ISSUED WEEKLY

90

Vol. XXXVI. No. 1

SATURDAY, JULY 7, 1945

Price Re. 1

1544 MOTION *re* WITHDRAWING RECOGNITION OF THE
NON-GAZETTED OFFICERS' ASSOCIATION

[Mr. W. J. Fernandez] [10th September 1946]

adequate help, we should not, I think, support their demand so strongly. We should be reasonable. Give them by all means help in such a way that you would not be throwing an unreasonable burden on the tax-payer."

M. A. SALAM SAHIB BAHADUR:—"Mr. Speaker, Sir, the point raised by the hon. Mr. Fernandez would have been well received if only this point of view had been applied when his own salary was raised. I can understand the anxiety of his community to associate themselves with whatever the Government does (Mr. Fernandez: 'No; I protest'), and his attempt now seems to be the same. This Government, as at present constituted, having twice bungled in the Scavengers' strike and the South Indian Railway strike, has committed a Himalayan blunder from which they will not be able to recover, and will not be able to settle this problem amicably—that is the cancellation of the recognition of the Non-Gazetted Officers' Association. It was the policy of this Government, as voiced by the Hon. Mr. V. V. Giri that this Government recognized peaceful picketing and peaceful ways and means to achieve the end so far as labour is concerned. But here comes a bolt from the blue—a blow below the belt. Government ought to have thought twice before they did this. If only the members of the Treasury Benches are not on the Treasury Benches, but outside, they would have rushed to the Press as soon as recognition is cancelled and would have given opinions that these things ought not to have been done. Because they are here, and because they are slowly becoming die-hards representing the old school of thought, they are not able to see the movement. Here at least they cannot have the prejudice that these organizations are backed by Communists. They can have no prejudice, and they can decide matters on facts and figures. Here is a claim which even this Government has said on their own word. For instance when the question of salaries came, it was the hon. Mr. Town who pointed to a very significant sentence in the recent Salaries Bill for Government recognizes that there was cent per cent increase in the cost of living. You said this about three months ago. This Government stood by a sentence that there was in this Presidency an increase of 100 per cent in the cost of living. Will you stand by it and give 100 per cent increase to the salaries of non-gazetted officers or do you want that these non-gazetted officers resort to a thing which you have done in the past. It was the policy of the Government of India and also this Government that whenever an interim relief is given, it is given with retrospective effect. There is no meaning in giving relief from 1st August 1946. If you think relief is necessary and that conditions warrant it—I think conditions warrant it—you should give them with retrospective effect, that is, from July 1945. You took enhanced salaries for the last four months, and you give a pittance to these non-gazetted officers. Why is this disparity shown to them?"

MERCANTILE BANK OF INDIA LTD.

(Incorporated in England)

Authorised Capital	Rs. 23,000,000
Subscribed	Rs. 11,800,000

1½ YEARLY DIVIDENDS -delivered to your door

Over Rs. 112 Crores were invested in less than eleven months in the First 3% Victory Loan (1957) withdrawn during February 1945.

The 3% Second Victory Loan (1959-61) is issued on attractive terms similar to the First, and is today's soundest investment for the big or small investor.

There is no limit to the amount you are permitted to invest.

The Loan is backed by India's wealth, and Government has guaranteed to repay at par not earlier than 15th August 1959 and not later than 15th August 1961. If between now and then you wish to realise your capital, the Loan is readily salable in the market at all times.

Interest at 3% per annum less Income-Tax will be

paid half-yearly on 15th August and 15th February and the dividend warrant will be sent to your address. You can cash it just like a cheque, and you have the satisfaction of knowing that your investment is helping India's war effort, counteracting inflation, and earning for you a good return.

To buy this Loan, apply to your Bankers, or to the Reserve Bank of India at Bombay, Calcutta, Madras, Delhi, Cawnpore or to the Branches of the Imperial Bank of India in other places or to any Government Treasury.

BOUQUETS & BRICKBATS

(From our Readers)

Lunatic System:

You have written, I am sure, what your readers are thinking about the destruction of goods and materials that took place at the American Hospital in England. When I condemned, through the columns of the *Indian Finance*, the capitalist system and the havoc Economists play in it, many of my friends did not approve of my indiscretion in saying all that I felt. Are not the burning of coffee in Brazil, the steamrolling of crockery and pianos, attempts to keep up prices, one of the feverish attempts of a lunatic system—called Capitalist system? Why should goods be destroyed in some countries? And why should people go without necessities in countries like India? The tragedy of the situation is heightened by the fact that goods of the Americans will be destroyed in India before the eyes of the hungry looking Indians. What an irony of fate it is that Sir Jeremy should preach that the well being of India depends on birth control! I wish the Government of India intervenes in this and sees to it that goods of the American Government are not destroyed. Is it not pertinent to remind that the Indians have a right to purchase these goods cheap because they have paid very dearly for articles (for no fault of theirs) when the American army entered the Indian market and raised prices.

N. Kripalani.

This Vexed Jute:

Having read your note 'What to call it, Black Market' and the letter 'Unpatriotic and Unsocial' I am only sorry for the Bengal jute grower and the jute labourer. Bengal instead of being rich and proud for having the world's monopoly of the 'golden fibre' indeed suffers for having it. The Scotchmen and Marwari get the gold leaving the malaria and the odds and ends for the Bengalees. The price of jute though theoretically controlled is still below the controlled price unlike other commodities. Like the right of James I to rule wrong it is the privilege of the Bengalee jute grower to have a monopoly for a much-needed commodity and still suffer by it. And add to these is the new menace importing jute into places like Travancore, where labour is damn cheap and manufacturing jute mattings to the detriment of the labourer in Bengal dependent on the jute industry. Unenviable indeed is the lot of the jute grower and the labourer dependent on it! Will not the Bengal Government face these problems?

N. C. Banerjee.

Sir Jeremy and Indian Population:

Your note on the subject is well written. Just as a golden flower is endowed with smell so also is the letter of Mr. Limaye to your note. Perhaps nothing more is desired.

But I wish to add my humble voice protesting against the words of Sir Jeremy whose sympathy towards us is shown too late in the day and in an unwanted direction.

When all countries of the world want to increase the population, why should India decrease it? Being an orthodox man, I believe it is God's will that men should beget children or no. Our country is vast and full of resources. If a national Government comes into power and develops the resources there will be enough and more to eat. Every mouth that is to be fed is accompanied with hands and feet to work and earn.

C. K. Murti.

I am surprised to see that your paper also does not agree with Sir Jeremy for his statement along with other papers which are led by pure sentiment. Whatever may be the direct cause of famine in Bengal it cannot be denied that the increase in population is one of the causes of famine in Bengal. When it is realised that there is not enough food for the teeming millions, instead of hanging on other countries for food and blaming them if they don't supply it, is it not sensible to adopt birth control and reduce the population? And when planners are anxious to improve the standard of living, is it wrong to suggest as Sir Jeremy has said, "post-war planning before regulation of population is building a house to accommodate ten people knowing full well that by the time it is finished the family will have increased to twelve?" Prejudiced minds cannot take advice, however, sensible it is.

Alexander Maxwell.

Change in the Coinage:

Please refer to your Editorial notes regarding change in the coinage. You say there is no necessity for ½ cent. Your argument is the ½ cent will go the same way as the pie did in the war period. You also think this country will have a high standard of living after the war. I wonder the prosperity you dream of will arrive so soon. Even the planners think only after 15 or 20 years something could be done to raise the standard of living of the people. And even if any thing is done it will only benefit the higher middle class. The masses are and will be poor. But the change in the coinage will be introduced soon. Therefore I think ½ cent should be introduced in place of the pie. Besides for religious people the pie is very useful for giving charity. If the pie goes we want a substitute in the ½ cent.

S. Afzal Hussain.

Agricultural Income Tax for Madras:

As a landlord, I am inclined to think that a reform of the tax system in Madras is not only desirable but necessary. It may be that I stand to lose by the levy of the proposed agricultural income tax. But that is no reason why I should oppose this measure if the present Act is the first step in reforming the land tax system and making it more equitable. Though I do not wish to enter the controversy going on in your paper yet there is one thing I wish to say regarding the levy of the Sales Tax and the discontinuance of prohibition.

The Sales Tax, no doubt, was levied to meet the deficit caused by enforcing prohibition. But I do not think Sales tax should not be levied the moment prohibition is withdrawn. Prohibition was withdrawn because there was not popular support of the requisite degree. The number of illicit cases increased. How can the Government infuse in the people enthusiasm when it was not there? They thought the best thing to do in the circumstances was to call off prohibition. But by the time, the war had come, the Government wanted more money. And with the coming of peace, post-war reconstruction schemes would require money. When conditions have thus changed how is it possible to withdraw the Sales Tax?

Mrs. Saroja S. Nath, B.A.

Fact Parade

Post Office Cash Certificates

Some Post Office Five-Year Cash Certificates of various denominations purchased during the period April 1917 to June 5, 1935, have not yet been discharged. As interest or bonus on these Cash Certificates has ceased to accrue, they should without further delay be presented for discharge, preferably at the post offices from which they were purchased, or at any other post office doing Savings Bank work, if it is not possible to present them at the respective post offices of issue. Claims in respect of Cash Certificates, which have been lost or destroyed or the holders of which are dead, will be duly investigated and met, if proved to be in order. It will expedite settlement of claims, (i) if at the time of claiming payment on lost or destroyed Cash Certificates the holders furnish as far as possible details of the Certificates and state the circumstances in which they were lost or destroyed, and (ii) if the heirs of the deceased holders submit with their claims the proof of their title to the Certificates.

Tax Rates in Australia and Elsewhere

Speculation has increased in Australia, following an announcement by the Federal Treasurer, that, towards the end of the year, the Government will review the whole taxation field. It has been indicated, however, that the Australian Government's taxation policy is that existing taxation is part of the economic wartime structure (including also wage-pegging, price fixation, investment control, etcetera) and that any taxation reductions, without corresponding adjustments to the rest of the structure, would unbalance the economy and tend to inflation and black marketing.

Comparative rates of taxation, on persons without dependents, in Australia, New Zealand, the United Kingdom and United States of America are shown hereunder:—

Income	Aust.	N. W.	U. K.	U.S.A.
100	—	13	—	—
150	11	19	8	—
200	22	25	22	5
250	37	40	35	17
300	55	54	49	26
350	75	70	67	30
400	95	83	88	47
500	137	118	129	68
600	179	152	171	88
800	265	225	254	130
1,000	355	305	338	175
1,500	619	534	546	287
2,000	951	805	796	426
3,000	1,747	1,472	1,402	757
5,000	3,530	3,204	2,777	1,619

40,000	35,905	34,704	35,615	29,737

Soviet Writer on Indian Poverty

The Soviet writer, M. V. Mikheev, in a travel article entitled "We Went Through India" says: "For all our lives we will retain in our memory the pitiful sight of hungry people with caved-in chests, legs thin as sticks and ribs sticking through their skins and crippled by disease."

After describing the meeting of the Congress in 1942, he says that everywhere the same demand was heard: "Give Independence—get out of India."

Human labour, says M. Mikheev, was the cheapest thing in India. "To have a couple

of servants here is bad form—there must be at least dozen of them."

"There are trains for the Indian people moving at not more than 15 kilometres an hour and special express trains for the whites with air cooling and baths in every carriage. This is fairytale India—rich and poor."

Egypt and Sterling Balances

The newspaper of the majority Wafd Party editorially has demanded that the representatives of Britain, United States, Russia, France and Egypt should investigate the British "monopoly in the Egyptian market."

The monopoly resulted from the British debt of 300 million pounds to Egypt since the start of the war, the editorial declared. It also demanded that the control of the Suez Canal be transferred to Egypt.

Abdel Rehman Biali Bey, Chairman of the Finance Committee of the Chamber of Deputies, proposed last night that the Anglo-Egyptian agreement on foreign exchange and trade should not be repeated at the end of this year on the ground that the present inflation in Egypt is largely due to her present currency and import policies.

He advocated that imports from Britain be increased to check the growth of the Sterling balance.

World-wide Sugar Shortage

The U. S. Department of Agriculture, last week disclosed that the world is facing the greatest sugar supply shortage since the close of the first world war and the prospects are not bright for an early recovery. India's 1945 sugar production is expected to decline slightly, the Department added.

Australian Surveys India's Requirements

Mr. Raymond Purvis, a prominent Australian industrialist, is visiting India shortly to investigate the possibilities of Australia supplying some of India's demands in the post-war period. Particular attention will be given to locomotive rolling stock needs and fabricated non-ferrous metals.

Geological Survey in Sandur State

A systematic geological and mineral survey has been inaugurated in Sandur State with a view to drawing up the post-war plans of the State associated with the Tungabhadra Project says a Press Note of the Sandur Darbar.

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

Extremely cheap conditions continue to prevail in the market and call money is quoting $\frac{1}{2}$ per cent in Calcutta and $\frac{1}{4}$ per cent in Bombay. The pathetic conditions in the money market, however, have not brought forth any large response for Central Government treasury bills. At the auctions held this week, with the preoccupation of banks with the closing of half-yearly accounts and the unattractive yield on treasuries, banks have not bothered to place funds in short-term bills. There was a sharp decrease in the amount of applications to Rs. 2.68 crores from Rs. 5.8 crores last week. As most of the tenders were at higher rates, the Reserve Bank had to reject many of them and the amount of accepted tenders was only Rs. 86 lakhs. Next week the Central Government will be again asking for Rs. 2 crores. Provincial Governments are anxious to take advantage of the present conditions in the market. Madras is asking for Rs. 1 crore. Bengal also is in the market for Rs. 3 crores.

It appears however that banks have taken more interest in the gilt-edged market in recent weeks even though advances have increased in the past fortnight and the statement of scheduled banks for the week ended June 22 shows a rise of nearly Rs. 6 crores to Rs. 286.58 crores.

The announcement this week that a further issue of the First Development Loan 1970-75 for Rs. 30 crores will be made is a clear indication that institutional investors are now definitely convinced that the yield on Government securities in the future will be considerably lower and that it will be advisable to place more funds in long-dated issues especially as there are no signs at present of any large withdrawal of deposits or any net decrease in the available funds for investment purposes.

The communique issued by the Government in regard to the First Development Loan 1970-75 reads as follows: "As it appears that there is a steady demand on the part of institutional investors and the market generally for a long-term investment, the Government of India have decided to create a further issue of 3 per cent Development Loan 1970-75 for Rs. 30 crores."

It will be remembered that only in the middle of April this year the First Development Loan was issued at a discount of 3 per cent for cash subscriptions and that holders of 5 per cent 1945-55 loan were offered conversion terms, the tax-free bonds being accepted at a premium of Rs. 2.8 per cent. The total amount offered for subscriptions was Rs. 40 crores. As the market was not clear about the outlook for gilt-edged and was worried about the repercussions as a result of the cessation of hostilities in the West, the response was very poor and the total amount of applications in respect of both cash and conversion was only Rs. 27 crores. The balance of Rs. 13 crores was taken up by the Government on its own investment account.

It was believed that it would be possible to liquidate the holdings of 3 per cent 1970-75 loan in the open market through the Reserve Bank but it was never expected that conditions in the gilt-edged market would improve to such an extent as to enable the disposal of the entire holdings in a short time and offer a further issue of Rs. 30 crores through the tap to institutional investors on terms ascertainable from the Reserve Bank. The demand has been so great that it has been even possible to increase the tap rate to Rs. 97-2. The First Development Loan is now regarded as very attractive. Apart from the short-dated loans $2\frac{1}{2}$ per cent 1948-52 and 3 per cent 1949-52 the only long-dated issue available for investment is the First Development Loan. With the result that there are reports regarding the possibility of a reduction in the interest rate on loans for short periods. We have already said that (the Second Victory Loan, however, is available on tap at par) short-dated loans should be on a $2\frac{1}{2}$ per cent basis. We will not be surprised if the Central Government comes out with an announcement in this respect at an early date.

The outlook for the gilt-edged market is thus very bright and prices might improve further. Non-terminable loans have been rather active with 3 per cent Paper being done at Rs. 95-6 and $\frac{1}{2}$ per cent Paper at Rs. 102-4. There are no further reports regarding the conversion of these loans into dated stock.

With the new developments in the gilt-edged market it is interesting to make a study of the statements of the scheduled banks for the last one year. One would have generally expected that the bulk of the support to the gilt-edged market would have come from scheduled banks but the table given below will clearly indicate that the net increase in investments, even on the assumption that surplus funds have been placed wholly in gilt-edged, for one year is only Rs. 48 crores. Actually, since the beginning of this year there has been disinvestment to the extent of Rs. 15 crores. If it were possible for the Reserve Bank to continue open market sales, attract subscriptions for the Victory Loans, and issue the First Development Loan, in the first instance for Rs. 40 crores, and in the second instance for Rs. 30 crores, the question might be asked as to how the whole of the money has been found. It is not possible to make any precise estimate of subscriptions to Government loans in the past one year, but it would not be far wrong if the figure were placed at say Rs. 75 to Rs. 80 crores. In the first three months of this year the surplus amount invested grew smaller, the figure on December 29, 1944 being Rs. 463.75 crores and on March 30, 1945 Rs. 405.86 crores. This drop was mainly due to the decline in the floating debt from Rs. 80.53 crores on December 29, 1944 to Rs. 39.35 crores on March 29, 1945; but there is still a balance of Rs. 18 crores to be accounted for. Banks were not anxious to invest in gilt-edged securities, as there was a rising trend in advances, and deposits did not improve in proportion to the expansion in note issue (they were actually Rs. $1\frac{1}{2}$ crores lower at Rs. 817.46 crores.) Since the end of March, however, the upward trend in deposits has again been resumed. As cash balances were rather ample, banks again started to invest in gilt-edged securities, the total of investments on June 22, being Rs. 448.4 crores against Rs. 405.86 crores on March 30. As the floating debt has not shown any increase in this period (there is actually a decline of Rs. 4.5 crores to Rs. 35 crores) it should be said that the whole of the investments have been in securities. To this extent the authorities have succeeded in forcing money which was secured on a short-term basis previously into permanent debts.

(In Crores.)				
Date	Total deposits	Total Advances	Total Cash	Surplus Invested
	Rs.	Rs.	Rs.	Rs.
22-6-45	861.13	296.00	116.73	448.40
30-3-45	817.46	296.99	114.61	405.86
29-12-44	819.01	249.20	106.06	463.75
29-9-44	778.49	213.63	122.29	442.57
30-6-44	747.43	219.90	126.71	400.82

The returns of the Reserve Bank for the week ended June 29, do not show any important changes. The total note issue at Rs. 1,146.75 crores is slightly higher with the return of rupee coin. Notes in circulation have improved to Rs. 1,136.97 crores from Rs. 1,133.18 crores. Both Sterling and rupee securities are unchanged. In the issue department there is a further jump in Central Government balances to Rs. 279.51 crores from Rs. 271.84 crores. Other government accounts also are higher at Rs. 22.37 crores against Rs. 20.5 crores. Bank deposits, on the other hand, have declined by more than Rs. 5 crores to Rs. 75.24 crores. Other deposits were Rs. 1.03 crores lower at Rs. 17.89 crores. As there was an increase in foreign balances to Rs. 395.16 crores from Rs. 388.42 crores, the drop in bank deposits with the Reserve Bank must be due to the large interest in gilt-edged and the increase in advances.

The exchange market has been steady with a larger number of export bills showing.

By Special Cable.

U. S. Financial Help to Britain

NO COMMITMENT FOR DOLLAR LOAN

Washington (By Cable).

James F. Byrnes, the new Secretary of State, has had experience in National Government, rarely possessed by public officials. During his career dating back to 1911, Mr. Byrnes, as member of the House of Representatives and the Senate, Supreme Justice and Director of War Mobilisation and Reconversion, had distinguished himself, particularly in the field of economics, and has always been a strong advocate of economy in Government. Although he disavows the New Dealer label, Mr. Byrnes, with few exceptions supported Roosevelt's policies when in the Senate and in recent years has been an exponent of post-war international co-operation along the lines laid down by Roosevelt. In one of his recent expressions on foreign policy he recommended "favourable consideration by the Congress of broad foreign policy to include extension and strengthening of trade agreements act, establishment of International Monetary Fund, establishment of International Bank for reconstruction and development, extension of authority of Export and Import Bank to finance our foreign trade and the repeal of the Johnson Act". Mr. Byrnes also feels that "as Christian humane people we gladly do our part to relieve suffering and distress in the war torn world". However, Mr. Byrnes has great solicitude for the United States taxpayer and in aiding other nations economically he may be expected to use the criterion he set while Director of War Mobilisation, namely, that the United States "must be prepared to make loans to those countries where there are reasonable prospects of repayment". 66 years-old Byrnes is a man of endless energy. He can be blunt when occasion requires and has reputation for winning most of his battles.

During the current Senate Finance Committee hearings a suggestion has again been raised that the United States should help Britain to put its finances in order before ratifying the Bretton Woods agreements. The Treasury Department this week expressed its opposition to this proposition and at the same time denied the "talk" that the United States is committed to granting Britain post-war credits for 6½ billion dollars. Specifically, the suggestion was made that the International Monetary Fund may not be operative until Britain's finances are put in order. The Chairman of the Finance Committee, Mr. Sagner, quoted the Assistant Secretary of the Treasury, Mr. Harry D. White, as saying that this would delay operation of the entire Bretton Woods Plan. He also quoted Mr. White as saying that discussions with Britain about credits so far are only "exploratory".

TREASURY BILLS

Bengal Government:

Tenders for Rs. 3,00,00,000 of three months' Government of Bengal Treasury Bills will be received at the offices of the Reserve Bank of India, Bombay and Calcutta, up to 11 a.m. on Thursday, July 12, 1945. Successful tenderers will be required to make payment and take up their bills on Saturday, July 14, 1945. Other conditions are as usual.

Central Government:

Tenders for Rs. 2,00,00,000 of three months' Government of India Treasury Bills were opened on Tuesday, the 3rd July, 1945. Total amount offered was Rs. 2,86,00,000. Tenders at Rs. 99-15-0 per cent. were accepted in full. Lower tenders were rejected. Total amount accepted was Rs. 86,00,000, the average rate of accepted tenders being As. 3-11 per cent. per annum.

Tenders for Rs. 2,00,00,000 of three months' Government of India Treasury Bills for Rs. 3,30,75,000 were sold in favour of the Issue Department of the Reserve Bank of India.

Madras Government:

Tenders for Rs. 1,00,00,000 of three months' Government of Madras Treasury Bills will be received at the offices of the Reserve Bank of India, Bombay, Calcutta and Madras up to 11 a.m. on Monday, the 9th July, 1945. Successful tenders will be required to make payment and take up their bills on Wednesday, the 11th July, 1945.

Financial Problems Before National Government

With the clouds slowly lifting from over the Simla Conference, it would be useful to examine the financial problems that will face the National Government to come. Some time ago, we discussed the problems as they could be purposefully apprehended by Sir Archibald Rowlands when he took over charge from Sir Jeremy Raisman. Though the problems are in substance the same vital differences of approach and objective make reconsideration necessary. With the finances of India in the hands of Sir Archibald and the whole Government of the country in the hands of nominees of the Viceroy, the scope of reform has perforce to be limited to practical possibilities instead of being determined by the nearest possible approximation to the ideal best. With an unreformed Government at the Centre and Section 93 ruling supreme in the Provinces, the limits to reform are felt rather than reasoned out. Nevertheless, we recognised that the scope was by no means narrow and that Sir Archibald, for his part, would be quite prepared to make the most of the opportunities that lay open to him. It may be said, therefore, that while nearly all the measures that we commended for Sir Archibald's acceptance should be equally appropriate for the National Government, the latter can be trusted to go further than a British incumbent of our Finance Membership.

As may be guessed, the difference lies in the degree and mode of deference to the British Government and to a far less extent in the eagerness of individual Finance Members to serve the best interests of this country. For our part, we have no doubt that Sir Jeremy Raisman did the best he could to India's finances in the position in which he found himself. And so would Sir Archibald, if his term of office is not to be terminated in a manner which he would himself welcome. But the pervasive authority of the British Government has always exerted itself over the Government of India as a whole and the Finance Department in particular. Where a particular course of action on the part of the Government of India is deemed, rightly or wrongly, to be in the interests of the British Government, it is discreet not to run up against it in a diametrically opposite line. To do so would be to invite a rebuff. The Government of India would seek to minimise the effects of such a policy rather than to avoid it altogether. Instances of this are not difficult to find. The most arresting of them is inflation. If a National Government had been installed at an early stage of the war similar to what is now being striven for, it might conceivably have succeeded in forcing the British and Allied Governments to adopt sounder methods of financing their war expenditure in this country.

It is idle to speculate on the exact methods which a partially independent National Government would have forced on the Allies. But it is certain that it would not have had to acquiesce, as Sir Jeremy Raisman had to, in the position that payments to India would be made only in sterling, and that the Government of India should make payments with an inflated note circulation and that they should start fighting the effects of inflation instead of the inflation itself. Another instance, though not of the same indubitable kind, is the allocation of war expenditure between the Government of India and His Majesty's Government. Here again, H.M.G. dictated the framework of the agreement with its distinction between Indian, British and common heads of expenditure. The old principle of leaving India with no more expenditure than what she can bear was discarded. In these respects, Sir Jeremy had no choice but to accept the framework. It is by concentrating on the details of application of accepted principles that he sought to secure relief for the Indian Legislature. In the matter of our foreign balances, too, the Finance Members of the old regime could hardly stand up to dictation from Whitehall.

The National Government and the Finance Member thereof may reasonably be expected to have a different status. Their views cannot be taken for granted, though legally they would continue to be a subordinate branch of His Majesty's Government. Since even the exercise of the Viceroy's veto is expected to be governed by the terms of Mr. Amery's statement, the National Government will have freedom of action in a wider sphere, though for opening up settled questions in which the British Government is interested no unilateral action is possible. The essence of the change from the old to the new regime is that unilateral action is not open to either side in matters of common concern, while in matters of exclusive Indian concern, the National Government can exercise far more of initiative and freedom of action. And since the National Government will be a greater respecter of the principle of collective responsibility than its predecessor, it is advisable to treat Finance, Commerce and Planning as more or less a single portfolio.

However, a beginning may be made with the more strictly financial problems. Our readers will remember that the principal questions we dealt with in the series of articles on the tasks before Sir Archibald, are the fight against tax evasion, a drive for efficiency of administration, the removal of corruption, institution of an economic service, the conversion of the 3½ per cent Rupee Paper to an appropriately lower interest basis, the systematisation and virtual centralization of public finance and the development of new sources of taxation commensurate with the increased burden of expenditure which planning will entail. It will be seen that this list does not include some of the crucial problems such as the bridling of inflation and the form of our foreign balances. The National Government will, doubtless, have to take up these questions without delay.

On the list of tasks and problems which the new Finance Member will tackle, inflation must for various reasons have the highest priority. For its importance in the regulation of prices, for the need to check the subversive changes in the social structure and, most of all for preparing the ground for post-war planning, inflation must claim the foremost attention. We may indicate in the first place how the new Government will be better placed than its predecessor to tackle this problem. Its predecessor was powerless to do anything at the crucial points, viz., payment of allied war expenditure in India and control over the Reserve Bank. The Reserve Bank has no means of resisting the will of the British Government when it is exerted through the Finance Department of the Government of India. To the extent that the National Government can refuse to act as a channel of communication and instead get the Bank to accept its own currency and credit policies, the position will be very much better. The National Government can and must refuse to make any further increase in the note circulation to oblige His Majesty's Government. That is the starting point. As a next step, it has to reinforce and expedite the anti-inflationary measures of the old regime. Since it is too early to fix the figure of the note circulation for the period ahead and since positive contraction of currency may lead to consequences for which we shall not be prepared for some time to come, we must be content with enforcing anti-inflationary measures to the fullest extent possible. The complete eradication of tax evasion will be found to take the Government far in the direction of deflation. Not only have the measures suitable to this end been indicated before in these columns, but the present Government have already acted on them. All that the National Government have to do is to put extra steam into the machinery devised to collect the taxes that have been evaded all these years. If the amount of money of which the Exchequer has been mulcted can be estimated even most conservatively at say Rs. 600 crores, the recovery of even half of it would be a substantial relief both to the Exchequer and to the pressure of inflation.

The other important anti-inflationary measure is the raising of Government loans and its variant, the encouragement of small savings. While the Government has so far had very impressive success in their new borrowing, it would be wrong to overlook the difference which the attitude of the average citizen to the New Government would make in the further progress of the new measures. Our readers are aware that we have all along advocated the conversion of 3½ per cent. Paper to a lower interest basis; and we need do no more than draw attention to it in this context. A reduction of ½ per cent. in interest rate would mean a saving of Rs. 1.4 crores to the Treasury. The acceleration of the small savings campaign would also be a great help not only in the withdrawal of redundant money but also in teaching people the habits of thrift and saving which they have all along neglected. Much depends on the ability of the National Government to arouse a new enthusiasm and devotion in the common people, which will stand the Government in good stead in every field of its future endeavours.

The collection of tax money that has till now evaded the vigilance of the Income Tax Department will give the National Government a new strength and a new prestige. And that would well pave the way for tackling the more important problem of imparting system to our public finance and making it more fit to bear the burden of expenditure on post-war development. It is, indeed, encouraging to see that the Working Committee of the Congress has already included this question among the principal problems to be faced. It is well to recognise the complexity of the problem in this regard. When last we examined this question in reference to what Sir Archibald Rowlands may attempt to achieve in a full term of office, we suggested that the present Finance Member should not only continue the good work done by his predecessor in tapping new sources of revenue, but should impart a high degree of centralisation to our financial system. This centralisation, we said should be factual and not legal. That is, he should aim at a considerable increase in the total

amount of revenue, which will be centrally collected and then divided among the Provinces on certain principles which will include the needs of each Province as well. The sales tax which at present is levied at different rates and in different forms in the various Provinces should, we suggested, be centralised and transformed into a turnover tax of wider range. Death duties should likewise be speedily imposed and centrally collected.

In making these suggestions, we were aware that some of the problems of federal finance which might in the future form subjects of keen controversy might be prejudiced. But for our part, we are in favour of the scope for controversy being narrowed by vigorous action now, when such action has a great deal to be said for it. We see no reason why the National Government should adopt a different course from what we commended for Sir Archibald's acceptance. The need to prepare for post-war development is, if anything, more urgent for the National Government than for the present Government. It should refuse to mark time or be a mere stop gap. The federal principle should, no doubt, be respected in other spheres. But in finance, experience has shown that there is little or no point in making a fetish of it. Neither the sources of public revenue nor their distribution nor even the channels of public expenditure are such as to suit a system of strictly federal finance. And to continue to respect the federal principle would be to neglect the task of building up a system and developing our sources in a manner most helpful to post-war development.

The one point in which we can concede a difference between Sir Archibald and his successor is that, while in the case of Sir Archibald we suggested that he should go ahead with centralisation without consulting the adviser regimes in the majority of Provinces, in the case of the National Government, it may be both incumbent on them and advisable, too, to take the Finance Ministers of the various Provinces with them in this course of action. But it is necessary that before the next budget is due, the financial outlook should be clarified and brightened beyond recognition. The basic conditions on which alone reasonably reliable forecasts of revenue and reliable estimates of new taxation can be made should be furnished. The questions in which tentative decisions should be arrived at are the currency and credit policy for a period of, say, three or four years, the policy in respect of imports and of internal production, volume of employment considered in a general way in relation to the possibilities of disemployment as a result of peace and distribution of tax burdens among the various classes of the population. The future Finance Member and the Cabinet have to furnish these conditions and get the whole position mapped out clearly by the permanent officials, reinforced by non-official economists from outside. The White Paper, which we suggested to Sir Archibald should in the case of his successor have a far wider scope. The ancillary issues, economic and other, will be examined in subsequent issues.

The Non-ferrous Metal Industry

While the Government of India and the Provinces and States are working at feverish haste to evolve postwar development schemes for India as a whole, and for the different regions, it is but natural that some of the industries which have gained strength and balance during the war years are trying to consolidate their gains and work for a prosperous future. It is gratifying to note that the representatives of the various non-ferrous metal manufacturing concerns have decided to form an association to protect and safeguard the interests of the non-ferrous metal industry in India. The Association to be formed will be affiliated to the Indian Chamber of Commerce, Calcutta. This is a move in the right direction and should be welcomed by all those who are eager to see a rapid progress in Indian metallurgical industries.

We have in the past often emphasised the need for evolving a correct and comprehensive mineral development policy in India. At present the position regarding the mineral industry is unsatisfactory in several respects. Owing to historical facts the development of mining is heavily concentrated only in a few areas. Since mineral is a wasting asset the sources would by and by be exhausted and thus there is a necessity to go in for smaller and hitherto unexploited deposits. It is not fully appreciated by those who emphasise the lack of minerals in India that the mineral wealth of this country is still only in a conjectural stage. While a few are never tired of talking of great potentialities, there are also some experts who doubt if India contains minerals to supply the ore basis for modern ferrous and non-ferrous industries. On the eve of the initiation of postwar planning it is vital to know the full details regarding the mineral wealth of India; for, in the absence of data regarding our resources, we are

likely to start planning our national economy on a wrong basis leading to heavier international commitments. Vast tracts in Bihar, Orissa, Central India, Assam, Eastern Ghats and Eastern States Agencies have not yet been surveyed by the Geological Survey. As Sir Cyril Fox recently pointed out not more than 5,00,000 square miles have been covered for the past one century while over a million square miles are yet to be taken over for detailed prospecting. Scratching the earth for ore is no doubt a risky job, but it has to be organised if the key industries of the country are to be strengthened for national purposes. We have often heard of lack of staff and insufficient funds being advanced as the reasons behind the snail's pace of the Geological Survey. It is high time that the mineral survey is speeded up to afford a correct basis for a reorganisation of the ferrous and non-ferrous industries. The Association that has been formed to safeguard the interests of the non-ferrous metals manufacturing concerns should shoulder the responsibility of agitating for greater activity on the part of the Geological Survey, for more active help by the Government and should themselves plan to reorganise and strengthen the non-ferrous concerns which have developed during the war.

The non-ferrous industry in India includes not only smelting concerns and the fabrication workshops engaged in casting, rolling and extrusion, but also the refineries reclaiming secondary metals such as copper, zinc, lead and tin from scrap and also the factories which extract the metals from the ore. To-day there are only a small number of concerns of the first type in cities like Bombay and Calcutta working on up-to-date lines but hundreds of smaller concerns are dotted throughout the country working in a crude and wasteful manner. Though these concerns have served the war effort admirably India's contribution of primary and secondary metals is very disappointing. Our country is at present known to be deficient in non-ferrous metals and in the past requirements were largely met by imports from foreign countries. Thanks to the war we have now understood that there is ample supply of bauxite for making aluminium. India's copper supplies hardly comes to one-tenth of her requirements, the present supply being only 6000 tons. Since even this is not refined electrochemically it cannot be used for a wide variety of purposes. Tin is almost totally absent in India while the size and nature of local deposits of antimony, lead and zinc have not yet been ascertained and are awaiting further investigations of the Geological Survey. The main difficulties experienced by these non-ferrous concerns are stated to be ill-developed ore deposits, difficulties in securing plants, tools and skilled personnel, want of knowledge of the uses of indigenous minerals and the uncertainty about financial returns. It is hoped that the Government of India would play an active role in tackling these problems since a healthy development of non-ferrous metals industries is essential to give strength to the ferrous industries and for the engineering industries in general.

In the absence of a detailed survey by the Geological Survey it is quite possible that the interests which stand to benefit by crushing India's ambition for developing non-ferrous industries may put forward the plea that, since suitable raw materials are not available locally, the industry has no claim on the Government for tariff protection. This argument is misleading because, in Europe many countries have given State help to non-ferrous metals industries though they could not boast of adequate ore basis. Some countries made the best of local scraps and arranged for imports. From our enquiries from trade circles we find that a large volume of scrap which India exported to Japan and other countries before the war could have served as the basis for a well organised non-ferrous metals industry in this country. Even to-day India has scrap in adequate quantities to serve as a good beginning.

The concerns have to present a united front and reorganise themselves on a stabler basis to face foreign competition which is likely to be very severe just after this war. As Mr. F. H. Kamani pointed out a few days ago, during the coming years the cost of production in India will remain high owing to heavy wartime inflation and the phenomenal increase in the cost of living. Greater inflation in India than elsewhere has also given additional competitive strength to the foreign industry. Besides, the scarcity of non-ferrous metals in this country will be another stumbling block. This can be tackled only if the activities of the Geological Survey are hurried up and finished in the course of five or ten years. Till the mineral wealth of India is fully revealed to us, the need for imports would remain. It is also necessary to remember that owing to controls here and elsewhere it will be difficult for Indian concerns to obtain metals and scraps from foreign countries; they have to depend upon internal scrap only. Further, while the prices of machinery and capital equipment are kept high in England and America, the prices of finished goods have been pressed down to lower levels; this

would also help India's competitors. There is another point to be borne in mind. The need to evolve a correct mineral development policy for India also arises out of the suspicion in commercial quarters that clause IV of the Atlantic Charter may not be applied in the real interest of India. This clause stipulates the ready availability of minerals and raw materials to all countries in the world. It is incumbent on the part of India to strengthen her industries on a stable basis, stabilise gains achieved during the war and thus qualify for procuring the required minerals and metals from the different sources of the world. It is a happy augury that Sir Ardeshir Dalal has assured the public that the conditions for tariff protection would be liberalised and the industries which have served the war effort would be given facilities for the progress and further expansion in post-war years. The recent statement of the Government of India regarding their future industrial policy envisaged offering several facilities for industries to work up for a rapid advance. Since controls are to be relaxed step by step and imports restored in the very near future the non-ferrous metals industries should prepare a practicable post-war plan estimating the productive capacity of India.

Fixing the target is the fashion of the day and the non-ferrous metal concerns should, therefore, try to work out their target to be achieved, say, in the course of five years. It would be valuable to remember two principles in this respect. The first is that, as far as possible, the production of non-ferrous metals from ores should be brought to the level of India's own consumption, and if sufficient minerals are not available internally, refining from scraps, both indigenous and imported, should be encouraged to fill the deficiency. Secondly, we should aim at the production of semi-finished articles such as sheets of copper, brass, aluminium lead, rods and tubes of copper, brass, etc., to the full extent of national requirements at the end of the first quinquennium. This would involve estimating of India's requirements of primary metals and semi-finished goods at the end of five years and probably the import figures of the five pre-war years from 1934-35 to 1939-40 would best serve as the basic period. Details regarding the proposed industrial expansion, development of power projects, transport of industries, etc., should also be taken into account for framing these estimates. We have roughly estimated the requirements of India during the first five-year period as follows:—

1. Copper tubes, rods, wires, about 200 per cent. of the 1934-39 figures.
2. Copper sheets 100 per cent.
3. Brass rods and wires 100 per cent.
4. Brass sheets 50 per cent.

India would also require about 50,000 to 60,000 tons of copper and 25,000 tons of zinc per year. As regards aluminium the present production of 8000 to 10,000 tons per year. The India Copper Corporation should be able to account for 10,000 tons in the five years, and about 10,000 tons of copper from scraps should be available for refining electrochemically. As regards zinc Dr. Antia mentions that the zinc ores of the Zawar mines are estimated to be at least 2,00,000 tons containing 6 per cent. to 13.3 per cent. zinc.

With regard to copper, prospects are quite excellent particularly in Jaipur State where the deposits can easily yield production of 8000 to 10,000 tons per year. The India Copper Corporation should be able to account for 10,000 tons in the five years, and about 10,000 tons of copper from scraps should be available for refining electrochemically. As regards zinc Dr. Antia mentions that the zinc ores of the Zawar mines are estimated to be at least 2,00,000 tons containing 6 per cent. to 13.3 per cent. zinc.

India should also endeavour to manufacture her requirements of semi-finished articles. As regards brass sheets the present production is about 10,000 tons per year and we gather that the plans have already been made to double this production in the course of five years. If the Government appreciate the great importance of non-ferrous metals industry they should come forward to finance the prospecting of non-ferrous metals though it is very risky and normally unprofitable from the business point of view. The Government should subsidise prospecting work and, if necessary, try to subscribe up to 50 per cent. of the share capital of the prospecting companies. They should also agree to pay lump sum grants, arrange for technicians and experts and give all facilities for imports of metals and scraps. The Government of India have done well in stating that control of all minerals of industrial importance should be made Central and the necessary legislative measures shall have to be carried through for a centralised and well co-ordinated control of the development as well as ordered utilisation of mineral resources in this country. The Board of Scientific and Industrial Research is sure to do its best on the side of research and by-products. We hope that the non-ferrous metals manufacturing concerns would receive the maximum consideration at the hands of the Government so that India's industrialisation could be speeded up and planned on right lines.

The War and Indian Rural Economy—V

(By our staff correspondent on tour)

According to official estimates more than two million Indians have joined as combatants in this war and at least another half a million in quasi-military service. Apart from a negligible number, who have either none to provide for at home or are foolishly extravagant, all the rest of this two and a half millions are able to put by surpluses according to their rank and pay; and as the bulk of the ranks is recruited from the villages, substantial remittances keep coming regularly into the rural areas. This is another new phenomenon, which has got to be recognised, in any survey of wartime rural conditions. Here again, it should be mentioned that neither the sources of recruitment nor the remittances consequent thereon are evenly spread over the whole of India. Only of the Punjab can it be said that the Province as a whole and every village in it has responded enthusiastically to the call to arms. The distinct martial traditions of the average Punjabi accounts for this. In the other Provinces, the bulk of the recruits has been from a few districts, while in others, it is only sparsely spread. In South India, in the districts of Tinnevely, Vellore and the States of Travancore and Cochin, almost every village can claim substantial remittances from men on war service. I have made a special study of one such village, and the following facts would show what place these remittances have in the villagers' life.

From the one hundred families in the village, 105 persons have taken to war service. Only ten families are out of the list, while more than one person has gone from several. Out of these 105 youths, only two persons did not send anything home; and they had been only six months in service. All the rest sent monthly remittances ranging from Rs. 7 to Rs. 70. (It is noteworthy that not a single recruit from this village had commissioned rank or drew a pay of more than Rs. 120). 15 of them sent between Rs. 40 and Rs. 70 per month, 10 persons sent between Rs. 20 and Rs. 39 and all the rest sent from Rs. 7 to Rs. 19. The families belonging to this lowest group who are very poor could have saved little from these amounts but for the fact that there are some members who keep behind and earn good wages in the fields. It is only when there is such a combination of more than one source of income that it has been possible to discover any saving. In all the families belonging to this lowest group, an improvement in the standard of life is conspicuous. Many of them, prior to the war, had only now and then seen a full meal a day. Now most of them are having two meals regularly; they are better clad, and the more fashionable among them, especially when there are only women left behind in the family, have taken to coffee or tea, spend something on toilet aids and frequently visit the pictures.

One delightful feature is an appreciable improvement in personal and domestic hygiene. The use of soap for example, among this group has gone up by leaps and bounds. Thanks to the concessions offered for relatives of service personnel, their children are also attending schools. Though small sums are generally being saved, the tendency is towards spending more. It looks also wise to spend rather than save for another reason. There are occasions when the soldier takes a few weeks' leave and comes home. His homeward journey is a proud and triumphant affair; with an exaggerated sense of his own importance he squanders the small amount he will be having with him on lavish payments to railway porters, cigarettes and tea to co-passengers whom he may also entertain with anecdotes of his own real or imaginary exploits; his expenses increase with his prowess as he approaches his village and if he has any money left with him, this he soon finishes by giving treats to old friends. Soon he lays his hand on whatever money is saved in the house from his previous remittances and it may even happen that he goes back on borrowed funds; the return journey is necessarily more economical. Such carnivals and extravagance send the poor family again into want and privation. Sometimes the leave period is also availed of to celebrate a hasty marriage and when the soldier leaves again for duty, his parents will have another member in the family to support! It also happens that persons who live a rigorous life and send their savings home, return to find that everything has been squandered by an impecunious relative in the village I have investigated there is one gentleman who is handing over without any deduction all his son's war savings to the neighbouring arrack shop-owner.

In the higher group i.e., where the remittances are more than Rs. 20 per month, three families have purchased landed property; more than ten families spend little and keep cash in hand. All of them have liquidated whatever debts they had. One person has invested Rs. 500 in an Ayurvedic Pharmacy. This is the only instance I could see of a productive investment in what may be called a rural industry. In the

Our London Letter

Prospects of Nationalisation

INEFFICIENT INDUSTRIES STAND TOGETHER

London, June 16.

The more the election campaign warms up, the more does the Stock Exchange get cold feet. There is no sign of slump but the whole vast market in industrial shares seems to be frozen, judging by various indices, at a point some four per cent below the peaks reached last month. Home railways have been a poor market for several months, mainly from the conviction that the question of nationalisation is likely to be prominent for next several years during which time investors and speculators will be attracted to them. At the end of the last war, Mr. Churchill himself, then a liberal politician, was convinced that railroads should be combined in one system and then nationalised. After some delay railways were amalgamated into four big systems; but the agitation for nationalisation died down while the public, especially shippers, hoped that amalgamation alone would be sufficient to bring down rates and improve efficiency. The scheme worked well in many respects. But the four new systems were heavily capitalised from the viewpoint of probable earnings and there were thousands of holders of railway shares who have never received anything but the most trifling dividends. They might be willing to cut their losses in exchange for government stock with safe interest, but they much prefer a drastic leveraging up of railway rates so that earnings will make dividends possible.

This railway situation illustrates the extraordinary continuity in British life and the British reluctance to adopt drastic reform when a little tinkering will suffice. This continuity should never be forgotten when appraising anything British. When Westminster Hall, in the House of Parliament, was built ten centuries ago timbers for the roof came from the estate of Sir George Courthorpe in Sussex; in Parliament which has just ended there was a Sir George Courthorpe sitting for Sussex seat, descendant of the original Sir George. Another member called Pym is the lineal descendant of Pym who, with Hampden and others, challenged the right of King Charles I to levy taxes without the consent of the Commons. This continuity is everywhere taken for granted and colours the popular attitude towards everything, from Ireland and India to water supply and drainage.

The campaign to get the price of aluminium down to the level at which fabricators can compete is beginning to warm up. Mr. W. C. Devereaux, Chairman and Managing Director of High Duty Alloys and Managing Director of Magnesium Castings and Products, in delivering the Edward Williams Lecture before the Institute of British Foundrymen to-day, called attention to Britain's large plant for fabricating aluminium. "As you know, the price of aluminium has been reduced from £110 to £85 per ton and I believe still further reductions can be made if the import from low-cost producers is not interfered with."

In this connection, it may be recalled that an American Expert recently predicted that in the near future the price of aluminium would be as low as 9 cents a pound (roughly £50 per long ton) and the price of magnesium would be as low as 14 cents (about 9 pence) per pound. The fixed price of magnesium in this country is now 15s. 6d. per pound but Mr. Devereaux told his audience that Canadian high purity magnesium could be sold in this country as low as 15s. 2d. per pound.

These are basic difficulties facing all light alloy industries. Taken together, the light metals industry is widely regarded as perhaps the most promising of all British industries. Certainly, its expansion in pre-war period was such as to arouse strong hopes. But it needs the cheapest possible raw material and this means that somehow or other it must have access to the cheap Canadian output. As the aluminium cartel is apparently not prepared to see its domestic market invaded without a fight, this may prove to be one of the earliest and most important of post-war battles.

But aluminium is not the only expensive raw material. Mr. Alfred Edwards, who in private life is a manufacturer and in public life a Labour M. P., makes the charge that, when a British engineering firm recently secured contract against stiff American competition to construct for £3,000,000 a barrage dam on the Nile for the irrigation of 1,000 square miles, it found that it could secure the steel which it needed for £400,000 in the United States, against £500,000 in Britain. Mr. Edwards claims that the British Government was forced to intervene before British steel could be used.

The announcement that, owing to domestic coal shortage, Britain will import coal from the Ruhr—where there are sur-

plus stocks of 7,000,000 tons immobilised by breakdown in transportation—has startled the public, bringing home the fact that talk of breakdown in British colliery industry is not mere politicians' chatter.

Imports of coal are not unprecedented. During the lock-out of coal miners in 1925 and 1926, there were fairly substantial imports; again in the 1930's a big British concern became resentful of the price demanded by companies for British coal and imported several shiploads from the Low Countries, causing great agitation among the advocates of "Buy British" as national policy.

The financial press is taking a completely objective line on the question of nationalisation of coal, the iron and steel industry, railways, and of gas and electric power. That is, it does not suggest that nationalisation is the correct solution; but it does, on the whole and with one or two exceptions, warn investors that even a Conservative Government may be driven to adopt nationalisation in the event that any given industry proves to be incapable of setting its house in order and furnishing British industry the raw materials and services it needs at prices permitting the export of British goods. In other words, whether or not the Labour Party wins the election, these particular industries are going to be limelit for a number of years and their shortcomings, if any, mercilessly discussed.

The market value of British coal, iron, steel securities as of April last years was £421,000,000; of home railways, £861,000,000; of tramways, omnibus and other transport undertakings, £134,000,000; of electric light power companies, £335,000,000; of gas companies, £335,000,000; of gas companies, £162,000,000. The grand total of market values of securities of these particular groups is £1,913,000,000 which gives a rough idea of the magnitude. Actually, this figure understates; for they do not include coastwise shipping, nor securities of small companies which are privately held and not quoted on the Stock Exchange. In transport alone, it has been estimated that the book value of capital is between £2,000 and £3,000 millions.

The Coal industry is National Problem No. 1, and the one most heartily detested by politicians of all groups. No Minister of Mines in pre-war days has ever gained any prestige from his office and today, though the post has been expanded to that of Minister of Fuel and Power, it is still under fire.

Various Gallop Polls suggest that the general public is now thoroughly fed up with the coal industry and is quite willing to see the Government take it over, lock, stock, and barrel. But this beleaguered industry, though it is headache to its biggest customers, iron and steel industry and electric power and gas industries has, nevertheless, powerful allies in the Parliament and in the Conservative Party, namely, all other big industries whose nationalisation has been more or less seriously proposed. They quite patently stand together lest they be hanged separately.

There has been much talk on both sides of the Atlantic on the possibility that Canada will raise the value of the Canadian dollar to equal that of the United States dollar. The £ sterling can buy only 4.03 American dollars but it can buy 4.45 Canadian dollars.

There are some plausible arguments for a change. Canadian finances have been handled with much skill during the war and prices there have shown substantially less inflation than prices either in the United States or Britain. Thus it is argued, that continued under-valuation of Canadian dollars is wrong, indeed, contrary to the spirit of Bretton Woods.

Nevertheless, there is a good deal of scepticism here about this report. For one thing, although Canada made giant strides in industrialism during the war, she is still on balance greatly dependent on exports of food and raw materials, and such a move would make her products more costly for the outside world to buy. Secondly, while some Canadians might take pride in seeing the Canadian dollar look the American dollar "in the face", there are other politically powerful Canadian groups which would regard this pegging of Canadian dollar to American dollar as complete severance from the sterling group and accordingly would resist it strenuously.

(Continued from previous page).

middle class families, a large part of these remittances goes only towards household expenses. No one in this village has put any money in war bonds, the Post Office or any Bank. Those who have purchased land seem to have paid too high a price for it. But they have no other means of employing the money and to have increasing amounts of cash in one's chest is not only risky, but is a standing temptation to spend. Money is a doubtful possession in the hands of those who have not cultivated habits of correct spending. On the whole one gathers the impression that in the villages from where large numbers have gone to the war, there is an alround improvement in the standard of living, a high percentage of liquidation of prewar debts and small savings in cash with the majority of the families concerned.

Editorial Notes

Liaison with the States

One notable feature of Lord Wavell's plan, which now seems to be making good progress, is the absence of all provision for co-operation between the National Government to come and the Governments of the Indian States. On the other hand, Lord Wavell specifically stressed the fact in his broadcast speech that the present proposals do not affect the relation between himself as the Crown Representative and the Indian princes. While, constitutionally speaking, the position is, no doubt, accurately stated, it is, from the practical point of view, quite unsound and even obstructive of the ultimate ends. The experience of the Government of India during the last few months should suffice to convince the Viceroy that, whatever the constitutional position may be, the need for liaison between the States and the Government of India will not be obviated by the Governor General being also the Crown Representative. It was Sir Jeremy Raisman and Sir Ardesir Dalal who had more to do with the States during the last few months than the Political Department. The statement on future industrial policy touches the States more intimately than any immediate constitutional changes that one can think of. And what is more, the National Government will have more imperative need to arrive at an understanding with the Governments of the States than their predecessors in office. In these circumstances, the need for a special machinery to ensure the collaboration between the States and the National Government in economic and other non-political matters should not be ignored. After all, the value of the present proposals for a National Government lies in its enabling the supporters and opponents of Pakistan to work together without prejudice to their respective views. And it is hoped that such close co-operation might lead either to a better understanding about Pakistan or its virtual abandonment. In either case the National Government is expected to pave the way for the solution of a ticklish constitutional problem. What can be said of Pakistan can also be said of the other great dissident part of India, namely, the States; and a similar provision for Indian and British India working together on common problems may have the effect

of facilitating planning in the first instance and of eventually getting over another big hurdle in our way to a common federation.

More British than the British

A sample of the way the Government of India are providing facilities for the establishment of new industrial units is furnished by their disposal of applications for the import of machinery for the production of vegetable ghee. It is some years since the Government came to the conclusion, of their own accord, that the production of fats should be increased very considerably in view of the vastly increased demand for animal ghee. It is also a considerably long time since they decided that permits for the production of vegetable ghee should be granted on a regional basis. But the other principles on which permits should be granted to a few among the necessarily numerous applicants and denied to the others have not been clarified. Decisions are to a large extent arbitrary; and the officials who have the responsibility are exposed to grouches and complaints. Be that as it may, the more important question is when the machinery applied for will be actually imported and when the consumer class will begin to enjoy the relief that can only come with increased production. In this matter, the applicant industrialists have naturally been more careful than the authorities. There have been cases in which arrangements with the manufacturers had been completed and definite promise of import of machinery within four months of the receipt of the permit had been obtained. That in spite of this we should be as far as ever from increased production of an essential food article is a simple fact.

The correspondence that has passed between one of such applicants and the Government of India makes distressing reading. The authorities in India seem to be more solicitous of the interests of British industry than even the British industrialists. For one of the British firms has made it clear that the British manufacturers of this machinery will not be able to carry out the orders from India for a long time to come that of the only two British manufacturers, one gets a large part of the order executed by others and that the other has to pay royalties to American interests, and that the need for dollar exchange cannot be got over by placing the orders in Britain. One would think that in this position the Indian capitalist will be given the permit to import machinery from America. But, no. He will wait for the end of the war, says the Government of India. In a palpably futile endeavour to serve British industry against its will, the Government of India have denied their own considered conclusions about the urgency of increasing the production of vegetable ghee. We think it more than likely that there are other industrialists in the country who have had similar understandings with American manufacturers but have been prevented from making any progress by a Government eager to serve British industry and conserve dollars. A few such cases will be a more powerful argument for variety in our holdings of foreign balances than a mere cry for more dollar-exchange. We shall greatly appreciate such industrialists furnishing us with details and reinforcing the case for freedom of imports from outside the sterling area.

Europe's Shortage in Sugar

Among the severe headaches of wartime Europe the shortage of sugar is by no means the least important. Before 1938, the world enjoyed glut in sugar, but the story is different since the war started with all the sur-

THACKERS PUBLISHERS—BOMBAY

prises in the East and the West. The Philip-
pines and Java passed into the Japanese
hands and Australian and West Indies' pro-
duction recorded a marked decline in produc-
tion. The world's leading exporter, Cuba,
however, managed to retain the pre-war
level and the supplies available for the U.K.,
U.S.A., and Canada are sufficient to maintain
their present rations if restrictions are en-
forced in the household consumption for can-
ning and industrial purposes. The require-
ments of the U.S. in 1945 are estimated at
6.5 million tons, and hardly one-sixth of this
is met by internal production. Imports from
Cuba, Puerto Rico, South America and
Hawaii filled the gap. The U.S. production
has decreased for the past two years and the
stocks are running short. In spite of reduc-
tion in consumption and increase in the acre-
age under sugar-beet the position in U.K. is
no better. In Canada the acreage under
beet went down just after this war and, in
spite of the recent upward trend, she is
hardly able to supply one-seventh of her re-
quirements from her own production. The
Economist (June 16), gives figures to show
that the liberated countries of Europe like
France, Belgium, Denmark, Holland and
Norway could hardly maintain one-third of
the peace time production and are suffering
acute shortage of sugar. These five coun-
tries consumed nearly 2 million tons of sugar
before the war and Belgium and Denmark
were actually self-sufficient. The peacetime
per capita consumption of sugar in the Eu-
ropean countries are:—Great Britain 50 kilo-
grammes, France 26 k.g., Belgium 31.4 k.g.,
Holland 39.6 k.g., Denmark 54.8 k.g., and
Norway 34.4 k.g. Even last year the per
capita consumption in Britain was greater
than those of Belgium and Holland. The
supply position in Europe is therefore caus-
ing anxiety for both the Victors and the
liberated.

70 per cent of Germany's sugar producing
areas is now under the Soviets, but since the
current production of Russia is not more than
a quarter of her peacetime production she
will not be able to come to the aid of the
Liberated countries. Sugar-beet is a diffi-
cult crop requiring lot of labour, machinery
and fertilisers—now in short supply in the
Continent as a result of the prolonged war.
Apart from the production of sugar-beet the
production of raw sugar and its refining pre-
sent great difficulties at present. The coal
position is bleak and this makes any plan for
rapid increase in Europe's sugar production
very difficult of achievement. Attainment of
the prewar situation depends mostly upon
coal supplies and the restoration of indus-
tries and the transport agencies. The libera-
tion of Java and the Philippines which is
just a matter of time now would relieve the
crises, but it is better that the beet producing
European countries learn the wisdom of pass-
ing on to their communities the benefits of
technical advance in cane sugar production
and not insist on self-sufficiency based on
beet production at high costs.

Commonwealth Civil Aviation

The decision to establish a Commonwealth
Air Transport Council taken at the Inter-
Imperial Talks at Montreal which preceded
the Chicago Conference, is a landmark in
the history of Commonwealth Aviation. The
Council, whose first meeting is to take place
this month, will be the supreme body that
will decide all matters pertaining to
Commonwealth air transport policy. Repre-
sentatives from Britain, the Dominions,
India, Newfoundland, Southern Rhodesia and
the Colonial Empire are included in the
Council and though mainly a consultative

The industrial development
of a country depends largely on
the extent of co-operation that its
banking services offer. From raw
material to finished product modern
industry needs all types of facilities.
Banking enables commerce and industry
to make a large turn over and effect saving
at every stage.
This bank is willing to give a helping
hand to every sound business venture.

CURRENT DEPOSIT ACCOUNTS—Interest on
daily balances from Rs. 500 to Rs. 1,00,000 will be allowed
at quarter per cent. per annum, and on sums over Rs. 1,00,000
by special arrangements. No interest which does not come to
Rs. 5 per half year will be allowed.

FIXED DEPOSITS—Received for long or short periods.
Terms on application.

LOANS, OVERDRAFTS AND CASH CREDITS.—
The Bank grants accommodation and undertakes on behalf of
its constituents the Safe Custody of Shares and Secu-
rities and the collection of dividends and interest thereon;
it also undertakes the sale and purchase of Government Papers
and all description of Stock at moderate charges. Terms on
application.

SAVINGS BANK.—Deposits received and interest allow-
ed at 1 per cent. per annum.

W. G. GROUNDWATER, General Manager.

body, the Council will be so constituted that
its deliberations will lead to action. No air
transport question of common interest will
be excluded from its purview. For the time
being, without a permanent Secretariat, the
Council has neither a fixed seat; it will meet
in various parts of the Commonwealth as
occasions demand. One of the main tasks
of the Council will be to plan reciprocal air
services between the different parts of the
Commonwealth. The new Lancastrian Ser-
vice to Australia has already made a
beginning in this direction and the next
important lines are expected to be a South
African Service and another Trans-Atlantic
Service. The B.O.A.C. will admittedly be
the chosen instrument for British Services
on the Commonwealth routes. According to
the White Paper on British Air Transport
issued last March, the B.O.A.C. will not only
have an overwhelming share in the Main
Services, it will also be having important
interests along with railway and shipping
companies in internal and European routes.

How to Prevent Denudation:

Investigations carried out at the Indian
Waterways Experiment Station, Poona, have
revealed that denudation can be effectively
prevented by soil conservation.

This remedy will not only increase the
productivity of the country, but also go far
to prevent the building up of river beds
with consequent bank erosion and floods
which in turn have adverse effects on the
health and lives of the people. In the past
the only remedy for rising beds and flood
damage in India had been to build embank-
ments. This policy can only delay the time
when the river will build up to such an
extent that it will eventually burst through
its embankments and change its course.

Experiments conducted at the Station have
demonstrated that if the charge of bed
material entering a river exceeds what can
be carried with the slope available it leads
to accretion and development of wide sandy
beds and meandering. The Kosi river is
a striking example of a river which is con-
tinually changing its course due to an excess
charge of sand. At one time the Kosi is
believed to have flowed into the Brahma-
putra and later into the Ganges far to the
East; but it is certain that it flowed into
the Mahanadi. It is now moving westwards
towards Darbhanga. Since 1892, it has
moved westwards at an average rate of
translation of about one mile per year. The
damage and devastation resulting from the
Kosi is enormous and is directly due to
denudation in the hills. All the rivers of
the Punjab and Sind have been slowly, but
steadily, building up their beds, and the
lowest excavations at Mohenjo-Daro showed
that 5,000 years ago that town was on the
ground 35 feet below the present ground
level. The breach in the Damodar Left
Embankment in 1943 is another case.

From the point of view of forestry and
agriculture, denudation of the soil results in
damage and loss of soil fertility and pro-
ductivity. It has almost always been due
to over grazing, or to deforestation for
cultivation and for obtaining supplies
of firewood. The Punjab was the first
province in India to tackle the ques-
tion on sound lines and much has al-
ready been done there in the way of de-
monstration and propaganda. The worst
denudation is, however, occurring in the
States on the Northern border of India
where control is difficult. Investigations
described in the Annual Report of the Indian
Waterways Experiment Station show that
much of the damage in the hill areas can be
set right by well-maintained terracing, wind
screens, hedges to exclude animals and by

planting trees and grass. In the areas with
flat slopes, terracing yields excellent re-
sults, provided adequate waste weirs form
part of the lay-out.

The Woollen Textile Industry in India

India, like other countries, has a long
tradition of the hand-spinning and handloom
weaving of wool but it was not until the
eighteen seventies that the application of
power to the manufacture of woollen goods
commenced in India. The indigenous hand
industry had covered a wide range of quali-

ties from coarse blankets made from the
plains and Deccan wools of India to the fine
shawls for which Kashmir had long been
famous, but power-driven factory was con-
fined to coarse goods particularly blankets.

In the eighties, woollen mills in India
began to install plant for the production of
worsted yarns with a view to meeting the
army demand for serges for which mills had
up till then, apparently imported the worsted
warp and yarn. The short wools obtainable
in India were scarcely long enough for
manipulation in a worsted plant, but wools
obtained over her land frontier from Tibet,

DYE-STUFFS FROM A LUMP OF COAL

.....the birth of a new Industry.

Hitherto the manufacture of Dye-
stuffs on a commercial scale was
never attempted in India although
on an average dye-stuffs worth over
3.5 crores are consumed in the
country every year.

India is very rich in deposits of
coal and one very important deri-
vative of coal is dye. The manufac-
turers of INDTHOL DYES have
developed the high technical effi-
ciency and skill necessary to exploit
this natural resource and have suc-
ceeded in producing high grade
dye-stuffs which are fast and have
uniformity in shade.

The important thing about
INDTHOL is that it is acceptedly a
quality product at a competi-
tive price.

Afghanistan and Persia were longer and could be so processed.

Although the mills existing in India were all utilised to the fullest extent in the production of warm clothing for the army, the greatest demand in woven fabrics was for woollen items—blankets, great coat cloth, flannels and serge.

Prosperity after the world war was short-lived in all industries and the newly established woollen mills for which plant had been purchased at a time of high prices soon joined themselves in difficulties aggravated by lack of Government demand, sales of surplus war stores and a huge volume of imports. If the industry had a grim struggle during the early nineteen twenties conditions in the last years of that and in the succeeding decade were still less favourable. This was partly due to the chaotic conditions of exchange the world over and partly also to the great expansion of Japanese imports into India. While large imports of piece-goods came into India from Japan, there were also important yarn imports which have played a valuable part in the development of the woollen industry in this country. From this yarn import resulted the establishment in Amritsar of a large number of weaving mills and in Ludhiana of many hosiery knitting factories, many of which have been engaged in the production of articles of clothing required by the armed forces during the second World War. Their normal supplies of yarn have, of course, been cut off but Government have been able to procure yarns from the United Kingdom and Australia to keep a portion at least of this valuable industry in operation.

No figures appear to be available as to the amount of capital sunk in the industry. Probably the total now invested in the industry may be taken as somewhere between three and four crores of rupees. Excluding the mills in the Amritsar area, the labour force employed is, at the moment, approximately eighteen thousand.

In India, the season in which woollen goods can be worn with anything approaching comfort is short—not more than about 4 months a year on the plains and therefore it is necessary for a mill to manufacture for many months large quantities in anticipation of a demand which may never be realised.

The individuality of the woollen trade as compared with the cotton trade is by no means confined to India but has been remarked upon all over the world. And it was rightly recognised by the established mills in India that it would be to their advantage to have a central body through which they could negotiate with the Government of India. The Central body should, as a writer in the Journal of Scientific and Industrial Research hopes, try to eliminate competition as far as possible and by a wise measure of control over production and by a frank interchange of information between the units should utilise the existing resources of the industry to do away with the necessity of importing woollen goods from abroad.

Minerals in Australia

The rapid strides of advance in Australian industrialisation are not without direct implications for the development of Indo-Australian trade. During the past five years Australia has conducted systematic surveys of the mineral wealth of the land and the findings go to show that the postwar prospects for the Australian engineering industry are bright. Coal was discovered in New-castle in 1796, copper in South Australia in 1844 and gold in Orange district in N. S. Wales but the Dominion does not propose to be content with merely living on the discoveries of the last generation. Scientific

prospecting in and around existing minefields is rated good. Complete self-sufficiency in minerals has not been attained even in the U. S. A. and the British Empire and Australia does not believe she would achieve this independence either. There are vital deficiencies to tackle and, like India, only a small part of the country has been geologically explored. That much can be achieved if prices, taxation policy and the Government aid are favourable is well indicated in the fortunes of the gold mining industry of Australia. Australia produced 3,836,096 oz in 1903 but only 427,159 oz in 1929 but since the three above mentioned factors were helpful the production came up to 1,645,697,030 oz. in 1939. Australia's chief deficiency lies in petroleum, manganese, chromium, and phosphate rock. Nauru and Ocean Island can supply phosphate rock, manganese can be imported from India and New Caledonia supplies chromium. But sustained effort is felt essential for discovering new petroleum sources. As for natural gas the workings of a disused colliery nearly 3000 ft. below Sydney Harbour have been sealed and the methane gas exuded from the coal surface is being drawn off, compressed, and used as a motor fuel. Monthly 1¼ million cubic feet are drawn (100 cubic feet is equivalent to one gallon of motor spirit). Further results of this experiment are awaited. Australia produces about 15 million tons of coal and New South Wales alone contributes 12 million tons. Extremely large quantities of lignite are available in Victoria. The scheelite deposits of Tasmania are considered the greatest in the world and this would fill a great deficiency in tungsten. In lead, zinc, copper and tin the position is good enough to meet domestic needs and bauxite resources have been recently assessed. Minerals like zircon, rutile, ilmenite and monazite are found in the Beaches. Potash bearing minerals are discovered at Lake Camprion and mica is mined in the Northern Territory. Discussing the strength and weakness of Australia's mineral economy (Ref. Australia To-day 1945) Mr. H. G. Raggatt discourages complacency since too little is known about the potentialities and urges more scientific geological surveys and systematic research.

Rubber, Synthetic and Natural

The question, will synthetic rubber supersede natural rubber is now being generally asked by various people interested in rubber who are anxious about the future of natural rubber. Synthetic as well as Natural rubber have both advantages and disadvantages. Natural rubber can be produced only in certain climates of the tropical regions. Heavy transport charges will, therefore, have to be incurred, which will increase the cost of Raw Rubber. Synthetic Rubber on the other hand can be produced in any part of the world. The resilience and strength of Raw Rubber are well known, but these qualities in Synthetic Rubbers amount to approximately nil. Likewise the insulating properties of Raw Rubber are extraordinary when compared with those of Synthetic Rubber. Raw Rubber is permeable to gas whilst Synthetic Rubbers are not.

Owing to the present scarcity of Raw Rubber, however, a large number of tyres are now being made of Synthetic Rubber, and they are unaffected by the heat generated on the road nor are they affected by oil, grease or heat with which they come into contact which in the case of natural Rubber Tyres are destructive agents. A most noteworthy feature of certain types of Synthetic Rubber is that they are impervious to certain gases and air, so that they can be highly recommended for the manufacture

of inner tubes which will be capable of retaining the inflated air for a period of at least three times longer than the Natural Rubber tyre does. Possibly a combination of natural Rubber and Synthetic Rubber will soon be found a necessity and that the combined properties of both these rubbers will advantageously affect the resultant product.

A question which arises, is whether the world production of Raw Rubber will cope with the world requirements of rubber. The prewar total production of wild rubber and plantation rubber was nearly one and a half

million tons per year. But some new species of rubber-bearing plants shrubs and vines, all of Russian origin, have now been discovered and the production of Raw Rubber will be greatly increased in the near future. Since Synthetic rubber is likely to be produced in several parts of the world there is likely to be competition between the two kinds of rubber. In any case Natural Rubber will be found a 50 per cent necessity and if rubber planters wish to keep up the plantation in a flourishing condition the price of Raw Rubber should be reasonable.

Mysore SANDALWOOD OIL

A MYSORE GOVERNMENT PRODUCT

PROSPECTUS

A copy of this Prospectus has been filed for Registration with the Assistant Registrar of Joint Stock Companies, Trichinopoly. An application will be made in due course to the Madras Stock Exchange Association Ltd., Madras and the Native Share and Stock Brokers Association, Bombay for listing the Company's shares.

The Consent of the Central Government has been obtained to this issue under Defence of India Rule 94A. It must be distinctly understood that in giving this consent the Government of India do not take any responsibility for the financial soundness of any schemes or for the correctness of any of the statements made or opinions expressed with regard to them.

THE MAGNESITE CORPORATION OF INDIA LIMITED

AUTHORISED CAPITAL - - - **Rs. 25,00,000**

(Divided into 1,25,000 ordinary shares of Rs. 10/- each and 1,25,000 preference shares of Rs. 10/- each.)

ISSUED CAPITAL - - - **Rs. 12,50,000**

Divided into 75,000 Ordinary Shares of Rs. 10/- each and 50,000 Cumulative Tax free 5% Preference Shares of Rs. 10/- each

The preference shares are entitled to first preference in the distribution of profits and in the event of winding up to return of the capital, but they are not entitled to share in the surplus profits or surplus assets of the Company.

The Subscription list will open on 3rd July 1945 and will close on 10th July 1945.

The Directors and their friends have agreed to take Rs. 1,00,000 (5,000 Ordinary and 5,000 Preference) worth of Shares and the vendors will be allotted Rs. 3,00,000 (18,000 Ordinary and 12,000 Preference) worth of shares and the balance Rs. 8,50,000 (55,000 Ordinary 33,000 Preference) are now offered to the public for subscription. ((Rs. 5 payable on application and Rs. 5 on allotment))

PROSPECTUS:

OBJECTS OF THE COMPANY.

The Company has been formed generally for the objects specified in the Memorandum of Association and particularly to acquire and work the Magnesite Deposits in the property known as Chetty Chavadi Jaghir in Salem District, Madras Presidency.

The deposits in the Chetty Chavadi Jaghir about three miles from Salem Town are the largest block in the locality known as Chalk Hills. It covers an area of approximately 2,500 acres and has been surveyed again and again both by the Government and by private parties like Mr. Schomberg (1919), Mr. Vinayaka Rao (1927), Mr. Comber (1937), and by the Geological Survey of India. The total magnesite available in this Jaghir is estimated at between 5 to 16 million tons.

1940-42. The adjacent block is owned and worked by a British Syndicate.

The quality of magnesite is exceptionally high containing about 96 to 97 per cent of Magnesium Carbonate. After careful analysis of 30 samples selected from different parts of the Jaghir, Mr. A. W. Comber, F.I.C. Associated Institute M. M. Church Gate, London, who is one of the leading authorities, on Magnesite reports:—"I have seen many magnesite properties, but this is the best in my experience".

The Jaghir is 5 miles by road from Salem Town and centrally situated for transport facilities. Karpurur Railway Station on the main railway line to Madras is only 1½ miles away.

Water for the general requirements of the work is mostly available from the Perennial streams inside the Jaghir. No special equipment or plant is necessary to collect the magnesite since huge quantities lie on the surface and in the hills and require practically only digging and picking. Calcining the magnesite can be done in the first instance in small batteries of country kilns and later by shaft kilns.

Magnesite is one of India's most valuable minerals and is now used in the United States and the Continent by various industries for a variety of purposes.

For example magnesite is used:—

- (a) For the manufacture of glazed and unglazed wall and floor, tiles.
- (b) for the preparation of sord cement and for stucco and flooring;
- (c) for the manufacture of highly refractory bricks for lining furnaces, electric furnaces, etc.;
- (d) for the manufacture of crucibles, insulators, grinding stones, imitation marbles, electric batteries, porous cells, statues and as a covering for steam boilers and steam pipes;
- (e) for coating enamelware;
- (f) for the manufacture of Magnesium Sulphate,
- (g) as filler for paper and paper pulp;
- (h) as an excellent absorbent in Dynamite manufacture;
- (i) for medical and toilet preparations;
- (j) for the preservation of timbers and sleepers, etc.,
- (k) for the manufacture of MAGNESIUM METAL;
- (l) for the manufacture of high class paints and distempers;
- (m) in the manufacture of rubber tyres; glass; indestructible stockade and building blocks.

Though Magnesite occurs in several places in the world like Greece Czechoslovakia, Canada, etc., the Magnesite deposits at Salem have been considered by Geologists to be among the best in the world.

In the Postwar periods there is likely to be a very heavy demand for Magnesite for flooring composition and for conversion into Magnesium Metal which is the lightest alloy now known.

In view of the huge reserves in the Jaghir, the Directors hope to establish several new industries with the help of the Central and the Provincial Governments.

On account of war conditions it is at present not practicable to give accurate figures regarding working expenses, etc. But the following data will suffice to give an idea to investors of the possibilities of this industry.

FOR CALCINING ONE TON MAGNESITE.

	Rs.	A.	P.
Approximate cost of 2¼ tons of raw magnesite	11	4	0
Fuel Oil	6	4	0
Calcining charges	5	0	0
Depreciation, etc. (including Rs. 7 for overhead expenses)	15	8	0
Packing, handling, etc.	18	0	0
Freight, insurance	22	0	0
Total	78	0	0

THE MAGNESITE CORPORATION OF INDIA LIMITED, PROSPECTUS—Contd.

The selling price prewar was £7 s.15 or approximately Rs. 100 per ton.

Net Profit 22 0 0

On a very conservative basis we have estimated Rs. 22 per ton profit on Calcined Magnesite, but the margin is actually higher. On this basis of a profit of Rs. 22 per ton itself the directors expect that there will be a return of about 10 per cent on the capital employed.

But it should be clearly understood that the profit figures do not include the numerous other auxiliary industries and by-products like dry ice, liquid carbon dioxide, fire bricks, etc. As Mr. Comber says "it is easy to consolidate the figures cited to show very tempting profits on progressive capitalisation. A shaft kiln for calcining 10,000 tons of Magnesite and a dry ice plant both costing £30,000 will easily yield about £54,000 per year (prewar). But the directors are content to indicate now the possibilities of this industry and would emphasise Mr. Comber's opinion that the Magnesite mines in the Jaghir should lead to big industrial activities of far reaching importance, so that when these industries are started in due course the prospects of the Company will be even better.

PAYMENT TO VENDORS.

The property is owned by the heirs of the late Raja Bahadur G. Krishnamachariar (formerly Legal Advisor and Member Judicial Committee, Hyderabad), who has had the property thoroughly inspected by Mr. Comber in 1937. The present owners Mr. K. Rangachariar, Hyderabad House, Srirangam and Mr. R. Ramaswamy for himself and his brothers Messrs. R. Srinivasan and R. Jagannathap, Cotton Press, Cantonment, Trichinopoly have entered into agreements with Mr. A. K. Sharfudin to sell the entire property for Rs. 10,00,000 (Ten Lakhs) of which Mr. A. K. Sharfudin has got the option to pay Rs. 7,00,000 seven lakhs in cash and the balance in shares of the company which option is proposed to be exercised. Mr. A. K. Sharfudin in exercise of his power to get the conveyance in favour of his nominee gives the benefit of the agreements to the Company without any consideration and the advance paid by him to the vendors will be repaid to him by the Company along with his actual expenses in promoting the Company.

EX-OFFICIO DIRECTORS.

The Managing Agents have the right to nominate one director who shall be an ex-officio director of the Company not eligible for retirement by rotation and two directors, when the Board consists of more than 7 directors.

INTEREST OF DIRECTORS.

The qualification of a director is the holding in his own name of shares of the company to the face value of Rs. 5,000.

Mr. A. K. Sharfudin is interested as holder of the option as stated above and as partner in the firm of the Managing Agents. Mr. L. N. S. Mani is the Managing Director of the Trinity Bank Ltd., Trichinopoly, who have underwritten a part of the share capital.

The Board of Directors are entitled to get 2½ per cent of the net profits of the Company as honorarium for their services in addition to their travelling expenses (net profits as defined by Section 87 of the Indian Companies Act).

A. K. Sharfudin & Co., will be the Managing Agents of the Company for a period of 20 years in the first instance and will be entitled to Rs. 1,000 per mensem as office allowance from the date of the Company comes into commercial production as may be determined by the directors, plus 7½ per cent of the net profits of the Company as per draft agreement. Further they will be entitled to an increase in their office allowance at the rate of Rs. 100 per mensem. (But subject to a maximum of Rs. 2,000 in all) for every addition of One Lakh of Rupees in the paid up capital of the Company over and above the present issue.

VOTING RIGHTS.

On a show of hands every member present in person shall have one vote. On a poll every member shall have one vote in respect of each share of either class held.

PRELIMINARY EXPENSES.

Preliminary expenses are estimated at Rs. 50,000 excluding the conveyance charges of the property.

BROKERAGE AND UNDERWRITING COMMISSION.

The Rs. 8,50,000 worth of shares now offered to the public has been underwritten to an extent of Rs. 4,00,000 by the Trinity Bank Ltd., Trichinopoly, Rs. 2,00,000 by Messrs. Gidia Industries Ltd., and Rs. 2,50,000 by Mr. P. R. Subramanyam, Bombay for a commission of 3 per cent. The underwriters have agreed to refund 1 per cent brokerage to certified brokers on allotments made on applications bearing their stamp.

The directors are satisfied that the resources of the underwriters are sufficient to discharge their obligations.

MINIMUM SUBSCRIPTION.

The directors will proceed to allotment when shares of the face value of Rs. 12,00,000 are subscribed.

INSPECTION OF DOCUMENTS.

The following documents are available for inspection at the registered office of the Company and copies of the office of the underwriters.

1. Agreement of sale in favour of Mr. A. K. Sharfudin assigned for the benefit of the Company.
2. The draft agreement with the Managing Agents which has been initiated by the Company's legal advisor for purposes of identification.
3. Underwriting letters of Messrs. The Trinity Bank Ltd., Mr. P. R. Subramanyam, and The Gidia Industries Ltd.
4. Memorandum and Articles of Association.
5. Report on the Magnesite Deposit in Chetty Chavadi Jaghir by A. W. Comber, dated 24th November, 1937.
6. Report by Mr. N. K. N. Aiyengar and Dr. M. S. Krishnan, M.A., Ph.D., Geological Survey of India (1941-42).
7. Draft Sale Deed.

GENERAL.

Applications for ordinary and preference shares are to be made in the form attached hereto and forwarded with the remittance of the amount in full to the Company's Registered Office or the offices of the underwriters and Brokers. Where no allotment is made the amount will be returned in full and where allotment is made pro-rata the surplus remaining will be refunded from the Registered Office of the Company.

("Preference in allotment will be given to those who apply for both classes of shares".)

World Cotton Problem :

Various schemes are put forward for solving the World Cotton Problem. The U.S. scheme is for subsidising exports. The Brazilian delegate to the International Cotton Committee has put forward a scheme which deserves examination. The basic principle of the Brazilian plan is that the problem should be solved only by mutual agreement between the producing countries and not by each country following its own course as the United States contemplate. Exports from each country would be determined by quotas, the surplus being bought by the respective governments. Surplus stocks of the cotton of a country can be disposed of to fulfil production quotas if the annual crop of any country should yield less than the average for the last three years; to supply future needs if world demand should exceed the present level; to supply certain grades if special circumstances should cause a lack of regular cotton grades or staple lengths; for special relief purposes internationally or domestically; for the United Nations' military defence needs. In order to prevent accumulation of future surpluses the scheme contemplates the retention of cotton acreage at the present levels, the exception being countries which reduced plantings which are allowed to return to prewar acreages. The finance for holding the surplus stocks will be provided by the U.S. Export & Import Bank which charges an interest of 3 percent per annum. The interest is payable when the country disposes of part or all of its surplus cotton. A country which breaks its export limit is to be denied credit facilities.

There is no reason why every government for carrying out this programme should be financed by the U.S. Export & Import Bank. Each Government should raise its funds in its own country. This will save interest. It is alright in theory to say that prices for exports must be fixed by the international controlling body but it will be found very difficult in practice. It is doubtful whether accumulation of cotton could be avoided if countries which have reduced their acreage in the war period are allowed

to return to prewar acreage while countries which have expanded their cotton area during wartime are allowed to continue to cultivate the expanded area. A proper arrangement would be to take a prewar period as the basic period and ask the producing countries to adjust their acreage to levels that prevailed in that period.

"A Children's Charter"

The children's charter as the new Education Act passed by the British Parliament is rightly called, aims "to secure for children a happier childhood and a better start in life". Under this Act young folk of the population will get instruction up to a higher standard than previously whether their parents are rich or poor. And when they grow up every encouragement will be given to them to continue their studies instead of being forced as in the past to discontinue for economic reasons. This right of education if translated into practice would be the fulfilment of one of the dreams of democracy.

The Act itself is not of much use unless people are acquainted with the rights and duties it confers on them. The Ministry of Education has issued a pamphlet entitled "The Nation's Schools; Their Plans", dealing with the problems bound to arise in connection with the carrying out of the provisions of the Act. To publicise the new conditions, the Ministry has also adopted the novel step of resorting to the cinema. An entertaining film illustrating the opportunities of secondary education and containing shots from a village school, a farm school, etc., is to be shown at 2,000 factories and 3,000 towns.

Provision of medical care, and training in good habits and right behaviour are to be the principal aims of the nursery school and the infant's school. Attendance at nursery school is voluntary for children between two and five, but after five it is compulsory. Thus in the early years of the new generation the healthy development of mind and body is recognised to be as important as the mere cramming of knowledge. The more significant educational changes are being

made in the secondary education. The term 'secondary' was applied to a type of school called the 'grammar school'. Now it is being transferred to a stage of education.

An interesting feature of the new Act is that young people up to 18 not attending full time school will have to attend young people's colleges for a day in the week for 44 weeks per year. The time spent at these colleges will be treated as working time.

The reforms under the Act involve heavy additional expenditure. The new educational reforms, it is estimated, will cost the country £47 million in 1951 and £80 million in subsequent years. The White Paper contained the words: "Upon the education of the people of this country the fate of this country depends". If the people of Great Britain which even before the war was spending from public funds the equivalent of Rs. 32-8-0 per head of the population on education need such an admonition, it would appear to be even more necessary in relation to India where the comparable expenditure in 1938-39 was Rs. 0-8-9 per head.

Clive Street Gossip

Though in the one or two articles I wrote some time ago I had said all that there was to be said about Indianisation of the Imperial Bank, the question has been kept alive in other sections of this journal. If I am not mistaken, there have been editorial notes on two or three occasions. Letters from correspondents, interested and otherwise, have been flowing into this office steadily, most of which have been published in "Indian Finance." I am not aware that, in spite of all this general public interest in this question has been aroused in any considerable intensity. Only a Karachi Chamber of Commerce has addressed the Bank a memorandum on this subject following the lines of my comment in these columns. There has been a flutter in those who are directly interested, I mean, the Indian staff of the Imperial Bank of India. And except for a few changes which the stricken conscience of the management has induced them to make, the position remains more or less unchanged.

No publicist would feel happy to have to return to the same topic again and again; but I can hardly see any alternative. One cannot look on when the foremost bank in the country, one which in any other part of the world would be called a national banking institution, carries on in utter disregard of its obligations to the nation. Let alone any special view that one might take of such obligations. Views of that kind are apt to have a personal equation and leave room for differences of opinion. But the Imperial Bank of India is not an ordinary jointstock bank, a kind of voluntary private association to which the law allows a large amount of freedom of action though within the limits set by the Companies Act, the Banking Act and similar relevant legislation of a general kind. The Imperial was brought into being by a special Act of the Central Legislature which authorised the amalgamation of three already privileged institutions, namely, the three Presidency Banks, conferred fresh privileges on it, invested it with a new and higher status.

And all for what? For the satisfaction of feeling that the country had been given a new bank which would seek to spread banking facilities all over the country, train up a large banking personnel and Indianise itself in course of time by helping Indians to positions of power and responsibility. It is precisely in respect of this Indianisation that the Bank has flouted the wishes of its Godfather, the Central Legislature. And in the process it has marred the careers of hundreds of talented Indians, and makes no promise yet of mending its ways in spite of the publicity given to this grievous wrong.

The first time I gave vent to my feelings in this matter was when Sir William Lamond's retirement fell due; and I urged in these columns that the opportunity must be availed of to cut at the root of this evil by putting an Indian at the head of the Imperial. One would have thought the Imperial Bank Board, at least the Indian section of it, would be quick to act on the suggestion and take the necessary steps. But, no. Sir William was persuaded, as the phrase goes, to accept an extension of his term. But extensions have their limit; and for the same reason for which I first dealt with

this question in these columns, I return to it now. Sir William, I understand, has decided to retire from the Bank; all the importunities of the Central Board will be of no avail. There is a limit to which one can oblige the Board by agreeing to continue on a lakh-a-year job. The question of his successor will come up before the Board again.

At this point, the reader will perhaps start pitying me for my irrepressible optimism or zeal for the cause, whichever you call it. But I protest, it is neither zeal nor optimism, as you would regard it. It is, on the other hand, a not unreasonable expectation that the members of the Central Board of the Imperial are alive to what is now agitating the national mind as a whole and activating in particular the Viceroy and the leaders of the principal political parties in Simla. The whole country, inclusive of the worst pessimists among the nationalists and the worst toadies going, has persuaded itself that political freedom and its embodiment, a national Government, are round the corner, that Indians need no longer live or flourish on the sufferance of others and that we may from now enter into our just rights without looking to any one's favours or dreading anybody's frowns. I suppose it will be granted that Indianisation of the Imperial Bank is one of such rights, apart from every Indian officer in the Bank being entitled by virtue of his initial understanding with the Bank, his service and his capacity and attainments to every kind of promotion and preferment that has been given to European colleagues who cannot compare quite favourably with himself. I suppose, too, that the members of the Central Board read their morning newspapers, react to the principal news items therein and feel something of the hopes that have been surging in the mind of every Indian. On these suppositions, the cause that I again champion is not a forlorn cause.

But, before I proceed, let me for the sake of completeness recapitulate the old story and bring it up-to-date. As is well-known, the policy of the Imperial Bank has so far been fashioned on such lines that Indians are not able to look upon it as an Indian institution. In no important respect is there much to choose between the policy and attitude of the Imperial Bank and the policy and attitude of the

foreign exchange banks operating in this country. But on paper, there has to be a difference. As a sop, therefore, a scheme of apprenticeship for Indian Officers was instituted in the early 'twenties; and the biggest indictment of the European Managing Directors is that no progress worth speaking of has been made with the Indianisation of the Bank. I had dealt in detail on former occasions with the hardships and handicaps to which Indian Officers have been subjected in the Bank. As a retort to the charges I had made, one of the British Directors of the Bank pointed out to me that there are now many Indian Staff Officers in the Bank while there was hardly any twenty years ago. I challenged my friend to show whether there was an Indian Officer in the Bank who was getting a salary of Rs. 1,500 or above. I had assured my friend, if he accepted this challenge and quoted instances where Indians were getting salaries of over Rs. 1,500, I would gladly give the most prominent publicity to his reply. My challenge was not taken.

In fact, it could not be. For, the truth of the matter is that, in the annals of the working of the Imperial Bank, and before that, in the working of the three Presidency Banks, there has not been a single case of an Indian getting a substantive salary of Rs. 1,500. This points to a most deplorable state of affairs with regard to promotion of Indian Officers. There are four grades of Staff Officers. The fourth, which is the lowest, has about 50 Indians, whose average age would be 42 to 44. As most officers start their career in the Imperial Bank quite early in their lives, they become due for retirement in their late forties. That is to say, the 50 Indian Staff Officers in the fourth grade may become due for retirement in five to seven years; and it would be lucky indeed

K. N. DALAL, Managing Director.

if twenty or ten per cent of them are in the service of the Bank sufficiently long to be promoted to third grade. There are only five Indians in the third grade. And so far as I can gather, they owe their lift to the very strong case that I put up in these columns. There is one solitary

Indian admitted to the status and emoluments of the second grade. No one has so far been in the first grade at all. A careful analysis of the careers of the past Indian Staff Officers of the Bank shows that, with the rate of promotion now obtaining, the maximum rise available to

the most competent of men is second grade. Even a mediocre amongst the British Staff Officers can count on the first grade as a dead certainty. That is as regards the staff.

As regards policy, one can deduce it from two circumstances, the personnel of the higher staff from which as I have pointed out Indians are rigorously kept out regardless of their ability and all other claims, and secondly, the personnel of the Central Board. The constitution of the Central Board, one would think, would conform to the principles of a joint-stock Company, or to the principles of a commercial institution constituted under a special Act of the Legislature. It is, in fact, neither. The system in vogue is that for each Centre a kind of electorate has been created out of the more important business houses, and, strangely enough, in Madras even for a firm of solicitors. There is no question of election so far as the local Boards or the Central Board of the Imperial Bank are concerned. If Tom Bingley retires from India, whoever succeeds him as the head of the Bingleys becomes automatically the director of the Imperial Bank. It is nothing but a caucus pure and simple, which has managed to secure the control over votes and perpetuate itself in the management and control of the Bank. The election is a farce; it is just the confirmation of the nominees of the big bosses. Most of the directors of the Imperial Bank are of this kind and description. In these conditions, the Directors are the executors of the policy laid down by the permanent executive. Even a rebel like J. R. D. Tata, however powerful and well-placed he may be otherwise, soon finds things made as unpleasant as possible for him. The attack on the caucus and the preserves is fitful and therefore, ineffective. The public has not learned to regard the Bank as a sphere in which it has every right to have things shaped according to its desires.

If I return to this subject, it is not because that I take a peculiar pleasure in criticising the Bank or even because I want to do my duty in the Gita spirit, but because I believe that the conditions are different. For one thing, Sir William Lamond, I hear, is not agreeable to another extension. For another, the doings at Simla are far too arresting and momentous for the Central Board of the Imperial to miss them or their significance. I know for certain that almost every Director of the Bank has followed every line written on this subject in this journal though it is a great pity that Mr. Tata should be away at this crucial moment. Nevertheless, I expect the Board to be more responsive—not to say responsible—to the demand that every step should be taken from now to ensure that the Imperial Bank is a truly Indian institution serving the best interests of India in the field of banking. And that means that the Board should no longer be the executor of the policy and decisions of the executive. It should no longer say "yes" to every proposal (to promote a European according to seniority and to keep down every Indian where there is an opportunity to raise him in keeping with his deserts. A thorough and drastic change is called for. In the first place, the Board must examine the consequences of the perverse policy of the past on the staff of the Bank and its efficiency. It is no light indictment of the Bank that members of its staff who are due for retirement in a few years throw away their pension rather than suffer the injustice and humiliation of continued service under

NOW BETTER THAN EVER

the Bank. I am not aware that the Board considers this enquiry as one of its duties. But such detailed enquiries by the Board can however be obviated by the appointment of a suitable Indian as successor to Sir William. Lord Wavell thinks nothing of offering the portfolio of Foreign Affairs to an Indian nominee of the Congress. Even his predecessor thought nothing of entrusting the Reserve Bank to an Indian. And if the Central Board of the Imperial hesitates to appoint an Indian at the head of the Imperial, the implicit claim to superior wisdom would be laughed to scorn both in this country and abroad.

The latest half-yearly report of Titagur Paper Mills affords the information that Mr. R. W. Mellor retired as on the 31st March; and the Directors "desire to pay a tribute to his loyal and devoted service." Many others besides his colleagues will join in the tribute. The last few years of Mr. Mellor's service have been a period of great strain, of increasing shortage of supplies of paper for various reasons and of increasing embarrassment for one in Mr. Mellor's position. When paper began to run short, Titagur under Mr. Mellor's guidance struck to a policy of minimising the hardships for their long standing customers, consistent with justice to other consumers. Profiteering was sternly and rigorously put out of the pale of consideration. While one hears of charges of profiteering and black marketing against some others, Titagur never wavered in their policy of charging fair prices and doing their best to meet the special requirements of their customers, particularly, journals or the position of Indian Finance. For all this, Titagur and the public owe a great debt to Mr. Mellor. But a charming and cultured personality is ever more than its most resounding achievements. Mr. Mellor signified the all too rare combination of scholarship and business acumen, and business acumen and sense of fair dealing. He has a debonair grace which endears him to all who meet him. Clive Street will be poorer for the retirement of such as he.

"EAVESDROPPER".

(Continued from page 4)

Textile Research

A Textile Research Co-ordination Committee has been set up by the Government of Bombay, says the Director of Information Bombay, in a press note. Its function is to consider the organisation of a co-ordinated research plan and report to the Government how the textile research work at the Technological Laboratory, the Victoria Jubilee Technical Institute and the Department of Chemical Technology, as also at the mills already engaged or willing to participate in research, can be co-ordinated.

The following will comprise the Committee: Mr. M. I. Kanga, Director of Industries (Chairman), Dr. Nazir Ahmed, Mr. P. N. Joshi, Sir Sohrab Saklatwala, Mr. Kantilal C. Munshaw, Dr. K. Venkatraman, Mr. Haridas Modhavas and Mr. S. D. Vashist, Deputy Director of Industries (Secretary).

Mysore Cycle Factory

The Government of Mysore have assured necessary concessions to enable a private company to start a full-fledged factory for the manufacture of bicycles. A capital of nearly Rs. 2,00,00,000 will be invested on the company and the factory will be located at Tumkur, 40 miles from Bangalore. The production will commence in about a year.

Fisheries Schemes in Travancore

The Government of India have sanctioned Rs. 1,82,200 towards the recurring and non-

recurring expenditure of the fisheries development schemes in Travancore State from 1943 to 1948.

The schemes deal with increasing the production of fish, improving the method of fish curing, exploitation of backwater fisheries, better preservation, packing and transportation.

The grant is made on the understanding that the Central Government will have the first claim on the additional production of fish.

Machinery for Edible Products Industries

Orders are now being placed with British manufacturers for machinery needed to establish new edible products industries in India and provided reasonable near delivery dates can be guaranteed, these plants will be operating by the end of 1947, stated Mr. S. A. Fazalbhoy of an Indian film and radio

concern who has recently arrived in London. The idea, he stated, is to make luxury foods available to Indian masses at prices they can afford and to absorb the labour displaced by the demobilisation of Indian servicemen and closing down of war factories.

Coal Consumers' Association

A Coal Consumers' Association has been formed in Calcutta. The object is to safeguard the interests of consumers and to instil in the public higher appreciation of the necessity of coal conservation and fuel economy. Referring to the "famine conditions" prevailing in the coal industry, a statement issued by the Association says that post-war local and export demand of coal is estimated at about 35 million tons, whereas the present annual production is only 22 million tons.

(From Our Correspondent)

Bombay, July 3.

This is the time when the annual accounts of insurance companies are presented, and insurance chairman have naturally had a good deal to say not only on the progress of insurance in the particular spheres, but on the broader aspects. At the Industrial and Prudential meeting, Sir Chimanlal Setalvad pleaded for a reduction in the ceiling of income-tax for life companies and also for fewer restrictions on the investment of assets of life companies. He agreed that, in order to reduce undesirable competition among the companies, a limitation of overall expenses was needed; and on the question of reducing the renewal commission, he put forward an interesting argument in support. According to him, the 40 per cent commission was thought of in 1937, when the average amount of an insurance policy was Rs. 1,485 as against Rs. 2,227 in 1943; the total insurance effected by all companies was only Rs. 48 crores in 1937 as against Rs. 72 crores in 1943. Sir Chimanlal therefore went on to say that this shows that life insurance is becoming more popular and that a small reduction in the first year's commission is more than compensated for by the increased business available to an agent. A slight cut does not mean much to him, while to the insurer as well as to the policyholder its value is far more.

The subject of increasing management expenses was also part of the theme of Sir Cunilal V. Mehta when he presided over the 26th meeting of the New India Assce. Co. Ltd. The rising costs have been brought about no doubt by the higher salaries and dearness allowance paid to the staff in these hard times, but the position is aggravated by the attempts made by the new companies in the field to induce the trained men to leave them by offering attractive salaries. Naturally, the older companies could not see their way to raise the salaries to the level of those offered by their younger confreres and have had regretfully to lose the services of experienced personnel. This form of competition is very unhealthy and has already been deprecated by the Indian Insurance Companies Association in a circular. The higher scale of expenses, while it may be easily absorbed by the present expanded premium and turn-over, will undoubtedly prove to be a drag on companies when conditions return to normal. It will then be found that these practices have become a heavy burden on insurance since after all the expenses are met only from the premium paid by the insuring public. It is noteworthy that Sir Chimanlal Mehta gave his blessings to the move to impose a statutory limit on the overall expenses of insurers embodied in the Amending Bill. He endorsed the principle underlying the proposed limitation, and conceded that though government's dictation in the matter of costs of running a business may be objectionable, it was different with insurance business. Policyholders are parties to what may be described as long-term contracts and have a right to look up to the State to ensure conditions in which the obligations in respect of such contracts can be properly discharged.

More light is available on the Cowasjee Jehangir Committee which is known to examine the undesirable features in the management of insurance companies. The Committee has received the views of the various interests concerned, and memoranda have been submitted by the Indian Insur-

ance Companies Association, and the Indian Life Assurance Offices' Association. As regards the attempt by certain powerful interests to gain control over insurance companies by cornering the shares, the I.L.A. feels that this is a phenomenon which is directly the result of war-time inflation and therefore should be treated as a temporary problem. This is perhaps a doubtful view, but the Association also proposes that Government should control the transfers of shares by insisting that any person transferring more than 10 per cent of the shares of a company should not do so without obtaining prior consent of the government. The I.L.A.O.A., on the other hand, recommends not only some restriction on the transfer of shares, but restriction of the voting rights of large holders. The latter suggestion is not deemed to be altogether feasible in some quarters. But all seem to be agreed on one point: that to vest in government power by law to interfere in these questions might increase government interference and bring with it additional handicaps to the managements of companies who, it is said, are already having enough interference in all conscience. As Sir Chimanlal Setalvad said, government would be justified in assuming some discretionary powers in regard to transfer of shares for instituting enquiries in specific instances, but to go beyond that may not be entirely advisable. As regards the interlocking of banking and insurance interests, some would favour the prohibition of a bank's officer being employed in an insurance company, while another suggestion is that banking law should contain a provision restricting banks from holding shares of an insurance company in excess of a certain percentage of the total shares. All these questions will be fully threshed out by the Jehangir Committee in its report.

Raw cotton came into the picture prominently last week. The cotton forecast indicated a reduction in the cultivation of short-staples and I hope it will not be said that the cottongrower did not play his part in easing not only the problems of food but

of cotton itself. The credit for the reduction in the outturn of the cotton crop to a mere 34 lakhs bales as compared with almost double that yield in normal times should be shared by the cultivator, the Central Cotton Committee and, of course, Government which enforced cuts by moral persuasion and administrative supervision. The reduction in the yield of long-staples is to be regretted since the mill industry badly needs these varieties, and those concerned ought to see that this does not recur. The statistical position, therefore, holds promise of improvement, but it could be still better if only the authorities try to make it so. For, it is rather sad to note that the qualities such as old crop short-staple cotton, of which there is an abundance, cannot be exported to the Continental countries for lack of freight. France recently switched over an order for 35,000 bales of cotton from India to America on consideration of freight. It is said Italy is in the market for about 10,000 tons of cotton (65,000 bales), and Greece also wants cotton from India, but the bottleneck in every case is lack of freight. As freight is available only from the Ministry of Supply, London, the trade expects the Government of India to bring pressure on the Ministry to allot reasonable shipping space to facilitate cotton exports. There is enquiry from the U.S.A. for superfine Punjab Deshi cotton, while the British Cotton Controller is making enquiries for Sind Deshi cotton. Without freight, even these small orders cannot be executed. The position is very bad indeed, and it is time that the Government of India did something to improve it.

South India

(From Our Correspondent)

Madras, July 5.

The Southern India Chamber of Commerce has made a representation to the Government of India inviting the attention of the latter to the difficulties experienced by the manufacturers of brass utensils owing to the shortage of brass sheets. The Chamber holds that the present quota of 170 tons for the Madras Province is too meagre and should be increased in due proportion to the needs of the Province. The manufacture of brass utensils as a cottage industry is carried on extensively throughout the Province, it employs thousands of workers and the products enjoy a very wide demand. The representation also brings to the notice of the Government the iniquity involved in entrusting the distribution of the sheets to the manufacturers, who are indifferent to the welfare of the cottage industry. The brass sheets are released to the manufacturers at Rs. 80, while for the same number of sheets, the cottage industry has to pay Rs. 103, which is another serious handicap to the latter. It is hoped that the Government would come to the aid of cottage industries before it is too late.

Of late, the problem of finding enough accommodation for the students, who seek higher education in the Presidency has become increasingly acute. This year, it seems to have reached a critical stage and it is gathered that over four thousand students qualified for college admission have been denied it on the plea of lack of accommodation. Representations to the Vice-Chancellor resulted in 500 more getting admission, but that was the final thing that even the Vice-Chancellor could do about it. The public are still seriously agitated over the question and the Mayor of Madras is taking steps to impress on the authorities concerned the need for a more liberal policy in the matter of admissions. There are suggestions for opening more Colleges, but as the academic year has already run a month, these proposals even if they take shape, are not going to help the kept-out students this year.

In the course of the Budget discussion in the Mysore Legislative Council, Mr. Chengalaya Reddy, the Congress party leader, introduced a cut motion to urge the necessity for taking immediate steps to revise the land revenue system as now obtaining in the State. The Mysore system is modelled on that of Bombay, but has failed to keep pace with the latter in its progressive developments. For example, Bombay passed the Tenancy Act and the Land Revenue Amendment Act in 1939; nothing like that has been done in Mysore as yet. There have been assurances from Government that a revision would be effected whenever a suitable occasion arose. The non-official Members who spoke on the cut motion, reminded the government of these assurances besides suggesting that land revenue itself might be done away with, and an income-tax imposed on all persons getting Rs. 1,200 and more per year. The Revenue Minister, while accepting the need for revision, contended that the present is hardly the time for it and as soon as conditions became normal, the Government would be setting up a Committee consisting of officials and non-officials to go into the whole question. The cut motion was then withdrawn.

Presiding over the annual meeting of the Directorate of the Indian Institute of Science, on July 2, Sir M. Viswaswarayya made another emphatic plea for the creation of National Boards of leaders. He said that the war deficiencies would have to be remedied and wants supplied in all the three departments—administrative, economic and social—of the national life. "A proper balance has to be maintained in the country's political strength, public activity, business pursuits, and cultural efficiency. For developing such a balance, qualified leaders are necessary and these should be dynamic men, fertile in new ideas and possessing powers of organisation". Sir Viswaswarayya wanted the Government to press such men into the different fields of national service in as large a number as possible. He also did not miss the occasion to make another appeal to the country on behalf of whole-hearted industrialisation. Quoting figures comparing the appallingly low industrial income of India with that of countries like England and the United States, he said that it was high time that education, industrial development and equipment for defence, three of the most neglected elements in our national life received our earnest and persistent attention.

as it is stated that there are ample facilities for starting other industries, which would increase the earning capacity of the company, the company would be on a dividend-earning basis even at an early stage. Another important point to be taken into consideration is that the managing agents have agreed not to draw any remuneration till the company reaches the stage of commercial production. The whole of the issue to the public is underwritten.

All-India General Insurance

Another composite insurance company which has been able to report satisfactory working for the period ending December, 1944 is the All-India General Insurance Company Limited. The results relate only to the working of the life department for about two months. The certificate for transacting general business was received on January 22, 1945. The management has lost no time in opening branches in important places. With the influential directorate very good results are expected. The confidence in the management will be evident from the heavy oversubscription for the shares which were issued at a premium.

Resume of Commodity Markets

The feature of the week is the suspension of silver sales by the Reserve Bank of India and the rise in prices for both gold and silver. While the improvement in the quotation for the yellow metal is due to the steady offtake and the tightness of the Spot position the rise in silver prices, it should be said, is mainly due to the decision of the Reserve Bank to suspend silver sales. The raw jute market has been steadier in sympathy with the jute manufactures market. Very firm conditions have been noticeable in both the hessian and heavy goods markets on reports that there might be a further large order for bags and that mills would be in a very difficult position to give complete delivery if the bazar contracts were not postponed or cancelled. The raw cotton market has been fluctuating in narrow limits with a slightly firmer bullion market.

It should be said that the improvement in prices for raw jute, in spite of the continued strength of hessians and heavy goods, has not been to the extent anticipated and that mills stand to derive considerable

advantage under present conditions. Towards the end of last week it was announced by the Government that the Jute Purchasing Panel was prepared to buy all quantities offering, old crop or new crop, in pursuance of their earlier decision to stabilise jute prices. For this purpose parity prices for the various districts have been announced. There has naturally been some criticism regarding the fixation of prices for the various districts but it can be expected that any anomalies in the fixation of prices would be rectified. The announcement, however, has not had any appreciable effect on the market and with mill buying only on a small scale, prices have recorded an advance of only 4 annas to 8 annas per maund. Sellers appear to be still anxious to liquidate old crop holdings.

The *communiqué* issued by the Government of India regarding their willingness to purchase all surplus stocks at the parity prices is given below:

"In the agreement reached by the Bengal Government with the Government of India on the acreage to be sown with jute this year and the prices fixed under the jute (Price Control) Order, 1944, it was provided that the Government of India would under-

take to buy all crop offering, old and new, at Calcutta and at selected up-country centres in Bengal should it be found necessary to support the market and maintain prices at the minimum level at Calcutta and at the appropriate parity prices in the selected up-country centres.

"The up-country centres, have now been selected and current approximate parity prices worked out for them are as follows:— Purchases will be made in Calcutta on a Calcutta mill landed cost basis as is customary in the trade. Purchases made up-country in consequence will be made through the normal trade channels so that an equivalent of the parity prices is assured to the jute grower.

	Jat Jute	
	Bottom per md. landed Calcutta.	Current approximate up-country parity price Bottom grade.

The current approximate parity prices shown above apply solely to the immediate vicinity of the centres named.

It is feared in certain quarters, however, that the efforts of the Government might not be completely successful if proper arrangements were not made for the storage of jute. No arrangements appear to have been made in this connection. If the agents are to stock on Government account much progress cannot be made. The suggestion was made in these columns on an earlier occasion that mills should be asked to purchase specified quantities of jute in a particular period and that facilities should be provided to increase production and despatch goods as quickly as possible. The question is one of larger mill consumption of jute and offtake of manufactured goods.

In the heavy goods section prices have improved further B. Twills quoting Rs. 65/12 and October-December Rs. 64/12. Mill are not prepared to sell for any position this year and there has been a rush to cover open positions. With the possibility of an improvement in the outlook for the heavy goods trade, with the reconquest of Far Eastern territories, prices will tend to remain at high levels.

The preliminary forecast of jute crop for 1945 has been published during the week

for six districts. It gives the total of the licensed area, the figures regarding areas checked up to date and the area on which jute has actually been found to grow. These do not, however, reveal any idea of the size of the crop for the next season as a good portion of the acreage under the crop or licensed still remains to be checked. In the case of Jessore it is as much as 83 per cent.

According to a press note issued by the Director of Agriculture, Bengal, details of the estimated area under jute crop (in acres) in the different districts of Bengal, which are now available, are given below:

1. Total licensed area—Jessore 135,375; Khulna 43,970; Burdwan 8,530; Howrah, 4,985; Tipperah 216,110; Cooch Behar State 21,300 (estimated by the Government concerned).

2. Total licensed area checked up to date: Jessore 4,875; Khulna 1,670; Burdwan 880; Howrah nil; Tipperah 57,030.

3. Total area on which jute has actually been found to have been grown:—Jessore 3,995; Khulna 1,100; Burdwan 590; Howrah nil; Tipperah 42,085.

4. Total area still pending for checking:—Jessore 130,500; Khulna 42,300; Burdwan 7,645; Howrah 4,985; Tipperah 159,030.

5. Last year's (final) jute crop:—Jessore 8,973; Khulna 27,770; Burdwan 5,330; Howrah 2,805; Tipperah 137,730; Cooch Behar State 19,500.

6. Proportion of item 3 to 2 expressed in percentage:—Jessore 83 per cent; Khulna 66 per cent; Burdwan 67 per cent; Tipperah 74 per cent.

The Reserve Bank's policy in respect of gold and silver sales seems to be deliberately planned to help the bulls in the market. As no reasonable explanation can be offered for the suspension of silver sales this week it is not clear whether the Reserve Bank has decided to do away with silver sales altogether. Bazar expectations have been confirmed as even at the end of last week there were reports that sales of the white metal might be suspended at an early date.

The publication of the cotton forecast showing a big decline in the acreage and yield, has not been of any advantage to the market as it is felt that with the easier shipping position and the large surplus world crop there would naturally be a tendency on the part of the Indian producer to use better varieties if they have them cheaply and in large quantities. It is not clear whether the shipping position will admit of any improvement in imports but mills are not prepared to buy in large quantities Indian qualities and are inclined to await further developments. Thus prices in the Bombay cotton market fluctuated in narrow limits and quotations have declined by six points.

It is now reported that gunny bags have been already despatched to Rangoon and that it is possible to expect rice supplies in one or two months. Bengal might be given preference as prices for the staple commodity are relatively higher and there is no appreciable improvement even with the bumper crop last year. It is true that the Bengal Province has been able to give the Central Government 100,000 tons of rice but so far as the small consumer is concerned, there has been no appreciable relief in the matter of prices and the rate at which rationed rice is sold is still Rs. 16/4 per maund. It must be said that there has been a slight improvement in the quality of rationed rice but give the better quality of rice black market trading is still going on and there has been no anxiety to reduce prices even with the reports of early imports of Burma rice.

Meantime, every effort is being made in Burma to improve the cultivation of rice. Only during the week the British Military

Administration announced that all the surplus crop would be purchased at a fixed price and the Burmese ryot would not suffer on any account. Normally, Burma produced seven million tons of rice of which 3½ million tons were available for export to other countries. Burma, Indo-China and Siam are the biggest exporters and account

for a large portion of the world's trade. Whether Burma will be able to recover her former position cannot be said but that so soon after the Japanese have left the country it is possible to export rice to the extent of 500,000 tons suggests that the internal economy has not been very much impaired as a result of Japanese occupation.

FIRST AID

SOMEONE is injured. Send for a doctor! Until he arrives we must help the patient by doing the right things and these we shall only be able to do if we have learnt First Aid. Sometimes proper equipment is not available and the First Aider must then improvise; at a pinch, for example, using baking powder for scalds or burns from fire, and washing soda to neutralise burns from acid. As a result of the war many more homes and factories in India than before have their own first-aid boxes and the contents of these remind us at once of our dependence on the products of the chemical industry, and the work of the research chemist. In them we shall find chemicals such as iodine, boracic acid, sal volatile, aspirin, and, of course, anti-gas ointment, as well as dressings, cotton wool and adhesive tape, all of which have been chemically treated. First-aid points or posts at factories or works will have a wider range of chemicals, including colloidal silver and medicinal paraffin for eye treatment, organic products like acriflavine as an antiseptic and gentian violet for burns. Under the stimulus of total war, chemical and medical research workers are constantly developing new and more effective products for First Aid and already some of the wonder-working sulphonamides are being incorporated in ointments which may be used with safety by the First Aider. As each new product or new medical use for old products is found by the British chemist, the British chemical industry makes them available for medical units on the Burma front, and for First-aid Treatment of accidents in Indian homes.

IMPERIAL CHEMICAL INDUSTRIES (INDIA) LTD.

The Fatigue Factor

The ideal length of a working shift for various types of work has been, and still is, a matter of considerable thought and research. The International Labour Office at Geneva has in particular paid a great deal of attention to the subject. Many factors have to be considered in addition to that of the nature of the work concerned. Type of workers, factory conditions, physical strain, mental strain, rest pauses and many others. Of recent years it has been particularly noted that even during a shift well within the physical powers of the workers output frequently falls during the middle portion. Formerly this fall off was termed the 'fatigue factor', but modern industrialists now know that it is not due to loss of physical energy but to falling concentration.

One of the most valuable means of combating falling concentration is tea. Hot tea served to the worker on the job is eliminating the 'fatigue factor' completely in many thousands of factories throughout the world. To those interested in this subject much valuable advice and assistance will be gladly given by the Indian Tea Market Expansion Board, 101, Clive Street, Calcutta.

INSERTED BY THE INDIAN TEA MARKET EXPANSION BOARD

Jute and Jute Manufactures

(From Our Correspondent)

Special to "Indian Finance"

Calcutta, July 5.

As already reported raw jute imports into Calcutta and the Mills' stations up to May last during the season 1944-45 totalled 2,91,50,979 maunds against 2,43,60,242 maunds for the same period in season 1943-44; an increase of nearly 20 per cent. Notwithstanding this appreciable increase in jute traffic to Calcutta, imports arriving by boat during the above mentioned period dropped by 30 per cent. in season 1945-46. This decline in imports by boat was off-set by arranging greater facilities for the carriage of jute by the railways and the quantity of raw jute imported by that means in season 1945-46 up to May last was 50 per cent. greater than during the corresponding period of season 1943-44. Now, in a notice dated 28th June, 1945 concerning the 'Export of Jute and Jute Products,' the Regional Port Directorate states that in order to relieve the pressure on the Lighterage Pool and to ensure a sufficiency of lighters for increased importation of raw jute from up-country into Calcutta it has been decided to arrange for the transportation of jute and jute products to the Docks by rail from Presses or Mills on the east bank of the River Hooghly. Those concerned have been notified with regard to the procedure to be adopted when exports are being made and as far as raw jute is concerned this procedure will take effect immediately for all ships loading at a Dock or Jetty berth; the Regional Port Director's instructions of 16th June, 1945 thereby being superseded. It is also notified that the Lighter Pool will give the lowest priority to the supply of boats for internal traffic between Mills and Presses.

An enquiry which may have some practical interest for certain Mills in Calcutta has been received from continental sources by a prominent firm in the city. The enquiry is for a large quantity of Tobacco Banding to be manufactured from jute. It is understood that the material may be constructed from 7½ oz. 140 in. hessian and 9 oz. 140 in. hessian supplied in the nature of 'webbing' of certain widths and cut lengths. It is also understood that as it may prove to be a potential line for a new use for jute the Indian Jute Mills Associations have taken up the matter with the member mills in order to investigate the possibilities of the manufacture of this type of banding in India according to the specifications given by the Overseas enquirer.

Readers will remember that at the time of the agreement between the Government of India and the Government of Bengal regarding the acreage to be sown with jute in 1945 and the fixation of maximum and minimum prices, it was also agreed that if it was found necessary to support the jute market at the fixed minima, the Government of India would buy jute at certain up-country centres at parity of minimum prices in Calcutta. A Government notification issued last week gives a list of the centres that have been selected and the parity price of bottom grades. Purchases will be made in Calcutta on mill landed cost basis in accordance with trade usage. Purchases made up-country will be made through normal trade channels so that an equivalent of the parity price will be assured to growers. When writing on this matter in March last after the official announcement of the setting up in Calcutta of the Jute Purchasing Panel whose function will be to regulate the

purchase of jute on behalf of Government if the state of the market should require such purchases to be made, we pointed out that the main difficulty in the way was lack of suitable storing accommodation. The validity of this opinion was called in question in view of the great number of godowns to be found throughout the jute districts but we still consider that the number of godowns really suitable for the storage of jute for a prolonged period is indeed very limited.

There is certainly plenty of godowns of a kind but mainly of the most "Kutcha" variety and utterly unsuitable for protracted storage. Few balers have any extensive capacity for holding jute and they require their godowns to be cleared regularly by despatches to enable them to continue their business. It seems, therefore, that unless Government can take delivery of their purchases from balers up-country the object of the scheme will be defeated if such purchases extend to any considerable quantity. It has been said many times before that one obvious way whereby Government can help the jute industry without recourse to buying raw jute to support prices at the minima is to supply mills with their full requirements of coal. This is still true to-day but as there is no indication that ample supplies of coal will be available to mills within the foreseeable future we might repeat the suggestion we made some time ago that as an alternative to the purchase of jute, Government purchases of gunnies for forward shipment, we maintain, would have the same effect as the purchase of ready raw jute but without the attendant difficulties.

Such purchases of goods from mills would bring the mills out as purchasers of jute to cover the sales and, moreover, by purchasing forward goods competition by the Bazaar would be stimulated—a factor which might enable Government to clear their hands of their purchases in a rising market. But even if Government did have to take up and pay for their purchases when due, they would not be faced with the problem of storage as mills normally undertake to carry sold goods in store for considerable periods.

In the Pucca Bales market there is nothing of interest to report either by way of export or purchases by local mills. Small business was reported done by mills in special marks at a small premium over minimum rates.

The Loose Jute market was somewhat active and a fair business was done during the week. Old and new crop are quoted at the same prices but the former might be obtained at a slight discount. Supervised jat, old crop was done at Rs. 15 to Rs. 15-8 for Middles and Rs. 12 to Rs. 12-8 for Bottoms. Old crop district Tossa came to business at Rs. 15-4 and Rs. 12-4 Middles and Bottoms. Supervised jat new crop Middles and Bottoms were done Rs. 15-4 and Rs. 12-4 and also at Rs. 15-8 and Rs. 12-8, while supervised District jute was done at As. 8 less. European new crop sold at Rs. 17-8 for Tops and Rs. 16 and Rs. 13 for Middles and Bottoms.

In the manufactured goods market business has been restricted due to reserve of mills. There has been some covering business in both hessian and heavy goods but sellers are not prominent and prices have further improved. Business has been mainly confined to inter-bazaar transactions and mills are asking maximum prices for nearly all descriptions.

With reference to the monthly production statistics for May last, the Indian Jute Mills Association has issued a corrected statement which places the total output of manufactures at 85,352 tons instead of 88,704 tons for that month. Thus the total production for the eleven months July to May should now read 911,557 tons and not 914,909 tons.

The jute consumption figure for May is amended to 4,78,000 bales instead of 4,97,000 bales which places the consumption for the period July to May at 51,05,000 bales instead of 51,24,000 bales.

Clearances in May were 82,217 tons instead of 85,569 tons and total clearances in the period July to May were 928,521 tons not 931,873 tons.

BOMBAY MARKETS

BULLION

(From Our Correspondent)

Bombay, July 5.

Bullion prices skyrocketed on Tuesday when the Reserve Bank announced the suspension of Silver sales. From Rs. 132-12 on Monday Forward Silver was taken up to Rs. 138 on Wednesday. The bull clique is exploiting the position while the bears who had earlier carried forward sales by paying high backwardation charges frantically covered.

Up-country and outside buying was prominent on Wednesday. The bulls maintain close grip and a further squeeze in the near settlement is expected. Profit-taking caused a decline in price to Rs. 137-5. The Reserve Bank has thus worsted the bears.

It is reported that the stoppage of sales is due to shortage of Silver stocks since a substantial quantity from America was absorbed in coinage. The resumption of Silver sales is considered very remote.

Gold also is firm under the bull clique and touched Rs. 79-6 on Wednesday when bulls unloaded their holdings. To-day's prices are Rs. 78-7 for Forward and Rs. 78-11 for Spot. Rumours of suspension of sales by the Reserve Bank persist, colour being lent to these by the fact that American gold sales are stopped completely. Only Durban gold is now sold.

Sixty Years' Service TO INDUSTRY

Our services to the Iron, Steel and other Indian Industries started sixty years ago at the growing port of Karachi, but today they spread all over India. As the largest engineering concern in North-West India, we have carried out many successful contracts both at home and abroad.

We manufacture:

Steel Doors and Windows; Pressed Steel Tanks; Equipment for Textile and Sugar Mills; Powerhouses and Factories; Garden Rollers; Water Supply Systems; Motor Launches; Plastiplug; Waterproofing, etc.

We stock:

Motor Trolleys; Marine Engines; Asphalt Boilers; Jenkins Clod Breakers; Structural and General Engineering Stores; Bitumastic, Pudlo and Solignum; Steel and other Metals; Cements, etc.

We can advise you on all your engineering and building problems; why not consult us without any obligation.

SATURDAY, JULY 7, 1945

Price Re. 1

Stock Markets to-day and to-morrow:

TITAGHUR PAPER MAKES GOOD SHOWING

Stock markets, in Calcutta and Bombay, have been very firm. In the latter part of the week a general rise in prices has been recorded. Activity on the Calcutta Stock Exchange, especially, has been more pronounced. With the lead given by jute shares a rise in prices is noticeable all round. The recovery in the bullion market in Bombay was also helpful.

There is no anxiety over the developments in the political situation at present as it is now regarded that a political settlement will be brought about in spite of the numerous obstacles and that the constructive attitude shown by the Congress will smooth out all difficulties. It cannot yet be said whether the Viceroy will prove to be successful in forming the new Executive Council, but it is generally agreed that a progressive policy will be adopted from now on, and that, with the encouragement given to Indian industrial development, it will be possible to maintain a high level of earnings.

The Calcutta Market always reacts favourably to any encouraging development regarding the jute industry. The placing of an order for 35 million bags two weeks back and the prospects of further orders for Heavy Goods have distinctly improved the outlook for the industry and strengthened the hands of mills. In order to tackle satisfactorily the problem of disposing of excess jute supplies it is felt that facilities will be afforded to the jute industry as far as possible. As sales have been made at very remunerative rates, the margin of profit on the basis of the present prices for jute is appreciable. The accounts of the important mills for the half-year ended September, 1945, might perhaps reflect the improved conditions in the industry.

It might be said that the bazar is unduly optimistic regarding the prospects of the jute industry as, without any appreciable increase in exports, the shipping position permitting, any increase in production would not guarantee the continuance of a high level of profit.

The table given below will show that the rise has been general and that the bigger denomination shares have improved by as much as 30 points in the course of a month. There has been special buying of certain counters like Nellimarla, Chitavalsah and Ganges and to that extent the rise in prices is exaggerated.

	Latest	A Fortnight ago	A Month ago	Two Months ago
	Rs. A.	Rs. A.	Rs. A.	Rs. A.
Anglo-India	508-0	491-0	485-0	483-0
Alliance	734-0	690-0	678-0	637-0
Bally	397-0	382-0	372-0	360-0
Gourepore	883-0	874-0	880-0	862-0
India	727-0	709-0	712-0	704-0
Ganges	634-0	603-0	592-0	565-0
Howrah	93-4	92-4	93-12	98-14
Kamarhatti	762-0	750-0	746-0	725-0
Kanknarrah	635-0	627-0	627-0	610-0
National	36-4	34-14	34-15	34-14
Nellimarla	37-7	37-7	35-2	34-4
Presidency	13-12	12-6	12-8	12-8

It was anticipated in these columns a few weeks back that Titaghur Paper Mills Company, Limited would be able to report a higher level of earnings for March 1945, Rs. 10 lakhs more than the figures for the previous half-year. The benefit of the increase in dividend could not be passed on to the shareholders. On reports of an increase in earnings there was a rise in the quotation for the shares from Rs. 28-12 to 31-4; it is now around Rs. 30-8.

The accounts, published during the week, completely justify our anticipations. The profit, before providing for taxation and depreciation, is considerably higher at Rs. 60,46,881 against Rs. 49,37,250 for the half-year ended September 1944. Nearly the whole of the increase has been taken up by the provision for taxation, Rs. 42,92,791 against Rs. 32,77,402. The amount set aside to depreciation is Rs. 2,55,478 (Rs. 3,78,558). The sum transferred to Deferred Mills Renovation Reserve is Rs. 3.5 lakhs (Rs. 2.5 lakhs). The allocation to Debenture Reserve Fund is Rs. 2.5 lakhs (same). Other funds receive Rs. 1.1 lakhs against Rs. 1 lakh. After maintaining the dividend and the bonus on the ordinary shares at 12 annas per share the amount carried forward is higher at Rs. 3,28,397 against Rs. 3,01,684 brought in.

