lakhs yards or 37,497 tons on commercial account and 275 lakhs yards or 11,418 tons on Government account. It is apparent that there is little margin of commercial hessian to come and go on, hence the great steadiness of the market in that commodity. But the stocks of Heavy Goods are on the high side though they might provide a useful pool on which to draw if any considerable demand were to come along from liberated territories.

The general consensus of opinion in the market place with regard to the new so-called "Five Grade" scheme for loose jute assortments as drawn up by the Jute Grading Sub-Committee of the Indian Central Jute Committee seems to be that, whatever the merits of the scheme may be, the present is not an appropriate time at which to attempt to introduce it. Labour is scarce up-country and what there is of it not particularly high skilled, many good assorters having been enticed away by the lure of higher wages in other lines. In the circumstances it would be difficult to introduce, and educate the available labour up to the niceties of the proposed scheme, and as this work is always on a piece-work basis, a higher scale of wages would have to be paid. In addition, almost all balers up-country are working in restricted space at present owing to the requisitioning of godowns, and the more elaborate system of assortment proposed would certainly require more elbow room in the sheds than the present system Again, it is pointed out that the existing system of grading appears to be quite satisfactory to mills and it is not clear why there should be any call to alter it. The present standardisation has certainly achieved greater stability in the grades over the past few years and this primarily is what mills require. Practically every mill has its own system of classification over the jute it receives, as to whether it is of good colour, or light rooted and so on, and on this private classification, the mill arranges its batch. In the batching house, a further selection of the jute is made to suit the different fabrics which are in course of manufacture at the time. It seems to be questionable therefore whether the more elaborate selection of jute upcountry would necessarily facilitate matters in different batching-houses where widely differing systems of final selection may be the rule. It is remarked too that faults like speck, crop, bukchal etc. do not appear to enter into the grading scheme at all, and it would be of interest to the trade to know how it is proposed that these should be treated. It is laid down that the scheme is confined to 'sound' jute, but in certain districts there is often to be found jute which, while not to be classified as throughly sound is still not perished or dead weak and probably quite suitable for, say, hessian weft. Is accommodation to be found for such fibre and if so, where? Finally it is pointed out that endeavours are being made by the Indian Central Jute Committee itself, by means of peripatetic grading parties, to educate the cultivator up to making a preelection of his jute on the lines of the existing system of grading, before offering it in the market, with a view to securing for the cultivator a possible better price than if the jute is sold on an overhead basis. Where jute is bought and sold on an "assortment" it would certainly complicate matters if the cultivator wanted to sell his jute on one system of grading and the buyer wanted to purchase it on another. On the whole therefore it would appear that, while the idea certainly represents an advance on the existing system of grading, any attempt at its introduction might well be held over till conditions are more normal.

The London Jute Association has now reported on the sample bales forwarded to them. Reds, Hearts and Daisee Fours are reported on as satisfactory but disappointment is expressed at the other grades, particularly the Firsts and, in a lesser degree, the Lightnings. The LJA is however prepared to accept these bales as Type Standards with the proviso that weak fibre would not be admissible either in Firsts or in Lightning Tops and that more attention be paid to the cutting of Firsts, emphasis being placed on First jute being "clean cut". It is remarked that the Type bales of Firsts show insufficient difference between them and the next grade. It is further remarked that the jute in the Daisee Four is regularly of good length and it is pointed out that length in this grade is immaterial provided quality is equal to the type bale.

Jute arrivals during January are estimated at 5,58,000 bales against 4,09,000 bales for the corresponding month a year ago. This brings the total arrivals for the season to 39,61,000 bales against 32,74,000 baies for the same period last year.

In the Fabrics market there has been little reported in Hessians though prices keep steadily at maximum up to September with mills occasionally able to get the price for Octr Decr. But turnover has been small. In the Heavy Goods section the tone has been steadier. There has been some enquiry from the U.K. and an order for 30,000 bales of "B" Twills was placed by the Adviser on Jute Supplies, a fair proportion of which was for early shipment, which is welcome.

continue and other banks would be able to do that work. Though Industrial banks were not much of a success, the speaker remarked, still industries have prospered due to Stock Exchanges which brought together the investor and the industry. He highly appreciated the work done by the land mortgage banks and co-operative banks in Madras Presidency and added that in Post-war reconstruction the assistance of the co-operative institutions was essential.

Talking of the future, he said that state-ownership and control of all public concerns was essential. A number of economic functions should be taken up by Government. Already the generation of electricity, railway transport, etc., were in Government hands. Post-war finance would depend on State Control in industrial and economic spheres. He believed that they would not get back to the old system of private enterprise.

Referring to the Reserve Bank, he regretted that it had done very little for the prosperity of the small banks. The negligence of the Reserve Bank, he pointed out, was one of the causes for the failure of the Travancore National and Quilon Bank. 'In Post-war India' the speaker, concluding, said, 'there should be a State Bank—a Nationalist Bank in a Nationalist India. Nationalised banking is inevitable.'

The income of the Madras Corporation anticipated from all sources would not be sufficient to balance the budget, points out the Commissioner in a note. Post war development schemes have been planned by the Corporation and the necessity to find more funds is obvious, if the Corporation is to function efficiently. The Commissioner has also pointed out that if the existing favourable conditions to levy new taxes were not availed of immediately, the Corporation would not be able to impose new taxes after the war when money would become scarce and additional taxation would be less justified.

Though the Brahmins of South India have made unique contribution to the cultural, economic, political and religious life of the country, yet far from their contribution being recognised, they are of recent years subjected to severe disabilities on account of their birth. To foster union among the various sub-communities among Brahmins a purely secular body named Brahmin Seva Sangam has been started in Salem. Dewan Bahadur R. V. Krishna Ayyar, C.I.E., who inaugurated the Sangam rightly asserted that the community had done its best to obliterate any ideas of social superiority due to caste and held that no person should be subjected to any secular disability on the ground of his birth in any particular community. The Brahmins, he said, did not seek any special privileges at the expense of other communities and only wished to be allowed to live their own lives to be free to make their own contribution to the all-round development of the nation. It is time Brahmins realise that only by uniting can they ask the Government with one voice to remove the disabilities even in such elementary matters as educational facilities.

up of the organization for collecting material to draw up social security schemes and the total expenditure thereon aggregating Rs. 5,37,459 were approved of. The expenditure for the cost of living Index scheme is Rs. 1,70,600. The grant to woollen industry, which was extended on an yearly basis at the rate of Rs. 1 lakh up to March. 1945, was further extended to 1945-46, the amount being Rs. 50,000. It was also proposed to continue for one more year the grant-in-aid to the handloom weaving industry i.e. up to March 1946, the amount being Rs. 5 lakhs. The proposal to construct residential and office accommodation for the Central Government servants at Calcutta and Bombay, at a non-recurring grant of Rs. 35,52,300 and Rs. 13,61, 600 respectively was approved. Arising out of the recommendations of the Economic Adviser, a proposal was laid before the meeting to reorganise the Indian statistical Institute, Calcutta, as a private body with a legal status, its scope of work continuing to remian as at present. The Institute's headquarters, it was stated, would be transferred to Delhi as soon as practicable. The net additional grant to the Institute would be Rs. 87,000 recurring and Rs. 75,000 non-recurring. The increased grant of Rs. 5.50 lakhs made to the Indian Research Fund Association would be continued in 1945-46. As regards telecommunications the total cost was estimated to be Rs. 16.24 crores of which Rs. 4.31 crores had been spent in 1942-43 and 1943-44. It was expected that a sum of Rs. 5.57 crores and Rs. 2.87 crores would be spent in the current and next year respectively. The railway telecommunications improvement scheme provided for the erection of lines and wires and installation of telephone exchanges for the improvement of the communication facilities of major railways in India and this was estimated to cost Rs. 1.48 crores during the current year and next year Rs. 38 lakhs and Rs. 43 lakhs would be spent during the current and the next year, respectively in improving the telephone system acquired from companies.

HILL BIRD.

(continued from page 178)

holders to this order was to push the 20 per cent unfrozen stock into the black market, thereby depriving the Bombay area and other centres from the few stocks they would have obtained. A common dodge is to push this cloth into the ready-made clothing shops, while a part goes to the printing establishments and a large part finds its way into the upcountry markets where the worst degree of inflation prevails. In brief then, a direct result of the previous order was to introduce a veritable cloth famine in Bombay itself. The Textile Commissioner had naturally to issue a fresh order freezing the remaining 20 per cent stock as well and to issue the permits only to such dealers who have been recommended by the provincial control authorities. The only, but a serious blemish in this scheme is that these checks have not yet been applied to Ahmedabad, Cawnpore etc. The quota holders there are making merry and in Ahmedabad particularly the fact that the quota holders are in unholy alliance with the producers has enabled them to defeat the control measures. It is thus a common experience for merchants from the provinces, who are armed with the necessary permits from the Textile Commissioner, to go to Ahmedabad from where they have to take a portion of their requirements and to return empty-handed, because forsooth no quota holder can be found to sell them the goods at the control prices. In upper India, much the same position obtains. While the quotas allotted from Bombay are being sent out at the control rates, those from the other manufacturing centres flow out neither in good quantity nor at the controlled prices. Otherwise. one cannot explain the acute shortage even in a centre like Cawnpore, although the Cawnpore mills alone are supplying 21,000 bales to the U. P. The position is appalling in the extreme. It has also been aggravated by the fact that some authorised retailers in the States who have not been in the cloth trade hitherto are able to make purchases from the mills unfettered by the numerous restrictions and limitations applying to others.

Life Dept.

To All Agents.

Dear Mr. Agent,

I am happy to announce that a preliminary examination reveals that our 1944 Life business exceeds Rs. 3,00,00,000/ --.

On behalf of the share-holders of the Company, I thank you one and all for this splendid achievement which is to a large extent due to your enthusiastic and untiring efforts. I am sure I can be confident of your continued co-operation during 1945.

We are extremely anxious to render the maximum possible service to all classes of policy holders. If, in course of your solicitation, you come across problems of an unusual nature, please do not hesitate to draw on the pooled experience of the Head Office and Branches.

Thank you again, Mr. Agent. Well done-keep it up.

Yours sincerely,
Baijnath Jalan
CHAIRMAN.

JUTE

(By Our Staff Correspondent).

Calcutta, February 8.

The raw jute market has been uninteresting and quotations have been around last levels. With no improvement in the coal situation mills have not taken any interest in the market and business has been very restricted. The new orders for heavy goods have created greater enquiry for bottom grades but there has been no need for largescale buying of these grades also. Sellers have naturally been eager for business and have offered a discount of four annas. But mills have not been attracted. No further reduction in rates can be given as mofussil centres are still firm and imports are coming in only in small quantities. There are buyers for whatever jute is received. Buyers seem to be sure of being able to market their jute as there are still complaints regarding moisture in jute.

In loose jute only a small business has been reported, Indian Jat Middles and Bottoms being reported at Rs. 15-8 and Rs. 12-8 per maund. Supervised Jat were Rs. 15-12 and Rs. 12-12 per maund. A small business was done in Assam Bottoms at Rs. 11-8.

Not much business was reported in the pucca bales section and shippers are idle. On Wednesday, however, there was some enquiry and Dundee Daisee 2/3 sold at Rs. 77 per bale. Mills have taken greater interest in the latter half of the week, Firsts being done at Rs. 76, Lightnings at Rs. 71 and Hearts at Rs. 67 per bale.

JUTE MANUFACTURES

(By Our Staff Correspondent)

Calcutta, February 8.

The continued difficulties in respect of coal supplies and the placing of new orders for heavy goods have had a stimulating effect on the market, but the stock figures for January have chilled sentiment to a certain extent as it was expected that there would be a big decrease in stocks with the reports regarding a lower level of production. In the hessian market business has been restricted with the reserved attitude of mills and there are good buyers for all positions upto the end of the year. It is generally expected that the cessation of hostilities in the West might result in an increase in exports of jute goods. Quotations for hessians are nominally at maximum rates.

In the heavy goods section there has been a good rise in quotations for "B" Twills, "A" Twills and Cornsacks following the placing of an order for "B" Twills for 30,000 bales mostly for February delivery. The bazar seems to have been nastily surprised as it was reported to have been oversold especially in "B" Twills. Sometime back there were no buyers for this quality. The quantity involved, however, is not large. "B" Twills are quoting Rs. 65, "A" Twills Rs. 73 and Cornsacks Rs. 65.

The local stock figures for the month of January have been published and total stocks are only 1,457 tons lower at 166,964 tons. Hessians, on civil account, were 10.99 crores yards against 11.04 crores yards and on military account 15.76 crores yards against 15.30 crores yards. There was an increase in total stocks of hessian expressed in tonnage from 67,203 tons at the end of December to 68,049 tons. Sacking stocks show a decline on both accounts which is a feature to be welcomed. On Commercial account the total of stocks was 87,497 tons against 88,920 tons and on military account 11,418 tons against 12,298 tons. The figures are given below:—

Total reported stocks of manufactured goods exclusive of Government Orders.

Description.	31-12-1944	31-1-1945
Hessian cloth and bags—		
Yards ..	11,04,39,108	10,98,70,452

N.B.—January stock figures include returns of Gagalbhai in addition to those of member mills, but contain an estimate of the stocks of Calcutta, Nafarchandra, Katihar and Maheswari Devi. Against these are shown the actual stocks of member mills and Gagalbhai for the month of December, 1944.

PIECEGOODS

Calcutta, February 8.

The new machinery for distribution of cloth and the new scheme for distribution of available goods have only resulted in the delaying of the despatch of supplies to the consuming centres and in Bengal conditions in the piecegoods market have deteriorated further. There is a great scarcity of both cloth and yarn in the Calcutta market. With the cold weather nearing its end there has been an increase in the demand for summer styles. The small consumer especially is having great difficulty in respect of his requirements.

Sixty Years' Service
TO INDUSTRY

Our services to the Iron, Steel and other Indian Industries started sixty years ago at the growing port of Karachi, but today they spread all over India. As the largest engineering concern in North-West India, we have carried out many successful contracts both at home and abroad.

We manufacture:
Steel Doors and Windows; Pressed Steel Tanks; Equipment for Textile and Sugar Mills; Powerhouses and Factories; Garden Rollers; Water Supply Systems; Motor Launches; Plastiplug; Waterproofing, etc.

We stock:
Motor Trolleys; Marine Engines; Asphalt Boilers; Jenkins Clod Breakers; Structural and General Engineering Stores; Bitumastic, Pudlo and Solignum; Steel and other Metals; Cements, etc.

We can advise you on all your engineering and building problems; why not consult us without any obligation.

Stock Markets to-day and to-morrow:

COTTON MILL EARNINGS AFTER CONTROL

There have been no fresh developments in the stock markets in the past week. Both the Calcutta and Bombay Stock Exchanges were inclined to be quietly steady in the early part of this week. Only in the last two days a slightly steadier feeling is noticeable. One would have expected that, with the rapid progress of the Russians on the Eastern front and the American break-through the Sigfried line, there would be a decline in prices. But the behaviour of both the bullion and stock markets has been different from the expectation of a certain section of the market. In the bullion market especially bears have been squeezed. Bulls do not seem to be frightened by the war news and are buying all available stocks and despatching them upcountry.

* * * *

I have pointed out in this column on more than one occasion that the movement in prices in the stock exchanges will be determined by the behaviour of the bullion market and that the possibility of a big decline in prices in stock markets was less probable especially as investments in stock exchange securities afford a moderate return as against the dead investment in bullion. I was, therefore, agreeably surprised when markets in both Bombay and Calcutta registered an improvement in prices on Thursday and Friday.

*

It is now said that the fall of Berlin is a matter of days. It would not perhaps be correct to form any definite conclusion on the basis of the experience of the past three weeks, but it can be reasonably hazarded that a slump in prices is ruled out and that there will be a readjustment of the general price structure in the light of available data.

* * * *

The proximity of the Budget has given rise to interesting speculation. It is said that there might be a further increase in taxation even though the Finance Member said that the peak of military expenditure had been passed. The authorities are keen to explore new sources of revenue and get the necessary tax collecting machinery in being so that adequate funds might be found for financing post-war reconstruction schemes. Death Duties will be a new feature, but there are reports that the authorities might try to limit the payment of dividends directly which has now been achieved indirectly to a great extent by the immobilisation of profits and the increase in income and super-taxes. I have pointed out on more than one occasion that the question of limitation of dividends is difficult of solution and that owing to the complexity of the issues involved Government might at best say that only a certain portion of the profits can be distributed as profits. But in view of the fact that such a proposal might have an unsettling effect on the market and that the general tendency would be uncertain with the changes in the war situation there might not be any such proposal. The authorities cannot possibly increase the compulsory deposit further as in the case of smaller companies it would operate very hardly. All things considered there will not be any surprises for the market in the form of direct taxes.

* * * *

The results of the Dunbar and Bowreah Cotton Mills for the half-year ended December, 1944, have been better than market expectations. With the difficulties in respect of coal supplies and the further reduction in ceiling prices one would have expected a decrease in earnings, but the advantage, perhaps, of cheap-priced cotton and the saving in the supply of foodstuffs to labour at subsidised rates have resulted in a rise in earnings. There is an increase in the dividend to ordinary shareholders in both cases.

The net profit for the half-year under reference of the *Danbar Mills Limited* before providing for taxation and depreciation is Rs. 9,00,293 against Rs. 7,05,200 for the previous six months. The provision for taxation and compulsory deposit is naturally higher at Rs. 7.5 lakhs (Rs. 6.35 lakhs) while the provision for depreciation is unchanged at Rs. 50,000. The ordinary dividend has been increased to Rs. 5 per share from Rs. 4 per share. The amount carried forward is slightly higher at Rs. 57,675 against Rs. 52,381 brought in.

* * *

Bowreah Cotton Mills Company, Limited, also has been able to report a higher level of earnings for the same accounting period but the increase in this case is less pronounced. The net profit, before providing for taxation and depreciation, is Rs. 9,25,797 against Rs. 8,70,501. The amount provided for taxation is Rs. 7,45,000 against Rs. 7,10,000. The charge on account of depreciation is unchanged at Rs. 75,000. The dividend has been increased to Rs. 10 per share from Rs. 7-8 per share. As there is a smaller ordinary capital ranking for dividend it has been possible to effect a larger increase in the dividend even though the improvement in earnings is less pronounced.

Reflecting in full measure the changed conditions in industry the accounts of the *Muir Mills Company, Limited*, for the twelve months ended December, 1944, show a decrease to Rs. 89,64,693 from Rs. 1,52,42,887 for 1943. Total sales were Rs. 2.55 crores against Rs. 3.68 crores, but there is an increase in manufacturing expenses from Rs. 99.62 lakhs to Rs. 1,11 lakhs and wages and other charges to Rs. 55,46,595 from Rs. 53,63,397 so that there is a decrease in earnings as indicated above. The provision for taxation is very much lower at Rs. 67 lakhs against Rs. 1.15 crores, but with the provision for compulsory deposits amounting to Rs. 16 lakhs (Rs. 18 lakhs) and the transfer to Pension Fund Rs. 50,000 (same), it has been necessary to reduce the amount of bonus. The ordinary dividend has been maintained at Rs. 10 per share, but the bonus is only Rs. 10 per share against Rs. 25 per share. The amount carried forward is lower at Rs. 4,48,312 against Rs. 4,83,679 brought in. Even on the basis of the last dividend the shares afford a return of 5 per cent taxfree.

* * * *

A large crush of cane in the last season has not enabled the *Cawnpore Sugar Company, Limited* to report satisfactory earnings in the year ended October, 1944. There was a further increase in working expenses while the percentage of recovery was slightly lower. Thus, the net profit before providing for taxation and depreciation is Rs. 14,65,357 against Rs. 18,88,878 for 1942-43. After setting aside for taxation Rs. 8.9 lakhs (Rs. 12.50 lakhs) the provision for depreciation is Rs. 1.65 lakhs (same).

A further sum of Re. 1 lakh is placed to renewals and improvements reserve. The dividend on the ordinary shares has been reduced to Re. 1-8 per share from Rs. 2-8

FREE EXPERT ADVICE ON ROPEWAYS BY BIRD & CO., Calcutta

FREE EXPERT ADVICE ON ROPEWAYS BY BIRD & CO., Calcutta

MARKET GOSSIP

By "Bear-Bull"

[The following is gossip in the literal sense of the term. The markets sway to and fro not in response to facts and developments, but in response to khabbar, true and untrue and slightly true and largely untrue. "Bear-Bull", right in the heart of the Exchange Ring, will relay, periodically, such gossip as has caused gyrations in prices and changes in sentiment.—ED. I. F.]

The market during the week under review fluctuated within narrow limits influenced by war news or by buying support from certain powerful and influential quarters. A very successful Bengali operator is reported to have purchased heavily Indian Irons and Burrakur Coals. Under the influence of strong buying Irons improved to Rs. 39 and Burrakurs, which came down to Rs. 40-12 on Wednesday, rose to Rs. 42-4 on Thursday. It is said by people in touch with the bull operators that Burrakurs are in for a further rise of about two rupees. Another group is lending support to South Karanpura. Some days back these shares had come down to about to Rs. 26-14. Today they closed as Rs. 30 after having been dealt in upto Rs. 30-8. It is said that this company has got a very low target figure of production and that due to coal being available very near the surface of some of its properties, by employing bull-dozers the is raising at present something like 22 to 25 thousand tons a month. These shares look like going up further if there is no general selling due to war news.

Most of the activity in the market is confined to local operators. There is very little investment enquiry. The present prices are not likely to attract any investment enquiry. On the contrary the general impression is better to unload a part of the holdings and wait for a more favourable opportunity.

In my last week's note I discussed the prospects of the share markets in the event of the European war coming to a close in the near future. I find that the termination of the European war is not looked up on now with the same panicky feeling as in August last or even a month back. A good number of powerful operators believe that there is nothing to be afraid of if this war comes to a close. I mentioned last week the arguments advanced by them.

My opinion is that if the war comes to an end the market will decline but I do not expect panicky conditions. Powerful operators who have made fortunes in shares and other commodities will come out to lend their support to the market. Due to this support the markets may register a rise.

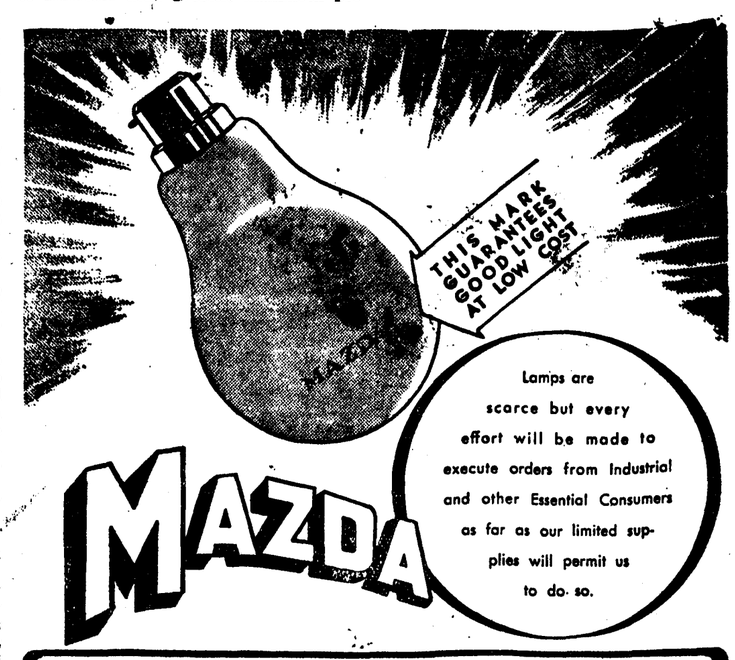
As regards the distant future, it is very difficult to make any definite statement. Much will depend on what policy the U.S.A. and the United Kingdom adopt in respect of exports to India.

My own belief is that sometime after the European war we, in India are likely to witness an era of falling prices. It is common horsesence to suppose that during the war we witness a period of rising prices and high profits. If the war comes to an end we will see a period of falling prices and shrinking profits.

In 1933 when President Roosevelt reduced the gold contents of the dollar it was argued by a very great financial authority that as the American will have to pay more dollars for the same amount of goods it will mean less buying from India. But the operators in the local market argued depending on their horse sense argued that when England went off the goldstandard in 1931 there was a rise in prices so the same will happen now that the U.S.A. has gone off the gold standard. They proved correct.

It may be proved by statistics that the world demand will continue to grow and that no economic depression can come. I remember certain American authorities tried to prove somewhere in the beginning of 1929 that the then existing prosperity in that country was likely to continue for ever. By the end of 1929 a depression set in such as had been never seen before.

In one article I cannot discuss all the arguments for supposing that we are likely to experience a bad time for our industries. Whilst stating that it is almost impossible to predict the distant future I set forth below the reasons which make me apprehensive about the future of our industries.



(1) Even on the basis of controlled prices the general index of prices in India is much higher than that of the U.S.A. and the U.K. (2) This disparity can exist only in war time due to restriction on production, transport, etc. (3) Once the restrictions that prevail now disappear the two levels must come near to each other unless strong barriers are created. (4) Businessmen and industries make money in a period of rising prices and lose money in a period of falling prices. (5) Under the stress of foreign competition the present level of abnormal profits is likely to disappear. (6) There is a tendency both in the U.S.A. and the U.K. to try to maintain their present mammoth production in post-war years. This will create a keen competition to find markets. With the exception of such industries as have no foreign competition to deal with many of the industries that have sprung up in India due to war will experience a severe setback. (8) England is not likely to agree to India erecting barriers against the inflow of goods from that country to us.

An official delegation is already on its way to the U.K. obviously to relieve the strain on Indian industries. The real object seems to be to arrange for an outlet for British goods in India.

If England and America both strive for maintaining their production at the present level we cannot hope to continue to sell to them unless we are prepared to buy from them.

I shall discuss all these points fully in my next week's notes.

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

CALCUTTA, February 9.

Steadier conditions have been noticeable on the Calcutta Stock Exchange in the last two days though earlier in the week all the sections were dull and idle and there was a general tendency to await further developments. The slight rally in prices on Thursday was rather surprising to some as it was generally expected that the announcement of the Big Three meeting and the decisions regarding the final phase of operations against Germany would have a depressing effect on the market. But there is no disposition on the part of holders to part with their holdings. As a matter of fact, at the lower levels there has been good investment buying. Coal shares have again been prominent though Jutes were inclined to be only a shade better with the continued reports regarding shortage of coal supplies. In the Engineering section, there was good buying of Indian Irons and the quotation at Rs. 39-2 is at the highest level for the week. Steel Corporations, however, have not been in favour. There are no important features in other sections. The general undertone is quietly steady.

The giltedged securities section has been slightly better, thanks to the recent purchases by the Reserve Bank in the open market and the easier conditions in the money market. 3½ per cent. Paper is quoting Rs. 99/8 three annas higher on balance. Among terminable loans, 3 percent. Defence Bonds 1946 were Rs. 102/5, 3 per cent. 1949/52 Rs. 101/8 and 3 percent. 1957 Rs. 99/7. 4 per cent. 1960/70 changed hands at Rs. 112/8 and 5 per cent. 1945/55 at Rs. 102-10. Among provincial loans, 4 per cent. Punjab 1948 were Rs. 104/8.

Bank shares were quiet with *Imperial Bank* contributories at Rs. 490 and fully paids at Rs. 1975. *Reserve Bank* also were lower at Rs. 131.

Cotton shares were uninteresting with *Cawnpore Textiles* at Rs. 12-14 and *Elgins* at Rs. 64/12. On the publication of a satisfactory report, *Dunbar* have risen to Rs. 317. *Kesoram* were Rs. 16/7 ex-dividend and *New Victoria* Rs. 7/5.

In the Coal section, there was some selling of the popular counters earlier in the week, *Burrakur* being done lower at Rs. 40/14 and *South Karanpura* at Rs. 26/14. Encouraging reports from the collieries and the conviction about a bright future for the industry led to resumption of buying and quotations are higher on balance, *Burrakur* are quoting now Rs. 42/4. *Bengal* were steady at Rs. 681 *Bokaro and Ramgur* at Rs. 48/14 *Central Kurkend* at Rs. 34/12. There was a sudden rise in Thursday's session in *Bhalgora* to Rs. 18-3 from Rs. 16-13, *South Karanpura* encountered selling earlier in the week and were done as low as Rs. 26-14, but there has been a recovery to Rs. 29-10 on Thursday. *North Damuda* were Rs. 16-8 and *Talcher* Rs. 12-9. Others shares did not show any important change.

But for the discouraging reports from the industry, the recent orders for heavy goods and the hopes about an increase in exports in the post-war period would have resulted in a good rise in prices for the better class jute shares. *Howrah* are now quoting Rs. 82-8. *Anglo-India* were Rs. 453 and *Kanknarrah* Rs. 564. The smaller shares have been quietly absorbed at lower levels. *Presidency* being quoted Rs. 11-8. *Rameshwara* Rs. 20-8, *Chitavalsah* Rs. 31-12 and *National* Rs. 35-4. *Hukumchand* were unchanged at Rs. 42-10. Kanknarrah and Kamarhatty Companies have maintained the dividends for the last half-year at the previous levels.

In the Engineering section, *Indian Iron* were for the most part of the week fluctuating around Rs. 38-8, but towards the close there has been a rise to Rs. 39-2. *Steel Corporation* were steady at Rs. 31-12. *Burn & Co.* were a shade better at Rs. 406 while *Jessop & Co.* were unchanged at Rs. 24. *Kumardhubi Engineering* improved slightly to Rs. 11-14. *Braithwaite* were Rs. 11-14, *Bhartia Elec.* Rs. 20-14 and *Arthur Butler* Rs. 24-12.

Sugar shares have been very uninteresting with *Balrampore* at Rs. 17-4 and *Carew & Co.* at Rs. 27-4. The earlier rise in prices for *New Savan* has not been held and on profit-taking there has been a recession in the quotation to Rs. 26-12. The reduction in the dividend of Cawnpore Sugar Works for the last accounting period to Re. 1-8 per share should have come as a disappointment to the market but for the distribution of the jubilee bonus of Re. 1 per share during the year. The quotation at Rs. 39 does not show any important change.

Tea shares showed a falling off in interest but there is still good demand for select shares, *Bishnauth* being quoted Rs. 45, *East India* Rs. 18-2, *Hansqua* Rs. 15-12, and *Hantapara* Rs. 805.

In the Miscellaneous section, Burma shares were active earlier in the week with a sharp rise in the quotation for *Consolidated Tin* to Rs. 3-14. *Tavoy Tin* improved by five annas to Rs. 2-7. *Burma Corporation* have been fluctuating in wide limits. From Rs. 5-12 there was a drop to Rs. 5-4. The close is slightly better at Rs. 5-9. *B. B. Petrols* have been fluctuating between Rs. 5-3 and Rs. 5-15. There is selling at the higher levels. *B. I. Corporation* were steady at Rs. 6-8, *Bararee Coke* were higher at Rs. 34-8. *Indian Cable* were steady at Rs. 28-8. There was a rise in *Assam Saws* to Rs. 6-2 from Rs. 5-6. *Borooah Timber* were noted at Rs. 19-4. Paper shares were unchanged with *Titaghur Paper* at Rs. 28 ex-dividend and *India Paper Pulp* at Rs. 224. *Midnapore Zemindary* were Rs. 171 and *I. G. N.* Rs. 182.

(*Continued from page 185*)

per share. A jubilee dividend of Re. 1 per ordinary share was paid during the year out of reserves.

It has been estimated that the adjusted Standard Profits for the period of trading are Rs. 6,11,083. It has also been estimated that Rs. 1,47,633 will be due in respect of these profits as a Compulsory Excess Profits Deposit under Section 10 of the Finance Act 1942.

* * * *

The Hind Bank's progress between March and December 1944 can be readily measured by figures appearing today. The disposable profits amount to Rs. 217,177-8-11 of which 1,25,000 is allocated to General Reserve. Previous allocations came from share premiums while the first provision was decidely smaller than the useful transfer now made. The enhanced carry forward is suggestive of an increase in profits though the growth of deposits in this case has been slower than expected. The advent of a new General Manager however is a pointer to accelerated progress in this case. In this balance sheet the proportion of Advances to total assets appears encouragingly large. The Investments are of the usual kind and Cash held at the end of the year was less than the sum invested in call loans. The distinction between Cash and Call loans is very slight and the benefits that may be derived by forgetting the difference extend to the creation of abundance when called for. It will be agreed that the substantial increase under Bills and Advances is a definite symptom of increasing vitality in regard to the Hind Bank. The extinction of items inseparable from flotation was to be expected in this case but more important for purpose of analysis is the decisive improvement in the net profit for the second period. The change explains the increase in the provision for Reserve which is certainly in line with the prompt increase in paid-up capital. The seeds of future growth have been very firmly planted and the caution in opening branches has not affected the normal expansion or resources.

THE RAWANWARA COLLIERIES LIMITED

Extra-Ordinary General Meeting

NOTICE is hereby given to the members of the Company that an Extra-ordinary General Meeting of the Shoreholders of the Company will be held at its Registered Office, 5, Royal Exchange Place, Calcutta, on the 28th February, 1945, at 4 p.m. to consider and, if thought fit, to pass the following Resolution as a Special Resolution of the Company :—

That Regulations 31 and 40 of the Company's Articles of Association be deleted and the following be substituted therefor :

31. The Company shall have a lien on every share (not being a fully paid share) for all moneys (whether presently payable or not) called or payable at a fixed time in respect of the shares and the Company shall also have a lien on all shares (other than fully paid shares) standing registered in the name of a single person or jointly with another person, for all moneys presently payable by him or his estate to the Company, but the Directors may at any time declare any share to be wholly or in part exempt from the provisions of this Regulation. The Company's lien, if any, on a share shall extend to all dividends payable thereon.'

40. The Directors may decline to register any transfer of share upon which the Company has got a lien.'

By Order of the Board,
KARAM CHAND THAPAR & BROS. LD.,
Managing Agents.

THE MUIR MILLS COMPANY, LIMITED, CAWNPORE

NOTICE is hereby given that the Seventy-first Annual General Meeting of the Shareholders of The Muir Mills Company, Limited, will be held at the Company's Office at Cawnpore, on Saturday, the 24th February, 1945 at 3 p.m.

The business to be transacted at the Meeting will be :—

(1) To receive and, if approved, adopt the Directors' Report and Audited Balance Sheet for the year 1944.
(2) To confirm the appointment of Mr. W. J. Packwood as a Director of the Company in place of Sir Tracy Gavin Jones.
(3) To appoint Directors in the place of Rai Bahadur Babu Ram Narain and Mr. W. J. Packwood who retire but are eligible for re-election.
(4) To appoint an Auditor or Auditors for the year 1945 and to fix his or their remuneration. Messrs. Lovelock and Lewes, the present Auditors, offer themselves for re-election.
(5) To transact any other competent business.

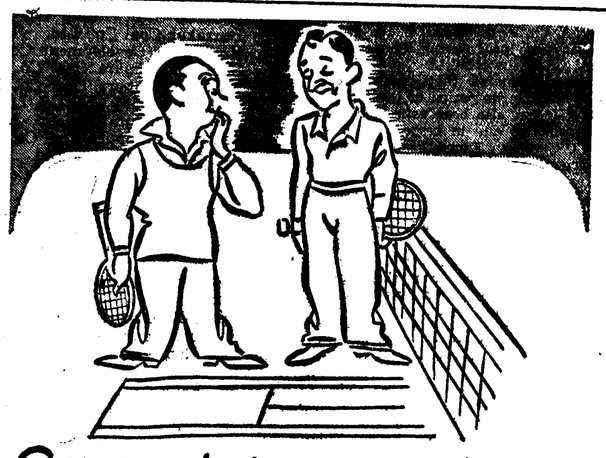
NOTICE is also given that the Transfer Books of the Company will be closed from the 14th to the 24th February, 1945 both days inclusive.

By Order of the Board,
K. J. D. PRICE,
Managing Director.

Cawnpore, 1st February, 1945.

THE HIND BANK LIMITED

NOTICE is hereby given that the Second Ordinary General Meeting of the Share-holders of The Hind Bank Ltd. will be held at the Registered Office of the Bank, 9, Royal Exchange Place, Calcutta, on Wednesday, the 28th February, 1945, at 3-30 p.m. to transact the following business :—



1. To consider and adopt the Directors' Report and the Audited Accounts for the period ended 31st December, 1944.
2. To elect Directors in place of the retiring Directors.
3. To appoint Auditors and to fix their remuneration.
4. To transact any other business permitted by the Chairman.

Mr. A. N. Tagore, a shareholder of the Company has given notice to nominate Messrs. Dalal & Shah of Bombay, Incorporated and Registered Accountants to the office of Auditors of the Company jointly with the other Auditors.

The Share-transfer books of the Bank will remain closed from the 15th February, 1945 to the 28th February, 1945 both days inclusive.

By Order of the Board.

(*Annual General Meeting on* 12-3-1945 *at* 10-30 *a.m. at Cawnpore. Books closed from* 19-2-1945 *to* 12-3-1945).

The company celebrated its Jubilee on 21st April, 1944. The relevant Minute of the Proceedings of the Directors' Meeting held in April, 1944, has already been circulated to all Shareholders. The Jubilee dividend of Rs. 1 per Ordinary Share has, as will be seen in the Accounts, been charged to General Reserve.

The results for the period, after providing for taxation and a bonus to employees, show a profit of Rs. 5,75,557; from which has been deducted:—Depreciation Rs. 1,65,000; Renewals and Improvement Reserve, Rs. 1,00,000, leaving a balance of Rs. 3,10,557; to which has to be added the Carry Forward from the previous year Rs. 1,26,010, leaving at credit of Profit and Loss Account Rs. 4,36,568.

This balance is recommended to be disposed of as follows:—In payment of a dividend on the Preference Shares at 8 per cent for the year Rs. 80,000. In payment of a dividend on the Ordinary Shares of Re. 1-8 per share Rs. 2,25,000, and Carry Forward Rs. 1,31,568.

Further, it has been estimated that the adjusted Standard Profits for the period of trading are Rs. 6,11,083.

It has also been estimated that Rs. 1,47,633 will be due in respect of these profits as a Compulsory Excess Profits Deposit under Section 10 of the Finance Act, 1942. This deposit is refundable after hostilities cease with interest at 2 per cent per annum and a bonus equal to one-tenth of the Excess Profits Tax paid.

The Marhowrah Factory commenced crushing on the 13th December, 1943, and continued until the 22nd March, 1944, while the Gauri Factory commenced crushing on the 6th December, 1943, and continued until the 31st March, 1944.

The sugar value of the cane treated was less than in the preceding season which, as reported last year, was one of exceptional beneficial climatic conditions. The factories' operations continued at a high level of efficiency despite difficulties in obtaining spare parts and replacements.

The basic price of Rs. 14-13-0 per maund (increased as from 21st October, 1944, to Rs. 16-4-0 with a corresponding increase of excise duty on stocks held on that date of Re. 1-7 per maund) allowed by Government for sugar produced last season has in no measure compensated manufacturers for the increase in the cost of raw material and the higher prices which had to be paid for stores of all kinds and for increase in labour charges due to a higher scale of dearness allowance. In the last two years there have been increases in the basic price of sugar and immediately on these announcements Government have increased the excise duty on stocks held by factories. The Industry has represented to Government that as and when reductions in the price have to occur there must be a corresponding reduction in the excise duty payable on stocks in the hands of factories. Unfortunately Government have not definitely agreed to this principle, but have informed the Industry when that occasion arises the question will have their consideration.

The decision of the Government of the U. P. and Bihar to retain for investment in Post Office Certificates two annas out of the twelve annas per maund which had been prescribed as the minimum price to be paid for cane caused widespread discontent with the growers and involved factories in an immense amount of trouble, extra work and expense. The object which Government had in view, namely, to compel growers to save a part of the price they received for their cane crop, would have been equally well achieved if Government had permitted factories to act as trustees for the growers and make bulk purchases of Defence Bonds at the close of the season on their behalf and maintain their individual accounts for them.

The Industry is unanimous in condemning as unjustifiable the enhancement in the Provincial Cess, particularly as the funds so raised are not devoted to the purposes for which it is claimed the Cess was instituted.

The Company's Gur Refinery situated at Cawnpore again remained idle throughout the year due to it not being possible to manufacture sugar from Gur on a profitable basis.

The Company's Cawnpore Distillery worked throughout the year and the Marhowrah Distillery for a total of eight months, the not infrequent shut-downs being due to lack of coal supplies and difficulties in obtaining wagons for the despatch of spirit, with the result that manufacture had to cease for lack of storage capacity.

The cane crop for the ensuing season will be materially less than the year under review due entirely to more lands having been placed under grain crops by the cultivators. The corollary, therefore, is that the results from the manufacture of sugar during the current year will not compare favourably with those of the year under review. All steps are being taken to encourage the growing of cane in the areas which supply the Company's factories and thus obtain an improvement of supplies for season 1945-46.

*Includes Dividend of Rs. 52,500 on Pref. and Ordy. shares for half-year ended 31st January, 1944 and additional Dividend on Pref. shares for the year ended 31st January, 1944 paid after 31st July, 1944.

‡Includes Rs. 7,08,426 from Waverley Mills Ltd., on account of double shift working.

(*Half-yearly General Meeting on* 23-2-1945 *at* 3 *p.m.*)

Accounts for the half-year show a profit of Rs. 4,45,820 to which is added Rs. 78,697, being balance brought forward from last account. *Less*—Dividend on Pref. and Ordy. Shares for the half-year ended 31st January, 1944, and additional dividend on Preference Shares for the year ended 31st January, 1944, paid after 31st July, 1944, Rs. 52,500, from this there has been placed: To Depreciation Rs. 75,000; to Reserve for taxation Rs. 2,85,000; to Reserve for Furlough Passages Rs. 5,000; to Reserve Rs. 49,042 and Total Rs. 4,14,041. Leaving an available balance of Rs. 57,975 which it is proposed to distribute as follows:—(i) In payment of the Preference Dividend for the half-year ended 31st July, 1944, at the rate of 5 per cent per annum (free of income-tax), absorbing Rs. 12,500. (ii) In payment of an Ordinary Dividend for the half-year ended 31st July, 1944, at the rate of 20 per cent per annum (free of income-tax), absorbing Rs. 15,000; leaving a balance at credit of Rs. 30,475-6-1 to be carried forward to next account.

The stock of jute has been valued at or under cost price and finished goods at contract rates.

Waverley Jute Mill by working double shift was able to take over Craig Mills' production. The amount received by the Company from Waverley Jute Mills Co., Ltd., as its share of the profits on double shift working was Rs. 7,08,425-13 and this has been shown separately in the Profit and Loss Account. Similarly, the sum of Rs. 1,06,766-14 was received from Alliance Jute Mills Co., Ltd. in respect of the purchase of loom hours outstanding from the previous half-year. Against these receipts, this Company paid to Waverley Jute Mills Co., Ltd., during the half-year an amount of Rs. 1,64,061 in respect of its gunny contracts taken over by Waverley Jute Mills Co., Ltd. This payment was necessary in view of the fact that the outstanding Craig contracts, which had been made prior to the period of temporary requisition on a market considerably lower than that ruling during the half-year under review, were at a less favourable rate than the Waverley contracts. An amount of Rs. 35,000 has also been paid to Waverley Jute Mills Co., Ltd., for Craig's share of the additional Depreciation of machinery which has occurred through double shift working.

A settlement of the Company's claim on Government has not as yet been effected.

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

Short credits continue to be in plentiful supply, with interbank call money nominally quoting ¼ per cent in Bombay and ½ per cent in Calcutta. In normal years, it is during the final quarter of the financial year that tax collections are heaviest. In the current year, however, E. P. T. advance payments are responsible for converting the second and third quarters also into fairly heavy tax collection periods. 1944-45 will thus stand out as an unique year in that double tax collections in an important tax head have been effected. This is partly responsible for Central Government's deposits with the Reserve Bank remaining at the high level of Rs. 254 crores. It may also be pointed out that the Indian money market has admirably stood the strain of these double tax payments. In fact, it is remarkable that, in spite of such a strain, conditions in the money market have remained exceptionally easy. At the same time, such easy money conditions have not led to any avid subscriptions for treasury bills or to strikingly increased sales of the Victory Loan. Because of the continued poor bidding at the weekly auctions of Central treasury bills, the weekly offer has been reduced from Rs 8 crores to Rs. 2 crores. It is, perhaps for a similar reason that the list for the Victory Loan is to be closed this week-end. We do not know yet the total amount of Victory Loan so far subscribed. The Loan has been on tap since March 25. 1944; and it cannot be claimed that it has been attended by any spectacular success. On the other hand, while the Reserve Bank was selling the loan at par through the tap, it was finding it necessary in recent weeks to include, in its open market operations, purchases of the loan at Rs. 99-8 and below. The Victory Loan was quoting as low as Rs. 99-6; and it was somewhat incongruous to keep the tap arrangement on the basis of sales at par. It is necessary to point out, however, that this is not the first occasion when a loan on tap was quoting at a discount in the open market. Considering that the Victory Loan has been available on tap for eleven months, and considering the unedifying position of the market rate being lower than the tap rate, it may be said that the authorities have shown judgement in closing the list.

While the decrease in the weekly offer of Central treasury bills to Rs. 2 crores and the closing of the list of the Victory Loan may be explained and understood in relation to market behaviour, current conditions lead us to speculate whether these two operations may not be preliminary to the fashioning and announcement of a new loan. A circumstance which lends encouragement to this speculation is the redemption of 5 per cent 1945-55 which is due next autumn. This loan is the only taxfree loan now extant. All the loans prior to the middle of the 'twenties were on a taxfree basis. It was Sir Basil Blackett who reintroduced the taxable type of loan in 1926 in the form of 4 per cent 1960-70 loan. Since then, all loans issued in India have been on the basis that they are subject to tax. Of the loans issued prior to Sir Basil Blackett's innovation, the only one that remains to be redeemed is the 5 per cent 1945-55 loan. The Government of India have the option to repay this loan on October 15, 1945 by giving three month's notice. It may be taken as certain that this option will be exercised. If so, the amount that has to be found for the redemption of 1945-55 loan is Rs. 56.75 crores. With the Government's Cash balances standing at over Rs. 250 crores, it should be possible to repay 1945-55 loan without recourse to any fresh borrowing. But the governing consideration with respect to Central Government's sales of treasury bills or raising of loans is, in present circumstances, not the ways and means position, but the effect of such borrowings as an anti-inflationary operation. From this point of view, a conversion loan for the purpose of taking care of the 5 per cent 1945-55 loan redemption is clearly suggested.

Conditions in the giltedged market are as favourable for a new loan now as may be expected. The 3 per cent 1957 Victory Loan has strengthened from Rs. 99-7 to Rs. 99-11 since the announcement of the impending closing of the list. In the course of a few days, this loan will be quoting at par. Our enquiries in market circles show that, in the last two days, not much scrip of Victory Loan is offering. Open market operations to the extent of a few lakhs should easily coax the price up to par. It is quite on the cards that the improvement in Victory Loan induces a corresponding rise in the whole range of giltedged securities. It is thus within the power of the Reserve Bank to instill and maintain a correct sentiment in the giltedged market. The next question is: What should be the terms and conditions of the New Loan?

In the first place, we suggest that the New Loan should be limited as to total amount of subscriptions as well as the period during which the list is to remain open. Secondly, the Loan should be in the form of 3 per cent 1959 Bonds. Our idea in suggesting 1959 as the maturing date is because of the progressive extension of maturing dates with regard to the series of defence loans. We have suggested 1959 also because a big loan like 4 per cent 1960-70 is to be redeemed in 1960. Thirdly, we suggest that the Loan be both for cash and conversion. 5 per cent 1945-55 loan must be given the option to convert into the New Loan. Some kind of inducement must be provided for conversion. The pre sent market quotation of 1945-55 is Rs. 102-8. It may be provided that this loan will be eligible for conversion at Rs.103. The inducement for conversion is thus 8 annas per cent. This must be considered quite substantial in present giltedged conditions. The total of cash and conversion may be fixed at Rs. 75 crores.

April is the most suitable time for the issue of such cash-cum-conversion loan. The tax-gatherer will have concluded his busiest session by the end of March, and will start taking things easy from April. There are also reasons to expect that the war news from Europe will prove extremely heartening from the end of March. If we suggest April as the most suitable time for the issue of a New Loan, we must make it clear that we do not attach special importance to this suggestion. The strain of tax payments or the activities of the busy season have made no difference to the money market. The old demarcation between the slack season and the busy season has disappeared. The convention in pre-Reserve Bank days was to issue the New Loan in the monsoon months. That convention has ceased to have signifi-

TREASURY BILLS

Central Government:

Tenders for Rs. 2,00,00,000 of three months' Government of India Treasury Bills were opened on Tuesday, February 13, 1945. Total amount offered was Rs. 14,25,00,000. Tenders at Rs. 99-14-3 per cent were accepted in full and those at Rs. 99-14-0 per cent allotted approximately 28 per cent. Lower tenders were rejected. Total amount accepted was Rs. 2,00,00,000, the average rate of accepted tenders being Re. 0-7-9 per cent per annum.