The improvement in earnings for the half-year has been mainly due to the increase in output, it being possible to bring the mills back to full production in spite of the difficulties in regard to coal supplies. Considerable difficulty, however, was experienced in respect of raw material supplies and chemicals particularly regarding wagon space. Of greater importance, however, is the statement in the report that manufacturing costs are satisfactory owing to the maintenance of full production. As the coal position has improved further it can be expected that in the current half-year it may be possible to

report a further increase in earnings. In the war period the Company has made as much as Rs. 90 lakhs in one particular half-year, that is, in the half-year ended March 1948. Bamboo prices were then relatively cheap. It might not perhaps be possible to earn this figure with the present cost of raw materials but it can be certainly expected that there will be an improvement by another Rs. 10 to Rs. 15 lakhs.

It is interesting to make a study of the balance-sheets of this company published during the war period. There is a substantial increase in the assets of the company and the equity value has considerably increased thanks to the careful policy pursued by the directors and the large payments on account of E.P.T. compulsory deposits. The paid-up capital at the end of September, 1939 was Rs. 48.38 lakhs, Debentures Rs. 25 lakhs Sundry liabilities Rs. 33.49 lakhs, Reserves Rs. 19.68 lakhs and Carry Forward Rs. 93,443. On the assets side, the Net Block was valued at Rs. 78.53 lakhs, Stocks Rs. 25.84 lakhs, Outstandings Rs. 24 lakhs, Investments Rs. 1.35 lakhs and cash Rs. 5.43 lakhs. On March 31, 1945 the paid up capital was Rs. 17.5 lakhs higher at Rs. 65.89 lakhs

 in
 Road Transport

Whatever may be your transport requirements — goods or passenger — we can handle the job to your satisfaction. Our confidence is backed by the experience of executing exacting transport jobs for the war—over the hills and plains of India; over roads opened up overnight. The war is a stiff taskmaster. The commissioned job must be executed to the tick of the clock and no excuses are accepted. With the largest transport unit in India we have been handling very large military transport jobs since the beginning of the war. This fact alone proves our efficiency.

Our war experience has taught us that it is not enough to have a large transport fleet and a set of careful drivers. Every transport vehicle has always to be maintained in perfect condition. We have, therefore, equipped a large workshop where every vehicle is checked for the minutest defect. If you have a transport job to be done in any part of India, send us your enquiries—we promise you a new experience in trouble-free transport.

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, July 5.

THE reopening after the long week end was quite steady though business passing was not on a very large scale. The irregular tone of the bullion market and the anxiety to await further developments had a restricting influence. In the last three days, however, definitely firmer conditions have prevailed and business has been on a larger scale. Jute shares have provided the feature of the week with a rise in the quotation for the bigger denomination shares by ten to fifteen points. The strength of the Jute section was due to the reports that further large orders might be received. It is felt that the decision of the Indian Jute Mills Association to extend the industrial pool arrangement is an indication that more labour and coal will be available in the coming months. Coal shares have been higher in sympathy with Jute shares while in the Engineering section there is nothing of interest. Both Indian Irons and Steel Corporations being quoted at Rs. 41 and Rs. 34 respectively for most part of the week. Sugar and Tea shares were uninteresting while in the Miscellaneous section a large amount of business was reported in Calcutta Electric shares. Calcutta Trams also were very firm. The general undertone of the markets is quite steady.

In the gilt-edged securities market firm conditions were noticeable and banks have taken more interest. It is reported that the Reserve Bank has been able to sell large parcels of 2 per cent 1970-75 loan, the announcement of a further issue of Rs. 30 crores of this loan being made to satisfy the demand for long-dated issues from institutional investors. Non-terminable loans have been more active with 3 per cent paper done up to Rs. 94-6 and 3½ per cent Paper to Rs. 101-15. Terminable loans also are better with 2½ per cent 1948-52 at Rs. 100-1, 3 per cent 1953-55 at Rs. 101 and 3 per cent 1951-54 at Rs. 101-6-6. 3 per cent Victory Bonds were Rs. 100-7 while 3 per cent 1986-68 were a shade higher at Rs. 98-9. 3 per cent 1963-65 were noted at Rs. 99-3. 4 per cent 1960-70 were 4 annas higher at Rs. 113-4 and 5 per cent 1945-55 Rs. 101-5. No transactions have been recorded in provincial loans. Extremely cheap conditions have continued to prevail in the money market and the yield on treasury bills is considered rather poor.

In the Bank section a slight improvement in prices has been recorded in sympathy with gilt-edged securities. Imperial Bank contributions were Rs. 506, United Commercial Rs. 22-8 premium and Reserve Bank Rs. 133 cum-dividend. Calcutta National Bank were unchanged at Rs. 15-14.

Cotton shares were inclined to be steadier with Cawnpore Textiles at Rs. 12-9, Elgin at Rs. 66-2, Kesoram at Rs. 17-14 and New Victoria at Rs. 7-10.

Coal shares were not very active in the early days of the week though Ranee-gunge, Sendra, Burra Dhemu and Equitable were favoured. In the last two days prices have been marked higher. Amalgamated improved from Rs. 58 to Rs. 59-6 and Bokaro and Ramgur to Rs. 50-12 from Rs. 49-12. Bengal were steady at Rs. 329 and Bhagora Rs. 12-1. Burrakur and South Karanpura were quoted at last week's levels of Rs. 43-4 and Rs. 32-12 respectively. Equitable were in great request and were marked up to

Rs. 72-8. New Beerbhoom fluctuated around Rs. 42-8; Ondal registered a rise of 2 points to Rs. 41-12 and Sendra to Rs. 27-6. Ranee-gunge were very firm at Rs. 66-8. Standard and West Jamuria were unchanged at Rs. 44-10 and Rs. 66-4.

Jute shares remained active throughout the week on reports that further large orders might be received and that it would be possible for mills to report higher profits. Birla were outstanding with a rise to Rs. 53-4 from Rs. 48-12 and Hukumchand to Rs. 48 from Rs. 46-8. Presidency were active being

over a point higher at Rs. 13-12. Howrah are now quoting Rs. 93-14. Ganges were Rs. 631 against Rs. 620, Kamarhatty Rs. 762 against Rs. 750 and Nuddea Rs. 137-8 against Rs. 133-8. National were Rs. 36-4, against Rs. 35-12. Chitavalsah and Nellimarla were rather quiet being quoted at Rs. 36 and Rs. 37-7 respectively.

In the Engineering section, as mentioned above, there was not much activity. Indian Iron and Steel Corporation were rather sticky at Rs. 41 and Rs. 34 respectively. Marshalls came in for buying at Rs. 6-6 against Rs. 5-11

FRIDAY, JULY 13th, 1945, 11 A.M. AT SIR COWASJEE JEHangIR HALL, BOMBAY

The third half-yearly draw for prizes in the Government of India five-year interest-free Prize Bonds, 1949, will take place at 11 A.M. on Friday, the 13th July, 1945, at the Sir Cowasjee Jehangir Hall, Bombay, under the supervision of a committee consisting of the following:

- | | |
|---|--|
| 1. SIR COWASJEE JEHangIR, B.A., K.C.I.E., C.B.E., M.L.A., Readymoney Mansion, Churchgate Street, Fort, Bombay. (Chairman) | 5. A. A. JASDANWALA Esq., The Cricket Club of India, Brabourne Stadium, Bombay. (Member) |
| 2. C. R. TREVOR Esq., Deputy Governor, Reserve Bank of India Bombay. (Member) | 6. N. SUNDARESAN Esq., O.B.E., Joint Secretary, Finance Department, Government of India, New Delhi. (Member) |
| 3. ARTHUR PETHER Esq., Member Local Board, (Western Area), Reserve Bank of India, Bombay. (Member) | 7. J. N. AHUJA Esq., Chief Accountant, Reserve Bank of India, Bombay. (Secretary) |
| 4. RAMDEO ANANDILAL PODAR Esq., Podar Chambers, Fort Bombay. (Member) | |

The Public will be admitted free to the draw. The list of winning numbers will be published in the Press.

EVERY BOND IN THE FOLLOWING SERIES WILL PARTICIPATE IN THE DRAW

Rs. 100 PRIZE BONDS SERIES: A, B, C & D
 Rs. 10 PRIZE BONDS SERIES: AA, AB, AC, AD, AE, AF, AG, AH, AJ, AK, AL, AM, & AN.

After the third draw no fresh series of Prize Bonds will be sold and sales will be restricted to unsold Bonds in partially sold series.

ISSUED BY THE FINANCE DEPARTMENT, GOVERNMENT OF INDIA

AAA 368

at the time of last writing. Jessop were unchanged at Rs. 25-12, *Bhartia Electric* Rs. 23-2 and *Kumardhubi Engineering* Rs. 11-10.

Greater attention is being paid to Public Utilities. *Cuttack Electric* recorded a rise of 2½ points to Rs. 17-8; *Patna Electric* changed hands at Rs. 19-10; *Dacca Electric* at Rs. 18-10 and *Benares Electric* at Rs. 16-14.

Sugar shares were unchanged though *Carew* proved the exception being quoted higher at Rs. 30-7, *Batrapore* were done at Rs. 14-1, *Belsund* at Rs. 15 and *Ramnugger Cane and Sugar* at Rs. 17-12. Speculative buying noticeable in the last mentioned counter sometime back seems to have disappeared.

In the Tea section not much interest has been taken though prices have been well maintained with *Bishnauth* unchanged at Rs. 43-6, *Hasimara* Rs. 18 and *Tengpani* Rs. 25-6 ex-dividend. *Tezpor* were Rs. 21-12.

In the Miscellaneous section, *Burma* shares were unchanged with *B. B. P.* a shade better at Rs. 5-14. *Aluminium Corporation* were firm throughout at Rs. 17-4. *Asiatic Insurance* were in good request at Rs. 10-12 and *Ruby General* at Rs. 20-8. *Calcutta Trams* were well held at Rs. 53-12, while a large amount of business was reported in *Calcutta Electric* at improved rates, the latest quotation being Rs. 42-3. *Reliance Firebrick* were firm at Rs. 26-12 while *Assam Bengal Cement*

were unchanged at Rs. 19-3. Among Paper shares, *Titagur Paper* were Rs. 30-6, *Orient* Rs. 32-6 and *Star* Rs. 16-10. *Midnapore Zemindary* were Rs. 188, *Assam Saw* Rs. 5-9 and *I. G. N.* Rs. 210.

THIS WEEKLY IS PRINTED

CALCUTTA.

FACT No. 4

INDIA'S cotton textile industry now produces per year nearly 14% of the estimated world production of cloth, over 13% of the estimated world production of yarn. Today the industry employs 3 lakhs more men and women than prewar. In 1943-44, cloth available for civilian consumption in India was about 94% of peace-time supply.

The mills which make the cloth then are not responsible for the present shortage in the retail market. No, indeed! The facts and figures given here demonstrate that India is one of the major textile-producing countries of the world, that a 6% reduction in normal peacetime consumption should be sufficient to equate demand with supply.

Who then is responsible? The movement of cloth and yarn after exit from the mills is entirely controlled by Government. Therefore, if you are unable to obtain necessary cloth or yarn you should approach the Textile Controller of your province. The mills are making enough cloth for essential civil needs.

One of a series of statements of fact for the information of the public:—

ISSUED BY

THE MILLOWNERS' ASSOCIATION
BOMBAY

THE ALL INDIA GENERAL INSURANCE COMPANY LIMITED

SATISFACTORY WORKING OF LIFE DEPARTMENT

Arrangements Complete For General Business

Speaking at the first Annual General Meeting of the All-India General Insurance Co., Ltd., on Thursday the 28th June, Sir Shantidas Askaran, Kt., who presided in the absence of the Company's Chairman, Mr. Ramdeo A. Podar, appealed to the 13,400 shareholders of the Company to give their whole-hearted support to the Directors by placing all their insurances with the Company.

The Chairman in the course of his speech said:—

"It is common knowledge that a number of hurdles have to be passed in these days before a Company—particularly a composite insurance company—can come into existence. Your Company was no exception to it and the promoters had to face several difficulties. The application for issue of Capital was made to the Examiner of Capital Issues on 31st December 1943 and the necessary permit was granted on 13-4-1944. The Company was got registered on 21-4-1944 and shares were offered to the public in the last week of May. The response was splendid and your Directors' offer of 62,500 shares to the public brought in no less than 15,448 applications for a total number of over 464,800 shares, thus resulting in an oversubscription of about 643%—and that too at a premium of Rs. 5 per share. Your Directors gratefully acknowledge this manifestation of public confidence in them and take this opportunity of assuring the shareholders that they (Directors) will not fail to justify the confidence placed in them.

The Certificate of Registration from the Superintendent of Insurance for transacting Life Assurance business was received on 3-10-1944 and arrangements were immediately started to transact business. The Certificate for transacting Fire, Marine, Accident and Miscellaneous Insurance business was received on 22-1-1945 and your Directors lost no time in preparing the ground for commencing these classes of business and for making Treaty arrangements for re-insurance.

Your Directors have established nine branches, namely, at Agra, Ahmedabad, Calcutta, Delhi, Hyderabad (Dn.), Karachi, Lahore, Madras and Nagpur, and progress has been made with the organisation and with obtaining business in all Departments. The Premium income disclosed in the accounts presented to you was derived as a result of about two months' operation in the Life Department only.

The Preliminary Expenses amounted to Rs. 31,969-9-6 and the Brokerage on shares to Rs. 11,730-4-0. These and other expenses amounting to Rs. 139,998-9-2 have been written off from the Premium on Shares (Rs. 6,25,000) received by the Company.

It will not be out of place if I express here my views about certain matters which have been agitating the minds of those connected with Insurance in India. As is probably known to many of you, the Select Committee, appointed by the Central Assembly on the Insurance (Amending) Bill, 1945, have recommended a reduction in the rates of commission payable to licensed agents and a statutory limitation of the total management expenses both in Life and non-Life business. Whilst I will welcome any proposals that may reasonably be expected to make Indian Companies stronger, I am opposed to any attempt on the part of the authorities to interfere with the day-to-day working of well-managed Insurance Companies. The Insurance Act, 1933, has considerably improved the working of Indian offices and if Government could but wait for another two or three years, they may themselves come to the conclusion that no such drastic legislation was necessary. A lot has appeared in the Press and elsewhere about the advisability or otherwise of the Government proposals so far as Life Assurance business is concerned but I have not come across any sound and disinterested arguments having been advanced in favour either of

the necessity or the desirability of imposing restrictions on the conduct of non-Life insurance business. One could understand the anxiety of Government to protect the interests of Life policyholders. No such protection arises or is needed in the case of non-Life business. All contracts for insurance against Fire and Accident losses are on yearly renewable basis and a Fire or Accident policyholder is free to transfer his policy to a stronger Company at any time he chooses. Why then, in the name of safeguarding the interests of the policyholder, enact measures which may retard the progress of younger or well-managed smaller offices? If Government propose to put through the legislation in this behalf in spite of opposition, let them at least do nothing which will harm the interests of Companies which are yet in infancy or are young and which need full freedom to grow. I am almost certain that the recommendations contained in the Select Committee's Report will, if placed on the Statute Book, definitely injure the development and growth of a large number of Life and Composite insurance companies. In this connection it is gratifying to note the stand taken by some of our oldest Life Insurance offices in opposing the Government proposals and I hope Government will not rush into making any legislation which may ultimately thwart the progress and success of Indian Insurance.

Another matter to which I may refer is the appointment recently of a Committee by Government to recommend measures to check the tendency to acquire controlling interest in Insurance Companies by purchase of a large number of shares at not very reasonable prices. I do not wish to anticipate the measures that may be recommended by the Committee. All that I wish to submit is that Government should not, because of a few undesirable features that may have come to their notice, place further restrictions on the whole lot of Indian Insurance Companies in the matter of investment of Life Assurance Funds. Government are not unaware of the feeling of Indian Insurance Companies regarding Section 27 of the present Insurance Act requiring Life Assurance Companies to invest not less than 55% of their funds in Government and Approved Securities; any additional curtailment of the powers of Life Companies to invest their funds is bound further to affect them adversely.

I will now refer to two other matters of importance to Indian Insurance. You are all aware of the terrible loss that took place in the Docks as a result of the explosion on 14th April, 1944. The damage to life and property was so widespread and severe as to cause considerable anxiety to Indian Insurance Companies. Luckily His Excellency Lord Wavell and his Government issued a notification assuming full responsibility for loss or damage to property which, at the time of the occurrence, was the subject of a Fire Insurance Policy. As you are aware, after lengthy discussion with the Government of India it was decided that Government should pay 100 per cent of duly assessed claims and that the Companies would contribute to Government, sums equal to 12½ per cent of settlements made to their respective policyholders. By this arrangement many an Insurance Company has been saved. But for it, the cause of Indian Insurance would have received a great setback. For this result our best thanks are due to His Excellency Lord Wavell and his Government.

The second thing to which I desire to refer is the Parleys that are taking place at present at Simla. I hope you will agree with me when I say that, but for the statesmanlike attitude adopted by the Viceroy the Simla Conference would not have been possible. I hope and pray that an interim political settlement for which the Leaders are striving and which is the aim of the Simla Conference will be a settled fact. If a National Government is established at the

centre it goes without saying that the claims of Indian Insurance will receive due recognition. The economic advancement of a nation has to be judged from the progress made by its banking, shipping, industrial and insurance institutions and I have no doubt that a National Government would be most helpful in securing progress in these useful directions. Let us therefore pray for the success of the Conference.

Before moving the adoption of the Report and Accounts I wish also to express your Directors' great satisfaction at the way in which your General Manager Mr. Cardmaster and the staff have carried out their duties in the interests of your Company.

Before I conclude, I wish to request the shareholders to give their whole-hearted support to the Company. There are about 13,400 shareholders on the Company's Register of Members. They can do a great deal to further the interests of the Company by placing all their insurances with the Company and by bringing its name before other persons in a position to offer insurances to it."

(Continued from page 29)

owing to the issue of bonus shares to shareholders and the reconstruction of capital in September, 1940. Debentures were unchanged at Rs. 25 lakhs while Sundry liabilities were sharply higher at Rs. 1.41 crores. Reserves were as much as Rs. 81 lakhs and undistributed Profits Rs. 3.28 lakhs.

On the assets side, the net block on the same date was Rs. 60.25 lakhs indicating that no substantial additions were made during the year; stocks are considerably higher at Rs. 68.73 lakhs (to a great extent due to higher prices for raw materials) and Outstandings at Rs. 94.9 lakhs. Investments were Rs. 66.5 lakhs higher at Rs. 67.87 lakhs and Cash was as much as Rs. 22.95 lakhs. It will be noted that there is a considerable increase in the liquid assets of the company. On September 30, 1939, Liquid assets were Rs. 76.58 lakhs against Sundry Liabilities, including dividends, of Rs. 33.49 lakhs. On March 31, 1945 liquid assets were as much as Rs. 255.5 lakhs against sundry liabilities including dividends of Rs. 140.57 lakhs. The increase in liquid assets was no doubt due to the decline in the net block by over Rs. 18 lakhs but it will be noted that the difference is as much as Rs. 75.6 lakhs. The increase in liquid assets will be even more pronounced if provision were taken for tax refunds. The Company has so far paid compulsory deposits to the extent of Rs. 34.58 lakhs and another Rs. 16 lakhs is due to be paid. Which means, that tax refunds will be nearly Rs. 20 to Rs. 25 lakhs. There can be no difficulty in redeeming the debentures due for redemption in 1946 on the due date as even now the Debenture Redemption Fund is Rs. 22.5 lakhs against the total debenture capital of Rs. 25 lakhs and the allocation from profits for the current half-year should complete the figure to Rs. 25 lakhs. That the shareholders are placed in an enviable position need not be emphasised. Out of the total paid-up capital of Rs. 65.89 lakhs only Rs. 35.02 lakhs is in ordinary shares. After providing fully for the redemption of debentures and the repayment of capital to the preference and preferred ordinary shareholders nearly Rs. 1½ crores will be available for distribution among the ordinary shareholders. The yield of 5 per cent with such a high break-up value for the shares can be considered attractive.

Reviewing the results of India Trade and General Insurance Company last week it was stated that the company was sponsored by a powerful group of Cawnpore interests. It should be said that prominent businessmen from all over the country are on the directorate.

COMPANY REPORTS

SOUTH KARANPURA COAL CO. LTD.

Audited Accounts for the half-year ended 28th February, 1945.

Accounts.—The Profit and Loss Account, after providing Rs. 1,38,000 for Depreciation, Rs. 1,90,000 for Taxation, transferring Rs. 10,000 to Stock Adjustment Reserve and including the sum of Rs. 1,532-8-11 brought forward from last half-year, shows an available balance of Rs. 1,06,435-0-7 which the Directors propose to dispose of as follows:—

In paying a Dividend at the rate of 10 per cent per annum, without any deduction for Income-tax paid by the Company Rs. 87,500; and in carrying forward Rs. 18,935; total Rs. 1,06,435-0-7.

Taxation.—The Company's appeal against the standard profit allocated to it has now been considered by the Central Board of Revenue and a substantial measure of relief has been granted. As a result, it has been unnecessary to make any provision for E.P.T. in the Accounts under review.

Reserves and Depreciation.—69,220 tons were raised and 1,11,794 tons despatched during the half-year as compared with 52,854 tons raised and 89,494 tons despatched during the previous half-year. The Reserve has continued to be maintained in the interest of the Government and the Military authorities and by Government order.

The general character of coal continued throughout the half-year, the quality of the coal being of a standard which has been maintained throughout the half-year and has been of a standard which has been maintained throughout the half-year.

Under the Colliery Control despatches were made in accordance with instructions issued by the Coal Commissioner.

Market.—Prices remained unchanged throughout the half-year at the levels fixed by the Coal Commissioner on the 1st June, 1944.

During the half-year ended 28th September, 1944, the sum of Rs. 50,595 was earned under the Target Bonus scheme and this has been included in the accounts.

It is calculated that a sum of approximately Rs. 2,00,000 which is subject to Income tax and Super-tax, will be earned during the half-year ended 31st March, 1945, and will be included in the next half-year's accounts after the figures have been agreed with Government.

A further concession to the Industry has been announced by Government in the shape of a bonus of 5 per cent, on the total sale value of all coal raised provided the target figure for raisings is exceeded by 10 per cent. A bonus of 7½ per cent on the total sale value of all coal raised will be paid in the event of the target figure being exceeded by 20 per cent. This bonus is limited to a maximum of Rs. 2,00,000 a Company each year and is subject to Income-tax and Super-tax, but free of E.P.T. It is expected that a substantial sum will be earned by the Company under this additional bonus scheme, for the half-year ended 31st March, 1945.

Labour.—Labour remained short throughout the half-year particularly in the Ranee-gunge Field partly due to seasonal causes and partly due to continued competition for available labour by Military and Government Contractors. Measures have, however, now been taken by Government in an attempt to restrict the encroachment of other employers on the limited supplies of coal mining labour available.

Without the re-introduction of women into the mines the present rate of raisings in the industry could not have been maintained as a very large proportion of the underground and surface loading is now being done by women. While the Directors regret the necessity for the employment of women labour in the mines they take this opportunity to emphasize that the work is entirely voluntary and further that the rates paid to women are the same as those paid to men.

Stores and Equipment.—The shortage of plant and equipment remain a serious obstacle to increased coal production but it is hoped that the representations made by the Coal Industry and Government will result in early delivery of the plant ordered abroad during the past two years.

Government have now agreed to grant the Coal Industry a Special Depreciation allowance in respect of items of plant purchased for the increase or maintenance of raisings. This concession will be of great value to the Industry and steps have been taken to apply for this special depreciation in respect of the items of plant required by the Company.

Transport.—Wagon supply was satisfactory throughout the half-year.

The Auditors have hitherto been unable to give the Company an unqualified certificate owing to the fact that in their opinion the total depreciation written off in the Company's accounts was inadequate. The opportunity has therefore been taken to utilise a considerable proportion of the sums made available by the revision of the standard profit to write off arrears of depreciation and thus reduce the Company's assets to a valuation at which the Auditors are prepared to give an unqualified certificate.

Articles of Association.—New up-to-date Articles of Association and a revised Managing Agency Agreement are at present under consideration of the Directors, and it is hoped to place draft documents before the shareholders for their approval in the near future.

Audited Capital.—Rs. 50,00,000. Issued and Subscribed—Rs. 17,50,000 in 175,000 shares of Rs. 10 each, fully paid up.

Statement of Balance Sheet at 28-2-1945.

Liabilities.	Rs.	Assets.	Rs.
Capital Paid	17,50,000	C. Share	17,50,000

PROGRESS OF CLOTH DISTRIBUTION IN CALCUTTA

The work of cloth distribution in Calcutta, during the Interim Rationing period, has been remarkably speeded up by the Ward Committees. In the week ending June 24, they issued 1,05,560 permits. This is almost seven times the total number of permits (15,392) issued during the first fortnight ending May 20th.

The following table illustrates the steeply rising tempo of the cloth distribution work in Calcutta:

THE TOTAL NUMBER OF PERMITS ISSUED FROM MAY 20 TO JUNE 24 IS 3,05,088.

Probably, the zenith has not been reached even in the latest achievement of over one lakh permits issued in a week. The provision of clerical assistance, it is hoped, will assist Ward Committees to speed up distribution to the fullest extent of cloth made available to them. This would mean that, in the words of the Director-General of Enforcement and Public Relations in his circular letter to them, "the Committees can afford to be more liberal—or, to put it another way, to be less rigid in the standard of selection—than in the past."

BOUQUETS & BRICKBATS

(From our Readers)

The Aggrieved Reader.

I wonder why in the Investors' Supplement such useful features as the 'list of daily transactions in the Share Market' and the 'list of dividends declared' have been discontinued. The Government has allowed an increased quota of paper consumption which should be sufficient to cover any new requirements. Why should it have been necessary to encroach upon the well established features referred to passes one's comprehension. I find also that the "monthly summary of companies' balance sheets" also is not being published regularly now, and it is not brought up-to-date, which detracts from its utility. To be frank, I for one had subscribed to the Indian Finance only on account of the features referred to. And it will be a disappointment to me if you decide to do away with these features altogether.

P. GHOSH

Leaders Beware:

Your note on the subject 'Liasion with the States' appearing in your issue of the 7th July, 1945, read together with the note 'Indian States and British Plans' in your issue of June 9th 1945, leads me to suspect the motives of the British Government which have been none too good.

Sir William Barter, former Resident in Baroda is reported to have said, "The States generally will look to Britain for supply of the equipment and technique they will need in carrying out their industrial programmes and they would be reluctant to conclude with British India an agreement that might in any way impede British Co-operation". Should the States think that their first loyalty is to British and even against British India it does not augur well with the future of India.

It has been said that the States have not been touched by the Wavell Plan because that would worsen the already complicated problems. But if exclusion of the States from the purview of the Wavell plan in the garb of simplifying the problem, is with a sinister motive to block India's progress towards independence, let our leaders beware.

M. Sobha Singh.

Indianisation of the Imperial Bank:

Eavesdropper deserves, not a bouquet for his 'Clive Street Gossip' appearing in the issue of the 7th July 1945, but a golden pen, like the one presented to Stalin, for writing more of that kind. Few columnists, I can say without fear of contradiction, have done such real service to this country, as this scribe in financial journalism. Whether it is the budget, or the loan policy, or the tariff question, or import of consumers goods or the municipalisation of tram services or any other question, he argues cogently and convincingly and gives a correct lead to the public without fear of incurring the displeasure of anyone. And this question—Indianisation of the Imperial Bank has been so dealt with that Eavesdropper's articles are the Magna Carta of the Indian staff.

As one who has read this journal for nearly fifteen years I am reminded of various instances on which Eavesdropper has hit the nail on the head. When the Reserve Bank Governor, Sir James Taylor, retired, Eavesdropper led successfully an agitation for the appointment of an Indian to that post. To give another instance, if I remember right, it was Sir Osborne Smith

who rightly said, that the very establishment of the Reserve Bank and the goodwill that people accorded to it, was in no small measure due to the powerful pen of Eavesdropper.

I am afraid I am going off the track. The Indianisation of the Imperial Bank is a measure that is long overdue. No sensible reason can be adduced against it. This campaign which Eavesdropper has undertaken deserves all support. Well begun, Eavesdropper, Go ahead!

N. K. Bharadwaj, M.A., B.T.

Sir Jeremy And Indian Population.

I do not know what exactly Sir Jeremy Raisman said on the question of Indian population and I am not out to defend him. But, I think, while it is necessary to increase the standard of living of the people of India, it is also necessary that people should have only as many children as they can maintain. I know this may not appeal to orthodox minds.

There is one difference that I note between India and countries like America. Such an important question as the population question is being discussed in your columns by males alone—as if it is their sole concern! I think that is only an extension of the system which prevails in Indian homes, the husband dictating to the wife on all matters. If husband and wife decide as to the number of children they should have, there should be no economic problem in this country and no need for sermons on population from retired men like Sir Jeremy Raisman. I think planning population is part of Economic Planning.

MRS. KOMA SRINIVASAN.

Lunatic System:

I have read your note styled 'Lunatic System' and also the strongly worded letter from Mr. N. Kripalani. Coffee being burnt in Brazil or crockery being steamrollered in Britain are not invariable concomitants of the capitalist system. That certain Governments chose to take such unwise steps is no excuse to condemn the capitalist system with bell book, candle. That the capitalist system has defects, everybody admits. But which system has not?

It should be pointed out that the capitalist system has certain advantages which no other system has: the opportunity for individual initiative, catering to the elementary human motive—profit.

I wonder if it will be possible to satisfy the increased and increasing needs of humanity in any other system. What is required is that the production and, much more, the distribution, of goods should be controlled by Governments and done equitably. The system is not in itself lunatic, but lunatics make use of it.

V. K. VASWANI.

BOMBAY MARKETS

BULLION

BOMBAY, July 12.

Despite the stoppage of Silver sales by the Reserve Bank of India, forward Silver declined from Rs. 139/4 on Tuesday to Rs. 135/4 today. The bull clique bought even at a premium of 8 annas to denude the market of stock. Spot Silver quoted Rs. 139/12 on Tuesday but the firmness was shortlived. Heavy arrivals of old rupee coins increased the stock to 3,000 bars despite the bulls railing, 1,000 bars upcountry. The undertone is quiet.

In Gold also heavy stocks prevail and no rise is expected. Spot and Forward are quoting Rs. 77/10. The undertone is easy.

Fact Parade

Strike Wave in Europe:

Strikes in France, Denmark, Holland and North Italy involving war workers, banks, bank clerks, miners, teachers, postmen and others are reported.

The shortest were token stoppages of 20 minutes, and a half an hour by Paris postmen wanting 24 sterling a month minimum salary, and gas workers seeking overdue bonuses.

At Toulon, bank clerks had a picket line.

While Rotterdam dockers went back to-day in a holdup which the Dutch Premier described as a threat to the country's life-lines, their union declared that it would call a nationwide strike unless their demands on wages and other issues were met by July 26.

At the same time between 3,000 and 4,000 coalmine and gas workers in Luterade Holland downed tools, said the Dutch Radio.

There are 2,000 shipping workers still out in Denmark, and they have rejected Government compromise proposals, said the Swedish Radio. Workers of other districts have downed tools sympathetically. The strike is holding up food cargoes destined for Norway and for Britain.

Strikers of various trades in Milan are parading with banners inscribed "We Are Hungry", while Allied tanks and armed patrols keep guard.

Eire's Sterling Assets:

In a lively debate in the Dail Opposition members expressed fears that Eire's sterling assets in Britain, now about £170,000,000 might ultimately be written down by half when Britain's turn came to redeem them in the share of goods or otherwise.

The Minister for Local Government and former Finance Minister, Mr. Sean McEntee said that Eire to-day was the most prosperous country in Europe, and because her traditional economy based on trade with Britain had not been interfered with more than absolutely necessary, sterling assets had accumulated under conditions imposed by war.

There was no justification for assuming now or in future that when Britain was again a dominant power in western Europe with vast resources of raw material at her disposal, the sterling would have no value. Opposition speeches, he declared, were ill-informed and capable of doing much harm.

Britain, Mr. McEntee added, had emerged as the strongest commercial power in western Europe, notwithstanding all she had suffered, and she would strain every nerve to regain her place in the world as a great producing people. Britain would not become a fraudulent banker or a defaulting creditor.

U. S. Loan for Britain.

The Assistant Secretary of United States Treasury, Mr. Harry D. White, told a closed session of the Banking Committee of the Senate that the United States Government have as yet made no actual commitments to give Britain postwar aid, according to statements by the Committee members after the meeting.

These members said that in reply to a direct query, Mr. White categorically denied reports that the country was committed to extending to Britain credit of 6,500 million dollars (2,112 crore and 50 lakh rupees).

Senator Robert Taft, Republican from Ohio, said after the Committee meeting: "Nothing should be given to Britain until she agrees to lift trade restrictions so that we can sell to India or Egypt for instance, on the same basis as the British Empire".

Members of the Committee quoted Mr. White as saying that discussions had been going on regarding a postwar loan from the United States to help to clear Britain's debts, "but only in a general way".

U. S. Trade Bill:

President Truman to-day signed an Act extending the United States reciprocal trade agreements programme for three years, and giving the United States Administration powers to reduce the tariffs by a further 50 per cent.

This Act aims at reducing trade barriers and was recently stated by President Truman to "place the United States squarely behind the principles of International co-operation."

Russian Academy Plans:

New plans are being made by the Academy of Sciences of the U.S.S.R. to forward the

great work which it has already carried out, in every aspect of economic and social life of the peoples. Up to 1940 more than 2,500 significant scientific works had been published, and even during the war 800 more were added. Thousands of textbooks and treatises on the history, language, and literature of the peoples of the Transcaucasus, Central Asia and Kazakhstan, and valuable collections of folklore and ancient classics, figure prominently among the works.

Many unsurveyed areas of the country have been studied and charted by their research workers who discovered new and extended old resources of raw materials for industry.

The Academy of Sciences now has seven branches which include 41 research and 77 other scientific institutions with nearly 3,000 research workers and three bases having branches in outlying sections of the country, such as Tajikistan, Turkmenistan, the Urals, West Siberia and Kazakin. There are also branches in the Far East.

Soviet Geological Map:

The Soviet Union is now preparing an intricate secret map showing the location of

SPLISH SPLASH

... drops the water from the wheel of pots as the ox plods wearily in a circle to keep the water on the move. Where electricity is available this old method of irrigation gives way to modern pumps. Water and electricity are closely allied, for power can be obtained from moving water to generate electric current. From hydro-electric head-works electric power is distributed by high-tension cables over a wide area.

Laid out along the most modern lines, our works are equipped with the latest type of machinery for the production of ultra modern cables. Highly skilled technical staff exercise rigid control at every stage of production ensuring strict conformity to any specification—B.S., I.S.O. or International. Right now we can only quote for Electric Cable, D.C. Bare Copper Wires.

Installation of hydro-electric plants and increased availability of electrical power will be one of the essential factors in the industrial and agricultural development of India. To this end we are equipped to supply the Nation's demand for cables to carry the current to every town, village and homestead.

THE NATIONAL INSULATED CABLE CO. OF INDIA LTD.

67/74, STEPHEN HOUSE, CALCUTTA. TELEGRAMS: "NICOINDIA". TELEPHONE: CAL. 3444 (10 LINES). BRANCHES: BOMBAY, DELHI — WORKS: BHATPARA (MUMBAI), BENGAL, D. & A. RLY.

its metal and mineral sources to a depth of two miles below the surface of the earth, it was reported recently.

The data is being gathered with the aid of a new geological formula called "tectogenia" which is already credited with helping discover oil in an area of Russia where its existence had never been suspected.

The formula was evolved by Vladimir D. Bondarchuk, 41 year old geologist and a member of the Ukrainian delegation to the United Nations Conference. He said in an interview that he would be glad to acquaint American geologists with his technique for spotting hidden natural resources.

Bondarchuk, who is also president of Kiev University, said a tectogenical map of the Ukraine has already been completed and shows that the hidden wealth of that one State alone is equal to that of the remainder of the Soviet Union.

It is in the Ukraine, along the east bank of the Dnieper, where the new oil deposits have been found.

With a warning that he may be oversimplifying an intricate geological theory, Bondarchuk offered this explanation of tectogenia.

Tectogenia is based upon the theory that minerals and metals are not hidden in the earth's crust at random but that their whereabouts are dictated by factors of time, history, and analogy.

Thus for instance there is no mere coincidence that the same granite is found in Sweden and in the Quebec region of Canada. The two regions are historically analogous and therefore every metal or mineral discovered in Quebec would be found in the Swedish granite area.

"Neither is there a coincidence that both California and Sakhalin are oil-bearing. The history of the formation of their respective mountain layers, the mountain ridges which encompass the Pacific Ocean being of the same origin and age calculated in millions of years, pre-determines the presence of oil in both areas," he explained.

"And a future tectogenical map of the Pacific would disclose counterparts to Alaska's gold region, without a gold rush," he added.

"The existence of theories in your and other countries have been tested by us before we developed our own," he continued, "which we claim, gives the correct answer to questions geologists are still asking themselves."

"We can now establish things scientifically on the basis of laws we believe we have been able to determine," he concluded, "I have spent many years in expeditions into unexplored regions in order to verify the theory on the spot. It has proved correct."

Iraqi-Turkish Trade Pact:

An Iraqi-Turkish Trade and Barter Agreement was signed at Baghdad. The negotia-

tors agreed to exchange surplus local products.

A Turkish Economic Mission visiting Baghdad, has established offices for selling Turkish monopoly goods at Baghdad, Basrah and Port Mosul.

Australian Trade Delegation for India?

The Federal Export Committee which is advising the Australian Government on methods of developing postwar trade is expected to recommend shortly the sending of an Australian trade delegation to India and Ceylon.

Coal Mines Control:

The Government of India, in consultation with the Coal Control Board, have decided to take steps to set up machinery to control the opening and re-opening of coal mines, states an official Press Note.

"Large numbers of small pits and quarries have been started in recent months, which drain away coal mining labour from established collieries and with inefficient methods produce only the inferior classes of coal."

"The Colliery Control Order, 1944, has, therefore, been amended by inserting the following clause:—

"No colliery shall be opened and no colliery, the working whereof has been discontinued over a period exceeding two months, shall be reopened except with the previous permission of the Central Government and in accordance with such directions as the Central Government may at the time of granting the permission or subsequently, give to the owner or owners concerned."

"It is not Government's intention to ask for information in great detail from persons desirous of opening or reopening coal mines. Control will be restricted to requiring the owner or proprietor to give prior notice and obtain the Coal Commissioner's approval to commence mining operations or to reopen a mine in any particular coal-bearing area."

"Applications are to be made to the Regional Controller of the area concerned from whom the prescribed form is also available. Permission to open or reopen will be given by the Coal Commissioner after consultation with the Chief Inspector of Mines in India."

New Loan to Bengal:

The Government of India, it is understood, have sanctioned a loan of Rs. 36,83,000 for various schemes relating to the distribution of seeds in the province of Bengal during the year 1945-46 as part of the "Grow More Food Campaign." It is an interest-free loan and is repayable within one year. The Government of Bengal is expected to spend an equal amount from its funds on these schemes.

The Government of India have also sanctioned a grant equivalent to 25 per cent of the actual loss or upto one rupee per maund, whichever is less, of the quantities actually distributed on the basis of the year 1945-46.

Khadi Pratisthan's New Product:

Production of full cream condensed milk on cottage industry basis adds to the list of Khadi Pratisthan's manifold services to the people. In seasons when milk is available in abundance the villagers can, by use of this method, preserve milk for future use. This will be of immense service to the people inasmuch as there are areas in Bengal where milk cannot be secured even for the babies. The full cream condensed milk now served by the Khadi Pratisthan will go a long way in alleviating the milk shortage in Calcutta and mufussil.

WORLD OF INDIAN FINANCE

CALCUTTA, Friday Evening.

Extremely cheap conditions continue to prevail in the money market and call rates are quoting ½ per cent in Calcutta and ¼ per cent in Bombay. The recent large sales of 3 per cent 1970-75 loan and 2¾ per cent 1948-52 loan do not seem to have made any difference to the market and it appears that the New Loan, terms of which were announced early this week, will also be a complete success. The preoccupation of banks with their purchases of tap loans, which give relatively high yields, has perhaps been responsible for the lack of interest at the auctions of treasury bills of both the Central and Provincial Governments. Otherwise the poor response for Central Treasuries and the steep rise in the average discount rate of Provincial Government treasury bills cannot be satisfactorily explained. It is rather interesting to note that while the Central Government is not anxious to increase borrowings on short-term basis, banks also have not been very keen to take up treasury bills at the present low rates and prefer to place surplus funds in gilt-edged securities. This is precisely the development that the authorities wanted to come about. As pointed out last week, since April this year, quite a substantial portion of the funds released on account of maturing treasury bills has been invested in Government loans.

Against the offer of Rs. 2 crores Central treasury bills applications were slightly lower at Rs. 2.42 crores but bidding was less keen and only tenders for Rs. 41.5 lakhs were accepted. There was a token increase in the average discount rate to 4 annas from 3 annas 11 pies per cent. The offer for next week has been again maintained at Rs. 2 crores. The Madras Government was on the market for Rs. 1 crore of treasury bills. Applications were rather satisfactory at Rs. 2.08 crores but as tenders were at high rates only Rs. 50 lakhs was accepted and even then the average discount rate had to be as high as 4 annas 8 pies per cent per annum. It will be remembered that only recently the Assam Government was able to get its requirements at 4 annas per cent. The Bengal Government has fared worse. Against the offer of Rs. 3 crores applications were Rs. 4.35 crores but the average discount rate was as much as 6 annas 2 pies per cent per annum. The higher rate demanded from the Bengal Government is perhaps a reflection on the provincial Government's finances, the recent increase in taxes having an unfavourable effect on lenders. It is also stated that there were no maturities against the offers by the provincial governments mentioned above and as such greater difficulty was experienced.

The announcement of the terms of a short-dated loan early this week has had a tonic effect on the gilt-edged market and there are indications that the New Loan will be completely successful. The New Loan is a 2½ per cent loan issued at par and repayable at par on July 16, 1950. Subscriptions can be made both in cash and cheque and the total amount has been limited to Rs. 20 crores. The list for the loan will open on July 16 and close after business hours on the same day.

The reduction in the borrowing rate to 2½ per cent for the first time in the history of the Central Government's borrowing programme is a measure of the success of the policy pursued by the new Finance Member in recent months. The suspension of sales through the tap of 3½ per cent paper and other loans has led to greater buying in the open market and an increase in the quotation for all loans has been recorded. The

feature of trading in the gilt-edged market in the last three months is the greater interest taken in long-dated issues. It was daily becoming clear that it would be more remunerative to buy medium and long-dated issues and it would not be advisable to rely wholly on short-dated loans. With the competitive buying by scheduled and other banks short-dated loans like 2¾ per cent 1948-52, 3 per cent 1949-52 and 3 per cent 1951-54 were quoted relatively high. After the announcement of the terms of the New Loan the Reserve Bank authorities have promptly suspended the sales of 1948-52 as parcels of this rupee counterpart were being issued to the market at Rs. 100 clear. There are reports, however, that in the Bombay market sales are still being effected at Rs. 100-8. We are unable to get confirmation of these reports but it need not be emphasised that for the new loan to be successful sales of 2¾ per cent 1948-52 should be completely suspended.

The rush for buying analogous issues, which yield a higher return, has naturally resulted in an increase in prices. The table below on page 66 will show that non-terminable loans have recorded a further sharp improvement and are now quoting at fresh high levels. The rumours regarding the possibility of conversion of these issues into dated stock have been revived with the reduction in the yield basis and the possibility of a large saving in interest charges. (This question is discussed at length by "Eavesdropper" elsewhere in this issue).

The Romance of a Cotton Bud

Nature's bounty and man's ingenuity have given us many of the finer things of life. The inanimate and most unimaginative object—the cotton bud—gives man a great opportunity in fashioning for himself cotton materials rich in texture, and in a wealth of designs, to suit a variety of tastes and fancies. From sarees to shirtings, and bedsheet's to several other household fabrics, the cotton bud is a faithful servant in the hands of man who can mould it to his liking.

The Lakshmi Cotton Mills are amongst the oldest textile manufacturers and it is their policy to apply their experience and resources to producing new and better fabrics to meet the requirements of one and all.

to the same extent as war makes its exit. The reason we adduced was that, since war expenditure is the main prop of the national economy in the present phase, its sudden cessation may cause a serious landslide, and that expenditure on planning should be increased at every stage to the extent of the decline in war expenditure. The National Government may conceivably choose to be less cautious. But whatever that may be, the point that is common to that context and the one on hand is that expenditure on national development should not be made to wait for the end of the war. On the other hand, there are numerous considerations for taking on hand a large scheme of developmental expenditure. The inflationary effects of such expenditure have to be considered; and one can say that road planning and agricultural development should be taken up only after the food and cloth position has been put right and after the financial measures suggested in our last week's article have been successfully put through. But it is extremely important that the preliminaries of planning should not be postponed by the delay in providing the conditions precedent. For, if we must think of these measures in relation to a time schedule, we may say that, if the National Government will go about its task energetically, the food and the cloth position can be put right in six to nine months, while at the same time inflation may be brought under control. If the war with Japan can be expected to end in nine to fifteen months, then the last few months can witness the introduction of such measures as road planning, building and agricultural development with significant expansion under education and public health. By the time planning proper can be considered, the nation will have learned to work together and economic and political problems will alike have lost their formidable character.

India and Rehabilitation of Burma

With the Allied armies rapidly occupying Burma, the problems relating to the rehabilitation of the country are presenting themselves. Burma has been under Japanese occupation for over three years during which there has been widespread liquidation or transference of property and assets as also a steep currency inflation. Because of the close economic ties between India and Burma and particularly the common currency of the two countries, banking readjustment and rehabilitation in Burma are of special interest to us. At the outset, one cannot but notice the adverse reaction around to the blueprint for Burma prepared by the conservative members of Parliament. How unjust and unhelpful are some of the views expressed in the blueprint will be obvious from the fact that even Mr. Amery has not been able to identify himself with them. He said in Parliament, 'I rather regretted the somewhat dangerous passage in the report of my honourable friends in which it spoke of the Indian exodus as having solved a major part of the alien problem in Burma.' In short, 'the suggestions contained in the blueprint', as Mr. M. A. Master put it, 'are ethically wrong, economically harmful and politically mischievous and in every way repugnant to the true interests of Indians in Burma.' It is, therefore, necessary to examine the problems likely to arise in settling the thorny question of Indo-Burma relations when Burma is rehabilitated.

The economic dislocation in Burma measured in terms of destruction of industrial and agricultural resources or displacement of population is hardly less serious than in Europe. Burma has been one of the greatest rice exporting countries; yet paradoxically it is faced with a rice shortage. Though it is difficult to say whether there is an absolute deficit of rice or no, scarcity is reported from both normally deficit and surplus districts. To take only one instance, Schewebon district which normally had 6 lakhs acres under paddy and yielded 3 lakhs of tons of paddy, had, during the last 12 months, only 2/3 of the area under cultivation and yielded only 55% of its normal yield.

It requires no imagination to understand the conditions that will result from poor crop, broken down transport and distribution system. Diversion of paddy fields to grow cotton to meet heavy Japanese demands, Japanese conscription of labour and bullock carts for defence work, and encroachment on the cattle resources of the country, these are said to have contributed to the present situation. India, it is well known, has been one of the principal importers of rice from Burma. And it is the common cry of all that the famine conditions in different parts of India were due in the main to the loss of Burma and its rice. In the interest of both India and Burma, therefore, paddy cultivation in Burma should receive prompt attention in any scheme of rehabilitation.

Recently the Government of India took steps to constitute a semi-autonomous Burmese currency without wholly severing the link between the Indian currency and the Burmese currency. Thus separate Burma Administration currency has now been put into circulation and the rupee notes of the Government of India are super-printed with the words 'Military Administration of Burma—Legal tender in Burma only' and circulated in reconquered Burma. But no final decision on the point whether the Burmese currency should be cut asunder from the Indian currency has been reached as yet. The immediate problems of banking rehabilitation in Burma will be of a more practical nature. When the foreign and Indian banks again open their business in Burma there will be a lot of salvaging to be done. By far the most important part of that work is that which concerns the small country bankers. These people carried banking facilities to the remotest corners of Burma—corners which the reputedly organised banking system could hardly hope to reach. The Burma Banking Committee, for instance, estimated that the total investments by the Chettiyar community from southern Madras presidency was about Rs. 75 crores, two thirds of which were computed to be invested in agriculture. The importance of these small credit facilities in the economy of Burma cannot be overestimated; and their absence in recent years may have done something to restore a sense of fairness and perspective.

Apart from the immediate and short term requirements of reoccupied Burma, there are wider issues such as the principles governing the grant of compensation for industrial equipment, buildings, and other property which were destroyed, resettlement of persons and the immigration policy. In all these, needless to say, Indians have a vital interest. It is understood that Civil Affairs Officers are soon to proceed to Burma with numerous survey parties for assessment of all immovable properties in liberated Burma. With regard to commercial and industrial properties, eight committees of inspection have been appointed under different heads, which include in their membership representatives of the Burma Indian Chamber of Commerce, the Chinese Chamber of Commerce and the Burma Chamber of Commerce. The Tory blueprint suggested that all British firms should be compensated for loss and destruction in order to help industrial rehabilitation while agricultural rehabilitation can be assisted only by transfer of the land to the ownership of the cultivating Burmans from the non-cultivating absentee landlords. British business in Burma opens its mouth wide; but any such far-reaching change can be effected only by a responsible Burmese Government. It is also understood that talks regarding post-war Indo-Burmese immigration are already in an advanced stage. It is but proper that such matters should be decided by National Governments in India and Burma.

The burden of the song in the Conservative Blueprint for Burma is that there is no love lost between Indians and Burmans and the sooner Indians left the country the better it would be for the Burmans. But facts are otherwise. The best proof of the mutual attachment of Burmans and Indians lay, as Raja Sir Annamalai the Chettiar pointed out in his speech in Bombay, in the fact that in the elections to the Burmese legislature which were fought on the issue of separation there was an overwhelming majority against separation from India. And the fact of the matter is that British commercial interests want to steal a march over Indians and infiltrate into the economy of liberated Burma while the war is still on, with the patronage of the British Government and their Indian branch. Numerous instances of discrimination between Indians and the British in the matters of re-entry, reacquisition of the properties, compensation for the ravaged property in Burma lend support to this view. All that Indians ask is that European and Indian interests should be treated alike and receive the same degree of protection. Industry, Commerce, Agriculture and Transport in Burma are all devastated. And Burma needs labour, skilled and unskilled, brains and capital, and devoted services which India can give. As soon as Civil Government is established Government should enable Indians to go into Burma without let or hindrance.

The problems that face Burma are many and complicated. The remedies suggested in the Conservative Blueprint are similar to making a desert and calling it peace. The correct appraisal of the situation is found in the words of the "Times", "Economically India is Burma's best customer and Burma is one of India's most profitable markets. Burma needs Indian help in rebuilding her war-shattered economy and India has large interests in Burma which call for fair treatment."

The War and Indian Rural Economy—VI

(From our Staff Correspondent on Tour)

In the five articles published in this series, I endeavoured to pass on to the reader the impressions that I gathered firsthand of how the war has affected agricultural economy in India. It is seen that the price boom has enabled large sections of the ryots to put by considerable surpluses; these surpluses are generally held in cash, less frequently in investments, and more often utilised for the repayment of debts or for the acquisition of more lands. In almost all cases, the higher cash incomes have been utilised to some extent towards the improvement of the standard of life. Though higher prices by themselves are a source of satisfaction to the cultivators in general, the vast majority of them are peasants with small and uneconomic holdings and they have not therefore been able to derive any genuine or permanent advantage. On the other hand, instances are not rare, where the disproportionate rise in the cost of goods and services which the cultivators have to purchase has rendered the position worse. That price control over agricultural commodities has always been more vigorous and effective than the control over other consumer goods is a circumstance which has a poignant relevancy here. The problem of rural debts which has already been greatly lightened by debt relief legislation is still there; and the Indian ryot for years to come may not expect another opportunity to wipe off these debts, in the shape of high and guaranteed prices. Notwithstanding the fact that many agriculturists have been able to liquidate their debts in part or in full, it can by no means be asserted that there has been any great improvement. Much of the repayment were through the sale of portions of lands and by fresh borrowings. In certain areas as, for instance, in the 19 districts of Mysore of which I gave figures in a previous article, indebtedness has only grown. The land mortgage banks which were a source of relief to indebted agriculturists have failed to adjust their policies and methods to the changed conditions since the war and they are becoming increasingly unattractive, their business has shrunk and some have even begun contemplating suicide. The ryot is again driven into the hands of private money lenders who offer him equally cheap and more facile credit.

Much land has changed hands between 1939 and 1945: it is not always the agriculturist with surplus cash who buys it; even when he purchases it, he is very likely to have taken it from a poorer ryot who sells it for the alluring price he secures. Actually the lands have passed over to a class who are the owners of unearned and fortuitous incomes during the war, who are not themselves agriculturists and who invest in land either to achieve what might be called a balance between their various sources of income or to put their money on the safest and most convenient investment obtained under present conditions. The conditions of austerity imposed by the war, the postponement of industrialisation and the meagre success of savings campaigns have resulted in the canalisation of cash surpluses towards land pushing its price, often to crazy heights. It is no wonder that faced with very tempting prices innocent ryots feel ready to part with the goose that lays golden eggs.

Nor could one see any general improvement in living conditions among the bulk of the rural population, except among the rump of the labour class. This latter section has been able to secure a rise in wage-income much higher than the rise in the cost of living and thus finds itself the greatest beneficiary of the war in the rural areas. But the advantage gained by labour is creating problems for the ryots and the prospects of an equitable re-adjustment of relationship do not look rosy.

In fact, it is no easy task to put together what must necessarily be impressions of conditions as they obtain in different spots which I have hurriedly surveyed in different parts of the country. But I believe I have gathered enough to induce a strong scepticism about the beneficial effects of wartime inflation on the cultivator classes. When one thinks of it, of the factors which affect the position of the agriculturists, the adverse ones are more numerous than the favourable ones. The latter group comprises only the rise in agricultural prices and the relief which the agriculturist family gets by employment of some of its members in war service. As against these two, there are the rises in the costs of production, particularly wages of agricultural labour, the more than proportionate rise in the prices of manufactured articles, the urge to live and adopt new styles of living and, above all, the lack of foresight and prudence. It would be well therefore if the public does not hug too closely to the illusion that the ills of the agriculturist have been cured, without any effort on our part, by the conditions of the war period. These ills are too many and too deep-seated to be got rid off by the financial and economic quackery of inflation.

The war tested the validity of price as a solvent of the ills of the Indian agriculturists. The ryot received the best

prices and often guaranteed prices for many commodities. He had also the advantage of direct sales to the Government or semi-official agencies. But agricultural prices rose with other prices and hence became if anything more than neutralised. The cultivator would have been helped if the prices of agricultural produce alone went up independently or at least stood at a considerably higher level than those of other commodities. But that is a position difficult to secure; the usual tendency seems to be the other way about. In the immediate future when there takes place a decline in price as well as in the cost of production, the former would in all probability fall more rapidly than the latter; at least in the matter of labour cost, this looks a certainty.

Governments have been trying to assist the cultivators in a number of ways but such piecemeal assistance has availed him little. The propaganda of the agricultural departments about improved methods of cultivation has produced some result here and there; but as long as the average ryot has neither the means nor the intellectual equipment for co-operation to put those methods into practice, all-round results could not be expected. The history of co-operative credit is a dismal failure. An organisation and a method officially imposed from the top on an impoverished and illiterate people can scarcely succeed. A minimum economic competence and educational attainment in the average individual is necessary if he is to function as a successful co-operator. Neither the one nor the other obtains in the average villager. Even among the educated classes, co-operation is looked upon as something of a nuisance. A prominent leader of the movement in the South confessed to me that he could not, in a city of six lakhs, get five people for an audience to celebrate the Rochdale Pioneers anniversary. Since the war, the services of co-operative societies have been utilised by various Governments for procurement, distribution and sale of foodstuffs and cloth. These societies often hastily improvised for the occasion are doing some good work. In many places, co-operative agricultural marketing societies have also come into existence and are thriving. But the wartime record of these institutions, propped up by Government assistance, guaranteed prices and a demand always outbidding supply, cannot warrant hopes of their stability and success in the more competitive and strenuous conditions of the future. Government attempts at controlling agricultural marketing more directly could also claim only partial success, as such attempts by themselves could not relax the financial grip the merchants have over the producers and which restricts their freedom of sale to a very large extent. Most of the Indian Governments have Rural Reconstruction Departments. But the work done by such departments has seldom gone beyond stray, sporadic, welfare activities. In short, Government attempts to improve the condition of the agriculturist masses have till now been just scratches on the surface. That these attempts have been based on a compartmental view of the whole problem also accounts for the poor results obtained.

Certain aspects of agricultural economy like the greed and unscrupulousness of middlemen and the ryots' unresponsiveness to improved methods of cultivation are frequently exaggerated. This should not blind us to the fact that, even when there is no rapacious middlemen and the lands are put to their best use possible under present conditions, it would yield the ryot far less than would be sufficient for his comfortable existence. In a previous article, I gave out that two or three acres of wet land in a place like Tanjore or Bezwada would be enough to support a small family. On reading this, an agriculturist from Andhra protests that nothing less than ten acres of the best wet land in Bezwada would maintain a family in comfort. Two acres would hardly suffice for the food and raiment of even a working class family. The crux of the whole problem is that most of the Indian ryots have too little land and there is not enough land for all.

A general improvement in the standard of living of the Indian ryots could be secured only through radical, I may even say, revolutionary methods. As the average ryot is incapable of self-help, every initiative should come from the State. The State should tackle the problem as a whole and should be prepared to impose compulsions and prohibitions hitherto undreamt of. None need suspect that cottage industries can work wonders. Hopes resting on the development of cottage industries are not going to be fulfilled. Cottage industries could have thrived during the war. They did not. They could not, in an environment dominated by large-scale production and demand. There might be a very good case for cottage industrialism, but then the method of approach is bound to be different.

For the economic revolution one visualises as inevitable for the prosperity of our rural areas, men are as much important as methods. The deplorable ignorance and incompetence displayed by Government officials in the administration of

U. S. and Post-war World Economics

Brettonwoods and British Problems

New York

Washington has largely replaced New York as financial capital of the United States. But private financiers here are watching Washington developments that may give them back some of their lost business in the foreign field.

Latest administration moves make it clear that the government is anxious to have lend-lease functions continued to a greater degree than is possible legally since Germany's defeat.

The government feels that the projected Bretton Woods Reconstruction Bank will eventually be able to meet most of the foreign credit demand, but is relying on private credit to take up the slack in the meantime.

Financial circles here understand this is the biggest motive for the government's request for immediate Congressional repeal of the Johnson Act. This Act prohibits private loans to nations which defaulted World War I debts. These include Britain, France and The Netherlands, all of whom are receiving lend-lease but who desire credits for use both at home and in their possessions beyond the scope of lend-lease.

Assistant Secretary of State, Will Clayton, has been the chief administration spokesman urging Congress to repeal the Johnson Act. He has implied Britain, France and The Netherlands would be the principal beneficiaries.

Clayton made a pointed effort to dispel fears that repeal would open the door to private credits to the German and Italian governments. He said this question "will be taken care of in the peace terms." He suggested, however, that when Germany and Italy have proved themselves worthy they might be permitted to join Bretton Woods organizations.

A few days later, Clayton told the United States associates of the International Chamber of Commerce in New York some of the U. S. government's views on postwar world economics.

He said the State Department's policy revolves around the conception of an expanded world economy—"free and equal access for all nations to the trade and raw materials of the world, increased production, much greater exchange of goods and services between nations, increased consumption and higher levels of living for all peoples everywhere. Now there is no one single element of the 'Santa Claus' philosophy in this policy. On the contrary, quite aside from the question of future peace, the United States will be one of its principal beneficiaries."

Clayton held it will be necessary for the U. S. to grant credits abroad either through the International Bank for Reconstruction and Development or the Export-Import Bank and that America must import goods to provide the foreign nations funds to pay interest and service on their borrowings.

He advocated extension of the reciprocal trade agreements and warned against a possible postwar trend in the world toward economic nationalism. "Democracy and free enterprise," he said, "will not survive another world war."

"I do not believe it is an overstatement to say that most of the other nations of the world will take the same road we take, but they will only take the road to economic liberalism if we give prompt and vigorous leadership."

U. S. business interests generally agree with government admonitions that "unless we import as much as we export, we cannot be paid for the goods we send out of the country." But here is a way their interpretation diverges, as expressed by Ralph Hendershot, financial editor of the New York World Telegram:

"In the past, we have protected our home markets with tariffs, and we have dipped into the export market too. The only rub has been that since we paid off all foreign loans on World War I, we have not been paid for our exports. And, in one way or another, the American public has stood the loss. The net result has been that we did not sell our goods abroad; we gave them away."

"We strongly suspect that if the question were put to the American public honestly they would say that if we have any goods to give away in the future we should give to our own needy first and then think about the people of other countries. In other words, they would condemn the trade practices between the two world wars."

"If, as is now being proposed, we decide to balance our exports with imports, we must consider the effect of the step on the big domestic market we have been enjoying more or less exclusively in the past. Everyone will agree it is much better to get goods in return for our goods than to give them away, but the question arises as to whether these imports will seriously interfere with our domestic markets."

"To the extent that these imports are made up of goods which are not or cannot be manufactured efficiently and cheaply here our markets will not be affected and the results will be highly satisfactory. The same is true to the extent that our exports are balanced by services which our own people cannot perform to advantage, or with funds spent abroad by tourists too."

"The clash comes where foreign-made goods enter into direct competition with those made by our own manufacturers and workmen. If such goods can be made abroad and sold here for less than we can make and sell them, it means the American workmen either will be obliged to accept lower wages or enter the lists of the unemployed."

"And, if our imports are anywhere near the \$10,000,000,000 figure some of our prominent people have been mentioning, we cannot see how at least 75 per cent of them can escape direct competition with American production."

Britain's trade problems were concisely outlined recently by Dr. John W. Williams, speaking before the Academy of Political Science. He said that in order to understand Bretton Woods, it must be appreciated that a number of other nations have adhered to the agreement, it is basically the product of British American negotiations.

Williams called the gist of the agreement the point that if the United States will create and maintain the conditions necessary for multi-lateral trade, England will undertake, after a transition period of three to five years, to relinquish her controls and join a multilateral exchange system.

Williams cited a series of bilateral currency agreements England has negotiated since Bretton Woods, and conceded that controls within the sterling area are being tightened, but said this was NOT a violation of the spirit of the agreement. The question it raised in his mind was whether, as a result of conditions beyond her control, particularly her large volume of frozen sterling balances and her large annual deficit on current account—Britain might not be carried considerably further in the next few years toward bilateral trade agreements and tighter exchange controls.

The Argentine government has produced no official figures on the amount of linseed stock available for export under the new Argentine-U. S. agreement, but the trade in Buenos Aires calculates there is at least one-million tons on hand. Argentina has been burning about 150,000 tons of linseed in the form of oil extracted from that amount—per month for at least a year. The 150,000 tons of seed produces about 50,000 tons of oil. The million tons in stock should be sufficient to meet the needs of the new agreement, the only question being whether enough tonnage will be diverted to Argentine ports to carry it away.

Steels representing at least 10 years of technological progress which have been developed in four years of war will be ready for expanded peace-time uses as soon as the go-ahead signal is given for civilian production, according to Irving S. Olds, chairman of the board of U. S. Steel Corporation.

"This improved steel quality," Olds said, "will become evident in thousands of new and older applications in the heavy industries, in better manufacturing tools, more durable consumer goods from the automobile to the tin can and down to screwdrivers, garden spades and lawn mowers."

Olds pointed out that as the result of high altitude applications of the stainless steels once extensively used in railroad passenger cars, new uses have been found for stainless steel in trucks and trailers, "promising light weight as well as high strength, with resistance to atmospheric corrosion thrown in."

The electrolytic process which helped to reduce tin consumption after the Japs cut off major tin supplies, he said, "will save much of the tin formerly used and will be a boon to the canning industry."

He pointed out that Carnegie-Illinois has developed high strength steels for weight reduction of rolling stocks.

"The speedy deposition of a thin phosphate film on sheet or strip steel has found many uses in wartime and will continue to serve requirements in the post-war years. Other coatings have been developed for strip and wire. New pickling processes have been developed."

(Continued from previous page)

wartime control measures brings this into bolder relief. Each ryot is a problem; and only the type of public servant who is an expert in his work and is capable of wide sympathy and understanding can fulfil the role of friend, philosopher and guide to the Indian villager. Any scheme of reconstruction can succeed only when piloted on the spot by such persons.

When all is said, the problem of numbers should also be mentioned. Under Indian conditions, while much has got to be done to increase the fertility of the land, something has also to be done to check the fertility of the men, who seek to live on it.

BUYING & SELLING REVOLUTIONISED

It is with the intention of working up a common platform between buyers and sellers that we have equipped ourselves to act as Agents, Distributors, Manufacturers' Representatives, Commission Agents, General Merchants, Exporters and Importers. Industrialists as well as consumers will find our service invaluable. At present buying and selling of the following goods are undertaken:—

OIL
Mahua Oil
Linseed Oil
Groundnut Oil

SEEDS
Linseeds
Mahua Seeds

GENERAL
Electrical Goods

Agricultural Tools
Small Tools
High Chemicals
Jute Products
Bee Wax
Medicines
Cutlery
Books & Magazines
Hosiery

Toilets & Perfumery
Biscuits
Confectioneries
Condensed Milk
Tea
Barley
Convalescence Foods
Toys

REPRESENTATION

We also act as—LOCAL PURCHASING AGENTS
LOCAL DISTRIBUTING AGENTS
LOCAL ENQUIRING AGENTS
IN FACT REPRESENTATION OF ANY KIND.

*Excuse me
Inner Cleanliness
comes first!*

The simple health rule of Inner Cleanliness with Andrews will help every woman to keep fit, stay young and feel cheerful. For Andrews is more than a laxative. A glass taken regularly, as often as needed, clears away those poisons that cause skin blemishes, headaches and the little ills of life. See how Andrews purifies the entire system:

FIRST - Andrews refreshes and cleans the mouth and tongue.

NEXT - Andrews settles the stomach and corrects acidity.

THEN - Andrews tones up the liver and checks biliousness.

FINALLY - To complete your Inner Cleanliness, Andrews gently clears the bowels. It sweeps away trouble-making poisons, corrects Constipation, purifies the blood and clears the skin.

For Inner Cleanliness
be regular with your

Editorial Notes

Contributions To U.N.R.R.A.

The visit of an U.N.R.R.A. Purchasing Mission headed by Mr. Francis Sayre serves to revive public interest in the question of India's contribution to this organisation. The object of the Mission appears to be to exploit the possibility of purchases in India of essential commodities which India can at present spare and which are needed for the relief of countries liberated from the yoke of the enemy. There has been a strong opposition to the proposal that India should contribute to the international organisation to the extent of about Rs. 15 crores on the ground that from the very inception this U.N.R.R.A. has not proceeded on right and equitable lines. Its pronounced European bias has aroused resentment and suspicion in the Eastern countries and while India has suffered under the mis-rule of the British and the Bengal famine was raging high, this organisation was speaking noble words and brazen ideals but failed to rush supplies to help India. Sometime ago we had a statement from one of the authorities which revealed that Europe would be given preference in the matter of rehabilitation and relief. Whether India can afford to pay Rs. 8 crores that has been fixed as her contribution during the last Assembly session is beside the point. India is second to no other country in her anxiety to promote international welfare and bring aid and relief to the war-ravaged regions of this world. But to-day her need is so great and her Government is so irresponsible that this probably is not the time to contribute heavily for an international body which has shown preference for European countries as against non-European. India, it should also be remembered, has no voice in the executive of this organisation and the report that the purchase of this mission in this country will not be confined to the budgeted amount of Rs. 8 crores only, is bound to create some uneasiness. The preamble of the U.N.R.R.A. agreement is couched in beautiful words no doubt but the way in which the American public has taken this organisation was revealed in "Foreign Affairs". This journal stated that if the fundamental job of the organisation was merely protection of its clients from hunger and disease, the promotion of such a policy would also prepare American industry for its part in post-war trade. Unless the Indian public are convinced that this U.N.R.R.A. would not be used as a spearhead for American commerce for the capturing of post-war markets as the British used the U.K.C.C.—opposition to India's contribution to this administration would not subside but would actually increase in intensity.

Australian Banking Bill.

In their attempt to modify the Australian Banking system along the lines suggested by the Royal Banking Commission which reported in 1937 the Government of Australia have gone a step too far for the industrialists and businessmen to approve. The Commonwealth Bank Bill and the Banking Bill introduced on March 9 last by Mr. Chifley, the Federal Treasurer, have come in for strong criticism at the House of Representatives. The purpose of the Government is to strengthen the central banking functions of the Commonwealth Bank and thereby ensure that the financial policy of the Bank will expand the general banking business by empowering the Bank to carry on activities in competition with the

trading banks. The aim of the Commonwealth Government is no doubt praiseworthy. The reorganisation of the banking system is intended to provide finance for the development of small industries even as the new Industrial and Commercial Financial Corporation in Britain is intended to do. It is also proposed to grant housing loans on credit terms. The Rural credits and Mortgage Bank Departments of the Bank and the Commonwealth Savings Bank will also continue to be in operation. The general Banking Division will be separate from the Central banking section of the Bank and the Governor will supervise both.

The Bill is opposed on the ground that it is calculated to cripple the activities of the trading banks. The Bill empowers the Central Bank "to make, with approval of the Treasurer, regulations controlling rates of interest in respect of advances made by the banks, deposits made with the banks, or rates of discount chargeable by the bank or any other person, in the course of banking business" Criticising the Bill the leader of the Opposition, Mr. Robert Menzies said "The truth is the whole plan of the Government is to nationalise banks not by a process of buying them up but by first exhausting them and then absorbing them." Opposition to nationalisation of banks is not unexpected even in Australia where the influence of Labour is known to be great but the reception to the Bill would have been better if the trading activities of the Commonwealth Bank are entrusted to a separate organisation and under independent management.

Reynaud & European Block.

In spite of the tall talks at San Francisco, it is clear that the leading statesman of the world are still thinking of a new world in terms of regional blocks, spheres of influence, and imperialistic exploitation of continents. That on vital issues which affect the ordering of the world in future the Big Three do not agree is ominous enough. America wants to create an organisation for the enforcement of perpetual peace, but has found it convenient and necessary to leave England a free hand in India which is bigger than Europe (without the U.S.S.R.) in area and contains one-fifth of the world's population. Mr. Churchill frankly stands for the old order of things and for bleeding India "white". Now comes M. Paul Reynaud, the second Prime Minister of France in war, with his advocacy of a western economic block in Europe—including Britain—to control the whole of the African continent. He does not pretend to speak for regional self-sufficiency or the liberation of the enslaved races in the world. He seems to be inspired by the wild dreams of the Fascist madcap Mussolini and desires to organise the restoration of France at the expense of the peoples of Africa.

His ideas are briefly these. The western countries in Europe should form an economic union; the conditions of production in this block should be similar; the currencies of countries included in the block must have a fixed relation with each other; a policy must be designed to eliminate great differences in production costs between the countries covered in the block. The United States and Soviet Russia are big and comfortable blocks but between them, England and France are losing importance and occupy too small a space for prospering in these days of mass production. Something must be done and hence this block idea. He pretends, further, that neither Russia nor the U. S. has any reason to oppose the formation of a Western European block.

M. Paul Reynaud's ideas are not new though they are capable of great mischief in the ordering of international amicable relations after this world war. Briand advocated a United States of Europe but failed; General Smuts linked the Empire solidarity with the idea of European union, but Fascist dictators went their own way to drag the world into a common chaos. Mr. Churchill offered an Anglo-French unification and always wished to sponsor a powerful Western European block against Soviet Russia. M. Reynaud just reiterates the hopes of many before him. This French conservative has nothing but the imperialist interests of France at heart and the recent events at Syria only show that the new regime in France will only play the old game of European power politics. To speak of a Western European Block on the eve of the Big Three meeting is obviously indiscreet and its influence on Russian foreign policy can be easily guessed. The Mid-east is in ferment and any revival of the reckless exploitation of the African peoples on the basis of Anglo-French collaboration would be opposed by the entire civilised world and if Britain succeeds in giving effect to this European ambition in Africa, another world war will not be far off.

Indians & U. S. Citizenship.

The U.S. House Immigration and Naturalization Committee has favoured in principle the admission of Indians into the States. The majority report of the Committee includes letters from, amongst others, Presidents Roosevelt and Truman, supporting the amendment to remove the ban against Indians. The removal of the ban would mean that about 100 Indian immigrants per year would be allowed into the U.S.A.—a figure so small that, in Roosevelt's words, there is no fear of 'unemployment or competition for jobs.' Experts like Mr. William Phillips and Mrs. Clare Booth Luce, with special knowledge of United States-India relationships submitted convincing reasons for the favourable consideration of the measure. What those convincing reasons are, one does not know. If Roosevelt's letter is any guide, the reasons did not seem to be convincing. This step appears to be a reward for Indians for their services rendered to the United Nations in this war. And the number to be allowed is so restricted that there is no fear of Indians overcrowding the U.S. These reasons are sufficient to show how far the author of the Atlantic Charter intended to implement it. The legislation speaks of 'races indigenous to India' which shows how America has been influenced by the British propaganda.

Nevertheless, it is a small mercy earned at a great cost and Indians should, we suppose, be grateful to the U.S. for this gesture of goodwill, which removes the ban because 'it served no useful purpose' and no harm will be done by its removal.

Indo-Afghan Trade.

There has always been a pretty trade between India and Afghanistan. The absence of a sea frontier for Afghanistan has made India the natural entrepot for the bulk of her trade. During the years 1900 to 1905, the total trade between the two countries averaged about Rs. 130 lakhs. Since then it has been steadily rising. The Anglo-Afghan Convention that followed the third Afghan war gave it a big push. In 1937, the exports from Afghanistan across the Indo-Afghan frontier amounted to Rs. 371 lakhs and the imports from India across the

common frontier, were Rs. 216 lakhs for 1937-38 out of which Indian goods accounted for Rs. 60 lakhs. By 1941-42, the figures rose to Rs. 335 lakhs and Rs. 217 lakhs respectively. The aggregate value of the trade in 1941-42 was thus Rs. 959 lakhs, the peak point ever reached. During the succeeding year, there was however a severe fall. India could not fill the gap created in the entrepot trade passing through India between Japan and Afghanistan, though Japan's exit from the field put India as the biggest supplier of exports to Afghanistan. The decline registered during 1942-43 is also explained by the difficulties which either country felt in getting supplies from foreign countries for mutual trade. The export of Indian goods on the whole only registered an increase. Though the year saw a heavy drop in the export of sugar into Afghanistan, it was more than compensated by the rise in cotton and tea. The principal items that figure in India's exports to Afghanistan during the war years are livestock, leather goods, scientific instruments, rubber goods, sugar, tea cotton and silk manufactures; her imports from Afghanistan consist mainly of fruits, nuts, vegetables, skins and furs, spices, raw cotton and wool. In some of her imports like

leather goods, India holds a monopoly of supply in the Afghanistan market, while in many other items, her share is not inconsiderable. There is a good scope for expansion in most of these.

Controls & Paper Industry:

If the relaxation of import controls should precede the removal of internal restrictions on the production, distribution and consumption of India's own manufactured goods, it would surely set in forces to nullify any tariff protection that may be granted to the industries in future years. The problem of decontrol should be so devised as to help Indian industries to consolidate their wartime gains, to work for rationalisation and organise to capture internal market and face foreign competition. But the Government of India is to-day following a short-sighted policy calculated to aid foreign interests against Indian producers. The case of paper is in point. As Mr. Shanti Prasad Jain pointed out in his presidential address at the fourth annual general meeting of the Indian Paper Mills Association held here a few days ago, the restrictions enforced in the different areas on the sale and distribu-

tion of paper and boards under a system of permits should be abolished, because emergency conditions are over. The release of 60 per cent. of indigenous production for civilian needs has restored the pre-war position. The paper industry has progressed in war-time and the scope for greater production is almost limitless. The per capita paper consumption in India is only 1 lb while the figures for U.S.A. is 241 lbs, UK, 134 lbs, Norway 98 lbs. and Denmark 96 lbs. If post-war plans are to be initiated at an early date, the market would expand almost too fast for internal production to catch. The Indian Paper Mills can now produce high quality paper and boards excepting newsprint and certain categories of special paper. Mr. Jain claims tariff protection on the ground that these mills can successfully meet internal demand. Whether the mills can meet the requirements of India during the post-war years is to be investigated and even if a part of the internal market cannot be met by the Indian mills adequate subsidies should be granted to stabilise the industry and encourage further results. The Government should appreciate that in spite of a fivefold increase in bamboo prices and the doubling of the prices of chemicals and stores used fair rates were charged for Indian paper offered in the market. The immediate difficulty is shortage of coal and it is urged that the Government should place jute, textile, and paper industries on the same footing in the matter of coal priority. While the contemplated proposal to establish a Cellulose Research Institute is welcomed as an invaluable aid for long-term progress, attention is now centred on a Tariff Board enquiry into the legitimate claim for protection.

Burma Rice:

Lower Burma having come back to more or less normal conditions the question of the revival of imports of Burma rice into India assume an immediate significance. Expectations in this direction have however, to be limited by two factors. Though nearly the whole of the rice-producing area in Burma has been won back, for various reasons, production is not expected to reach anything like its pre-war level, for sometime to come. Since the Japanese occupation, the foreign market for Burma rice has shrunk to negligible dimensions and even under conditions of partial cultivation, surpluses have been accruing from year to year. Even the internal transport has been seriously dislocated. Lack of cattle, cloth and currency have been further impediments in the way of the farmer. Still, this year, lower Burma has been able to accumulate an exportable surplus and it is estimated that in Rangoon alone about 40,000 tons are available. The new Government is also keen on a quick development of the supply. Indian interest for the time being, centres not so much on the availability of adequate quantities as on the restrictions which the Burma Government are contemplating to impose on trade in rice. They have proposed to form an Agricultural Projects Board in conjunction with the British Ministry of Food which will have a virtual monopoly of the Burma rice trade. The direct result of these steps will be the total exclusion from the trade of every trace of Indian interest. Before the war, nearly two lakhs of Indians were earning their livelihood from this trade and during all these years these two lakhs of people have been patiently waiting to return to their previous avocations as soon as normal conditions are restored in Burma. With the British Ministry of Food and the Agricultural Board in the field, they are insidiously and unceremoniously push-

India Coffee House, Albert Hall, College Square.

Reason?

In its new address, the India Coffee House is better, brighter and bigger than ever.

Surely, not so central as in Central Avenue?

You wouldn't say so if you visited the new place. It is, so to say, in the heart of Calcutta. Centre of whatever is lively and vivacious. Easily accessible.

But, I suppose, there is not that variety of visitors?

People will travel far to get the admittedly and inevitably good coffee that you can, every time and at all times, get at the India Coffee House. The old patrons are all still there—and will ever be there—and many, many new patrons. Remember, it is a bigger, better, brighter place.

INDIA COFFEE HOUSE
ALBERT HALL, COLLEGE SQUARE

ed out. Nor does the interference and dictation of the British Ministry of Food on a matter which ought to be the sole concern between two neighbouring States—till 1937 two Provinces of the same State—derive justification on any other ground. The Indian Chamber of Commerce of Bombay, has taken up the question and the Chamber has made a representation to the Central Government urging protection of the Indian interests concerned. Sir Ghuznavi, the President of the Bengal Indian Chamber, among others has also reinforced the plea on behalf of the Indian merchants whose legitimate rights are thus threatened with silent extinction. It is not merely a point of restoring a right but one that involves the livelihood of two lakhs of people; it is hoped that the India Government would not give in, when such vital interests have to be protected at all costs.

"The American Problem"

Prof. D. W. Brogan's rapid and comprehensive survey of American civilisation is largely meant to show that America is not Europe and that Americans are still groping towards their responsibility for the Old World. The problem is one of orientation and whatever help Europe gives to America to bring about the progress from nuclear alliances can only be regarded as discharge of a duty. The evaluation of U.S. economic progress and political achievement contained in Prof. Brogan's "The American Problem" (Indian edition, Thacker, Bombay, Rs. 6-14) is more than fair. The conquest of Nature alone makes America incredible to many. The political doctrine that has been evolved since 1776 has not hampered the application of unusual skill to vast resources. In an earlier book the regions, their industries, and the possibilities were described brilliantly to enable a clear grasp of the facets of the American economic system. In the latest, Prof. Brogan ties up the economic and political ends together to show how much has been compressed into 160 years of U.S. history. As to the requirements of government, when administration is nine-tenths of Government, few can be positive; but the tradition of amateur genius in the military art may well suggest that there is nothing beyond American ingenuity. The eclipse of Liberalism in Europe and the hardening of faith in the Founders may suggest that the U.S.A. has turned away for good from Europe. But the war has made an immense change away from the Neutrality Act to the outline of collective organisation that the U.S. Secretary of State offered last April.

It is, of course, the glittering contrasts that overlay America's unity which force many to think that America may again step down from her pedestal; but Prof. Brogan thinks that a Two-Ocean war has made for the wholesome realism that puts the American public abreast, if not ahead of its responsibilities. American economy running on petrol and a tradition of speed has its post-war problems taped before they arise. That means the U.S.A. can look steadily at or to others' problems in the future, and it is more than current academic optimism which inspires the belief that the country which had its frontier licked before the Gold Rush can do its thinking as to one world by formed marches. In a very wise and agreeable book the conclusions count for less than the approach and how vast is Prof. Brogan's own knowledge of transatlantic affairs can be ascertained readily from a careless dip into any page. The achievement is as remarkable as America's and, if allusiveness causes strain, the by-play of wit is always there

to reduce it. America as the land of unmatched opportunity takes some explaining, and Prof. Brogan, as the interpreter, has fulfilled his own purpose admirably.

U. S. Aid to Cashewnut Industry:

Within a few months of the Japanese declaration of war on the United States, the latter put an embargo on many imports declaring them as unessential or luxury goods. Cashewnut was also included in this list. The embargo was a severe blow to the Cashewnut industry in India, because America was the largest importer of Cashewnut from India.

Quilon is one of the four or five centres of the Cashewnut trade. Soon after the embargo was announced, the Cashewnut interests in Quilon moved the Government of Travancore in the matter, and then the Government of India, but as there was a courtesy understanding between U. K. and U. S. A. that the former will not try to put diplomatic pressure on U.S.A. in cases like this, the Commerce Department in New Delhi felt helpless. Luckily, Mr. William Phillips, visit to and tour in India was announced and the Cashewnut interests in Travancore availed themselves of his visit to Trivandrum to meet him and present a memorandum on their case. About Rs. 1.4 crores worth of Cashewnut was held in stock in the year and the American embargo was announced abruptly without any notice at the peak of the collecting season. The loss of so much stuff would have meant the ruin of all but one or two wholesalers in the trade. All these points were pressed on to Mr. William Phillips

and he promised to put it on his return before President Roosevelt and he did it. As a consequence, not only was the embargo lifted, but a special steamer was sent to collect all the unsold stock lying with the wholesalers. A promising young industry was thus saved.

A Planned City For Hyderabad.

Among the large number of post-war schemes contemplated by the Government of His Exalted Highness the Nizam, the pride of place must easily go to a new industrial city to be raised on the banks of the Godavari. Under the scheme, whose bare outlines alone we could gather, a combined Hydro-electric and Irrigation Project will bring into cultivation about eight lakhs acres of land bordering the river, in the Warangal, Karimnagar and the Adilabad Districts of the Nizam's Dominions. About 75000 K.W. of electric power would be made available at cheap cost for industrial purposes and at a site in the centre of the region abundant in raw materials such as coal, iron, limestone, soapstone, timber and cotton, a city planned on the most modern methods will be built. Two railway lines will connect this interior city with Bombay on the West Coast and Viza-

gapatam on the East. The scheme estimated to cost Rs. 24 crores is the combined product of some of the ablest and most talented officers of the State and is modelled on the Tennessee Valley Scheme in America. Such a combined agricultural and industrial project is the first of its kind in India. The Nizamsagar project has already yielded successful results and has revealed the possibilities of further endeavours in the same direction. The economic development of the Hyderabad State has till lately been haphazard and large agricultural tracts have been left absolutely untouched. The Tungabhadra Project in the South and the Godavari Scheme in the north will fill two of the most conspicuous of these gaps.

Foreign Capital For India.

The anxiety prevailing among Indian business circles over the question of foreign capital for future industrial development again finds expression in the address delivered by Sir Ghuznavi at the first quarterly meeting of the Calcutta Indian Chamber of Commerce. Dwelling at some length on this point, Sir Ghuznavi pointed out that it was most unfair on the part of the Industrialists in the United Kingdom or any other country to suggest that participation of British capital in the ownership, control and management of Indian industries should be a condition precedent to their supply of capital goods and technical goods needed by Indian industrialists. He also held up the country's right to borrow capital or purchase capital goods in the international market, with as much freedom as any other advanced country in the world. Unfortunately the war has rendered the situation only worse for India. Not only has the demand for capital goods greatly enhanced in many countries, the supply has assumed all the aspects of a rigid corner. From among the few countries who could share the supply, Germany has gone out as also some of her lesser neighbours in Europe. With the result that America and Britain monopolise between themselves the whole supply of capital goods. It is not so much the political power which Britain has over India as this virtual economic monopoly that is disquieting and the latter is likely to continue even when the former ceases. Added to it are the economic forces which compel Britain to view Indian industrial development with consistent alarm. Lately the United States also has come into the picture sharing more or less the attitude of Great Britain on these questions. Importunities are however of no avail when the nations that enjoy the monopoly of capital goods know the value of that monopoly and the absolute dependence of industrially backward countries on them. The only alternative to the emergence of a fairer sense in Britain's capitalists has to be sought in the development of a competitive source of supply from which India can draw for her needs. Perhaps, Russia may provide such a source at some distant future.

Stop S-L-O-W-L-Y

The entire production of reputed brands of electric fans is at present requisitioned for the essential services. You should therefore treat your existing fan with care.

Stopping the fan suddenly by means of switching off electricity is a common source of damage and breakdown. The correct method is to move the switch of the regulator gradually to the "OFF" point and then to switch away the current.

"Orient" fans are specially built to give noiseless and uninterrupted service for years. The regulator supplied with each "Orient" fan offers positive selection of four speeds.

Preparations are being made to meet the demands for "Orient" fans in full immediately after the war.

Call in a Mechanic:

- * when noise develops
- * for regular oiling and cleaning
- * to inspect the wiring and switches.

Mechanised Rice Farming.

Even though the war revealed beyond doubt the inadequacy of home production of food and the dependence of this country for its staple food on other countries, the country has not learnt a lesson to produce its own food. How far it is possible to increase the production of paddy by mechanising, how little help it is to depend on pious slogans like "grow-more-food" will be obvious to anyone who cares to learn from the Australian experiment to increase paddy. In 1939-40 Australian paddy crop was considerably less than one thousandth of that of India and a very small portion of world output. During the war it has been increased by 75 per cent. The peak output is 75,065 tons in 1943-44. It is in the methods employed and the size of the Government farm at Wakool, that interest chiefly centres. Australia's foremost rice-growing area, established as a result of war needs, is the Government farm of 4,803 acres at Wakool on the River Murray, source of supply for the irrigation of this and other farming schemes. The Wakool project is operated on Tulla station by the New South Wales Water Conservation and Irrigation Commission for the Australian Federal Government. It is one rice farm with 4,803 acres under crop and is believed to be the largest single rice farm in the world. Labour at Wakool has consisted of 170 Italian prisoners of war. Paddy is grown by power farming and irrigation, rainfall being 14 to 16 inches in the rice-growing areas.

The first step in establishing an Australian rice farm is to make a close contour survey of the land. Substantial check banks are then built to hold the irrigation water to a depth of from six to ten inches. The land is ploughed and cultivated by multiple disc ploughs and harrows drawn by tractors. Paddy is sown in the dry by a combination cultivator seed drill. Sulphate of ammonia is used as a fertiliser if required. After sowing, the land is flooded from the irrigation canals, and immediately drained. After germination and a growth of, say, four inches the land is flooded again, usually in November, and the water is held at depths of six inches to ten inches until the rice matures. It requires an average of from six to seven acre feet of water per acre to produce a rice crop in Australia. (An acre foot is the amount of water required to submerge one acre to a depth of one foot). After the rice matures the water is drained off, and the rice is harvested in April, May and June.

Harvesting is by tractor-drawn, power-driven combination reaper-thresher, which reaps, threshes and bags in one operation. Each of these Australian-developed and Australian-built machines is capable of harvesting up to 900 bushels of paddy rice (the rice with the husk still on) a day. It is a development of the Australian machine designed for harvesting wheat and other grains, but has special attachments to enable the heavier rice crop to be gathered. Each farm has its own sowing and harvesting plant.

Conditions in India, it might be argued, are different from those in Australia. And foreign experiments are foreign. But Government experimental farms in India could very well try mechanised farming on these lines and should it prove successful, the soldiers could adopt it when they are resettled on the land.

Mr. J. J. Kapadia, Secretary, Bombay Shareholders Association, writes:

For sometime past, European Managing Agency Houses in Calcutta have been can-

vassing General Proxies from shareholders of Companies under their management. The latest instance is that of Messrs. Shaw Wallace & Co., who are the Managing Agents of several Companies. They have addressed circular letters requesting shareholders of the Amalgamated Coal Fields Ltd., under their management to sign the enclosed form of General Proxy in favour of Shaw Wallace Nominees Ltd., a company controlled by them. It is pointed out that on several occasions matters of importance are decided at meetings of shareholders at which only a minority of members entitled to vote are present and that this aspect of the situation is unsatisfactory from the point of view of those who hold valuable investments in the Company. They therefore suggest that the shareholders should take steps to see that their votes are recorded and for this purpose they recommend them to sign the General Proxy.

Under clause (1) of the Proxy form the signatory viz. the shareholder authorises the attorney to vote on his behalf at all general meetings of the companies "which are now or may at any time hereafter be in the managing agency, secretaryship, managership or agency of the firm of Shaw Wallace & Co., or any company with limited liability which may be formed and adopted to take over any of their business, in which I am now or may at any time hereafter be a shareholder" and under clause (2) he empowers the attorney "to sign proxies in favour of any person or persons for the purposes of voting at any such meetings or for any other purposes connected therewith".

It will be seen that the Proxy is not only in respect of meetings of the particular company namely The Amalgamated Coal Fields Ltd., but it is also in respect of meetings of all companies with whose management Messrs. Shaw Wallace & Co., Ltd., may be connected. The document is of a most sweeping character and is highly objectionable.

A general Proxy is like a blank cheque. Generally speaking, the giving of a general proxy is undesirable. When, however, a general proxy is required by the management the request should, in my opinion, be rejected as experience has shown that occasions arise when the interests of the management conflict with those of the shareholder with the result that the shareholder's own

votes may be cast against his own interests.

The public will recollect how in the year 1930, the Imperial Bank of India, whose extravagant administration had been subjected to considerable criticism, was able to defeat the shareholders' agitation by means of general proxies and general powers of attorney granted to it by certain shareholders and constituents.

On this occasion I do not desire to go into the reasons which are responsible for shareholders' absence at company meetings. I, however, feel bound to point out that the demand for general proxies is no remedy for such absence. On the contrary, the giving of a general proxy will operate to destroy even the little interest that a shareholder may be taking in the affairs of the Company. It will only strengthen the hands of the management against the general body of shareholders.

It is true that the proxy can be revoked at any time, but it must be borne in mind that the onus of revocation lies on the shareholder, who has given the proxy and this makes all the difference in actual practice. It is for this reason that special proxies are always to be preferred to general proxies.

It is hoped that the shoreholding public will appreciate the dangers involved in complying with the request of the managing agents and refrain from acceding to the same.

A MYSORE GOVT. PRODUCT GOVERNMENT SILK WEAVING FACTORY, MYSORE

Clube Street Gossip

The announcement of a 2½ per cent Loan by the Government of India marks the climax of the enlightened borrowing policy for which "Indian Finance" has been fighting, single handed and against heavy odds, almost since its inception in 1928. At that time, no one believed in the efficacy of an adroit borrowing policy for the Government or in the value of low interest rates for the healthy progress of national economic life. Crude ideas derived from the experience of untelligent individual borrowers were taken to the plane of the theory of interest and of State borrowing. Notions, appropriate to the days when the world of finance did not lend itself to purposive regulation by enlightened public authority, survived even to the times when not only Central banking institutions had been well established, but they had learned to co-operate in matters of essential international concern. In India, the continuance of a palpably high exchange rate had made a deflationary policy indispensable for its maintenance. The monetary screw was being wound tighter and tighter, every time, under the dictates of Whitehall which did not know its interests and did not care for ours. And the Government of India, habituated as it was to tame acceptance of the wishes of Whitehall, was deaf to the pleas for reason. In the background of deflationary conditions which the Government was creating, the loans were foredoomed to failure. The difference between the private borrower and the State was wholly forgotten; and the Government thought of itself, not as a determinant of the conditions of the capital market, but as a diffident competitor for the meagre savings of the time and a mendicant for the favours of the investor. That the success of a loan depended on the conditions of the gilded market, that the market cannot be strong if the yield of a new loan is more favourable than the yield from old loans at the ruling rates and that the market will gain in strength and not lose it, if the terms of the new loan are comparatively unfavourable to the investor—these simple points were not only ignored, but flouted with disastrous consequences.

"Indian Finance" stood up for these simple principles; and had its share of the derision and contumely of all supporters of unpopular, but true, causes. Again and again, it reiterated these sound principles of State borrowing. Again and again, it exhorted the Government, to the point of exasperation, to think better of itself than was its wont and to arrest the rot in its borrowing policy. The chance came only with the abandonment of the gold standard in 1931 and of the deflationary policy which was bound up with it. For India, it meant that the deflationary rack was done with, for once and for all, and that the country could have as much of currency circulation as was good for it.

But the implications of this change in the situation were not fully apprehended by the Government. The heritage of the past was weighing down on the authorities for a long time after. Cheap money was regarded, for a long time after the abandonment of the gold standard, as a flash in the pan. It was thought that interest rates, like other features of the old economic system, were exposed to vicissitudes and fluctuations. It fell to

"Indian Finance" to make it clear to Government and public alike that the niceties of the old theory of interest rates with its emphasis on demand and supply, on new savings and marginal productivity of capital, had no longer any use for the modern world; that, on the other hand, interest rates depended on the currency and credit policy of the Central banking institution and the Chancellor of the Exchequer; and that no Chancellor or Governor of the Central Bank was so cussed as to think of clapping the fetters of dear money again on industry and trade and, we must add, the State, too; for, no Government in modern times can afford to look back on its record as a borrower with a view to reduce the scale of its borrowings.

But these facts which have been so clearly demonstrated by the system of war finance adopted in all countries were often denied in the past. The Government of India never paid adequate regard to the fact that it is alone among all governments of the world to have so large a part of its debts represented by income yielding assets. It was inclined more to look upon the days when its loans offering a six per cent yield were failures than to look forward to the time when it could swoop hundreds of crores on less than three per cent.

"Indian finance" can justly claim to have afforded the Government the most reliable advice, and in the strongest terms, during all the phases of this long-drawn change in its borrowing policy. Through all these changes from amateurish bungling of new loans, ignorance of, or diffidence in, its own strong position, lack of grasp of the trends in international finance, to the new technique of borrowing and of regulation of the money market, "Indian Finance" valiantly stuck to its guns till today, it is in the proud position of a proved prophet.

Outside of the "Indian Finance" group, there was none in Government or business circles or even among the small number of economic prophets, who thought it possible for India to achieve the miracle of a 2½ percent borrowing rate. When World War II started, there was a catastrophic fall in gilded prices in India. The officials in charge of the financial policy of this country stood gazing at this collapse in a state of

K. N. DALAL, Managing Director.

benumbed indifference or helpless impotency. It fell to the lot of "Indian Finance" to pull up the official authorities to the realisation of the intrinsic factors governing gilt-edged prospects and outlook in this country; and, in categorical and unequivocal terms, we proclaimed that this war would prove entirely different from all previous wars so far as trends and developments in the economic front were concerned; that, while gilt-edged securities were the first to be adversely affected in every previous war, the behaviour of gilt-edged in this war would be exactly the opposite; that the borrowing rate of the Government in respect of defence loans would be such as to make this a 2½ percent war; and that, in consonance with such prospects, the Government of India must give up their weak-kneed and faint-hearted gilt-edged policy and instal in its place a policy of abundant self-assurance and of complete faith in the credit of India being as high as that of any other country in the world.

This realisation dawned on our financial authorities only slowly and in stages. On a former occasion, I had narrated, in this column, the episode of one of these officials telling me, while 3½ percent Rupee Paper stood at Rs. 87, that I had proved a correct prophet so far with regard to the inevitability of appreciation in this stock, but that I would be overshooting the mark if I tried to push 3½ percent Paper still higher. I had, naturally, to reply that it was not I that was pushing the price of 3½ percent Paper, but the intrinsic strength of the gilt-edged market in India; and that nothing could prevent—not even persistence in the official faint-hearted gilt-edged policy—3½ percent Paper shooting up to par level. Gradually and steadily, 3½ percent Rupee rose thereafter to Rs. 94. But the indefinite sales of this stock at Rs. 94 through the tap had the effect of stabilising the price at Rs. 94. At this juncture, "Indian Finance" put forward the suggestion that sales of 3½ percent Paper were not considerable at

the fixed tap rate for the simple reason that the investor was in no hurry to buy as he knew that he could purchase 3½ percent Paper at this rate at any time he wanted; that the proper technique under the circumstances was to raise the tap rate in successive stages of 8 annas to Re. 1: that the fear that the rate for the next week must be higher than that for the current week, would accelerate purchases and induce in the investors a feeling that it would be advantageous to anticipate requirements and harmful to postpone needs. Sir Jeremy Raisman acted on this suggestion with commendable expeditiousness. The result was that 3½ percent Paper rose to Rs. 98; and that, in the process, the tap and sales were far more than in the previous regime of fixed tap rate.

The common belief is that the only way of taking up prices of any security or commodity is to make open market purchases. Acceptance of the proposal of "Indian Finance", however, proved that prices could be taken up even by well-planned sales. This was a revolution in open market policy. This technique of raising the tap in successive stages had to be suspended for a time for strategic reasons. There was an interregnum during which the Government neither sold nor bought 3½ percent Paper through the tap. The end of this interregnum witnessed 3½ percent Paper attaining par. The Reserve Bank came out as sellers of Paper when the par level was touched. It again was the task of "Indian Finance" to point out that the achievement of par level for 3½ percent Rupee Paper was a signal, not for resuming sales through the tap, but for giving the requisite three months' notice for the redemption of this loan.

It is more than a year ago that this view was urged in these columns. Since then, there has been, I presume, much correspondence and consultation between the Finance Department and the Reserve

Bank, as to the feasibility, practicability and desirability of redeeming 3½ percent paper. This exchange of views has taken quite a long time; and the upshot of it is the announcement, this week, of the issue of 2½ percent 1950 bonds at par for a limited amount of Rs. 20 crores. The list will open on July 16 and close on the same day or earlier as soon as it appears that subscriptions for Rs. 20 crores have been received.

That the Government of India have been able to achieve a 2½ percent borrowing rate, is an event of exceptional significance. A borrowing rate of 2½ percent is a record in the annals of Government borrowings in India. In "Indian Finance" dated April 14, the task before the new Finance Member was examined; and it was pointed out that a definite decision must be taken for the discharge of 3½ percent Rupee Paper. The following is a paragraph taken from that article: "With 3½ percent rupee stock out of the way, the gilt-edged market will be in the best condition to provide a favourable response to the 2½ percent type of loan for medium-dated and a 2 percent type of loan for short-dated. Sir Jeremy Raisman established his reputation by making this a 3 percent war. Coming events may well prove that Sir Archibald Rowlands succeeds in making it a 2½ percent war. This forecast has been proved true within the first three months of Sir Archibald's regime. As Shelley would rank as a great poet even if he had written no other poems than "To A Skylark", so Archibald Rowlands would rank as an eminent Finance Member on this one single achievement of establishing a 2½ percent borrowing rate during his stewardship of India's finances.

Though Sir Archibald has been in his present office only for a few months, he has provided ample evidence of his adroitness and correct judgment with regard to Government borrowings. The first loan he

(From Our Correspondent)

Bombay, 10th July, 1945.

Sir Chunilal B. Mehta and his colleagues on the Cotton Committee of the Textile Control Board are to be warmly commended for the spirited stand taken up by them on the question of revision of minimum prices for cotton for the season 1945-46. They stressed the need or raising the present floor price by at least Rs. 50 on the ground that the cotton cultivator has not yet had a fair deal. It will be remembered that even last year they were trying might and main to prevent alteration of the ceiling and floors. The case for at least continuing the present minimum prices into the next season rests on the following facts:—First, the crop has been considerably reduced thanks to the drive for the compulsory cultivation of food crops; secondly, the average price realised this season is much below that of last year; thirdly, the cost of living has not gone down and the cultivator's cost of production has certainly not declined. It is in fact a formidable case, and it is small wonder that the official proposal to reduce the floors by Rs. 50 to Rs. 300 per candy in terms of the Indian cotton contract did not make much headway. It was rather surprising that the proposal for reduction was brought on, as it had been fairly definitely known in the earlier weeks that no such move was in the offing. Perhaps, when officialdom got wind of the proposal of Sir C. B. Mehta and others, they resorted to this tactic and trimmed their guns accordingly. Anyway, a decision on the question has been put off, it is alleged, pending the formation of the new Government at the Centre, and Sir Purushotamdas Thakurdas may convene the next meeting in the next two weeks.

There is a growing impression that prices of raw cotton are disproportionately low compared to the prices of textile piecegoods and yarn. The charge that the mills have been callous towards the cotton cultivator while themselves making enormous profits remains to be substantiated, but there can be nothing but support for the view that the price of the raw material should bear a reasonable relation to the price of the finished product. Perhaps, from the point of view of textile control and the consumer public, it is the converse which has to be emphasised. All the same it is rational to ask for a link between the two sets of prices. Perhaps, the proper view to take is that cotton prices require a levelling up while those of yarn and piecegoods are capable of a slight further reduction, but one can imagine the suggestion being hotly resented by the industry. It is therefore significant that the Chairman of the Textile Control Board has agreed to comply with the request to furnish the Committee with the average figures of profit made by the mills per pound of cloth and yarn. Raw cotton has few friends and has need for all the support that it can get from the industry, government and the importer overseas. It should be remembered that the Directors of the Liverpool Cotton Association Ltd. have been good enough to exclude India cottons from among those tenderable against the futures contract now under consideration. Here is a case of unjustifiable discrimination against India and it can hardly be believed that British spinners are averse to taking Indian cotton. The alleged reason for excluding Indian growths is that they do not conform to a particular staple and are very unreliable. Need one say that the very fear of rejection would, in course of time, act as a deterrent to the evil of mixing, not to

mention the fact that the authorities here may be trusted to give some attention to this important problem.

The Rayon panel appointed by the Planning Department of the Government of India met in Bombay during the week to discuss the possibility of establishing a rayon industry in India. Dr. Nazir Ahmed, Director of the Technological Laboratory of the I.C.C.A. presided. The Committee has directed its Secretary to compile information regarding the supply of raw materials, chemicals and other necessities and has adjourned till August. It is not commonly known that the Central Cotton Committee has, on its own initiative, previously bestirred itself in the question in collaboration with the Bombay Govt. The Committee was stated to be ready to take upon itself the preparation of chemical cotton, while development of the next stage, namely, the manufacture of artificial silk from chemical cotton was to be the charge of the Bombay Government. A firm of consultants in America had been requested through the Indian Trade Commissioner in New York to analyse the proposals forwarded from here and to submit a report on the possibilities of producing chemical cotton and artificial silk in India and to make suitable recommendations concerning both the type of plant that should be installed for the purpose and the choice between the two commonly known processes, acetate and discose. The Bombay Government was subsequently reported to have backed out and it was decided that since chemical cotton has other uses than in the manufacture of artificial silk, the investigations regarding the manufacture of chemical cotton should be proceeded with. In fact, a pilot plant for the production of chemical cotton is, it is understood, installed already and sums have been approved for the construction of the necessary building in the technological laboratories. The Government of India had been asked whether they would meet the expenditure from the Cotton Fund. This is the background against which the investigations regarding rayon manufacture may be viewed.

The past week has been one of the most exciting in all markets. The cotton futures market was fluctuating widely on reports of the possible reduction in the minimum prices

and their subsequent refutation. The heavy tenders amounting to more than 1,10,000 bales against the July contract put the bulls in a queer situation but they apparently have decided to stick it. Their support to the September contract is almost a corollary. In bullion, something of a sensation was caused last Tuesday when the Reserve Bank announced cessation of offerings of silver, as I pointed out in my telegram last week. Various reasons are put forward for this step but after a week one should admit that the stoppage seems to be temporary only and that sales may be resumed when fresh stock has arrived. The possibility of a stoppage of sales of gold by tender has also been canvassed in market circles. Opinion is equally divided as to the present bullion policy. There is a school which thinks that a new orientation is sought to be given to bullion policy and that the bullion sales will ultimately be stopped. The other view is that inasmuch as the supply of the precious metals from abroad is stated to be shrinking, the Reserve Bank has to conserve and make the best use of the small stock, so that in case bullion prices shoot up to very high levels, such stock may be employed to offset a viciously rising trend. One must be content to leave it at that, as it is idle to expect any clarification from authoritative sources on this question. The Reserve Bank and the Government have come in for praise at the way in which the gilt-edged situation has been handled. The latest issue of 2½% Bonds had generally been anticipated and it is said that this was just the security which a section of the industrial market had been needing. The second issue of 3% 1970-75 Development Loan is a logical sequel to the recent hectic demand for securities which was taken advantage of by the Reserve Bank to sell the entire lot of holdings of the 1970-75 loan which had been held in government account. That the issue price has been put up to Rs. 97-2 (although in Madras by a queer mistake on the part of the Reserve Bank some investors were able to get the second issue even at Rs. 97) itself shows the confidence that the authorities have. They had been steadily preparing the market by reducing the loans available on tap and by successfully reducing the treasury bill rate to a record low level.

W. LOTHIAN BROWN
General Manager

South India

(From Our Correspondent)

Madras, July 10.

Sardar Bahadur Sardar Lal Singh Fruit Development Adviser to the Government of India last week, has left some valuable suggestions for the future development of the fruit industry in the Presidency. At present the industry has two serious drawbacks. The methods of production are out-of-date and there is a large amount of waste owing to the absence of 'preserving' factories. Addressing a meeting of the fruit-growers in Kodur, Sardar Lal Singh said, that both in production and canning, there was great scope for expansion; the cultivation of such fruits as pineapple, bananas, papayas and strawberry finds congenial conditions in South India and the fruit preservation of technical guidance to the growers and the establishment of fruit nurseries on up-to-date lines. Captain Mitchell, a leading fruit industrialist of the Punjab who was on a tour in the South, also spoke about various aspects of fruit-growing. The Fruit Adviser's visit is expected to result in a more vigorous fruit policy on the part of the Government.

Speculation over the probable centres of vegetable ghee industry in Madras is set at rest with the announcement that the Central Government have accepted the recommendations of the Madras Government and have selected seven places, Madras City, Guntur, Hospet, Cuddalore, Vizag, Katpadi and Chittoor, for starting new factories. The promoters of the concerns are having discussions with the Government in respect of such questions as the policy to be followed in their organisation, the form and extent of assistance Government should offer and the help necessary from capital from outside the Province. Opinion seems to be in favour of restricting share-subscriptions to persons domiciled in the Province and giving the growers of groundnut as large a quota as they could take. It is gathered that capital will be invited to the extent of fifteen lakhs for each factory and production is expected to start in the course of a year.

It is understood that preliminary work for the establishment of an artificial silk factory in Alwaye (Travancore) will shortly be taken up. Out of the proposed capital of a crore and a half, the Travancore Government will be subscribing to the tune of Rs. 30 lakhs.

A fair compromise between the internal needs of the Province and the necessity to maintain the outside markets in tact forms the basic principle of the Madras Cotton Order of 1945, as far as the order relates to the export of handloom goods. In a Press Note explaining the Order, the Textile Commissioner says that fresh restrictions on the export of handloom fabrics have been made necessary for two reasons; the imports of finer counts of yarn from outside the Province have completely stopped and the exports of handloom cloth from Madras have gone up to eighty per cent of the output though for purposes of allocation of mill cloth, it was presumed that not more than fifty per cent would go out of Madras. Prices of handloom cloth have also risen to unreasonable levels for the reason that many new persons have set up business and taking advantage of the high prices of cloth in other Provinces, have been purchasing in the local market at speculative rates for export. All these newcomers will be eliminated from the scope of the export permit which will be issued only to those who have been exporters in the basic period, i.e. from April to September, 1944.

Keen resentment prevails among interested circles over the manner in which the personnel of the Burma Custodian of Property Committee has been selected. At a meeting of the Burma Indian Evacuees' Association of South India held on June 27, in George Town, strong protests were made against the exclusive representation given to the Burma Indian Chamber of Commerce in the Committee. That the personnel was selected without due publicity also came up for criticism. The Chulia Muslims who hold extensive interests in Burma contend that at least three representatives should have gone to the Committee from among them.

That India could attain a standard of life comparable to that of Britain or Canada within the next twenty years if the available resources were scientifically pooled and that in areas like Mysore, agricultural enterprises like

the Tennessy Valley Scheme could be profitably undertaken were some of the views expressed by Sir. J. C. Ghosh, at a party given in his honour by the Congress Members of the Mysore Legislative Council. Sir Ghosh insisted that any planning committee which might come forward to undertake this task should allow science full play in any scheme of development. He also felt the need for a development committee which should have full powers to do whatever it thought best in the interests of the country. He said that he was of opinion that it would be best if all the industries in the country should be under the control of the Centre. Referring to the visit of the Science Delegation to the United States and England, Sir Ghosh wished some of the politicians and legislators also undertook such foreign tours so that they could enrich their knowledge through a study of conditions prevailing in other parts of the world.

ON
LOOKING
AHEAD

Resume of Commodity Markets

There are no interesting developments in the commodity markets in the past week. Bullion prices have been fluctuating in narrow limits. As a matter of fact, a definitely easier tendency has been noticeable in the latter half of the week on reports that the Reserve Bank might resume silver sales. The raw jute market was steadier with greater mill interest and the continued strength of the goods market while the raw cotton market was irregular even though it was reported that at last week's meeting of the Cotton Committee no decision was taken regarding the reduction in floors and ceilings for the Indian contract. In the piecegoods market, business is very brisk and is only restricted by the issue of licenses and the allotment of quotas to particular traders.

Thanks to the greater interest taken by mills in the raw jute market steadier conditions have been noticeable in raw jute though, it should be said, that the undertone is not definitely firm and there is still a feeling that, given the continuance of present conditions, the yield from the crop will be very satisfactory and that total jute supplies both old and new crop, might be in excess of market requirements. For this reason, sellers have continued to be anxious to do business even though a substantial quantity of jute was purchased on behalf of France, the quantity involved being 60,000 bales.

Further instalments of the preliminary forecast figures have been published, but they do not give any definite ideas regarding the size of the crop. In the important districts like Tipperah, Dacca, Mymensingh and Noakhali, the areas yet pending for checking are still a substantial proportion of the areas licensed. Market estimates are, therefore, mainly based on information from unofficial sources.

The jute manufactures market has continued very firm especially for hessians. Mills are unwilling to enter into any commitments for positions this side of December. Only a small business has been reported at maximum rates. Even for deliveries early next month, mills are not free sellers though it would appear that for positions after March they would consider the acceptance of orders in large quantities. It is felt that there would be a reduction in the present maximum prices of jute when the Jute Control Order expires.

In the heavy goods section too steady conditions have continued to prevail. The bazaar has taken more interest and mills are reported to have done some business for delivery in the last quarter of the year. Quotations are very nearly at the maximum rates for certain qualities.

The stock figures for the month of jute make satisfactory reading. This is the first month, for sometime, in which there is a substantial reduction in sacking to the exclusion of hessian. The rise in hessian stocks is mostly on commercial account the figure at the end of June being 41,709 tons against 38,454 tons at the end of May and, on military account, 36,913 tons against 37,264 tons. Total stocks were 78,622 tons against 75,718 tons. Sacking stocks, on civil account, were 87,585 tons against 90,107 tons and on military account, 10,575 tons against 12,188 tons. Total stocks were 98,158 tons against 102,295 tons.

The reduction in sacking stocks by over 4,100 tons must be due to the exports of gunny bags to Burma for handling surplus stocks of rice in that country. The absence of any decline in hessian stocks is perhaps due to the preference given to the exports

of heavy goods with the difficulty in shipping space. The figures for the current month will show whether any further despatches of heavy goods have been effected.

At last week's meeting of the Cotton Committee of the Textile Control Board the question of a reduction in floor and ceiling prices for cotton against the Indian cotton contract by Rs. 50 per candy seems to have been suggested by Government officials and vigorously opposed by the cotton interests who asked for an increase of Rs. 50 per candy to Rs. 400. After a hot discussion no decision was taken, the meeting being postponed to an indefinite date. It is reported that a fresh meeting may be held sometime at the end of this month. Even the reports that there is to be no immediate reduction in the minimum prices for cotton have not favourably affected the Bombay cotton market as it is felt that ultimately the Go-

vernment might decide on a reduction and that with possibilities of larger imports of Egyptian cotton, there is no prospect of any appreciable rise in prices. Jharilla July closed at Rs. 417 and September at Rs. 427. There was a decline earlier in the week to Rs. 414 and Rs. 423 respectively.

It is reported that arrangements are being made for the export of cotton to China where a shortage is experienced and mills in Kuming and Chungking are not able to work continuously. 30,000 thousand bales are expected to be sent, more than two-thirds of it being allotted to textile mills.

The bullion market was featureless there being considerable speculation regarding the Reserve Bank's sales. There were rumours that silver sales might be resumed. It is not definitely known what is the outcome of the discussions between the Indian Government

Time marches on. And, with Time, the country's progress also. The India of 100 years ago has changed so very much that today industry has almost as important a place in India's scheme of things as agriculture.

India's industry is today on the march—a march that is destined to bring a general increase in the standard of living of the country's teeming millions. In keeping with the country's march of progress, both industrial and agricultural, the 60-YEAR-OLD-FIRM of Herman & Mohatta, Western India's pioneers in the Iron and Steel Industry, are now busy manufacturing goods for agriculture and industry.

PACKING A NATION'S PRODUCTS

Manufacturers in India will prepare their goods for internal transit, display in the shops—and for export—more carefully than they did before the War. Paper wrappings, some of which will have to take coloured printing, in every substance from lightweight white printing upwards; pure pulpboards of different colours, weights and surfaces for outer containers, strong enough to stand rough handling—or flexible enough to be creased and bent into cartons and tubes... all these will be supplied by Titaghur.

The most advanced Manufacturers in India have always used Titaghur packing materials to give their goods a handsome setting and to deliver them to the consumer in perfect condition. The good printer or boxmaker is the best person to advise on the correct Titaghur product to use.

OTHER TITAGHUR PRODUCTS

Papers and Boards for writing, duplicating and printing of all kinds—for Ledgers and Account Books—for Binding-cases. Notepaper & Envelopes. Shorthand Notebooks.

and the United States for the further imports of silver in this country on lease-lend account.

A rather quiet feeling was noticeable in the silver market on Thursday and silver ready closed at Rs. 137 and forward Rs. 136-6. There is a slight decline in the discount for forward over ready.

The gold market has been erratic. Reports of the possibility of suspension of gold sales were considered encouraging, but the activity of the speculators has been checked to a certain extent by the fears that the Popular Government, if it comes into being, would check the activities of speculators to a great extent.

It was reported during the week that a meeting of the All-India Handloom Board would be held in Nagpur shortly to consider the question of control of prices and production of handloom products in the various producing centres. As a result of the rationing of mill-made cloth and yarn in some provinces, there is a large increase in demand for handloom products. There is no restriction regarding the purchase and the sale of handloom varieties. There is also no restrictions regarding the prices to be charged though it is made sure in provinces like Madras that the finished products are sold through co-operative societies at fair prices. As the Madras Government is a large producer of handloom goods at relatively cheap prices, there has been a large increase in exports, in recent weeks, from that province to other areas.

As it has been estimated that 80 per cent of the output of the handloom industry will be required for consumption within the province itself, it is necessary to control exports and movement of handloom goods from the Madras province to outside areas. The Provincial Textile Commissioner has issued an order during the week to the effect that, without necessary permits, it would not be possible to move goods out of the Madras province. The relevant extract from the communique reads thus:

"Taking advantage of the prevailing high prices of handloom cloth in other provinces, several new persons had set up business and have exported cloth to Bengal and other provinces. The competitive prices offered by these exporters have been in no small measure responsible for the abnormal increase in the prices of handloom cloth. It has been decided to eliminate all the newcomers from the field of export and to issue export permits under the Madras Cotton Cloth (Exports) Control Order, only to persons who have been exporting handloom cloth to other provinces in the past. The basic period during which an exporter should have exported handloom cloth to other provinces to make him eligible to export cloth has been fixed as six months from April to September, 1944. Only persons who have been exporting handloom cloth to other provinces during the six months commencing from April 1 to September 30, 1944, will be treated as exporters and they alone will be eligible to apply for export permits.

The Provincial Textile Commissioner has decided to adopt the following principles in regard to the export of handloom cloth to other provinces: (1) The maximum quantity of handloom cloth that will be allowed to be exported including the quantity to be exported by the Commonwealth Trust and the Madras Handloom Weavers' Provincial Co-operative Society will be fixed at about six million yards per month; (2) the exporters will be permitted to export handloom cloth only to those provinces to which they were exporting the cloth in the basic period; (3) out of the total quantity of about six

million yards that will be allowed to be exported, such quantities as may be determined by the Provincial Textile Commissioner from time to time will be reserved for export by the Madras Handloom Weavers' Provincial Co-operative Society; (4) with reference to the quantity available for export after reserving such quantities, as stated above, a quota will be fixed for each province and the approved exporters will be allowed to export handloom cloth only in such quantities as may be fixed in proportion to the total quantities of cloth exported by them during the basic period; (5) the proportion of fine cloth going out of this province is far too high being 25 per cent of the total exports. This province had always been a deficit area in regard to the production of fine counts and as imports of fine yarn have been completely stopped, it is necessary that the available yarn in fine counts should be utilised for the benefit of the consumers of this province. However, with a view to enable the handloom industry of this province to maintain its established markets outside the province, the Provincial Textile Commissioner proposes to allow 10 per cent of the total quantity exported in counts between 36's and 48's and 2½ per cent in counts above 48's. This restriction will apply to all handloom cloth where either the warp or weft is above 36 counts.

"It is possible that manufacturers of handloom cloth may have produced varieties of handloom cloth which can be consumed only in provinces outside Madras. The Provincial Textile Commissioner will be prepared to consider applications for export permits from persons who have produced such cloth be-

fore June 30, 1945. This will be allowed to be exported only by regular exporters. In giving such permits care will be taken to see that the total quantities to be allowed to be exported do not exceed six million yards per mensem. From July 1945, the policy outlined above in regard to the export of handloom cloth will be followed. Every manufacturer of handloom cloth is therefore advised to produce only such varieties as can be consumed within this province and to give up production of varieties for which there is no market here."

The need for controlling the output of both the mill and handloom industry in order to bring about an effective distribution of available goods cannot be over-emphasised, but it will be admitted that so far the rationing of mill-made cloth and yarn has not functioned efficiently and the authorities do not have any clear ideas as to how such rationing should be effected. The Bengal Government, in particular, seem to have a capacity for bungling in the execution of such schemes. Not unnaturally the Ward Committees, which were asked to supervise the operation of the interim scheme have said that unless a definite date was fixed for the inauguration of the full rationing scheme, the hardship of the consumers would only be increased with half-measures and that the handling agents, who have been asked to procure goods and stock them would grow fat at the expense of the consumer. As the Textile Commissioner for India has on more than one occasion pointed out the difficulty in respect of the distribution of available supplies of cloth and yarn is mainly due to the lack of co-ordination between the Centre and the Provincial Governments.

For the loan to be completely successful a further rise in the quotation for 2¾ per cent 1948-52 and other loans is needed but even if the loan were not completely subscribed on next Monday, the Government can take up the balance of the unsubscribed loan on its own investment account as in the case of First Development Loan. It might perhaps be possible to liquidate later parcels of this new short-dated loan in the open market at favourable rates.

The only loans now available for sale to the investor are thus the 2½ per cent 1950, 3 per cent 1970-75 First Development Loan and 3 per cent 1959-61 Second Victory Loan. After next Monday, if the short-dated loan is completely subscribed, the choice will be confined only to 3 per cent 1959-61 and 3 per cent 1970-75. It is rather surprising that even under present circumstances the Second Victory Loan should be quoting at a slight discount.

The returns of the Reserve Bank for the week ended July 6, 1945, shows an increase in the note issue to Rs. 1,151.66 crores from Rs. 1,146.75 crores, thanks to the expansion of currency against sterling securities for Rs. 5 crores. The increase in notes in circulation is not equally pronounced, the figure at Rs. 1,138.94 crores showing a rise of only about Rs. 2 crores. Sterling securities are

Rs. 5 crores higher at Rs. 1,034.33 crores while there is a small decline in the amount of rupee coin to Rs. 15.08 crores from Rs. 15.16 crores. The latest addition to the note issue has come after four weeks, the last expansion being during the week ended June 8, 1945 for Rs 10 crores. The smaller rate of currency expansion is obviously due to the larger subscriptions to Government loans and the tap sales effected by the Reserve Bank. Tax receipts also appear to be satisfactory and the reduction in the floating debt has not affected Central Government balances to any great extent.

There is a slight decline in both Central and other Government accounts perhaps due to the month-early disbursements. Central Governments balances were Rs. 277.2 crores against Rs. 279.51 crores and Other Government accounts Rs. 20.64 crores against Rs. 22.37 crores. Bank balances were Rs. 3.3 crores higher at Rs. 82.55 crores Other deposits were Rs. 20.48 crores against Rs. 17.89 crores. There is no important change in foreign balances at 395.08 crores but if the transfer to the issue department of Rs. 5 crores is taken into consideration there is a net receipt of Rs. 4.92 crores during the week. Investments are lower by Rs. 71 lakhs at Rs. 21.58 crores, perhaps due to sales by the Reserve Bank in the open market.

The statement of the Imperial Bank reveals a slight decline in deposits to Rs. 237.13 crores from Rs. 237.71 crores but there is an increase in investments to Rs. 145.09 crores from Rs. 143.03 crores. Advances were lower at Rs. 64.37 crores against Rs. 68.28 crores mainly due to the decline in bills discounted and purchased. There is an increase in cash balances to Rs. 39.41 crores from Rs. 36.6 crores.

The statement of Scheduled banks for the week ended June 29, 1945 shows a large increase in both Demand and Time Liabilities. Demand Liabilities were Rs. 629.44 crores

against Rs. 624.17 crores and Time Liabilities Rs. 239.13 crores against Rs. 236.96 crores. There is a jump in cash balances to Rs. 36.87 from Rs. 31.97 crores. Balances with the Reserve Bank are lower at Rs. 78.86 crores against Rs. 84.76 crores. Advances have declined to Rs. 279.74 crores from Rs. 282.58 crores. Bills discounted are Rs. 20 lakhs higher at Rs. 13.62 crores.

It will be evident from the statement of the Imperial Bank that a large interest has been taken in the gilt-edged market. The increase in investments could not possibly be due to treasury bills, the total of sales last week

being poor and maturities were Rs. 4 crores. In spite of the half-yearly closing, there has been no effort at window-dressing by scheduled banks. Cash balances and the increase in deposits have been liberally utilised for investment in gilt-edged securities. Total purchases were perhaps over Rs. 11 crores. Against the increase in working capital by 7.44 crores cash balances are Rs. 1 crore lower. If the decrease in total advances by Rs. 3.24 crores is taken into consideration a sum of Rs. 11.08 crores is to be accounted for. It is precisely this sum that should have found its way into the gilt-edged market.

MAYBE it is you, perhaps not in the same way as shown here but burning it all the same. Every time you buy needlessly and at inflated prices, you are in fact burning money, because it is plain commonsense that war-time prices give you bad value for money.

Many things have disappeared from the market—others are in short supply. Rationing and controls have been necessary to see that everyone gets a fair share of what is available. Prices of controlled articles, even are in excess of pre-war prices, not to mention uncontrolled articles. We presume you are a good citizen and do not pay the fantastic Black Market prices. Why pay ten rupees for a thing which is not worth more than five? Much better to postpone your purchases till prices are normal again, when you will be able to buy better goods at lower prices.

**PLAN TODAY FOR TOMORROW
SAVE ALL YOU CAN**

But remember to invest your savings where they will be safe, and waiting for you when you need them.

National Savings Certificates, Government Loans, Post Office Savings Bank Accounts, Insurance, Co-operative Societies and Savings Bank Accounts are both safe and profitable. Do not risk your money by buying land, buildings, commodities, manufactured goods or jewellery. Their prices are very high these days and chances of depreciation are great. **SAVE SAFELY FOR THE FUTURE**

Jute and Jute Manufactures

(From Our Correspondent)

Special to "Indian Finance".

CALCUTTA, July 12.

For some time local mills have been greatly handicapped in their efforts to step-up production by a shortage of labour as well as a shortage of coal. There may be several reasons to account for the shortage of coal. There may be several reasons to account for the shortage of labour but it would appear that one of the main causes for the migration of workers from the jute mills is the present availability of more remunerative and less confined employment either with military units employing civilian labour or in new industries or industries that have expanded during the war. Reports from Dundee indicate that the labour position there is not dissimilar. It is said that the existing demand for Dundee jute cloth and bags exceeds the supply and that production is not improving due to a very acute shortage of labour. The difficulties of the labour problem in Dundee may be gauged by the fact that in pre-war days the number of workers employed in the jute industry was in the neighbourhood of 30,000 but due to the transfer of labour and other causes connected with the war-effort that number was ultimately reduced to approximately 12,000. It has been estimated that 8,000 more workers are required immediately to satisfy urgent requirements. Although several European countries are reported to be making enquiries in Dundee, manufacturers are unable to accept firm orders in many cases because of the scarcity of labour and the consequent effect on their productive capacity. The existence of what might be called more attractive employment with higher wages during the war years has meant that there have been few new hands available to learn the jobs of spinning and weaving and of course it must be anticipated that there will be reluctance on the part of former jute mill workers to return to the industry especially if they have prospects of permanent employment under better conditions in some other sphere. In this connection a Committee has been appointed to suggest improvements in the working conditions of jute mill workers in Dundee. Trade circles in Dundee generally agree that this step will most likely lead to a recommendation for higher wages which in turn would reduce the home industry's capacity to compete with Calcutta in Overseas markets. But as observed by the President of the Dundee Chamber of Commerce when stating that the man hours required to produce one t.n. of yarn in Calcutta are four times as many as would be necessary in a modernised Dundee Mill (a statement to which we alluded in this column last April) the Jute industry in Dundee may take encouragement from that fact, provided plant is modernised and the workers give their full co-operation.

The Calcutta jute industry may continue to be faced with a labour problem even after the end of hostilities in the East although perhaps in a less acute form than prevails in Dundee at the moment. Yet as time passes and plans for the industrialisation of this country begin to take a more definite shape, competition for the services of workers is bound to become keener. Much has been done and is being done by local mills to improve conditions of work and service but we wonder if the real solution does not lie, as in Dundee, with the installation of modern machinery as such plant becomes available.

A short time ago reports of enquiries for raw jute from France and Belgium and recent shipments of fair quantities of the fibre to the Continent fostered the hope that the jute industry in these countries has not suffered material damage on any large scale. That such a hope was justified has now been confirmed by the recent publication of French official estimates of the damage done to jute mills in the course of the war. These estimates indicate that 90 per cent of the jute mill plant in France is undamaged but there are three main obstacles to the placing of the industry on its former basis, namely, coal, labour and raw material. Coal and labour difficulties are common features in France's industrial life at the present moment and until these difficulties are, in the main, overcome demand for raw materials is likely to remain subdued. Therefore it may be some little time before France and other continental countries similarly placed are ready to purchase raw jute on the same scale as before the war. Pre-war, France imported about 80,000 tons of raw jute annually and in 1940 had an estimated total of 7,000 looms (i.e. about 5.8 per cent of the world's total jute loomage) against 8,500 looms in the United Kingdom and 9,600 in Germany.

The total reported Mill stocks of manufactured goods at the end of June show a decrease for the first time in four months—but only a very small one. The weight of goods in stock at the end of June is given as 1,76,780 tons whereas on 31st May last the figure was 1,78,013 tons—a difference of only 1,233 tons. Commercial hessian stocks again show an increase being 3,255 tons or nearly 117 lakhs yards higher than in May but this has been more than offset by reductions in stocks of sacking goods held on both commercial and military accounts plus a small reduction in the hessian stocks held on military account. Commercial sacking stocks are lower by 2,524 tons or nearly 63 lakhs yards while Government held sacking is down by 1,613 tons or 41 lakhs yards. Hessian held on Government account is lower than the May figure by 351 tons or 31 1/2 lakhs yards.

Arrivals of jute for the month of June 1945 is estimated at 4,11,000 bales as against 5,18,000 bales in June 1944. The total arrivals of jute for the period July 1944 to June 1945 is therefore 63,58,000 bales which is 8,92,000 bales more than for the same period in 1943-44.

The Indian Jute Mills Association has issued the following statement of reported sales for the week-ended Saturday, the 30th June 1945:—

	This & next month Yds.	Forward Yds.
Hessian	50,32,192	1,50,76,657
40" 8 oz hessian (included in above)	Nil	7,00,000
Twills	65,49,554	1,62,46,197
Plains	75,35,223	1,38,36,761

In the Pucca Bale market fairly good business was done for export to France in Reds, Firsts, Lightnings, Hearts and in Dundee Daisee were bought for local consumption at minimum prices also Special N. Cs at Rs. 46 and Special Lightnings at Rs. 76/. Except for ordinary M.Cs and N. Cs which are quoted by sellers at maximum rates, all descriptions are offered at minimum with dealers free sellers.

A fair turnover in Loose jute has taken place during the week and rates have hardened. Most of the business was done in New crop, Supervised Jat was done at Rs. 15/8 and Rs. 12/8 for Middles and Bottoms. 50/50 assortment. European Middles alone were done at Rs. 16 while European Middles and Bottoms in 70/30 assortment sold at Rs. 16/4 and Rs. 13/4 with 20/80 assortment done at -/4/- more. Ordinary Marwari Jat marks were done at Rs. 15/4 & Rs. 12/4 Middles and Bottoms, also at -/4/- higher. A small quantity of District Tossa old crop came to business at Rs. 15/4 & Rs. 12/4 and new crop District Tossa sold at Rs. 15/12 & Rs. 12/12 Middles and Bottoms. Some new crop District jute (white) was done at Rs. 14/12 & Rs. 11/12 Middles & Bottoms.

Due to reserve of sellers there has been comparatively little business in the Manufactured Goods market. Mills have little to dispose of up to the end of the year and it is difficult to find sellers for any large quantities for the more forward positions. A small Government Order for hessian placed this week was off-set by the cancellation of the balance of a Government order for flour bags. Prices for N. Cs which are quoted by sellers at maximum deliveries are at maximum prices for hessian and are not far off maximum for sacking. The goods' markets are still firm and the buoyancy imparted by the Government order for heavy goods placed a fortnight ago is still in evidence.

(Continued from page 58)

signed was the 3 per cent 1970-75 Development Loan, which was a cash and conversion loan for a total of Rs. 40 crores. The loan was open for three days; and subscriptions from the public fell short of the total by Rs. 13 crores. Securities for Rs. 13 crores, however, were taken up by the Government in the first instance and sold gradually on tap through the Reserve Bank. The Reserve Bank carried out this sale so successfully that it was soon found necessary to create a re-issue of the First Development Loan for another Rs. 30 crores. Thus, Rs. 70 crores is sought to be raised through the Development Loan. Other tap loans are also being sold through the Reserve Bank. Taken all in all, and inclusive of the 2½ per cent bonds, Sir Archibald will have raised from the market, say, Rs. 120 crores in the space of three months. That he has been able to borrow an average of Rs. 40 crores a month and, at the same time, to effect a reduction in the borrowing rate to 2½ per cent is splendid work.

All this is, however, only the preliminary stage and the advance preparation for the more vital project of paying off 3½ per cent Rupee Paper. Some people have talked of an investor's strike, that is to say, it is argued that, if the yield on the loan is reduced to anything like 2½ per cent, the investors will cease to take any interest in new loans. This line of argument is adopted by people who have no money-market sense. The rate allowed on current accounts by commercial banks was reduced from 2 per cent to 1 per cent and from 1 per cent to ½ per cent. Have the deposits of banks gone down? Far from it. On the other hand, with each reduction in the rate allowable on current accounts, there has been more than a doubling of the deposits received by banks. The Imperial Bank of India is paying no interest on current accounts; has this been a handicap to the Imperial Bank receiving deposits on a larger and larger scale? That the yield on a new loan must be higher in order to attract investors, is an economic fallacy, an exploded theory, a belief which is totally opposed to current practice and experience.

In some other quarters, it is pointed out that the amount involved in the repayment of 3½ per cent Paper is Rs. 270 crores; but the cash resources required for undertaking such a gigantic operation are considerable; and that, though the Central Government's cash balances are now high, they represent accumulations and earmarked reserves of some kind or other and cannot, therefore, be available for the repayment of 3½ per cent Paper. Here is another string of fallacies. Why should anybody assume that the present holders of 3½ per cent Paper will, in a body, non-co-operate with the conversion loan offered? What ground is there for the assumption that only a fraction will elect to convert and the large body of the holders will claim payment in cash? These and other questions were dealt with in our article of April 14; and, by way of answer to such arguments (which, I consider, are frivolous and mostly ignorant) and as further reinforcement for my plea for the immediate repayment of 3½ per cent Paper, I may quote the following paragraph from our April issue:

"We suggest that the conditions that confront Sir Archibald are ideal for initiating the move to replace the 3 per cent type of loan by a 2½ per cent type for medium and long-dated loans and 2 per cent type for short-term loan. The first essential for the success of such a move is the redemption of 3½ per cent

non-dated rupee loan. We cannot understand why the authorities have so far failed to take a definite and positive stand in regard to the redemption of this loan. Much less can we understand the policy of the Government underlying their sale of 3½ per cent Paper at par a few months ago. On more than one occasion we have stressed our view that, from the point of view of the present gilt-edged market and future gilt-edged outlook and from the point of view of the high credit which India enjoys both at home and abroad as well as from the point of view of the comfortable ways and means position of the Central Government the Government cannot long delay the redemption of 3½ per cent non-dated rupee stock. On the earlier occasions when we put forward this suggestion, we had to contemplate the redemption to be carried out in stages. The cash position of the Government is now so comfortable that the redemption of 3½ per cent rupee stock can be undertaken in one single operation. The moment an announcement of the decision of the Government to repay this loan is made, the gilt-edged market in India will receive a most powerful reinforcement of confidence and optimism. It may be taken as certain that over 90 per cent of the holders of 3½ per cent rupee stock will convert into whatever new loan is offered for the purpose. Only a negligible number of holders of this scrip will elect to receive payment in cash."

If the talks in Simla are crowned with success, Sir Archibald's term as Finance Member may end abruptly. Even so, there is, I feel, sufficient time and opportunity for Sir Archibald to cover his brief period with glory by the final announcement of Government's decision to give three months' notice to the holders of 3½ per cent Rupee Paper.

As we go to press, I have received the following telegram from our Bombay Correspondent: "Our friend Cooverji Hormasji Bhabha elected unanimously Director Central Bank of India." Cooverji has established many records—when he became the director of the Oriental Life Assurance Company, he was the youngest director. I believe, in the annals of

Oriental. When he became the Chairman of Apollo Mills, he set up another record for juvenile eminence. He is, if I am not mistaken, the Chairman of Sholapur Mills. He is the first Bombay businessman of importance to be on the board of South Indian plantation companies. In logical sequence comes election to the Central Bank's Board. Cooverji looks as if he is just out of his teens; but he perfectly harmonises self-assurance and modesty. There is, I am confident, a future of great importance and service for one who has begun so well and sustained his strident career with notable ability. Cooverji inherited a tidy fortune from his father; but the richest legacy he received was his father's debonair grace, unruffled temper and sure judgment.

"EAVESDROPPER".

A Correction

In the Prospectus of the Magnesite Corporation of India Limited, published in the issue of "Indian Finance" dated July 7, 1945, the date of opening of the subscription list was by mistake given as July 3rd and closing July 10th. The opening and closing dates should read as July 10th and July 20th respectively. The number of Ordinary shares issued to the public is 52,000 and not 55,000.

Rs. 34,00,000 a day invested!

Over Rs. 112 Crores were invested in less than eleven months in the First 3% Victory Loan (1957) withdrawn during February 1945.

The 3% Second Victory Loan (1959-61) offers you another opportunity to lend money to India on attractive terms. You serve your country, help to lower prices, and the 3% dividend per annum less Income-Tax is sent to your address twice a year.

There is NO LIMIT to the amount you are permitted to invest in the Loan, and the Government has guaranteed to repay at par not earlier than 15th August 1959 and not later than 15th August 1961. If in the meantime you want to realise your capital, the Loan is readily salable on the market. You can obtain refund of Income-Tax if you are not liable to it or liable at a lower rate.

To buy this Loan, apply to your Bankers, or to the Reserve Bank of India at Bombay.

Calcutta, Madras, Delhi, Cawnpore or to the Branches of the Imperial Bank of India in other places or to any Government Treasury.

SATURDAY, JULY 14, 1945

Price Re. 1

Stock Markets to-day and to-morrow:

BOOMLET IN THE CALCUTTA MARKET

Trading on both the Calcutta and Bom-
bay stock exchanges in the past few days
gives the impression that boom-like condi-
tions would continue for some time and
that with the reserve of investors there
might be a squeeze in particular counters.
The change in the general sentiment in the
stock markets in the past week, it need
not be emphasised, has been mainly due
to the announcement of the terms of the
New Loan by the Central Government.
It is confidently expected that the reduc-
tion in the yield basis would become an
accomplished fact and that the amount
of Rs. 20 crores asked for would be easily
subscribed, if not on the first day, at least
through open market sales later. The
announcement has been well received and
a smart rise in prices has been recorded
for all Government loans.

The smaller yield on gilt-edged securi-
ties has naturally emphasised the merits
of fixed interest-bearing securities and
first-class industrials. The readjustment in
prices can be expected only over a period
but with the liberal outlook and the
encouraging prospects for industries a sub-
stantial rise in prices has been recorded
during this week. As there is still scope
for a rise in gilt-edged securities and as
it is felt that equities are relatively under-
valued, there will be a parallel movement
in both gilt-edged and equities for some
time.

The changes in prices for important
shares are given in the following table:

	12-7-45	5-7-45	14-6-45
Cottons			
Cawnpore	Rs. 13 4	Rs. 12 9	Rs. 12 10

Bhartia	25 12	23 2	22 13	
Indian Iron	41 12	41 3	41 9	
Jessops	27 2	25 14	25 8	
Marshall's	6 7	6 4	5 7	
Steel Corporation	34 2	34 1	33 13	

It will be seen that the upward move-
ment in the market has started even in
the middle of June and that the fall in
prices noticeable after the unconditional
surrender of Germany has been more than
regained. After the announcement of the
new loan on Monday this week, there has
been a spurt in prices, Bengal alone being
quoted 47 points higher at Rs. 776, Bur-
rakur 2 points higher at Rs. 45/5, Equit-
able 1½ points higher at Rs. 74, New Beer
hoom 1 point higher at Rs. 47/8, S. Karan-
pura 4 points higher at Rs. 36/10 and
Sendra 1½ points higher at Rs. 29/1.

The rise in jute shares also is pronounc-
ed. In the case of the bigger denomina-
tions the rise is as much as 30 points.

Engineering shares have been left be-
hind but constructional engineering com-
panies have done well. Bhartia Electric
Steel, Jessop & Co., and Marshall's are
instances. The steadier feeling has not
been confined only to these three sections
alone. In the miscellaneous group also
a substantial improvement in values has
been recorded.

After the abrupt rise in prices there is
no suggestion of weakness though in Fri-
day's session there was profit-taking with
the week-end adjustments. Also the reports
from Simla were not encouraging. Invest-
ors are not very anxious to liquidate their
holdings and cash profits. With the huge
volume of surplus funds and the prospect
of large-scale industrial development in
the post-war period, it can certainly be
said that the boom, if it comes about, will
be more broad-based and will not be
shortlived. The developments in the next
few weeks should be carefully watched.

India Paper Pulp Company Limited, has
not been able to report any large increase
in earnings in spite of the fact that output
was maintained at a record level, the increase
in working expenses as a result of the
high prices for raw materials preventing
any appreciable improvement in earnings.

The net profit, before providing for taxa-
tion and depreciation, is Rs. 6,92,101 against
Rs. 6,86,996 for the previous six months.
The amount set aside for depreciation is
Rs. 91,021 against Rs. 82,996 while the pro-
vision for taxation is appreciably lower at
Rs. 270,000 against Rs. 415,000. The
smaller provision for taxation is due to the
refund of Excess Profits Tax previously
paid with the adjustment in the company's
standard profit. The larger disposable
balance, however, has not been utilised for
increasing the distribution to shareholders.
The ordinary dividend is maintained only
at Rs. 6 per share. A sum of Rs. 75,000
(nil) has been transferred to reserve for re-
pairs. The amount carried forward is
slightly lower at Rs. 68,744 against
Rs. 77,703 brought in.

As a result of the realisations on Govern-
ment bills the balance-sheet shows a cleaner
position, the overdraft shown in the last ac-
count at Rs. 12,29,642 having been liquidated.
At the date of the latest balance-sheet the
company had credit balances with both
the Managing Agents and the Imperial
Bank.

YARN FOR HANDLOOMS

Manufacture of cloth on the handloom is an important factor in Bengal's economy. In making allotment of cloth to Bengal, the Central Government take into account the handloom production of this Province; and the same is taken into consideration by the Bengal Government in making allotment of cloth to the districts. On an average a bale of Yarn weighs 400 lbs. and 1 lb. of Yarn produces 4½ to 5 yards of cloth.

Bengal's present monthly quota of Yarn for Handlooms is 7,100 bales and this is distributed on a scale of 24 bales per thousand looms, the balance being distributed to miscellaneous fabricators of handloom cloth.

In order to maintain the specialised production of Fine Cloth for which certain areas are noted, an increased proportion of Fine Count Yarn is sent to these areas out of the small total of Fine Count Yarn available to this Province.

During the period May 19 to June 18, 1945, the total quantity of Yarn despatched was 5,486 bales.

DEPARTMENT OF CIVIL SUPPLIES BENGAL

ended February, 1945 are gratifying there being a substantial increase in net profit thanks to the higher raisings. The net profit, before providing for taxation and depreciation, was Rs. 3,48,901 against Rs. 1,99,954 for the previous six months. The amount set aside to depreciation is Rs. 25,085 against Rs. 10,604 while the provision for taxation is Rs. 1,64,500 against Rs. 79,222. The dividend has been maintained at 11½ per cent. but there is to be a bonus of 3½ per cent. in addition. The amount carried forward is considerably higher at Rs. 41,200 against Rs. 21,734 brought in. But for the caution uttered by the directors in their report to the shareholders, Pench Valley coal could probably be tipped for a further rise in prices. It is stated that payment of an additional distribution in the form of a bonus is due to the expectations of a heavier incidence of taxation on earnings as E.P.T. deficits accumulated in earlier years have been liquidated. In future full provision for taxation will have to be made. There is no reference in the report to any receipts by way of target bonus as was mentioned in the reports of the Bird-Heilger's group. Perhaps the company has a very high target and the directors are not hopeful of an increase in raisings to merit any bonus payment.

There are reports that Amalgamated Coalfields Ltd., might not be able to pay any appreciable higher dividend market expectations being as much as 30 per cent. It is understood that it will be possible only to pay a dividend of 11½ per cent. for the half-year ended March, 1945 against 10 per cent. for the previous half-year. The market, however, has not been affected by these reports and the quotation for these shares is very steady at Rs. 61. There was a temporary decline in the quotation to Rs. 59-12.

The sensational rise in the quotation for Craig from Rs. 8-12 to Rs. 12-8 was due to the reports that the company might go into voluntary liquidation and that the shareholders would receive a large sum as repayment of capital. At the half-yearly general meeting of shareholders held on Friday the Chairman is reported to have stated that there is no foundation in these reports. The recent rise in prices might therefore not be sustained and before long the quotation may again be Rs. 8-8.

I reliably understand that the dividend of the Tata Iron and Steel Company for the year ended March, 1945 will be maintained at the level of the previous year. For 1943-44 the ordinary shares received Rs. 23 per share and the deferred shares Rs. 129-8-9 per share. It will be remembered that some time back on rumours that the dividends on both the ordinary and deferred shares might be reduced there was a decline in quotations. Recently, however, with heavy buying by a bull syndicate and the improvement in the general sentiment of the market prices have been on the upgrade

EMPIRE OF INDIA LIFE ASSURANCE CO., LTD.

28, DALHOUSIE SQUARE, CALCUTTA

and present quotations are around the highest levels for sometime.

Before the Reliance Mills were requisitioned by the military authorities the quotation for the ordinary shares was Rs. 10 to Rs. 12 higher than Howrah's. At the present moment, however, it is Rs. 12 lower than Howrah's. As there is every likelihood that the Reliance Mills will be released from requisition it should be said there is, margin for rise by 24 points. The dividend in the half-year ended March, 1945, was Re. 1-4 per share.

In the Jardine Skinner group, Reliance has the lowest capital value per loom. And as the ordinary capital is rather small the day E. P. T. is removed, this Company has the best prospects in the group.

Empire Jute has so far not recorded any sharp rise in the quotation. As the ordinary capital is only Rs. 6 lakhs, even with a small improvement in earnings, it will be possible to pay substantially higher dividends.

Among the Begg Sutherland Group of sugar companies, Samastipur Central is favourably placed. Against the paid-up capital of Rs. 12 lakhs the break up value is estimated at Rs. 22 lakhs. The factory has a capacity of approximately 800 tons of cane per day, and the mills were completely reconstructed after the Bihar earthquake.

The Bihar Government has removed the control on molasses. As there is a large demand for molasses in Bengal it would be possible to make good profits on its sale. The debentures can be redeemed on October, 1945, and the option will be exercised.

The optimistic view taken by the Chairman of the Industrial and Prudential Assurance Company at the annual general meeting held recently (the speech is published elsewhere in this issue) regarding the future of the Company is fully justified by the accounts published. Apart from the substantial increase in new business, progress is noticeable all around and the interests of shareholders seem to have been properly safeguarded.

It has been possible to report an increase of over 50 per cent in new business in the year ended December, 1944, 7,036 proposals were received during the year, of which 6,522 proposals resulted in policies assuring a sum of Rs. 2.06 crores against Rs. 1.35 crores in 1943. The total number of policies in force at the end of the year was 37,349 assuring, with bonuses a sum of Rs. 9.98 crores of which Rs. 62.18 lakhs was reinsured.

The income on account of first year's premiums was Rs. 10,84,467. on renewal premiums Rs. 40,078,83 and on single premiums Rs. 1,72,922. Interest income

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE (From Our Correspondent)

CALCUTTA, July 13.

Rather dull conditions have been noticeable on the Calcutta Stock Exchange in the past week and quite a large amount of business has been put through. The announcement of a new short-dated loan on a 2½ per cent basis has had an encouraging effect on markets and all popular counters have recorded a rise by several points over the week. Jute and Coal shares, in particular, have been firm, there being a sensational rise in South Karanpura to Rs. 36-10 and Craig to Rs. 12-4. The bigger denomination Jute shares are 30 to 35 points higher. In the Engineering section, popular speculative counters such as Indian Irons and Steel Corporations have not shared in the general rise but the purely engineering shares are firmer. Sugar shares were better. Belsund were strong at Rs. 16-11. In the miscellaneous section, Calcutta Trams, Midnapore Zemindary and I. G. N. were very firm. The general undertone of the markets is quite satisfactory though quotations are at the time of writing below the best levels for the week.

Gilt-edged securities have naturally been favourably affected by the announcement early this week that a new loan would be floated by the Central Government. This loan carries interest at 2½ per cent and is issued at par and repayable at par in 1950. This is the first time that the authorities have come out with a loan on a 2½ per cent basis.

As even with the recent improvement in prices the yield on existing loans was higher there was a rush to buy. 3 per cent and 3½ p.c. paper have touched new high levels, the former being done up to Rs. 96 and the latter Rs. 102-12. The quotation at the time of writing is around Rs. 95-6 and Rs. 102-10 respectively. Among terminable loans 3 per cent 1951-54 was Rs. 401-8 against Rs. 101-6, 2½ percent 1948-52 Rs. 100-8 against Rs. 100-1, 3 per cent 1957 Rs. 100-12 against Rs. 100-8, 3 per cent 1966-68 Rs. 98-10 against Rs. 98-7, 3 percent 1970-75 Rs. 97-5 against Rs. 97-2 and 3½ percent 1947-50 Rs. 101-10 against Rs. 101-6. No transactions have been recorded in provincial loans. The response at the treasury bills auctions at both the Central and Provincial Governments was very poor and there is a sharp rise in the average discount rate on Provincial Treasuries, Bengal especially.

On the announcement of a higher dividend by the Imperial Bank of India for the half-year ended June, 1945 there has been a sharp rise in prices, fully paid being done up to Rs. 2,130 and Contributories Rs. 550. Reserve Bank are one point higher at Rs. 139 while United Commercial were bought up to Rs. 28 premium from Rs. 22-8 last week. Calcutta National also were a shade better at Rs. 16, and Hindusthan Commercial at Rs. 54-8.

There was not much activity in the Cotton section but it should be said that a definitely better tone is in evidence and a sympathetic rise in prices has been recorded. Cownpore Textiles were Rs. 13-4 against Rs. 12-6 last week, Dunbar Rs. 346-8 against Rs. 337, Elgin Rs. 68-8 against Rs. 66, Kesoram Rs. 19-4 against Rs. 17-13 and New Victoria Rs. 8-1.

The coal section has been marked by considerable activity and the popular counters are two to three points higher. Amalgamated jumped to Rs. 61-4 from Rs. 59-8 but there was a setback to Rs. 59-12 on reports that the increase in the dividend for the half year ended March 1945 might not be up to market expectations. The quotation,

however, is again higher at Rs. 61-6. Bengal have improved from Rs. 729 to Rs. 776, Burrakur to Rs. 45-4 from Rs. 43-1, Equitable were 2 points higher at Rs. 74 and New Beerbhoom more than a point higher at Rs. 47-8. With the declaration of a higher dividend Pench Valley recorded a rise of 5 points to Rs. 64. Raneegunge were steady around Rs. 67-10 while Sendra were Rs. 29-1 against Rs. 28-4. South Karanpura were very active being quoted as high as Rs. 36-10 against only Rs. 32-11 at the end of last week. It is reported that there is some difficulty in respect of deliveries and that there is a heavily oversold position. West Jamuria jumped to as much as Rs. 75 from Rs. 66-4 last week. Amongst speculative counters Bhulgora were frequently dealt in and are 2 points higher at Rs. 23-6, Bharat Collieries have risen to Rs. 14-8 from Rs. 12-12, Ghusick and Musia to Rs. 17-6 from Rs. 16-5 and Talcher to Rs. 14-8 from Rs. 13-8.

The improvement in prices in the jute section is also very pronounced, the bigger denomination shares, as mentioned earlier, recording a rise of about 30 points. The anticipations of further large orders have been mainly responsible for the activity in the Jute section. It is also pointed out that some of the popular Jute shares are relatively undervalued. Anglo-India were Rs. 528 against Rs. 508, Barnagore Rs. 265-8 against Rs. 256, Bally Rs. 420 against Rs. 395, Champdany Rs. 296 against Rs. 273, Ganges Rs. 645 against Rs. 634, Kamarhaty Rs. 796 against Rs. 782 and Kinnison Rs. 450 against Rs. 422-8. Among the smaller shares, National were 1½ points higher at Rs. 37-8, Nuddea 4 points at Rs. 41-8, Rameshwara 3 points at Rs. 13-12 and Northbrook 1½ points higher at Rs. 45-6. Presidency were rather sticky at Rs. 13-4. There was a sensational rise in Craig to Rs. 12-8 from Rs. 8-8. Waverly also were better at Rs. 13-9.

In the Engineering section, Indian Iron are only slightly higher at Rs. 41-42, the highest level touched during the week being Rs. 42-2. Steel Corporation are not very much changed at Rs. 34-2, but among other shares, Bhratia Electric Steel were Rs. 25-12 against Rs. 23-6, Braithwaite Rs. 13-8 against Rs. 12-12, Jessop Rs. 27-2 against Rs. 28-7. Marshalls were steady at Rs. 6-7 and Kumardhubi Rs. 12-4.

The Sugar section has grown suddenly active, Balrampore recording a further rise to Rs. 18-7, Belsund to Rs. 16-11 from Rs. 15-8 and Darbhanga Rs. 28-2 from Rs. 26-12. Ramnugger Cane and Sugar improved further to Rs. 19-9 on special buying and Samastipur Central to Rs. 22. Carew were active early in the week being done up to Rs. 31-4 but are now quoting lower at Rs. 30-8.

In the Tea section there is not much interest. Quotation are a shade better, Hasimara Rs. 80, Roopacherra Rs. 26 and Loobah Rs. 20-10.

In the miscellaneous section, Burma Corporation were uninteresting at Rs. 5-10. B. B. P. were marked higher at Rs. 6-3 on reports about the proposal to amalgamate the smaller companies in Burma. Karanpura Development were very strong at Rs. 42-8 against only Rs. 38. B. I. C. also came in for buying and were quoted at Rs. 6-14 against Rs. 6-6. Indian Cable were very steady at Rs. 32-2. A number of transactions have been put through in National Tobaccos and there is a rise of 4 points over the week to Rs. 31-4. India Paper Pulp were steady at Rs. 243 and Tttaghur Paper at Rs. 32-3. Midnapore Zemindary were 10 points higher at Rs. 201 and I. G. N. at Rs. 221.

(Continued from previous page).

was Rs. 831,626. As stated above, the expense ratio is slightly higher at 26.1 per cent of the premium income. Claims by death amounted to Rs. 6.64 lakhs and on account of maturities Rs. 8.27 lakhs. The Life Fund has increased to Rs. 2.35 crores from Rs. 2.04 crores. Total investments are shown in the books at cost. The market value of these investments was in excess of book value by Rs. 9.51 lakhs. Out of the total of the total balance sheet of Rs. 2.55 crores, Rs. 1.28 crores is in Government securities, Rs. 16.64 lakhs in Pro-

vincial securities and Rs. 47.79 lakhs in trustee securities. Holdings in ordinary shares were Rs. 19.16 lakhs and preference shares Rs. 4.98 lakhs. Loans to policyholders were Rs. 10.52 lakhs. There is a large appreciation in the value of trustee securities and ordinary shares.

The Chairman had very interesting remarks to make regarding the Insurance Amendment Bill, which is now in the Select Committee stage. The suggestion for an overall limitation of expenses, which has come in for considerable controversy, is accepted in principle. The proposal to effect a reduction in first year's agency

commission with the substantial increase in new business will perhaps meet with general approval though according to the Chairman "very influential interests have put forward a case against a further reduction of commissions paid to licensed agents." The Chairman also deprecated attempts at cornering of shares of Insurance companies as the consequent change in management and control might jeopardise public interest. Frequent changes in management should be avoided especially if it is found that the cornering agents had ulterior motives.

WATCH-DOG.

THIS IS NOT A PROSPECTUS BUT ONLY AN ANNOUNCEMENT

Consent of the Central Government has been obtained to this issue under Defence of India Rule 94A. It must be distinctly understood that in giving this consent the Government of India do not take any responsibility for the financial soundness of any schemes or for the correctness of any of the statements made or opinions expressed with regard to them.

PYRETHRUM PRODUCTS (INDIA) LIMITED**AUTHORISED CAPITAL**

Rs. 25,00,000

Divided into 1,00,000, 5½% Preferred Ordinary shares of Rs. 5 each and 20,000 Ordinary shares of Rs. 10 each.

ISSUED CAPITAL

Rs. 10,00,000

Divided into 60,000 5½% Preferred Ordinary shares of Rs. 5 each and 70,000 Ordinary shares of Rs. 10 each.

In respect of the Preferred Ordinary shares Rs. 1-4 per share is payable on application and Rs. 1-4 per share on allotment and the balance in two equal instalments at the discretion of the Directors at an interval of not less than two months. In respect of the ordinary shares Rs. 5 per share is payable on application and Rs. 5 per share on allotment.

PRESENT ISSUE:

60,000 Preferred Ordinary and 70,000 Ordinary shares are being issued at present out of which the Directors, Managing Agents and their friends have agreed to take 24,000 Preferred Ordinary and 28,000 Ordinary shares to the value of Rs. 4,00,000. Besides, a further number of 15,000 Preferred Ordinary and 17,500 Ordinary shares have been kept reserved for the bona fide residents of Assam. The balance of the issue, viz., 21,000 Preferred Ordinary and 24,000 Ordinary shares are now offered for public subscription.

Directors:

1. N. R. SARKER, Esq., Chairman.
2. SUSHIL C. SEN, Esq., C.B.E. Solicitor to the Government of India in Bengal.
3. RAI BAHADUR K. N. KHANDELWAL, Calcutta.
4. SETH DAYARAM PODDAR, Calcutta.

8. K. DUTT, Esq., Calcutta.
9. R. M. PURKAIT, Esq., Calcutta.

Bankers:

1. COMILLA UNION BANK LTD.
2. NEW STANDARD BANK LTD.
3. BANK OF MYMENSINGH-GOURIPUR, LTD.

Brokers:

1. Messrs. BISSENDAYAL DAYARAM, 7, Lyons Range, Calcutta.
2. Messrs. NARAYANDASS KHANDELWAL & CO., 25, Swallow Lane, Calcutta.
3. Messrs. N. L. ROY & CO., 9, Royal Exchange Place, Calcutta.
4. P. R. SUBRAMANYAM, Esq., 61 Stock Exchange Building, Apollo Street, Fort, Bombay.

Managing Agents:

ROY & PURKAIT LIMITED.
3-1, Bankshall Street, Calcutta.

Central Office:

3-1, BANKSHALL STREET, CALCUTTA

Objects:

This Company is being formed to carry out the objects set out in the Memorandum of Association and in particular, to acquire the Laikroh and Laitlyngkot Pyrethrum Estates in Khasi Hills together with valuable concessions from the Government of Assam for the production of Pyrethrum.

The flowers of Pyrethrum contain an organic compound chemically known as Pyrethrin, which is the most potent insecticidal agent so far discovered. Disease-carriers like mosquitoes, bugs and cockroaches are instantaneously killed by a spray of a highly diluted solution of Pyrethrin. The Universal use of Pyrethrum in India will mean the saving of two million human lives every year and

the prevention of over 50 million malaria cases. In terms of money, the annual saving will run into several crores of rupees.

The President of the Rockefeller Foundation in his review of 1942, activities referred to the success attending the use of Pyrethrum (as spray in fluid medium) in the following words:—

"The 45-year-old battle against malaria and the mosquito is being won in India. American soldiers and millions of civilians are being benefitted by an anti-malaria weapon which is known in Indian villages as 'Sweet Mist'. It is Pyrethrum spray, which is harmless to human beings but deadly to mosquitoes".

But when the active principle of Pyrethrum is released in an aerosol (a gaseous medium such as 'Freon') its insecticidal potency is intensified several times as is proved by the following extract from the "Popular Science Monthly" of America:—

"Pyrethrum most deadly of insecticides to mosquitoes if released in an aerosol is many times as effective as the oil spray used in the common household spray gun. FIVE MILLI-GRAMS—ONE VERY SMALL DROP—OF THE EXTRACT WILL IN ONE MINUTE KILL EVERY MOSQUITO IN A ROOM 12 FEET SQUARE AND 7 FEET HIGH".

Pyrethrum is commercially grown in Japan and Kenya. In pre-war period Japan used to produce 25 million lbs. of dried Pyrethrum flowers per annum, and 90 per cent of this output went to the United States. Since Japan started hostilities, the only supply for the Allied countries has been from Kenya where Pyrethrum is regarded as one of the most flourishing industries.

The Government of India have been much concerned on account of the world shortage of Pyrethrum and have been encouraging the Provincial Governments of Assam, Madras and the Punjab to introduce and extend Pyrethrum cultivation as speedily as possible; and towards this end, the Government of India expressed willingness to offer suitable inducements to growers of Pyrethrum.

The Government of Assam have already offered the following concessions:—

- (1) Acquisition of 500 acres of land.
- (2) Lending the services of Government experts.
- (3) Supply of seedlings and seeds of Pyrethrum at cost price.
- (4) Priority in the matter of transport.

It has been found that the Pyrethrum flowers that grow in Khasi Hills contain about the highest percentage of Pyrethrin in the whole world so far ascertained; that is to say, the flowers grown in Khasi Hills near the Pyrethrum Estates acquired by this Company, contain 1.4 per cent of Pyrethrin as against 1 per cent in Kenya, 1.1 per cent in Japan and 0.8 to 1.1 per cent in other parts of India. This Company is fortunate in acquiring developed Pyrethrum Estates (portion of which is already in flower), and also extensive lands certified to be the most suitable as regards rainfall, soil and altitude, etc., at an altitude of over 6,000 feet near Shillong on the Trunk Road connecting Shillong, Sylhet and Gauhati.

Since acquiring the Estates development work under the supervision of an experienced European Manager has been actively pursued.

IT OUGHT TO BE MENTIONED HERE THAT THE AREA PUT UNDER CULTIVATION LAST YEAR HAS ALREADY BEGUN TO FLOWER AND THE SEED BEDS SUCCESSFULLY GERMINATED.

Taxation Advantages:

It is of particular importance to investors that the income of the Company being derived from agriculture, is not subject to Excess Profits Tax or Income-tax but only to the Assam Agricultural Income-tax which is 2 annas 6 pies in the rupee.

The Directors have decided to pay brokerage at 2½ per cent to authorised brokers and bankers on allotment made in respect of applications bearing the stamp of such brokers and bankers.

INDUSTRIAL & PRUDENTIAL ASSURANCE COMPANY**LARGE INCREASE IN NEW BUSINESS****SIR CHIMANLAL SETALVAD ON THE INSURANCE AMENDMENT BILL**

Gentlemen,

Speaking at the 31st Annual General Meeting of the Company, the Chairman said:

This year we are meeting under more cheerful circumstances than those under which we met last year. The War in Europe has been won and there seems to be sense of general relief all round. No doubt the War in the East is still raging but the optimism that has been created by the Victory in the West makes people bear this burden of the Eastern War cheerfully and everywhere confidence to win is quite apparent. Thus in Business circles, as well as in the general public there is great expectation for a bright future, which stimulates business activities in the country.

As anticipated in my speech last year, the New Business written by our Company in 1944 is much more than that written in 1943. New Business written by our Company in the year 1944 amounted to Rs. 2,05,67,000 as against Rs. 1,35,34,000 in the previous year. I am sure that during the year 1945 progress will be maintained and if things go on as at present we will be able to show better results for the current year.

You must have observed from the Revenue Account that our premium income for the year under report is Rs. 52,65,000 in round figures as against Rs. 46,12,000 of the previous year. Our income from Interest, Dividends and Rents also shows a substantial increase, being Rs. 8,31,626 against Rs. 7,47,965 of the previous year. Our claim ratio continues to be satisfactory and is well within the provision made in our rates. Our Expense Ratio shows a little increase this year due to the substantial increase in the New Business and the dearth prevailing all round. Even with this increased expense ratio our Company would continue to be considered as one of the most economically managed.

As regards lapses, I assure you that the Management is keeping a watchful eye. The experience of last year in this matter is not unfavourable and with the continuance of good times, the position in this respect will continue to improve.

Our Funds continue to show a considerable increase over the previous year. The Life Insurance Fund at the close of the last year was Rs. 2,04,39,000. It has now increased to Rs. 2,36,42,000. The total assets of the Company increased from Rs. 220 lakhs to Rs. 253 lakhs.

Your Board is very cautious about Investments. They are being distributed very fairly which you will find from the Balance Sheet as the Form AA.

During the year under report our Funds were invested in the following manner:—

	Rs.
Government and Approved Securities	1,61,72,893
Ordinary and Railway Shares	20,21,007
Preference Shares and Debentures	5,48,555
House Property and Mortgages	10,42,578
Loan on Policies	14,57,314
Miscellaneous	4,74,406

The present restrictions on the Investment of Assets of Life Insurance Companies necessarily result in a lower yield. The Insurance Interests are requesting the Government to give them further scope to invest these Funds more profitably than at present.

In the United Kingdom as well as in Canada there is no requirement of compulsory Investments in Government securities. In addition to these difficulties about investment, I last year discussed the problem of Income-tax payable by the Life Insurance Companies. As I then mentioned the ceiling of Income Tax for Life Insurance Companies is fixed at 63 pies in a Rupee. This ceiling is considered very high by the Insurance Interests and they have requested Government to reduce it. They have however, not met with any success so far. It is in the interests of the general public to support the claim of Life Insurance Companies to get this ceiling reduced.

There are two events which intimately concern Insurance Companies in particular.

One is the Insurance Amendment Bill introduced by Government, in the Assembly on which opinions have been invited from the public.

The main point in this Bill which has attracted the attention of the public, and which is much criticised, is the proposed limitation of over-all expenses of insurers and the reduction in the commission of licensed agents. I feel that in order to curtail undesirable competition amongst the companies, it is necessary to have a limitation of over-all expenses. Careful Insurers do keep their expenses within proper limits, but there are others who overstep the mark. These Insurers are bound indirectly to affect the economic working of the careful ones. It is, therefore, proper that some steps should be taken to limit the expense ratio.

Another provision in the Bill refers to reduction in the commissions of licensed agents. I am aware that very influential interests have put forward a case against a further reduction of commissions paid to licensed agents. I, however, believe that if the overall limitation of expenses of Insurers is to be limited it is impossible not to reduce in particular the commissions paid to licensed agents. At present, the licensed agents under the Act can be paid on life insurance business 40 per cent of the First Year's premium and 5 per cent of the Renewals. Let me at once say that the renewals allowable to the licensed agents under the present Act should not in my opinion be reduced. As is well known, many licensed agents continue to take interest in their work because of this renewal income. The case, however, about the first year's commission is quite different. The 40 per cent was thought of in the year 1937, when the average amount insured under all policies was according to the Blue-Book only Rs. 1,485 as against Rs. 2,227 in 1943 and the total insurance written by all Insurance Companies amounted to Rs. 48 Crores and Odd only as against Rs. 72 Crores and Odd in 1943. Thus the times have changed and Life Insurance is becoming more and more popular. An individual agent can now book more cases than he used to do before. The increase in the average also leaves him more time to canvas more cases. If, therefore, a slight reduction is effected in the percentage of First year's commission allowable to the licensed agent, it should not work as a hardship to him, when it would be of great benefit to the insurers and policyholders.

Another matter that is engaging the attention of the Insurance World is the subject matter of enquiry by what is popularly known as "Sir Cowasji Committee". Certain recent instances of cornering of the Shares of some Insurance Companies at fabulous prices have drawn the attention of Government resulting in the appointment of this Committee. If such cornering is done for motives which could not be justified morally, it should certainly be the concern of Government to examine the whole matter and if the evil requires to be checked, even Legislative measures may be thought of. In doing so, however, I would request the Government to keep in mind that there should be no undue interference in the normal working of Companies. Then again, with a view to remove one of the motives for acquiring control of Life Insurance Companies, viz., the investment of Funds, Government should not further restrict the Investments of Life Companies. The Insurers have been already much perturbed over the present low yield and it should not be further lowered by more restrictions.

In order to prevent frequent transfers of control of Life Insurance Companies, the Government would, however, be justified to assume some discretionary powers in the matter of transfer of shares or for instituting enquiries in specific instances.

I congratulate the Field force as well as the Head Office staff for the efficient manner in which they are performing their duties. We all know that the times are hard, living has become very costly, and there are various other disturbing factors. In spite of all difficulties the members of our Staff have loyally stuck to their posts and have performed their duties efficiently.

The Indian public also deserves to be congratulated for their greater appreciation of the desirability of investing in Life Cover for themselves and securing protection for their old age as well as security for their dependents.

I now move the resolution for the adoption of Audited Balance Sheet and Revenue Account for the year ending 31st December, 1944.

THE BENARES ELECTRIC LIGHT & POWER COMPANY, LIMITED.**NOTICE.**

is hereby given that the Thirty-fourth Ordinary General Meeting of the above-named Company will be held at the Registered Office, No. 12, Mission Row, Calcutta, on Monday the 30th July, 1945, at 11-0 A.M. for the purpose of receiving and considering the Directors' Report, the Statement of Accounts and Balance Sheet for the Half-year ended 31st December, 1944, and to transact any other ordinary business of the Company.

The Share Transfer Books of the Company will be closed from the 24th to the 30th July, 1945, both days inclusive.

By Order of the Board,
MARTIN & CO.,
Managing Agents.

Dated, Calcutta,
the 12th July, 1945.

*The dividend as recommended by the Board, if passed at the General Meeting, will be paid to Registered Shareholders on and after 30th July, 1945.

IMPERIAL BANK OF INDIA.**NOTICE**

The Annual General Meeting of the Shareholders of the Imperial Bank of India will be held at the Local Head Office of the Bank, No. 3, Strand Road, Calcutta, on Tuesday, the 21st August, 1945, at 11-30 a.m. (Standard Time) for the transaction of the following business:—

1. To receive the Central Board's Report, the Balance Sheet of the Bank made up to the 30th June, 1945, and the Report of the Auditors.
2. To elect three Auditors and to fix their remuneration.

W. LAMOND,
Managing Director.
Bombay, the 9th July, 1945.

**RESERVE BANK OF INDIA
CENTRAL OFFICE
BOMBAY.****NOTIFICATION**

It is hereby notified that the eleventh Annual General Meeting of the Bank will be held on Monday the 6th August 1945 at Delhi in the Meeting Room of the Delhi Municipality in the Town Hall Building, opposite the Clock Tower, Chandi Chowk, at 3-30 p.m. (New Standard Time). The following business will be transacted:—

- (a) The balance sheet as on the 30th June 1945 and the Profit and Loss Account of the Bank for the year together with Auditors' Report will be read and considered.
- (b) The Auditors will be elected and their remuneration fixed.

C. D. DESHMUKH,
GOVERNOR.
Bombay, 7th July, 1945.

THIS ANNOUNCEMENT APPEARED ABOUT THE MIDDLE OF JUNE WITH RESERVATION OF SHARES FOR SUBSCRIPTION BY BONA FIDE RESIDENTS OF ASSAM. AS ASSAM HAS NOT TAKEN UP THE QUOTA ALLOTTED TO HER, IT HAS BEEN DECIDED TO REPEAT THE ADVERTISEMENT AND INVITE GENERAL SUBSCRIPTION.

(Half-yearly General Meeting on 25-7-1945 at 3-30 p.m. Books closed from 10-7 to 25-7-1945).

Audited accounts for the half-year ended 31st March, 1945:

The accounts, after allowing for taxation, including Excess Profits Tax, etc., show a balance of Rs. 17,54,091-0-2.

There has been set aside for Depreciation Rs. 3,68,240-15-7 and an amount of Rs. 18,527-10-0 has been written off Investments.

Transfers have been made to:—

Provision for Deferred Mill Renovations Rs. 3,50,000; Debenture Redemption Reserve Rs. 2,50,000; Labour Quarters and Welfare Rs. 60,000; Indian Workers and Mill Staff Pension Funds Rs. 50,000.

The balance remaining after giving effect to these transfers is Rs. 6,57,313, which, together with Rs. 3,01,684 brought forward from last half-year, gives a total of Rs. 9,58,997.

The Directors propose that the balance available for distribution be disposed of as follows:—

In paying a Dividend on 1st Preference Shares at the rate of 8 per cent per annum, without any deduction for Income-tax paid by the Company Rs. 46,000; in paying a Dividend on 2nd Preference Shares at the rate of 5 per cent per annum, without any deduction for Income-tax paid by the Company Rs. 37,500; in paying a Dividend on Preferred Ordinary Shares at the rate of 10 per cent per annum, without any deduction for Income-tax paid by the Company Rs. 21,875; in paying a Dividend on "A" and "B" Ordinary Shares of As. 8 per share, without any deduction for Income-tax paid by the Company Rs. 3,50,150; in paying a Bonus on "A" and "B" Ordinary Shares of As. 4 per share, without any deduction for Income-tax paid by the Company Rs. 1,75,075; and in carrying forward Rs. 3,28,397; total Rs. 9,58,997.

During the half-year the Company has been fortunate in being able to bring the Mills back to full production, although there have been considerable difficulties in regard to coal supplies, with little hope of early improvement.

In common with other industries, the wagon supply position continues to cause grave anxiety in regard to the maintenance of supplies of raw materials and chemicals of all descriptions.

Manufacturing costs are satisfactory owing to the maintenance of full production. It should be stressed, however, that raw materials costs to the Company are still greatly in excess of pre-war economical values and show no signs of early reduction.

The Welfare Stores at each Mill continue to function satisfactorily for the Mills' staff, workers and their families within the limits created by the Food Rationing Control and according to the Control regulations. Food supplies to the labour continue to be made at prices considerably below cost. The Cooked Food Canteens are becoming increasingly popular.

During the half-year under review prices to Government were similar to those ruling for the previous half-year. During the half-year, however, Government reduced its

oftake and released a greater percentage for the civil market.

The compulsory and voluntary E. P. T. Deposits paid by the Company now amount to Rs. 34,58,384. In the near future the Company will be called upon to pay a further compulsory deposit estimated at approximately Rs. 16,00,000 in respect of 1944-45 Accounts.

Against this obligation a further sum of Rs. 3,50,000 has been set aside this half-year for Deferred Mill Renovations, thereby earmarking this amount for future capital replacements. No credit has been taken in the Accounts for amounts which will be repayable by Government from E. P. T. on account of the optional and compulsory deposits made, or to be made. Further, no credit has been taken for interest accruing on these deposits.

A further sum of Rs. 60,000 has been allocated to Labour Quarters and Welfare Reserve, and the sum of Rs. 50,000 for investment by the Trustees of the Mills' Staff and Workers' Pension Funds. The nominal value of investments held by the Trustees on account of the two funds on the 31st March, 1945, was:—

(a) Indian Workers' Pension Fund Rs. 6,30,500. (b) Indian Staff Pension Fund Rs. 2,63,700.

Authorised, Issued and Subscribed Capital—Rs. 65,89,000 in 11,500, 8 per cent 1st Cum. Pref. of Rs. 100; 15,000, 5 per cent 2nd Cum. Pref. of Rs. 100 each, redeemable on or after 30-9-1946 at a premium of 5 per cent 175,000 Preferred Ord. shares of Rs. 2-8 each; 350,000 'A' Ord. shares of Rs. 5 each and 350,300 'B' Ordinary shares of Rs. 5 each, all fully paid up.

Synopsis of balance sheet as at 31-3-1945.

BANK PROFITS

THE BANK OF INDIA LIMITED

The transactions of the past six months have resulted in a profit of Rs. 35,32,352-2-2 from which sum has to be deducted Rs. 20,00,000 approximate Income Tax, Super Tax and Excess Profits Tax, leaving a net profit of Rs. 15,32,352-2-2 for the half year ended 30th June 1945. To this amount has to be added Rs. 11,77,395-9-7 brought forward from the last account making a total of Rs. 27,09,747-11-9.

This sum the Directors have disposed of as follows:—

In payment of an interim dividend at the rate of eleven per cent per annum (Rs. 2-12-0 per share) free of Income Tax on the Paid-up Capital of Rs. 1,48,58,950 for the half-year ended 30 June 1945 which absorbs Rs. 8,16,613-4-0; carried forward to the next half year Rs. 18,93,134-7-9.

THE INDIAN BANK LTD.

Subject to audit of accounts, the Net Profit of the Indian Bank Ltd., Madras, for the half-year ended 30th June, 1945, after providing for contingencies is Rs. 8,51,626-1-9, the gross income and expenditure (depositor's interest, management expenses, etc.) for the period being Rs. 26,52,348-14-2 and Rs. 18,00,722-12-5 respectively. The above net profit together with the balance of Rs. 52,524-6-9 carried forward from the last year's account amounts to Rs. 9,04,150-8-6 which is available for disposal.

IMPERIAL BANK OF INDIA

The Directors of the Imperial Bank of India at the Meeting of the Central Board held at Bombay on Monday, the 9th instant, declared a dividend to shareholders for the half-year ended 30th June 1945 at the rate of 14 per cent per annum, payable on and after the 16th July 1945.

The profits available, including Rs. 43,54,900 brought forward from the previous half-year, amounted approximately to Rs. 92,77,300 which sum was disposed of as follows:—

Payment of a dividend of 14 per cent per annum Rs. 39,37,500; Transferred to Reserve Fund Rs. 5,00,000; Transferred to Pension Funds Rs. 1,10,600; Bonus to staff Rs. 8,50,000 and Carried forward to next half-year Rs. 38,79,200. Total Rs. 92,77,300.

The average rate for Demand Loans during the half-year was 3½%.

THE CENTRAL BANK OF INDIA LIMITED

The net profit of the Central Bank of India Ltd., for the half year ended 30th June, 1945, subject to audit, including the amount brought forward from last year's accounts, amounts to Rs. 60,84,444 which the Directors have resolved to dispose of as follows:—

To pay an ad-interim dividend at the rate of 10 per cent per annum, free of income tax for the half year ended 30th June, 1945 and Bonus at annas -[4]- per share to Shareholders. Rs. 15,07,134-0-0; and to carry forward to next half year's account subject to provision for taxation Rs. 45,77,310.

ANDHRA BANK, LIMITED.

The net profit of the Andhra Bank Ltd., for the half year ended 30-6-1945 (subject to audit) is Rs. 1,45,147-11-6 as against Rs. 65,074-2-0 for the last corresponding half year and Rs. 1,18,146-6-10 for the whole year 1944 and including a sum of Rs. 373-15-10 brought forward from the previous year's accounts, the profit available for appropriation this half year is Rs. 1,45,521-11-4.

THE VELLAMALAI TEA CO., LTD.

At an Extraordinary General Meeting of Members held at the office of Messrs. Peirce, Leslie & Co. Ltd., Coimbatore, at 11-30 a.m. on Saturday, the Seventh day of July, 1945, it was resolved that the company go into voluntary liquidation forthwith and that Messrs. Cyril Gill, John Stanley Goodwin and Sydney Albert Bindon all of National Bank Buildings, Madras, be appointed liquidators of the company exercising all powers and duties of a liquidator jointly and severally.

Under terms of the Debenture Trust Deed, dated 3rd August, 1929, on the company's going into liquidation the full amount of any debentures outstanding becomes immediately payable and instructions for surrender of debentures and repayment thereof together with interest thereon up to the date of liquidation will be issued by the liquidators as soon as possible.

Debentures should not be sent to the company; Debenture-holders should await instructions from the liquidators.

FACT No. 5

TODAY as always India's cotton textile industry is pledged to serve India's public to the limit of its resources.

And the resources of the industry are not negligible; nearly 14% of the estimated world production of cloth is made each year in India. 407 mills contribute to this gargantuan total. Over ten million spindles. Over 200 thousand looms. Eight lakhs of workers are employed each day; three lakhs more than in the days of peace. In 1943-44, there was available for civilian consumption, 5,868 million yards of cloth in India, which is only 6% less than the pre-war average available supply.

So, you see, India's cotton textile industry remains faithful to its pledge to serve India's public to the utmost. The responsibility for the present cloth shortage does not lie at the door of the producers; through this war they have assuredly "delivered the goods"

Approach the Textile Controller of your province if you cannot obtain necessary cloth or yarn. Movement of cloth and yarn is entirely controlled by Government.

One of a series of statements of fact for the
information of the public.

ISSUED BY

**THE MILLOWNERS' ASSOCIATION
BOMBAY**

**Fact
Parade****Civil Motor Cars Control Order:**

The Government of India have issued a Civil Motor Cars Control Order, to control the sale and distribution of motor cars imported for civil use. The Order covers both motor cars imported on Government account and commercially imported for civil use.

The only cars which are now available for distribution are all 10 H.P. Austins; the price has not yet been fixed but may be expected to be about Rs. 5,750 plus transportation charges from the centre of distribution to the premises of the dealer or sub-dealer.

In view of the acute shortage of motor cars, it is proposed to make these available only to essential users chosen from both officials and non-officials.

Persons desiring to purchase these cars should apply to the Provincial Motor Transport Controller concerned.

Distribution of the 10 H.P. Austins will be through three "distributors" assisted by "dealers" and "sub-dealers" for specified areas.

Increase in Betting Tax in Bengal:

The Governor of Bengal has enacted the Bengal Finance (No. 11) Act, which increases the rates of the totalisator and betting tax from 10 to 15 per cent. in order to reduce the "considerable excess of estimated expenditure over estimated income" in the Bengal budget for 1945-46. The Act, which will remain in force for one year, extends to the whole of Bengal.

The Governor has also enacted the Bengal Public Gambling (Penalties' Enhancement) Act, enabling courts to award more appropriate and deterrent penalties in respect of illegal betting upon a horse race, which may be resorted to as a result of the enhancement of the betting tax, causing a probable loss to the revenues of the province.

Tube-well Expert for Sind

The Sind Government is understood to have requisitioned the services of an expert in tube well boring from America on a two-year contract. The expert will help in locating water in certain tracts near Karachi and it is estimated the plans when completed would bring under cultivation several thousands of acres of land.

Reconstruction of Textile Industry:

Presiding over the first quarterly general meeting of the Textile Stores and Machinery Merchants' Association, Bombay, Mr. R.M. Nanavati expressed the view that India's territory was too large to make each province self-sufficient. He regretted the Government's move to give zonal bias for industrial development at the cost of the industrially advanced provinces and thought that the policy of not giving priority for renovating the existing plant would, if accepted, bring economic disaster.

Mr. Nanavati revealed that India would require about 10,000,000 spindles and 200,000 looms to reconstruct her textile industry. He was sorry that 400 cotton mills in the country were unable to feed 400 Indian merchants engaged in the textile stores trade, which was being controlled by about a dozen non-Indian concerns.

Ceylon Budget Proposals for 1945-46:

It is officially disclosed that the budget proposals for the island for 1945-46 will contain additional taxation measures to yield a total of 30 million rupees, all of which will be transferred to reserve. The budget for 1945-46 provides for total revenue of 2,86,535,000 against the revised estimate for 1944-45 of 283,152,000 and expenditure chargeable to revenue of 285,930,000 against the revised estimate for 1944-45 of 254 millions. In addition 20 million active defence expenditure will be charged to loan funds. Other expenditure to be met from advances from cash balances pending charge to specific loan or loans is over nine million. Another nine million expenditure will be charged to Public Works Loan 1937.

Preliminary Jute Forecast:

The estimated area of jute in Bihar, Orissa, Assam, Cooch Behar and Tripura, together with the total licensed area in Bengal, is 2,635,925 acres, according to the preliminary forecast of the crop for 1945.

This is an increase of 876,370 acres over the final forecast of 1944.

In Bengal, out of 2,546,925 acres for which licences have been issued, 438,180 acres only have since been checked. Jute has actually been found to have been grown on 362,025 acres of the checked area; and 2,108,745 acres of the licensed area still remain to be examined.

The estimated acreage under jute in other provinces is as follows: Bihar, 161,800; Orissa, 14,300; and Assam 181,600.

Calcutta Corporation to take Over Electric Supply:

The Calcutta Corporation decided to-day to purchase the Calcutta Electric Supply undertaking on due date in 1948, as provided in the licence. Accepting the recommendation of its Public Utilities and Markets Standing Committee of November 7, 1944 the Corporation reiterated its policy of acquisition of the electrical undertaking comprised within the Calcutta licence. It decided to write a letter, in the meantime, to the Bengal Government to accord their sanction to the option of the Municipality to purchase the Electric Supply undertaking.

Another Technical College for Madras:

The demand of over a quarter of a century for an engineering college for Coimbatore was to-day realised when Sir Arthur Hope, Governor, opened the Arthur Hope College of Technology five miles outside the city.

The college was made possible by the munificent donation of Rs. 2,00,000 by Mr.

G. D. Naidu, a leading industrialist, with buildings and equipment free for a period of three years. The Southern India Mill-owners' Association also donated Rs. 2,00,000 for a degree course in textile engineering. It is proposed to institute electrical, civil automobile and textile engineering with designing and manufacturing courses. This is the fourth technical college to be opened in this Presidency within a period of one year.

Wheat Forecast:

All India Second Wheat Forecast 1944-45 which relates to information upto the period ending December 1944 in case of Hyderabad State but upto the latter half of February 1944 generally in case of other tracts. Area 24,193,000 acres against 33,178,000 acres corresponding revised area of last year. Crop condition fairly good on the whole.

Govt. Of India's Loan To Assam:

The Government of India have sanctioned a loan of Rs. 11,90,000 to the Assam Government as part of the Grow More Food campaign scheme. This money is to be utilised for seed distribution scheme in the province. The loan is interest free and is repayable at the end of the current financial year.

Average American Dies at 57:

The Census Bureau reports that in America the average age at the death has risen from 48.9 years in 1930 to 56.9 in 1944 a rise of almost one sixth. In 1940 the average mortality age was 55.4 years.

U. S. and Iranian Railway:

A British War Department report says that the U.S. Army had relinquished operations on the Iranian State Railway where American troops moved 2,813,937 tons on lend-lease supplies for Russia. The transfer was made to the British, who turned the control over to the Iranian Government.

American Goods for Europe:

The Journal American says that some members of the Senate Mead Committee are of the opinion that many millions worth of American goods would be dumped in Europe at twenty-five per cent of the cost price due to artificial exchange rates. Such a swamping of European markets, the members feel would ruin continental industries.

Burma Oil Refineries' Production:

Burma oil refineries are again in limited production, according to Mr. Ralph Davies, the Deputy Petroleum Administrator.

FOR LIFE INSURANCE

The
**BOMBAY
MUTUAL**

LIFE ASSURANCE SOCIETY LTD.

BOMBAY MUTUAL BUILDING, HORNBY ROAD, BOMBAY.

THE OLDEST LIFE OFFICE IN INDIA

He explained that a temporary production programme of 108 barrels a day has been set for the Chauk area. He added that full recovery was necessary to pump all wells.

Of the 5,900 wells drilled in Burma fields, 4,355 were producing before the war and practically all of them were made inoperative when the British left the country in 1942.

During the Japanese occupation they produced 560 barrels of crude oil daily compared with 22,000 barrels daily before the invasion.

Anderson on Future of Br. Cotton Industry:

Sir John Anderson, Chancellor of the Exchequer said that there is ample opportunity for the British cotton industry to re-establish itself and to recover goodwill throughout the world "by going all out to develop export trade in the next few years while Germany is out and Japan is certainly going to be out."

"We are in a very exceptional position regarding cotton," Sir John added. "The whole world is starved for cotton. There are no cotton textiles anywhere in the world. At home, in India, and further East,

and in South America and North America there is an absolute dearth of cotton textiles of all kinds."

French Social Insurance Scheme:

A "Beveridge plan" for French workers was announced by the Minister of Labour, M. Alexandre Parodi, in a far reaching scheme for a reform of the Social Insurance system.

The scheme provides for insurance of all wage earners and salaried officials earning up to 120,000 francs yearly.

The insurance will cover pension amounting to 40 per cent of the average salary over the past 10 years at the age of 65 or 20 per cent of the average salary during the past 10 years at 60.

If ill health necessitates retirement at 60, the pension would be the same as at the age of 65. In any case, persons retiring at 60 get 40 per cent on becoming 65.

The health insurance is to cover long and serious illness such as tuberculosis.

London to Australia in 63 Hours:

British Overseas Airways is speeding up its Lancastrian service to Australia to reach

Sydney in 63 hours, thus clipping nine hours off the existing schedule.

This 12,000-mile service, started on May 31, to serve the needs of the war in the Far East, is not only the fastest but the longest air route in the world. It calls at Lydda in Palestine and at Karachi, from where crews of B.O.A.C.'s Australian associate, Qantas Empire Airways, fly aircraft to Sydney.

The number of flights is to be increased from one to two a week in each direction.

Very soon B.O.A.C. will open a new service to India with York aircraft which will reach Karachi in 31 hours as against about 33 hours by the existing flying boat and land plane services.

Australia's War Bill:

Australian war expenditure in the fiscal year 1944 to 1945 was £460,000,000 (Australian). Mr. J.B. Chifley, the Australian Treasurer and Minister for Post-War Reconstruction, said that the expenditure was met by revenue and loans amounting to £196,000,000 (Australian) respectively. During the same period £2,000,000 (Australian) was spent on drought relief.

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

Easy conditions continue to prevail in the money market and call rates remain unchanged at $\frac{1}{2}$ per cent in Calcutta and $\frac{1}{4}$ per cent in Bombay. The large amount of surplus funds seeking investment has naturally resulted in a big response to the $\frac{1}{2}$ per cent short-dated loan, terms of which were announced last week. The list for the loan was opened on Monday this week. It is reported that the whole amount of Rs. 20 crores was secured in one and a half hours and that as the issue was closed as soon as the limit was reached applicants will get nearly full allotment. The communique issued on Tuesday stated that the list for the loan had to be closed at 11-30 a.m. on Monday after it was fully subscribed. Initial dealings in this new loan have been recorded in the Bombay market at Rs. 100-2 but it is not clear whether sales of 2-3/4 per cent 1948-52 are still being effected though sales have been suspended in Calcutta. Till Saturday last week sales were effected at Rs. 100-8. The market, perhaps, is of the feeling that the redemption of the 2-3/4 per cent 1948-52, 3 per cent 1951-54 and 3 per cent 1949-52 might take place at the later maturing dates and that the $\frac{1}{2}$ per cent 1950 loan is the most attractive from the point of view of banks. Otherwise, it cannot possibly be expected that investors would take large parcels of this loan at 2 annas premium what time 2-3/4 per cent 1948-52 is available at Rs. 100-8 and below.

It would appear from the returns of the Reserve Bank for the week-ended July 13, 1945 that larger interest has also been taken in 3 per cent 1970-75 and quite a substantial amount has been disposed of in the open market. In fact, the demand for short and medium dated loans and 3 per cent 1970-75 has been so great that the investments of the Reserve Bank in the banking department show a decrease from Rs. 24.58 crores to Rs. 17.19 crores.

The jump in Central Government balances by Rs. 17 crores, while due to the higher level of sterling balances, is also due to sales of rupee counterparts and inter-Governmental adjustments.

The success of the New Loan has confirmed that the basis of gilt-edged henceforth for short-dated and medium-dated issues is $\frac{1}{2}$ per cent and for long dated 3 per cent and that gilt-edged values would get adjusted on that basis. The re-adjustment can be expected to be completed in a short period as there are rumours that the Reserve Bank might possibly affect a reduction in the bank rate to $\frac{1}{2}$ per cent from 3 per cent at an early date. (This question is discussed in an editorial elsewhere in this issue.)

At the auctions this week the response was very poor for Central treasury bills, the amount of applications being only Rs. 70 lakhs against the offer of Rs. 2 crores. The total amount accepted was only Rs. 58 lakhs against applications for Rs. 2.42 crores last week and acceptances for Rs. 41.5 lakhs. It would appear from the figures that even with the smaller amount of applications, bidding was more keen. The average discount rate was unchanged at 4 annas per cent per annum. This rate does not interest banks and under the circumstances it is not quite clear why the offer for next week is increased to Rs. 4 crores. In view of the extremely strong ways and means position and the large receipts from loans it should

be said that the Central Government has no need for increasing short-term obligations and that the increase in the offer has been effected only to create greater interest in Treasury Bills around the present rates. The Assam Government is asking for Rs. 4 crores of Treasury Bills next week, applications being received up to Monday July 23.

The returns of the Reserve Bank for the week-ended July 13, show that there has been no further expansion in currency. Total notes issued were slightly lower with a drop in rupee coin to Rs. 14.89 crores from Rs. 15.08 crores. Notes in circulation were higher at Rs. 1,140.69 crores against Rs. 1,138.94 crores. Both sterling and rupee securities are unchanged.

In the banking department, there is a jump in Central Government balances, as remarked above, to Rs. 294.79 crores from Rs. 277.20 crores while there is a drop in other Government accounts to Rs. 15.79 crores from Rs. 20.64 crores. Bank deposits also show a big drop to Rs. 72.39 crores from Rs. 82.55 crores. There is an increase in sterling balances to Rs. 402.94 crores from Rs. 395.08 crores while investments are lower at Rs. 17.19 crores against Rs. 20.58 crores.

The statement of the Imperial Bank for the same week shows a decrease in deposits to Rs. 234.64 crores from Rs. 237.13 crores. There is a further increase in investments to Rs. 147.94 crores from Rs. 145.09 crores. Advances are Rs. 67 lakhs higher at Rs. 65.04 crores. There is a big decline in cash to Rs. 31.18 lakhs from Rs. 39.41 lakhs.

The statement of scheduled banks for the week-ended July 6, reveals a decrease in Demand liabilities to Rs. 624.05 crores from Rs. 629.44 crores, due perhaps to month-endly withdrawals while Time liabilities were higher at Rs. 240.16 crores against Rs. 239.13 crores. Cash on hand is lower at Rs. 35.60 crores against Rs. 36.87 crores. There is an increase in balances with the Reserve Bank to Rs. 81.19 crores from Rs. 78.86 crores. Advances show an increase of Rs. 1.09 crores to Rs. 280.83 crores while bills discounted are Rs. 78 lakhs higher at Rs. 14.39 crores. It would appear, therefore, that the entire amount of maturing treasury bills was not utilised in any manner.

EAST INDIAN RAILWAY

TENDER NOTICE.

Special Item Costing Over Rs. 5,000.
Class I Contract.

Sealed Tenders are invited for the following and will be received in the Controller of Stores' Office, East Indian Railway, 105, Clive Street, Calcutta, before 12 noon on the 16th August, 1945.

Tender No. SP/B/FI/6 for the supply of Barrows platform 2 wheeled without wheels.

Tender forms with full particulars can be had from the office of the Controller of Stores, East Indian Railway, 105, Clive Street, Calcutta, on payment of Rs. 2 per copy and Drawing No. B/755/40 from the Chief Engineer's Office at Rs. 1 per copy to the Treasurer, East Indian Railway, 105, Clive Street, Calcutta, and on production of his receipt when applying for the same.

Firms outside Calcutta, may, however, remit the amount to the Controller of Stores, direct by Money Order. No refund is permissible after payment.

« COAL PROBLEMS »

1

MEETING DEMAND

MORE COAL has been raised in the first six months of this year in comparison with the corresponding period of 1944. Indeed, the index of these months is considerably higher than the average of 1942 and 1943.

This is the first welcome news we of the Coal Industry have been able to give the public for many long months, but

rigid economy is still as necessary as before because, with the retreat of the Japanese, the armies' lines of communication are being extended—more trains and more ships are consuming more coal.

The days when demand can be fully satisfied are still far ahead. But we look forward to the fruition of our efforts to increase coal production.

India's most vital industry

(Continued from page 82).

Indian Cotton Supplies for China:

The second 3,000 tons of absorbent cotton to be imported into China from India is now reaching Kunming, the big Allied road and air terminus in west China, in instalments.

The cotton is packed in 6,000,000 bales of which 13,500 have been allocated to United States forces in Kunming and 500 to the Chinese forces, 30,000 bales will come to Chungking where more than two-thirds of it will go to the textile mills. This shipment of cotton will be sufficient to feed all the mills in Kunming and Chungking for several months.

In order to secure better distribution of cotton yarn and cloth, a supervisory committee has been specially organized to attend to this. Dr. Ong Wen-hao, Director of the War Production Board and one of China's leading experts, is Chairman, and Mr. C.K. Yui, Minister of Finance, is Vice-Chairman.

New Oil Deposits in China:

China's oil reserves have been greatly augmented by recent discovery of oil deposits at Kiangyu, 75 miles north-east of Chengtu, provincial capital of Szechuan. According to American experts, this is richer than the famous Yumen deposit in north-west provinces of Kansu, which has given China the greatest amount of oil. It is learned here that the National Resources Commission has completed a survey of the region and will sink wells in August. Three hundred tons of equipment have arrived for Kiangyu for necessary installations.

"America could not Feed the World":

Secretary of Agriculture Anderson, said that America could not feed the world and "We have got to make that clear and positive from the outset of our welfare activities or we will be inviting a lot of misunderstanding, trouble and ill-will."

The Cotton Cloth (Control of Printing) Restrictions Regarding Printing of Cloth.

The following press communique has been issued by the Central Government:— Order, 1945 has been promulgated by the Central Government and published in the Gazette of India, dated 7th July, 1945. The Order prohibits the sale, purchase or disposing otherwise of a cloth printing machine by any person whether or not in performance of a contract made before the date of publication of the Order. It also directs that no person shall work a cloth printing machine which was not in his possession installed in working order during January 1945, besides prohibiting any producer or printer to work a printing machine or cause or permit it to be worked continuously for more than a single shift a day not exceeding 11 hours. No mill or powerloom factory can hereafter hand-print any cloth produced by it or send such cloth outside for printing by any process whatsoever. The other provisions of the Order restrict the qualities of cloth which can be printed and specify the nature of the printing to which such cloth can be subjected and the various disabilities of persons or producers in respect of printing of cloth. The Order prohibits printers from buying any cloth for printing or selling any cloth printed by them except under certain conditions. Dealers who desire to print or get their cloth printed, can do so only after obtaining a written permit from the Provincial Textile Authority concerned. The Textile Commissioner is empowered to exempt any person or a class of persons from the operation of any of the provisions of the Order which comes into force with immediate effect.

Two Landmarks

As "Eavesdropper" pointed out in the last number, the introduction of a 2½ per cent type of loan of the Government of India is an important landmark in the history of this country's money market. Though it is our contention that, from a much earlier stage of this war, monetary conditions had been conducive to a 2½ per cent type of defence loan, we are prepared to proffer the most gorgeous bouquet to Sir Archibald Rowlands for this achievement. For one thing, while a 2½ per cent loan is a belated arrival in relation to the war period, it must be considered quite an early move in reference to Sir Archibald's term of office as Finance Member. For another thing, we have reasons to believe that, in this matter, there has been some difference of opinion between New Delhi on the one hand and the Reserve Bank authorities in Bombay on the other hand. With regard to the piloting of defence loans, the Finance Member is very much in the hands of the Reserve Bank. One of the important functions of the Reserve Bank is to advise the Government in all matters that pertain to the intervention of Government in the money or exchange markets. From all these points of view, the advice tendered by the Reserve Bank has, necessarily, great value. Theoretically speaking, the final decision of policy rests with the Finance Member. But he has to carry the Reserve Bank with him as far as possible. With regard to a 2½ per cent type of loan, it is after considerable consultation and exchange of views, that agreement on the feasibility and practicability of a 2½ per cent loan could have been arrived at between New Delhi and Bombay.

Now that the 2½ per cent 1950 bonds for Rs. 20 crores have proved a triumphant success—the list was closed within 1½ hours of opening—the Finance Member must now address himself to the pleasant and thrilling question: "What next?" The answer is revealed in a close study of the series of 3 per cent defence loans. The first 3 per cent defence loan was an extremely short-dated loan, with the issue price at par and the redemption price at Rs. 101. The second defence loan had a later maturity and was issued at par and repayable at par. The third defence loan had a still later maturity date, and so on. The same plan and procedure have to be adopted in the case of 2½ per cent loan. The first is five-year bonds. The second may be eight-year bonds; and it follows that the third will be twelve-year bonds. The stage is set for the unfolding of this series on the basis of each successive loan having a maturity longer by three to four years.

The first of the series having been put through in a thoroughly self-confident style, we have no doubt that the subsequent loans in the series will follow in due course and will be devised and piloted with like self-assurance. The keynote to Government's gilded policy must be abundant faith that the credit of this country is as high as that of any other country in the world; and that the Indian money market is now so situated as to permit of the Government borrowing at rates more favourable than any other Government. This faith must be firmly installed in the mind of the Government and must inspire Government's loan programmes and operations.

At the same time, it is also necessary to take such other measures as are a corollary to this faith, and as will further strengthen and emphasise this faith. One such measure is the redemption of 3½ per cent rupee paper. It is unthinkable that, while the Government are able successfully to float loans on the basis of 2½ per cent, a 3½ per cent loan repayable on three months' notice remains unredeemed. This is more than a financial anomaly: it is a financial scandal. We feel strongly that no more time should be lost in arriving at a final decision on this matter. We earnestly hope that the required three months' notice to the holders of 3½ per cent non-terminable loan will be given before August is rung out.

An announcement to this effect will have an instantaneous effect on the gilded market. Government securities will show an all-round improvement by anything like two to five points according to the maturing dates. In the optimism and the bolder gilded outlook that will come to prevail, the complete 2 per cent five-year bonds as the first of the series. If the Government plan their loans adroitly and confidently, we, for our part, believe that the inauguration of the 2 per cent loan series may take place before the end of 1945.

With the reduction, already achieved, in Government's borrowing rate to 2½ per cent, and with the prospect of a 2 per cent borrowing rate, it becomes necessary to study closely the whole structure of interest rates. The core and centre of interest rates is the official minimum of the Reserve Bank. When the Reserve Bank came into existence, the bank rate was

3½ per cent, a rate which it inherited from the Imperial Bank of India. On November 28, 1935, the Reserve Bank lowered the official minimum to 3 per cent. For nearly 10 years, the bank rate has remained unchanged at 3 per cent. In London, the Bank of England rate has remained unchanged at 2 per cent from October 1939. At the beginning of the war, however, the Bank of England authorities, in unwarranted panic, raised the bank rate in two quick stages. But, within a few weeks, the bank rate was brought down to 2 per cent and has remained at that level. Taking the war period, credit may be given to the Reserve Bank authorities in India for having avoided the early panicky moves. But the Bank of England deserves the greater credit for having consistently established a 2 per cent bank rate amid the alarms and jitters of war finance. If British, in close proximity to the European theatres of war, could have afforded and managed a 2 per cent bank rate, it is difficult to understand why the Reserve Bank authorities in India consider it fit and proper to impose a 3 per cent bank rate on this country.

Our contention is that the correct bank rate in India throughout the war years would have been 2 per cent.

During all these war years, a 3 per cent bank rate has proved violently discordant with the other money rates. While the British Treasury Bill rate is slightly over 1 per cent, the Indian Treasury Bill rate has established an all time record of ½ per cent. The rates paid by banks for deposits have steeply declined. Industrial enterprises issuing debentures and preference shares are now able to raise funds at 1 per cent to 2 per cent lower than per-war rates. There has been considerable reduction over the whole structure of interest rates. While these reductions have taken place, a 3 per cent bank rate has been left high and dry, out of tune with the structure of interest rates of which it is supposed to be the core and centre.

A 3 per cent bank rate is meaningless. It is like a jangled bell out of tune. It lacks harmony with other money rates. It is a false note, cacophonous rhythm.

This discord and this disharmony must now be ended. The establishment of a 2½ per cent borrowing rate as a landmark in the history of the Indian money market requires and warrants its celebration by the installation of a 2 per cent bank rate as another notable landmark.

Indian Agriculture and the War

There is a widespread impression that the war, whatever may be its economic effects on other sections of the people, has brought about conditions of unprecedented prosperity for the agriculturist classes in India. The account of wartime rural conditions which our Staff Correspondent has been giving in these columns during the last few weeks should have served to dispel this view to a large extent and to show that the higher money incomes that the agriculturists received during the war years have been of doubtful ultimate material benefit to the vast bulk of the rural population.

For our part, we have never subscribed to a view which credits the agriculturist with gains totally incompatible with the very fundamentals of the inflationary economy of this war. The real tests of prosperity for any class or section have to be sought in its standard of life, health, education and recreational facilities. In none of these, has the war period registered any general improvement as far as the rural population is concerned. If at all there has been any progress, it is meagre and confined to small groups. On the other hand, increasing non-civilian demand for consumption goods, the stoppage of imports of many essential goods and the difficulties that emerged in the way of internal production for different commodities and of transport in general, have combined to produce conditions under which the rural population had to be satisfied with less goods than before, often goods of poorer quality and frequently, belated supply of even the necessities of life.

However, in so far as the increased volume of employment and higher prices have inevitably resulted in the additional creation and wider distribution of purchasing power within the community, the agriculturists have also had some share in the gains. We say "some share" in view of the existence of powerful factors which have tended to neutralise the advantages derived by them, through the rise in prices and expansion in employment. During the first two years of the war, when the rise in prices was uncontrolled and was left to take its own course, the benefits of such a rise seem to have gone more to the merchants who cornered and sold high than to the

cultivators who are always rather sluggish in responding to changing conditions; and by the time they began claiming their full share of the rise, Government controls had set in, with the prices fixed invariably a little below the previous level. Even so, the cultivators could secure a price, which ranged from 200 to 300 per cent of pre-war levels. The fact of around higher money incomes is not questioned. What we have to ask is, how did the agriculturist make use of his increased cash incomes. To what extent has it been utilised to raise standards of living. Has he liquidated his debts? Has he been able to effect any regular saving? The reader will find all these points answered in the articles that have already been published under the title "War and Indian Rural economy." The data furnished in these articles confirm the point that generally speaking, the scarcity of consumption goods could not render any appreciable rise in living conditions possible. The one redeeming feature from the immediate point of view of the poorer sections of the Indian consumers, has been the loss of overseas markets for commodities like coffee and tea and the consequent increase in their internal supply, the rural population has not been slow to respond to it. A more serious handicap in the way of any general rise in their standard of living is the more than proportionate rise in the prices of manufactured articles which absorb an increasingly larger share of the family expenditure. In respect of these, not only have the prices been proportionately higher, the effectiveness of controls which is seldom high even in towns found their lowest levels in the rural areas. Black-marketing there is in a small measure even among the agriculturists; but in this field, the illiterate and unorganised ryots stand nowhere near the clever and sophisticated merchant.

The extent of savings actually in the hands of the agriculturist is difficult to estimate. The small savings campaign is yet to reveal its results, and the more prosperous agriculturists are by tradition hoarders more than investors. As however, the majority of peasants in India are holders of uneconomic holdings, and as the cost of living has far outstepped agricultural prices, the logical inference should be that, even if they have been able to put by some surpluses, these should be inconsiderable.

There has been some improvement in the liquidation of rural indebtedness. Both the big and the small cultivators have shown anxiety to repay debts. But the way in which debts have been cleared is frequently more injurious to the ultimate interests of the ryot than the continuance of the debt would have been. Enamoured of the high prices of land many a cultivator has disposed of portions of his property to pay off his debts and slices are thus cut off from holdings which were even before the sales too small to be considered economic. Cases of repayment of debts to institutions like Land mortgage banks through fresh borrowings from private sources have also been quite common—a trend which should be considered the most unflattering commentary on the flexibility and progressiveness of organised and semi official rural credit institutions in this country. We have sufficient data to prove that borrowings for unproductive purposes also continue if not in the prewar scale. The inflated prices for land have also had the unwelcome result of transferring considerable landed property from the smaller owners to the bigger owners and from the agriculturists to non-agriculturists. On the whole, when the war ends and normal conditions return, the average Indian ryot will find himself in more or less the same position as he was before the war.

It may be even worse for another reason. The cost of cultivating the land has gone up in several ways since the beginning of the war. A large percentage of agricultural labour has been recruited to the forces and the wages of labour still available have risen four and five fold with a marked decline in efficiency, to boot. Cattle wealth from rural areas in different parts of India has been greatly reduced. Agricultural implements have also become more and more scarce and seldom promptly available. These are some of the factors that have been found to slow down progress of the Grow More Food Campaign. These adverse factors have produced a situation, which is not only difficult for the time being, but one whose disappearance, in the year's immediately following the war does not seem easy. It is a bleak reflection that the agriculturist may have to face a period of sinking prices with the cost of cultivation refusing to move in full sympathy.

In certain aspects, the developments have also been very deceptive. For example, many governments have with evident satisfaction advertised the active role of co-operative bodies in procurement, distribution and sale of food stuffs and cloth. We do not deny the service and the assistance that these bodies might have rendered to government in the enforcement of control measures. It is however quite a different thing to pin our faith on the future of institutions which could work successfully only under the artificial stimulus of war conditions. Co-operation had been perpetually sick and frequently bedridden before the war and it has revived only to the tonic of Government control of normal business functions and guaranteed prices and profits. Once these are withheld, the man is very likely to fall ill again. The foundations, for the successful progress of the movement in its different aspects should be much more reliable and secure than those on which they work during the present war.

Progress of Indian Insurance

In the history of Indian insurance companies, both life and Composite, the past fifteen years are marked by important developments. Rapid strides have been made by all classes of companies transacting insurance business; and since the beginning of the war especially, the progress of life offices should satisfy the most ambitious amongst us. The year 1942, 1943 and 1944 witnessed a jump in the total of new business written both by old and new companies. Larger premium incomes and the satisfactory mortality experience have naturally resulted in considerable additions to total funds and it has been possible to take greater interest in gilt-edged especially as there was the statutory compulsion in regard to the disposition of available funds.

But while the experience of life offices in the last three years is encouraging and their progress uninterrupted, the same cannot be said of the Composite companies. It should be remembered, however, that a feature of recent years is the gradual extension of the activities of the life offices to general insurance and the promotion of new companies dealing in life as well as general business. As the Chairman of the Indian Insurance Companies Association, Bombay, remarked at the annual general meeting held in the first week of this month, the year 1944 is important to Indian general insurance companies in many ways. The Association was able to report an increase in the membership to 42, nine new companies having joined the Association during the year. In 1926 the Association was formed with only six companies on the rolls; the present number is an index of the access of strength to the Association.

The increase in the total, however, has not resulted in any appreciable net increase in the amount of general business as with the restricted conditions in regard to the transaction of business under wartime conditions and the keener competition, it has not been possible to report quite satisfactory results. Actually in 1944 the premium income of various companies declined by 20 per cent over 1943 and a large increase in working expenses was experienced. As a result, with the larger claims on account of the fire due to the Bombay explosions, several companies had to report a deficit in the working of the Fire Department.

The difficult working conditions for the general insurance companies will be noticeable from the figures given in the last Insurance Year Book. The total premium earned in this country from business of insurance other than life was Rs. 7.63 crores, of which the share of Indian companies was Rs. 2.89 crores and that of non-Indian companies was Rs. 4.74 crores. The proportion of Indian business to total was therefore only 38 per cent as against the share of foreign companies of as much as 62 per cent. It will be clear that even with the increase in the number of Indian insurance companies operating in the field, there has been no appreciable increase in the share of business underwritten in this country. That Indian companies have still to learn considerably from their foreign compeers will be evident from the fact that large reinsurances

are effected even at the present moment and that the relatively poor financial position of many of the companies does not enable them to undertake large risks.

Till 1938 the experience of companies transacting general insurance business was not quite satisfactory. As will be evident from the table given below, business was not conducted on satisfactory lines and till 1935 most companies experienced a loss in underwriting. It was only after 1937 that with the statutory limitation on commission at 15 per cent and also partial limitation imposed on the commission of chief agents under the rules of Bombay and Madras Tariff Associations that an improvement has been noted. Even now, the margin of 14.6 per cent cannot be regarded as adequate provision for risks against unforeseen contingencies. The need for considerable economy in the working expenses and trans- action of business at rates consistent with the risks involved cannot thus be over-emphasised:

Years.	Claims.	Underwriting Profit or Loss.
1930-32	51.4	- 0.8
1933-35	49.1	- 2.1
1936-38	37.0	+ 0.4
1939-43	27.8	+14.6

There is great scope for general business in postwar years specially as this country is getting more industrially minded and with the compulsory legislation for accident and other insurance, there will be a big increase in the total business. The premium income of British insurance companies at present amounts to £260 million (over Rs. 340 crores) of which £160 million (over Rs. 210 crores) is from overseas business. They have one-fourth share in the world insurance other than life.

In order to be able to compete effectively with established companies and get a fair share of the increase in business, all

undesirable practices for the procurement of business should be ended and, as has been emphasised in the Insurance Amendment Bill, there should be a ceiling in respect of over-all expenses. We are glad to note that the Chairman of the Indian Insurance Association fully supported the proposals for the limitation of expenses and the proper safe-guarding of policy-holders interests. In order to enable new companies to function satisfactorily, certain concessions should be allowed and the ceiling of over-all expenses must not be so rigid as to prevent transaction of business on an ambitious scale consistent with the general principles of underwriting contracts.

Perhaps, the most important observation in the Chairman's speech at the annual general meeting of the Indian Companies Insurance Association is the need for a liberal taxation policy in the case of insurance companies. It is true that maximum limit in respect of income tax and super-tax is placed at 6 annas 3 pies per cent in the rupee as from last year. But even this limit has been found to operate harshly. The Chairman's proposal for exemption of profits from taxation of a certain proportion transferred to reserves till the total statutory and additional reserves reach 100 per cent of the premium income has a great deal to be said for it. Without large reserves and capital it would not be possible for companies to function satisfactorily.

As several new companies have been floated under influential auspices and as there is an increasing tendency on the part of insurers to place their business with Indian offices, there is every need for encouragement by the State. If, in the years to come, the management of the various insurance companies could act unitedly and pursue a definite code of principles it can be said without any exaggeration that we have a good nucleus in being and in the post-war years insurance companies can do valuable service to the country while, at the same time, improving their position by taking advantage of the new opportunities.

Defence of a country, particularly in modern warfare, largely depends on the excellent morale of the people, irrespective of whether they are directly engaged in war work or not. It is the unshaken morale of the people of Great Britain that helped in the magnificent defence against the terrible Air Bombardment by Germany and gave the Germans the first setback. It is the knowledge of every individual and the satisfaction that their country is well defended that creates such morale. In the defence against Air Raids Balloon Barrage plays an important part. So also the efficiency of the fire fighting services and the Rescue parties. All these need—and an essential need of course—suitable and strong ropes. Hartons play the leading role in these supplies. Whatever the kind of quality in ropes may be Hartons have the variety to choose from.

LIFE INSURANCE

Every family protected means happier home; every income assured for life means more contentment and less unrest. Every fortune secured against waste means greater stability to business and finance. The message that life Insurance brings is one of hope. Its objective is financial security for each and all.

Editorial Notes

Germany's War Potential

Can Germany declare another war? This question, it is believed, should not arise for the simple reason that the whole world must see to it that aggressor countries are kept perpetually in check. For the past two years news streamed in that the terrific pounding that Germany was made to take from the American and the British Air Forces has reduced German factories to smithereens and the Morgenthau plan for the dismemberment of the Reich would make the world safe for democracy and peace. Now that Germany has fallen certain facts are coming to light and certain events are happening to disturb the public mind regarding the possibility of an early German revival. Secretary Morgenthau has resigned and Truman's ideas are not exactly those of Roosevelt. The new President does not favour the outright dismemberment of Germany though he has made up his mind not to allow any resurgence of Nazi aggression. That the Big Three differ in several vital questions is well known. Now comes the revelation that Germany's industrial strength is indeed big enough to cause anxiety.

Three weeks ago Mr. William L. Clayton, Assistant Secretary of State for Economic Affairs, U. S. Government, outlined the State Department programme for destroying the economic basis of German aggression, and made pointed reference to the Nazi economic penetration of Latin American countries, and the question of German cartel combines and technology. The public fed on the large volume of news about the achievements of the thousand-bomber raids over the industrial towns of the Reich, have taken it for granted that German industries are now almost totally crippled and what remains is only to track down German efforts to hid a stake abroad. But the disclosures of the U. S. Senate subcommittee on War Mobilisation make some unpleasant reading. The Foreign Economic Administrator, Leo T. Crowley, asserted that German economic and industrial machine achieved, in 1944, its highest production in spite of manpower shortage and Allied bombings. It appears that, unless carefully controlled, Germany even to-day possesses wherewithal to stage another war in five

years. The present industrial strength is assessed by Leo T. Crowley as follows: (1) 4,000,000 tons of machine tools and capacity to produce much more; (2) a dye and chemical industry virtually untouched by war; (3) equipment and resources to produce annually 25,000,000 tons of iron and steel, far in excess of peacetime needs and a capacity to make 350,000 tons of aluminium a year; (4) Nitrogen producing equipment only slightly damaged; and (5) similar capacity to produce, petroleum products, rubber, bearings, electric power, electrical and electric equipment, wood products, precision and optical instruments.

If the war-damaged Germany could retain a power to produce 25 million tons of steel which will be more than the output of the steel mills of U. K., France, Belgium and Luxemburg, it is clear that, unless the Allies formulate a safe and correct policy of the treatment of Germany the industrial potential of this country is likely to prove a menace. If German territories are annexed by the Big Powers and if they do not make up their minds to stand united even in post-war years, it will not be impossible for the wily Germans to stage a comeback under a different name, with new Allies, but for the same purpose of aggression. That Germany still retains respectable industrial capacity will disturb the industrialists of U.S.A. and U. K. who are planning to capture European markets in the immediate future. The world will watch with keen interest whether German factories are to be dismantled and exported and a new world order to be constructed to make militarism impossible.

Mineral Wealth of Bihar

Bihar is one of the poorest provinces of India but in mineral wealth she is the richest. As the Punjab is the wheat granary of India, Bihar is the mineral store-house of this country. Industrialisation being dependent to a large extent on mineral products, Bihar plays, and will continue to play in the future, an important role in the industrialisation of India. Mineral wealth, when once exhausted, is exhausted for ever and cannot be replenished. It, therefore, will not do to export minerals to other countries at low prices. No doubt, Bihar has been able to establish some important mineral industries like iron, steel, copper, ceramics and cement but considering the mineral wealth of the province, there is ample scope for the development of many other mineral industries. There are about 60 important minerals which are found in India. Some of them, however, occur in negligible quantities. Barring some six minerals like petroleum, strontium, cobalt and gypsum all other minerals are found in Bihar. There is a remarkable diversity in the mineral wealth of the province and the wealth is mostly confined to the southern half, the important districts being, Singhbhum, Manbhum, Hazaribagh, Ranchi, Palamau and Santal Parganas.

Bihar produces minerals worth about 40 per cent of the total value of minerals produced in India. It is the only copper-producing province in India, though copper ore occurs in many other provinces. She is the premier mica, coal and iron ore producing province. About 80 per cent of the world's supply of high grade mica comes from Bihar. The need for the proper organisation of the mica industry of Bihar is happily attracting the attention of the people and Government.

Bihar supplies more than 50 per cent of India's coal and is thus responsible for the growth of innumerable industries, especially

As in every necessity of life, in clothing too, the peasant class is nowadays badly affected. The question of paying any price is an impossibility with them. They don't want to put up a show; what they need is durability and cheapness. Apart from the varieties of finer clothing we also manufacture clothing of medium but durable texture which are available at a considerably cheaper price.

JALI WORK

ASSAM BENGAL CEMENT Co. Ltd.

in northern India. The establishment of the National Fuel Research Laboratory in the Jharia coalfield is a step in the right direction. The iron and steel industry with its centre as the Tatas is likely to expand further with the manufacture of machinery required for Indian industries and also with the manufacture of different kinds of steel. Excellent deposits of limestone are found in Bihar. Clay of good quality is also found in the province. There is no dearth of suitable glass, sand and quartz. Possibilities of other industries as abrasives, refractories, insulators, fertilizers, paints and coal-tar derivatives are there.

The material prosperity of the country depends not merely on the proper development of its natural resources but on their intelligent utilisation as well. The wasteful methods of mining of mica and manganese and the unscientific methods of utilising coal, should be discouraged and Government should exercise a vigilant inspection, as Mr. Sharma points out in an article in the Journal of Scientific and Industrial Research, June 1945.

Rural Uplift Organisation for Madras :

One will readily agree that the five-year scheme for rural uplift in Madras submitted by Mr. Dixon, Member, Board of Revenue to the Post-War Reconstruction Committee, is a realistic and practical attempt, with the means at the disposal of the Government, to change village life for the better. The scheme is an extension and elaboration of the one which originated with Mr. Rajagopalachari, when he was premier, for the prohibition districts and worked with considerable success by Mr. Dixon himself. That is one of the reasons why the scheme should commend itself.

After the war the economic uplift of the mass of the people, the great majority of whom live in the villages, will be the most important duty of the Government. The Central and Provincial Governments are preparing many costly schemes for the betterment of the people. It is, therefore, necessary to plant organisations in the villages to prepare the village folk to take advantage of the schemes and at the same time practise self-help which is perhaps the surest way of helping oneself and the community.

The Revenue Department as the biggest, most influential and powerful body is to be responsible for the organisation of rural uplift. The whole scheme will be under the control of a Member of the Board of Revenue acting as Rural Development Commissioner, and as Chairman of a Provincial Rural Development Board of which the members will be the heads of nation-building Departments—Directors of Agriculture, Veterinary services, Industries, Public Health, Public Instruction and the Registrar of Co-operative Societies and representative non-officials. District and Divisional conferences, similarly composed are to be established with the Collector and Revenue Divisional officer as Chairmen. One important difference, between the Committees proposed and the committees which have been in existence is that the new committees are not merely ornamental or advisory. In fact the Provincial Board will control the allotment of funds, for rural development will prescribe which schemes should be given priority and executed by each department each year. The Collector will be responsible for creating, controlling and inspiring the organisation. And he is to be relieved of much of his routine work.

The objectives of the organisation should be to establish committees in every village,

to produce from within an urge for better village and a better village life, to induce villagers to help themselves, to interest villagers in the development departments and to co-ordinate the economic uplift effort to each district and to enable development departments to overcome the ryots' inertia in a co-ordinated drive.

Capital Levy in France

Three years of Nazi rule have shattered the property structure of France and collaborators and opportunists have grown fat while the masses endured severe hardships. Economic co-operation with Germany for sometime meant galloping inflation which never fails to make the rich richer and the

THE FROZEN MAMMOTH

COLD is the great preserver. In Siberia bodies of the prehistoric mammoth have been found with the flesh still edible after 10,000 years in the frozen earth. This is a drawing of the mammoth discovered on the River Beresovka in 1902. Refrigeration is now general practice, but the action of Nature has been replaced by mechanical processes, developed by the chemist and physicist and made possible by the products of the British chemical industry. Mechanical refrigeration processes, of which the domestic refrigerator is a familiar example, do their work by making liquid chemicals, like anhydrous ammonia or methyl chloride, boil in a confined space. The heat for this boiling is taken from surrounding objects, either foodstuffs to be refrigerated, or water to be turned into ice. Research in low temperatures has already enabled substances to be chilled to within a fraction of what is known as the Absolute Zero, representing 491 Fahrenheit degrees of frost! Sometimes a solid refrigerant has advantages over mechanical refrigeration, but ice melts into water and thus raises all sorts of corrosion problems. Nowadays "dry ice" or "Drikold," the solid form of carbon dioxide gas, is increasingly used, because it evaporates into the air instead of dissolving into water. Refrigerated storage and transport of foodstuffs are to-day vital to our very existence. Refrigeration is also necessary in industry. Solid CO₂ is used, for example, in testing aircraft components for use at high altitudes, for joining engineering parts together by "shrink-fitting," and in aircraft construction for delaying the natural hardening of light alloys which would otherwise make them unworkable. British chemists, physicists and engineers have always led in research into low temperature problems. The British chemical industry supplies the chemicals which make possible the increasing use of refrigerating processes in the service of mankind whether at war or peace.

poor poorer. The reconquest and liberation of France meant another doze of chaos and confusion in the monetary organisation of France. M. Rene Pleven, the Finance Minister of France, had, therefore, the heavy responsibility of devising a new scheme to correct the maldistribution of wealth and satisfying the progressive opinion in the country with regard to post-war reconstruction of the financial system in France. Adhering to the original programme of financial rehabilitation M. Pleven conducted a census of certain forms of wealth and has now come forward with two definite proposals, viz., an exceptional capital levy and an excess profits duty. The excess profits duty is so devised as to bear on the real increases of fortune which happened during the period from January 1940 to June 4, 1945. The tax will vary between 20 per cent and 100 per cent according to the actual fortunes amassed. Profits below 200,000 francs per family are exempted but fortunes above 5 million francs will be taxed at 100 per cent.

Details of the capital levy are not yet available but the broad lines are as follows: A straight capital levy payable in four instalments during 1946-49. The rates are based on current net wealth and range from 3 per cent to 20 per cent on fortunes exceeding 300 million francs. The exemption limits are as follows: 100,000 frs. for bachelors, 200,000 frs. for married couples, with a further allowance of 100,000 frs. for the first child, 200,000 frs. for the second child and 400,000 frs. for each additional child. It is also proposed that all the French firms with a capital exceeding 40 million francs should transfer to the State bonds to the value of 5 per cent of their capital. In his Budget Speech M. Pleven stated that the yield from the straight capital levy would be between 100 to 125 million francs, i.e., £500 to 625 million in four years. Regarding the levy on wartime increments of wealth to be paid in 1946 no estimates are given. The financial proposals confirm to the strict principles of public finance and they would not fail to be deflationary in effect. Since the exemption limits are pitched high the incidence will be directly only upon a prosperous minority. Though the levies would impose a strain on French administrative machinery the need to achieve equitable redistribution of wealth is not questioned.

Mid-East Oil and Pacific War

Apart from their chronically unsettled politics, a new circumstance has contributed to the revival of world interest in the countries of the Middle East. The oil requirements of the United Nations have increased enormously since the intensification of the Pacific war. It was officially stated in Washington last year that even at that time, operations in the Pacific front alone consumed a quantity of oil which exceeded the estimated potential military requirements of the whole world two years before; and this quantity since then has only been steadily increasing. This vast and increasing demand cannot be met by the United Nations production which has already very nearly reached its maximum and whose further expansion is hampered by various causes that could not be removed in the near future. Inevitably the world has to turn to the Middle East countries for a vital addition to their supplies. But during the years 1939-43, this production was more or less at a standstill. Limited local refining facilities and the shortage of tankers made expansion impossible. But since 1943 progress has been possible as both local refining facilities and the world tanker position have improved. The output from the refining of the Anglo-Iranian Com-

pany at Abadan, which in 1939 was having a daily capacity of less than two and a half lakhs barrels, has been raised to 320,000 barrels in 1944 and is expected to reach the four lakh limit before the end of 1944. Similar progress is seen in the output of other companies also, not only in Iran, but in the other regions of Saudi Arabia, Egypt, etc. Another refinery will shortly begin production at Ras-Tanovia in Arabia and its daily output is expected to be not less than 50,000 barrels a day, says the *Economist*. Nor do these increases mark the potential maximum the refineries could yield. There is still a shortage of equipment and the full potentialities of the different oil fields are far from being reached. Even as it is, the oil from the Middle East is playing a vital role in the overthrow of Japan.

Far West & Far East:

While reports are streaming in that the United States is planning for organisation of a global export trade, the correspondent of the London *Economist* says that the States west of the Rockies are particularly interested in developing commercial connections across the Pacific. When Japan is defeated vast territories in the East will look up to America for capital goods and other requirements to raise the standard of living of the peoples living in those regions; and the western part of the United States, thanks to the fillip given by the war, seems to be now especially equipped to cultivate intimate trade connections with the countries of the Far East. A Washington promotion booklet proclaims "First the Adriatic, then the Mediterranean, then the Atlantic each in its turn wore the crown of supremacy and each in turn has passed that crown over to a western sea. To-day is the dawn of the Pacific era." The suggestion is not so much to the decline of British commercial supremacy or to the coming chance for China and India but to the fact that during the years before 1939 the States east of the Rockies dominated American trade and politics, but ever since Roosevelt found the wisdom of developing the potentialities of the Western States a new situation has arisen. The western part of the United States is to-day well provided with five million hydro-electric h.p. besides magnesium plants, steel mills, fabrication plants and other activities connected with the production of aluminium. The Western States therefore have valuable excess capacity and the businessmen there have decided that after the war the plants should not be junked under pressure from the interests in Eastern States and even though they cannot sell their products to the Eastern States, outlets must be sought across the Pacific. This Far West, therefore, has outlined plans for the greater commercial contact with China, Manchuria, Siberia, Korea, Indo-China, Philippines, Malaya, Thailand, Burma, India and the East Indies where nearly half the world's population lives. These areas are at present undeveloped and therefore serve as excellent potential markets. The importance of China is particularly emphasised and the industrialists of the western states of the U.S.A. are optimistic that these undeveloped countries have got the purchasing power to support their trade plans. The Far East can give rubber, tungsten, chinchona bark, tin, tungoil, tea, rapeseed, copra, palmoil, jute, hemp, silk, antimony, bauxite, graphite, camphor, lac, bamboo, hides and skins, tapioca, ivory, spices and many other things besides.

The warning for the British industrialists is clear but we in India can have no objection to increasing commercial intercourse with the United States if it leads to increase in our industrial capacity as early as possible. If the Western American plans aim at draining away the raw materials of the Far

East and flooding that market there is no doubt that this policy would lead to future troubles.

Fertilisers & Food Shortage:

It is feared that the world will suffer from food shortage for sometime to come, and the position in Europe seems to be acute. Till national economies are switched back to peacetime activities, the strain on existing food supplies will continue to be severe. But European agriculture seems to be very intimately connected to the production and supply of fertilisers particularly potash and nitrogen. With regard to potash it is significant that Russia now controls Saxony, Thuringia and Brunswick—areas which supplied the greater part of Germany's potash output. Throughout the war years plantations and agricultural fields were starved of potash. There is a great pent-up demand that has now to be met. The Soviet Union has developed its Ural deposits under the first five-year plan and before the war Poland's potash output went a great way to satisfy Europe's requirements. Production has so much improved in Palestine during the past few years and it is estimated that the Alsatian mines are capable of producing annually 1.8 million tons of raw salt with a k20 content of 6 lakhs tons. Production in Spain was so much affected but

recent recovery is remarkable. The United States, which was an importing country before the war, trebled its potash output during the war years. In 1944 U.S. produced 834,600 tons against 546,757 tons in 1939. She is now not only independent of foreign supplies but is capable of exporting substantial quantities. Australia and Chile are also on the road to increased production. The immediate prospects in Europe are not very rosy, and unless an agreement with Russia is reached early rehabilitation of European agriculture will be found difficult.

As regards nitrogen the question is one of excess production. Even before the war the world's synthetic and byproducts nitrogen producing capacity was estimated to be twice the demand and during the war the industry has increased its capacity. The I.C.I. has doubled the output in its Billingham works. Spain has built two synthetic plants and new constructions are reported in other countries also. Tremendous progress is achieved in the United States where from 424,000 tons in 1939 production has come up to 1,430,000 short tons per annum, according to a recent report by the Bureau of Mines. Drastic curtailment in the nitrogen producing capacity of Germany is certain at least for some years to come but still the main problem is how best to tackle the problem of surplus

PROSPECTUS

1. OBJECTS OF THE COMPANY.

The Company has been incorporated for the purposes set out in the Memorandum of Association and particularly to carry on all kinds of business of manufacturers, importers, exporters, assembling, distributors and dealers in radios, radiograms, gramophones, wireless apparatus, domestic and commercial refrigerators, coolers, and freezers, of all kinds, humidifying, dehumidifying, ventilating and cooling plants, room coolers and air-conditionings of all kinds, records, bare and rubber insulating wires, cables, flexible cords, fuse wires, copper weld and aluminium wires, electric switches and switch gears, contents, lamps, motors, fans, and electric goods, Plastic & Light material, products, equipments and accessories of all kinds, cold storage equipments and all articles and things used in manufactures, construction, erection, maintenance and working thereof or in connection therewith in any way whatsoever to repair the same and their machinery and appurtenances, etc., to manufacture and deal in loud speakers, transformers, microphones, transmitter, amplifiers, receivers, public address equipments and wireless equipments of all kinds and accessories of all kinds used in manufacture, installation, erection, repairs, maintenance and working thereof or in connection therewith in any way whatsoever.

Karam Chand Thapar & Bros. Ltd. (Managing Agents of the Company) have been fortunate in securing an arrangement with Messrs. Philips Denbigh (Pty.) Ltd., Radio, Acoustic & Electric Engineers of Cape Town, South Africa, a firm of considerable standing, reputation and technical skill in manufacture of Radios, Radiograms, Sound Equipment and amplifiers. The said firm has agreed to pass on to Karam Chand Thapar & Bros., Ltd., all plans, drawings, patents, technical information, benefits of researches which are the property of the firm for their benefit and exclusive use in India and Burma. The said firm has further agreed to instruct and train the Indian Staff in all technical radio and electrical services with a view to such Indian Staff becoming proficient technicians in the shortest possible time. In accordance with that arrangement, one of the senior Directors of the said firm who shall be an experienced electrical and Radio Engineer shall be in the charge of the Radios and Sound Equipments. Karam Chand Thapar & Bros., Ltd. (The Managing Agents of the Company) have agreed to pass on all the rights, benefits and undertakings of this arrangement of theirs with the said Messrs. Philips Denbigh (Pty.) Ltd., to the Company.

Negotiations are also in progress for making similar suitable arrangements with another Electrical firm of repute in England for other lines of electrical goods. Our representative in England is also arranging to secure the services of an experienced technician able to lay out an up-to-date Electrical Works and carry it on to the production stage.

It is intended to erect the Factory in the suburbs of Calcutta. Negotiations for purchase of land for the purpose are already in

Rs. 25,06,250

PAYABLE AS FOLLOWS:

Preference Shares—Rs. 20 per share on application and Rs. 20 per share on allotment. The balance in two instalments of Rs. 30 each at an interval of not less than three months between each Call.
Ordinary Shares—Rs. 2 per share on application and Rs. 2 per share on allotment. The balance in two instalments of Rs. 3 each at an interval of not less than three months between each Call.
Deferred Shares—Rs. 5 per share, the nominal value of each share payable with application.

The Deferred Shares are proposed to be distributed at one Deferred Share for every 8 Ordinary Shares applied for.

Of the above issue, the Directors have already promised to take shares of the nominal value of Rs. 15,68,750 in 4,000 Preference Shares, 1,10,000 Ordinary Shares and 13,750 Deferred Shares. The balance 3,000 Preference Shares, 1,60,000 Ordinary Shares and 7,500 Deferred Shares are offered for subscription.

(Note:—No further Calls are proposed to be made on the Preference and Ordinary Shares for the time being. Further Calls will be made as and when payments are to be made on the Machinery and/or when erection of the factory is started).

IN RESPECT OF PREFERENCE SHARES AND DEFERRED SHARES

The said Preference Shares shall be distributed to the holders thereof the right to a fixed Cumulative preferential dividend at 5 per cent. per annum (income-tax free) on the Capital for the time being paid on the said shares, and the right to an extra 1 per cent. on the surplus of the dividend on the Capital for the time being paid up on the Ordinary and Deferred Shares. It shall from time to time be determined to distribute by way of dividend, remaining after paying or providing for payment of dividend on the capital for the time being paid up on the said Ordinary and Deferred Shares, but that the total dividend, including 5 per cent. Cumulative Share shall not in any year exceed the amount of the dividend on the Capital for the time being paid up on the said Ordinary and Deferred Shares in proportion of four-fifth and one-fifth respectively. The said Preference Shares shall also, the Preference Shares shall be entitled to the return of capital and the said fixed preferential dividend when declared or not up to the commencement of the winding up, but shall be entitled to participate in the profits or assets. Any surplus of the paid-up capital shall be distributed amongst the Ordinary and Deferred Shares in proportion of four-fifths and one-fifth respectively.

ISSUED CAPITAL

- Rs. 32,50,000

Divided into:-

- 10,000 5 per cent. (I/tax free) Cumulative Preference Shares of Rs. 100 each ... Rs. 10,00,000
2,00,000 Ordinary Shares of Rs. 10 each ... Rs. 20,00,000
50,000 Deferred Shares of Rs. 5 each ... Rs. 2,50,000
Rs. 32,50,000

progress and may be expected to be completed very shortly. The erection of the factory will be taken in hand immediately arrangements for purchase of machinery are completed and necessary licence for import thereof are granted or otherwise as soon as the present restrictions on imports on account of the War are relaxed by the Government. A representative of the Managing Agents has already gone to England for arranging purchase of the necessary machinery and equipments.

PROSPECTS:

The development of electrical power as the basis of the Industrial development as also agricultural irrigation and rural industries comes foremost in the programme of Post-War Reconstruction schemes of the Government of India as also in the plans and schemes so far brought forward by the leading industrialists of various Commercial Bodies of India. The demand for all kinds of electrical goods including radios, refrigerators and sound equipments is great. With the agricultural and industrial development of the country the radio equipments in all its branches, wireless sets, Cinema Machines, gramophones and all other electrical and radio equipments and appliances may be expected to have progressively growing home-market.

Estimated Capital Cost:—It is estimated that about Rs. 25 to Rs. 30 lacs will be required for machinery, plants, buildings, land, etc.

2. PRELIMINARY EXPENSES

The Preliminary Expenses including registration fee and printing charges and other incidental expenses, but exclusive of underwriting commission and brokerage on sale of shares, if any, are estimated to be not more than Rs. 20,000.

3. MINIMUM SUBSCRIPTION

The minimum subscription on which the Directors may proceed to allotment is fixed at 7,500 Ordinary Shares after receipt of the sum payable on Application.

4. VOTING RIGHT

Every member whose name is entered in the Register of the members of the Company as holder of at least one Ordinary or two Deferred Shares is entitled to vote or take part in the proceedings.

Preference shares carry no voting right. On a show of hands, every member entitled to vote and present in person shall have one vote and upon poll, every member entitled to vote and present in person or by proxy, shall have one vote for every Ordinary share and one vote for every two Deferred Shares held by him. No member shall be entitled to be present at the General Meeting or to vote either personally or by proxy, or to be reckoned as quorum whilst any Call or other sum be due or payable to the Company in respect of any share by such member.

5. RESTRICTIONS ON TRANSFER OF SHARES

The Directors may at their discretion decline to register the transfer of any shares

other than the fully paid-up shares or on which the Company has got a lien. No transfer shall also be made to an infant or a person of unsound mind.

6. DIRECTORS' QUALIFICATIONS AND REMUNERATIONS

The qualification of a Director shall be the holding of Ordinary Shares of the Company of the nominal value of Rs. 10,000 in his own name. The remuneration of every Director shall be Rs. 100 for every Meeting of the Board attended by him, unless otherwise determined by the Company in General Meeting. He will further be entitled to his actual travelling charges not exceeding First Class and Third Class for servants and an allowance of Rs. 20 per day for the days he is actually away from his place of residence for attending Board Meetings or otherwise in execution of his duty as a Director. When journey is undertaken by a Director by Air, actual Airway fare, instead of First Class, will be paid.

7. MANAGING AGENTS

The first Managing Agents of the Company shall be Messrs. Karam Chand Thapar & Bros., Ltd. The said Messrs. Karam Chand Thapar & Bros., Ltd., or their assigns or successors in business whether under the same name or any other name, style or firm, shall, in the first instance, be entitled to remain and continue to be the Managing Agents of the Company for twenty years, unless and until the said Office of the Managing Agents of the Company, before the expiration of such period of twenty years, shall be resigned by them.

The Managing Agents shall be entitled to the Management of the whole affairs and business of the Company, subject to the control and supervision of the Board of Directors.

The remuneration of the Managing Agents shall, until varied by an express mutual agreement, and subject to any additions which may from time to time be sanctioned by the Company in General Meeting for special services, be:—

- (a) A personal allowance of Rs. 2,500 per mensem for the first 5 years and Rs. 5,000 per mensem thereafter, payable monthly from the date of their appointment as Managing Agents.
- (b) A commission of 12½% per annum on the net profits of the Company after allowing for all the usual working charges, interest on loans and advances, repairs and outgoings, but without any deduction in respect of income-tax, super-tax or any other tax or duty on income or revenue or for expenditure by way of interest on debentures or otherwise on capital account, or depreciation on Assets or on account of any sum which may be set aside out of profit in each year for reserve or any other special fund.

The remuneration payable as above to the Managing Agents shall be exclusive of and shall not include any remuneration, salaries or wages, which shall become payable to the Managers, Secretaries, Agents, Clerks, Servants, Workmen, Brokers, Bankers, Solicitors, Auditors, Engineers, Experts, Technicians or other Officers or Employees who may be employed by the said Managing Agents for carrying on and conducting the business of the Company, nor any rents, taxes, costs, postages, printing, stationery or other office incidentals and expenses of manufacture, all of which remuneration, salaries, wages, costs, charges, and expenses shall be borne by the Company.

HINDUSTAN GENERAL ELECTRICAL CORPORATION, LIMITED—Contd.

The Managing Agents have informed the Directors that they will not charge to the Company any remuneration till such time the Company commences distribution and sale of its manufactured, imported or assembly produce.

8. AMOUNT OFFERED FOR SUBSCRIPTION WITHIN 2 PREVIOUS YEARS

Nil.

9. NUMBER AND AMOUNT OF SHARES AND DEBENTURES ISSUED OR AGREED TO BE ISSUED OR AGREED TO BE ISSUED AS FULLY OR PARTLY PAID UP OTHERWISE THAN IN CASH WITHIN 2 PREVIOUS YEARS

25,000 Deferred Shares of Rs. 5 each have been agreed to be issued to Karam Chand Thapar & Bros., Ltd., credited as fully paid-up to reimburse them for the expenses incurred by them on preliminary surveys and researches, sending their representative abroad for negotiating arrangements with technical experts and parties for machineries.

10. AMOUNT PAID WITHIN LAST 2 YEARS OR INTENDED TO BE PAID TO PROMOTERS

Nil.

11. NAMES AND ADDRESSES OF VENDORS OF ANY PROPERTY PURCHASED OR ACQUIRED BY THE COMPANY OR PROPOSED TO BE PURCHASED OR ACQUIRED WHICH IS TO BE PAID FOR WHOLLY OR PARTLY OUT OF THE PROCEEDS ISSUED AND THE AMOUNT, IF ANY, PAID OR PAYABLE FOR SUCH PROPERTY

Nil.

12. NATURE AND EXTENT OF DIRECTORS' INTEREST

Lala Karam Chand Thapar is the Managing Director and Mr. B. M. Thapar is a Director of Messrs. Karam Chand Thapar & Bros., Ltd., Managing Agents of the Company, and are interested accordingly.

13. AGREEMENTS

The following Agreements have been or will be entered into on behalf of the Company:—

(a) Agreement between the Company on the one part and Karam Chand Thapar & Bros., Ltd., on the other part or the appointment of the latter as Managing Agents of the Company, the terms of which are referred to in this Prospectus under the heading "Remuneration of the Managing Agents" and under Articles 160 and 169 of the Articles of Association of the Company.

14. UNDERWRITING ARRANGEMENTS AND COMMISSION

No Underwriting Agreement has so far been made.

15. DOCUMENTS

Copies of Memorandum and Articles of Association of the Company and the Agreements referred to in the Prospectus can be inspected at any time during business hours at the Registered Office of the Company.

16. BROKERAGE

Brokerage will be paid at As. 8 per Preference Share and As. 4 and As. 2 per Ordinary and Deferred Share respectively on allotment made in respect of applications received through the recognised brokers and Bankers.

17. APPLICATION FOR SHARES

Application for Shares should be made on the form accompanying this Prospectus or it may be obtained at the Registered Office of the Company or from the Head Office and Branches of Messrs. Karam Chand Thapar & Bros., Ltd., the Managing Agents of the Company or from the Lahore Head Office, Calcutta, Delhi, Lucknow, and the Ludhiana Branches of the Punjab National Bank Ltd.,

or from the Cawnpore Head Office and other Branches of the Hindustan Commercial Bank Ltd. Applications may be sent to the Registered Office of the Company or deposited with the above-stated offices of Company's Bankers or the Managing Agents of the Company, together with a remittance of the amount payable on application. In case where no allotment is made, or where the number of shares allotted is less than the number of shares applied for, the full deposit or the balance of deposit, as the case may be, will be returned. The Directors reserve to themselves the right to make allotments of shares in any manner they deem proper.

The Shares will be issued subject to the Memorandum and Articles of Association of the Company.

Applicants for Ordinary Shares are entitled to apply for 1 Deferred Share as against every 8 Ordinary Shares applied for by them. Applicants for Ordinary Shares who do not

apply for Deferred Shares or apply for lesser number of such Shares than in the above proportion would be considered to have waived their claim to the Deferred Shares not applied for by them. Deferred Shares will only be allotted in proportion of 1 Deferred Share for every 8 Ordinary Shares allotted, fractions not counting.

Clive Street Gossip

The Wavell Plan has ended as another gratuitous advertisement of the foibles and follies of Indian politicians. When it was announced, there was everything different from the Cripps negotiations or the pantomimes with which Lord Linlithgow used to demonstrate the sincerity of his desire to establish a National Government. Though there are significant differences in the end, the upshot has been the same: a more or less helpless sense of frustration within the country, a stronger feeling of self-righteousness among British politicians and increasing doubt in foreign countries whether Indian freedom is a cause which is deserving of their support or sympathy. These are normally the three principal results that the British Government aims at when it inaugurates, with a pre-arranged flourish of trumpets, an attempt to end the political deadlock in India and give this country something like a National Government. Whether there was a change on this occasion or not, the results have not been far different; and one may be sure that, if the general elections should fail to bring about a change of Government in Britain, Mr. Churchill and his colleagues will hardly hesitate to make the best use of the advantages yielded to them by the inauguration and the failure of the Simla Conference. If the Wavell Plan is not different from its forerunners, it would be a waste of time, space and energy for me to write at length on the issues connected with or arising from the Simla Conference.

But as I have said earlier, there are some striking differences between Lord Wavell's attempt to end the deadlock and the attempts of others. Personally I had set great store by the personality of the Viceroy. From the day his name was announced for the Viceroyalty of India, I felt that an altogether new type of person had been chosen for this important office at a critical period in the history of this country and of its relations with Britain and the rest of the world. Nearly every word that Lord Wavell uttered after the announcement of his appointment seemed to me a confirmation of what I had conceived as a matter of instinct. I must confess that some of his speeches immediately after assumption of office were extremely disappointing. That, one could attribute to the natural tendency of any one to affirm the policies of the predecessor, till one understood the position for one's self. I was therefore looking forward to the first sign of a change. It came with the release of Mahatma Gandhi which in an earlier regime would have been delayed if not denied altogether. But a change of policy is a different matter. When Lord Wavell left London, attempts were made to hide from the public eye the purpose of his visit. But it became clear before long, not only that Lord Wavell was seeking authority for a fresh attempt to end the deadlock, but also that he was encountering stiff opposition from Mr. Amery and Mr. Churchill. While it is quite possible that the Labour members of the Coalition Government lent Lord Wavell some strength, it is not till the Caretaker Cabinet was formed, that a decision was arrived at; which perhaps suggests that the Tories consented to Lord Wavell's Plan only after they felt that the Plan would be put into action only when their hands are free to steer its course.

However, the first notable difference between the Wavell Plan and the earlier attempts is that the Viceroy himself worked for it in the face of the most strenuous opposition from higher authority. In the earlier instances either the Viceroy was himself in the plot or that he was free to scotch the attempt by his indifference or by more positive ways. The second difference, which was important both at the beginning and which even now cannot be without some significance to the future course of events, is that Lord Wavell did not take up the question on hand till the ground was cleared for him, that is, in so far as it could be cleared, by the Bhulabhai-Liaquat Ali agreement about the basis of representation for the Congress and the League in a new National Government. Other points of difference lie in the narrowing of the scope of the attempt, the careful shelving of basic issues on which differences could not be easily bridged, the manner in which Lord Wavell dealt with the parties and the party leaders and the general spirit of fairness and accommodation which the Viceroy showed in his dealings with Gandhiji and the Congress leaders.

It was not, therefore, mere inert optimism that made people look forward to tangible and early results when Lord Wavell announced his Plan in a broadcast speech. The speech itself was a model of a businesslike utterance on a problem of serious complications and grave national import. And if the terms of the offer seemed unacceptable in some respects, the readiness with which Lord Wavell made changes thereon in response to the suggestions of the Congress leaders more than made up for those shortcomings. So that, when the Simla Conference met, it had to deal with a Plan, which had not only bypassed many an inconvenient issue, but had sufficient mobility to negotiate any awkward turns that its further progress might suddenly reveal. Till a late stage, there was no room for apprehension of such awkward turns. Nearly all the old dangers seemed to have vanished. I have said already that, so far as the Government was concerned, whatever might have been the intentions and hopes of Mr. Churchill and Mr. Amery, Lord Wavell was for his part eager to hammer out a settlement. Even Mr. Amery, it must be set down in fairness to him, stated clearly the conditions in which the Viceroy's veto would be exercised and

thus removed what might have been a stumbling block. Those who are extremists by the force—or inertia—of habit, suddenly found that criticism of the Wavell Plan on the ground of the retention of the veto would not hold water. And since the Viceroy himself was able to build up a fund of goodwill with the Congress leaders, the attitude of the Government offered no difficulties.

The Congress, which at other times would have rejected offhand an offer ten times as good, was not in a mood to grab any chance of getting out of the stagnation of the last three years. Mahatma Gandhi started with entering a caveat against the use of the term, "caste-Hindu" and the possible detraction from the national character of the Congress. Lord Wavell disarmed criticism by the sheer suavity of his reply. Gandhiji as good as wriggled out of formal membership of the Conference, invitation was extended to Maulana Azad as President of the Congress. The proceedings of the Conference were kept as a secret and of its early stages nothing more is known than that Lord Wavell asked the leaders to accept his leadership, that the principle of a panel of names was accepted all-round, that negotiations were set afoot to adjust the differences between the Congress and the League and that, when they seemed to require time to resolve, an adjournment of a fortnight was decided on. From the day of the adjournment to the date when the Conference was declared to have failed and therefore dissolved was a period of gloom. Then darkness descended. It is not clear even now whether Mr. Jinnah's "No" was confined to the Congress demand for the inclusion of a Nationalist Muslim or whether it was extended to the repre-

SOME CLOTH FACTS

FEWER VARIETIES but **MORE** **CLOTH**

At the request of Government, the Cotton Textile Industry have agreed to restrict the number of varieties of cloth and yarn they manufacture in order to increase India's cloth and yarn supplies.