Tenders for Rs. 2,00,00,000 of three months' Government of India Treasury Bills will be received on Tuesday, February 20, 1945 at Bombay upto 11 a.m. and upto the close of business on Monday, February 19, 1945 at other centres. Successful tenderers should make payment on Monday, February 23, 1945. Other conditions are as usual.

During the week ended February 9, 1945, Government of India Treasury Bills for Rs. 2,42,50,000 were sold in favour of the Issue Department of the Reserve Bank of India.

Roosevelt's Plea for Acceptance Bretton Woods Proposals

Washington, February 13.

Roosevelt's message to Congress on Monday urging acceptance of the Bretton Woods recommendations is built around this theme. "It is time for the United States to take the lead in establishing principles of economic co-operation as foundation for expanded world trade". President Roosevelt was emphatic that international co-operation alone would be entirely inadequate and would be "friendly, constructive only if solutions are found to the difficult problems we face today". He construed participation in International Bank for reconstruction and development and International Monetary Fund as matters of self-interest to this country. The United States can trade profitably only in a prosperous world far different from that which will emerge in first post-war years. Other nations in Europe and Asia would furnish labour, local money and materials, the President noted, but obviously in wardepleted economies the many necessaries for reconstruction and development must come from abroad. Thus, Roosevelt said: "It is at this point our highly developed economy can play a role important to the rest of the world and very profitable to the United States". He noted also that already inquiries about post-war purchases and credits were being made by other nations and nationals. Roosevelt described the Bretton Woods project as "cornerstone to international co-operation, demonstrating common United Nations objectives, expanded production, employment, exchange, etc. In other words, "more goods produced, more jobs, more trade and higher standard of living for us all" was adequate protection for all interests. It would make or guarantee loans for reconstruction and development and facilitate wide private participation in such loans. It would "go far to take care of our part in lending requirements in post-war years". But the President noted that even more is needed for investment—exchange rates must be stabilized, channels of trade opened. So he urged acceptance of the Monetary Fund as instrument which "in maelstrom of panic and economic warfare culminating in war or would wherein members strive for better life through mutual trust, co-operation and assistance. The choice is ours."

Earlier, American Bankers Association and Committees representing 14,600 commercial banking institutions released their report, which was two months in preparation, wherein they have approved the proposal for a bank but have urged elimination of fund as instrument based on "unsound" economic principles. Opposition to the fund, which bankers stand indicated, will occur when Congress begins action on the proposals, perhaps prompted by Roosevelt's unusually forceful argument in their favour. He has already asked for approval in the annual message to Congress in January. The Bankers have proposed that stabilization activities be handled by separate department of Bank. Their proposal would reduce international contributions from 17,900 million dollars to 8,900 million and entail considerably diminished emphasis on gold. Roosevelt warned against permitting what he called "differences of opinion on minor details" to sacrifice the agreement which has been already achieved at Brettonwoods on major problems. But bankers who were not very well represented at Brettonwoods consider their objections above level of minor details and bespeak of earnest Congressional and Administration consideration of their alternative proposals which they hold enforce, rather than weaken, Brettonwoods objectives.

The Railway Budget

In the sixth and probably last full year of the war, the Indian Railways are experiencing the convergence of a number of problems of a more or less technical character which had been gathering momentum in the earlier years, as also of problems which pertain to the post-war period. In the earlier years, they had to send locomotives, track and rolling stock to the Middle East while at the same time they shelved the proposals for setting up the manufacture of locomotives and boilers within the country. The rapid increase in requirements however led to the revival of those proposals and the placing of orders for rolling stock both at home and abroad. The stage has now been reached when the locomotives sent to the Middle East are returning in increasing numbers. Orders placed abroad are being met at great cost, and the plans for indigenous manufacture are well under way. In the financial sphere, while gross earnings and surplus on the old basis continue on the upward trend, the cost at which new rolling stock is being obtained and repairs effected and, even more, the disquieting arrears of replacement for which the Railways are never too sure adequate provision has been made are all sufficient to remind the Administration of a possible skeleton in the financial cupboard while the table may seem so alluringly satisfactory. There are, besides, the post-war problems to consider, the need to co-ordinate road-rail transport, to provide better amenities for travel and to ensure that the Railways will continue to retain a sound financial position and make a reasonable contribution to general revenues. Though the end of the war may not be far away, the year ahead may well involve more strain on the resources of the railways, improved as they may be by recent replenishment. Not only might military requirements be more, but, as the Member for War Transport has made it clear, the campaign for less travel is so clearly a failure that the appropriations for that purpose has been reduced. The Railways carried 10 million more passengers monthly in 1944 than in 1943 and 25 million more than in 1942. In the first 8 months of the last year Railways loaded 7¼ per cent more wagons and carried nearly 2 million tons more goods than in the same period of the previous year. Coaching earnings increased by no less than 80 per cent largely due to increased parcels traffic. While the problems that call for some precautionary provisions, if not final solution, are many and complex, the Railway Administration cannot expect to have either a free hand or all the data necessary for judgment.

Considering the various problems on hand, the speech of Sir Edward Benthall to the Assembly on Wednesday last should meet with general support. The record of the Railways, over looking minor or inevitable shortcomings, was creditable. Military operational demands have been met to the satisfaction of the Service Chiefs, the expansion of capacity on the lines of communication to Assam has been in excess and in advance of the target, and thanks to the close co-operation of the Services, military movements over the entire railway system have been carried through according to programme. The essential programmes for the movement of civilian traffic, like foodgrains, sugar, cotton cloth, timber, iron, steel and cement have on the whole been successfully carried out, thanks to close co-operation between the Railways, the Priorities organisation and the Government departments concerned. As regards foodstuffs, in particular the Railways claim that in 1944 nobody went short of the necessaries of life because of failure of rail transport. The financial results of the working of the Railways have been satisfactory, inasmuch as they have not only enabled a big contribution to general revenues, but have also helped the maintenance of a reasonably sound financial structure. The War Transport Member has been able to assure the Assembly that the future of the manufacture of locomotives and boilers will not be jeopardised by the large-scale imports of the year ahead. Hopes of improvement of conditions of travel are held out. And the Railways are not behind other departments of Government in preparing for the post-war period. While the general objective of financial changes which have been proposed should commend itself to all, and while it may be readily agreed that it is better to increase the financial soundness of the Railways than to reduce by a fraction the deficit in the General budget, final judgment on these measures in their present form must await closer scrutiny.

If one puts out of mind the cost (in depreciation) at which they have been obtained, the earnings of the Indian Railways must be considered extremely satisfactory. In 1943-44 traffic receipts were Rs. 6.93 crores more than the revised estimates while working expenses increased by only Rs. 11 lakhs. The year closed with a surplus of Rs. 50.84 crores against a revised estimate of Rs. 43.77 crores, enabling a contribution of Rs. 37.64 crores to general revenues and of Rs. 13.2 crores to Railway reserve. In the current year, the revised estimate of gross traffic receipts is Rs. 214.30 crores against the budget estimate of Rs. 182 crores, while the expected increase in ordinary working expenses is only Rs. 33.25 crores. Receipts for the year ahead are estimated at Rs. 220 crores and ordinary working expenses at Rs. 140.65 crores. The year's surplus is expected to be Rs. 36.51 crores. The ordinary working expenses include in 1944-45 a sum of about Rs. 24 crores and in 1945-46 a sum of Rs. 30 crores which, if the Railways continue to follow ordinary rules of allocation, would not be charged to working expenses. To enable the Railways to finance this special liability and bearing in mind the needs of both the General Revenues and Railways, Government now propose that the Railway contribution to the General Revenues should be fixed at Rs. 32 crores in 1944-45 as well as in 1945-46.

The change in the rules of allocation is deemed necessary in view of the fact that otherwise the capital at charge would be unduly heavy and the depreciation fund will be reduced. But for the change, the expenditure on locomotives and wagons in the four years from 1943-47 estimated at Rs. 94.75 crores would involve a debit of Rs. 16 crores to capital and Rs. 78¾ crores to the Depreciation Reserve Fund. Expenditure on works would have a similar if not equal effect. It has been decided that all works of general traffic utility executed at the instance of the War Department to meet the needs of war time military traffic will be charged to military estimates and the Railways will pay interest and depreciation at agreed rates subject to the arrangement being reviewed at the end of one year after the war. The cost of other works such as military sidings, depots, etc. constructed for the sole use of the War Dept. are shared between the Railways and the War Department according to certain prescribed code rules. Although the Military sidings, depots, etc., constructed during the war should be treated as temporary the Railway share of the cost, which is estimated at about Rs. 3 crores, has been charged to capital. It is now proposed to transfer this expenditure to working expenses in accordance with the principles of allocation of temporary Railway works. As regards other important capital and Depreciation Fund works for purely railway purposes, it is proposed that 50 per cent of the expenditure incurred after 1942-43 should be debited to working expenses in view of the high cost of these works resulting from the war. As regards rolling stocks, it is now proposed that a charge to Capital should be raised only when the total capacity of wagons or the aggregate tractive effort of locomotives is increased on any railway after making allowance for difference in estimated lives of the old and the new stock.

The financial results of these proposals in respect of wagons and locomotives are, the charge to capital will be about a crore; that to Depreciation Fund will be reduced from Rs. 78¾ to Rs. 22 crores; there would be a withdrawal of Rs. 10¼ crores from the Railway Reserve and a sum of Rs. 61½ crores will be debited to working expenses. Adding Rs. 3 crores for Military sidings, depots, etc. and Rs. 1½ crores for works the particulars of which are available, the total amount that is proposed to be debited to working expenses is Rs. 66 crores of which Rs. 24 crores will be accounted for in 1944-45, Rs. 30 crores in 1945-46 and Rs. 12 crores in 1946-47.

There is a great deal to be said for not burdening the Railways with an unduly heavy capital. It would have been singularly fortunate if the Railways could manage to pull through the war period and postpone replacements till after the war, when prices will have come down. That would be an instance of having the best of both worlds, earnings on the war time scale and expenditure on that of peace time. Six years are too long a period for replacements to be avoided. In fact, one can understand the general position in this regard by taking note of Sir Edward's observation that the import of rolling stock even on the large scale programmed now will not prejudice the prospects of the locomotive, boiler and wagon building industries. In the case of locomotives, the deliveries will barely replace the overage locomotives which ought to be scrapped and no provision at all has been made for deliveries of passenger engines, so that there is no doubt that there will be plenty of orders available for the new locomotive works which are being established, provided funds are conserved for the purpose. In the case of wagons, present orders have had the effect of anticipating future demands to some extent and will provide for some overall increase in stock, but in the 10 years from 1945-46 an average of 5,400 wagons will become overage each year against an average of 480 which were still due for replacement in the previous 10 years. There therefore appears from the technical aspect to be room from 1947 onwards for wagon orders on the Indian industry in excess of the pre-war average. From the standpoint of industry as well as of the travelling public the future must be deemed bright. There is much in the recent experience of the Railways to suggest that, in spite of the handicaps of the war period, passenger and goods traffic is steadily rising to higher levels.

Ship-building—Progress and Promise

After the Indian Tariff Board's formal enquiry into the shipbuilding facilities existing in India as part of its investigation into the market available for the Indian steel industry the general conclusion reached was that shipbuilders then had no specific ambitions and were content to rely on chance rather than interested guidance, partly because the demand for their services was fitful and limited. The Tariff Board then devoted much attention to what navigation companies could do by encouraging the consumption of steel in spite of the latter's very limited competitive ability while ascertaining that shipping and shipbuilding were so closely connected as to offer some opportunities of development. In the most recent enquiries relating to shipping after the war special prominence is assigned to the part that shipbuilding can play in the creation of an Indian mercantile marine, largely on account of the formation of a new yard on the East Coast to build fairly large sea-going vessels as distinct from harbour craft and river steamers that have been built in India for many years.

Although steel has been scarce in wartime, and even in 1943 India could turn out 75 per cent of the steel required, the wartime progress in steel production from ¾ million tons to 1¼ million tons offers a hope of creating the bigger broad-based industry to which experience of ship repairs should contribute. It is believed that an estimated production of 225,000 tons of structurals and an estimated production of 82,000 tons of steel plates along with the marked increase in castings affords the foundation for postwar progress in this case. Though India is scarcely going to be self-sufficient in the matter of steel the curtailment of war demand might help in the creation of a shipbuilding industry, particularly, if the amount of naval work after the war remains considerable. The separation of the two—civil and Government work—may not be convenient for the experience of the war period clearly illustrates the actual dependence both of the shipyards and shipwrights on Government. A scheme of subsidies for shipyards might be one way of encouraging Indian shipping although the same scheme might spell drastic modification of tariff protection for steel. Further the more important consideration may not be the level of costs but the probable requirements of the carrying trade. As part of the Government's reconstruction the rapid development of shipping and hence of shipbuilding has been accepted as desirable. Is it possible to believe that the foundations for a modern efficient industry exist on the basis of progress in engineering made so far. There has been construction of small armed vessels for the RIN and much work on light craft of many types. It is only in the matter of boilers and machinery that India's disadvantages appear as great as in the past but even in this matter it is permissible to adopt an optimistic view on the strength of what has been made to develop a very old, though moribund industry, to new purposes. Before the war steam-driven vessels as well as countrycraft were built in India, mainly at the ports, for water transport was well developed. The laying out of a large yard from which equipment later was transferred to the west coast was part of a scheme to get most out of the war. Early in 1940 the Commerce Department surveyed shipbuilding facilities and accepted that engines etc., would have to be imported. An official conference in May, 1940 was however concerned with an assessment of limitations. But the Admiralty indicated that shipbuilding could be developed and the local construction of trawlers, launches and minesweepers became part of the supply programme. The Admiralty promised machinery and stores to the firms that took up shipbuilding work for the Government.

What the Directorate accomplished in three years in stimulating production of engineering concerns and workshops is not as widely known as the application of war gifts for naval expansion. The shipbuilding programme suffered only to some extent from the Admiralty's failure to provide steel which had to be obtained in India. Delays and difficulties notwithstanding, a large programme was executed in 1942. It is commonly suggested that the Supply Department's attitude to shipbuilding was merely negative. On the other hand, it appears from the close connection developed with the firms able to build vessels that the conference of July, 1940 led to a vigorous expansion, limited only by the scarcity of materials including timber. It has been found that small craft for defence can be made locally in addition to a large number of boats made of wood. Some machinery for ships has been locally produced as part of the building programme; and defects and delays are probably associated with the strain of war rather than the inherent deficiencies of the industry. The constant increase in repair work at ports illustrates clearly the success of the shipbuilding industry. Since 1941 the work has grown in importance and the war against Japan has led to extended use of the facilities at Indian ports. There are six ports in which it has been found possible to carry out repairs far greater than the casual, inter-voyage repairs carried out in peacetime. The bulk of the repair work has been carried out at Bombay and Calcutta but Karachi, too, has carried out repairs to merchant vessels. Tonnage figures may not indicate how much has been done. Instead of imported steel Indian plates have been used and alloys of Indian origin have found application along with Indian timber. The repair programme has covered British, Australian and Allied vessels and included the provision of defence equipment for merchant vessels. Plastic armour came into use during 1942-43 and 324 ships were fitted with the material in a single year. Shipbuilding work is at present limited to six ports and the distinction between ship construction and repair is not very clear though the shipping companies' connection can be easily ascertained.

It is however apparent that the new yard planned at Vizagapatam is the most important segment of the circle and even the transfer of equipment to the other side of India did not imply the complete suspension of construction since facilities for repairs were made available at the new Scindia yard towards the end of 1942. The arrival of evacuees from Hongkong and Singapore has not been without advantages for the development of an industry that must look for skilled labour. Italian prisoners and Chinese labour drawn from Burma have found employment in Indian shipyards. It is believed that the biggest difficulty may arise as regards supervisory labour while British assistance may be required in the future as in the past. The total numbers engaged in shipbuilding and repairs are put at 50,000. The construction of small vessels for other countries may be said to make for improved prospects. In the past it was contended that Burma mail steamers were a special type and they could be had for the Irwavaddy Flotilla only from the Clydeside. That view may possibly disappear in view of the experience already available to the Indian industry which combines building of new vessels with repairs. The actual numbers required may increase with the development of river and coastal navigation after the war though it is fairly clear that rapid technical progress will be the decisive factor in this case. The special measures adopted to develop countrycraft may be without much effect on postwar shipbuilding since the level of freights will be the main factor for both shipbuilding and shipping. Should postwar controls apply to shipping, the degree of development may be larger than supposed. The current emphasis on shipbuilding as preferable to purchase of surplus tonnage from other countries may not prove as important as the acquisition of an export market for small ships in Burma, and possibly in China. Like the state of activity in British yards, the amount of compensation for war damage may conceivably regulate the distribution of orders after the war. There is reason to hold that the situation is vastly different from that described in 1926 when new building was strictly subordinate to repairs and both were determined by river navigation companies' requirements—their connection with engineering and managing agency firms made it so. The building up of a large local labour force more than the laying out of a large modern yard may be said to represent the biggest advantage. How it is going to be used depends mostly upon the rate of naval expansion and the local and foreign shipping companies' use of the opportunity to carry out the scheme for getting the ships for the increased share in the Coastal and Near trades. The exclusion of a narrow nationalism may lead to the kind of development desired, now that resources and experience are known to be in excess of what was available when only a bounty scheme for special types of steel was under examination.

Editorial Notes

No Unmixed Evil

The budget presented by the Hon. Mr. T. C. Goswami to the Legislative Assembly while it confirms the fears of large deficits, should also hearten the people of the Province that war and famine may not ultimately prove to be an unmixed evil. The current financial experiences of the province and the immediate outlook are, no doubt, extremely disagreeable. But the list of measures of immediate relief and long term reconstruction which the Finance Minister set out before the Assembly should be deemed by all to be both heartening and impressive. Famine and its aftermath of epidemics have led to colossal expenditure, for which the Central Government have made contributions, which are both inadequate and grudging. Mr. Goswami's remarks on the point set an example for other Ministers, here or elsewhere, who may find themselves in disagreement with the Central or with other provinces. But a wide variety of works which will add to the wealth and well-being of the people has been set afoot. Likewise, under stress of the recent calamities, Bengal has taken on hand the task of expanding the sources of her own revenue. Detailed examination of this and other aspects of the Budget must be postponed to the next issue. Here it should suffice to say that, though a great part of the increase in revenue is traceable to war conditions, the steady increase in the yield of entertainment, betting and sales taxes and the taxation of agricultural income bid fair to effect a permanent improvement in the finances of the province. Mr. Goswami has hinted at new taxes, which are now being examined and some of which may be introduced later in the year. With the increase in production which the reconstruction measures provide and the increase in revenue now being steady worked for, the future must be deemed to be brighter. But there must be keener appreciation at the Centre and over the rest of India of the injustice of Bengal being left with an unproductive debt of Rs. 19 crores and without any appropriation for post-war reconstruction funds. But within Bengal there must be recognition that in the most disheartening circumstances Mr. Goswami has been able to find ways and means of financing many a prospect of permanent popular utility.

Increased Imports

According to a recent announcement from Delhi this country may hope to receive considerably larger supplies of engineering stores from the United Kingdom as the supply position in regard to stores imported under the panel scheme is easier. The increased supplies should be sufficient to meet demands not hitherto acceptable under the panel scheme because they could not qualify as being for war purposes or for essential civil needs. The items immediately available include motors, generators and starters, condensers, switch and fuse gear and a number of tools. The Government of India has decided to relax the restriction hitherto imposed on those receiving import licenses and also quantitative limits hitherto imposed. Industrial consumers who used to import directly will be granted licenses, and the limits of importers will not be limited to those who previously obtained licenses by proving that they imported goods during a specified period. Licenses are to be issued to those who obtain firm offers from suppliers in the U. K. though the actual grant of license will be considered in the light of conditions prevailing from time to time.

The announcement follows the dispatch of the official mission connected with supply questions. Suspicion as to the purposes of the Hydari Mission has been common but the first fruits of the mission offer no threat to established industry. On the other hand, it provides only for a moderate expansion of a limited class of imports. Civilian consumers are the principal beneficiaries, and in view of the supervision possible over distribution, prices will be moderate. Recently the Civil Supplies Department's proposal to fix prices for cables and flexible cords by direct agreement with the trade has been made. This, too, is meant to help the Indian consumer. The supply mission's chief object is to secure relaxation of export restrictions to meet Indian requirements. There are two governments involved, both of whom are concerned with the maintenance of the favourable trend of imports of machinery and instruments into India. Imports since April last have shown some increase and the adjustments in procedure are meant to confirm the trend. Some alarm over probable imports of steel, cement and cloth has been occasioned by furious conjecture as to the Mission's objects. It is however patent that it is not a purchasing body as it is considering ways of developing production here. Export allocation of cloth for the Indian market has been made but Lancashire is known to be very short of labour and keener on Latin American markets where it is possible to compete. The relaxation of control in respect of capital goods is a deferred benefits scheme while the relaxation relating to engineering stores in spite of the recent communiques cautious wording is meant to apply immediately. The many electrical items and tools referred to are not ordinary consumer goods and in the event of regular and large arrivals the net outflow of money need not be large. To secure preference when other countries too are looking for imports from Britain has assuredly become necessary and having regard to the very moderate rise in imports last year it may be inferred that the new policy—one of dealing with shortage rather than encouraging demand—is not going to affect to any extent costs, profits and prices. Gradual relaxation of import control has been both expected and desired in view of assurances given as regards industrial development here.

Money for New Schemes

The Standing Finance Committee of the Assembly at its meeting on February 2 accepted the proposals for expenditure on certain schemes. The Central Government intends to spend every year Rs. 170,000 on Labour Commissioners to work for labour welfare. There will be one Labour Commissioner at Delhi and three Deputies at Calcutta, Bombay and Lahore. The choice for the post at Delhi is known to have fallen on Mr. S. C. Joshi. The new branch of the Labour and Industries Department is to deal with the trade disputes in the Central Government's undertakings and is to take over the work of the Conciliation Officer who deals with Railway Labour. The Committee was informed that the Rege Committee's investigation would be over by July. Funds for carrying out its proposals will certainly exceed the sum of 5,37,459 voted. The Finance Committee has merely provided the money for investigation into the possibility of a Social Security Scheme. Another pro-

LOW LIFE ASSURANCE RATES

have been made possible partly by the economical management of the Society, the expense ratio being lower than that of the majority of the larger life assurance companies in India.

Taking the first fifteen Indian insurance companies in order of their total business in force, the Society's premium rates for life and endowment policies are among those of the four companies who charge the lowest rates.

Rebates allowed by the Society on the premium rates include: 2½% for annual payment; 5% to 10% for residence in healthy climates; 10% to employees of Municipalities, Schools and other departments insuring through their employers; and As. 8/- and Re. 1/- per thousand for single policies of Rs. 10,000/- and over and Rs. 20,000/- and over respectively.

The Society's life and endowment policies offer the best value to those who look for a large company with economical rate schedules. A copy of the 1944 Prospectus and Tables of Rates will be gladly supplied on request.

CCB

posal connected with labour welfare is the collection of facts and figures relating to the cost of living. The investigation started in 1942-43 is to proceed and the working class cost of living index for selected urban and rural centres is to be prepared as recommended by the Court of Enquiry which dealt with G.I.P. railwaymen's claim for a dearness allowance. The taking over of the Indian Statistical Institute and its reorganisation is contemplated. The expenditure entailed is put at Rs. 1.4 lakhs recurring and Rs. 75,000 non-recurring. In place of a grant of Rs. 53,000 every year the Central Government would pay Rs. 87.000 more for the Institute which will be under the Economic Adviser. This may well represent t beginning of economic research on a large scale for Government's own purposes of planning. The most considerable item for which the Committee approved expenditure was the tele-communications scheme. The Posts and Telegraph Department is spending Rs. 5.57 crores this year and aims to spend Rs. 2.87 crores next year. Progress made since 1942-43 has led to the acceptance of a similar scheme for the major railways. Improvement of telephone facilities is among the objects of capital expenditure undertaken by the Posts and Telegraph Department. The three industrial grants recently voted were those for the woollen industry, the sericultural industry and the handloom weaving industry. The yearly grants for 1945-46 have been approved but that for the woollen industry is to be Rs. 50.000 instead of Rs. 1 lakh. The Standing Finance Committee also sanctioned a special grant for the Delhi University and another for strengthening the staff in the Central Education Department to deal with postwar plans. There is a plan for despatching 500 Indian scholars abroad for special training who on return to India would be bound to serve the Government. Additional expenditure for three years has been sanctioned but the actual cost of the scholarship scheme must obviously be shared by the Provinces and States who select the trainees.

Population Changes

Some suggestive figures as to the war's effects on the growth of population are again available although the League of Nations' bulletin stops with 1943 and is limited to the consideration of European countries excepting Russia. A rise in Germany's infant mortality is as significant as the drop in Malta's infant mortality after 1942. The rates are highest for the Balkans and lowest for Sweden. Proof of Britain's good health in wartime is forthcoming as a drop in infant mortality was recorded in 1943. The Occupied countries generally showed a higher death rate than the principal countries at war. Changes in Iceland during Allied occupation cannot be indicated but for Europe as a whole. The infantile death rate tended to fall before the war. Since 1940 there has been a rise while the birth-rate has fallen in most countries including Germany. Important exceptions in this case are the neutrals including Eire. Civilian deaths did not rise very sharply in spite of the fall in the standard of living. The rates did not show more than a slight increase in Italy, Britain and Germany. The Scandinavian countries as usual had the lowest death rate and the Low Countries experienced the natural increase that is recorded in the case of France where the birthrate definitely improved during the Vichy regime because the number of marriages increased after 1940. The prewar total of marriages was certainly not attained in Germany where the number of births has fallen since 1940. This feature rather than the stability of the death rate should claim attention. In Occupied France the death rate fell but rose again in 1943 and exceed the birth-rate. Abnormal increase in civilian death rate is peculiar to Hungary and may perhaps be linked with the rise in the birthrate as well as the deathrate for infants. The normal excess of births over deaths is not recorded in all cases. The war losses however are not included in all totals though the rise in Finland's death rate in 1940 is clearly attributable to the war. Though military casualties at home are duly included the U. K. death rate rose only in 1940 and has since been at the 1939 level. German war casualties are completely excluded for which reason the effects of continued bombing on the death rate cannot be ascertained though the drop in the birthrate is a fair guide to the economic strain from which the population suffered. Contrary to the prevailing impression, there has been no increase in the number of marriages in Britain during the war period. But the number of births has increased and the death rate for infants has also fallen. This may neutralise apprehensions as to a stationary population—a subject into which a strong inquiry committee, presided over by Lord Simon, is devoting attention.

Corporation Budget

The Calcutta Corporation's estimate of revenue and expenditure for 1945-46 presented last week revealed the necessity for a subvention to supplement the proposal made for additional revenue. The C. E. O.'s proposal for an increase in the Property tax is based on the need to repay the debt, the need to keep a revenue balance of some kind, and to tax so as to qualify for larger grants from motor vehicles taxation. Expenditure is expected to rise by Rs. 2,49,000 while revenue is expected to rise by Rs. 10.1 lakhs though only Rs. 6¼ lakhs of the increase will come from the Property tax. Taxes on consumption by permission have again been advocated along with a claim for a share in the Entertainment Tax. Reference has been made to the major schemes for improving water supply and the City's conservancy arrangements. In the statement introducing estimates, the claim for a subvention of Rs. 40 lakhs has been reiterated. The main case has been referred to the Special Committee dealing with the Budget. As for the increase in Property tax a comparison with Bombay has been made. The rise in the rateable value of property and the level of rents even under Control are presumably strong arguments to justify an increase in the Property Tax. The increase might well lead to increased contribution to the Improvement Trust though there is a proposal to reduce it temporarily. The Corporation's lack of productive undertakings is not the only reason for the difficulties described. The war has increased responsibilities for local authorities. Revenue, in the usual sense, is singularly inelastic and economy is impossible to adopt. Borrowing in a closed

market when capacity is impaired is also difficult and the actual measures prescribed after the special officer's review of the Corporation's financial position have apparently been insufficient to deal with the deficit. There is a deficit of 20.67 lakhs for the current year which has been met from the opening balances. This is the reason given in support of the proposal to raise the consolidated rate, the chief head of revenue, accompanied by a conditional promise to reduce it. The growth of expenditure is more or less inevitable. The C. E. O. drew attention to the increase in Calcutta's population and the duty to maintain many essential services. To discharge that duty, the Corporation is asked to raise the Property Tax by one per cent, if not two per cent. There is hardly any reason to regard the aggravation of stringency as usual. The Provincial Government has experienced the same growth of debt and the Finance Member has described the need for adjustment of the Central contribution to population and responsibility for expenditure. If the same arguments apply, the Corporation's claim for a subvention of Rs. 30 lakhs appears very strong. The decision may be delayed but the small increase in taxation would duly strengthen the Corporation's claim for assistance. The tendency for Government grants to increase as a consequence of the extension of secondary functions is certainly a feature of local government finance that must be cited in this connection.

Estate Labour in Assam

Conditions in the tea industry cannot be indicated merely by reference to the numbers recruited in a single year. The Emigrant Labour Act was in force during 1942-43 and the increase in numbers was due to the I T. A. scheme for helping in the construction of defence projects. New workers came to Assam from Bengal. U. P., Madras and Bombay. The tea gardens had a labour population of 1,175,431 showing a rise of 20,284 on the previous year. There were more adults than children and the increase in numbers was less than the number of new arrivals from other Provinces. Immigration was largest in respect of the Assam Valley and certainly exceeded that recorded in the four preceding years. Since it is known that 1943 was a difficult year for tea growers the official report's estimate of the net cash earnings per month is not enough. Labourers on tea estates got many concessions as usual. They had also the benefit of a food supply scheme. To make rice available to labourers some gardens had to buy rice at Rs 35 per maund and resell it at Rs. 5 per maund. To ensure the supply of other articles the tea industry was granted a quota of commodities imported by the Government Agents and the Indian Tea Association was made responsible for distribution. Besides the free issue of cloth some estates imported cloth and issued it at cost price or at substantially reduced rates. Arrangements were made to take a quota of standard cloth but imports were delayed. Variations in earnings from district to district or between men and women tended to be very slight and the proportion of settled labour to busti labour was unchanged. An increase in sickness did not have much effect on the death and birth-rates but in 1942-43 there was the exodus from Burma and the tea industry had to deal with other things besides repatriation of labourers. Total numbers engaged and total wages paid cannot be ascertained from the figures contained in official review. Average daily working strength of men, women and children settled on tea estates in seven districts appeared to exceed 430 000 to which must be added over 38,000 (total of faltu or busti labourers) whose cash earnings were nearly equal to those of settled labour though the latter are given more work by way of ticca which adds to their earnings. The existence of rent-free houses with corrugated iron roofs and ventilators at the top in some tea gardens pointed to an improvement in housing conditions. It is known that the tea industry attained a high output in 1943 despite labour difficulties. There was a fall in profits and therefore in dividends paid. The explanation for the decrease in profits is not unexpected but what took place in 1944 should have a material effect on other things besides average prices realised at sales.

Forcible Repatriation

The very limited success of anti-inflationary measures in France which included a new tap loan bearing interest at a modest rate led to the formulation of drastic proposals for getting at surplus assets held by Frenchmen abroad. The French Government wants to repatriate the funds compulsory but vesting orders require co-operation. That has been promised by Britain which has secured a promise of reciprocity in this case. Possible effects on international shares cannot be indicated since the realisation of assets by holders may be inconsiderable; only tax avoidance on holdings may be frustrated. The estimates of French refugee funds vary. But it is presumed they are large, and the private investor is now called upon to furnish details and is directed to bring back the assets. Although the entire procedure prescribed does not differ greatly from that adopted in connection with dollar securities held by Britons and Indians, the fact that London's foreign balances (of which a part must be funk money, not hot money) would decrease must be recognised. The provisional government's intention is plain. It does not want to sell gold when foreign exchange can be commandeered.

The success of the plan should ensure enlargement of essential imports and limit Lend-Lease supplies. That France wants to

AUDITOR'S REPORT.

I have audited the above Balance Sheet and Profit and Loss Account with the books of the Head Office, and all the branches in Madras and the certified returns from the other branches and sub-offices, verified the cash and securities at Mayavaram, and the Madras offices, and have obtained all the information and explanations I have required. I beg to report that the above Balance Sheet and Profit and Loss Account, are in my opinion, drawn up in conformity with the law, and that the Balance Sheet exhibits a true and correct view of the Book's affairs as on that date, according to the best of my information and the explanations given to me and as shown by the books of the Bank and that in my opinion, books of account have been kept by the Bank as required by Section 130 of the Indian Companies Act, 1913.

P. S. SUBRAMANIA IYER, B.A., G.D.A., R.A.,
Registered Accountant, Auditor.

Madras, 27th January, 1945.

PROSPECTUS

A copy of this prospectus has been filed with the Registrar of Joint Stock Companies, Bengal.

"Consent of the Central Government has been obtained to the issue of capital subject to the condition that so much of the capital as cannot in that Government's judgment be properly expended until some uncertain future date is invested and kept invested in prescribed securities which will not be released until the Central Government (in consultation with the Crown representative if any Indian State interests are involved) is satisfied that the time has come to make corresponding payments for the purposes which are consistent with the enforcement of any measures of control or restriction that may be in operation at the time when such release is applied for. It must be distinctly understood that in giving this consent the Government of India do not take any responsibility for the financial soundness of any schemes or for the correctness of any of the statements made or opinions expressed".

THE SUBSCRIPTION LIST WILL CLOSE ON 20TH FEBRUARY, 1945.

Application has been duly made to the Committee of the Calcutta Stock Exchange Association Ltd., for the quotation of the shares of the Company in its official list.

SODEPORE GLASS WORKS LIMITED

INCORPORATED UNDER THE INDIAN COMPANIES ACT, 1913.

AUTHORISED CAPITAL - - - Rs. 20,00,000

		Rs.
Divided into:		
1,56,303 "A" Ordinary Shares of Rs. 10 each	... ...	15,63,030
36,970 "B" Ordinary Shares of Re. 1 each	... ...	36,970

PROSPECTUS

OBJECTS OF THE COMPANY.

The Company has been formed with the objects set out in the Memorandum of Association and in particular to carry on the business of manufacturers of glass and other allied products.

The Company was incorporated on the 14th November, 1941 with an authorised capital of Rs. 6,00,000, of which Rs. 5,11,670 is paid up as stated above. Shortly after its incorporation the Company acquired a going glass factory, situate at Sodepore near Calcutta one of the largest of its kind in India. The Company has since then equipped the factory with the equipment for the manufacture of sheet Glass and has been since over a year manufacturing sheets glass also, which so far is being manufactured by only two other factories in India. The Company since its inception has paid good dividend. The Company is one of the biggest glass factories in India but is unable to meet the demands of its customers.

The Company now proposes, after the termination of the war or earlier if possible, to erect a glass factory at Ramgarh in the district of Hazaribagh in Bihar for the manufacture of various kinds of glass such as plate glass, window glass, wired glass, ornamented glass, mirror glass, ribbed glass, etc. and also other allied glass products such as glass cloth, glass wool, cut glass etc.

The main raw materials required for the manufacture of glass are coal, silica, sand and quartz, limestone and soda ash. All the raw materials except soda ash will be available at the site and at a very cheap rate. Soda ash used to be imported in large quantities prior to the war, is now produced in India also in considerable quantities. There will be no difficulty in getting the necessary amount of soda ash after the war either by import or by purchases from the local factories. The factory will be situated near the railway station. There is a good motorable road passing through Ramgarh and both the East Indian Railway and Bengal Nagpur Railway have their stations near about. Ramgarh is only about 180 miles from Calcutta and there will be enough transport facilities and also other facilities to get soda ash and other materials. In the opinion of the Directors, Ramgarh is a very suitable place in India for the erection of a glass factory. Most of the glass factories in India are at present situated more with a view to availability of markets than to proximity to supplies of raw materials with the result that the costs of their production are very high. In the year 1936, the Government of Bihar appointed the Chemical Industries Committee and this Committee has recommended that Bihar is a very suitable place for glass industry. It has gone so far as to say that if the industry is started at the coal fields in Bihar there is good chance of competing successfully with Japan.

The glass industry in India has been steadily growing since some years prior to the war. The value of imports in India of all kinds of glassware came to about Rupees two crores and fifty three lacs in 1926-27, it decreased to one crore and sixty five lacs in 1931 and in 1938-39 the value of the imports came up only to Rupees one crore and twenty-five thousand. On the other hand, productions of Indian factories have been steadily increasing. India has also been exporting some kinds of glass even to foreign countries. The war has given a fillip to this industry also and with the various post-war reconstruction programme for the industrialisation of India and for raising the standard of living of the people the demand for all kinds of glass and specially of the several types the company proposes to manufacture will steadily increase.

There is at present no factory worth the name producing the several types of better quality glass which are very costly to import also. The company therefore will have the unique chance of meeting this demand.

The company proposes to have an up-to-date factory with the latest equipments and sufficiently large to produce the best type of glasses at a low cost and in fairly big quantities.

The Directors are confident that the factory to be erected at Ramgarh will be yielding profits shortly after it starts working and the Directors will be in a position to declare dividend on the present issue of the shares also not long after the proposed factory at Ramgarh starts working.

RESTRICTIONS ON TRANSFERS

There are no restrictions on transfers of the shares save and except that the Directors without assigning any reason may decline to register any transfer of shares not fully paid up or of shares on which the Company has a lien or to a person not approved by them.

MANAGING AGENTS REMUNERATION

Messrs. Bhadani Brothers Ltd. of 15, Clive Street, Calcutta, are the first Managing Agents of the Company since the commencement of the Company and they are to hold office for a period of twenty years from the date of incorporation of the company. The remuneration of the Managing Agents is a fixed office allowance at the rate of Rs. 1,500 per month and a commission at the rate of ten per cent on the net annual profits of the company as defined by Section 87 C of the Indian Companies Act provided that should the commission payable to the Managing Agents in any one year be less than the sum of Rs. 10,000 the Managing Agents shall notwithstanding be paid a minimum commission of Rs. 10,000 in lieu of actual commission calculated as aforesaid.

DIRECTORS QUALIFICATION AND REMUNERATION.

The qualification for a Director is the holding of shares of the company of any kind of the value of Rs. 12,500. The remuneration of a Director is at the rate not exceeding the sum of Rs. 100 for each meeting of the Directors at which he shall be present as may from time to time be decided by the Directors. At present a sum of Rs. 32 per meeting is payable to the Directors.

If any Director being willing shall be called upon to perform extra services or to give special attention to the business of the company, the company may remunerate such Director either by a fixed sum or by a percentage of the profits or otherwise as may be determined.

DIRECTORS' INTEREST

Rai Bahadur Ram Chand Ram, Lala Gurusharan Lal and Babu Vishnu Prasad Bhadani are also Directors of Messrs Bhadani Brothers Ltd., the Managing Agents of the Company and as such are interested in the remuneration payable to the Managing Agents.

UNDER WRITERS AND THEIR COMMISSION

The shares now offered for public subscription have been underwritten for a commission at the rate of Re. 1 per Preference Share and 4 annas per "A" Ordinary Share on the amount thereof by Messrs. M. Sohanlal, Share and Stock Brokers of Calcutta, who in the opinion of the Directors are parties with sufficient resources to discharge their underwriting obligations. The aforesaid underwriting commission is payable by the Company.

Brokerage will be paid at the rate of Re. 1 per Preference Share and 4 annas per "A" Ordinary Share on the amount thereof in respect of accepted applications received by the Company through registered brokers. A brokerage to the extent of Rs. 747-8-0 on the entire Ordinary Shares sold and to the extent of Rs. 800 on debentures worth Rs. 2,00,000 has been paid within the two preceding years.

INSPECTION.

The Memorandum and Articles of Association of the Company can be inspected at the registered office of the company during office hours.

APPLICATION FOR SHARES

Application for shares should be made on the accompanying form and forwarded together with requisite application money which should be paid to the Managing Agents at the registered office of the company. In case no shares are allotted the whole of the application money will be refunded and if a lesser number of shares are allotted the excess will be utilised for payment of the amount of allotment money and if any excess is still left it will be refunded.

A report by the Auditors of the company with respect to the profits of the company so far as the information is available in each of the two financial years immediately preceding the issue of the Prospectus and with respect to the rates of dividends paid by the company on each class of shares in the company for each of the said two years giving particulars of each such class on such dividends have been paid and the source from which the dividends have been paid and the particulars of the cases in which no dividends have been paid on any class of shares for any of these years is annexed hereto.

No amount has at any time been paid to any promoters either in cash or in shares.

Auditors.

get the money for the war is the real, compelling reason for the demand. A compulsory declaration as to foreign assets has been demanded of U. S. nationals as well as others during the war. To promote the return of French capital at the fixed rate of exchange has been found impossible. But the rate of 200 francs to the £ is evidently to be retained after the repatriation of assets takes place. It must be admitted that the return of capital may help France to attempt a capital levy. What Britain does will help her own export trade drive. There is perhaps no intention to use the gold reserve for essential imports when exchange restrictions can be kept up to prevent the export of capital. The Bank of France has a new Governor who was chosen in October to further the Government's own programme of borrowing and taxation. But taxable capacity could be determined only after the amount of fugitive capital is known. Vichy kept on borrowing to pay its way. Gen. de Gaulle is bent upon defending the franc by taxing wealth that eluded taxation for years. While stringent taxation may be part of a deflationary policy, and French exports may be drastically limited in the near future, the Government would have the means to wage war while monetary abundance would not be dangerous. That is the only aspect which concerns the Allies who may remember that M. Pierlot's Government obtained a register of capacity holdings in Belgium after measures at home linked with the new exchange rate went through.

Today's Prospectus

Several leading Indian industrialists have joined the board of the Sodepur Glass Works Ltd., whose prospectus calls attention to considerable developments within the glass industry during the war period. The raising of new capital to finance the development certainly acquires merit from the site selected for the additional factory. In the prospectus Ramgarh's advantages are detailed; and freedom from anxiety as to coal promises early realisation of the hopes cherished by the company. The profit figures for two years contain sufficient assurance as to the opportunities available for glass manufacturers. It is noteworthy that the deferred share capital is to be strictly limited as the present issue consists of ordinary and 5 per cent tax-free cumulative preference shares only. The greater part of the issue has been taken up already, and the list opening on February 20 is for a relatively smaller number of ordinary shares of Rs. 10 each. Mention is made of the raw materials needed, the transport facilities available, and the growing market for all types of glass. Figures to confirm optimistic estimates are scarcely necessary. The plan for expansion made to *synchronise* with the end of the war will indicate how far alert Indian industrialists are able to prepare independent plans for industrial development. The self-reliance of free enterprise should evoke satisfaction for the reason that a part of the industry does not look for hothouse protection and is duly confident of development on the basis of existing resources. The Sodepore Glass Works on the basis of its present record has exceptional claims on the local investor's attention because the plan of expansion promises independence of imports from Japan. The present issue is likely to be oversubscribed quickly since glass manufacture is not industrially a war baby and the managing agents Bhadani Bros. affiliate to the J. N. Group, have demonstrated the possibilities of early success. The application amount required is Rs. 2-8 and Rs. 2-8 on allotment the balance in calls at the Directors' discretion.

Indo-Commercial Bank Limited

The increase in the Reserve Fund is not the only feature of the Indo-Commercial Bank's accounts and the balance-sheet published today. The rise in net profit over the two previous halfyears is the direct result of a striking increase in Advances. The

Clive Street Gossip

In this series relating to the place of villages in All-India planning, I am under commitment to deal with three issues posed at the end of my Gossip of last week, the first of which is an examination of the existing agencies through which schemes connected with planning will be executed in the districts and villages. As the main text for today's gossip let me quote the following passage from the issue of February 10.

> "Allowing for expenditure that will be incurred in connection with Central services and in connection with industrial ventures, it may, in broad terms, be said that the amount spent in each district of India may be of the order of Rs. 3 crores per year. If this Rs. 3 crores is to be spent according to present methods and through present agencies, graft and corruption would take away a moiety of the total amount. That is to say, bribes paid to officials and fabulous margins extracted by contractors will eat away the major portion of Rs. 3 crores disbursed on account of planning. The actual benefit to the peoples in whose interest planning is being designed may not be as much as 4 annas in the rupee."

I cannot claim to have any direct experience of the way in which public works schemes are carried out in other countries; and I am not in a position to say whether the system of contractors is very much in vogue in foreign countries and whether, in the dealings between officials and contractors, there is a high standard of integrity. But it is well-known that, so far as India is concerned, our general experience is that, where works are executed departmentally, there is incompetence and total lack of cost accounting sense; and, where the works are carried out through contractors, merry arrangements are fixed up between contract-dispensing officials and contract-executing agencies. In regard to the bigger projects sponsored by the Central Government or the Provincial Governments, there are scrutinies and checks exercised by the officials working under the Auditor-General and the Accountant-General. It cannot be claimed that such checks and safeguards and scrutiny guarantee a fool-proof and knave-proof state of affairs. In the case of projects pertaining to the sphere of district boards, local boards and local bodies, financial, audit and other control is of the meagrest kind. The authorities charged with the execution of the schemes of local bodies are outside the purview of the technical services trained in cost accounting and financial scrutiny. The spending authorities have thus a free charter to indulge in their spending proclivities.

* * * *

The general, if not invariable, rule is to entrust the execution of all schemes, big and small, to contractors. The selection of contractors is a result of favouritism and bribery. Favouritism may come into play either as a result of political affiliation or communal jobbery or blood relationship. Bribery means nothing less than that the contractor has to understand definitely that he cannot have all the margin of profit to himself, and that he can be allowed to have a bigger margin of profit if he shares the margin of profit with the people concerned. This system is the rule rather than the exception so much so that the phrases "honest local board engineer" or "honest contractor" may be said to be a contradiction in terms. The giving and taking of bribes is not confined just to the engineer who gives out the contract or the lucky fellow who gets the contract. The infection has infected the whole body politic. If, say, a district board has in its power the giving of a contract for a road repair, some of the members of the board will need to be greased. The engineer whose job is to advise the board also requires anointing. Let us suppose that our lucky friend has secured the contract. Then he has to pay recurrent bribes to the supervising overseer who comes to check periodically the work in progress. This is the most interesting and profitable stage for application of grease. If the supervising overseer has been brought to a state of being very well disposed, he would on the first day, examine and certify 120 piles of stone chips heaped along the furlong length of the road. He will time his next visit for the following week; and the interval gives sufficient time and provides suitable opportunity for the contractor to remove 60 of these piles of stone chips to the next furlong length. And so it goes on. It is easy to see that the contractor has a simple way of utilising only half the materials included in the estimates. With such materials, the road is duly made; and one need not wonder that the actual width is less than the stipuated width or that the job as executed is only of 50 per cent value as compared with the job as planned. As the work progresses, bills are made from time to time; and these bills are certified by the supervising overseer. This is hailed as a further useful occasion for further ransom. The contractor is duly in possession of the bills and approaches the authorities to get payment on them. The clerk who checks the bills claims his share; and the cashier who hands out the crisp notes claims naturally a bigger share. Every official has an impressive parapharnelia of red-liveried chaprasies; and the chaprasies have certainly learnt apt lessons from their masters as to what is due to them as their share in these lucrative transactions.

* * * *

The contractor is an adept in human psychology. He knows that, once an officer has tasted of his payment in kind or in cash, that official at any rate will have to okay whatever he says or does. He has, therefore, no trepidation or sense of backwardness in basing his tenders and in framing his bills with as large margins of profit as possible. A typical mofussil contractor is the last word in extravagance in his dealings with bosses and the last word in stinginess in his dealings with subordinates and workmen. If the engineer comes to town, he will think nothing of expenditure in engaging a taxi all night and all day or in buying petrol in the black market at Rs. 10 gallon or in offering entertainments with whisky paid for at Rs. 60 for White Label or of paying for all the purchases made by the engineer's memsaheb in the shops in the towns. There is a quality and sumptuousness about the entertainments

of contractors which seems to come easy and natural to them. The same contractors with such effusive views on entertaining their bosses will higgle and haggle for every pice with the man who supplies the materials; and finally, they will buy only the materials for which the correct description is cheap and nasty. The jack of all trade who is the kind of assistant on whom these contractors rely is the meanest and poorest paid in the country. The masons, carpenters and other workmen employed by the contractors know only too well that they will be paid the least for doing the most.

Such were the district boards and local boards and local bodies, their members and officials, their engineers and overseers, and their contractors, before the war. The war has underlined and emphasised these age long traits and characteristics. Those who are in a position to give out war contracts, whether in big jobs or small jobs, seem to have, except in a few cases, a feeling that the war has provided them with an unique opportunity for making the fortunes of their lives and that they would be fools if they missed such an unique opportunity. They also have a feeling that the duration of the war is uncertain; that the war may perhaps, end tomorrow; and that therefore they must make as much as possible with each opportunity. It is no exaggeration to say that war has made corruption a widespread infection in India. With officials able to dispense large patronage, and with bribe-taking no longer a furtive occupation, a whole race of touts has sprung up. Formerly, there were only the officials and contractors extracting appropriations for themselves; the war years have created an unholy trinity. Corrruption being more rampant, the contractors have become more greedy and now extract far bigger margins of profit.. A friend was relating to me this morning an incident where on an outlay of Rs 1 lakh the profit expected to be made by the contractor was Rs 1½ lakhs. These are truly halcyon days for contractors.