This measure of rationalisation will yield an increased output of about 400 million yards a year. Ninety per cent of the mills' production will in future consist of the following varieties:

Dhoties	Longcloth
Sheetings	Chaddars
Shirtings	Voiles
Mulls	Drills
Twills	Tussorees
Coatings	Towels

Reduction in Defence Service demands and in exports and increased supplies of coal will also add many hundred million yards to the quantity of cloth available to you.

Help your poorer neighbour by buying only what you need for your immediate wants. Every month now cloth is being produced at an increasing rate.

representative of the Unionist Muslim who was backed up by the Viceroy himself. In any case, the breakdown occurred when the League categorically refused to submit its panel of names on the ground that the Viceroy would hold out the assurance that all the Muslim members of the Cabinet would be the nominees of the Muslim League.

The Conference, therefore, broke down on the question whether or not the Muslim League was to be regarded as the sole representative of the Muslims of India to the exclusion of the right of any other Muslim organisation to a representative character, however restricted. In considering that question, one must be careful to avoid confusion of issues. The merits of this question, so far as the Simla Conference with its admittedly narrow scope is concerned, are more or less wholly irrelevant. They were relevant, no doubt, in the arguments which Pandit Pant presumably had with Mr. Jinnah when he tried to get him to a reasonable attitude. But once, Mr. Jinnah and the League made up their mind they would not abate their claim, it was for the Government and the Congress, not to speak of other parties, to decide whether they would accommodate that extreme claim or not. And if they could not or would not, the Conference had to be dissolved. It would be more or less out of order for the Conference to decide that it would go on with its work without caring for the co-operation of the League. And as for the Government, it was, in the language of the London Times, morally indefensible and politically inexpedient to override the League opposition. The Conference had to be wound up and the Wavell Plan abandoned.

While the Wavell Plan could thus be ended, the major issue thrown up in the course of the abortive attempt to implement it cannot possibly be shelved for long. The claim of the Muslim League amounts to the assertion that, while India is not one, while the people of India is a congeries of castes and communities and Hindu Society is a structure with the most awful faults and fissures, the 90 millions of Muslims are, by some miracle, one solid bloc, with one organisation, one leader and one policy. The League has said implicitly but with more force than any explicit statement can command, that the League membership embraces all the Muslims of India, that Pakistan exhausts all their political thought and that they can have nothing to do with any constituted Government in the country which does not subscribe to these statements. In this form the League's position should cause graver concern among Muslims than in the Congress. So long as it is a question of voicing the just apprehensions of a large and historically important minority and securing proper safeguards for its interests, the 90 millions of Muslims are, of course, one. But that unity cannot be taken unimpaired to other contexts, to supporting the demand for Pakistan, the implications of which nobody understands, or foiling the attempt to set up a Government which can minister to the needs of a long-suffering people and fulfil the aspirations of the intelligentsia in every community. It is no wonder that the Simla Conference provided the occasion for all those sections of the Muslim population which were not in close agreement with Mr. Jinnah and the League to emphasise and demonstrate their separateness. In fact, many Muslims

have made careful calculations of the League's following and these calculations show what a ludicrous exaggeration of facts the League claim is.

Apart from these calculations, there is the simple fact that the results of the General elections rebut, rather than confirm, the League's claim to represent all

the Muslims of India. After all, it should not be forgotten that the 90 millions of Muslims are not evenly distributed over all parts of India and that the bulk of them are in the Provinces of the Punjab and Bengal. In neither Province has the League been able to get an absolute majority and set up a League Government of its own. In both Provinces, there are large sections of Muslims who have parties of their own which are at least as strong as the League. And in the all-India sphere there are Muslim communities who have all along disowned Mr. Jinnah's leadership.

These are facts, the significance of which will necessarily vary with the context. To the Simla Conference, they are almost irrelevant. To the British Government, they may seem statements of fact which will need to be verified when they begin to be useful. To Lord Wavell they are possibly startling revelations which call for changes in his plans and methods. But to all those, Indian or other, who want to see India set on the road to constructive work these facts are fundamental to their understanding of the position in India and the lines on which the way out of the deadlock is made possible by the triangular nature of the tussle. But if it should turn out that one of the three points is not really a point, but a jagged edge, that the British Government is not disposed to be as antagonistic to the Congress as formerly, then a common responsibility devolves on all the authorities concerned for suiting plans and policies to the changed position. In this matter, one can hardly afford to be cocksure. Who knows whether and to what extent the British Government has changed its attitude to the political pro-

gress of this country? Who knows to what extent the non-League Muslims are prepared to pull their weight and make themselves felt in the future course of events? While these questions cannot be answered with any accuracy, there is no mistaking the fact the Simla Conference has brought up new facts to the surface. Lord Wavell, when he declared that the Conference had failed, took the blame for the failure on himself. The motive of this self-censure may be found in his anxiety to avoid recrimination among the parties. But it may also be an expression of remorse that he had unwittingly been the cause of another unedifying demonstration of irresponsibility in high places, and regret, too, that he had not armed himself to meet the emergencies which he should have foreseen. In any case, the failure of the Simla Conference is unlike the failure of the Cripps Plan in that it brings the country face to face with the pretensions of political parties and the need to put them to the acid test of a general election. The Wavell Plan has failed. But the Wavell purpose remains.

Not all the massive reasoning or trenchant argument that I adopted in my articles on the Indianisation of the Imperial Bank have been of any avail in getting the Central Board of the Bank to see reason. Mr. A. R. Chisholm, I understand, has been appointed Managing Director. I understand, too, though confirmation is not available, that Mr. N. G. Irvine has been raised to the position of the Deputy Managing Director. It is, indeed, strange that the Board should persist in treating the new appointments as a detail of the administrative routine, instead of a fundamental question of policy of wide national import, which it

undoubtedly is. However, if the appointment of an Indian should be out of the question, one would like to know why the claims of Mr. F. H. Moorhouse were ignored. The decision of the Central Board would seem to be another revealing instance of Bombay's pull over other places in matters connected with the Reserve Bank and the Imperial. The Head Office of the latter, which formerly shifted between Calcutta and Bombay, is now moored to the latter city permanently. And in the Imperial Bank, the officers of the Bombay circle, it would appear, are automatically conceded priority over those of other circles. It is a trend which the rest of India can ill afford to overlook.

(From Our Correspondent)

BOMBAY, July 17

The Press Conference convened by the Chairman of the Textile Control Board, last week was, in many ways, an eye-opener. As I have stated already, the samples of utility cloth which were shown to the Pressmen were fairly satisfactory, though we did not see coatings or dyed cloth among them. That, no doubt, was due to the short notice at which the Conference was convened. In any case, the durability of the cloth seems assured and tests have already been carried out to support such a conclusion. It was also stated that the specification of utility cloth would not be allowed to be watered down indiscriminately; and, in this connection, the Textile Commissioner himself was heard to say that an Inspection Branch to look after this work is being set up. The saving in the cost of manufacture resulting from the reduction in picks is to be passed on to the Consumer, and in fact the decline in mill earnings in the current year as compared with 1944 is expected to be of the order of 25 per cent. Standard cloth has, after all, become a success and the demand for it is reported to be very good, so much so that its production is to be continued alongside of utility cloth. Moreover, standard cloth is supplied at 6-1/4 per cent. over the ex-mill price. As regards the quantitative aspect, in addition to the 10 per cent. increase in yardage of cloth which the adoption of utility scheme is expected to bring about, the general supply position is also expected to obtain relief in other directions—namely, a cut in the defence orders which, it is said, will take up only 8 per cent. of the productive capacity (190 million yards); a reduction in exports to the extent of at least 200 million yards. Incidentally, this disposes of the unfounded rumours that exports will be stepped up on account of pressure from overseas. All in all, therefore, the textile situation is slowly improving and even the coal bottleneck is lifting, since the Government are said to have increased the quota to the industry by about 10,000 tons per month.

In striking contrast with the attitude of the Government of India, which favoured lower floors for cotton at the last meeting of the Textile Cotton Committee, the Egyptian Government has actually decided to increase its buying prices for the several varieties of the Egyptian crop by 10 per cent. It is no use for official supporters to suggest that what is good for Egypt is not necessarily so for India. For, the reasons which have led the Egyptian Government to take this step are worth noting and are capable of application to the Indian scene *mutatis mutandis*. It appears that producers and merchants in Egypt wanted that there should be no war-time restriction on cotton purchases and exports. They also demanded that the minimum prices for new crop should take into account not only the cost of production, but world cotton prices and that charges of ginning and transport should be reduced. In fact, so far Egypt has gone that representations have been made for the abolition of the British purchase Co-ordination Committee which has hitherto held a monopoly of sales and purchases. The reference to world cotton prices is made here because Egypt,

in order to counterbalance the American export subsidy, which has reduced the premium between Egyptian and American cotton in the export markets, is proposing abolition of the export cess which now works out to Rs. 22 per candy. In addition to all these, the Egyptian Government is also paying greater attention to the regulation of the crop in each variety. One may reasonably expect that when the Cotton Committee meets next the significance of these changes will not be lost upon those concerned.

The subject of competition between cotton and synthetic fibres came into the limelight recently when the British Rayon Federation announced a reduction by 2-1/2 d. per pound in the prices of continuous filament rayon yarn for domestic consumption, thereby bringing the home prices down to the same levels as export prices. The cut came as a particular surprise in view of the fact that a rise in the prices of cotton yarn to cover the wage advances granted to workers had been decided upon. It is only sometime ago that Mr. Courtauld in a statement gave the opinion that the cost of rayon would start falling soon after the end of the war; as a matter of fact, the downward movement seems to have begun somewhat prematurely. This is a foretaste of the competition which synthetic fibres are certainly going to offer cotton. In fact, Sir Frank Platt, Cotton Controller, put the position graphically by describing rayon as cotton's enemy. In addition to rayon, Imperial Chemical Industries are going ahead with Ardil, the new fibre which is said to have all the qualities of wool. The growth of rayon has been nothing short of meteoric and world production is estimated at over 1,000,000 tons, which

is about a quarter of the cotton industry's output. The rayon producers have fired the first shots in the war against cotton and cotton producers all over the world can hardly afford to be complacent. A factor whose importance is not commonly recognised is that the United Kingdom Government is itself interested in the progress of synthetics to avoid foreign exchange stringency. For import of raw materials for synthetic yarn costs much less than imported raw cotton or cotton yarn. The dominant importance of this factor will be realised when it is remembered that during the first few post-war years, even the essential imports will be regulated in order to minimise the heavy deficit on current account. Taking all these into consideration, there is every reason to presume that cotton growers will have a difficult time ahead of them after the war. That the Indian Central Cotton Committee is fully alive to these new trends in the world cotton situation is borne out by the fact that the local sub-committee has held a preliminary discussion on the subject at the end of June and has referred the matter to the Technological Research Sub-Committee. Dr. Nazir Ahmed is investigating the matter, fortified by what he has seen and learned of the progress of synthetic fibres in other countries in his recent tours.

MADRAS, July 16.

At a meeting of the post-war Reconstruction Committee was discussed a scheme for a rural uplift organisation submitted by Mr. A. F. W. Dixon, I.C.S., Member, Board of Revenue. The present scheme is based on and is an elaboration of the original Salem scheme. The Salem scheme was a success. This scheme is, therefore, a practical and realistic attempt to change village life for the better. The objectives of the organisation will be to establish village committees as part of village life to produce from within an urge for a better village, to induce villagers to help themselves, to interest villagers in the plans of the various nation-building departments for betterment of village and to co-ordinate the economic uplift effort of each district. No new department is to be started to attain these objectives. The Revenue Department, which has been strengthened to deal with supplies, war collections and savings, recruiting and the like will be maintained in its strength and it will switch over from wartime activities to peace time task of rural uplift. A small addition of special staff for rural recreation and development will alone be made. The whole scheme will be under the control of a member of the Board of Revenue acting as Rural Development Commissioner and as chairman of a Provincial Rural Development Board which will consist of the heads of the nation-building departments as members.

In inaugurating the college of Engineering and Technology at Coimbatore, Sir Arthur Hope, the Governor, said that it must be acknowledged that agriculture would always be the principal industry in this country though a great deal of progress had been made and should be made to establish industries in the big towns in the years to come. While he hoped that Coimbatore would be the Manchester of India he also hoped it will not be so ugly as Manchester. He appealed to the citizens to prevent the horrors that went on in the last century when industry was developing without any feelings about the conditions under which people were going to live or the beauty of the cities themselves. Referring to the question of State versus private ownership Sir Arthur said that his personal view was that they should have a mixture of both. He hoped very much that there would be a conference between employers, employees and the Government so that we could have a well established industrial system in the country.

Addressing the Nilgiri Rotary Club on "Food Control and Rationing in India" Mr. W. H. Kirby, Rationing Adviser to the Government of India, said that if India was to be saved from food crisis during the next few years it was absolutely essential that food control and rationing should be continued until such time as we could be sure that India's production of food stuffs was more than sufficient to meet her internal requirements. Mr. Kirby referred to the history of rationing in India since its introduction in 1943, and said that Bombay served as the first operational centre for pucca food rationing in the country and that the success achieved there was taken

as the basis for inaugurating rationing schemes in other Provinces and States, with the necessary modifications to suit local conditions. He said that rationing was proceeding smoothly in all the areas where it had been introduced and the activities of the black-markets in grains had been considerably minimised, if not completely eradicated and 550 towns and 52 million people had rationing. He added that the great increase in population and the transport difficulties had to be kept in mind constantly when dealing with rationing problems as also the long distances between one place and another in India. The question of quality of foodgrains added to the difficulties of the Rationing authorities.

Urging that food control and rationing should be continued until such time as they could be sure that India's production of foodstuffs was more than sufficient to meet her internal requirements. Mr. Kirby said that various measures, like the starting of industrial canteens, school-feeding schemes, milk priority schemes, etc., were being planned by the Governments concerned, which were also dealing with the nutritional aspects of the food problem. The assistance of nutrition experts was being frequently enlisted so as to ensure an advancement of the health of the masses through correct feeding. Answering some questions at the conclusion of his speech, Mr. Kirby said that the wastage of foodgrains, if any, should have been due to lack of proper storage facilities.

With a view to securing adequate quantities of Ammonium Sulphate a valuable artificial fertiliser, for the benefit

of agriculturists in the Province, the Government of Madras have considered various proposals. They have agreed to contribute 25 lakhs of rupees towards the capital of the factory proposed to be set up by the Government of India in Bihar on condition that they are allowed to appoint a representative to the Directorate of the Board of Management. They have also agreed to guarantee from the production of the Factory an offtake of 25,000 tons of ammonium sulphate per year for five years. The Government also propose to investigate the possibility of opening a factory of their own at a suitable place in the Province if the proposal of the Central Government does not materialise in the near future. As regards the Travancore fertilisers and chemicals the Government of Madras consider it advantageous to secure an interest in that concern, so that not less than 20,000 tons of Ammonium sulphate per year might be obtained at favourable rates. By these arrangements the Government expect to get 45,000 tons of the fertiliser per year for the first five years after commercial production has begun from Bihar and Travancore.

Resume of Commodity Markets

There is nothing of importance in the commodity markets during the past week. The raw jute and jute manufactures markets have remained unchanged though it should be said that a slightly easier feeling is noticeable in the raw jute market on the reports that the condition of the standing crop is satisfactory. The Bombay raw cotton market has been fluctuating in narrow limits. But for the support accorded by bulls for September position the large tenders of cotton for July delivery would have resulted in an appreciable reduction in rates. There is also a tendency to await further developments. The bullion market has been rather irregular though quotations are higher on balance due to the strike by bullion brokers earlier in the week and the continuance of small investment and consumer buying. It is reported, however, that local stocks are improving daily and that with the favourable reports about the war situation in the East, prices might decline. Rather brisk conditions were noticeable in the piecegoods market in the various centres. In Bombay and Ahmedabad a slight increase in the volume of business has been reported as despatches from mills were on a larger scale.

In the raw jute market slightly easier conditions were noticeable though business passing should be considered satisfactory by the standards of the past three months and mills are prepared to buy in larger quantities. Export business also has been better but, as pointed out last week, sellers are very anxious to do business as they seem to be convinced that the yield from the new crop will be very much higher and that total supplies will be in excess of mill consumption and exports. Prospects for an increase in mill consumption do not appear to be very rosy as the bottleneck in respect of production is still coal, there being a decline in arrivals in the past few weeks.

The consolidated statement for Bengal, Bihar, Orissa and U. P. and the Indian States of Cooch Behar and Tripura regarding the preliminary forecast figures of the jute crop for 1945 have been published. The estimated area of jute in the three other Provinces, two Indian States, together with the total licensed area in Bengal is 2,935,925 acres. In the Province of Bengal out of 2,548,925 acres for which licenses have been issued 438,180 acres only have since been checked as required under section 14 of the Jute Regulation Act and jute has actually been found to have been grown on 362,025 acres of the checked area. 2,108,745 acres of the licensed area still remain to be examined.

The total area still pending for checking is 82.6 percent of the licensed acreage but as it is estimated that about 80 percent of the licensed area will be put under cultivation, the yield of the crop is put around 65 to 70 lakhs bales.

Export figures for June are rather satisfactory the total being 103,000 bales as compared with 96,000 bales in the previous month. The total for the season so far is 10,39,000 bales against 971,000 bales for 1943-44 and 12,25,000 bales for 1942-43. In 1939-40 the figure was as much as 29.29 lakhs bales. As there has been a resumption of exports to France, Belgium and other Continental countries it can be expected that from now on exports will tend to be higher and that the total for the next season will be nearly double.

In the jute manufactures market there is no important change as mills are not interested in concluding fresh business. Without any improvement in the coal position they are not sure of being able to effect deliveries in time. There is also a disposition to await

further developments. If large purchases are made on behalf of the U.N.R.R.A. and there is a further increase in the demand for heavy goods mills might be forced to refuse deliveries for civilian consumption. It is not clear as to what exactly is required by the U.N.R.R.A. as the reference earlier in the week was to purchases of jute. It was revealed later on that the finished product was needed and not the raw material. It has been suggested that the U.N.R.R.A. mission should make an effort to use large quantities of sandbags which are lying with mills on Government account and for which no satisfactory use could be found. Only recently it was reported that the U.S.A. could not make any effective use of these sandbags.

In spite of the large tenders of cotton against July contract, nearly 2 lakhs bales, there has not been any appreciable fluctuation in prices for raw cotton. With the opposition from the trade for a reduction in prices in floor and ceiling of Indian cotton and with the anxiety of bulls to maintain prices considerable support has been afforded to the market by the Bull Syndicate. No substantial change in prices can therefore be expected.

The Central Cotton Committee at its next meeting will consider the question of the revision of maximum and minimum prices for cotton. There are reports that the cotton interests will support their claim for an increase in both the floor and ceilings. The grant of an increase in prices of Egyptian cotton has been cited as an argument in their favour. It is also stated that cotton prices are relatively undervalued and that the ryot is being exploited by the mill industry.

The Utility Cloth scheme has received considerable attention in the press. The Chairman of the Textile Control Board made a lengthy statement last week to the effect that the new scheme will prove to be advantageous to everyone concerned and that the manufacture of utility cloth will not result in any great deterioration in the quality that is already produced by mills. While everything is to be said in favour of an increase in mill production by rationalisation, it being estimated that there will be an increase of 10 per cent on account of the introduction of the new scheme, the

U. S. Decision on Aviation Policy

Need for Indo-U. S. Agreement

Possible Obstacle of British Interests

WASHINGTON, (By Cable)

In the statement of the United States International Aviation policy, the Government in the past fortnight announced the selection of two air-lines to fly through Europe and the Middle East to India. The two carriers are the Pan-American Airways to fly to Calcutta and Trans-Continental and Western Airways to fly to Bombay. The third carrier, American Export Airlines, was certificated to fly to Moscow.

The announcement was issued by the Civil Aeronautics Board with the approval of President Truman and the War, Navy, State, Justice and Commerce Departments. It establishes a policy of competition among American carriers, permits domestic carriers to fly internationally and recognizes that geographical boundaries should not interfere with the air transport operation. Now that other countries know which American carriers are authorised to fly to their territories, it is expected that diplomatic negotiations for landing rights accordingly will be facilitated.

The Civil Aeronautics Board said in this decision that the development of air transportation in the year ahead will cause reorientation in the entire world's thinking and will promote valuable exchanges among nations in commerce and cultural concepts. It is hoped by this country that air transport will serve to establish links with India that were previously impossible of achievement, through slow surface transportation.

As yet, however, the United States and India have not arrived at an agreement in respect of post-war air transport. At the Chicago conference last year, India's policy was virtually identical with Britain's. When the latter country and America failed to reach an agreement on the economic aspects of aviation, the result was they left the Chicago conference still under the necessity to conduct bilateral negotiations for reciprocal landing rights. The same is true of America and India. Officials in both countries believe, however, that such negotiations will be carried out without formidable difficulties.

It is believed that India will want reciprocity written into any agreement with this country, to which the United States is entirely agreeable holding as she does, reciprocity to be inherent in any air negotiations. But it is a question when India will be able to begin air services to the United States. Consequently, officials hope that India will not desire to delay this country's inauguration of flights to Calcutta and Bombay until she is ready to send her planes to the United States' cities.

To offset temporary advantage gained from wartime manufacture of air transport, the United States has announced her willingness to make planes available for other countries on a "non-discriminatory basis." Where India is concerned, this, of course, involves the question of foreign exchange and Britain's apparent determination to sell her own aircraft within the sterling area.

The Pangolin, more commonly known as the Scaly Anteater, wears an armour of scales which overlap each other like the tiles on a roof. Immediately it scents danger, it rolls itself into a ball and its scales stick up like sharp bayonet points. Thus, practically an accident-proof animal, it prepares for any emergency.

Your car, however, isn't accident-proof. So, instead of taking unnecessary chances you should insure it with the Indian Trade & General Insurance Co. Ltd. They cover all classes of private and commercial car risks and you can be sure your accident claims will be settled promptly and generously.

CLOTH FOR MOFUSSIL

From 15th April to 30th June, 1945.

Despatches of non-Standard Cloth (acquired through Authorised Dealers in Calcutta) to mofussil started on the 15th April last. Since then up to 30th June 30,107 bales have been despatched. This is equivalent to 4,51,60,500 yards of cloth valued at approximately two and a half Crores of Rupees. Nearly half of this quantity of cloth was in Dhotees and Sarees.

The consolidated table below indicates the Districts and Sub-divisions to which cloth was despatched and the quantities in bales. These figures are exclusive of more than 5,000 bales of Standard Cloth sent to mofussil during this period.

Statement showing Total Despatches of Civil Cloth from 15th April to 30th June, 1945.

DEPARTMENT OF CIVIL SUPPLIES, BENGAL.

Jute and Jute Manufactures

(From Our Correspondent)

Special to "Indian Finance"

Calcutta, 19th July, 1945.

The total reported production in June last of goods manufactured by Mills in the membership of the Indian Jute Mills Association and also by Gagalbhai Mill shows an increase of nearly 3½ per cent on the preceding months' production figure, being 88,300 tons as against 85,352 tons in May. This brings the total production for the season to 10,03,209 tons; an average monthly production of 83,600 tons. Of the total weight of manufactured goods produced in June 11,097 tons or 12½ per cent was on Government account, practically the same proportion as in the previous month. Production comprised 37,587 tons of hessian totalling 1,416 lakhs yards of which 34,641 tons or 1,342 lakhs yards was on commercial account and 2,946 tons or 74 lakhs yards was on Government account. Sackings amounted to a total of 47,372 tons or 1,113 lakhs yards of which 39,478 tons or 947 lakhs yards was on commercial account and 7,894 tons or 166 lakhs yards on Government account. It is believed that the increase in production last month is due partly to a very slight easing of the position as regards the labour shortage and partly to some small increase in coal supplies although the latter continues to be poor and irregular and not nearly enough to meet full requirements.

Jute imports into Calcutta and the Mills Stations during June last amounted to 20,04,443 maunds; a decrease of nearly 4 lakhs maunds on imports during May. Imports by boat which have been gradually decreasing since July 1944 until they reached almost negligible proportions during the last four months of the season, showed a slight increase in June 1945 but even so they only amounted to 24,589 maunds. Leaving out of consideration the quantity of jute imported by road, figures for which are not available, the total imports into Calcutta and the Mills' stations for the season July 1944 to June 1945 was 3,12,10,816 maunds as against 2,67,95,207 maunds for season 1943-1944. As regards particulars of the quantities of jute passing by road through the Traffic Registration Stations of the 24 Parganas and Howrah Districts, these are not now available as the compilation of such figures have been discontinued by Government and the road traffic registering stations in these districts abolished. It has been noted that the average yearly import by road recorded during the five years 1918-1919 to 1922-1923 was 3,62,916 maunds. More than 52 per cent of the total imports (excluding imports by road) for the season 1944-45 was carried by rail; 44 per cent by vessel and only 4 per cent by boat. The corresponding percentages for the previous season (i.e. season 1943-44) were 43 per cent, 51 per cent and 6 per cent imported by rail, vessel and boat respectively.

Some weeks ago when referring to the sowings of the new crop we stated that the trade had estimated that if last years sowings be taken as 16 annas, the new crop sowings would be in the region of 18 annas. This expectation that sowings this year are greater than last year is confirmed with the issue last week of the Government of Bengal's Preliminary Forecast of the 1945 crop which deals with estimates of the areas under jute in the various Provinces and States. The figures issued in the case

of Bengal show a departure from the previous method of presentation in that comparative statements are given of the total licensed areas in each Province/District which have been checked up to the date of the compilation of the Forecast; the total areas on which jute has been actually found to have been growing and the total areas still pending for checking. The total area licensed in Bengal is 2,546,925 acres out of a total of 54,00,000 acres registered as jute lands under the Bengal Jute Regulation (Amendment) Act. The total licensed area which has been checked is 4,38,180 acres and of that area 82.6 per cent or 3,62,025 acres have been found with jute actually growing on it. There are wide variations as between the different districts in Bengal with regard to the proportion of the area on which jute has been found to be growing to the total licensed area checked is 33 per cent whereas in Rangpur the figure is 94 per cent. Of course the smaller percentages are to be found in those districts where sowings are late. Regarding the other Provinces and States concerned with the growing of jute, namely, Assam, Behar, Orissa and Cooch Behar and Tripura States, estimates only are given of the areas under jute. These show little change from last year except in the case of Assam where it is estimated that the area sown this year is 1,81,600 acres as against 1,48,900 acres in 1944. The total estimated area for the above mentioned Provinces and states is 3,89,000 acres as against 3,65,200 acres last year. Although a considerable area remains to be checked and there are wide variations in the proportion of the area actually sown with jute to that licensed, there can be no doubt that in its new form the Forecast, as it relates to Bengal, is a definite improvement on previous publications, as formerly the figures, given in the Forecast were confined to the area licensed under the Bengal Jute Regulation Acts and of course gave no indication at all of the acreage actually sown with jute. As regards the yield of the 1945 crop, we discussed this in detail in this column at the end of May last when there was general expectation of an estimated two anna increase in sowings for the current year. As stated above, the issue of the Preliminary Forecast has confirmed that the area sown is greater than last year and it is probable that the figure arrived at as a result of our calculation when endeavouring to estimate the yield of the 1945 crop in our issue of 2nd June last, namely—a 74 lakhs bales yield—is not very wide of the mark.

The Indian Jute Mills Association issued the following statement of total reported sales for the week-ended Saturday 7th July, 1945:—

	This and next month	Forward yards.
Hessians	64,57,223	2,42,58,434
8 oz./40" Hessians	—	—
(including in above)	nil	6,00,000
Twills	1,11,51,138	19,14,501
Plains	28,37,564	80,02,004

Last week deliveries of coal to the I. J. M. A.'s Dump averaged only 32 wagons and it is reported that arrivals so far this week are even worse. The position has deteriorated to such an extent that several of the foster Mills have been compelled to close down and it seems probable that others may soon have to follow suit.

Exports of raw jute from Calcutta during June were 1,03,000 bales as against 96,000 bales in May bringing the total exports for the season to 10,39,000 bales. The increase in the shipments of raw jute last month was due to exports to France and other Continental markets and it is expected shipments in July will also show some improvement.

In the Pucca Bale Market dealers, are free sellers for all descriptions at minimum rates except for special marks and Cuttings. There has been very little business done but balers report small quantities of private marks sold for export to America and Continental Ports. Some business is also reported done by local mill in special Firsts at Rs. 83, special Lightnings at Rs. 76 and Dundee Daisee 2/3 at minimum price.

The Loose Jute market has shown an easier tendency especially towards the end of the week. Sellers are more eager for business but are reluctant to discount prices due to the firmness of mofussil markets. Prices this week, however, are four annas lower than last week. District Tossa, old crop, was done at Rs. 15-8 and Rs. 12-8 for Middles and Bottoms and also at -/4/- less. Small business also passed in Supervised jat Tossa Bottoms alone at Rs. 13.

There is little of interest to record in the Manufactured Goods Market as no business of importance took place during the week under review. The Government placed a small order for E cloth, Heavy C's, B Twills and Atta bags. Mills have not much to sell in any of the positions up to the end of the year and are adopting a policy of reserve as regards business for the more forward positions.

United India Life Assurance Co. Ltd.

Like other life offices the United India Life Assurance Company, Limited has done well in 1944. New business written during the year was a record in the annals of the Company.

The Chairman was naturally enthusiastic regarding the progress made by the Company in 1944 at the meeting of shareholders held recently. The improvement in the amount of new business written was, he said, due to the improved earning capacity of the insuring public and the greater anxiety on the part of individuals to get their lives insured. There is an increase in the average value of policies issued. During the year 16,070 proposals were received for assurance amounting to Rs. 3.96 crores. Out of these and also the proposals pending at the beginning of the year 13,906 new policies amounting to Rs. 3.41 crores were issued. The total assurances in force in the books of the Company as at the end of the year

including bonus additions amounted to Rs. 10.94 crores of which Rs. 43.33 lakhs were reinsured.

The total revenue for the year was Rs. 59.4 lakhs from premiums, interest and other fees. The Policyholders' Trust Fund increased to Rs. 2.26 crores at the end of 1944 from Rs. 1.98 crores at the beginning of the year.

Suitable adjustments in the portfolio have been made in order to bring in a larger interest income especially as the yield on gilt-edged securities tended to decline. As there was a decrease under policy loans and loans on mortgages the company lost useful sources of investment. There is an increase under investments in house properties, debentures and preference shares. The market value of investments is in excess of the book value.

The share capital of the subsidiary company, the New Guardian of India Life Insurance Company, Limited, was reduced by Rs. 1,07,012 during the year which amount was utilised towards wiping out the deficit in the Life Assurance Fund of the Company and in writing off intangible assets, the balance having been set aside as Reserve for Depreciation or loss in the realisation of the investment and other securities and assets of the Company.

A TATA PRODUCT

New Great Insurance Co. of India

The results for the first full year's making of the New Great Insurance Company of India in respect of general business should be regarded as satisfactory. The total business in respect of the Fire, Marine and Accident departments amounted to Rs. 15,95,000. The large expenses on account of the expansion of organisation have naturally been responsible for the high expense ratio. But proper provision has been made for unexpired risks, even after losses on account of the Bombay explosions of Rs. 1,20,381.

The Company commenced life business during the year and a total of Rs. 10,28,500 was written. The life fund at the end of the year amounted to Rs. 11,086 and this business is reported to be showing progress.

Neptune Assurance Company

Neptune has fared well like other life offices and new business in 1944 showed an increase of 58.4 per cent over the previous year. In order to expand the activities of the Company there was a successful issue of additional capital during the year. Permission was also secured to start fire and miscellaneous insurance business. It is gratifying to note that the company has been able to get a return on its investments of as much as 5.05 per cent. That is perhaps due to the "sagacious" policy in regard to investments.

(Continued from page 105)

arguments put forward do not seem convincing to the public and there is a feeling that the industry is trying to effect a further reduction in ceiling prices only with a lower cost of production as, for instance, by the elimination of picks in the manufacture of utility cloth. Whether the utility cloth scheme will meet the same fate as the standard cloth scheme (the Chairman's views, however, are different) remains to be seen. The experience of the past six months has been so depressing that the average consumer is not prepared to believe in any improvement in the cloth position unless actual results are achieved. It can only be expected that the reduction in military requirements and the increase in the allotment of coal will result in a substantial addition to the total of available supplies for civilian consumption and that, with a more effective distribution to the various consuming centres, the scarcity will be greatly relieved.

That the utility cloth scheme will not affect yarn supplies to the handloom industry is perhaps the most encouraging remark made by the Chairman in recent months. It appears that yarn output has actually improved by 50,000 bales and that with the efficient functioning of the Handloom Board things will function more satisfactorily.

At a time when imports of Burmese rice are expected to relieve the scarcity in respect of this staple commodity, the publication of the All-India Final Rice Forecast for 1944-45 will not perhaps be received with satisfaction by the country. There is no appreciable decrease in the area under rice cultivation, the acreage being 80,754,000 in 1944-45 against 81,117,000. But the yield of cleaned rice is very much lower at 27,122,000 tons against 30,664,000 tons in 1943-44. Thus against a decrease in acreage by 0.4 per cent the reduction in rice is as much as 11.4 per cent. This must be due to the smaller output from Bengal, the 'Aus' crop for 1943-44 being a record one for the province. The condition of the crop is reported to be fairly good on the whole.

There is nothing more pleasant than a regular glass of refreshing Andrews—nothing more healthful, too, for Andrews gives you deep-down Inner Cleanliness to keep mind and body alert and invigorated. Andrews is the ideal tonic laxative that even fit people need. It suits all ages and is not habit-forming as the same small dose always suffices.

FIRST... Andrews cleans and refreshes the mouth and tongue.

NEXT... Andrews settles the stomach and corrects acidity.

THEN... Andrews tones up the liver and checks biliousness.

FINALLY... To complete your Inner Cleanliness, Andrews gently clears the bowels. It sweeps away trouble-making poisons, corrects constipation, purifies and cools the blood.

For Inner Cleanliness
be regular with your

Stock Markets to-day and to-morrow:

NEW LOAN SUCCESS CHEERS MARKETS

The usual week-end adjustments have not taken place on Friday this week as markets in Calcutta especially, have been very firm and the closing quotations for jute shares are at the highest levels for the week. The Bombay market also has remained steady though it should be said that an irregular feeling is noticeable in the latter half of the week with the tendency of operators to await the outcome of the Potsdam Conference.

The strength of the markets, it need not be emphasised, is due to the success of the 2½ per cent 1950 loan. The list was fully subscribed on Monday this week and initial transactions have been reported in the Bombay market at a slight premium. As there were rumours of a reduction in the bank rate, operators were inclined to the feeling that the reduction in the yield basis was an accomplished fact and that it would be justifiable to rate shares on the basis indicated in these columns on an earlier occasion. The expectations of large orders for the jute industry, the reports regarding the maintenance of dividends by the Tata Iron & Steel Company for 1944-45 and the encouraging news from collieries that raisings have been favourable are factors for bull operators. The reserve of the average investor has also been a helpful influence.

There has been no 'give' in the market even though a certain section of operators is inclined to believe that the recent rise in prices has been rather uninterrupted and that there is need for consolidation of the ground gained. Profit-taking was encountered in Wednesday's session in the Calcutta market and a generally lower level of prices was recorded towards the close on that day. On Thursday and Friday, however, the upward trend has been resumed and, as indicated above, the closing prices for most of the counters are at the highest levels for the week.

The outstanding features of the week are Assam Saws and British India Corporations. There is a rise in the quotation for Assam Saw from Rs. 6 to Rs. 7-6 and in British India Corporation from Rs. 6-10 to Rs. 8-10. It is reported that the rise in the quotation for these shares is due to the rumours of the possibility of a bonus issue to the shareholders. In both cases there is scope for the issue of bonus shares to shareholders though it should be said that the rumours in the case of British India Corporation have been recurrent in recent years and the Chairman at the annual general meeting this year did not have anything much to say in this connection. For Assam Saws it need not be said that the high level of earnings in recent

years has improved very much the financial position and the present reserves admit of the issue of bonus shares.

As the capital of both companies was drastically reconstructed the shareholders are entitled for a generous consideration. B. I. Corporation shareholders especially have waited for long and if their patience is to be rewarded it will not be in vain.

There is a further decline in the earnings of the Hasimara Tea Company, Limited. A further increase in costs of production and a smaller crop have resulted in a sharp reduction in net profit which is before providing for taxation and depreciation, Rs. 10,44,604 against Rs. 16,39,692 for 1943 and Rs. 27,96,201 for 1942. The provision for taxation is Rs. 2,11,808 against Rs. 3,98,442 on the former occasion and the transfer to Reserve for Renewals and Additions Rs. 2,46,749. Even with the smaller allocations to reserves and taxation it has not been possible to prevent a drastic cut in the distribution on the ordinary shares. The final dividend of 35 per cent., makes with the interim dividend of 7½ per cent already paid, 42½ per cent for the whole year against 55 per cent. for 1943 and 65 per cent. for 1942. The amount carried forward is appreciably lower at Rs. 3,31,380 against Rs. 4,40,333 brought in.

Weather conditions were favourable for the outturn of tea but a shortage of labour caused by outside attractions resulted in a reduced crop of 5,147,464 lbs. of which 3,380,543 lbs. were supplied to the Tea Controller for India on contracts with the Government of the United Kingdom. The crop turned out from the Company's estates in 1943 was 6,021,978 lbs. The average net sale price realised was 12.51 annas per lb. in 1944 against 11.37 annas in 1943 but the increase in working expenses was more than the increase in the average sale price, the working cost per pound of tea produced being 9.25 annas against 7.72 annas.

The reduction in the dividend seems to have been anticipated by the market. There has, therefore, been no appreciable change in the quotation for the shares. In fact, with the general strength of the market tea shares have been more active during the week and Hasimara are higher at Rs. 81-8 against Rs. 79-8. Even at the present level the reduced distribution works out to more 5 per cent. tax-free.

I have remarked on earlier occasions that industrial development in this country in the past few years has been mainly related to the war effort and that it was not possible

for industrialists to take advantage of the new opportunities for filling up the gaps in the industrial structure. Nevertheless, effort has been made by a few enterprising promoters to start companies in new lines. With the relatively high level of prices obtaining at the present moment the newly started enterprises have been successful, but whether they would be able to withstand competition in the post-war period remains to be seen. In most cases, however, Government have promised protection and it is hoped that with the gain in experience it would be possible to effect a substantial reduction in costs and compete effectively with foreign imports.

Development in the electrical goods industry, however, has so far been poor. It is true that companies like National Insulated Cables have come into being, but the range of products manufactured by them is very narrow. After the visit of Mr. Fazlulbhoj to the United Kingdom and the United States it is hoped that the production of electrical goods in all lines will make appreciable headway in the post-war period.

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, July 20.

VERY firm conditions continue to prevail on the Calcutta Stock Exchange though it would appear that there has been a slowing down in the upward movement in the last two days and there is a disposition on the part of operators to cash their profits at the higher levels. The success of the New Loan has naturally had an encouraging effect, but as it was generally expected that the general response would be satisfactory, the rise in prices after Monday has not been very pronounced. In mid-week with the easier tone in the Bombay market, on rumours of Jap peace, there was profit-taking in the local market and quotations were slightly lower. In Thursday's session, however, steady conditions continued to prevail. The opening on Friday has been satisfactory. The general undertone is firm.

The gilt-edged securities section has remained firm, business being restricted on account of the scarcity of sellers. No further important rise in prices has been recorded. The rumours regarding the possibility of a reduction in the bank rate have not had any effect on the market as it is stated that already there is an adjustment in values on the basis of the New Loan. 3 per cent 'and 3½ per cent Paper were steady at Rs. 95-8 and Rs. 102-12 respectively. Among terminable loans, 3 per cent 1957 were noted at Rs. 100-7, 3 per cent 1946 at Rs. 102-10 and 3½ per cent 1947-50 Rs. 103-6. There are good buyers for 3 per cent 1970-75 at Rs. 97-2, 4 per cent 1960-70 changed hands at Rs. 113-5 and 3 per cent 1949-52 at Rs. 102-1. The only transaction in Provincial loans was in 3 per cent U. P. 1961-66 at Rs. 99. Easy conditions continue to prevail in the money market, but there is no great disposition on the part of lenders to place money in treasury bills at the present low rates. For the third week in succession the Central Government was unable to get its requirements of treasury bills in full.

Bank shares have continued firm with Imperial Bank contributories at Rs. 550 and Reserve Bank at Rs. 140-8, United Commercial were a shade easier at Rs. 28-4 premium. Nath Bank were firm at Rs. 32-4.

On the hopes that the utility cloth scheme might improve the position of the cotton textile industry and that with the liberal allotment of coal supplies, there will be a large increase in production, Cotton shares were in greater demand. Bengal-Nagpur recorded a rise of 2 points to Rs. 50 and Dunbar by 8 points to Rs. 345. Kesoram were very firm at Rs. 19-12, Cawnpore Textiles at Rs. 13-13 and Elgins at Rs. 70-8. New Victoria also were firm around Rs. 8-9.

In the Coal section, the popular counters have not recorded any important rise in prices while the speculative counters have been more active with Samla being done up to Rs. 14-6 and Ghusick and Muslia to Rs. 17-5. Bengal fluctuated around Rs. 770. Burrakur were Rs. 46-8, after being done up to Rs. 47-2. South Karanpura also were quoting Rs. 36-10 after being higher at Rs. 37-10. Equitable remained firm at Rs. 74 and East Indian at Rs. 45-8. Nazira were unchanged at Rs. 20-2. There was large buying of New Churnulia up to Rs. 15. Dhemo Main were quiet at Rs. 29-15 but Hurruldih improved by 3 points to Rs. 42-10. Talcher were unchanged at Rs. 14-7 but West Jamuria were 2 points higher at Rs. 78-8.

The placing of a further small order for bags and the expectations of large buying on behalf of the U.N.R.R.A. have resulted in greater activity in the jute section and the bigger denomination shares are 20 points higher. Ganges were Rs. 650 against Rs. 640, India Rs. 782 against Rs. 747, Dalhousie were in good request around Rs. 415 and Empire Rs. 55-4. Anglo-India were firm at Rs. 527, Champdany at Rs. 292-8 and National at Rs. 37-0. The quotation for Craig was fluctuating in wide limits as there was considerable speculative activity. Earlier in the week there was a decline to Rs. 11-4 on reports that the company was not going into voluntary liquidation. On fresh buying there has been a substantial recovery to Rs. 13-12. Reliance improved to Rs. 84-8 from Rs. 82 last week but there was a setback in mid-week to Rs. 84-12. The quotation is again higher around the highest levels for the week. Nuddea were firm at Rs. 148 and Megna Rs. 157 but there was a sudden rise in Presidency to Rs. 12.

Among Engineering shares, Indian Iron were slightly more active, the quotation being marked up to Rs. 42-12. At the higher levels there were not many buyers and they are now quoting around Rs. 42-8. Steel Corporation were uninteresting. The quotation has been for the most part of the week around Rs. 34-2. Among Other shares, Indian Standard Wagon registered a rise of 15 points to Rs. 108, Braithwaite maintained last week's gains being quoted at Rs. 13-10. Jessop continued steady at Rs. 27-4. Marshalls were Rs. 6-6 and Kumardhubi Engr. Rs. 12-4.

In the Sugar section Darbhanga and Ramnugger Cane and Sugar were the outstanding features being quoted at Rs. 28-8 and Rs. 28-2 respectively. There was good enquiry for Belsund at Rs. 17-4. Carew changed hands at Rs. 37 and Cawnpore at Rs. 40-12. Balrampore were fluctuating around Rs. 18-2. There was greater interest in the Tea section with Bishnauth quoting Rs. 49-1, Hasimara Rs. 81-1, East India Rs. 18-14 and New Chumta Rs. 118. The relatively high yield on tea shares is attracting the attention of investors.

In the Miscellaneous section, there was a jump in the quotation for B. I. Corp. and Assam Saw to Rs. 8-10 and Rs. 7 respectively on reports of a bonus issue to shareholders but so far there has been no confirmation of these reports. Burma Corp. and B.B.P. were unchanged at Rs. 5-10 and Rs. 6 respectively. Calcutta Trams were a shade easier at Rs. 54-4 and Indian Cable at Rs. 31-12, Bararee Coke improved from Rs. 38-2 to Rs. 38-10 and Rohtas Industries from Rs. 16 to Rs. 18. Among paper shares, India Paper (Pulp) quoted Rs. 240 and Titagur Paper Rs. 32-2. Midnapore Zemindary were sticky at Rs. 199. There was a big drop in I.G.N. to Rs. 215 from Rs. 227.

(Continued from previous page)

in this issue) can therefore be said to be floated at an opportune moment. The promoters have been fortunate to secure the necessary technical assistance, negotiations having been already completed with a reputed firm in South Africa. Arrangements are also being made for getting the assistance of another reputable firm in the United Kingdom. It is stated in the prospectus that preliminary arrangements are very nearly complete and that the factory will be situated in the suburbs of Calcutta. The authorised capital of the Company is Rs. 50 lakhs in 10,000 cumulative five per cent tax-free preference shares of Rs. 100 each, 3,75,000 ordinary shares of Rs. 10 each and 50,000 deferred shares of Rs. 5 each. The issued capital is Rs. 32.5 lakhs in 10,000 cumulative pre-

ference shares, 2,00,000 ordinary shares and 50,000 deferred shares. There is already a subscribed capital of Rs. 6,18,750. The present issue is Rs. 25,06,250 in 7,000 preference shares, 1,70,000 ordinary shares and 21,250 deferred shares. The directors have agreed to take 4,000 preference shares, 1,10,000 ordinary shares and 13,750 deferred shares. The public is asked to subscribe for 3,000 preference shares, 60,000 ordinary shares and 7,500 deferred shares. The preference shares are entitled to a cumulative tax-free dividend of five per cent per annum. They also participate in profits upto 7 per cent after the payment of 10 per cent on the ordinary and deferred shares. Surplus profits are divisible in the proportion of four-fifth and one-fifth between ordinary and deferred shares.

Bengal Jute Mills Company, Limited has been able to maintain very nearly the earnings for the half-year ended December, 1944. The net profit, before providing for taxation, is Rs. 5,15,561 against Rs. 5,45,730 for the previous six months. The amount provided for taxation is Rs. 2.5 lakhs (same), while the sum set aside to depreciation is 90,228 against Rs. 82,561. The allocation to Reserve is unchanged at Rs. 50,000 as also the distribution on the ordinary share at ten annas per share. The amount carried forward is slightly higher at Rs. 54,366 against Rs. 50,282 brought in.

While the Craig shares must have shown a setback, there has actually been, during the week, a rise of over 2 points to Rs. 14-6. I had pointed out that at the recently held half-yearly general meeting of the shareholders, the Chairman categorically denied the report that Craig Mills Company would go into liquidation. It was this rumour that was responsible for the earlier flareup in these shares. After the authoritative refutation of this rumour, one would have expected that the shares would again find their intrinsic level. On the contrary, the market has staged a further rise. This seems unjustified. At Rs. 14-6 the price per loom works out to Rs. 13,000 and the yield is hardly 1 per cent.

On the other hand, there is prospect for a rise of at least Rs. 5 in Northbrook Jute shares. At the present market price, the price per loom works out to Rs. 7,000. This is a very reasonable figure. All the loom hours of Northbrook are utilised by Dalhousie Jute. Dalhousie Jute has gone up by Rs. 70 per share in the last one month. During this period Northbrook has gone up by only Rs. 2. This is a share worth the attention of investors.

The increase in Imperial Bank's dividend from 12 per cent to 14 per cent per annum, has, as is to be expected, stimulated a fairly substantial rise in the shares. Even at the present levels, the yield is as much as 3.4 per cent tax free.

The Imperial Bank holds in its portfolio Government Securities for Rs. 147.94 crores. These holdings must show considerable inner reserve. An investment in Imperial Bank shares is as good as in government securities from the point of view of this backing. But from the point of view of yield, Imperial Bank shares are far better than Government Securities. As there is every prospect of 3½ per cent. Paper being redeemed, banks, insurance Companies, investment Institutions and the class of investors who prefer gilt-edged will, therefore, do well to make a change-over to Imperial Bank shares. In my opinion, the best investment to-day is in Imperial Bank shares—as solid as gilt-edged and as the best equity share.

WATCH-DOG.

NEW GREAT INSURANCE CO., OF INDIA

SATISFACTORY RESULTS FOR THE FIRST FULL YEAR

MORE BRANCHES OPENED

The Second Ordinary General Meeting of the Company was held in the Meeting Room of the Bank of Baroda, Ltd., Mandvi Road, on Saturday, the 30th June, 1945 at 12 noon at which the Audited Statement of Accounts and Balance Sheet for the year ended the 31st December, 1944, and the Directors' Report were submitted for adoption by the shareholders.

The Chairman, Mr. Tulsidas Kilachand, in moving the resolution for adoption of the accounts said:—

"The Directors' Report, the Audited Statements of Accounts and the Balance Sheet have been sent to you already and with your permission I shall take them as read.

The year 1944 was the first full year during which the Company transacted Fire, Accident and Marine business and I am glad to say that we have progressed in all directions. The gross premium in the General Department which transacts Fire, Accident and Marine business amounted to Rs. 15,95,000 while the net premium in the three departments reached a sum of Rs. 6,67,000. The Fire Department showed a gross premium of Rs. 11,13,133 out of which it retained Rs. 4,72,548. The Accident Department received a gross premium of Rs. 2,18,689 and retained Rs. 92,613. The Marine business resulted in a gross premium of Rs. 2,64,082 and a net premium of Rs. 1,01,846. Claims paid and outstanding in all the three departments excluding explosions losses amounted to Rs. 78,818 while our share of the loss resulting from the Bombay Explosion of 14th April, 1944, amounted to Rs. 1,20,381. We have kept a reserve of 50 per cent in the Fire Department, 100 per cent in the Marine Department and 50 per cent in the Accident Department of the respective premium income for 1944 to cover our liability in respect of unexpired risks. As you are aware, the reserve customarily maintained is only 40 per cent, but your Directors decided to increase this figure to the limits indicated above with a view to conserve the Company's resources. The total reserves for unexpired liability amounts to Rs. 3,84,426 at the end of 1944 as against Rs. 1,23,627 at the beginning of that year. We commenced transacting Life business on the 4th December, 1944. A sum of Rs. 10,28,500 was completed during that year. The Life fund at the end of the year amounted to Rs. 11,086 and this business is showing steady progress.

During the year under review, we have been gradually building up our organisation in the country and have now branches at Ahmedabad, Madras, Calcutta, Lahore and Karachi. These branches are transacting business for all departments and showing satisfactory progress. We have also opened offices at Surat and Bhavnagar which are doing solely Life business. The natural growth of these organisations results in an increase in our expenses at the outset, but we are confident that the business which the Company will receive from these and other sources which we are tapping this year will make an addition to our revenue in the coming years.

As you are undoubtedly aware, the major portion of our business is derived from British India, where during the last few years, the business has expanded rapidly and companies have been able to show very large increase in their premium income. However, it has been found that this has not resulted in an increase in the financial strength in the case of many companies, and one of the points of criticism by the insuring public and the Government has been the high expense ratios of insurance companies. Consequently, in the new bill for amending the British Indian Insurance Act, provision has been made for limiting the over-all expenses of the offices. Although government intervention in private enterprise is objectionable in principle, the business of insurance is an exception since it deals with the security offered to the insuring public. It should therefore naturally be the concern of the Government to see that the business of insurance is con-

ducted on sound lines. For this reason, I feel that the Statutory limitation of expenses is justified. It is true that here there is a sharp difference of opinion amongst the interests concerned but I think that it should be within the capacity of all concerned to arrive at a solution which would bring about the desired improvement in this respect.

In conclusion, I desire to express our appreciation of the work of the officials, and the Staff both at the Head Office and the Branches and all our Agents, Brokers and Clients for loyal support they have continued to give to the Company."

The Report, Audited Statement of Accounts and the Balance Sheet were adopted unanimously.

After re-electing the existing Directors Mr. Jehangir P. Patel and Mr. Ambalal Kilachand, who retired by rotation and appointing Messrs. Dalal & Shah as Auditors of the Company for the current year, the meeting terminated with a vote of thanks to the Chairman.

WAR TRANSPORT DEPARTMENT

NOTICE.

Applications are invited for import licences for the import of passenger cars from U. K. during 1945 & 1946 from firms holding a franchise from the manufacturers. There is no quota limit and firms are advised to book orders immediately with the manufacturers, and to restrict their application for import licence to the number they expect to obtain.

Applications in the prescribed form together with—

- copies of documents evidencing that the applicant firm holds a franchise for a particular make or makes of cars, and
- a detailed description of the territory for which the firm holds the franchise

should reach the undersigned on or before the 31st July 1945. Applications not received by that date will not be considered.

(S. D. GUPTA)

Controller of Motor Transport (Supplies)

RESERVE BANK OF INDIA

Central Office, BOMBAY.

Notice to Shareholders

In view of the restrictions imposed by the Paper Control (Economy) Order, 1944 it will not be possible this year to supply a copy of the Report of the Central Board to each shareholder of the Bank. Only a limited number of copies of the Report will be printed, and will be supplied, until the stock is exhausted, to such shareholders as may be interested, on receipt of a written requisition to the Secretary of the Local Board at the place where the register pertaining to the shares of the applicant is situated. Copies of the Annual Accounts will, however, be supplied to each shareholder.

C. D. DESHMUKH,
Governor.

11th July 1945.

WAR TRANSPORT DEPARTMENT

The War Transport Department, Government of India propose to recommend the grant of import licences for the following passenger cars to be imported during 1945 & 1946.

HUDSON 70

STUDEBAKER 185

Applications in the prescribed form together with—

(i) copies of documents evidencing that the applicant firm holds a franchise for a particular make or makes of cars;

(ii) statement showing the numbers of cars of each make imported by the firm during each of the years 1937-1938 and 1939; and

(iii) a detailed description of the territory for which the firm holds the franchise.

Should reach the undersigned on or before the 31st July 1945. Applications not received by that date will not be considered.

The number of each make of car will be distributed amongst applicants at the discretion of the War Transport Department and their decision will be final.

(S. D. GUPTA)

By order of the Board,

THE CALCUTTA AGENCY LTD.,

Managing Agents.

14, Clive Street, Calcutta.

The 13th July, 1945.

NEPTUNE ASSURANCE COMPANY

"LET LAW PROTECT, NOT RESTRICT"

NEPTUNE'S GROWING STENGTH

"Regulation by Law is necessary in the interests of the public; but only to the extent of promoting or safeguarding the public interest is legislative interference with commerce justified," declared Seth Amratlal Kalidas, Chairman of the Neptune Assurance Co., Ltd., presiding over the 14th general body meeting. Strongly supporting the proposed legislation for limiting the over all expenses of insurance companies, Sheth Amratlal made practical suggestions for a reduction of the agency commissions on the other hand, he equally deprecated the move to limit the holding of Bank and Insurance shares and to restrict the shareholders right to vote.

Sheth Amratlal was happy to submit the Neptune's annual report which showed a rise of 58 per cent in new business, a Life fund of nearly 33½ lakhs and a premium income of nearly 10½ lakhs. He was also happy that the Company's new capital issue of Rs. 20 lakhs (10 lakhs paid up) was quickly subscribed at a premium of Re. 1 per share.

The Neptune has started Fire and General Business this year and the Chairman forecast substantial results.

Discussing the business done in 1944, Sheth Amratlal pointed out that policies issued during the year totalled Rs. 65,14,446 as against Rs. 41,12,698 of the previous year. There was a corresponding rise in the premium income. The Life fund went up by nearly 7 lakhs to Rs. 33,40,036. He claimed two achievements; firstly, the management was so economical, that the big rise in the new business did not lead to any appreciable rise in the expense ratio, secondly, despite the crippling compulsion to invest a large portion of insurance funds in low-yielding Government and quasi-Government securities, the Neptune has secured a yield of 5.05 per cent on its mean Life fund. In this connection he repeated his last year's pretest against the official policy of heavy taxation on one side, and restriction of investment on the other.

Regarding complaints of discrimination on the part of Banks, he appealed and cautioned Indian Banks to treat Indian Insurance companies with a spirit of comradeship and not to forget that they themselves thrive on the spirit of patriotism.

Proceeding, he warned against Government interference with the rights and liberties of investors to invest and vote at their discretion and pointed out "The right to invest and having invested, the right to vote, are the fundamental basis on which modern financial and industrial structure is based; and any undue interference with it can only recoil on the interests—Banking and Insurance in this case—which it is intended to safeguard". Regulation by law is necessary in the interests of the public, and only to the extent of promoting or safeguarding the public interest is legislative regulation justified". In fact, I venture to suggest that the Trade Associations would play their roles more effectively if they devote part of their energies to educating the public in matters of official policy towards business."

Referring to the expense ratio of Insurance offices, he pointed out the loopholes of the 1938 Act, to amend which new proposals are under consideration to restrain effectively the overall expenses of the companies, he said "the specific ratio of allowable expense is yet to be determined. It is for the public, that is the policyholders, existing and prospective, to agitate for the utmost economy of expense in Insurance companies, for after all, it is they who foot the bill. In view drastic economy is particularly imperative now and particularly possible and desirable in the matter of agency commissions, provided, of course, it is done uniformly by all companies—and that uniformity can be secured only by Law.

In the western countries, life insurance canvassing is a wholesome profession and the agent in India, needs to be educated to realise that his duty does not end with the securing of the first year's premium.

"The renewal commission even at 5 per cent is far too much and from the point of view of the agent a reduction would be more than compensated by the increase in the volume of business which would result from industrial expansion as well as better stability of insurance companies themselves. I should also strongly urge the spreading over of the first year's weightage on five years which will also mitigate the violent fluctuations of expense ratio from year to year."

"As an organic limb of the economic structure of the Nation, Insurance will soon be called upon to play its part in the race for national prosperity. In this there is need to make sure that it will, in itself be healthy, and health demands prudence and restraint. In the fullest co-operation between all Insurance companies and allied industries lies our strength and our hope for the future."

In conclusion, Sheth Amratlal thanked his colleagues on the board the officials of the company, the Managing Director and the Agents.

BENGAL JUTE MILL COMPANY LIMITED

NOTICE is hereby given that the 9th Ordinary General Meeting of the Members of the Company will be held at the Registered Office of the Company at 61, Harrison Road, Calcutta, on Tuesday, the 31st July, 1945, at 2-30 P.M. for the purposes of receiving the Directors' Report, passing the audited accounts; declaring the dividends recommended by the Directors for the half-year ended 31st December, 1944; to elect a Director in place of the retiring Director; to appoint Auditors and fix their remuneration at Rs. 750/- per half-year and for transacting any other business of the Company that may be transacted therat.

The Share Transfer Register of the Company will remain closed from 21st July, 1945 to 31st July, 1945, both days inclusive.

BY ORDER OF THE BOARD.

For and on behalf of
BENGAL JUTE MILL CO., LTD.,

Managing Agents.

61, Harrison Road
Calcutta, the 29th June, 1945.

BENGAL JUTE MILL CO., LTD.

DIRECTORS' REPORT TO THE SHAREHOLDERS FOR THE YEAR ENDED 31st DECEMBER, 1944

Gentlemen,

We beg to submit herewith the Balance Sheet and the audited statement of accounts of your Company for the period ended 31st December, 1944 showing a Gross Profit of Rs. 6,70,530-7-9. After providing Rs. 90,227-13-10 for Depreciation and Rs. 1,54,968-13-0 for interest, Commission, allowance and other expenses, there is an available balance at credit of Profit and Loss Account of Rs. 4,25,333 12 11

To this should be added the account brought forward from the previous half year Rs. 50,282 9 2

It is proposed to set aside as a Reserve for Taxation Rs. 4,75,616 6 1

Leaving a balance of Rs. 2,25,616 5 1

We recommend that this should be dealt with as follows:—

In paying a Dividend of 5½% per annum on Redeemable Cumulative Preference Shares for the half year ended 31st December, 1944 (free of Income Tax) Rs. 27,500 0 0

In paying a Dividend on 1,50,000 Ordinary Shares of Rs. 93,750 0 0

Transfer to Reserve Rs. 50,000 0 0

To be carried forward to next half year Rs. 2,25,616 6 1

Mr. N. R. Sarkar in terms of the Memorandum and the Articles of Association of the Company retires this year from the Board of Directors of the Company and being eligible offers himself for re-election.

We regret to announce that Mr. J. S. Ker has retired from the Board of Directors and your Directors have been pleased to elect Mr. W. R. Elliot as a Director in his place.

Messrs. S. R. Batliboi and Co. Auditors of the Company retire and being eligible offer themselves for re-appointment.

Messrs. N. R. Sarkar and J. P. Goenka being out of Calcutta have not signed the Report and the Accounts of the Company.

We are, Gentlemen,
Yours faithfully,
For and on behalf of
BENGAL JUTE MILLS CO., LTD.

(Annual General Meeting on 1-8-1945 at 3-30 p.m. Books closed from 18-7 to 1-8-45).

Audited accounts for the year ended 31st March, 1945:

They show a profit of Rs. 34,57,014, including Rs. 3,91,656-6-3 brought forward from the last accounts. After providing Rs. 3,00,000 for Reserve Fund, Rs. 1,50,152-3-0 for Depreciation, and Rs. 20,25,000 for Taxes for the year (excluding compulsory E.P.T. Deposit), the period under review shows a profit of Rs. 8,18,861-13-0. Out of this sum, interim dividends of Rs. 63,722-9-0 on Preference Shares at Rs. 3-12 per share less Income-tax and of Rs. 3,04,200 on Ordinary Shares at Re. 1 per share, free of Income-tax were declared payable by the Directors on the 22nd November, 1944, thereby leaving a sum of Rs. 6,13,939-4-0 now to be dealt with. The Directors recommend that the above amount should be disposed of in the following manner:—

In paying a final dividend on 23,642 Preference shares at Rs. 3-12 per share less Income-tax (making a total payment of 7½ per cent per annum for the year), Rs. 62,337-5-0; in paying a final dividend on 3,04,200 Ordinary shares at Re. 1 per share, free of Income-tax (making a total payment of Rs. 2 per share for the year), Rs. 3,04,200; and in carrying forward the balance Rs. 2,47,401-15-0; Total Rs. 6,13,939-4-0.

In accordance with the Indian Jute Mills Association Working Time Agreement, the Mill was allowed to work 54 hours per week during the period under review, but, on account of acute coal shortage and Turbine break-down, it remained closed from time to time for a considerable period.

To mitigate the adverse effects of the acute coal shortage on the Industry as a whole, the Association formed a "Mills Industrial Pool" which became effective from the 1st July, 1944. The proceeds of the pool are derived from a cess of two annas per loom hour worked by each mill and from the rents payable by Government for requisitioned property. Out of the funds so made up, disbursements are made to mills which, on account of coal shortage only, were not able to work their full complement of loom-hours. In addition, the pool purchases from such mills the lost loom-hours at a rate fixed from time to time, which at present is As. 12 per loom-hour. All loom-hours so purchased will be extinguished. Under this Scheme, the Mill was benefitted to a certain extent.

The number of hours lost and recoverable as on 31st March, 1945, under the Industrial Pool and the Working Time Agreement was 1137.

The previous five-year Working Time Agreement amongst the members of the Association having terminated in December last, a new Agreement, on substantially the same lines, effective from 12th December, 1944, has been entered into for a further period of five years.

In pursuance of the adoption of a new set of Articles of Association of the Company by the Shareholders at the Extra Ordinary General Meeting held on the 18th September, 1944, providing, *inter alia*, for the audit of the accounts once at least in every year instead of twice yearly, the Directors decided that the accounts of the Company be, henceforward, closed and audited yearly as on the 31st March.

Mg. Agents.—Messrs. Birla Brothers Ltd.

Authorised Capital—Rs. 80,00,000. Issued and Subscribed—Rs. 54,06,200 in 3,04,200 Ordys. of Rs. 10 each and 23,642, 7½ per cent Cum. Pref. shares of Rs. 100 each, both fully paid up.

BIKANER BANK LTD.

The Branch of the Bikaner Bank Ltd., was opened at Bombay, on 17th July, 1945 by His Highness the Maharaja of Bikaner. The Chairman of the Bank, Rao Bahadur Shivratan G. Mohatta and other Directors were present. There was a fairly large gathering of well-known people of all communities associated with banking, industries and big business.

Nearly 200 accounts were opened on the opening day and a deposit of over Rs. 1 crore was received. The Directors are contemplating to open a Branch in Calcutta in the near future.

Indianisation of the Imperial Bank:

I am very sorry to find that the Imperial Bank has poured cold water on the enthusiasm of Eavesdropper whom I always considered its best friend even though a strong, constructive critic. Eavesdropper has been pleading for Indianisation of Imperial Bank. It is as much in the interest of the Bank as it is in the interest of Indians. It might be inconvenient for a few Britons but to all those who have the larger interests of the bank at heart the Indianisation of the staff of Imperial Bank is absolutely necessary for its growth and future prosperity.

It is a pity that the authorities have not taken the sound advice of Eavesdropper. It is a thousand pities that a national Government is not likely to come into existence, as all expected and as all hoped, it would use its influence with the bank in this direction.

Now as we understand the appointments to highest posts in the bank have been given to Britons, we wish them luck but, nevertheless, we must assure Eavesdropper that he has the support of his readers who wish him well and who are confident that his campaign is bound to succeed in the long run.

MOHANLAL BEHARI.

Germany's War Potential

Your editorial note entitled 'Germany's war potential, appearing in your issue of July 21st presents a balanced picture. It has been the common boast of war-leaders both in England and America that Germany's industrial potential had been annihilated and the only thing that remained was the putting into operation of the Morgenthau Plan to convert Germany into an agricultural country. What a hoax was the so-called air-pounding of Germany is now obvious, when William L. Clayton, the important official of the U.S. Government gives us facts and figures to show that defeated Germany is not less rich industrially than Germany at the height of her glory.

The Big Three are at the moment, and have been, planning to prevent Germany from waging another war. Germany full of resources, whatever the Big Three may plan, is bound to wage another war if the spirit of revenge is all the legacy of the war. Perhaps the best way of securing peace is the fundamental Christian doctrine of "Love thy enemy". It is high time leaders thing of translating the principles of the Atlantic Charter of which they talked so loudly rather than think of reducing Germany to nullity.

A. READER.

Lunatic System

Recently you wrote an editorial note entitled "Lunatic System". While I agree with the contents of the note I do not agree with the title which seemed to suggest that the capitalist system is Lunatic. Every sensible man will doubtless join you in condemning the burning of coffee, and steamrollering of crockery. But what is responsible for these mad acts is the avarice and lack of feeling for the sufferings of human beings.

If men are such, why blame the Capitalist system? One cannot give a dog a bad name to hang it. Let us have a capitalist system and its advantages and let us be more sensible and see to equitable distribution.

N. PRASAD.

I have been following with interest, the lively controversy raised by your note under the above caption. Mr. N. Kripalani hit the nail on the head, when he attributed the evils of the system to Capitalism. But here comes along Mr. Vaswani who takes up the cudgels on behalf of that system which obviously is running its last sands in the glass.

The apologist-Mr. Vaswani-thinks, that the organised destruction of wealth is not an inherent concomitant of the capitalist system. If only he would trouble himself to go through the third volume of Marx's Capital, which deals with the theory of crisis, all possible and impossible doubts on this score would be laid at rest.

Mr. Vaswani admits that the Capitalist system has its defects; so far so good. And then he proceeds to ask which system has not. Had he pursued this point further, he could have easily seen that the difficulties of modern capitalism are entirely man-made. Further on in his letter he tacitly admits this by saying that the production and especially the distribution of goods should be controlled by Government. One cannot refrain from asking which Government. That the Capitalist Governments cannot or will not do this, is self-evident to any one who understands the class-nature of states and their official representatives, the Governments. Mr. Vaswani perhaps has forgotten the Bengal Famine.

As regards individual initiative, has not the Soviet Union demonstrated—if such were needed—that individual initiative has ample scope in a Socialist Society. Mr. Vaswani 'wonders' whether the increased and increasing needs of humanity can be satisfied in any other system except the Capitalist System. With the Japanese War on, the U.S. had 7,34,000 unemployed in March 1945. I wonder what the American unwanteds would think of Mr. Vaswani's logic. The fact is Mr. Vaswani begs the question by quietly ignoring the matter. It is, that the Capitalist System produces lunatics and therefore deserves to be scrapped. As some satirist has said, "the Roman Empire was destroyed by barbarians outside its frontiers; we are breeding our own".

G. R. JOG.

Indians And U.S. Citizenship

I must congratulate you on your editorial note with the above caption appearing in your issue of July 14. There is after all not much difference between Whiteman and Whiteman: it is obvious from the way in which America is willing to admit Indians into that country.

Who can say that Englishmen are bad in their country? That they treat the coloured people as unequals is due to the historical fact that they have an empire. While America without an empire is not much better. America is a vast country and full of resources; yet the restrictions they put on coloured, be they even civilised Indians, mark out clearly that white is white. Indians have a lesson to learn from the U.S.

R. K. CHATTERJI.

The Case for Vegetable Ghee

I have read with much interest the editorial note "More British than the British" which appeared in the issue of 7th July and you deserve congratulation for voicing the grievances of the public. Vege-

Fact Parade

Bengal Sugar Production :

To help Bengal's eight sugar mills reach their 60,000-ton total annual production capacity, a conference of representatives of the Central and Bengal Governments and of the industry was held at Writers' Building, Calcutta. Mr. B. R. Sen, Secretary, Food Department, and Mr. V. Sahay, Sugar Controller, represented the Government of India.

The conference is understood to have discussed, among other things, the question of fixing the minimum price of sugar cane and of cordoning off an area of sugar cane supply for each mill. The Government of India are stated to have assured the mills of facilities for transport of sugar cane to the production centres.

Bengal's production last season amounted to only about 12,000 tons.

National Planning :

Pandit Jawaharlal Nehru is getting into touch with the members of the National Planning Committee, of which he is the Chairman, in order to assemble the Committee at an early date.

This Committee, comprising several prominent scientists, engineers and experts, was set up by the Indian National Congress in 1938, mainly at the initiative of Pandit Jawaharlal Nehru.

Hydari Mission :

The Hydari Mission has arranged for the imports of such consumer goods from Britain and the U.S.A. as are not manufactured in this country or are insufficiently manufactured. The imports will not flood the market but will meet the deficiency of consumer goods in Indian markets.

This assurance was given by Sir Akbar Hydari, Secretary, Industries and Civil Supplies Department, Government of India to members of the Bombay Muslim Chamber of Commerce.

Trade Between Canada and India :

Sir Ardeshir Dalal, Member of Viceroy's Executive Council, in charge of Planning and Reconstruction, who is on a visit to Canada, said that the Government of India has agreed to purchase upwards of 100,000 tons of Canadian wheat per month depending upon available shipping space until the end of 1945. Sir Ardeshir Dalal added that Canadian imports of Indian tea, jute and cotton textiles could be expanded in return for Canadian heavy machinery and equipment for electrification of Indian railways. For this purpose, he said, the Tata-Birla mission will visit Canada.

Assam Potatoes for Bengal :

At the instance of the Bengal Government, the Government of Assam have agreed to export of 40,000 maunds of potatoes into Bengal. Arrangements are being made for the consignments to arrive in Calcutta from August. Potatoes will be sold through licensed retailers under Government supervision.

Madras Cattle for Travancore.

The Government of Madras have agreed to supply Travancore with 100 head of cattle per month.

Sewage Grown Vegetables :

That sewage grown vegetables usually carry heavy surface pollution, resulting chiefly from the splashing of wet sewage and the blowing of infected dust during dry weather, is the inference drawn from the recent researches carried out at the biochemistry department of the Indian Institute of Science, under the auspices of the Imperial Council of Agricultural Research. The nature and extent of pollution caused by sewage-grown vegetables has been a subject which has attracted considerable attention in different parts of the world. The opinion has often been divided, though it is stated the major section has always taken the view that sewage-grown vegetables are rather unsafe for general public use at any rate without adequate precaution.

Nizam's Trade Commissioner for London :

It is understood that the Nizam's Government have sanctioned a scheme for the appointment of a Trade Commissioner in London to safeguard the commercial and industrial interests of the Hyderabad State. It is further understood that until permanent arrangements are made, Mr. Lloyd Jones, formerly Adviser to the Nizam's State Railway Board, will act as Trade Commissioner.

Are Pigs "Goods"?

Pigs can be classified as "goods" according to a decision of the Supreme Court of Ceylon. A lorry licensed to carry goods carried 14 pigs. The Negombo police charged the driver with contravening the provisions of the Motor Car Ordinance. It was argued in his defence before the Magistrate that "goods" included pigs. The Magistrate, however, thought otherwise. The driver was found guilty and fined Rs. 50. The appeal was heard by Mr. Justice Canekaratne. His Lordship disagreed with the interpretation of the Magistrate, and holding that "goods" included pigs, set aside the conviction.

Irrigation Adviser to Study Tube-well Methods in U.K.

Sir William Stampe, Adviser to the Government of India on Irrigation, who has left for the United Kingdom said in an interview that he was going there to study various methods of boring tube wells and see for himself what methods would suit Indian conditions best.

Sir William is accompanied by a former Executive Engineer of the United Provinces, Mr. Sanyal, who is attached to the Government of India and who acts as technical adviser to Sir William. They are returning to India in October.

Sir William said that large tracts of land could still be brought under cultivation by irrigation tube wells and other means. Sir William felt that while tube wells could not replace large irrigational works, they could be applied with success where something had to be done in a short space of time.

Sir William is also visiting Egypt to study the modern methods employed by the army authorities in the Middle East for boring tube wells to provide water for the army on the march.

Australian Trade Offices in India :

The Australian Government will shortly establish Trade Commissioners' offices in Bombay, Calcutta and Colombo.

Mr. H. R. Gollan, Australian Trade Commissioner in India, announcing this on his return after consultations with the Commonwealth Government, said that the step was expected to result in more intimate

national and trade ties between the two countries. Mr. Gollan forecast a visit to India shortly of a number of Australian manufacturers and business men. He added that Australian manufacturers were most anxious to assist India in its industrialization programme with both capital equipment and technical help.

Food Crisis in Pacific War Zone :

Declaring that the food situation in the Pacific war zone was most acute, the U. S. Joint Purchasing Board Officer, Maj. Harris W. Hantman, said that the transfer of vast armies from Europe to fight against Japan had caused what was almost a meat famine in that area.

The Pacific armies must be fully fed and the liberated people of Europe must not starve", he said. "We must increase production and overcome obstacles", he added.

Ships for China :

Five Liberty ships of a total of 50,000 tons are to be chartered to China by the U.S.A. The ships will be manned by Chinese seamen, who are completing a refresher training course in the U.S.A. before taking over the vessels in August.

Australian Inter-States Airlines :

A Bill to nationalize Australian inter-States airlines was introduced by Mr. Arthur S. Drakeford, Minister for Air and Civil Aviation, in the House of Representatives.

The Bill provides for the establishment of an Australian Airlines Commission charged with the responsibility of providing safe, efficient and economically operated inter-States airlines.

The Commission's power might be extended to cover international services.

There is a provision for initial appropriation of £3,000,000. The Commission would have the power to acquire aircraft and other property. Under penalties provided other services may not compete with the Commission's airlines.

Reconstruction of Moscow and Leningrad :

A 20-year plan for the reconstruction and development of Moscow and Leningrad has been formulated by the Soviet authorities. Moscow, built for a population of 2,000,000, now has five million, mostly women. Every Moscow family is bereaved and rich and poor live under same conditions. Both Foreign Commissar Molotov and Vice-Commissars like Maisky and Litvinov live in three-room apartments. Big houses and luxury apartments are given to artists since they are considered to be the aristocracy.

Harvesting in Russia : Mobilization Order :

Newspapers have published the decision of the Council of Peoples' Commissars to mobilize the man and woman power of Russia for the coming harvest.

The decision stipulated that all persons aged 14 years or above living in rural districts would participate in the harvesting, which is considered to be a most important economic and political task.

Director-General of Resettlement :

Nawab Mushtaq Ahmed Gurnani has been appointed Director-General of Resettlement and Employment in the Labour Department for five years.

The Director-General will supervise, co-ordinate and direct the work of both the central and regional sections of the organization and maintain close contact with the Central Government departments and the

Provincial and Indian States Governments with a view to bringing about co-ordination of measures.

Glass Houses :

Glass houses with a glass roof, glass plumbing, glass walls and floors, glass furniture and even glass mattresses.

These will be the dream homes of the future, according to Dr. Alexander Silverman, head of the Chemistry Department of the University of Pittsburgh.

You will not have to insure your glass home against fire. You will not have to give it endless paint. The whole structure, inside and out, will be washable.

But although you may live surrounded by glass, you will still be able to enjoy complete privacy. The walls will be made of foam glass that lets in daylight, but which cannot be seen through and rats and mice cannot get through it either.

Heating will be provided by metal designs traced on the walls. Dr. Silverman has a glass stove—a piece of plate glass on which is traced an aluminium design, through which electricity runs to provide heat.

Dr. Silverman has a new idea for the windows, too. He thinks he may be able to arrange two panes of glass in such a way that by shifting them slightly, light may be either let in or obscured.

U. S. Loan to Russia :

It will be fair to assume that the United States will loan Russia more than one billion dollars through the U. S. Export and Import Bank next year, Leo T. Crowley, Foreign Economic Relief administrator, told the Senate's Committee on Banking and Currency here.

Crowley added that the Government intends to terminate its two and a billion dollars lend-lease programme to France as soon as the war with Japan ends.

U. S. Expert on Land Erosion :

Dr. Donald Vincent Shuhart, American expert on land erosion problems, arrived in India from Chungking. He will visit all the main Provinces and Indian States making a special study of the problem of erosion in India and will advise the Government of India in the matter.

Gold Mining in U. S. :

Gold mining is being permitted in the United States with effect from July 1, the War Production Board has announced. The announcement came as revocation of an order which had been in effect since October, 1942.

The Homestake Mining Company announced immediately that it would resume operations in its gold mines in the black hills of South Dakota after being shut down three years. Homestake is the United States' largest gold mining enterprise.

Disposal of U. S. Army Stocks :

The appointment of a single administrator to handle the disposal of vast stocks of United States army and navy material scattered over the country.

Assam Government :

Tenders for Rs. 4,00,00,000 of three months' Assam Government Treasury Bills were opened on Monday, the 23rd July, 1945. Total amount offered was Rs. 4,05,00,000. Tenders at Rs. 99-14-3 per cent and above were accepted in full. Lower tenders were rejected. Total amount accepted was Rs. 4,00,00,000, the average rate of accepted tenders being Re. 0-6-7 per cent per annum.

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

Easy conditions have been noticeable in the money market in the latter half of the week. Earlier in the period, however, it was reported that the call money rate was ¾ per cent in Bombay. In Calcutta also there was a larger demand for funds though there was no change in the rate. The tighter phase of the money market was due to the larger subscriptions to the Government loans and the larger speculative activity in the gilt-edged market. With the smaller interest in gilt-edged and the completion of the loan programme of the Central Government for the time being, it can be expected that normal conditions will again prevail before long. Even the preparedness of the Central Government to offer an increase in the discount rate has not increased interest in treasury bills. The Assam Government was obliged to pay a high discount rate for its requirements of Rs. 4 crores. Next week perhaps might witness greater interest in treasuries.

At the auctions of Central Government treasury bills held this week applications were only Rs. 57.25 lakhs against Rs. 70 lakhs on the last occasion. The amount of accepted tenders was only Rs. 47.25 lakhs against Rs. 58 lakhs and the average discount rate was sharply higher at five annas and one pie per cent against four annas for the two previous weeks. The authorities have, however, maintained the offer for the next week at Rs. 4 crores. As treasury bills maturities are Rs. 4 crores per week, till the middle of next month, greater interest might perhaps be taken in the next few weeks. Against the Assam Government's offer of Rs. 4 crores applications were Rs. 4.05 crores. The amount of accepted tenders was Rs. 4 crores with the average discount rate at six annas and seven annas per cent, even higher than the Bengal Government's rate.

The gilt-edged market has been rather quiet during the past week and it is reported that there was considerable selling by speculators. The non-terminable loans have been marked lower, 3½ per cent Paper especially, with the quotation as low as Rs. 102-2 against Rs. 102-15 sometime back. It will be remembered that there was considerable buying by speculators sometime back on the rumours that there might be a redemption of the non-terminable loans. There is, now, however, a feeling that it will be sometime before the conversion of 3½ per cent Paper and 3 per cent Paper is taken on hand. Otherwise, with the success of the 2½ per cent 1950 loan steadier conditions should have been witnessed in the gilt-edged market. Actually, as stated above, quieter conditions have been noticeable in gilt-edged and 2½ per cent 1948-52 is quoting Rs. 100-2.

It is now said that the 2½ per cent loan has not been quite the success as has been made out to be and that the Reserve Bank and Imperial Bank took between them large parcels of the loan. The returns of both the Reserve and Imperial Bank, however, do not show any large increase in investments, the figure in the Banking department in the statement for the week ended July 20 being only slightly higher at Rs. 19.62 crores against Rs. 17.19 crores. The statement for the Imperial Bank shows only a rise of Rs. 9 lakhs in investments to Rs. 148.03 crores. It is not likely that large sales of other securities were effected in the market and that parcels of the New Loan were taken up. It is possible, however, that in the various funds at the disposal of the government there were surplus amounts to be invested.

It appears that the loan has not been quite popular with the Indian joint-stock banks, the new banks especially. As in the case of the 3 per cent First Development Loan, however, it can be expected that interest will revive in the gilt-edged market before long and that once the present speculative position is liquidated values will move higher.

As a result of the changed outlook for gilt-edged the small savings movement might receive considerable encouragement. The National Savings Certificates are very attractive as affording a return of 4-1/6 per cent tax-free. As such a satisfactory yield is not available even on first class industrials the small investor would naturally prefer the assurance regarding safety of capital in investments in National Savings Certificates.

The returns of the Reserve Bank for the week ended July 20, 1945 do not show any important changes in the issue department. As the Government has been able to rope in large funds there has been no need for currency expansion. With the return of rupee coin the total of notes issued is slightly higher at Rs. 1,152.15 crores against Rs. 1,151.48 crores. There is a sharp decline in notes in circulation to Rs. 1,135.28 crores from Rs. 1,140.69 crores. Notes held in the Banking department as a result are higher at Rs. 16.86 crores against Rs. 10.79 crores. Rupee coin were Rs. 15.57 crores against Rs. 14.89 crores.

In the Banking department government balances have recorded a jump for the second week in succession. The figure at Rs. 321.03 is perhaps the highest ever recorded. The jump by nearly Rs. 44 crores in two weeks is mainly due to the receipts on account of the 3 per cent First Development Loan and 2½ per cent short-dated loan. The rise of nearly Rs. 3 crores in other Government accounts, must be due to the sales of treasury bills. There is no large decline in bank balances with the Reserve Bank, the latest figure being Rs. 68.60 crores against Rs. 72.39 crores. Sterling balances are Rs. 9.4 crores higher at Rs. 412.38 crores. War expenditure must be rather appreciable even at the present moment as the adverse balance

Dr. M. M. CHATTERJEE, Managing Director.

THE BANK MANAGER SAYS...

"So you bought a nice little plot of land with half your savings and with the rest cloth, jewellery and other odds and ends.... Yes, prices were going up then and you thought you would make easy money by selling at higher prices. Well, the prices did not go up but went down instead and now you have lost a lot of money. I had warned you at the time."

Being a well-informed and a competent business man, the Bank Manager's advice to his client had been to avoid unsafe and speculative investments because their prices were high and the trend of prices was downwards and not upwards. His advice today is the same. Why not ask your own Bank Manager?

**PLAN TODAY FOR TOMORROW
SAVE ALL YOU CAN**

But remember to invest your Savings where they will be safe, and waiting for you when you need them.

Today's best and safest investments are National Savings Certificates, Savings Bank Accounts, Government Loans, Insurance, Co-operative Societies and Post Office Savings Bank Accounts.

Do not invest your money in land, buildings, manufactured goods, commodities or jewellery. Their prices are likely to depreciate.
SAVE SAFELY FOR THE FUTURE.

ISSUED BY THE FINANCE DEPARTMENT, GOVERNMENT OF INDIA.

AAA 151

British Elections

By its decisive verdict in favour of a Labour Government which will be wholly independent of the support of other parties the British electorate has furnished one sure basis for the building up of the post-war period. The American electorate did likewise when it elected Mr. Roosevelt for the fourth term; but Fate has decreed otherwise and the peculiarities of the governance of the U.S.A. serve to perpetuate the uncertainties of Government policy in that country. In Russia stability rests on Stalin, while France lacks both a stable constitution and influence in international affairs. The period following a great world war is always full of uncertainties. The British electorate has reduced them to the extent that stability of the British Government can. The Labour Party's stand on the various questions of national and international importance is so well known that it is possible for the first time after many years to have a glimpse of the main trends of the future. The opportunism of the Conservative, both at home and abroad, have added not a little to the confusion of our time. In its relations with Soviet Russia during the war and both before and after it, in its playing fast and loose with the Atlantic Charter and most of all in the use it made of the Beveridge Plan till it felt strong enough to reduce it to a dead letter, the Conservative Party showed a lack of principle which is particularly provoking in a period of unsettlement like the present. It is true that the Labour Party had its lapses in the past and must be expected to have them in the future. But its position in the future will be so different and the circumstances too so unlike those of the Tories that the Labour Government will have the opportunity to prove itself one of the most powerful and creative forces of our time.

To this uniqueness of opportunity, many other circumstances besides the preponderance of Labour in the new House of Commons will contribute. There is the fact that Britain is the only country among the Great Powers where a Labour Party has gained powers by wholly constitutional methods. When the second Labour Government of Mr. Ramsay MacDonald went out of office on the spurious issue of the safety of the pound, careful observers like Prof. Harold Laski despair of Labour ever being able to win effective power in Britain. The hold of the ruling classes on the Army and the sentiments of the King and the Royal Family, it was thought, would render the Labour Government innocuous, even if it should attain a small majority. But to-day, thanks to the war, Labour has put up a larger number of ex-servicemen as its candidates; and the service votes are believed to have given invaluable support to the Labour Party. The suspicion that the British voter is a Conservative at heart and that the Labour Party can do little to alter his stolid adherence to the traditional ruling classes has been convincingly disproved. In a world in which socialist Governments are either the result of a coup d'état or are confined to small and medium nations, the establishment of a strong Labour Government in Britain by the vote of the people augurs well for the future.

For the power and influence of the new Government will be felt in wide and varied spheres. Besides the familiar division into political and economic, there is the grouping of national, imperial and international problems. In their long lease of power which they extended more than once by tricking the electorate, the Tories had cast their influence on the side of reaction. Faced with the challenge of Fascism they sought precarious shelter under appeasement. They nursed and tended the Axis war-mongers while they neglected the defences of Britain and the Empire alike. For the economic depression they had no better remedy than monopolistic restrictionism. Discontent of subject peoples they met with repression, perfidious reformism and intrigue among the peoples concerned. And even when the war against the Axis was hardly won, there was insidious plotting against a gallant ally. With such a record in the past, they held forth little promise for the future. On the other hand, post-war competition was sought to be given a premature and unhealthy start. The disillusionment of subject and liberated peoples was deepened into despair. And everywhere there was a growing certainty about the third world war.

In such a setting a Labour Government which will be reasonably faithful to its principles and professions can do a world of good. It is no reflection on the international sense of the average Briton that the elections were fought on purely domestic issues. On the other hand, it is an index of the British grasp of realities that the political complexion of the future Government was decided only in reference to domestic problems. For, while the public has a keen sense of the tragic disappointments of ex-servicemen after the last war, it is also aware that the hardships of the people this time have been more severe than before. Housing is itself a prodigious

problem. Adjustment of the national economy to post-war conditions is another. In all these matters, the Conservatives far from reassuring the working classes, actually raised serious apprehensions by their handling of the Beveridge Plan, by premature inauguration of monopolistic schemes and by the relaxation of war-time controls. Their confidence in winning the elections in spite of these issues has proved a costly blunder. The personal prestige of Mr. Churchill on which they chiefly relied, was shattered by Mr. Churchill himself, who, as Prof. Harold Laski pointed out in his article in the "Eastern Express" on the eve of the elections, proved the truth of Dr. Johnson's saying that no man was ever written down except by himself.

The change from a national hero to an ordinary party politician dispelled the magic of his name; and there was nothing thereafter to prevent the voters from recognising the dangers of another lease of power to the Tories and giving Labour a chance at the helm. For, the Labour Party has during the last ten years slowly and painfully risen to the position of the alternative Government which was, indeed, lying vacant since the disruption of the Liberal Party. For the large Conservative majority of the past, the reason is to be found, in the main, in the absence of an alternative Government. The British voter had not learned to look on Labour as such. The war has wrought a vast change in this position. Thanks to the part played by Labour leaders in the Government and by the working classes in the home front and the battle front, Labour is not afraid either of its leadership or of its rank and file.

With a solid and overwhelming majority in the House of Commons and with such a fine record of work in the Coalition Government behind them, Mr. Attlee will form such a striking contrast to Mr. MacDonald. He could embark on policies for which the latter's pusillanimity would not have allowed a moment's consideration. The fact that the Coalition had unanimously accepted many of the schemes of the Labour Party will itself be a great help, since the kind of frantic denunciation with which vested interests usually seek to scotch radical reforms will be more or less ruled out. Nobody can reasonably regard the Beveridge Plan as economically heretical or socially subversive; and the Labour Government will be well within its rights to restore the features which Mr. Churchill and his colleagues had resolved to remove. Likewise, nationalisation projects could be judiciously framed and applied to the industries whose problems are recognised to be insoluble on any other basis. Re-organisation and rationalisation of industries can be taken on hand without the same nervous regard as of old for the various groups of private interests. And the Labour Government can be depended on to regard the maintenance of the standard of living of the people as the acid test of wisdom of every economic policy.

The nature of Britain's national economy, it is well known, requires the careful correlation of national policies to the development in the international sphere. Where the interests of big business would have obligated the Conservative Government to manipulate international understandings to its own special interests, the Labour Government will probably be inclined to adhere more closely to its special economic doctrines. If Mr. Truman has inherited something of his predecessor's crusading zeal for anti-cartel measures, he is sure to find better support from Mr. Attlee than from Mr. Churchill. But the foreign policy of the Labour Government in the economic sphere will take time to evolve. At the moment it is by no means the strong point of Labour; for, Labour's thoughts have been concentrated on internal problems. All the constructive ideas of the Labour Party in the sphere of economic policy have been based on the assumption of Britain's continued ascendancy in foreign markets. It has assumed all along that all that is required for the revival of Britain's export trade is the removal of trade barriers and the restoration of free trade. While this may be true, it overlooks the difficulty of belling the cat. It does not dive sufficiently deep to probe into the reasons of this universal love of protectionism and of the development of indigenous industry. Labour is yet to be brought face to face with the need for a reconsideration of the distribution of productive activity in Britain.

The need to face up to that problem will not be long in coming. The re-distribution of production and of markets which this war will have effected will not take as long to be known as on the occasion of the last war. The conflicts in the international field will be felt in the various organisations that are now being set up to meet different purposes. It remains to be seen whether the Labour Government will throw its weight in favour of a rational reconstruction of national economics with a view to their integration into a world order or whether it will continue to work for British interests narrowly conceived. Much depends on the sequence in which the various problems come up for solution. If political questions like the freedom of India or the cessation of conquered territories to this power or that should have to be decided earlier, then economic pro-

blems may well figure as the result of decisions taken on the political plane.

It would be unfair to cast suspicions on the Labour Government's devotion to its principles. At the moment, it is more important to stress the contribution that it can make to the fund of international goodwill than to the possible occasions for lack of respect for its own professions. For the foremost problem of the world to-day is to prevent another world war; and to the solution of this problem a Labour Government in Britain will have a far bigger contribution to make than any other Government or other factor in the world to-day. To have sterilised the Conservative Party as a source of jingoism and of wars based on class conflict is itself a great contribution. But even more important is the prospect that through its ideological kinship with Soviet Russia and its ethnic and linguistic ties with the U.S.A. the Labour Government may be able to strengthen the chances of a peace that will endure.

Towards Rating Reform

By Prof. L. A. NATESAN

In current discussions on post-war planning, the role of rail transport does not appear to have been given the importance it deserves. This is a mistake because transport affects the economic life of a country at all stages from the field and the mine to the factory and thence to the consuming centres. Of all types of transport for the carriage of freight in India, railways are superior to all other agencies in point of equipment, organization and economy. With the consummation of complete State management under a centralised control their resources are unrivalled. In the context of the post-war economy it is necessary to visualise how this instrument of transportation is to be used to the best national advantage.

The railway rating system has been rightly looked upon by our trade and industry as a vital factor in the economic development of the country. During the inter-war period the incidence of rail freights on trade and industry came under scrutiny. The inadequacy of the rating structure and rating practice was pointed out by authoritative committees and organizations but the steps taken to meet the criticisms were far short of the needs of the case. The number of classes was indeed increased, but the inherent defects of a nineteenth century system were left unremedied. The railway systems have been too individualistic in their rating practice to allow for long leads and traffic flows with the result that except for coal and one or two other commodities, no telescopic scales are quoted for distances exceeding the limits of each railway administration. The existing treatment of the risk rates is another anomaly. It is unnecessary to add to the list. The net effect of all these shortcomings has been to introduce a degree of complexity and friction which makes the trade and industry creak and groan. With the prospect of a return to peacetime conditions in the immediate future, businessmen are entitled to demand a proper solution to these long-standing grievances. The direct State-management of all the principal railways has removed one possible objection, based on the contractual rights of the companies, and has encouraged the expectation of an early overhaul of antiquated procedure.

Railways, it may be assumed, are alive to the demands likely to be made on them. There were references at the last meeting of the India Railway Conference Association to certain proposals for improving the rating system. On such problems as these the Association takes the initiative and introduces the changes. Questions relating to freight rates are of intimate concern to business people and are in other countries discussed in public and the views of railway executives are readily available to those interested. Not only are the trades and industries affected taken into confidence, all changes in the rating practice are further subject to the approval of an impartial tribunal. When any proposal is before the tribunal, the trading public have a right to be heard—a right which they freely exercise. The public in India are treated with scant courtesy. The proceedings of the Indian Railway Conference Association are not open to the public. With the solitary exception of the President's speech which is issued to the press, the deliberations and reports of the Association are not known to any one outside the Association. In no other country in the world is such intense blackouting of proceedings maintained in respect of rates and classification. The position is rendered more anomalous by the fact that there is no independent agency in this country corresponding to the British Rates Tribunal or the American Inter-State Commerce

Commission, to question the adequacy or reasonableness of classification of goods. The Rates Advisory Committee is debarred from entertaining a dispute as to classification.

These features of the railway rating system have not only militated against prompt redress of the traders' grievances; they have made it impossible to effect a timely adaptation of the system to meet the changing needs of Indian business and industry. In fact, the Wedgewood Committee commented pointedly on the feeling of helplessness experienced by trades all over the country.

It is thus clear that Indian Railways will have as their first problem to reorganize the existing machinery to make possible a regime of active co-operation with the economic interests in the country. Before embarking on this task, it is necessary to define and clarify the precise status and role of the Indian Railway Conference Association. It came into existence at the turn of the present century not only to provide a meeting ground for the different railways to discuss inter-railway problems, but also to safeguard the interests of companies against too much interference from Government. The companies at the time had the majority of votes, but all decisions on important matters required the approval of Government. This, of course, is not likely to be withheld, if the companies are agreed among themselves. With the transfer of the company-managed railways to the State, there is no longer need for a safeguard of this kind. General Managers of State-managed Railways cannot pretend to have an interest to protect such as the Agent of a Company-managed Railway did have in the past. Consequently, the existence of the Indian Railway Conference Association has now become anachronistic.

This is not to say that the work of the Association should be discontinued. In the course of well-nigh fifty years of its existence, it has developed and perfected a technique and machinery to deal with complex inter-railway problems which it is not now possible to dispense with. But much of it, of an administrative character, can be taken over by the Railway Board. There would still be left the need for a meeting ground for the railways of the Indian States and British India. But the most urgent need is to bridge the gap that now exists between the railways and the trading public. If the constitution of the Association is liberalised to admit representatives of trades associations, it will serve to remove a serious defect in the present system.

The next step is to deal with the revision of the rating system itself. Some of the defects of the present practice have already been referred to. Their effect on industry and business was intensified during the depression in consequence of the relatively higher rate level. War-time inflation and abnormally increased prices combined with the priority controls have produced a situation which has no parallel in peacetime. Although no enhancement in rates comparable to rise of commodity prices was made since 1939 the withdrawal of concessions and slight increases have raised the general level by a substantial margin. According to the Railway Board's annual statistics, the average rate per maund per mile on the Class I Railways during 1939-39 to 1943-44 has increased as shown below, from 2.84 pies to 6.87 pies.

	Pies per mile per md.	
	Class I Rly.	All Railways.
	Per cent.	Per cent.
1938-39	5.84100	5.98100
1939-40	5.84100	5.9399
1940-41	6.11105	6.19103
1941-42	6.07104	6.14104
1942-43	6.56112	6.64111
1942-44	6.87118	6.96116

Expressed as a percentage of 1939-40, there has been an increase of 18 per cent in the average rate. The corresponding figures for the United States discloses over the same period a distinct decrease over the 1939 level. With the recession of price levels in the near future, the return of the rate level, not only to the pre-war figures, but even to lower figures, will be necessary to facilitate the expansion of the industrial activity of the country. The policy required to bring this about will be the most important decision in connection with the planning programmes of the future. There are, of course, other factors, such as the system of classification, structure of fares and cumulative basis of charges which call for no less urgent attention. But the objective of all changes should be to lower the burden of freight on traffic. How this is to be realised raises other problems which the present writer hopes to deal with in a later issue.

OUR LONDON LETTER:

The Press Faces Peace

POST-WAR PLANS OF LONDON PAPERS

MONOPOLY IN TINPLATE

LONDON, July 13.

The future of newspapers and newspaper advertising is much discussed these days. Throughout the war, newspaper circulations and newspaper advertising rates have all gone up but there is nowadays a tendency to discuss whether peacetime conditions are likely to alter these trends in any way.

During the war, circulation of those newspapers which have their circulation figures vouched for by an independent Audit Bureau of Circulations, representing about 34 per cent of the press of Great Britain, was in January 1945, about 23 per cent higher than it was in June 1939; further-more, it was 5 per cent higher than in June, 1944.

A research bureau has recently calculated that the total circulation of morning, evening, Sunday and weekly newspapers in Great Britain has increased from about 45 million copies in the beginning of the war to over 51 million at the end.

This report calculates that advertising rates during this period have risen 46 per cent against the increase of circulation amounting to 13.3 per cent. Some newspapers have doubled their rates. An advertiser, who in 1939 took in ten "national" morning papers published in London advertising space amounting to one inch, single column width, at basic "run-of-the-paper" rates, would have paid £80.

There is no doubt that many advertisers who spent lavishly in peace-time finally decided that these war-time rates are too high and virtually withdrew from the field; it is assumed that the majority will want to return when newspapers are more or less restored to normal size, providing that rates come down a good deal nearer peacetime levels.

A factor most likely to bring them down is the severe degree of competition existing among newspapers; they work closely together on many common problems, but their plans for post-war growth are reportedly full prepared and are based on the strictest competition. For example, the youngest of the London papers, the "Communist Daily Worker", is expanding its plant and physical equipment with an eye fixed on a circulation of 1,000,000; membership of the Communist Party itself seems frozen around 50,000 and the burden of this large circulation will presumably fall largely on them.

Thus far the Paper Controller has given no indication how soon and to what extent additional newsprint can be granted. Printers who need superior type of paper for catalogues of British goods for export seemingly have no difficulty in getting supplies; but domestic catalogues are still banned. In short, so far as reaching the home market is concerned, British manufacturers and distributors are given no encouragement.

Although there is never-ending discussion of "planning" and post-war changes are confidently anticipated, the number of signs suggesting that there will be no fundamental change is strikingly large. Indeed, neutral observers might readily be convinced that, since the second Great War has not actually unseated a single one of the powerful groups which dominated the pre-war pattern of British industry which is being re-organized on restrictive lines exactly parallel to those adopted in the period between the wars and at least during the election campaign, heatedly denounced by politicians from Right to Left.

The new schemes which have been blessed by Dr. Dalton, Labour member who was president of the Board of Trade during the Coalition Government, and by the Trades Union Congress, hand over the entire tinplate industry to close monopoly with power to deny to new-comers the privilege of entering the industry and with no body representing consumers to see that the monopoly does not exact too high a price.

Under this "Tin-plate Redundancy Scheme" a number of obsolete mills will be closed down, owners receiving a sum of £7,500 for each mill. When all such mills are closed, the industry's capacity will have been cut by one-third, from some 30,000,000 boxes per annum to about 21,000,000 boxes; the latter figure is a shade more than the maximum annual production during the period 1928-30. Richard Thomas and Baldwins and five other producers, which together command 80 per cent of the total capacity, will each close down 30 per cent of their capacity, while remaining twenty odd small concerns will collectively reduce their combined capacity by 30 per cent. The six larger mills have waived almost all compensation due

to them for mills closed down and the total cost of the scheme will be around £480,000, to be raised by levy amounting to 6d. per box per annum exacted retrospectively from the manufacturers for the period between April, 1943 and April, 1945. Additional sums are to be found for compensation for elderly workers who will be displaced by the scheme.

The financial press understands that the Board of Trade has not any time complained about the principle of the scheme, but pressed for iron-clad assurances that the new monopoly has definite plans for future re-equipment. Not until it was satisfied on this point, did the Board of Trade bless the enterprise.

Theoretically, under the canons of "free-enterprise," Richard Thomas & Company should have been allowed to utilize its new American-type continuous strip mill to produce steel sheets at prices far lower than its rivals with their obsolete old-style mills, driving the latter into bankruptcy. But the rivals have no relish for bankruptcy and with the help of the Bank of England and big joint-stock banks seized control of Richard Thomas & Company and forcibly merged it with Baldwins under new name, Richard Thomas & Baldwins, Ltd. When that was accomplished, the new tinplate redundancy scheme followed logically enough.

The London Metal Exchange is hopeful that the Government will free a large part of the current trade in nonferrous metals and permit re-opening the Metal Exchange. It is believed that tin will continue to be controlled as to price and distribution; but dealers are hopeful again in building up big international business in copper, and later in lead and zinc.

However this General Election may result, it will be interesting to examine the results as affected by the broadest single economic factor visible, namely, what the war has done in the redistribution of the National income.

London and Cambridge Economic Service, founded many years ago by J. M. Keynes and others, makes an interesting attempt in its April issue to break down the White Paper figures on National income in wartime to show more plainly just what changes have taken place.

Briefly, they estimate that during the year 1938 income from rent and profits amounted to 31 per cent of National Income, rising to 36 per cent in 1944. The salaried classes took 27 per cent in 1938 but only 22 per cent in 1944. Wage-earners took the same proportion, in both the years—42 per cent, both in 1938 and 1944.

It is any man's guess how these seven years have affected the salaried and wage-earning classes, but the election experts of all parties will assuredly spend some days, if not weeks, in attempting to assess how these clearly marked classes voted.

Another very important factor which will certainly be studied is the woman's vote. Total figures for the electorate are not available owing to tardiness with which the register is compiled but it is probable that the total would show, as in the past general elections, that throughout the country as a whole women voters outnumber men by some 10 per cent.

Although the future of Lancashire cotton industry is still obscure in good many respects, the cotton industry is doing remarkable job of educating British public to its wartime achievements, in the hope that public opinion will support whatever government measures may be decided upon. This educational activity started in the mills of Lancashire and Yorkshire where there have been some 800 lectures and demonstrations; these have been repeated in the cotton towns and in good many schools as part of the industry's frantic efforts to attract the youthful entrants into industry. Now these lecture-demonstrations are going still further a-field.

One of the novelties which attracts attention is the cotton "exposure suit" for aviators who accompany convoy ships to Arctic-bound port of Murmansk. These suits are not only wind-proof but chill and water-proof. Normally an aviator who is forced to bale out over icy waters in the North Sea would die in icy waters in about five minutes; with this cotton suit on, he could live at least one hour, perhaps even an hour and a half, thus multiplying enormously his chances of being rescued. The cotton trade believes that this has peacetime possibilities. Other novelties being shown, are "rain-catchers" for life-boats and rafts; remarkable fire-proof and electrically heated suit which can be stripped off in one second; bullet-proof waistcoats other than fabric armour; light cotton dinghies for fighter planes; electrically heated "casualty bags" in which wounded men can be placed.

It has been reported here that owing to world shortage of flax, the U. S. Navy turned to cotton and produced some remarkable specimens of cotton rope and twine with tensile strength superior to manila in case of ropes and superior to linen in case of threads and twine. There are also other naval gadgets made wholly of cotton but not much has been reported here regarding them as yet.

However, the moral of all this is that cotton has nothing to fear from other natural fibres and probably very little to fear

Our American Letter

Promotion of International Trade

Sterling Bloc A Stumbling Block

WASHINGTON, July 6.

A large segment of American business and government is making ever-greater efforts to "crack" Britain's \$16,000 millions sterling bloc. Some of the efforts appear sympathetically aimed to "help put Britain back on her feet" and promote freer world trade. Other pressure seems to have the sole motive of capturing a larger share of world markets for American goods.

Lack of dollars is the complaint of almost every U. S. visitor from countries within the sterling bloc. As Ardeshir D. Shroff of the Tata enterprises told a business group here, "We are like the man with a million dollars in the bank, but no change in his pocket to pay the taxi fare."

Despite the vast home market accumulated for American producers during war-time shortages, many manufacturers are anxious at the same time to "get in on the ground floor" of post-war markets—if they can see how they are going to be paid.

Almost all suggestions here for overcoming the obstacles of blocked sterling involve extension of American credits in various forms—private or government loans, either direct to Britain or to other countries within the bloc, and either to the governments of those countries or to private industries of those countries.

What will finally evolve depends, of course, on high-level discussions understood to be already under way informally between Washington and London. G. D. Birla predicted to a New York meeting that India with its huge holdings of blocked sterling, and with a splendid record of contribution to the war effort, will demand a share of the benefits if American loans are extended to Britain. It is presumed here other countries within the bloc take a similar view.

British sources here report that one banker after another, without being asked, has proposed American loans to Britain of up to \$5,000 millions. It is presumed these would be private loans guaranteed by the U. S. Government. But these sources insist Britain has never asked for any loans and think the British Government is extremely anxious to avoid incurring any further dollar obligations.

British informants here said instead of increasing her dollar debts Britain wants to solve the problem by expanding her export trade. American businessmen think if this is the official view it promises to be a source of friction with business interests within the bloc.

In this connection, one member of the Indian Industrial Mission who came to the United States from England related his difficulties in seeking textile machinery and other goods from the United Kingdom. "We found English factories booked for as much as two years in advance," he said, "with orders for Russia and other countries. They could not even quote firm prices to us with our blocked sterling. Although without dollars, we turn to America in hope of making some kind of arrangements to get goods we urgently need."

Considerable interest is felt here in a proposal made recently before the Senate Banking Committee. This would involve transactions which in effect would not be loans but a "grant-in-aid" to Britain somewhat similar to the outright Canadian gift of \$1,000 millions to Britain in 1942.

Allen Sproul, President of the Federal Reserve Bank of New York, told the Committee that Britain must be put back on her financial feet. Bretton Woods cannot do the job, he said, and Britain will be forced into further bilateral agreements unless she gets post-war credit.

John Williams, Vice-President of the same bank, went further and recommended at least \$3,000 millions in loans "which should be as near a gift to Britain as we can make it. . . . In exchange Britain should agree to give up restrictive trade measures."

Financial experts here see considerable merit in Williams' proposal as a sort of financial extension of Lend-Lease. They wonder, however, if it is politically feasible. They cite two factors which might prevent such arrangement:

- (1) Whether American voters would realize the tangible benefits for them if Britain responded to such a "grant-in-aid" by abandoning Imperial preferences, bilateral trade agreements and other emergency measures.

- (2) Whether Britain would be willing to abandon these admittedly restrictive measures immediately. There would certainly be great Congressional opposition to "giving away three billions dollars" unless immediate reciprocal benefits were in prospect.

How much concern there is among American businessmen over the situation was shown at a recent foreign trade forum sponsored by the International Trade Section of the New York Board of Trade.

The forum heard American exporters' charge that American products are barred not only from India and the British possessions but also from such countries as Turkey, Egypt, Iceland and Netherlands West Indies. The forum appointed a committee of seven to take the matter up with the State Department.

One exporter at the forum claimed information that the Egyptian Trade Mission in the United States had been informed by the State Department that Egypt could not purchase in this country any product which can be obtained within the sterling bloc.

Another trade advanced the opinion that Great Britain's foreign assets, particularly in the United States, are much more intact than is commonly believed—thus Britain could, if she desired, provide more dollar exchanges to her dominions and dependencies.

The New York Journal of Commerce published early this month a survey of American export leaders who were virtually unanimous in desiring discontinuance of pooling of dollar earnings of Middle East countries in London under the present system of exchange control.

"The immediate effect of British withdrawing of dollar pool support for those countries may well be a decline in American exports," the Journal Survey said. "However, those who have made a careful survey of the situation believe temporary reduction in volume should be preferred to continued British exchange control."

"The full potentialities of American Middle East trade can only be realized, traders add, if commerce is built on a sound basis and not tied in with a system under which the dollars go into a common pool and allocations are made by Britain to the individual countries."

"A financial expert . . . declared it is most unlikely Britain can work off these (blocked) balances at a rate in excess of \$300 millions per year."

The Alexander Hamilton Institute's publications "Business Conditions Weekly" praises the work of Sir A. Ramaswami Mudaliar and his committee in formulating the Economic and Social Council, and adds:

"Certainly one of the causes of war has been economic pressure leading nations to indulge in imperialistic adventures as a means of relieving domestic distress. If the new Council can head off such adventures in imperialism through the promotion of economic co-operation it will contribute greatly to the prevention of another war. Moreover, the aims and powers of the new Council are broad enough to enable it to curb social as well as economic causes of war. . . . If the Charter had been in effect when Germany began its anti-Semitic program, the United Nations could have taken appropriate action as soon as that program began to force emigration of refugees to other countries."

"Some observers think Great Britain may ask the Council to find a solution to the Zionist demand for a national home in Palestine. Tariffs, trade preference agreements, quotas, exchange controls and other barriers to international trade will undoubtedly receive the Council's attention. Most critical of all will be the questions relating to production and distribution of commodities necessary for every nation's advancement, such as tin, rubber, sugar, petroleum, wheat and cotton. The world's hope for permanent peace may well rest upon how effectively the economic and social council can secure co-operation from the nations in bringing about a just distribution of this planet's material resources."

(Continued from previous page)

from artificial fibres provided the cotton industry supports research work and is open to the impact of new ideas.

The Stock markets are not too happy these days. There is steady pressure of new money seeking investment in market which is bare of stock which tends to lift prices. Against this upward tendency is the discreet selling due to the uncertainty regarding the political situation. Since sellers are not always in the same sections of the market where buyers are looking for stock, there are movements both up and down which in the jargon of stock exchange, "do not make sense."

Editorial Notes

Future of Cottage Industries:

Small scale industries in India are mostly carried on in cottage as handicrafts and the great bulk of industrial production in this country is still of this category. Of the 15 million people classified as industrial workers only about 1½ million were employed in factories. The largest of the small scale industries was the handloom weaving which gives full or part-time employment to about 6 million persons and supports nearly 10 million people. Next come various handicrafts working up metal, wood or stone and others engaged in processing agricultural products and those who produce artistic wares and other ordinary articles of consumption. The total production coming from our small scale industries is not so large as indicated by the numbers employed. But that is not the criterion to judge whether they should survive or not.

Most of the cottage industries are in a state of decay. The production per worker has gone down and most of the workers are unemployed wholly or partly. The reasons for the decline of cottage industries are not far to see. Not only imports but internal factory-made goods have contributed to the decline. In the case of artistic products the real cause of decline is not machine competition but the loss of patronage from the better classes in India, largely due to the change of fashion.

There can be no two opinions about one thing—that cottage industries should thrive in this country. We cannot afford to throw away the employment now given by small scale industries to 15 million people. However much India may be industrialised, it cannot be industrialized in the sense in which England is. It should have a balance between agriculture and industry. Small industries offering work and income to agriculturists in their spare time, cannot be dispensed with easily. The aesthetic claims of handicrafts are even more formidable.

The Bombay Plan has made a special plea for small industries as a means of affording employment. The preservation of cottage industries can be achieved only by making handicrafts efficient. Cottage production can be made much more efficient by the use of electricity, as has been done in many European countries and in Japan. Steps should be taken to safeguard cottage industries against machine competition by marking out definite spheres for each. In general it may be best for cottage industries to stick to products which call for variety and distinctiveness rather than produce ordinary consumption goods. The weakness of cottage workers is due to the high cost of raw materials and poor marketing methods. The State may help a great deal in this direction. Cottage industries should survive, as Dr. P. J. Thomas said recently in a radio talk, but not as a relic of primitive economy, as a symbol of sweating and low living standards.

Plan for British Steel Industry:

Reconversion in Britain seems to be going on with greater speed than in U.S.A. and the British Steel industry is busy preparing a post-war plan to rebuild and reorganise so as to face the severe competition likely to arise after the war. Sir John Duncanson, Commercial and Technical Director of the British Iron and Steel Federa-

tion, has announced a five-year plan involving an expenditure of over £120 million (or about Rs. 160 crores) Plans are being studied for constructing new coke ovens to produce 2.5 million tons of coke for the use of steelworks. There are 98 blast furnaces now working in Britain and 19 more at a cost of £19 million will be erected. £20 million are allotted for new melting shops and £33 million for replacement and reconstruction of rolling mills and a new continuous hot strip mill in South Wales. It is also proposed to replace or rebuild one-third of the existing blast furnaces. The total ingot production in Great Britain is sought to be raised by 20 per cent.

Britain's need to prepare for a strong drive for exports is felt by all the British industries and for sometime past the urge for greater efficiency and expansion has led to heated controversy on the question of nationalisation or rationalisation of the Steel Industry. The Iron and Steel Trades Confederation has been insisting on increasing the output of British steel at an early date. Its manifesto states "We have urged that if the number of workpeople at present dependent on the industry for a livelihood is to be assured of continuous employment and an increasing standard of life in the future, an output of between 18 and 20 million tons will be necessary." It goes so far as to recommend the replacement of imported iron and steel products by home-produced materials amounting at least to 2 million tons per annum. The cry for nationalisation has not yet subsided and the British public are reminded that the prewar cost of production of the British steel industry compared unfavourably with the steel industries of U.S., Germany, France, Belgium, Luxemburg and India. The Government alone can find the money for the ambitious plans of the industry. Whether the State takes over the British industry or not the need for expansion and rationalisation has not been doubted.

Vegetable Ghee Factories:

The full details of the distribution of the location of vegetable ghee factories in the immediate future are now available. The 10,500 tons production in Bombay will be shared between two factories, one in Bombay Extension, producing 7,500 tons and the other at Amalnar, with a capacity of 3,000 tons. Only one factory is mentioned for Behar which is to be located at Dinapore. Behar is allotted an annual output of 7,500 tons. Bengal gets a quota of 15,000 tons and four firms have been given permission to start factories; the information about their location is not fully available. C. P. will have a 7,500 ton factory at Wardha and the 21,000 tons of Madras will be equally distributed among the seven plants in Chittoor, Katpadi, Guntur, Hospet, Madras city, Cuddalore and Vizianagaram. Besides these, seven plants have also been allotted to Indian States. The original all-India target production figure was an additional 1,05,000 tons by the middle of 1946, but it appears that only 70,000 tons production is now feasible. Fresh sanctions for starting factories will probably be issued by a Committee which the Government of India are contemplating for the purpose.

Telephone Manufacture in India:

Modern means of communication have annihilated distance and space. In this achievement the part that Telephone has played is not small. Even in India telephones are being used more and more extensively. But Indians are mere users of

backed by INDIA'S WEALTH

Over Rs. 112 Crores were invested in less than eleven months in the First 3% Victory Loan (1957) withdrawn during February 1945.

The investment of so large a sum in so short a time was proof of the First Loan's soundness and the public's confidence in Government Loans. The 3% Second Victory Loan offers you the same excellent terms—half-yearly dividend less Income Tax sent to your address, guaranteed repayment at par not earlier than 15th August 1959 and not later than 15th August 1961, no limit to the amount purchasable, security of your capital, ready salability in the market at any time, and refund of Income-Tax if you are not liable to it or liable at a lower rate. Investment in the 3% Victory Loan assists the war effort and helps to counter inflation. It keeps your savings safe from depreciation and gives you a handsome return year by year.

To buy this Loan, apply to your Bankers, or to the Reserve Bank of India at Bombay, Calcutta, Madras, Delhi, Cawnpore or to the Branches of the Imperial Bank of India in other places or to any Government Treasury

telephone, not makers, even though the telephone has been in use in India for some decades now. With the advent of the war and India being in a strategical position as an important base for the Pacific War and the development of trade and industry, the need for rapid communication has become insistent and there is an immense demand for telephone connections. The growth of tele-communications in India has been remarkable during the last two years; the country has spent 16 crores on the extension and development of the telephone and the telegraph. The number of circuits in the principal towns has been quadrupled. Some 1,23,000 miles long distance wire and 1,50,000 miles of local circuit have been added to the existing mileage giving Indian tele-communications a total wire mileage of 7,87,000 far in excess of any other Asiatic country. But this hardly touches the fringe of the requirements of this country. It is hoped that after the war, the industrialisation of the country will bring in enormous developments of tele-communications.

The construction and installation of tele-phones in this country has so far been controlled either by certain foreign interests or by Government Departments like the Posts and Telegraphs which use standard material manufactured in the United Kingdom. And during the war, the import of tele-communications material is held as a monopoly by a small group of British concerns. Before the present war the manufacture of telephones, switchboards and certain types of spare parts was started in Bombay by the Super Services (India). This company has put up a number of installations all over the country. This is probably the first purely Indian pioneering venture. Though the company has made rapid progress its future depends upon the support it receives from the Government of India. A variety of tele-communications material can be and is fabricated in India; and it is possible that everything that is necessary for complete installations of various systems will be made in India. But the foreign interests which have a monopoly of importing finished goods because of the exigencies of the war enjoy indirect protection from the Government and are in a position to harm the indigenous industry by refusing supplies of the necessary supplementary parts which cannot, as things stand at present, be made in India. Unless the Government of India exercise control over the activities of these foreign interests, the future of the indigenous industry, as Mr. J. M. Rajput points out in an article in the *Free Press Journal*, is very gloomy.

Transport Combines:

The Governments of Madras and Bombay are haying under consideration schemes for starting transport combines with a view to making bus services most economical and satisfactory. According to an order issued by the Madras Government, the formation of transport Companies owning at least twenty buses, and having facilities for repair and maintenance absorbing or amalgamating the smaller operating agencies that now exist is made an essential condition for the issue or renewal of permits beyond 1945. In Madras, the policy of voluntary amalgamation was tried but it did not bear any great result; and hence the Government have felt compelled to enforce action. For buses that may have to change hands in the process, the Provincial Motor Transport Controller will fix a fair price which will cover its goodwill also. If prospective sellers demand unfair prices, their permits will be cancelled under appropriate sections of the Defence of India Rules. In

order to ensure that no monopolies emerge, the Government have decided to withdraw the power to sanction the transfer of permits from the Road Traffic Boards and vest it in the Central Road Traffic Board.

In Bombay, a temporary Railway Relief Scheme has already been started between Poona and Ahmednagar and Poona and Bombay for transport of goods. Under the permanent Rail Road co-ordination scheme, it is proposed to divide the Province into 11 zones, each zone to be operated by a limited Company, in which all the existing operators are given the option to join. From a Press note, it is seen that the constitution and the management of the Company will be such that neither the Provincial Government nor the Railway will be in a position to acquire an overwhelming authority to the detriment of the interests of the private shareholders.

The Bombay Branch of the Indian Roads and Transport Development Association has offered a few suggestions to improve the scheme and give the present operators a large share in the total capital of the Companies than now allotted. The absence of any provision for goodwill in the fixing of compensation for operators is also an important omission which they have pointed out.

Indo-Canadian Trade:

The balance of trade between India and Canada, which before the war invariably and largely in favour of India has rapidly risen since 1941 and the ratio between imports and exports during 1944 was 1 to 7. The total value of Canadian exports to India, has rapidly increased since 1941. In 1944 it amounted to almost 87 times the corresponding figure in 1937. The value of import from India has increased only to a very small extent, the total during 1944 being only 3½ times that recorded during 1938. Canada's present exports to India are swollen with shipments of war materials. The Canadian Minister for Trade and Commerce estimates that 75 to 80 per cent or even more of Canada's exports are war materials. This might be slightly more than what it is. But still the balance of 20 per cent that may come under the category of "regular peace time export" will still amount to a great deal more than what was ever shipped to India. An examination of the items entering into Canada's exports will show that some may very well become regular peacetime exports. In the post-war period with industrial development India may buy from Canada not only increasing quantities of consumers goods but also machinery, plant, factory equipment and similar items.

What are the Indian goods that will be imported into Canada in the post-war period?

The nature of the imports of Indian goods into Canada is not likely to be the same in post-war period as it is in the war period. Manganese and chrome ore have been increasingly exported to Canada during the war. Canada might be willing to import these in the post-war period also. But it is for India to decide how far it is profitable to export ores to other countries. The suggestion is also made that India might replace atleast a part of the prewar imports from Japan into Canada. Whether it is necessary and desirable, it is for the future government to decide. During 1944 there were trade enquiries from Canadian business firms for several Indian products. Cane and rattan, carpets and rugs, coirmats, foodstuffs, vegetable oils, lac, textiles and leather are some of the goods which Canada requires. The Tata Birla Mission, Sir

Ardeshir Dalal is reported to have said in Ottawa, will be visiting Canada shortly. And thanks to the Mission's negotiations Canada might get from India tea, jute, textiles and such other goods in exchange for machinery plant etc. If it is mutually profitable there is doubtless a good future for Indo-Canadian trade.

Full Employment Plan For Australia:

A White Paper issued by the Government of Australia on problems relating to post-war development holds out full employment for all her citizens as a fundamental aim of her future policy. The White Paper recognises that the two serious threats to full employment are the instability of private capital expenditure inside the State and that of overseas expenditure on exportable Australian goods and services. Neither can be completely stabilised, but it is possible to counteract fluctuations in either spheres by internal and international adjustments. A decline in private spending could be compensated by Government filling up the gap and this Australia proposes to do through an adjustable policy in respect of housing, slum clearance, community centres, hospitals, libraries, roads, railway bridges, harbours, aerodromes, power undertakings, irrigation, afforestation water conservation and reclamation. To minimise fluctuations in the value of Australian exports, the Government propose to seek agreements now with other nations, particularly major industrial countries by which they undertake to do all in their power to maintain employment within their own territory and thus expand the demand for goods that enter into international trade; to enter into international arrangements by which fluctuations in the price of foodstuffs and raw materials could be kept at a minimum, to develop and diversify her export markets and to stimulate internal expenditure in sympathy with changes in export.

Switch-over to Civilian Production:

Several circumstances tend to point out that the switch-over from war to civilian production in India has already begun in many spheres. The shortage of coal which was one of the main handicaps with many industries is gradually becoming less and less acute, thanks to the efforts of Sir Akbar Hydari, the coal position in respect of at least the paper and cotton textile industries has appreciably improved, of late. The Cement and steel production for civilian use has exceeded 1944 quantities. Army's requirements for leather goods and textiles are being progressively reduced from time to time, and virtually the whole of the silk industry, hitherto catering to parachute demands has been converted back to civilian production. The Government have also decided to make available to civil population woollen goods in quantity at least as much as was available in 1939. A distinct improvement in the supply and a substantial reduction in the price of drugs is also noticeable. While internal production is thus gradually switched on to a peace basis the possibility of a regular and all-round expansion of imports is also bound to assist the position further. It is however doubtful in view of authoritative statements indicating Government policy on the subject, whether a parallel decline in prices will also accompany the expansion in the volume of civilian consumption goods.

Indian Goods for Mid-East:

The Middle East, according to the Indian Government Trade Commissioner in Alexandria, "should provide a good market for Indian piecegoods, now that Japan's competition is likely to be eliminated for some years.

In view of the introduction of a great variety of Indian piecegoods, whose quality and workmanship have been well commented upon, we might hope that a portion of the Indian trade in piecegoods will continue after the war. To bring this about, concentrated action is necessary to see that Indian goods are supplied according to samples and specifications and manufacturers pay special attention to create a good name for themselves."

The varieties of cotton textiles which will find, according to his report, a good market

in the Middle East countries are grey goods, such as sheetings, grey printed, grey mulls, grey voiles and other grey fancy goods, dyed satin and red veil; yarn dyed goods such as striped poplin and striped shirting and white shirting and white mulls.