* * *

This infection of bribe-taking and this demand for bigger margins of profit have spread to every nook and corner of the country. In the five and a half years of war, the projects executed, whether in regard to supplies or contracts, whether in the city or in the moffusil, must have been on the basis that 10 annas to 12 annas in the rupee have gone in bribes and margins and that the actual value realised would not be more than 4 annas to 6 annas.

* * * *

Our traders also have got infected with this craze for bigger margins of profit. Let us take the case of rice. Till three years ago, the price of good quality rice was Rs 6 per maund. The rice-dealer was lucky if he got a profit of 4 annas per maund. If competition was keen many rice-dealers had to be content with the value of the bag as his only profit. During the hectic days when the price of rice in Bengal rose to Rs 25, Rs 30 ,and even Rs 40 there were a large number of firms and individuals, some firms and individuals with high-sounding names who bought rice in Orissa or Central Provinces and sold it in Calcutta with margins of profit equalling Rs 6 to 10. That is to say, the margin of profit reaped by such people was equal to what was the price of rice before. This spell of extravagant margins of profit has set up repercussions which are felt even today in the rice business. In my village the prices authorised by the Government are Rs 19/8 per kottah at which agriculturists must give their rice to the purchasing agent and Rs 21/8 at which the purchasing agent must supply to the wholesale agent. The margin is thus Rs. 2 on Rs. 19-8. This works out to 10 per cent. This is a margin sanctioned and affirmed by the Government. At no time in the history of the rice trade did wholesalers get 10 percent on the turnover.

* * * *

Or, take cloth. When you buy a pair of dhoties, you see stamped on it the wholesale price and retail price. The wholesale price is, say, Rs 8/4 per pair.

(Continued on page 212)

MINERALS

NOT the minerals iron, limestone or quartz, but the fizzy drinks that are the delight of youth, cause a prickly feeling in the nose and are becoming increasingly difficult to come by in Britain at war. It was an ingenious amateur chemist, the English nonconformist minister Dr. Joseph Priestley, world-famous for his discovery of oxygen, who in the 18th century showed that efficient substitutes for the then popular natural mineral waters could be made by dissolving carbon dioxide gas in water under pressure. He lived next door to a brewery and originated a rival industry, with gas from the brewer's very vats! Carbon dioxide — one of the gases formed during combustion and breathing — is still used, and is obtained industrially in many ways. It is carefully purified and then compressed into steel cylinders whence it can be released by adjustable valves as required. The water in which it is to be dissolved has to pass stringent analytical tests, both chemical and bacteriological. Sugar and other sweetening agents, the latter synthesised chemically, are added, together with natural and artificial flavouring essences and colouring matters, and the carbon dioxide is then forced into the liquid under pressure. In this way more gas is dissolved than can remain in solution under ordinary conditions, so that when the bottle is opened the excess escapes and the liquid effervesces. Pop! A "bottle of pop", welcome to the hot and thirsty of both sexes and all ages, is one of those minor pleasures of life for which our thanks are due to the chemist.

ICI

No. 23 in the "Services of an Industry" series issued by

IMPERIAL CHEMICAL INDUSTRIES (INDIA) LTD.

Olympus

(FROM OUR CORRESPONDENT)

New Delhi, Feb. 13.

I learn that Senior Officers of the Indian Civil Service and other Imperial Services recruited by the Secretary of State for India, getting salaries between Rs. 1,000 and Rs. 2,000, will with retrospective effect from January 1 get the benefit of the war allowance. So far among members of these services only those drawing salaries upto Rs. 1,000 have been getting war allowance. It is gathered that the rate of the war alowance to personnel of these services, whether drawing upto Rs. 1,000 or between Rs. 1,000 and Rs. 2,000, has been fixed at 17½ per cent of the salary. Senior members of these Imperial Services have, it is recalled, been agitating for the war allowance, some demanding children's allowances. Perhaps it was in view of this decision that the Punjab I.C.S. association was refused by the Government of India their demand for children's allowance.

* * *

The other spot news is that the cheap money policy initiated and maintained by the Reserve Bank of India is likely to be reversed according to reports current here. The Finance Member, it is said, is having under consideration a proposal to draw the large idle capital lying in the money market by enhancing the rate of interest. Sir Jeremy in his last budget speech, it is recalled, said he was convinced that the high-rate policy would prove injurious to banking and insurance interests who have been steadily supporting the security market. Is this a move to avoid further taxation, direct and indirect, in view of the mounting expenditure and apprehended deficit and if so, is it a wise move? This is the vital question asked here.

* * * *

According to reports current here a plan designed to help British commercial and industrial interests get a start in Burma over their Indian rivals before Indians having business and professional interests there can return to that country is much under way. British capital has begun to operate in the reconquered territory, the labour being Indian. About a third of Burma is already occupied and the S.E.A.C. is administering the conquered territory through the Civil Affairs Service comprising former Burma Civil Service personnel who have been given military ranks. The service is under the command of Major-General Pearce, I.C.S. Numerous Indians having interests in Burma and anxious to return to that country are not yet allowed to return. Even the contracts for supplies and public works, it is said, are given to only European firms. All this is done in the name of rehabilitation of that dependency and war efforts.

* * *

This preference for Europeans and the policy of the shutting out Indian business and professional classes having long-standing connections with Burma have caused great discontent and several commercial and other bodies have protested to the Government of India against this invidious exclusion move. The whole question, it is gathered, will be raised during the budget session of the Central Assembly when legislators will demand an assurance from the government that the interests of half a million Indian refugees will not be sacrificed, that an agreement will be made with the Burma Government ensuring early return and rehabilitation of those Indians who may wish to return to Burma, and that Indian refugees of the business or professional classes will be placed on an equal footing with Britons returning to that territory. The tone of U Tin Tut's statement, which is quoted in an officially sponsored publication issued by the Government of India, is helpful. The future welfare of Burma depends on friendly relations with India, he says. Such statements show that Burmese opinion will not endorse this policy of racial favouritism.

* * * *

All the 15 members, officials and non-officials, of the Select Committee on the Insurance Amendment Bill have signed one or other of the six minutes of dissent appended to the committee's report. Much controversy centres round the committee's proposal to give equal rights to insurers and provident societies in the matter of small insurance. One minute of dissent says that this will be hardly fair to the provident societies, which have also to comply with part 3 of small Insurance Act, while ordinary insurers are not under that obligation. Another minute says that the whole field of life insurance should not be left to be worked upon by all types of life organizations. Yet another minute of dissent suports the proposal only in case co-operative societies, irrespective of the amount, are allowed to transact insurance business. Another disputed point is the committee's proposal to disallow payment of commission or a share in profits to any employee, except the insurance agents who may be allowed commission on business procured by them.

Gateway of India

(From Our Correspondent)

Bombay, 13th February, 1945.

On every side, the Banking Bill is the target of acute criticism. While opposition to some of the provisions is crystalising in Bengal and other provinces, the Indian Merchants' Chamber is the first to draw pointed attention to what may be called the political aspect of the thing. In a memorandum on the subject, the Committee of the Chamber records emphatic disapproval of the provision relating to the licensing of non-Indian banks. While banks registered in the United Kingdom are sought to be treated in a privileged manner, banks registered in the Indian States are treated as foreign institutions, and commercial opinion naturally feels that there is no justification for such a differentiation and that all banks not registered in British India should be treated alike. The Committee mentions the case of the Imperial Bank which will be outside the pale of the proposed legislation, and sees no justification for the exemption as the Imperial is no longer a State Bank. It further urges that the Imperial should not have the monopoly of transacting treasury business on behalf of the Reserve Bank. In view of the growth in the stature of Indian banks the feeling is gaining ground that they should have a greater share in the financing of foreign trade, which is now concentrated in the hands of non-Indian banks. In view of the fact that the Reserve Bank has a branch in London and is empowered to rediscount bills of exchange and otherwise assist transactions relating to the finance of foreign trade, it ought to be possible for the Government to provide facilities to Indian banks to enter that field. Of course, it has been an old demand that the Reserve Bank of India Act should be suitably amended in order to facilitate the rediscounting of commercial and industrial loans as eligible paper. Another important suggestion concerns the inclusion of bullion and loans of Indian States among approved securities. The suggestion does not seem to be sound as regards bullion, but the loans of Indian States ought to be treated on a par with those of provincial governments. The Banking Bill could indeed go much farther than it purports to. The foreign banks regard it as unwarranted and cheeky interference; the Indian banks feel that it merely seeks to regulate the structure of joint stock banking, while leaving out other types of important indigenous credit institutions from its scope. The lack of a comprehensive approach to the problem of banking reform and re-organization is the chief drawback.

The sordid story of discrimination has already started in Burma, as it is slowly recaptured from the Japs. While government have hardly made clear their policy as to how they propose to safeguard the interests of Indians in Burma and what facilities they would give to Indians to return to the liberated parts of Burma, British firms and houses are said to have proceeded to Burma and restarted their business activities presumably under consent of His Majesty's Government. So far as Indians are concerned, it seems, they would have to apply to the South East Asia Command and not to the Government of India for obtaining necessary facilities. It is also said that trade between India and Burma will hereafter be carried on by a branch of the U.K.C.C. which will be able to command the necessary shipping space. It is an alarming prospect for the Indian who after building up Indo-Burman trade patiently over decades in the face of every discouragement, now finds his plums being snatched away almost under cover of darkness. The Indian Merchants' Chamber has addressed the Government of India on the subject, but apparently policy in these matters emanates from the Bourbons of Whitehall.

Indeed, nothing is being left out to push the Indian out of Burma for ever. The Burma "blue-print" is an example and no one who has read it can have any doubt that the prejudices against Indians are sought to be fanned into a flame. The Burmese, left to themselves, can be trusted to treat the Indians well, but there are not people wanting to play up prejudices and kindle suspicions against the Indian. Recently, Sir Alfred Watson declared in London that the Burmese in these years of freedom have developed the strongest prejudice against the *exploitation by Indians*. It is typical of smug Tory self-righteousness that the British should regard themselves as guardian angels ordained by Providence to succour Burma. No Burman will be deceived. The Burmese Refugees' Association has recently declared that they have no desire to oust the Indian merely to give Britain a monopoly of exploitation of still undeveloped Burma. The insidious moves to deny Indians their share of opportunity in regard to trade with Burma are condemned also in a letter sent by the Imperial Indian Citizenship Association to the Government of India Commonwealth Relations Department. By every token, Indians have a right to be granted the rights and privileges enjoyed by foreigners in Burma when it is liberated.

* * * *

The proposed amendment of the Insurance Act, especially in regard to the restriction of the over-all expenses, has drawn forth a spirited and somewhat strident criticism from Mr. H. E. Jones of Oriental, who is also President of the Bombay Life Insurance Companies' Association. It is curious that Mr. Jones should regard official interference in the management of life assurance companies as unwarranted. More value perhaps attaches to his view that the proposals for the limitation of expenses are not feasiable, and that the proposed reduction in the commission of licensed agents is inopportune owing to the high cost of living. Mr. Jones thinks that consideration of the matter could have been put off until after the war, and he deprecates the haste with which reform is being attempted. He is also of opinion that, in times of depression, the rigid application of the rule regarding limitation of expenses would prove impossible. Coming as these comments did from one with such an experience and standing as Mr. Jones', the criticism has to be given due weight, but it is doubtful if government regulation of the conduct of insurance business is such a sin against the Holy Ghost as Mr. Jones seems to think, especially in conditions prevailing in India. After all, the present measure is only a logical successor to the first Insurance Act.

Resume of Commodity Markets

There were no important developments in the commodity markets during the past week. The raw jute market has been quietly steady while the jute manufactures has remained firm. The raw cotton market was easier with some selling by jobbers but the bullion market has remained fully steady and bulls are still in control of the market. There is, however, a substantial discount for the forward positions. In the piecegoods markets business is very difficult of exccution owing to the scarcity of stocks. Great hope is entertained regarding the new scheme which, it is believed, will eliminate middlemen to a large extent. The stricter control regarding distribution should result in a considerable reduction in black market trading.

In the jute market there was nothing of interest as mills are not taking any interest. The slight improvement in coal supplies in the last two days and the reports that there might be regular buying of jute on behalf of France and Belgium have resulted, however, in a steadier feeling. It appears immediate requirements of these two countries have been satisfied by Britain from reserve stocks and that their agents will in future purchase jute from Calcutta. It can be expected, therefore, there will be an increase in exports to Continental markets.

The decision regarding the jute acreage for the next season has been announced and, as was reported in these columns earlier, eight annas of the acreage registered in 1940 is to be placed under jute. The Government have agreed to purchase all surplus at the minimum prices now in force and ryots have been exhorted to grow jute to the full extent of the licensed acreage. If the full area is sown it would be possible to have a crop of 80 lakhs bales which should be enough for all purposes. But if as last year there is no great inclination on the part of growers to cultivate jute there might be a shortage of supplies later in the season if the coal situation improves and there is an increase in exports. The following communique has been issued by the Government of Bengal in this connection:

"The question of the acreage to be sown with jute this year and its probable effects on prices has been under the consideration of the Government of Bengal for some time. The matter was recently discussed in a conference with representatives of the Government of India at New Delhi and as a result certain decisions have been reached which are now announced for the information of those concerned.

(a) The Government of Bengal will, as in the previous year, issue orders for the licensing of an acreage of As. 8 of the basic acreage of 1940 and will advise and encourage agriculturists to plant fully up to this acreage in there own interests.

(b) The Government of India will guarantee a minimum price of raw jute on the basis of Rs. 15 per maund of jat middles at Calcutta and at the appropriate parity price at selected principal jute purchasing centres upcountry. Details of these selected centres and the minimum parity prices at which purchases of raw jute will be made at these centres will be shortly announced.

(c) The Government of India will undertake to buy all crop offering, old and new, at Calcutta and at selected centres upcountry in Bengal with a view to maintaining prices at minimum level at Calcutta and at the appropriate parity prices in the selected upcountry centres.

(d) The Government of India will fix a maximum price of raw jute on the basis of Rs. 17 per maund of jat middles at Calcutta (other qualities or grades of raw jute to be in parity with this price) with the right of the Government of India to requisition on the basis of the maximum price. The Government of Bengal will assist in such requisitioning from middlemen if necessary.

(e) The Jute (Price Control) Order, 1944, fixing maximum selling prices for manufactured jute goods will remain in force.

(f) This agreement will remain in force between the two governments till 31st March, 1946.

The Government of Bengal have taken the necessary steps to give the growers the full benefit of these arrangements."

The jute manufactures market has been firm throughout the week with hessian prices fully at maximum rates and no business possible owing to the reserve of sellers. The heavy goods section was for a time easier with the reports of an increase in arrivals of coal.

Great interest is attached to the scheme of distribution of available cloth and yarn supplies. The new scheme of distribution was announced on November 1, 1944 but as it was felt that without more effective control and greater inducement to retailers it would not be possible to eliminate black market trading certain new proposals are being framed. Attempts will be made to reduce the number of licensed dealers in any particular province and prescribing the nature of business for each class of dealers. Thus A dealers can sell only to the B dealers and the latter to the retailer. This way the wholesaler will not be allowed to compete with the retailer and the small trader will be assured of a regular turnover. The reduction in handling costs and the payment of commission will also leave a larger amount of profit to holders. Greater responsibility has been placed on provincial governments. With the greater control over distribution it is expected that the scarcity in certain centres will be relieved but without an increase in production and a reduction in demands on the industry from other directions it will not be possible to ensure regular supplies to the consumer. In the earlier stages the industry had the advantage of large hoarded stocks of cloth and yarn. It now appears that except

the frozen stocks there is not much of hoarded stocks and unless the civilian requirements are more generously met the problem of control will prove difficult.

There has not been any setback in bullion prices in the past week and prices for ready are, if anything, slightly higher. The small sales by the Reserve Bank and the concentration of stocks in strong hands have prevented any sharp decline in prices. It is said that the hoarded stocks will not come out easily and that even with the cessation of hostilities there might still be a premium in the Indian markets over world parity prices. But, as has been pointed out in these columns, the tendency will be for adjustment towards parity prices in a free market.

(*Continued from page 208*)

The mills charge this price of Rs 8/4 while it costs perhaps Rs. 4 to manufacture that pair of cloth. The mill has thus 100 per cent profit. Of the profit of Rs 4/4 made by the mill, as much as Rs 3/14 is paid to the Government as Excess Profits Tax and other taxes. In other words, the cotton mill-owners of India have been fleecing the customers who have been their friends in order to benefit the Government who have, to put it mildly, never been their friends. The first margin of profit to which exception has to be taken in this cloth business is that of the mill-owners. Then come the traders. The wholesale price is stamped on the cloth and is Rs 8/4; and the retail price is also stamped and is Rs 9/10. I am giving these figures only illustratively, but I have examined and compared a number of these wholesale prices and retail prices and I find that the margin between the wholesale price and retail price is about 20 percent. This 20 percent is sanctioned and awarded by law to the dealers. Never did the traders in cloth in India enjoy such a margin as 20 percent! Now the fellow is not satisfied with this 20 percent margin. If you and I approach him for a pair of dhoties, he pleads "no stocks". He is a trafficker in the black market; and he seeks to sell this pair of dhoties for double the price. The wholesaler also, like his boss the mill-owner, will not be content with anything less than 100 percent margin.

* * * *

And so is it in every trade. Some of the fellows who import whisky wholesale in India make 200 percent and 300 percent. All traders and shopkeepers down to the pettiest of them have been infected with this disease of fantastic margins of profit. If planning is to be successful, if the Rs. 3 crores that will be spent in each district is to realise 16 annas value for every rupee, it is urgent and imperative that agencies and conditions should be created which will be farthest away from all this corruption, bribery and sinful margins of profit.

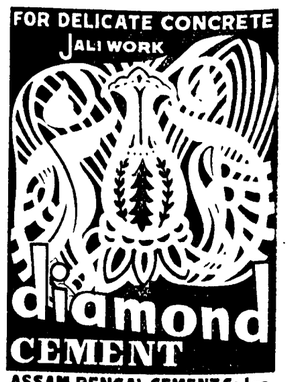
expansion noted under Deposits which have risen from Rs. 182.59 lakhs to Rs. 235 lakhs in a single year accounts for the increase under Advances, again fully reflected in the rise in profits. The half-yearly allocation to Reserve Fund is again Rs. 75,000 and the dividends on the three classes of shares is again 6 per cent. Although a part of the increase in the Bank's profits is absorbed by taxation the growth of assets indicates that the jointstock banks of the South experienced in 1944 the same expansion as the old larger banks in India. The uniformity characteristic of bank reports extend to the reduction under cash balances towards the end of the year as well as the moderate decrease under Investments as compared with Advances which have already acquired in some cases their traditional predominance in Bank balance-sheets. The changes as compared with the balance-sheet a year ago are not limited to the rise of Rs. 54 lakhs in the gross total but cover the enhanced stability of earnings suggesting that the growth of competition has no specific effect on bank profits—a fact from which shareholders must derive great encouragement. In the balance-sheet published today the gross earnings cover for the dividend declared is higher than ever and the staff bonus corresponds to general expectation in view of current practice. The Indo-Commercial Bank's results are consistently improving and even the regular increase under drafts and telegraphic transfers payable is indicative of the advantages of branch expansion.



BOMBAY MARKETS

BULLION

(From our own correspondent)

Bombay, February 16.

The Bull syndicate dominates trading in the bullion market. Thus bulls who manipulated the rise in silver delivery price from Rs. 123-10 to Rs. 124-15 on Saturday, liquidated 1,500 bars on Monday owing to the fear of war news. The quotation declined by Rs. 1-7 to a mere 4 annas against bears in a single day. Offtake averaging 300 bars helped the rally to Rs. 122-10 on Tuesday and the market firmed upto Rs. 125-11 today with spot quoting Rs. 126. Even after the liquidation of stocks bulls retain control especially as selling was absent owing to the carry-over difference being heavily against bears. The Gold market has been extremely interesting throughout the week. On Saturday, small stocks in bazar totalling 70,000 tolas were cornered by the bull clique which further obtained buying for near delivery against sales for forward on Monday. Bears who were oversold stampeded to cover gold for near delivery and carryover difference against them increased from 4 annas to Rs. 1-8, position being entirely unaffected by silver decline. Firmness was helped by Reserve Bank offerings being 12,000 tolas only against offtake averaging 25,000 tolas. Since Tuesday the complexion of the market has changed and under weight of a heavy premium for spot offtake has declined to 10 000 tolas while arrivals are also higher for the same reason. Consequently, in current settlement bull syndicate finds itself saddled with 1,75,000 tolas and is reported to be selling at every opportunity especially as war news improves. The undertone is thus uncertain though the rates now at Rs. 72-4 for Forward and Rs. 72-14 spot do not reflect it.

Jute and Jute Manufactures

(From Our Correspondent)

Special to "Indian Finance"

This is the season of Annual General Meetings and amongst the more important of these, that of the Indian Jute Mills Association will have taken place before these lines are in print. Changes in the administration become necessary due to the pending retirement both of the present Chairman and Deputy Chairman. It is understood that Mr. I. G. Kennedy will fill the post of Chairman for the coming year and Mr. A. L. Cameron that of Deputy Chairman. Mr. Birla will continue as Vice-chairman. There will also be some new-comers to the Committee due to the retirements noted above. The Report of the Committee for the past year should make interesting reading and some trenchant remarks are to be expected on the subject of Coal supplies in particular.

Arrivals of coal have been rather better this week, but that is only in comparison with the deplorable level, 27 wagons per day, to which they fell last week. The supply is barely sufficient yet to keep the foster mills working full out and those on single shift simply have to stand idle, with incalculable but certainly disastrous effects on their labour force.

Labour is becoming a serious problem even in the foster mills where full employment can be more or less guaranteed. Partly perhaps this is because the present is the season when cultivators who own some land invariably want to depart to their *mulk* to prepare the fields for the coming crops. partly because of the enticement of higher paid jobs elsewhere. Whatever the reason, mills which are running double shifts are finding it difficult to keep up a normal level of production because of shortage of workers. The hours at which the shift labour has to work, either starting very early in the morning, or finishing late at night, render shift employment less attractive than the normal daylight hours of single shift working. Which fact the present single shift mills may find advantageous if and when they get running again. At present their labour force is largely dissipated, though not forgetting to turn up for their standard unemployment and amenity allowance. But there is little doubt that. if the foster mills are finding labour difficulties just now with most of the single shift mills idle their position would become much more acute as soon as these mills started up again.

Dundee is also having its labour difficulties in spite of the recent drive to get jute mill operatives back to their original employment. The trade there also seems to be viewing with apprehension the continued demand for higher wages which they reckon will, if maintained, put them in a disadvantageous position vis-a-vis Calcutta when. after the cessation of hostilities. trading will once more become competitive. Already Dundee is talking of protection from the inroads of cheap Calcutta goods as they seem to fear that, after their experience during the war period in supplying special fabrics for military requirements, Calcutta may be in a position to appear as a competitor even in certain lines of fabrics which Dundee previously considered peculiarly her own.

It is interesting to note that mills in France are apparently getting into production again for a cable has been received from the London Jute Association to the effect that the French Government have decided to purchase raw jute through their appointed Calcutta Agent and propose to distribute their purchases as far as possible on a quota based on pre-war sales by L. J. A. members and Calcutta shippers direct to French spinners. Sales are to be on the L. J. A. contract and quality guaranteed equal to the standard type sample bales recently approved by the L. J. A. In the case of disputes, the L. J. A. will appoint arbitrators to proceed to the French port of discharge until conditions allow for the renewal of London arbitration. It is believed that the Jute Control in Dundee has already supplied to France some jute from their reserve stocks.

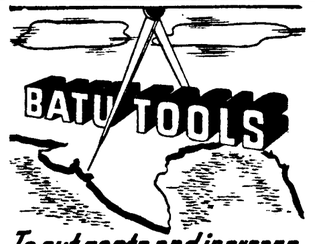
It is announced today that the quota of Jute Sowing for the coming season has been officially fixed at eight annas, as we forecast about a month ago. Eight annas of nte Registered acreage in Bengal, plus the probable area for neighbouring provinces, would amount to an acreage of some 27 lakhs, which if fully taken advantage of and granted normal weather conditions, should provide a crop of around 75 lakhs of bales. With so many imponderable factors liable to affect the situation, it would be rash to predict whether such a crop would be short, sufficient, or in excess of requirements. The current crop had all the appearance of being well short of requirements. but the slow rate of consumption due to shortage of coal and the exiguous exports due to the prolongation of the war, make it now seem as if there would be enough to tide over at least till the new crop comes to market. But any radical change in these conditions might easily upset calculations. Meanwhile, it is also announced that the controlled prices for jute and jute goods will be continued for another year.

Little information is yet to hand from the mofussil with regard to new crop prospects. Where rain has fallen, ploughing is going on. but no sowing is reported as yet. Nor can it be forecast with any certainty how the cultivator will distribute his land between jute and paddy. The official decision as to the quota to be licensed for jute sowing seems to have been left to an unreasonably late date if the cultivators are expected to pay any attention to it. As it happens, the quota is the same as last year, but how quickly this information can be disseminated throughout the growing area is a factor which does not seem to have occurred to the bureaucray.

Analysis of nte Jute arrival figures for the month of January show that the bulk of the shortfall from the previous month's figures is due to the railway arrivals being down by over 3 lakhs of maunds. It was the poorest month for rail carriage this season with the exception of September. but happily nearly Steamer figures were also lower but not seriously—only 70,000 maunds. In point of fact, jute is coming forward almost faster than mills, in present circumstances, can take it in. With godown accommodation so seriously encroached upon by military demands and consumption in many cases far below expectations due to lack of coal. not a few mills would be glad to have shipments deferred. On the other side of the medal there is in many upcountry stations more freight space offering than there are consignments to fill it. It is regrettable to record that after two months, negotiation. the Railway authorities have not yet been able to conclude the "through-booking" arrangement for jute routed to Calcutta via Khulna.

There is nothing to record in the Export Jute market. No enquiries are coming along to shippers and it is reported that direct sterling offers to Dundee at rates which undercut the local minima by two to three rupees. evoke no response. Dundee does not seem to be interested in anything but further forward shipment than balers care to cater for. the anxiety of the latter being to get rid if possible of ready stocks. Local mills have neglected this market also

(*Continued from page 195*)



ance with the disappearance of demarcation between the slack season and the busy season. Any month now is a new loan month.

It remains to be considered whether there should be only one loan or whether there should be one medium-dated loan and one short-dated loan. For our part, we believe that a short-dated loan so fashioned as to appeal especially to banking interests will prove useful. The undoubted success of the Defence Loans planned by the Government of India is a strong plea for more courage and self-assurance in new loan planning. We strongly favour the experiment of five-year Exchequer Bonds carrying interest at 1¾ per cent to 2 per cent. The British Government has successfully tried this experiment. The financial and credit position of the Indian Government must inspire the steward of India's finances with an equal confidence in the success of such experiments here.

On the weekly treasury bill tender day, applications amounted to Rs. 14.25 crores as against Rs. 2 crores on offer. The average rate of accepted tenders shows a satisfactory decline from 9 annas per cent per annum to 7 annas 9 pies per cent. The offer for next week remains unchanged at Rs. 2 crores.

The returns of the Reserve Bank for the week ended February 9 disclose an increase of Rs. 11.66 crores in active note circulation. The expansion is against sterling securities. Sterling securities in the issue department have gone up by Rs. 13 crores to Rs. 949.33 crores. Rupee coin has gone out to the extent of Rs. 1.34 crores, the balance in the issue department being Rs. 11.10 crores. In the banking department, Central Government's deposits show a small drop of Rs. 2.57 crores to Rs. 254.32 crores. Deposits of the Burma Government and the Provincial Governments have also declined, the latter by Rs. 5.38 crores to Rs. 15.58 crores. Banks have increased their deposits by Rs. 49.74 lakhs to Rs. 72.04 crores. Foreign balances with the banking department have gone down by Rs. 5.76 crores to Rs. 352.51 crores. As the rise in sterling securities in the issue department is Rs. 13 crores, the net increase over the week in sterling assets held by the Reserve Bank is Rs. 7¼ crores. Bank's investments show a further increase of Rs. 1.18 crores to Rs. 21.49 crores. In the last three weeks, investments to the Reserve Bank have gone up rapidly. possibly due to open market operations. The Bank's investments have risen from Rs. 13.95 crores on January 19 to Rs. 21.49 crores on February 9.

The return of the Imperial Bank shows a slight decline of Rs. 16.20 lakhs in deposits to Rs. 232 24 crores. While investments have gone down by Rs. 1.19 crores, loans and advances have risen by Rs. 58.20 lakhs. In the result cash has increased by Rs. 59.57 lakhs to Rs. 27.87 crores.

To cut costs and increase
PRODUCTION

MANUFACTURERS! Think of the Post-war competition now. Remember your very existence after the war will depend upon your being able to offer quality goods at competitive prices. So reorganize—make your production more efficient, more economical. Use tools that will save time, save material—save costs—use BATU TOOLS.

BATU TOOLS, for their extreme durability and high resistance, help to cut costs, increase production, maintain quality and provide trouble-free factory operations. Besides, their accuracy ensures better out turn—minimum spoilage.

REGISTERED BATU TRADE MARK

Reamers, Milling Cutters, Taps, Little Giant Dies, Circular Dies, Slitting Saws, End Mills, Etc., Etc.

JUTE

(By Our Staff Correspondent)

Calcutta, Feb. 15.

The raw jute market has been quietly steady with a small volume of business passing. Mills have been taking very little interest in the market as there has been no improvement in the coal situation. Several of the steam mills are still idle. As arrivals of jute into Calcutta are in excess of consumption and mills have been adding to stocks in recent months there is no anxiety to enter into fresh commitments. There is a general tendency to await further developments. Sellers have been eager to do business and have offered a slight discount in rates but no great inducement can be offered to mills as mofussil markets are still firm and prices are in full parity with Calcutta. The continued strength of the mofussil markets with the discouraging advices from Calcutta is rather surprising. Arrivals continue to be on a small scale. Holders do not seem to be worried regarding their ability to dispose of their holdings. There is not much speculation regarding post-war prospects as it is essentially a question of the improvement in the coal situation for an increase in production and unless such improvement takes place it cannot be expected that there will be any large increase in mill consumption. It can be expected however, that with the reopening of the Continental markets there might be an increase in exports of raw jute. The developments in the next few months will give us an idea of what can be expected.

In the loose jute section only a small amount of business has been reported. Mills have not been keen to do business for reasons referred to above. Sellers are eager for business as the orders on their books are being completed and they are anxious to book further orders. Supervised Jat Middles were done at Rs. 15-12 and Bottoms at Rs. 12-12 per maund. Some business was reported in Assam Bottoms at Rs. 11-12.

JUTE MANUFACTURES

(By Our Staff Correspondent)

Calcutta, Feb. 15.

There is nothing of importance to be recorded in the jute manufactures market. The hessian market has continued firm with buyers for all positions upto the end of the year at maximum rates. But mills are rather reserved and there is no disposition to enter into commitments which might be upset by irregular supplies of coal. In the heavy goods section there is very little business of importance and most of the business was on account of inter-bazar operators. Quotations are slightly lower than the levels at the end of last week. 'B' Twills are quoting Rs. 16-12.

PIECEGOODS

Calcutta, Feb. 15.

The piecegoods markets has been uninteresting as business has been restricted on account of the scarcity of supplies. There are no sarees or dhoties for middleclass consumption while of the finer styles shirtings, drills etc. are virtually unobtainable. Representations have been made to the authorities to release immediately frozen stocks of cloth and yarn. In the mofussil centres especially consumers are experiencing great difficulty. The Bengal Government has a scheme for relieving the shortage of yarn by starting spinning mills in the areas where there is a concentration of the handloom industry. It is said that these yarn supplies will be marketed at cost price through government agencies or depots. The immediate release of 15,000 bales of yarn, frozen with merchants for a long time, will relieve the scarcity to a certain extent and the Provincial Textile Controller has been addressed in this connection by the Calcutta Yarn Merchants Association.

Stock Markets to-day and to-morrow:

MARKETS UNAFFECTED BY WAR NEWS

With so many surprising developments in the war situation both operators and investors are in a difficult position to take a definite view of the immediate outlook. Earlier in the week there was a tendency to await the results of the Big Three meeting. It is now generally known that complete agreement has been reached on all the major issues at Yalta and that the progress of the Allied armies on both the Western and Eastern fronts have strengthened the hopes that there will be an early termination of hostilities in the West. With the possibility of an early end of the German war and the proximity of the Central budget there was no disposition to push up prices. In contrast to the steadiness of the Calcutta market the Bombay Stock Exchange has exhibited a weaker tone. The declaration of lower dividends by some important cotton mills, though to a certain extent anticipated, has had a depressing effect.

Friday morning's news that Tokyo is under Naval attack by a powerful United States task force is perhaps the biggest news for the week for it was never expected that the U. S. Navy would be able to attack the Japanese mainland, so far away. This news combined with the reports earlier in the week that the Japs were preparing to evacuate Malaya suggests that the Japanese are on the defensive and that the interval between the German and Japanese defeat might not be so long as was at first feared. All the encouraging news from the various fronts, however, has not had any effect on prices either in the stock exchanges or in the bullion markets.

It is said that the strength of the bullion market is due to the manipulation of bulls and that the general tendency is downward. As has been pointed out already in these columns bullion prices must decline in the long run though with stocks in the hands of strong hoarders and the weight of surplus funds seeking investment the downward trend in prices might not be quite pronounced. Unless the real decline in prices starts in the bullion market the stock exchanges would remain unaffected. As has been pointed out by "Analyst" in this issue elsewhere a fresh decline in prices might be utilised for purchasing shares which have assured post-war prospects.

* * * *

There are persistent rumours about the possibility of a new loan flotation by the Central Government. It was announced during the week that no subscriptions to 3 per cent Defence Loan 1957 would be received from Monday next week. The loan has been on tap for nearly one year and in view of the need for the redemption of the 5 per cent 1945-55 loan in October this year it is expected that the new loan might be a cash and conversion loan. The question has been discussed in detail in the main issue.

* * * *

The results of four jute companies have been published during the week and they all make satisfactory showing thanks to the successful working of the Industrial Pool scheme.

* * * *

Kamarhatty Company, Limited has been able to report a slightly higher level of profits for the half-year ended December, 1944 before providing for taxation and depreciation, at Rs. 20,13,660 from Rs. 18,32,575 for the previous six months. After providing for taxation Rs. 13.30 lakhs against Rs. 12 lakhs and setting aside Rs. 2.60 lakhs (Rs. 2.26 lakhs) for E. P. T. deposit the dividend on ordinary shares has been maintained at Rs. 15 per share. The amount carried forward is higher at Rs. 93,724 against Rs. 68,064 brought in.

The arrangement for working the loom hours of the requisitioned 'A' mill in the 'B' mill has been satisfactory. Double-shift working of 'B' mill commenced on June 26, 1944.

* * * *

Kanknarrah Company, Limited has been able to report only a smaller profit for the same half-year. The net profit before providing for taxation and depreciation is Rs. 17,83,260 against Rs. 18,85,921. The provision for taxation is Rs. 11,55,000 (Rs. 12,76,000) while the allocation for E. P. T. deposit is Rs. 2.22 lakhs (Rs. 2.52 lakhs). The dividend has been maintained at Rs. 12-8 per share on the ordinary shares.

* * * *

Thanks to the joint working arrangement with the Orient Jute Mills the Lothian Jute Mills has done well in the half-year ended November, 1944. The net profit for the half-year is Rs. 5,97,781 against Rs. 1,40,071 for the previous six months. There is an increase in the amount of sales to Rs. 35.07 lakhs from Rs. 27.15 lakhs. As the directors point out in the latest report, the Company has benefited from the Coal priority to the Orient Jute Mills for the purpose of double shift working. The provision for taxation is as much as Rs. 4.25 lakhs (Rs. 50,000). The amount set aside to depreciation and machinery renovation reserve is Rs. 50,000 against depreciation charge of the same amount on the previous occasion. The dividend paid to ordinary shareholders is higher at Rs. 4-8 per share against Rs. 3 per share. The amount carried forward is higher at Rs. 42,184 against Rs. 29,403 brought in.

The Directors of the Orient Jute Mills Company, Limited having given notice of termination of the arrangement between the two companies a new arrangement, with effect from 1st February has been entered into whereby the Orient Jute Mills Company will purchase the loom hours to which the Company is entitled under the Indian Jute Mills Working Time Agreement at the loom hour purchase rate fixed from time to time by the General Committee of the Association for the Mills Industrial Pool. This arrangement will continue so long as the Orient Jute Mills Company is able to utilise the Company's loom hours by working their Mill 108 hours per week or until terminated by the giving of 1 month's notice by the Directors of either Company. The arrangement also includes the sale by the Company to the Orient Jute Mills Company of its stocks of Jute as at January 31, 1945 and of such Mill Stores as the Orient Jute Mill requires, at market rates; and the transfer to the Orient Jute Mills at market rates of the Company's outstanding contracts as at January 31, 1945 for the sale of jute goods.

* * * *

Hasting Mills, Limited would have done better if it were possible to utilise fully its loom hours at the Wellington Mills of the Champdany Jute Company, Limited. The loom hours which have been made good have been the subject of a claim to Government for compensation at the Industrial Pool rate

MARKET GOSSIP

By "Bear-Bull"

[The following is gossip in the literal sense of the term. The markets sway to and fro not in response to facts and developments, but in response to khabbar, true and untrue and slightly true and largely untrue. "Bear-Bull", right in the heart of the Exchange Ring, will relay, periodically, such gossip as has caused gyrations in prices and changes in sentiment.—Ed. I. F.]

During the week under review, there was very little activity in the market. With the exception of a slight rise in Indian Irons and Steel Corporations, prices in most of the sections are almost unchanged. The transactions that take place are confined mostly to bazar operators.

News from the European theatre of war do not exercise influence on the market now. Speculative elements of the market now are inclined to the view that the war is not going to end in a week or two as it looked doing sometime back. From the present mood of the market it looks that actual cessation of hostilities alone can have any effect on the market.

The forthcoming budget is another factor which is responsible for reducing the volume of business. Both speculators and investors are inclined to wait till the budget is out of the way before making fresh commitments. Some people think that there is a possibility of Income-tax and Super-tax being increased. Some are inclined to believe that the Government of India may introduce some measure to discourage larger dividends. Others think that the Income-tax now in India stands at a very high level and there is practically no room for any further increase in that direction. In any case every one is inclined to wait. Till the budget is actually introduced, for the next few days the market will be affected by rumours about the budget. Usually well-informed quarters are inclined to hazard a guess that the budget will not certain anything which is likely to affect the share market either way.

I mentioned last week that the termination of the present war is not looked upon with a panicky feeling now. On the contrary, I find the general opinion in the market to favour buying if the market comes down as a result of any general selling pressure when the war comes to an end. Incidentally, I may mention here that the market never goes up if all want to sell nor does it come down when all want to buy in case of a decline. From the present mood of the market it can be said that the share market is not likely to come down much when hostilities cease in Europe and even if there is any decline it is likely to prove a very temporary one. Once the decline is arrested certain sections of the market are likely to register an appreciable advance. The sections that are favoured by speculators are jutes, coals, teas, steels.

As regards the distant future, it is very difficult to take any definite view. There is a good deal of force in the arguments advanced by Bulls and Bears.

Those who are inclined to a bullish view about the future of the share market argue that although the demand for goods for military purposes will cease it will be replaced by demand for civilian. The general public have been forced to keep down their consumption of goods at an absolutely minimum level. Once the war is over, there will be a great demand for all kinds of goods. Besides so much destruction has been wrought during the present war that there will be a great demand for goods for repairing that damage. Over and above these plans are

(Continued on page 224)

(This is only an announcement and not a Prospectus).

Under the Defence of India Rule 94-A the consent and recognition of the Central Government as well as the consent of the Government of His Highness the Maharaja Saheb Bahadur of Jodhpur have been obtained to this issue. It must be distinctly understood that in giving this consent and recognition the Government of India and the Government of His Highness the Maharaja Saheb Bahadur of Jodhpur do not take any resposibility for the financial soundness of any schemes or for the correctness of any of the statements made or opinions expressed with regard to them.

(A copy of this Prospectus has been filed with the Registrar of Joint Stock Companies, Jodhpur, and a copy duly certified under Section 277 (A) of the Indian Companies Act has been delivered to the Registrar of Companies, Bombay)

The Subscription List will open on the 14th day of February, 1945, and will be closed as soon as the present issue of the capital is fully subscribed and in any case not later than the 22nd day of February, 1945.

JODHPUR COMMERCIAL BANK, LIMITED

(Incorporated and Registered at Jodhpur under the Marwar Companies' Ordinance, 1923).

(The Liability of the Members is Limited).

AUTHORISED CAPITAL - - Rs. 5 Crores

Divided into 50,00,000 shares of Rs. 10/- each.

ISSUED CAPITAL - - Rs. 1 Crore

Divided into 10,00,000 shares of Rs. 10/- each.

Out of this 5,00,000 Shares of the nominal value of Rs. 50,00,000 have been agreed to be taken by the Directors and their friends, which will be allotted in full and the remaining 5,00,000 shares are now offered for public subscription.

The Shares will be payable as follows:

Rs. 2-8 per share payable on Application; Rs. 2-8 per share payable on Allotment; and the balance of Rs. 5 in such call or calls and at such intervals as the Board of Directors may in their absolute discretion determine. It is not intended to make any such further call or calls at present.

Allotment:—The acceptance of the applications and allotment of Shares shall be in full discretion of the Directors, who may not accept any application for shares. The Directors in allotting shall have full right and power to give preference to the applications of those who are subjects of H. H. the Maharaja of Jodhpur.

BANKERS

IMPERIAL BANK OF INDIA,
THE BANK OF JAIPUR LTD.

OBJECTS OF THE COMPANY.—The Company has been formed with the objects set out in the Memorandum of Association and in particular for the purpose of establishing and carrying on the business of Banking of all kinds in the Jodhpur State and in other parts of India.

PROSPECTS.—Jodhpur State, one of the premier States of India, has got vast resources of development of Industries. It has an area of 36,000 square miles and a population of about 25 lakhs. A Banking concern will be able to carry banking facilities far and wide in the State, thus enabling the public to have full advantage thereof. The public of Jodhpur has already become banking minded and they will be able to make the best use of the banking facilities that will thus be provided to them within easy reach. The Bank will be establishing branches at important centres in British India as well, and thus enabling the Jodhpur public, who resides in British India in large numbers, to have banking facilities near his home, urgency for which has been felt for a long time. The establishing of this Bank will fulfil this need and will bring Jodhpur in direct contact with important business centres in British India and elsewhere. With its ample resources and with its strong Board of influential Directors, the Bank will be able to participate in the financial life of the country and promote its well being.

Jodhpur Commercial Bank, Limited—*(contd.)*

MANAGEMENT.—The business of the Company shall be managed by the Directors who are authorised by the Articles of Association to appoint a Manager. The following provisions have been made in the Articles of Association regarding appointment of and remuneration of Managing Directors.

"The Directors may from time to time appoint one or more of their body to be Managing Director or Managing Directors of the Company for a period not exceeding five years at any one time and may from time to time (subject to the provision of any contract between him or them and the Company) remove or dismiss him or them from office and appoint another or others in his or their place or places.

The remuneration of a Managing Director shall, subject to the provisions of any contract between him and the Company from time to time be fixed by the Directors on the basis of a salary and/or other allowances".

INSPECTION.—A copy of the Memorandum and Articles of Association of the Company and copy of Marwar Companies Ordinance, 1923, may be inspected at the Registered Office of the Company and with Messrs. Motichand and Devidas, Solicitors and Notary Public, 31, Nanabhai Lane, Fort, Bombay and Mr. Sankalchand J. Shah, Advocate, Kalbadevi Road, Bombay.

PLACE OF BUSINESS IN BRITISH INDIA, ETC.—The Company has not established any place of business in British India, but it is intended to make Bombay the principal place of business in British India and Branches are also intended to be opened at Calcutta, Madras, Karachi, Hyderabad and other places.

It is intended to make application to the Stock Exchange of Bombay, Calcutta and other places for placing the shares on their list.

APPLICATION FOR SHARES.—Application for less than 50 Shares may not be considered and application for odd shares will be considered as for nearest multiple of fifty.

Prospectus and Forms of application for shares can be obtained at the registered office of the Company and from any of the offices of the Imperial Bank of India, The Bank of Jaipur Ltd., and Messrs. Narayanlal Bansialal.

Jodhpur, dated, this 27th day of January, 1945.

Markets Await Further News

Cotton Mills 1944 Dividends

(BY ANALYST)

Bombay, (By Wire).

Stock market operators are following a wait and see policy. There is very little business in Bombay and Madras. The turnover in Calcutta seems to be much better than in Bombay. In Dalal Street I visited several leading broker offices and found to my amazement that there was practically no business and brokers were only lecturing to their clients not to make any purchase till the European war situation is clear. Of course, the slogan was that it is to wait till the Central budget is announced. Looking, therefore, to the consensus of opinion markets are likely to sag further.

As for the Central Budget, apart from the Death Duties Bill I do not expect any drastic changes in taxation and I expect the budget to be a featureless one. If, therfore, markets should fall on news like early termination of hostilities in Europe I would prefer to avail myself of such an opportunity to take select scrips with postwar prospects. I mean, Steels, Cements, Jutes and Teas and one of the firstclass textiles. In Bombay the Brady Group of Mills have come out with lower dividends. New Great have declared a dividend of Rs. 20, New City Rs. 20 and Colabas Rs. 7 as against Rs. 25, Rs. 25 and Rs. 10 paid in the previous year. Kohinoor has declared a final dividend of Rs. 11 plus Rs. 5 bonus i.e., Rs. 16 in all making the total for the year Rs. 28 as against Rs. 40 paid in the previous year. In view of the increase in capital by 50 per cent a year ago, I should consider this dividend very satisfactory. From next year onwards I am afraid one would be a bold prophet if he expects a dividend of more than Rs. 24 or Rs. 25. Kohinoors, therefore, might decline from the present level of Rs. 590 to Rs. 500 in course of time, i.e., on a 5 per cent basis. *Dyeing* are also weak at Rs. 1,770. I expect a final dividend of Rs. 50 making the total for the year Rs. 75 as against Rs. 100 in the previous year. Therefore, around Rs. 1.700 cum-dividend i.e., about 1,650 ex dividend the shares look a good buy. *Bombay Dyeing* should be able to maintain a dividend of Rs. 75 for some time to come. *Azamjahi* and *Osmanshahi* are sticky around Rs. 660 and Rs. 280. I hear that the closing of the transfer books of *Azamjahi* has been postponed and I am unable to understand the reason for this postponement. The shares, however, look to me attractive even at the current price.

In Madras, *Buckingham and Carnatic* declined to Rs. 310. I consider Buckinghams a giltedged security and they are always a good buy around Rs. 300 since I feel that this company will be in a position to maintain a dividend of Rs. 12-8 for several years. As for other mill shares I expect a dividend cut of 25 per cent to 30 per cent all round and on that basis I feel that Textiles should decline further. There is no hurry to buy other mill shares in Bombay and Madras.

Coming now to the Steel section, I find many investors have sold out *Tata Steel* Deferreds and Ordinaries and there are also reports that production this year is very much lower than last year and that the dividend is likely to be lower. I feel that Tatas should be in position to maintain the same dividend even if there should be a slight decline in profits but looking to the tone of the market I would not be surprised if Deferreds break Rs. 2.000. I feel that a purchase between Rs. 1.900 and Rs. 2.000 would be safe.

Associated Cement proved an exception by improving from Rs. 228 to Rs. 238 on very influential buying. I am an optimist in Cements and I would suggest always buying whenever the shares touch around Rs. 220. I would prefer to concentrate on Associated Cements and gradually liquidate holdings of other cement shares.

(Continued on page 224)

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, Feb. 16.

Steady conditions have continued to prevail on the Calcutta Stock Exchange and business passing has been on a fairly large scale. The general undertone is steady. In mid-week a slightly easier feeling was noticeable and there was a tendency to await the Big Three decisions. After the announcement of the successful conclusion of the talks there was a firmer tone in evidence though for a time operators were inclined to be bearish with the reports that the Russians might help the Americans in their war against Japan. But at no time there has been heavy selling and the general undertone is so steady that no appreciable fluctuations in prices is expected till the Central Budget proposals are announced. Coal shares were better while the Jute section was inclined to be steadier. In the Engineering section, Indian Irons were done up to Rs. 39-8 and Steel Corporations Rs. 32-12. There are no other important features.