Discussing the export prospects of different Indian commodities to the Middle East countries, the report concludes that the trade in jute manufactures has well developed and, as India has a virtual monopoly, we may expect it to continue.

ALL HANDS ON DECK!

Convalescent troops on the garden-lake of Mayurbhanj Palace.

Sick and wounded men of India's Navy, Army and Air Force enjoy their own manoeuvres in a Rajah's beautiful garden. This is one of the means by which the Indian Red Cross helps the men to regain their mental and physical strength in the weary weeks after they leave hospital and before they are fit enough to visit their homes.

Boating doesn't occupy all the time—nor do all convalescent Depots have such ample facilities for the men to entertain themselves. Books must be provided, cinema shows and other outside parties arranged; games and musical instruments supplied by the Indian Red Cross. This work calls for an organisation with human sympathy far beyond the scope of any official service. Therefore it needs private money; but who would not spend freely for the happiness of those who have kept us safe?

Please send your contributions to the Hon.
Treasurer, Indian Red Cross Appeal (Bengal),
Government House, Calcutta.

INDIAN RED CROSS

RE-INVEST IN KINDNESS

Space given by the Imperial Bank of India.

(Continued from page 134).

tered throughout the world is advocated by President Truman in a message to the Congress to-day. The Administrator would take the place of the present Surplus Property Board.

U. S. Trade in Middle East:

The formation of a Middle East Committee is announced by the American National Trade Council which represents members of important U. S. business concerns including banking, transport and oil companies. The Committee will analyse commercial conditions and problems prevailing in the Middle East and draw up recommendations concerning American trade policy to be pursued in this area.

Special attention will be given to import and export trade as well as global implications arising from natural resources, communication and transportation.

Currency and exchange positions affecting American business in the Middle East are also under primary consideration.

U. S. Firms to Erect Oil Refineries in London:

The Socony Vacuum Oil Company and the Standard Oil Company, New Jersey, have been granted permission by the Lebanese Government to erect a refinery each in Tripoli about 40 miles north-east of Beirut. There are no definite plans as to the capacities or when the refineries will be built.

The permission is in the form of an option to build when the companies deem it advisable. When actual construction is undertaken, the agreements provide that Lebanese labour must be employed except in highly technical capacities.

Britain to Export Cars to Mexico:

British car agencies announce that they will soon export cars to Mexico, the United States and other countries.

The Mexican Chamber of Commerce reports that the United States will not export cars to Mexico until March 1946.

750,000 Tons of Burma Rice:

Rice has disappeared from the shops of Britain and the slight stocks available are being used up by hospitals and the Services. Indian and Chinese restaurants are using boiled barley instead.

Overrunning by the Japanese of Burma, Siam and Indo-China, cut off nearly all the world's supplies. Before the war, Burma exported 3,000,000 tons of rice annually. Now that Burma has been largely liberated, 750,000 tons are available for export, but a shortage of bags and shipping is making it difficult to move this small quantity.

When it can be shipped abroad, the United Nations Combined Food Board will decide on its distribution.

Food Drive Grants:

In furtherance of their food production campaign, the Government of India have sanctioned Rs. 1,20,642 for 1945-46 and another grant of Rs. 1,13,525 during 1946-47, to meet half the cost of the scheme for multiplication of improved paddy seeds in Bihar.

Rationing to Continue After the War:

"Food control and rationing in India will have to continue for three to five years, after the war," said Mr. Kirby, Rationing Adviser to the Government of India, in an interview. "This, however, does not mean that there is

no scope for increasing the basic rations", he added.

Development of Silk Industry in Bengal:

The Government of Bengal, it is understood, have appointed Mr. C. H. Gordon, I.C.S., formerly District Magistrate of Maldah as Special Officer for Silk with a view to examining the possibilities of reorganizing and reviewing the silk industry in Bengal, as part of the post-war reconstruction plan.

Lac Cess Committee:

The Indian Lac Cess Committee which has just concluded its session in Calcutta, decided, in view of the present unsatisfactory position of the Committee's finances, to suspend for two years the research activities of the Committee's London Shellac Research Bureau and to attach an information officer to the office of the High Commissioner for India in London to maintain contact with consumers of lac in Britain and other European countries.

The Committee's meeting was preceded by a session of its advisory board.

Sind's Surplus Wheat:

"A conservative estimate shows that Sind will have a surplus of 4 lakh maunds of wheat even after it has met all its requirements till the end of April, 1946", said Mr. B. R. Patel, Director of Civil Supplies.

Madras Introduces Anti-Begging Law:

To prevent begging in public places or anywhere in the province of Madras, the local Government have enacted a legislation with the assent of the Governor-General.

Power is taken under the act to arrest beggars wherever they are found in the presidency and commit them to work houses or special homes.

Specific provision has been made in the act to prevent begging in railway carriages or premises of a railway station.

The act will be enforced in any area from such date as may be notified by the local Government.

Rowlands Report to be Reviewed:

Mr. A. E. Porter, I.C.S., formerly Secretary to His Excellency the Governor has been appointed on return from leave as Special Officer to examine the Rowlands Report from the Government point of view. It is understood that the main object of his review of the report will be to find out how and when recommendations of the Rowlands Committee can be implemented.

Ethyl Alcohol from Sawdust:

The first commercial plant in the U. S. for the production of ethyl alcohol from sawdust is nearly completed at Eugene, Oregon, and it is expected that it will be in operation very shortly.

Although this is the first plant in the United States, the Germans founded their whole war economy on that industry. Japan and Italy also used the German method.

The new plant is one of the largest in the world and will cost the sponsoring company more than \$2,000,000. To start with, it will produce 10,000 gallons of ethyl alcohol a day from 200 tons of sawdust, but the plant has been so designed that expansion is easy.

Up to now, most of the U. S. alcohol had been produced from blackstrap imported from the Caribbean. The existing production facilities were strained to breaking point by the increased war demands, and the lumber

industry, with vast resources of raw materials at its disposal, saw its opportunity.

A Tribute to Women Workers:

In his speech to the London Rotary Club last February, Sir Miles Thomas, Vice-Chairman of the Nuffield Organisation, paid a warm tribute to the women workers in factories in Britain. He said, "Women as factory workers have been magnificent, and I hope that they will get a square deal from Government at the end of this war. Women came in at a time when things were really very difficult indeed, and, as a man, I have no hesitation in saying that in many respects they helped to build up the moral fibre of the factory community. They were cheerful, adaptable and keen to get on with the job."

"Women's advent into the factories, too has taught our planning engineers a great deal about the way in which complicated operations can be broken down into their simple constituent parts. This experience would help us build up manufacturing organisations in the Empire and provide gainful employment for unskilled labour which is fairly abundant there."

Telephones for Civilian Use:

In about six months' time, more telephones may be made available for civilian use. In course of a communication to the Marwari Chamber of Commerce, the authorities have informed that with the telephones released from A. R. P. establishments, connections are being given to those whose telephones were requisitioned.

Soviet Motor Industry:

The Soviet news agency reports that the Soviet Union is preparing to carry out a large-scale expansion programme of the motor industry.

Expansion of the Moscow, Gorky, Minsk and Yaroslavl automobile plants has already begun and new plants are under construction in Dnepropetrovsk, the site of the great dam and several other cities of the U.S.S.R.

New Industries in Kapurthala:

An important step in the industrialisation of Kapurthala State might be said to have been taken with the starting of the Jagatjit Distillery and Allied Industries Limited and Jagatjit Chemical and Pharmaceutical Works. The credit for starting these industries is due to its Managing Director Mr. L. P. Jaiswal. These enterprises will be brought into operation in October this year. Many more industries, Mr. Jaiswal hopes to start in the wake of these.

BOOK REVIEWS

Economic Development of India by Dr. Ihsan Muhammad Khan: Published by Bhagwati Narain for Premier Book Depot, Rampur State, pp. 107. Price Rs. 2-8.

To the spate of books on Postwar Planning with which the market is being flooded of late, one more has been added. In his book on Economic Development of India, Dr. Ihsan Muhammad Khan puts forward a ten-year plan costing Rs. 6,200 crores and divided into five-year periods. In introducing the Plan he puts the Bombay Industrialists Plan and the People's Plan to a searching criticism and tries to expose the weak points of both. Many social and economic institutions now obtained in India also come in for the authors' comments. Certain observations in the book are noteworthy in so far as they indicate the emphasis placed on possible political developments in their bearing on economic planning. "It will not be wrong to presume", he says, "that the Central Government will act as the friend, philosopher and guide to the autonomous Provinces and States and help them to evolve their provincial programmes which without overlapping the programme of the Central Government would supplement it. The trend of political events and parties compels us to assume that Provinces will acquire the right of self-determination and that the influence of the future Central Government, far from being dictatorial, will be friendly, constructive and co-ordinating"—there is a commendable sense of restraint running through these lines, but the implications cannot be missed. On many

aspects of reconstruction, Dr. Khan has bestowed detailed attention and given suggestions worth considering.

Manufacture of Lead and Slate Pencils by N. N. Godbole: Published by Benares Hindu University, pp. 40. Price Rs. 4.

Mr. Godbole's book on the manufacture of Lead and Slate Pencils is a revised compilation of four articles published in the Quarterly Journal of the Sarojanik Sabha, Poona in the years 1916-17. It is an elaborate survey of the present position and future prospects of the pencil industry in India and much valuable data is given as for example on the adequacy, location and methods of the use of different raw materials necessary for the industry. The book shows evidence not only of vast experience in the field but considerable original research. That there is ample scope for expansion of the pencil industry in India will easily be seen, even without the aid of the circuitous logic which the author employs for the purpose. Among the many suggestions made in the books, two deserve mention; namely a plea for a policy of regeneration of forests by a scheme of plantations on a rotation system and to look to the economic import of graphite as far as possible than to seek to employ indigenous output, which requires laborious refining.

A Plan for Developing Fisheries in India by E. V. S. Maniam.

While the war has revealed on the one side, the big gaps in Indian economy, it has also induced research and investigations into the

scope and methods of bridging up those gaps. It is now admitted on all hands that the fish industry promises scope for vast and varied developments. Mr. Maniam, in his "Plan for Developing Fisheries in India" surveys the extent and distribution of fish resources in India, suggests methods of improving the varieties, of scientific fish culture and the innumerable industrial uses to which fish can be put. The pamphlet will be of considerable assistance at least as a statistical background, to those who interest themselves in the subject.

Clive Street Gossip

As our readers will recollect, it is my contention that the exercise of the option to purchase the Calcutta Electric Supply Corporation and the Calcutta Tramways Company has been seriously complicated by the way in which the authorities concerned have gone about the business. As a first step, the Bengal Government should have approached the Central Government to treat these two transactions as coming within the scope of the programme of sterling debt repatriation. This straightforward course of action would appear to have been taken as the last step instead of the first step; and the Central Government were approached after much time had been wasted over half-baked schemes and futile negotiations. The Central Government were thus approached in this matter at a time when their enthusiasm for sterling debt repatriation had more or less completely evaporated. In the result, the Central Government turned down the request of the Bengal Government. While this information is available to us on the authority of the "Eastern Express," the public are yet in the dark as to the reasons which led New Delhi to reject Bengal's suggestion summarily. Nor is official confirmation available of the correctness of the information vouchsafed by the "Eastern Express." As the accumulating sterling balances have roused controversy in all circles, the Government of India owe it to the public to explain why this opportunity presented by Bengal's two public utilities has not been pressed into service to provide partial mitigation of the problem.

There is much for which India has to be grateful to Sir Jeremy Raisman with regard to the transformation of India from a debtor country in the international sphere. The measure of this credit has to be gauged from the fact that a similar opportunity in the last war was not utilised for a similar purpose. That sterling obligations for £400 million have been liquidated is a circumstance which is an important landmark in the international financial status of India; and Sir Jeremy has contributed much to make this landmark notable.

To say this does not mean that every detail of the programme of sterling debt repatriation has been carried out on sound lines. Before the war was two months' old, the colossal piling-up of sterling balances was forecast in this column; it was also urged that the logical way of dealing with swelling sterling assets was to utilise them as much as possible and as far as practicable for converting India's sterling obligations into rupee obligations. It was also stressed that, to achieve this purpose, the Government of India would have to secure the good offices of the British Government for the promulgation of the vesting order whereby the sterling obligations could be paid off before the dates of expiry or redemption. This plan to request the good offices of the British Treasury was advanced by "Indian Finance" towards the end of 1939; but the Government were not prepared to act on it immediately. The suggestion of "Indian Finance" with regard to the conversion of sterling obligations to rupee obligations was accepted; but the Government's first step to effect such a conversion was to buy India sterling stocks in the open market in

London, and to issue rupee counter-parts in India. As soon as this plan of operation was made known to the public, I pointed out that the scheme was totally detrimental to the objects in view; while it must be our purpose to buy India sterling stocks at as low rates as possible, the open market purchases were calculated to lever up prices—while it should be the aim of the Government to issue the rupee loans at as high a rate as possible indefinite selling of the rupee counter-parts through the tap was calculated to depress prices. In other words, the strategy adopted by the Government of India in consultation with the Reserve Bank was designed to raise prices in London and depress prices in India—and this was opposite to what should have been the correct policy.

In pursuance of this policy of open market purchases in London and tap sales of rupee counterparts in India, India's sterling loans for £32 million were repatriated. But the stage was reached when no more open market purchases were possible. Even the smallest purchase caused a sharp rise in market rates. It was thus found that the plan of the Government, in the space of a few months, proved its own unworkability. It was only after the plan became unworkable, that the Government decided to act on the suggestion of "Indian Finance" to request the British Government to issue vesting orders requiring British holders to surrender their scrips and accept payment on the basis of the prices ruling on the day of the vesting order. I must also add that the Government took this correct course, only after they had caused considerable rise in prices of India sterling stocks as a result of their ill-planned policy of open market purchases. In other words, if the Government had accepted the proposal to work the sterling debt repatriation scheme in consultation and co-operation with the British Government, the prices for the stock-holders would have been definitely lower. As a consequence of the higher prices caused by the earlier open market purchases, the cost of the repatriation scheme so far as India sterling loans were concerned was higher to India by a good few millions.

One would have thought that, after the sterling obligations of the Government of India were discharged, the sterling debentures of public bodies like

Calcutta Port Trust, Bombay Port Trust and Bombay Improvement Trust would be dealt with a part of the sterling debt repatriation scheme. There is nothing to distinguish between the Government of India loans from the debentures of public utilities so far as contractual obligations are concerned. If the holders of Government of India sterling loans could be asked to accept payment before maturing dates, there is no reason why the holders of the debentures of public utilities should not be brought within the scope of a similar vesting order.

While the public are puzzled as to the rationale of Government's policy in this matter, there is more puzzlement in some of the other operations that were put through or that were proposed to be put through in connection with the repatriation of sterling debt. Such Indian railways as were managed by sterling companies or as were owned and managed by sterling companies were purchased by the Government of India by the application of vesting orders which require the stockholders to accept payment before due dates. The utilisation of surplus sterling for such purchases of railway undertakings was proper and legitimate; and this has resulted in complete nationalisation of the entire railway system of India. Sir Jeremy Raisman also took credit for taking advantage of the large sterling balances to fund India's outside obligations in respect of railway annuities by arrangement with His Majesty's Government. By this means, the Government have funded a rather complicated series of railway annuities by the payment of a lump sum of £30 million to His Majesty's Government who have undertaken to provide the annual sums required for payment to the annuitants until the termination, the flat rate of interest taken as a fair basis for the arrangement on actuarial calculations being 2½ per cent. It is obvious from this transaction that the Government of India were ready and willing to pay the present lump sum against future recurring annuities. It is equally obvious that the British Government were glad to be paid lump sums in this manner. While the British Government undertook to find the requisite sterling year by year, the obligation of the Indian Government to the annuitants remained unchanged.

There are other evidences, too, to show the British Government's readiness to accept proposals for lump sum payments to oblige London. In the budget speech and the Indian Government's readiness of 1943-44, Sir Jeremy Raisman disclosed that he was examining a scheme to deal with the future payments on account of sterling pensions, family pensions and provident funds. It was then estimated that these charges would be of the order of from £5 million to £6 million a year. The scheme considered was analogous to the arrangement made for sterling railway annuities. Sir Jeremy explained the scheme in the following words:

"This would, in effect, involve the purchase from His Majesty's Government, by the investment of a capital sum at a suitable rate of interest, of the right to receive a series of sterling payments estimated to be sufficient to meet the relevant charges over the period during which they are likely to have to be met. These charges, and consequently the sterling remittance required to meet them, would naturally

after a certain time gradually decline in amount until they disappeared, and the transaction might thus be described as the purchase of a tapering annuity. It is not contemplated that the rights of any class of Government servants would be affected, or that the liability to pensioners should be transferred from the Government of India. The arrangement would be purely financial, and would amount to the investment of a capital sum in return for which the Government of India would, at stated intervals, receive stated sums of sterling with which they would be in a position, as far as can be estimated, to meet these sterling obligations."

The lump sum that had to be paid in connection with this scheme was said to be £200 million to £250 million. The proposal was stoutly opposed in this column; and, whether because of this criticism or because of any other reason, no action has been taken on the proposal outlined in the budget speech of 1943-44.

Even the budget speech of 1945-46 provides evidence to show that the British Government are eager for lump sum payments and that the Indian Government are none too slow to oblige. The original arrangement arrived at between His Majesty's Government and the Indian Government with regard to non-effective charges was that India's net liability during the war was to be fully discharged by an annual payment of £1,350,000 to H.M.G.; and that £15 million, as representing India's liability under this head before the war, was payable on the termination of the present arrangement. His Majesty's Government proposed, later on, that this sum of £15 million was to be paid in advance; and that, in return, the annual payment would be reduced from £1,350,000 to £900,000. The Government of India accepted this arrangement as favourable to themselves and the payment of £15 million was made on February 1, 1945.

I have recited these instances in detail to show that some of the schemes adopted or considered by the Government of India with regard to sterling debt repatriation were far-fetched and subverted the main object of presenting the British Government with a present lump sum in return for scheduled annual payments. If proposals like these could have been given effect to, we cannot understand why the Indian Government have said "no" to the request of the Bengal Government to treat the transaction of the Calcutta Electric Supply Corporation and the Calcutta Tramways as falling within the scope of the programme of sterling debt repatriation. If all-India public utilities like the railways can have their agreements terminated in advance of the dates when India would have been entitled to do so under the agreement with the railway companies, why should not a similar course of action be adopted in the case of local public utilities. Similarly, if the sterling loans of the Government of India could have been redeemed in advance of the dates when the India Government would have been entitled to do so under the terms and conditions of each loan, why should not a similar course of action be adopted in the case of the sterling debentures of local public bodies like the Port Trusts, Municipalities and Improvement Trusts?

On Friday before last the Indian Institute of Art in Industry held its first

Council meeting at the Government House, Calcutta. The proceedings show clearly that the Institute has got to the stage when it can more hopefully, if not quite confidently, plan its programmes for the future. Even this has involved quite uphill work for Mr. Born. For the importance and practical utility of art in industry is not easily recognised either by industry or by the Government and the public. It took a long time to overcome the general misconception that art is an inaccessible luxury in life and is either misplaced in industry or difficult to import into it. In India, while we

sniff at the crudity of industrial products, we hardly remember that the Indian handicrafts enshrine a great deal of the faculty of artistic designing, a fact of which Mrs. Casey has aptly reminded the public. Hard and intelligent work has brought the Institute to the stage in which, on the strength of an initial grant from the Bengal Government, it can be confident of more from the Centre and the other Provinces and States and make a definite plan of work. An exhibition in 1946, a periodical aiming at issues at shorter intervals, representation in

Throughout the world Dunlop tyres have earned their reputation as the best on sheer performance. The postwar Dunlop tyres will be even better thanks to valuable new experience gained under war conditions.

DUNLOP

Better than the best

Olympus

(FROM OUR CORRESPONDENT)

New Delhi, July 25.

The British Government have very generously undertaken to guarantee a supply of 1,00,000 tons of wheat per month from July to December. India's deficit in cereal requirements is a varying and uncertain factor. Indian harvests are, as has been described, a gamble in rains but this year's wheat production is expected to be better than last year's, which has led the Government of India to hope that with the local production supplemented by the imports they will be able to implement their accepted price and food policy as well as to build up an adequate central reserve.

It is understood that initially the items of Reconstruction Policy which will be put into force in the immediate post war period are the development of roads, irrigation and electric power. We are still very far from becoming a nation under the grid, but the creation of power facilities must naturally take precedence over other parts of the policy. Development of irrigation is equally important and the improvement of road communications is an essential auxiliary to the others. Conversations are understood to be going on between the Centre and the Provinces on post war schemes and it is to be hoped that some co-ordinated and uniform policy will be evolved.

It has now been announced that the 27th Session of the International Labour Conference will be held in Paris between 15th October and 7th November. Among the subjects for consideration at the Conference are the maintenance of high levels of employment during the period of industrial rehabilitation and reconversion, welfare of children and young workers and minimum standards of social policy in dependent countries. Evidence of the "welfare consciousness" of the Government of India, particularly in the matter of woman and child labour, is available in numerous legislative measures lately introduced. The policy of postwar reconstruction, in this country as generally, is to ensure a high level of employment and activity and preliminary conversations have already taken place between the Government of India and Provincial Governments and development of irrigation facilities, power resources and communications will be the first to be taken in hand.

An interesting development within the framework of the International Labour Organisation is the setting up of seven International Industrial Committees with a view to providing specialised machinery to consider the problems of certain major world industries. India has been invited to participate in all these Committees except the one on Petroleum Production and Refining.

The post war development of hardware and associated industries is the subject of an enquiry by the Iron & Steel (Minor) Panel in New Delhi. These industries which came into existence primarily to meet war demands are faced with a gloomy future with the prospect of competitive imports. In having spanned the wartime gap in supply of these products the indus-

try certainly deserves assistance and it is to be hoped that the assurance of post war protection to certain wartime industries will apply to these.

The use of producer gas has released some 30,000,000 gallons of petrol a year for defence needs. Madras has been the pioneer and is now the leader with the largest number of motor vehicles converted for producer gas operation. In the whole of India 25,000 motor vehicles, most of them transport vehicles, now run on producer gas and the value of the plants fitted to them is Rs. 3 crores.

Reports of two of India's Trade Commissioners abroad have been published recently. The Canadian Trade Commissioner refers to the spectacular expansion in the volume of trade with India. The pre-war favourable balance has now become heavily adverse to India, but this is stated to be because Canada's present exports to India are swollen with shipments of war materials. The post war prospects for India in the Canadian market are considered to be bright, even with the disappearance of wartime business. It is also believed that fairly good prospects exist of India being able to replace at least a part of the pre-war imports from Japan into Canada, both in manufactured and semi-manufactured articles.

The Trade Commissioner in Mombasa has reported on the favourable trade prospects for India in East Africa. How much expansion there has been in the trade between the two countries is illustrated by the following figures: Indian exports to Kenya and Uganda which in 1938 amounted to £4,42,472 increased to £29,94,777, roughly seven times; exports to Tanganyika which in 1938 were of the value of £1,61,902 rose to £16,80,000. India supplied 88 per cent, 93 per cent and 72 per cent of the cotton textile imports of Kenya, Uganda and Tanganyika. The Trade Commissioner exhorts Indian manufacturers to take advantage of the present opportunities to lay the foundations of permanent trade relations. With the elimination of German

and Japanese imports into East Africa, there is stated to be a wide market not only in cotton textiles but in other lines also for Indian exporters to capture.

(From Our Correspondent)

BOMBAY, 24th July, 1945.

July is the month of meetings galore. At the moment, there are the meetings of the various sub-committees of the Textile Control Board, while the meetings of the sub-committees of the Indian Central Cotton Committee are also being held. It looks as if the latter meetings will overshadow the discussions by the textile control authorities. Indeed, in his speech to the Textile Control Board on Saturday last, Mr. Krishnaraj Thackersey, Chairman, had little to say which is not known to the general public. Apart from pointing out that the standardization scheme has come into force, the only new feature referred to by him is that the Board has recommended that provincial control of the machinery of distribution should end and that it is to be brought within the control of the Textile Commissioner. It is true that the stage has been reached when the interests of uniform application of control measures in all provinces and States, and with a view to securing proper distribution of supplies, the Textile Commissioner should have direct control of what is being done. Experience has shown that in the absence of such Central supervision, all the efforts go to naught. The consumer will receive with relief the news that there is going to be in the next 6 months a reduction by at least 50 per cent in the supplies to the Defence services. As a result of this and the promised relief to India by way of reduction in the permissible exports, civilian supplies would be higher by at least 500 million yards in the year 1946.

On the question of revision of prices, Mr. Krishnaraj said that the schedule on the basis of which ceiling prices for cloth and yarn were being calculated has been revised in a manner that would discourage the mills from manufacturing luxury goods or any type of goods which consume too much yarn and fuel. Dyeing and finishing charges have also been reduced. It appears that a review of present price levels is impossible owing to the serious stoppages occurring in various parts of the country on account of insufficient coal supplies. A proper level of costs cannot be arrived at, unless continuous working of the mills can be assured. In Ahmedabad, it seems that production is lower by 15 per cent owing to this factor; the situation in other upcountry centres is even worse. One can sympathise with the Industry Committee's difficulties in this regard, but it should be their steadfast aim to reduce prices as far as possible. A suggestion which has been made by a prominent millowner in this connection is that the prices of the ordinary varieties of cloth consumed by the lower middle class and the poorer classes may be reduced further still, while perhaps the upper ten may not, and should not, mind the prices of their cloth supplies being slightly increased to compensate the mills.

The Textile Directorate is losing the services of another person whose technical knowledge and experience had been a great asset to it. Mr. Greaves has now retired from his post of Hony. Chief Controller of Raw Materials and Stores. It would be no exaggeration to say that the various controls owe their smooth working and efficiency to the inspiration and unflagging energy of Mr. Greaves. No wonder that the Directorate, which is ill able to spare him, has prevailed upon Mr. Greaves to keep in touch with the Textile Commissioner and remain Chairman

of the Millstores and Priority Assistance Committee and Cotton Movements Committee. The Export Committee will also be missing Mr. R. S. Mani, I.C.S., who has been of great assistance in the drafting and administration of export control measures. Mr. Mani is going to be the Political Secretary to the High Commissioner for India.

The various sub-committees of the I.C.C.C. are in session. The Central Committee itself meets on the 27th. Quite important subjects figure on the agenda, comprising floor and ceiling prices for cotton in the next season, the international cotton agreement, competition between cotton and synthetic fibres and the regulation of the cotton crop for the future. As regards minimum prices, it is expected that the Committee will recommend increase of the floor price of cotton by Rs. 50, but official circles appear to be entirely against such a move and would even appear to be very keen on a reduction if possible. The pull among the opposing points of view is well balanced so that a continuance of the existing prices may therefore be taken as fairly certain. Among the new proposals is the scheme for the production of long staple cotton in the province of Madras. Research has already resulted in the development of two long staple and early maturing cotton varieties known as CO. 3 and CO. 4 which are said to be particularly suited for summer sowing. In fact, the present production is estimated at about 26,000 bales. The staple of this cotton seems to be susceptible for further improvement, and hence the new scheme for expanding its cultivation. If it succeeds, this country would, to that extent, be free from the necessity for importing foreign cotton, at least in the range of staple lengths 1¼ ins. to 1-1/16 ins. The Committee may also consider the measures to be taken to increase the consumption of cotton by the mills. The utility cloth scheme should help in using up more cotton of the Indian varieties, especially if mill prices are going to be related to cotton prices as seems likely in the future.

The Bombay Government is going ahead with the scheme for rail-road co-ordination. Mr. Kothavala, the Provincial Motor Controller, has just completed a tour of the Deccan area to place the official scheme before road operators. According to him, the prospects of zonal companies being formed in the

Bombay-Poona zone and the Poona-Belgaum zone are bright. Motor bus operators seem to be generally favourable to the scheme in which they will be partners along with the Government and the Railways. Under the scheme, a limited company will be formed for each of the zones with 9 directors. The existing operators, the railways and the government will each be represented by 3 directors. Every operator will have a right to a share in the zonal company concerned, equal to his vehicular assets. Of the total capital of the company, value of vehicles will form 25 per cent., while the Government will have a 35 per cent. share and the railways a 30 per cent. share. The balance of 10 per cent. shares will be allotted to the promoters. The operators of each zone have been given the right to select their own promoters who could help both the operators and the government to assess the value of the vehicles, which will form the basis of the shares to be held by the operators. It is expected that the promoters will ultimately be managing directors of the zonal company for a period between 2 to 5 years. The government desire that as far as possible, at least in the initial stages, the actual operators should promote and manage the companies. The right to subscribe 10 per cent. of the capital in the names of the promoters has been provided for, mainly to ensure that they have sufficient inducement to ensure efficient management. For the 10 per cent will represent the personal interest in addition to the interest in the their capital which they will have as operators. It appears that, except for the operators in the Sholapur Zone, the others in the Deccan welcome the terms of the scheme.

Only a busowner can really comment on the above scheme, and indeed criticism from a responsible source has been forthcoming from Mr. N. M. Chinoy at the annual general meeting of the Bombay Lorry-Owners Association. While the Bombay Government is claiming that its scheme is much more liberal than that of the Government of India, Mr. Chinoy pointed out that the Bengal scheme provides for 50 per cent. of the shares to the operators against the 35 per cent. provided for in the Bombay scheme. The U.P. Government seems to have followed Bengal in drafting its scheme. Mr. Chinoy contended that the interests of operators should be

South India

(From Our Correspondent)

Madras, July 24.

Presiding over the annual meeting of the Madras Motor Workers' Union, Mr. V. V. Giri expressed the view that transport services should be socialised, since the State would be more responsive to people's needs than private owners. Referring to the manufacture of motor vehicles in India, he said that the National Planning Committee had a scheme for manufacturing small and big cars costing Rs. 600 and Rs. 1,800 respectively, but the Government of India did not give them any support. He announced that the Planning Committee would soon be called and its work will be completed.

The Government of Madras have passed orders on the award given by an adjudicator appointed by them to settle the trade dispute between the management of the Buckingham and Caramatic Mills and its workers. Under the Defence of India Rules the Government have ordered that the decisions should be binding on both the parties. The award was given on four points. The first related to the working of the twelve-loom system. The adjudicator found that this imposed a strain on the weavers and recommended that each weaver should not be placed in charge of more than 6 looms. The Government have accepted this recommendation. The second point is the classification of workers as temporary and permanent. Subject to one or two conditions, the adjudicator's recommendation, that all workers who had put in one year's continuous service should be deemed permanent, has been accepted. As the Government are thinking of placing the wages in the textile industry in the whole province, on a uniform basis the Government do not propose to take any action on the adjudicator's recommendation for setting up a Wages Board. The Government are not going to force the Company to increase dearness allowances, in view of the fact that the Management's rate of dearness allowance is the highest in Madras.

The food situation in the province in the last fortnight was on the whole satisfactory. Stocks of food-grains were adequate for current needs and their flow into market centres was fairly free. There were sufficient stocks of millets and pulses in all districts though there was considerable demand for Bengal gram and toor dhal in the South Kanara district. Shortage of firewood was felt in parts of Anantapur, Coimbatore, Ramnad and a few other districts. In the Government depots in the Madras City, there was an improvement in the stock position. Statutory rationing continued to work well in all the municipal towns in the Province and in the rural areas of Malabar. There were fairly adequate stocks of sugar in the Province to meet the current demands, said the Additional Secretary to the Government, Development Department.

The budget statement presented by the Finance Secretary to the Travancore Legislature was marked by lucidity of exposition. Travancore's finances have improved to a considerable extent during the last ten years, as the figures given by the Dewan will show. Ten years ago the revenue and expenditure stood at Rs. 285 and Rs. 277 lakhs respectively and the current figures are Rs. 624 and Rs. 500 lakhs respectively leaving a surplus of Rs. 124 lakhs. A sum of Rs. 74 lakhs is to be spent on Government's post-war reconstruction programmes and it was definitely Govern-

ment's intention that the amount should be expended during the year. As the Dewan pointed out, the war had given an undoubted fillip to the finances of the State. But the present satisfactory state of affairs was due to investments being productive, and the State's industrial development yielding good dividends. When commerce came back the State should be able to keep up the progress if the authorities exercised the same amount of care and forethought in the future.

To day in Madras we face a dearth of institutions for higher study of every description, medical, engineering, arts and sciences. And in existing institutions the demoralising practice has settled down as a policy, that admission is regulated on grounds which are educationally irrelevant. The reference is to the fact that admission to colleges is based on criteria other than educational attainments. It is therefore particularly appropriate that leading men like Mr. C. Rajagopalachariar, Mr. Sanjeevi Rao, Chairman of the Federal Services Commission, Mr. Justice N. Chandrasekhara Iyer have come forward calling on the public to start educational institutions where admission is by merit and merit alone. Mr. Rajagopalachariar, Mr. Sanjeevi Rao and others have asked for the starting of an Engineering College in the name of the late Mr. S. Satyamoorthy. Few in this country do not know the sacrifice he made and the services he rendered to the country. Whether it is in the Central Legislature or as the leader of the City Cleaning Campaign when he was Mayor of the City of Madras, Mr. Satyamoorthy was an outstanding personality and his zeal

and enthusiasm for the cause of poor, were equalled only by his sincerity. His services to the cause of education are too many to be enumerated. If Mr. Satyamoorthy had been alive to day he would not suffer to see young men go from college to college only to be refused admission but would move heaven and earth to start new colleges. It is, therefore, to be expected that the appeal will meet with splendid response in this province and outside.

Karachi, July 23.

While other provinces are busy with big post-war schemes, Sind which has the advantage of a popular Ministry and plenty of funds is only tinkering with the problems she will have to face when the war with Japan is finished. Reconstruction plans here have not gone beyond the red tape. Our paramount need is good roads, and priority has been given to road construction in the scheme of post-war development. Though Sind is criss-crossed with canals from the Indus, we suffer from the lack of necessary bridges. This deficiency will also be rectified. Besides the construction of two more barrages, a fifteen-year agricultural plan is on the tapis.

Industrialisation is slowly rearing up its head and there is a move to give an impetus to cottage industries. If all the blue prints which Sind has have to be executed, we need at least forty crores of rupees, whereas our budget balances are hardly eight crores. After the cancellation of the Barrage debt and the suspension of subvention from the Centre, Sind has to evolve her own financial destiny and one wonders whence the money will come for ambitious post-war schemes. Taxation is the only possible course, but people will be averse to pay more taxes unless they are confident that they will be able to reap the benefits from taxes they are called upon to pay.

Mr. Roger Thomas, Adviser to the Government of Sind in agriculture and post-war reconstruction has prepared lengthy and valuable notes on planning for the expansion of agriculture in post-war Sind. These notes have been released to the press by Mr. V. Iswaran, Secretary, Post-war Reconstruction department. The notes which extend to over 25,000 words are comprehensive in their scope and cover a number of subjects relating to the practice of agriculture and animal husbandry in the province. Mr. Thomas fears that there is a progressive and rapid deterioration in soil fertility in Sind. He says that if we are to preserve to posterity our heritage, we will have to do more than what we have done hitherto and do it quickly to put off the evil day. He has stressed the need for the periodic reclassification of selected large blocks of land with a view to watch the rate of deterioration and at the same time to plan preventive and remedial measures to counter the salt problem. According to Mr. Thomas, there is acute shortage of agricultural labour and to overcome this, he suggests the immigration of labour from the congested and over populated parts of India. There is considerable scope for the use of time-saving machinery on the irrigated lands but the time is not yet ripe for general farm mechanisation designed to replace the share-cropping system.

Adverting to rural reconstruction, Mr. Roger Thomas says: "Hitherto the rural reconstruction activities of government have been so meagre as to be almost totally ineffective. There is need for deeper understanding of rural problems than is commonly found in government departments before the defects in these problems can be adequately solved. Though there is a dearth of economic and sociological surveys covering all aspects of village life, those in close touch with rural conditions already know that much can be done to help the villagers help himself. The land system of tenancy-at-will, in vogue in Sind, cannot be expected to survive for long unless the

employer takes a deep interest in the welfare of his employees."

A strong plea for developing Indian ship-building would be put forward by Rao Bahadur Shivratan Mohatta at the current meeting of the Ship-building Advisory Panel, now being held at Bombay. Rao Bahadur Shivratan Mohatta is a member of the Panel. With a view to expand ship-building industry in India, the firm of Herman and Mohatta are in negotiations with some of the leading ship-building firms in England. They have plans to start a ship-building industry on a large scale at Karachi in affiliation with some of the British concerns. With a view to study the latest developments in ship-building, Rao Bahadur Shivratan is shortly proceeding to the United Kingdom. Some other leading industrialists from Sind have also applied for passage and the necessary facilities to visit factories in Britain and the United States.

Steel dealers in Karachi are making good profits of about Rs. 100 per ton owing to fall in price of steel in the market. Formerly, Karachi was not declared as a major port like Bombay Madras or Calcutta. But after a representation was made to the Central authorities, it has been declared so. This has meant a saving of Rs. 63 in freight charges.

There is wheat surplus in Sind; 4,00,000 maunds of wheat will be available for export after fully meeting the requirements of the province. Hoarded wheat is gradually coming out into the market because the hoarders fear that the maximum control rate of Rs. 8-10 as per maund will not be increased.

The cotton market is steady. There are no fluctuations in quotations. The general outlook is not bullish. Bombay Syndicate is taking delivery of July contracts and the total tenders are about 35,000 bales. There is no demand for higher quality cotton, though desi cotton is being exported.

With a view to bring down the rising prices of fish and preventing its shortage which was being acutely felt in Karachi of late on account of excessive exports to outside places, the government have issued

orders under the Defence of India rules prohibiting export of fish by rail, road, river or sea from the province of Sind except under a permit to be issued by the Director of Civil Supplies.

The Karachi Indian Merchants' Association have voiced their protest against the Corporation's move to treble the license fee of factories situated in the city. They fear such a move would be detrimental to the promotion of industrial enterprises.

A Resume of Commodity Markets

Except for the continued boom in oilseeds, there is nothing of interest in the commodity markets for the third week in succession. The raw jute market is rather quiet with sellers anxious to do business at minimum prices. In the jute manufactures market steady conditions prevail both in the hessian and heavy goods sections for the near positions though the bazar appears to be inclined to offer a small discount for deliveries early next year. The raw cotton market has continued uninteresting with the Bull Syndicate supporting the market at the lower levels. In the latter half of the week, however, there has been a definite weakening in the tone. The piecegoods market has continued firm.

The expectations of a large crop and the small buying by mills have been responsible for the quieter tone of the raw jute market. Sellers are more than ever anxious to do business at minimum prices. The easier coal situation in the past few days had not any cheering effect on the raw jute market as it is pointed out that the long-term outlook is not quite satisfactory and that, with the prospect of an excess of jute supplies and the fall in rice prices, the ryot would be satisfied even if he could secure minimum prices for his produce. Mills are thus placed in a very advantageous position. While the scarcity of hessian for near positions has enabled them to realise maximum prices they are able to get their requirements of raw material at very near the minimum prices and earn substantial profits. If production increased materially in the next few months, jute mills might perhaps be able to report a record increase in earnings.

In the pucca bales section it is reported that business has been affected by the relatively high prices and that exporters are asking for a reduction in rates. If the present conditions continue something will have to be done in order to enable a larger amount of business to be put through.

In the jute manufactures market firm conditions continue to prevail in the hessian market. The reserve of mills has forced bears to cover their open positions as a good premium is available for early deliveries. Steady conditions were noticeable in the heavy goods section also.

In the Bombay raw cotton market the efforts of the Bull Syndicate have not been quite successful though it should be said that their decision to take up as much as two lakhs bales has prevented any break in prices. With bears predominating the market and the fears of a large increase in imports, the Bull Syndicate seems to be gradually losing confidence. It was reported during the week that sales were being effected through third parties. On Wednesday a slightly easier tendency was noticeable as covering by bears on the last contract day resulted in a rally. There is no important change in the quotations for July, but September is five points higher at Rs. 431. It is persistently reported that the floors and ceiling for cotton will be reduced, and that the Government are determined to give effect to their proposal. The next meeting of the cotton sub-committee of Textile Control Board will therefore prove to be very lively.

The Indian Central Cotton Committee which is now sitting will consider the question of the revision of floors and it was reported that a definite resolution will be moved suggesting an increase rather than a decrease in the existing floor prices of cotton. The

question of the possibility of increasing the use of Indian cotton in mills will also be discussed. The present position in this connection will be reviewed and the committee will consider to what extent there is scope for substituting Indian cotton for foreign growths and in the manufacture of articles required for both war and civilian purposes, and what steps should be taken to achieve this object.

The scheme for the growth of long-staple cotton in the provinces of Bengal and Madras also will be considered. Madras is anxious to make herself independent at least for a portion of long-staple cotton required for consumption by producing in the province cotton having staple length from 1-1/16 inches to 1 1/4 inches. The Bengal Government have put forward proposals for two new schemes, one for the cultivation of long-staple cotton suitable for the Falta tract and the other for the investigation of bio-electric potentials developed in plant seeds and their application to testing the hybridity in cotton and other seeds.

At the meeting of the Textile Control Board last week the Chairman had very interesting remarks to make regarding the changed conditions in the industry. He was rather optimistic about an improvement in supplies to the civilian consumer in 1946 and that the utility cloth scheme will prove very successful. Extracts from the speech of the Chairman regarding the changed conditions in the industry and the utility cloth scheme are

given below, even though our readers are familiar with the important developments:

"As far as the Indian Cotton Textile Industry is concerned, the direct outcome of the end of war in Europe has been the reduction in the demand for Defence Services materials, the total purchases of which in the next half-year namely, August 1945/January 1946, will be in the neighbourhood of 160 million yards which represents a reduction of at least 50 per cent over the previous half-year's purchases. This will take about 8 per cent of the productive capacity of mills in the next six months and naturally result in a rise in the cloth supply for civilian consumption in India. I have no doubt that this improvement will continue in the further period to follow and that as a result of this and the promised relief to India by way of reduction in the permissible exports from India to foreign countries in the next year the cloth supply for civilian consumption in India will be increased by no less than 500 million yards in the year 1946.

"In my speech at our last meeting I indicated that the Rationalisation and Standardisation Sub-Committee of your Industry's Committee had formulated certain proposals in conjunction with the Government with a view to increasing the quantum of production in the mills. The details of the utility cloth scheme were finalised towards the end of April 1945 and the Textile Industry (Control of Production) Order published on 18th May 1945 enacts the main principles of the arrangements by which, as decided by your

General Manager.

Head Office:
2, ROYAL EXCHANGE PLACE
CALCUTTA

Industry's committee, the Industry would impose on itself certain restrictions with a view to increase the production of cloth. Briefly stated the Order imposes (a) a drastic reduction in the number of counts spun by mills; (b) a drastic reduction in the number of varieties produced by mills; (c) utilisation of 90 per cent of the available productive capacity for manufacturing what are termed utility cloth up to the maximum density specified; (d) a drastic restriction on the production of such qualities of cloth as are wasteful of yarn, e.g., high reed and pick poplins shirtings and two or more folded yarn coatings etc.; (e) a substantial increase in the production of dhoties and sarees and (f) a prohibition of the manufacture of any cloth with borders plain or otherwise over 2 inch in width."

The statement that Indian industry has been accorded representation in the Textile Committee set up by the United Nations to arrange for the distribution of cotton textiles and take measures for increasing production is very important especially as it is said that there is no effort on the part of the western producers to recapture lost markets or to capture new ones and Indian interests would not be jeopardised. Mr. Thackersey said that in respect of imports, fine cloth from foreign countries Government had agreed to avoid as far as possible the importation into India of cloth superior in quality to those produced under the utility cloth scheme so long as it remained in operation. But Sir Akbar Hydari at the press conference last week said that the assurance relates only to qualities which are affected by the utility cloth scheme and that there cannot be any undertaking to restrict imports of cloth which were not in production before the scheme came into effect.

(Continued from page 151).

foreign countries, all these are comprised in a plan which Mr. Born outlined at the meeting. I hope industry will shed the least vestige of scepticism about the value of art in industry and contribute freely to the success of the Institute.

The appearance of the "Registered Accountant," a monthly journal devoted to the problems of accountancy, both as a profession and as a science in daily application will, I am sure, be widely welcomed not only by the members of the profession but also by public authorities of various grades. Accountancy in India has far outgrown the stage when it can be content with foreign journals for the exposition of its problems. Its related problems like taxation, for instance, have also grown in number, significance and complexity. And a journal under the editorship of such senior members of the profession as Messrs. S. V. Aiyar and G. Basu should be able to discharge its function with notable ability. The first issue contains a number of notable contributions and editorial notes that cover a wide range of topics. A special feature is the review of developments in accountancy in the U.S.A. and other foreign countries. There is much indeed of value both for the novice and the veteran. The "Registered Accountant" is linked in the matter of its editorial direction with "Indian Finance".

"EAVESDROPPER".

(Continued from page 153).

placed on a equal footing with the railways and government in regard to the allocation of shares, if only in recognition of the fact that operators had developed road transport in the face of heavy odds always, and particularly during war-time. He stressed

the importance of realising, that the bus owners were giving up not only their vehicular assets, but also that intangible but very precious asset termed goodwill. For operators, this is their life interest and when they handed over such life interest to the State in conformity with a principle, it is upto the government to set due store by such goodwill. The fact that private motor transport interests are thus prepared to co-operate with the government in rationalising transport is a measure of the progress we have achieved. The present scheme will spell the end of rail-road competition as well as of the petty rivalries among road operators themselves. At one stroke, the evil of uneconomic competition will be rooted out. Of all the post-war schemes, the scheme for road-rail co-operation is the best and the earliest to fructify.

BOMBAY MARKETS

BULLION

BOMBAY, July 26.

The Silver market is ruling easy because the bull syndicate has liquidated its holdings and strong holders are few. The fact that Calcutta prices have been quoted sometimes at Re. 1 discount under Bombay is a serious damper. Further, operators are much exercised over the quick Japanese collapse, following possible Russian intervention. Silver prices are Rs. 134-6 and Rs. 135/6 against Rs. 136/8 and Rs. 137/4 last Saturday for Ready and Forward respectively.

Gold is much steadier thanks to the sustained offtake of 20,000 tolas daily. The spot price is in level with Forward at Rs. 77/14, now that bullish manipulations are perceptibly waning.

Jute and Jute Manufactures

(From Our Correspondent)

Special to "Indian Finance"

Calcutta, July 26.

The Indian Central Jute Committee at their Monsoon meeting held on Wednesday, 18th instant, adopted several measures designed to assist in the further development of various aspects of the jute industry. Amongst these was the Committee's decision to continue for another term of three years their scheme at Narsinghdi and the provision for the testing on a wider scale, under conditions similar to those met by jute cultivators, the practicability of the measures devised at the Dacca laboratories for the control of diseases and pests peculiar to the jute plant. The Committee also accepted a new scheme submitted by the Bose Research Institute whereby the possibilities of evolving improved species of jute by subjecting them to X-rays, neutrons and gamma rays will be explored. This scheme will cover a period of three years at a total cost of about Rs. 20,000.

The old research schemes of the Dacca and Calcutta Universities relating to the impregnation of bleached jute fibre with a synthetic resin with a view to improving its textile qualities; investigations on the chemical utilisation of jute waste; and X-ray analysis of the jute fibre are to be continued for terms extending from one to three years. An extension was also granted to the research scheme for the biochemical investigations on the processes involved in retting jute plants. To remove the prevailing shortage of improved jute seed in Bengal the Indian Central Jute Committee agreed to the proposal of the Director of Agriculture, Bengal, to help the Bengal Government in establishing a large jute seed multiplication farm in the province. The Government of India approving, the Committee decided to make a grant of Rs. 50,000 to the Bengal Government as a permanent advance for five years in this connection. It was also agreed that two co-operative societies of cottage industry workers should be established in Bengal for two years in the first instance, in order to assist the jute cottage industry in marketing their products which, in their way, are quite useful. It was suggested that these societies should endeavour to procure the co-operation of the Bengal Industries Department in the task of improving the processes of spinning, dyeing and weaving.

The Jute Grading Sub-committee's recommendation with regard to the commercial grading of raw jute on a Five-Grade basis was approved. Our readers will recall that the Five Grade scheme for loose jute assortment worked out by the Jute Grading Sub-Committee of the Indian Central Jute Committee provides for five main grades namely, Tops, Inters, Middles, Bottoms & Low Bottoms and beyond that a Rejection grade to cover all jute having more than 70 per cent Cuttings or Sacking weft or over 50 per cent of Cuttings or Sacking weft if the jute is dark or medium colour. Of the five main grades, all but the Tops are subdivided according to cutting and Colour; Inters, Bottoms and Low Bottoms into two sub-grades and Middles into three sub-grades with an arithmetical notation harnessed to the scheme in order that each sub-grade can be easily indentified. We are unable to say with certainty whether the assortment of the main grades is expected to be elaborated into the sub-gradings in the up-country godowns but presumably this must be inten-

ded and therefore it is inevitable that much closer supervision will have to be given to the assortment than is ordinarily the case but it need not be considered impossible to educate assorters up to it. It is known that the reactions in some quarters of the trade have not been wholly favourable to the new grading scheme and we have heard criticisms mainly on the grounds of the consequential higher expense charge to Balers and the difficulties of finding the extra godown space required to carry out the new assortments under the scheme. In the meantime it does not seem to be quite clear whether it is contemplated that each sub-grade be packed separately and any defined proportion of each sub-grade delivered under a contract for the main grade, or whether the sub-grades laid down merely define the variations of colour and cutting combinations which it is permissible to tender against the main grade. It is noticeable that the factor of faults in the fibre are apparently not taken into account except that of soundness. Speck for instance is a factor which varies widely from year to year and often from district to district and when of the hard "birds eye" variety is a serious obstacle to the good spinning properties of the fibre.

The average daily arrivals of Coal at the Indian Jute Mills' Associations Dump during the week-ended Saturday 21st instant was 41 wagons and as a result of this slight improvement in supplies several of the foster mills which have been idle were able to resume work. It is expected that more mills will be able to restart this week as arrivals of coal wagons have been above average so far this week.

There is little of importance on which to comment with regard to the Jute market as there has not been much activity in any section of the market during the week under review. In the Pucca Bale market small business was reported with mills in special N. Cs. at Rs. 46-8 and in Special Tossa Cuttings at Rs. 46. Rs. 43 and Rs. 42 was paid for small quantities of N. Cs and M. Cs. There has been nothing reported in the export market and dealers are free sellers at minimum rates for all descriptions except special marks and Cuttings.

The Loose Jute Market has been easier with sellers pressing for business without meeting much response from buyers. Business was done in Indian District Tossa at Rs. 15-8 and Rs. 12-8 for Middles and Bottoms and in District Tossa Bottoms alone at Rs. 13. Old Crop Indian District Bottoms alone were done at Rs. 11-8. Fair business is reported in old crop Bottoms for which Rs. 12-8 and Rs. 12-12 was paid according to the mark. It is also reported that a small quantity of new crop Supervised jat came to business at Rs. 15-4 and Rs. 12-4. At time of writing prices are on the basis of Rs. 15-4 and Rs. 12-4 for supervised jat Middles and Bottoms.

In the Manufactured Goods Market there has been no fresh business of importance although small quantities of hessian have been done at maximum prices for delivery up to March 1946. It is reported that there have been enquiries for hessian for shipment in April-June 1946 but no actual business so far. Heavy Goods prices are firm but transactions have been mainly confined to bazaar operations. Mills continue to quote maximum prices for their goods and are not offering anything for shipment earlier than Jan.-March 1946. Quotations in the bazaar for heavy goods are under maximum rates.

Quotations for manufactured Goods as on Thursday 26th instant are as follows:—

	Ready	July-Sept.	Oct.-Dec.	Jan.-March.
Rs. A.	Rs. A.	Rs. A.	Rs. A.	Rs. A.

(Continued from page 131).

table ghee, to-day, has become one of the main items in cooking and in some cases it displaces mustard oil. The Government must see that either mustard oil is available in sufficient quantity or they must ensure the proper supply of its substitute i.e. vegetable ghee.

While the people are crying hoarse for vegetable ghee and mustard oil the Government are delaying the import of machinery for the production of vegetable ghee because the British manufacturers are not in a position to supply the machinery in the near future. But at the same time the Government will not allow import of machinery from America. Then why this haste in receiving applications from and issuing permits to the intending producers if the Government is not ready to import machinery? The time has come when the Government must allow the Indian Industrialists the freedom of import from outside the sterling area.

AMAL KARMAKAR.

Indian And The U.N.R.R.A.

Ever since the day when it was announced that India is to contribute very liberally to UNRRA, people in this country had great misgivings as to what would come out of India joining the UNRRA. The aims of UNRRA have been said to be very lofty but in practice it is only the usual whiteman's practice of taking away with one hand what he gives with another or of gaining in gold what he lost in silver.

The UNRRA was said to relieve poverty and distress but the self same poverty and distress when found in India would not attract the attention of his organisation. High questions of shipping space, priority, security, were raised, both in America and in England to defend their action in not sending relief to India.

The position of India, being what it is it will be safe if she neither joins international organisation and pay heavily nor except charity from abroad. I therefore, think that the present Government of India is absolutely unjustified, in contributing to the fund of UNRRA.

SOME CLOTH FACTS

FEWER VARIETIES
 but **MORE**
CLOTH

At the request of Government, the Cotton Textile Industry have agreed to restrict the number of varieties of cloth and yarn they manufacture in order to increase India's cloth and yarn supplies.

This measure of rationalisation will yield an increased output of about 400 million yards a year. Ninety per cent of the mills' production will in future consist of the following varieties:

Dhoties	Longcloth
Sheetings	Chaddars
Shirtings	Voiles
Mulls	Drills
Twills	Tussorees
Coatings	Towels

Reduction in Defence Service demands and in exports and increased supplies of coal will also add many hundred million yards to the quantity of cloth available to you.

Help your poorer neighbour by buying only what you need for your immediate wants. Every month now cloth is being produced at an increasing rate.

KNOW THE FACTS and

DON'T RUSH TO BUY

Issued by the Department of Industries and Civil Supplies, New Delhi.

Price Re. 1

Stock Markets to-day and to-morrow:

BRITISH ELECTIONS AND THE MARKETS

MORE than the news regarding the crushing Labour victory at the British elections the reports of the anxiety of the Japanese to conclude peace have had a discouraging effect on markets in both Calcutta and Bombay in Friday's session and a slight decline in prices was noticeable all-round. The general undertone, however, is fairly steady. Prior to Thursday rather steady conditions were noticeable in the Calcutta market though after the upward trend in prices in the previous two weeks and the large speculative activity in particular counters, there was a feeling that profit-taking was overdue and there was need for consolidation of the ground gained. The weakness of the gilt-edged market and the anxiety of speculators to liquidate holdings of non-terminable loans also prevented extension of interest in other sections.

What exactly will be the effect of the Labour victory in Britain on the stock markets is not clear though it would appear that London is inclined to take a slightly bearish view and prices in Bombay have been marked sympathetically lower. It should be said that the coming into power of the Labour Party will not result in any radical change in policy and that Leftist views will take time to assert themselves. It is agreed that the attitude of British Labour is very different from socialist parties in other countries and that the average Britisher is generally known for his conservative views.

The London market had reason perhaps to worry over the prospect of nationalisation of the Iron and Steel and coal industries which, too, is very doubtful having regard to the opposition in Parliament to the proposals sometime back. But so far as Indian stock markets are concerned, with the prospect of a more liberal policy towards India, the coming into power of Labour is rather a bullish than a bearish factor. The developments in the next few weeks will be watched very carefully both by investors and operators.

In Thursday's session the London market seems to have taken a definitely bearish view of the Labour victory. As it became apparent that the opposition was getting the upper hand there was heavy liquidation. As the general trend was undecided and investors could not take any definite view of the immediate outlook, prices slumped rather abruptly. With the exception of funds nearly all sections were affected. It cannot yet be said that the general trend has been fully reversed. It might turn out that the fears of the Stock market operator were rather exaggerated.

As regards the Japanese war situation, it is reported that the enemy is anxious to end the war as early as possible, through the mediation of Russia, if possible. Otherwise, total destruction will cripple the Japanese for a long time. It is thus only a question of whether the war will end in a few weeks or in a few months.

It need not be emphasised that stock markets discount events far ahead and that it is generally agreed that, war or no war, prices will continue to remain at high levels. With the reduction in the yield basis and the large volume of surplus funds seeking investment, there is no fear of any appreciable setback in prices. It may perhaps be said that pending a definite plan for industrial development in the postwar period and the formation of a national government, markets will be marking time.

With the possibility of an early reconquest of Far Eastern territories attention has naturally been paid to shares of companies registered in the Straits Settlements and elsewhere. The prospects for rubber have also come in for discussion. While it is generally agreed that the reconquest of Malaya and the Dutch East Indies will result in a considerable increase in the total available supplies of rubber, it is pointed out that the reconquered territories might not be able to resume production immediately. It is not known what exactly is the condition of the rubber estates. The labour problem also might prove difficult. But there certainly will be an increase in available rubber supplies and additional quantities, in conjunction with the synthetic rubber output of Germany, might perhaps create a glut. But with the very low stock position and the possibility of a large increase in demand for civilian consumption, all available supplies will be needed for some time to come and there is no immediate fear of a setback in prices.

The Madras market, however, will view with pessimism any development which affects favourably the supply position in regard to rubber.

The caution of the directors of Cochin Malabar Estates Limited, in recommending a lower dividend for the year ended February 1945, would, therefore, appear to be justified even though record earnings were reported. The crop turned out from the estates was smaller, but the average price realised was

much higher and more than compensated the increase in working expenses on account of the higher remuneration to labour. The net profit, before providing for taxation and after depreciation, for the year is Rs. 5,69,452 against Rs. 5,34,042 for 1943-44. Provision for taxation is substantially higher at Rs. 81,800 against Rs. 15,600 on account of the anticipated liability under the Madras Agricultural Income-tax. After paying a final dividend of 25 per cent, which with the interim dividend of 25 per cent already paid, makes 50 per cent for the whole year (57½ per cent), the carry forward is increased to Rs. 1,20,010 from Rs. 88,269 brought in.

Production of rubber amounting to 13,92,771 lbs. was the second best in the history of the company; the crop for the previous year being a record. The all-in-cost for 1944-45 was 6.47 annas per lb. against 5.4 annas for 1943-44, but the average price realised was higher at 12.88 annas per lb. against 11.44 annas.

It is reported that the Hindustan Motors Corporation will be shortly making a call of Rs. 5 per share being the unpaid portion on

BOOK 11

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Quite steady conditions were noticeable on the Calcutta stock market in the first half of the week. But after Wednesday, a definitely easier tone was in evidence, though there was no appreciable marking down in prices, with the inclination of operators to await the British election announcement. The sweeping Labour victory has to a certain extent surprised the market, but there is no important setback in prices. There is a feeling, however, that the peak of activity has been reached and that with the weakness of the gilt-edged market, it might be sometime before the upward trend is resumed once again. Reports regarding the possibility of a negotiated peace with Japan and the anxiety to await the developments in the international political situation, following the British elections, will naturally have a restricting influence on business for some time. The undertone of markets is quietly steady.

The gilt-edged securities section has been rather quiet with 3½ per cent Paper being done at Rs. 102-2 against Rs. 102-12 at the end of last week. 3 per cent Government Paper quoted Rs. 95-6 against Rs. 95-9 earlier in the week. Among terminable loans, 2½ per cent 1948-52 was 4 annas lower at Rs. 100-2, 3 per cent 1949-52 quoted Rs. 102-2, 3 per cent 1957 Rs. 100-8, 3 per cent 1963-65 Rs. 99-4 and 3½ per cent 1947-50 Rs. 103-2. It is rather significant to note that too many transactions have been recorded in small lots during the week. Conditions in the money market have been not quite easy as with the large demand for funds against gilt-edged securities and larger subscriptions to loans, banks are not free lenders. There was very little interest at the auctions of treasury bills held this week.

Bank shares were neglected, Reserve Bank quoting Rs. 140, Imperial Bank fully paid Rs. 2,150 and contributories Rs. 547. Nath Bank improved to Rs. 33-12 from Rs. 33-4 while Calcutta National Bank were unchanged at Rs. 16. United Commercial Bank were Rs. 28-12 premium.

Cotton shares were a shade easier with Cawnpore Textiles at Rs. 13-6, Elgin Rs. 68-12 and New Victoria Rs. 8-4.

Coal shares have not been very active the only features of interest being provided by Kalapahari at Rs. 42-9 and Dhemo Main at Rs. 31-4. A quotation as high as Rs. 32 for the latter counter was touched on Thursday. Burrakur improved to Rs. 47, but are now quoting Rs. 46-2. S. Karanpura were Rs. 36-4 against Rs. 36-14. Bengal have shed 7 points to Rs. 773 while Nazira were unchanged at Rs. 20-4 and Equitable Rs. 73-8. Bhalgora were marked higher at Rs. 23-8, though they are now quoting at Rs. 22-14. It is reported that Burra Dhemo Coal is refunding capital to the extent of Re. 1-8 per share. It is also said that profits for the last accounting period will be utilised for reducing the block account as the life of the mines is rather short.

Jute shares provided the feature of the week with a rise of 25 to 30 points for the bigger denomination shares in the earlier part of the period under review. The strength of the section continued to be noticeable till Thursday evening. Howrah were marked up to Rs. 98-6. On profit-taking there was a decline to Rs. 97. At the time of writing with the reports regarding the willingness of Japs to conclude peace and the Labour victory the quotation has come down to Rs. 96-12.

Anglo-India were Rs. 540 though they are now quoting Rs. 533. Bally were Rs. 430, Barnagore improved by 8 points to Rs. 287. They are now quoting Rs. 284. There was some selling of Craig and the quotation has come down to Rs. 13-11 from Rs. 14-8. Kamarhaty improved from Rs. 802 to Rs. 820, but have receded to Rs. 815. Megna rose by 5 points to Rs. 162-8, but they are now quoting Rs. 154. National improved from Rs. -37 to Rs. 38 to quote again Rs. 37. Reliance were steady at Rs. 87, but on profit-taking the quotation came down to Rs. 4-8.

The earlier rise in jute shares was mainly due to the hopes that with a relatively low price for raw jute it would be possible to make substantial profits especially as sales were effected at very near maximum prices.

In the Engineering section, constructional engineering shares were in demand particularly Braithwaite, Britannia Engineering and Indian Standard Wagon. Braithwaite were as high as Rs. 15-7 while Indian Standard Wagon jumped from Rs. 103 to Rs. 121. Britannia Engineering were Rs. 25-12 against Rs. 23-12. Burn & Co. were not very much changed at Rs. 455. Indian Iron improved from Rs. 42-8 to Rs. 43-2, but are now quoting Rs. 42-7. Steel Corporation likewise, improve to Rs. 35 to quote again at Rs. 34-6. There was enquiry for Texmaco in midweek and the quotation has risen by 2 points to Rs. 17-8. Jessop & Co. were steady at Rs. 27-12 and Kumardhubi Engineering at Rs. 12-6.

There was not much activity in the Sugar section. Carew & Co., quoted Rs. 30-2, Cawnpore Rs. 41 and Ramnugger Cane and Sugar Rs. 19-13.

There was a broadening of interest in the Tea section with Hasimara being marked up to Rs. 84 and Bishnauth Rs. 49-8. In sympathy with the tone of the other markets the closing quotation was slightly lower. Central Cachar were dealt in at Rs. 128, Namburnadi at Rs. 13-12, Roopacherra at Rs. 28-12 and Sonai River at Rs. 28-4.

In the Miscellaneous section, Burma Corporation were higher at Rs. 6, but there was selling at the higher levels. B. B. Petrol were Rs. 6-4, after being higher at Rs. 6-8. The rise in B. I. C. has not been held as there was considerable realisation and there was a setback to Rs. 7-12 from Rs. 8-10. Assam Saw also were easier at Rs. 6-12, Balmer Lawrie were bought up to Rs. 5-12 while Indian Wood Products were Rs. 33-4 and National Tobaccos Rs. 31. Titagur Paper were strong at Rs. 32-6 ex-dividend, Midnapore Zemindary were unchanged at Rs. 200. India General Navigation were steady at Rs. 216.

BANK PROFITS

BANK OF BARODA, LIMITED.

The profit of the Bank of Baroda, Ltd. for the half-year ended 30th June, 1945, subject to audit, including Rs. 4,54,587-10-6 brought forward, amounts to Rs. 19,44,104-15-8.

The Directors have resolved to declare an *ad-interim* dividend at the rate of 10 per cent per annum, free of income-tax which will absorb Rs. 4,99,979 and to carry forward the balance of Rs. 14,44,125-15-8 to the next account.

THE CUTTACK ELECTRIC SUPPLY COMPANY, LIMITED.

NOTICE.

A Dividend of 3 3/4% for the year ended 31st December 1944 has been declared payable at once.

OCTAVIUS STEEL & CO., LTD.

Managing Agents.

Calcutta 23rd July 1945.

WAR TRANSPORT DEPARTMENT GOVERNMENT OF INDIA

The War Transport Department, Government of India, propose to recommend import licences for the following makes of light commercial and transport vehicles to be imported from North America during 1945 and 1946 upto the aggregate number indicated against each make:—

114"—122"	W.B.		
	International	...	132
134"—135"	W.B.		
	International	...	132
	Studebaker	...	24
158"—160"	W.B.		
	Diamond T	...	36
	International	...	372
	Reo	...	48
	Studebaker	...	84
194"—195"	W.B.		
	Diamond T	...	12
	International	...	48
	Reo	...	12
	Studebaker	...	12

The nearest equivalent W.B. to those mentioned is intended in regard to the various makes specified.

2. Applications for import licence in the prescribed form together with (i) copies of documents evidencing that the applicant firm now holds a franchise from the manufacturer for a particular make or makes of vehicles;

(ii) statement showing the number of vehicles of each make imported by the firm during each of the years 1937, 1938 and 1939; and

(iii) a detailed description of the territory for which the firm holds the franchise, should reach the undersigned on or before the 15th August 1945. Applications not received by that date will not be considered.

3. The number of each make of vehicle will be distributed amongst applicants at the discretion of the War Transport Department and their decision will be final.

(S. D. GUPTA),

Controller of Motor Transport (Supply).

WAR TRANSPORT DEPARTMENT

Applications are invited for import licences for import of light commercial and transport vehicles of various capacities from United Kingdom during 1945 and 1946, from firms holding a franchise from the manufacturers. There is no quota limit and firms are advised to book orders immediately with the manufacturers and to restrict their applications for import licence to the number they expect to obtain.

2. Applications for import licence in the prescribed form together with—

(i) copies of documents evidencing that the applicant firm holds a franchise for a particular make or makes of vehicles; and

(ii) a detailed description of the territory for which the firm holds the franchise from the manufacturer should reach the undersigned on or before the 15th August 1945. Applications not received by that date will not be considered.

(S. D. GUPTA),

Controller of Motor Transport (Supply).

COMPANY REPORTS

COCHIN MALABAR ESTATES LTD.

Audited accounts for the year ended 28th February, 1945.

The accounts show a Nett Profit for 1944-45 Rs. 5,69,452; Add Balance as per last Directors Report, Rs. 88,269; Total Rs. 6,57,721. Less 7 per cent Dividend on Preference Shares for 1943-44 paid on 30th June, 1944, Rs. 7,931; Less Interim Dividend of 25 per cent for 1944-45 paid on 24th February, 1945, Rs. 2,23,990; Less Transfer to Income-tax Reserve Rs. 5,500; Less Transfer to Madras Agricultural Income-tax Reserve Rs. 76,300; leaving a balance of Rs. 3,44,000; out of which the Directors recommend the payment of a Final Dividend of 25 per cent, free of income-tax absorbing Rs. 2,23,990; and carry forward Rs. 1,20,010.

The profit for the year is the highest in the history of the Company and in recommending a final dividend of 25 per cent, which makes the total for the year 50 per cent against 57½ per cent for the two preceding years, the Directors feel it is prudent to assume that the conditions of the last few years may not continue indefinitely. The suggested diminution in the dividend is the measure of the policy of prudence considered advisable and increases the carry forward from 1943-44 of Rs. 88,269 to Rs. 1,20,010 for the current season.

A sum of Rs. 5,500 has been reserved against Income-tax on the profits of Pudukud Estate which lies in Cochin State and Rs. 76,300 have been reserved against the probability of Madras Agricultural Income-tax at 2 as. in the rupee. These reserves are shown as appropriation of profits in the Balance Sheet and therefore do not appear in the Profit and Loss Account. Other reserves remain unchanged.

During the year under review 3 per cent Government of India Funding Loan 1966-68 was purchased to the extent of Rs. 75,000. The other investments remained unchanged and the total at the end of the financial year stood at the figure of Rs. 3,79,192, on the basis of cost or market price, whichever was the lower.

The amount of Rs. 28,430 transferred to Development Account consists entirely of the expenditure on New Clearings on Kinalur and Eddivanna Estates and Nurseries on Pudukud and Kinalur Estates. Expenditure on Replanted areas amounting to Rs. 30,050 has been shown separately in the Working and Profit and Loss Account under Estate Expenditure.

Sales throughout the year continued to be made direct to the Government of India at the Schedule rates. The Bonus Scheme, which started on 10th April, 1944, resulted in additions to these Schedule rates as follows:

	Per 100 lbs.
April 10th to July 1944	Rs. 11 1 9
August-September 1944	Rs. Nil
October-December, 1944	Rs. 11 1 9
January-March, 1945	Rs. 33 5 3

The Bonus Scheme will not be continued after 30th June, 1945, and in its place the Government of India will pay until further notice prices based on Re. 1 per lb. for Group 1, Rubber against the present Schedule rate (without Bonus) of Rs. 77-5 per 100 lbs. for Group 1. The average selling prices on this basis should be higher than in 1944-45.

The acreage of the properties is as follows: Mature Rubber (Unbudded) 3,533.56 acres; Replanted areas 1938 (Budded) 73.92 acres; Replanted areas 1940 (Budded) 10.00 acres; Replanted areas 1941 (Budded) 86.00 acres; Replanted areas 1942 (Partly Budded) 259.65 acres; New Clearing 1939 (Budded) 224.60 acres; New Clearing 1943 (Budded) 200.00 acres; Reserve, Buildings, etc., 2,261.09 acres; Total 6,648.82 acres, which is unchanged from last year, except for an adjustment of the estimated area of the 1943 new clearing.

Against a record crop in 1943-44 of 14,46,603 lbs., 13,92,771 lbs. were harvested in 1944-45 at a cost of 6.47 as. per lb. F.O.B. (previous year 5.40 as.) and realised an average price (sales and valuation) of 12.88 as. per lb. as compared with 11.44 as. per lb. in the previous year.

The unsold rubber has been valued at 47.33 cents per lb. being the average all-in cost. The estimated crop for 45-46 is 13,85,000 lbs. at an F.O.B. cost of 43.46 cents (6.95 annas) per lb. The progressively enhanced cost is again mainly due to the increased remuneration to labour.

The Company, however, has been fortunate in obtaining the services as Visiting Agent of Mr. N. B. Hartley, a well-known planter who has had over 30 years experience of rubber on Teekoy Estate, in Travancore, Mr. Hartley has already made one report on the Company's Estates. While the report indicates that the property is in a satisfactory condition generally, it makes it evident that the time has come to abandon completely the measures adopted to accelerate production. The exacting Double-Three system of tapping has assisted in producing the record crop of 1943-44 and a second record crop in 1944-45. There is, however, evidence that a continuance of this system would not only affect the future productivity of the Estates, but would also lead to an immediate diminution of crop. It has therefore been decided to revert entirely to the previous system of alternate day tapping on a single cut.

Agents and Secretaries.—Messrs. Pierce Leslie & Co., Ltd.

Authorised Capital—Rs. 14,00,000. Issued and Subscribed—Rs. 10,09,259 in 2,266 Preference shares of Rs. 50 each, and 2,98,553 Ordinary shares of Rs. 10 each, on which Rs. 3 have been called and paid up.

Synopsis of balance sheet as at 28-2-1945.

Indianisation of the Imperial Bank

A very righteous cause has been taken by "the Eavesdropper" when he has brought his able pen to bear upon the question of Indianisation of our financial and banking institutions. May I crave your hospitality for carrying a noble cause, which your "Eavesdropper" started, to its logical conclusion?

The crux of our economic problem, to my mind, is not so much the Indianisation of posts as that of the policy. It is not the wages but the profits that matter. It is unjustified optimism to believe that control will automatically fall into Indian hands by the appointment of a Director or two in an institution run with Non-Indian capital. It is an elementary economic law that control goes with capital. Our real masters are the masters of capital and the nationality of personnel makes hardly any difference, so long as the nationality of capital remains foreign.

While, therefore, it is legitimate to carry on a campaign for Indianisation, as we understand it, we must beware that the real issue is not, thereby forgotten or sidetracked. The "Liberal" in your issue of 21.7.45 has cited the instance of the Indian Governor of the Reserve Bank, in his plea to Indianise the Imperial Bank. May we not ask ourselves, at this juncture whether an Indian's appointment could prevent the suicidal policy of printing more currency notes in India, at the giddy rate of several millions a week, against mere book-entries in sterling at the Bank of England? If the Indian Governor were to protest, he would have been changed, perhaps, but not the British policy. For the policy is dictated, not by the Governor of the Reserve Bank, but by Whitehall, which in its turn is dictated by Britain's Big Business. Has the Indianisation of the I.C.S. or the Indian Army made either the one less ruthless in curbing patriots or the other more effective in fighting for the cause of Indian freedom? What is true of bureaucracy or the army in not less true of finance and Economic Control. We must, therefore, train ourselves in the habit of thinking on fundamental issues. It is Indianisation of Control rather than of jobs, big or small, that we must fight to achieve, if we wish to make any real progress in the shaping of our destiny.

Primal Mehta.

Many will share the regret that has been caused by the failure of massive reason and trenchant argument of the Eavesdropper to have any effect on the Imperial Bank authorities. With those who are ready to listen, it is possible to argue; those who are willing to be convinced, it is possible to convince; but with those who have as their motto neither to listen nor to be convinced it is useless to argue. Nevertheless, Eavesdropper's cause is just. Even though the authorities are unable to concede his demands for Indianisation of the Imperial Bank because of their self-interest, they could not miss Eavesdropper's very high sense of justice. Even amongst Britons, when Mr. Irwin has been promoted over the head of Mr. Moorehouse, as Deputy Managing Director of the Imperial Bank, Eavesdropper's sense of justice revolts against it. Why, on fundamental basis of justice between man and man, should there be this invidious distinction, he asks.

K. M. Patel.

Lunatic System

Despite my eagerness not to enter the controversy going on in your valued columns Bouquets & Brickbats, on this subject, I have to say this much that there is truth in the arguments of both the sides. One cannot deny that the capitalist system has enabled mankind to have more of earthly goods but it must also be admitted that the inequalities of income which existed from almost the beginning of the world have been increased by this system. Also, one could not ignore the fact that in socialistic countries this inequality has been reduced to a considerable degree and the poor man is ensured of a living. Then why not have the benefit of both these systems and the removal of the defects of both. Let us have more and more of material goods and let us distribute them in a much more sane way.

R. Basu Mullick.

A Fitting Honour

Your South Indian correspondent has reported the move of some of the leaders of Madras to start an Engineering College in memory of the late Mr. Satyamoothy. It is but proper that it should be done Mr. Satyamoothy's services to Education cannot be better recognised than by the starting of an educational institution, especially now. When we read in the papers that many boys have to go without college education because, there are not enough colleges. And a college now, is like a Manna to the boys of Madras.

But Mr. Satyamoothy is not a leader of Madras alone. India knows him as a great soldier in the cause of Indian freedom. His speeches in the Central Assembly are the pride of his friends and the despair of his enemies. He is on a par with the late C. R. Das, Motilal Nehru and Dadabhai Naoroji and I would suggest that an All-India Memorial should be raised for him. May I also sug-

gest "Indian Finance" might start a fund, for, I know this paper is read by rich and influential people who can and will contribute liberally.

R. P. Sarathy.

Cottage Industries

The thanks of the villagers are due to you for your note "Future of cottage Industries," a subject apt to be forgotten, but one that deserves the greatest care and attention. The facts and figures you have given show to what an extent these industries help the villager to keep body and soul together. Yet it is a pity, that all the plans of the Government, even plans for the resettlement of soldiers in villages make no mention of these industries. Government spokesmen are never tired of saying that India is and is bound to continue as an agricultural country and if so, is it not necessary that agriculturists should have some means of supplementing their income, should have some work in the off-season when they are compulsorily unemployed? Cottage industries need not be an anachronism. Countries like Japan have shown that they can be modernised. I hope Government will look into this question carefully and consider the points you have raised.

A Villager.

Germany's War Potential

Truth is said to be the first casualty of the war. How true this is, is obvious from Mr. Crowley's assessment of the industrial strength of defeated Germany. (Reference Indian Finance dated July 21, 1945 Editorial notes P. 89). The American Government, not content with the havoc caused by U. S. and R.A.F. bombers, is still eager to destroy the economic basis of German aggression. Is it possible and desirable? I think Germany cannot be prevented from waging another war by reducing it to an agricultural country admitting for the sake of argument it is possible. Vengeance yields vengeance. And one has to stand in a ditch to keep another in it. This tactics has been tried and found useless. Then why not try some other method to prevent Germany from waging another war.

The following announcement is published for information only.

The Consent of the Central Government under Rule 94-A, Defence of India Rules, has been obtained to this issue of capital subject to the condition that not more than one-half of the issue shall be called-up until the Central Government is satisfied that the time has come to make corresponding payments for purposes which are not inconsistent with the enforcement of any measures of control or restriction that may be in operation at the time when such release is applied for. It must be distinctly understood that in giving this consent the Government of India do not take any responsibility for the financial soundness of any scheme or for the correctness of any of the statements made or opinions expressed with regard to them.

THE NEW INDIA BUILDING & LAND IMPROVEMENT SOCIETY LTD.

(Incorporated under the Indian Companies Act 1913)

Authorised.	Issued or to be issued.
Rs. 40,00,000 in 40,000 4½ p.c. Cumulative Preference (Tax-free) shares of Rs. 100/- each	Rs. 20,00,000
Rs. 60,00,000 in 6,00,000 Ordinary Shares of Rs. 10/- each	Rs. 30,00,000
Rs. 1,00,00,000	Rs. 50,00,000

Of the shares now being issued, 2,12,000 ordinary shares have been allotted to the directors and their friends; and there are now offered for public subscription 20,000 4½ per cent. Cumulative Preference Shares of Rs. 100/- each and 88,000 Ordinary Shares of Rs. 10/- each.

PAYABLE:

PREFERENCE SHARES	ORDINARY SHARES
On Application ... Rs. 25/-	On Application ... Rs. 2/8/-
On Allotment ... Rs. 25/-	On Allotment ... Rs. 2/8/-
Total Rs. 50/-	Total Rs. 5/-

The balance of Rs. 50/- in the case of Preference Shares and Rs. 5/- in the case of the Ordinary Shares will be payable in one instalment when called for.

The Preference Shares carry right to a fixed cumulative preferential dividend of 4½ per cent. per annum free of British Indian Income-Tax on the capital for the time being paid up thereon and the right in a winding up to be paid all arrears of preferential dividend whether earned or declared or not down to the commencement of the winding up and also to be repaid the amount of capital paid-up or credited as paid-up thereon in priority to any payment in respect of the Ordinary Shares but shall not be entitled to any other rights in the profits or assets of the Company. The articles of the Company provide that the Company shall not be at liberty to issue further shares ranking pari passu with or to any preference in regard to dividend or capital over the said preference Shares except pursuant to an agreement ratified or confirmed in the manner provided by Article 62 of the Company's Articles. Subject as above the profits determined to be distributed and the surplus assets in a winding-up are distributable among the ordinary shareholders.

MANAGING DIRECTOR.

Mr K. M. Saleh.

THE SUBSCRIPTION LIST will open on 6th August 1945 and will close on 9th August 1945 or earlier at the discretion of the Directors.

BROKERAGE will be paid at the rate of Rs. 2½ per cent of the nominal value of such shares as are actually allotted pursuant to applications bearing the stamp of recognised brokers.

GENERAL INFORMATION—The Company has been formed mainly for the purpose of granting facilities, by means of advances repayable over a period, for the purchase or erection of houses for owner-occupation or otherwise and for the acquisition and development of land and estates and erection of house properties thereon. It is confidently anticipated that with the rapidly growing urbanisation of India there will be an ever increasing demand by the Indian middle classes and others for residential accommodation in and near the big centres of population and it is with a view to exploiting this anticipated demand that the Company has been formed. It is intended that the Company should operate on the lines of what are known in western countries as Building Societies the astounding success of which in England over the period of the last 70 years needs no emphasis.

The Company has a number of promising schemes in view which it hopes to turn to the advantage of the public in general and the shareholders in particular.

It is confidently expected that the post-war period will see a great expansion in India's commerce, trade and industrial development and naturally therefore more and more recruits will be enlisted from the rural areas to swell the army of factory operatives, clerks, executives and others who will be required to cope

with India's rapidly expanding industrial economy. Even to-day hundreds of thousands of city workers and industrial operatives are compelled either for want of cheap houses or lack of adequate space to live in most unsatisfactory conditions or forced to take long journeys twice a day to reach their places of business. This shows the extent of the existing demand for residential accommodation in our larger cities and industrial centres; and this demand will naturally go on expanding. There was large scale housebuilding activity before the war but for the last five and half years for want of building materials it has been held in abeyance and will no doubt be resumed when the war comes to an end. In fact it is confidently expected that a most important phenomenon in the post-war period will be a widespread and vigorous building boom.

Another factor which stresses the important place of house building in national economy is the universal conviction that one's own home is the kind of investment which is beyond market fluctuation and which is guaranteed against depreciation. Members belonging to the professions or earning fixed salaries have always the desire and urge to buy and own their own houses.

FULL PARTICULARS as to the terms upon which the shares are being issued and also all relevant and statutory information concerning the Company together with Forms of Application for Shares will be found in and accompanying the Prospectus, copies of which have been filed for registration with the Registrar of Joint Stock Companies, Bengal. Copies of the Prospectus and Accompanying Forms of Application are obtainable from the Company's Bankers, Hindustan Commercial Bank Ltd. and United Commercial Bank Ltd. and from the Registered Office of the Company.

Fact Parade

U. S. India Test Flights:

Test flights to India, the Middle East and Europe may be commenced this autumn by American commercial airlines.

Madras Conch Shells for Bengal:

The Madras Government have agreed to make over 50 per cent of their total catch of conch shells this year to the Bengal Government at equitable rates. This is hoped to give a fillip to the age-old conch shell (cot-tage) industry of Bengal. There are four important centres of the industry in Bengal, viz., Dacca, Berhampore, Nadia and Bankura and roughly 10,000 people are engaged solely and hereditarily in this industry.

Kerosene and Petrol go Cheaper:

A notification says that the Government of India have authorised the fixation of prices of motor spirit and kerosene which show decreases of one anna per gallon in the case of motor spirit and annas 5 per bulk unit of eight imperial gallons in the case of both superior qualities of kerosene.

Among the reasons for this satisfactory state of affairs are the reduced cost of imports as a result of lower War Risks Insurance on cargoes and reductions in A. R. P. expenditure and war risks insurance in this country.

U. K. C. C. to Continue:

Rumours that the United Kingdom Commercial Corporation would soon be liquidated are officially denied. V-E day automatically ended some of the activities of the U.K.C.C., but official policy is that the U.K.C.C. shall continue its remaining work. One of its branches, namely the U.M.C.C. in Spain is being voluntarily liquidated and a liquidator was appointed recently.

Anti-Opium Policy of Chungking:

Instructions to start anti-opium messes in every newly-liberated, district of the East China province of Chekiang have been given to Provincial authorities by the Chinese Government.

New Governor of China Central Bank:

The first of the Government changes promised by the Premier, Dr. T. V. Soong, was announced as Mr. H. H. Kung resigned the important post of Governor of the Central Bank of China. His successor is the Minister of Finance, Mr. Ok Yui, who also retains his portfolio.

Mr. Kung is the brother-in-law of Generalissimo Chiang Kai-shek.

Airfields in Burma:

It is revealed that British and American engineers have completed the construction of about 200 airfields in Burma during the six months between November last and May this year.

New Cigarette Tobacco Produced:

As a result of research work carried out at the Tobacco Research Sub-Station (located at Guntur), of the Imperial Agricultural Research Institute, New Delhi, a promising cigarette tobacco variety, Amarelo-5, has been produced. It is a selection from Ama-

relo which is a little-known variety useful for flue-curing.

In the extensive trials conducted, Amarelo-5 has been immensely successful both in the experimental areas and in the cultivators' fields, and has proved superior to Harrison's Special, which is at present extensively grown in India. It matures earlier, gives higher acre yields of cured leaf of good quality, cures several hours earlier resulting in economy of coal required for the curing process, and produces 20 per cent more of top-grade high-priced leaf.

It has proved itself uniformly highly successful in such wider separated places as Hyderabad, Cuttack and Pusa, thus showing its high degree of adaptability. It grows well even in heavier soils which are considered unsuitable for growing Harrison's Special, Amarelo-5 thus easily secures higher economic returns than Harrison's Special. The variety is now ready for release to growers.

Baroda Budget:

Increased allotments for nation-building activities like Agriculture, Education, Public Works and Health and Medical Departments are the salient features of the Baroda State Budget for the coming year presented to the Baroda State Assembly. It is a balanced budget, the expected surplus being only Rs. 30,000. The receipts are estimated at Rs. 404 lakhs and expenditure at Rs. 403.70 lakhs.

The Revised estimate for the current year shows that owing to increased income from taxes due to higher profits gained by merchants and industrialists in war time, the revenue tops higher by 5.50 lakhs over the original estimate while the expenditure was less than the original estimate by 1.26 lakhs. Rs. 2,69,000 have been provided over and above last year's expenditure for the medical department to be spent on the proposed Medical College, the extension of the Ratan Ayurvedic College, the opening of dispensaries and health centres, for prevention of malaria in Navasari District and for supply of medicines. Rs. 18.24 lakhs have been provided for the agriculture department.

Rs. 12 lakhs have been set aside for post-war reconstruction programme while Rs. 10.50 lakhs have been earmarked for the military department for the reorganisation of the family pension and gratuities scheme.

Indian Exports to Venezuela:

The flourishing importation of Indian products into Venezuela, which was interrupted by the outbreak of the Pacific war, will be resumed as soon as shipping space is available, the Venezuelan "Trade Bulletin", said in an article.

Quoting leading Venezuelan importers, the publication said that merchants here hope to buy rice, jute, tea and other products in the Indian market within the next 12 months.

U. S. Army Discharging 4,000 Men Daily:

The New York radio stated that the United States Under-Secretary for War, Mr. Robert Patterson, announced that the United States army is discharging 4,000 men daily. Already 200,000 men have been discharged under the points system.

British Export Trade:

The British Export Trade Research Organisation (BETRO) has now started operation with 99 founder and 112 ordinary member firms.

The BETRO chairman says that the number of founder members (who pay an annual subscription of £500 for no greater privileges than the ordinary members, who pay £100), shows that industrialists recognize

that Britain's foreign trade must be based on accurate and continual surveys of overseas markets. The BETRO is now recruiting skilled staff for market research.

British Motor Industry:

The British motor-car industry, which is scheduled to make 200,000 private cars by June, 1946, and to export 100,000 of them, finds great shipping difficulty. A spokesman of the trade suggests that a few of the larger invasion craft might possibly be used to accelerate exports of cars.

Plan to Improve British Ports:

Plans are being considered for a £10,000,000 scheme for modernizing and developing many ports on Britain's east coast. The scheme is an extension of plans under consideration before the war, but since shelved. The figure of £10,000,000 may be greatly increased later when plans for other ports and harbours, not yet begun, but already projected, are put into operation.

Moscow-Chungking Rail Link: Tokyo Report:

Tokyo Radio said that the Chinese Premier and Foreign Minister, Dr. T. V. Soong, has told the People's Political Council that China and Russia have concluded an economic reciprocal treaty, and that work is under way on a railroad to connect Moscow with Chungking.

New Russian Rice:

Important improvements in Russia's rice and American cotton crop have been reported by research institutes in Azerbaijan, South Russia.

The Azerbaijan experimental rice station has developed a number of new varieties demanding considerably less water for growing than existing types, and yielding, it is claimed, a 40 per cent bigger harvest.

New varieties of cotton are said to be distinguished by high harvest yield and the length and quality of their fibre.

New Medical Discovery:

A new medical discovery called folic acid, because it occurs in green leaves, is announced in the *British Medical Journal*.

It has been used in the experimental treatment of cancer in mice, with possibly significant results.

It has been found that folic acid can be obtained from grass, green leaves like spinach, and yeast. It is also present in animal tissues, notably liver and kidney. It is known to promote growth and be concerned with blood formation.

Until it becomes generally available much of the work already done will need confirmation. There is as yet no evidence of its effect on human tumours.

New Miracle Fuel:

A new fuel which might have had a pronounced influence over the enemy's form of warfare, if it had been brought into general use, was discovered by German scientists shortly before the Nazi military collapse according to the naval correspondent of the *Sunday Times*.

The new miracle fuel called *Ingolin* by its discoverer is simply peroxide in water.

The discoverer is Dr. Walter who now is in Britain and who is understood to have revealed the results of his work to the Allied scientific scheme now investigating German installations in Kiel Canal. *Ingolin* can be used as a fuel by itself or as a source for stored oxygen. As a fuel it gives off super-heated steam which is a ready source of energy for driving pistons or turbines.

The Germans actually used *Ingolin* to launch V-1 flying bombs.

By Special Cable.

Indian Delegation's Disappointments

MORGENTHAU ON U. S. SILVER POLICY

WASHINGTON, (By Cable)

The Indian Industrial Delegation, which comprised Mr. G. D. Birla, Mr. J. R. D. Tata, Sir Sultan Chinoy, Mr. Laik Ali, Mr. N. R. Sarker, Mr. A. D. Shroff and Mr. Ajaib Singh, has completed its tours of the various industrial centres in the U.S.A. and will soon depart from the country en route to India. Mr. P. S. Lokanathan of New Delhi, who acted as co-ordinator for the group said, that they found the supply situation in this country very tight now, but had reason to believe that there would be improvement soon, so that India could obtain needed materials here. Perhaps the composite view was expressed by Mr. Tata when he said that their mission here had been largely exploratory and added that it would be difficult to enter orders for materials now when there is such concentration on war production and preparation for re-conversion. Mr. Tata said that he found it difficult to get a clear picture now of the kind of economic arrangements the United States and India might be able to work out in the postwar period and expressed the hope that he could return to the United States within a year or 18 months when he believed that definite proposals could be usefully discussed.

In his final report as Secretary of the Treasury, Henry Morgenthau devoted considerable space for a discussion of United States gold and silver policies since 1934 and concluded "there can be no doubt that after the war demand for silver will be greatly increased. Postwar silver policies are important to many countries including the United States. At Bretton Woods Conference the Treasury supported the recommendation that problems resulting wide fluctuations in the value of silver should be further studied by interested nations". Mr. Morgenthau said that it had been his policy to encourage monetary use of silver, to broaden the monetary base by the inclusion of a proportion of silver in the monetary stocks of the United States and raise the price of silver to a reasonable level stabilizing it. He said that the Treasury increased silver in monetary stock by 2,350,000,000 ounces from 1934 to 1940 but nevertheless, because of the increase in gold stock, it was not possible to maintain ratio of 1/4th of combined gold-silver monetary base in silver which was the objective of the Silver Purchase Act of 1934.

During the war, in accordance with the Treasury's aim, it put all possible silver into urgent war uses. Silver was made available for use in the production of munitions. More than 900,000,000 ounces was put into non-consumptive use in war industries as a substitute for copper and other metals which were then in short supply. Also the Treasury withdrew from the Silver market and allowed domestic and foreign production to be channelled into war uses and finally sent silver to Allied countries for coinage and industrial purposes. To India, United Kingdom, Australia and other countries the Treasury made available 335,000,000 ounces of silver under lend-lease arrangements.

The retiring Secretary of the Treasury, who has been replaced by former Director of War Mobilization, Fred Vinson, said that the Treasury was partially successful

TREASURY BILLS

Central Government:

Tenders for Rs. 4,00,00,000 for three months' Government of India Treasury Bills were opened on Tuesday, the 31st July, 1945. Total amount offered was Rs. 2,32,75,000. Tenders at Rs. 99-14-6 per cent and above were accepted in full. Lower tenders were rejected. Total amount accepted was Rs. 1,49,75,000, the average rate of accepted tenders being As. 5-11 per cent per annum.

Tenders for Rs. 4,00,00,000 of three months' Government of India Treasury Bills will be received on Tuesday, the 7th August, 1945 at Bombay upto 11 a.m. (Standard Time) and upto the close of business on Monday, the 6th August, 1945 at other centres. Successful tenderers should make payment on Friday, the 10th August, 1945. Other conditions are as usual.

During the week ended the 27th July, 1945 Government of India Treasury Bills for Rs. 1,44,50,000 were sold in favour of the Issue Department of the Reserve Bank of India.

in its policy of encouraging the use of gold for settling international transactions, but during the prewar period, it could not prevent continued maldistribution which accounted largely for flights of capital from Europe.

WORLD OF INDIAN FINANCE

CALCUTTA, Friday Evening.

For various reasons, the favourable position created by the successful floatation of 2½ per cent 1950 Bonds has somewhat deteriorated. In the first place, the Reserve Bank has been pursuing a definitely puzzling Bill policy. For the past several weeks, the market has shown unmistakable nausea for Treasuries. The recurrent experience has been that the applications received have fallen far short of the amount on offer; that a good portion of the tenders has been at unsuitable rates; that the Reserve Bank has been able to secure only a small proportion of the quota. In such a temper and mood of the market, the obvious course would have been to reduce the weekly offer. The actual course adopted by the Reserve Bank was to increase the offer from Rs. 2 crores to Rs. 4 crores. This is the first puzzlement in official policy.

In the second place, the response to the weekly offer, since the quota was increased to Rs. 4 crores, has been even more unsatisfactory. One would have thought that the Reserve Bank would, in such circumstances, retrace its steps and either reduce the offer to Rs. 2 crores or suspend sales for the time being. On the contrary, the Reserve Bank is persisting in maintaining the weekly offer at Rs. 4 crores. It is obvious that offer on the basis of Rs. 4 crores per week has nothing to do with the ways and means requirements of the Central Treasury, whose deposits with the Reserve Bank stand at the high altitude of Rs. 354 crores. It follows that Treasury Bills are being kept up as an instrument of monetary policy. With a considerable part of the liquid resources of banks diverted into 2½ per cent Bonds and 2-3/4 per cent loan, of which the total sales in recent months are over Rs. 50 crores, there may be said to have been a considerable funding of Treasury Bills into these short-dated loans. With the free surplus cash of banks immobilised to a great extent by this means, Treasury Bills, as an instrument for maintaining even conditions in the money market, are no longer required. In fact, the money market may be said to be now more or less depleted of floating balances; and the steadiness of monetary conditions to day has not, perhaps, been known since the war began. In Bombay, short credits have been definitely usable; and transactions in interbank loans have been reported at three-fourths per cent. Both in Bombay and Calcutta, there has been pronounced demand from outside parties for loans on call basis.

It would appear that this demand is in respect of finance required for carrying bull positions both in bullion and gilt-edged. Before the issue of 2½ per cent Bonds, and by virtue of intelligent anticipation of this issue, speculators had bought up large parcels of 2-3/4 per cent 1948-52 Loan while the tap rate was at or below par. This loan went up to Rs. 100-8; but, on the Reserve Bank coming out as a seller at this rate, the stags started clearing out and have brought the rate down to Rs. 100-2. The decline in the price of this scrip is a factor which has somewhat disrupted the favourable gifted position of following the success of the 2½ per cent Bonds 1950. It is unfortunate that the inapposite Treasury Bill policy abets this kind of disruption.

If the Government were serious in their issue of a 2½ per cent Loan, it is clearly their duty to avoid disruptive policies and adopt positive policies which will prepare the ground for the issue of the next Loan in the 2½ per cent series. From this point of view, the Reserve Bank must immediately suspend sales of Treasury Bills. And sales of 2-3/4

per cent Loan through the tap must be resumed only at the proper time and at the proper rate.

Easy conditions prevail in the money market call money quoting ½ per cent in Calcutta and ¼ per cent in Bombay. It would appear, however, that in the Western Centre there is still a stringency for funds though banks are not demanding the high rate of 3/4 per cent of last week. Conditions are not completely normal as at the auctions of treasury bills bidding was still poor and the Central Government was not able to get its requirements in full. There is, therefore, a further sharp increase in the average discount rate to 5 annas 11 pies per cent from 5 annas 1 pie per cent last week. The amount of accepted tenders was Rs. 1.5 crores against the offer of Rs. 4 crores. It should be said that response has been better during the week. The total amount of applications was higher at Rs. 2.93 crores against only Rs. 57.25 lakhs last week. The amount of accepted tenders also shows an increase of more than Rs. 1 crore to Rs. 1.5 crores.

With the further increase in the average discount rate banks will perhaps take greater interest in treasury bills. The Central Government also seems to be of the feeling that banks should be allowed a slight increase in rates asked for, especially as the loan programmes have been successfully completed and it is only the 3 per cent 1950-51 loan which is on tap. The total of the floating debt has come down to Rs. 21.83 crores from Rs. 46.0 crores in the beginning of June. This is perhaps the lowest level for over four years. That it has been possible to effect a reduction in the amount of outstanding treasury bills by nearly Rs. 100 crores is a good testimony to the extremely strong ways and means position of the Government and the successful floatation of the various loans.

With the reduction of nearly Rs. 25 crores in just a little over two months, and the continued increase in the working capital of banks, though at a lower rate, it not surprising that the Central Government has been able to liquidate its holdings of 3 per cent 1970-75 loan to the extent of Rs. 13 crores, further issue the same loan for Rs. 30 crores and also make a successful issue of the 2½ per cent 1950 loan. As it was reported that the Reserve Bank, the Imperial Bank and the Central Government between them took a large portion of the short-dated loan, issued recently, it can thus be said that the

new money found by the Central Government was over Rs. 25 crores in two months leaving out, of course, subscriptions to the 3 per cent 1959-61 loan.

With the recent stagnation in the gilt-edged market and the anxiety of speculators to dispose of their holdings, subscriptions to existing loans will perhaps be on a smaller scale and the Reserve Bank may not have the opportunity for some time to effect further tap sales. But it can be certainly expected that once the present speculative position is liquidated the gilt-edged securities section will again be steadier.

The returns of the Reserve Bank for the week ended July 27, show that there has been a further decrease in notes in circulation to Rs. 1,128, 73 crores from Rs. 1,135.29 crores. As rupee coins are further higher at

Rn. 16.35 crores against Rs. 15.57 crores total notes issued have improved to Rs. 1,152.94 crores from Rs. 1,152.15 crores. Notes in the banking department have jumped to Rs. 24.21 crores from Rs. 16.86 crores. The reduction in the total of notes in circulation for two weeks in succession, by nearly Rs. 12 crores, has given rise to the feeling that it may not be necessary for the Reserve Bank to effect any large additions to currency for sometime and that, if the war against Japan is fought away from India's frontiers, sterling accumulations also might be on a smaller scale. In the two weeks ended July 27, however, foreign balances in the banking department have recorded a sharp rise, the latest figure at Rs. 434.45 crores revealing a rise of Rs. 31.5 crores. Whether this payment is due to the delayed inter-government adjustments is not clear.

In the banking department, as a result of the large, sterling receipts Central Gov-

ernment balances have naturally recorded a sharp rise. The figure at Rs. 353.79 crores on July 7, is the highest for all time. There is a rise of Rs. 32.75 crores over the previous week. Sterling balances have improved to Rs. 22.07 crores so that about Rs. 10 crores has been received on account of taxes, subscriptions for loans and other items. Other Government accounts are slightly higher at Rs. 19.5 crores against Rs. 18.63 crores. Surprisingly enough there is a large increase in bank deposits with the Reserve Bank to Rs. 75.07 crores from Rs. 68.6 crores. Unless the advances registered by scheduled banks in the week ended July 28 were purely temporary, the large increase in bank balances without any appreciable increase in working capital is not quite understandable. Other deposits showed a rise of Rs. 65 lakhs to Rs. 21.76 crores while investments are further higher at Rs. 20.28 crores against

(Continued on page 208)

THE HEROIC SCALE

India must plan to increase her steel production if she is to develop the heavy industries essential for a country of her size. For the construction of iron and steel manufacturing plants on a massive scale the irreplaceable need is steel.

Cloth Control In Bengal

Thanks to the visit of Sir Akbar Hydari to Calcutta, there appears to be a fair prospect of the cloth muddle being put right in time to meet the Puja demand equitably, and as far as available stocks will permit. The measures that have been decided on by Sir Akbar and his official and non-official advisers have naturally to await the return of Mr. Casey from the Governors' Conference at New Delhi. But a large measure of agreement has been reached on all the important aspects of the problem; and since the Puja and Id season is not far away, one can expect early effect to be given to the results of recent consultations and deliberations. With a special allotment of 10,500 bales for giving the new regime a favourable start and with a large representative association to supervise the working of the control and with the assurance of the co-operation of the trade at every stage, there are brighter prospects of successful working of the control than we had at any earlier stage.

But it is necessary that both the authorities and the public should bear in mind the nature of the present emergency, the main factors that brought about the present crisis and the possible need at a later, but not necessarily distant, stage to secure a return to more or less normal conditions of trading and of economic life as a whole. If these facts and considerations are borne in mind, the methods of giving effect to the decisions of Sir Akbar and his collaborators will be properly chosen; and the machinery that will then be brought into being will function smoothly without any misconception about the ultimate purposes of control. For, not the least fertile of the various sources of our present troubles is the idea that the development of wartime scarcity and the consequent need to set up official controls both on the procurement and the distribution sides can be regarded and utilised as an opportunity for the large scale transference of trading opportunities to favoured groups and classes. This idea is manifestly in conflict with the policy of the Government of India not to disturb the structure of the trade of normal times and to utilise ordinary trading channels for the working of wartime controls. While this policy has on the whole been adhered to in other provinces and has ensured comparatively smooth working of controls, in Bengal special factors were at work to disorganise the structure of the trade and open the door wide for the entry of new elements. In the first place, the cessation of imports of cotton goods from abroad forced the traders in imported goods to turn to Indian mill-made goods. Secondly, the exodus of 1941 led to the temporary exit of a large number of old established traders from the scene. The introduction of cotton cloth control two years ago was therefore the occasion for a considerable change of personnel of the trade in Calcutta. But an even more powerful factor working for a change is the fierce resentment of the public against the large scale profiteering and black marketing of which some sections of the trade were guilty. The fact that the trade in cotton goods belonged so preponderantly to one community has also weighed on the minds of the public and of the Government and led to the demand for equitable division of this trade among other communities as well.

These developments, while they are no doubt important in the deterioration of the position during the last year, have an even greater bearing on the ways and means of instituting a more efficient system of distribution for the future. The basic difficulty, however, is that Bengal is even more of a deficit province in cotton goods than she was in food and that therefore much depended on the efficiency of the administration. But it is notorious that the administration in Bengal has not risen to the requisite standards of integrity and efficiency. The change in the personnel of the trade, which was favoured alike by the objective circumstances and by the state of feeling among large sections of the people, furnished opportunities for favouritism and corruption which are by no means conducive to the working of any system of control. In many cases, black marketing is said to have been necessary to avoid losses, rather than to make abnormal profits. In these circumstances, it is no wonder that control hardly had a fair chance of success and that evil was gathering in snowball fashion.

The Central Cotton Textile Board was naturally chary, in these conditions, of taking on any manner of responsibility for what goes on within the borders of this Province. In every visit of his to Calcutta, Mr. Vellodi has emphasised that the responsibility of himself and his colleagues stops with ensuring the despatch to Bengal of her quota and that its proper distribution is the sole concern of the local Government. But the continued mismanagement of distribution can constitute a grievance for other Provinces in that the sacrifice they make

in finding Bengal's quota is not properly requited by satisfaction of the people of Bengal. For this reason, as also for the fact that the position in Bengal was becoming increasingly hopeless, Sir Akbar has ended the aloofness of the Central Government to the point of visiting Calcutta, examining the various points of view and reconciling them for the purpose of evolving a scheme that will be acceptable to all sections and assured of smooth and satisfactory working.

The problem before Sir Akbar was to reconcile the claims of the various communities, persuade the Government of Bengal to give up the idea of a Syndicate and form a new organisation which will be assured of all-round support and co-operation. In the statement which Sir Akbar made to the Press Conference on Thursday last, he made it quite clear that "control should be exercised as far as possible in a business-like way without consideration of community or class. The Government did not believe in control being exercised on communal or political lines, for the whole purpose of control was to get the particular commodity controlled at a reasonable price." It is equally a basic principle that "whenever possible the ordinary trade channels should be utilised." Sir Akbar should also have emphasised the inequitable character of any attempt to accord communal representation in the trade in cotton goods. There is the fact which cannot be buried, that out of four hundred and odd cotton mills only two or three mills belong to the Muslims. While the share of the Muslim community in the distribution need not be in accord with this proportion, it is well to recognise the unfairness of staking too high a claim in regard to distribution.

But the communal outlook has been so strong that the proposal to form a Syndicate led on by stages to the proposal to set up as many Syndicates as there are communities aspiring to a share in the trade in cotton goods. It is fortunate that there have been non-communal objections also to the Syndicate idea. There have been lively apprehensions that the formation of a Syndicate or more than one Syndicate will have the effect of leaving the whole trade in the octopus grip of one or more commercial caucuses. Sir Akbar Hydari, though he takes the view that these apprehensions are unfounded and that adequate safeguards had been provided, agrees nevertheless that, when public opposition is strong, even intrinsically sound schemes should be abandoned in favour of those which meet with popular favour. One can imagine how much it should have taxed Sir Akbar's powers of persuasion to get the Government of Bengal to abandon the Syndicate idea which, in the position in which they found themselves, must have seemed an effective means of extricating themselves from an extremely difficult predicament.

The present proposal to form an Association which will be representative of the trade and include a number of men who enjoy the confidence of the public is greatly to be preferred to the Syndicate. As the details of the new scheme have not yet been furnished to us, we can either make suggestions of our own or be content to comment on the reports and rumours that are now current. There can be no doubt that much depends on the constitution of this Association. It is rumoured that, as at present contemplated, the Bengal Chamber and the Muslim Chamber will have two members each and the Indian and the Bengal National Chambers two members between them. The injustice of this allocation is too obvious to call for more than mere mention. The two leading principles in this regard are adequate representation of the trade and a large contingent of public men in whom the public has implicit confidence. One cannot in fact exaggerate the importance of the latter. For, unless the Association contains a number of such men and it is known widely that they take active interest in the working of the control, the new scheme will be as bad a fiasco as any of its forerunners. It is to be hoped that the usual practice of filling the list with names which are prominent because they have been more or less ubiquitous will not be adopted in this case as well.

The manner in which the new body will be brought into being is also of great importance. Since the Central Cotton Control is itself the result of the action taken by the Government under the Defence of India Rules, it is desirable that the new system also should be promulgated by the Government under the D. I. Rules. As we began with saying, the seasonal demand for cotton goods is near and no time can be lost in drafting the announcements that have to be made in this regard. It is highly desirable that the drafts should be waiting for the return of H. E. the Governor from New Delhi; so that the new scheme will be inaugurated without any delay. We trust that due attention will be given to the provision of a full complement of officials for the control. For our part, we attach great importance to the provision of two full-time Senior Civilians, one for Calcutta and one for the mofussil.

The Marketing of Agricultural Produce in India—II

(Contributed)

In my first article in this series appearing in 14th April issue, I made a general survey of the conditions of agricultural marketing in India and some of the steps the Government had taken to improve these. Before discussing the merits, scope and efficacy of these measures, I propose to dwell at some length on the various disabilities under which the agriculturist labours in the marketing of his produce. These are mainly those that concern finance, storage, transport, weights and measures and the conditions of sale.

Lack of finance is the most serious and the most common handicap for the ryot, both in production and in marketing. It is notorious that even wealthy agriculturists frequently finance cultivation with borrowed funds. On business principles, one can raise no objection to the employment of borrowed money as such. And when the private money-lender is criticised for the exorbitant rates he charges it should not be overlooked that but for him, the ryot may have to go without the credit essential for raising his crop. The disadvantage in the employment of borrowed money rests in certain obligations it creates which curtail the freedom of the ryot and affect his profits. Among our ryots, borrowings for non-agricultural and unproductive purposes constitute a respectable proportion of their total debts and the land alone has to bear the full weight of all these. In such a situation, the lender's conditions naturally become more and more rigorous and the ryot becomes more and more dependent on him. As far as the marketing side is concerned, the lender who is more often than not a merchant himself or closely associated with merchants interested in securing the agricultural produce on the cheapest terms possible, makes a prior condition of exclusive sale of the whole of the cultivator's crop to himself at a price much below what the former could have secured under competitive conditions. The seller's freedom is limited not only in respect of the price he secures, but of the time and place of sale as well. The creditor-merchant usually purchases the produce immediately on harvest and that is a time when the supply will be heaviest and consequently the prices lowest. It is possible that the ryot secures a higher price if he could cart his produce a few miles off, but his prior contract with a creditor comes in the way. But, as I indicated before, it is no use exaggerating the evils of indebtedness, when most of the ryots who just manage to avoid the grip of a creditor, find themselves in no better position when the time for the disposal of their crop arrives. With them, the harvest synchronises with the end of their resources, a critical point which they might have reached, even a few days before the harvest. The crop has to be sold in hectic haste, for sheer sustenance. This universal lack of staying power exactly when the ryots need it most, constitutes perhaps the most tragic aspect of the situation. A few days' waiting might fetch for their produce a considerably enhanced price, but they cannot afford to wait.

In the financing of many cash crops, big business, particularly foreign firms, often plays a conspicuous part. It is also a helpful part, in more ways than one. To cite an example, the growth of the cultivation of Virginia Leaf Tobacco in Guntur owes much to the initiative and assistance given to local cultivators by a well-known British firm. Not only are seeds, money etc., advanced but valuable technical advice is also afforded, whenever necessary. Cultivation is guided at every step, always keeping in view the demands of the manufacturer who would purchase the produce. Thus not only is the ryot given help and guidance, an effective and useful link is established between the producer and the industrial consumer, correlating supply to demand in every detail. These are substantial advantages which the ryots derive; but when the question of price is investigated, it will be found that it is not possible to credit the business firms with any great measure of altruism. In such instances it has all the characteristics of a buyer's monopoly price, though it need not on that account be uniformly unfair to the seller. Even when there is competition among two or more foreign firms the limitations imposed by common interest on such competition have to be taken into account.

It would not be an accurate picture if it is maintained that the disabilities arising from the indebtedness of the ryots are a universal phenomenon in India. These disabilities are relatively rare among producers of plantation crops and there are localities fairly free from the incubus. Giving evidence before the Agricultural Commission, Dr. Mann says that at least as far as Khandesh is concerned, the dependence of

the cotton growers on money-lenders is a myth. It can be said of many other places in India as well. But the evil is sufficiently wide-spread and deep-rooted.

Another equally onerous handicap which the Indian ryot has to face in this respect is inadequacy of rural communications. It would be tautological to dwell on his problem because it is well-known that either in mileage or in efficiency of construction, the rural communications in India are nowhere beside those in any progressive country. Though Railways and Waterways are fairly well developed in India, the case of roads is different. Compared with Great Britain, which has 2.02 miles per square mile, India has only 0.22 mile, a little above one-tenth and even of this only about one-third are all-weather roads. The position in respect of rural roads is still worse. Between many villages in several parts of India, there are no regular roads at all and the footpaths annually improvised, get submerged in the rainy season often cutting off a village from the rest of the world for weeks together.

Referring to this problem, the Hon'ble Mr. R. H. Parker, President, The Indian Roads and Transport Development Association, Ltd., says:—

"In India there are today huge areas totally devoid of any lines of communication. There are areas with tremendous agricultural possibilities for the growing of all sorts of crops which are now lying fallow except for the bare cultivation necessary for the needs of the people living there. India is thus being held back while the rest of the world progresses. How appallingly few are the roads in some of the areas served by the great waterways will be evident from a brief study of India's road map. For hundreds of miles do rivers like the Godavari flow through rich soil, the produce of which cannot reach the market it deserves for lack of road facilities.

"More than half of the perishable produce of India runs to waste on account of delay in reaching the market consequent upon the limitation of transport. Improved roads which mean faster and larger transport facilities, particularly with the use of motor lorries, could convert this waste into wealth. Fast transport is also of the utmost importance to staple industries such as cotton, especially when it is a race to get the crop into the factory before the rains or to make delivery by a promised date."

The Bombay Economic and Industrial Survey Committee (Sir P. Thakurdas Committee) of 1940 revealed that the economic development of Bombay has been arrested for want of transport facilities connecting production and consumption centres. They pointed out that 40 to 75 per cent of the area in certain districts are not served by roads at all and that in certain other districts 70 to 80 per cent of the villages are totally cut off from outside communications during the monsoon.

Such conditions make transport of commodities impossible during parts of the year and difficult and costly at all times. Sometimes it compels the cultivator or his workers to carry the produce on headloads for distances of three and four miles—which in any other country would be considered a tragic waste of human labour. Besides, lack of roads prevents information with regard to prices and other conditions in neighbouring markets reaching the ryots and restricts the area of sale to narrow limits. One of the most effective means of securing better prices for produce is the pursuit of alternative markets. This is entirely ruled out in the absence of communications.

SPECIAL ARTICLE:

Insurance and Agricultural Finance

(By S. S. SHUKLA)

In my last article, which appeared in the 'Indian Finance' dated the 18th June 1945, I advocated three principles which should govern the investment policy of insurers in India. Those principles were firstly, the security of capital, secondly, adequacy of income, and thirdly, compatibility with national interests. I also tried to show that these principles were complementary to each other. It is possible to choose investments which without jeopardizing the principal can yield good income; and at the same time the avenues may be such that they are conducive to public wellbeing. In support, I cited the examples of the Insurance Companies in some of the foreign countries such as U.S.A., Canada and Germany where

they have done so much for the development of national industries and at the same time have increased their own profits.

Now let us examine, what are the crying needs of the country at present and how and how best can the financial resources at the command of the Insurance Companies be utilised to satisfy them? India is predominantly an agricultural country. Nearly two-thirds of the four hundred millions of population depend upon agriculture. The poverty of the agriculturist of this country is proverbial. The average income per annum per capita does not exceed Rs. 65. This amount is not enough even to keep body and soul together not to speak of the ordinary comforts of life. The main reason for it is the low productivity of the land. During the last few decades, the pressure on land has increased manifold. The Indian farmer is still employing antiquated methods of cultivation. These methods were suitable to the time when there was vast arable land at his disposal and he could jump over to virgin soil when the fertility of his farm showed signs of decrease. This method of cultivation is technically known as extensive method. What is now required is the intensive method of cultivation which has been described as the cultivation of a small area with large expenditure of capital to make the soil yield the largest possible produce.

This brings us face to face with another problem of rural India. Where from to find capital for all this? As we have already seen, it is beyond the resources of a farmer. He must depend for it on some outside agency.

Those who are conversant with rural affairs in this country know that at present there exists no agency worth the name in the villages to provide credit to the agriculturist. Even the much 'maligned' 'Sowcar' has transferred his interest to the urban areas where he finds much more return on his capital in trade and commerce. The abandonment by the different Provincial Governments of the policy of laissez faire which was giving him a sort of protection in exploiting the masses has to some extent scared him away from the villages. The less said about the co-operative banks and other Government measures such as 'Taccavi', the better for them.

There were in all ten Provincial Banks and 601 Central Banks in India at the close of the year 1940-41. The total working capital with these 601 Central Banks was Rs. 29.32 crores. Thus the total funds available for co-operative credit for the whole of India were about Rs. 43 crores. Fresh advances made by these agencies in the year 1940-41 amounted to Rs. 7.5 crores only. It has been calculated that the benefits of co-operative credit have reached to only .8 per cent of the whole population of this country. Now compare these figures with the total rural indebtedness of India which was estimated by the Central Banking Enquiry Committee to be about Rs. 1,200 crores. It is a drop in the ocean.

So much for the short term credit needs of rural India. The position of long term credit is still worse. The total working capital of the 150 or so Land Mortgage Banks in India is about Rs. 4 crores only. The only other agency catering to this kind of need is the Government scheme under the Land Improvement Act of 1883. An idea of its working

can be obtained by considering the fact that the total outstanding amount under this scheme is less than Rs. 1 crore.

While these agencies of national importance are starved of funds, our Insurance Companies are still searching for suitable avenues of investment for their funds. This state of affairs can be described simply as pitiable. The Insurance Companies can come to their rescue by subscribing liberally to the share capital and debentures of Central and Land Mortgage Banks. In this connection, two considerations will have to be borne in mind. First, the security of investment and second, the adequacy of income. The last question is rather of a controversial nature. It will depend upon so many factors such as the efficiency in the management of the Insurer's business particularly in regard to its over-head expenses. Then it will depend upon the total funds with the Company available for investments. Companies with huge funds can naturally be satisfied with a lower rate of interest while the smaller ones will need higher rates.

Generally, the premium tables in this country are being prepared at the assumed interest yield of 3½ per cent. As has already been stressed in these columns, it is neither in the interests of the Companies nor the public to lower this figure and thus increase the cost of insurance. Now add to this figure 1½ per cent for revenue taxes and investment expenses. In my opinion, insurers should be satisfied with a 5 per cent return on their investments which will enable them to show some valuation surplus too.

The average interest rate at present charged by the Mortgage Banks and different Government agencies comes to about 8 per cent. I think a dividend of 5 per cent can safely be assumed on investments by the Insurers in Land Mortgage and Central Co-operative Banks.

The Government of India in their communique on their future Industrial Policy have promised to encourage enterprises of National importance by guaranteeing dividend on capital etc. I think there can be no better occasion for the Governments Provincial as well as Central to demonstrate their sincerity in the matter of welfare of the masses. The Governments of Madras and Bombay have in the past given such guarantees for the issue of debentures by their respective Provincial Banks. This arrangement will give additional advantage to the Insurance Companies. They will have 30 per cent more of their funds for investments in securities other than the Government paper under section 27 of the I.A. Up to 30 per cent out of a total of 55 per cent can be invested in approved securities. Approved securities include securities which have been guaranteed as regards principal and interest by Central Government or a Provincial Government. Suitable conditions, of course, may be devised in each case for securing Government supervision of these concerns. I am rather averse to too much interference by the Government departments in the day-to-day working of business institutions, because red-tapism and inefficiency have been the hall mark of our Government machinery. But their provisions regarding audit, limitations in the power of distributing dividends etc. can have a salutary effect.

I hope our Insurance Pundits will give some thought to these suggestions and evolve schemes which will ameliorate the conditions of our peasantry and at the same time improve their own profits.

UNITED INDUSTRIAL BANK LIMITED
(Established 1940)
A SCHEDULED BANK
Chairman: JADU NATH ROY, Esq.
General banking business of every description transacted at favourable rates.

FACT No. 1

THE age of miracles is past. If today India's cotton textile industry was not producing an adequate yardage of cloth, then, however great our need of dhoties, sarees, towels, sheets, shirts and other essentials, our demand must go unmet.

Is it a fact that India's cotton textile industry is not producing cloth in adequate quantity?

No. The fact is that the Industry produced on an average, before the war, 3,800 million yards annually as against 4,800 million yards now. If the production of the cotton handloom industry is also included, and if allowances are made for the cloth sent out of the country and supplied against defence requirements, there was available in the year 1943-44 5,868 million yards, as against the prewar average of 6,260 million yards, a reduction of only 6% from peace-time supplies.

These figures convincingly prove that the responsibility for the current shortage assuredly does not lie at the door of the Indian cotton textile industry. The industry has adequately met the wartime challenge to produce enough for the Services and civilians alike.

One of a series of statements of fact for the information of the public.

ISSUED BY

**THE MILLOWNERS' ASSOCIATION
BOMBAY****Editorial Notes****Disposal of War Surplus Stores :**

The principles which would guide the Government in the disposal of war surplus stores and ordnance factories are revealed in the Second Report on Reconstruction Planning, by the Reconstruction Committee of Council. The machinery for direction and control is a Disposals Board which would be responsible for the general policy in respect of surpluses and allocations and which would control all disposal operations. The Board will consist of the Secretaries of the Supply, Industries and Civil Supplies and the Commerce Departments, Financial Adviser (Military Finance), the Head of the Ministry of Supply Mission in India and the Director General of Disposals. On questions of high policy, it is stated, the Board will have to get its decisions approved by His Majesty's Ministry of Supply.

The methods of assessing surplus stocks, their storage, etc., have also been referred to in the Committee Report. These proposals which concern a matter of very vital immediate interest to the business class as well as consumers, show serious drawbacks. The exclusively official complexion of the Disposals Board may easily give rise to gross administrative inefficiency, especially in view of the fact that expert black marketeers and profiteers will not be found wanting to defeat the simple-minded policies of Government. A strong representation of business interests in the Board is a desideratum. The need and the extent of control to be exercised by the British Ministry of Supply are also points likely to create irritation in the country. Before the machinery is finally set in motion, it might be hoped that the Government will have opportunities to revise some of these decisions, and make their methods more fool-proof. The All-India Manufacturers' Organisation has issued a pamphlet written by Mr. N. D. Sahukar, where the broad principles to be kept in view in the disposal of war surplus stores and ordnance factories are logically presented. The author has also mentioned how the United States deals with the problem. The pamphlet reinforces the plea for a revision of Government policy at many points.

The Travancore Budget :

The income of the Travancore Government which stood at about three crores before 1939, is expected to exceed six crores of rupees in the coming financial year. The rise has been gradual through the war years and could be accounted for by the general inflationary conditions which the Government have turned to advantage through measures such as the Excess Profits Tax. The rise in revenue in items like the Excise, though advantageous from the Bud-

getary point of view, has social implications in no way encouraging. The emphasis however, ought to be not so much on how money comes into Government coffers as on how it is being utilised. Thus judged, there can only be praise for the Travancore Budget. In the current year, according to the revised estimates, there is a surplus of about one crore and a half, and the major part of it goes towards financing post-war development. The coming year is also expected to show a surplus of one crore and twenty three lakhs of rupees. Of this amount, 44.32 lakhs is allotted to the Post-war Reconstruction fund; and the balance barring Rs. 5 lakhs credited to the Revenue Reserve Fund, is earmarked for expenditure on reconstruction programmes in the coming year. The main items in this programme are the manufacture of shark liver oil, establishment of a silk factory, development of a cardamom marketing scheme, expansion of fisheries, introduction of compulsory education in selected rural and urban areas, investigation of major irrigation works, improvement of tanks and coastal navigation and development of ports. The expenditure on education will be as part of a ten-year programme at the end of which the State is expected to attain centpercent literacy. As Travancore is already far ahead of the rest of India in education, this is a fair length of time for the attainment of the objective. The Government have also in view a medical and public health programme spread over three years.

The Travancore Government deserve congratulation for the radical step they have taken in respect of land revenue reform. Doing away with the existing rates of land tax based on Inams and Tharams, a basic tax on land at a uniform rate throughout the State will be introduced; no person getting less than a certain income from land need pay more than this basic rate. Others will pay on the basis of percentages of the net yield. The Government also contemplate varied facilities for those whose income is entirely or predominantly derived from land. These measures would go a long way towards solving agrarian distress, though a complete solution for it has to be sought in reforms in other directions as well.

U. P. Agriculture :

Figures for the progress of cultivation of food crops in United Provinces during 1943-44 are now available. The Grow More Food Campaign, favourable weather at the time of planting crops and the high price of produce have been responsible for an expansion in acreage in respect of several food crops, though such an expansion was not uniformly accompanied by a corresponding increase in output. The largest increase recorded is for sugarcane, the cultivated area showing an increase of 20 per cent and the outturn in terms of gur increasing by 11 per cent. Wheat acreage registered a rise of 1.7 per cent though the yield for the year showed a fall of 6 per cent. For rice, the rise has been 1.3 per cent in area while the yield rose by 1.9 per cent. In the case of barley, the yield went down by 5 per cent though the area recorded a small rise. Jowar had a slide down both in area and in yield of 8.1 per cent and 16 per cent respectively. Bajra also decreased by 11 per cent in area and in outturn by 14 per cent. The high prices then prevailing for cotton resulted in the acreage for cotton shooting up by as much as 19.5 per cent. It is estimated that the Grow More Food Campaign alone should have accounted for about a lakh of acres to be brought under the plough during the year.

Hyderabad and Rayon Industry:

The Indian States and the different provinces of British India are exploring all possibilities for the establishment of a rayon industry before the war is over. During the recent budget session of the Travancore Legislature the Dewan outlined the ambitions of Travancore and indicated the possibilities of taking up the manufacture of rayon in the State. Mr. R. J. Chinai who has recently studied the American technique of rayon manufacture in the U.S.A. told the Silk and Art Silk Mills Association, Bombay, that India also can take up the manufacture with prospects of lucrative trade in the post-war years. Annually India imported 37.5 million lbs. of rayon before the war and the country was drained to the extent of about Rs. 264 lakhs. Most of the chemicals required for rayon manufacture are available in India at present and sulphite wood pulp, an important ingredient in rayon manufacture, can be imported from U.S.A., Canada and Scandinavia. The real difficulty, it appears, would be in the matter of locating the plant since care must be taken to choose a place where large supplies of water can be available and facilities for the safe disposal of this water can also be easily arranged.

That Hyderabad has excellent possibilities of starting this industry is brought out in a booklet issued by Nawab Ahsan Yar Jung Bahadur, retired Chief Engineer and Secretary to the Government, P.W.D., Hyderabad Government. According to him Hyderabad would gain by the establishment of a rayon industry because with the manufacture of staple fibres the textile mills in the State will be enabled to replace long-staple cotton imported from America and Africa as excellent counts can be spun from staple fibre. The important raw materials, namely short staple cotton, sunn hemp and bamboo, are considered to be adequate in the State and the quality of sunn hemp and bamboo available has been examined and testified as satisfactory. In view of the high cost of production of bamboo pulp and the difficulties of collecting bamboo in the forests and taking them to the factory areas, the Nawab prefers sunn hemp and chemical cotton as more suitable raw materials. In order to reduce the cost of production the rayon industry should be self-contained in respect of chemicals and electric power. The establishment of a chemical factory to produce the necessary chemicals and an increase in the area under short staple cotton are recommended. It is further calculated that a factory with a capacity of ten tons per day will be an economic proposition and the site can best be near Mancherial on the banks of the Godavari.

The capital requirements are outlined as follows: Total cost O.S. Rs. 1.7 crores, including O.S. Rs. 25.7 lakhs for chemical factory, O.S. Rs. 17.5 lakhs for power installation, O.S. Rs. 58.2 lakhs for rayon manufacture machinery, O.S. Rs. 36.03 lakhs for working capital, O.S. Rs. 5.2 lakhs for land, O.S. Rs. 5 lakhs for farm development, O.S. Rs. 7.5 lakhs for buildings and O.S. 5.82 lakhs for pulp making machinery. On the basis of the present prices the author of the booklet assumes that cost of production will not exceed Re. 1 per lb and the finished product can be marketed at Rs. 1½ per lb. The prewar selling rate of rayon was annas 12 per lb and the postwar rate is taken to be only Rs. 1-8 per lb and on this calculation a safe 20 percent can be guaranteed for the industry. In view of the enormous scope for the industry we hope that the matter will be taken up by

the Nizam's Government and other businessmen as early as possible.

45-Crore Plan for Sind

The Sind Government have announced that they have drafted a five year-plan for the Province consisting of 122 schemes and costing about Rs 45 crores. The schemes would be put into operation with effect from the 1st of April 1946. Priority is given, first, for technical training, then for irrigation and waterways, thirdly, to roads and fourth to agriculture. Industrial development comes last. Two barrages will be constructed at a cost of Rs. 16 crores capital and Rs. 24 lakhs recurring to irrigate 2½ million acres. Work in the Lower Sind Barrage will commence this year and nearly 14,000 workers will be employed. There are 32 agricultural projects costing Rs. 7 crores. These include rice cultivation, experimental farms in each district, survey of riverine areas, manuring of crops, distribution of agricultural implements and cotton seeds, purchase of tractors and technical training for Agriculture, etc. Adequate provision is made for cottage industries and industrial training and it is made clear that State enterprise will be confined to textiles, tanning and fishing. The Road Plan aims at hitting a target of 4,000 miles at a cost of Rs. 11 crores. The electric power schemes aim at providing light for all the neighbouring towns and the electric grid for the provinces including Karachi at a cost of Rs. 1.2 crores capital and Rs. 11.5 lakhs recurring. Plans are also ready for the establishment of medical schools and a school for training of midwives and improvement of drainage and water supply, the cost being estimated at Rs. 4.15 crores. Due consideration will also be given to the reorganisation of town planning and housing schemes for the poorer classes and also the constitution of an Improvement Trust in Karachi. Sind aims at developing forestry for over an area of six lakhs acres and provision is also made for fisheries, rural uplift, labour welfare and village amenities etc.

During the first year of the Plan the province will have to spend Rs. 15 crores and during the year 1945-46 an expenditure of Rs. 3.56 crores will be incurred. At the end of 1944-45 special funds came up to Rs. 8.5 crores only and Sind expects the Centre to give a capital grant of Rs. 4 crores besides the recurring grant. The scope for taxation is very limited (receipts are not expected to be more than Rs. 50 lakhs at the highest) and even the compensatory subvention from the Punjab Government is not expected to improve matters considerably. The reliance on the Centre stands and more than 50 per cent of the money to finance post-war plans is expected to be raised through loans.

Hydari's Assurances:

Sir Akbari Hydari assured the Bombay Provincial Muslim Chamber of Commerce recently that he had arranged for imports only of such consumer goods from the U.K. and the U.S.A., as are not manufactured in this country or are insufficiently manufactured. He was sure that the imports will not flood the markets but will actually make up the deficiency of consumer goods in India. Revealing a few figures he said that his Mission had arranged for the imports of 30,000 to 50,000 bicycles while the pre-war requirements of this country were approximately 80,000. India would also be getting about 25 million lbs. of yarn, 5 million from the U.K. and 20 million from the U.S.A. While it is quite possible that some of the Hydari items may relieve the great scarcity that is being felt among civilian population in India at the present moment.

commercial circles do not agree with Sir Akbar that the achievements of his Mission will not lead to the flooding of our markets by foreign goods. The real implications of the import of consumer goods, particularly of the variety of bicycles, from England would be appreciated only if the problem is looked at from the point of view of the other significant changes that are coming

over Indian economy in recent months. War contracts are being cancelled in a hurry and this forces the Indian industries to get ready for peace as early as possible but the facilities are not yet forthcoming for the transition. Secondly, the Government of India are revising (downward) maximum prices particularly for such goods as are usually imported and for which Indian

enterprise is now fully equipped for production. Thirdly, the Government have started releasing for the civilian market certain classes of goods for which production has just recently been organised. It is well-known that bicycle manufacture was encouraged in India under official auspices

during those dark days when England was being pounded severely by the Luftwaffe but, when, after 1942, the tables were turned against the Nazis, British factories started working again and the Government of India have withdrawn their support to the Indian manufacturer. The case of the manufacture

of small marine engines in Bombay is another case in point. Trade circles are also apprehensive of the policy followed by the Government of India in retaining the products of Indian industries for Government use and releasing foreign goods for the use of civilian markets in India with a view to preparing the ground for exploitation by foreign industrialists. That there is no other alternative besides arranging for the imports, which after all may not arrive in the immediate future, will not come from an administration bent upon laying the foundations of a strong industrial future for India. There are alternatives. The Australian and Canadian Governments under similar circumstances have chosen to give fillip to indigenous industries to relieve the strain of scarcity instead of going abroad for the finished products. Sir Akbari surely knows that there is a great scarcity of consumer goods in India which has been created only by the short-sighted policy of the Government who failed to encourage Indian industries in the past four years of golden opportunities. Alternatives there would have been if the Government declared their industrial policy in clearer terms for the protection of Indian industries and if they had endeavoured in right earnest to procure machinery from abroad to speed up internal production.

Insurance Policy-Holders in Burma

After three years of Japanese occupation, Burma is now practically reconquered. But the mere liberation is not going to instil optimism and cheer in the minds of holders of insurance policies in that country. During these three years a large number of policies have irrevocably lapsed. A few cases there might be, which were nearing maturity. These will be saved, thanks to the operation of the non-forfeiture clause. But there are likely to be a number of cases of mature claims which were ready for payment pending the production of necessary documents.

At the time when Burma was overrun insurance interests requested the Government to come to the rescue of policy-holders, by saving their policies from lapsing through the non-payment of premiums. The Government suggested that insurance companies should gratuitously keep in force all policies since non-payment of premiums was due to circumstances beyond control, till the war ended or reconquest of Burma, when the policy-holders should be given the option of reviving the policies on payment of arrears. But the Companies did not take this suggestion as it would mean strain on their finances. They suggested that Government should advance money on behalf of policy-holders and the money thus advanced would be the first charge on the policies which must be returned with interest when claims would arise. If the policy-holders did not revive the policies they would automatically be assigned in favour of Government. Though the Government was not ultimately a loser yet they did not accept this.

Between the suggestion of the Companies on the one hand and the suggestion of the Government on the other, but none materialising, the lot of the policy-holder was none too enviable. Policies that have lapsed irrevocally are assets wasted. Even now there might be slight chance to revive these policies.

There is one aspect of the problem that is of immediate interest to Indians. Considerable assets were left behind by Indian insurers in Burma. It is not known how much damage has been caused to the assets. An enquiry should be made into the extent of the damages done to such assets of Indian insurers. And such damages should be

made good by H. M. Government, if the Provincial Government could not do so. Sir Kingsley Wood a former Chancellor of the Exchequer, gave an assurance to this effect. It remains to be seen how far this is to be fulfilled. Another important point is that no invidious distinction should be made between the assets of Britishers and those of Indians.

Needs of the Non-ferrous Industry

Peace brings danger to many industries and amongst the most nervous at present can be cited the Non-ferrous Metals Industry in India. When the normal channels of foreign trade are restored, manufactured goods tend to flow in and indigenous raw materials flow abroad in search of better prices. War has operated as an excellent tariff protection and peace will, it is feared, bring in the dangers of freer trade, because the Government of India never followed any consistent policy of encouraging Indian industries. Though recently the industrial policy of the Government is clarified it has not allayed the fears of the non-ferrous metal manufacturers. In their memorandum to the Government of India, Planning Department, Messrs. S. S. Jain and Balachandran plead for State help in the matter of procuring raw materials like tin, lead, zinc, etc., and for prohibiting the exports of the valuable raw materials available in the country at present. If a Panel of Importers is to be set up, they urge, it must be representative in character and conditions may be imposed for minimising the cost of production. A plea is entered for augmenting the staff of the Geological Survey to explore the possibilities of mining various deposits of non-ferrous ores. The view is held that after the collection of all geological data there should be a regional allocation of the mines for operation of such of those industries already in existence in the respective areas. The Government can do a great deal by extending financial aid, by promoting an Industrial Investment Corporation for purposes of encouraging industries, and by giving facilities for the procurement of the required plant and machinery. Unhealthy competition has to be eliminated and the quality of indigenous production should be improved. Pointed attention is drawn to the fact that in this country the railway rates are excessive and unless the transport charges are made more favourable the industry cannot hope to lower the cost of production. The urgent need for forming an Indian Standard Institution on the lines of the British Standard Institution is also brought out. This Institution will be of great help in formulating Indian Specifications, in conducting research and in standardising the quality of all the products of the non-ferrous industry in India. It can also serve by issuing periodicals on technical subjects, foundry work, processes of manufacture, etc.

Since the non-ferrous industry is vital for the industrial progress of the country, the Government of India should appoint a committee to go into the question of how far the State should come to its aid. An exhaustive enquiry will also yield valuable facts and figures to plan the future of this industry.

Egyptian Cotton Prices:

Cancellation of war contracts in India has its own repercussions on the prices of the high quality cotton of Egypt. At a time when the whole world is supposed to be suffering from acute cloth famine and when the shipping position is happily restored to normalcy, the price of Egyptian cotton has, it is reported, declined. In view of the fact that the exports of Egyptian cotton has been on the increase for the past few months, a

decline in prices appears confusing. The President of the Egyptian Cotton Exporters' Association has been expecting an upward swing in prices because he thought India would purchase more, and orders from France, U.S.A., Spain, Greece, Sweden and Switzerland would also increase. Egypt's own consumption of cotton pointed towards a higher price being very probable. Still the unexpected has happened and the reasons are now catalogued as follows. Responsibility is placed on the cancellation of war orders for parachute cloth in India and the introduction of rationalisation of the cotton mill industry leading to the introduction of the utility cloth scheme which does not require the high quality Egyptian cotton. It is reported that the Government of India has sufficient stocks of Egyptian cotton to get on for one year more. Further, the price of the Egyptian cotton has been considered very high and not properly related to the American varieties. Obligated to tackle the situation the Egyptian Government have decided to raise the official price by 10 per cent. The Committee under the chairmanship of Makram Ebeid Pasha, the Egyptian Minister of Finance, have considered a suggestion to utilise the profits, made by the Egyptian Government from their cotton purchases and the receipts from the War Risks Insurance for the purpose of helping the stabilisation of the cotton prices. Being more interested in the people's welfare the Egyptian Government does not learn a lesson from the Government of India, who found it expedient to fix a lower floor for the cotton crop of 1945-46, 25 per cent less than the level for 1944-45.

The Egyptian Government have in fact encouraged extension of the area under cotton for the past two consecutive years and the Finance Minister, it is reported, is contemplating the abolishing of all the

restrictions on cotton exports. He is satisfied with the Anglo-Egyptian Cotton Purchasing Board enjoying the monopoly in the export of Egyptian cotton. The U.S. also is busy cultivating markets for her cotton in England and in the European countries. Thus, while the chief cotton producing countries are trying their best to help cotton exports it is a sad contrast that the Government of India are keeping quiet, waiting probably for something to turn up.

U. S. Chemical Industries:

The U. S. War Production Board is rightly proud of the achievements of American chemical industries in 1944. The value of the output has increased nearly two and a half times since 1939 and now stands at the peak figure of \$300 million. It is revealed that the production of sulphuric acid has increased from 10.9 million tons in 1931 to 13.93 million tons in 1944 while the production of fertilisers increased from 8 million tons in 1940 to 12 million tons in 1944. The output of pharmaceuticals recorded remarkable increase and the output of Atabrin has increased five-hundred fold during the past few years. From almost nothing America has started producing 8.5 lakhs tons of synthetic rubber per annum. The production of magnesium jumped up from 1350 tons in 1939 to 2046 tons in 1944. Production of penicillin rose up from 9000 million units per month to approximately 2.9 lakhs million units. Even cosmetics recorded a large increase from 209 million in 1939 to \$408 in 1944. Though England takes the credit for some of the important discoveries like penicillin, polythene, and radar their large-scale manufacture is organised only in America and the progress in the manufacture of the new insecticide D. D. T. is quite

COSTLY RELATIONS

HERE are the loathsome rat, his cousin the rabbit, and that unwelcome relation, the squirrel. What is the connection between them and the British chemical industry? All rodents are the enemies alike of the farmer and fruit grower, the market gardener and merchant. The damage they do has been estimated at many lakhs of rupees a year — and almost all of this is foodstuffs. It is characteristic of rodents that they destroy even more than they devour. Thus rats not only eat the grain in stack and granary; they render an even greater quantity unfit for human consumption by fouling it. Besides eating the eggs and young of birds, squirrels play havoc in orchard and garden, wantonly nipping off fruit or vegetables and laying by stores which they often forget all about. All such pests must be ruthlessly kept down and it is here that the British research chemist and the chemical factory enter, by evolving new and more effective ways of attacking them. To trapping, snaring and shooting have been added methods of chemical warfare. Rats are poisoned by the use of baits containing such chemicals as arsenic, phosphorus, zinc phosphide, barium carbonate and red squill. They can also be gassed with sulphur dioxide or the exhaust gas (carbon monoxide) of car or motorcycle. Far the most humane as well as efficient way of exterminating rodents is by cyanide-gas poisoning. It is also safe and simple — a level tablespoonful of cyanide dust is placed in the entrance to the burrow, which is then sealed with earth. The rodents within are rapidly and painlessly killed. As for the squirrel, the best two methods of settling accounts remain trapping and shooting. But in the total war against rodent pests, chemical warfare is most effective.

IMPERIAL CHEMICAL INDUSTRIES (INDIA) LTD.

THEIR NEEDS

never ignored

Our specialities:—
DOUSCHETE CHE-
QUER, Mock Coating,
Thana Coating, Printed
Mock Coating, Thana
Chequer, Border
Sarees, etc.

As in every necessity of life, in clothing too, the peasant class is nowadays badly affected. The question of paying any price is an impossibility with them. They don't want to put up a show; what they need is durability and cheapness. Apart from the varieties of finer clothing we also manufacture clothing of medium but durable texture which are available at a considerably cheaper price.

Moon MILLS LTD.

General Assc. Buildings, Fort, Bombay.

That Australia's prosperity is vitally linked to the prospects of her wool is well-known and how far a large purchaser of her wool can occasionally give her trouble was clearly seen when a few years before this war Japan started cornering Australian wool for evil designs. War has succeeded temporarily in postponing Australia's anxiety to evolve a suitable plan for the stabilisation of the wool prices and to guarantee a profitable market abroad. But now that the defeat of the Axis Powers is almost over, the twin problems of post-war marketing of Australian wool and organising scientific improvements in the industry have again come to the forefront. Huge stocks have been accumulated for the past few years and something must immediately be done to arrange for their orderly liquidation. The emergence of artificial fibres as competitors to wool as for cotton and silk is one of the foremost economic problems facing Australia to-day. 25 per cent of world's production comes from this Dominion and her dependence on foreign markets is indeed great. In order to tackle the special problems of wool industry the Australian Government has recently introduced a bill to provide for a suitable machinery. The rate of tax collected under the Wool Tax Act is proposed to be quadrupled and £650,000 (Australian) will be raised to strengthen the Wool Use Promotion Fund. It is reported that a Wool Use Promotion Bill will be introduced to form the Australian Board on a broader basis. Research programmes are outlined to improve the standard of the marino and other breeds, to improve the processing methods and to conduct systematic investigations in connection with the marketing problems. Plans are also to be evolved for improving the quality and the finish of wool and to widen the range of its utility. Empire co-operation is forthcoming in full measure and the recent Empire Wool Conference which met at London gave Australia much encouragement and hope. Though the arrangement to supply the British mills will stabilise the prices of Australian wool for the time being the long-term interests can be said to be successfully tackled only when the co-operation of other important wool producing countries is enlisted and steps are taken to meet the new competition from novel substitutes.

« COAL PROBLEMS »

2

WOMEN IN THE MINES

MUCH of the criticism against the temporary lifting of the ban on the employment of women underground in coalfields in India has been based on misconception about conditions under which they work. In 1937, with the wholehearted support of the industry, Central Government passed legislation preventing the employment of women workers in the mines.

In 1940 to 1943 the industry battled against a rapidly worsening labour situation for which the principal two of several causes were, firstly, considerable recruitment of coal mining labour by other industries mainly large contracting schemes in the area and, secondly, the acute shortage of machinery supplies.

So serious was the position in 1943—the whole of India's industrial output threatened by increasing coal shortage—that Central Government decided the only solution was to lift the ban temporarily and to permit women to work below the surface.

Women are restricted to carrying baskets of coal on their heads and to loading the tubs, work well suited to their physique, to which they have been accustomed for generations. Deep mines are well ventilated and temperatures underground are frequently lower than those on the surface. By statute no women are allowed to work in seams under 5 feet thick. In addition, extensive medical and maternity facilities and benefits are provided.

There is no compulsion, either economic or otherwise for women to go underground as there is ample alternative work on the surface.

The Industry has recommended their withdrawal the first moment it can be done without affecting the war effort; but it is estimated that to do so now would mean a drop of 20% output because men are not available to take their place. It is a valuable contribution to the war effort and those women who have elected to work in the mines are not undergoing any hardship which would justify sacrificing their contribution.

Clive Street Gossip

My championship of the Indian assistants of the Imperial Bank has won for me the "benedictions" as they call them, of a number of these disappointed young men. I have with me a long letter of five type-written foolscap sheets with a few press cuttings attached. From the latter I find that mine has not been quite a lone voice in this cause. I said some time ago that a Karachi Chamber had addressed the authorities in this matter. And before that, my comments on this question had drawn an echo from the "Eastern Economist" and the "Bombay Chronicle." I now find that the Indian Merchants' Chamber took up the matter with the Imperial Bank authorities directly. The answer was polite in parts, but curt and abrupt at the end. In any case, the correspondence ended abruptly in circumstances which make one wonder why. But the more important development of which I am now appraised by my correspondents, namely, the Indian assistants of Imperial, is that "Blitz," the enfante terrible of the world of journalism in Bombay had let loose a blitz on this ancient banking institution of ours. The practical effect is not much. But it is well to know that yours is not a lone voice and that the justice of the cause compels wider recognition.

It is not for benedictions or other self-satisfaction that I return to this topic. The long letter of five type-written pages contains much useful information on this question. I regret very much that we have not sufficient space available in the paper these days to reproduce the letter in full. We have been obliged to summarise the letter to less than half its size, which perhaps does less than justice, to its authors, but which is nonetheless a requirement of justice, considering other claims on scarce space. The principal point that my correspondents make is that from the beginning the top men in the Imperial had been mindful of the ways and means of withholding from the Indian staff the promotions and emoluments which they have all along been anxious to provide the European members. It is not known as widely as it should be that the Bank makes a distinction between Asiatics and non-Asiatics, so that certain privileges can be preserved for the latter and automatically kept out of reach of the former. I myself was under the impression for a long time that the means of denying certain privileges to the Indian staff officers of the Bank was through the importance given to the place of recruitment. On this basis it was, I thought, that while the European member got his passage home and long furlough and other heavenly facilities, the Indian member who was recruited from Shambazar got only a first class tram ticket from the High Court to his house in North Calcutta. But the evil appears to be more deep rooted and more securely based. I cannot for the life of me understand how the Central Board which includes a few Indians can allow this flagrant instance of racial discrimination.

That, however, would seem empty sentiment by the side of the solid wrongs done to the Indian staff assistants and lower grades. I am growing fairly sick of this theme and its details are even more exasperating than the broad outlines. The cadre of staff assistants are divided into two grades. This much-

advertised Second Grade Assistants' Scheme of the Imperial Bank is cunningly devised. Within 10 or 11 years the Assistant is assured of a rise in substantive salary to Rs. 450. If he gets an acting job as Agent, he gets a house allowance of Rs. 90 and an agency allowance of Rs. 90. Then he is to wait to be promoted to the first grade. But this promotion to the first grade, of course, does not mean any increase in emoluments. But what happens is that the allowances are added to the salary to make a higher figure of substantive pay. Usually, he is made to vegetate indefinitely in the first grade. During all this period of vegetation the Assistant gets the same salary. The promotion from First Grade to Staff Officership is verily like the passing of a camel through the eye of a needle; but one can guess the motive of these exceptional promotions. But whatever it may be, the fact remains that a scheme intended to Indianise the Bank stabilises and fossilises promising young men in the same status as they get in their thirties. The first grade Assistants have definite quotas allowed for the 3 circles; Calcutta circle, say, 22 Assistants in the first grade cadre, Madras 12 and Bombay 10. But small as this quota is, it is not filled up. For an Assistant reaches first grade and stagnates on the maximum salary of Rs. 540 for 10 or 15 years. What kind of responsibility can we expect of him? For, he becomes thoroughly disgusted with his work and totally dissatisfied with the Bank. He is not to blame. That is to say, the Imperial Bank not only has crippled and crushed the Indianisation scheme, but it has crushed the Indians who have joined under the scheme.

But I shall not give more of these provoking details. It should suffice to say that 197 European officers of the Bank absorb Rs. 40 lakhs of the Bank's annual earnings while 250 Indian assistants account for Rs. 14 lakhs. Let no one get away with the notion that the Indian assistants are of lesser calibre or of lesser breed or are less educated or otherwise less qualified. The Bank, I understand, still asks for first class graduates when it advertises for the probationary assistants' posts. It would be interesting to know how many of the members of the European staff have been inside a University, no matter in what capacity. In the case of the former, passing the examina-

tions of the Institute of Bankers is a condition for promotion, even if in their collegiate course they have satisfied stiffer tests in similar or identically same subjects. But the European assistant gets Rs. 450, I am told, for passing a Hinduisthani test. That is all to be expected. What I can't understand, as I said, is the Indian members of the board being so singularly unaffected. The issue, I am now convinced, has to be settled on a much higher plane, in the Central Legislature.

I should like, for more than one reason, to change to less unsavoury topics. I said, less unsavoury, because not many will grant that the Potsdam talks are a fragrant topic. Fragrant or otherwise, it is a fascinating topic for gossip. Imagine for a moment the changes that have taken place in the last few months. Not long ago, the personnel of the Big Three was fixed in every one's mind. The Big Three had indeed become an institution in international politics. At Teheran and at Yalta the Big Three met and decided the fates of nations, as if it was an international Executive brought into being by the Statutes of fifty or sixty of the nations of the world. Even at Quebec, which Stalin refused to attend on grounds which seem now to be such a cruel mockery of facts, namely, that his presence would be misunderstood by Japan, there was the Big Three; for Stalin absent was just as powerful as if he was present. But now the Big Three is quite different, except for the continuance of Stalin as one of them. Roosevelt was snatched away by an unkind fate. And Churchill, who began the talks, with the Premier of the Shadow Cabinet ominously at his side, has now had to sulk behind declining the invitation of his successor to repeat his example. In these changes of personnel, one might perhaps read a world of change.

But without attempting to read too far into that, while Stalin would no doubt be much into them, one might well say that eager to fraternise more cordially with the displacement of Mr. Churchill by socialist Premier, he will not be inclined Mr Attlee is indeed a momentous and to overlook the difference between his far-reaching development. For Stalin is own position in Russia and that of Mr. no longer confronted by two ex-allies Attlee in Britain. Stalin's realism, so gravitating slowly to active hostilities far as it concerns the safeguards for against himself. And the potentialities Russian interest, would remain as keen of armed conflict between Russia and as insistent as ever. But there is bound democracies are reduced when a socialist kind in matters of common concern and becomes Premier of one of them. We in the reconstruction of a better world in do not know yet how far the actual ex-the post-war period. Mr. Truman would periences of the Conference were in be only too eager to co-operate since, accord with this natural surmise. I take after all, America's first interest is an

enduring peace. He would be more disposed than before to wink at the fait accompli with which Stalin had planned to confront them, less inclined to sniff at them after putting them, to the test of the Declaration of Rights and other documents which have become more or less obsolete on the European continent.

For Mr. Truman should be as ready as any one else, not to speak of Stalin in particular, to recognise that when the staid, broadbased British electorate voted so overwhelmingly socialist, the future of the world belongs to socialism and that all nations should accordingly adjust

the bearings of their national policies. The British elections signify not only a silent revolution in Great Britain, but also a resounding world revolution. Till yesterday, no one gave a moment's thought to the socialist Governments in the world. New Zealand and Australia were thought to be on the side of Mr. Churchill. Soviet Russia was regarded as an aberration of human nature. Sweden, Norway and other countries were thought to be monarchies with an aristocracy and court which were too prudent to go the way of the French and the Russian aristocracies. The Socialist parties and governments in these States were not known outside their countries, except to a few well-informed enthusiasts for socialism.

But now—When Hitler and Mussolini were at the pinnacle of power, the whole of Europe went Fascist, excepting of course the gallant Czechs. Austria and Rumania had strong Fascist parties which waited for Hitler's word to stage a coup de etat. Franco in Spain won power for himself, while giving his overlords the chance of a dress rehearsal for the war to come. France played to the tune of Laval rather than M. Blum. And in England, the Cliveden group was trying its best to make the ark of democracy leaky. But now, I say, the whole world will start dancing to a different tune. Perhaps it is opportunism. Perhaps it is prudence. Or it may even be that old facts appear in a new light. But I wager, the most conservative of us will soon begin to see new and unsuspected virtues in being socialist.

That is, if Mr. Attlee and his colleagues will remain socialist. It is unfortunate that we have to put in a proviso of this kind. The race of Macdonalds and Snowdens—may their tribe not increase—had made British Socialism suspect all over the world. In India, it has become a commonplace—but all too true—that a change of Government means nothing to us in India. No, that is an understatement, for in the past, a socialist Government had always meant a filip to repression. Mr. Attlee will, I am sure, belie those fears, though the fulfilment of any hope of positive progress is problematical. However, he and his colleagues have made a good start with the proposal to abolish the India Office. There are many whom this proposal leaves cold. But for my part, I confess I am sentimental. The Bastille, you know, at the time it was stormed by the Parisian mob, contained a few men guilty of common crime and none of what we would call political prisoners. But it is stupid, for this reason, to think of debunking the storming of the Bastille. To this day, France celebrates July 14 as the day of her liberation. The closing of the India Office may have a similar significance. Mr. Amery is without a second!

It is given to few to take giant strides at the same time in the glorious paths of philanthropy and success in big business. My friend Dr. Alagappa Chettiar has had that good fortune; and lest some should mistake it for mere luck, let me hasten to add that Dr. Chettiar is tall enough, mentally, morally and materially, to take such giant strides. All his ventures have turned to gold mines at his touch; and as quickly as he makes big money, he gives it away with a prodigal hand to a wide variety of public endowments. It is of more than personal interest therefore, to learn that Dr. Chettiar has now extended his sphere of activities to insurance and

Inches from Eternity!

There is no room for excuses in executing war transport jobs. Over plains and hills, even mountain tracks—where a miscalculation of inches would send a vehicle hurtling into eternity—our transport fleets travel and arrive at their destination within stipulated time. We have gathered our experience in a hard school, it has taught us many lessons. We know now that it is not enough to have a large fleet of vehicles and a set of carefully trained drivers. In addition efficiency depends on first class maintenance and careful planning. Our experience in handling transport plus the largest fleet of transport vehicles in India enable us to undertake any transport job anywhere in this country with complete confidence. Whatever may be your requirements—goods or passenger—we are in a position to handle the job for you. We invite your enquiries.

Dr. AMAL KUMAR ROY CHOWDHURY, M.D.

Gateway of India

(From Our Correspondent)

Bombay, 31st July, 1945.

As was expected, the Indian Central Cotton Committee unanimously passed Sir C. B. Mehta's resolution urging the Government of India to raise the floor prices for Indian cotton for the 1945-46 season by Rs. 50 per candy from the current floors. The main reasons for this step have already been discussed here; the Committee took the view that the cotton grower was entitled to the increase in the floors by virtue of the losses suffered during the 1944-45 season owing to the reduction in the premiums, the short crop add the lower average price realised. Sir Chunilal made out a very effective case, arguing that the reduction in premiums in the current season was not commensurate with the fall in yarn or cloth prices. Actually, old crop varieties are quoting at substantially lower prices than those for the current crop; the spinner's margin has gone up in the result. Already, the cotton grower has suffered by the lowering of the floors in the current season. Let it be noted that the resolution was supported among others by Sir Sorab Saklatvala who may be trusted to know his mind, without being stampeded into supporting a weak case. The I.C.C.C. reviewed the progress of the various research schemes for improvement of cotton. Among these, the most interesting is the one relating to the production of long-staple cotton in Sind, which the committee has favoured. Staples longer than 1 1/8 inch will be grown. It is also to be ascertained whether the growing of Egyptian cotton in Sind can be an economic proposition and whether suitable varieties can be evolved for replacing East African varieties.

The cotton future market is poised on the grit of a few longs to hold on to their record holdings. I.C.C. July ran out on the 25th and the closing rate was fixed by the Board of the E.I.C.A. at Rs. 419. The total tenders under the July Contract amounts to 2,75,100 bales which is a record. The syndicate has also gone long to a small extent in the September contract, no doubt to maintain the prices at the present level up to September. A little more heavy buying by the mills who were now somewhat aloof from the market would help the bulls to digest the large stocks they bought. The export position is still unsatisfactory, with no enquiries either at Bombay or at Karachi. During the week the U. S. Department of Commerce have published the Cotton shipment figures from the U.S.A. during the war years, which were hitherto confidential. The exports beginning from 1941-42 in the four years were respectively 1,117,846 bales, 1,480,485 bales, 1,138,097 bales and 1,126,085 bales for the 9 months of 1944-45. Total during the 3 years nine months was 4,862,513 bales of which 61.9 per cent. were under Lend/Lease. According to the Manchester Guardian, 1 million bale of cotton from New Orleans to France will be shipped on Lend/Lease terms towards one season's supply for France. Paris reports indicate that heavy shipments of American cotton would take place in the near future in all European countries. This is doubtless a consequence of the fact that America is able to command so much freight space. It is most regrettable that whereas American cotton can find the bottoms to get transported to Europe, Indian cotton should remain idle in India for lack of freight.

Washington apparently feels Lend/Lease a great blessing as it enables the disposal of uncomfortable accumulations of cotton. The U.S.A. thus exploits its control of shipping to dump its cotton on others while the needs of deserving countries like India are utterly forgotten. Further, the U.S.A. has removed the import control on raw cotton of over 1-1/8 inch. Larger imports from Egypt are fore-shadowed. Recently the Anglo-American purchasing commission had been buying larger quantities in Egypt at prices below the prices quoted for American-Egyptian cotton grown in the U.S. Cultivation of the latter variety had been stimulated by grant of premiums to the growers, but apparently the U.S. is finding it a costly affair.

Try as we might, there is no getting away from the problem of foreign trade which stares us in the face at every turn. The resumption of trade, or what little of it is possible in the present transitional period, is engaging the attention of all Indian businessmen, who have many misgivings in their hearts. It was, therefore, not surprising that the full gamut of import-export questions was traversed by the relevant sub-committee of the Indian Merchants Chamber, when it met the Chief Controller of Exports, Mr. K. G. Menon. The committee urged the removal of all control over exports at the earliest opportunity save those essential for industrial and food purposes. It pointed out the danger that officially controlled agencies under military or other supervision may, under the plea of regulating distribution, block Indian trade interests from resuming free contacts with the liberated countries. Already, there are reliable reports to show that exports are sought to be canalised by organising officially sponsored purchasing missions on behalf of countries like Turkey, France and Belgium. These agencies, if allowed to operate, will cut at the root of India's bargaining power and will, no doubt, become irritating accretions of vested interests. The Indian exporter ought to be able to contact directly his purchaser at the other end and put through a deal on terms of mutuality. The committee urged again that prices for exported articles should be fixed by normal criteria and not by consideration of extraneous factors, such as we see only too blatantly in the purchases of groundnuts, seeds and tea effected by the Ministries of Supply and Food in London. We may let bygones be bygones, but at least hereafter the export trade should not be manipulated in this manner. The Ministry of Food, for instance, are said to have instructed their agents that shipments to Continental ports should be allotted only to specified firms, and it is important to note that the Ministry is the sole purchaser of oil seeds exported from India. Here is a bad instance of discrimination against Indian shippers. These and many other spokes put in the wheel of trade should be swept away. In fact, at the Seeds Traders' Association Ltd., the Export Controller's attention was drawn to the need for purchases seeds being made by the open tender system to see that Indian shippers got a fair share of the shipping trade. The Association also urged the resumption of hedge markets in oil seeds, now closed for the last two years. At the meeting with the committee of the exporters's association again Mr. K.G. Menon was requested to help the Indian shipper in obtaining his share in exports. This is now a general cry and reflects the handicaps already experienced by the Indian exporter. As an instance of the unfair fixation of the price of an exported article, it was pointed out that the price of exported cotton hardwaste was fixed at the

pre-war level which enables foreign countries to get it at a very cheap rate.

Mr. D. R. Sen, Food Secretary, Government of India, has been in Bombay discussing with the officials of the Bombay Government the food requirements of the province. He paid a tribute to the efficiency of the administration and the good sense of the public, in an interview to the Press. The quota of rice to this province has been increased by 30,000 tons and it appears that this quantity will be allocated mostly from C.P. and Sind, so that transport is not such a major problem. It also appears that out of the 100,000 tons of wheat per month promised by H.M.G. for 6 months from mid-August, a large part would go to Bombay. The local authorities are, however, in no hurry to increase the ration and the additional quota received from the Food Department is being utilised to build up a reserve. Not until the progress of the food crops in the Province can be ascertained will the Government of Bombay divert the increased supply to the consumers.

In the twilight of the war, one can already glimpse the shadows that even now have

begun to creep across the industrial scene. The dispute between the Millowners' Association in Ahmedabad and the Textile Labourers' Association regarding payment of dearness allowance at the old rates until August 8th was only recently settled by the Industrial Court; but that was only a truce and now the Association is demanding the continuance of the allowances even after that date, which the Millowners have declined to do. The parties appeared before the Labour Commissioner but could not come to an agreement. The dispute will have to be referred again to the Court by the Government, otherwise the association has threatened a strike. The same grave problem is cropping up in Gujarat also, millowners have already given notice for stoppage of dearness allowance after August 8th. It is a very ugly situation which will strain the fact and the good sense of the parties concerned. Nothing can be more rueful at present than a stoppage of production on this account. Equally, any realist must also face the problem posed by the very high scale of dearness allowances granted in Gujarat and Ahmedabad. The latter have been paying an allowance of As. 7-4 per point of rise in the index, while in Bombay Sholapur have been paying about As. 4 per point. In Ahmedabad, the mills are neutralising 96 per cent. of the increased cost of living while in Bombay and Deccan the fraction is 75 per cent. The millowners in the north naturally feel that they have an unbearable burden to shoulder; and Mill's earnings are also tending to go down. It is hoped that the matter will not be allowed to drift.

(Continued from 205)

has become the Chairman and Managing Director of the Jupiter Insurance Co. and Chairman of the East and West Insurance Co. His debut in Bombay's big business, I understand, was duly celebrated at the Taj with a large and weighty party which included such persons as Sir Victor Sassoon, Mr. Nagindas Master, Mr. K. S. Ramachandra Iyer, Mr. K. R. P. Shroff, Mr. Mulraj Kersondas, Mr. U. S. Desai, Mr. P. R. Subramanyam and others, Mr. Mulraj Kersondas playing the host. Quite a bunch of good speeches have been made; and here, too, Dr. Chettiar must have carried the palm being a well-educated and accomplished speaker. The South Indians in Bombay must have felt taller for Dr. Chettiar's presence amongst them, a community of intellectual proletarians, as a businessman as tall as any in the city of Bombay.

EAVESDROPPER.

(Continued from page 188)

Rs. 19.62 crores. In the week ended July 20, the Reserve Bank afforded considerable support to the money market by rediscounting treasury bills to the extent of Rs. 6.8 crores. In the latest return there is a drop of over Rs. 3 crores to Rs. 3.75 crores which is a clear indication that money conditions are returning to normal and that the stringency will be over in one or two weeks.

The statement of Scheduled Banks for the week ended July 20, shows only a small increase in Demand liabilities to Rs. 623.82 crores. Time liabilities, however, were Rs. 1.74 crores higher at Rs. 242.02 crores. Both cash on hand and balances with the Reserve Bank were lower by Rs. 5.33 crores, the drop in cash on hand being Rs. 1.76 crores to Rs. 32.45 crores and balances with the Reserve Bank by Rs. 5.36 crores to Rs. 68.12 crores. There is a jump in advances to Rs. 286.04 crores from Rs. 281.84 crores. Bills discounted also are Rs. 27 lakhs higher at Rs. 14.62 crores.

The report of the Reserve Bank for the year ended June 30 shows a record net profit of Rs. 14,89,26,894 out of which a dividend of 4 per cent is to be paid leaving Rs. 14,69,26,894 to be handed over to the Central Government. Sterling assets of the Bank continued to increase, the net accretions during the accounting period being Rs. 420.39 crores against Rs. 358.4 crores in the previous year and Rs. 1,352.88 crores since the beginning of the war. The total holdings in the issue and banking departments on June 30, 1945 amounted to £1,066.85 millions or Rs. 1,422.46 crores which are maintained in the form of cash and investments in short-term British Government securities renewed from time to time. On the subject of the utilisation of sterling balances, there is a more realistic attitude. It is admitted that the available resources should be utilised as far as possible to hasten the industrial development of this country in the post-war period, as the development of India's resources has been already excessively retarded.

The following remarks make interesting reading: "For the United Kingdom the problem is how best to establish either through direct trade with India or through trade with other countries the surplus of exports over imports necessary to meet the needs of India and other creditors in addition to covering the gap in the balance of payments resulting from the loss of overseas investments and of income from these and other invisible exports. Estimates of the quantum and form of goods required and of capacity of the United Kingdom to supply these requirements or alternatively to make available foreign exchange for the purpose should assist in framing the terms of a satisfactory settlement. Any such settlement must, however, provide the assurance of a steady minimum flow of capital equipment essential for the already excessively retarded development of India's resources at a satisfactory rate as well as a necessary measure of elasticity to take account of the many uncertain factors that will be at work on either side. In order to secure the full benefits of the liquidation of sterling balances for the country, careful attention must at the same time be given to the formulation of an appropriate commercial policy involving consideration of tariffs, necessary priorities for imports and the direction of export trade and to the organisation of trade in certain sectors under official or private auspices, with a view to co-ordinating the demand, regulating import costs and ensuring satisfactory terms of trade."

A recent development in the London Foreign Exchange market has been the permission given for limited dealings in sterling held on American account; and New York has of late, been regularly quoting what might be called "free sterling." These rates have fluctuated within the range of official quotation viz 4.02-1/2-4.03-1/2. The London control, with a view, probably, to allow the resumption of freer dealings in forward dollars and other hard currencies, has widened the difference between buying and selling rates for forward deliveries in respect of all currencies. The control's buying rate for dollars now is 4.03 1/8 spot, 4.03-7/8 one month forward and 4.04-1/4 two months' forward. Canadian dollar and Swiss franc rates have also been changed. As a result, buying rates for dollar bills have been changed as follows: Sight Bills, ready Rs. 328, one month forward Rs. 327-12, 2 months' forward Rs. 327-8, 30 days' Bills ready Rs. 327-8; 1 month forward Rs. 327, 2 months' forward Rs. 326-12.

South India

(From Our Correspondent)

MADRAS, (August 1).

Sometime ago the Corporation of Madras appointed a Special Officer to investigate the question of compulsory evacuation of milch cattle from the Madras city and to draw up a scheme for the settlement of the evacuated milkmen in colonies outside and for the supply of milk in the evacuated areas. On the basis of the Report submitted by the Special Officer, the Commissioner of the Corporation has put forward a few proposals. He has suggested that the evacuation should be through stages and as an experiment, the cattle in Triplicane and George Town should first be evacuated. On the results of this, further evacuation might be carried on. The cost of providing grazing lands and cheap fodder for the cattle thus evacuated should be borne by the Government. The Commissioner has stressed the need for a Dairy Act for the City and for the licensing and Registration of milch cattle within the city whether it is kept for private use or for profit. The cost of enforcing the scheme for the two areas is estimated to be Rs. 45 lakhs, and Rs. 175 lakhs for the scheme for the whole city.

Presiding over the annual meeting of the Madras Rice Merchants' Association, Mr. A. F. W. Dixon, Commissioner of Civil Supplies, dwelt on many points concerning rationing in the Province. Speaking about the quality of rice supplied, he said that during the last twelve months an appreciable improvement has been achieved and the authorities are keen on continuing it till "every body is satisfied if at all it is possible." To a suggestion by the Mayor that the quantity of ration in the city should be raised, Mr. Dixon replied that as yet his Department, owing to several reasons, has not been able to bring the Malabar ration into level with that obtained in other parts of the Presidency and their first endeavour should be to correct this inequality. He also forecast the starting of a milk factory in the city which would improve the nutritional value and taste of dry milk by giving it a special treatment. This experiment has been successfully tried in Colombo.

The Southern India Chamber of Commerce has sent a representation to the Textile Commissioner protesting against what they consider to be inequities in the present arrangement for the allocation of quotas for exporting handloom cloth from the Province. It is complained that two institutions are allowed to export a substantial percentage irrespective of their trade in the basic period or outside it and this has resulted in acute distress for a large number of weavers. It seems there is much to be desired in the distribution of yarn as well where too the Chamber points out the existence of anomalies. It is expected that the rules may be altered wherever they are causing hardships or leading to unfair results.

A summary of the Report of the Special Committee appointed by the University of Madras to examine the problems of post-war educational reconstruction has been published. The Report offers suggestions on diverse questions such as women's education, nursery schools, physical education, education of Backward classes and changes of a purely administrative character. It is also suggested that Special Committees should be formed to consider in greater detail certain of the recommendations in the Report. The Report recommends free and compulsory education for all children from the ages 5-6 to 13-14 though in view of practical difficulties

ties compulsion is suggested immediately for the primary stage only. A primary school for every village with 1,000 population, free meals and transport for the children, and the employment of women teachers as far as possible are some of the other suggestions made. Secondary education continues for six years and is divided into two stages; the first three years forms the middle school stage and the second the High School stage. At the latter stage, two types of schools are recommended, the preparatory schools leading to University courses and technical schools leading to Polytechnics and other technological institutions. Examinations at either the primary or the middle school stage are discontinued.

The Committee does not favour reducing the length of the Degree courses and favours the retention of the S. S. L. C. system at least for a time. Except at the High School and Intermediate stages co-education finds support. The Committee has also made a number of suggestions in respect of educational finance.

The Madras Government have issued a questionnaire to members of the Legislature and prominent industrialists in the Province

to elicit opinion and data relating to the position of industries and their future development. The letter accompanying the questionnaire gives a resume of Government policy and action taken hitherto. The questionnaire covers raw material resources, location, finance, machinery, technical education and similar subjects relating to both cottage and large scale industries. A list of 134 industries is sent along with it and the Government see prospects for expansion in every one of these.

A Resume of Commodity Markets

There is nothing of importance in the commodity markets during the week. The raw jute market continued quiet while the jute manufactures market remained firm. Reports of the possibility of further large orders from the Government had a stimulating effect towards the close. The cotton market has been fluctuating in narrow limits. Earlier in the week there was a definitely weaker tendency in evidence as it was rumoured that the Cotton Sub-Committee of the Textile Control Board had recommended to the Government a reduction in the ceiling prices by Rs. 25 per candy. The bullion market was uninteresting with quotations for both gold and silver fluctuating in narrow limits. In the piece-goods market firm conditions prevailed and there has been an increase in the offtake with an improvement in the supply position in the various centres.

The feature of the week in Calcutta is the announcement by the Central and Provincial Government representatives at a press conference held on Thursday, that an association of trade and other interests would be formed with a governing body. There will be an executive committee consisting of Chambers of Commerce and other bodies. While the association will function under the direction of the government, it is expected that with the control over procurement and distribution, it would be possible to relieve the acute scarcity to a certain extent.

In the raw jute market quiet conditions have been noticeable for the most part of the week though in the latter half of the period more interest was taken by mills and prices remained at last week's levels. The continued firmness of the up-country centres and the smaller arrivals have not prevented any further deterioration in the general tone of markets. The larger buying by mills would ordinarily have been reflected in higher prices for raw jute but the anxiety of sellers to do business and the fears of the bazar that total available supplies will be in excess of requirements, even if there was a considerable improvement in the coal situation, have prevented any rise in prices especially as the period of heavy arrivals will begin from the end of the month and there is no definite opinion regarding the immediate course of prices.

In the loose jute section, Supervised Jat Middles and Bottoms were done at Rs. 15/4 and Rs. 12/4 per maund while Indian District Tossa Middles and Bottoms were dealt in at Rs. 15/8 and Rs. 12/8 per maund. Supervised Jat Bottoms alone were purchased at Rs. 12/8 to Rs. 12/12 per maund.

In the pucca bales section export business was rather poor but mills are reported to have purchased Special Lightnings at Rs. 78 per bale, Dundee Daisee 2/3 at Rs. 77 and Special N. C. at Rs. 46.

The jute manufactures market has been firm throughout with quotations at maximum levels for all positions to the end of the year. There are reports that shipments in the past month have been satisfactory though the bazar has not been able to get space for all its despatches. It might be that exports in July were mostly on account of Heavy Goods intended for Burma for handling the rice crop. The local stock figures for the last month will make the position clear. Production should be certainly higher as it was reported that the coal position was easier and in certain weeks wagon arrivals were higher than expectations. In the past week it is stated that arrivals averaged 52 wagons per day, the

best figures for some time. All Foster Mills are working though the steam driven mills have not been able to resume operations and only one or two of them were reported to have adequate coal supplies. On Wednesday it was stated that a further order for B. twills for August-October delivery had been received. Some orders have also been placed for hessian fabrics of all descriptions. This has resulted in a slight rise in prices for B. twills to Rs. 66-12 Ready and Rs. 66-4 for October-December.

There is nothing of importance in the bullion market and quotations have been fluctuating in narrow limits. The Reserve Bank continued to sell 20,000 tolas of gold per day but there has been no appreciable setback in values even on the rumours of the possibility of an early Jap peace. The market, however, seems to be worried about the slowing down in the rate of currency expansion and there is a general feeling that with a generally lower level of prices, it will be impossible for holders of bullion to pass all their stocks to others at satisfactory prices, from their point of view.

At the Press Conference held on Thursday the Central Government's spokesman said that after considerable discussion with the various representatives concerned, it was possible to arrive at an agreed scheme regarding the procurement and distribution of cloth supplies coming into the province in order to alleviate the distress of the consuming public, and put an end to the present malpractices in the trade. As our readers are already aware there

was considerable opposition to the syndicate scheme as it was not found suitable in the interests of the trade and consuming public. It was feared that the creation of a powerful body of handling agents would possibly result in greater confusion and lead to profiteering at the expense of the established members of the trade. As the proposal for the formation of a syndicate gave rise to other difficulties also, it has been considered desirable to drop the scheme altogether and form an Association consisting of trade and other interests with a governing body which will look after the pro-

(Continued on page 212).

REDUCTION IN PRICES OF MUSTARD OIL AND CAKES

As a result of the recent reduction of the prices of mustard seed, mustard oil and oil cakes in the United Provinces, the maximum prices of mustard oil and oil cakes in the Initial Rationed Area of Calcutta and Howrah have been reduced.

With effect from the 16th July, the prices of oil in this area have been fixed as follows under the Defence of India Rules:—

Mustard Oil: (Ordinary grade)	Ex-mill or ex-godown of wholesaler, who is also a U. P. Mill Agent (when sold in tins of 17½ seers or more)	Rs. 37-8 per maund.
"	Ex-premises of wholesaler other than a miller or a U. P. Mill Agent (when sold in tins of 17½ seers or more)	Rs. 38-8 per maund.
"	Sold in unopened tins with Agmark seals intact	Rs. 39-8 per maund.
(Agmark Special)		
Mustard Oil: (Agmark Grade "A")	Sold in unopened tins with Agmark seals intact	Rs. 38-8 per maund.
Mustard Oil: (All grades)	Ex-shop of Retailer	Re. 1-0 per seer.

The price of Oilcakes Ex-mill has been fixed at Rs. 4-12 per maund (with bags).

Consumers are requested to report cases of overcharging to the nearest Police Station or to the Deputy Commissioner of Police (Enforcement), 309, Bowbazar Street, Calcutta.

Mustard Oil will continue to be sold through the usual trade channels and ordinarily no "permits" or "delivery orders" will be required to purchase it. But, as a measure further to assist the public, Government are ensuring that a part of the available supplies will be sold through 225 established retailers shops of which 217 are already selling oil; these selected retailers are being assisted to obtain supplies by means of Delivery Orders issued on Oil Mills in Calcutta and Howrah. In view, however, of the limited supplies made available, none of them is allowed to sell to a purchaser more than one seer of oil at a time. These shops will open at 8 a.m. in the morning and again at 6 p.m. in the evening. For the information of the public, the names and addresses of these shops are given below:—

(Continued from page 210).

curement and distribution of all cloth supplies that come into the province. With the presence of prominent public men in Bengal and the trade and government representatives, it is believed, it would be possible to look after the interests of both the traders and consumers and if rationing were extended to other parts of the province, it would be possible to distribute available supplies on an equitable basis. There will also be an executive committee consisting of Chambers of Commerce and other bodies.

In order to give the rationing scheme a good start, the Textile Control Board, in agreement with the Central Government will place at the disposal of the provincial governments a reserve of 10,500 bales of cloth which will considerably strengthen the position of the

Association and the Government in their programme of effective rationing.

That the proposal for the formation of an association acting under the direction of the Government will be a good substitute for the Syndicate scheme need not be questioned as it will avoid the creation of an "octopus" which will have a stranglehold on the cloth trade. Intervention by prominent members of the Textile Control Board and the representatives of the Central Government has certainly contributed to the formulation of a scheme which has the support, according to the Secretary of the Department of Industries and Supplies, of all classes of trade and the consuming public but there is still a fear that the provincial government may not carry out the distribution on a proper basis, and that there will still be an attempt to bring in new elements into the trade. It is true that with the

introduction of rationing, the right of the quota holders, who have perhaps alienated the sympathy of the consuming public by their profiteering activities, have been ignored. An effort should be made as far as possible to conduct business through normal channels of trade and in the selection of approved shops, the retailers should as far as possible be kept in the trade. How far the provincial government rises to the occasion and relieves the present cloth crisis, remains to be seen. At any rate, as the spokesman of the Central Government said, the Bengal Government has been afforded a great opportunity to bring an end to the present crisis in the cloth trade and if as a result of the new plans for procurement and distribution effective control could be maintained at all stages the average consumer could very well be assured of his quota.

Jute and Jute Manufactures

(From Our Correspondent)

Special to "Indian Finance".

Calcutta, August 2.

Imports of new crop into mofussil centres continue on rather a small scale. Although prospects for a good crop remain bright reports have been received indicating that, in some places at least, conditions are not altogether satisfactory. The less favourable conditions now prevailing in some centres of Bengal have been caused by the recent drought. A certain amount of damage has been done to the crop in places affected by insufficient rainfall but so far it has not reached serious proportions although one centre reports damage estimated at two annas. Steeping water in which to carry out the retting of the plants is in short supply in not a few centres in Bengal and harvesting has been retarded to some extent. Nevertheless, the Calcutta raw jute market remains weak with a tendency towards still lower prices as it is anticipated that the prices at present ruling up-country will fall towards parity with Calcutta as the new crop comes forward in large quantities.

Mills are in no hurry to commit themselves to large purchases of jute. It is generally expected that there will be plenty of the fibre for all in the current season and in any case the trade is still haunted by the spectre of something very like a coal famine which together with a drop in loom efficiency due to a shortage of skilled operatives, gives justification to the adoption of a cautious policy in the matter of buying requirements of the raw material. It would be thinking wishfully to hope for better supplies of coal in the near future but until this most necessary commodity is forthcoming in greater quantity and sustained over a considerable period thus enabling mills to consume more jute by stepping-up production of manufactured goods, it cannot be expected that mill buyers will become more liberal in their purchases of raw jute. In the meantime it is hoped that the position may be relieved to some extent by increased demand in the export market but there are no obvious indications that the time is ripe for any sharp increase in such a demand just at present.

During the week the Government of India placed an order with mills for about 30,000 bales of B Twill sacking. Mills position, especially as regards heavy goods, was already very tight up to the end of the year and it does not help much when orders in mills books for commercial sacking have to be cancelled or delivery delayed in order to comply with Government's delivery terms. It is also reported that hessian business was done on Government account but, as yet, we have no details.

The following table gives the comparative figures presently available for Exports of Jute Manufactures for the last three seasons during the periods July to June of each year:

	Hessian	Cloth	Sacking
	(Lakhs of yards)	(Lakhs of yards)	(Lakhs of bags)
1944-45	12,167.6	919.5	180.4
1943-44	12,375.6	1236.9	167.3
1942-43	9,995.6	980.2	200.4

It would seem from the above figures that the position is not unsatisfactory although a better comparison can be made only when the tonnage figures become available in the Overseas Trade Statistics which will not appear for some time yet. It will be noted

that in the season July 1944 to June 1945 exports of hessian cloth were over two crores less than in the previous year and that there was a decrease of more than three crores of hessian bags. Sacking cloth shows an increase of 13 lakhs yards but sacking bags decreased by a little over 83 lakhs bags.

Exports of raw jute from Calcutta during the season July 1944 to June 1945 amounted to 10,41,000 bales which is an improvement on the previous years' showing but is substantially less than the total exports made during 1941-42 and 1942-43 and of course remains well under pre-war figures. However, it is generally expected that exports will show further improvement in the current year as and when Continental and U. K. mills are in a better position to absorb large quantities of the fibre than has been possible for them to do during the war years and as more shipping space becomes available. Export business in raw jute has been in the doldrums for a very long time and any expansion in the demand from abroad will be more than welcome. We give below, details of raw jute exports from Calcutta for the last four years. The figures given represent 000's Bales.

SEASON	JUTE	REJECTION	CUTTINGS	TOTAL
1941-42	1132	74	145	1351
1942-43	1104	16	106	1226
1943-44	914	2	56	972
1944-45	1010	7	29.7	1041

As regards season 1941-42, to the total exports shown in the above table must be added 1,20,000 bales exported from Chittagong and 71,000 bales sailed to Bombay for export from that Port.

The Indian Jute Mills Association issued the following statement of total reported sales for the week-ended Saturday, 21st July 1945.

	This and next month	Forward
	Yards	Yards
Hessian	87,27,613	1,59,74,220
8 oz/40 in. Hessian	Nil	Nil
(included in above)	58,27,613	90,03,384
Twills	27,60,923	2,64,36,362
Plains		

The "Journal of Commerce," New York, recently reported that a considerable volume of burlap formed part of recent cargo arrivals. The paper said activity in the central

burlap office remained brisk as withdrawal by bag manufactures for the current quarter indicated that supplies were adequate and satisfactory as to weight. Available advices also reported an improvement in Calcutta Mills' stocks of burlap at the end of June. The War Production Board recently reported the removal of restrictions over the use of jute butts or Cuttings; the amount of jute butts available in the United States representing 24 months' supply at the present rate of consumption.

In the Pucca Bale Market small business was done with local mills in special Lightnings at Rs. 76, Dundee Daise 2-3 at Rs. 77 and special N. C.s at Rs. 46. Dealers are free sellers for all descriptions at minimum rates except for special marks and Cuttings.

Mills have taken slightly more interest in Loose Jute this week but the turnover has not been large. Supervised marks and Bengali marks, old crop, sold at minimum prices. New crop supervised jute in 50-50 assortment came to business at Rs. 15-4 and Rs. 12-4 for Middles and Bottoms. Some supervised marks and Marwari marks were done at Rs. 15 and Rs. 12 for Middles and Bottoms. It is reported that European packing was done at Rs. 15-12 and Rs. 12-12 and also at Rs. 15-8 and Rs. 12-8 in higher assortment. Old crop District Tossa was done at Rs. 15-8 and Rs. 12-8 for Middles and Bottoms.

In the Manufactured Goods market prices for B. Twills moved up sharply on the placing of the Government Order referred to above. At time of writing B. Twills are quoted in the bazaar at around maximum price for Ready goods. Early in the week B. Twills were bought from mills at Rs. 66 for July-August shipment and Rs. 65-8 to Rs. 65-12 for August alone. Business in hessian has also been restricted due to scarcity of sellers. Buyers are offering maximum prices for hessian up to March, 1946 and small business has been done.

(Continued from page 199)

invest maturing treasury bills in permanent loans. It is important to remember in this connection that since the beginning of this year there has been a gradual reduction in the floating debt. As the Imperial Bank is usually a large holder of treasury bills it stands to reason that surplus funds were reinvested in government securities as and when the occasion arose. Thus in the balance sheet deposits are only slightly higher at Rs. 240.16 crores against Rs. 237.78 crores at the end of 1944 and Rs. 230.53 crores at the end of June 1944. Investments were Rs. 143.32 crores on June 30, 1945 against Rs. 148.23 crores at the end of 1944 and Rs. 126.51 crores in the middle of 1944. Advances on these dates were Rs. 66.8 crores, Rs. 70.23 crores and Rs. 66.35 crores respectively. Earnings for the corresponding period last year were Rs. 46.02 lakhs and for the latter half of 1944 Rs. 51.81 lakhs and in the last half-year Rs. 49.22 lakhs. For the payment of the higher dividend allocation to general reserve was lower at Rs. 5 lakhs

(Rs. 7.5 lakhs) and the amount carried forward from the previous account had also to be utilised to a certain extent.

Indo-Commercial Bank

The Indo-Commercial Bank Limited, one of the prominent banks in the south, has made steady progress in recent years and the effects of the setback suffered in the crisis of 1937 have been completely overcome. With the generally satisfactory experience of joint-stock banks in India it is natural that the Indo-Commercial Bank, too, should be able to report good progress in the first half of 1945 especially as business is conducted on sound lines.

In the half-year ended June, 1945, deposits increased to Rs. 2.73 crores from Rs. 2.35 crores. It has been possible to put to good use the increased working capital, advances being Rs. 1.63 crores against Rs. 1.46 crores. Investments also are higher at Rs. 74.75 lakhs against Rs. 56.7 lakhs. As before, nearly the whole of

the investments is in gilt-edged securities. The market value is in excess of book value by over Rs. 70,000. Cash balances were Rs. 65.23 lakhs against Rs. 57.71 lakhs.

The net profit of Rs. 2.7 lakhs should be considered satisfactory and it has been possible to increase the dividend on 'A' and 'B' shares to 7 per cent from 6 per cent per annum, after placing to reserve Rs. 1.25 lakhs and providing for tax Rs. 57,034. Provision is also made for one month's bonus to staff. The sum carried forward is Rs. 16,542 against Rs. 3,606 brought in.

The directors report that the business of the Bank has been very satisfactory and that it is proposed to open more branches shortly. Since the date of balance-sheet building property worth about Rs. 2 lakhs has been purchased. The Indo-Commercial is the only bank so far to increase the dividend for the first half of the current year besides the Imperial Bank.

New India Building and Improvement Society

The announcement by the new India Building and Land Improvement Society Limited (published elsewhere in this issue) gives the details regarding the first large flotation which proposes to exploit the big increase in demand for house accommodation in the post-war period. In the war years, with the shortage of building materials, there has been a considerable slowing down in new construction. As it is expected that there will be a great expansion in India's commerce, trade and industrial development and the population in urban areas will increase considerably there is need for building construction on organised lines. Building societies in the U. K., and other countries, are functioning very satisfactorily. With the possibilities of a higher standard of living in post-war years there will be naturally a tendency to live under more clean and better conditions.

The company has a number of promising schemes in view which it hopes to turn to the advantage of the public in general and the shareholders in particular.

The authorised capital is Rs. 1 crore in 40,000 4½ per cent cumulative preference shares of Rs. 100 each and 6 lakhs ordinary shares of Rs. 10 each. The issued capital is Rs. 50 lakhs in 20,000 preference shares and Rs. 3 lakhs ordinary shares. The directors and their friends have agreed to take up 2,12,000 ordinary shares. The number of shares offered for public subscription is 20,000 preference shares and 88,000 ordinary shares. That the directors and their friends have taken up such a big portion of the issued ordinary capital is indicative of the complete confidence the promoters have in the future of the company.

½ YEARLY DIVIDENDS -delivered to your door

Over Rs. 112 Crores were invested in less than eleven months in the First 3% Victory Loan (1957) withdrawn during February 1945.

The 3% Second Victory Loan (1959-61) is issued on attractive terms similar to the First, and is today's soundest investment for the big or small investor. There is no limit to the amount you are permitted to invest.

The Loan is backed by India's wealth, and Government has guaranteed to repay at par not earlier than 15th August 1959 and not later than 15th August 1961. If between now and then you wish to realise your capital, the Loan is readily salable in the market at all times.

Interest at 3% per annum less Income-Tax will be

paid half-yearly on 15th August and 15th February and the dividend warrant will be sent to your address. You can cash it just like a cheque, and you have the satisfaction of knowing that your investment is helping India's war effort, counteracting inflation, and earning for you a good return.

To buy this Loan, apply to your Bankers, or to the Reserve Bank of India at Bombay, Calcutta, Madras, Delhi, Cawnpore or to the Branches of the Imperial Bank of India in other places or to any Government Treasury.

PAPER**NOW EASIER TO GET
-and at Controlled Prices**

There has been a substantial increase in the supplies of paper available for civilian consumption both by larger releases from Indian paper mills and by imports.

This increased supply has led to very substantial relaxations in the provisions of the Paper Control (Economy) Order, 1944. Permissible consumption under the Order has been raised from 50% to 80% of the consumption in 1939 in the case of textbook publishers, and from 30% to 60% of consumption in 1943 in the case of other consumers of paper.

Essential consumers are now able to get their requirements of paper easily and at controlled rates. This justifies the policy underlying the paper control measure.

ch Markets to-day and to-morrow:

FEARS OF DEFLATION UNJUSTIFIED

For two weeks in succession active note circulation has revealed a successive reduction. In the week ended July 20, notes in circulation had declined from Rs. 1,140.69 crores to Rs. 1,135.29 crores. There has been a further reduction to Rs. 1,128.73 crores in the week ended July 27. There has thus been accumulation in active note circulation to the extent of Rs. 12 crores in one fortnight. It will be, however, totally unwarranted to jump to the conclusion that currency inflation has definitely yielded place to currency deflation. Any hasty conclusion of this kind will be dispelled by a close analysis of the figures published in the Reserve Bank statements. The reduction in active note circulation has merely meant an increase in notes held in the Banking department, which have risen from Rs. 10.79 crores on July 13 to Rs. 24.21 crores on July 27. This increase in the notes held in the Banking Department is, in its turn, due to the present expansion in Central Government's deposits and the manner in which this expansion has taken place. While foreign balances in the Banking Department have gone up from Rs. 402.98 crores on July 20 to Rs. 434.45 crores on July 27. Central Government's deposits have risen from Rs. 294.79 crores to Rs. 353.79 crores. That is to say, the increase in Central Government's deposits is Rs. 59 crores, of which only Rs. 31.5 crores is accounted for by the receipt of sterling payments in respect of inter-governmental transactions. The balance of the increase in Central Government deposits is, presumably connected with the proceeds of the 2½ per cent 1950 bonds amounting to Rs. 20 crores and the continued sales of tap loans. Thus, apart from the increase in Central Government's deposits through book entries as between London and

India, a good proportion of this increase is due to transfer of funds from investors and investment institutions to the coffers of the Government. There has thus been a special reason for the reduction in active note circulation in the fortnight between July 13 and July 27. This special reason will not be operative to the same extent in the coming weeks. Sales of treasury bills are also proving sticky; and it is obvious that these sales are being continued in spite of a most unresponsive market. Taking all these into account we may conclude that the reduction in active note circulation in the two weeks does not show any permanent reversal of previous trends and tendencies and this is only a temporary phase.

I have dealt at length with the present currency situation as professional operators both in Bombay and Calcutta are reported to have been predicting that the era of deflation has begun. While we can definitely do with this assertion of natural forces bringing about a gradual and orderly reduction in active note circulation, it must be emphasised that, so long as the present procedure of financing allied purchases and commitments in India is maintained, currency inflation is inevitable.

On the bogey of the dawning of the era of currency deflation the bears were able to inspire and propagate a mood of depression in stock exchange circles. The bearish operations in this regard were further aided and abetted by the adverse behaviour of Throgmorton Street and Wall Street. I give below a cable received from London which presents a picture of market reactions to the installation of the Labour Government.

"Millions of pounds have been shorn from the value of British Stocks in less than a week by the wave of selling which followed the election of a Labour Government with its avowedly socialistic programme.

"The hardest hit were the issues in those companies which the Labour Party has announced will be taken over by the Government in its plans to nationalise coal mining, gas and electricity, railways, iron and steel.

"These have dropped more than 10 per cent since the vote was announced last Thursday.

"The election aftermath is not confined to the few industries scheduled for early nationalisation. The entire industrial list has fallen nearly 9 per cent. Some observers forecast an early rally.

"When the rally comes the rise will not be in six pences or shillings, the 'Financial Times' predicted."

The decline in share values in London must be mainly construed as precautionary

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE (From Our Correspondent)

Calcutta, August, 3
Till Wednesday last stagnant conditions were noticeable on the Calcutta Stock Exchange and business passing was on a definitely smaller scale. At the end of last week a definitely quieter feeling was noticeable on the announcement of the British election results and the rumours that the Japs might negotiate for peace at an early date. The uncertainty created by these various rumours was responsible for the generally quiet tone of markets in the first three days of the week. It is significant, however, that there was no selling pressure and that in Thursday's and Friday's trading a steadier feeling was noticeable and nearly the whole of the losses were regained. In Friday's session, jute shares, especially, were firm on the announcement of new orders for both hessians and B. Twills and the expectations that purchases for the U.N.R.R.A. will have a definitely encouraging effect on the market. The general undertone is steady. There is no fear of any appreciable drop in prices even if the war against Japan takes a more favourable turn.

In the gilt-edged securities section rather uninteresting conditions have been noticeable with the anxiety of sellers to liquidate their holdings 3½ per cent. paper as a result, is quoting a few annas lower at Rs. 101-14 and 2½ per cent. 1949-52 at Rs. 101-1-6. 3 per cent. paper was noted at Rs. 95-4 and 3 per cent. 1957 at Rs. 101-4. Among Provincial Loans, 3 per cent Punjab Loan was Rs. 99-14. Conditions in the money market too have remained easy with call money quoting ¼ per cent. in Bombay and ½ per cent. in Calcutta though for the third week in succession the Central Government have not been able to get its requirements of treasury bills in full and even on the partial acceptance of tenders the average discount rate was considerably higher at 5 annas 11 pies per cent.

In spite of the weakness of the gilt-edged section, Bank shares have remained steady Reserve Bank being Rs. 137 ex-dividend. Imperial Bank fully paid Rs. 2,170 and Con-

tributories Rs. 550. United Commercial Bank also were higher at Rs. 30 premium and Calcutta National at Rs. 16-4 cum-dividend. Hindusthan Commercial changed hands at at Rs. 57.

Cotton shares have not been very much affected, Cawnpore Textiles being Rs. 13-6, Elgins Rs. 69-6, Kesoram Rs. 19-1 and New Victoria Rs. 8. Benares were a shade easier at Rs. 12.

Coal shares were not very much in favour earlier in the period under review. All the popular counters recorded a decline. Bengal came down to Rs. 762 from Rs. 775, Bhargora to Rs. 22-11 from Rs. 23-4, Burrakur to Rs. 45-2 from Rs. 46-12 and Equitable to Rs. 73 from Rs. 74. With the improved tone of markets and the reports that raisings have increased considerably, quotations are higher than the lowest levels for the week. Bengal were Rs. 765, Burrakur Rs. 46-8, East India Rs. 46-2 and Raneegeunge Rs. 65. South Karanpura have been very active for the past three days with a rise in the quotation from Rs. 36-4 to Rs. 38-8. It is reported that bear covering by the market and buying by a prominent operator were mainly responsible for the sharp rise in prices. Barrea improved Rs. 41-12 on special buying; New Beerbhoom were Rs. 46-8 ex-dividend and Talcher Rs. 14-7. Transactions have been recorded in Central India Coalfields around Rs. 11-7. Central India Coalfields is one of the new collieries recently started by Birla Bros., Ltd.

Jute shares were lower with the weakness of the raw jute market and the slightly easier tone of Heavy Goods but the placing of orders in midweek for large quantities of B Twills and various description of hessian fabrics toned up the market especially as it was reported that the Central Government would purchase larger quantities on account of the U.N.R.R.A. It has since been announced that India's contribution to the U.N.R.R.A. will be 20,000 tons of jute manufactures, besides other commodities Anglo-India earlier in the week were noted lower at Rs. 535 but the quotation is now Rs. 542. Bally have been fluctuating around Rs. 282 while Chmpdany were Rs. 288. Ganges dropped by 15 points to Rs. 657 but are now higher at Rs. 688. Howrah were 2 points lower at Rs. 96-6 but have since improved to Rs. 98-7. National were Rs. 36-14, Nuddea Rs. 141-4 and Reliance Rs. 83-8. Presidency were quieter at Rs. 14-9 though Craig remained steady at Rs. 14-2. Chitavalah were higher at Rs. 38-12 against Rs. 37-12 at the end of last week.

In the Engineering section, there is nothing of importance. Quotations were generally lower, Indian Iron quoting Rs. 42-2 against Rs. 42-14 at the time of last writing. They are now 4 annas higher at Rs. 42-6. Steel Corp. came down to Rs. 34-1 from Rs. 34-12 to quote again higher at Rs. 34-7. Braithwaite were lower at Rs. 14-12, Britannia Engineering Rs. 24-13, Jessop & Co., Rs. 27-6 and Texmaco Rs. 17 against Rs. 17-12.

Among sugar shares, with the exception of Ramnugger, other shares were lower, Carew & Co., being Rs. 29-13, Samastipur Central Rs. 21-4 and Belsund R. 16-12. Ramnugger Cane & Sugar were steady at Rs. 21-8.

Tea shares also were steady with selective buying by investors, Dimakusi being Rs. 58-12, East India Rs. 21-6 and Jaybirpara Rs. 48-4.

In the Miscellaneous section, Burma Corp. were quiet at Rs. 5-10 and Indian Copper at Rs. 3-6. Calcutta Tram were unchanged at Rs. 54-4 while B. I. Corp. encountered

selling and were very much lower at Rs. 7-6. National Tobacco were firm at Rs. 31-12. There was some enquiry for Walford Transport around Rs. 4-15, B. B. Petrol were easy at Rs. 6-1. Among Paper shares, Titaghar Paper were steady at Rs. 32-1 and Sri Gopal at Rs. 18-12. Assam Saws were easy at Rs. 6-11, Calcutta Electrics fluctuated in wide limits earlier in the period under review but in the last two days there has been heavy buying and the quotation has sharply improved to Rs. 47 from Rs. 41-12. The sudden rise in prices is due to the reports that the Bengal Government is negotiating with the Calcutta Electric Supply Corporation for the purchase of the undertaking and that some settlement will be reached.

GOVERNMENT OF INDIA DEPARTMENT OF SUPPLY

TENDER NOTICE.

Tender No. CDD/NFR/63/10190
due on 31-8-45.

The Controller of Supplies (Disposals), 2, Fairlie Place, Calcutta, invites offers for the purchase and removal of the following stores:—

Store.	Tons.	Quantity.
1. Brass Scrap (Gr. I)	30	0 0 0
2. Brass Borings (70/30)	16	0 0 0
3. Copper Scrap (Gr. IV)	20	0 0 0

Offers to remain open upto 20-9-45. Delivery of the stores will be at site and removal should be completed by 1-10-45. Tenderers are at liberty to quote for the entire quantity or a portion thereof. The quotations should be submitted separately for each item and rate to be quoted should be per ton.

LAKSHMI MILLS COMPANY LIMITED

Dividend Maintained Inspite of Lower Earnings

ORDERS ALREADY PLACED FOR INCREASING SPINNING CAPACITY

Presiding at the 35th Annual General Body Meeting of the Shareholders of the Lakshmi Mills Co., Ltd., held on the 22nd July, 1945, at the Registered Office, in Coimbatore, Rao Sahab T. T. Rathnasabapathi Pillai, President, said:—

Ladies and Gentlemen,
"I have very great pleasure in extending to you, on behalf of the Board of Directors, the Managing Agents and myself, a hearty welcome to this, the 35th Annual General Body Meeting, and I have special pleasure in doing so this time, because, we are meeting this afternoon in this spacious hall of our new building, which has just been completed. Before I deal with the report and accounts, which have already been sent to you sufficiently early, it is but proper, that I should refer to the most momentous event which has happened in the World War No. 2, after we met last, i.e., the utter defeat of Germany. A similar defeat of the Japanese is a foregone conclusion; and I hope, that when we meet again, we shall be in a position to congratulate ourselves upon such an event. While we are legitimately filled with happiness on account of the conclusion of the War in the West and the progress of the war in the East, there is another event, which has happened nearer home in our country, which is a matter for genuine regret for all of us, viz., the breakdown and the failure of what is commonly known as "Lord Wavell's Conference" with the political leaders of our country. High hopes were entertained, that a solution to end the deadlock parties would be arrived at. It is obvious, that such a solution is absolutely essential, especially at the present juncture, when this life in her economic and industrial career. It is extremely likely, that with proper plans for the Industrial advance of this country and energetic execution of those plans, India may achieve an important place as one of the foremost countries in the world. To reach such a goal, Government help, assistance and encouragement are necessary and must be freely available. The people in general naturally feel encouraged, enthusiastic, bold and enterprising, if the political atmosphere in the country is clear and calm. Now, we can only hope, that some way will be found as early as possible to remove the present political difficulties.

DIVIDEND MAINTAINED.

Coming to the report and the balance-sheet, I feel sure that you find the position of your company highly satisfactory. The works having 40,872 spindles at Coimbatore have earned a net profit of Rs. 31,41,248-6-11, after deducting all expenses and providing for taxes and for depreciation on building and machinery, provision for the said depreciation being Rs. 1,57,987. We have reserved set apart a sum of Rs. 23,18,000. We have reserve, from out of which, the Excess Profit Tax compulsory deposit will be paid. You would, however, have noticed, that the profit of the mills for the period ending 31st March, 1945, is less than half the net profits in the earnings of the year. This reduction in the earning of the profit can involve no reflection whatsoever on the working of the mills. The main reason for the fall in the profits is the reduction in the ceiling price for yarn without any appreciable corresponding reduction in the price of cotton. As long as the present conditions in the matter of a distribution of last, you cannot expect not warranted by the standard profits of the mills. Thanks, however, to the high standards which our mills enjoy, your Directors are still in a position to recommend a dividend of 24 per cent, the same as last year's. It must, therefore, be a matter of gratification to you, that the reduced profits have not affected your dividend.

I may draw your attention to another highly satisfactory feature in our accounts relating to the Reserve Fund. Our mills have got a Reserve Fund of Rs. 21,70,200. Although this reserve is being ploughed back into the working of the concern, it is certain to contribute to the profits of the mills in the coming years. If, to this fund is added, the amount set apart this year, it comes to very nearly Rs. 25,00,000. When the mills get back their share in the compulsory deposits made, the mills will be in the fortunate position of receiving a sum of not less than Rs. 10,00,000 which if added to the reserve fund already set apart, will increase the fund to over above Rs. 35,00,000 an impressive figure indeed. I am leaving out of account the compulsory deposits which may have to be made in future years, as this factor is uncertain. I am sure, therefore, that all of you must feel happy and highly satisfied in the matter of the financial strength of our mills and we can trust our Managing Agents to carry on the work as efficiently as usual, to take advantage of the accumulated assets of our Mills and improve still further, the profit earning capacity of our mills. Already, the mills have placed an order for 8,640 spindles and when they are made available, they will be installed in the Koilpatti works, which, you will be glad to hear not only possess a building already constructed to hold 25,000 spindles, but also are capable of considerable expansion owing to the availability of large extent of land that has already been acquired for the mills.

PLEA FOR RELAXATION OF CONTROLS.

Several industrialists of eminence all over the country have time and again been impressing upon the Government, the desirability of relaxing the controls over industries, adopting a liberal policy in the taxation measures and in the matter of allowance by way of depreciation. May I add my own voice to such representation. It must be remembered, that before the recent boom Indian textile industry had to face for several years, very difficult conditions and the shareholders of the several Textile mills in this country had often to be content with small dividends and sometimes, with no dividends at all. The textile industries cannot expect the same boom conditions to continue after the war. Although there are a few features present to tempt us to make an optimistic forecast for the textile industry in this country, still, we must take note of certain factors which must compel us to view the future of our industry with certain amount of caution and care. The Indian Textile Industry must be prepared to face very keen competition in the world market in the near future. As unfortunately, textile machinery are not manufactured in this country, we have to look to the United Kingdom and America for such goods and for such time as it would take to obtain textile machinery in this country itself. In view of the surplus wealth available in this country, many new textile mills are certain to be started in this country. This again means keen competition in the purchase of textile machinery.

Almost all the mills in this country now need urgently fresh equipment on up to date lines and according to modern standard. Labour problems are certain to crop up after the end of the War. To enable the Textile Mills to stand competition in the markets of the world, to make it possible for them to retain the gains made by them in the last few years and to prevent them from relapsing into the financial difficulties, which were all too common some few years ago and to give them the security of a contented and efficient labour force, a very sympathetic and discerning treatment and consideration for the textile industry at the hands of the Government and utmost sagacity and foresight on the part of the Industrialists are absolutely necessary. I hope, all these will be forthcoming in a large measure and the textile industry, which is the most important

and successful industry at present in this country will have continuous prosperity.

Your Directors and the Managing Agents are keenly alive to the problems, which may face them in the postwar Era. Taking into consideration the financial strength and resources of your mills, the zeal and enthusiasm of your Managing Agents and their ripe experience and efficiency, I can reasonably assure you, that the prospects of our mills are bright and encouraging. We intend to enlarge the scope of the working of the mills. If possible, we may embark upon enterprises associated with spinning, which is now the main working of the mills.

Before I conclude, I wish to express, on your behalf and on behalf of the Board of Directors, our genuine appreciation of the able and efficient manner in which the Managing Agents of our mills have been discharging their duties. All the members of our staff deserve our appreciation of their loyal and unstinted service to the mills".

EAST INDIA RAILWAY

Annual Contract Item Over Rs. 8,000.

TENDER NOTICE.

Sealed tenders are invited for the following and will be received in the General Manager's Office, East Indian Railway, 105, Clive Street, Calcutta, on the 29th August, 1945 at 12 noon.

"Tender No. SP[E]Est[30]Gb4[Pt.I for conversion of 339 tons of Scrap C. & W. White Metal into an equivalent quantity of New White Metal".

Tender forms with full particulars can be had from the Controller of Stores, East Indian Railway, Calcutta, on payment of Rs. 2 per copy to the Treasurer, East Indian Railway, Calcutta and on production of his receipt when applying for the same.

Firms outside Calcutta may, however, remit the amount to the Controller of Stores, direct by money order. No refund is permissible after payment.

Sealed tenders delivered by hand, should be presented for registration in the General Manager's Office and then put into tender box outside, the Deputy General Manager's (Works) room by the Tenderer or his representative.

Carry F'd	2,208	1,652	9,656
Div. per cent	24	24	40

Audited accounts for the year ended 31st March, 1945.

After meeting all expenses, and providing for taxes, and depreciation on buildings and machinery to the extent of Rs. 1,57,987, the result of this year's working shows a net profit of Rs. 31,41,248-6-11, and together with Rs. 1,652-6-6 carried forward from last year's profits, the total sum available for distribution amounts to Rs. 31,42,900-13-5 which the Directors propose to appropriate as follows:—

Dividend to Shareholders at 24 per cent per annum, free of income-tax, Rs. 4,27,692; Reserve for Taxes (E. P. T., I.T., and C. T., Rs. 23,13,000-0-0; General Reserve (out of which the E. P. T. Compulsory deposit will be paid), Rs. 4,00,000-0-0; and the balance of Rs. 2,208-13-5 is to be carried forward to next year.

The Directors point out that the profit of the mills has been reduced to less than half of last year owing to the reduction in the ceiling rates for yarn. They have recommended the same rate of dividend as last year.

Chairman.—Mr. T. T. Rathinasabapathy Pillai.

Authorised Capital—Rs. 50,00,000. Issued—Rs. 24,00,000. Subscribed—Rs. 17,82,050 in 24,000 shares of Rs. 50 each fully paid up and 23,282 shares of Rs. 50 each on which Rs. 25 have been called and paid up.

(Continued from page 217)

home and of the repercussions abroad of Labour coming into power. From an independent study, it will be realised, that the one market which has been singularly free from any excessive inflationary influences is the Indian Stock Exchanges. Most of our industries are well set and they are well prepared to meet the demands of peacetime and so make the further reorganisations that the transition from war to peace will make necessary and possible.

With the successive reduction in ceiling prices cotton mills have been able to report only a lower level of earnings in the past year. Mills in South India especially have been very badly affected. As in most cases standard profits were rather low, the distribution to the shareholder had to be curtailed drastically. Lakshmi Mills Company, Limited, however, is in a fortunate position as earnings for the standard period are rather satisfactory and the directors in the past were prudent enough to make the distribution to shareholders in such a manner that it could be paid out of the standard profits at any time. The net profit, before providing for taxation and after depreciation, for

1944-45 was less than half the sum earned in the year ended March 1944. The actual figures for the year 1944-45 and 1943-44 were Rs. 31,41,248 and Rs. 73,22,709 respectively. Provision for depreciation in these two years was Rs. 1,57,987 and Rs. 1,74,085 respectively. After reserving Rs. 23,13,000 against Rs. 55,65,000 for taxation and transferring to General Reserve Rs. 4 lakhs against Rs. 13,40,021 the dividend has been maintained at 24 per cent. The amount carried forward is Rs. 2,209 against Rs. 1,652 brought in.

Speaking at the Annual General Meeting of shareholders the Chairman said that orders had already been placed for 8,640 spindles for increasing the spinning capacity. When these spindles are made available it is proposed to instal them in the Kollipatti mills where there is accommodation for 25,000 spindles and also if necessary their is scope for expansion as suitable land is available. The existing capacity of the mills at the present moment is 4,672 spindles in Colimbatore and 776 spindles in Kollipatti.

The financial position of the company is very sound, as against the paid-up capital of Rs. 17,82,050 total reserves including the latest allocations amounted to over Rs. 25 lakhs. As the funds at the disposal of the company are being put to profitable use with the disposal of the company are being put to profitable use with the increase in the earning capacity of the company the shareholders can expect to derive greater benefit on their investment.

WATCH-DOG.

GOVERNMENT OF INDIA**DEPARTMENT OF SUPPLY****TENDER NOTICE.**

The Controller of Supplies (Disposals), 2, Fairlie Place, Calcutta, invites offers for the purchase and removal of the following stores:—

Store.—Fabricated B. P. Plates which are cut, drilled, heated and treated either wholly or in part.

Tenderers are at liberty to quote for the entire quantity or a portion thereof. Rates to be quoted per ton ex-site.

THE PANBARRY TEA CO. (1926) LTD.**NOTICE.**

The Annual Ordinary General Meeting of the Shareholders will be held at the Registered Office of the Company, No. 19, Old Court House Street, Calcutta on Friday, the 24th day of August, 1945, at 3-30 p.m., for the following purposes:—

- (1) To receive and pass the Directors' Report and the Audited Accounts for the year ended 31st December, 1944.
- (2) To elect a Director in place of the retiring Director.
- (3) To elect Auditors for the ensuing year, and to fix their remuneration.
- (4) To transact any other business that may be brought forward.

The Share Transfer Book of the Company will be closed from 17th August, 1945, to 24th August, 1945, both days inclusive.

OCTAVIUS STEEL & CO. LTD.

Managing Agents

Calcutta, 25th July, 1945.

Announcement**GAYA SUGAR MILLS LIMITED.**

The Directors have pleasure to inform the shareholders that we have been granted import Licence No. 52922 C.C.I.G.P.W. 9(5)/CG/45 of 10-7-45 for the Import of complete 2000/2500 tons Sugar mill plant. The period during which the shipment will be made from England is between January to June 1946.

The order for the plant has already been placed with Messrs. Mirrlees Watson & Co. Ltd. and it is expected that the makers will be able to ship the whole plant in time to enable the Management to catch the season 1946-47. Vigorous attempts are now being made to keep the building ready for erection of the machinery. Since the requirements of this factory for complete 120 running days is about 75 lac maunds of cane, arrangement is in hand to get as much of cane as possible at the Mill's gate.

It will not be out of place to mention here that this is the only mill which has got sanction from the Government of India to install a new factory so far.

G. S. LALL,

Managing Director.

Calcutta, August 1, 1945.

GOVERNMENT OF INDIA**DEPARTMENT OF SUPPLY****AUCTION SALE**

"Under instructions from the Controller of Supplies (Disposals), 2, Fairlie Place, Calcutta, Messrs. Mackenzie Lyall & Co., (Govt. Auctioneers), 5, Mission Row, Calcutta will sell by public auction at Returned Vehicle Park, Dhanbad at 10 a.m. on Saturday, the 18th August, 1945 57 Nos. 1942 Model Dodge Vehicles of 3 ton capacity each. These vehicles are completed with Engine, Wheels, Tyres, Tubes and Batteries and have been selected as Potential Runners requiring minor repairs from a large number of surplus Army Vehicles CDD/VHR/1/E. Intending purchasers may apply to the Controller of Supplies (Disposals) for full particulars and for letter of authority to inspect the vehicles at site."

PLOD PLOD

... went the weary feet of the couriers, Pheidippides as he ran from Marathon to Athens to tell the good news of Victory.

Today news is flashed to all corners of the globe by means of telegraph and telephone. The modern world relies on high-efficiency cables to carry its messages.

Laid out along the most modern lines, our works are equipped with the latest type of machinery for the production of ultra modern cables. A highly skilled technical staff exercises rigid control at every stage of production ensuring strict conformity to any specification—B.S. or International. Right now we can only quote for electrolytic H.D. Bare Copper Wire.

A closer system of telecommunication will be one of the essential factors in the industrial development of India. To this end we are equipped to supply the Nation's demand for cables of all types.

Fact Parade

U. S. Purchases In India:

The United States had spent 489 million dollars in India since July 1, 1940, the U. S. Foreign Economic Administration disclosed in a report. In a summary covering transactions abroad during the four years and nine months ended March 1, 1945, the report said that most of the amount had been spent on the purchase of strategic war materials and supplies needed to manufacture civilian goods in the United States and for the construction of military installations in India. Military purchases in India accounted for about \$115,000,000 of the expenditure. During the same period, the United States had received 412 million dollars in reverse lend-lease from India.

Development Of Indian Fisheries:

The Government of India are deputing their Fisheries Adviser, Dr. Bainsi Prasad, to the U. S. A., Canada and the United Kingdom for about four months to study the latest developments in fishery exploitation and preservation and their adaptability to Indian conditions.

Dr. Prasad will study the various types of machinery and equipment used in the preservation and stoppage of fresh fish arriving in assembly centres, the latest equipment used to transport live fry and fingerlings to the interior of the country for stocking operations, and to explore the possibility of early procurement of suitable machinery for the proposed Central Fisheries Research Institute and the recruitment of specialists, on a contract basis.

States' Industrial Delegation:

It is understood that Mr. H. S. Malik, Prime Minister, Patiala State, will lead the States' Industrial Delegation leaving towards the end of August on a visit to the United Kingdom and U. S. A. Names of other members of the Delegation are not yet announced by the Chamber of Princes, but it is reliably learnt that Sir Joseph Bhore, Prime Minister of Bhopal, will be one of the members.

More Milk For Madras City:

The milk factory proposed to be started in city of Madras, it is understood, will begin to function within four months. The factory will convert dry milk powder, which will be obtained from abroad, into milk, and sell the same at a moderate price. Under the existing arrangements, it is estimated that it will be possible to produce 3,000 measures of milk daily.

Damodar Project To Cost Rs. 50 crores:

Following the Conference held in Calcutta last January between the representatives of the Central Government and the Bengal and Bihar Governments on the multi-purpose Damodar Valley Project, a preliminary report prepared by the technical experts of the three Governments has now been submitted, it is learned.

At the January Conference it was agreed that the three Governments should prepare an inventory of facts and figures which would enable the technical experts to prepare a preliminary memorandum embodying a coordinated scheme for the Valley's multi-purpose development.

The Project is now estimated, according to the Preliminary report to cost Rs. 50 crores. It is understood that the financial aspect of the scheme and problems of administrative control are being actively examined by the Government of India.

Pending decision on these questions, the Central Government's view is that necessary action to carry out further detailed investigations should be taken in hand without delay, because no construction work can be undertaken without these investigations.

In order to consider the preliminary steps, it is understood, that a Conference between the three Governments may be called towards the end of August.

Unloading Of Cargo Ships:

Smashing world's record for unloading a cargo ship by 14 hours and five minutes, two American port companies have completed unloading a C-2 cargo ship at the U. S. Army port of Calcutta in 30 hours.

The previous world's record also was held by the base section of the India-Burma theatre in Calcutta with a time of 44 hours, five minutes for unloading a liberty ship in May.

London Financial Papers Amalgamate:

Britain's two financial daily newspapers are amalgamating. The *Financial News* Limited has brought a controlling interest in the *Financial Times* Limited held by Lord Comrose and his family. Minority holders of the *Financial Times* Limited will be offered the same price as has been paid for the controlling interest, namely 41s. 3d. per share.

The *Financial Times* will acquire the copyright of the *Financial News* and subsequently the two papers will amalgamate.

Reuter's City editor comments: The deal apparently involves about £2,500,000. The copyright acquisition implies that the name of the amalgamated paper may be the *Financial Times*.

Mr. Brendan Bracken is associated with the *Financial News* Limited, which now controls both the papers.

Bank Of Newzealand to be nationalised:

Newzealand's Prime Minister, M. Peter Fraser said that the Government of Newzealand would nationalise the Bank of Newzealand.

Pension To Mrs. Curtin.

The House of Representatives passed a bill granting an annuity of 500 Australian pounds (Rs. 5,600 approximately) to the widow of Mr. John Curtin, the former Australian Prime Minister.

Dehydrated Meat For India:

Australia will explore the possibilities of increasing sales of dehydrated meat to India and Ceylon, state official Australian sources in London.

Two experts are about to leave for India for this purpose.

Manufacture Of Cars In Australia:

The U. S. Chrysler Motors Corporation has submitted detailed plans for the manufacture of automobiles in Australia, the Minister of Post-war Reconstruction, Mr. John Derman revealed.

U. S. Unemployment After Jap War:

A warning that there would be a crisis in the United States domestic economy "as costly as a military defeat" and involving widespread unemployment, unless the Government speeded up industry, is given in a special Senate Committee report.

The Chairman of the Committee declared that, if the war against Japan suddenly ended the United States would be largely unprepared to deal with home economy problems. Reconversion would not have progressed sufficiently to absorb manpower suddenly released unemployment on a large scale would probably ensue.

Big U. S. Industrial Programme:

A vast programme of expansion, under which American manufacturers plan to spend 9,000 million dollars during 12 months for new plant and equipment, and for expansion of working capital, is revealed in the present plans of American industrialists as analysed in a study by the U. S. Department of Commerce.

In addition to these planned outlays, expansion costing approximately \$1,500,000,000 is expected to be included in the programmes of gas and electric utility companies and railways.

"A Survey of Current Business" draws the conclusion that American manufacturers are, in general, coming out of the war with a lot of cash on hand. In fact, most of the expansion is to be financed by the manufacturers' own money rather than by borrowings.

Wool Surplus in U. S. A.:

The War Production Board has eliminated the basic wool and worsted cloth controls due to a surplus of more than 500 million lbs. of raw wool for the 1945 production. It was estimated that raw wool on hand for the industry this year will be 1,650 million lbs. which is about one-third above the normal requirements.

New U. S. Secret Weapon:

The Navy Department revealed that it has a new secret weapon—the electronic supply ship. The first of the ships has just been commissioned and is named USS Indian Island. It is a vessel of 10,000 tons fitted with very elaborate electrical equipment. Details as to how the electronic weapons are used and what objectives they will attack are not revealed.

Australia's Gold Mining To be Overhauled

The Post-war Reconstruction Panel set up in Australia to consider the rehabilitation of the gold industry has decided that, as most of the superficial deposits have been located, an intensive exploration on a scientific basis is now needed. The work, however, would have to be undertaken by the British Commonwealth Government on account of the cost, says a Perth message.

War taxations have made the task impossible for independent companies, and the only answer seems to be a Commonwealth geological survey.

Latest information is being obtained by Australian experts from Canada and the United States regarding the technical and financial side of such exploration. Also the Federal Treasury is considering the replacement of mining machinery, commandeered for war purposes, from overseas on an equitable system.

Questionnaires are being circulated to all mining bodies asking for an indication of their urgent needs in machinery and men.

Mr. Kaiser To Build Lightweight Cars:

Plastic and light metals will be used extensively in the manufacture of a large, lightweight, low-priced automobile which Mr. Henry J. Kaiser, west coast shipbuilder, will deliver to the public early in 1946. The car will be manufactured in the new Kaiser plant to be constructed on the Pacific coast.

TREASURY BILLS

Central Government:

Tenders for Rs. 4,00,00,000 of three months' Government of India Treasury Bills were opened on August 7, 1945. Total amount offered was Rs. 3,14,25,000. Tenders at Rs. 99-14-3% and above were accepted in full. Total amount accepted was Rs. 3,14,25,000, the average rate of accepted tenders being Rs. 0-6-3% per annum.

Tenders for Rs. 4,00,000 of three months' Government of India Treasury Bills will be received on Aug. 14, 1945, at Bombay up to 11 a.m. and up to the close of business on Aug. 13, 1945, at other centres.

During the week ended Aug. 3, 1945 Government of India Treasury Bills for Rs. 98,00,000 were in favour of the Issue Department of the Reserve Bank of India.

WORLD OF INDIAN FINANCE

CALCUTTA, Friday Evening.

Quite easy conditions were noticeable in the
money market with call rate quoting ½ per
cent. in Calcutta and ¼ per cent. in Bombay.
With the greater interest in the gilt-edged
market by outsiders it has been possible for
speculators to liquidate completely their
holdings. The correction of the overbought
technical position in the gilt-edged market
will be evident from the improvement in the
rate for 3½ per cent. Paper to Rs. 102/12.
The successive increase in the average dis-
count rate on Central treasury bills and the
large volume of floating funds have naturally
resulted in an increase in the amount of
applications but in the absence of an impor-
tant bidder it has again been not possible for
the Central Government to get its require-
ments in full. At the auctions held this
week the total amount of applications was
Rs. 3.14 crores against Rs. 2.93 crores. It is
rather significant that all the tenders have
been accepted though the authorities have
been obliged to concede an increase in the
average discount rate to six annas and three

With operators anxiously awaiting
further developments in the war against
Japan the news, late in the evening on
Friday, that Japan was prepared to accept
the Potsdam terms had a discouraging
effect on stock markets. In unofficial
trading a further decline in prices has
been recorded. Indian Irons were
Rs. 39-15 against the official close of
Rs. 40-9. Steel Corporation Rs. 32-10
against Rs. 33. Burrakur Rs. 43-12 against
Rs. 44-4. South Karanpura Rs. 36 against
Rs. 36-8 and Howrah Rs. 93-10 against
Rs. 94-8.

In Bombay Tata Deferreds were
Rs. 2,140 against Rs. 2,200. Bullion prices
recorded a sharp fall. Silver Forward
coming down to Rs. 131 and Gold Forward
to Rs. 72-12.

The general sentiment is bearish.

pies per cent from five annas and eleven pies
per cent per annum last week. It would
appear that the Central Government is keen
on increasing its short-term borrowing as
subscriptions to loans have slowed down and
it would again prove profitable to increase
the floating debt and repeat the funding pro-
cess of recent months. In spite of the fact
that from next week maturities are only
Rs. 2 crores per week the offer has been
maintained at Rs. 4 crores. It remains to
be seen whether in the face of smaller matu-
rities banks would show keen interest in
short-term bills. As on former occasions,
the Imperial Bank might perhaps come out
as the principal bidder as the cash balances
are rather high and if there is a further in-
crease in deposits there would be no difficulty
in placing funds in treasury bills.

It was pointed out last week that the de-
crease in note in circulation for two weeks
in succession was due to special factors and
that, as was feared by the market, it was
not correct to say that deflation had started.
With the continued receipts of sterling for
goods and services in connection with the
Allied war effort there will have to be con-
tinued expansion of currency though on a
smaller scale. The return of the Reserve
Bank for the week ended August 3 shows an
increase in notes in circulation to Rs. 1,132.7
crores from Rs. 1,128.73 crores. Total notes
issued are slightly higher at Rs. 1,153.11
crores against Rs. 1,522.94 crores on account
of the return of rupee coin from circulation.
The total of rupee coin at Rs. 16.52 crores
shows a rise of 17 lakhs. Notes in the Bank-

ing Department have naturally declined to
Rs. 20.31 crores from Rs. 24.21 crores. There
is no change either in sterling or rupee secu-
rities.

In the Banking department, Central Gov-
ernment balances show a big drop to
Rs. 343.03 crores from Rs. 353.79 crores pos-
sibly due to the month-end disbursements.
There is a decline in other government
accounts also to Rs. 18.51 crores from
Rs. 19.50 crores. Balances with the Reserve
Bank have jumped sharply to Rs. 85.70 crores
from Rs. 75.07 crores, the lower level of ad-
vances and the further rise in working cap-
ital being perhaps responsible for the larger
cash balances. Foreign balances were
Rs. 3.8 crores higher at Rs. 438.26 crores.

The absence of any large demand for funds
is borne out by the statement of the Imperial
Bank for the week ended August 3, 1945.
Deposits were higher at Rs. 238.60 crores
against Rs. 237.91 crores. Investments do not
show any important change at Rs. 148.07
crores but advances are lower at Rs. 64.94

Nationalisation of the Bank of England

The nationalisation of the Bank of England has always occupied a prominent place in the programme of the Labour Party; and it is now known, on Labour coming into power and taking office, that this objective will have the highest priority. In Professor Laski's recent broadcast to America on Labour policy, he indicated that socialisation of the Bank of England would be among the first of the legislative steps to be taken by the new Government. This will take precedence over the other measures of the Labour programme such as the nationalisation of mining, power, transport and steel industries.

With the realism characteristic of the British nation, the general tendency in London is to look upon this revolutionary change as nothing other than an instance of the British way and style of evolution. Far from there being any strong criticism of this first implementing of Labour policy, the change-over of the Bank of England to a national bank is regarded, in the words of the City Editor of the "Evening News", as a de jure recognition of a de facto state of affairs. It is argued that, for decades past, the Bank of England has not acted as a purely private institution; that the Bank is not run in the ordinary sense for profit; that its shareholders have no say whatever in the management of its monetary policy; that, over a long period, the relations between the Bank and the Treasury have been getting closer and closer and are so intimate especially in the last decade and a half, that the differences on questions of monetary policy to-day as between the Bank authorities and the Treasury Department are insignificant if they exist at all; and that, in brief, nationalisation of the Bank of England means really no change.

While the Labour Government is, in the present parliament, able and determined to give full effect to Labour policy and programme, it is noteworthy that the public at large in Britain are prepared to provide a setting favourable to the experiments and innovations inevitable in the execution of Socialist policies and plans. It may, therefore, be taken as certain that, before many months are past, the Bank of England will be transformed from a shareholders' institution into a State Bank. The procedure for this transformation is simple. The paid-up capital of the Bank is £144 millions; and on nationalisation, the shareholders will either be bought out or are given some kind of Government stock on the basis of a price for Bank of England shares to be determined.

If nationalisation is, thus, such a simple affair and means nothing more than the conversion of a de facto state of affairs into a de jure state, one may ask why this obviously redundant contraption of shareholders and their voting was kept up so long. Present discussions emphasise the fact that the shareholders did not have any great say; and that they have been something of a fifth wheel in the coach. That the fifth wheel was not cut out and thrown away earlier, is, from this point of view, a matter for surprise.

Does nationalisation as contemplated by the Labour Party mean nothing more than a formal change of this kind? In answer to this question, we have to take note of the fact that Prof. Laski, in his broadcast referred to, did not speak of nationalisation of the Bank of England, but of Socialisation. Is there any special significance to be attached to the use of the word 'Socialisation' in the place of 'Nationalisation'? The City Editor of the "News Chronicle" deals with this conundrum and says: "It may be that the intention is something more ambitious than merely bringing the Bank of England formally under Treasury control. It may be that the reconstituted Bank will at once be invested with formal powers of control of joint stock banks in furtherance of the Labour Party's declared policy that their operations 'shall be harmonised with industrial needs.' In this event, the prospect of a much more complex and controversial chain of legislation is opened up." If the Bank of England is, thus, to be entrusted with statutory power of control over joint stock banks, there is no reason to sense in this a revolutionary change. If it is argued that, in the sense that the Bank of England is a Government Bank, it suffers no change worth mention when it is converted from a shareholders' bank into a National Bank, it can be argued with equal force that, in the sense and to the extent that the Central Bank of every country has always been regarded as a banker's bank, as the core and centre, as the inspiration and mentor of all banking institutions, the formalisation through statute of the Central Bank's control over joint stock banks connotes really no change.

What will be the more obvious and more readily seen effects of the nationalisation of the Bank of England? While the Bank of England is a shareholders' bank, it is true that the shareholders have no big voice; but the shareholders serve as an effective instrument to shut out the voice of Parliament in the working and affairs of the Bank. No questions regarding

the working of the Bank may be put in the House of Commons; the questions will be ruled out on the ground that the Bank of England is a private institution owned by shareholders. In actual working, the Treasury does have full and effective voice in the policy of the Bank; but the Parliament as such is curiously told to keep off the grass. This state of affairs will be changed after the nationalisation of the Bank of England is effected. While the Treasury will have its relations as close and as intimate as heretofore with the Bank of England, the Bank in the new regime will not be independent of parliamentary control.

Another obvious change will be that the directorate of the Bank will become less and less of a caucus. Various taboos had grown up with regard to the qualifications of a Director of a Central Bank; and the following description from "Central Banks" by Kisch and Elkin refers to one of the most important restrictions applicable to the Bank of England:

"As the dealings of the Central Bank are largely with commercial banks, it is desirable to provide that the latter should not obtain control of a central banking policy. The relations of commercial banks with trade and industry may, on occasion, colour their views as to what the policy of the Central Bank should be. Clearly a policy that should be directed by national considerations ought not to be subordinated to the interests of the principal customers of the Central Bank. The practice of the Bank of England is to exclude from its Court directors of joint stock banks, bill discounters and bill brokers as such; and to be a director or an officer of a banking institution is a disqualification in the case, for example, of the Board of the Commonwealth Bank of Australia, the South African Reserve Bank and the National Bank of Czechoslovakia." And, we may add, of the Reserve Bank of India. As the Big Five and the other important banks of Britain have enlisted, on their directorate and on their higher executives, a considerable proportion of business and industrial talent and experience, the range from which the Court of the Bank of England can be selected has become, in practice, extremely limited. In the 'thirties, it was openly alleged in independent circles in Britain, that it was easier for one who was not an Englishman and who had foreign sympathies, to be elected to the Court of the Bank of England than for a straightforward Englishman. Foreign influence came to count for a great deal in the Court of the Bank of England. If the Bank of England is nationalised, it may be taken as certain that the new directors will be more representative of the various economic sections of British society and more alive to the genuine economic interests of Britain. As the City Editor of the "Manchester Guardian" points out, the first change will probably be the addition of further industrial and trade union representatives to the Court of directors.

Nationalisation of the Bank of England, from this point of view, will mean that the directorate of the Bank will no longer be the result of manipulations and wire-pullings among powerful City circles, but will be representative of the broad and important interests in national life.

Britain & Bretton Woods

America has made up her mind on the Bretton Woods proposals. She has decided to stand by the plan evolved last year regarding the setting up of an International Monetary Fund and a World Bank. There has been stout and persistent opposition in America against Bretton Woods for the past several months and it still continues. Since the rejection of the Keynes Plan the British Press had remained silent for some time to enable free discussion in the U. S. Now there has been a violent change in the political set-up and the Conservatives have been disastrously defeated and Labour enthroned in power. Some of the Labour leaders, now Cabinet Members, are known to have expressed their doubts if the Bretton Woods proposals could be adopted by Britain without amendments. The London Economist has already started a campaign in favour of changing the Bretton Woods proposals to suit British interests of reconversion, exports drive and balancing her international debt position. The question would come up before Parliament before long and unless Britain ratifies the Final Act the future of the world currencies and monetary organisation will be dark and dismal.

Some of the informed journalists of the United States pointed out that the Bretton Woods proposals aim at solving only some of the short-term difficulties of international economic system and no attempt has been really made to rectify the fundamental forces which create long-term disturbances. The basic maladjustment in the international economy has not been successfully tackled by the idea of setting up a world bank, return to the gold standard and the abolition of exchange controls. If the questions are posed "why, between the two Wars, the gold standard has not

worked successfully? Why the Great Depression could not be avoided? The answer is stated thus: The big economic giants of this world—the U.S.A., and the U.K.—have fundamentally different purposes and interests in the ordering of international finance and trade. The United States, on the one hand, has been continuously selling more to the outside world than she purchased from it. The dollar was always scarce. For some time the debtor countries were given loans to continue their purchases from the U.S.A. but that did not work for long. All of a sudden, after a few years of this policy, the United States stopped giving foreign loans and thus forced on her creditors the necessity to scramble for gold for unpleasant payments to U.S.A. This led to a continuous accumulation of gold in the U.S.A. till at last by 1940 most of the world's monetary gold was concentrated in that country. America has great capacity to export, and she has to, but since the dollar is scarce and her tariff high, she cannot import enough to balance her trade. Even if the tariff had been lowered, it is held in certain quarters, the scarcity of the dollar would not have been perceptibly relieved. This situation created so much uncertainty in other countries, that all the currencies were in perpetual danger of a collapse and prevented other countries from fulfilling their obligations to the United States. This difficulty was particularly felt when the multi-angular trade gave place to the bilateral trade agreements, currency and tariff wars during the period of the Depression. In order to balance the foreign trade the U. S. had either to cut down her exports or agree not to demand immediate payment for the monies owed against her exports but invest these sums abroad. As a result of this war America's production capacity has gone very high and the dependence of the outside world on the American dollar has not in any way decreased but actually increased tremendously. The old problem will come up again and as yet, it is true, the U.S.A. have not yet solved this problem.

Great Britain, on the other hand, is an instance of the opposite. She has been, by virtue of the fact that a great part of the world became her debtor during the nineteenth century, importing continuously more than she exported and thus she could maintain her high standard of living. She bought twice as much from the outside world as she sold to it. Before this war Britain has been eking out her living mostly from incomes from her inheritance. But owing to the commitments arising out of this war her position has deteriorated very much and she has become a noted debtor, with the result that sterling is bound to become abundant and cheap in postwar years. A position will be reached, it is feared, when nations will scramble for dollars and they will also try to unload pound sterling, and create instability in the international economic system. Britain can avoid this position either by lowering her standard of living and cutting her imports, or by doubling her exports. The former will not be contemplated and the latter would lead to intense economic competition with America and the other countries. She will be obliged to use the sterling balances of India, Argentina and the Dominions to cultivate her postwar markets. Further, she has been, and is likely to continue to be, a great purchaser of goods produced in several countries, industrial and non-industrial. While, on the one hand most of the countries in the world look to America for capital equipment and thus create a great demand for the dollar, they will have also to retain the British market. As a result, the currency of any single country is likely to suffer a downward pressure with reference to the dollar and an upward pressure with reference to the sterling. Unless free multilateral trade is restored, and restored at an early date, the interests of most of the countries of the world will not be served. But for a great debtor like England bilateral trade agreements would suit best. Thus, the cross purposes between the U.S.A. and the U.K. have to be solved and the Bretton Woods proposals, it is believed, have failed to tackle the question of worldwide dollar scarcity.

The problems before the United States and the United Kingdom are indeed complicated and big and cannot therefore be solved in a hurry in the near future. But can other countries afford to wait till these problems are finally solved to their entire satisfaction? Since every individual country will plan only according to its own requirements and therefore prolong the period of transition according to its own convenience, the Bretton Woods proposals are considered unsatisfactory because they seek to establish at an early date a system of world trade and stable free currencies. Britain has now started thinking aloud regarding her immediate as well as longterm requirements and criticism against the Bretton Woods Plan is now heard louder than before.

From the standpoint of world peace, it is recognised both in the U.S.A. and in the U.K. that Bretton Woods has one outstanding achievement to its credit, viz., the co-operation of Soviet Russia. It is indeed a great thing for the future of international amity that this Colossus has agreed to abandon

her policy of self-sufficiency and isolationism and give her backing to America's sincere attempts for the remodelling of world's economic and political relations for a prosperous future. Though the Soviet Union cannot abandon her monopoly of foreign trade or Government control on banking, she has agreed to buy and borrow capital equipment from other countries and thus she is not opposed to free international economy. She has also agreed to lift the censorship on economic and financial data in order to qualify for admission into the international capital market. That Soviet Russia is prepared to co-operate with other countries in matters economic is no mean achievement and the appreciation of this fact is likely to influence British public opinion before the British finally take up their decisions regarding the Bretton Woods proposals and the terms under which Britain should ratify the proposals.

Britain's attitude towards Bretton Woods will be based on her plans of recouping the economic damage done during the war and her plans to achieve a prominent position in the postwar world. She needs more freedom of action to put her house in order than the Bretton Woods proposals allow. She requires to get a clearer glimpse of the postwar world before she can finally commit herself to the international proposals of he like settled at Bretton Woods. The anxiety not to repeat the mistakes of the last war is widespread and since Britain suffered heavily as a result of fixing the value of the pound sterling too early after the last war, and that too, at far too high a level in relation to the American dollar, her anxiety to avoid a recurrence of the tragedies which happened between the Wars is indeed genuine. Under the Bretton Woods proposals members are allowed to devalue only to the extent of 10 per cent without the permission of the Fund. Britain's postwar economy may require a greater devaluation and in such a case, either she will not be allowed to do so or she will have to quit the Fund and face the economic boycott against her led by America. Secondly, so long as America has not devised a plan to relieve this world-wide scarcity of the dollar, her interests will always be jeopardised by a strict adherence to the requirements of the Bretton Woods plan. It is also felt that Bretton Woods provides only an inadequate amount of short-term credit facilities and the terms are also prohibitive. If she becomes, therefore, a member of Bretton Woods organisation and keeps the rules, Britain will not be able to use her markets as a bargaining counter to make arrangements with Empire and non-Empire countries. Bilateral pacts suit her very well but Bretton Woods Plan stands for multi-lateral schemes and Mr. Pierse Loftus M.P., pointed out "it makes as its primary purpose the free convertibility of all currencies at fixed exchanges thereby making international trade a desperate struggle for gold convertible currencies, not a healthy, mutually advantageous exchange of goods." It is also felt that Bretton Woods gives too much prominence to monetary arrangements and not to production of goods. In the absence of a plan outlining the future methods of international goods and services, any premature arrangements regarding the stabilisation of world currency cannot be in the interests of several countries including Great Britain.

Examining the Bretton Woods Plan the Federation of British Industries has expressed its opinion that debtors are put under considerable pressure to redeem their debt while no such pressure is put upon the creditors to buy in proportion to their sales. While the initial supply of dollar to the Fund is to be only \$2750 million, the potential demand for the dollar is estimated to be no less than \$6050 million. The Economist pleads for a longer transitional period for Britain because the need for wartime controls and expedients need not automatically disappear even if peace arrives. Planned measures have to be taken, it is argued, to restore conditions of stability and Britain's great responsibility is to evolve a workable scheme to liquidate her indebtedness. If the dollar is scarce, the paper asks, how can sterling be made readily convertible and how can indiscriminate be adhered to to satisfy the requirements of Bretton Woods plans. To those who argue that a 50 per cent increase in British export trade would correct trade balances of England the Economist expresses its doubt if the target can be hit in the near future. British overseas assets have been drawn upon or destroyed to the extent of about £2,000 million since 1939 and the sterling debt already incurred has reached the figure of £3,000 million. Including the deficiencies of the transition period, it is calculated, that British international and financial position has deteriorated by £6,000 million. Strange to say, the reparations to be imposed upon Germany appear to be only \$20,000 revealing that the cost of victory to be heavier than the cost of defeat.

Discussing the way in which the British debt mounted higher and higher, the Economist says "When in 1940 Californian labour and American materials and military aircraft were on British orders, the whole business was, in any meaning of the words, part of the war effort of the U. S.—but it was paid for by Britain. When Indian factories are equipped to produce

ammunition for the Fourteenth Army fighting the Japanese in Burma, that, in a realistic assessment, is part of the Indian war effort—but it is paid for by Britain." It is, however, conveniently forgotten that America entered the war only in December 1941 and in regard to India, the people had no say in the fashioning of the war effort. The suggestion is clear that there should be a revision of the whole problem of liquidation of war debts, of course, in her own favour. The International Monetary Fund does not allow debtors or creditors to use its resources for the liquidation of the war debts and the Final Act allows a country to have its control over exports of capital and concedes the blocking of the sterling balances. Still, since Britain's temporary borrowing capacity does not amount to more than \$325 million while her debt remains at \$5000 million, there is a campaign in Britain to demand a plan for the settlement of the debt question before Bretton Woods is discussed on its merits and adopted. Unless her debt position is solved to the satisfaction of her national economy, it is pointed out that Britain would stand to lose by surrendering her freedom of action in currency matters and committing herself to the working of a gold standard as planned by Bretton Woods.

SPECIAL ARTICLE :

Meaning of Regionalism

(By B. BASU)

In the shock of this war, many of the aspects of the world order have broken down. Even before the thunder of the guns and the crash of bombs have died out peoples in every part of the world are getting ready with plans for post-war reconstruction of their political, economic and social structures. The plans for the economic development of India during the post-war period, whether they are sponsored by the Government of India or by nationalist Indians of socialistic or capitalistic leanings, merely visualise a high-gear rush in industrial expansion, increased agricultural productivity, improved and extended means of communications, and enlightened social security programme. The formulators of these plans have fixed targets for a stepped-up economic activity, like the trebling of the national income of India in the Bombay Plan or the Rs. 450 crores scheme for road construction or the Rs. 1,000 crores scheme for agricultural development of the Government of India.

But where will all this lead to? Will increased production of steel, textiles, or agricultural machineries solve the economic problems of our country? Such expansion programmes in the industrial field will tend to develop ugly concentrations of industries near profit-yielding centres. The 'amenities', as they are called, of old established industrial centres, planted near coal mines or ports or near quarries, will exert a gravitating pull on these projected schemes of industrial expansion. Instead, of having to erect individual power plants the new industries will have the advantage of buying power in the old centres. Then there are of course the telephonic or even wireless communication system with the markets and financial hubs of the world to take advantage of. The water supply, the housing of an army of workers, easy credit facilities, ready purchasers, these are only a few of the amenities which old centres acquire. But this will lead to a heaping up of productive units, of wealth, and of population in old centres which were once remunerative. The functional utility of the factors which caused the development of such centres in the past not only lose their value with the changes in their environment brought about by their own growth, but they also create fresh problems which cry for solution.

For example, they create an enormous dis-balance, between themselves and the regions that produce the raw materials and also consume a greater part of their goods: they behave like spiders clinging to the country around with their long, wiry tentacles, sucking their life blood to nourish the center. Not only does this draining of wealth from one part of the country with a view to its concentration in another create economic disbalance within the region itself but it gives birth to class distinction, a worse malady of our present-day economic system. Such an industrial concentration will also stimulate the cancerous growth of slums and devitalise our national health and culture. As it is, the industrial worker and the miner live and die within the very site of his work, he breathes its polluted air to the last, and he can hardly escape the memories of his slavery even in his dream as his only escape lies, in eternal sleep. But apart from this humanist argument, there is the reality of waste of man-hours at work caused by lowered vitality, travelling time between the slums and the factory and such factors, working against the policy of concentration. On the other hand, the indus-

trialist can sleep peacefully with the assurance of a vast reservoir of workers which bring him advantages in the bargaining for the price of labour at any time. The concentration of industries: largescale units of production: a plethora of advertising and distributing agencies: jerry-built slum houses for the working class: haphazard sprawling of jerry-built cities: destruction of the balance between rural and industrial economy: intoxication of the human mind with the calculus of profit—all these will be embroidered on the fabric of postwar economic order, if we accept magnitude of expansion of the means of production as an end in itself. New forces, activities, institutions, instead of crystallising independently in their own appropriate forms, will creep into the structure of the existing diseased system. Can we not win this postwar civilization purged of the inhibitions of the past failures?

The planning efforts in India ignore the fundamental principles of planned economy. An unscientific, sentimental or get-rich-quick plan is sure to bring great social miseries and ultimately defeat the purpose of the plan itself. The basic principle on which the whole structure should rest is 'the optimum utilisation of the life-circumstances of the environment with reference to human needs'. The life-circumstances of the environment readily fall into two groups: the physical elements like the terrain, soils, climate, natural resources of the vegetable, mineral and the animal world; and the cultural elements which take form as a result of man's adaptation of nature. Environment, in this sense, is taken as the source of energy, which is to be seized and converted into usable forms,—to light and heat our apartments, to drive machines, to send messages over the ether, or to discover and kill microbes that cause death. Not merely should planned economy aim at the exploitation of coal as a source of power, or harness a running stream, but it should plan to develop all possible sources of energy, like that of the wind when accumulators are provided, of the sun in the sunbatteries which generate 7,000 h.p. per sunacre, of the tidal estuary, if not of the doubtful possibility of harnessing the inter-atomic energy.

In a planned economy the harnessing of these forms of energy does not take competitive forms, but complementary; secondly, it aims at increasing conversion of energy into usable forms from all possible sources, its equitable distribution, and the maximisation of its use in the service of man. In a similar way the elements of terrain are to be assimilated and utilised and not merely accepted as a fact of existence. To cite an example: the rivers of north Bihar are flowing in a north-western to south-eastern direction and with progressive alluviation of the plain, they have lowered their grade and increased their tortuosity along the course to the Ganges. The result is that their waters spread over the agricultural countryside when the rivers cannot contain all the swollen flow after the rains. Man constructed roads and railways over high embankments in an east to west direction, ignoring the realities of terrain. Consequently, the spill waters of the rain-swollen streams can not spread over the land uniformly, but are held back by the embankments of the roads and railways causing incalculable damage to the standing crops.

Planned economy, instead of fixing targets for the expansion of agricultural acreage or increased return per acre, sets out to assimilate and utilise the elements of terrain. The roads and railways, the canals and waterways are elements of the cultural landscape—their alignment should take note of the physical setting. Instead of upsetting the equilibrium of physical environment, planning efforts should aim at the optimum utilisation of its life-circumstances. On the other hand, where the natural forces are working towards destruction of the cultural environment, as in the Damodar valley of Bengal or the Kosi area in Bihar, attempts should be made to control them and secure those areas for healthy economic life. Keeping in mind this vital principle of planned economy, the working of the plan should be based on the principles of socialisation of resources and the rationalisation of production, distribution and consumption. Without a realisation of these principles, the economic system can not do justice to every man and human dignity.

From what has been said of the optimum utilisation of the life circumstances of the environment it will be obvious that it can be attained only with a plan for regional development. A region is an area with distinctive physical and, therefore, cultural unity. The physical environment forms the base for human activity and settlement. As such an uniformity in the physical elements of a territory like relief, hydrology, climate or soil enter as determinants in shaping the regional consciousness of an area. For example, it is not difficult to realise the regional differences between the Himalayan region, the Gangetic plains or the Thar desert. But at best the physical factors seem to have negative functions only when the people inhabiting the region live in the

Living costs at the end of 1944 exceeded the pre-war average by 692 per cent in Iran (November), 235 per cent in Turkey (March 1944), 183 per cent in Egypt (November), 130 per cent in India (October), 126 per cent in Chile, 103 per cent in Finland, 100 per cent in Mexico (excluding rent), 74 per cent in Portugal (September), 73 per cent in Peru, 61 per cent in Japan (November), 58 (November) and Switzerland, 43 per cent in per cent in Denmark, 53 per cent in Norway Sweden, 31 per cent in the United Kingdom and the Union of South Africa, 28 per cent in the United States, 23 per cent in Australia, 18 per cent in Canada, 12 per cent in Germany and 10 per cent in the Argentine (November).

A valuable U. S. Example

Though most of the countries are predominantly either agricultural or industrial yet the ideal is and has always been co-operation between agriculture and industry. The U.S. Department of Agriculture provides a meeting ground between industry and agriculture. Research and experimentation by scientists in its Bureau of Agriculture and Industrial Chemistry result in precise knowledge of value in both fields and penicillin, the wonder drug, is a case in point. This drug was discovered and produced in small quantities by British scientists. Large scale production, impossible at the time of the attack on Pearl Harbour, is now under way and the valuable mold once grown in milk bottles is being grown in huge tanks. Much of the credit for this goes to the researches of the U. S. Department of Agriculture and Scientists of the Northern Research Laboratory tried feeding the mold on a diet made of corn starch which resulted in an increase of 100 times the yield. Further experiments with other agricultural products gave encouraging results. Commercial chemical producers were invited and the Chemistry Bureau of the Department gave the full information for production on commercial scale. Today 15 or more Companies use the formulas and it is estimated enough penicillin to treat 250,000 serious cases per month is produced at a cheap rate.

When scientists from the Bureau of Agricultural and Industrial chemistry accomplish such significant results, officials call a conference with commercial representatives interested in quantity production. All information showing how agricultural products may be used in such chemical manufacture is made available to these firms and results are shown on both test tube and pilot plant scale. Commercial production, distribution and sale are up to the industry. Recently the scientific research of the Department of Agriculture was consolidated into an agency known as the Agricultural Research Administration. Under pressure of war needs, researches of the Administration have developed needed materials from waste products or useless farm materials. Out of farm waste has been manufactured a type of plastic which can replace metals in many ways. The reason for the success of the laboratories of the Agricultural Department (as an article in the Journal of Scientific Industrial Research points out) was the whole hearted co-operation from industry and Government Institutions. Needless to say this co-operation between the different departments in U. S. can well be emulated in this

country in the Schemes of Post War Reconstruction.

Crop Insurance in U. S. A.

The Federal Crop Insurance Programme which was in operation in the United States of America for five years between 1939 and 1944 was suspended in the latter year and reintroduced in 1945 with revisions made in the light of experience gained. Crop Insurance was sold for the first three years in respect of wheat only, written on a commodity basis. Insurance of cotton was afterwards started, closely following the wheat insurance pattern. The Federal Crop Insurance Corporation was in charge of the programme with important responsibilities assigned to the Agricultural Adjustment Agency. Under the present revised programme flax produced for seed has been added to wheat and cotton as an insurable crop and on all these three crops, farmers are insured against loss of yield, up to seventy five per cent of the average yield for the farm. One interesting innovation is the "progressive" coverage, which provides for increased protection with the progress of the growing season. The method is based primarily on the recognition that losses occurring earlier in the season are not as serious losses later in the season when additional production costs have been incurred. Another improvement on the first programme is the condition that crop insurance will be made available to any County only if at least fifty farms or one third of the farmers concerned participate in it. From 1950, if losses incurred for an insured crop exceed premiums collected, indemnities will be paid to the ryots only on a pro-rated basis. There have also been revisions in the method of computing premium rates. Whereas under the previous system, each

EFFICIENT SERVICE AND PERSONAL ATTENTION ASSURED

OVER 13 LAKHS OF CLOTH RATION UNITS THROUGH EMPLOYERS

About a month ago, it was announced that to relieve the Ward Committees of a considerable part of their burden and also to expedite distribution of cloth to labour, Government would distribute cloth through Employers during the period of the Interim scheme.