The giltedged securities section has been a little steadier with easy money conditions but business has not been large. It was, however, reported that there was some buying by institutions. With the announcement regarding the closing of the list for the 3 per cent Defence loan 1957 there are expectations of a new loan. Among terminable loans there is a slight improvement in the quotation for 3 per cent 1957 to Rs. 99-11. 3 per cent 1951/54 were Rs. 100-11 and 4 per cent 1960/70 Rs. 112-10. 5 per cent 1945/55 were Rs. 102-8. Among provincial loans, 3 per cent U. P. were Rs. 98-4.

Bank shares have been uninteresting with *United Commercial Bank* at Rs. 37-8 premium. *Imperial Bank* fully paids were Rs. 1,975 and *Contributories* Rs. 488. *Hindusthan Commercial Bank* changed hands at Rs. 50-4.

In the Cotton section beyond the slight rise in prices for *Cawnpore Textiles* to Rs. 13-6 there is nothing else of importance. *Elgin* were quoted Rs. 63-12 and *Dunbar* Rs. 310. The Bombay market has been rather quiet with the announcement of lower dividends by important companies for the year ended December, 1944.

In the Coal section a definitely firmer tendency is noticeable and the Supply Member's remarks in the Assembly regarding the efforts made by the Government to increase coal raisings should have a definitely stimulating effect on the market. *Bengal* were four points higher at Rs. 684 while *Bokaro* and *Ramgur* were Rs. 49-7. There has been good buying of Bhalgora. There was a setback to Rs. 18 but the close is definitely better at Rs. 19-2. *Nazira* also have been in good request, the quotation being done upto Rs. 20-8 from Rs. 18-12 at the end of last week. *Equitable* have been uninteresting throughout the week at Rs. 66-10. *South Karanpura* were bought upto Rs. 30-6 as also *Burrakur* to Rs. 42-6.

With the reports about difficulties in coal supplies there has been no increase in activity in the Jute section but in the last two days a better feeling is in evidence on the reports that coal supplies have increased. *Howrah* were quoted Rs. 82-6, *Anglo-India* Rs. 460 and *India* Rs. 692. *Presidency* continued in favour at Rs. 12. *Nellimarla* were Rs. 34-2 and *India* Rs. 692.

In the Engineering section *Indian Iron* have been done upto Rs. 39-8 and there is a feeling that the quotation might be stabilised around these levels. *Steel Corporations* also have been in request being done upto Rs. 32-12. *Jessop* were steady at Rs. 24-4, *Indian Standard Wagon* were lower at Rs. 85-12. *Saran Engineering* were quiet around Rs. 10.

The Sugar section has been featureless with *Belsund* at Rs. 15-4, *Balrampore* at Rs. 17-2 and *Carew* at Rs. 27-2. *Dharbanga* were Rs. 27 and *Champarun* Rs. 37-6.

Tea shares have remained steady and select shares have been quietly absorbed. *East India* were firm at Rs. 17-12, *Hattikhira* at Rs. 29-6 and *Tukvar* at Rs. 22.

In the Miscellaneous section, *Burma Corporation* were slightly easier at Rs. 5-8 as also *B. B. Petrol* at Rs. 5-5. With the approach of the dividend *B. I. Corporation* were better at Rs. 6-10. *National Insulated Cables* also are higher at Rs. 14-4. Paper shares were unchanged with *Titaghur Paper* at Rs. 27-8 ex-dividend. *Midnapore Zemindary* were Rs. 171 and *I. G. N.* Rs. 187.

(Half-yearly General Meeting on 27-2-1945 at 3 p.m. Books closed from 12th February to 27th February, 1945)

Audited accounts for the half-year ended 31st December, 1944.

After writing off for Depreciation Rs. 75,000, the accounts show a profit of Rs. 8,50,796-10-10 to which has to be added the balance brought forward from the last account, namely Rs. 55,812-10-11, making a total of Rs. 9,06,609-5-9. From this is deducted the amount set aside as a Reserve for Taxation and as provision in respect of E.P.T. Compulsory Deposits Rs. 7,45,000-0-0, leaving a balance of Rs. 1,61,609-5-9 for disposal.

The Directors recommend that this should be dealt with as follows:—

To paying the dividend on the 'A' Preference Shares for the half-year ended 31st December, 1944 at Rs. 4 per share (*i.e.*, 8 per cent per annum), without any deduction for Income-tax payable by the Company Rs. 24,000-0-0, to paying the dividend on the 'B' Preference Shares for the half-year ended 31st December, 1944 at Rs. 3-8 per share (*i.e.* 7 per cent per annum) without any deduction for Income-tax payable by the Company Rs. 21,000-0-0, to paying a dividend on the Ordinary Shares at the rate of Rs. 10 per share (*i.e.* 20 per cent per annum), without any deduction for Income-tax payable by the Company Rs. 60,000-0-0 and to carry forward the balance of Rs. 56,609-5-9.

The main feature of the period under review was an intensified drive launched by both the Central and Provincial authorities to eliminate black market activities in cloth and yarn. A certain measure of success has undoubtedly been attained but there is still an acute and unwarranted shortage of goods in many districts and it is to be hoped that the action of the Bengal Government in extending the quota system to all classes of traders will ameliorate the situation.

There have been no wide fluctuations in the cotton market and, with increasing war orders and the demand for civilian needs consistently in excess of the supply, manufacturers have experienced no difficulty in disposing of their productions. Deliveries of coal however have continued to be insufficient to afford steady working at the Company's mills on a full singe-shift basis and the shortage of transport has also made it increasingly difficult to ensure the regular arrival of adequate supplies of the raw material. An improvement in the food position through rationing and a further increase in the 'amenity' allowance paid to all mill employees have done much to keep the workers contended.

(Half-yearly General Meeting on 27-2-1945 at 3 p.m. Books closed from 12th February to 27th February, 1945).

The Accounts of the Company for the half-year ended 31st, December, 1944.

After writing off for Depreciation Rs. 50,000, the accounts show a profit of Rs. 8,50,293-8-3, to which has to be added the balance brought forward from the last account namely the accounts Rs. 52,381-9-9, giving a total of Rs. 9,02,675-2-0 from which is deducted the amount set aside as a Reserve for Taxation and as provision in respect of E.P.T. Compulsory Deposits Rs. 7,50,000-0-0, leaving a balance for disposal of Rs. 1,52,675-2-0.

The Directors recommend that this should be dealt with as follows:—

To paying a dividend on the Share Capital of the Company at the rate of Rs. 5 per share (*i.e.* 10 per cent per annum), without any deduction for Income-tax payable by the Company Rs. 95,000-0-0 and to carry forward the balance of Rs. 57,675-2-0.

(Annual General Meeting on 27-2-1945 at 3 p.m. at Cawnpore. Books closed from 14th to 24th February, 1945).

Audited accounts for the year ended 31st December, 1944.

After providing for a bonus to employees and setting aside Rs. 67,00,000 for estimated taxation, Rs. 16,00,000 to General Reserve and Rs. 50,000 to Pension and Gratuity Fund, the result of the year's working is a profit of Rs. 6,64,632-11-5. Adding to this Rs. 4,83,679-1-4, being the balance brought forward from 1943, there is a sum of Rs. 11,48,311-12-9 available which the Directors have allotted as follows:—

Ad-interim Dividend of Re. 1-8 per share on the Preference Shares, and Rs. 5 per share on the Ordinary Shares to 30th June (both free of income-tax), Rs. 1,95,000 Leaving for disposal a sum of Rs. 9,53,311-12-9, which they propose to deal with as follows:—Final Dividend of Re. 1-8 per share on the Preference Shares (free of income-tax), Rs. 45,000. Final Dividend of Rs. 5 per share on the Ordinary Shares making 20 per cent for the year (free of income-tax), Rs. 1,50,000. Bonus of Rs. 10 per share on the Ordinary Shares (free of income-tax), Rs. 3,00,000. To be carrier forward Rs. 4,48,312 Total Rs. 11,48,312.

A sum estimated at Rs. 16,00,000 will be due for payment, during 1945, as a compulsory E. P. T. Deposit under Section 10 of the Finance Act 1942. The equivalent of this amount has, therefore, been set aside to General Reserve.

Managing Director.—Mr. K. J. D. Price

Authorised, Issued and Subscribed Capital —Rs. 30,00,000 in 30,000 Ordy. of Rs. 50 and 30,000 Cum. Pref.,' (6 per cent) of Rs. 50, both fully paid up.

(Half-yearly General Meeting on 23-2-1945 at 12-5 p.m. Books closed from 9th to 23rd February, 1945).

Accounts for the half-year ended 31st December 1944, shows a profit of Rs. 20,13,659-9-3 which together with the amount brought forward from previous half-year Rs. 68,064-7-3, makes total of Rs. 20,81,724-0-6, from which is transferred to Taxation Reserve Rs. 13,20,000-0-0, and reserved for E. P. T. Deposit Rs. 2,60,000-0-0, leaving for disposal a total sum of Rs. 5,01,724-0-6.

The Directors recommend payment of a dividend of Rs. 3 per share on the Preference Shares Rs. 48,000-0-0 and Rs. 15 per share (making a total of Rs. 30 for the year) on the Ordinary Shares Rs. 3,60,000-0-0, carrying forward the balance of Rs. 93,724-0-6.

In accordance with the Indian Jute Mills Association's Working Time Agreement. the Mills, during the period under review, worked 54 hours per week.

Jute has been entered at or under cost price and fabrics, of which there are no unsold stocks, at contract rates.

The question of the compensation to be paid by Government for requisitioned Jute Mill property has been discussed with representatives of the Government of India and a decision may be arrived at in the near future. Any sums which this Company may receive as compensation will be paid to the Industrial Pool and will not form part of the revenues of this Company. The attention of the Shareholders is directed to the accounts which accompany this report. They show the working of the Company for the past six months, during the whole of which one of the Mills has been requisitioned. It will be seen that the trading results of the past half-year have been satisfactory and the Shareholders have not suffered.

Dividends include Bonus wherever declared. (i) Interim Dividend. (f) Final Dividend. $ Includes arrears of Dividends accumulated upto and including September, 1939. *Year ended. All other half-year ending.

Note.—In each case the closing quotation for the day and the lowest and highest quotations for the period are given.

(*Continued from page* 217)

together with the loom hours which were lost as a result of requisitioning in the period previous to that covered by this report. This claim has not been included in these accounts. The other parts of the Company's claim against Government consisting of recovery of out of pocket expenses for goods supplied, and services rendered to the requisitioning authorities has, however, been included in the Profit and Loss Account. Although the entire claim was submitted to the Requisitioned Jute Mills Co-Ordination Committee on the 10th November, 1944 no payment has yet been received or sanctioned.

The net profit for the period ending September, 1944 is Rs. 4,97,780 against Rs. 2,85,834 for the previous half-year. The amount set aside to depreciation is Rs. 1,07,342 (Rs 92,469). The provision for taxation is Rs. 2,50.000 (Nil). In spite of the higher level of earnings it has been possible to pay the arrears of dividend on the preference shares only for two half-years ending February, 1944 against three half-years on the former occasion.

* * * *

A new bank under influential auspices has been started. *The Jodhpur Commercial Bank* has been formed to provide banking facilities throughout the Jodhpur State. Of the Issued Capital of Rs. 1 crore in Ordinary shares of Rs. 10 each 5 lakhs shares have been taken up by the Directors and their friends and the balance offered to the public.

* * * *

The Registrar of Joint Stock Companies has still two offices, one at Calcutta and another at Suri. Important records were removed to the latter centre during the scare of 1941. Many offices of the Bengal Government also with their records were removed to places outside Calcutta for purposes of security but with the improvement in the war situation many of them have been shifted again to Calcutta. Only recently it was announced that the share transfer department of the Bird-Heilgers group has been brought back to Calcutta. In view of the fact that the Registrar of Joint Stock Companies is doing important work and there has been a large increase in Company flotations in recent months the custody of records in the Suri Office is an inconvenience both to the public and the Registrar. It is time that arrangements were made to bring back all the records to Calcutta.

WATCH-DOG.

GOVERNMENT OF INDIA
DEPARTMENT OF SUPPLY

(M. P. Branch), Calcutta

NOTICE

Subject:—Revised Procedure for import of Engineer Stores under the Panel Scheme

In view of the greatly improved supply position in the U. K. of certain engineer stores which are imported under the Panel Scheme, the Government of India have decided to issue licences for these items more freely than in the past. Importers who had not so far been eligible for a licence under the Panel Scheme may now apply for licences according to the instructions set out below:—

(i) Applications should be made in duplicate on Form IC2-B to the Director, American and Panel Imports, 7/8, Ezra Mansions, Calcutta.

(ii) Evidence that the manufacturers overseas are prepared to export the quantity for which an application is made in the period stated in the application must be attached to the Form. This can be in the shape of a copy of letter or telegram from the manufacturers or suppliers.

(iii) Separate applilations should be made for imports to be shipped during the periods January-June 1945 and July-December, 1945.

(iv) Applications for goods to be shipped in the period January-June, 1945 must reach the Director, American and Panel Imports, by the 1st March, 1945 and those for goods to be shipped between July and December, 1945 by the 1st June, 1945 at the latest.

2. Applications are invited for the whole range of items covered by the Panel Scheme but it must be appreciated that many items are still in short supply and under an allocation system in the U. K. The grant of licences for such items is, therefore, limited by the quotas allotted to India and it may not, therefore, be possible to issue licences in every case for the full quantity asked for or even for a portion of it. Subject to consideration in the light of conditions prevailing from time to time, licences will also now be issued to industrial concerns who wish to import panel items for their own use direct.

The grant of licenses will be regulated in accordance with the opinion of Government on the quantities of goods which the Indian market can absorb.

3. In order to ensure that Indian industry, large and small, benefits as soon and as much as possible from the improved supply position, the scope of the various controls over distribution is being examined. It is expected that it will be possible to remove distribution control altogether on many items and to relax it substantially on many more. Details will be advertised shortly.

(*Continued from page* 218)

being prepared for improving the condition of economically backward countries like India and China. In India what is now being spent on war requirements will be spent on increasing the purchasing power of the masses. Both the non-official and official plans for post-war economic reconstruction envisage the spending of large sums of money by the Government. The arguments advanced by the other side against this is that admitting that there will be a greater consumption of goods by the civilian population once the stress of war is over, no one will be prepared to buy goods at the present abnormally high prices. If prices continue at the present level, civilian demand for goods will continue at the barest minimum level. As regards expenditure on post-war economic development plans and the resultant expansion in the consumption of goods it will be a long time before all those plans can become effective and reach a stage when the consumption of goods will be affected. There is bound to be a lag between the cessation of demand for military purposes and the expansion of demand by the general public. During that period of lag prices will have to come down considerably as a result of over-production which means less profits. I shall continue this discussion in my next week's notes.

(*Continued from page* 219)

Following the encouraging report by the United Commercial Bank new banks like Hindusthan Commercial and Hind Bank have come out with good reports. I, however, prefer United Commercials from the investment point of view. Two small banks from Travancore, I mean Thomcos Bank and Travancore Forward Bank, have also come out with very encouraging reports, the former declaring a dividend of 6 per cent tax-free after liberal allocations to Reserves and the latter 10 per cent dividend despite both the banks increasing their capital last year. Centrals are steadier at Rs. 81. I like Centrals for long-term investment and would suggest picking up shares whenever the market is a little reactionary.

In the Insurance group, *Empire Life* had a meteoric rise from Rs. 1,000 to Rs. 1,600 on reports that a controlling block of shares has been bought over by a local bank. I feel that holders should take this opportunity for selling out their holdings. As soon as the parties who are interested in controlling get their requirements the shares are likely to be neglected as it happened in the case of Jupiters very recently.

NOTICE TO SHAREHOLDERS

NOTICE is hereby given that the Registered Office of the undernoted Companies will be removed from Kurseong, D. H. Railway, on 28th February, 1945, and thereafter will be situated in the Office of Messrs. Bird & Co., Chartered Bank Buildings, Calcutta. Shareholders are requested therefore to address all communications as from 18th February, 1945, to the Company at Chartered Bank Buildings, Calcutta. The Share Transfer Registered of the undernoted Companies will be closed as from 19th February, 1945 to 28th February, 1945, both days inclusive.

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

The slowing in the rate of increase in advances and the closing of the list for the 3 per cent 1957 loan, combined with the large weekly treasury bills maturities and the continued expansion of currency, have resulted in a sudden slackening in the conditions in the money market. In the last fortnight the average discount rate has dropped two annas and nine pies to six annas and three pies per cent as there was keen competition for the small offer of treasury bills. The reduction in the amount of applications at the auctions held this week was not due to poor response but in anticipation of a reduction in the discount rate and poor allotment. Thus, applications totalled Rs. 12.95 crores against Rs. 14.25 crores and there was a drop in the yield on treasury bills, as referred to above. There is no change in the amount of offer for next week. The authorities are probably preparing the market for the reception of the new loan. All the surplus funds should now seek investment in the open market and there might be in that event an improvement in giltedged prices. Even the small discount for the 3 per cent 1957 loan might thus disappear in a short time.

The returns of the Reserve Bank for the week ended February 16 shows a further increase in the note issue there being expansion of currency for Rs. 5 crores. Total notes issued were thus higher at Rs. 1,067.22 crores against Rs. 1,062.68 crores and notes in circulation at Rs. 1.058.54 crores against Rs. 1,054.20 crores. Sterling securities showed a rise of Rs. 5 crores to Rs. 954.33 crores while rupee coin were again lower at Rs. 10.63 crores against Rs. 11.10 crores.

Weekly disbursements by the Central Government now seem to be more than Rs. 25 crores especially as treasury bills maturities are in excess of sales every week by Rs. 4 crores. Thus, even with the receipt of foreign balances for nearly Rs. 16 crores Central Government balances are only Rs. 4.34 crores higher at Rs. 258.66 crores. Nearly the whole of the addition to the note issue has been paid out. Other Government accounts were Rs. 2.5 crores higher at Rs. 18.06 crores. The affluence of scheduled banks is reflected in the higher level of deposits at Rs. 76.32 crores against Rs. 72.04 crores. Other deposits also increased to Rs. 21.69 crores from Rs. 20.57 crores. Foreign balances were nearly Rs. 11 crores higher at Rs. 363.50 crores.

The statement of the Imperial Bank for the week ended February 16, 1945 shows a drop in deposits to Rs. 231.66 crores from Rs. 232.24 crores, rather surprisingly. Advances are lower at Rs. 71.28 crores against Rs. 72.16 crores as also investments at Rs. 141.41 crores against Rs. 142.30 crores. There is an increase in cash balances to Rs. 28.58 crores from Rs. 27.37 crores.

The statement of scheduled banks for the week ended February 9 shows a decline in demand liabilities but time liabilities have continued to improve, from Rs. 213.57 crores to Rs. 216.18 crores. As the increase in advances has been only Rs. 75 lakhs and as bills discounted are lower by Rs. 22 lakhs there is a rise in bank deposits with the Reserve Bank to Rs. 70.03 crores from Rs. 68.12 crores. Cash on hand does not show any important change at Rs. 28.13 crores.

The bullion market has been very steady and the whole of the lost ground in the silver market has been recovered. Bulls have been very successful in the silver market especially as the news regarding the European war has been in favour of bulls. The stiffening of German resistance has given hopes of a prolongation of the war. What is more important is that bulls are not afraid of a possible sharp decrease in prices and that the recent sales of silver by the Reserve Bank have been completely absorbed by the bull clique. The report of the recapture of the Bawdwin mines intact by the Allied troops in Burma, however, is unwelcome news for the bull operator. It is well-known that the mines of the Burma Corporation can produce large quantities of silver and that all the silver produced in previous years has been mainly absorbed by this country. Naturally the Central Government would like to purchase whatever silver that would be available but the knowledge that the Reserve Bank can be an aggressive seller, if necessary, will have a sobering effect on the market.

The Exchange market has been steady. There is a slight adjustment in the rupee price for Canadian dollars similar to the adjustment in prices for U.S. dollars some time back.

Call money quoted ½ per cent in Calcutta and ¼ per cent in Bombay. 3 to 5 months ½ per cent; 6 to 11 months ¾ per cent and 12 months 1¼ per cent.

TREASURY BILLS

Central Government:

Tenders for Rs. 2,00,00,000 of three months' Government of India Treasury Bills were opened on Tuesday, February 20, 1945. Total amount offered were Rs. 12,95,25,000. Tenders at Rs. 99-14-6 per cent were accepted in full and those at Rs. 99-14-3 per cent allotted approximately 12 per cent. Lower tenders were rejected. Total amount accepted was Rs. 2,00,00,000, the average rate of accepted tenders being Re. 0-6-3 per cent per annum.

Tenders for Rs. 2,00,00,000 of three months' Government of India Treasury Bills will be received on Wednesday, February 28, 1945, up to 11 a.m. and up to the close of business on Tuesday, February 27, 1945 at other centres. Successful tenderers should make payment on March 2, 1945. Other conditions are as usual.

During the week ended February 16, 1945, Government of India Treasury Bills for Rs. 2,76,00,000 were sold in favour of the Issue Department of the Reserve Bank of India.

By Special Cable.

Japanese Collapse Expected

London (By Cable)

Although Japanese Bonds are now weakening daily, it is noteworthy that the Stock Exchange still rates them far more valuable than German Bonds. Some commentators have suggested rather superficially that this discrimination due to the fact that before the Japan had an impeccablr record as a borrower whereas Nazi Germany notoriously had not. But this explanation assumes rather naively that the Japanese and Germaan governments after defeat would be allowed some control over the administration of foreign owned claims which is quite unlikely.

The real reason for such discrimination is the belief that whereas the Nazis will continue the fight until the entire German economy is wrecked, thus making quite impossible any resumption of the pre-war debt service the Japanese war-lords will prudently surrender before their economy is wrecked.

Indeed, this anticipation of a quick collapse of the Japanese war machine is bothering the City a good deal, for if it followed quickly upon the collapse of Germany, many think it would place the British Government and the whole British economy under the greatest strain. Few observers believe that Government's plans are anywhere near ready and, in any case, most observers believe that an interval of, say one year, between the defeat of Germany and the defeat of Japan would enable the transition from war to peace to be made much more smoothly.

The opening of a Congressional battle in Washington over the agreement made at Bretton Woods is deeply interesting the City. Newspapers have carried fairly lengthy extracts from Mr. Morgenthau's article in the American journal "Foreign Affairs" defending Bretton Woods from criticisms both domestic and foreign. The comment of financial editors shows that Mr. Morgenthau's arguments have allayed considerable misgivings here and brought converts.

Aluminium threatens to be the decisive test in the near future for the moot question whether the British Government is master in its own house. The fixed price of aluminium is still £110 per ton whereas the United States Government by getting "tough" now enjoys a price of £70 to £80 per ton and many American commentators are forecasting a post-war price around £40 in view of the enormous world capacity now built up, estimated around 2 million tons per annum compared with 600,000 tons before the war.

British manufacturers who use aluminium are strongly pressing the Government to bring the British price into line with the American. If this is done, it will have serious reprecussions upon the British price of copper of later if it would be forced down from the present price of £62 per ton to £25-26 which would be well below the lowest pre-war price namely £35. Otherwise, if copper maintained its present prices, then it would unable to hold many fields of consumption including electric cables which would pass over to aluminium.

The Stock exchange is working slowly lower apparently in an effort to steel itself against any shock arising from sudden termination of the war. Home Railways, notwithstanding the fact they enjoy a sheltered market for their services, have conspicuously led the decline. Many stockbrokers urge clients to buy good Industrials and hold firmly through any setback, which in their opinion would be purely temporary.

Costs & Prices in Post-war India

In our examination of the question of costs and prices in the leading article of February 10, we expressed the view that the level of prices must be brought down, that the total note circulation must be reduced by stages to about Rs. 500 crores and that the general diffusion of redundant currency that obtains at present is such as to help the execution of a deflationary policy without fear of quick or adverse consequences on production or on business activity. We suggested, too, that the problem of bringing about a lower price level should not be tackled only from the monetary end, but that special efforts should be made to expand production and increase supplies of goods on which, for various reasons, the pressure of demand in the post-war period may be felt with a special intensity. It would also be necessary to ensure through various devices that the decline in prices is less in the case of agricultural commodities than in the case of manufactured articles. This aim can be realised if general control is continued during the post-war period over the price policy of Indian industries; and to the extent that supplies will be more adequate, the controls can be exerted with less fear of black markets or of resentment among the interests concerned. But the toughest part of the price policy of the post-war period will be, however, the reduction in wages. That labour will resist every attempt to reduce wages regardless of the economic justification or of national considerations may be taken for granted. But there can be no doubt that some reduction in wages will have to be effected, if costs are to be brought into relation with the lower level of prices contemplated here. We have also to consider the re-distribution of wealth which a change in the price level inevitably implies. It is manifestly unfair that those who have amassed fortunes, big and small, out of the profits of the war period should be given a further augmentation of their wealth by an enhancement of the purchasing power of money. Measures for offsetting this undesirable effect are not easily devised. Barring taxation, there is no means of adjusting maldistribution of wealth; and it is for the Finance Ministers of the future to tackle the problem as best as they can. The present level of prices would be hard to sustain and cannot be suffered to continue merely to spite the newly rich.

All these, however, are suggested only by a consideration of the problem from the side of internal conditions. But there is the world outside to reckon with, a world with which economic relations have to be kept up. India cannot do without a revival in the export trades, which owing to the war and the blockade have been in a moribund condition for four or five years. We have also to remember that, if we could do without imports of many lines of goods, it would be difficult in practice to shut any of them out entirely. And there has to be some relation between the prices of imports and the prices of indigenous products, where they are competitive. The last post-war period gave us some very unpleasant experiences in this regard. Industries, which were started during the war period found themselves crushed by the import of foreign goods. It is only fair to mention here the other possibility that should imports be kept out, the consumer may find himself at the mercy of the local producer.

If, then, some degree of equilibrium between external and internal prices is essential, it is necessary to see what the trend of world prices will be like in the years following the war. It hardly needs saying that in this we come up against the most baffling uncertainty of the post-war period. It is more than doubtful if the world will again witness anything like a general level of international prices. The re-drawing of the political map of Europe and Asia may well involve serious changes in the contours of international finance. In the absence of special financial aids from the U.S.A., sterling may lose prestige and lead to a shrinkage of the sterling area. The yen bloc may be a pale ghost of its former self, while the Continental countries, inclusive of France, may be groping for a suitable policy in currency and exchange. Only the U.S.A. will retain power to shape her policies according to her will and even to exert some pressure on other countries. If the Bretton Woods Conference will not prove an uninteresting episode in recent history of international finance, one may hope for the re-emergence at some stage of an international price level.

But that can only be a few years after the signing of peace; and the problem refers in the main to that period of dangerous flux and unsettlement. So far as India is concerned, it should suffice for the present purpose to relate the problem to the conditions and policies of the more important of the countries with which India will have trading and financial relations. The principal factors which will affect the position and course of the rupee will also have to be considered. It is necessary to rid ourselves of ideas which are derived from the war period. During the war, the rupee has no doubt been in a strong position. All the signs of strength for a national currency have been abundantly in evidence. We have accumulated foreign currency at a staggering rate. Not only have we paid off foreign obligations on a large scale but we have also amassed foreign balances in colossal amounts. The steep fall in the internal purchasing power of the rupee has not been allowed to have any effect on its external value. Though it is meaningless to argue, as some British journalists have done, that without a corresponding fall in external value this fall in the internal purchasing power of the rupee spells injustice to Britain, we should not overlook the fact that in the comparatively free conditions of the post-war period this fall in internal purchasing power will make itself felt on the external value of the rupee as well. Such a development, as well as the process through which it will work itself, viz., large imports and adverse balances of trade, will be extremely harmful to the national interest. Our sterling balances will either be unavailable or will have to be frittered away in checking or regulating such a development. The lowering of the price level, which we found to be necessary in consideration of internal conditions, is dictated to an equal extent by the consideration of our external relations. No exaggerated ideas of the strength of the rupee in the absence of an adjustment of price levels should be allowed to prevail.

This reduction in the price level is also suggested by the needs of post-war competition in international trade. It is not as well known as it should be that prices in countries like Britain and the U.S.A. have not been allowed to go up as high as in India. Even today, imports are being made from Britain at prices which are only slightly higher than pre-war prices. Indian Trade Commissioners abroad have often stressed the fact that out of far-sighted considerations of future advantages, British manufacturers, unlike Indian, have not raised their prices as high as they might have. Costs in Britain have been carefully kept down. The end of the war will, no doubt, enable Britain to resume her import trade on a large scale. And while it is true that Indian industry will have to look to import duties as their first line of defence against foreign competition, it is also necessary to bring down our internal prices. Such a step will also strengthen the competitive position of India's export trades. With imports kept down and exports maintained, the balance of trade will be large enough, together with the annual instalments of repayment of our sterling balances, to finance the import of machinery and other capital goods which we shall need for the industrial and economic development of the country in the post-war period. It is only by taking our stand on what can be regarded as the normal that we can judge the deviations from the normal and relate them properly in a rational scheme of things. Though a return to pre-war conditions is unquestionable, post-war problems are thought out best in terms of pre-war conditions which are both familiar and intelligible. A price level which will be distinctly above the pre-war and very much below the present level, imports and exports of about the same value as before the war, import of capital goods financed out of instalmental repayments of sterling balances and normal trade balances—these may well form the basis, for a start, of India's post-war policy in regard to currency, exchange and foreign trade.

Bengal Budget

The Bengal Budget presented on Friday last raises again the question of Central subventions in case of established need. Though a regular federal system of finance may be yet lacking the apportionment of funds in proportion to needs is a well-recognised principle. There is to be borrowing from the Centre as the memorandum indicates that debt will again rise by about Rs. 13 crores under all heads and independent borrowing would be strictly limited. It is thus the Centre's generosity that will have to stand the test, now that the Finance Minister has assessed the total financial results of war and famine at Rs. 61 crores. The Finance Minister hopes that the wind will be tempered to shorn Bengal and the immediate prospects must be governed by the size of the subvention. The Centre raised the first grant from Rs. 4½ to Rs. 10 crores, and Bengal in asking for more has pointed to the possible fall in the share of incometax by Rs. 50 lakhs. That the Centre has agreed to finance the Civil Supplies Department and share in its trading losses must be regarded as proof of the strong case built up to prove that Bengal's government attended to the production, procurement and distribution of food in 1944 with results that are recorded in the budget speech.

The deficit became larger at Rs. 11 crores against an estimate of Rs. 8.46 crores. Revenue in 1944-45 was undoubtedly buoyant but a decline is anticipated and prepared for. The Finance Bill was passed in November and the Government hopes to tighten up excise revenue so as to get more revenue than from either land revenue or sales tax. The proportion of indirect

to direct taxation (represented by the share of income-tax) is very considerable so that the validity of either agricultural income tax or inheritance tax will not be disputed.

The deficit for 1945-46 will arise from the fall in receipts not from the growth of expenditure. The emergency clearly is over and the tasks of recovery are simpler even in the order stated by the Finance Minister. Reduction under famine relief, public health and other heads should be a correct measure of the success attending the Ministry's efforts in 1944 to break the crisis by large scale outlay. Even the loss of Rs. 17 crores on the Civil Supplies Department's trading operations in two years (the loss exceeding the estimate by nearly Rs. 8½ crores) should be treated as part of the emergency expenditure. Further, the increase in the Department's activity next year does not entail a loss on the same scale as in 1944-45 while the Centre as a partner in trading operations evidently accepts responsibility for deficit working so that current criticism as to the damage sustained by stocks and the financial loss therefrom should be modified by the emergence of partnership. The Government's control of food supply in the consumer's interest is fully vindicated. There is promise of a continuous, coherent policy attuned to the Central Government's main prescription for the persistent food shortage in India. The reduction in ordinary expenditure should be treated as a measure of the recovery from famine to which the budget speech on Friday bore witness. Though the provision for Police still appears substantial in the list of votable items the yearly grants for agriculture, health and education have increased steadily and the last is expected to increase like the provision for cooperation and the Veterinary department. The post-Famine relief measures are allotted Rs. 305.55 lakhs as against Rs. 430.68 lakhs in the Revised Estimates. The provision should meet criticisms based on reports of epidemics, lack of employment, and food shortage. It should serve to remind the Centre that Bengal's large responsibilities are multiplied by a population greatly exceeding that of other Provinces. The separate provision made for famine relief relieves Government from the necessity of meeting any charge as to complacency and if we can foresee a fall in losses on food distribution together with the abolition of famine relief and a normal growth of excise and stamp revenue, next year's budget may well be balanced. It is this possibility on which we must dwell since last year's famine distorted the whole financial picture. This year too debt and deficit are the results of the events of 1943-44. The possibility may not stand in the way of Central assistance since Bengal has to provide Rs. 32.76 lakhs for interest alone and the extinction of debt is the joint concern of both the Centre and the Province, particularly, as the unproductive debt rose in a single year from Rs. 11 crores to Rs. 19 crores.

The more important features of the scheme of expenditure can be summarised by reference to the increase in concessions to Government servants, the provision for rehabilitation (Rs. 168 lakhs for 1945-46) and Rs. 77 lakhs for the Grow More Food Campaign in 1945-46. There are plans for cattle breeding, fishery development and goat breeding as well as boat-building which assumes a very special position as the Government intends to spend Rs. 5½ crores (raised by treasury bills) on constructing a fleet of 10,000 boats of 100 maunds and upwards to supplement transport. The Central Government's promise of 75 per cent of the cost of the Damodar River Embankment, which is expected to take Rs. 3 crores, may be described as part of the scheme of assistance to fit in with the Bengal Government's plans for rehabilitation. The budget speech contains a reference to a scheme for a large cattle farm in the Nadia District to revive a malarial region. Such dual-purpose schemes are not many but the budget suggests that the original charge of maladministration will no longer hold. The absence of any provision for a grant to the Calcutta Corporation after the latter's admission of difficulties will certainly appear surprising. There was a subsidy in 1943-44 and its continuance during the emergency would only be an admission that all other authorities in Bengal were or are exposed to war and famine to the same extent as the Bengal Government.

The growth of revenue during the emergency and the satisfactory yield of the new taxes—the agricultural income-tax is expected to yield Rs. 50 lakhs in 1945-46—certainly prove that financial administration has not failed in Bengal to equate resources to obligations. In our comments last year reference was made to the protection of Bengal's credit by the increase of taxation. The new taxation in force up to March 1948 may be described as clinching the case for the subvention that Mr. Goswami expects in advance of a settlement which, in his words, will be free from any taint of injustice or niggardliness.

Perils of Planning

The Road to Serfdom: By F. A. HAYEK: Routledge: pp. 184.

When you read a work of Mr. Hayek's it is better to sit up from the start than vainly feel your back put up at the end. In his latest work, "The Road to Serfdom" Mr. Hayek not only challenges every one of the assumptions basic to economic planning, but opens a vista of dreadful consequences, which an advocate of planning has only to glimpse to recoil in horror from everything that he has fondly clung to during the last ten years and more. The path of planning, Mr. Hayek argues, is the Road to Serfdom, a road on which, once set, you can never turn back but must proceed till you reach the bitter goal. This conclusion is not the result of speculative reasoning or armchair reflection on the probable results of trends and tendencies It has been exemplified, says Mr. Hayek, in the recent history of the nations which have ended up by becoming a menace alike to themselves and to the rest of the world.

Formerly, Mr. Hayek was concerned to emphasise the importance of objective value, the necessity for the guidance which free prices alone can furnish and the utter impossibility of rational calculation of costs in a regime of economic planning. This kind of attack on socialism was powerful enough. But now Mr. Hayek's attacks are on political and broadly social grounds. His base is not scientific equilibrium economics, but the social philosophy and the individual ideology which Liberalism embodies. He traverses a wide range of social and political problems, from the mental reactions of individuals in a planned regime to the dangers of an international regime based on force. As Mr. Hayek is careful to emphasise in his preface, "This is a political book".

And that is what makes it dangerous in one view. Mr Hayek starts with selecting the trends of thought and the flow of events in one country, he links them up in a chain of apparently inevitable cause and effect, makes sweeping generalisations therefrom and calls on commonsense understanding of life to bear out his conclusions and their applications alike. The Nazi system, Mr. Hayek argues, is not the product of a peculiar wickedness in the mental make-up of the Germans, but the result of the trend towards socialism which in Germany was stronger and of far longer standing than in any other country in the world. This result Mr. Hayek tries to prove, is inevitable. It is seminal in the passion for artificial order, in the impatience for differences which seem to slow down progress, in the readiness to bend the will of one and all to ends that are outside of them. To believe that Nazism is an accident of German history or the product of a peculiarly German trait is to open the floodgates of similar disasters on the rest of mankind. The fact is, Mr. Hayek argues, German Nazism is the offspring of German socialism. Nazism is based on planning. Planning leads to totalitarianism; and totalitarianism is the total end of all the values of civilised life.

No one will deny that planning is part of socialism; that Nazism is descended in a way, from German socialism; that Nazi and communist planning has led in Germany and in Russia to totalitarianism and tyranny. But it is a big jump from these facts to the assertion that the scope of planning is irrepressibly self-expansive, that planning will make democracy impossible and that, socialism and slavery are one and the same though the two words may not sound synonymous.

"The Road to Serfdom" is an elaboration in scientific garb of particular views about facts—just what Mr. Hayek says of Plato's noble lies and the racial theory of the Nazism—though the facts are indisputable and the views have great value and importance. There is need to open the eyes of all men and women to the dangers that are inherent in planning. A clear and reasoned warning against such dangers is something to be grateful for. But it is one thing to stress the dangers of planning. It is quite another to damn socialism eternally on that account. It is one thing to see the link between German socialism and German Fascism. It is far different to assert that all planning must lead to totalitarianism or that collectivism must necessarily prove the death-knell of democracy. Strange, Mr. Hayek himself says that in social evolution nothing is inevitable but thinking makes it so. The links in this chain of reasoning, close as they may seem, nevertheless cover wide and varied issues to which the particular truths and aspects of the truth which Mr. Hayek selects and stresses cannot do justice. Since the general theme is wide and unlimited, no thesis can be sound without an appropriate restriction of its scope and specific application. While Mr. Hayek is, no doubt, careful in tracing the connection between the facts, factors and forces that are relevant to planning, he ascribes to them an unwarranted permanence or universality and gives his tentative conclusions the status of eternal and ever valid truths. This should explain the puzzling result of his enquiries, viz., a series of unexceptionable statements and conclusions, observations of great insight, power and practical value and a more or less imperceptible twisting of all this in support of a general thesis of, at the least, questionable validity.

It is the tragedy of socialism that no socialist party has ever been truly socialist. And that is understandable, because true socialism is impossible without a genuine internationalism based on the equality of man. But the practice and even the ideological elaboration of socialism has been mostly in the hands of trade unionists and the leaders of the labour party within each nation. British socialists trim their views to suit the requirements of the working class in a nation which is a rentier among the nations. German socialism heaves a deep sigh that it is not as advantageously placed as the British and in sheer despair throws itself into the lap of the Kaiser or Herr Hitler and his Nazis. Russian Communism is forced to turn from the organisation of economic conditions for a decent life for the average man to the organisation of war potential for the imminent clash with Germany or with the capitalist powers. All the world over, Socialist parties are tainted by war, offensive or defensive; and war is the worst enemy of democracy. It is only to be expected that the German nation should lead in this trend from socialism to the tyranny and war-mongering of Fascist totalitarianism. Mr. Hayek's heavily documented chapter on "The Socialist Roots of Nazism" proves a great deal against socialists, but nothing against Socialism. Nor can the defections of the Labour movement in Britain, such as its acceptance of Britain's privileged position, its readiness to support monopolies, its jealous preoccupation with its own interests to the exclusion of the broad public interest, be held as an indictment of socialism. "What socialists", asks Mr. Hayek, "seriously contemplate the equal division of existing capital resources among the people of the world?" The fact that there have not been such socialists is sufficient by itself to invalidate most of Mr. Hayek's general conclusions.

Mr. Hayek completely overlooks the fact that there has been no planning by genuine socialists. True Socialist planning is to some extent even impossible in the present conditions. The world is far from ripe for internationalism of any kind. And there is no country in which conditions are helpful for the rise of a party, sufficiently strong and sufficiently sincere in its professions of socialism, to give an honest trial to socialist planning. While socialism is a creed which has no place for any narrow sectional interest it has so far got little of disinterested support. In this, it is not different from Democracy or Liberalism. No ideal, however, lofty, gets anything but interested support. But while political Democracy, like British Liberalism, had an extraordinarily long run of good luck, socialism was born in thunder and in rain. Mr. Hayek mixes up the defections of socialists and the misfortunes of socialism to make a strong case against planning and collectivism. It may be that true socialism will never get a chance to reconcile the conflict between freedom and organisation. It would be interesting, however much it may damp the spirits of ardent socialists, if one were to develop a thesis, on the basis of social psychology or other relevant studies, that the rise at any time of a strong and genuinely socialist party is impossible. But it is quite a different thing to argue, as Mr. Hayek does, only on the basis of past events in Russia and Germany and make them out to be the inevitable results of any attempt at economic planning. The exaggerated importance, which Mr. Hayek attaches to circumstances which are transient or which are, at any rate, not inevitable, is best brought in the following:

> There is hardly an aspect of it (our life), from our primary needs to our relation with our family and friends, from the nature of our work to the use of our leisure, over which the planner would not exercise this 'conscious control!' In the direction of economic activity, the interests to be reconciled are so divergent that no true agreement is likely to be reached in a democratic assembly.....Yet agreement that planning is necessary together with the inability of democratic assemblies to produce a plan, will evoke stronger and stronger demands that the Government or some single individual should be given powers to act on their own responsibility.....If democracy resolves on a task which necessarily involves the use of power which cannot be guided by fixed rules, it must become arbitrary power.

All this is motivated pessimism. If planning is self-expansive, it hardly means that we are altogether powerless to limit its scope according to circumstances. The Russian N.E.P. is a notable instance of retreat from mistaken policies. An intelligent people can always check up the results of particular policies and call for appropriate changes therein. Mr. Hayek speaks at more than one point as if planning requires a single act of judgment by the Legislature which involves the signing of a blank cheque, because of the impossibility of judging details or deducing general principles. Is planning by instalments an utter impossibility? Why should it be supposed that large schemes based on intelligent and intelligible principles cannot be brought up before the democratic legislature in succession and at suitable intervals, so that public opinion and the preferences of the public may be duly brought to bear on them? Is it impossible to break the fiery steed of Leftist planning and regulate its pace, so that democratic control can catch up with it?

That, of course, is a matter of opinion. And it is hardly right to oppose one set of dogmas with another. All that can be said is that the experiences of Russia and Germany cannot constitute a permanent and decisively valid argument against socialism; that the observations of war-minded German socialists are no proof that true socialism will be less concerned about individual freedom than true Liberalism; that the need for coercion is due not so much to the inherent necessities of planning as to the inability of political parties, inclusive of socialist or Labour parties, to rise above sectional interests. Mr. Hayek recognises the last mentioned point sufficiently to question "whether any body can realistically conceive of a collectivist programme other than in the service of a limited group". He argues that "the belief in the community of aims and interests with fellow men seems to presuppose a greater degree of similarity of outlook and thought than exists between men merely as human beings". True. Though it is an old saying that "man is the measure of all", few have learned to interpret "man" in this context as "the other man", instead of one's own self. And this is more true of classes than of individuals, which explains the Marxist tirades against bourgoise mentality. But there is no need to despair of a similarity of outlook and thought sufficient to make a clear-cut them? Is it impossible to break the fiery speed of Leftist dual of an oppressive sense of personal privation in being content with what that programme makes available to him. The recognition of that possibility depends probably on emotional sympathy rather than intellectual perception. But it is manifestly unfair to pronounce final verdicts on the ethics of collectivism without a single experiment in true socialism to go by, to assert that "there can be no place for them (the very concepts of humanity) in a collectivist system of thought", and, more than all, to taunt socialism with the treachery of notorious renegades like Mussolini and cite their careers as proof of the inevitability of Fascist development in socialism.

Mr. Hayek should have known better than to detract from a good case by palpable overstatement. He could have kept the distinction between planning in present conditions and planning for true socialism. For, all his observations which are confined to planning in the present conditions have a value for the contemporary world which it is impossible to exaggerate Much of the support which the cult of planning enjoys today is based on exaggerated hopes on the one side and almost sinister scheming on the other. There is too little appreciation of the numerous points at which economic planning can touch the individual in an exasperating manner. And there is no disposition to consider realistically the impact of centralised economic authority on the machinery of democratic Government. All these are dangers, to which the minds of the intelligentsia and the eyes of the people must be opened. Mr. Hayek has laid the whole of the contemporary world under a deep debt to him. No one, who is interested in social and sociological problems, can read the book without feeling the whole structure of social and socialist thought rocked to its foundations. And it always does good to have such a shake-up.

Editorial Notes

Jute Industry In 1944

The three major difficulties of 1943 coal, requisitioning and transport continued into 1944 and the jute mill industry's position during the last year has not altered very much. But Mr. Walker's survey of the situation is not important so much for its description of the difficulties over compensation for loom-hours or the enforced idleness of mill hands as for the mill industry's view of the acreage decision reached lately. The case for an increase was stated in January; and it has been turned down. When control prices are fixed for both export and domestic supplies the increase in acreage asked for could not upset prices. But the Ministry put its own food plans first and the danger of a jute famine to which Mr. Walker referred on Friday must be called real or illusory according to the estimate of carry over at the end of June and the nature of the early monsoon. It is however manifest that the acreage decision which was without market reactions has been reached without regard to the Indian Jute Committee's request for an increase in jute cultivation. Though shortage of coal curtails mill consumption it is noteworthy that stocks of manufactures fell during the year. A hint that lower prices for raw material may be enforced by post-war competition will raise again in an acute form the fundamentals of crop restriction. But during the war restriction has been vindicated and the real issue may be one of taxation. If competition of alternative materials develops to any extent, the export duty on jute and jute manufactures may become a handicap like the policy to maintain jute prices at a fully remunerative level for the grower. The renewal of the working time agreement for five years means that the arrangements made in 1939 are permanent and the industry will adjust production to demand as and when necessary. This was expected and the recent firmer tendency in jute shares must be attributed to the announcement that with surplus capacity well under check the industry will remain in a sound condition after the end of the war. The lower level of earnings in 1944 as compared with the year 1940 however suggests that the present rise is not based on a very careful estimate of possibilities. Mr. Walker's frank allusion to the coal position being particularly black at the moment can only mean that the results for the current half year would be indifferent, while assessment of post-war prospects must be guided by Mr. Walker's warning as to costs and prices.

Bankers On The Banking Bill

A detailed memorandum dealing with the new Banking Bill has been submitted by the Indian Banker's Chamber of Bombay. It refers to the expansion in currency as the original reason or banking expansion. It calls attention to the exclusion of indigenous bankers from the scope of reform as also the co-operative societies. This is regarded as a defect. The bill seeks to relate the paid-up capital to the number of branches. The memorandum points out that the risk to depositors does not increase with either the number of branches or the population of towns served. Further the paid-up capital of banks in proportion to deposits is usually small and sound management is the best safeguard. The memorandum offers an alternative suggestion. Every bank, and even every new branch, should be licensed. Conditions should be prescribed thereunder, and the license may contain provision for an increase in paid-up capital, so that branch expansion and increases in capital coincide.

Detailed comments on the clauses of the bill are furnished and the power to suspend the act is regarded as superfluous. Dealing with clause 9 describing the forms of business in which Indian banking companies may engage the memorandum points out that dealings in shares, stock or debentures as well as under-writing the same mean that banks can enter the industrial financing field. So far banks have avoided participation in new issues, but when opportunities arise, they could do so under adequate safeguards although the clause does not mention them. The clause empowering the Reserve Bank to satisfy itself at the discretion of the the Government by inspection of a bank's books and accounts and report thereon is regarded as adequate, but it is urged that no kind of assistance is available when a bank experiences difficulties; also that a bank prior to inspection must have a chance to explain its own position, because Government can take action upon the report without calling for one. The memorandum certainly indicates that the form of protection for depositors is not strictly regarded as a guarantee of progress. The arguments in favour of statutory regulation are not affected by the changes recommended but the Central Assembly is bound to keep in view the objections to the draft published in November.

Ports and Waterways

A special correspondent's account of the Army's help in developing the traffic capacity of harbours and waterways contains much about the special maintenance and transport companies formed for the purpose. The Port Commissioners' budget next month may not give the interesting details as to the changes in the port's traffic. Development schemes carried out include the laying of a track of 100 miles to increase wagon-handling capacity. After the daylight raid on Calcutta in December 1943 repairs to the dock were carried out by the special companies. Congestion has been reduced and the clearance of cargoes of war supplies is the job of special staff of winchmen, cranedrivers and stevedores. Three new berths are under construction and one is already in use. Cranes of large capacity have been installed and six gantries were obtained from the Port of London Authority. It is claimed that tonnage clearing capacity has been increased by 70 per cent. The preparation of rivercraft for service on the waterways in India and Burma is part of the transport workers' assignment. Harbour craft are also operated by the companies whose newest job may be salvage of river steamers in Burma. Inland water transport has been developed mainly to limit the burden on the Indian railways. The Army

is said to control at times the ports of Vizagapatam and Chittagong but in Calcutta the Trust merely takes assistance. The work in ports covers the construction of lighters and small craft for inland navigation, though assembly rather than shipbuilding, is mentioned as the concern of the Erection and Riveting Companies. A building berth in which engines are installed on rivercraft put together there has been got ready and barges on their maiden trips will carry cargoes brought to the building berth. In this way ships increase. It is reported that about 4,000 men have been detailed for craft erection and a new jetty is under construction. An inland port in Bengal served by a double line broad gauge railway is nearing completion. The port is meant to supplement Calcutta port facilities and take away surplus cargo. It will be inferred that the development recorded has the elements of permanence and the support it might give to inland navigation companies after the war should not be overlooked in assessing prospects for shipping companies. For a year locally strong preference for shipping shares has been in evidence though jointstock companies are forbidden by the D. I. R. to publish their results in the usual form.

Germany After Defeat

The Yalta declaration contained important promises concerning post-war Germany. The picture has not clearly emerged however of either territorial adjustments in the west or east. But the unconditional surrender involves economic disarmament to the limit. The elimination or control of all German industry that could be used for military production is a cardinal aim of both the Russians and their allies. The Russian claim for reparations is fully satisfied by the Yalta declaration. Restitution is to be made to the occupied countries. Finland, Rumania and Hungary are paying reparations in kind while Germany is expected to pay in goods or in labour. A Reparations Commission in Moscow will deal with the numbers that are to be drawn off from Germany for reconstruction. Its functions in relation to the inter-Allied control Commission in which France will participate can be inferred from the Soviet's failure to obtain big credits in Britain and America. To take over as a going concern the Todt organisation or the Hitler labour Corps may be difficult in case the Nazi system collapses. But the Control Commission must move German workers out, calculate their earnings less subsistence and credit their receipts to reparations.

In the Allied Leaders' declaration no time limit is given to the payment or to the relative importance of Polish and other claims on the Reich against Russian claims. If it is reparation in kind, the chief raw material procurable will be coal. Compared with other countries Germany has too much coal and iron ore, but their removal from the export schedule will mean that competing countries cannot hope for much. Export outlook for British and Belgium Coal may become more obscure if coal is taken as compensation for war damage. But there may be real advantage in putting the enemy's industrial resources into a pool from which the victors will draw according to their needs. The pre-peace conference at San Francisco on April 25 should be able to offer some estimates as to the value of reparations in kind and manpower that Germany can provide. To a certain extent the German food problem would be simpler if compulsory labour service abroad is a condition of the settlement. But discriminatory rationing must be avoided in the liberated countries particularly as Germany's own reconstruction would be held up for years though a labour reserve would never reappear as the draft for foreign labour service would make for a shortage of workers though complete demobilisation after defeat would increase the numbers looking for work. If the labour service scheme is to be viewed merely as demobilisation plan for the German Army, it may be rejected but it is also meant to convert military conscription into industrial con-

scription of another kind and Germany may well gain from the change after the reparations arrangements terminate. The conditions under which it will be worked require detailed investigation. For instance Holland may appear to be more important than Poland or the Ukraine and the Soviet's territorial gains may require to be balanced against the losses due to enemy action. The supply of raw materials also must be regulated with attention to both needs and deserts. Probable effects on S. E. Europe's trade cannot be ignored. If Germany's production capacity is rigorously pared down, the United Nations must provide for them imports in addition to relief and reparations drawn in kind. Coal obtained by Yugoslavia may have to be exchanged for foreign manufactures. The latter factor may well determine the nature of the reparations procured in kind and plant and dismantled equipment taken over may complicate the surplus and disposal problem in all countries.

Australian Achievement

Australia's removal of export restrictions on several articles has been announced. The embargo on the export of jam and jellies has been removed because of the favourable supply position. There is more fruit in Australia; and most of it, fresh or canned, goes to the Services who get their vitamin C in black currant syrup. There is perhaps more behind Mr. Curtin's decision not to divert manpower away from the war effort than the decision to launch in March the third Victory Loan for £100 million. There is the Government's earlier resolve to keep war production going after the fifth year. Total war outlay up to June 30, 1944 is estimated at £1,654 million, that is to say 30 per cent of the national income since 1938-39. Both primary and secondary production has been directed for war purposes. This is the chief reason for the fall in the gold-mining output. In 1943 the output was less than half of 1940 output and a further fall in 1944 would mean that one of the chief exports has been deliberately curtailed. Gold ranked after wool and wheat as a leading export. This had not affected the growth of Australia's sterling balances. The commonwealth Bank held in December 1944 £135 million against £54 million in December 1943. Trading banks are required to sell all overseas exchange to the Commonwealth Bank. The accumulation suggests that the 5 per cent 1945-75 loan may be dealt with in the usual manner. It has been suggested that another part of Australia's sterling debt will be quickly repaid from the London assets. At home the Commonwealth Bank acquires a share of the trading bank's increased resources. In a year the savings banks' deposits advanced by £106.4 million to stand at £510.5 million in November 1944. According to a monthly news bulletin the Commonwealth Bank's special deposits (furnished by other banks) rose by £69.9 million during the period. The most interesting item however is the efficiency factor of Australia's young steel industry. Lower costs have been claimed on the score of efficient plant good ore, good workmen, and good organisation The Minister for Supply in Britain stated that Australia produced steel at a cost of £10-8-0 per ton whereas the same in Britain cost £14-3. Steel for structural purposes sells in Australia at only 23 per cent above the pre-war level. There is no subsidy and B.H.P's new plant actually paid over £1½ million in taxes. The company employs about 30,000 people and the estimated annual wages bill is £11 million.

World T. U. C.

To the world trade Union Congress attended by 250 delegates representing 45 nations the title, Parliament of Labour has been bestowed. Why the working class should be brought together to seal the unity of governments at war with Germany may be hard to understand but it was important to bring Russia into the international organisation of labour. That has been done by the arrangements proposed. A further purpose was to secure approval of the Allied leaders' decisions concerning the post-war emasculation of Germany industrially. In the controversy over the admission of trade unionists from Italy, Finland etc. the only point that arose was whether they, so lately delivered from Fascism, could be real trade unionists The conference offered no recommendations as to labour welfare and industrial progress. Its objects were political and the most important result of the London meeting may be the bringing together of the South American labour movement and the larger brother, the C.I.O. The international trade union conference made no reference to the problems of colonial welfare or the position of foreign capital in South America. The conference however wants to keep alive after the war and function as a political appendage to other organisations. This may be no unmixed advantage since the main claim for equality and civil liberties cannot be secured by the composite organisation. It may be that the restoration of the lost prestige of the Labour movement is vital for reconstruction of governments in Europe and something more respectable than the

THE BANK OF INDIA LIMITED

[Established September, 1906.]

To be submitted to the Shareholders at the Annual Ordinary General Meeting to be held at the Registered Office of the Bank, Oriental Buildings, Bombay, on Thursday, the 1st March, 1945 at 4 o'clock P.M. (New Standard Time).

DIRECTORS' REPORT FOR THE YEAR ENDED 31st DECEMBER, 1944.

The Directors beg to submit to the Shareholders the Balance Sheet and Profit and Loss Account for the year ended 31st December, 1944. The Auditors' Report is also annexed.

The transactions for the past year, including the balance brought forward from the previous year Rs. 9,85,827-4-5, have resulted in a profit of .. .. Rs. 75,23,262 9 7

An interim dividend was paid for the half-year ended 30th June, 1944 at the rate of 11 per cent per annum on the Paid-up Capital of Rupees One Crore, free of income-tax, which absorbed Rs. 5,50,000 0 0

Provision made for Income-tax, Super-tax, and Excess Profits-tax for the year .. .. Rs. 31,00,000 0 0

Bonus to Staff .. .. Rs. 2,84,000 0 0

The Directors now propose:—

To pay a final dividend for the half-year ended 31st December, 1944 at the rate of 11 per cent per annum, on the Paid-up Capital of Rs. 1,48,35,550, free of income-tax, which will absorb .. .. Rs. 8,13,887 8 0

To pay a Bonus of 8 annas per share, i.e., 1 per cent per annum, free of income-tax .. .. Rs. 1,47,979 8 0

ANNUAL REPORT

	Rs.	A.	P.
To place to Reserve for Head Office New Property	3,50,000	0	0
To place to the Bank's Reserve Fund	4,00,000	0	0
To place to the Bank's Investments in Government Paper and other Securities	7,00,000	0	0
To carry forward to the next account	11,77,395	9	7
Total Rs. ..	75,23,262	9	7

The Bank's business continued to function satisfactorily.

The Official Bank Rate remained stationary at 3 per cent.

Branches were opened during the year under review at Madras, Junagadh, Veraval and Palanpur and a Sub-Branch at Mauek Chowk, Ahmedabad.

It will be observed that the item in the last Balance Sheet "Reserve for Contingencies" has been added to the Reserve Fund. Also the premiums on the new issue of shares amounting to to Rs. 48,35,550 have been added to the Reserve Fund.

In accordance with Article 92, Mr. Ambalal Sarabhai and Mr. Ramnivas Ramnarain retire from the Board by rotation, but are eligible and offer themselves for re-election.

The Shareholders are requested to appoint Auditors for the ensuing year and to fix their remuneration.

N.B.—The Dividend, when sanctioned, will be payable on and after Saturday, the 10th March, 1945, to those Shareholders whose names stand on the Register on 16th February, 1945.

Warrants for the amount of Dividend due will be posted to Shareholders at their Registered Addresses.

Early intimation should be given to the Bank of any change of address.

BALANCE SHEET AS 31st DECEMBER 1944.

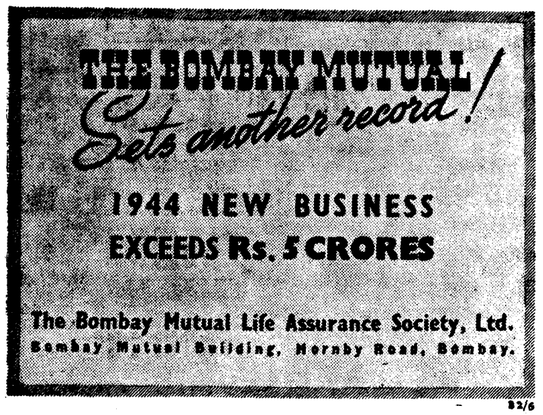
resistance movement must be put into the coalitions as and when they change. The international trade union movement conveniently abridges differences between Socialists, Communists, Syndicalists and others, possibly one result may be that the Catholic unions may lose their separate identity in the future for a national, not separatist, organisation is planned and voting by countries may create a new world of labour.

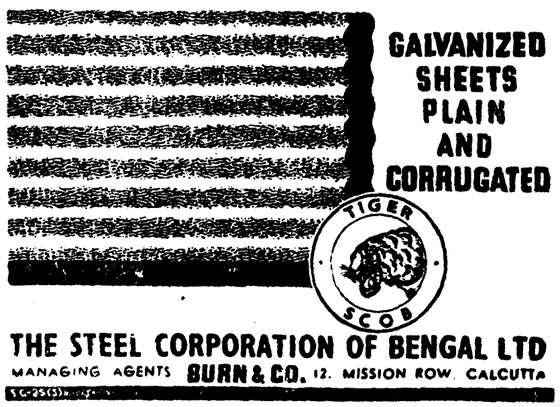
The Great Squeeze

Within a month the Russian armies have moved from the Vistula to the Oder and threaten part of the Baltic Coast, much nearer to Germany than to Russia. The military achievements from Hungary to East Prussia must be reckoned as considerable as the acquisition of the industrial region of Silesia up to Breslau. The fear of a pause on the east bank has disappeared. The long thaw has not set in and the advance has been resumed. The heavy raids on Berlin have undoubtedly influenced the Russian advance and greater significance is attached to the signs of disorder in Germany than to the evaluation of resources left for the last round. Gen Dittmar's "no surrender" declaration may only proceed from a desire to shore up the home front, now definitely breaking up. Although the Allied leaders' resolve to hasten the end has been without definite effects on markets here the relative firmness of Wall Street on hopes of early peace like the significant improvement in oil shares in London should not be overlooked. The Allies' resolve to defer consideration of Polish, Czechoslavak and other issues, so as to get the war in Europe over as early as possible has certainly been anticipated. The hope of "a tolerable life" for defeated Germany may prove a decisive consideration after the failure of the two offensives in the West. If the Oder rather than the Rhine appears the real frontier today, the loss of bridgeheads on the former to a superior force, with more artillery at its disposal, is the basic reason for assuming that the winter offensive will end with the capture of Berlin and the final stage of war inside the Reich may not be long-drawn-out. From Stockholm comes another estimate of the duration. The war on Germany is expected to conclude towards the end of March or early in April. The speed-up of the war in the Far East has produced a similar revision of the schedule in Europe. It is now certain that the weather is not at all going to help the German Army while it must aggravate the confusion and discontent at home. Foreign workers, deserters and plain criminals have taken advantage of the disasters. Hitler's broadcast last month, promising a fight to the bitter end, now looks as unimportant as Goebbels' 11th hour warning. The main front is now in East Germany and fresh effort by British and American forces from the Dutch-Belgian frontier may well be part of the great squeeze which is vastly different in nature and origin from the Nazis' own squeeze inside Germany six months ago

Welcome Reduction



The un-pegging of aluminium prices in Britain has been anticipated in India where the aluminium industry has taken note of the consumer's requirements and reduced prices. The distribution at controlled prices of both aluminium and brass-ware has been made possible only by the ready support given by the trade which stands for a square deal. The importance of a reduction in prices around the harvest season will assuredly be grasped by townsmen who look to the village for grain. The reduction is both considerable and timely and aluminium, ranking high as a war metal, is made available under an efficient system of which the hub is the well-known firm of Jeewanlal (1929) Ltd. whose efficiency in saving the consumer both money and trouble deserves general appreciation.



Electricity in Britain

The inauguration of a Central Power Board to coordinate further electrical development in India confers interest on the description of the Grid given by Robert Nelson in London Calling. Since January 1, 1935 Britain has had publicly owned transmission lines and a single system has been developed. Though generating stations are privately-owned the supply is controlled and co-ordinated. There are more than 600 separate electric supply undertakings each enjoying a monopoly within its own area. These areas vary greatly in size, from small townships to many hundreds of square miles and they cover both town and country. Before the advent of the Grid the licensee operated independently. What the Grid has done is to enable generation to be concentrated in the larger and more economical stations. The result is that the small-scale generating station has disappeared.

Clive Street Gossip

For this third article in the series relating to the place of villages in all-India planning, I shall take, as my text, the following passage from the gossip of February 10 :

> There is a Sanskrit saying that, when you make a gift, you must make sure that the recipient is worthy of the gift. Even more important is it to bear in mind that the beneficiaries of planning are worthy of the benefits of planning. The village folk as we see them today are so passive, indifferent, unconcerned about anything and everything. They seem to be suffering from an inertia which cannot be removed. They are sunk in sloth. Grinding poverty and endless days without hope of any kind have killed in them all sense of vitality and urge and zest for joyful living. Planning in its application to the villages cannot attain success unless the masses in general know and appreciate how to co-operate in a successful working of these schemes. Such co-operation has to be active, energetic, vital, wholehearted and intelligent. The people as they are today cannot render this kind of co-operation. What are the steps to be taken to ensure a vital and effective interest on the part of the masses in schemes designed for the masses?—this is the crucial question which will determine whether all the grandiose objectives of planning are or are not to be successfully achieved.

My wife was recently ill; and the doctors advised that this city air was not helpful to recovery, and that I must take her to the country. While, from the point of view of air, the villages are possibly healthier, I knew that in the villages there is a total lack of even the minimum comforts. I had, therefore, written beforehand and asked for special arrangements to be made, and especially the purchase of two cows. The first thing I learned on reaching the village was that the cows had not been bought. I was told that it was difficult to get cows, and particularly cows whose yield of milk can be considered satisfactory and reliable. The search in all the villages had produced no result. The price demanded for the one or two cows that were available was three to four times the price prevalent only three years ago. Moreover, I was told, it was not advisable to buy cows just then, as there was an epidemic in the district, and in fact, more than a dozen animals had died in the village. Never had I known such scarcity of cattle and such famine of milk in Indian villages. The main diet prescribed for my wife was milk, curd and butter; and, finally, I had to find a solution by buying milk from the milkman of the place. For securing 5 seers of milk a day, I had to draw supplies from four separate sources. If there are fewer cows now, the average milk yield is also considerably less. Some villages have taken such a fancy to rice cultivation that every available square inch is under paddy and the greedy village folk completely overlooked the need for a common grazing ground. Luscious grass which used to be the principal fodder of cattle is hardly available. The mainstay for cattle food is hay; and the price of hay is 500 per cent of the pre-war price. But it is not the grass and hay that strengthens the milk-yielding capacity of cows. For stimulating milk yield, the food to be given to the cows is cotton seeds, oilcakes and bran. Oilcakes seem to have entirely disappeared from the villages. Cotton seeds sell at exorbitant prices. Bran, too, is selling at many times the pre-war price. Both for the cultivation of the fields and the healthy living of the village folk, this problem of scarcity of cattle and famine and high prices of cattle food must receive immediate attention.

* * * *

Modern dietetics has shifted its emphasis from energy food to protection food. From the point of view of protection food, vegetables come next in priority to milk. I was amazed and astounded at the complete famine of vegetables in my village. Even brinjal or 'sag' was unprocurable. I had to arrange for the supply of vegetables from the neighbouring town which was six miles off. It meant that, for buying vegetables worth Rs. 3, I had to engage every other day a bullock cart at Rs. 3 for the journey to and fro. It is really a topsy-turvy world if the villages are to get their vegetables from the towns. Most of the houses in the village had big backyards, with ten or twelve cows and six or eight pairs of bullocks. These sheds are all empty now. Yet, twenty years ago, I had seen them full with cattle. Behind the cattle sheds in the village houses lie vast grounds where vegetables used to be grown. All these lands are now lying fallow.

* * * *

I was curious to know what has wrought this change. The decade before was one during which agricultural produce in India was fetching prices even below cost. Even rich landowners were obliged to sell portions of their land and some of their cattle to meet their ordinary and special expenses. As agriculture was not thriving the village people had become indifferent, about their agricultural operations. With the decay of cultivation came the decay of cattle. But, what about vegetables?—I asked. Why is cultivation of vegetables a thing of the past? The explanation offered opened my eyes to a menace whose enormity I was given to realise by observation in village after village. Roughly speaking there are three communities in a village. There are a few Brahmins who own a considerable part of the land. Quite a lot of the population is the non-brahmins who are not actual tillers of the soil but who supervise labour and other miscellaneous work. Lastly, there are the Harijans who are the actual cultivators. But now, what has happened is that the large body of non-Brahmins has realised that rearing of goats is a profitable occupation. For military needs, the demand for goats is unlimited; and price is no consideration. The rearing of goats has thus become the main occupation of the non-Brahmin villagers. If the start is made with 20 goats, the herd swells to 100 by the end of the twelfth month. And original investment of 100 to 200 rupees is multiplied ten-fold within a year. There is no grazing ground for the goats. There is no special food for the goats. The goat wanders all over the village and it respects no bounds. Bark of trees or shoots of plants or ears of corn, in fact anything suits the palate of the goat. The result is that the goats which are owned by the non-Brahmins who own hardly any land devastate the land and cultivation of the entire village. No vegetables can be grown to sturdy dimensions because the goats eat the tender leaves as they come out. The goat menace is not restricted to any one village. The

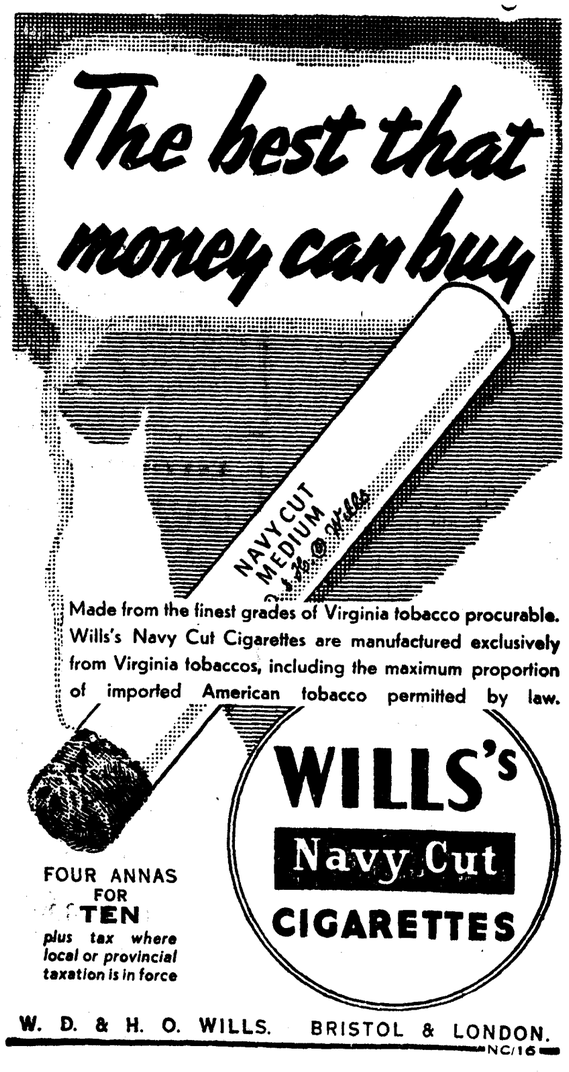
goat menace is universal; and no grow-more-food campaign can be successful unless the rearing of goats is totally prohibited by law. At any rate, owners of goats must by law be compelled to own adequate grazing land, and no license to rear goats must be given unless there is proof of the adequacy of the grazing land and unless the applicant undertakes not to allow his goat to stray into the village land. I have talked to the people in the village as well as to the officials in the entire district administration. Every one is agreed that no time must be lost in effectively putting an end to this goat menace.

* * *

The village folk do not get even a fourth or fifth of the milk that they were accustomed to. While once upon a time the food in the village houses used to be sumptuous with vegetables, they have now become a rarity and luxury. Even the rice which the village folk eat now is not of the same quality as in the old days. The common practice used to be for paddy to be stored in barns to allow to mature; and rice is to be taken only after this kind of maturity for at least twelve months. Under present control conditions, the village officers decide what quantity of rice is required for one's own consumption and requisition the surplus. So, no one can keep any surplus rice over and above one year's requirements, which means that the people can eat only new rice. Rice is the main staple and it has deteriorated. Milk and vegetables are the protective foods and they are available in small quantities and at onerous prices. The food in the villages has deteriorated in quality generally and from the point of view of balancing. The rural population of today is not in the same state of health as a decade ago.

* * * *

With vitality thus impaired, there is a general proneness to infection. Our village people today fall victim to diseases easily and hardly have any resistance. Diseases are more common; and medical relief, never adequate, is now hardly available. Out of 25 village dispensaries in the district, nearly 20 have closed down during the war. Some of the doctors have gone on military duty, while a few others have found public health service more attractive than rural dispensaries. The sponsors of post-war plans envisage a tremendous multiplication of rural dispensaries; and I wonder if they realise that what has actually happened now is that medical facilities in rural parts are, during the war years, 20 per cent of what they were before the war.



* * * *

A sound body is the basis of a robust outlook on life. Is it any wonder, then, that our village folk are today full of indifference and unconcern about anything and everything? For a village with a population of 3.000 the annual budget for common amenities for roads and lighting is Rs. 300. This sum is handed over by the local board to the village Panchayat. In this particular case the Chairman of the Panchyat lives in another village. The sweeper is paid Rs. 4; and can you expect him to keep the roads clean? Street lighting is to cost no more than Rs. 100 per year; but the fellow whose job it is to light the lamps as night sets in does his work only fitfully. The budget of Rs. 300 is a pittance for a village of decent size and my complaint is that, even of this Rs. 300 the actual benefit derived by the village is hardly 4 annas in the rupee. There are quite a large number of educated people in the village. There are also a few men of means and influence. But if they would combine and assert their sense of public duty the Panchayat can be compelled to do its duty properly; and, what is more, the funds available for the common good of a village will be greatly augmented by voluntary contributions. Nobody seems to care what happens to the village or in the village.

* * * *

The men who own the land are at the mercy of the middlemen who control or order about the Harijans. The methods of cultivation today are the same as 30 years ago. With present agricultural prices extremely favourable, the owners of the land do not benefit correspondingly as the cultivation expenses have also gone up. The most satisfactory feature of village life is that the men who till and toil are now very much better off. I was making sample survey of economic conditions with regard to the agricultural labourers and rural workers. Let me give details of a typical case, of a family which has been serving the same landowner for three generations. It now consists of a father aged 60 years, 4 sons and their wives, all of them working in the field. They also take on lease two or three fields belonging to their landlord; and their share of the harvest furnishes them with the requisite amount of rice and hay. The tank nearby gives as much fish as they can eat. They have a small poultry; and chicken curry is not a luxury to them. Altogether, these Harijans were having a better balanced meal than the better-placed people. At the end of the year's work, the 60 year old father told me proudly, "We have not got three pairs of bullocks and 3 carts. We have two cows and we are sending milk to master's house and we are getting a good price". At present prices of bullock and carts, this family is worth today over Rs. 2.500; and this is a year's saving. The savings in the current year must be more, as the bullocks will be yielding quite a substantial revenue. When one comes to think of it, this is as it should be—the men who are the actual producers have made even more than those who own the land.

(Continued on page 245).

Olympus

(From Our Correspondent)

New Delhi, February 19.

"This is one picture. The other is, the Viceroy holds talks with Sjt. Bhulabhai Desai. The air is thick with *rumours* of big changes. The *rumour* hardly squares with the news, I have summarised and which the public knows already", says Mahatma Gandhi in a statement referring to the Bihar ban and the recent arrest of Congress leaders in that province and elsewhere. Gandhiji is a Mahatma mainly because he is wedded to truth in all circumstances and is hundred per cent straight in all his dealings, in his private life and politics. Political observers here consider this statement of Gandhiji most significant. They analyse and annotate the statement in the following terms:—Gandhiji and Congress have not changed even a whit from their original stand taken long, long ago and they are not prepared to change; no unreal change in the political panorama of the country will be accepted by them; Gandhiji and Congress are not prepared to foreswear the August Resolution since they do not believe that it should be foresworn—they feel they have more than amply answered the charges levelled against them and vindicated the truth of their professions and action; Congress constructive programme will be pursued to the goal irrespective of any interim change in the existing state of things, and a condition precedent to certifying by Congress of any change is unconditional release of members of the Congress Working Committee and all other political prisoners. Gandhiji's statement gives no clue to whether Mr. Desai had Gandhiji's blessings before he started his parleys with the League leader and subsequently with the Viceroy. Actually he has used the word "rumour". But Gandhiji's statement certainly makes clear one fact. It is that if Mr. Churchill and the Viceroy propose to insist on Congress foreswearing the August Resolution and giving up the constructive programme, then they and the parliamentarians—Desai and Nawabzada Liaquat Ali Khan—better stop further negotiations.

* * * *

Meanwhile, Pandit Jawaharlal Nehru and Pandit Govind Ballabh Pant have been removed, or are being removed, from Ahmednagar Fort to Bareilly Jail (U.P.). Mr. Rafi Ahmed Kidwai, former Congress Minister in the U.P., and now a detenu, has been transferred to Naini Central Jail, Allahabad, from Bareilly Jail. And Sir Tennant Sloan, Adviser to the Governor, U.P., at a Press conference in Lucknow said that the reasons for Mr. Kidwai's transfer were not entirely connected with his health. True, the Home Member announced in the Assembly that Pandit Pant is to be operated for hernia and the operation may be done, perhaps according to Pandit Pant's desire, in a Lucknow hospital. But why this transfer of Nehru? One explanation for these transfers may be that they are in response to the country-wide demand that political prisoners in general and members of the Congress Working Committee specially, be kept in the jails in those provinces to which they belong. The Home Member has also indicated that this is the reason for these transfers. Nevertheless, political observers here piecing the above news of transfers with the recent tour of the Home Member have begun to speculate and ask whether the whole thing is also not a move to isolate Pandit Nehru so that either Lord Wavell or Sir Francis may see him alone and discuss with him H.M.G.'s reactions to Mr. Desai's efforts and their terms. According to these commentators the announcement of the Viceroy's reactions to Mr. Desai's efforts is urgent—the Railway budget is before the Legislature; the general budget will be presented in the first week of March. Perhaps in the sixth year of the war and with the war in the Far East about to gather further gigantic momentum H.M.G. and the Viceroy do not want to have certified budgets again. And the attitude of the Opposition, specially the Congress, will depend, it is now clear, on H.M.G.'s reactions to the Desai-Liaquat Ali Khan venture. Has the Viceroy received the War Cabinet's reply to his communication on his talks with Mr. Desai and is he or the Home Member planning to see Pandit Nehru and discuss the whole question before announcing the War Cabinet's views. These are the vital questions now being asked. Set in this atmosphere, Gandhiji's statement is indeed very significant. It is a writing on the wall for the Viceroy, the Muslim League and also Congress whether there is any move or not on the part of the Viceroy or the Home Member to see Pandit Nehru or Gandhiji himself.

* * * *

"Cut" motions on budgets indicate legislators' immediate reactions to them. The first instalment of "cut" motions tabled for the Railway Budget discussions totals about 50. No doubt so far there is no "cut" refusing the supplies altogether. Heading the list of "cut" motions on the Railway Budget is Mr. Anthony who wants to raise the subject of the "unsatisfactory condition of civilian travelling". As he has himself personally suffered—though a member of the Assembly—he will tell the House a good many things. No less than 10 motions deal with difficulties of travelling—particularly the hardships of third-class passengers due to overcrowding and lack of arrangements. As even Lord Munster has commented on the dirty and insanitary carriages and the lack of suitable amenities, non-official speakers can now quote official testimony in support of their charges. Both Nationalist and League members have given notice of token "cuts" to discuss the Government of India's policy regarding the co-ordination of rail-road transport. Mr. Joshi is with his usual subject—working conditions of railway employees. A new question raised is the post-war plan Government are having for the accommodation and amenities of passengers. A Congress member wants to censure the Government for their "unsatisfactory policy in regard to locomotive manufacture". Another motion urges the desirability of holding judicial inquiries whenever there are serious railway accidents.

* * * *

As regards the budget itself, it is certainly a welcome feature that the increased earnings of railways should be utilised to write down the high cost of rolling stock acquired and works executed during the war so that the depreciation reserve fund would not be unduly reduced or the capital at charge improperly inflated. And Sir Edward and Sir Jeremy deserve credit for seeing at least this much of credit, even though at this belated hour. But the change is only partial expiation for the fallacies of the past. Again, the budget is without any positive proposals to give relief to the passenger, in the way of lower fares or increased amenities, or to the industry and the consumer in the shape of a drastic revision of the rates structure. The War Transport Member himself confessed that shortage of locomotives was still acting as a bottleneck for which the Government have themselves to blame. Actually the time has come to determine the railway contribution to the general revenues on some rational and equitable basis. After this is done, all the surplus must go into a joint fund to be used to cover depreciation loss and improvement including amenities to the third class passengers.

* * *

While on the subject of the budget, it is worthwhile to record some of the significant issues raised by the Federation of Indian Chambers of Commerce and Industry. Commenting on the budget it says that the policy of relying on outside sources for obtaining a major part of India's requirements of locomotives and wagons and giving only a secondary place to the local industry would not provide sufficient impetus to build up and expand an adequate locomotive and wagon manufacturing industry in the country. The other question raised by the committee is that the damage due to the ravaging effects of the war to the Indian railways and the abnormal cost at which they will have to be rehabilitated after the war, cannot be treated as an exclusive liability on the taxpayer. The liability, the Committee adds, should be allocated on a certain agreed basis between the United Nations. But what hope is there when as Sir Mohammed Zafrulla

Gateway of India

(From Our Correspondent)

Bombay, February 20

All over India, the theme and accents of planned economy are being orchestrated. Sir Ardeshir Dalal is touring the provinces to ensure that the provincial schemes of post-war development fit in with the plans of the Centre and to see that overlapping is avoided. The Centre has already promised financial assistance to the provinces on a population basis, and it is probable that the representatives of the Central and Provincial Governments may be associated together in a board created for the purpose of consultation and pooling of ideas. The need for co-ordination is the greater because provinces like the Punjab, Bombay and Madras have evolved post-war plans in which the emphasis shifts according to the peculiar problems of each province.

Bombay has got its plan ready. Its financial aspect was indicate by Sir Henry Knight, Adviser to the Governor of Bombay, at a press conference. The plan suggests that government are leaving the era of soft options behind, and are ready to launch courageously on schemes of post-war development. The present plan deals only with non-industrial reconstruction, but Sir Henry envisaged the probability that, though industrial reconstruction will be financed by private savings and not by public money, there will be expenditure for industries and industrial areas, for which financial provision will be made later. Sir Henry was concerned to indicate the financial aspect, as the constructive aspects are by now fairly well known. As far as Central financial assistance is concerned, this is the position: the Government of India contemplate a total expenditure of Rs. 1,500 to Rs. 2,000 crores in the first five years. This figure includes private investment but excludes provincial resources other than provincial borrowing. It is made up of estimated Central surplus of Rs. 500 crores, Central and Provincial borrowing Rs. 500 crores, and private investment to the tune of Rs. 500 to Rs. 1,000 crores. Those figures are based on the assumption of optimum production and employment in the early post-war years as well as full utilisation of the taxable capacity of the country. Part of the Central surpluses may be made available to the provinces as subventions. Of the Rs. 1000 crores to be found by the State, about half may be spent on schemes directly sponsored by the Centre, while the other half, less that pertaining to provincial borrowing, will be available for provincial aided schemes.

The aid will tentatively be on a population basis, and Bombay is expected to qualify for an assistance of Rs. 20 crores from the Centre. It is in the perspective of these figures that the cost of the provincial plan involving expenditure of Rs. 60 crores in five years on non-industrial rural reconstruction has to be viewed. The proposals are neither impracticably large or unimaginatively small for the province.

The full sum of Rs. 60 crores will be found from Rs. 50 crores representing non-recurring expenditure and Rs. 10 cores being the total of the annual recurring amounts in each of the five years. The ways and means problem is proposed to be tackled thus, though based on a number of assumptions. Apart from the sum of Rs. 20 crores expected from the Centre as subvention, a sum of Rs. 15 crores is exptcted, to accrue in the Post-war Reconstruction Fund of this Province at the commencement of the first five-year period (the Fund had Rs. 17 crores in 1944-45 and an addition of Rs. 4 crores in each of the subsequent years is expected). Further, in each year from 1947-48 to 1952-53 when the scheme will be in force a margin of Rs. 2 crores between revenue and expenditure (other than expenditure on the programme itself) is anticipated. Thus, a total of Rs. 45 crores may be obtained. derived from, firstly, the Central subsidy, secondly, the P.W.R. Fund and, thirdly, revenue surpluses in the first five-year period.

The balance of Rs. 15 crores will be met by additional taxation and borrowing. Sir Henry Knight assumed that, if expenditure goes according to programme, the accumulated funds and the Central subvention may require Bombay to raise Rs. 15 crores in the fourth and fifth year of the programme, i.e. in 1951-52, and 1952-53. Assuming that the amount is borrowed at a rate of 3½ per cent for a period of twenty years, the revenue charges for interest and amortisation may amount to Rs. 1 crore per year. The annual revenue surplus at the end of the five-year period would also be Rs. 1 crore and may be expected to meet these charges. The rate of interest is naturally assumed at an onerous level, though no public borrowing need perhaps be made hereafter at anything over 3 per cent. Whatever is done in the second and third five-year period, it is common prudence to expect a recurring expenditure for keeping up the improvements introduced in the first 5-year period. This may be about Rs. 2½ crores per annum and will most probably be realised through a sales tax. That is a financial sacrifice from which no province can escape if it is to have any worthwhile planning on the big scale.

The compound of the Bombay Secretariat was overflowing with milk on Thursday last when milk vendors in the city chose this novel but criminal form of protest against the Government Order compelling catering establishments to use only skim milk powder. As a result, there has been an excess of milk in supply and the surplus has been sold at distress prices. The milk trade, however, is in no mood to lower the prices for civilian consumption; and so far as regular customers are concerned, the price has not been reduced. Far from stimulating the demand by reducing the price, the owners of milch cattle and milk merchants are considering ways and means to reduce the supply with a view to maintaining the present price of milk. At the meeting held on Sunday, they appealed to the Government to appoint a representative committee to report on the problem of a reasonble price for milk. They apparently want to defeat the object of the Government Order by failing to import the full quota of milch cattle, on the plea that they have to sell milk below the cost price and their business had become uneconomic. Government, however, have no intention of allowing this to happen, and are determined that the city should have the same supply of milk as before. After all, it is with great difficulty that they have been able to persuade other provinces like the Punjab to increase the exports of milch cattle, and there is simply no point in refusing to import cattle and playing into the hands of the unscrupulous milk vendors. The quotas of cattle import for February is 850, for March 1,050, thanks to the Punjab's readiness to make a larger allotment to Bombay. The public and the government have long felt that the price charged for milk in the city was exorbitant and a tussle was brewing. The operation of the skim milk scheme has brought matters to a head. Now that a big part of the total production of milk is diverted to civilian needs, the price should come down.

Meantime, government is going ahead with its scheme for supply of milk to children as well as expectant and nursing mothers. After the 19th, the scheme has been further enlarged to include children upto 10 years of age, and the quantity supplied per head has also been raised from a quarter seer to half a seer. The price charged is only 6 annas per seer, which compares with the rate of 12 annas per seer at which civilians are at present buying milk. Under the subsidised scheme, the offtake by the government has increased to 2,400 maunds per day. The quantity which they would take will, it seems, go on increasing every week. The milk supplied to children is of a high quality, and the scheme is no mere eyewash. The experiment is succeeding wonderfully and is an object lesson to other provinces, provided they have the requisite grit and organisation to take in hand this great human experiment. Certain shops, called hot milk shops, are allowed to supply hot milk to any person irrespective of his age for consumption on the premises or elsewhere, and the prohibition on catering establishments not to supply milk does not apply to such shops. The per capita consumption of milk

Karachi, February 15

Sind's war-time prosperity will be reflected in the budget to be introduced in the Assembly on February 21. I understand that no fresh taxation will be imposed this year. This year's budget like last year's is expected to be a surplus one. At a party given to pressmen, Sir Ghulam Hussain, the Premier presented a rosy picture of Sind's finances. "Sind is in a very happy position financially. The Barrage debt has been paid off, leaving us yet enough to make a small beginning with post-war plans for the province", he said. Sind has paid five crores of rupees, which is the difference between the capitalised debt and the subvention. By paying off this huge amount, the province had freed itself from the Barrage debt and was in addition making a saving of Rs. 22½ lacs a year, which it paid by way of interest on the debt at 4½ per cent. The Premier stated that Sind's post-war plans were ready and would be placed before the public after it had been approved by the Central government. In April, 1946, Sind will have a free balance of five crores and seventyfive lakhs of rupees. In addition to this, Rs. 3,00,000 were set apart for the development fund and Rs. 350,000 for the equalisation fund. The development fund would be utilised for financing Sind's war programme. The equalisation fund was a far-sighted measure. Prices would reach a peak and then fall down, as experience showed. It was for that purpose that the equalisation fund had been set up. The fund would be needed when the prices declined.

Discussing Sind's post-war plans, the Premier stated that two Barrages, one for lower Sind and the other for upper Sind would cost about Rs. 28 crores. In the budget for 1945-1946, Rs. 20 lakhs had been provided for the purchases of excavating machinery.

The progress of every country, the Premier went on to say, depended in a great measure on its communications and transport. The development of communications and the construction of roads, which was a vital part of the programme of post-war Sind was expected to cost Rs. 31 crores. The Central government would no doubt pay for some roads and thus bear a part of the cost. Meanwhile, the government of Sind had Rs. 43,00,000 for the construction of roads, mostly in Hur areas.

The Premier further announced the appointment of a Sind Provincial Development Board, composed of officials and non-officials. The functions of the Board shall be to advise government on all questions of policy, including the financing of the post-war development plan and individual schemes, to assist government in securing co-operation for achieving the aims and objects of post-war development from trade and agricultural organisations and the general public including consumers and to receive reports on and examine the progress of the general plans for post-war development.

Complete elimination of private trading as envisaged in the Butler report was not going to be forced on any province and in Sind, it was being allowed to the fullest possible extent, consistent with export policy, said Mr. B. R. Patel, Director General of Civil Supplies, after his return from Delhi, where he represented Sind at the all-India Food Conference. The general position regarding procurement and distribution of food grains in the conference was that it should depend upon internal conditions prevailing in the province and that no uniform pattern could be imposed on the country. Sind had so far exported 130,000 tons of wheat and beside the total declared surplus which was already in the hands of the government, the authorities were still purchasing what was being offered, though not in very large quantity.

Karachi will play an important part in the England-Australia air service. The service which is designed to improve Empire communications at the earliest possible moment, will be gradually brought up to seven every week. It is possible that one aircraft shall operate direct between the two countries, with Australian crews taking over at Karachi. The Liberators and Catalinas, at present on the Indian Ocean service, will eventually be replaced by the Lancaster service when it is firmy established. The present Indian Ocean service arrived at and left Perth every three days and is operated by the British Airways Corporation. The new service will continue the service without prejudice to the long term policy.

The mercantile community is feverishly awaiting the war developments in Europe. The bullion market has come down but not appreciably. In cotton, market sentiment appears to be changing for the better, though speculative element is still cautious after having suffered heavy losses during the recent slump. Activity in the spot market continues with premiums for quality cotton improving day by day. Ginnings continue to be backward and arrivals from up-country are smaller. If European war ends not only will exports increase but there will be greater demand for Indian textiles.

A review of rationing for the last year was given by Mr. Nazir Ahmed, head of the rationing department. He said that about 100,000 ration cards had been issued at Karachi with a population of over 500,000. Rationing in respect of sugar too was quite successful, the off take being 80 to 85 per cent of the quota. The annual consumption of food grains was about 18,00,000 maunds or nearly 75,000 tons. The consumption of rice and wheat was in the ratio of one to three. During the present year, the provincial quota of sugar had been decreased by 2,000 tons. The present personal quota would not however be reduced. The situation would be met by reducing the quota to restaurants.

Resume of Commodity Markets

The feature of the week is the strength of the bullion market, particularly the recovery in silver prices. The manipulations of bulls and the reports regarding vigorous counter-attacks by the Germans on the Eastern Front have resulted in the rise in prices in the past few days. An increase in the offtake has resulted in a higher premium for ready over forward. The jute market has been quietly steady while the jute manufactures market has continued firm. The improvement in prices for heavy goods especially is significant. The cotton market remained firm till Wednesday but towards the close a slightly easier feeling is noticeable as it was reported that Government was a seller of large quantities of old Broach crop. In the piece-goods section business is not possible as there is an acute shortage of cloth and yarn particularly in Bengal and Assam. It is feared that unless there is rationing of supplies it will not be possible to meet the requirements of the consumer.

The jute market has remained steady even with the small day-to-day business by mills as mofussil markets have continued firm and it is felt that there might be a complete utilisation of the current season's crop by mills before June, 1945 and that some difficulty might be experienced before new crop supplies are received. There is no anxiety on the part of holders to dispose of stocks though in Calcutta sellers have been anxious to do business.

The jute manufactures market has been very firm including the heavy goods section. The shipping instructions for heavy goods have created a stir in the market and there has been a sharp recovery in prices. The present state of the market is in strong contrast with the conditions ruling some-time back. The Chairman of IJMA was rather optimistic regarding the future of the jute industry in his speech at the annual general meeting of the members of the Association last week. He was satisfied with the performance of mills in the face of difficulties and was confident that no great difficulty would be experienced in the transition period from wartime to peacetime production. He expected that the loss of government orders would be more than compensated by an increase in exports of heavy goods to the markets in Far East.

The cotton market remained steady till Wednesday this week with the greater interest shown by mills in the ready market and the improvement in the coal situation. The reports that the Central Government wanted to dispose of 18,000 bales of old Broach crop had a discouraging effect on prices but there was some recovery with buying at the lower levels and prices are not very much changed on balance. The International Cotton Advisory Committee is meeting in Washington to formulate provisional proposals for an international agreement on production and marketing among the leading producing countries. India also will be represented at the meeting and it is said that representations would be made to the United States to maintain prices at fairly high levels so that Indian cotton producers woud not suffer unduly.

The cloth famine threatens to assume larger proportions and unless immediate arrangements are made to ensure a proper distribution of available supplies and increase production of both cloth and yarn the consumer would be put to great difficulty. The need is great in respect of Bengal and Assam. The decisions reached by the Textile Control Board have been examined by the various provincial textile controllers. In order to relieve the situation it is reported that Bombay mills would try a system of rationing and that a pair of dhoties would be issued to every ration card holder every six months. The experiment will thus begin with the distribution of dhoties the shortage of which is very acute.

The bullion market is very firm and the weakness noticeable in the silver market early last week is no longer in evidence. The stiffening of German resistance and the increase in the offtake have resulted in a rise in prices. Reserve Bank sales have continued on a small scale.

India's winter lac crop in 1944 was 172,125 maunds as compared to 387,000 maunds last year, registering a decrease of nearly 215,000 maunds. The decrease in the yield of Katki crop was only 60,000 maunds, but the fall in the Kusmi crop was over 150,000 maunds. The unsatisfactory yield of the year's crop, particularly the Kusmi crop, according to the President of the Lac Cess Committee, was due mainly to the dearth of good healthy brood and to a certain extent to the lack of interest on the part of lac growers.

Below are comparative estimates in maunds of Katki and Kusmi lac crops:—

Political Divisions	Final Katki		Final Kusmi			
	1944	1943	1942	1944	1943	1942

Tea and Industrial Output

Few matters have received such detailed attention since the war began as the efficiency of industrial production. In India the problem has been greater than in most other countries because, to meet the basic needs of the fighting forces, a great new industry has had to be created without the help of either a large machine tool industry or a large mass of skilled labour accustomed to factory conditions.

That tea—India's own product—has played a valuable part in achieving unprecedented output figures is a matter for no small satisfaction. The part that tea has played—is playing, and will continue to play—is to promote concentration. In the old days it was accepted throughout the world, as an unavoidable fact that output would fall towards the end of a working shift. Today this is no longer accepted, because it has been proved over and over again that tea served to the workers on the job renews concentration and flagging energies with the result that output remains at its peak level *right to the end of the shift.*

To those interested in this subject much valuable advice and assistance will be gladly given by the Indian Tea Market Expansion Board, 101, Clive Street, Calcutta.

INSERTED BY THE INDIAN TEA MARKET EXPANSION BOARD

IK 241

Jute and Jute Manufactures

(From Our Correspondent)

Special to "Indian Finance"

Calcutta, February 21

Jute Mills production during the month of January totalled 85,542 tons, rather a better figure than was anticipated. It is certainly an improvement by 16 per cent or 11,580 tons over the figure recorded in December and more than 2500 tons better than the average for the previous six months. But it is manifestly still far short of the target figure of 100,000 tons per month desired by those in authority. Of the total production, 10,145 tons or nearly 12 per cent was on Government account. This compares with 14½ per cent the previous month, which however was an unusually high proportion. Of the total production, Hessians accounted for 36,041 tons, 1214 lakhs yards or 31,667 tons being on commercial account and 144 lakhs yards or 4,374 tons on Military account. Sacking accounted for 46,058 tons, of which 984 lakhs yards or 40,844 tons were on commercial account and 112½ lakhs yards or 5,214 tons on military account.

Adding the small decrease in stocks recorded at the end of January to the production total, we arrive at a figure of despatches during the month of 87,000 tons, which is just under the average for the previous six months and may be considered reasonably satisfactory.

In terms of jute consumed, the January production implies a consumption of 4,73,000 bales, bringing the consumption for the 7 months of the season, July to January, to 32,21,000 bales.

Those interested in the Jute Industry will have read with mixed feelings a statement of the Supply Member in the Central Assembly to the effect that the closing of textile mills during December and January was considered desirable in order to augment their coal stocks depleted by increased consumption during the recent spells of intense cold. The crucial words are "coal stocks" and the cotton mills must be considered very lucky indeed to have had any coal stocks to deplete. None of the jute mills have seen a stock of coal for the past two years at least but have been working on a precarious hand-to-mouth basis, seldom knowing whether they will be able to start up the next day or not. A grievance seems to have been made of the fact that the recommendation was made only to the cotton textile mills and not to the jute mills and this was described as unfair discrimination. So far as is known, the closure of cotton mills only extended to four days, and only to mills in certain districts. On the other hand, some jute mills have not worked more than 5 or 6 weeks throughout the past eight months! And the overhead loss due to stoppages from lack of coal must have been colossal. It would be interesting also to know to what extent the Cotton Industry has economised in the use of fuel. The normal requirements of the Jute Industry amount to over 52,000 tons per month. By dint of the most stringent economy and rationing of the available supplies, the Industry cut down their requirements by no less than 37 per cent to under 33,000 tons per month, but even so have never yet received that quota, and in many months, nothing approaching it. And it is instructive to note that the position has become demonstrably worse since the control and distribution of coal was taken over by the Supply Department. The Jute Industry was assured that, in appreciation of their efforts in this and other directions, their claim would rank first on any increased supplies resulting from improved raisings. Raisings are reported to have improved, but the increased supplies to Jute Mills have failed, as usual, to materialise. Arrivals of coal have been better during the current week, averaging about 60 wagons per day against the quota of 77 wagons. Last week the average was 40 wagons and the week before that 27 wagons. It is therefore too soon to bank on the improvement this week being more than a flash in the pan. Unless pressure has been brought to bear by the military authorities. It is well known that certain canvas orders placed with the mills are urgently required and mills were peremptorily told to speed up deliveries. The laconic response was "No coal, no canvas". It remains to be seen whether the reaction has any permanent effect.