It was proposed initially to give Cloth Ration "A" (the first unit) only to labourers and their families, including children below twelve; later it was decided to allow the benefit of this scheme to the other employees and their families too.

The Employers were asked to submit their indents for the cloth required by them and, on receipt of the indents, the following quantity of cloth in the varieties indicated has been supplied to them for distribution:—

Variety.	Number of Ration Units in civil cloth.	Number of Ration Units in Standard cloth.	Total Number of cloth Ration Units.
Dhuti, Large	193743	423542	617285
Dhuti, Small	23137	62842	85979
Sari, Large	132916	178480	311396
Sari, Small	47188	2670	49858
Shirting Coloured	34175	..	34175
Drill Grey Bleached	12662	..	12662
Long Cloth	131690	..	131690
Shirting Grey	57102	2090	59192
Twill	..	5048	5048
Total	..	..	13,07,285
Extra Supplies	..	..	3,600
Grand Total	..	..	13,10,885

Percentage of Dhuties and Saris—

In Civil Cloth—63%

In Standard Cloth—97.5%

Distribution of cloth through Employers thus covers about one-third of Calcutta.

Meanwhile, the Ward Committees have distributed cloth to over 8 lakhs of people up to July 22, 1945. It is hoped that in the interval between now and the introduction of full Rationing the Ward Committees in Calcutta proper will launch a special "last lap" drive to distribute to the full the quota allotted to them every week so that as many people as possible may have their interim ration before the scheme closes down.

There are some difficulties in shifting to peacetime production immediately. While some sectors of the national economy can change over without much difficulty there are several heavy industries which have to be re-equipped and reconditioned before they can prepare for peacetime work; and this takes time. The problem of demobilisation of military personnel is there to be adjusted to reconversion requirements and, above all, reconversion has to be carefully planned with reference to the probable influence of foreign trade when fully restored. Production for civilian use or for exports can be successfully organised only if the price and cost readjustments are made in those industries shifting to civilian production. Besides, the flow of raw materials is not uniform with reference to all industries and this position has to be corrected before reconversion plans can be finalised.

The degree of reconversion would naturally vary from sector to sector and adjustment for peace does not necessarily mean going to pre-1939 conditions. Canadian productivity has increased by 33-1/3 p.c. during the war years and a new situation has arisen when preparation has also to be done for the great opportunities which may arise in postwar years. The monthly commercial letter of the Canadian Bank of Commerce presents the following figures to show the

REPORT OF THE CHAIRMAN OF THE BOARD OF DIRECTORS OF THE CALCUTTA NATIONAL BANK, LIMITED.

To THE SHAREHOLDERS,
GENTLEMEN,

I have great pleasure in presenting to you the audited Balance Sheet and the Profit and Loss Account of the Bank for the period of twelve months ending the 30th June, 1945.

The period under review has witnessed the conclusion of the war in the European theatre with the unconditional surrender of Germany to the allies. But the war in Asia is still going on, although the actual scene of warfare has receded a good deal away from the borders of India.

In spite of the favourable war situation the financial position in India continues to give cause for grave anxiety. The inflationary movement of the currency remains unchecked, and the real cost of living is still rising in spite of there being "controls" on many of the essential commodities. The cloth situation in Bengal is simply scandalous, and black marketing in cloth is rampant. What of faith in the present administrative machinery of the Government is a big contributing factor to the present deplorable situation. Complete overhauling of the administrative machine is the only solution under the circumstances. It is not true that honest and capable men in sufficient number are not available in the country at present, but it is true that the present Government is absolutely unable to attract those honest and capable men to its services. Communal considera-

tions should now be brushed aside in making recruitments to the Government offices in the larger interests of the communities themselves. There is a positive danger of the financial structure of the country being seriously weakened, because of the administrative machinery of the Government being absolutely weak and incompetent so far as it relates to the control of commodities.

In spite of the stress and strain through which we all are passing, I am glad to report that our Bank has made substantial progress. The working capital of the Bank has increased by more than two crores and eight lakhs of rupees, and it now stands at more than five crores and fifty-nine lakhs.

Capital.—During the period under review, the capital of the Bank has been increased by ten lakhs, and the present paid up capital of the Bank is rupees thirty lakhs only. The shares of the Bank are now being quoted on the Stock Exchange at near about Rs. 16 per share.

Reserves.—The total Reserves of the Bank now stand at more than eleven lakhs of rupees. The big increase is to a large extent due to the addition of substantial amount of the share premium to the Reserves.

Deposits.—The deposits of the Bank have been increased by more than one crore and seventy-seven lakhs of rupees in course of the year under review.

S. M. BHATTACHARJEE,
Chairman & Mg. Director.

RAJENDRA SINGH SINGHI, Director.
T. C. CHATTERJEE, Director.
H. C. SARCAR,
Director & General Manager.

Cash Position.—Cash position of the Bank is exceptionally strong.

From the Balance Sheet, you will find that more than 28 per cent of the deposits is held in cash, and that the total of cash, Bullion and Government securities alone represent more than 62 per cent of the total deposits.

Land and Buildings.—During the period under review, the Bank acquired additional lands and buildings at Lahore, Mymensingh, Ahmedabad and Cuttack. The Book value of the Bank's investments in lands and buildings has been shown in the Balance Sheet, and the market value of these assets is now substantially more than the book value. The return from these assets continues to be quite satisfactory.

Branches.—During the period under review new offices of the Bank were opened at Amritsar, Muzaffarpur, Sadar Bazar (Delhi), Masketi Market (Ahmedabad), Canning Street (Calcutta) and Sandhurst Road (Bombay). I am glad to report that all our new branches are working quite satisfactorily. At present our Bank has got its offices in all the important cities of India.

The number of offices of the Bank, including the Head Office, now stands at 42.

Profits.—Although your Directors are following a very conservative policy because of the prevailing circumstances, still the result of the working of this period must be considered satisfactory. The

profit and loss account shows a net profit of Rs. 3,62,732-3-2 pies, which together with the sum of Rs. 43,637-7-9 pies (carried from the last year's account) amounts to Rs. 4,06,369-10-11 pies. After setting apart the sum of Rs. 1,30,000 as provision for Taxation, a sum of Rs. 2,76,369-10-11 pies is available for appropriation. Your Directors recommend that from this total of Rs. 2,76,369-10-11 pies the sum of Rs. 50,000 be transferred to the Reserve Fund, and that dividend at the rate of 6¼ per cent (free of income-tax) be paid to the shareholders. This dividend distribution will take away the sum of Rs. 1,87,500 from the profits, leaving a balance of Rs. 38,869-10-11 pies which sum the Directors propose to carry forward.

I am glad to report that the Maharaja Srish Chandra Nandy Bahadur of Cossimbazar has recently joined the Board of Directors of the Bank. I believe he will prove to be an asset to our institution.

In conclusion, I beg to put on record my appreciation and the appreciation of the Board of Directors of the services of Mr. H. C. Sarcar, our able General Manager. Our hearty thanks are also due to the members of the staff, who have done their best to enhance the good reputation of the Bank.

S. M. BHATTACHARJEE,
Chairman of the Board of Directors.

The 28th July, 1945.

AUDITORS' REPORT

We have audited the above Balance Sheet of Calcutta National Bank Limited, as at 30th June, 1945, and the attached Profit and Loss Account of the Bank for the year ending 30th June, 1945, with books and accounts as kept in Head Office in which are incorporated the accounts of its Branches including certified returns of some Branches, and have obtained all the information and explanations we have required. In our opinion, such Balance Sheet and Profit and Loss Account have been drawn up in conformity with the law and the Balance Sheet exhibits a true and correct view of the state of affairs of the Bank according to the best of our information and explanations given to us and as shown by the books of the Bank. In our opinion, the books of account have been kept by the Bank as required by Law.

It's different when you're young, but
at 55 a man needs security,
comfort, freedom from care...

"You see, I know. This year I was 55 and retired from my job. Was I worried about it? Not at all.....I had saved enough money to make my retirement free from financial worry. How did I do it? It is quite simple. I started the saving habit when I was still young. At that time I did not earn a big salary, but every month I saved something and invested my savings in safe investments."

It is not everybody who can put away money in such amounts as Rs. 1,000 or Rs. 5,000. Too often people who find their surplus income amounting to a few rupees only consider it futile to save so small a sum. They are wrong. The simple secret of successful saving is to put away a little each month, however small it may be. You will be surprised to see these small savings grow in time to a useful sum....Systematic saving that is the tip.

PLAN TODAY FOR TOMORROW SAVE ALL YOU CAN

But remember to invest your savings where they will be safe, and waiting for you when you need them.

You can invest quite small amounts in National Savings Certificates, Government Loans Post Office Savings Bank Accounts, Insurance, Co-operative Societies and Savings Bank Accounts. Your money will be safe there and increase as time goes by. Do not risk your savings by buying commodities, manufactured goods, jewellery, land or property. Their value is likely to depreciate.
SAVE SAFELY FOR THE FUTURE.

ISSUED BY THE FINANCE DEPARTMENT, GOVERNMENT OF INDIA.

AAA 152

great changes that have come over Canadian economy since the war began:—

Net value of Production (Million dollars)		
	Average 1935-39	Average 1940-44
Agriculture	706.7	1,485.5
Forestry	246.2	421.3
Fisheries	33.8	66.2
Mining	334.2	473.8
Electricity	138.4	196.3
Construction	158.6	266.3
Manufacturing	1,121.0	2,668.8
Total	2,842.5	5,733.4

During the period 1940-44, 25.9 per cent of the agricultural production 46.6 per cent. of the manufacturing, 8 per cent. of the mining and 7.3 per cent. of forestry production was diverted to war, and to this degree reconversion would be necessary. Construction for peace has already started and when the shortage of labour and materials are over reconversion can be in full swing. Canadian agricultural products, minerals and the forest produce are bound to have a bright future and wartime experience will go a long way in cultivating foreign markets. When reconversion is complete 4-1/2 million people of Canada's working population will be employed and goods and services worth \$5 billions would be produced for the civilian market.

Postwar Plan for Egypt:

The Egyptian Ministerial Committee has finished drafting a post-war development plan covering industries, transport and agriculture and costing £E 115 million. Special emphasis is laid on improving the transport services and schemes for the improvements of the State Railways and for the electrification of the Cairo-Helwan and the Cairo-Matara lines are given high priority. Provision for a vast network of road for rural welfare and the construction of bridges and aerodromes has also been made. Schemes are also outlined for encouraging the growth of co-operative and industrial banks, for modernizing agriculture and for reclamation of land for sale to the smaller landholders. The Assuan hydro-electric project is proposed to be launched under the supervision of British engineers and the cost is estimated at £E 3 million. The Egyptian Government further propose to take over the military workshops of the Allies at a price of £E 1 million. The Five-Year plan outlined is not considered very ambitious since it is based on the resources of Egypt but the question of Sterling balances is worrying the post-war planners in that country. During the recent discussion on the sterling balances in the Chamber of Deputies it was suggested that if Britain is unable to repay the amount (£300 million) immediately she should be asked to refund part of them in the form of the Suez Canal shares. Egyptian interests require immediate assistance from Britain and though the Finance Minister chose to remain mum on the thorny problem of sterling balances he is expected to urge for the early import of machinery from Britain to speed up the reconstruction plans.

Australian Finances:

The Commonwealth of Australia Treasurer has issued a statement giving approximate results of the Consolidated Revenue Fund at the 30th of June, 1945.

Expenditure on war services totalled £480,000,000, of this amount £194,000,000 was provided from revenue, and the balance

from loans raised in Australia. Overseas war expenditure was £36,000,000 compared with £56,000,000 the previous year.

Expenditure on munitions, supplies and services for other Governments totalled £65,000,000, and recoveries £61,400,000. Reciprocal Lend-Lease, United States Forces was £89,000,000. War expenditure was £45,000,000 less than the Budget estimate. This was largely due to increase in Lend-Lease credits and recoveries in respect of expenditure in previous years being greater than anticipated when the Budget was prepared.

At £343,000,000, revenue was £18,000,000 in excess of the Budget estimate, the main increases being Income-tax £15,500,000 and Sales-tax £2,200,000.

The Pink Bollworm

One of the most serious insect pests on cotton is the pink bollworm whose original home scientists have traced to our own land. Attempts to control it in India began with investigations carried on by Mr. J. M. Haymann, Deputy Director of Agriculture, United Provinces. From 1921 to 1935, a series of investigations were conducted under the supervision of Mr. P. B. Richards, Entomologist to Government. The experiments revealed that the worm was a major pest of cotton in the U.P. and damaged crops to the extent of 20 to 100 per cent in different areas and seasons and it was estimated that the cash value of the loss due to this pest ranged from Rs. 3/4 crore to 24 crores during the years 1925 to 1935. Researches in U.P. and those carried on in Egypt and other countries had established that the worm could not stand a temperature of 140 degree, for any length of time and consequently the sun treating of cotton seeds in April and May would effectively destroy the larvae in them. The application of heat by special machines to all commercial seed after ginning was another suggestion. Extensive tests made to assess the effect of the sun-heat treatment have shown that the average increased value of cotton per acre during the period 1926-35 as a result of the treatment was Rs. 23.13. For sometime, there was a controversy as to whether the growers of cotton should be compelled to adopt treatment measures. The controversy is now in abeyance and the U. P. Government since 1943 have launched a scheme under which large selected areas are being supplied with the treated seed. The results of the experiment are awaited.

Jayabharat Insurance

Jayabharat Insurance Company is one of the new entrants into the field of insurance. With the commencement of life business in November, 1944 this company is now doing all forms of insurance business. The results of the first full year's working of the Fire Department are satisfactory, the net income being over Rs. 3.2 lakhs. As in the case of other companies fire losses were adversely affected by the Bombay explosions, Rs. 1.6 lakhs has been set apart for unexpired risks being 50 per cent. of the premiums. In the Miscellaneous department the premium income amounted to Rs. 56,690 and the net claims paid and outstanding were Rs. 28,243. After providing for a reserve of Rs. 50,000 for unexpired risks there is a profit of Rs. 6,702 which is transferred to the profit and loss account. As it was considered desirable to make full provision to the extent of the premium income in the marine department there was a loss of Rs. 13,750. One and a half months of business in the life department accounted for new business of Rs. 10.64 lakhs.

Clive Street Gossip

Control of capital issues was established in India twenty six months ago; and, if one recalls the sinister motives attributed at the time to this measure, it must now be gratefully admitted that these apprehensions have been falsified. The main criticism was that control of new capital would, in effect, mean facilities for British companies and handicaps for Indian companies. Even those who continue to criticise this feature or that of capital control will concede that, as between British and Indian interests, the working of the Control has been absolutely impartial. Sir Alan Lloyd, to whom was entrusted the organisation and guiding of the new department, has been fair, conscientious and impartial; and he has ever kept in view the purpose for which the Control had to be established. That new capital issues should not exercise any undue inflationary influence on supplies and services vital in war-time was the chief purpose Sir Jeremy Raisman sought to achieve through the initiation of control over every kind of new capital plan. Sir Alan is not concerned with the financial or economic soundness of the proposition: the criterion he applies is whether the demand for supplies and services that will be caused by the project in question can be met without disturbance of what may be described as war priorities. The application of this criterion has been detailed, intelligent and sympathetic. It may, in general terms, be said that the decisions of Sir Alan have given satisfaction; and it cannot be said that refusal in any particular case was due to cantankerousness or obstreperousness, or to a perfunctory or off-hand attitude.

While the original aim and object of control was its value as an anti-inflationary measure, the same machinery and personnel have had to take on work connected with scrutiny of applications for issue of capital in the immediate future for projects to be executed in the post-war period. This question was, in fact, first posed in the columns of "Indian Finance"; and the suggestion was made by the Examiner of Capital Issues that, in approved cases, authorise the current issue of capital if a considerable percentage of the proceeds of the share-issue is invested and kept invested in government securities. Sir Jeremy recognised the need for the inclusion of post-war projects in present capital issues, and the appositeness of "Indian Finance's" suggestion for the locking-up of a certain proportion of the capital. Sir Alan has, thus, been called upon to deal with cases in which the original criterion relevant. Nor is it any function of Sir Alan to probe too carefully into the financial and economic merits of each post-war project. Consent in the case of the matter; and all that the Examiner of Capital Issues has to do is to satisfy himself that the promoters have carried research and enquiries far enough to justify their appeal to the public for money. Post-war issues have, therefore, a far smoother passage; and it is not surprising to learn that out of the 96 long-range industrial cases on which orders were passed, in the fifteen months ended March 31, 1945, under the control of capital issues scheme, consent was given in 94 cases. The successful applications in-

volve issues of capital totalling Rs. 45.31 crores.

The Federation of Indian Chambers of Commerce is, however, unwilling to accept so simple and direct an explanation. In a representation addressed to the Government at July-end, the Committee of the Federation furnish their version of this matter:

"In considering the grant of permission to applications, it appears as if the authorities are inclined to lay unjustifiably great emphasis on the investment of subscribed capital of a Company seeking permission, in the Government securities. As a result, 'Long-range' issues get more favourable treatment than the 'immediate' issues, because the former are not likely to use the subscribed capital immediately in carrying out projects and thereby such capital can be locked up in Government investments".

In simple terms, long-range capital are, in the opinion of the Federation, another sly way of increasing subscription for Defence Loans. This interpretation is, surely, far-fetched; for a Government which has been selling Defence Loans, Victory Loan, Development Loan, etc., for Rs. 250 crores per year, a few crores secured through post-war capital issues are neither here nor there. Moreover, with Government's cash balances in the vicinity of Rs. 350 crores, it is not an urgent or imperative need to push up the sale of Defence Loans by any and every means. Even those who are easily prone to attribute motives to others must be content with the explanation that, in post-war issues, there is little or no danger of increasing pressure on supplies and services vital in war-time; and that, therefore, long-range projects have easier chances of securing the Examiner's consent.

This admitted tenderness towards long-range projects is stressed by the Federation as being in sharp contrast to the attitude of the Examiner towards capital issues designed for projects to be put into immediate execution. The allegation of the Federation is that the working of the Capital Control, has been stringent and dilatory. I am afraid that the Federation will not be able to substantiate the charge of undue stringency. On the other hand, believing as I do in the necessity for capital control not only from the point

of view of the present emergency requiring checking of inflation, but also from the point of view of saving the public from unscrupulous company promoters, I cannot help thinking that the Examiner has been far too liberal in the granting of sanction to new issues. One has merely to read the large number of announcements in the daily papers (mark you, 'this is only an announcement but not a prospectus') to realise that at least one out of every two new issues must not have been accorded sanction. Take a simple thing like general insurance companies. In the last two years, it has not been a rain but a downpour of general insurance concerns. Every managing house has been itching to have a general insurance company of its own; and the Examiner has been obliging almost every one of these applicants. If Sir Alan Lloyd had been really stringent in the matter of giving consent, at least half the general insurance companies that have made their debut in the war years should have been refused sanction. This field of insurance has long ago reached the point of over crowding.

Equally lenient has been the Examiner with regard to banks. Jaipur was the first Indian State to receive the Examiner's consent after his department was set up. This has been the signal for every major Indian State applying for consent to start a bank. Between you and me, we know that the States by themselves have not such a turnover of business as will justify the functioning of a bank with a large paid-up capital, but it is possible for banks in Indian States to come handy for the manipulation of black money. This is a trick and strategem which I need not explain in detail. I am sure Sir Archibald Rowlands is fully aware of the uses and abuses of banks in Indian States; and other bankers, too, know what is taking place. This being so, one would have thought that the Examiner of Capital Issues would be particularly careful in being a party to the multiplication of banks. As a matter of fact, the field of banking has also got overcrowded; and the correct procedure would have been to pursue a more liberal policy towards the applications of well-established institutions to increase their capital. As it is, new banks have found it more easy to enter the banking field with a capital structure which rivals that of some of the older institutions. This has worked as a serious handicap particularly to well-run and financially sound medium-sized banks.

My experience of the recent cases in which Central Government's consent has been secured for new enterprises goes to show that, while securing the consent from the Finance Department has been pretty easy, the securing of capital from the public has become increasingly difficult. The consent given by the Examiner is valid for six months in the case of projects of immediate interest and for nine months in the case of projects of long-range interest. I know of at least a dozen companies in which the consent period has lapsed as the promoters were unable to raise the capital within the stipulated period. I know of a prominent businessman who secured the consent of the Central Government for a capital issue of Rs. 1½ crores for a long-range scheme; and, despite a strong directorate, hardly a third of the sanctioned capital has been raised. I know of at least three engineering enterprises in regard to which consent has lapsed owing to the inability of the promoters to tap the capi-

tal market unsuccessfully. Another Cement scheme and paper company are in cold storage. The fact of the matter is that the new capital market in India is not in a very responsive mood at the moment. It has been unresponsive for the past six months. The public subscribed with avidity for the motor car issue sponsored by the Birlas and the other motor car issue sponsored by Mr. Walchand Hirachand. These shares were easily oversubscribed; and the initial quotation on the market showed a good premium. The premium, however, was shortlived. The shares have now sunk to a discount. Investors all over India have burnt their fingers in these two floatations. Burnt by the motors, investors in India are now shy of all new issues.

The most important matter that should engage the attention of everyone interested in India's industrial development is, therefore, the devising of such measures as will cure the market of the shyness that has followed the floatation of the two motor companies. There is plenty of money seeking investment; a good proportion of this surplus money was finding its way into new capital issues. Suddenly there has been a drying up so far as issues are concerned. All surplus money is now being diverted to stocks and shares of the older concerns. It is necessary to revive the ardour and confidence of investors in new capital issues. Until this phase of diffidence in the new capital market yields place to confidence and optimism, the Examiner of Capital Issues will do well to be less liberal than he has been hitherto with regard to the giving of the Central Government's consent.

There are other aspects of capital control, the treatment of which I have to postpone to a subsequent issue on account of pressure of space in this week's.

It is notorious that capacity for expeditious work is not one of the accomplishments or aptitudes of the Government of India. Mr. G. K. Gokhale once said that the best motto to be engraved on the portals of the Central Secretariat would be the phrase, "Too late". But Mr. Gokhale was thinking only of political reforms and referred to the consistency with which the Government, by sheer delay in announcement and introduction, could make a sound measure of reform totally unacceptable and harmful to the people. But if you think of it, Mr. Gokhale's description of the Government of India has far wider scope than he imagined. It is not alone in politics that the Government's genius for delay manifests itself. It could be as effective in the simplest of administrative tasks. If there were a commission to enquire into the record of the administration in great detail, it would be found that many of the problems that have been found to be ponderous and insoluble could be traced ultimately to the Government's habit of leisurely disposal.

Take, for instance, the whole question of the needs of the civilian population during the war period. Which of the principal features of the situation during the last few years could not have been foreseen and provided against? Did we need strenuous economic research to discover that a considerable part of India's requirements of rice were imported from Burma and that, if these imports were cut off, a grave situation would result? Or did we need extraordinary insight into human

psychology to know that the Japanese once they occupy Burma will not be so overflowing with the milk of human kindness as to drop bags of Burmese rice on Indian territory? Or that crops do not grow merely by advertisements in urban newspapers? And yet there was, for all practical purposes, a blissful ignorance of these simple obvious facts and nothing was done till we were overwhelmed by the food crisis over the whole country and the catastrophic famine in Bengal.

One would have thought that with the appearance of famine, its spread from food to other necessities of life would be clearly foreseen. To some extent, it must be said in fairness, it was. The institution of cotton cloth control can be set to the Government of India's credit. But its numerous imperfections are on the other side of the books. After all that may be said to the credit of the Government, the fact remains that the hardships of the average man have been increased by the failure of the Government to act in time.

I am thinking specially of the action in regard to the production of vegetable ghee in this country. The facts in this regard were there clear as day, for all to see. You don't need to take a doctorate in dietetics to know that fats are an important constituent of proper and nourishing food for human beings. Nor need you go about collecting statistics or carrying out mass observation to be sure that the strain on our pre-war supplies of fats, animal and vegetable, had vastly increased, while at the same time our sources of supply had suffered a serious shrinkage owing to the large scale slaughter of cattle to meet the

(FROM OUR CORRESPONDENT)

NEW DELHI, Aug. 8.

Two more Indian Trade Commissioners have recently submitted their reports on post-war trade prospects in the respective countries in which they are stationed. In the Australian Trade Commissioner's report our attention is drawn to the phenomenal increase in Indian exports and imports from Australia; at the end of five years of war our exports to Australia have recorded a sevenfold increase, due largely to the elimination of competitors brought about by the war; there has been a similar improvement in India's imports from Australia which are five times over £1,500,000 which was the value of our imports in the year 1938-39. Discussing the prospects of post-war trade the Trade Commissioner is hopeful that a share of the raw cotton market in Australia will be available to India; but he is doubtful if Indian textile exports which owing to the elimination of Japan and the inability of other supplying countries have had a good market can retain their hold in the post-war years; and he visualises a sharp decline in this line of export. There would, in his view, be a demand for miscellaneous goods and the Trade Commissioner's advice to Indian exporters is to adopt modern and up to date methods of manufacture. He is of the opinion that the comparatively lower cost of Indian goods may enable India to sell her goods in Australia and New Zealand in competition with goods manufactured elsewhere. The war-time development of industry in Australia will enable her to offer India capital goods in the following lines: processing raw wool, food processing industries, manufacture of paper, hardware, plastics, plywood and straw products, perfumery, toilet requisites, buttons, toys, bicycles, furniture, electric wires and cables, etc.

The Indian Trade Commissioner in the U.S.A. points to the very large orders on priority basis placed with American manufacturers of capital goods and the small chances of India obtaining a share. He advises spot purchases as there is a keen home demand, and a pressing export market in Russia, China and South and Central American countries. Even as regards consumer goods the Indian Trade Commissioner is of the opinion that in view of trade prospects at home and business booked with foreign countries the prospects of America entering into trade commitments with India are remote.

The prospects for Indian export trade with America, normally consist of raw materials such as burlap, jute, wool, cotton, shellac, manganese ore, etc., in all of which there would appear to be a continued market in post-war years. Indian export interests will find the report well worth perusal.

While Indian Railway services continue to deteriorate steadily, their earnings continue to break all previous records and reach new peaks. Apparently the railways are very prosperous but it is little realized that ultimately it is the tax-payer who finds most of this money. What is so much credit in the Railways' books is (practically) so much debit in the Defence Department's military expenditure which the tax-payer is called upon to provide. In the midst of apparent affluence, to which the tax-payer contributes indirectly, he has the charging of having to do his travels in intolerable conditions. The Railways would also ap-

pear to be consolidating their position so as to enjoy a monopoly of land transport in post-war times. With the assistance of the Defence of India Rules, capital issue controls, and with the operation of the controls regarding motor vehicles, petrol rationing, etc., the small road transport operator is already disappearing and is being displaced by road transport combines in league with the railways. The unassailable position which the Railways have gained insidiously in the war years does not augur well for the future and the trader seeking transport will find himself faced with a monopolistic organisation and not have competitive means open to him. Whether the change in the old order and the coming into existence of the new is in the real interests of the country is not a difficult question to answer, for it is not.

The Famine Commission's Second Report is expected to be published shortly. It is anticipated that the Report will survey food administration during the war and make recommendations regarding the policy to be pursued after the war, the population problem in the next twenty-five years and the country's food supplies, the agricultural economy of the country and suggestions for the reform of the land tenure system, agricultural prices, rural credit, the State's responsibility for providing the people not only with a certain quantity of cereals but with a diet adequate to nourish them.

HILL-BIRD.

Bombay Mutual Life Society

As one of the oldest insurance companies Bombay Mutual Life Society has naturally been able to take advantage of the improved conditions regarding insurance business. The total new business written in 1944 was considerably higher at Rs. 5 crores against Rs. 3½ crores in 1943. The average amount of policies which in the previous year was Rs. 2,213 declined to Rs. 2,059 but the average premium including single premium policies per thousand increased from 54.7 to 55.17. While the reduction in the amount of average is indicative of a tendency to revert to pre-war conditions, it also shows that the Bombay Mutual is now serving a wider public and that mortality experience will to that extent prove more favourable. The increase in the average premium per policy is due to the greater preference shown by insurers for short-term policies.

The premium income during the period, including consideration for annuities granted, amounted to Rs. 1.04 crores against Rs. 81.46 lakhs in the previous year. The renewal expense ratio showed a decline to 11.66 per cent from 12.88 percent. The claims experience continues to be satisfactory, claims by death inclusive of bonus additions amounting to Rs. 12,18,306 and by maturities to Rs. 7,61,991.

In view of the present low rates of interest the yield on investments amounting to 3.91 per cent against 4.07 should be considered very satisfactory. Total investments at book value in Government securities were Rs. 1.85 crores in approved securities, Rs. 73.56 lakhs in stock exchange securities Rs. 78.55 lakhs and in real Estate Rs. 39.82 lakhs.

As one of the two important companies affected by the proposal to reduce the remuneration to Chief Agents, the Chairman had naturally his arguments against the proposed reduction in the payments of Commission to licensed agents including Chief Agents, in the Insurance Amendment Bill. The contention that the Chief Agents function as branch offices and that additional expenses should be allowed for this purpose is admissible but in view of the general practice of doing business through branch offices by almost every big insurance company there cannot possibly be any great objection for the proposed limitation of commission payments to licensed agents including Chief Agents. The case of Bombay Mutual may perhaps be favourably considered but objections to particular suggestions can be best overcome by fixing a ceiling for overall expenses.

Calcutta National Bank

Among the new Bengalee banks that have a claim for a place in the front rank is the Calcutta National Bank. Deposits increased in 1944 by more than Rs. 1.7 crores As a result of the new issue of capital at a premium there is a substantial increase in reserves. It was possible to find profitable use for funds and at the same time keep a highly liquid position. Cash balances were 28 per cent of deposits while the total of liquid assets to deposits was as much as 62 per cent.

Out of the net profit of Rs. 3,62,732 for the year the provision for taxation is Rs. 1,30,000 and the allocation to Reserve Rs. 50,000. The dividend of 6½ per cent tax-free is to be paid.

Save your Mysore sandal soap

In these days it isn't easy to cope with the demand for this exquisite soap. Help us by using it economically. Wet your hands and make a lather with the soap; rub the lather and not the soap on your face and body; keep the soap-dish dry—your soap will last longer.

(From Our Correspondent)

BOMBAY, Aug. 7.

After good deal of canvassing for the rival points of view on the question of the new cotton ceilings and floors, The Cotton Committee of the Textile Control Board after all took a decision in the matter on Saturday after having adjourned earlier in the week. The Government were, as I have indicated before, fairly adamant that the floor prices for the next season should not be changed. The victory for the protagonists of enhanced floors has, therefore, been of a negative character. Of course even the continuance of the old floors is something to be thankful for, as otherwise the bears would have given short shrift to the bulls who have so large a stake in keeping the prices up and the contract would have been hammered down. But the Government, if it did not have its pound of flesh, had at least half of it, in that it succeeded in lowering the ceilings for some of the important staple varieties. Thus, cotton of 13/16" staple has its ceiling cut by Rs. 10, while 3/4" staple will be pegged at the maximum of Rs. 530 instead of Rs. 550, the present price. This cut is more symbolic than substantial, and therefore in itself is not anything to raise a shout about; it will tend to acquire its proper significance only in the context that may develop in the future, when perhaps, for aught one can say now, prices may soar up again on the stimulus provided by export demand. Of the latter, there is not as yet any indication. On the other hand, there are only too many signs that this country is not having a fair deal in regard to the allocation of shipping space. How else can one explain the not irresponsible reports that, sometimes, ships leave India half-loaded with cargo? Permission has been granted to the E. I. C. A. for trading in new crop, and the necessary rules are being framed. The cotton futures market was, of course, heartened by the decision taken by the Committee.

For almost a fortnight, Dr. Rm. Alagappa Chettiar, the merchant prince and philanthropist from the south and President of the Southern Indian Chamber of Commerce, has been feted, dined and winned by commercial and social circles in the city. The spotlight of publicity was focussed on him as it has been on few others before, but Dr. Chettiar has stood it well. The lakhs he has given away to the sacred cause of charity have created a bright halo around this young industrialist. Almost everyone here has been amazed at the ripeness of his judgement, the width of his vision and his keen understanding of economic problems. Seldom, they say, has such an old head rested on such young shoulders. Dr. Chettiar has now taken over the management of the Jupiter General Insurance Co. as well as the East and West. This is the second change which the Company is witnessing within a short period. But it may at once be said, that, however people may regard these quick translations, they are agreed that the two companies have everything to gain by being cared for by one so knowledgeable and with such integrity as Dr. Chettiar. The South Indian community in Bombay paid its tribute to him in no uncertain or ungenerous manner. A number of receptions were held in his honour, and in each function, Dr. Chettiar's replies to the toast were models of modesty and sagacity. For instance, when at the S. I. Association one admirer was so far

carried away by his enthusiasm as to hope that Dr. Chettiar may be enabled by Providence to donate Rs. 3,000 lakhs for charity, out came the profound observation from the distinguished guest that he hoped that, in the interests of the country, such wealth would not be concentrated in anyone's hand to be able to give away such a large sum! This touch of the egalitarian in the young plutocrat is characteristic of him, and partly explains the ineffable ease with which he is able to give munificent donations. It is such people the country would like to have at the helm of industry, finance, insurance and other spheres.

As if in irony, it is in the same week that the Cowasji Jehangir Committee has submitted its report on the seamy side of insurance management. On previous occasions, I have made references to the nature of the task with which the Committee has been charged by Government. Both the enormity of the latter-day happenings in the market of insurance shares, and the distinguished personnel of the committee which include Mr. L. S. Vaidyanathan Superintendent of Insurance, had led one to expect a frank and unshrinking expose of the whole matter. The actual recommendations of the committee are shrouded in secrecy, but from stray reports, some inkling into them has been available. The Insurance Advisory Committee may be meeting in Madras in the middle of the month to consider the report of the Cowasji Jehangir Committee. The latter came across several instances of unsound administration of life insurance companies, of the cornering of shares by banks at abnormal prices, of manipulation of

life funds and payment of large salaries to officers and similar nepotism. Appropos the interlocking of banking and insurance interests, the following example of manipulation will be read with interest. When the shares of an insurance company are subscribed for by a bank and the bank is unable to find the money to pay for the shares, the amount appears on the liabilities side of the insurance company, as capital, and on the assets side as deposits with bankers. The bank shows on its liabilities side the amount of the insurance company's share capital under

PACKING A NATION'S PRODUCTS

Manufacturers in India will prepare their goods for internal transit, display in the shops — and for export — more carefully than they did before the War. Paper wrappings, some of which will have to take coloured printing, in every substance from lightweight white printing upwards; pure pulpboards of different colours, weights and surfaces for outer containers, strong enough to stand rough handling — or flexible enough to be creased and bent into cartons and tubes... all these will be supplied by Titaghur.

The most advanced Manufacturers in India have always used Titaghur packing materials to give their goods a handsome setting and to deliver them to the consumer in perfect condition. The good printer or boxmaker is the best person to advise on the correct Titaghur product to use.

OTHER TITAGHUR PRODUCTS

Papers and Boards for writing, duplicating and printing of all kinds — for Ledgers and Account Books — for Binding-cases. Notepaper & Envelopes. Shorthand Notebooks.

TITAGHUR

THE MASTER-PRINTER'S CHOICE

ISSUED BY THE TITAGHUR PAPER MILLS CO. LTD.

deposits, while on the assets side it shows the share of the insurance company. While the company has a large sum to its credit with the bank, it is not able to pay its outstanding claims. In the valuation year of the company, some of the investments of the insurance company may be sold to the bank at fictitious prices and profits taken to show a large life fund. The valuation would thus show a surplus. After the actuarial valuation, the same securities will be purchased again by the insurance company from the bank, thereby avoiding any loss to the bank. It is thus that the real position of the bank and the insurance company is concealed from the balance-sheets and the public hoodwinked.

In its recommendations, the Committee is reported to have urged restrictions on the investments that can be made by the insurance company. Firstly, 55% of the income should be invested in Government or approved securities without being encumbered in any way, not excluding a banker's loan. Of the remaining 45%, life companies are not to invest in anything but approved securities guaranteed as to principal and interest. The choice of the venues for investment of funds is also to be suitably circumscribed by conditions whose object is to ensure that the company is solvent. Further, a life company shall not invest in banks more than 2% of its funds or 2% of share capital of the banking company, whichever is less. A life company again is not to have more than 2% of its life fund in current deposits or fixed deposits with a banking company. In any case, no deposit is to be for longer than a year. In the case of joint stock companies, investment upto 5% of the insurance funds or 10% of the share capital and debentures will be permitted. Existing investments, not complying with the foregoing conditions, are to be liquidated within one year from the commencement of the Act when it is amended. As regards cornering of shares the Committee recommends that no paid-up holding exceeding 10% of the paid up capital shall be transferred without prior sanction of the Government; and in the case of a bank holding shares on its own account, the percentage recommended is only 5. The Committee while facing up to its task in a spirit of realism, has on the whole taken a middle road attitude. Further interference by Government is a thing which is obnoxious to most companies, who do not want the present mess happening in some companies to be made a pretext for having cast-iron regulations clamped on them. On the other hand, their evidence to the committee, shareholders and policy holders have been urging the Committee to go the whole hog in control. Some of them suggested that a greater proportion of life funds should be compulsorily invested in Government securities. Whatever may be the ultimate upshot of the present enquiry, the point to be noted is that public opinion is alert and watchful and will not tolerate any more shady deals. It is upto the Government to devise suitable remedies in proper consultation with the insurance interests.

BOMBAY MARKETS

BULLION

Forward Silver firm to Rs. 138-8 on Saturday owing to heavy bear-covering and absence of sales by the Reserve Bank. Even atomic bombing caused recession only to Rs. 136-14 but today the Russian offensive against Japan caused panic, the rate declining to Rs. 134-6 despite bull support. At the time of closing the undertone is nervous with Spot Silver at Rs. 136 and Forward Rs. 134-7.

Airway Port

(From Our Correspondent).

Sind is still groping through schemes of post-war reconstruction. In spite of the fact that this province was the last to come out with its tentative projects, many of them will have to be abandoned owing to paucity of funds or other reasons. Broad outlines of Sind's post-war schemes and the probable ways and means of financing them have been announced in the form of a blue book, running to over 500 pages. There are altogether 122 schemes, touching every sphere of activity, and in the first five-year period, they are estimated to cost Rs. 35 crores capital and Rs. 11 crores recurring.

Because of the absence of hydro-electric schemes and the paucity of coal and oil, Sind is unsuited for large-scale industrial enterprises and her economic salvation will have to come mainly through agriculture. That is why high priority is given in post-war schemes for the construction of a lower Sind Barrage, which is expected to bring into cultivation two and a half million acres and provide jobs for thousands. Next in importance comes Communications and it is proposed to have 4,000 miles of road improvement and construction. Provision has also been made for electric power and light for all the key towns in Sind.

The individual schemes have been grouped together under nineteen heads which have been classified as (1) special priority, (2) all-province, and (3) particular area schemes. A Sind Provincial Development Board on the lines of the Reconstruction Committee Council has been constituted. It will have merely advisory function. The Premier is its chairman and all the Ministers are ex-officio members.

It is on the rock of finance that many of these schemes will flounder. The two major items, namely, Lower Sind Barrage and the roads, alone will cost Rs. 25 crores capital and one crore recurring. It can be estimated that the total cost of all the schemes will work up to Rs. 50 crores. This will average at Rs. 22 per head of the population. Following are the estimates of the funds available: (1) Accumulated balances with the Sind Government including post-war development fund; Rs. 8½ crores at the end of 1945-46. (2) annual surplus with the Sind Government in the next five years: not more than Rs. 4 crores, (3) grants from the Government of India and the Punjab Government. The Punjab contribution is still under dispute and hence no figure can be given. The Government of India is expected to give a capital grant of about 4 crores. Recurring grants may be given, but no figures are available. The only other remedy is the imposition of new taxation, but no more than fifty lakhs can be expected from this source. Over half the plans will have to be financed by loans which will bring further problems in the recurring cost of servicing. Sind's credit is not very high and it is problematical whether the loans will be met with adequate response. There is bound to be a slump in agricultural prices after the end of the war. And if Sind's salvation is to be linked with the development of agriculture alone, the prospect before us is not very rosy.

There is no provision made for a textile mill or a cement factory, though these schemes are sponsored by private capitalists. They are awaiting the sanction of the Central Government.

I understand that permission was refused for putting up a vegetable ghee factory in

Sind on the score that it was the policy of the Central Government not to accord permission for such enterprises in the provinces of Sind, the Punjab and the United Provinces.

Karachi Panjrapole Association has received a letter from the Dairy Expert of the Government of India, asking them to start an up-to-date Dairy in Karachi. The letter also suggests that a fodder farm should also be attached to the Dairy so that the herd gets its own fodder. It is estimated that about 400 acres would be required. The proposal is part of a "grow more food campaign" and has been made with a view to augment the milk supply of the city and improve the condition of red Sindhi cattle. The scheme is to be put into force immediately.

A strong plea has been made by the Buyers and Shippers' Chamber in a letter to the Government of India for the appointment of an Indian as the next Chairman of the Karachi Port Trust. The Chamber points out that one year's extension of service was given to the present Chairman of the Karachi Port Trust, whose term of office expires next December. The Government of India should have appointed an Indian as Chairman, when an opportunity offered itself to them to implement their declared policy of Indianising the Chairmanships of Port Trusts. The Government should, therefore, carry out their promise of appointing an Indian as Chairman, when they take up the question of making the appointment after the expiry of the tenure of the present incumbent.

The Sind Government propose to set up an improvement trust for Karachi for carrying out several schemes for the improvement and development of the city. The improvement programme for the city is an ambitious one and is expected to take fifteen years for completion. The programme includes the improvement of slums, removal of cantonment area from the municipal limits and utilisation of land so available for civil purposes, poor and working class housing, provision for drainage facilities, improvement of sea beach at Clifton and provision of adequate number of parks and recreation grounds. It is explained that such improvement trusts are working fairly satisfactorily in other cities and the magnitude of the problems to be tackled at Karachi was such that a statutory body like an improvement trust alone could effectively and expeditiously deal with them. The details of the expenditure involved have not been worked out, but it is expected that part of the expenditure will be recouped by the sale of developed lands. If the Sind Government finally decide to accept the proposal, a bill will have to be brought before the Sind Assembly for constituting the proposed Improvement Trust. Government have forwarded their proposals to the local authorities concerned for eliciting their views on the matter.

In spite of the fact that Sind is a big rice producing province there is at present a shortage of sugdasi and red rice and also bajri. The last sugdasi crop was very much below the normal, and whatever was produced was just adequate to meet the consumption demand in the producing areas themselves, with the result that it became hard to produce any surplus for import into Karachi. Besides, the quality which was obtainable was far from satisfactory and contained an unduly high admixture of an inferior variety of rice. This difficulty is still being experienced and government has, with a view to cater to that section of the public which is accustomed to consume superior rice, finally succeeded in arranging for the import of Punjab fine rice which will be sold from ration shops.

To mitigate the hardships of that section of the public which can make private arrangements for the import of sugdasi or red rice, the department of Food and Civil Supplies is freely issuing import permits on application, enabling such people to send for any grain from outside on the basis of their ration cards.

A Resume of Commodity Markets

What exactly will be the effect of the latest developments in the Far Eastern War, it is perhaps too early yet to say but that there will be a considerable change in the outlook for particular commodities need not be emphasised. It is generally agreed that the entry of Russia in the war against Japan on the side of the Allies, will hasten the end of the common enemy and that before long it would be possible to look forward to a resumption of exports to pre-war markets though not on the pre-war scale.

It cannot be said, however, that as soon as there is a complete cessation of hostilities there will be an effort to the pre-war trade pattern. For, conditions have changed vastly in the past few years and recently some important producers have shown a tendency to compete with this country by trying to take advantage of their favourable position. Recently there were reports that the United States was trying to utilise her enormous shipping resources to further American exports and that under lease-lend large quantities have been promised to continental consumers. Then there are the difficulties regarding exchange control and other factors.

But whatever the difficulties it cannot be denied that, as one of the principal producers of raw materials in the world, this country will experience a good increase in demand in the post-war period and that, with the vast schemes for stepping up production the loss of custom on account of Germany and Japan might be more than covered. There may thus be an increase in exports though there may be a change in the direction of trade.

The raw jute market, however, has not been affected favourably and the large surplus crop, expected in the current season, seems to have a restraining influence on the market. It is true that a big increase in exports is expected but with the expectations of a fall in prices for foodgrains and the need for competitive prices for the golden fibre it is feared that there is no large scope for a rise in prices. But when mills are confident of being able to market their goods at maximum prices it cannot be said that the fears of a general fall in prices for competitive fibres have prevented an improvement in values in the raw jute market. The generally quiet tone of the market should be directly attributed to the fears regarding the statistical position. Mills are reported to have taken more interest in the market and some business has been reported in Supervised Jat at Rs. 15-4 and Rs. 12-4 for Middles and Bottoms.

In the Jute manufactures market very firm conditions have been noticeable and there were eager buyers for hessians for positions well into the next year at maximum prices. In the heavy goods section also quotations are at maximum rates for ready delivery.

From the local stock figures for the month of July it would appear that there were no large exports of heavy goods in the last month and that the available shipping space was mostly used for exports of hessian. Otherwise, the increase in sacking stocks against the big decline in hessian stocks cannot be explained. The figures for July contain for the first time the details relating to other manufactures.

Hessian stocks, on civil account, showed a drop to 31,389 tons at the end of July from 41,702 tons at the end of the previous month. On military account also, there was a decline to 33,351 tons from 36,733 tons. Total stocks were 64,440 tons against 78,435 tons. Sacking stocks on military account were

higher at 13,078 tons against 10,536 tons and on civil account at 87,783 tons against 87,562 tons.

The reports that the Cotton sub-committee had recommended only a smaller reduction in floors and ceilings had an encouraging effect on the market. The feeling that in spite of the efforts of the United States to increase exports, Indian cotton would be in greater demand had also a stimulating effect. The news that Indian Cotton had been included in futures trading in the Liverpool market was another favourable factor. But quotations are not very much higher on balance and Jharilla September was only Rs. 432.

There were reports of liquidation by the Bull Syndicate earlier in the week. If bulls continue to be firm in their attitude favourable developments might perhaps result in a slight improvement in prices.

Mill consumption of Indian cotton in the month of May this year was encouraging as there was a substantial increase to 349,942 bales against 326,262 bales in the corresponding period of last year. The total consumption for the nine months of the

season was estimated at 3,120,123 bales against 3,094,025 bales. The consumption figures for June are very important as they would reflect the effect of the increase in the allotment of coal to the textile industry on production and the adoption of rationalisation methods also on mill output.

The bullion market was uninteresting for the most part of the week. Only in Thursday's session a decline in prices has been recorded. However, there has been no scramble for selling, and holders still prefer to carry over their commitments. The future of bullion prices is the subject of considerable speculation. It has been pointed out on more than one occasion that there will be an abrupt drop in prices only when closed market conditions cease to exist and when arbitrage operations are possible. Till then speculators would try to take advantage of present conditions.

The All-India Third Wheat forecast for 1944-45 estimates the area under the crop at 35,072,000 acres against 33,630,000 acres (revised) for 1943/44. The decline in acreage is thus 4 per cent. There is no proportion-

Man-hours

Given :

1 man in 1 hour produces x units

Therefore

100 men in 1 hour will produce 100x units

Similarly

100 men in 8 hours will produce 800x units

It reminds one of the old algebra problems, but in terms of day to day factory experience it does not always work out that way. In fact, energy flags as the day goes on and to keep it up is the factory manager's constant aim.

Tea is an important aid in the task. Hot tea very quickly increases concentration and stimulates increased energy. Thus, served to the worker on the job in the middle of a long shift, it has the effect of maintaining output at a high level. In a very great many factories throughout India this fact is being turned to good advantage in terms of increased output.

To those interested in this subject, much valuable advice and assistance will be gladly given by the Indian Tea Market Expansion Board, 101, Clive Street, Calcutta.

INSERTED BY THE INDIAN TEA

MARKET EXPANSION BOARD

Jute and Jute Manufactures

(From Our Correspondent)

Special to "Indian Finance"

Calcutta, August 9.

The statement issued this week by the Indian Jute Mills Association of the stocks of manufactured goods at the end of July records the lowest stock of hessian cloth and hessian bags for more than a year. In spite of a rise in the sacking stock figure since the end of June, the total stock of manufactured goods at 31st July (excluding stocks of Rove, Rope, Twine etc.) was the lowest for twelve months with the exception of February last which was, however, a short month made shorter by several days holidays so reducing mills' production and thereby contributing to the lowering of the stock figures for that month. The weight of goods in stock, both hessian and sacking, fell to 1,65,301 tons at the end of July; a decrease of 11,232 tons as compared with the total stocks at the end of June. Commercial hessians are down by 10,613 tons or 416 lakhs yards while hessian held on Government account declined by 3382 tons or 123 lakhs yards making a total reduction in hessian stock of 13,995 tons during July. This has been due to heavy shipments stocks in Mills' hands at the end of July were 64,440 tons of hessian of all descriptions as against 78,435 tons at the end of the previous month—a reduction of nearly 18%. As regards sacking goods, the increase in stocks is due mainly to the rise in goods held on Government account. Stocks thus held stand at 13,078 tons as against 10,536 tons at the end of June, an increase of 2,542 tons representing a total of 55 lakhs yards. There is a small increase of 221 tons recorded in the sacking stocks held on Commercial account which brings the total increase in stocks of sacking goods during the month of July to 2,763 tons. The total stocks of sacking goods of all descriptions at the end of July was 1,00,861 tons or 2,428 lakhs yards as against 98,098 tons or 2,355 lakhs yards at the end of June.

We give below a comparative statement of Mills stocks at the end of July 1945 and July 1944.

	31st July 1945	31st July 1944		
	Lakh Yds	Lakh Yds	Tons	Tons
Hessian Commercial A/c	1123	1139	31089	31766
Government A/c	1418	1769	33351	41078
Total	2541	2908	64440	72844
Commercial A/c Sacking	2123	2314	87783	97123
Government A/c	306	210	13078	8525
Total	2429	2524	100861	105648
Grand Total			165301 tons	178492 Tons

The stock of manufactured goods now in hand (i.e. 165301 tons) cannot be registered as large as they represent less than two months production on the basis of the average monthly production during the past season. It will be noted that in referring goods to the total stock of manufactured goods as at 31st July, we have implied that the figure taken as a basis of comparison with previous stock figures excludes stocks of Rove, Rope and Twine. This is because

the latter commodities appear in the I. J. M. A. statement of stocks of manufactures for the first time. The quantities given in the July statement for Rove, Rope and Twine are 2853 tons held on Commercial account and 1173 tons held on Government account. Thus the grand total of all manufactures held in stock is given as 1,69,327 tons.

Deliveries of coal to the Indian Jute Mills Association's Dump during the week ended Saturday 4th instant averaged 40 wagons per day. At time of writing deliveries are reported to have fallen off still further and the average this week so far is something like 14 wagons daily. At least one foster mill has had to close down again and it is expected that others will have to follow suit if more coal is not quickly forthcoming.

With regard to the Indian Jute Mills Industrial Pool, an estimate of the position of the Pool over the twelve months of working ending 30th June 1945, indicates a deficit of Rs. 79,35,203.

The Indian Jute Mills Association issued the following statement of total reported sales for the week-ended Saturday 28th July 1945:—

	This & next month Yds	Forward Yds
Hessian	71,72,363	2,63,72,720
8 oz/40" hessian		
(included in above)	8,00,0000	11,50,000
Twills	73,71,586	90,06,700
Plains	18,43,165	90,36,152

In the Pucca Bales market Cuttings were sold to mills at Rs. 42/- and Rs. 41/- for N. C. and M. C. respectively. It is a long time since Mills were able to buy Cuttings below the maximum rates but some dealers are discounting in the belief that more Cuttings will become available as it is generally expected that exports of Pucca bales will increase substantially this year. Some business was also done with mills in Dundee

Daisee 2-3, Lightnings and Firsts at minimum prices. Special Firsts and Lightnings were sold above minimum rates. The export market is almost idle except for reports of direct business in Tossa with balers. Dealers are free sellers for all descriptions at minimum rates except special marks and Cuttings the latter in some cases being quoted at one rupee below the maximum.

The Loose Jute market has been stirred to a little more activity this week with Mills taking greater interest in offerings. Although sellers are still eager to get more business on their books the tone of market is somewhat better. Whether this is only a temporary improvement in outlook remains to be seen. In any case prices remain at or near the minima. The turnover during the week has been on a larger scale than for some time. Quite good business was done

BUSINESS EFFICIENCY

Business efficiency depends to a large extent on the state of your health. You can't afford to get ill NOW. The rains are here and call for extra precautions. Ladcovine the Port wine tonic can be most effectively used to revitalize the entire system and the build up your powers of resistance against illness and strain.

in supervised Jat marks at Rs. 15-4 and Rs. 12-4 for Middles and Bottoms but business was later reported done in that description at four annas less. Old Crop supervised and Bengali Jat marks came to business at Rs. 15 and Rs. 12 for Middles and Bottoms. New crop District Tossa came to business at Rs. 15-4 and Rs. 12-4 for Middles and Bottoms and Old crop supervised Jat Bottoms alone were done at Rs. 12. European jat was sold at Rs. 15-12 and Rs. 12-12 with District jute coming to business at -/8/- less. Business has also been reported in European jat marks at Rs. 15-8 and Rs. 12-8. New Crop supervised Jat Tossa sold at Rs. 16 and Rs. 13 for Middles and Bottoms and New crop District white jute at Rs. 13-12 and Rs. 11-12 for Middles and Bottoms.

(Continued from 264)

ate decline in the yield, however. The estimated yield for 1944/45 was 10,501,000 tons against 10,325,000 tons (revised) for 1943/44.

The condition of the crop is reported to be good on the whole. It is stated that the decline in the yield is mostly to the shorter Sind crop but with the expected large imports of wheat there is need for anxiety.

(Continued from page 243)

Regarding the banking system, he said, that it had emerged through the European war equipped with far ampler resources than before and better fitted to serve the needs of trade and industry in an expanding economy.

The progress in the year ended June, 1945 is very satisfactory. The number of banks included in the Second Schedule to the Reserve Bank of India Act rose from 76 to 86. There are applications for 11 more banks which were under consideration at the end of the year. Demand and Time liabilities of Scheduled banks improved from Rs. 744.44 crores on June 29, 1944 to Rs. 868.58 crores, on June 30, 1945. The proportion of Demand liabilities to total liabilities which was as high as 75.6 per cent on June 30, 1944 declined to 72.4 per cent by the end of 1944-45. The percentage of cash on hand and with the Reserve Bank declined from 16.95 per cent to 13.33 per cent as a result of an increase in the trade demand for funds. Balances with the Reserve Bank at the end of the accounting period were also lower at Rs. 78.86 crores against Rs. 95.98 crores at the beginning of the period, the excess over the statutory minimum thus declining from Rs. 64.08 crores to Rs. 42.6 crores. Advances rose to Rs. 279.74 crores from Rs. 211.47 crores. The proportion of advances and bills discounted to deposits increased from 29.43 per cent to 33.77 per cent.

demand for meat. It is not that the Government of India were unaware of these changes in the position. In fact, they were so keenly alive to it that more than two years ago they decided that our capacity for producing vegetable ghee should be very considerably increased, if necessary, by special measures. They went further and laid down that this additional productive capacity should be distributed over the whole country according to the deficiencies of supply prevalent at the time in each area. Since artificial ghee was one of the most profitable avenues of investment, applicants for the lucrative privilege of importing machinery and setting up a factory were legion. The principles by which one applicant was to be preferred to another were not easily laid down. And the profits expected were on such a large scale that a large outlay on the acquisition of the privilege was by no means an unsound com-

mercial proposition. Be that as it may, what the country wants is an addition to the supplies of an essential article of food and what the industrialist wants is that he should not allow the grass to grow under his feet.

But it is precisely in these two respects that the Government's genius for delay showed itself at its brilliant best. In matters like this, the task of the Government is to lay down the policy and take all the necessary precautions to ensure that the underlying principles are respected and then leave the rest to the private industrialists concerned. It is for the industrialist to make his own enquiries abroad among the manufacturers of the requisite plant, get the best terms and conclude contracts providing for delivery of goods by a specified date. The Government would see to it that the action of the industrialists is in accord with their own policy. It is not permissible to buy from an enemy country, even if it should be in a position to supply the goods. It may not be permissible to buy in a country where we may not be able to find the requisite currency. And it would be wrong to allow a private industrialist to acquire the machinery on too onerous terms.

But these are not the points to which the Government have directed their attention. In fact, it is difficult to see what led them to take the steps which they have taken, unless it be they wanted to make sure that no additions to the supply of artificial ghee will be possible for another one or two years to come. As I have said already the decision to add to these supplies and to distribute the new units according to the existing deficiencies was made nearly two years ago. Grants of licenses to particular parties to import machinery were also made more than a year and a half ago. But during all these months

we are not any nearer the import of such machinery, not to speak of additions to production. The industrialists for their part have carefully gone about their work. In one case I know, arrangements were concluded for the delivery of machinery within two months of the receipt of the import license. But the Government preferred to deal with a group of British manufacturers, which comprised only two firms useful for the purpose, one of which can not meet these orders for a long time and the other can only with the co-operation of American manufacturers. The indispensability of American co-operation means that payment in dollars is inescapable. The Government of India, though they were duly apprised of these facts by the manufacturers themselves, prefer the British manufacturers. In other words, they have ensured our being on short ration for a few more years to come.

Mr. M. D. Mehta who recently returned from a trip to U. K. and U. S. A. has relinquished his position with the Hindustan Motors Ltd. (Managing Agents: Birla Bros. Ltd.) in order to develop his old firm, Motor House (Gujarat) Ltd. It will be recalled that Mr. Mehta was the pioneer in setting up as early as 1924 the first Plant in India to assemble motor cars and has been connected with Motor Industry in India for the past 27 years. Mr. Mehta negotiated the Nuffield's arrangement for Hindustan Motors Ltd. Hindustan Motors is very much in the picture; it started the depression in the market for post-war issues—it is passing through vicissitudes in executives—it is posing a problem if the uncalled capital of Rs. 5 per share is being called up.

That the position in the jute industry in so far as steam-driven units are concerned is not very satisfactory will be evident from the results of the *National Company, Limited*, for the half-year ended April, 1945. The deterioration in coal supplies was so pronounced that the mills could work only 196 hours, that is to say for less than four weeks during the entire half-year. For the remainder of the period, the company was dependent on payments due to it by the Mills Industrial Pool. As the Pool itself continued to be affected by the extreme shortage of coal, which reduced its income from the Cess and increased its liabilities of purchase of the loom hours, mills in the Andrew Yule group have taken credit for only 50 per cent of the amount due to them by the Pool for purchase of loom hours. The balance due is shown as a Contingency Asset in the balance-sheet.

In order to be able to realise this Contingency Asset the Industrial Pool should be able to utilise in full the lost loom hours. If the improvement in the coal situation in the next few months permits of an increase in the number of working hours, the steam-driven units can hope to report satisfactory results.

It appears that with the present rate of working it will not be possible for Hukumchand ordinary shares to receive any dividend though, earlier, hopes were entertained that, with the introduction of the Industrial Pool Scheme and the wiping off of arrears on preference shares, the position of ordinary shareholders would considerably improve.

As a result of the resolution adopted at the Extraordinary General Meeting held in October last year, the accounts of the

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

CALCUTTA, Aug. 10.

Till Wednesday this week quite steady conditions were noticeable on the Calcutta Stock Exchange and business passing was on a fairly large scale. The firmer tone noticeable on Friday last continued to be maintained. Coal shares, in particular, registered important rise in prices. Jute shares also were firm while in the Sugar section there was a general improvement in the quotations on the reports that minimum prices for cane might be raised and that sugar production would improve with the larger supplies of cane. On Thursday and Friday, however, there has been a setback in prices on the Soviet declaration of war against Japan and a five to ten per cent decline has been recorded in almost all the sections. The gilt-edged securities section was steady and has not been in any way affected by the general weakness of the markets. It is not clear what exactly will be the effect on prices of Russian entry into the war against Japan but it should be said that there has been no nervous selling and both investors and operators show no inclination to liquidate holdings. The developments in the next few days will clearly reveal the trend of markets.

With the continuance of easy money conditions, the gilt-edged securities section has been definitely better, 3½ per cent paper quoting Rs. 102-10 against Rs. 101-5, 3 per cent paper was steady at Rs. 95-8, with the liquidation by stags 2-3/4 per cent 1948-52 was higher at Rs. 100-5. Among terminable loans, 3 per cent Victory Loan was Rs. 100-7-6, 3 per cent 1963-65 Rs. 99-1-8 and 3 per cent 1966-68 Rs. 98-8. 3 per cent 1970-75 was better at Rs. 97-4. Among Provincial loans, 3 per cent Punjab 1958 loan was Rs. 99-12 and 4 per cent Punjab 1948 loan Rs. 104-14.

There is no feature of interest in the Bank section, the only exception being the rise in the quotation to Rs. 35 from Rs. 32-12 in Nath Bank, Imperial Bank fully paid were

Rs. 2,105 ex-dividend, Reserve Bank Rs. 136 ex-dividend and United Commercial Bank Rs. 29 premium.

Cotton shares were uninteresting throughout the week. *Cawnpore Textiles* were Rs. 12-12, *New Victoria* Rs. 17-15 and *Bowreah* Rs. 660.

Among Coal shares, there was considerable activity in Borra, Central India Coalfields, West Bengal and Bhalgora. There was a jump in Borra to Rs. 47-8 from Rs. 42-4, Central India to Rs. 13-3 from Rs. 11-8 and West Bengal to Rs. 14-2 from Rs. 11-6. Bhalgora were done upto Rs. 24-8 from Rs. 22-8 at the end of last week. There was also good buying of Bengal on reports that the balance sheet for the half-year ended April, 1945 would make satisfactory showing and that a higher dividend would be paid. The shares were done up to Rs. 780 from Rs. 767. They are now quoting Rs. 770. *Burrakur* improved by one point to Rs. 47 but have receded to Rs. 44-4. *South Karam-pura* were steady at Rs. 38-2 but are now quoting Rs. 36-14. *Equitable* were more than a point lower at Rs. 72-8 while *East Indian* have come down from the peak for the week of Rs. 47-8 to Rs. 46-2.

Jute shares were inclined to be steadier early in the week on reports that mills were making large of profits but in the last two days the quotation has come down by 5 to 10 points in the case of the bigger denomination shares. *Anglo-India* were Rs. 528, *Dalhousie* Rs. 420, *Ganges* Rs. 685, *Howrah* Rs. 95-7 against the highest quotation for the week of Rs. 97-2, *Kamknarrah* Rs. 685, *Nuddea* Rs. 139-8 against Rs. 145 and *Presidency* Rs. 14-9. On account of the shortage of scrips *Craig* were very steady at Rs. 14-6.

Among sugar shares, *Ramnugger Cane* and *Sugar* were Rs. 23-8 against Rs. 22-8, *Champaran* were two points higher at Rs. 42-4. *Cawnpore* also were Rs. 42-4. But at the time of writing *Carew* are lower at Rs. 31-4, *Balrampur* were Rs. 18-4, *Ramnugger Cane* Rs. 21-8 and *Cawnpore* Rs. 41-8.

There was a broadening of interest in the Tea section on reports that a higher export quota had been allotted to the tea industry. *East India* were Rs. 72-2, *Central Cachar* Rs. 133, *Sapoi* Rs. 27-8 and *Tukvar* Rs. 24-12.

In the Engineering section, *Indian Irons and Steel Corp.* have registered a drop of nearly 1½ points Indian Irons being Rs. 41 against Rs. 42-8 earlier in the week and *Steel Corp.* Rs. 33-8 against Rs. 34-12. *Braithwaite* were not very much lower at Rs. 14-14. *Kumardhubi Engineering* came down to Rs. 11-8 from Rs. 12-2 and *Mars* shall to Rs. 6-11 from 6-15.

Electrical issues were very steady, *Agro-Electric* being Rs. 187 *Benares Electric* Rs. 20-8 and *Cuttack Electric* Rs. 18-3.

In the miscellaneous section, *Burrakur* and *Indian Copper* were unchanged at Rs. 5-11 and Rs. 3-7 respectively while *Assam Bengal* deids. improved to Rs. B.I.C., on the other hand, were quiet at Rs. 7-7.

Among paper shares, *India Paper* quoted Rs. 242 and *Titagur Paper* Rs. *Midnapore Zemindary* were 7 points lower at Rs. 193, *Walford Transport* improved special buying to Rs. 5-15, the preferred ones were higher at Rs. 4-6, *Assam* were quiet at Rs. 6-6.

BOMBAY MUTUAL LIFE ASSURANCE SOCIETY

LARGE INCREASE IN NEW BUSINESS

CHAIRMAN ON THE ROLE OF CHIEF AGENTS

The following is the Chairman's speech delivered at the Annual General Meeting of the Bombay Mutual Life Assurance Society, Limited, held at the Registered Office of the Society, Bombay Mutual Building, Bombay, on 4th August, 1945.

GENTLEMEN,

Before proceeding to review the Report and Accounts for the year 1944, I deem it necessary to offer a few observations on some matters of vital importance to the companies carrying on the business of life insurance. A Bill to amend the Insurance Act was introduced in the Legislative Assembly in November, 1944 and was referred to a Select Committee. The Select Committee has introduced in the Bill a provision to limit the percentage of the premiums which can be absorbed in expenses by life offices and to reduce the maximum of the commission that can be paid to licensed agents.

I admit that it is essential that every office should work economically and keep itself within the margin provided for the purpose in the premium rates. The premiums that are charged by life offices are prepared on certain assumptions regarding mortality, future, the rate of interest it would be possible to earn and the expenses which it does not relate to the working of an individual year only, but are based on the experience which the office is likely to have for a fairly large number of years. The very basis of the working of a life office rests on the average of the experiences of a long-term. The basic conception in effect changes the very working of an individual year rather than on the average of the experience of a long duration. It will, therefore, be apparent that the very approach to the problem is contrary to the basic principles of life insurance. My apprehensions are that this will prove injurious to the business, and even those companies, whose methods of work are considered very economical and conservative may be faced with difficulties of a serious nature.

The proper test to ascertain whether business is being done on right lines is the actual valuation. The Act provides sufficient safeguards for protecting the interests of the policyholders. No case has been made out for making any change. If the Government unfortunately thinks otherwise the proper course would be to further tighten up the control by the Superintendent of Insurance regarding valuations rather than adopt the proposed arbitrary and unscientific method.

The Act at present prescribes that no company shall pay or contract to pay and that no licensed agent shall accept or contract to accept more than 40 per cent of the first year's premium and 5 per cent of the renewal premium as commission. The amendment aims to reduce percentages to 25 per cent and 2½ per cent respectively. Incomes of licensed agents are generally meagre and their work very difficult and irksome. This has to a very large extent kept qualified and well placed young men away from the profession of insurance salesmanship. The reduction in the maximum of the commission will further encroach upon the agents' income and will necessarily retard the recent tendency towards the insurance field being enriched by the entry of educated and qualified young men. I and my colleagues are, therefore, of the opinion that the maximum of the agency commission should not be reduced. Further, it is well known that the present limitation has to a very large extent been nullified by a large number of companies by appointing dummy employers of agents under diverse designations. It has only handicapped honest, hard-working and good producers, who notwithstanding the cut in their rate of commission continue to work as ordinary agents and

do not take up organiserships. For healthy competition and honest method of work, it is essential that even the present control over the agency commission should be removed.

Recently a move has been made for limiting the Chief Agents' remunerations. So far as I know, excepting our Society and another office, no insurance company is working wholly on Chief Agency basis. Other companies are working mainly through branches, although some of them have a chief agent here and there. I have been associated with the Society as a Director for about 20 years; I have closely watched the working of our chief agencies and our experience is that the system is efficient and effective. Our expense ratio compares very favourably with that of other companies. Any imposition of limitation of the chief agency remuneration is uncalled for and will be prejudicial to the best interests of the business.

Chief Agents carry on their work exactly in the same way as branch office. The distinction is only in the form of the payment of remuneration. In the case of Chief Agents, they are paid certain commission, out of which they have to pay to their agents, to their organisers, to their staff and incur other consequential expenses. In the case of branch offices, all the expenses are directly borne by the company itself. To limit chief agency commission without imposing similar control on the branch expenses and the expenses which the Head Office incur for and on behalf of the branches is discriminatory. If unfortunately the Government, for reasons not known to us, considers limiting chief agency commission necessary, it must also place a similar control on the expenses of branch offices and the expenses incurred by Head Offices for and on behalf of their branches.

Coming to the working of the Society in the year 1944, I have great pleasure in commending for adoption the Report of the Directors, Accounts and Balance Sheet of the Society.

NEW BUSINESS

The new business of the Society in the year 1944 was Rs. 5 crores as against Rs. 3¼ crores in the preceding year. The credit for this remarkable increase goes mainly to the Chief Agents of the Society and other field workers. I am sure you will agree with me that they deserve our thanks and hearty congratulations. The average amount of a policy which in the previous year was Rs. 2,213 has reduced to Rs. 2,059, but the average premium excluding single premium policies per 1,000 has increased from 54.70 to 55.17. Reduction in the amount of average policy is indicative of a tendency of reversion to pre-war conditions, but the average premium points to short-term policies being still popular.

INCOME AND EXPENSE

The premium income during the year including consideration for annuities granted amounted to Rs. 1,04,13,928-12-1 as against Rs. 81,45,836-8-9 in the previous year and the total expenses amounted to Rs. 30,70,358-10-5 as against Rs. 22,33,994-3-5 in the previous year. The renewal expense ratio as calculated according to Rule 25(6) of the Insurance Rules 1939 is 11.66 as against 12.88 in the previous year. The increase in premium income and reduction in expense ratio is remarkable. Considering all-round high prices of stationery and higher rates of postage and expenses under several other heads, reduction in expense ratio must deserve your approbation.

CLAIMS

Our claim experience is very satisfactory. The claims by death inclusive of bonus additions amounted to Rs. 12,98,306-6-10. Those by maturity amounted to Rs. 7,61,991-11-0 and permanent disability benefit to Rs. 3,214. An amount of Rs. 14,659 was paid by way of

annuities. Of the outstanding claims shown in the Balance Sheet Rs. 5,50,889-12-0 has since been paid and Rs. 2,84,236-5-0 has been passed for payment and is awaiting proof of title.

INVESTMENTS

The total investments at their Book Values in Government securities are Rs. 1,85,31,509-1-9, in approved securities Rs. 73,55,802-3-8, in other Stock Exchange securities Rs. 78,55,266-6-1, and in real estate Rs. 39,82,482-15-11.

The interest yield on the Life Fund for the year, calculated according to Regulation 3(1) of Schedule IV, Schedule to the Insurance Act, comes to 3.901 as against 4.07 for the previous year. To realise 3.9 per cent on our Life Fund when the rate of yield from securities and shares is going down is worthy of note.

GENERAL

To the Manager and the staff at the Head Office, the Directors have paid as bonus amount equal to two months' salary to those employees, who have served for 12 months and one month's salary to those employees who have served for six months and were in the service of the Society on 31st December, 1944 and also on 20th June, 1945. This bonus has absorbed a sum of Rs. 33,519-0-0. This amount has been included in the expenses in the accounts for 1944 as it legitimately pertained to that year. This has contributed towards our expense ratio for the year 1944 to the extent of 0.44 per cent.

I take this opportunity to convey our deep recognition and sincere thanks to all our chief agents, and, other field workers for the remarkable work done by them and record our appreciation of the services rendered by the Manager, Officers and Staff of the Society.

Gentlemen, now I beg to move that the Directors' Report and Audited Revenue Account and Balance Sheet for the year ended 31st December, 1944, be approved and adopted.

"GOVERNMENT OF INDIA DEPARTMENT OF SUPPLY"

AUCTION SALE

(Annual General Meeting held on 6-8-1945).

Audited accounts for the year ended 30th June, 1945.

After payment of expenses of administration and provision for sundry liabilities and contingencies, the net profit amounts to Rs. 14,94,05,069-11-1; of this amount the sum of Rs. 17,50,000 will be utilised for payment to shareholders of a dividend at the rate of 3½ per cent per annum, being the cumulative rate fixed by the Central Government in accordance with Section 47 of the Reserve Bank of India Act, 1934. Under the Reserve Bank of India (Limitation of Dividend) Ordinance of 1943 (which continues to be in force, the rate at which dividend on the share capital of the Reserve Bank may be paid by the Bank to shareholders is limited to a maximum of 4 per cent. The additional dividend payable is therefore limited to ½ per cent per annum, equivalent to Rs. 2,50,000 leaving a surplus of Rs. 14,69,26,893-11-1 for payment to the Central Government in accordance with the said section as modified by the Ordinance.

The net profit is higher than in the previous year by Rs. 4.63 crores owing to a further increase in the interest-bearing assets of the Bank.

Governor.—Sir Chintaman Deshmukh.

Authorised, Issued and Subscribed Capital—Rs. 5,00,00,000 in 50,00,000 shares of Rs. 100, fully paid up.

(Half-yearly General Meeting held on 1-8-45)

Audited accounts for the half-year ended 31st March, 1945.

The balance available for appropriation after the inclusion of the amount brought forward from the previous half-year is Rs. 2,68,802-15-0; and after deducting the Compulsory E. P. T. Deposit to be set aside to Buildings and Machinery Replacement Fund Rs. 1,25,000, there remains Rs. 1,43,803 out of which the directors recommend the payment of a Dividend at the rate of 20 per cent per annum, together with a Bonus by way of Dividend at the rate of 2½ per cent per annum, both free of income-tax, absorbing Rs. 1,31,187-8-0; leaving to be carried forward Rs. 11,615-7-0.

Output and despatches of Steam and other grades of Coal for the last three half-years are as follows:—

Half-year ended.	Raisings.	Despatches.
	Tons.	Tons.
31st March, 1945	3,08,086	3,05,751
30th September, 1944	3,12,351	3,13,616
31st March, 1944	2,68,664	2,67,822

Output during the half-year under review showed an appreciable improvement over the figures for the corresponding period of last year.

Mg. Agents.—Messrs. Shaw Wallace & Co.

*After taking into credit Rs. 1,00,000 being estimated tax refund recoverable.
†After crediting Rs. 75,000 from Dividend Equalisation Reserves.

Audited accounts for the half-year ended 30th April, 1945.

After making sundry adjustments the results for the half-year show a profit of Rs. 86,941-10-1. After bringing forward the balance from the last account and providing for Managing Agents' commission and Insurance Fund and paying forfeited dividends, there is a balance at the credit of Profit and Loss Account of Rs. 2,69,983-4-4 from which the Directors recommend payment as follows:—

Dividends on Preference Shares at Rs. 3-8 per share Rs. 17,500; and on Ordinary Shares at As. 8 per share, Rs. 1,75,000; thus absorbing Rs. 1,92,500 and leaving Rs. 77,483-4-4 to be carried forward.

During the half-year the deterioration in coal supplies has continued and the mill was able to work only 196 hours, that is to say, for less than four weeks, during the entire half-year.

For the remainder of the half-year the Company has been dependent on payments due to it by the mills Industrial Pool.

Unfortunately the Pool itself has also continued to be affected by the extreme shortage of coal, which has reduced its income from the cess and increased its liabilities for purchase of locom hours. In view of the Pool's consequent financial position the Directors have brought into account for the current half-year only 50 per cent of the amount due to the Company by the Pool for purchase of locom hours. The balance due is shown as a contingent asset in the Balance Sheet. Amounts due by the Pool in respect of wages and loss incurred on subsidised food-stuffs during the period the mill was shut have, however, been included in the accounts in full.

Such locom hours as are paid for in full, either now or later, by the Industrial Pool will be cancelled under the Working Time Agreement. But apart from hours due to be purchased by the Pool the Company is still entitled to make up a total of 722 hours.

Mg. Agents.—Messrs. Andrew Yule & Co., Ltd.

Authorised, Issued and Subscribed Capital—Rs. 40,00,000 in Ordinary shares of Rs. 10 each and 5,000, 7 per cent Cum. Pref. shares of Rs. 100 each, both fully paid up.

(Annual General Meeting on 11-8-1945).

Audited accounts for the year ended 31st March, 1945.

After providing for all charges and transferring Rs. 20,000 to General Reserve the amount at the credit of Profit and Loss Account is Rs. 94,482-6-3 including Rs. 14,621-12-4 brought forward from previous year which the Directors recommend to be disposed of as under:—

Payment of a Dividend at the rate of 10 per cent per annum without deduction of income-tax Rs. 80,000; Carrying forward to next year Rs. 14,482-6-3; Total Rs. 94,482-6-3.

Mayurbhanj Forest.—Forest working for the past twelve months under review has been on a restricted scale owing to diversion of labour from the working area and also due to restriction imposed by the adjacent States in the matter of recruiting. The output has consequently been lower than was expected.

Extraction of stock of sleepers was, however, considerably accelerated due to the assistance of Military Convoy placed at the disposal by the authorities, which enabled the Company to fulfil its contract for Broad Gauge sleepers before the due date.

As was reported in the last accounts the forest lease is due to expire in February, 1948, extraction work will, however, be continued beyond that date as provided by the terms of the lease.

Mg. Agents.—Messrs. Martin & Co.

INDIA PAPER PULP COMPANY LIMITED

Audited accounts for the half-year ended 31st March, 1945.

After providing Rs. 2,70,000 for Taxation, Rs. 91,021 for Depreciation and transferring Rs. 75,000 to Reserve for Repairs, there is a balance of Rs. 2,48,743-13-0 at the credit of Profit and Loss Account from which the Directors recommend payment of a dividend of Rs. 6 per share absorbing Rs. 1,80,000 and leaving a balance of Rs. 68,743-13-0 to be carried forward.

An adjustment of the Company's standard Profits Tax previously paid and this has reduced the amount required to be provided for Taxation this half-year. The Directors Rs. 75,000 to Reserve for Repairs, on which substantial expenditure will be necessary after the war.

The total production of paper for the half-year reached a record level, but nevertheless manufacturing costs again continued to rise throughout the period.

In the Directors Report for last half-year reference was made to the Company's overdraft which was then Rs. 12,29,641-2-4. The majority of the old bills on Government have now been liquidated, with the result that at the close of the present half-year the Company had credit balances with both the Managing Agents and the Imperial Bank of India.

ROOPACHERRA TEA COMPANY, LIMITED

Audited accounts for the year ended 31st December, 1944.

They show an amount at credit, after making provision for Taxation, appropriations to Reserves and after charging certain Capital Expenditure, etc., of Rs. 52,792-11-7; Add—Balance brought forward from last account, Rs. 2,269-6-6; making a total of Rs. 55,062-2-1; which it is recommended should be disposed of as follows:—

In payment of a dividend of 20 per cent per annum (free of income-tax), absorbing Rs. 52,000; leaving a balance at credit of Rs. 3,062-2-1, to be carried forward to next account.

The following figures are of interest:—

Crop Manufactured:
Black Tea—23,760 lbs. (297 maunds).
Green Tea—3,16,303 lbs. (3,954 maunds).
Total—3,40,063 lbs. (4,251 maunds).

Export Quota.—Allotted 2,23,741 lbs.; purchased 56,550 lbs.; carried forward to 1945 8,962 lbs.

Green tea was again supplied under contract to the British Government, the contract price being Rs. 1-5-9 per lb. but this was later increased by ½d. per lb. for deliveries in respect of the second 50 per cent of the contract; the balance production of Green tea was sold on the Calcutta market for an average price of As. 14-10 per lb. A

THE JAYABHARAT INSURANCE COMPANY

Mr. Navinchandra Mafatlal on the Company's Magnificent Progress

The second annual general meeting of the Company was held at its head office at Apollo Street, Bombay on Thursday, the 19th July. Speaking on the occasion, the Chairman, Mr. Navinchandra Mafatlal said:—

"It is indeed very unfortunate that the Chairman has to refer to the sad death of one of the Directors of the Company at two successive Annual General Meetings of our Company. Last year Sheth Haridas Madhavdas who presided at the meeting had to refer to the sad death of my revered father Sheth Mafatlal the first chairman of the Company, and to-day it has fallen to my lot to mourn the loss of your Director and my beloved brother Bhagubhai who was snatched away from us all, in the very prime of youth, by the cruel hand of destiny. Gentlemen, you are all aware that the late Mr. Bhagubhai was one of the enthusiastic Directors of the Company and took great pains to see that the Company is placed on a sound footing. It is indeed very sad, that he is not with us to-day to see the magnificent progress that the Company has made during its first full financial year.

He next referred to the working of the Company and said:

"During the year under report the Fire Department has written a net premium, income of over Rs. 3,21,463. The net claims paid and outstanding amounted to about Rs. 77,866 out of which the claims in respect of the tragic explosions on the 14th April amounted to about Rs. 40,304. As a Reserve for unexpired Risks a sum of Rs. 1,60,731-10-8 being 50 per cent of the net premium income for the year has been set apart. The Revenue Account shows a profit of Rs. 1,94,738-12-3 which has been transferred to the Profit and Loss Account.

"Thus the results of our Fire Insurance for the first full financial year of the Company have been quite gratifying although the profits during the year have been affected to a certain extent by claims arising out of the Bombay Explosions. Gentlemen, I do not wish to go into the often debated question as to on whom the ultimate liability in respect of these explosions rests. Suffice it to say that the Insurance Companies in the interest of the Policy holders readily agreed to share with Government 12½ per cent of the losses when called upon to do so.

"The net premium income of the Miscellaneous Insurance Department during the year amounted to over Rs. 53,890. The net claims paid and outstanding were Rs. 28,242-9-4. After providing a Reserve for Unexpired Risks of 50 per cent of the net premium income for the year the Revenue Account shows a profit of Rs. 6,702-8-5. This has been transferred to the Profit and Loss Account.

"Our Marine Department started writing business in February 1944. The Net Premium Income amounted to Rs. 45,011-2-8 and the claims paid and outstanding amounted to Rs. 4,20,215-6. As a matter of sound policy your Directors have kept aside a Reserve for Unexpired Risks of Rs. 45,011-2-8 being 100 per cent of the net premium income for the year. Naturally therefore the Revenue Account shows a loss of about Rs. 13,750.

"Your Company with its policy of gradually extending its activities started transacting the Life class of Insurance business in the middle of November 1944. You must have noticed that the Company now transacts all classes of Insurance business.

PROGRESS IN LIFE DEPARTMENT

"During the short period of only a month and a half the Life Department of the Company received 77 Proposals for assurance amounting to Rs. 13,03,500. Out of these 48 Proposals resulted in Policies for an aggregate amount of Rs. 10,34,000 of which Rs. 7,82,000 were reassured. The actual premiums received after deducting the re-

assurance premiums amounted to about Rs. 15,177. Taking into consideration the very short period of only a month and a half the results are quite encouraging.

"From the Directors' Report for the last year you must have noticed that the Balance carried forward to the Profit and Loss Appropriation Account from the Profit & Loss Account amounts to Rs. 2,02,391-2-0 and that the Profit and Loss Appropriation Account shows a net balance of Rs. 2,07,264-8-11. "Your Directors propose to appropriate this amount as follows:—

Rs. 1,00,000 as General Reserve.

Rs. 75,000 as Taxation Reserve, and the balance to be carried forward to the next Account.

"Gentlemen, I am sure it is a matter of great satisfaction to you all, to know that the progress made by the Company during such a short period is quite satisfactory, and I hope that your Directors will be able to report on still better progress from year to year.

"In conclusion, Gentlemen, I have a very pleasant duty to perform and that is to express our thanks to Mr. Laxmidas P. Goculdas for his devoted services to the Company as the Director in charge of Management and also to our Chief Agents, Field Workers, well-wishers, and all members of the staff for their unstinted co-operation and able discharge of their duties.

The Chairman next moved the adoption of the Report and accounts, which were then passed by the meeting.

"Mr. Laxmidas P. Goculdas, Mr. Chimanlal B. Parikh and Mr. Arvind N. Mafatlal, were re-elected Directors of the Company.

"M/s. Dalal and Shah and M/s. Sharp and Tannan were re-appointed Auditors of the Company.

"With a hearty vote of thanks to the Chair, the proceedings terminated."

HUKUMCHAND JUTE MILLS, LTD.

JUPITER GENERAL INSURANCE COMPANY

THE JUPITER, 'A SACRED TRUST—DR. ALAGAPPA CHETTIAR'S PLEDGE

"We, as Indians and as members of the business community owe a duty to ourselves and to the community to show that we can make money and make profits not at the expense of others, but by adding to the common prosperity of the country", observed Dr. Rm. Alagappa Chettiar, M.A., Ph.D., LL.D., D.Litt., Bar-at-Law, the well-known industrialist and philanthropist of South India, on the occasion of meeting members, staff, agents and field-workers of the Jupiter General Insurance Company, the management of which he has taken over as its new Chairman. Mr. J. C. Thakkar, the outgoing Chairman, presided.

Mr. E. S. Joel, the General Manager of the Company, welcoming Dr. Chettiar, observed that it was a happy augury for the Company, which is the second largest composite insurance office in India, that so eminent a captain of industry as Dr. Chettiar would be at its helm. He added that Dr. Chettiar enjoyed a wide reputation as an authority on economics and finance, and his endowments in the cause of education and his gifts to charity were so vast that those alone would give an insight into his excellent qualities. He also paid a tribute to Mr. Thakkar for the keen interest he had taken in the development of the company.

AN INTELLECTUAL

Mr. Thakkar, introducing Dr. Chettiar, said that he was a man of high intelligent, who had made numerous donations and as a man who was well respected all over the country. He said that during his tenure of office he had kept the name of the company as high as possible.

SACRED TRUST

Dr. Chettiar, who was cheered as he rose to speak, expressed his feelings of joy and gratitude at their most cordial and warm welcome. He said that the Jupiter General Insurance Company, was one of the finest and greatest insurance companies in India. The sacred trust, as I call it, which is being handed over to me, will be worked to the best of my lights to serve the interests of the great and large number of shareholders and policyholders of the company and the country as a whole.

"The savings of every nation are the collective savings of individuals, and it is the duty of the State and the community to see that these great collections which are made up at terrible sacrifices, of parents, people and guardians, should be carefully husbanded, and kept for the future generations, which are the beneficiaries of this trust. I am sure that in the task that I am undertaking, I can count upon the loyal and hearty co-operation of the members of the staff as well as of the large body of field workers of the company."

EAST INDIA RAILWAY

Annual Contract Item Costing Over Rs. 8,000. Class 1 Contract.

Sealed tenders are invited for the following and will be received in the General Manager's Office, East India Railway, 105, Clive Street, Calcutta, upto 12 noon on 3rd September, 1945.

Tender No. SP/E/Est/6/Gb8/Pt.II for the supply of 330 Nos. Almirah Steel Large 72" high by 36" wide by 18" deep (inside) with 6 shelves including bottom.

Tender forms with full particulars can be had from the office of the Controller of Stores, East India Railway, Calcutta on payment of Rs. 2 per copy to the Treasurer East India Railway, Calcutta and on production of his receipt when applying for the same.

Firms outside Calcutta, may, however, remit the amount to the Controller of Stores direct by money order. No refund is permissible after payment.

Sealed tenders delivered by hand should be presented for registration in the General Manager's Office and then put into the tender box outside the Deputy General Manager's (Works) room by the tenderer or his representative.

PLEA FOR FORESIGHT

"The world is a shrunken world, as the late Mr. Wendell Willkie, said is 'One World'; and a rumour in one corner of the world, or the policy of a particular cabinet being changed, affects the fortunes of the poor investor. It is therefore the greater reason why people who are at the helm of affairs of a company, should always make provision against the possibility of misfortunes which might confront the companies for no fault of their own."

A PLEDGE

"I am indeed thankful to you for the legacy that has been left to me in the shape of this most prosperous company, and I am grateful to the founder of this company, the late Mr. Laljee Naranjee of revered memory. It has been referred to by one of the speakers that the unfulfilled ambitions of this great man might be realised during my lifetime. I sincerely hope that it may be given to me, through the medium of this company, to carry out the ambitions of that venerable soul."

"I can assure you that it will be my constant endeavour to see that I give my greatest attention to the task that has been entrusted to me and to see that I will do nothing whatever to injure the feelings of anyone or hurt the interests of anybody. It is with much trembling in any heart that I approach this task, and I hope that before long we shall meet and say to ourselves: There is a task well done."

KANKNARRAH COMPANY, LIMITED

GOVERNMENT OF INDIA DEPARTMENT OF SUPPLY

TENDER NOTICE.

Tender No. CDD/BTR/2/384 due on 28.8.45

The Controller of Supplies (Disposals), 2, Fairlie Place, Calcutta, invites offers for the purchase and removal of approximately 400 tons of unserviceable Dry Cell Batteries that may become available at the Army Salvage Depot, Sibpur, Howrah from July to December, 1945.

Offers in tender forms obtainable from the office of the Controller of Supplies (Disposals), 2, Fairlie Place, Calcutta in sealed covers superscribed with tender No. CDD/BTR/2/384 should be accompanied by a deposit at call receipt for Rs. 3,000/- deposited as earnest money in Imperial Bank, Reserve Bank or Government Treasury in favour of the Controller of Supplies (Disposals), Calcutta should reach the Controller of Supplies (Disposals), 2, Fairlie Place, Calcutta by 4 p.m. on 28-8-45. Offers should remain open for acceptance for 20 days. Cheque in no case will be accepted against earnest money.

Goods will be sold without guarantee to their condition and subject to the conditions of Contract given in the Tender Form. Goods can be inspected at site on any working day during office hours on presentation of the Tender form to the Stockholder.

The successful tenderers must give a written guarantee that the Batteries sold to them will be broken and cannot be resold by them as batteries.

Lunatic System:

May I refer to the letter of Mr. G. R. Jog on the subject 'lunatic system' appearing in your issue of July 28, 1945? He says that the 'difficulties of modern capitalism are entirely man-made'. Few will deny this. In fact that has been one of my arguments. Having said this Mr. Jog goes off at a tangent and attacks in an unwarranted way the capitalist system in the words 'That the Capitalist Governments cannot or will not do this (control the production of goods) is self-evident to any one who understands the class-nature of states and their official representatives, the Governments. Mr. Vaswani, perhaps has forgotten the Bengal Famine. What is the connexion between 'controlling the production and distribution of goods and the class-nature of states and their official representatives,' I fail to see. I am not very well-read in the socialist lore. All I pleaded was that the Capitalist system should be used for the benefit of man. In war-time England it was done. In war-time U.S.A. it was done.

I must assure Mr. Jog that I have not forgotten the Bengal Famine. The causes for the Bengal Famine are many and the Capitalist system which is prevalent throughout India, should have brought famine to Bengal alone is something strange.

Disciples of Marx look at everything with his spectacles. Yes, I have read Marx's 'Capital'. And I would ask Mr. Jog to read Hearnshaw's 'A Survey of Socialism'.

Mr. Jog has given the classical example of the wonderful achievements of the Soviet Union. Granting there are some achievements in the Soviet State, one cannot agree that there is scope for individual initiative. Time should not make us forget the cost at which the Soviet system was made a fait accompli. If individual initiative could be had in a system at such a cost, many would not like to have it. I still think that the capitalist system is not lunatic but lunatics make wrong use of it. Because there are thieves in society do not ask for the abolition of society.

V. K. VASWANI.

Thief of Health:

We have read your editorial comments entitled 'More British than the British' (pertaining to the import of machinery for the production of Vegetable Ghee), in the issue of 'Indian Finance' dated the 7th July, 1945. We agree with you that in order to expand the Vegetable Ghee Industry in the country it is necessary that the authorities in India should make the necessary plants available as soon as possible. You refer to the cases of certain concerns which are not able to get the required machinery in time as British manufacturers will not be able to attend to the orders for a considerable period, and suggest that facilities to import the machinery from America should be granted.

Instead of importing the machinery from Western countries, it is desirable that the Indian industrialists should encourage the manufacturers of such plants in India. The vegetable Ghee plants manufactured by Indian Engineering concerns have been installed and are already in operation. There are concerns in India who are manufacturing Vegetable Ghee Plants

The Calcutta Tramways Co., Ltd.:

These days rumours are current that the Calcutta Tramways Co. Ltd., will be taken over by the Calcutta Municipal Corporation or by the Government of Bengal and in any event the ordinary shareholders will be getting the break up value, according to some, about Rs. 71; according to others even Rs. 91.

A prominent firm of European Brokers of Calcutta informs us that this is mere guess work and the break-up value will depend mostly on the price to be paid by The Calcutta Passenger Transport Board. Rumours about higher break-up value are being floated about by the dealers to encourage speculation in the shares.

Is it likely that the Calcutta Municipal Corporation or the Government of Bengal will be acquiring the concern? If so, what will be the break value? If you will kindly throw some light on the matter it will be a boon to the investing public as well as to those holding the shares in anticipation of higher break-up value.

(THIS IS ONLY AN ANNOUNCEMENT AND NOT A PROSPECTUS).

Consent of the Central Government has been obtained to this issue of Capital, subject to the condition, that so much of the Capital as cannot in the Government's judgment be properly expended until some uncertain future date is invested and kept invested in prescribed securities which will not be released until the Central Government (in consultation with the Crown Representative if any Indian state interests are involved) is satisfied that the time has come to make corresponding payments for purposes which are consistent with the enforcement of any measures of control or restriction that may be in operation at the time when such release is applied for. It must be distinctly understood that in giving this consent the Government of India do not take any responsibility for the financial soundness of any scheme or for the correctness of any of the statement made or opinions expressed with regard to them.

A copy of the Prospectus has been duly filed with the Registrar of Joint Stock Companies, Bengal, as required under Section 92(2) of Act VII of 1913.

The Subscription list will remain open upto 6th September, 1945. But it may be closed as soon as the issue in full is subscribed or earlier if the Directors so desire.

THE PEOPLE'S COTTON MILLS, LIMITED

(Incorporated under the Indian Companies Act, 1913.)

ISSUED SHARE CAPITAL - Rs. 25,00,000

Divided into 60,000 Ordinary Shares of Rs. 25 each and 10,000—6% Tax Free Cumulative Participating Preference Shares of Rs. 100 each.

PRESENT ISSUE:

Of these shares of the face value of Rs. 5,04,000/- consisting of 12,160 ordinary shares of Rs. 25/- each and 2,000 Preference Shares of Rs. 100/- each have been subscribed by the Directors. MANAGING AGENTS:

Messrs. SEN FRIENDS LTD.,
28, Dalhousie Square, Calcutta.

OBJECTS.

The Company has been formed generally for purposes set out in the Memorandum of Association and particularly for the purpose of carrying on the business and manufacture of Cotton goods of all varieties by the various processes of spinning, weaving, dyeing, bleaching, mercerising, printing, etc. It is needless to emphasize that Bengal is most favourably placed in respect of the Cotton Textile Industry. The existing Mills of Bengal can cater to the needs of the province up to 22 per cent and if the adjoining provinces of Assam, Bihar and Orissa, where there are very few Cotton Mills, are taken into account the combined production of Bengal and other provinces cannot meet more than 10 per cent of their demand regarding cotton goods. At present when the average cloth consumption is 12 yards per head, Bengal is too deficient in her local production and when the minimum requirements of clothing are to be increased to 30 yards per person as envisaged by the National Planning Com-

mittee and the Bombay Plan, Bengal will be placed in a very hopeless position of deficit. It is clear from the above analysis that there is a big scope for the development of Textile Industry in the province. Apart from the shortage of cotton textiles in the local market other favourable factors for the extension of the cotton textile industry in this province are its humid temperature, proximity to the coal producing area and the cotton market and availability of the technical staff in very good numbers. The Company have completed negotiation for purchase of a plot of land measuring about 80 bighas with Railway Sidings and motorable road connections in an area within 12 miles from Calcutta—an area in which half a dozen Cotton Mills are situated. At present every effort is also being made by the Company to import the machinery of most up-to-date varieties as early as possible. It is their intention to equip the mill initially with 500 looms, 20,000 spindles and other machinery required for calendering, dyeing, bleaching, mercerising, finishing and printing. The Company hope to complete the constructions of buildings and erection of machinery within a short-time in view of the cessation of hostilities and to bring the mill in a production stage. As such it can confidently be expected that the Company will be able to start paying dividend without much delay.

AGREEMENT.

An agreement between the Company on the one part and Messrs. Sen Friends Ltd., on the other part has been entered into by and on behalf of the Company for the appointment of Messrs. Sen Friends Ltd., as Managing Agents, main terms of which are referred to below.

MANAGING AGENTS & THEIR REMUNERATION.

The Articles of Association of the Company provide that the Managing Agents of the Company shall be Messrs. Sen Friends Ltd., for the period of 20 years certain computed from the eighth day of April, 1945. The remuneration of the Managing Agents as such shall be:

1. A commission at the rate of 10 per cent calculated on the net annual profit of the Company as defined in Section 87C(3) of the Act with a minimum of Rs. 15,000 (Rupees fifteen thousand) per year in the absence or inadequacy of profits in any year. But it has been agreed upon by the Managing Agents that they will not claim this Commission until the Company has first made a profit sufficient to declare a Dividend at 4 per cent per annum, to the Ordinary Shareholders.

2. An office allowance at the rate of Rs. 2,000 (Rupees two thousand) per mensem payable monthly on the first day of each month.

INTEREST OF DIRECTORS.

Messrs. A. K. Sen, B. K. Ukil and J. N. Bhattacharjee, three of the Directors of the Company are also Directors Messrs. Sen Friends Ltd., who are the Managing Agents of the Company and as such are interested in the remuneration payable to the Managing Agents of the Company.

VOTING POWER.

On a show of hand, every ordinary and preference shareholder entitled to vote and present in person or represented under a power of Attorney by a person (who is not a member of the Company) shall have one vote and upon a poll every member present in person or by proxy shall have one vote for each and every share held by him.

RESTRICTION ON RIGHT TO TRANSFER & VOTE.

The Director, without assigning any reason for such refusal may decline to register any transfer of shares not fully paid up or to a person of whom they do not approve and may also decline to register any transfer of shares upon which the Company has a lien.

APPLICATION FOR SHARES.

Application for shares should be made on the form which may be obtained at the Registered Office of the Company and sent to the Managing Agents together with a remittance of the amount payable.

COMMISSION.

The amount of commission shall not exceed 7½ per cent of the face value of the shares.

Fact Parade

Soviet Policy Towards Industrial Workers:

M. Vassili Kuznetsov, the Soviet Trade Union leader, revealed that Soviet policy towards industrial workers is directed in the return of these workers to the pre-war 40-hour week at the wage-scale received during the war for longer hours.

Holland's Gold Returns:

A Dutch merchant ship has sailed for Holland from London with her holds jammed with boxes of gold guilders part of the Dutch Government's gold reserve which was brought to England, when the Germans overran the Low Countries. The gold was brought to London from a secret hiding place near Maidenhead by a special train. This is the first big consignment of "refugee" gold to return to gold-starved Europe.

Development Of Textile Machinery:

A grant of Rs. 400,000 minimum yearly has been made by the Department of Scientific and Industrial Research to the British Cotton Industry Research Association at the Shirley Institute, Manchester.

The grant is subject to the Association's industrial income reaching Rs. 930,000 and will be increased by an additional rupee for rupee on incomes over this amount up to a maximum of Rs. 6,70,000.

The Director of the Institute said that it was proposed to set up an Engineering Department, the results from which would have a considerable influence on the design and development of textile machinery.

Turkey to buy Shipping Commodities from Britain

A Turkish delegation is coming to Britain to purchase shipping commodities worth about £300,000. During their stay they will visit docks and shipbuilding yards in various parts of the country.

Nigerian Labour Dispute:

The Chicago Tribune reports from its Washington correspondent that important members of Congress are urging that the new world security organisation should review the Nigerian labour dispute in which 150,000 Nigerian workers are involved. The report adds that Congressional circles are shocked at details of labour conditions in Nigeria.

Pills For 100 Ailments:

One of Europe's leading drug factories—a British firm—is capable of turning out pills for a 100 different ailments at the rate of 200,000 each per day, medicated sweets at 700,000 a day and sufficient aspirin tablets daily to cure a 1,000,000 headaches.

Anti-Malaria Bomb:

Since the aerosol anti-mosquito bomb invented in 1941, 1,600,000 have been distributed to protect Allied armed forces against catching malaria.

When the aerosol bomb—a small metal container which applies insecticides in a new way by suspending them in the air in the form of a thin mist which remains active for a longer period than sprays—is used, a small valve is opened to cause a sudden

change in the pressure of the chemical inside, agitating it to a rapid boil and allowing it to escape through a hole and "saturate" wide extents of air.

The bomb has proved one of the most useful medical weapons yet in the Burma and Pacific theatres of war.

Great Film Invention:

It is now possible to take a photograph at the staggering speed of 1/100,000th of a second by means of a special new "flash" that gives off a scarcely noticeable blue light. It is claimed, that it is more powerful than 40,000 50-watt lamps in its effect on photographic efficiency.

Details picked out by this new photographic "magic eye" are vivid to a degree never achieved before, giving to any picture taken an almost stereoscopic effect.

An American invention, the method is being experimented with in Britain.

Peacetime applications without number are envisaged, especially in the exact recording of industrial tests applied to metals and other materials, while crime detection is expected to be aided considerably by means of the new photographic aid. Great developments are expected in the cinema.

General Motors' War Record:

Following at a rate of almost \$11,000,000 a day, General Motors deliveries of war products in 1944 amounted to \$3,800,000,000, an increase of three per cent over 1943 on a comparable basis. The cumulative total value of General Motors war product deliveries from the beginning of the defence program through 1944 amounted to nearly \$10,000,000,000. Total General Motors pay rolls for 1944 were \$1,380,000,000 as compared with pay rolls of \$1,322,000,000 in 1943. During the year 1944, the average number of General Motors employees was 465,617 compared with an average of 448,848 for the preceding year. Since the start of the General Motors war products training schools programme conducted by various divisions and General Motors Institute, 55,000 uniformed men and women have been graduated. General Motors' post-war programme, involving the rearrangement and reorganization of plants, machines and other facilities to be used in producing the cars, trucks and other items

that make up the Corporation's peacetime products, contemplates an expenditure likely to reach \$500,000,000.

Centre to Control Mines and Oil-fields:

A proposal to bring under Central Control all mines, oil fields and minerals of strategic and industrial importance is now under consideration.

It is stated that experience during the war and requirements of reconstruction and development policy for India as a whole necessitate a central policy and it would be better for the Centre to frame rules and laws with regard to mines, oil fields, minerals etc.

The Government of India have in view a general law authorising control over the power to lease and export minerals like mica, petroleum and coal and an ad hoc legislation dealing specifically with problems relating to those individual goods.

Uranium found in India

Uranium ores are widely spread throughout the world. So far as is known Uranium bearing minerals have been found in India in Gaya, Hazaribagh, Singhbhum districts as well as in Nellore (South India) and Travancore. But so far no thorough investigation has been made regarding these mineral ores in India.

Paper Control to end early

The hope that Paper Control, which was the last to come, would be the first to go, probably by the end of this year, was expressed by Mr. Lepar, Paper Controller for India.

TREASURY BILLS

Central Government:

Tenders for Rs. 4,00,00,000 of three months' Government of India Treasury Bills were opened on Tuesday, the 14th August, 1945. Total amount offered was Rs. 3,20,00,000. Tenders at Rs. 99-14-3 per cent were accepted in full. Lower tenders were rejected. Total amount accepted was Rs. 1,70,00,000, the average rate of accepted tenders being Re. 0-7-0 per cent per annum.

Tenders for Rs. 2,00,00,000 of three months' Government of India Treasury Bills will be received on Tuesday, the 21st August, 1945 at Bombay upto 11 a.m. (Standard Time) and upto the close of business on Monday, the 20th August, 1945 at other centres. Successful tenderers should make payment on Friday, the 24th August, 1945. Other conditions are as usual.

During the week ended the 10th August, 1945, Government of India Treasury Bills for Rs. 1,38,00,000 were sold in favour of the Issue Department of the Reserve Bank of India.

By Special Cable.

U. S. Worry over Reconversion

Effects of British Elections & Peace

WASHINGTON, (By Cable)

Omens which they saw in the British elections as well as in the sudden end to the Japanese war seemed to occupy Congressmen's minds, as they prepared this week to resume work on the conversion of the United States economy to peacetime basis. The Congress will resume its sessions about September 4; but before then, the Committees will try to get ready the necessary Bill and recommendations to meet the great problem of cutting down war production, so that unnecessary unemployment will not be created but at the same time rapidly enough to enable reconverted war plants to absorb the workers displaced from war jobs.

Even before they left for the summer recess some ten days ago, Congressmen showed concern over the repercussions of the British election and were worried over reconversion problem at home. This was reflected when the Senate Banking and Currency Committee at the last minute before the recess held preliminary hearings on "full employment bill". And on the final days of the Senate's sessions, several Senators rushed in with proposals and reports on how to go about satisfying the widespread need for new housing in United States. The British elections had the effect of stirring Congressmen to a realisation that people in Britain were not convinced that post-war prosperity would be as much assured under Conservatives as under Labour. This realisation moved Senator Wagner to declare at hearings on Full Employment Bill that Britishers knew that "economic tranquility rests on full employment with all the social gains that full employment means for all the people". From this point, the hearings developed into a series of warnings of dangers to America's capitalistic

system if unemployment should follow the end of the war. Hence it is generally agreed that full employment, which was defined by Mr. Roosevelt in January 1944 as 60 million jobs, will have top priority on the legislative calendar when Congress returns to Washington. The Bill under discussion would provide for public policies at maximum employment and Government expenditure and investment, should private business fail to provide the jobs. However, great stress is laid in the bill on the fact that Government would always work through private enterprises and would not operate business directly. Each year the Government would estimate what, if any, unemployment was in prospect and the President would recommend measures to Congress to provide the necessary jobs. Such measures might include lowering or raising of tariffs, lowering of corporation taxes, action on monopolies or any number of steps before actual Government investment begins.

Part of the concern felt by Congress over the readiness of the country for reconversion came also from the recently published report of the Senate's War Investigating Committee which held the view even before Japan's surrender offer, that the United States would be in a bad way economically should war end suddenly.

The reverse side of this picture was displayed last week when the Commerce Department made public the results of the survey of 7,000 manufacturers. It was disclosed that collectively these businesses had plans for expenditures amounting to more than 9 billion dollars on expansion programmes within next year. The capital outlay would be for plant equipment and alterations, increasing inventories of non-military goods, increasing trade receivables or advances of credit. Additionally it was found that rails and other utilities planned 1,500 million dollars of expenditures in the same period. The officials felt that such plans would be the most important factor in filling the gap to be created when the war contracts are cancelled.

WORLD OF INDIAN FINANCE

CALCUTTA, Friday Evening.

Cheap conditions continue to prevail in the money market with inter-bank call money quoting $\frac{1}{2}$ per cent. in Calcutta and $\frac{1}{4}$ per cent in Bombay. But the market has no appetite for treasury bills and at the auctions held this week bidding was poor. The amount of applications was satisfactory at Rs. 3.2 crores against Rs. 3.14 crores last week but tenders were at higher rates and the amount of accepted tenders was only Rs. 1.7 crores. The average discount rate was further higher at seven annas per cent per annum against six annas three pies per cent. It is perhaps last week's action of the Central Government that has resulted in the poor response for treasuries. The acceptance of all tenders last week gave the impression that the authorities would concede a further increase in the discount rate. Lenders therefore tried to push up rates further in the absence of any bidding from special quarters.

We have already pointed out that official policy in respect of borrowing is rather puzzling and that the persistence in short-term borrowing, while the market had no appetite for treasury bills, would only undo the good work accomplished earlier. With the strong ways and means position there is no need for borrowing on a short-term basis and the money market could be left alone for sometime and treasury bills sales completely suspended. The reduction in the floating debt to a record low level of Rs. 22 crores from over Rs. 110 crores has brought about a process of unconscious funding which was precisely the development which both the Reserve Bank and the authorities desired. It is satisfactory to note that the offer for the next week has been reduced to Rs. 2 crores but it would be better if sales were completely suspended for some weeks.

The money market has been passing through an uninteresting phase since November last year. It was expected that the large increase in imports in the past eight months and the unconditional surrender of Germany would have a disturbing effect. Bankers expected a slight withdrawal of deposits but with the continued increase in working capital and the easy financing of the import trade banks have been bothered with an excess of funds. The earlier apathy to long-dated loans is no longer in evidence. After April this year the Central Government has succeeded in raising large sums both in long-dated and short-dated loans and the reduction in the borrowing rate to $2\frac{1}{2}$ per cent was achieved.

With the complete cessation of hostilities banks would like to await further developments. There is no fear, however, that there would be any largescale withdrawals and banks might be asked to play in an important part in post-war industrial development.

A sudden drop in prices in the bullion market following the unconditional surrender of Japan has been recorded. Silver ready dropped to Rs. 116 from Rs. 133 and gold ready to Rs. 68 from Rs. 73. There has been a feeble effort at rally but the general sentiment is inclined to be bearish. The drop in prices was due to heavy selling by bears and a flood of selling orders from upcountry centres. The Reserve Bank has suspended gold sales. The earlier strength of the bullion market indicated that the Bull Syndicate would not give up the fight easily but the prospect of free trading at no distant date and the rumours that large supplies of silver had been received or were about to

be received unnerved operators. In unofficial transactions silver ready is quoted at Rs. 120 but whether the downward movement has been halted cannot be said. Even the present quotations for both gold and silver are artificial. If there is no change in the exchange rate prices should ultimately come down to near parity levels. On the basis of the British Treasury price of 172s. 3d. per oz. for gold and the London market price of 25 $\frac{1}{2}$ d. per oz. for silver the rupee price for gold is around Rs. 46 per tola and for silver Rs. 64 per 100 tolas.

It would be interesting in this connection to make a study of price fluctuation for both the precious metals in the war period. It would be seen from the tables given below that the fluctuation in prices earlier in the war period were mainly governed by the developments in the war situation and that whenever there was an Allied reverse prices were marked higher. Only in the last two years a jump in prices has been recorded with the operation of inflationary forces. The activities of black market operators and the prevalence of closed market conditions aided the activities of bulls. If normal conditions are restored it need not be emphasised that bullion prices in the Bombay market must be in parity with prices in other markets. In the war period silver has been put to new uses. Only in the last few days it has been stated that a large quantity of silver was used in the manufacture of the atom bomb. In this sense silver may assume importance as a strategic metal and console the bull operator for a time. However, with the large surplus silver resources and the presence of the metal in so many forms any effort at improving the status of silver cannot succeed in pushing up the price to very much higher than pre-war prices.

Peace—and its Problems

With Japan's acceptance of the terms of the Potsdam declaration, the world war which raged for six long years has come to an end and the post-war period, for which all people yearned and many planned, has been ushered in. Considering the course of the war during by far the greater part of the last six years and the ponderous technical problems which the defeat of the Axis powers raised, the war must be deemed to have come to a precipitate end. One has only to recall the various stages of Allied recovery to realise that, if peace came somewhat abruptly, the efforts it entailed have been prodigious. There was a time when to clear Africa of Axis forces not only called for mighty preparations, but could not be confidently looked forward to. To fight and overpower the Luftwaffe, to release Africa from the Axis clutch, to regain control of the Mediterranean, check the submarine menace and establish air supremacy—these big steps in themselves, only sufficed to prepare the Allies for the assault on Hitler's European fortress. The landing in Italy and the weaning of that country from its allegiance to Mussolini and Hitler did not fulfil all the hopes that they raised; and the German forces in Italy were not overpowered till the German surrender. D-day came. But the dawn was overcast with clouds; and for a time Arno and the Rhine seemed to be the limits of the Allies. Without overlooking the mutual helpfulness and inter-dependence of the two fronts it may be said that the turning point of the war came when the Russian forces crowned their magnificent efforts in rolling back the tide of German invasion with a swift and brilliant drive from Warsaw to the banks of the Oder and thence to the outskirts of Berlin. There were, no doubt, the rattling episodes of the V-bombs. But the war was won when the battle was taken to Berlin; and the obvious emptiness of Nazi boastings turned the people away from Hitler and his henchmen.

The war against Japan had to some extent been won on the banks of the Oder and the Rhine; for from the beginning it was clear that Japan had to stand or fall by Germany and that the moment the Allies were free to shift the weight of all their resources on to Japan, the surviving Axis nation would be crushed beyond hope of recovery. Nevertheless, American recovery in the Pacific like Russia's in Eastern Europe was accomplished brilliantly, though but slowly and painfully. The end of the war was in sight when the U. S. air forces were in a position to do to Japan what they had done with British and Russian intervention and the invention of the atomic bomb removed the last vestige of doubt in Japan's mind about the inevitability of complete defeat. She had sufficient self-possession, however, to insist on, and obtain a variation of the Potsdam declaration to the extent of protecting the position of Emperor Hirohito.

The comparatively sudden onset of peace, welcome, no doubt, from the general human standpoint, nevertheless adds to the complications of the post-war problems. But there is reason to think that the political problems like those of occupation were thought out fairly clearly in the meetings of the Big Three at Potsdam. Russia's declaration of war against Japan is also a helpful circumstance, in that the Big Three can have as far as possible a common policy and common principles of action both in Europe and Asia. Without such principles of wide application the task of securing peace and building the foundations of a world order is bound to be tinkered with, with a fatal indecision and lack of finality. It is fortunate that the war ended with a firm note on the vastly increased powers of destruction which the nations have acquired through the invention of new weapons. The V-series of the Nazis have now been eclipsed by the atomic bomb which the U.S.A. has succeeded in producing. At the moment, the U.S. is in possession of the secret. But whether the monopoly continues or should be broken by the independent research of other nations, it is certain that the addition of the atomic bomb to the weapons of modern warfare gives a new complexion to war itself. Whether this will make the small nations more amenable to the needs of a world order and give the big nations a new sense of responsibility remains to be seen. But there can be no doubt that the existence of such a bomb will add greatly to the general yearning for a stable peace.

It must be admitted, however, that peace will be at least as dangerous as war, if it does not progress hand in hand with justice. And justice among the classes in each State and among the various nations rests largely on the wise solution of the national and international economic problems. It is precisely here that the sudden onset of peace is likely to prove a source of further complication. For the plans for reconversion, even as plans on paper, had not made much progress when peace hove in sight. The problem of relief and reconstruction in Europe has not been reduced in magnitude. Wartime scarci-

ties are continuing in more or less the same intensity as before the German surrender. And as for post-war reconstruction, there is no means yet of forecasting the trends of trade or the relative strength and weakness of the various currencies and exchanges. But it is prima facie wrong to think that the continuance of the war is a help in the solution of any part or aspect of these problems; for it would be very much like believing that it is a help to fire fighting, if the fire continues till the fighting equipment is got ready.

The problems that have to be tackled now fall into easily distinguishable groups. There is in the first place what has come to be called the liquidation of the war effort. Secondly each Government has to work out the transition from war economy to the kind of economic organisation and economic life which, on the basis of present conditions, possibilities and ideals may be deemed to be proper for the immediate future. Thirdly, there has to be all-round effort to bring into being the system of international co-operation and international regulation which will be helpful to the realisation of national policies as well as the aims which have general international acceptance. The three groups of problems no doubt overlap, to some extent. But if the borderland between one group of problems and another is carefully surveyed and dealt with, then progress will be both speedy and stable.

It is not yet clear to what extent the Great Powers have tackled the first and the second groups of problems mentioned above. For one thing, demobilisation itself may take nearly a year to be completed. But of greater importance to the economic world is the disposal of surplus stocks in the hands of the various Governments and the cancellation of war contracts. The one great advantage that we have today over the last post-war period is the widespread recognition that the saving of public expenditure is the last of the many relevant considerations to be paid any regard. All Governments can be depended upon not to precipitate a slump by a hasty unloading of surplus stocks. A similar attitude to demobilisation will be dictated by the anxiety not to create an unduly large volume of unemployment. But the success of smooth liquidation of the war effort depends primarily upon the quality of the plans for converting industry from a wartime to a peacetime basis. Plans for such reconversion have engaged the attention of many experts almost from the beginning of the war. Apart from the technical aspects of such reconversion, it may be said that the severe shortage of consumer's goods, which is felt all over the world, will provide the most favourable conditions. But owing to the eagerness to retain competitive advantages in foreign markets and to anticipate future developments, the problem is not one of simple additions to the stocks of goods which, as things are, cannot possibly exceed the demand for a long time to come. Another complication is the need to effect the adjustments in internal production which are required to sustain the standards of life at home at levels more in consonance with the newly accepted social ideals.

That the pace of reconversion will be set by the Big Three, few will doubt. The U.S.A. is busy considering new legislation which will enjoin on the State the duty of stepping in to provide full employment, in the event of private business proving unequal to the task or unwilling to discharge it satisfactorily. Soviet Russia, it is said, turned over her industrial plants to the production of consumer's goods almost from the moment of the German surrender. Not only can one give credence to this report, since the war with Japan could have been foreseen to prove a small and short affair, but one would feel the utmost sympathy for the Russian masses who have had to bear the utmost hardships almost since the Bolshevik Revolution. In Britain, the economic policy of the new Labour Government has been clearly outlined in the King's speech. As may be expected, the emphasis is on the socialist aspects of the new policy. Wartime controls are to be continued in the public interest. The Bank of England is to be nationalised and new investment is to be controlled and regulated. The long delayed nationalisation of the coal mines is now to be accomplished. From the standpoint of the outer world, it is of more importance that Britain does not propose to abandon the wartime policy of developing British agriculture. If it is remembered that during the war Britain produced 60 per cent of her food requirements, the significance of this part of the King's speech may be easily understood. Another aspect of Labour's economic policy is the emphasis on adequate housing. Since Britain's housing requirements are enormous, thanks to the Blitz and the rocket bombs, the housing programme may conceivably involve relief in the pressure of British competition in some other lines. However, it is worthy of note that Britain's economic policy for the post-war period is attuned to the requirements of the masses and that it subordinates to them the profits of private business.

If the three great powers lose no time in effecting the change over from wartime to peacetime economy, other

countries will to that extent find it easier to solve their problems. But it must not be forgotten that in the smooth exchanges of international trade, the Continent of Europe and Japan occupied a very important place in the pre-war period. To the extent that these countries have been disorganised by the ravages of war, their resuscitation will be found to be definitely more complicated. In the countries which were occupied by the German forces for a number of years, the industrial system was forcibly linked to that of the German war machine. Workers were transplanted in large numbers from their homes. It is not known how and how soon these ravages will be repaired. The problems in the case of Germany and Japan will be further complicated by the changes which the victorious allies will impose on them, in order to assure themselves that the vanquished powers will not return to the paths of aggression. While the peace treaties will no doubt emphasise the desire of the allies that the standard of life in these countries should be maintained, it remains to be seen how far this desire is consistent with the need to deprive Germany and Japan of their war potential. In fact, industrial equipment, which these two countries will be allowed to retain is one of the nodal points from which the future of international trade is to be determined.

For the present, however, the speed and efficiency with which relief will be carried to the war ravaged areas and reconstruction thereof will be helped will determine the pace of recovery. It is only then that world economy can be said to convalesce under the care of the International Monetary Fund and other economic organisations devised by the Bretton-woods Conference. There is a period of strenuous work ahead, which has to be taken seriously, if all the talk of avoiding a post-war slump is not to degenerate into tall talk or pious wish.

In India, the impact of sudden peace is bound to prove very powerful. For our part, we emphasised even at the time of the German surrender that Government must speed up the various schemes comprised by post-war planning so that expenditure on planning will increase pari passu with the decline in war expenditure. Now that the latter is to be more steep and abrupt than we had reason to think at that time, there is no time to be lost in the inauguration of the ambitious schemes of reconstruction which have been formed during recent times. Contrary to the opinion held in official circles both here and in Britain, the need for a National Government, far from having vanished with victory, is accentuated by the sudden onset of peace. From this point of view, it is indeed regrettable that the reference to India in the King's speech is worded in terms which to Indians have, over a long time, meant next to nothing. If it is realised that India takes the ninth place among the world's industrial nations and her importance as a trading country is even greater, the political and economic reconstruction of India will be recognised to be one of the prime factors in the recovery of world economy after this devastating world war.

The Marketing of Agricultural Produce in India—III

(Contributed)

In my last article in this series, I endeavoured to show how seriously the ryot is handicapped in marketing his produce by his indebtedness and by the inadequacy of transport facilities. Another serious handicap for the ryot in the marketing of his produce is the lack of adequate modern storage facilities. This leads to considerable loss of the produce through deterioration or depredations by insects and rodents, affects the quality of the produce, spoils its reputation, forces the farmer to hasten sales irrespective of prices and stands in the way of his getting credit facilities. Even for a cash crop like cotton, where the trading interests at least are fairly well organised, storage facilities, as far as the producer is concerned, are scarcely what they could be. The I. C. C. C. Report referred to in my last article states, "No village storage facilities exist in any of the areas investigated. Cultivators store **Kapas** in their own huts and not with the Bania or petty trader. The lack of adequate storage facilities is one of the serious defects in the organisation for sale in the villages. There is considerable risk of the **Kapas** being spoiled or destroyed by fire and this is one of the reasons which induce the cultivators to sell as quickly as possible."

According to the Reports on the marketing of wheat and rice in India which in the opinion of Dr. Coyne give only conservative estimates of the losses, the peacetime losses through bad storage in these two grains average about 600,000 tons annually; and Dr. Coyne estimates that rodent damage alone probably accounts for a million tons of all food grains with equal quantities lost from insect and moisture damage.

"A figure of 3 million tons may seem astonishing but that is the order of magnitude of the annual losses in India with which we are concerned to-day. The Imperial Agricultural Research Institute has come to a similar conclusion quite independently taking the losses at 5% of all food grains produced and arriving at 3.3 million tons. It is not profitable to argue about the actual figures; it suffices to agree that losses of anything like this order are deplorable and if action can be taken to reduce them appreciably, a very great contribution to the food supply of India will have been achieved." It is stated that one pair of rats, given enough food supply, can breed eight hundred of their kind in a year and when they can have an ample provision of food in India through the negligence of man, it is no wonder they multiply so fast.

Loss of quantity through bad storage has another undesirable consequence. The dealers concerned often try to make up the loss in weight or measure by mixing inferior stuff or by damping or adulterating the produce in other ways. In the case of food stuffs, this practice results in a further deterioration in quality and impairs the health of the consumers; in the case of produce for industrial consumption it creates a prejudice against the exporting country which more honest methods might not easily dispel. Such practices aggravate the bad reputation which Indian produce had earned in foreign markets through lack of proper grading and processing. The Agricultural Commission found 'much of the Indian produce exported to foreign markets would appear to be marketed in an unsatisfactory condition though matters have considerably improved in recent years. In England we were informed that cotton is badly retted and graded and suffers from excessive moisture, that Indian hemp is very irregular in quality, badly mixed and contains an excessive proportion of dust and dirt'; though the Commission felt that impression abroad on the quality of Indian wheat and oilseeds was more favourable.

The endless diversity of weights and measures constitutes another vital drawback in our marketing system. It is easy to explain the existence of such a bewildering variety in these and to trace their origin to times when communications from one part of India to another either did not exist or were too meagre, and interregional trade, scanty and irregular. The emergence of different political systems in different parts of India at different times and the existence of widely different cultures, perpetuated and frequently aggravated diversities in this sphere. Another explanation for the diversity in weights and measures even between one Taluka and another is to be found in the advantages which the merchants in the assembling centres derived by perpetuating local variations. Before the advent of the Railway, each Taluka was more or less an independent economic unit with its own distinct practices and methods. It was very seldom that the ryot in such a unit cared to or had the need to familiarise himself with the practices in a neighbouring, not to speak of a distant, Taluka. And those merchants who functioned in the assembling centres found it easier to dupe the village cultivator with a confusing variety of weights and measures which made the transactions more complex and unintelligible. While the complexity of the country's economics has been rapidly changing in many other fields, in this particular sphere, conditions still continue to be primitive. It will cover a volume to give the innumerable variations in weights and measures that are being used for different commodities in different parts of India. I give below just a few illustrations. A common source of confusion is the same name being used for different measures of capacity or weight in different places. The **Kalam** a commonly used term in Madras Province is equivalent to 24 Madras measures at Tanjore, 48 at Trichinopoly and 96 at Chingelput. In the Central Provinces, the Pali, also known by at least four other names, stands for 80 Tolas rice in Jubbulpore, 100 Tolas in Nagpur, 160 tolas in Buldana and 320 tolas in Akola. The maund seems to beat every other unit in the variability of its weight indications. Not only does it differ from Province to Province, but even within the same District innumerable variations may be noticed. For example, the Agricultural Commission found that in Khandesh, 1 maund was equal to 72 seers in Dhulia, 50 Seers in Shirpur, 40 in Navapur, 80 in Pachora, 72 in Amalner, 48 in Jalgaon, 22 in Edlabad and 21½ in Eodwad. Take the Khandy. In Bombay it was 784 lbs., in Madras 500 lbs. and in Khandesh the Khandy varied from 160 to 250 lbs. The Maund signifies also different weights for different commodities. The Mysore maund for groundnut is 45 seers of 24 Tolas each while for other commodities the standard maund in the State is equivalent to 40 seers of 24 tolas each. No other civilised country would have tolerated the waste of energy and clumsiness in exchange involved in such meaningless diversities. Not only is there a surprising diversity which itself gives the merchants excellent opportunities for fraud, the actual weights used often fall short of the weight they are intended to indicate. This is inevitable when lumps of iron, stones and sticks serve as

(Continued on page 292)

OUR LONDON LETTER:

New Trends in Party Politics

Insurgence in Back Benches

Pressure for Radical Reform

LONDON, August 3.