Some doubt is being expressed as to what is implied by the Bengal Government's notification that eight annas of "the basic acreage of 1940" is to be licensed for jute sowing in the coming season. What was previously known as the "registered" acreage under the Bengal Jute Regulation (Amendment) Act, amounted to 53,99,000 acres. The "recorded" acreage in 1940 amounted to 49,38,000 acres. For the season now closing, eight annas was supposed to be licensed, but the area licensed was recorded as 25,63,000 acres, which does not accord with eight annas either of the "registered" or the "recorded" acreage of 1940. Last year the Bengal Government scored a tactical victory over both the Central Government and over the Industry by securing the legislative fixation of a minimum price for jute against their agreement to license an eight anna acreage and their promise to do their utmost to achieve this acreage by intensive propaganda. They failed to deliver the goods. The acreage actually sown was no more than 5½ annas and the intensive propaganda was imperceptible to the naked eye or ear. Just as much faith can be placed in the eight anna acreage for the coming season, even though it is not at all clear exactly what that eight annas implies. Again the Bengal Government will not have the goods to deliver although they have secured the *quid pro quo* of a continuation of the minimum price and the Central Government's guarantee to purchase thereat. It might as well be admitted that the last word remains with the cultivator and the "quo" of the Bengal Government is valueless. In order to placate some of their noisier supporters or opponents as the case may be, they have again got away with something for nothing.

Exports of Raw Jute during January are recorded as 1,04,000 bales, the higest total recorded for any month during the current season, but still below the figure for a year ago which was 1,12,000 bales, though better than that recorded in January 1943, which was only 71,000 bales. In the last prewar year, 1939, exports in the month of January amounted to 3,59,000 bales. For the season up to date, that is, July to January, total exports amount to 5,34,000 bales against 5,89,000 bales last year and 8,66,000 bales in the season before that. In July 1938 to January 1939 exports totalled 24,74,000 bales. Jute arrivals for the first half of February are estimated at 2,65,000 bales against 1,27,000 for the same period last year. This brings total arrivals for the season from 1st July to mid-February to 42 53.000 bales against 34,01,000 bales during the similar period a year ago. At the end of January, arrivals totalled 39.88.000 bales. We have shown Mill consumption to that point as 32.21,000 bales and Exports as 5,34.000 bales a total of 37.55.000 bales disposed of out of the arrivals, leaving a balance of 2.33,000 bales added to the stock position.

Some business has been done in the Export market for a change this week. Business has been reported in Reds at Rs. 89, Firsts at Rs. 76 and Lightnings at Rs. 71, all minimum prices. And there are still plenty of sellers. Mills have shown scarcely any interest in pucca bales, only some Lightnings being reported at Rs. 74, minimum, and some Straight-morahed Rejections.

Turnover in Loose Jute has also been light and any small interest has centred mainly in which European Jat and District was reported at Rs. 16-8 and Rs. 13-8 Mids and Bots, European District Bots alone at Rs. 13-8, Indian Jat Tossa at Rs. 16 and Rs. 13 and Indian District Tossa at Rs. 15-8 and Rs. 12-8. In white jute, small business was reported in European packing at Rs. 16-3 and Rs. 13-4, in Supervised Jat Bots at Rs. 13-4 and in Bengali Jat at Rs. 15-12 and Rs. 12-12.

In the Fabrics market, Hessians remain very firm with Mills reluctant sellers, only parting with the October/December position, both nines and elevens, when opportunity offers at maximum rates. The tone in the Heavy Goods section is much steadier though the turn-over has been less and the volume of enquiry, or fresh orders from abroad, negligible. The steadiness has been brought about by the Bazar being caught short in Cornsacks, for which shipping instructions have now been received and which have had to be covered from Mills at maximum rates for near shipment. This has resulted in sales for February and March at Rs. 67-12, while small orders have also been placed for July/September at Rs. 65 and for October/December at Rs. 63. "B" Twills have also ruled firm and Mills have been able to sell balances for this month at maximum price of Rs. 66-12. Little else of interest has been recorded.

(Continued from page 240)

The prosperity of the Harijan family I have referred to cannot, however, be the basis of comforting conclusions. It is due in the main to a combination of many adventitious circumstances. It is not to be supposed from this that village folk can grasp and utilise to the fullest extent every opportunity that comes their way. On the other hand, while the manual workers are keen to appropriate advantages when all of a sudden their traditional callings suddenly become very lucrative, the will to progress is absent in all to an equal degree. If the Central Government were to institute a system of grants-in-aid to the villages for their self-development, those funds, I am sure, would lie idle for decades, if no special measures are taken to reclaim the villagers from their lotus-eating habits. They are not perhaps wholly to blame. The perverse developments of the last half a century in our economic and our social life have taken out of the villages the zest for life. Efforts seem to them a weariness of the flesh and progress, a cruel mockery. The social structure is topsy-turvy, turned upside down by the worst kind of democratic jealousy, without no constructive democratic instincts to compensate the harm done. The intelligentsia comprising the upper classes has been impoverished and was all but starving, till the war provided them some employment. The artisan classes are nearly extinct. Only the cultivators are having a comparative prosperity. In these conditions, village uplift is no easy job. And that is where exactly we have to begin.

Khan, leader of the Indian delegation to the Commonwealth Relations Conference, says shackled India has to fight for others' liberty, herself being unfree?

* * * *

American businessmen fear that as India is not economically independent (as if politically it is?) American interests will not be able to compete on an equal basis with British interests and that some sort of Imperial preference is likely to operate; British authorities have naturally done nothing to dispel this fear. This view was expressed by Dr. P. S. Lokanathan, who has just returned from the U.S.A. after attending the Big Business and Pacific Relations Conferences, when asked what he thought of America's attitude in meeting India's post-war requirements of capital goods. I agree with the Doctor. The feelings of the U. S. business interests on the subject and the situation in India are well-known. Britain's fear regarding America's entrance into India's trade, commerce and industry is also well-known. Perhaps this is the reason why Mr. Mahindra, who was head of the Supply Mission in America, is being replaced by an official. And perhaps this is the reason why the Supply Mission is being directly put under the Agent-General—notoriety of the office of the Agent-General needs no explanation. Going back to the subject actually the measure which is most urgent for the industrialisation of India is the presence of opportunities for her to freely trade with any country she likes. The British Government and the Government of India may be profuse in their professions that such unfettered facilities exist. But do they? The provisions in the Government of India Act prohibiting discrimination against British subjects and trade and commercial interests are actually restrictions in a negative sense on India's economic relations with countries other than Britain. Mr. Manu Subedar's resolution seeking removal of these provisions will come up in the Assembly on March 2. The issue involved is important. Again, the Government's niggardly policy relating to the provision of dollar credits is another question requiring urgent and drastic change. Mr. Trevor, Deputy Governor of the Reserve Bank of India, has admitted that the dollar position had eased and that the British Government were willing to provide dollars for the import of all necessary goods. But in actual practice business men and those who want to obtain technical assistance from America are not getting from the Government of India any help in the matter of dollar credits. Mr. T. T. Krishnamachari has tabled a question in the Assembly asking what is proposed to be done to help Indian interests in this matter. This vitally concerns India's post-war development. Will the Finance Member give proper assurances on the subject?

* * * *

An important financial issue raised in the Assembly last week was the exemption given to American, Chinese and other troops from the customs and the income-tax. The Finance Member admitted that in addition to certain customs concession no income-tax is being collected by the Government of India from American, Chinese, Australian and New Zealand troops—about five crores, according to Mr. Manu Subedar's estimate. Is it not a big and invisible drain on this country's resources? Again there is the cost of movement of the U.S. and other non-Indian forces. According to a statement given in the Assembly the expenditure on the movements of U.S. forces in India from 1942 to 1944 amounts to Rs. 6 crores. This expenditure is borne entirely by India under reciprocal aid arrangements. "But how many Indian officers are there in those countries?", asked a member. There was no reply.

* * * *

It is reported that the callousness on the part of certain firm in Calcutta in regard to the procurement of food grains for Bengal during the days the province was starving has been dealt with in the interim report the Famine Inquiry Commission has submitted to the Government of India, according to well-informed circles here. It is also learnt that as a result of this interim report two senior officers of the Government of India have been deputed to Calcutta to look into the accounts of the firm with a view to find how and where affairs were bungled and mishandled.

HILL-BIRD.

(Continued from page 242)

in the city is very low and if the price comes down, the poor and the middle classes would be enabled to consume more milk, and the problem of surplus would be solved. However, a fair price for milk in these days is rather difficult to arrive at, and at the very least, requires an enquiry into the real cost of production. Too low a price brought about by statutory prohibitions on the supply might drive the producers out of the trade altogether. Such a policy, if not pursued carefully, may have the effect of killing the goose that lays the eggs.

While the report of the Select Committee on the Insurance Amending Bill is giving rise to varied reactions in different classes of insurers, the chief agents are still smarting over the provisions. At the seventh general meeting of the All India (Life) Chief Agents' Association last week, Mr. N. N. Jalundhwala expressed his resentment at the proposals to limit the overall expense ratio of life offices and to make drastic cuts in the maximum commissions payable to licensed agents. The proposal to fix the expense ratios has caused general bewilderment; and while the principle behind it is not disputed, the general feeling is that the proposed ratios are much lower than the existing expense levels of even first-rate life offices. Mr. Jalundhwala, like Mr. Jones, felt that a drastic working down of costs under compulsion might lead to chaos, especially if economic conditions border on a depression. He also disapproved of the proposal to effect slashing reductions in the maximum rates of commission payable to licensed agents. The dissentient minutes in the select committee report have focussed attention on this aspect. The original provisions in this and other respects may well undergo changes as the Bill is taken up by the Assembly.

BOMBAY MARKETS

BULLION

(From our own correspondent)

Bombay (By Wire).

Bulls in the silver market have succeeded in engineering a violent squeeze against bears which is duly reflected in the spread of Rs. 3 between spot and forward rates as against a mere 10 annas days back. Bulls control total stock of 2,000 bars. While the railing of silver to Calcutta and upcountry has resulted in a draining of stocks, they have been buying up the entire 300 bars offered by the Reserve Bank daily. Forward price is quoting Rs. 126-8 as against Rs. 124-8 on Monday last. Bears find themselves in a hopeless situation and have to-day covered part of oversold position though Reserve Bank sold 900 bars in view of the holidays next week. But these were absorbed instantaneously and the market is firm, unaffected by war news. The gold market was slightly quieter during the week. Heavy purchases by bulls induced forward prices to improve from Rs. 71-11 on Monday to Rs. 73-12 on Wednesday evening especially as the bank sold only 12,000 tolas daily against demand averaging 20,000 tolas. A temporary setback to Rs. 72-14 occurred to-day on reports that tenders for sale of 24,000 tolas were called for on Friday, but market recovered to quote Rs. 73-2 in evening with spot price at Rs. 73-8.

(Continued from page 238)

The selected stations connected with the Grid numbered 138 on December 31, 1938. They generated over 90 percent of the energy taken for public supply. Parliament authorised the construction of the Grid in 1926 and set up the Central Electricity Board. The Board buys and resells energy to the 600 distributing undertakings. It has been possible to extend supply to rural areas. Regional planning for electricity meant the conversion of generating stations into transforming stations. Inter-connecting lines from district to district were constructed. The scheme took eight years but towards the end of 1934 it was virtually complete. There are more than 300 main transforming and switching stations. The Board is a wholesale supplier of electric current taken from the selected stations at a price closely related to the actual cost of production. The rate paid by the supply undertakings is based on the cost of purchase and transmission plus allowance for the Board's own capital charges. This has made electricity cheap and plentiful and British experience has undoubtedly influenced conversion to bulk supply in this country. While combintion in the electrical industry can be either horizontal or vertical, the juxtaposition of private enterprise with public control is an original feature which has made the Central Electricity Board significant for the development of public enterprise. The first Chairman, Sir Andrew Duncan entered the National Government as President of the Board of Trade and later as Minister of Supply. The Central Electricity Board employed its independent borrowing powers under guarantee, and some part of its success may be ascribed to the cheap money conditions of the period of its growth.

Rayon Progress

A leading rayon producer's entry into synthetic rubber production marks out the vitality and adaptability of the British rayon industry. Rayon has more than held its own as compared with natural fibres in wartime. Rayon goes into tyre cords as high tenacity yarn has been developed. In the textile field rayon has been adopted to utility clothing manufacture and a proportion of British export trade has been preserved. Experience gained during the war is expected to support revival. According to a recent survey Lancashire and Yorkshire firms will use rayon for both dress fabrics and lingerie material. Printed styles are expected to command attention. Rayon staple adapted to spinning in cotton, silk and other mills is expected to be a stand-by of the export trade. New types have been devised and rayon looking like wool when treated with special dyes is expected to enjoy a vogue in mixtures. The introduction of spun-dyed rayon staple is believed to be a very important development so far as colour effects go. The preparation of staple fibres ready for spinning without previous carding began in 1939 and spinners were keenly interested in the product. Rayon has been used for parachutes, for insulation and rayon yarns are expected to be used for many industrial fabrics. Research has enhanced the versatility of both rayon yarn and rayon staple. The rayon industry is well organised into a new federation and devotes much attention to both research and marketing. A great revival in export in this particular field has been predicted. The disappearance of Italian competition may well be a powerful factor in the anticipated revival. The technical progress leading to production of world ranges explains the confidence of the industry. Peace prospects for this branch of textile manufacture in Britain can be readily measured by the steady rise in share values notably Courtaulds and British Celanese which paid a maiden dividend on the ordinary shares before the sudden death of Dr. Dreyfus was announced.

JUTE

(By Our Staff Correspondent).

Calcutta, February 22.

The raw jute market has been quietly steady with a slight increase in the volume of business in the latter half of the week. With the reports regarding a slight increase in arrivals of coal mills shown greater interest. It is also felt that there will be no appreciable reduction in prices in upcountry centres and that as the season progresses there might even be a further rise in prices. With the licensing of only eight annas of the basic acreage registered in 1940, there might be a shortage of supplies in the next season and the I.J.M.A. Chairman's remarks in this connection have had an encouraging effect on the market. Mills have been doing small business, but this has been enough to keep up prices in the local market. Sellers are eager for fresh orders as arrivals have been coming in fast and there are no larger outstanding orders. The general undertone is steady.

Mofussil markets have continued firm. Land is being prepared for jute sowings and the recent rains have been helpful.

In loose jute only a small amount of business has been reported with mills still reserved. It is believed, however, that mill buying will increase as the weeks go by as there are signs of an improvement in the coal situation. Some business has been reported in European packing Tossa Middles and Bottoms at Rs. 16-4 and Rs. 13-4 per maund. Supervised Jat Middles and Bottoms were quoted Rs. 15-12 and Rs. 12-12 per maund.

In the pucca bales section shippers were quiet and no export business has been reported. Mills have purchased only a small quantity of Lightnings at Rs. 74 per bale. There is still demand for Rejections and Cuttings at a premium.

JUTE MANUFACTURES

(By Our Staff Correspondent)

Calcutta, February 22.

The jute manufactures market has been very firm especially hessians. The production figures for the month of January, make better showing, but it still indicates that jute mills are having difficulties in respect of fuel. As there is a large demand for hessians any increase in production is welcome. Mills were free sellers a few days back and some business was reported at the maximum rates for positions till the end of the year, but they are again reserved.

In the heavy goods section firm conditions have been noticeable mainly due to bear covering. Shipping instructions to the bazar for cornsacks have led to a rush for covering as dealers had not the required stock on hand. There has been some covering in "B" Twills also and the quotation has improved to Rs. 66-4. Mills are not sellers below maximum rates.

The production figures for the month of January, 1945 now available show that output was higher at 85,542 tons against 73,962 tons for the previous month in spite of the difficulties in respect of coal supplies. Most of the increase in output is on commercial account, hessians being 31,667 tons against 26,785 tons and sackings 40,644 tons against 33,894 tons. Other manufactures were 2,886 tons against 2,405 tons. The figures are given below:—

TOTAL REPORTED PRODUCTION OF MANUFACTURED GOODS.*

by the mills in the membership of the Association and also by Gagalbhai Mills.

Description.	Quantity.
1. TWIST & YARN—	
(a) for sale ..	1,345 tons
(b) all other, including that used in sewing bags	1,109 ,,
	476 ,,
2. CANVAS—	8,91,842 yards
3. GUNNY BAG (Tonnages exclude sewing twist)—	
(a) Hessian ..	2,853 tons
	98,11,222 yards
	60,27,645 number
(b) Sacking ..	37,405 tons
	9,08,88,296 yards
	3,83,26,815 number
4. GUNNY CLOTH—	
(a) Hessian ..	28,338 tons
	11,06,89,091 yards
(b) Sacking ..	3,439 tons
	73,45,712 yards
5. OTHER MANUFACTURES (including ropes) ..	432 tons
6. TOTAL PRODUCTION (above figures combined)—	
(i) All kinds ..	75,397 ,,
(ii) Hessian (both as bags and cloth) ..	12,05,00,313 yards
(iii) Sacking (both as bags and cloth) ..	9,84,34,008 ,,
(iv) Canvas (both as bags and cloth) ..	8,91,842 ,,
7. Sandbags ..	Nil
8. Scrim Cloth ..	Nil
9. Hessian bags and cloth and canvas ..	4,374 tons
	1,43,94,203 yards
10. Sacking bags and cloth ..	5,214 tons
	1,12,45,098 yards
11. Ropes and twines	557 tons

*Exclusive of all Government Orders.

The return of Katihar has not been received and is excluded.

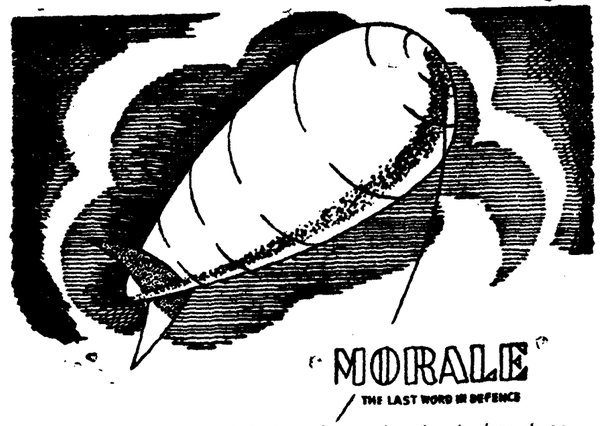
TOTAL REPORTED PRODUCTION OF GOODS MANUFACTURED ON GOVERNMENT ACCOUNT

(By the mills in the membership of the Association and also by Gagalbhai Mills).

SUMMARY.

Total Civil and Military Accounts.

Hessian:		
Civil ..	12,13,92,156	31,667
Military ..	1,43,94,203	4,374
Total ..	13,57,86,358	36,041
Sacking:		
Civil ..	9,84,34,008	40,844
Military ..	1,12,45,098	5,214
Total ..	10,96,79,106	46,058
Other Manufactures:		
Civil		2,886
Military		557
Total ..		3,443
Grand Total ..		85,542



The return of Katihar has not been received and is excluded.

PIECEGOODS

Calcutta, February 22.

There is an acute shortage of sarees and dhoties in the piecegoods market and dealers are unable to do business owing to the lack of supplies. Most of the descriptions are not available and the hardship of consumers especially in upcountry centres is great. With the approach of the *holi* festival there has been a large increase in the demand for dhoties and it is reported that some of the dealers appointed by the Government are distributing cloth on ration cards.

There is no improvement in the yarn market. The freezing order is still in force. The issuing of permits against frozen yarn is still delayed. There is an accumulation of 20,000 bales of yarn in godowns and a speedy release of this accumulated quantity will go far to relieve the present shortage of all kinds.

Defence of a country, particularly in modern warfare, largely depends on the excellent morale of the people, irrespective of whether they are directly engaged in war work or not. It is the unshaken morale of the people of Great Britain that helped in the magnificent defence against the terrible Air Bombardment by Germany and gave the Germans the first setback. It is the knowledge of every individual and the satisfaction that their country is well defended that creates such morale. In the defence against Air Raids Baloon Barrage plays an important part. So also the efficiency of the fire fighting services and the Rescue parties. All these need—and an essential need of course—suitable and strong ropes. Hartons play the leading role in these supplies. Whatever the kind of quality in ropes may be Hartons have the variety to choose from.

Stock Markets to-day and to-morrow:

SHARP RISE IN JUTE SHARES

Very steady conditions were noticeable in both the Calcutta and Bombay Stock markets early in the week. With the strength of the bullion markets, the continued expansion of currency and the reserve of investors bears have been obliged to cover their open positions and the speculative counters in the two markets recorded a sharp rise in prices. The Bombay market, however, turned easier on Wednesday on budget fears. The close was below the best levels for the week. Tata deferreds were done upto Rs. 2,175 from Rs. 2,087 on Wednesday last week. The close in midweek was lower at Rs. 2,061-4-0 Textiles improved on bear covering and fresh buying, but they also shed some points on liquidation towards the close.

The Calcutta market, however, has not been affected by the lower advices from Bombay and a generally firm tone is noticeable in spite of the approach of *Holi* and the nearness of the Central Budget.

It is rather significant to note that not much importance is attached at present to war news. It is generally admitted that, war or no war, prices would be maintained at high levels. Far from there being any liquidation of holdings investors have shown a disposition to accumulate stocks which have assured prospects in the post-war period.

* * * *

The feature of the week is the strength exhibited by the jute section. There is a jump in the quotation for Howrahs by nearly four points. The bigger shares are ten to fifteen points higher. There was nothing new in the statement of the Chairman of the Indian Jute Mills Association regarding the post-war prospects for the industry at the annual general meeting held last week, but his confident tone has carried conviction. There was a rush for buying especially as some of the shares give a relatively high yield.

The following is the extract from Mr. Walker's speech regarding the future of the industry:

"Without that Agreement I would hesitate to contemplate the fate of the industry; and it is therefore a matter of greatest satisfaction that we have bound ourselves together for a further 5 years, which will undoubtedly cover a period of vital importance. Replying to a recent communication from the Government of India, I stated I thought the industry would have no great difficulty in the transition from war conditions to peace conditions. That is from the standpoint of capacity for production and markets for our manufactures. The loss of Government orders should be more than compensated for by the reopening of our valuable Far Eastern markets which absorb larger quantities of our heavy goods. The difficulties will be in the years further ahead".

The immediate prospects, however, are dependent on an improvement in the coal situation and the Chairman had some caustic remarks on the subject of coal supplies to the industry. He said that if there was no gesture from the Government the prospects of renewing the Industrial Pool Scheme were remote. At the end of December, 1944, there was a deficit, the total assets of the Pool being Rs. 110 lakhs against liabilities of Rs. 175 lakhs. If there was a termination of the Industrial Pool Scheme mills would be obliged to ask for an increase in rent, compensation, etc.

* * * *

Burma shares might be more active from now on. With the rapid advance of the Allied forces into Burma it was expected that the mining companies would be able to recover their properties. The announcement on Friday morning that the Bawdwin mines have been recaptured and that no serious damage had been done to the mines by the Japanese before they left and no evidence was immediately available as to whether or not or to what extent they had been using the mines is welcome news. It is the first report of the recapture of an important mining property. When Allied naval landings take place nearer Rangoon and in the Moulmein area other important mining areas might be released. The famous oil bearing territory in the Irrawaddy valley in Central Burma might be taken by the Allied forces before long. If, on closer scrutiny, it is found that no serious damage has been done to industrial property there might be a sharp rise in prices. Pending a satisfactory settlement of the claims for compensation for damage it cannot be expected, however, that it would be possible to declare dividends at an early date.

If Burma Corporation will be in a position to resume operations at an early date, it may be some months yet before civil administration is restored and the necessary labour and equipment is secured, it would be possible to dispose of the silver output at satisfactory prices.

While on the subject of Burma shares it will be relevant to discuss the results of working of the British-Burmah Petroleum Company, Limited. It would be wrong, however, to class this share as purely a Burma share though till recently the main income was derived from the Burma oil properties. The company has interest in the South African Torbanite Mining and Refining Company, Limited, the Rangoon Oil Company, Limited, the Trinidad Consolidated Oilfields Limited, and Trinidad Properties. Great importance is attached to the Trinidad properties, but owing to existing conditions no trading or development work has yet been undertaken.

There was a loss of £49,650 in respect of the year ended January, 1944. The carry-over from the previous account, after the payment of the debenture interest and the loss referred to above, has been reduced to £16,422.

* * * *

As the report and accounts have been reviewed already the Hindusthan Commercial Bank's progress in its first year need be cited only to show that the new Bank is already among the Upper Ten. Sir Padampat Singhania told shareholders at the annual general meeting that the Bank had attracted enough custom and served its customers efficiently in 1944, citing in this connection figures as to accounts opened, bills discounted, and drafts purchased. The Hindusthan Commercial Bank's Chairman also referred to schemes for benefiting the staff and improving their opportunities. The speech is in many ways significant of what Indian bankers hope for after the war. The adjustment of income to taxation is but one of the demands that figure in the list of post-war requirements. The Hindusthan Commercial Bank in seven months has obtained over Rs. 9 crores in Deposits, and the chairman in expressing satisfaction with the results reflective of public confidence declared that, in building up business, the management had not sacrificed any prudent principle of banking.

MARKET GOSSIP

By "Bear-Bull"

[The following is gossip in the literal sense of the term. The markets sway to and fro not in response to facts and developments, but in response to khabbar, true and untrue and slightly true and largely untrue. "Bear-Bull", right in the heart of the Exchange Ring, will relay, periodically, such gossip as has caused gyrations in prices and changes in sentiment.—Ed. I. F.]

The market during the week under review has been firm with an improvement in practically all sections. Howrah Jute have attracted a good deal of attention. These shares have registered a rise of about Rs. 4 to Rs. 4-8 in the course of one week. There are rumours in the market that a well-known speculator intends to corner this share. I do not believe there is any truth in this rumour. The fact is that there was a considerable "Bear" account outstanding. Due to a general demand for all jute shares and the increased interest shown both by speculators and investors there was some "Bear" covering and some fresh speculative buying was responsible for sending up the price of this share. There is no actual attempt at a corner, nor is any syndicate interested in buying. I feel certain that any decline in these shares can be only temporary as strong parties are prepared to buy these shares on all appreciable setbacks. There is no prospect of the dividend being increased but even on the basis of the present dividend on a purchase price of Rs. 85, the yield is a little over 4 per cent. No doubt it is an ordinary share and the yield on an ordinary share is always subject to considerable fluctuations. Still looking to the position of the jute industry in general and the financial position of this company, in particular, this scrip can be safely treated as almost a preference share. If the forthcoming budget does not contain anything likely to affect the distribution to shareholders I feel that this share is in for a further rise.

Amongst the speculative counters Burrakur Coal has also registered a rise of about Rs. 2 per share. These shares were neglected upto now and were sold as a sort of hedge against other coal shares as the general speculative opinion about these shares was that they were fully priced. The dividend paid is very small being only As. 10 per share. But there has been a sudden change in this attitude. For the half-year closing December, 1944, it is believed by some well-informed quarters that the company has done very well and that the next dividend will be substantially higher than the last dividend. Barring any general bearish movement in the market it is believed that, if expectations of a bigger dividend are realised, this share may touch Rs. 50.

There has not been much activity in Indian Irons. The price has gone up by about a rupee in the course of a week. The share have been keeping remarkably steady but there is no general speculative interest in these shares.

Amongst Coals, New Beerbhooms are recommended as a good purchase. In the last few days a considerable number of shares has been purchased by financially strong parties. Some people think that there may be an attempt to get hold of majority shares. Ignoring that aspect, even on the intrinsic position of the company they are a good purchase. The Company is reported to have considerably increased its raisings and the next balance sheet might show a marked improvement in earnings. The properties of the company are free from royalties which makes a big difference in earnings.

There are rumours in the market that the parties who purchased large blocks of Soorah Jute and Albion Jutes have transferred these holdings to Seth Ramkrishna Dalmia of Delhi. The price paid is reported to be very much higher than the current market. Mr. Dalmia is now reported to be interested in four jute mills.

Incidentally it may be mentioned here that at times the rise in the price of a share is difficult to be understood on the merits of the company's balance-sheets of the companies whose shares are dealt in on Indian Stock Exchanges. They then try to obtain a controlling interest by buying a majority of the shares. In the last year or so there have been several attempts in this direction. This is a new development and all managing agents who do not hold a controlling interest are getting nervous about the concerns that they manage.

I mentioned last week in connection with the forthcoming budget prospects that some people who are supposed to be well-informed are prepared to hazard a guess that the budget is not likely to contain anything affecting the fortunes of the shareholders. The prevailing mood of the market operators is to wait till the budget is out of the way. If the budget does not contain anything unfavourable to the shareholders there will be a general wave of buying and prices may register a sharp advance. No one in the market is worried about the war news. Spectaculor seem to have taken the cessation of the European war for granted.

EAST INDIAN RAILWAY.

LAKSHMIPAT
Director,
Managing Agents.

Calcutta, the 9th February, 1945.

(Continued from previous page)

Bank of India Limited

The increase of Rs. 22.36 lakhs in the year's net profit confers interest on the Bank of India's report for 1944 which together with the balance-sheea as on December 31st appears to-day. The increase of capital and Reserve Fund alike follows the decision to issue new shares last year. The addition of four branches to the list, the increased appropriation to Reserve, and the special provision for investments are suggestive of vigorous growth last year. The balance-sheet figures tell the whole story in a clear fashion though the increases in totals as compared with 1943 are moderate. There is an increase under fixed and savings deposits as well as current deposits which come to over Rs. 49.8 crores. The outstanding feature is the increase in investments in a year from Rs. 18.43 crores to Rs. 31 crores. Significantly, the holding of Indian Treasury Bills is smaller Advances have risen only to a small extent by Rs. 1½ crores during 1944 to stand at Rs. 15.16 crores. The fall in the cash ratio is explained by the rise noted under investments. As the deposits total about Rs. 60 crores the cash ratio at the end of 1944 was about 13 per cent which is conveniently near the ratio usually retained by big British banks. The large increase under Bills is undoubtedly increase under Advance proportionate to the a feature calling for notice while the limited increase of Rs. 6 crores in deposits should be regarded as noteworthy. After the increase in the Bank's capital the Reserve Fund as before exceeds the paid-up capital. The fact that two-thirds of the deposits have gone into giltedged will certainly help to show how careful and exact the Bank of India's policy remaims. In 1944 the Bank's profits rose by Rs. 16.28 lakhs. The further increase despite the slowing down of the rate of increase under Deposits and Advances is invested with special significance. The Bank's Advances are equal to less than a quarter of the working capital. Its liquid position remains so striking as to suggest that the Bank of India still retains a lead over other jointstock banks. Most of the increase in the year's profits is retained in the books as evidenced in the larger sum carried forward.

BENGAL JUTE MILLS COMPANY, LIMITED

DIRECTORS' REPORT TO THE SHAREHOLDERS.

For the half-year ended 30th June, 1944.

GENTLEMEN,

We beg to submit herewith the Balance Sheet and the Audited Statement of Accounts of your Company for the period ended 30th June, 1944, showing a Gross Profit of Rs. 6,86,037-1-7. Rs. 4,63,168 8 1

To this should be added the amount brought forward from the previous half-year 8,364 1 1

Total Rs. .. 4,71,532 9 2

It is proposed to set aside as a Reserve for Taxation 2,50,000 0 0

Leaving a balance of 2,21,532 9 2

We recommend that this should be dealt with as follows:—

In paying a Dividend on 5½ per cent per annum, Redeemable Cumulative Preference Shares for the half-yeor ended 30th June, 1944 (free of income-tax) 27,500 0 0

In paying a dividend on 1,50,000 Ordinary Shares of As. 10 per share, free of income-tax 93,750 0 0

Transfer to Reserve 50,000 0 0

1,71,250 0 0

To be carried forward to next half-year 50,282 9 2

Total Rs. .. 2,21,532 9 2

Mr. J. P. Goenka in terms of the memorandum and the Articles of Association of the Company retires this year from the Board of Directors and being eligible, offers himself for re-election.

Messrs. S. R. Batliboi & Co., Auditors of the Company retire and being eligible offer themselves for re-appointment.

Mr. N. R. Sarkar being out of Calcutta has not signed the Report and the Accounts of the Company.

We are, Gentlemen,
Yours faithfully,

J. S. KER,
J. P. GOENKA,
M. L. JALAN,
C. L. BAJORIA, } Directors.

For and on behalf of
BENGAL JUTE MILL CO., LTD.,
SOORAJMULL NAGARMULL,
Managing Agents.

Calcutta, 1st February, 1945.

(Continued from page 249).

A reduction in the quantity of cane crushed and a lower rate of recovery, with an increase in working expenses, have been responsible for the sharp decline in the earnings of the *Purtabpore Company Limited* in the year ended October, 1944. The net profit, before providing for taxation and depreciation, is Rs. 3,82,165 against Rs. 6,62,128 for the previous twelve months. The amount set aside to Taxation Reserve is Rs. 1.6 lakhs against Rs. 2.54 lakhs while the provision for depreciation is the smaller sum of Rs. 75,000 (Rs. 1,50,000). The sum of Rs. 25,000 (nil) is placed to Renewals and Replacements Reserve. The ordinary dividend is lower at twelve annas per share against one rupee per share on the former occasion. The amount carried forward is lower at Rs. 65,551 against Rs. 70,886 brought in.

WATCH-DOG.

BENGAL JUTE MILL CO., LTD.

NOTICE is hereby given that the 8th Ordinary General Meeting of the Members of the Company, will be held at the Registered of the Company, at 61, Harrison Road, Calcutta, on Monday, the 5th March, 1945, at 3-30 p.m. for the purposes of receiving the Directors' Report passing the Audited Accounts, declaring the dividends recommended by the Directors for the half-year ended 30th June, 1944, to elect a Director in place of the retiring Director, to appoint Auditors and fix their remuneration and for transacting any other business of the Company that may be transacted thereat.

The Share transfer Register of the Company will remain closed from 20th February, 1945 to 5th March, 1945 both days inclusive.

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, February 23.

Firmer conditions have been noticeable on the Calcutta Stock Exchange in the past week. In spite of the approach of the *Holi* festival and the proximity of the Central Budget, there is no cautious feeling in evidence. As a matter of fact, there has been an improvement in prices for nearly all the popular counters and jute shares in particular have been marked higher. It is rather interesting to note that the rise in prices is more pronounced in the speculative counters. It was reported during the week that there was some buying by Bombay operators and investors showed a tendency to accumulate certain lines. The undertone in the several sections is quite steady and there is no disposition to attach any great importance to the developments in the war situation. Markets were closed on Thursday account of a *Jain* festival.

The giltedged securities section has been steadier though business has still been restricted. 3½ per cent Paper quoted Rs. 99-10 and 3 per cent Paper Rs. 90-8. Among terminable loans, 3 per cent 1951-54 were Rs. 100-8, 3 per cent 1957 Rs. 99-12 and 3 per cent 1949-52 Rs. 101-12. 4 per cent 1960-70 were unchanged at Rs. 112-9, but 5 per cent 1945-55 were better at Rs. 102-12. No business has been recorded in provincial loans. Easy conditions have continued to prevail in the money market and the average discount rate has declined to six annas and three pies per cent from seven annas and nine pies per cent.

Bank shares were quietly steady with *Hindusthan Commercial Bank* at Rs. 6 premium. *United Comercial Bank* were Rs. 18-8 ex-rights, *Imperial* contributories changed hands at Rs. 488.

In the Coal section, steady conditions have been noticeable though prices are not very much higher. One or two counters came in for special buying. *Amalgamated* were one point higher at Rs. 52-8 while *Bengal* were unchanged at Rs. 687. *Burrakur* were eight annas higher at Rs. 42-14. There was influential buying of *New Churulia* and the quotation has improved to Rs. 13 from Rs. 12-4. *Nazira Coal* were in favour and are now quoting Rs. 21-12 against Rs. 19-12. *South Karanpura* have been fluctuating around Rs. 29-12. *Satpukuria and Asansol* have risen two points to Rs. 11-14. After being sticky around Rs. 38-8 for sometime *New Beerbhoom* have been marked upto Rs. 40.

Cotton shares were uninteresting with *Cawnpore Textiles* at Rs. 13-10 and *Dunbar* at Rs. 316. *New Victoria* were fluctuating around Rs. 7-12. There was a slight rise in *Elgin* to Rs. 55-12. *Muir Mills* were steadier at Rs. 435.

Jute shares have provided the feature of the week. *Howrah* especially have been in favour with a rise of nearly 4 points to Rs. 86-3 on bear covering and investment buying. The Chairman of the Indian Jute Mills Association at the annual general meeting last week was rather confident about the future outlook for the industry. As there were also reports regarding the possibility of a sustained improvement in the coal situation there was investment buying. *Anglo-India* were ten points higher at Rs. 460 and *Bengal* two and half points higher at Rs. 39-12. *India* were Rs. 702 against Rs. 692, *Kanicnarrah* Rs. 588 against Rs. 580 and *Kamarhatty* Rs. 693 against Rs. 680. *Presidency* were quiet at Rs. 12-3 while *Reliance* were steady at Rs. 73-4.

In the Engineering section, there was good buying of *Indian Irons* and the quotation improved to Rs. 40-2 from Rs. 39-4. *Steel Corporation* were in request and done upto Rs. 33-8. *Indian Standard Wagon* were higher at Rs. 89 and *Burn & Co.* at Rs. 410. *Braithwaite* were steady at Rs. 12-14.

Sugar shares have been quietly steady but *Ramnugger Cane and Sugar* have provided the feature with a rise to Rs. 15-12 from Rs. 14-2. *New Savan* were firm at Rs. 27-12. *Belsund* were Rs. 16-8 and *Carew & Co.,* Rs. 27-8. *Champaran* were unchanged at Rs. 38-4 and *Cawnpore* at Rs. 39-2.

Tea shares have been quietly steady with quotations at last levels. *Bishnauth* were Rs. 45-4 ex-dividend, *Namburnadi* Rs. 13 and *Hattikhira* Rs. 29-6. *Tezpore* were Rs. 21-8.

In the Miscellaneous section, on the news of the recapture of the Bawdwin Mines, *Burma Corporation* have been done upto Rs. 5-14 in the early hours of Friday. Other Burma shares are unchanged. *B. I. Corporation* were Rs. 6-10, *Indian Wood Products* Rs. 28-12 and *National Insulated Cables* Rs. 14-4. *Bararee Coke* were Rs. 34-8 and *Calcutta Trams* Rs. 49-4. Paper shares were unchanged with *Titaghur Paper* at Rs. 28 and *India Paper Pulp* Rs. 233. *Dalmia Cement* were steady at Rs. 17-4. *Midnapore Zemindary* were a shade better at Rs. 174 and *I. G. N.* at Rs. 190.

HASTINGS MILL, LIMITED

(*Half-yearly General Meeting on* 6-3-1945).

Accounts for the period of 7 *months ending* 30*th September,* 1944:

After providing for Depreciation and Taxation, making sundry adjustments, and bringing forward the balance from the last account, there is a balance at the credit of Profit and Loss Account of Rs. 2,06,399-9-11. From this the directors recommend payment as follows: Dividend on Preference shares for half-years ended 31st August, 1943 at Rs. 3 per share Rs. 75,000, and 29th February, 1944 at Rs. 3 per share Rs. 75,000-0-0 thus absorbing Rs. 1,50,000 and leaving Rs. 56,399-9-11 to be carried forward.

The weekly hours of working under the Indian Jute Mills Association Working Time Agreement remained unchanged throughout the half-year at 54 hours per week with all looms operating. The Wellington Mill of the Champdany Jute Co., Ltd., has been operating from 1st May to make up as far as possible the production of 800 of the looms and payment has been received from them for loom hours worked on our behalf at the rate fixed by the Committee of the Indian Jute Mill Association under the Industrial Pool Agreement, which rate remained unchanged at As. 12 per loom-hour throughout the period. The looms hours which have not been made good have been made the subject of a claim to Government for compensation at the Industrial Pool rate, together with the loom-hours which were lost as a result of requisitioning in the period previous to that covered by this report, which claim has not been included in these accounts. The other parts of the Company's claim against Government consisting of recovery of out of pocket expense for goods supplied, and services rendered to the requisiting authorities has, however, been included in the Profit and Loss Account. Although the entire claim was submitted to the Requisitioned Jute Mills Co-Ordination Committee on the 10th November, 1944, no payment has yet been received or sanctioned.

Apart from the hours the Mill was entitled to make up 468 hours under the Working Time Agreement, which were lost previous to requisitioning. In this connection the original Working Time Agreement expired on 11th December, 1944, but a new Agrtement has been entered into on the same terms as the old one for a period of 5 years from 12th December, 1944 and it is specifically provided that hours due to be made up under the old agreement may be made up under the new agreement.

LOTHIAN JUTE MILLS CO., LTD.

(*Half-yearly General Meeting on* 9-3-1945.

Accounts for the half-year ended 30th *November,* 1944:

After transferring Rs. 30,000 to Mill Renovation Reserve, providing Rs. 20,000 for Depreciation and Rs. 4,25,000 for Taxation, and after making sundry adjustments, the results for the half-year show a profit of Rs. 1,22,781-7-6. After bringing forward the balance from the last Account and transferring Rs. 35,000 to Dividend Equalization Reserve there is a balance at the credit of Profit and Loss Account of Rs. 1,17,184-6-6, from which the directors recommend payment of Dividends on Preference shares at Rs. 3-8 per share Rs. 35,000-0-0, and on Ordinary shares at Rs. 4 per share Rs. 40,000, thus absorbing Rs. 75,000 and leaving a balance Rs. 42,184-6-6 to be carried forward.

The weekly hours of working under the Indian Jute Mills Association Working Time Agreement remained unchanged throughout the half-year at 54 hours per week with all looms operating, and the output of the Mill has been maintained in the Mill belonging to the Orient Jute Mills Co., Ltd. As was anticipated the Mill has not been appreciably affected by the general shortage of coal, but the Mills Industrial Pool was established with effect from 1st July, 1944. As from that date the Mill is therefore liable to pay the Pool a cess of 2 annas for each loom hour actually worked and provision for this has been made in the accounts, while the token rent which Government has agreed to pay for the Mill is also payable to the Pool. Against this, however, the Company has benefited by the Coal priority allowed to the Orient Jute Mills for the purpose of double shift working, as a result of which the Mill lost only 63 working hours during the half-year and for these compensation is receivable from the Pool. All these transactions have been allowed for in the accounts.

During the half-year the working of the Orient Jute Mills' extra 43 looms enabled the Mill to make up 90 of the hours previously lost, leaving a balance of 884 hours still to be made up under the Working Time Agreement. This balance includes 122 hours which were lost during the half-year as a result of breakdown in the Oriental Jute Mills' Power Plant.

The Directors of the Orient Jute Mills Co., Ltd., having given notice of termination of the arrangement between the two companies, a new arrangement, with effect from 1st February has been entered into whereby the Orient Jute Mills Co., will purchase the loom hours to which the company is entitled under the Indian Jute Mills Working Time Agreement at the loom hour purchase rate fixed from time to time by the General Committee of the Association for the Mill Industrial Pool. This arrangement will continue so long as the Orient Jute Mills Co., is able to utilise the company's loom hours by working their mill 108 hours per week or until terminated by the giving of one month's notice by the directors of either company. The arrangement also includes the sale by the Company to the Orient Jute Mills Company of its stocks of Jute as at 31st January, 1945 and of such Mill Stores as the Orient Jute Mill requires, at market rates; and the transfer to the Orient Jute Mills at market rates of the Company's outstanding contracts as at 31st January, 1945 for the sale of Jute goods.

WORLD OF INDIAN FINANCE

Calcutta, Thursday Evening.

Thanks to the suspension of Victory Loans, and the modest scale of treasury bills sales, short credits have been piling up; and interbank call money is in a state of excessive glut. Call rates are ½ per cent in Calcutta and ¼ per cent in Bombay, nominal. The Government have been making heavy disbursements, and this has also accelerated plethoric monetary conditions. On the weekly treasury bills day, against Rs. 4 crores on offer, applications amounted to Rs. 10.25 crores against Rs. 9.16 crores, the average rate of accepted tenders being annas 5 pies 3 per cent per annum as compared with annas 5 only in the previous week. The offer of Central treasury bills for next week is Rs. 4 crores. The Assam Government were also, on the market this week for treasury bills, the amount asked for in this case being Rs. 1 crore. Bidding was exceptionally keen, tenders amounting to Rs. 4.45 crores. In the result, the Assam Government were able to get their short-term requirements satisfied at a rate which is higher by only 9 pies than Central treasury bills.

The returns of the Reserve Bank for the week ended March 2, disclosed an increase of Rs. 11.73 crores in gross note circulation and of Rs. 9.18 crores in active note circulation. To the extent of Rs. 7 crores, there has been expansion against sterling securities. There has been further expansion on account of Reserve Bank taking delivery of rupee coin for Rs. 5 crores from the Government. Thanks to this addition, rupee coin in the issue department shows a rise of Rs. 4.73 crores to Rs. 15.20 crores. In the banking department, Central Government's deposits have declined by Rs. 13.89 crores to Rs. 245.80 crores; those of the Burma Government by Rs. 4.26 lakhs to Rs. 83.46 lakhs; and those of Provincial Governments by Rs. 6.47 crores to Rs. 15.97 crores. The chief beneficiaries from these withdrawals in Government accounts are the banks whose deposits with the Reserve Bank have increased by Rs. 15.92 crores to Rs. 91.21 crores. Foreign balances have declined by Rs. 2.29 crores to Rs. 366.67 crores. The Reserve Bank's holdings in treasury bills sales and in giltedged securities has gone down by Rs. 1.65 crores and Rs. 1.08 crores respectively.

The statement of the Imperial Bank for the week ended March 2, shows a sharp decline in Investments. As Investments have gone down by Rs. 7.25 crores, one wonders whether the Bank has sold some Government securities in addition to the maturing treasury bills. Cash has increased by Rs. 7.06 crores to Rs. 38.84 crores.

With the Explanatory Memorandum on Budget reaching our hands this week, we are in a position to make a detailed study of the ways and means budget for the coming year. The new loans contemplated to be issued in 1945-46 come to the colossal total of Rs. 350 crores. In addition, it is expected that sales of National Savings Certificate and Post Office Cash Certificates will yield Rs. 27 crores. The estimates also assume that the net increase in Post Office Savings Banks' deposits will be Rs. 17½ crores. It is therefore planned to rope-in as much as Rs. 400 crores from the public in the course of the next year. Of this amount, Rs. 56½ crores will be utilised for the redemption of 6 per cent 1945-55 bonds. The balance mainly represents the gap between current revenue and expenditure plus such borrowings as are designed to mop up surplus cash. To a country which was accustomed to a pre-war annual average of Rs. 20 crores of new loans, Defence Loans for Rs. 350 crores in one year must appear a sensational progress. This stupendous total, however, is only the climax to a rapidly progressive planning of defence loans. During the twelve months beginning with February 1, 1944 and ending with January 31, 1945, the total amount invested by the public in various forms of public loans reached Rs. 286 crores. This figure approximates to the total receipts of the previous twelve months also. It may be added that the progressive total of public loans since the beginning of the war has, up to the end of January, reached the impressive figure of Rs. 833 crores. Against this background of successful and substantial borrowings, it will appear strange that the Government have not yet appreciated the incongruity of keeping on the 3½ per cent non-terminable loan. Sir Jeremy states in his Budget speech that Rupee Paper for Rs. 15.11 crores was sold by the Reserve Bank on Government account after November 16, 1944 when, for the first time, 3½ per cent paper reached par. Sir Jeremy says that "at this stage, it was considered desirable to meet the demand from existing stock." A Government which has been borrowing colossal sums at 3 per cent and whose cash balances are over Rs. 250 crores must have come to the conclusion that the rise of 3½ per cent paper at par was the stage at which it must be considered desirable to give the three months' notice required for redemption. 3½ per cent Rupee Paper at Rs. 100 is not a signal for selling paper from Government stock, but for buying paper from the market. We consider that an unnecessary present of ½ per cent is being made to investors by the failure to redeem 3½ per cent Paper. If Sir Jeremy decides, before he lays down the reigns of his office, to redeem the 3½ per cent Rupee Paper, it will mark the final fulfilment of a most successful and scientific borrowing programme.

The exchange market is steady with a few export bills showing but it is expected that with the resumption of hessian business through private trade channels with the United States dollar bills will be offering.

Call money quoted ½ per cent in Calcutta and ¾ per cent in Bombay. 3 to 5 months ½ per cent; 6 to 11 months ¾ per cent and 12 months 1¼ per cent.

Bank's buying 90 days/St. at 1s. 6 7/32d., for 1 and 2 months; Bank's buying 90 days/St. at 1s. 6¼d., for 3 to 6 months.

TREASURY BILLS

Central Government:

Tenders for Rs. 4,00,00,000 of three months' Government of India Treasury Bills were opened on Tuesday, the March 6, 1945. Total amount offered was Rs. 10,89,00,000. Tenders at Rs. 99-14-9 per cent were accepted in full and those at Rs. 99-14-6 per cent were allotted approximately 31 per cent. Lower tenders were rejected. Total amount accepted was Rs. 4,00,00,000, the average rate of accepted tenders being Re. 0-5-3 per cent per annum.

Tenders for Rs. 4,00,00,000 of three months' Government of India Treasury Bills will be received on Tuesday, the March 13, 1945, at Bombay up to 11 a.m. (Standard Time), and up to the close of business on Monday, the March 12, 1945, at other centres. Successful tenderers should make payment on Friday, the March 16, 1945. Other conditions are as usual.

During the week ended the March 2, 1945, Government of India Treasury Bills for Rs. 4,76,25,000 were sold in favour of the Issue Department of the Reserve Bank of India.

Assam Government:

Tenders for Rs. 1,00,00,000 of three months' Assam Government Treasury Bills were opened on Monday, the March 5, 1945. Total amount offered was Rs. 4,45,00,000. Tenders at Rs. 99-14-6 per cent were allotted approximately 80 per cent. Lower tenders were rejected. Total amount accepted was Rs. 1,00,00,000, the average rate of accepted tenders being Re. 0-6-0 per cent per annum.

GOVERNMENT OF INDIA

DEPARTMENT OF SUPPLY

(*MAIN SECRETARIAT*).
New Delhi.

NOTICE

1. Information has been received from the United Kingdom that the supply position of machine tools and accessories has now improved sufficiently to warrant considerable relaxation in the stringency of the control which has hitherto been necessary.

2. The Government of India have, therefore, decided that as from 1st March, 1945, orders for machine tools of U.K. origin will no longer be placed on the Machine Tool Controller, Calcutta, for procurement through Government channels, but may be placed either direct on Suppliers in the United Kingdom or on Manufacturers' Agents or Importers in India for import through normal trade channels.

3. All imports must, however, be covered by Import Licences issued by the Machine Tool Controller, D.G.I.M.P., Supply Department, 6, Esplanade East, Calcutta, in accordance with the Machine Tool Control Order, 1941.

4. Attention is drawn to the recent Press Note issued by the Commerce Department, New Delhi, on the subject of registration of post-war requirements of Capital Goods and that Department's letter I(83)—ITC/43, dated, 23rd December, 1944, circulated to all recognized Chambers of Commerce. Under this Registration Scheme, it is necessary for all persons, who have placed or intend to place orders overseas for machine tools having an f.o.b. value of Rs. 10,000 or more and for which shipment is not expected from the United Kingdom before 1st July, 1945, to register their requirements with the Chief Controller of Imports, New Delhi, Machine Tools having an f.o.b. value of less than Rs. 10,000 or for which shipment from the United Kingdom is expected before the 1st July, 1945, need not be registered.

5. No application for Import Licence for a machine tool having an f.o.b. value of Rs. 10,000 and above and for which shipment is not expected from the United Kingdom until after 1st July, 1945, should, therefore, be made to the Machine Tool Controller until after the requirements have been registered with the Chief Controller of Imports, New Delhi. Applications to the Machine Tool Controller for import of machine tools which are expected to be shipped after this date should invariably state the Registration Certificate number and also quote the f.o.b. value in rupees. It should be noted that, in the case of an order for a complete plant or unit of machinery, the determining factor for purposes of registration will be its total value and that it should not be split up into separate orders for various components or values below the prescribed limit.

6. Import Licences will be issued up to a quantitative ceiling determined on the basis of what India can absorb after deducting the quantity which India herself can produce. Applications for Import Licences for stocks will receive consideration.

7. The above procedure will not apply to machine tools of U.S.A. origin, which must for the present continue to be procured through Government channels as at present. No application for import of U.S.A. machine tools for stock can be entertained at the present time.

Second Thoughts on the Budget

After the lapse of more than a week since the publication of the Central Budget, there is need to return to the question, partly because some aspects of the budget could not be dealt with in our last week's comments and partly because the reception to the budget both within the Legislature and without is also of importance. Generally speaking, it is very difficult to judge the country's reactions to a budget of the Government of India. For one thing, the criteria of purposive criticism are not easily defined. We have for our part, always believed that in commenting on the policies and actions of the Government of India, it is far better to recognise the imponderables of the present political status and position of the country and keep comment within the limits laid down by certain major premises than to have ideal states in one's mind and make our comments more or less indistinguishable from mere wishing. This standpoint may not appeal equally to all; but the futility of commenting on Sir Jeremy Raisman's work as if he were the Finance Minister of a National Government which is well able either to keep out of the present war or to bring it to a swift end by taking sides, can hardly be overlooked, much less denied. Nor can it be overlooked that as Finance Member of the Government of India, Sir Jeremy is part of a Government which is subordinate to His Majesty's Government. To recognise these facts is not to condone them any more than their oversight can rank as a constructive contribution. There are good, sound reasons for the leader of the Congress Party in the Assembly rejecting this standpoint as unsuitable to his position. But the press and the public at large must beware of conditions in which candour and realism may be increasingly at a discount. While it is legitimate to feel that military expenditure has risen to a level unjustified by the economic capacity or the political status of this country, it would be unfair to deny that, by and large, the Finance Member has done his work as well as circumstances permit and that the ability of the nation's financial system to bear the burden of post-war development has been carefully promoted in many ways. Recognition of this fact would not prejudice either the prospects of Swaraj or the consideration of particular proposals contained in the budget.

It is difficult, for instance, to agree with Sir Jeremy Raisman that developmental schemes must of necessity wait for the end of the war. Sir Jeremy avers that "post-war development must mean and must continue to mean post-war development." Verbally, yes. But the war is not a relevant, much less decisive, consideration in timing all important schemes of development. It is only in so far as the war gives rise to insuperable financial or administrative obstacles that it can be considered a relevant factor. It would be prudery to condemn more liberal allotments for nation-building schemes merely because our revenue deficits today are on a high level. It would be tantamount to saying that while the expenditure of a few crores on the National War Front or the "Grow More Food" campaign would be financially sound because of their association with the war effort, the outlay of even smaller sums on agricultural or educational development would not be. No attempt has been made by the Government so far to see whether a part of the necessary preparation for planning can be taken on hand from now. The shortage of consumer's goods which the country is now suffering from could have been made up to some extent by better organization of some of the smaller industries. The idea that all schemes of development must wait for the end of the war and that it is a financial sin to make any appropriation for development during the war is so strong that it is now suggested that development must be postponed even during the first few years after the war on the ground that they "inevitably will be for the Centre years of heavy deficit on revenue account."

In the budget debate in the Assembly, more has, however, been made of the scale of the military expenditure than of the reluctance to embark on developmental schemes, the outlay on which will be but a drop in the ocean of uncovered deficits that the country is now having. Questions relating to Lease-Lend, particularly the question of reverse Lease-Lend have not, it would appear, had as much attention as one would except. It is indeed, disappointing that the ambiguities in the Finance Member's references to this part of public expenditure have not been cleared up. Sir Jeremy observed in the course of his budget speech:

> The progressive total of Reciprocal Aid from the beginning of the war to the end of 1944-45 would, on these estimates, amount to about Rs. 124 crores. At present the great bulk of Reciprocal Aid afforded to the U.S.A. in India is charged to Indian revenues and only a relatively minor amount of such aid (e.g., that relating to certain non-indigenous supplies) is financed by H.M.G. and treated as British Reciprocal Aid. The total amount of supplies and services expected to be made to India under Lend-Lease arrangements up to the end of 1944-45 is now estimated at roughly Rs. 515 crores and the value of these supplies and services which India, but for Lend-Lease, would have had to provide at her own expense is now assessed at approximately Rs. 150 crores. It is impossible to make any similar estimate for the year 1945-46 as the extent of Lend-Lease granted during that year must necessarily depend on war developments both in the European and the Eastern theatres. There seems no reason, however, to think that the value of Lend-Lease aid received by India to the end of that year will fall short of the corresponding amount of Reciprocal Aid to the U.S.A.

The following report appearing in a daily contemporary about the Finance Secretary's statement in the Council of State is hardly helpful in clearing the position. The report says:

> In regard to the Rs. 150 crores debited to the Indian account in respect of Lend-Lease materials, the Finance Secretary explained that the amount represented the goods supplied to India to the end of 1944-45. It consisted of munitions, vehicles of all kinds and locomotives, petrol and other industrial products. No obligation devolved upon India on this account since this country had no direct Lend-Lease agreement with the U.S.A. Reciprocal aid to the U.S.A. at our expense came to Rs. 124 crores.

It is difficult to see what the amount of Rs. 515 crores referred to in the Finance Member's speech represents though it may be presumed that it is the total value of Lend-Lease goods made available in India. Whatever it may be, there is a degree of involution in Lease-Lend accounts, which is not in the public interest. A year ago, Sir Jeremy explained in his budget speech that the allocation of lease-lend benefits between H.M.G. and the Government of India is "a matter of great complexity." But complications in accounting are different; and it is high time that the public knew where this country stands in relation to the U.S.A. The last sentence in the quotation from Sir Jeremy's speech seems to suggest that there is more chance of our reverse Lease-Lend exceeding Lease-Lend than otherwise. The receipt of Lease-Lend via H.M.G. is the source of these complications; and if there can be a Mutual Aid agreement with Canada, there is no reason why there should not be similar direct dealings with the U.S.A. In any case, the need for scrutiny of public expenditure is emphasised by these complications.

The next phase of the budget discussions will probably throw some light on these problems. It will also afford a discussion of the provisions which aim at giving larger depreciation allowances, and which are examined elsewhere in this issue. It is not useful to anticipate the changes which the Legislature will seek to make on the Budget. But if the Government can be made to accept a ceiling for military expenditure and for the note circulation, two valuable safeguards in highly essential matters will have been secured.

It is for the Assembly to insist that the Government of India must from the beginning of the new financial year accord due paramountcy to preparation for post-war development. The financial position which Sir Jeremy will leave to his successor is nothing to cavil at. And just as Sir Jeremy was the maker of the system of war finance, it will fall to Sir Archibald Rowlands to lay the foundations of the financial system for peacetime development. The idea which Sir Jeremy reserved for the end of what is known as the first part of his budget speech, viz., the nationalisation of certain industries "in order that it (the State) may have additional sources of income for the sustenance of national well-being as a whole," is one that will have to be fully and fearlessly exploited in the years to come. It is true, as Sir Jeremy said, that insufficient attention has been paid to the question of extension of State ownership of industries as a source of additional revenue. The place which the contributions of commercial departments occupy in the total revenues of the Government of India emphasises, rather than detracts from, the importance of extending such State ownership of such commercial enterprises. Whether as a precaution against a possible fall in the contributions of the Railways and the Post and Telegraphs Department, or as a means of further augmentation of such revenue, it is necessary that a few more commercial enterprises should come under State ownership and management. The example of some of the Continental countries and the exigencies of post-war development in this country will help in the choice of industries for this purpose. And it is well that a Finance Member of the Government of India has robbed the proposal of its revolutionary ring. The financial problems of the years ahead cover a wide range; and they will be increased in number and scope when the war comes to an end. We may reasonably envisage India being called upon to deal with foreign nations directly in matters connected with international finance. The negotiation and ratification of international agreements, the

settlement of the vexed problem of sterling balances, the scrutiny of military expenditure, the re-adjustment of Provincial and Central finances to suit the requirements of planning—all these are waiting to be handled during the next few years. And in all these, the last few years are not lacking in helpful precedents or other developments.

Death Duties for India

In his last budget speech Sir Jeremy Raisman described the possibility of death duties in India and has followed it up by a clear reference to the Estate Duty Bill which he hopes to introduce later in the Assembly session. In his view, this measure should be regarded as the first concrete step towards the building up of a planned and expanding financial system for the future. Death duties then are going to figure in the list of direct taxes even when indirect taxation is going to be increased in the way approved by the Finance Member. Though local opinion as to the value of death duties is indeterminate, and report speaks of the disapproval of the Ulema in this case, we might record here that death duties have a respectable pedigree, and they were introduced by Britain by one who presciently observed 'we are all Socialists now.' Before the estate legacy and succession duties were imposed there were the probate and account duties leviable on estates of deceased persons. We must remember also that the principles of taxation settled in 1894 and 1910 made possible the expansion of social services in Britain. The organic relation between social insurance and the taxation of inheritance is not peculiar to Germany. It is certainly noteworthy that Mr. Lloyd George's Budgets rested on the taxation of property, as distinct from income, and we have to take note of another fact, that taxation does not interfere with accumulation of property. This is perhaps the most important point connected with objections that may be advanced against the Estate Duty Bill. What death duties stand for, and accomplish, can be readily ascertained from fiscal practice in many countries. The death duties adopted in Australia supplemented direct taxation so that old age pensions and children's allowances could be provided by the Government. Though the Finance Member has not mentioned social security specifically but spoken only of the needs of Provincial Governments when their share of Income-tax falls after the war, it is useful to remember that the Provinces have large requirements, and much of indirect taxation today happens to be Central. The case then for death duties may be called very strong, particularly, in view of the Todhunter Committee's recommendations in 1925 and the provisions in the Government of India Act of 1935. The intention of Parliament has to be translated into a revenue measure that will secure for the Provinces the additional revenue wanted for nation-building expenditure.

The legal doubts have been duly cleared up this year and what we have to look at is the reasonable antiquity and universality of inheritance taxes at present. The justification will be stronger when the E. P. T. is withdrawn after the war and the relative share of direct to indirect taxation falls. The case that can be presented for the introduction hardly requires restatement, but what the enquiry of Sir Alan Lloyd yielded may determine the actual provisions of the bill. The enactment of a bill applicable to all areas and communities may lead to a review of experience. It is however essential to remember that death duties are a peacetime proposition. The majority of federal governments, have adopted the rule as to taxation of property when it changes hands and it is noteworthy that in the U.S.A. the federal estate duty overshadows what is levied by all States excepting Nevada.

A small book of Dr. B. R. Misra (published by Nand Kishore & Bros., Benares, Re. 1) contains the usual arguments in favour of the proposed tax on inheritance. The arguments advanced therein will certainly suggest to many that the recommendation in Part II of the Bombay Plan meets with approval for the reason that our tax system is regressive, and death duties would be one way of 'soaking the rich.' The Italian Professor Rignano suggested many refinements and improvements in death duties so as to make them a weapon of redistribution of capital. J. A. Hobson also considered death duties particularly valuable for acquiring for the State a share in the capital of existing industries. There is no question as to what property on devolution should pay. We may note here that evasion can be checked in this case by adopting safeguards as to deathbed gifts and gifts inter vivos. The holding company trick too can be defeated if due regard is had to Lord Snowden's warning in 1930 against the transfer of shares in private companies owning estates. There is probably the consideration that apportionment may not be easy but if a Federal Loans Council dealing with contributions and inter-Governmental financial relations were to be set up administration would present no difficulties. The theoretical justification from Bentham's time is ample. It may be said that death duties constitute a premium payable for undisturbed possession for a lifetime. There is also the fact that income-tax is not an adequate measure of taxable capacity, particularly, for the rich; and unearned wealth must be taxed on succession when the Government recognises a fresh title to property. Though the theory of feudalism may seem inapplicable, the essential fact remains that the right to property arises mainly from the existence of the State. The only way of taxing capital gains and unearned increments is presented by death duties.

Certainty and convenience are certainly present in this case but the annual yield cannot be rigorously estimated. This may seem a small objection to a tax that will help to diffuse wealth and can be paid by inheritors without objection. In the case of real estate collection in eight yearly or sixteen half-yearly instalments may prove convenient, and deduction for debts, funeral expenses and encumbrances would mitigate objections on the ground that death duties are arbitrary and the same estate may be too frequently taxed. Progression is easily applied to this tax, so that war profits can be taxed in the case of individuals. Graduation can be imposed in many ways according to the propinquity of relationship, the size of the inheritance, and the previous wealth of the legatee or the number of times the estate has been proved. The moral justification may be readily sought also in the prevalence of tax evasion and the requirements of progressive administration.

It is hardly possible to picture the particular provisions of the scheme since death duties that affect all subjects of the Government and cover property held outside British India in addition to what is declared would have to be guided by the rules of different legal systems. Existing succession duties are merely fees for court proceedings affecting a very small minority. What the Government contemplates is probably a blend of estate, legacy and succession duties. Exemption for marriage settlements may be as necessary as exemption of the estates of common seamen and serving soldiers who die on active service. Possible exemption for charitable and public bequests must be regulated by the practice abroad, and rebates in case of quick succession may be granted; likewise rebates in case agricultural land is subject to Provincial inheritance tax.

While death duties will be difficult to assess, compulsory declaration by banks and others can be secured regarding the estates of deceased constituents and Registration records will probably afford guidance as to the market value of property inherited. Since the Provinces have a direct interest in death duties judicial authorities too could help the revenue and examine the nature of gifts made before death. If the agricultural income-tax is made general in all Provinces, and a succession duty on agricultural land is made common, the differences as between Provinces and various tenures may be reduced. The future succession duty on personal property can be collected for the sake of the Provinces without regard either to origin of fortune or residence of deceased. Though various rules apply as to inheritance, it should be easy to draft a statute overriding both law and customs in order to secure for the Government a share in property. Though a single duty namely the estate duty alone may be regarded as practicable a levy at the rate of 1 to 40 per cent on estates may give a very satisfactory yield. The limited expectation of life may even favour the revenue, but when minor's estates are concerned, the levy may be on the guardian as much as the estate, and the customary distinction between ancestral and self-acquired property may be ignored. As a percentage of the market value of property inherited death duties could be made to vary from 1 to 40 per cent in Dr. Misra's opinion. He suggests that Australian legislation of 1914 and 1928 provides a pattern. Revenue derived from probate and succession duties as compared with customs or sales tax in Australia does not appear considerable, but the States do not levy death duties there. Dr. Misra's advocacy of the Australian example is influenced also by the useful principle of Commonwealth contributions to definite States like Western Australia—a principle that has not been submerged by the war. Though reversions and reminders cannot be taxed, all alienable property passing at death can be taxed, as also payment on insurance policies and annuities purchased for others by the testator. The taxation of property outside British India would therefore approximate to the rule adopted even in 1894 in Britain by which property in Australia and the Colonies was subject to estate duty. Payment within a stipulated period in the form of stamp duty has been recommended as also penalties for evasion which may conveniently take the form of double payment. The form that the second revenue measure of this year takes will certainly evoke attention for the reason that the Finance Member has outlined already postwar financial responsibilities in the concluding part of his speech last week. The fufilment of his promise may give the Indian tax system the balance and productivity that ensures economic justice.

Editorial Notes

Assam Budget

Although Assam increased its short-term borrowing and expenditure in 1944-45 increased considerably, the Province reports a revenue surplus larger than the reduction in the closing balance. The explanation for this improvement was given in the Minister's speech on Saturday last when the budget estimates were introduced. The share of income-tax given by the Centre increased and land revenue again improved like excise. According to the budget estimates Assam's revenue in 1945-46 will not be so large because income-tax receipts would be lower as also excise and petrol tax and forest revenue. The Assam Budget proposals certainly include expenditure on civil supplies but no losses appear to have arisen so far. As the Ministry intends to spend Rs. 39 lakhs more in 1945-46 there is no provision for the postwar reconstruction fund this time. While a revenue deficit of Rs. 230,000 is expected the improvement in the closing balance is not important. There is, however, definite purpose in the additional outlay as food production is to be stimulated by devoting Rs. 51 lakhs to grow-more-food schemes, meeting two-thirds of the cost instead of 50 per cent. Assam intends to spend more on administration generally and is recruiting additional staff for its development schemes. The invasion appears to have produced no special financial strain so far as Assam is concerned, unless it be the amendment of the scheme for dearness allowance to Government employees and rice concessions to municipal sweepers. The brightest feature of the Budget is the increase in forest revenue, but the Department wants funds for development in order to restore the assets. Like the increase in expenditure on agriculture and education in Assam, this will probably meet with approval since forests will naturally provide revenue, once the extra staff is obtained for the department. In place of the subvention of the past, the assistance of the Centre is limited to interest-free advance along with the usual subsidies for grow-more-food schemes. Central grants for road-building have not been mentioned at all though there is again special provision for the ravages of malaria. The Assam budget contains no proposals of capital expenditure after the war; and land settlement is apparently covered by the grow-more-food plans.

Rise in Civil Expenditure

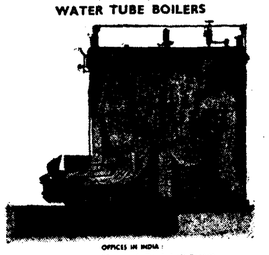
In his speech on Wednesday last, the Finance Member gave details of the enormous increase of civil expenditure in 1944-45. Instead of Rs. 86.38 crores provided in the Budget, the revised estimates stand at Rs. 115.42 crores. This explains the rise in the revenue. The important items of expenditure referred to include the subvention to Bengal. An exgratia grant of Rs. 10 crores was offered of which Rs. 3 crores was paid in advance and Rs. 5½ crores more in 1944-45. The Bombay Docks explosion forced the Government to offer compensation. Provision had to be made for expenditure of Rs. 10¼ crores in the current year and Rs. 5¾ crores next year. The Finance Member stated "the question of incidence of this expenditure is under consideration, and pending a final decision as to sharing of cost between India and His Majesty's Government it has been decided to pay claims from general revenues, at the same time transferring from the War risks Insurance Fund to the revenue account amounts equal to the estimated compensation payable." Recently some figures as to the compulsory insurance funds were given, but the sums transferred can be recovered only if H. M. G. agrees to pay for whatever happened on account of loading the Fort Stirlkine with cotton at Karachi. The Government of India bought 2¾ lakhs of bales of cotton valued over Rs. 6 crores in accordance with a price to buy cotton at the floors. This, of course, is not expenditure properly speaking but investment.

Though coal-mining has passed under the control of the Supply Department from last June, nothing is said about what has been spent to stimulate output. Figures as to the bonus paid are not available, and what the import of machinery for mines has cost is not ascertainable. While supply expenditure rose Government also obtained something by sale of surplus goods and salvage. In regard to supply, the Finance Member said Rs. 5 crores worth of goods are surplus out of which Rs. 2 crores worth has been sold. Regarding contracts to be cancelled or reduced no hint was given as to re-negotiation but a promise was made that surpluses would be avoided as far as possible. The Supply Department took Rs. 76 crores worth of goods in seven months of 1944-45 against Rs. 162 crores in 1943-44. This means that there has been no substantial reduction because textiles and foodstuffs are bought by other departments. In 1944-45 Government's payments to evacuees came to a little over one crore more than the budget provision. India's contribution to the U. N. R. R. A. for 1944-45 was fixed at Rs. 8 crores but Rs. 1.1 crore only was spent and the balance of Rs. 6.9 crores is thus carried over to the next year. The Finance Member proposes to keep the Rs. 6.9 crores in a special form to prevent budgetary inconvenience. The expenditure on dearness allowance to Government servants accounts for a total outlay of Rs. 3¾ crores but the speech does not make it clear if the total covers the war allowance to officers drawing up to Rs. 1,000. As he added that more relief is under consideration, the increase must be called permanent and growing.

War Risks Insurance

An announcement dated March 4 referred the factories war risks insurance scheme. In spite of representations made in recent months, calling for abolition as the emergency is over the compulsory insurance scheme is kept alive for one year from April 1. But it is apparent that some relief is given in the form of a reduction of premium. The scheme introduced in May 1942 certainly asked for a higher premium than the ½ per cent now fixed. It is not clear whether it is a quarterly premium or a yearly premium that is payable in four instalments as before. Though a substantial sum has accumulated and claims have been few in the last year the Goverament has decided to ask for compulsory insurance of factories as well as inland vessels for one year more. It may be suspected that fire damage in Bombay and the compensation paid therefore has a real connection with the survival of the war risks insurance schemes. There is only a liability to pay renewal premiums at a flat rate by all factories for a year and administration is unaltered as insurers act as agents in respect of the Government scheme which is distinguishable from the war damage contribution scheme adopted in Britain. The compulsory insurance scheme should bring up the total held in the insurance funds to a level that will permit E. P. T. refunds to take place in an orderly and prompt manner after the war.

Jute Mills and Coal Supply



In the Central Jute Committee's bulletin appears an estimate of the effect of the shortage of coal on jute mills' output and the demand for raw jute last year. The study is important since it makes plain that output in 1943-44 fell below the standard output ascertained to be 106,000 tons per annum on the basis of 8 years' average. The loss of output arising from coal shortage is put at 364,000 tons but this curtailment of output had no important effect on jute and hessian prices during the period. The mills certainly bought jute for stock even when their output was falling and the jute grower did not suffer though total receipts were lower. That mill output fell away when the big U. S. order was in hand can only be explained by reference to the coal shortage. The coal shortage leading to the fall in output to 954,000 tons in

A CONCRETE SCHEME for rural reconstruction

Rural development is one of the most important items in all post-war plans now being formulated for this country.

Concrete roads and creteways will provide the villager with an all-weather link to the nearest market-town and station. Concrete houses, tanks, wells, grain storage silos, cattle sheds, etc., will afford him protection against fire, famine and heavy losses due to the ravages of rats and vermin.

The services of the Concrete Association of India (Victoria House, Calcutta) are available free to all interested in rural reconstruction schemes.

DISTRIBUTORS A.C.C. & DALMIA CEMENTS

1943-44 may be held up as a reason for the acreage decision providing for a 8 annas crop only in both 1944 and 1945. But the fall in profits arising therefrom has not so far lowered prices for jute shares. This contradictory situation is of less importance than the variations in prices of jute and jute manufactures. Of recent years 1939-40, when output rose to 1,263,171 tons, appears to be the best, but that does not mean the whole industry is well covered against the E. P. T. liability. Since averge prices for raw jute were higher than in 1942-43 the actual loss to the jute grower does not appear much as against the mills' failure to work for 54 hours in the week. This may be held to justify the price control agreement relating to raw jute as also the mills' decision to get some war orders cancelled. When demand increased the mills were unable to produce enough, and the chronic shortage of coal limits the chances of recovery in the immediate future. While the fall scarcely can be made good in the face of requisitioning the outlook for exports has changed very much for the better since 1943-44. The investigation only establishes what is already known, that coal shortage forced down industrial output and that profits suffered in the case of the majority of mills. But it also indicates that mills bought more jute than was required and held larger stocks. The claim for relief advanced on behalf of jute growers on the score of prices being lower than expected hardly matters in view of the reduction in the price of paddy and rice as from March 1 in Bengal. But the jute grower has to consider the continuance of coal shortage as also the food plans for the province. As compared with 1943-44 jute mill production this year has shown some recovery but the fluctuations up to January have been pronounced on account of the coal shortage. From July 1943 the Calcutta mills have found the coal shortage their biggest problem and where responsibility must be fixed for the coal shortage is now clear enough. The recent improvement in supply notwithstanding, the outlook for jute consumption is not very bright, for which reason the schedule of prices fixed in relation to the rates for manufactured goods has evidently not been revised.

World Textile Requirements

The announcement that Mr. Kasturbhai Lalbhai is to attend a meeting concerned with the world's textile requirements in Washington will, doubtless, stimulate interest in the future of Indian exports. The previous conferences connected with cotton textiles were concerned with employment, rather than cotton, with tariffs and quotas, rather than relief supplies. Americans have written off Europe's textile industry and look forward to a period of stringency after the war. They have taken note of the possible increase in demand for yarn and cloth after the war and the limited supply of substitute fibres, even in Europe. The immediate problem may not be one of relief supplies only or of developing production for the export market, but the creation of a pool to which Britain, America and India should contribute in agreed proportion. Indian millowners have already grasped the essentials of the postwar structure in which Latin America's partial self-sufficiency will be unimportant as compared with Africa's requirements and the decay of Japan's major export industry. Obviously, the fairest solution may be allocation of markets and the extinction of tariffs but that implies, for the present, the withdrawal of tariffs in the exporting countries as well, so that Indian cotton blankets and American fabrics alike would enter their usual markets without much difficulty.

The contribution that Britain may be able to make depends entirely upon the removal of tariffs but the conference may not be able to decide postwar tariff policy summarily since questions of import control are involved. The forthcoming talks at Washington would only help to settle the export quota in relation to production. The allocation of markets that India may receive thereunder may stimulate her trade with the Middle East. What the conference may decide about markets for Japanese textiles after the war may be only a continuation of the quota system, implying as before a guaranteed supply of raw cotton. But that would mean that Japan's raw cotton supplies must be assured, even when manufacturers in America want all the cotton they can use. The really important question is one of Japan's access to markets and if the six-point plan for Japan's disarmament goes through, the whole issue must be disposed of in a way different from what Dr. Murchison did in 1936 after his visit by fixing a quota for Japanese textiles. Should the supplies be limited after the war, the restoration of the mills in the Far East must be a big problem. Probably, a revival of yarn exports from India for the Far East including the Indies, might provide a partial solution but there are differences between output and rating as between India and Britain; and awareness of these differences may lead to a consortium for the development of cotton manufactures and cotton-growing in China. The export quota that may be required after the war may be larger than presumed since it is apparent that present controls have checked consumption. How the conference will provide for plenty and create confidence in cotton is necessarily a matter of interest to cotton-growers who may well ask for new mills in the new countries whereas manufacturers may be mostly concerned with prices in relation to costs. A promise of uniformity by agreement may help rather than hamper India, while a close investigation of capacity in this case may help to procure machinery for renewals and replacements. It is from this point of view that Indian millowners will follow the talks, for Allied goodwill in regard to increase of production must assume a favourable shape in this case.

Canada's Foreign Trade

Foreign trade in 1944 hardly reflected the fluctuations in Canada's mining and industrial output. The increase of over 20 per cent in the value of exports was achieved in spite of a fall in her exports of gold. The developments in 1944 owe much to the war since munitions, metals and food constituted the principal items of export trade. While an increase in direct war exports did not take place Canadian shipments of foodstuffs and textiles increased and the result was an increase in peacetime products traded with both the U. K. and the U. S. A. Where ex-

ports of munitions fell away exports of food, wood and paper increased and this shift in trade accounts for the increase in trade with the U. S. A. modifying original apprehensions as to the maintetnance of U. S. demand for Canadian manufacturers. According to the Bank of Commerce the expansion in Canada's trade took place though commercial exports accounted for only 25 per cent of the total which is one reason for the rise in Canada's imports.

Prospects in European markets were reckoned bright at the year end since the agricultural season was favourable and agricultural exports generally in 1944 showed a commendable increase like the increase under fish and meat. The share of the U. S. A. in Canada's export trade was almost equal to that of Britain but in the case of the latter, there is diversion of shipments. The really striking features are the recovery in exports of wheat and flour as well as pulp and paper. The increases in Canadian production made good the shortages experienced in the U. S. A. Since last summer Canada's warlike exports have declined in comparison with the increase noted under food grains and forest products. The foreign trade of Canada with the British Empire increased during 1944 but there was a greater increase under trade with Europe which advanced by 320 per cent. The liberation of Europe assisted Canadian export trade and the coming of peace might probably produce changes in trade corresponding to changes in production. The great preponderance of agriculture in Canadia's foreign trade has been drastically modified by the war so that the increase of productive capacity in the case of iron and steel, chemicals etc., promises to confer permanent benefits particularly as Canada has ships to carry her goods. At the end of war Canada will have over two million tons of shipping and an export credit system to supplement the mechanism of foreign trade.

Combined Demand

Resolutions adopted by the Federation of Indian Chambers last week-end conform to type for the main demand is for a clarification of policy as to control, tariffs and international agreement. Last year's demand for investigation and reform of the tax system has certainly revived while the caution against cartels follows naturally the discussion at Rye by the Business Conference. The Federation offered no specific solution and did not proceed with any enquiry as to planning. This omission is suggestive inasmuch as it implies acceptance of the programme already planned. The more important consideration is that planning will meet the three demands referred to. The Budget speech contained no prescription as to the dual functions of the State and Free Enterprise but it contained a hint of Central Excises to offset a decline in income-tax revenue. That excises modify tariff protection, and if they are without effect on exports, certainly limit the growth of consumption should not pass unnoticed since the major factor after the war must be the expansion of home demand for textiles, food, and all manufactured goods. There were resolutions about South Africa, East Africa and Burma asking for equal treatment for Indians resident or intending to re-enter Burma.

The Federation's resolutions are fewer than at times in the past and one result of the extreme care taken is the comprehensive demand for a declaration as to Government's purposes. The progress of planning so far has not claimed as much attention as it should though the Federation has asked for the fullest utilisation of the country's resources. It is perhaps inexpedient to expect a specific declaration as to the Bombay Plan but last year the Federation obtained an exposition and accepted most proposals readily. There has not been similar endorsement for either official or non-official planning this time; and businessmen in conference offered no advice as to the pace of reconversion though it is clear that the release of resources now assigned to war purposes would play a great part in determining both prices and production. The Federation did not examine questions as to employment and social security as they belong to another organisation. But it appears difficult to believe that Britain's proposals relating to health and full employment have produced no impression on Indian industrialists. The fact that no defence of planning for reconstruction was undertaken may mean that organised Business, in spite of the Central Legislature's disapptoval, stands for planning but the Federation has offered no advice as to priorities and procedure in the form of resolutions while it has not indicated its attitude as to the relation between national income and outlay.

Clothes Rationing

The coupon system has altered the nature and functions of clothes in Britain in three years. Rationing enforced by shortage of raw material and labour as well as the purchase tax has produced a fall in consumption, though clothing for the armed forces had to be obtained as usual. The application of the utility principle changed the content of retail trade. Fewer shops for fewer goods became the rule and the adjustment of textile production to home demand in the first place has obviously influenced the departures in the control of textile production in India. Cuts in rations, special preference for privileged classes and special adjustment of quality and prices to the needs followed the adoption of utility production. The major result has to be sought in the level of prices during the war in Britain as compared with countries which have no such rationing. While barter developed to an unexpected degree even in second hand clothes, a consequence of clothes rationing was a general desire to make the most of old and serviceable clothes. Waste instead of virgin wool has also found wide application and outside Britain, too, shoddy manufacture has developed to an amazing extent. The change-over to peace may find utility production well established and one result may be that wholesale clothing manufacturers may enjoy greater advantages even without export markets. The clothing industry in India is primarily a prduct of the war but if cloth supplies are enlarged for civilian consumers, the system of wholesale manufacture of ready-to-wear goods may extend. Uniformity in taste and consumption may assist the wartime industry to adapt itself to changing conditions.

Rationing adopted in 1941 when the textile industry in Britain was concentrated has been of some help in keeping alive a part of Britain's export trade. If India's textile exports were to be kept up after the war some limitation of consumption cannot be wholly avoided after the war. Large-scale manufacture of shorter lengths in fewer widths and adjustment of production to military demand have already been accepted by the mill industry but the latter has not yet examined either the opportunities of direct distribution or of the sale of made-up clothing. The branch of manufacture that mills can take over after the war is the adaptation of Army clothing factories to civilian requirements in peace. A worth-while investment can certainly be found for undistributed profits or tax refunds, and the gain to the consumer may be measured in the disappearance of retail traders' margins. The arrangements in force in Britain for saving cloth and labour certainly show that something more than zonal quotas are wanted to prevent shortage and high prices. But the arrangements have entailed a reduction of both consumption and exports and deconcentration during or after the war is by no means easy. The drop in home consumption for four years may improve prospects for British textile manufacturers but it must also check a rapid recovery in exports.

Plan for Retribution

The shortest way of dealing with Japan's overseas possession appeals to Mr. Morgenthau whose post-war plan for Japan takes the form of removing all oversea territory and giving Manchuria to Russia as well as China. Though only a press forecast has come and the plan is directly traceable to the Cairo declaration, the six-point plan for U. S. retribution covers complete disarmament and the transfer of factories to China and adjacent regions. There is a proposal to limit Japan's imports even her imports of capital, and the industries which are exempt from the plan for demolition are agriculture and fisheries. The real purpose of the Vansittartist plan is to give China reparations in kind, in the form of factories and machines. It is fairly obvious that Japan after eight years of war cannot pay reparations in cash, but to give away her ships and machinery and in addition, to lose nearly all minerals would put the Empire in the very uncomfortable position of facing a strong Russia and a growing China. The question of access to markets even for such of her light industries as Japan will be allowed to keep is not dealt with. There is apparently difference of opinion as to the nature of Japan's economy as well as her contribution to the restoration of Chinese economy after the war. The most important result is probably aimed at Russia since a reward for Russian intervention in the Far East is offered in the shape of Manchuria, letting China out of that area, since the latter is to get back Formosa. In view of Allied plans to carve up Germany, the U. S. Treasury Secretary's suggestion that Manchuria including the older Japanese acquisition should be disposed of by Allied agreement might find favour. But this would extend Russian influence from the Atlantic to the Pacific and put China far nearer Russia than the U.S.A.

Declaration of War

Finland has moved sideways or Leftward in unmistakable fashion; for the third declaration of war is against Germany. The decision was reached in advance of the general election fixed for March 15 and it is antedated by sixmonths to confirm the armistice concluded with Russia. The probable results will claim more attention than any act inspired by the Soviet Armistice Commission in this case. The decision will, of course, have no effect on the armistice terms, but it may help to bring Finland back into the sterling bloc. The export outlook for wood, pulp, and paper must improve in view of the decision to join the Allies. The trade with Britain and America might grow at the same rate as her trade with Russia and Finland's economic recovery may proceed satisfactorily because of the declaration of war. The Finnish Cabinet's decision was not regulated by Allied invitation to join any conference, but it may be interpreted readily as proving that plans for a Scandinavian bloc may come to nothing. Possible results include the opening of a new front in Norway with Norwegian forces assisting Finns and the closure of the Baltic to the German fleet after its expulsion from Gydnia.

The end of winter may help the Allies to use Finland as a base for the northern-most operations against U-boats. The declaration of war against Germany will certainly defeat surmise as to the future of the Baltic States after reconquest. The fact of Russian conquest is accepted like their own armistice and one important point distinguishing her from Poland, is that Finland has no provisional regime subordinate to Moscow. The entry of Finland into the Russian orbit may put Sweden in a new position vis-a-vis Germany and Britain. Of course Sweden's foreign trade with the former has vanished but the obligations of neutrality linger. The Finnish decision may not however influence Herr Hansson's foreign policy to any extent but it must put an end to hope of a Scandinavian bloc standing outside the Russo-Anglo-French combination. Since Finland left the German alliance and the northern army was driven out, the only notable event reported was Russia's decision to compensate Anglo-Canadian interests for the loss of the nickel mines at Petsamo. But the claim for compensation did not involve Finland directly and the most that could be concluded then was that Finland's nickel was distinguishable from Rumania's oil. The declaration will, however, put Anglo-Finnish relations on a satisfactory basis, helping forestry and agriculture to play a greater part in reconstruction. The current belief that Finland is not exhausted and war damage is slight receives some support from the decision. The kind of approval that Russia may give to a new government in Finland following the election may be taken for granted, even as it may be expected that Finland has followed the flight of German armies across the Baltic States and the speed-up in the west.

One, Big Airline

Integration has been achieved in civil aviation in Britain by Lord Swinton's decision to retain and expand the B. O. A. C. It will be recalled that the Cadman Committee advocated a single, large company subject to Government supervision and a combine was created. This is to expand further but the four railway companies and the shipping companies own air subsidiaries will join as partners in the combine. A monopoly under State control will confront the multiplicity which occurs in the U. S. A. as in the field of broadcasting. Relations between Dominion and Indian companies will probably remain unchanged as contracts will run on and terms will be the the same. Though a final decision has not been taken, the interesting point is that six major shipping companies are having a small stake in civil aviation as planned about two years ago. This kind of integration, with the travel agencies also being represented in the projected company, might help civil aviation to secure more traffic. What form of assistance the Government will offer in the form of subsidies or other means cannot be learnt till the White Paper is out.

The aircraft industry held the view that civil aviation had not developed on proper lines because of the monopoly but it probably looks for development of European services to secure a market for planes. In 26 years the civil aviation industry has developed from a mushroom venture into a State controlled monopoly which may find the M. A. P. helpful in getting new machines. So far as the Dominions are concerned there will be compromises though Canada may have a share in Atlantic services because she has acquired air bases in Newfoundland and Labrador. As for India, the result may not be favourable since shipping companies will support B. O. A. C. rather than indigenous enterprise and the Empire services cannot be touched. The B. O. A. C.'s development on the basis of a central pool of machines and crews should give it a big advantage as against local rivals even those created by the Posts and Air Department. There is an inordinate faith in aviation to judge by the premium for the two quoted stocks even after the increase in their capital. This faith may not be shaken by reading of the British Government's plans to meet U. S. competition with a streamlined State-controlled airline. The nationalisation of Air France after liberation has not induced Britain to set up a State enterprise. But to improve and convert the existing company it will take money and the issue of stock to shipping companies ensures the supply of new capital in this case. The shipping companies alone are sufficiently rich and disinterested to wait for returns after a period whereas the airlines cannot. In 1943 the shipping companies looked towards South America rather than the Empire and B. O. A. C.'s expansion programme may therefore be across the South Atlantic. Since the U. S. A. has concluded agreements with Spain, Eire and Portugal as regards aerial navigation, there is a possibility of competition which the Chicago agreement did nothing to obviate. It is on this ground that Lord Swinton has decided in favour of one, big company whose development must limit the Indian government's opportunities.

The Directors beg to submit to the Shareholders the Balance Sheet and Profit and Loss Account of the Bank for the period ended 31st December, 1944.

	Rs.	A.	P.
The net profit during the 9 months, including Rs. 1,73,458-6-6 brought forward from the previous account, after providing for all known and anticipated charges an expenses of opening branches amounts to ..	14,58,011	10	6
The Directors propose to make the following appropriations out of the net profit:			
1. To transfer to Reserve Fund	7,50,000	0	0
2. To provide for Taxation	5,75,000	0	0
3. To pay Bonus to Staff	85,000	0	0
4. To carry forward to the next year's account	48,011	10	6
Total Rs. ..	14,58,011	10	6

SECOND REPORT OF THE BOARD OF DIRECTORS

During the period under review, the Bank opened a number of new branches. Preparations are also in hand for opening more branches at some suitable places. Expenses in connection with opening of new branches incurred upto the end of December last have also been provided for in the accounts under review.

The Shareholders will notice from the Auditors' Certificate that the Directors have prescribed that accounts of each branch should be audited by a qualified Auditor, as prescribed under the Indian Companies Act, and that they do not want our Statutory Auditors merely to depend in some cases on certified returns by Branch Managers.

The Bank continues to make steady progress.

In view of the continuous expansion in your Bank's activities, the Directors decided some time back to issue 2 lacs further shares of the face value of Rs. 2 crores and to call up Rs. 50 per share. Necessary sanction from the Government of India under Defence of India Rules No. 94A was duly obtained. Invitations for subscriptions to the new issue have already been sent to the shareholders.

The Directors are grateful to the shareholders and to the Bank's clients for their support and good-will in building up the bank's business. They also express their gratitude to the members of the Bank's Local Boards and Local Advisory Committees for their able guidance and work.

The General Manager, Mr. B. T. Thakur, has been working very hard and has spared no pains in developing the Bank's work and activities and the Directors on their behalf as well as on your behalf thank him most heartily for his enthusiastic, energetic and efficient work. At his suggestion, they have now provided him with the assistance of two Deputy General Managers, Messrs. S. T. Sadasivan and V. R. Sonalker. Both of them are tried and experienced bankers of long standing.

Under Article 95 of the Bank's Articles of Association, four of your Directors

Mr. M. A. Ispahani,
Mr. I. P. Goenka,
Sir Adamjee Hajee Dawood, Kt. and
Mr. Motilal Tapuriah,

retire from their office as Directors, but are eligible for re-election and offer themselves accordingly.

The Shareholders are requested to appoint Auditors for the ensuing year and to fix their remuneration.

CALCUTTA:
7th February, 1945.

G. D. BIRLA,
Chairman.

Paper Makers' Position

The year of jubilee finds paper-makers in India more concerned over the present than the future since the glimpses of the industry's history afforded by Mr. R. W. Mellor in a scrupulous survey of both achievement and possibilities only confirm general belief. The assurance that the industry as a whole is now on a firm basis is important for the reasons detailed by the Chairman of the manufacturers' association. The industry has clearly won out against high costs and official interference. It has doubled its output and is concerned only with improvement in distribution and transport. That is a fine achievement for which general appreciation should be forthcoming. The industry is certainly prepared to advance the cause of education in every manner and Mr. Mellor's hope as to the Sargent Scheme remaining a live one will be shared by those who like him expect that postwar planning will give Education high priority. There is little by way of admonition or warning but the industry's wartime record is set against the necessities of the future to show that import trade control must supplement Protection. This claim, of course, is by no means unusual, having regard to the paper industry's acceptance of price control and requisitioning of output. The industry will have an excess of capacity after the war and the function of imports can only be secondary. That is a claim sustained by a hint of reduced manufacturing expenses and the prevalence of internal competition as much as the whole attitude towards the home market's expansion in the future.

To Mr. Mellor's claim that paper-making is an important basic industry there can be no objection since the future of education depends upon cheap books and paper as much as the supply of teachers. As to the immediate future our paper-makers are more hopeful than a year ago. Their struggle against shortage of coal and raw materials is coming to an end: relaxation of the Paper Economy Order is essentially due to the increase in output that paper mills obtained. The survey (which appears on Page 315) certainly deserves the notice of investors anxious to know how the industry would stand up to peace. They should derive satisfaction both from the results recorded in 1944 and Mr. Mellor's evaluation of the future, when the printing and publishing trades resume their normal appearance. The conditions of the future present no determinate hazards and the favourable circumstances to which Mr. Mellor has drawn attention may neutralise the influence of imports. The only possible inference is that older units would continue to show great stability of earnings on the basis of an expanding market while the E. P. T. refunds supplementing reserves may act as a dividend equalisation fund to the extent that shareholders may desire. The remarkable expansion of output distinguishes paper mills from the majority of Indian industries. That expansion offers a basis for the postwar educational schemes to which Mr. Mellor's survey properly directs attention again.

Clive Street Gossip

The Federation of Indian Chambers, which had its annual session at Delhi last week, has of late changed a great deal. In its inception, it was an offshoot of the Currency League of Bombay. And for years, the ratio kept buzzing within its bonnet, to the detriment of many other questions. But formal constitution and annual sessions have helped to subject the Federation to changes more familiar in the sphere of national politics. I sometimes have to rub my eyes to make sure that I have not misread the name of a retiring or incoming President of the Federation. For there was a time when the Federation was more or less sharply divided between what we loved to call the Treasury Benches and the opposition. Any formally constituted body has such divisions—even the Editors' Conference has. But in the Federation, there was a strong team in the opposition, which was marked off from the leading lights of the Federation of that time. It was on the look-out all the time to defeat attempts to compromise the Federation's stand on political issues. And in other ways, it was a distinct entity. But of that team, there is none left. It would have been impossible then to think of J. C. Setalvad as President of the Federation. But he has been President for a year. Age, increasing importance and the changed perspective of many of the problems which divided the members of the Federation in the old days—all these have wrought the change. I am waiting to see if Maganlal Ghia, too, will have his turn at Presidentship. If he does, the disruption of the old opposition will be complete.

* * *

As for the choice of Sir Badridas Goenka for the Presidentship of the Federation, one's first thought is that it has come so late in the life of the Federation. Those who know Sir Badridas will not however wonder why. The heated controversies which were for so long the life-breath of the Federation had for Sir Badridas little to attract, and much to repel. Neither his personal inclinations nor his business associations favoured his participation in the activities of the Federation. But how long can men of his position hold off from the premier organisation representing the industrial and commercial interests of the country as a whole? Sir Badridas is now the President of the Federation. And I understand that in view of this he has already resigned his Directorship of Companies, between whose interests and the interests and views of the Federation as a body there is somewhat of a gulf. That is a sample of the man, and I am sure that he will guide the Federation well and wisely in many a question of importance.

* * *

One such will surely be coming up before the country very soon; and that, the principal fare of the Federation's fire-eaters. Mr. Manu Subedar's motion in the Assembly asking for steps to delete section 111 to section 121 of the Government of India Act 1935 has brought to a head the vexed question of commercial safeguards. I wonder, if, for alround muddling, there is another question to compare with it. The Congress and the Indian commercial community, British business in India and the British Government and last but not least, the Government of India, all have contributed towards creating the tangle that there is now. But the setting in which commercial safe-guards have to be viewed has changed vastly. Formerly, people thought in terms of the drain of wealth from this country, of developing industries one by one, and phase by phase, by discriminating protection, of making slow inroads into the position of foreign competitors. That surely meant a creeping danger against foreign business. And the devious ways of the R.T.C. were helpful to hatching the safeguards plot. But now matters are different. The Cripps proposals bypassed commercial safeguards in a way which their ultimate failure has induced people to overlook. The minimum political concessions have moved up to the stage of negotiated agreement between the two countries, which is, strangely enough, what the Montagu Chelmsford and the Simon reports favoured. On the economic plane also, we have moved from paltry protection to alround planned development; and the most obstreperous of foreign business interests cannot claim to be included among the beneficiaries of planning. The death of these commercial safeguards, always a foregone conclusion, is more so now than ever before. Mr. Manu Subedar asked for the deletion of the offending clauses of the Government of India Act. And Sir Ardeshir Dalal, who certainly saw eye to eye with Mr. Subedar, has announced that the Government of India are engaged in discussions with the Secretary of State in this matter.

* * *

My comments on contractors and public works expenditure has drawn a reasoned remonstrance from a contractor from distant Punjab. It is such a fair presentation of the contractor's case that I gladly give part of my quota of space to its publication. But my correspondent has somewhat missed the point of my review of the present position viz., that between corrupt officials and contractors who cannot stand up to them, the public interest goes by the board. I agree with the correspondent that upright officials will be an alround boon, though, I must insist, corruption is an evil which must be fought from all sides—as an Allahabad Judge put it, he who gives bribes is as much to blame as he who takes them.

* * *

Sir,

Contractor is a much-maligned person. Leading a life of great hardship which has no parallel in any other profession and working in extremely difficult circumstances in order to create real wealth of the country he nevertheless remains a constant target of unjustified attacks from all sides. Any one who can get the opportunity of having a fling at him thinks that by doing so he has done duty to himself and to the public in general. It is considered a sin to speak or write a word in recognition of the services rendered by the contractor and the useful part he plays in the economy of every country. But for his zeal, industry, business acumen, organising ability, capacity to take risks and to lead a life of hardship amidst surroundings devoid of even wholesome food and healthy water, there would be no roads, no railways, no bridges, no tunnels, no buildings, no canal, no weirs, no dams, no harbours, no dock-yards, no aerodromes, no defence works, no hydroelectric installations, no water supply schemes and no drainage. It is horrible to picture to one's mind the face of the earth if the above mentioned qualities of the contractors had not been requisitioned into service. It would not have been possible for a critic to emerge from his

comfortable drawing room to sit smugly in his car running hundreds of miles over hill and dale if the victims of his attacks had not created these amenities for him. It is one thing to become suddenly rich overnight by operating on the stock exchange and quite another thing to earn one's livelihood by the patient labour of a field worker extending over months rolling into years which the contractor has to put in. The former does no good to any body else and might conceivably bring misery to many while the latter entitles a fellow to his earnings only after he has been instrumental, through a period of hard toil, in creating real and permanent wealth of the country.

* * *

In view of the above it is a painful surprise to find "Eavesdropper" lining himself up with ignorant and irresponsible critics. It takes one's breath away to find "Eavesdropper" making the unfounded assertion that out of a rupee the real benefit to the people is worth four annas and the rest is all eaten away by high margin of contractor's profits and the bribes paid to the P.W.D. officials. If "Eavesdropper" has an opportunity to study the account books of a few contractors he will find that the truth is just the other way about and that the margin of contractor's gross profit, including all sorts of legitimate and illegitimate overhead expenses, ranges between 15 per cent and 25 per cent which is definitely less than the margin of gross profit in many other industries. With the system of tenders in vogue resulting in keen competition he would indeed be a bold man who would assert that the margin of contractor's profit is unduly high.

* * * *

There is no denying the fact that a contractor has to deal with dishonest as well as honest officers. This phenomenon is to be found in every profession and it is not reasonable to single out one profession for adverse comments.

* * *

The prevalent notion that it pays a contractor to work with a corrupt P.W.D. officer is entirely erroneous. A corrupt officer cuts a fairly big hole in the profits of a contractor by exacting a price for refraining from causing him pinpricks which if allowed to go on might cause him great loss. A corrupt officer thinks that such exactions are his due and expects the contractor to make due provision for them in working out his tender just as he would make provision for all other items of expenditure. He therefore does not consider it his duty to return to the contractor in some form or other his ill-gotten gains. Weak and vacillating due to fear of the grip of the Law a corrupt officer tries to remain on the safe side by resisting even the most reasonable demands of the contractor. The funniest part of the whole thing is that it is difficult to convince such an officer that his conduct falls below the standard of rectitude. The test that he himself employs for his so called honesty is that his garb is not affecting adversely the interests of the Government of which he is the paid servant. With a narrow and circumscribed outlook he considers browbeating as the most potent weapon to fleece contractors. The contractor seldom receives even an ordinary measure of courtesy from such an officer.

* * *

Belonging to a different class is a P.W.D. officer who is upright, just, strong, capable, conscientious, polite and sympathetic. In working with him the contractor derives great pleasure and real benefit in the form of getting and preserving his legitimate dues. Such an officer has the courage of his convictions and is not slow to meet the reasonable demands of the contractor. He takes pride in his profession and is jealous of preserving its good name. He feels that it is only the organising ability and the spirit of adventure of the contractor that can harness his own scientific knowledge to the benefit of mankind. He therefore respects the contractor and in turn is respected and loved by the latter. He sympathises with the difficulties of the contractor who in his turn tries to understand his viewpoint and gives him ungrudging cooperation in the honest discharge of his duties. Fortunately the number of such officers is growing steadily as the majority of new youthful entrants in the P.W.D. service is imbued with a fresh and wholesome spirit.

* * * *

It is amongst the subordinate ranks from the overseer downward, that corruption is most rampant. The evil arises from the fact that these low paid men are saddled with great responsibilities. Being unable to make both ends meet with the meagre pittance they receive they have as a matter of sheer necessity to fall back upon extraneous sources of income. And once these evil propensities are let loose they know no bounds. "Eavesdropper" will earn the everlasting gratitude of the contractors if he can successfully throw his weight on the side of substantial increase in the salaries of the subordinates. This will go a long way towards eradicating corruption amongst them to the great relief of the contractors.

* * * *

It can never be my intention to defend corruption in any shape or form in any profession, much less in the profession to which I myself belong. But such one sided and unbalanced views as have found expression in the Clive Street Gossip of 17th February are likely to do more harm than good. "Eavesdropper" has yet to learn that a contractor is but a creature of his circumstances and much that he is compelled to do is against his better judgement and much more against his own real interests. "Eavesdropper" has therefore started his crusade for reform from the wrong end. It is high time that "Eavesdropper" realised that a contractor is not quite the devil that he has depicted him to be. On the other hand he has a record of service to his credit which should earn for him the gratitude of the intelligent public.

* * *

Since "Eavesdropper" has written some very harsh things about the contractors, for which there is no justification, it is only fair that the opposite viewpoint may be allowed to find expression in the columns of your esteemed weekly.

A Contractor.

EDUCATION for NATIONAL POWER

What is the value of complete adult literacy without Village Libraries? On the road to knowledge which is power, students of all ages need text-books, exercise-books, rough paper for calculations, graph paper for mathematics.

Books for the fully educated are increasingly published in India — ranging from technical subjects such as medicine to cultural — thus raising a new field of authorship.

Titaghur make paper for all those purposes, from ordinary white printing for text-books to fine papers which will take offset printing in colours, or imitation art for half-tone reproduction. The printer and the publisher between them know best which Titaghur paper serves their purpose most economically.

OTHER TITAGHUR PRODUCTS

Papers and Boards for writing and typing, Ledgers or Letters, Duplicating, Binding, Packing, and Labelling.

Notepaper and Envelopes, Shorthand Notebooks.

TITAGHUR

THE MASTER-PRINTER'S CHOICE

ISSUED BY THE TITAGHUR PAPER MILLS CO. LTD.

NOTICE

Subject:—Revalidation of licenses valid for shipments in the period July-December, 1944

Licenses for the import of goods falling under Machine Tool Control Order, 1941, which were valid for shipment in the period July-December, 1944 will stand automatically revalidated to cover shipment up to the 30th June, 1945 and will not require formal revalidation by the Machine Tool Controller, Calcutta.

Olympus

(FROM OUR CORRESPONDENT)

New Delhi, March 5.

"The plainest exposure of British policy, political and economic, in India; a challenge to the United Nations' professions; a direct offensive against the Government of India and a reply to Sir Jeremy's budget and urgent guidance notes for Sir Ardeshir Dalal, Planning Member"—this is how observers here sum up the proceedings of the 18th session of the Federation of Indian Chambers of Commerce and Industry which concluded yesterday. The session is an excellent review of almost all the urgent political and economic issues facing the country. Never before has the Federation been so militant, outspoken and trenchant. It is good that the Finance Member and the Planning Member attended the session—they had a foretaste of what awaits them in the Legislature.

* * * *

Many a spirited speech was made and India's captains of industry were unequivocal in their denunciation of British policy in India. Mr. J. C. Setalvad was almost fiery when he said "I should like to emphasize this, as there has been a good deal of misunderstanding with regard to the attitude of the commercial community. Surely, British statesman should recognize that two things must be done at once for getting India's fullest co-operation; one is that the political leaders must be set free and the other is that a national government must be set up in the country at the Centre and in the provinces. There is at present no country in the world which has locked up its foremost men who are decidedly anti-Fascists and who were anti-Fascists when several of the British statesmen themselves were friendly and flirted with Fascist and Nazis". And it was not a soap-box orator's tone when he challenged "it is not a bargain she is requiring, but a recognition of her own rights and privileges and a due fulfilment of the pledges given to her time after time and this too with a view that she may be more capable of standing shoulder to shoulder with the Allied nations in the prosecution of the war and to keep the ultimate peace for the world." Mr. Setalvad dealt with the Hydari Mission and import policy and the "hush hush" over both, demanded early and orderly liquidation of the sterling balances and said that the Government should make a full statement of the operations of the Empire Dollar Pool and that henceforth either the pool should be dissolved or in any case India should cease to be a partner in it and all the dollars accumulating to India's credit should be unreservedly made available to her".

* * * *

The Conference passed as many as 18 resolutions the important of which being those relating to release of political leaders and establishment of a national government, abuse of powers vested under the D. I. R., Indo-American relations, sterling balances and dollar credits, consumer goods import, Government's policy regarding post-war trade and industrial development, Indian rights in post-war Burma, anti-Indian legislation in South Africa and East Africa and coal problem. The political resolution demanded the release of political leaders and establishment of a national government "which is essential for the economic and social development of the country". A strongly-worded resolution was passed protesting against the abuse of powers vested under the D. I. Rules—particularly Rule 122 and similar orders under the hoarding Ordinance which "deem a person to be guilty unless he proves his innocence". The resolutions relating to Indo-American relations dealt with the question of citizenship rights for Indians in the U. S. A. and suggested a Treaty of Commerce and Navigation with the Government of the U.S.A "so that Indian business men in the United States may enjoy the same status and facilities which the United States business men enjoy at present in India". The Federation protested against the anti-Indian propaganda in the United States and demanded that India's Agent-General should be made "independent of the British Embassy". The resolution on Sterling Balances and the International Monetary Fund said that "the participation of India in the International Monetary Fund or the Bank should not be agreed to unless India is given a permanent seat on the Executive Fund and unless a solution of India's sterling credits in the United Kingdom, satisfactory to Indian interests, is arrived at between His Majesty's Government and the Government of India." The resolution asked for an agreement with His Majesty's Government for easy convertibility of sterling balances into dollars and other foreign currencies and also the dissolution of the Empire Dollar Pool so that all dollars may be credited to Indian account as and when they become available. In a brilliant speech, Mr. Shroff described the forcible linking of the rupee with the sterling as an "iniquity" and charged those managing the Empire Dollar Pool with "petty-mindedness". He wanted negotiations forthwith for settling at least the principles upon which the liquidation of the sterling balances should be made.

* * *

Another valuable contribution was Mr. B. M. Birla's speech on the resolution on consumer goods imports. The resolution pointed out that these imports competed with the production of Indian industries "that are handicapped in maintaining or expanding their production in the absence of any concerted and serious effort on the part of the Government to import necessary plant, etc." The Federation reiterated its view that in order to bring about a steady increase in the standard of living, rapid industrialization of the country should be carried out without delay. In an outspoken speech, Mr. B. M. Birla referred to the Hydari mission's activities and said:

"While we enter our emphatic protest against the commitments made by that mission, we hope that now the Government will retrace its steps and take proper measures to render all possible assistance to Indian industry by obtaining for it raw materials, components, plant and other equipment which will enable it to increase its production to a substantial extent."

Mr. G. L. Mehta's resolution urged the necessity of an early declaration of industrial policy by the Government of India on three points, namely the role of the State in future; the measure and extent of protection to be extended against internal and external competition to Indian industries both in existence and those that may be started hereafter and India's participation in any international arrangements which may impede the fullest utilisation of India's resources. The resolution on Burma declared that Burma should have a national government and that the rights and privileges which Indians will have in Burma shall not in any way be less than those granted to British subjects of the U. K. Sir Badridas Goenka while speaking on the resolution on controls referred to the "sorry spectacle of the complete failure of commodity control" and added bitterly that "the Government of India could easily get the first prize if the objects of control were to prevent production, hamper distribution and injure the business community". Mr. D. P. Khaitan's resolution declared that government's war-time taxation hampered post-war industrial development and left inadequate reserves to meet post-war requirements.

* * * *

With a slashing attack on "Printing Press Raisman" as he called him, Mr. Subedar opened the Budget debate today in the Assembly. He described the Finance Member as a "true representative of John Bull and Company", who, whether Mr. Churchill was liquidating the Empire or not, was "effectively liquidating the economic life of the country". He attacked the Indian Members of the Government as "tame Indians" led by their British colleagues, and added amidst laughter "empty wagons driven by the white locomotive". Why was it, he asked, that even one of these tame Indians was not given the Finance portfolio? He described the financial settlement with Britain as a sham and a camouflage and asked whether it was not a case of Dr. Jekyll and Mr. Hyde—"the Government of England making a settlement with itself". He attacked the Defence expenditure as a heavy and unjust imposition imposed on a helpless people under the "pretext of settlements made behind our backs of which no details have been given". Replying to the Finance Member's defence that it was a "small price" for victory in the war, Mr. Subedar said: ""We know the immediate price. We know the future mortgage. We have paid the price, but where is the freedom which is our due? He described it as a price for British victory, not for Indian freedom.

* * * *

There was a tragic scene in the Assembly today—Mr. K. S. Gupta, Congress M.L.A. from Vizagapatam fell down dead in his seat in the midst of a speech castigating the Government's food policy during the budget debate. The poignancy was only heightened when the end of one of the prominent Congress legislators was almost after he said the words, ironically enough, "No food, no clothes, no doctors no medicines." He was referring to the terrible economic plight of the country. He was the third speaker in the debate after lunch.

* * * *

Mr. Gupta while feelingly speaking suddenly felt uneasy, interrupted in his speech to say "Sir, I am not feeling well," slouched in his seat and closed his eyes. Several members rushed to his side and Dr. Deshmukh tried to give him first aid but it was already too late. Mr. Gupta stopped breathing within three minutes.

* * * *

This is the first time that a member has died speaking on the floor of the House. Mr. K. C. Roy, well-known as the father of Indian journalism, also died under similar circumstances, several years ago, when the Assembly was in session in Simla, but only after he had been removed to the lobby.

(From Our Correspondent)

Bombay, March 6.

The Budget for 1945-46 has been received favourably, less for what it is than for what it might have been. The Stock Exchange was weighed down by fears of higher taxation on the eve of the Budget; and when therefore it transpired that the Finance Member was leaving all, but the Rs. 8 crores of the deficit of Rs. 163 crores to be filled up by public borrowing, there was almost a sense of elation in the markets. Shrewd observers of the market have, however, noted a strange under-current of uneasiness behind the first flush of optimism. As a portent of a bright future for our industries, the budget is almost a damp squib, as the discussions at the meeting of the Federation of Indian Chambers of Commerce and Industry clearly show. While consideration of the sterling balances issue is postponed practically *sine die* and the dollar fund increases at the miserably poor rate of 20 million dollars a year, thereby effectively militating against the receipt of capital goods vital for development, the danger of imports is very real in the Budget. In the name of relieving the strain on Indian economy, it is feared that indiscriminate imports may be allowed to take place even though such goods might well be obtained by proper encouragement of Indian industries themselves. There are already instances in which the Government of India are known to have placed orders for goods abroad at much higher prices than what Indian manufacturers themselves can supply at. Unremitting vigilance on the part of Indian businessmen is the price of survival. It is also realised that while the Finance Member was so very non-committal about postwar plans, he was very definite about the new taxes that the provinces should impose —especially the sales taxes. These are also responsible for giving rise to misgivings on the part of those who are trying to assess the future for industries. It is felt that the industries may be asked to bear many new burdens in the name of new planning without a corresponding *quid pro quo*.

* * * *

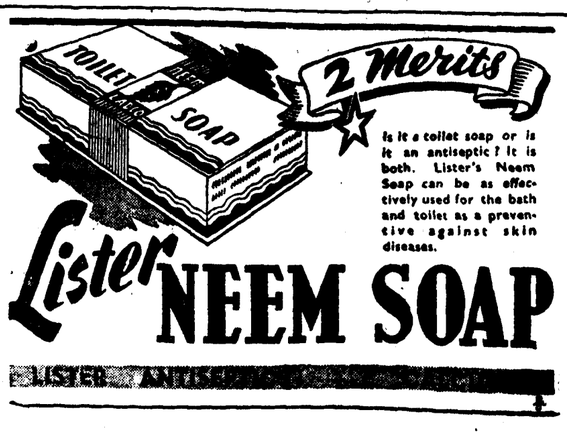
The second All-India Textile Conference held in this city last week inspires hopes that the technical development of the textile industry will not suffer from lack of attention in the future. The conferences held in the last two years are a striking success from this point of view and the Textile Association deserves to be congratulated on its efforts. The Association has the encouragement and support of the leading millowners in the country. Sir Joseph Kay delivered the inaugural address which was notable for the correct blend of realism and optimism. His approach was that of the candid businessman. He views the future of the textile industry with a measure of optimism on the ground that "we are not likely to suffer from external competition and the consequence of price-cutting from without. We know too that our mills can meet the increasing domestic requirements of the country without producing and selling at unremunerative rates and assuming, as we must, some extension of the industry, we have export markets within our reach". As regards continuance of control after the war, Sir Joseph sees no reason why government should have ground for interfering with the textile trade in the after-war years. In fact, he was emphatic that in the textile industry there should be no such thing as government versus private enterprise. He deprecated indiscriminate replacements of machinery or extensions of the plant and urged that, in view of the inflated costs, replacements should be done with due regard to the probable earnings in normal times on the capital outlay. He seemed to think that our mills will make no such mistakes and that they are capable of proceeding prudently in this regard. But he is entirely opposed to the purchase of second-hand machinery such as Sir Shree Ram, for instance, would advocate. Another point made by Sir Joseph is that the Platt Report has as much value to India for Lancashire and that Indian mills should slowly explore mass production methods. Our mills have indeed been making too many sorts of cloth which, in the order of things, tends towards a lower all round efficiency and output. It is true that in the earlier stages of fiscal protection, the Tariff Board had advocated diversification of the lines of production in order that the Indian industry might compete successfully with the foreign industry, but it is time that the textile mills concentrated on the aspect stressed by Sir Joseph Kay. This would be all the more important in the era of planning to come and the greater purchasing power for masses. Moreover, the cost of production in the post-war period would be a very important factor in resisting competition from without, and therefore everything should be done to keep it low.

As anticipated, the Textile Commissioner has extended to Ahmedabad with effect from 1st March, the regulation which now applies to the Bombay area and the suburban district, under which all goods bought from a manufacturer are frozen with the quota-holder and can only be sold and delivered to a person holding the permit of the Textile Commissioner. In the case of Ahmedabad, however, it has been decided to issue the purchase permits to the Maskati Cloth Market Association and the Panchkuva Cloth Market Association which have undertaken to ensure that the holders obtain, at not more than the legal prices, the cloth which their permits entitle them to buy. Such an arrangement, while, being welcome to the areas concerned, has the merit of lessening the strain on the administration, but the only fear is that no abuses should creep in, especially as Ahmedabad is notorious for its black markets.

* * * *

The Government of India have nominated Mr. Kasturbhai Lalbhai to represent them on the International Cotton Textile Conference to be held at the end of March. The agenda is not known but it is expected that the Conference will discuss among other things the pooling of production in the various countries for purposes of distributing in the export markets. The Government of India have made a particularly happy choice in its nominee. There are few millowners in the country with such unrivalled grasp of textile production problems as Mr. Kasturbhai Lalbhai. It is also said that he will join the Indian Industrial Mission in England. The delegation headed by Mr. J. R. D. Tata may be leaving early in April and will be proceeding to England first.

The first meeting of the Co-operative Planning Committee appointed by the Government of India to submit a plan for the development of co-operation in India will come off on the 19th March. Mr. R. G. Saraiya is the Chairman of the Committee and is a particularly appropriate choice in view of Mr. Saraiya's knowledge of co-operative problems. It is matter for gratification that the Reserve Bnak of India will be closely associated with the working of the Committee in drafting the blue-prints of a co-operative plan for the country. After all, the Planning Department may prepare and execute great schemes, but nothing less than the concrete formulation of ways to bring home the fruits of such schemes to the cultivators, the artisan and the discharged soldier or technician will avail if planning is not to go sterile. It is noteworthy that the Committee consists of both non-officials and government officials, including the military department. Mr. Sher Jang Khan of the Agricultural Credit Department of the Reserve Bank is the Secretary of the Committee, which will start its work immediately. The first part of its work will be to collate the various plans of the provincial governments, and information about the plans is being collected.



(Continued from previous page)

The activities of the Imperial Council of Agricultural Research which have hitherto been limited to research will shortly be expanded to embrace education and the application of research to everyday practice.

The Advisory Board of the Council which meets here tomorrow and the following two days will consider the question of the expansion of the Council's activities and also the regionization of agriculture and animal husbandry in India.

The proposed regionization scheme divides India into three regions on the basis of their soil, rainfall and main agricultural product. Region I includes the area lying mostly in the Indus Valley. The soil is alluvial and the main product wheat. It comprises Sind, North Bombay States, the North-West Frontier region, Punjab, Western U. P., Delhi and part of the Central India States. Region II with a rainfall of between 25 inches and 50 inches comprises Southern U. P., Central U. P. some Central Indian States, Hyderabad, Mysore, Eastern Bombay, Western Madras and South-Western Bombay. This is predominantly black cotton soil and millet producing. Region III with a rainfall above 50 inches, comprises Assam, Bengal, Bihar, Orissa, Eastern U.P., Eastern States, Eastern Madras, Madras States and South-Western Bombay. Rice is the predominant food crop in this region.

Airway Port

(From Our Correspondent)

KARACHI, March 1

Contrary to expectations, Sind's sixth war-time budget provided only a small surplus of two lakhs and odd, for the year 1945-1946. The income for the year is Rs. 8,57,37,000 and the expenditure Rs. 8,54,77,000. A feature of the budget is that it proposes no new taxation, though it foregoes none of the taxation measures which have been introduced in the last five years of the war. The budget estimates reveal a healthy financial position in which the province finds itself at present. Last year, the government of Sind, after protracted negotiations with the Government of India squared up the debt of 20,40 lakhs it owed to the Centre on account of the Sukkur Barrage, with the subvention it was receiving and placing the capitalised value of the subvention at Rs. 14,71,27,000. The balance cash value of the debt Rs. 5,68,73,000 was paid last year, and the debt was wiped out. The government of Sind also paid off last year Rs. 2,02,37,000 out of its other consolidated debt mainly from the proceeds of its 3 per cent two-crore loan raised during the year. The free balance with the government reached a figure exceeding Rs. 9 crores in 1944-45. During this year, the Barrage debt was wiped out by a lump sum payment of Rs. 4,76 lakhs at the end of the budget year.

The present prosperous financial condition of the province is due considerably to the trading activities of the government who, for the last two years, have been exporting surplus food grains of the province. The profits from trading operations amounted to fifteen lakhs in 1943, Rs. 250 lakhs in the year 1943-1944 and Rs. 91 lakhs during the current year. The trading profits thus amount to Rs. 3,83 lakhs.

The revised estimates for the current year show an all-round improvement on the revenue side. The receipt from the share of realisations from the income-tax exceeded 25 lakhs during the year, while realisation from excise reached an all-time record of Rs. 112 lakhs, three times what it was four years ago. Mr. D. R. C. Halford, Finance Secretary to the Government in his budget note characterised this as an indication of the increased earnings brought about by the war, pointing out that this item was especially sensitive to changes in prosperity.

The revised estimate of revenue from the Forest department show an increase from Rs. 18 lakhs to Rs. 42 lakhs. This is due to purchase and production of firewood departmentally.

The various provincial taxes and duties brought to the Exchequer Rs. 63 lakhs against Rs. 21 lakhs estimated originally. This increase is mainly due to an increase of Rs. 38 lakhs from petrol tax.

The ordinary land revenue of the province during the current year also reached an all-time high figure of Rs. 4,25 lakhs against actual receipts of Rs. 3,34 lakhs during the previous year. Last year, when the land revenue equalisation fund was started, the government had placed the average revenue receipts at Rs. 2,30 lakhs for the purpose of carrying any excess receipts over this figure into this fund. They have revised their basis now and the average receipts from land revenue are now to be taken at Rs. 2,50 lakhs so that any receipts over this figure are to be transferred to the revenue equalisation fund. The transfer, therefore, to this fund during the year amounts to Rs. 1,75 lakhs.

The land revenue receipts for the budget year also are estimated at Rs. 4,25 lakhs so that the transfer to the revenue equalisation fund is estimated at Rs. 1,75 lakhs. This fund, thus at the end of the budget year, will reach a comfortable total of three and a half crores of rupees.

The bumper revenue receipts that the government have experienced during the current year have also enabled them to increase their contribution to the post-war reconstruction and development fund from an estimated Rs. 50 lakhs to Rs. 1,95 lakhs. In the budget year, they intend contributing Rs. 1,35 lakhs towards this Fund which will thus stand at a figure of Rs. 3,30 lakhs at the end of the coming budget year.

Taking advantage of the good financial results of the working of this year, the government have also provided for an advance provision of the sinking fund contribution of Rs. 11.29 lakhs for liquidating the two-crore loan which they raised during the year.

This is the first budget to be introduced after the paying off of the Barrage debt and hence it does not show an interest and repayment of the Barrage debt on the one side and of subvention on the other.

The receipts from the sale of Barrage lands reached a record figure of Rs. 2,64 lakhs in the previous year, an increase of about a crore over the figures for the year 1942-43. Receipts from this source for the current year have been estimated at Rs. 2 crores while the estimates for the budget year have been placed at Rs. 1,49 lakhs.

Income from this source has been the main item in the revenue surplus in Sind's finances. In the previous year it contributed Rs. 2,64 lakhs in the revenue surplus of Rs. 1,97 lakhs. The figures for the budget are receipts from land sales of Rs. 1,49 lakhs against a revenue surplus of Rs. 1,38 lakhs. The Finance Secretary in his explanatory note on the budget contends that these figures would show that but for the receipts from land sales, the budget would be in deficit apart from the exceptionally peak year of 1943-44. Even for this year, the position is not so favourable as the figures show, as an all-round revenue of over Rs. 3,34 lakhs was retained in the revenue account without making what should have been a compulsory deposit to the equalisation fund in that year.

The local press has criticised the Premier for his convertism. A miser's hoard is the characterisation of the surplus. Nothing has been provided for nation-building departments. The only redeeming feature of the budget is the allocation of Rs. 24.75 lakhs for compulsory education in six talukas, Rs. 125 lakhs for medical facilities and Rs. 20 lakhs for roads.

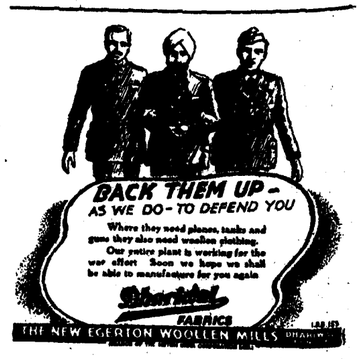
Resume of Commodity Markets

The feature of the week is the strength of the bullion markets in spite of the improvement in the war situation and the expectations of an early termination of hostilities. The raw jute and jute manufactures markets have been better while the raw cotton market has continued firm on expectations of an increase in exports and a large internal demand for cotton. In the piecegoods market confusion prevails in the various centres. In Bengal specially there is no improvement in the situation.

It looks as though the expectations of dealers in the mofussil centres of an increase in jute prices as the season progresses may be justified. The report early this week that business in hessian in the U. S. A., through normal channels, is now permitted and the news about the improvement in the coal situation have naturally encouraged holders. It may perhaps be too early yet to say that a definite improvement in the coal situation has come about but it will be reasonable to assume that the worst days have been left behind and that mill productiin from now on can be expected to be above 90,000 tons. Which means an average consumption of 4½ lakhs bales every month is assured. Even if the total consumption on this basis be about 55-60 lakhs bales there might be such an improvement in the export position that unless the licensed acreage under jute is fully utilised, a shortage of jute supplies would be felt. Of the estimated crop of 55 lakhs bales for the current season so far 42 lakhs bales have been received and it can be expected that in the next three months the balance of the crop will be fully taken up. As the reports regarding progress of sowings, or rather the preparation of land for the cultivation of jute, have not been encouraging, available supplies for the next season might be only about 75-80 lakhs bales, in which case the jute mill industry will be threatened with a definite shortage of the golden fibre. How far the lifting of the ban regarding private trading in burlap with the U. S. A. will affect the course of markets in the next few months remains to be seen

The news about the grant of permission for private trading in burlap with the U.S.A. has not come as a surprise to the market as even as early as October 1944 it was said that the U. S. A. Government was no longer interested in burlap purchases and that as the shipping situation had considerably improved and there were protests from trading interests in the U.S.A. it was considered advisable to allow trade through the previous importers. If the necessary shipping space can be found traders naturally would like to import in as large quantities as possible. The stock position here, however, does not permit of any immediate increase in hessian exports. The local stock figures for the month of February published during the week show that hessian stocks on commercial account are barely one month's consumption. Even sacking, on civil account, are only about two months' consumption. So that, if for any reason, it were decided to release large quantities of jute goods, there might be an acute shortage. That is the reason why mills are not anxious to enter into any fresh commitments without being sure about their position. Some mills were anxious to take advantage of the maximum rates a far ahead as March 1946 early in the week but forward contracts have been only for small quantities. Business for sacking for near delivery also has been satisfactory mills being only too anxious for whatever business offering.



* * * *

It cannot possibly be expected that the Bill introduced by Mr. Engle in the U. S House of Representatives to increase the price of gold to 56 dollars per fine ounce from the existing price of 35 dollars will be considered seriously as it is known that the Administration is opposed to any change in the dollar price for gold especially as the Brettonwoods proposals have been framed on the basis of the existing value of the dollar in terms of gold. Beyond the fact that it would encourage bulls in the Bombay market to continue their manipulations both in silver and gold, the Bill cannot possibly have any significance.

The bullion market has been very firm. In spite of the encouraging war news high prices have been maintained and gold ready was done upto Rs. 75. There is no suggestion of weakness as both Calcutta operators and cotton traders have been strong buyers. What exactly will be the future of bullion prices in the war period cannot be definitely stated. As has been pointed out in these columns on more than one occasion, however, the peak levels have been definitely reached. If the Brettonwoods proposals are ratified and if surplus funds find satisfactory employment it can be expected that there will be a gradual decline in prices though, it might be a long time, before complete parity in prices is reached even under free conditions of trade.

* * * *

The cloth muddle in the Bengal Province still continues and there are loud protests that consumers are not able to get their requirements. It is a fact that the control shops are being besieged and long queues are noticeable but against the statement by the Commerce Member in the Central Assembly the acute shortage of cloth and yarn in this Province is not quite explainable. The Commerce Member said that total yardage of standard cloth supplied to Bengal from 31st December 1943 to 31st December, 1944, was 169,880,377 and from January 1, 1945 to February 15, 1945, 6,596,871. The quota of cloth for Bengal was fixed on the estimated prewar consumption. It is stated that supplies in recent months admit of 13.90 yards per head. There is considerable controversy regarding the allotment to Bengal and the Provincial Government has been asking for a revision of the quota. As it was pointed out that there was a large increase in the population as a result of the influx from other provinces, it is not justifiable to fix the quota on the basis of prewar consumption. While it should be said that control measures have not been quite successful in recent months, there is not much the same difficulty in other deficit areas. Black market trading in Bengal is still on a large scale and there is greater preference for finer styles. It should not be forgotten that before the war Bengal was the biggest importer of foreign goods, both British and Japanese. In the absence of any outside sources of supply the difficulties of this province are naturally greater and in any estimate of the consumption of cotton goods by the population in this part of the country adequate regard should be paid to these factors.

Jute and Jute Manufactures

(From Our Correspondent)

Special to "Indian Finance".

Stock returns of goods in godown by mills at the end of February show a small decrease of 4,385 tons, but as production could not have been very good owing to lack of coal, the decrease is probably due more to this cause than to heavy shipments of goods, though these are believed to have been satisfactory. Commercial Hessians declined by 999 tons and commercial Heavy Goods by 2,926 tons a total decline in commercial stocks of 3,925 tons. On Government account, Sandbags decreased by 167 tons but other Hessian descriptions were higher by 441 tons. Heavy Goods on Government account were lower however by 734 tons, making a nett reduction of 460 tons. Total stocks at the end of February stood at 162,178 tons consisting of 1,086 lakhs yards, or 29,417 tons of commercial hessains, 1,595 lakhs yards, or 37,766 tons of Government hessians, 1,986 lakhs yards, or 84,296 tons of commercial heavy goods and 264 lakhs yards, or 10,699 tons of Government heavy goods. Stocks cannot be considered at all excessive, they might even be described as insufficient to meet any considerable crudescence of export demand. Since 30th June 1944, the end of the last seasonal year stocks have dropped by 34,000 tons, in which all descriptions have shared, the most notable being commercial hessians and sacking which are lower by 9,000 tons and 21,000 tons respectively, and now stand at a fi which would be considered light in times of normal trade.

Coal has of course had a good deal to say in the reduction in stocks of manufactured goods and is still curtailing production materially. The average arrivals this week look like being somewhat better, but still well short of the required quota. It is understood that the Industrial Pool had to carry a further heavy debit into account at the end of February for this cause; and as the only hope of salvation for the Pool is a regular and sufficient coal supply, the claims of an industry which has stood on its own feet, and has saved both the local and central Governments infinite embarassment by keeping its labour force quiet and contented by means of subsidies from its own funds, surely merits special consideration so that its self-contained and self-supporting scheme should not be wrecked for the lack of the few more extra waggons of coal which are admittedly essential and which have been promised times without number.

There can be no question that unfair and dishonest advantage is being taken of the subsidised payment by mills to idle labour. This is demonstrated by the fact that when a single shift mill which has been idle, starts up, a full complement of labour is available, while neighbouring "foster" mills which have been working all out, simultaneously find that they are seriously short of workers. The obvious explanation is that much of the labour force, while drawing their "dole" from the idle mill, have found another job in the working mill. But when the idle mill restarts, they must present themselves for work, otherwise they would not qualify for the "dole" when it has shut down again. It is difficult to see how this dodge can be prevented but when it is considered that the working mill is actually contributing the funds to provide the "dole" for the idle(?) workers, it is particularly galling for them to find that a considerable proportion of their workers disappear when the idle mill restarts. It is apparent that there is overhead a considerable shortage of jute-mill labour, probably more or less directly due to coal shortage stoppages, and an acute labour shortage may well appear if and when sufficiency of coal permits all out general working.

In a tentative forecast of supply and demand for raw material in the coming season, we showed last week that the Jute Industry was skating on a very narrow margin of raw material stocks. We placed the optimum crop for the coming season at around 90 lakhs of bales but this would entail the total licensed area in Bengal being sown—which is doubtful. It would also require favourable weather conditions throughout the growing period and throughout the area. Therefore for purposes of calculation it would be unsafe to count on an optimum crop, and 10 per cent less would be the maximum it could be considered safe to calculate. A the same time we consider that the current crop will yield a greater out-turn than the official estimate owing to the fact that it was permitted to mature fully and in some cases to over-mature. With these considerations before us, it may be of some interest to examine the statistical position and to demonstrate how the carry-over or marginal stock of jute is decreasing.

	Bales.
Mill stocks in godowns, stored up-country and in transit ..	23,13,000
In dealers' and cultivators' hands up-country	17,00,000
In local bazar and press-houses	3,50,000
	43.50,000
Add probable outturn of 1944-45 crop	60,00,000
Visible supply for season 1944-45	103,50,000
Estimated consumption 1944-45—	
Associated Mills	55,50,000
Export	10,00,000
Outside mills and local consumption	8,00,000
	73,50,000
Probable carry-over at 30th June, 1945	30,00,000
Probable supply 1945-46, Optimum Crop 91 lakhs bales *less* 10 per cent	82,00,000
Visible supply for season 1945-46	112,00,000
Probable consumption 1945-46—	
Associated Mills	66,00,000
Export	16,00,000
Outside mills and local ..	8,00,000
	90.00,000
Probable carry-over at 30th June, 1946	22,00,000

These figures demonstrate that there is a probability of the carry-over of marginal stock of raw material for the Industry being reduced by half between 1944 and 1946 and incidentally being reduced to a figure which represents barely four months stocks for the local mills alone—much less than they normally carry in their own godowns. A jute famine is the last thing that the major industry of Bengal should be reduced to, particularly at a time when hostilities happily seem to be nearing an end. But that contingency would appear to be the considered policy of the local Government. For the welfare of the Province, it is a policy which ought to be reconsidered in a very liberal light before the next jute season approaches.

There has been little activity to record in the Pucca bale market either for export or with local mills. Freight was reported to have been allotted for some further business for the continent but no covering was heard of. Mills have shown little interest and all principal grades are still on offer at minimum prices with plenty of jute apparently available.

In Loose Jute there has been a moderate turn-over though some of the business reported cannot yet be confirmed. European packing was reported first at Rs. 16-4 and Rs. 13-4 for Mids and Bots and then at four annas more, with the lower rate reported for District alone in assortment and for Jat Middle alone. Supervised packing was done at Rs. 15-12 and Rs. 12-12 Jat and is now held for Rs 16 and Rs. 13. Indian District Tossa is reported done up to Rs. 16 and Rs. 13. Some New Crop business has been recorded in Supervised Jat at Rs. 16-8 and Rs. 13-8 with District at eight annas less. Then later, four annas more was reported to have been paid in each case. New Crop may doubtless have some attraction for such mills as have restricted storing accommodation and who wish to cover forward sales of goods. Jute arrivals for February are estimated to amount to 5,05,000 bales, against 3,46,000 bales in February last year. Total arrivals since July thus amount to 44,93,000 bales as against 36,20,000 bales for the similar period last year.

The tone of the Hessian section of the Fabrics market is firm. Offers have gone out to the U. S. A. for a large proportion of their July/December requirements and replies are awaited. Much of this is already held by shippers and speculators and when the orders are placed it is unlikely that mills will have to take up much. On the prospect of clearing their hands of their July/December holdings, speculators are already showing interest in further forward positions and Mills are reported to have effected sales for January/March next year at maximum rates.

After the settlement of the February position in the "B" Twill Fatka, there was some subsidence in prices and the ready rate is quoted back to Rs. 65-8. Business has also been reported in P. D. O.s and in March shipment "Bs" at Rs. 64-8, while sales have been reported for April/June at Rs. 64-8 and for July/September at Rs. 62-8. A few Liverpool Twills have sold for March at maximum and Flour bags for May at Rs. 79. But generally speaking demand for heavy goods is very meagre and transactions are confined mainly to the Bazar.

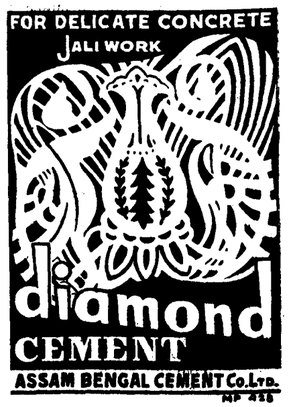
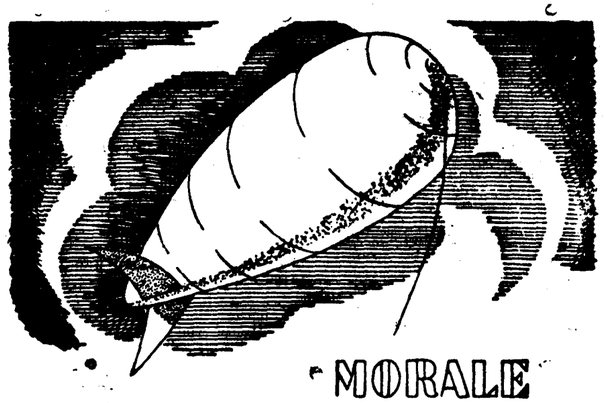
WANTED



Applications in prescribed form are invited for the post of the Director, Jute Agricultural Research under the Indian Central Jute Committee on Rs. 750—50—1,250 p.m. A higher initial salary upto Rs. 1,000 p.m. may be given if the qualifications of the candidate so merit. Qualifications required are an initial degree in Agriculture or Botany followed by a post-graduate degree in plant breeding, not below a 1st Class M.Sc. of a recognised University, with subsequent practical experience of research in plant breeding. Evidence of ability to direct research in biological sciences must be produced. The last date for the receipt of applications is the 30th April, 1945. Further particulars and the prescribed application form can be obtained from the undersigned.



B. DAS GUPTA,
Secretary,
Indian Central Jute Committee,
No. 4, Hastings Street, Calcutta.

Special Depreciation Allowances

It now appears that the special allowances in respect of new plant and machinery and buildings erected after March 31, 1945, besides the usual depreciation allowances, do not amount to much. The Finance Member has proposed a special depreciation allowance of 20 per cent on plant and machinery and 10 per cent on buildings. This special allowance is not deductible for determining the written down value. Also, this allowance is admitted as expense only for income-tax, the Excess Profits Tax being payable, before allowing for special depreciation. It is started that the overall allowances should not increase 100 per cent and that the exemption under E.P.T. is not given as companies which were able to make large profits and add to their plant considerably will derive undue advantage. We are not inclined to agree that the contention of the Finance Member is correct. In any case, the special allowances do not meet to any extent the claims put forward by the Cotton textile industry for relief under E.P.T. as it was said that with the lower profits for the standard period and the need for large replacement of machinery in the postwar period cotton mills would have to lay by large sums for rehabilitation purposes.

The relief as at present proposed is very meagre and will not prove to be helpful. It is really another method of restricting dividends and to that extent anti-inflationary in nature, from the Finance Member's point of view. As overall allowances cannot exceed 100 per cent any writing off in the value of assets in a shorter period than it would otherwise be possible with the statutory allowances will have to be completely set aside. With the prospect of no appreciable decline in taxation there will be no great inducement to take advantage of the present proposals. If the Finance Member proposes to give any relief to the industries, especially when the principle of writing off of heavy replacement costs from the revenue account has not been conceded, the allowances should be increased and allowed as a deduction for E.P.T. purposes as well.

MORALE

THE LAST WORD IN DEFENCE

Defence of a country, particularly in modern warfare, largely depends on the excellent morale of the people, irrespective of whether they are directly engaged in war work or not. It is the unshaken morale of the people of Great Britain that helped in the magnificent defence against the terrible Air Bombardment by Germany and gave the Germans the first setback. It is the knowledge of every individual and the satisfaction that their country is well defended that creates such morale. In the defence against Air Raids Baloon Barrage plays an important part. So also the efficiency of the fire fighting services and the Rescue parties. All these need—and an essential need of course—suitable and strong ropes. Hartons play the leading role in these supplies. Whatever the kind of quality in ropes may be Hartons have the variety to choose from.

JUTE

(By Our Staff Correspondent).

Calcutta, March 8.

Steady conditions have continued to prevail in the raw jute market though business has been on a smaller scale than last week. Sellers are not so anxious to book fresh orders as it is felt that with a larger enquiry from the Continent and the improvement in the coal situation, all the jute offering would be needed. The resumption of trading in jute manufactures with the United States, through normal channels would, it is believed, result in a large increase in demand so that mills would be anxious to increase production with even a slight improvement in the coal situation. It cannot be expected that there will be any large surplus even with growers cultivating jute fully to the extent of the licensed acreage. Dealers are thus in a very advantageous position. As has been pointed out before, there is no immediate hurry for mills to buy fresh stocks of jute. But if it were possible for all the steam-driven mills to continue working fully, it might be necessary to purchase raw material on a larger scale than hitherto after one or two months. The bulk of the current season's crop has arrived and the balance is in strong hands. Any appreciable increase in buying would naturally be reflected in higher rates. Even during the past few days loose jute prices are 4 annas higher. With the continued strength of mofussil markets, there cannot be any setback in prices.

In the loose jute section business has been reported in European packing Middles and Bottoms at Rs. 16-8 and Rs. 13-8 per maund while Supervised Jat Middles and Bottoms were done at Rs. 16 and Rs. 13 respectively Assam Bottoms were taken up at Rs. 11-12.

In the pucca bales section, export business has not been on a large scale as last week. There was some enquiry from the Continent and business has been reported in Firsts at Rs. 79, Special Lightnings at Rs. 75 and S.M.R at Rs. 59. Mills purchased Lightnings at Rs. 74.

JUTE MANUFACTURES

(By Our Staff Correspondent)

Calcutta, March 8.

The jute manufactures market has been very firm especially hessians. Mills have reported earlier in the week business as far as March 1946 at maximum rates. They are now reserved as it is expected that with the resumption of buying by the U.S.A. through normal trade channels, there will be a considerable increase in exports and there is no hurry to enter into commitments especially as the position in regard to coal supplies is not quite clear.

In the Heavy Goods section also steady conditions have been noticeable thanks to the recent large clearances on account of shipping instructions. "B" twills, however, are now a shade lower at Rs. 66 though mills have not shown any anxiety to discount prices. Most of the business is on account of interbazar operators.

A. CHATTERJEE, B.COM., C.A.I.L.B.
General Manager.

Local stock figures for the month of February, 1945, show that there is a decline in hessian stocks to 67,183 tons from 67,908 tons at the end of January, 1945. The decline is on account of civil goods as those on military account have increased from 37,492 tons to 37,766 tons. Sacking on civil account showed an appreciable decrease to 84,296 tons from 87,222 tons indicating that the offtake in the last month has been very satisfactory. On military account also there is a decrease to 10,699 tons from 11,433 tons. This is the first month in which a decline in sacking stocks of nearly 4,000 tons has been reported. As February is a short working month it is not clear whether the decrease in stocks of 4,300 tons is due to the lower production.

The figures are given below:

Total reported stocks of manufactured goods exclusive of Government Orders.

Description.	31-1-1945	28-2-1945
Hessian cloth and bags—		
Yards ..	10,90,15,681	10,85,73,223
Tons ..	30,416	29,417
40 ins. 8 oz. Hessian (included in above)—		
Yards ..	38,56,669	45,31,839
Tons ..	828	1,015
Sacking cloth and bags—		
Yards ..	20,32,53,334	19,86,13,513
Tons ..	87,222	84,296

Total reported stocks of manufactured goods held on Government Account.

Description.	31-1-1945	28-2-1945
Sandbags—		
Yards ..	9,91,71,435	9,84,07,140
Tons ..	20,790	20,623
Scrim cloth—		
Yards ..	48,34,038	51,74,026
Tons ..	1,391	1,454
Hessian bags and cloth and canvas—		
Yards ..	5,37,26,600	5,59,46,097

N.B.—February stock figures include returns of Gagalbhai in addition to those of member mills, but contain an estimate of the stocks of Calcutta. Nafarchandra, Katihar and Maheswari Devi. Against these are shown the actual stocks of member mills and Gagalbhai for the month of January, 1945.

PIECEGOODS

Calcutta, March 8.

In spite of the statement by the Commerce Member that the Bengal Province has received more than its share of textile goods very difficult conditions are noticeable in the local piecegoods market. Consumers are not able to get their requirements. The cloth famine now in existence has naturally been the subject of wide discussion but without complete control over distribution and an increase in supplies, it will not be possible to satisfy even a fraction of the demand. The Bengal Government have revised their freezing order to cover all dhoties, sarees and cloth which are priced above 10 annas per yard. It is also reported that they are considering the appointment of handling agents and employers. The bazar is naturally worried about the dislocation in normal trade channel as most of the business is only through a few approved government shops. But, in the absence of any clear understanding between trade interests and Government representatives, the provincial government will naturally try to get hold of existing supplies in as large a proportion as possible and try to arrange for the proper distribution of the same. So far the provincial administration has not acquitted itself in a creditable manner and unless it is able to produce actual results, there will not be faith in any schemes whatever.

In the yarn market there is no change and the freezing order continues in force. As all the stocks arriving into Calcutta come under Government control releases have been delayed. Even with the increase in yarn allotments demand is considerably in excess of supplies.