The future of the Conservative Party after this unprecedented defeat engages good many first-class minds. Led by a popular war leader who made the entire election a personal issue, this ancient Party was simply overwhelmed at the polls. It polled barely 39 per cent of the total votes whereas Lloyd George, at a similar "khaki election" in 1918 polled 57 per cent with the aid of both the Tories and the Liberals. In 5 constituencies, normally counted safe, the Tory candidate polled less than 1/8th of the total votes and thus lost his £150 deposit. In his own constituency, Woodford in Essex, the Prime Minister had the chagrin of seeing over 10,000 of his constituents vote derisively for his opponent, an unknown candidate, while only 27,000 voted for Mr. Churchill.

The first reaction among politically-minded people is that the Conservative Party as a "national party" is virtually finished; it has always depended upon the middle class to keep it in power, and this class has obviously been jarred loose in a number of constituencies normally considered "safe".

But banks, finance houses, industrial concerns, insurance companies, railway companies, colliery companies, not to mention the great landowners, have more reason than ever to use political weapons to safeguard their interests; and opinion is crystallizing that this can only be done by forming, as successor to the old Tory Party with its "hard-faced men who look as though they had done well out of war", a party of "moderate men", led by Mr. Churchill, if he insists, but better by Mr. Eden if the latter recovers his health, which will fight rearguard action in the hope that the pendulum will again swing them back into power.

Already in some boroughs, local Conservatives are making overtures to Liberals to form a "Progressive Party" which will fight Labour in local elections; this movement may possibly spread.

But in the meantime, British politics will almost certainly become, not as heretofore, a battle between two or more opposed parties, but a struggle within the Labour Party itself. If the present leaders, steeped in the Coalition atmosphere for the past five years and with nearly a quarter century record of timidity and "appeasement", shows signs of going slow with its programme, there will be uprising among the newly elected Labour M.P.s far exceeding in extent the various rebellions led by Mr. Aneurin Bevan and kindred spirits during the Coalition Government. According to this theory, men like Attlee, Bevin, Morrison, Greenwood and Dalton are virtually "prisoners" of the rank and file, for the first time in their political careers. If they misread the significance of this overturn, it is said, and try to earn the approval of the Conservative press as "moderate and sensible" men, they will be unseated by determined backbenchers and a wholly new Front Bench will be established with mandate to nationalize colliery companies, in the same way as Dutch Conservatives nationalised a larger part of their own coal industry several decades ago, and, in general, implement the party's pledges to the nation.

If this, or anything approaching it, happens, the Labour Party will almost certainly have to tackle the House of Lords with its overwhelming Conservative majority including a large number of peers who directly represent landed interests, banks, railways and similar enterprises.

Back in 1934, the Labour Party declared that it was in favour of abolishing the House of Lords as a hereditary Chamber, but it carefully refrained from committing itself to the question whether a different sort of a Second Chamber should be established. Opinion on this is sharply divided within the Party. One group points out that during those terrific crises in national existence, the First World War and Second World War, Britain practically converted itself into an one-chamber country; for, the House of Lords virtually ceased to function as a Second Chamber with powers of amendment or rejection. If the one-chamber system works in wartime, why can it not work in peace time?

But there are good many politicians who personally are attracted to a Second Chamber chosen by some less exhausting method than a direct appeal to the electorate; and they would like to see it established so that they could return there and enjoy political discussion in their declining years. Incidentally, one rumour is that the new Government plans immediately to send to the House of Lords a dozen or more new Labour Peers so as to strengthen the Labour's debating team in that Chamber.

OUR AMERICAN LETTER

New Possibilities for Export

U. S. Industrialists' Dilemma

WASHINGTON, July 25.

Indian businessmen seeking to buy U. S. goods are competing indirectly with literally thousands of buyers from almost every country in the world eager to obtain replenishment for disrupted economies in their home nations.

It is a common observation among businessmen visiting this country that except in specialized lines such as automobiles, U. S. industrialists have neglected the export trade while competing fiercely among each other for the home market.

Now many American producers find themselves besieged by representatives of a market they were slow to seek in pre-war days. Added to this is a domestic clamour to fill a home market by nearly four years of non-manufacture of thousands of consumer items.

Some manufacturers are getting their first real glimpse of export possibilities for their goods and don't know what to do about it. Their "plight" was illustrated by one businessman who told the United Press of America:

"Today I talked with a buyer from Egypt who convinced me I could build up now for a nice post-war business in his country if I could sell him some specialized machinery now to get in ahead of manufacturers of other countries. A couple of hours later a dealer from New Orleans warned me he would never buy anything from me post-war if I let any of now-limited production go abroad before filling at least the major share of his needs. Even if our plant was already reconverted from war production we could not get raw materials or skilled labour we would need to produce enough to please everybody."

Besides many hundreds of buyers now in the United States from Asia, Europe, Africa and Australia, an estimated 2,000 businessmen from Latin-America are in this country. Most of them are from Brazil, Colombia, Argentina, Chile, Bolivia, Venezuela and Ecuador.

They seek both new and surplus war materials, chiefly road-building, shoe, textile and paper manufacturing machinery; household appliances, electric refrigerators, wearing apparel and pharmaceuticals.

Some U. S. exporters, although appreciative of foreign marketing possibilities in post-war, claim American goods are being sold to neighbouring countries at inflationary levels, to the ultimate detriment of the United States. Traders say complaints of this nature—mostly involving Latin-America but to a certain degree elsewhere—have grown to such an extent that they will seek a government investigation.

The complaints work both ways, however. There have been a few charges by foreign firms that in the present "sellers' market" a certain few U. S. firms have passed off cheap, undesirable goods to foreign buyers at exorbitant prices. Some trade associations already are taking steps to prevent such tactics, which might seriously jeopardize the prestige of American goods abroad.

The domestic shortage-foreign-demand situation applies mainly to Indian European, Latin-American and other buyers in this country seeking consumer goods. It is believed to affect

The Stock markets are profoundly shocked as a whole in the new situation confronting not only investors, but also the City's entire financial machinery. If the new Government does even a quarter of the things it has promised to do, repercussions on the City will be extensive. Control of the country's investment machinery is an obvious instance; there has been such control during the war, which has been accepted cheerfully. But it would be a different kettle of fish if it became permanent.

Running through all the discussions is a great criticism of Churchill's handling of the campaign. The Conservatives are telling people that they wanted him to issue only one broadcast address which was to be dignified and "above the battle" as befits a great national leader but they claim that the Premier was full of ardour of battle, enjoying himself hugely, and insisted upon two broadcasts and later contrived altogether to make four broadcasts, not one of which, they say bitterly, made votes.

If Mr. Churchill comes back into active politics as leader of the opposition, he may have a very good time castigating his former colleagues in Coalition Government; but it is generally believed that his career will soon follow in the same pattern as that of Lloyd George, who to the last could always hold the House of Commons when he rose to speak, but had absolutely no influence throughout the country, except in little groups of Non-conformists like Baptists, Methodists and similar protestant religious sects.

to a somewhat lesser extent the missions of big Indian industrialists here seeking mainly heavy capital goods with which they can manufacture consumer goods.

A number of American businessmen have the impression that a major underlying motive of the Indian industrialists seeking capital goods here is to "get an early start" toward capturing postwar markets which Japan dominated before the war.

Industrialists here most familiar with the situation can foresee no great struggle between India and China to capture the vacated Japanese markets. They believe China's re-industrialization will require many years, and that decades may elapse—even under more ideal conditions than are generally expected—before China can hope to take a place among the world's industrial powers. The question in their minds is to what extent India can move in the same direction under conditions more favourable than those China faces.

There is no disposition in business circles here at present to feel that since America has been carrying the main burden of the war against Japan, she should fill the major part of the industrial "vacuum" Japan will leave. This might be largely traceable to the above-mentioned "home market" psychology of American industrialists. But a number of business leaders the writer of this article has questioned felt that the Orient, with its peculiar conditions, must continue to be, in time of peace, at least as much of an industrial unit as it was when Japanese goods were flooding Far Eastern markets and Japanese warlords were preparing to overrun Oriental lands.

One man put it this way: "So far as America is concerned, the Orient will have to produce nearly everything she uses. It is only proper that she should for her own well-being. America can, and wants to, sell the East a lot of automobiles, refrigerators, tennis balls and hundreds of other items. But it looks to me as though the man in Indo-China who formerly got his under-shirt from Japan will be getting it from somewhere else in the East from now on. If India can develop herself to supply that under-shirt and a hundred or thousand other necessities of life, more power to her."

A striking expansion in the gold and foreign exchange holdings of central banks in Latin America during the war was revealed in the statistical bulletin of the economics division of the League of Nations, whose offices are in Princeton, N. J.

Gold held in Brazil rose from 195,000,000 cruzeiros at the end of 1942 to 1,682,000,000 at the end of March, 1945, while foreign assets of the central bank rose from 834,000,000 cruzeiros to 2,583,000,000 and 4,367,000,000 respectively in the same period. The combined gold and foreign assets of 6,049,000,000 cruzeiros at March 31, equal to \$366,566,400 at parity of exchange or to about \$318,000,000 at current exchange rates.

Gold and foreign assets of Argentina rose from 1,395,000,000 pesos at the end of 1939 to 2,318,000,000 at the close of 1942 and to 3,881,000,000 on March 31, equivalent to \$2,789,368,000 at parity of exchange, or to about \$970,000,000 at current market value. Gains also are shown by Chile, Mexico, Peru and Venezuela, according to the league's bulletin.

These countries have "vastly increased" their holdings of gold and foreign assets, and consequently their ability to make purchases abroad, as being mainly producers of primary

commodities, the agency reports. "This development is largely due to export balances resulting from heavy shipments of raw materials needed for the war effort, coupled with reduced facilities for importing manufactured goods," it declares, adding that foreign assets held by commercial banks in the same countries also have shown substantial increases.

(Continued from page 290).

weights and there is no regular official control or check. Even iron weights when they are handled for five or six generations lose considerably from their original weight. It is also seen that unscrupulous dealers employ one set of weights and measures for purchasing and another set for selling. In the use of the dry measures, there is an artifice known as thumping, by which a clever measurer can manipulate quantities within limits. The question of standardising weights and measures has off and on been engaging the attention of the Central Government. The Indian Weights And Measures Committee (1913-14) recommended the enforcement of standardised and uniform weights. But for another quarter of a century no further action was taken. The Standards of Weights Act was passed by the Central Legislature in 1939 but the Provincial Governments, most of whom have yet to move in the matter.

Now I come to the crowning grievance of the agriculturist. In the markets where he brings his produce for sale he is faced with a multitude of functionaries whose number is matched only by the multiplicity of "traditional" deductions and discounts from the seller's price. Discussing this aspect of the marketing of wheat Mr. M. C. Munshi in "A study of price spreads" remarks "when the grower takes his produce to the market he meets the Ka'cha Achatiya and his tout, the dalal, the rola who dresses his wheat, the weighman, the charhava who fills the scale pan, the ota who keeps open the mouth of the bag. Besides satisfying the demands of these, there are the munim, the archatiya's cook and a horde of beggars, all of whom regard themselves as entitled to a share of his produce." Over and above the commission given to the above functionaries the seller is asked to pay for charities, for cow protection, for dispensaries, temples and schools. Even when the sellers voluntarily pay for charities, they have no control over the expenditure of the sums thus collected nor have they any means to see whether these are utilised at all for the appropriate purpose. Free samples, deductions for drage, impurities etc., are also taken in fairly lavish proportions for most commodities irrespective of whether such deductions are actually justified by the condition of the produce. In certain markets, more curious items for deductions appear, for example the note batta (if the seller asks for payment in silver), Chabeni (on account of Food), Palladari (Porterage), Chung (fee to buyer's servants) and shagirdi (a commission to the arhatya's apprentices). All these together take such a pretty slice off the cultivator's price "that the latter must feel himself lucky at the end of the day that he is left with his cart and bullock to take home." Apart from their multiplicity the fact that these marketing charges are seldom clearly specified and defined makes them still more objectionable.

Editorial Notes

Demobilisation.

The war is over, thanks to the early surrender of Japan but peace has its own horrors to Capital and Labour alike in this country, since an era of unemployment and deflation is feared in several quarters. Industrialists are uneasy that the import policy and the absence of a clear-cut programme for economic development by the Government make it impossible to plan peacetime ventures. Industrial labour is expecting hasty and unplanned discharge of workers from the Ordnance factories and other establishments connected with war effort. The two million soldiers from the Indian Army, most of whom came from the villages, should be by now thinking seriously of their own post-war problems. Most of them have lived comparatively better lives in the barracks and are used to the comforts which it will not be possible for them to procure when they return to rural life. They have sacrificed a lot and have a claim upon the Government of India to be housed and employed comfortably during the years to come. Some of them are well trained and all of them have led a life of discipline and collective effort. Unless there is an expansion in the industrial activity and an improvement in agricultural production of India, these demobilised soldiers cannot satisfactorily be re-employed.

From the reports emanating from the provinces it appears that owing to redtapism several provinces are not yet ready with clear-cut schemes for absorbing the returned soldier. After all, since the V-Day the provincial governments must have known that the collapse of Japan was only a matter of time and they should have speeded up their plans for re-absorbing the demobilised soldiers. But they are not yet ready. It is interesting to see that, according to the Special Correspondent of the Hindustan Times, the U. P. Government are not aware as to how many soldiers would come back in their province seeking reemployment. Contact with the military authorities seems to be incomplete and no wonder that no tangible plans for the resettlement of the demobilised men have been evolved. In the U. P. a Regional Directorate of Re-settlement has been constituted but even at this late hour they do not know the number of ex-soldiers who would like to be resettled on farms, or the number of men who should prefer to be employed in industrial work. Rough calculations are made on the basis of military recruitment from the province which comes to two and a half to three lakhs and about a lakh and a half of labourers have been sent from Gorakhpore and other places for labour outside the province. Thus, the U. P. Government have a great responsibility for providing employment for six lakhs of men dislodged by the war. The problem has now become urgent and some of the schemes under the U. P. five-year plan recently published are sought to be hurried up. Land Colonisation Schemes are there but it is not known how far the soldiers would like to take the land offered and, further, anti-malaria measures have to be taken before the land can be allotted to the demobilised. The memory of how the last war still haunts the minds of provincial governments. Even now, the best method of obtaining from the army the most suitable types of personnel for jobs in the public works to be launched has not yet been determined, though, some progress has been achieved regarding the setting up of employ-

ment sub-exchanges. Since time is running fast and the day of demobilisation draws very near, we hope that the authorities will appreciate the urgency and finalise their plans for re-absorbing the returned soldier.

National Research Council

The Industrial Research Planning Committee of the Government of India has recommended the establishment of a central research organisation called the National Research Council which will initiate a five year programme of development of scientific and industrial research. According to this plan a National Chemical and Physical laboratory, certain specialised research institutes, all-round strengthening of the existing research organisations and training of sufficient research personnel are to be established. A large number of research laboratories to deal with local problems is recommended to be set up in all the Provinces and major states. To meet capital and recurring expenditure a block grant of Rs.6 crores and an annual grant of Rs. 1 crore is recommended to be made. On the completion of the five year programme a statutory cess of one anna per hundred rupees worth of industrial output is to be levied. This cess will be levied by the respective local governments both in the provinces and in the native states and is expected to yield a crore a year.

The existing research activity in India does not present the bare minimum judged either by international standards or by internal industrial requirements. Industrial research is still in its infancy. There is no link between principal research institutions and industrial interests. Industry has not become research minded. Programme of researches of various institutes concerned with industrial research are not framed by mutual consultations or according to any co-ordinated plan.

A suitable machinery for the development of research along sound lines, to strengthen the science departments of universities and existing research institutions and bring about an effective co-ordination among all the institutions, a central research organisation to be called the National Research Council is obviously necessary. The organisation is to consist of 60 members, representatives of scientists, universities, industry, labour and administration.

The functions of the council will be varied. It will organise and maintain national laboratories; establish and maintain specialised research institutes; stimulate pure and applied research in universities by grants in aid and founding fellowships, to function as National Trust for patent and to set up a Board of Standards and specifications and last but not least to function as a clearing House, encourage deserving scientific and technical societies and foster the growth of new ones.

A small executive body to be called the Research Board will be responsible for the administration of the work of the Council. The council that is contemplated is one that is long overdue. In Britain such a council has done valuable work. If the work of the Council is entrusted to men of ability and ability alone then the Council has a great future.

Industrial Health Research

Industrial health Research is one of the many subjects which have acquired a new prominence since the war. Though the war demanded the maximum efficiency and the largest and the quickest output, inevitably war time production had to be carried on under circumstances least favourable to them; the hectic and often the precarious conditions of wartime industrial production should have given meagre scope for measures that would

UNDER THE CEILING

The prices of electric fans are now controlled throughout India. A list of ceiling prices of available brands was published in the Calcutta Papers on the 23rd June, 1945.

At present we manufacture only two types of "Orient" fans—52" A.C. and 56" D.C. The retail price of both is fixed at Rs. 150/- each with complete equipment, which is considerably below the ceiling prices fixed by Government. We would request those patrons holding permits not to pay more.

The entire production of "Orient" fans is now requisitioned for the essential services. We can therefore supply fans only to those possessing the necessary permit from the Controller General of Civil Supplies, Bombay. We are making arrangements to meet post-war demands in full.

Irrigation in the States

The achievements some of the Indian States have to their credit is the development material resources within their territories compare favourably with similar work done in many parts of British India. In the development of irrigation facilities, the record of many states is particularly notable. It is estimated that within the two decades from 1920-21 to 1939-40 over two million acres were added to the areas fed by irrigation in the Indian States. Hyderabad has invested nearly Rs. 14 crores on irrigation works and her post-war proposals are estimated to cost Rs. 65 crores. Mysore has several irrigation works and the Krishnaraj Sagar dam alone cost her Rs. 44 crores. Bikaner constructed the gang canal at a cost of over Rs. 3 crores and it is the longest concrete-lined canal in the world. The Sutlej Valley Works, another huge enterprise in the field was the product of the combined resources of the Punjab, Bahawalpur and Bikaner Governments. Bahawalpur alone has spent Rs. 14 crores

the war but there has been a remarkable relaxation during the recent war years and the move back to rigorous control is what is worrying the film producers. According to Mr. Howard C. Heyn, the APA Staff correspondent, the gross receipts abroad from the

Hollywood films totalled \$170,000,000 to \$180,000,000. 50 per cent of this was from Britain, 12 to 14 per cent from Latin America about 12 per cent from Europe and another 12 per cent from Australasia. The potentiality of the Indian Market should have been

obvious to the planners of the drive for more exports of Hollywood pictures and so the Indian film producers would do well to take note of the possible competition from America. The Government of India should also appreciate the necessity to encourage this industry which can educate the people, give employment to millions and above all represent the culture of the peoples of this vast subcontinent. Sometime ago Mr. Akbar Fazalbhoy pointed out that India should aim at hitting a target of 10,000 permanent cinemas and touring units to bring films to all urban and rural areas. India should try to retain a large portion of the internal market for her own production and Mr. Fazalbhoy called for an annual production of 300 feature films, 104 instructional films, and 52 weekly newsreels. While India requires the help of Hollywood for setting up studios and for the training of technicians the Indian producers remember that every effort should now be made to prepare plans for safeguarding our market from excessive exploitation by foreign interests who might take advantage of our need for foreign capital and personnel.

British Housing Programme

In the five-point programme the Labour Government have chalked out for the immediate future, housing is given first preference. That immediately after the election results were announced, more than two hundred Members of Parliament including Churchill had to go hunting flats in London is symbolic of a national deficiency whose seriousness it is difficult to exaggerate. Though German bombs did the greatest havoc to British habitations, other causes also contributed to the present shortage. Higher taxes and the paucity of domestic servants compelled large numbers of the wealthier classes to abandon large dwellings and seek more economical homes. The large-scale migration of labour and civil population led to overcrowding in particular areas. The Government themselves had to requisition quite a good number of buildings for military and quasi-military purposes. The minimum requirements to cover the shortage are estimated to be 750,000 houses though even this number would not be sufficient to solve overcrowding. The Churchill Government had drawn up a scheme for three hundred thousand houses to be built within the course of the next two years. Before the Govt. retired, they also gave wider powers to the local authorities to requisition empty premises and to sanction new constructions. The upper limit of £100 on private housing work has also been lifted so that henceforward licences could be issued even when the costs exceed the limit. The details of the new Government's programme are yet to be known. It is possible that the target fixed by the previous government would be raised; the process of de-requisitioning might also be speeded up. But as to how far the shortage in labour and building material would be got over no indications are available.

Suez Canal and the Big Three

The Big Three have their own post-war ambitions of capturing extensive markets in different parts of the world and Suez Canal has therefore threatened to become a bone of contention among them. The Canal is important for Britain to safeguard the trade route to Africa, India and the Far East and the happenings in recent years have only increased her dependence on the Empire countries for reviving her large export trade. This war has been organised mostly under the leadership of the United

States and her designs in the Mideast besides her interest in the proper ordering of post-war Europe are now well known. Soviet Russia's interference in the recent tussle for the Persian and Arabian oil wells and her anxiety to have some control over the Dardanelles clearly point out that she is preparing for a gigantic export drive in the years to come. She has gained an outlet to the Atlantic and now she is bound to have her ambitions satisfied in the Pacific too. But if she should count in the Mediterranean politics and if the Dardanelles issue is to have any meaning at all she should have unhampered passage from the Mediterranean to the Atlantic on the one side and to the Arabian Sea on the other. This Colossus evidently wants to have unhampered and simultaneous access to all the seven oceans of the world so that she may prepare for playing a vital role in international affairs in the future.

The intentions of the United States are made clear in the statement of the U. S. Foreign Economic Administrator that the U. S. has been repeatedly pressing Britain to abolish, under the Lend-Lease, the Suez canal tolls on its ships. Up to January last, it is reported, the U. S. has paid \$14.3 million as the Canal dues besides paying under Lend-Lease about \$9 million in tolls on British ships passing through the Panama Canal. Britain has not yet agreed to place the Suez Canal charges on the U. S. vessels on reverse Lend-Lease. The British point of view, it appears, is that since the Suez Canal is jointly owned by other powers besides herself she cannot do anything in the matter herself. Since the canal dues are paid in Egyptian pounds this would result in increasing Britain's debt to Egypt, a trend she wants to avoid. Informed opinion in the U. S. is not satisfied with this argument because, after all, Britain has the big say in Suez Canal administration and she is the largest share holder. Negotiations are presumably going on to settle matters to America's satisfaction and in the meanwhile, Russia has expressed her anxiety to have a hand in the Suez Canal and its future. She is pressing to have representation on the Suez Canal Company. In view of Britain's special interest in the Canal, the future course of the rival ambitions of the Big Three would be watched with keen interest.

Wartime Employment in U.S.A.

Certain aspects of the expansion of wartime employment in the United States are of more than local interest. It is estimated that eight million men and women have joined non-agricultural trades and professions since 1939, the year in which American production swung over from a peace to a war basis, and of this six million have been absorbed in munitions industries. It is also seen that though the increase in employment has been fairly distributed throughout the States the rise is much more marked in those regions where there had already been a heavy concentration of munition works. The employment figures for May 1944 reveal that the highest expansion was registered in California, with Ohio, Michigan, Texas and Indiana ranking close below. In most of the States showing the highest figures for employment, industrial expansion had started even before the war and the war only hastened the pace and it is claimed that even if there had been no war, employment would still have swollen in these States though not to the same extent as war made possible. The concentration of workers was also not so uniformly acute as was commonly believed though in Ship building and aircraft centres the concentration was particularly marked. One circumstance which

makes the problem of reconversion easier is owing to labour restrictions the employment of extra-workers in non-manufacturing trades and services had been keeping very

much behind employment in manufacturers; consequently ready openings are available in the former for a large number of discharged war workers.

It must be distinctly understood that in giving this consent the Government of India do not take any responsibility for the financial soundness of any schemes or for the correctness of any of the Statements made or opinions expressed with regard to them."

The Company has been formed to work the Guzdar Kajora Colliery, situated in the Raneeunge Coalfield near Kajoram Railway Station. The Colliery comprises over 500 bighas of coal land consisting of the well-known Kajora Seam (Selected Grade B). Under the above seam is another seam intact within a depth of 100 ft. which the Company proposes to work. The Colliery is a running one, well equipped with machineries and a Railway Siding. It has a raising capacity of 8,000 tons per month with the possibility of further increase in raisings.

The Company was incorporated under the Indian Companies Act 1913, on 24th July, 1945, but the benefits of the Colliery from 1st July, 1945, will accrue to the Company.

Clive Street Gossip

In my last week's review of the working of capital control, I was, in the main, complimentary; and I expressed my dissent from the contention of the Federation of Indian Chambers of Commerce that the control had been administered with stringency. I must, however, agree with the Federation's charge that the working of the department has been unnecessarily dilatory. If an application to the Examiner of Capital Issues is vouchsafed a reply within two months, this must be considered an exceptionally fortunate case. There have been instances when no orders have been received from the Examiner's department even after the lapse of three or four months. The question is whether it is possible to provide for a more expeditious disposal of applications. When the department was set up in the summer of 1943, it was deluged with applications for new capital issues; and one could understand some delay in the circumstances of such acute congestion. Dilatoriness in the early months of the working of the department could also be explained by the fact of capital control being altogether a new contraption. When Sir Alan Lloyd was asked, one fine morning, to set up the machinery for controlling capital issues in British India, he had to contend with various practical problems such as finding accommodation in a Secretariat that had overflowed into all nooks and crevices, finding staff at a time when there was a regular famine for qualified personnel, the importunity of applicants, high-placed and otherwise, who sought interviews and wasted the time which was sorely needed to deal with the spate of applications. It was a stupendous task, requiring organising ability as well as versatility of knowledge and shrewd judgment. As I said, delay in the early stages of the capital control's career was to be expected; and, from my personal knowledge of the working of this department, I could say that, taken all in all, cases were disposed of with reasonable expedition.

Conditions are changed now. Mr. Master has proved a competent and capable deputy. The staff in the department have become thoroughly trained in the work. There is also not such a rush of cases. I must, however, modify the last statement by saying that, since the Examiner was entrusted with the task of giving sanction for post-war projects, the work in the department has again tended to increase. But, so far as post-war projects are concerned, the criterion to be applied by the Examiner has little to do with inflation; and the consent in such cases is more or less a formal matter. In these circumstances, it is certainly up to him with statistics from the point of view of the time taken for the disposal of cases; and, if he finds that there has been unnecessary delay, he must ginger up the organisation so as to result in the disposal of cases in the speediest time possible.

I know that the disposal of the cases is not entirely in the hands of Sir Alan. There is a departmental Committee through which each case circulates. The Committee comprises the Secretary of the Finance Department, the Secretary of the Commerce Department, the Secretary of the Industries Department and the Secretary of War Transport. In special

cases reference to other departments also may become necessary. In a colliery application, for instance, the Coal Commissioner has to note on the file. Where priorities for engineering materials are concerned, the department of the Director General of Munitions Production has a say. If the application for new or additional capital is from a bank, the vital requirement is the opinion of the Reserve Bank. In the case of an insurance company, the file has to go to the Superintendent of Insurance and then to the Reserve Bank. Thus, quite a number of other officials are also included in the procedure now in vogue; and it may be contended that, even if Sir Alan and his department were quite alert, they could not vouch for the alertness of everyone of the other officials concerned. Surely, it should be possible to set up a convention that no official in this programme of circulatory noting could sit on the file for more than three days. The department of the Examiner must also be able to keep in touch with the file in this migration from department to department. By such means, the time taken by each case in its vagabonding outside the Examiner's department can be greatly curtailed.

I suggest that an application for capital issues involving only the departmental Committee in New Delhi must be disposed of within a month; and that an application which is to be sent to the Reserve Bank in Bombay or the Coal Commissioner in Calcutta may take a maximum of two months for its disposal.

Our Company promoters are looking forward to a relaxation in capital control, now that the war has ended. They base this hope on the ground that wartime capital control in Britain was recently relaxed in certain respects. The relaxation in British control was effected while the Coalition Government was in power. For my part, I am not sure if a reversal of this policy will not be initiated by the Labour Government. In the economic programme of the Labour Party, the setting up of a National Investment Board occupies an important place. In a special article contributed by H. N. Brailsford to the "Eastern Express" on "Labour's task at Home," the writer refers to the creative control of credit and investment. Socialisation of the Bank of England may be now be taken

as certain; and this will be the first measure to implement the Labour Party's programme. As regards investment, Mr. Brailsford reveals that "long-range investment will be controlled by a Board that will have powers to direct the flow of new capital into socially useful channels." In other words, capital control as it has obtained during the last six years in Britain was devised purely as a war measure and had reference solely to war necessities. The present intention, however, is to establish permanent control to capital; the aim and object of such permanent control is to ensure that the available new capital is directed only into socially useful channels. Readers of this column will recall that I have, on more than one occasion, suggested that the present department of the Examiner of Capital Issues must be so broadened, strengthened and planned as to become a National Investment Board for India. I have always believed that Company promoters in India have not infrequently abused and exploited the capital market and taken away moneys for projects which are not exactly socially useful or even projects which are detrimental to society. The company boom in 1919-22 is a painful reminder of what havoc could be inflicted on investors by unscrupulous company promoters. Much havoc has been caused even by bonafide company promoters due to lack of sufficient pre-investigation or lack of real expertness for the particular business in question.

To emphasise the necessity for control and direction of capital in India, I need mention only the cases of Woollen Companies in 1920 and of Insurance Companies in the last two years. The Currumbhoys came out with a woollen proposition say, on a Monday. The capital of

the Company was fixed at Rs. 1 crore. By the afternoon, the capital was over-subscribed. A leading broker of Bombay, went to the Currimbhoys in the evening and complained that he was not given a chance to participate in the capital. The Currimbhoys replied in an airy manner: "We will make the capital Rs. 2 crores. You can take up the second crore." So, the Currimbhoys Woollen Mill had a Rs. 2 crores capital, as if it were a matter of indifference whether a block would need Rs. 1 crore or Rs. 2 crores. On the following day, that is, Tuesday, Ratanji Morarji came out with a scheme for a Woollen mill. The capital of this concern was also underwritten and also oversubscribed by the same afternoon. On Wednesday, D. M. Wadia came out with a project for a third Woollen mill. The capital of this concern was also subscribed by the public. So Bombay, which has no winter at all and wears summer clothes all through the year, was to have three Woollen mills. Fortunately, the Currimbhoys Woollen Mill proved an abortive affair. One wise thing, however, the Currimbhoys had done. They had remitted a good part of the funds of the Company to London while the rupee-sterling exchange was near 2 shillings. The money was later brought back to India at 1s. 4d.; and, with the Company going into voluntary liquidation, the

shareholders got back all the money they had put in. The shareholders of the Morarji Woollen Mill and the Wadia Woollen Mill were not so fortunate. Small-sized plants in sharp contrast to the original grandiose plans were installed; and they were eking out a miserable existence for years and years. If you ask any of the investors who had put money in any of these woollen mills, he is sure to vote for as stringent a capital control as practicable.

Take the case of Insurance Companies. After the end of the last war, there was hardly any Indian General Insurance Company which could be said to be genuinely Indian. As is to be expected, Tatas sponsored the New India Assurance Company conceived and planned on elaborate and giant lines. The original name of the Company was Tata Prudential Assurance Company. After registration, it was decided to change the name into New India Assurance Company. The legal formalities took some time. In this interregnum the Jupiter General Assurance Company made its debut. There was such a scramble for these shares that an application for 100 shares was allotted 4 shares. Meantime, the shares of the New India Assurance came on the market at a premium of Rs. 25,

which tended to rise day by day. Within a few days, the Vulcan Assurance saw the light of day. Soon followed the Universal. British India General Assurance Company was another new comer of this period. Calcutta was not content to be a laggard in this respect; and Alpha Insurance Company was sponsored by businessmen who had affiliations in Burma, Bengal and Bombay. The Himalaya Assurance was the ultimate in this orgy.

We have witnessed a similar frenzy in the flotation of General Insurance Companies in the last few months. Of a cotton mill which I had gone to inspect in the twenties, a friend who had accompanied me pointed out there were as many chimneys as there were spindles; but even such cotton mills were keenly bought up in the frantic boom of 1921. It may be said to-day that every Managing Agency house has its own general insurance company. There is a phrase referring to each one living by taking the neighbour's washing. The general insurance companies started in this war will live by the opposite principle; each managing agency will do its own washing.

India could get along all these years without a Company for manufacturing motor cars; but if motor cars are to be made in India, it should be not by one

Company but by two. And so on. Indian capitalists have a way of crowding into the same track. It is this tendency on their part that accounts for overcrowding of sugar mills in Bihar and U.P., for overcrowding of cotton mills in the Island of Bombay and Ahmedabad. The present craze for vegetable ghee plants is also due to the same imitative zest of the capitalists.

I am definitely for the continuance of capital control, for capital control to be exercised more stringently than hitherto, for capital control being so strengthened and expanded as to blossom into the National Investment Board for India.

The opening of the Bombay Branch of the Bengal Central Bank is an event which to me has manifold significance. It marks the expansion of one of the soundest of Bengalee banking institutions to beyond the borders of Bengal and Bihar. Mr. J. C. Das, whose career and doings as a banker I have watched with great care and interest over a long period, has overcome his deep-rooted conservatism sufficiently to make a bid for an all-India status for his Bank. As he told his

audience at Bombay, the Bengal Central belongs to the medium sized banks in India. But under the zealous care of Mr. Das and, thanks to the filip given by war conditions, it has grown in stature. Its position has been maintained, if anything, even sounder than before. With increased resources and greater strength the Bank had necessarily to venture out into new spheres. And I look forward to the Bengal Central securing for itself a sound and safe position in the banking world of Bombay.

The appointment of advisers to H. E. the Governor of Bengal, coming as it does when the public is expecting the end of Section 93 in all the provinces, will deepen the general suspicion that political reform in India is farther than the most pessimistic of us believed it to be. The press note announcing the appointment points out that, irrespective of future developments, H. E. the Governor considers it unsatisfactory to delay further the formal recognition of the de facto position. It is not clear where the difference between such recognition and the absence of it lies. Both from the public and the administrative points of view, it is far more

necessary that the apprehension regarding the indefinite continuance of Section 93 regime should be allayed, than that it should be deepened by a measure which has all the look of a stable arrangement. The fact that the Governor could not find a single Indian to act as his adviser, though the number of his advisers has been increased to five as compared with three in Madras, is a comparatively minor grouse.

"EAVESDROPPER".

THIS IS NOT A PROSPECTUS
(Consent of the Central Government has been obtained to this issue under Defence of India Rule 94A. It must be distinctly understood that in giving this consent the Government of India do not take any responsibility for the financial soundness of any schemes or for the correctness of the statements made or opinions expressed with regard to them.)

Letters have been posted to the existing shareholders in accordance with the provisions of the Indian Companies Act, 1913 and the form of application and also the letter of renunciation have been issued to the shareholders. The offer to the shareholders will remain open up to 15th August, 1945, and the Directors reserve to themselves the right to dispose of the shares after that date in any manner they think fit.

By Order of the Board,
H. D. RAJAH,
General Manager.

Dated, 1st August, 1945.

IT LOOKS ALL RIGHT FROM A CARRIAGE WINDOW

BUT the traveller does not smile. The prosperous looking farms and orchards pass him swiftly by, yet he thinks only of the vast lands beyond, that grow practically nothing at all.

He knows the reason too—most of India's 700,000 villages are isolated for want of roads. If the villagers grew more food, they would not be able to get it to market. When the ROADS are made, not only will it be possible to grow more produce, but the villagers will in turn be able to buy the products of industry. Agriculture and industry are interdependent; on the development of the one depends the well-being of the other.

And the traveller looks ahead and sees the future India with a network of roads, like a vast system of arteries along which will flow to villages, towns and cities, the goods that are the life blood of a nation's health and prosperity.

DALMIA CEMENT LIMITED

The Company having been granted permission by the Government of India to extend its manufacturing capacity by 1500 tons per day which will increase the present capacity of the Company to about two and a half times, the Directors of the Company have decided to issue the following shares consisting of:

70,000 6% (income-tax free) cumulative preference shares of Rs. 100/- each at a premium of Rs. 10/- each. That is, the issue price will be Rs. 110/-.

12,00,000 Ordinary shares of Rs. 10/- each at a premium of Re. 1/- each. That is, the issue price will be Rs. 11/- per share.

The present issue of Preference and Ordinary shares shall rank *pari passu* in all respects to the existing Preference and Ordinary shares except that the new issue will participate in the profits of the Company from 1st October, 1945.

The Directors have decided to close the Shareholders' Transfer Books from 25th to 30th August, 1945, both days inclusive.

As required by Section 105C of the Indian Companies Act 1912-36, the issue is at first offered to existing shareholders and as such, only those persons will be entitled to the present issue, who hold shares in their names in the books of the Company on 30th August, 1945, or else they prove to the satisfaction of the Directors that they are the genuine holders of such shares.

Accordingly each holder holding 100 shares irrespective of the class let these 100 shares be a combination of Preference, Ordinary or Deferred shares or let them be only Preference, or Ordinary or Deferred shares individually—**WILL BE ENTITLED TO 165 Ordinary shares and 6 Preference shares out of the present issue.**

Where shares are held in a multiple or fraction of 100, the shareholder will be entitled to the nearest proportion on the aforesaid basis.

Shareholders can apply for the number of shares they are entitled to upto 10th September, 1945, only.

The Directors' discretion will be final in the matter of allotment of shares.

The application for shares along with the money as specified hereunder should reach the Registered Office of the Company or be deposited at the Company's Bankers, viz., Messrs. Bharat Bank Ltd., Lyons Range (Calcutta), The Mall (Lahore), Fort (Bombay), Daryaganj (Delhi), and Patna by the 10th September, 1945. Messrs. Bharat Bank Ltd., will accept local cheques at par. At the Registered Office of the Company all remittances or cheques will be accepted at par irrespective of the place at which they are payable.

Each application must accompany Rs. 40 per Preference shares and Rs. 2-8 per Ordinary share as application money, no premium money being called at present. The Directors will not call any further money on allotment. Further call money and the premium amount will be called only when the Directors think fit in distant future.

Please obtain full particulars from the Company.

By Order of the Board,
 For DALMIA JAIN & CO., LTD.,
 S. P. JAIN,
 Director,

Dalmianagar,
 3rd August, 1945. Managing Agents.

FORM OF APPLICATION.

(to be used as it is or to be copied and used).

To THE DIRECTORS,
 DALMIA CEMENT LIMITED,
 Dalmianagar.

GENTLEMEN,

Having paid to the Company's Bankers the sum of Rs.
 Rs. 2/8/-
 (Rupees.....) (being application money at Rs. 40/-)

Ordinary shares each of the face value of Rs. 10/- issued at Rs. 11/-
 Preference shares each of the face value of Rs. 100/- issued at Rs. 110/-

or less number of shares as per your Directors' Notice, dated, 3rd August, 1945.

I hereby agree to accept the same or any small number of shares that may be allotted to me.

 Accountants.....

Cowasji Jehangir Committee Recommendations

The following are the recommendations of the Committee set up by the Government of India to enquire into the undesirable features in the management of insurance companies in India. Sir Cowasjee Jehangir is the Chairman and Mr. K. R. P. Shroff, Sir Alan George Morton, Mr. L. S. Vaidyanathan and Mr. J. K. Lloyd are the members.

1. Transfer And Acquisition Of Shares

(a) Every shareholder of an insurance company carrying on life insurance business shall make a declaration to the company which shall keep a proper record of it, disclosing what interest, direct or indirect, he has in the shares standing in his name and in the shares standing in the name of others in the shares register.

(b) Whenever an application for registration of a transfer of shares of such a company is made, the transferee shall furnish a declaration in writing to the company whether he proposes to hold the shares for his own benefit or as a nominee jointly or severally on behalf of others and in the latter case who the beneficial owners are.

(c) If on presentation of an instrument for the transfer of a share or a block of shares, the directors find that the transferee's total paid-up holding after the transfer is likely to be 10 per cent or more of the paid-up capital of that company the directors shall not transfer such share or shares without the previous sanction of the Central Government. In the case of a bank or an investment company holding shares on its own account the percentage shall be 5 per cent. For this purpose, the total holding of any person should include the holdings in the names of others which are held either partly or wholly for his beneficial interest.

2. Changes In The Directorate.

Every change in the Board of Directors of an insurance company carrying on life business occurring by reason of resignation death or appointment of a new director shall be published in two newspapers (one English and one Vernacular) in the province in which the company is registered.

3. Capital Structure and Voting Rights.

(a) Any company carrying on life insurance business should have only one class of shares namely ordinary shares. The face value and the called-up amount should be the same for all its issued shares.

(b) In the case of insurance companies doing life business the voting rights of shareholders should be proportionate to the paid-up amount on shares as in the case of banks.

(c) An insurance company doing life business having disproportionate voting rights for different classes of shares should, within a period of one year from the commencement of the Act, make the voting rights of its shareholders strictly proportionate to the paid-up amount of the share held by them.

4. Restrictions On Investments.

(1) 55 per cent of the liabilities of a company doing life insurance business to life policy holders have to be invested in Government or approved securities. It should be definitely provided that the securities relating to the investment of 55 per cent should not be encumbered in any way whatsoever, including a banker's lien. If such securities are in the custody of a bank, the insurer should submit a certificate from the bank that the securities are held free from bank's encumbrance, including a banker's lien. If the securities are in the custody of

the directors, the directors should submit a certificate that such securities are free from encumbrance. Such certificates should be submitted to Government with the returns prescribed under Section 28 of the Insurance Act.

(2) An insurance company doing life business should not invest out of the remaining 45 per cent of its funds in any securities other than the following:—

(a) (i) approved securities;
 (ii) securities of or guaranteed as to principal and interest by the Government of the U. K. or of any Dominion, colony or dependency thereof;

(b) (i) debentures of any company or corporation secured by a charge on the real estate or plant or equipment provided interest has been paid in full regularly for at least 5 years immediately preceding upon these securities or upon securities of a similar type issued by the company and still outstanding;

(ii) debentures of any company or corporation which has paid regularly dividends on its ordinary shares for 5 years immediately preceding;

(iii) preference shares of any company which has paid dividends on its ordinary shares for not less than 5 years immediately preceding;

(iv) shares of any company which are guaranteed by another company which has paid regularly dividend upon its ordinary shares for at least 5 years immediately preceding provided the amount of shares so guaranteed is not in excess of 5 per cent of the amount of preference or ordinary shares of the guaranteeing company;

(v) shares of any company or corporation upon which regular dividends of at least 4 per cent including bonus have been paid for 7 years immediately preceding provided that no insurer shall invest his life insurance funds in the shares of another insurer being a company which carries on life insurance business;

(c) first mortgages on immovable property in British India or elsewhere where the insurer is carrying on business provided the mortgage does not exceed 50 per cent.

(d) real property for the use of the insurer.

Provided that notwithstanding the restrictions contained in the foregoing sub-clause (b) a company doing life insurance business may invest out of the remaining 45 per cent at its own discretion if such an investment is made with the unanimous consent of all the directors present in India whether on leave or not.

Provided further that whenever any such investment is made with the unanimous consent of all directors it shall be reported immediately to the Central Government.

(3) (i) A company doing life insurance business shall not invest out of the remaining 45 per cent in the shares of any one banking company or investment company more than—

2 per cent of such funds, or
 2 per cent of the subscribed share capital of the banking company or investment

company concerned, whichever is lower. Provided that if the investment is in partly paid shares, the amount invested together with the uncalled liability on such shares shall not exceed 2 per cent of such funds.

Provided that when new shares are joint stock company and the insurance company is already a shareholder it may subscribe to them although the limits prescribed above may be exceeded.

(ii) Such a company will not have more than 2 per cent of such funds in current deposit or in fixed deposit with a banking company. In no case shall a fixed deposit be for a period longer than one year.

(4) A life insurance company shall not invest out of the remaining 45 per cent in shares or debentures of any one joint stock company other than a banking company or investment company more than—

5 per cent of such funds, or
 10 per cent of the subscribed share capital and debentures of the joint stock company whichever is lower provided that this shall not apply where investment is made with a view to forming a subsidiary life insurance company with the previous consent of Government. Provided also that if investment is the partly paid shares, the amount invested together with the uncalled liability on such shares shall not exceed 5 per cent of such funds.

Provided that when new shares are issued to the enlisting shareholders by a joint stock company and the insurance company is already a shareholder it may subscribe to them although the limits prescribed above may be exceeded.

(5) A company doing life insurance business may grant loans on policies of life insurance issued by it and may grant advances to agents for their work as agents.

(6) A company doing life insurance business shall be prohibited from making advances or loans secured or unsecured for any purpose other than these provided for in (2) (c) and (5) above.

(7) Existing investments exceeding the limits prescribed in the above sub-clauses should be liquidated by the company within one year from the commencement of the Act, provided that the Central Government may sanction, for such period as they deem fit, the continuance of these investments if in their opinion such investments are in the interests of the policy-holders.

5. Return.

(a) Every company doing life insurance business, shall, in addition to the returns made under Section 28 of the Indian Insurance Act, furnish a statement of full particulars of each and every investment with full details as to the number, amount, purchase price, etc., including the uncalled amount on any shares. Any changes made in the investment during the calendar month should be reported to the Superintendent of Insurance immediately after the end of that month. Forms may be prescribed by the Government for both quarterly and monthly statements.

(b) The Superintendent of Insurance should have the power to call for any information relating to the investments of the life fund of an insurer at any time and the insurer should comply within a reasonable time.

(c) The Superintendent of Insurance have power to publish the information so obtained in a consolidated form in the Indian Insurance Year Book.

6. Directors And Officers.

(a) No two companies doing life insurance business should have a common director provided this provision shall not apply to

Dalmia Cement New Issue:

Early this year the Central Government announced that it was proposed to expand the capacity of the cement industry by 3.5 million tons per annum by 1952 and that the schemes prepared by the Associated Cement companies and Dalmias for increasing their capacity by 1.15 million tons per annum had been approved. The plan to increase the production in Jamnagar State by 100,000 tons was also approved.

The Associated Cement Companies has already raised additional capital to finance the extensions to plant and the erection of new factories. The Dalmia Cement Company is now proposing to increase the capacity of the factories by 550,000 tons per annum to one million tons per annum. For this purpose additional capital for Rs. 1.9 crores is proposed to be raised. 70,000 six per cent tax-free cumulative preference shares and 12,00,000 ordinary shares of Rs. 10 each are to be issued at a nominal premium in the first instance to shareholders. Both the preference and ordinary shares are offered at a premium of ten per cent. The present issue of preference and ordinary shares shall rank pari passu in all respects with the existing ordinary and preference shares except that the new issue will participate in the profits from October 1, 1945. Shareholders are offered 105 ordinary shares and six preference shares for every 100 shares held irrespective of class. The present issued and subscribed capital is Rs. 1 crore in 35,000 preference shares of Rs. 100 each, 6 lakh ordinary shares of Rs. 10 each and 5 lakhs deferred shares of Rs. 1 each. The announcement of the new issue of capital on bonus terms has naturally had an encouraging effect on the market but the rise in prices is pronounced especially in deferred shares.

People's Cotton Mills

The People's Cotton Mills Limited has an impressive directorate. It is proposed to start a cotton mill in the vicinity of Calcutta with 500 looms and 20,000 spindles and equip the mill with other machinery also. The authorised capital of the company is Rs. 25 lakhs in 60,000 ordinary shares of Rs. 25 each and 10,000 six per cent tax-free cumulative preference shares of Rs. 100 each. The directors and their friends have taken up 12,160 ordinary shares and 2,000 preference shares. The balance of 8,000 preference and 57,840 ordinary shares are offered for public subscription.

Guzdar Kajora Coal Mines Ltd.

Guzdar Kajora Coal Mines Limited has been formed to work the Guzdar Kajora Colliery in the Raneeunge coalfield. The colliery comprises over 500 bighas of coal land and is in workable condition well equipped with machinery and a railway siding. It has a raising capacity of 6,000 tons per month. The authorised capital is Rs. 7.5 lakhs in 75,000 ordinary shares of Rs. 10 each. The issued capital of Rs. 6.5 lakhs in 65,000 shares has been already oversubscribed. Messrs. Ohja Brothers Limited are the Managing Agents who have considerable experience of the coal industry.

A Resume of Commodity Markets

The end of the Japanese war has given rise to many problems and the prospect of an early return to peace conditions has created violent disturbances in some commodity markets in the last two days. The raw cotton market, contrary to earlier expectations, has reacted rather adversely to the news regarding the Japanese surrender and a further substantial decline in prices has been recorded. It might perhaps be said that the slump in prices for raw cotton was brought about by the decline in prices for bullion. But in the absence of any activity on the part of the Bull Syndicate the emphasis on the need for parity prices, for bringing about an increase in exports of Indian cotton, has, to a certain extent, weakened the position of bulls and it is feared that for some time the tendency both in the raw cotton and bullion markets will continue to be downwards. Perhaps, the only market that has not been affected by the news of the cessation of hostilities is the raw jute market. Earlier in the week there was even a small rise in prices with firmer upcountry advices and the reports that the floods in the Brahmaputra might possibly affect the standing crop and reduce the yield.

In the jute manufactures market the bazar has been taking a rather bearish view of the future with a discount in rates for forward positions early next month. The drop in prices, however, has not been appreciable. In the piecegoods market there is nothing of interest while in oilseeds the boom in prices has not been kept up on the expectations that with the smaller purchases by the Ministry of Food there would be a decline in prices.

The position in respect of raw jute has not been considerably affected by the new developments during the week. With mills as the principal consumers of the golden fibre and exports controlled by big organisations like the U.N.R.R.A. and the U.K.C.C. the existence of war or peace-time conditions for some time will not matter very much for the industry or the ryot. Prices are barely steady around minimum rates. So long as mills can get good prices for finished products, at anything near the maximum rates, it could be expected that a substantial portion of the new crop would be marketed around minimum rates. What is likely to happen after March 1946 cannot be anticipated at the present moment.

It is expected in certain quarters that the cessation of hostilities would possibly witness a rise in jute prices and on the expectations of larger exports and consumption by mills (of course with larger coal supplies) there would be a demand for all available supplies of jute. It need not be emphasised that the future of jute prices is bound up with so many other factors, namely, the level of prices for foodgrains within the country and the competitive prices for jute goods as packing material. Already it has been suggested that cotton is relatively overvalued and a sharp decline in prices has been recorded in the Bombay market during the week. If as a result of the re-adjustment in prices in the world's cotton markets and other competitive fibres, a general lowering of values is attained, it need not be emphasised that raw jute also will have to be marked downwards in the process. As has been pointed earlier the Central Government market in the event of prices falling down below official minima till March, 1946. The

Jute Purchasing Panel will perhaps be obliged to purchase raw jute in large quantities if in the busy season prices were marked down appreciably. Both the Provincial and Central Governments might not experience any great difficulty in this regard as mills are well sold till the end of the year and there might be a large increase in demand with an improvement in the shipping position later in the year. Mills could very well agree to pay the statutory minimum prices for jute and purchase adequate quantities of raw jute against their sales of fabrics.

The discount in the price for forward positions offered by the bazar is mainly due to the expectations of a generally lower level of prices and an increase in jute mills production. Mills, however, are not prepared to reduce their selling rates and are awaiting further developments.

That mills are still experiencing considerable difficulty in respect of their requirements of coal supplies is reflected by the production figures for the month of July. There was a decrease in total output over the previous month by 6,739 tons. The decline in the turnover last month was mainly due to a lower level of production on commercial account, particularly hessian. This perhaps explains the sharp decline in hessian stocks at the end of July. The smaller output for last month was mainly due to the poor supplies of coal as there were a greater number of working days. The position with regard to coal supplies has not improved as during the past week many of the Foster Mills had to close down for lack of fuel. The position was at one time so bad that the Calcutta Electric Supply Corporation said that some of the mills electrically-driven would have to be stopped owing to the shortage of coal supplies for generation

of power. Fortunately, however, the position did not worsen to any considerable extent.

In the raw cotton market the Bull Syndicate has not succeeded in keeping up prices for the old crop and a fall of nearly 30 points has been recorded, September being marked down to Rs. 384 from Rs. 420 last week. It is now said that Indian cotton is relatively overvalued and that it cannot be expected that exports will increase to any great extent if Indian prices did not compare favourably with American and Egyptian styles especially as it is reported that Egypt has increased considerably the acreage under cotton and the United States is very anxious to dispose of its surplus stocks. Perhaps the most discouraging factor for bulls is the inactivity of the Bull Syndicate. There has been no effort to support the market at the lower levels as with the large stocks carried over prominent bull operators cannot possibly do anything especially as bullion prices have tumbled down in the past two days and they have large commitments.

Till last week there was no suggestion that the bullion market would be affected adversely even in the event of the surrender of Japan. As a matter of fact while the stock markets were inclined to take notice of the reports that Japan had accepted the Potsdam terms, the bullion market was not adversely affected on Friday last. Till Tuesday this week there were no important developments and prices fluctuated in narrow limits. After it was known that Japan had surrendered bears got busy and what exactly helped them in hammering down prices is not quite clear. There were no reports of heavy bull liquidation but a flood of orders from upcountry centres and the anxiety of bears to wreak vengeance on bulls pushed down prices to very low levels.

ROCK SALT AVAILABLE

Rock Salt on an unrationed basis is now available to consumers from selected Appointed Retailers' Shops in Calcutta and Howrah, at the retail price of 3 Annas per seer.

The quantity available being limited, supplies will not be guaranteed, and no one will be allowed to buy more than one seer at a time.

The names and addresses of the shops where rock salt is available can be obtained from the offices of Chief Inspectors of Civil Supplies (Unrationed Food) at:

- (1) 81, Cornwallis Street, Calcutta.
- (2) 94, Chittaranjan Avenue, Calcutta.
- (3) 52-D & E, Beninandan Street, Bhowanipore, Calcutta.
- (4) 12, Nrityadhan Mukherjee Rd., Howrah.

DEPARTMENT OF CIVIL SUPPLIES, BENGAL

Jute and Jute Manufactures

Special to "Indian Finance"

(From Our Correspondent)

Calcutta, August 16.

NEWS of Japan's capitulation and acceptance of the Allies' peace terms was received calmly by the markets although there was some tendency for prices to sag in the more forward positions, notably in the heavy goods section in which April/June B. Twills are reported to have been sold by bazaar operators at Rs. 61-8. It is perhaps too early yet to say how markets will react when all implications of a world again freed from war have been carefully considered but it is logical to presume that the conclusion of hostilities in the East should be the precursor of a large demand for jute bags and wrappers of all kinds to assist in the rehabilitation of devastated territories and countries which have been occupied by the enemy. The existing limitations on shipping, which necessarily extended during the war years even to many countries outside the war zones which are normally large consumers of gunnies, should shortly be mitigated to a great extent although some time may elapse before such Eastern markets as the Dutch Indies, China and Siam will be ready to trade on something like pre-war levels. We may therefore see some recession in prices in the next few weeks but we believe that the fall, if any, will be temporary and that a recovery will be made as Far Eastern markets gradually re-open for normal trading.

As far as the jute industry is concerned the end of the war can be interpreted as a "bullish" factor inasmuch as demand must revive, and this factor is at present enhanced by the crucial position reached in the matter of coal supplies to the industry. We had warning that July would probably be a bad month for coal deliveries to Mills and that warning has certainly attained the status of a prophecy only too well fulfilled. Last week for example deliveries of coal to the Indian Jute Mills Association Dump amounted to 126 wagons or an average of only 18 wagons per day. We are able to report an improvement in supplies so far received this week but the position and outlook is very unsatisfactory. It is said that raisings at the mines have fallen off considerably to a shortage of labour but a contributing cause to the sorry showing made last week was shortage of transport, especially railway engines which were switched over to the other haulage work. At one time last week the supply position became so acute that the Southern and Cossipore Power Stations were compelled to warn electrified mills in their respective areas that it might be necessary to shut off power from certain mills. As a matter of fact several working hours were lost to mills through this cause and we have heard of at least one mill who after receiving the warning that power might not be available after 1 p.m. on a certain day accordingly allowed their workers to go home at the mid-day break, only to find that, due to last minute arrivals of coal, power was available for the afternoon shift but there were no workers to attend the machines. At time of writing most of the foster mills are closed for lack of coal.

The following is a summary of the total reported production of goods manufactured on civil and Military accounts during July 1945, as issued by the Indian Jute Mills Association, including returns of mills in the

membership of the Association and that of Gagalbhai Mill:

Total Civil and Military Accounts.			
Hessian:			
	Yards.	Tons.	
Civil	12,22,40,477	31,487	
Military	90,21,827	3,262	
Total	13,12,62,304	34,749	
Sacking:			
Civil	7,77,71,135	32,395	
Military	2,57,50,851	11,273	
Total	10,35,21,986	43,668	
Other Manufactures:			
Civil	..	2,737	
Military	..	407	
Total	..	3,144	
Grand Total	..	81,561	

Production in July dropped from 88,300 tons (the tonnage produced in the previous month) to 81,561 tons, a decrease of 7.6 per cent. The July figure is below the average monthly production for the season July, 1944 to July 1945 by 2,039 tons and is perhaps a measure of the hours lost during the month due to labour shortage and poorer supplies of coal than usual. Of the total weight of manufactured goods produced in July 14,942 tons or 18.3 per cent was on Military account; an increase of 3,845 tons as against the previous month's figure. Goods produced on Civil account amounted to 66,619 tons as against 77,203 tons in June, a decrease of 10,584 tons; giving as stated above, a nett decrease in production of 7.6 per cent or 6,739 tons.

As we write, markets are on the eve of a two-day holiday to celebrate the victori-

ous conclusion of the war with Japan and little of interest in the way of business falls to be reported in any section during the three working days under review this week.

In the Pucca Bale market there has been no business of importance done since the placing at the end of the last week of a fair order for high grades by U.N.R.R.A. Dealers are free sellers for most descriptions at minimum rates.

The Loose Jute market has witnessed steadier conditions but there has not been much business passing. Sellers are inclined to be more reserved and prices in some cases have advanced As. 4 due to advices of firmer prices in mofussil centres where imports continue on a small scale. Small business was done in special Bottoms at Rs. 12-12 for new crop. European jat, old crop, sold at Rs. 15-8 and Rs. 12-8 for Middles and Bottoms. Assam District Middles and Bottoms in 10/90 assortment came to business at Rs. 14-8 and Rs. 11-8 respectively, and Supervised jat, new crop, was done in 30/70 assortment at Rs. 15-4 and Rs. 12-4 for Middles and Bottoms.

After showing a little weakness following initial reports of a Japanese surrender offer, the Manufactured Goods market is slightly steadier except in the more forward positions. In the bazaar small discounts are offered for Hessian for delivery January-June, but mills are reserved and business is chiefly confined to inter-bazaar transactions. 11 Porter Hessian was reported done in the bazaar at Rs. 26-12 for January-July delivery. For most descriptions mills are not sellers below maximum rates and no business of importance has been reported.

In the Heavy Goods market too, business has been mainly confined to bazaar operations where some "B" twills have been reported sold at Rs. 61-12 for April-June delivery. Prices are slightly irregular with Ready "B" twills around Rs. 66 and around Rs. 64 for October-December Shipment.

Excuse me -
Inner Cleanliness
keeps the
skin clear

Powders and face creams will help you to look lovely, but the secret of a really beautiful skin is to be clean inside. Until you realise this you are wasting half the money you spend on beautifying yourself. So let Andrews give you deep-down tonic Inner Cleanliness. That is the first step to a lovely clear skin. A glass taken regularly—whenver you feel you need it—cleanses, cools, refreshes and invigorates. This is how Andrews does its health-giving work:

FIRST - Andrews refreshes and cleans the mouth and tongue.

NEXT - Andrews settles the stomach and corrects acidity.

THEN - Andrews tones up the liver and checks biliousness.

FINALLY - To complete your Inner Cleanliness, Andrews gently clears the bowels. It sweeps away trouble-making poisons, corrects Constipation, purifies the blood and clears the skin.

For Inner Cleanliness
be regular with your

facts about the 3% SECOND VICTORY LOAN 1959-61

The First 3% Victory Loan (1957) was withdrawn in February 1945, after more than Rs. 112 Crores had been invested in less than eleven months.

The 3% Second Victory Loan (1959-61), issued on similar excellent terms, is now available until further notice.

THE LOAN can be bought through your Bankers, who will arrange everything, or you can apply to the Reserve Bank of India at Bombay, Calcutta, Madras, Delhi, Cawnpore or to Branches of the Imperial Bank of India at other places or to any Government Treasury.

DIVIDENDS at the rate of 3% per annum less Income-Tax will be sent to your address twice a year on the 15th August and 15th February.

NO LIMIT is set to the amount you can invest in this Loan.

SAFETY of capital is assured. The Loan is redeemable at par not earlier than 15th August 1959 and not later than 15th August 1961.

REALISATION of your investment is possible at any time, since the Loan is readily salable in the market. Apply now!

REFUNDS of Income-Tax will be obtainable by holders of the Loan who are not liable to Income-Tax or who are liable to Income-Tax at a lower rate.

The Chinese genius for a regulated conduct of human life was epitomised in the great Analects of Confucius. Thanks to the early invention of paper in that country, for more than two thousand years his Code on good life was read and emulated by a larger number of human beings than any other secular document.

Before society can be freed from the fear of want—Confucius' last stage on the road to civilization—better human relations will have to be established and new codes framed: framed, printed and circulated on paper, greatest of civilizing agencies.

Price Re. 1

Stock Markets to-day and to-morrow:

OUTLOOK FOR SHARES, BULLION AND COMMODITIES

Now that hostilities are over, it is necessary and appropriate to pose, in this column, the important question: What is the future in store for prices of stocks and shares, of gilt-edged, of bullion and of commodities? I have received quite a number of enquiries, particularly from operators who are generally bullish and who have been somewhat unnerved by the last week-end's smart setback in the stock exchanges and in bullion.

Before one can gauge the post-war prices of gilt-edged securities and equity shares, there are two fundamental questions regarding which one must do some clear thinking and arrive at as precise answers as possible.

The first question is: How will the borrowing rates of Governments in the post-war period compare with the borrowing rates during war years? Just as, on the eve of this war, the almost universal feeling prevalent in market circles was that gilt-edged securities would be the first to be adversely affected by the war and would suffer a catastrophic fall, there is to-day an impression that gilt-edged prices during peace years will start dropping. There is no justification for this gloomy post-war outlook on gilt-edged.

This war has proved that the authorities in charge of the finances of the leading countries have mastered the technique of control of the money market in such measure and with such success that this war stands out as the first war in history in which the strongest counter in the stock exchanges is gilt-edged, and that Governments with correct monetary technique can raise any amount of Defence Loans at less than 2½ per cent.

The most important lesson to be drawn from this war development is that what counts with regard to the rate of Government borrowings is courage and mastery in correct monetary technique.

There is no reason to think that a techni-

que that has been brought to perfection in war years will be forgotten as soon as peace treaties are signed. On the other hand, it may be confidently assumed that the financial authorities will be able to pursue, in peace conditions, their declared policy of cheap money with greater ease and greater benefit to the community.

Alert watchfulness on the part of the Government with regard to borrowing rates is as essential in the coming peace period, as during the war years. Peace on this occasion means, for most of the countries, colossal reconstruction projects of various kinds. These reconstruction plans could not be executed unless the colossal sums that are required can be raised at as cheap rates as possible. We may be sure that the most important aim of every finance minister will be to maintain as cheap conditions as possible in the money market and as firm conditions as practicable in the gilt-edged market.

Countries like the United Kingdom and the United States have been able to raise their Defence Loans at 2½ per cent and less. The Indian Government raised their loans at 3 per cent. The loan that was issued recently was on the basis of 2½ per cent. If, for purposes of reconstruction, governments could borrow at 2½ per cent and less, it need not be doubted that, for purposes of reconstruction, the requisite funds can be raised at even cheaper rates.

The post-war rate of borrowing for governments is, I make bold to prophecy, 2 per cent rather than 2½ per cent.

If the yield on government securities is thus likely to be reduced from the current 3 per cent to 2 per cent, it follows that this very factor must cause considerable appreciation in all share values. For, the expectation on the part of the investor so far as the yield on equity shares is concerned will be automatically reduced to 1 per cent. This is another way of saying that prices should appreciate to such levels as will work out to post-war yields on equity shares being 1 per cent less than the war yields.

The next question to be considered is: Is there any prospect of relief in taxation? Reports received from authoritative quarters in London indicate that proposals will be placed before the Parliament before the year-end for suitable changes in Excess Profits Tax. It is clearly recognised that E.P.T. is a war measure: if the war comes to an end E.P.T. as such cannot continue. Its place may be taken by some other type or measure of taxation. But E.P.T. has to go. This is the view held in London circles.

without precedent and parallel. Controls of various kinds will be functioning. Official policies will be directed to maintaining prices at levels which guarantee suitable margins to the producers.

My view, then, is that post-war prices of commodities will be midway between war-inflated prices of the last six years and the depression deflated prices of pre-war years.

Actually, the Japanese Agency report on Tuesday afternoon that the Potsdam terms had been accepted brought about a rise in prices in the Calcutta market and the earlier losses were more than regained. Indian Irons recovered from Rs. 39.15 to Rs. 41.8, Steel Corporations to Rs. 34 from Rs. 33, Burrakurs to Rs. 46 from Rs. 43.8 and South Karanpuras to Rs. 38 from Rs. 36.2. The recovery on Tuesday afternoon has had no reference to other markets. As it was known that Bombay operators were inclined to be bullish and it was feared that there would be a break in prices for bullion, there was a tendency to take profit at the higher levels on Wednesday. The gains of the previous day's trading were to a certain extent lost. The closing of the markets for five long days and the drop in prices for silver by over 16 points and for gold by over 6 points have, however, made no great impression on the stock markets and investors have not been frightened into selling their holdings. It is true that the debacle in prices in both the raw cotton and the bullion markets has greater significance for the Bombay operators and the loss in raw cotton and bullion will affect prices in the Bombay stock market too. The unsettlement as a result of the weaker raw cotton and bullion markets in Bombay might thus prevent any attempt at a rally in prices in the stock markets in Calcutta and other centres and for some time both investors and operators might await further developments. But it is satisfactory to note that the Bull Syndicate will not be affected to any great extent by the losses in either raw cotton or bullion as the average prices for bullion had been considerably reduced by the continuous payment of "budda" differences by bears.

So far the market does not appear to be very much worried regarding the loss in the other markets having a great adverse effect on stock exchange securities.

As regards the prospects for stocks and shares in the immediate future I have on more than one occasion pointed out that the end of the war does not necessarily mean lower level of profits for Indian industries and that with the efforts of the Government to continue support to Indian industries which have been mainly catering to war demands and the large industrial development in the post-war period, a reasonably high level of profits will be earned and satisfactory dividends distributed. Thanks to the Excess Profits Tax all the leading companies, with the exception of cotton textiles, have not been able to pay sensational dividends in the war period. Even if there was a slight decrease in earnings, it would still be possible for many of the important companies to continue to pay their former dividends.

Another important factor for the stock markets is the possibility of the Excess Profits Tax being removed. Introducing the budget for 1945-46 early this year the Finance Member stated that the E.P.T. was intended only as a wartime measure and that it would be abolished when war conditions ceased to exist. If as a result of the substantial decrease in military expenditure and other expenses, it were possible to do away with the levy of E.P.T. next year, the relief on account of taxation will be appreciable. In certain cases it may even be possible to distribute higher dividends.

As for the prospects of particular industries, tea companies will continue to enjoy a good demand for all their crop while sugar mills, especially those having distilleries, will benefit from an increasing demand. The possibility of improving the by-products industry also will help the sugar industry to reduce its cost of production. The jute industry is hopeful of an increase in exports with the easier shipping position. The only bottleneck is coal supplies. Constructional engineering companies will do well while cotton mills have a large home market to deal with. It may be also asked to export to countries in the near East and certain parts of China.

All things considered present indications are that industrial activity will continue to be maintained at a high level and that with the large turnover and satisfactory profit margins shareholders interests will be fully safeguarded.

The accounts of the Steel Corporation of Bengal Limited for the year ended December, 1944, make very encouraging reading. This important steel producing company has made rapid strides in recent years. The Chairman is hopeful that with the additional units coming into operation in the current year, the earning capacity of the company will be substantially increased. During 1944 sales have improved by Rs. 50 lakhs over the previous year, the figure being over Rs. 4.85 crores. This is an indication of the improved production which the works have been able to achieve during the year. The increase in profits, however, has not been in proportion to the increase in sales as raw material prices were higher and manufacturing costs and provision for repairs and renewals also increased. The net profit, before providing for taxation and depreciation, for the year is thus Rs. 1,11,93,676 against Rs. 1,07,41,002 for 1943. The sum set aside to depreciation is unchanged at Rs. 35 lakhs but provision for taxation was higher at Rs. 44 lakhs against Rs. 42 lakhs. After paying interim dividends amounting to 14 annas per share, the same as for 1943, the amount carried forward is higher at Rs. 290,949 against Rs. 178,266 brought in.

Sales, the share of profits payable to the Indian Iron and Steel Company and the net profit for the past four years are given below:—

Year ended December.	Sales Rs.	Share of Profits to Indian Iron Rs.	Net Profit Rs.
1944	4,84,89,375	18,96,230	1,11,93,676
1943	4,35,44,557	17,26,367	1,07,41,002
1942	3,68,01,309	16,24,393	1,06,86,691
1941	3,37,24,057	13,40,405	1,00,69,740

The net profit has been struck after providing for the share of profit payable to the Indian Iron and Steel Company and provision for repairs and renewals of Rs. 42,37,021 against Rs. 37,47,061 in 1943.

Due to the considerable increase in capital expenditure it has been necessary for the Corporation to draw upon its credit facilities arranged for the purpose by the Imperial Bank of India to the extent of nearly Rs. 31½ lakhs. Total additions to the block during the year amounted to Rs. 70 lakhs.

The balance sheet for the years 1940 and 1944 make very interesting reading. It will be seen from the figures given below that the financial position of the Company has considerably improved and that even with the substantial provision for depreciation the net block is not very much lower. Liquid assets of Rs. 2.5 crores compare with liabilities of Rs. 1.93 crores in 1944 while in 1940 liquid assets of Rs. 75.72 lakhs were even lower than sundry liabilities amounting to Rs. 84.35 lakhs. One would have expected that with the large payments towards taxation, the company would have paid considerable sums by way of compulsory deposits. The figure shown under this head in the latest balance sheet is only

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, August 17.

The behaviour of the Calcutta Stock Exchange has been rather interesting during the past week. The period under review is short of two working days as markets have remained closed from Thursday till Monday both days inclusive, in celebration of the victory over Japan. But during the short period markets have remained open rather interesting developments have been noted and the rise in prices on Wednesday has rather surprised a certain section of the market. It will be remembered that the close last week was rather quiet and that there was considerable anxiety regarding the developments in the war situation. Prices for the leading counters recorded a drop of one to two points on the fears that the unconditional surrender of Japan might have an upsetting influence on the markets. The re-opening early this week was rather quiet with Indian Irons at Rs. 40-8, Steel Corporations at Rs. 33-8 and Howrah at Rs. 94-7. Prices were fluctuating around these levels till Tuesday afternoon when the first news regarding the unconditional surrender by the Japanese was received. As it was hourly expected that the war would soon be over, the actual announcement did not have any depressing effect on the market. As a matter of fact, there was some buying and quotations for the popular counters improved by one to two points. Only on Wednesday with the slump in prices for bullion and the long weekend there was a disposition to take profits and await further developments. The undertone is quietly steady. Even with a further sharp setback in bullion prices it is not expected that there will be any decline in values in the stock markets. The developments in the next few days will be very interesting.

The gilt-edged securities section was slightly steadier with the rally in prices early this week and 3½ per cent. Paper was done upto Rs. 101-15. 3 per cent Paper changed hands at Rs. 95-8. Among termable loans, 3 per cent 1966/68 were Rs. 95-8, 3 per cent 1953/55 Rs. 101-3. Conditions in the money market are easy but lenders have no appetite for treasury bills and the average discount rate has again increased to seven annas per cent.

In the cotton section, Cawnpore Textiles closed at Rs. 13-3, Dhakeswari at Rs. 27-4, Dunbar at Rs. 343 and New Victoria at Rs. 8.

Coal shares were weak earlier in the period with Burrakur being noted as low as Rs. 43-8 in unofficial transactions. But for the disturbed conditions in the market the report of the Bengal Coal Company Limited for the half-year ended April, 1945 would have been well received by the market. There is an increase in the distribution to shareholders to Rs. 18 per share from Rs. 16 per share previously. Bengal were noted lower at Rs. 785 but recovered to Rs. 50-4, while Burrakur jumped to Rs. 46-2 from Rs. 44-4. It is reported that in unofficial trading the quotation is around Rs. 45-8. Bhalgora were firm at Rs. 24-4 while East Indian were bought upto Rs. 47. New Beelbloom were in favour at Rs. 47-2 and Hurraladih at Rs. 42-8. South Karanpura have always shown a tendency to recover from the lower levels. From Rs. 36-2 they recovered to Rs. 38-2 to close at Rs. 37-8.

(Continued on page 316)

BENGAL CENTRAL BANK LIMITED

SPEECH OF MR. J. C. DAS, CHAIRMAN OF THE BOARD AND MANAGING DIRECTOR OF THE BENGAL CENTRAL BANK LTD., CALCUTTA, AT THE OPENING CEREMONY OF THEIR BOMBAY BRANCH ON FRIDAY THE 10TH AUGUST, 1945, MR. K. R. SHROFF, PRESIDENT, BOMBAY STOCK EXCHANGE, PRESIDING.

Mr. President, Ladies and Gentlemen,

On behalf of the Board of the Bank and Mr. Jehangir P. Katgara, J.P., our Local Director, I extend to you all a most cordial welcome. I am grateful that at considerable personal inconvenience you have graced this occasion with your presence to encourage us in this new venture of doing business in your city. We may assure you that we will strive to serve you and your Province to the best of our ability and deserve ourselves of the encouragement that you have shown to us.

Before I proceed further I am in duty bound to express our grateful thanks, which I do from the bottom of my heart, to you Mr. Shroff for having kindly agreed to preside over this function to-day. Your reputation as the President of the Bombay Stock Exchange has extended far and wide and your knowledge and experience of the intricacies of Stock Exchange operations in Bombay—which are of international character—are unique. Keeping the Bombay Stock Exchange in a proper mood is one of the most difficult tasks particularly because Bombay is the financial nerve of India and that too sometimes a very sensitive one, and this you perform, Sir, I have learnt from various sources, in a very admirable manner. The connection between commercial banking and Stock Exchange is a very intimate and deep one and as such we feel all the more fortunate in having you as the President this evening.

As a new comer to your city I shall with your permission state briefly some facts concerning us. But before I say something about our Bank, Bombay has advanced very far industrially and commercially and has a number of big banks and other financial institutions, which every Indian can feel proud of, yet your brothers in the Eastern Province have somehow or other lagged behind industrially and commercially and as such the institutions controlled by them have so long been rather of a smaller stature. It was therefore a matter of great pride for us that our first Bengalee-managed bank to be admitted as a member of the Calcutta Clearing Bank Association and also to be the first one to be scheduled to the Reserve Bank of India. This Bank, this Bank was established in the city of Calcutta in 1918. The activities of the Bank were mostly confined to the Province of Bengal with an extended sphere of service only to the neighbouring Province of Behar. The conservative and it was not in favour of expansion unless the capital structure and the volume of business handled by the Bank justified it. After a strenuous service extending a period of over 27 years and after acquiring what may be termed as a decent capital structure, the Directors have thought fit by the necessity of sphere of activities wider. It is now on the threshold of becoming an All-India institution thus taking its rightful place amongst the big credit institutions in the country. Our success in that direction will largely depend upon the high standard of banking service that we can continue to render to our clients and the greater measure of public support we are fortunate enough to have.

Our present subscribed capital is now Rs. 50 lacs; and paid-up capital is about Rs. 49 lacs. Known in terms of paid-up capital of Banks, as we have with a capital of Rs. 50 lacs may be said to come in the medium group. It was our intention and it is our endeavour, to raise the capital to Rs. 1 crore. The demand for the shares of the Bengal Central Bank is considerable; and there should be no difficulty in bringing the capital to Rs. 1 crore. However, due to the control of capital issues it is not possible for even a well-established old institution like the Bengal Central Bank to raise the additional capital even when the Board of Directors considered it desirable and necessary. It is necessary to secure the consent of the Central Government for the issue of such additional capital. In the giving of such consent there are, presumably, various criteria to be kept in view by the authorities; and I, for one, would think that one of the most important criteria in this regard is the standing of the institution and the stability of its structure as

well as its ability to raise the capital with ease. It is, therefore, a matter for surprise that, while absolutely new institutions have no difficulty in securing the consent of the Central Government for raising large capital like Rs. 1 crore or for increasing the capital further to Rs. 2 crores, as matters stand at present, the Bengal Central Bank has to be satisfied with a plan to increase the capital instalments. This is a matter of public importance as affecting the conditions under which such an important machinery as capital control is functioning. It is also a matter affecting established concerns as against new concerns who are thus able to start straight-away on a basis which puts the older institutions at a handicap. I am not urging these in any spirit of complaint or grievance. My purpose in referring to our present capital is firstly to impress upon our constituents that our goal is definitely to bring the paid-up capital to Rs. 1 crore, and that the delay in achieving this goal is due to a policy of the Government which is not altogether clear to us. I have also another purpose in bringing up this matter. The Government certainly owe it to the public and to the established Banks in particular, to explain why things with regard to the issue of capital are made easier for new institutions than for old, institutions.

However, the Board, as sanctioned by the Examiner of Capital Issues, has decided to issue further capital of Rs. 25 lacs at a premium of Rs. 3 per share, and we are issuing same almost immediately thus bringing the subscribed capital of the Bank to Rs. 75 lacs.

This matter of increasing the capital structure of old and established banks in the country has a bearing on the problems of our post-war banking structure. That India was underbanked before the war was admitted on all hands. War gave a fillip to new banks being developed and it is yet to be found whether this present boom in banking will continue in the post-war years in the shape and form as it is to-day. It should be the effort of everyone of us to see that our Banking and Credit structure are maintained at a fairly good level if we want to escape the serious consequence of a post-war depression. To my mind, one thing that can save the post-war debacle in the banking structure is a sound and large capital for banking institutions. It should, therefore, be the banking policy of the country to help, as far as possible, those well established Indian Banks to increase the capital structure and thus enable them to absorb post-war shocks of depression. We naturally look to the Reserve Bank of India—the guardian angel of credit and banking in the country—to take a lead and give as much of sympathetic assistance as possible in this direction to the deserving banks in the country.

I may also utilise this occasion to refer to another matter which is engaging considerable interest not only in Indian financial circles, but in international financial circles also. One of the most marvellous achievement of this war is the complete success with which every Government of standing has been able to keep its interest rates under control. This war has been described as a 2½ per cent war. On a superficial view, it may be thought that one of the worst sufferers from such low interest rates would be Banks. But the experience of the war has proved otherwise. If our interest on gilt-edged investments has gone down appreciably, and if, correspondingly, the interest on loans and advances has also had to be reduced Banks in general have been benefitted by equally drastic reductions in rates which they have had to pay on deposits. This experience of low rates in this war has taught Banks the technique of doing banking business in relation to an all-round lowering of interest rates.

It is in the light of this experience that we have to view the future of interest rates in the post-war period. It is now generally agreed that post-war reconstruction schemes will engage the active interest of every country which seeks to find adjustments in the new kind of economic world. In other words, every Government will find it necessary to raise large sums from capital market for various kinds of reconstruction plans. Another lesson which has been impressed by present events is that the bigger the borrower, the more dominant role he can play in the money market. If the Governments in the post-war period will continue to be borrowers on a large scale, it follows that Governments will maintain the completest control over interest rates; and what is more, they have now the technique and experience to make this control a hundred per cent practical success. Banks, then, have to be prepared for an indefinite continuation of this era of cheap money and low

interest rates. There need be no apprehensions that the profits of Banks will be affected by this prospect. On the other hand, Banks will be the main instrument through which the benefits of cheap money will be distributed over the entire population. To my mind, it would, therefore, be in the self-interest of Banks themselves to co-operate in future with the Government and other big borrowers in maintaining this cheap monetary rates which will ultimately help the economic reconstruction of our country which is so dear to every one of us.

Without inflicting a repetition of figures to you Gentlemen, I would briefly put the position of this Bank as follows:—

The paid-up Capital and Reserve are about Rs. 56,00,000. The deposits amount to Rs. 7,55,93,000. The liquid assets comprising of Cash, Bank Balances and market value of Securities are Rs. 6,46,88,000. The proportion of liquid assets is therefore 85½ per cent of deposits. The balance of 14½ per cent of deposits may be easily realised out of the loans and advances amounting over Rs. 2 crores, to enable the Bank to promptly pay even 100 per cent of the depositors' money if called upon to do so. This obviously is an ideal condition of a Deposit Bank. Undoubtedly the safety offered to its depositors is unique. I have already said above that we are almost immediately increasing the Capital of the Bank by another Rs. 25 lacs and this would mean greater security to everyone dealing with the Bank. Furthermore, we shall make supreme endeavours to render efficient service to our clients as is humanly possible. It will be for you, Gentlemen, to judge us and make this as one of your own bank in Bombay.

Experienced and well-known businessmen such as Mr. B. N. Chaturvedi, President and Mr. J. M. Dutt, an ex-President of the Calcutta Stock Exchange Association Ltd. and Mr. I. B. Sen, President of the Bengal National Chamber of Commerce, are in the Board. This is an additional guarantee that the affairs of this Bank will be kept straight and sound.

Here in Bombay we have been fortunate in securing the help and collaboration of Mr. Jehangir P. Katgara, J.P. of your city and this certainly augurs well for our institution. I thank him for the services he is rendering to the Bank. We are placing the Bombay Branch under the charge of one of our able and experienced officers Mr. S. Banerjee.

Gentlemen, I would not take up more of your valuable time and thank you all for giving me a patient hearing.

THE SALEM-ERODE ELECTRICITY DISTRIBUTION CO. LTD.

The Fourteenth Annual Ordinary General Meeting of the Share-holders will be held at the Registered Office of the Company, No. 14, Old Court House Street, Calcutta, on Friday the 31st August 1945 at 3.45 p.m. for the following purposes:—

- (1) To pass the Directors' Report and the audited Accounts for the year ended 31st March 1945.
- (2) To declare a dividend.
- (3) To elect a Director in place of the retiring Director.
- (4) To elect Auditors for the ensuing year, and to fix their remuneration.
- (5) To transact any other business that may be brought forward.

The Share Register of the Company will be closed from 22nd August 1945, to 31st August 1945 both days inclusive.

OCTAVIOUS STEEL & CO. LTD.,
Managing Agents.
Calcutta, 7th August 1945.

Note: In accordance with a Government of India Notification No. 1564/OR/42 dated 7th September 1942 the Directors' Report and the Accounts will not be published.

The Directors have recommended payment of a dividend at the rate of 3½% free of income tax for the year ended 31st March 1945.

RUBY GENERAL INSURANCE COMPANY LIMITED

A Fair Deal for Indian Insurance

Commenting on the status of Indian Insurance Companies Mr. B. M. Birla, Chairman, Ruby General Insurance Co., Ltd. presiding at the 9th General Meeting held on the 10th August, observed:

"The voice of Indian Companies so far has been very feeble in the Insurance Associations which are dominated by foreign interests. The time has come when the representatives of the Indian Companies should have greater voice in the various Committees. The various Indian Insurance Associations should be strengthened and should further the cause of Indian Insurance vigorously."

Referring to the progress of the Company he said:

"Despite the war situation characterized by stringent control resulting in depletion of stocks, etc., with a consequent decrease of premium, our accounts disclose a very successful year of trading. The Company has now attained a position of great stability derived from a substantial volume of business distributed throughout the country which speaks of the confidence inspired by its method of working."

The advance in the premium income is reflected in the following net premium figures:—

	1943.	1944.
Fire ..	Rs. 11,47,557	15,92,707
Marine ..	3,64,897	4,40,019
Motor & Accident ..	2,81,699	4,14,101

In spite of the Bombay explosion the claim ratio has increased only slightly in the Fire Department. In the Marine, Motor & Accident Departments the ratio showed at the same time a considerable decline.

Our Life Department continues to make steady progress and last year again contributed a substantial figure of over a crore and a half as against one crore in the previous year showing an increase of 50 per cent over the previous year's total.

Life expenses have been high this year on account of the cost of transferring the Head Office and records back from Delhi to Calcutta and of further extension of business in new territories.

BRIGHT FUTURE FOR INDIAN INSURANCE

The long protracted European war has at last come to a successful end and the end of the war in the East too is in sight. That end will terminate a number of the difficulties through which we have had to pass during the past five years. Though there will be a fall in prices and in War Risk rates resulting in a shrinkage of premium yet this should be more than compensated by an increase in the quantity of stocks and an increase in the number of industrial concerns which are envisaged in the post-war period with a resultant all round increase in insurance business.

We welcome the new Indian Companies that have been started during recent years. They will add to our strength immensely and we

should now be able to stand on our own legs. There is great scope for the development of insurance business in and outside India. All that we require is close co-operation, good faith and the spirit of mutual aid. Given these things we can be sure of making substantial progress in the field of business. The total General Insurance business in India at the end of 1943, according to the Insurance Year Book was Rs. 763 lakhs out of which the Indian Companies' share was only Rs. 289 lakhs. That shows the great scope we have for expanding our business if only joint steps are taken by us to educate the public about the desirability of placing their insurances with the Companies of their own country. There is no reason why the concerns under non-Indian management should not insure with Indian Companies as they have grown and thrived on Indian soil and are financed in the majority of cases by Indian capital.

I should like to make a reference here to the amendments proposed to the Insurance Act. There has been going on in our country a race for more and more business at higher and higher costs. This has begun to strike at the very roots of Indian Companies which are in the infant stage working wholly within the limits of their own country. Such unhealthy competition has not the same consequence for foreign companies having strong financial resources and world wide ramifications. There is some controversy as regards the limitations of over-all costs. We have tried our best individually and through the various Associations for years to have matters set right but despite all the efforts we have made, the situation has gone from bad to worse. Surely we have had enough of the very bitter experience of higher and higher costs during war time. No one would wish to have any more of it. Should we wait till the lesson is learnt by each and every Company as it must be sooner or later or are the results of the past few years sufficient to open our eyes and make us realise that it is high time we put our house in order? The answer is plain. Sound business can only be built upon foundations which are solid.

The amendment of the Insurance Act in the year 1939 which limited the agency commission improved the situation to a certain extent but this was a partial control over the cost of acquisition and it is desirable that this control be perfected.

Looking to the circumstances as they are, I feel convinced, that only legislation which would limit commission and expenses that is, the overall costs, would enable us to establish business on a sound basis.

I must warmly thank our valued clients for their continued support. I have also to place on record my appreciation of the efficient and enthusiastic work done by our Chief Agents, Agents, Organisers and Members of the Staff.

(Continued from page 314)

a little over Rs. 2 lakhs. No large amounts therefore, will be received by way of tax refunds:

	1940	1944
Liabilities	Rs.	Rs.
Capital paid-up: Ordy.	2,80,18,500	296,48,900
" " Pref.	1,19,95,400	119,95,400

	5,86,38,035	7,43,85,548
Liquid Assets	75,71,638	2,50,00,496

Satisfactory progress has been reported by the Ruby General in all departments and as the Chairman remarked "the company has now attained a position of great stability derived from a substantial volume of business distributed throughout the country." The premium income of the Fire Department improved in 1944 to Rs. 15,92,707 from Rs. 11,47,557 in the previous year, in the Marine department to Rs. 4,40,019 from Rs. 3,64,897 and the Motor and Accident department to Rs. 4,14,101 from Rs. 2,81,699. New business in the Life department was very much higher at Rs. 1.5 crores against Rs. 1 crore.

In spite of the Bombay explosion the claim ratio increased only slightly in the Fire department while in the Marine, Motor and Accident departments the ratio showed a considerable decline.

On order to extend further its activities the Vanguard Fire and General Insurance Company is issuing further capital, 1,50,000 ordinary shares being issued at par. The offer was made in the first instance to shareholders. The directors have reserved the right to dispose of the shares which are not taken by shareholders in any manner they think fit. The entire issue is under-written. It is not clear why.

(Continued from page 314)

Jute shares were very steady on the expectations that the end of the war would result in a large increase in exports and that jute mills would do well. But for the reports that mills are still experiencing considerable difficulty in respect of coal supplies, the rise in prices would have been even higher. The bigger denomination shares improved by ten to fifteen points, Anglo-India being Rs. 535, Bally Rs. 426, India Rs. 782, Ganges Rs. 667, Kamathatty Rs. 810 and Nuddes Rs. 143. Craig were lower at Rs. 13-4 while Presidency opened firm at Rs. 15 and closed easier at Rs. 14-4.

In the Engineering section there is nothing of importance. Indian Iron were for a time quoted below Rs. 40 but they recovered to Rs. 41-7 to close at Rs. 40-14. Steel Corporation also improved from Rs. 33 to Rs. 34-6 to close at Rs. 34. Other shares were uninteresting with Braithwaite quoting Rs. 14-7, Jessop Rs. 26-3 and Marshalls Rs. 6-7.

Sugar shares were steady at the lower levels, Balrampur changing hands at Rs. 17-12 and Carew at Rs. 31-4. Ramnugger remained steady on special buying at Rs. 23-1.

There is good enquiry for tea shares and there are not many sellers. New Docars were Rs. 1,510 cum-dividend, Jaybirpara Rs. 49-4 and Ledo Rs. 286.

In the Miscellaneous section, Burma shares were active with a rise in Burma Corporation to Rs. 6-12. Slight profit-taking caused a setback to Rs. 6-6. Consolidated Tin also were higher at Rs. 4-5, I. B. P. at Rs. 125 and B. B. P. at Rs. 6-4. The rise in B. B. P. to Rs. 6-9 was not sustained. B. I. C. were fluctuating around Rs. 7-8 while Dunlop were very firm at Rs. 73-4. Midnapore Zemindary were Rs. 193 and India Paper Pulp Rs. 225. I. G. N. were steady at Rs. 220. Calcutta Electric were noted as high as Rs. 47-4 but with selling, the quotation has come down by over three points to Rs. 44-8.

COMPANY REPORTS

BOWREAH COTTON MILLS CO., LTD.

H-Year ended	30.6.1945	31.12.1944	30.6.1944
Sales	Rs. 36,48,954	33,16,962	38,20,367
Net profit	8,75,178	9,25,797	8,70,501
Taxation	7,00,000	7,45,000	7,10,000
Depreciation	75,000	75,000	75,000
Dividend A'm't	1,05,000	1,05,000	90,000
Carry F'd	51,787	56,609	55,813
Div. % Ordy.	10	10	7½
Div. % 'A' Pref.	4	4	4
Div. % 'B' Pref.	3½	3½	3½

(Half-yearly General Meeting on 27-8-1945 at 3 p.m. Books closed from 13-8 to 27-8-45). Audited accounts for the half-year ended 30th June, 1945.

The accounts, after writing off for Depreciation Rs. 75,000, show a profit of Rs. 8,00,178-1-2; to which has to be added the balance brought forward from the last account, namely Rs. 56,609-5-9; giving a total of Rs. 8,56,787-6-11; from this is deducted the amount set aside as a Reserve for Taxation and as provision in respect of E. P. T. Compulsory Deposits Rs. 7,00,000; leaving a balance for disposal of Rs. 1,56,787-6-11.

The Directors recommend that this should be dealt with as follows:—

To paying the dividend on the 'A' Preference shares for the half-year ended 30th June, 1945 at Rs. 4 per share (i.e., 8 per cent per annum), without any deduction for income-tax payable by the Company Rs. 24,000; to paying the dividend on the 'B' Preference shares for the half-year ended 30th June, 1945 at Rs. 3-8 per share (i.e., 7 per cent per annum), without any deduction for income-tax payable by the Company Rs. 21,000; to paying a dividend on the Ordinary shares at Rs. 10 per share (i.e., 20 per cent per annum), without any deduction for income-tax payable by the Company Rs. 60,000; and to carry forward Rs. 51,787-6-11.

The period under review witnessed no major fluctuations in the cotton market and, with demand both on Government account and for civilian requirements remaining at a high level, mills have been able to place their maximum productions of yarn and piece-goods. The labour situation continues to be difficult in consequence of the shortage of procurement of adequate coal supplies is still a major problem.

Early in the year the Bengal Government concluded after a short trial period that the quota system would not solve its cloth distribution dilemma, and it was decided that plies should be delivered to a number of Handling Agents and forwarded by them as rationing scheme was later put into operation and it has since been announced that full rationing will come into force early in September.

Mg. Agents.—Messrs. Kettlewell Bullen & Co., Ltd.

Authorised, Issued and Subscribed Capital—Rs. 18,00,000 in 6,000 Ordinary, 6,000, 8 per cent Cum. 'A' Pref. and 6,000, 7 per cent Non-cumulative 'B' Preference, all of Rs. 100 each, fully paid up.

(Half-yearly General Meeting on 31-8-1945 at 12-5 p.m. Books closed from 17-8 to 31-8-45). Audited accounts for the half-year ended 30th June, 1945.

Amount brought forward from previous half-year Rs. 93,725-0-6; the Profit and Loss Account shows a profit of Rs. 15,28,903-15-11; total Rs. 1,62,228-0-5; Transferred to Taxation Reserve Rs. 9,70,000; Reserved for E.P.T. Deposits Rs. 1,65,000; leaving for disposal a total sum of Rs. 4,87,628-0-5.

The Directors and the Managing Agents recommend payment of the following dividends free of income-tax:—

Rs. 3 per share on the Preference shares Rs. 48,000; Rs. 15 per share on the Ordinary shares Rs. 3,60,000; and carrying forward in Profit and Loss Account Rs. 79,628-0-5.

In accordance with the Indian Jute Mills Association's Working Time Agreement the Mills, during the period under review, worked 54 hours per week.

Jute has been entered at or under cost price and fabrics, of which there are no unsold stocks, at contract rates.

The accounts reflect the working of the Company for the past six months, during the whole of which one of the mills has been requisitioned. It will be seen that the trading results of the past half-year have been satisfactory.

(Half-yearly General Meeting on 6-9-1945 at 11 a.m. Books closed from 23-8 to 6-9-1945). Audited accounts for the half-year ended 30th April, 1945.

After providing Rs. 3,00,000 for Depreciation and Rs. 40,30,000 for Taxation and Cesses, including Excess Profits Tax and transferring Rs. 1,00,000 to a Reserve for Amenities for Miners and their families and Rs. 1,00,000 to a Reserve against reduction in valuation of stores, there is a balance at the credit of the Profit and Loss Account of Rs. 10,05,315-8-5 from which they recommend:

Dividend of Rs. 10 per share Rs. 4,00,000; Bonus of Rs. 8 per share Rs. 3,20,000; Provision for Commission to Directors Rs. 7,200; and Carry forward Rs. 2,78,115-8-5. Raisings were 8,10,616 tons against 7,23,283

tons and 7,62,537 tons in the preceding half-years.

This satisfactory increase in raisings has earned for the Company a bonus under Government's Target Scheme of Rs. 25,040-9-8 for the six-monthly target period ended 31st March, 1945.

Despatches, which include purchased coal as usual, were 13,55,160 tons against 11,90,749 tons in the half-year ended 31st October, 1944, and 9,13,398 tons in the half-year ended 30th April, 1944.

(Half-yearly General Meeting on 27-8-1945 at 3-10 p.m. Books closed from 13-8 to 27-8-45).

Audited accounts for the half-year ended 30th June, 1945.

The accounts, after writing off for Depreciation Rs. 50,000, show a profit of Rs. 8,70,718-10-2; to which has to be added the balance brought forward from the last account, namely Rs. 57,675-2-0; giving a total of Rs. 9,28,393-12-2; from this is deducted the amount set aside as a Reserve for Taxation and as provision in respect of E. P. T. Compulsory Deposits Rs. 7,80,000; leaving a balance for disposal of Rs. 1,48,393-12-2.

The Directors recommend that this should be dealt with as follows:—

To paying a dividend on the Share Capital of the Company at Rs. 5 per share (i.e., 10 per cent per annum), without any deduction for income-tax payable by the Company Rs. 95,000; and to carry forward Rs. 53,393-12-2.

Mg. Agents.—Messrs. Kettlewell Bullen & Co., Ltd.

Authorised Capital—Rs. 50,00,000. Issued and Subscribed—Rs. 19,00,000 in 19,000 shares of Rs. 100 each, fully paid up.

Synopsis of balance sheet as at 30-6-1945.

(From our Readers)

National Research Council:

I am surprised to see that you have not emphasised and explained an excellent idea contained in the last sentence of your note on the above subject. The sentence reads thus "If the work of the Council is entrusted to men of ability and ability alone then the Council has a great future." Every thinking man in this country recognises that research is essential for the development of industry, just as independence is necessary for our full National Development.

But the recognition is only in theory. Narrow and irrelevant considerations come when selecting men for high research posts. Representation for minorities and provinces and other considerations should not crop up. The scientific achievements of Britain, U.S.A. and Russia are in no small degree due to the recognition of this fundamental truth.

But in India many did not know who the first F.R.S. was until revealed by Prof. A. V. HILL. The second F.R.S. fought hard to keep the wolf from the door. The greatest scientist of the day is not called to assist in the proposed scientific reorganisation. Could it not be laid down statutorily that all research appointments should go only to outstanding men?

"A Scientist"

Capital Control:

I do not want to be understood to flatter this scribe 'Eavesdropper' for I don't know him. But I think I am not true to myself if I do not express what I honestly feel about his writings.

Having been a reader of 'Indian Finance' almost from its start, I have naturally an affection for the paper and admiration for 'Eavesdropper'.

His first article on Capital Control, factual, clear, and to the point, especially in answer to the Federation of Indian Chambers, left me with the impression that 'Eavesdropper' has not pointed out the defect of "Capital Control". But the second article falsified the fears. And there is little to differ with what Eavesdropper has said in support of Capital Control.

May I add that Indian Capital will not be 'shy' if people are certain that each venture which has the stamp of the Examiner is a fairly safe enterprise? Mushroom enterprises will not come into existence as in the past and with the probability of investments the investing habit will develop.

Moreover, as Capital Control is done with the consultation of so many departments, this will help Government to have a planned industrial economy. If there is no control, Departments may never know what Industries are growing and which firms require Government help and direction.

Abdur Rahim.

Cloth Muddle:

I appreciate that for want of space you have not discussed fully the cloth question. But you have brought out the essentials of a good scheme for the proper distribution of cloth. As it is we find a mad race to blame each other. The producers say that everything is O.K. at their end and that the fault lies with the distribution system. The retail dealer swears he

has not got enough to distribute. Where does all the cloth go if it is produced in sufficient quantities?

I think the Central Government in complete collaboration with the Provincial and State Governments should come forward to tackle this question. Food Rationing, Mr. Kirby, the Rationing Adviser has said, should continue for some years more. Cloth, I think, should follow suit. We have at least some knowledge of the magnitude of the first problem. We have not got even that with regard to the second.

Export should be stopped. The war no more demands cloth. Coal and other materials will be available in larger quantities to keep mills working. Let Government take statistics of our production capacity and our needs and plan accordingly.

A. R. Gopal.

Bank Rate:

I don't find any reason why the existing Bank rate of 3 p.c. should be lowered to 2 p.c. as suggested by you in the issue of 21st July. When money has become cheap the lowering of the Bank Rate will facilitate the further expansion of credit in the country which consequently will lead to wild inflation.

While fully aware of the fact that the Central Bank should accommodate the member Banks and the Government, the lowering of the Bank rate would rather worsen the situation. The expansion of credit in the country has gone to an enormous extent. The time has come for a halt to this wild expansion.

**FRUIT EVERY DAY
KEEPS THE DOCTOR AWAY**

HEALTH is the essence of life. Doctors advise us to eat fresh fruit daily to maintain a good standard of health.

So in any planning for a healthier and wealthier India, intensive development of fruit-farming is essential. Also cultivation must be extended over areas that now lie wastefully barren. But fruit is a perishable crop and must be carried to market quickly. ROAD TRANSPORT would solve the problem, as it reduces handling to a minimum, and is the safest, quickest way to carry the produce to market.

Good communications are essential to the nation's health and prosperity. Railways and Rivers have played and will continue to play an important role. But the Road is at least equally important. Above all else India urgently needs MORE ROADS.

GOOD ROADS ARE AVENUES TO PROSPERITY

Fact Parade

Improvement of Marketing in India:

The Government of India, it is understood, have appointed a Committee to go into the question of marketing, consisting of 15 members with Sir T. Vijayaraghavachariar as Chairman.

The Committee will, among other questions, deal with the improvement of marketing, the maintenance of standards of purity and quality, establishment of ware-houses and the functions of the Central Agricultural Marketing Department.

The Committee includes among others: Mr. Hossain Imam, Member, Council of State, Sir Datar Singh, Khan Bahadur M. A. Momin, Dr. L. C. Jain, the Hon. Mr. Somerset Butler and Sir Theodore Gregory.

Timber for Civilian Use:

As a result of diversions of military demands secured by the Hydari Mission it will be possible during 1946, to release 5,00,000 tons of timber for civilian use, of which about 2,00,000 tons will be available to the civil markets, the balance being allotted for certain essential Government and semi-Government civil uses, says a Press Note. In order to safeguard against profiteering and with a view to enabling timber to reach places where it is most needed, measures are being taken to introduce price control over timber; and to facilitate and control movement of timber with the help of the Timber Transport Advisory Committee.

Indian Institute of Bankers:

Sir Chintaman Deshmukh, Governor of the Reserve Bank of India, was elected President of the Indian Institute of Bankers at the annual meeting of the Institute held in Bombay recently.

British Cycles for India:

Every effort is being made in Britain to provide India with all the bicycles she needs. An official of the War Export Group of the British Cycle Industry stated that the next 12 months may see a return to the pre-war position when India was supplied with as many machines as she needed.

"Our greatest problems are those of labour and shipping," he said. "But the industry is hopeful that these will be eased in the near future. There has been a slight increase in the allowance of cycles for export, but in terms of actual machines, this will not make a great deal of difference to India as we are trying to distribute increases equitably among different export markets. However, expansion of the export side of the British cycle industry is going ahead as fast as possible."

Development of Mining in Surguja State:

It is learnt that with a view to helping the development of the mining industry in the Surguja State, the Government of India have included in their post-war development plans a scheme for the construction of a broad gauge Railway from Chirmiri on the B.N.R. to Barwadih on the E.I.R. The proposed Railway will cover the whole of the mining area in

the State which is about 400 square miles. The Surguja State has large deposits of steam and cooking coal and Messrs. Tata Iron and Steel, Co., are at present carrying on boring operations with a view to taking a lease of coal.

Latest Food Index: A Slight Drop:

The Economic Adviser's All-India index of wholesale prices of Food Articles (Base: last week of August, 1939=100) worked out to 237.9 for the week ended August 4, 1945, as compared with 238.5 for the previous week.

Between the two weeks 'Cereals' and 'Pulses' remained stationary while 'Other Food Articles' declined by one point.

U. P. Electricity Schemes:

The proposed Nayar dam in the Naini Tal district and the Rihand dam in the Mirzapur district, Mr. Watal, Chief Engineer, U. P., pointed out, should cover the entire area lying between the Ganges and the Jumna in the province. It was also proposed to increase the number of generating stations on the Ganges, from 5 to 7.

Mr. Watal indicated that it would be possible for the Government to provide electrical energy at a very cheap rate to the people, namely at 1.3 pice per unit.

U. P. Milk Supply Scheme:

It is learned that the Director of Animal Husbandry, U.P. Government and the Registrar, U.P. Cooperative Societies are conducting many surveys to determine the quantity of milk likely to be available to the general public and the cost of collection and, pasteurization under hygienic process before bacterial multiplication starts in.

Supply of pure milk to expectant and nursing mothers and children of vulnerable age group is a problem engaging the attention of the milk committee appointed by the U.P. Government.

The total cost of the scheme to the Government is Rs. 21,61,869. The provincial Government's share of the cost will be Rs. 13,05,037.

Archaeological Museum for India:

It is understood that under the re-organisation scheme of the Archaeological Department, a museum at an initial cost of Rs. 1 crore and with a recurring expenditure of Rs. 7 lakhs has been proposed to be built in Delhi.

Research Work in Irrigation in Madras:

The Irrigation Department of the Government of Madras have secured the services of Dr. V. I. Vaidyanathan of the Punjab Irrigation Research Institute and a member of the Soil Research Sub-Committee, Government of India, as Director of Irrigation Research in Madras.

Travancore has Thorium Deposits:

Thorium which is noted as one of the radioactive elements and which is held by experts as next in importance to uranium is found in Travancore mineral lands disclosed Sir P. C. Ramaswamy Aiyar.

Sir C. P. Ramaswami Aiyar said: "The atom bomb was used at present as an instrument of destruction. But this source of energy might be diverted to the production of power in peace time in addition to uranium. The experts had held that thorium was only next in importance to uranium and this thorium is found in our mineral lands."

**Durability
+
Precision**

BATU Tools are unexcelled in durability and high precision, for these are made from the finest procurable materials in a factory housing the latest type of machinery, by highly skilled craftsmen under expert European supervision. All Batu Tools are carefully checked before leaving the factory by trained engineers. You'll never regret using Batu Tools. Batu Tools conform to British Industrial Standards and are tested and approved by Government Workshops.

TREASURY BILLS

Central Government:

Tenders for Rs. 2,00,00,000 (Rupees two crores) of three months' Government of India Treasury Bills were opened on Tuesday, the 21st August, 1945. Total amount offered was Rs. 3,34,00,000 (Rupees three crores and thirty-four lacs only). Tenders at Rs. 99-14-6 per cent were accepted in full and those at Rs. 99-14-3 per cent were allotted approximately 63 (sixty-three) per cent. Lower tenders were rejected. Total amount accepted was Rs. 2,00,00,000 (Rupees two crores only), the average rate of accepted tenders being Rs. 0-7-0 (Annas seven only) per cent per annum.

Tenders for Rs. 2,00,00,000 (Rupees two crores) of three months' Government of India Treasury Bills will be received on Tuesday the 28th August, 1945, at Bombay up to 11 A.M. (Standard Time) and up to close of business on Monday the 27th August, 1945, at other centres. Successful tenders should make payment on Friday the 31st August, 1945, or on Thursday, the 30th August, 1945, where Friday is a holiday. Other conditions are as usual.

During the week ended, the 17th August, 1945, Government of India Treasury Bills for Rs. 74,50,000 (seventy-four lakhs fifty thousand only) were sold in favour of the Reserve Bank of India.

CENTRAL LAND & BUILDING SOCIETY LIMITED
2/2, SOUTHERN AVENUE, CALCUTTA

CALCUTTA, Friday Evening.

Extremely easy conditions have prevailed in the money market in the past week and call rates are nominally quoting $\frac{1}{2}$ percent in Calcutta and $\frac{1}{4}$ percent in Bombay. For the first time in several weeks the Central Government has been able to get its requirements in full though it should be remembered that at the auctions held this week only a smaller amount was offered. Against the offer of Rs. 2 crores applications for Rs. 3.34 crores were received. Bidding was more keen and the amount of accepted tenders was Rs. 2 crores against Rs. 1.7 crores. The average discount rate was unchanged at 7 annas percent per annum. The offer for next week has been maintained at Rs. 2 crores. In view of the smaller demand for funds and the large cash balances with banks, treasury bills might be taken up in larger sums at around the present discount rate.

The gilt-edged market has been easier in sympathy with the other sections and $3\frac{1}{2}$ percent Paper is nearly 1 point lower at Rs. 101. Enquiry for terminable loans also has been quite satisfactory and quotations, as a result, are a few annas lower. It would appear that there has been a slowing down in the rate of subscriptions to Government loans and that unless the present situation in the market gets clear, there will not be any large revival of interest in gilt-edged securities. In view of the unsettled outlook and the anxiety of banks to keep large cash resources, for some weeks there might be greater response for treasuries.

The returns of the Reserve Bank for the fortnight ending August 17 have to be covered, as the statement relating to the week ended August 10 was not received in time last week. There is a slight increase in notes in circulation to Rs. 1,138.88 crores from Rs. 1,132.7 crores on August 3. Notes held in the banking department have declined to Rs. 13.87 crores from Rs. 20.41 crores as also rupee coin from Rs. 16.52 crores to Rs. 16.17 crores. There is no change either in sterling or rupee securities. The fears of a contraction in the note issue have therefore been falsified.

In the banking department Central Government's balances are higher at Rs. 346.18 crores against Rs. 343.03 crores. Other Government accounts, on the other hand, are slightly lower at Rs. 16.89 crores against Rs. 18.51 crores. Bank balances with the Reserve Bank are Rs. 6.5 crores higher at Rs. 92.11 crores. Sterling payments have been on a rather large scale in the fortnight under review, total receipts being Rs. 16.59 crores. The latest figure shows an increase by this amount to Rs. 454.86 crores. In the absence of any large increase in Central Government's balances it is to be presumed that disbursements have been rather large and that the increase in note circulation is due in the main to these disbursements.

The statement of the Imperial Bank for the same fortnight also reflects the easier conditions in the market. The Imperial Bank was unable to utilise remuneratively the large increase in cash balances as a result of maturing treasury bills and the decrease in advances. There is no important change in the figure of deposits at Rs. 238.73 crores, but investments are lower at Rs. 144.25 crores against Rs. 148.07

crores and advances at Rs. 61.23 crores against Rs. 64.94 crores. There is a jump in cash balances to Rs. 42.84 crores from Rs. 45.21 crores.

The statement of scheduled banks for the week ended August 10, reveals a further increase in working capital. Demand liabilities were Rs. 75 lakhs higher at Rs. 630.06 crores and Time liabilities Rs. 1.92 crores higher at Rs. 247.86 crores. Cash on hand is slightly lower, but balances with the Reserve Bank have improved from Rs. 85.05 crores to Rs. 88.73 crores. With the drop in Advances to Rs. 271.63 crores from Rs. 277.86 crores and bills discounted to Rs. 13.74 crores from Rs. 14.04 crores one would have expected that cash balances would have shown a greater increase. Whether the small improvement in total cash balances is due to the greater interest in gilt-edged securities is not clear.

The discussion in these columns regarding the prospects for bullion has, as may be expected influenced the views of bullion dealers both in Calcutta and Bombay, leading to somewhat heavy sales early this week. It was pointed out last week that even with the substantial drop in prices for both gold and silver, rupee prices were still artificial, and that with the removal of closed market conditions, prices would ultimately be quoted around parity levels namely, Rs. 46 per tola for gold on the basis of the British Treasury's purchase price of 172s. 3d. and Rs. 64 per 100 tolas of silver on the basis of the London price of 25 $\frac{1}{2}$ d. per ounce.

In the comments by "Watchdog" on the same subject, unfortunately a proof mistake crept in and the sentence read: "At this time next year gold is likely to be nearer Rs. 30 than Rs. 70." The statement is verbally correct in so far as the parity of Rs. 46 per tola is nearer Rs. 30 than Rs. 70. But the figure 30 is obviously an error. Sir Chunilal Mehta, one of the prominent dealers in the Bombay market, is not in agreement with the view that bullion prices should be gradually marked down and that there is no justification for the present level of prices being quoted. His contention that there cannot possibly be a decline to below parity levels is incontrovertible and is amply borne out by our discussion in these columns last week, but it is not clear why there can be no imports of the precious metals in the next two or three years or that prices in Bombay will be governed entirely by the demand and supply within the country. The sterling bloc is a prominent producer of gold. It cannot be expected that the principal gold producers within the sterling area will agree to sell to the British Government all their output at a fixed price what time they can hope to get better prices for their production in markets like Egypt and India. If gold supplies were available within the sterling area for investment purposes, exchange control cannot be taken to the point of barring transactions between countries within the sterling block and if the necessary shipping space were made available, the tendency would ultimately be towards parity with prices in New York and London.

The Bull Syndicate evidently is disturbed over the developments in the past two weeks and is trying its best to pass

THIS IS ONLY AN ANNOUNCEMENT AND NOT A PROSPECTUS.

(The Prospectus has been duly filed with the Registrar, Joint Stock Companies, Bengal and a copy thereof may be inspected at the Registered Office of the Company).

"Consent of the Central Government has been obtained to the issue of Capital subject to the condition that so much of the Capital as cannot in the Government's judgment be properly expended until some uncertain future date is invested and kept invested in prescribed securities which will not be released until the Central Government (in consultation with the Crown Representatives if any Indian State's interests are involved) is satisfied that the time has come to make corresponding payments for the purpose which are consistent with the enforcement of any measures of control or restriction that may be in operation at the time when such release is applied for. It must be distinctly understood that in giving this consent the Government of India do not take any responsibility for the financial soundness of any schemes or for the correctness of any of the statements made or opinions expressed with regard to them".

LAKSHMI TEXTILE MILLS LTD.

(Incorporated under the Indian Companies Act, 1913.)

AUTHORISED & ISSUED CAPITAL Rs. 25,00,000

Divided into 10,000 Preference shares of Rs. 100/- each and 1,50,000 Ordinary shares of Rs. 10/- each. Payable 25% on application; 25% on allotment and the balance in such call or calls as the Directors may determine.

The preference shares carry a fixed cumulative Preferential dividend at the rate of 5 per cent per annum, free of Income-tax and to a right on a winding up to be paid all arrears of preferential dividend to the commencement of the winding up and also to be repaid the amount of capital paid up or credited as paid up thereon in priority to any payment in respect of the Ordinary shares. The Preference shares do not carry any vote.

SOLICITORS:

Messrs. P. D. HIMATSINGKA & CO.,
6, Old Post Office Street, Calcutta.

REGISTERED OFFICE:

9, JAGMOHAN MULICK LANE, CALCUTTA.

OBJECTS:

The Company has been formed for the purpose specified in the Memorandum of Association of the Company and in particular for the purpose of establishing one or more textile Mills in Behar. The

Company will carry on the business of spinning, weaving, dyeing, bleaching, mercerizing and printing of cloth and yarn both cotton and silk. It is proposed to erect the mills at some place near Bhagalpur which is the junction of E. I. Railway and O. & T. Railway and is also accessible by metalled road and river. There are even now very few cotton mills in Behar and their production is not sufficient to meet even a portion of the demand of the Province. Bhagalpur is famous for its silk and weaving industry and the Company will therefore be able to get trained labour at the spot. The war has proved conclusively that the present Cotton Mills in India, even if they work up to capacity, are unable to meet the internal demand of cloth and yarn. There is cloth famine in the country and Behar is one of the worst sufferers because it has very few mills. There is always a great demand of Indian textiles from Middle East, China and other neighbouring countries and due to the devastation caused by the War and owing to the big post-war reconstruction programme of the various countries such demand is likely to increase to a great extent after the War. The Company intends first to start spinning mills with about 25,000 spindles to manufacture yarn which is in great demand in Behar. Later on it proposes to equip the factory with looms also to weave cloth both silk and cotton. Provisional order for the purchase of machinery has already been placed with Messrs. Tweedales & Smalley (1920), Ltd., the well-known textile machinery manufacturers of U. K. and a sum of Rs. 1,00,000 has already been paid to them in advance.

PRELIMINARY EXPENSES:

Preliminary expenses are estimated at Rs. 25,000.

UNDERWRITING COMMISSION AND BROKERAGE

Brokerage at Re. 1 per Preference share and As. 4 per Ordinary share will be paid in respect of accepted application received through any broker.

DIRECTORS' QUALIFICATION AND REMUNERATION:

The qualification of a Director is the holding of shares of the face value of Rs. 2,500 in the Company. The remuneration of the Directors shall be a sum not exceeding Rs. 100 per meeting of the Directors besides all travelling and other expenses.

INTEREST OF DIRECTORS:

Mr. Lakhprasad Shah, Mr. C. P. N. Singh and Mr. Nandlal Chowdhury are Directors of the Company and also Directors of Managing Agents' Company and as such are interested in the remuneration payable to the Managing Agents. Mr. P. D. Himatsingka is a member of the firm of Messrs. P. D. Himatsingka & Co., Solicitors of the Company and as such interested in the remuneration payable to the Solicitors.

MANAGING AGENTS AND THEIR REMUNERATION:

Messrs. Shree S. B. Limited, have been appointed Managing Agents of the Company for a period of 20 years from the date of incorporation of the Company at a remuneration of Rs. 2,000 per month as office allowance and a commission at 10 per cent on the net yearly profits of the Company within the meaning of Section 207 of the Indian Companies Act, besides all costs and charges incurred by them for and on behalf of the Company. The Managing Agents have agreed not to charge any allowance or commission until the Mills of the Company start working.

APPLICATION FOR SHARES:

Application for Shares should be made on the form to be obtained from the Registered Office of the Company or from the Banks of the Company and their Branches.

If no allotment is made the deposit will be returned in full and where the number of shares allotted is less than the number applied for, the excess will be utilised for payment of the amount of the allotment money and the balance, if any, will be refunded.

Application for less than 10 Preference shares and 100 Ordinary shares will not be entertained.

The Pressure of Problems

There is little evidence of appreciation on the part of the Government of India of the rush of problems consequent on the sudden advent of peace. If here and there, one hears of talks of post-war economic reconstruction or of attempts to solve the political deadlock, close scrutiny of these talks and reports tends to show that, even in the spheres of emergent action, the spirit of leisurely routine has been allowed to intrude and even to dominate. As soon as the news of the German surrender was made known in India, we hastened to emphasise that the interval between the defeat of Germany and the defeat of Japan should not be exaggerated and that at any rate, the decline in the war expenditure, which the end of the war in Europe necessitated, should be made up by increase of outlay on schemes of economic development in India. The German surrender was followed not long after by the announcement of the Wavell Plan to end the political deadlock in India, to establish a National Government at the Centre and prepare the ground for the formulation of a permanent constitution for the whole country. The Wavell Plan unfortunately proved a failure. And regret at the failure was somewhat reduced by the feeling that was then prevalent, that it would in practice matter little so long as the war with Japan lasted. And now that the Japanese surrender too is due to be completed within a few days, all the problems that had been put off in shortsighted love of momentary freedom from worry now come crowding in and clamouring for immediate attention. And there is every danger that, owing to the practical difficulties of fixing priorities and seeing clearly their inter-relations, all or most of these problems will be either neglected or tinkered with in a disastrous fashion. It was never realised that, if the pre-occupations with the war were availed of as a handy pretext for the postponement of every problem, the Government would be only laying up a huge pile against the day, when the demand for the time and attention of the Government would be even greater than during the war period.

The problems which have been so put off to the present moment may for the sake of clarity of understanding be said to fall under three divisions. There is first of all, what has come to be known as the Indian political problem. Secondly there are the economic problems of the post-war period, as it was called, which are distinguishable into two groups, the problems relating to the liquidation of the war effort and the return of the national economic life to a normal peacetime basis and secondly, the laying of the foundations for that positive economic development and progress, which people in every country feel they are justly entitled to after all the sacrifices they have made during wartime. As we have observed already, these three groups are distinguishable more as a facility for thinking them out than as a faithful correspondence with the realities. Ever since planning began to loom large in public discussion, it has been a commonplace, that no system of national economic planning will be possible without popular ministries at the helm of affairs both in the Centre and in the Provinces. In a sense, the solution of the political problem, viewed as one of installing ministers with popular support at the head of the Government, is the starting point of our efforts to solve the economic problems of the present, though, the repeated failures of the attempts to bring the major parties together raises the doubt whether it is not the economic problem that holds the key to the solution of the political, rather than 'vice versa'. In any case, to increase the orbit of popular Government to as wide an extent as possible in the present conditions is a necessary preliminary to any wise attempt either at orderly liquidation of the war effort and the complicated economic machinery that goes with it, or at the more positive problems of post-war reconstruction. If the authorities had cared in the least to relieve, to the extent possible, the pressure of problems at this juncture, they would have restored Provincial autonomy and effected a key move which would avoid the series of stalemates that have been of late our lot as a nation.

As things are, the failure of the Simla Conference, the advent of a Labour Government in Britain and the unexpectedness of the sudden surrender of the Japanese have only led to what is virtually a further postponement of the consideration of our urgent problems. The decision to hold general elections so as to have the new Assemblies for the next budget session can only mean that the deterioration of the objective position will continue unchecked for a few months more, unless it be that Lord Wavell succeeds in persuading His Majesty's Government to take certain steps even before the holding of the elections. The uncertainty of political trends and of the British Government's policy has, it would appear, led to a

certain amount of listlessness and indifference in Government circles. It was not long ago that the heartening progress of the Simla Conference in its early stages threatened the present members of the Viceroy's Executive Council with an abrupt end of their official careers. And now the approach of the elections and the possibility of Lord Wavell returning from England with fresh proposals have again disturbed the tenor of official life. The rumours about some members of the Viceroy's Council contemplating resignation will strengthen the popular fear that, at the present moment, little of enduring value to post-war reconstruction, either in the political or in the economic sphere, is being accomplished at New Delhi.

In these circumstances, there is every danger that matters of crucial importance to the problems on hand will tend to be settled as matters of mere administrative detail. Already, it is understood that the cancellation of war contracts is being proceeded with and that firms, who had such contracts are frantically beginning to adjust themselves to the new situation. Fear of unemployment, which the country had not known for the last four or five years, has again been revived. And forecasts based on a general understanding of world trends and of the undoubted possibilities of development in this country may fail to have their full heartening effect. When it is remembered that, in modern economic life, the cessation of war contracts is not an isolated measure, but tends to spread its effects to wider and wider spheres of national economy, the need to combat the adverse effects by the introduction at the same time of large schemes of economic development will be seen to be an absolute necessity, both in the near and in the long view. We have pointed out on various occasions that, inchoate as it is in some respects, the work done in regard to post-war reconstruction has been concrete enough to yield a number of schemes which can be immediately put into effect as a potent antidote to the post-war slump.

It should be remembered that the paramount need at the present moment is to prevent the sharp decline in the purchasing power of the middle classes and the working classes. Such a decline, occurring in a setting in which the effects of wartime inflation still remained uncorrected and unadjusted, would lead to a disastrous distortion of the patterns of economic life in the country. The fact, that the fight against inflation has to be carried on both by anti-inflationary measures of the past and by a positive deflationary policy carried out within the limits, does not, however, imply that public expenditure on developmental schemes should be checked and the distribution of the national income allowed to suffer further disturbances in the interest of the rich, through a fall in the purchasing power of the lower classes.

This objective of public policy has been duly emphasised by Sir Chintaman Deshmukh in his speech at the annual general meeting of the Reserve Bank of India. And if this objective is remembered, it will be readily agreed that no time can be lost in inaugurating such schemes as will tend to the wide diffusion of purchasing power over all parts of the country. The schemes that answer to this description are those which will relate to irrigation and anti-erosion measures, road-building and the development of house-building throughout the country which during these years of the war has suffered a great deal. But both the Government and the business classes are thinking far more of the most spectacular phases of our postwar industrial development such as those of the establishment of new industries through large scale imports of costly machinery and plant from abroad. The issues arising from this partiality are discussed at length in the "Clive Street Gossip" section of this issue. Suffice it here to say that both Government and the industrialists will be making a grave mistake, if they overlook the dangers of undue impatience in this regard. The experiences of the Indian Industrial Mission are sufficient proof that foreign industrialists have been encouraged to entertain an exaggerated sense of their bargaining power. Around the import of costly machinery and the establishment of new industries, there is a cluster of baffling problems which we shall be better able to solve, once we have smoothed the return of the national economy to the conditions of normal peacetime.

The problem, in regard to the establishment of new industries have been tackled by Sir Ardeshir Dalal during his recent tour abroad; and the results were given out by him in a Press Conference during the week. Sir Ardeshir had a four-fold aim in his foreign tour, firstly, to enquire into the possibilities of obtaining capital goods from abroad, secondly, to ascertain if any of the modifications of the safeguard clauses would be acceptable to the U. K. industrialists, thirdly, to make sure of the facilities available for Indian students for technical training, and lastly, the availability of experts for Indian industries,

Excepting in regard to the training of Indian students, in all these objects, the results must be pronounced to be far from encouraging. As we have hinted already, foreign manufacturers are anxious to make out that India's orders are a matter of indifference to them and that technicians cannot be spared except for industries in which they will have a share in the control. As for modification of safeguards clauses, British industrialists are not prepared to consider any change except in the wider setting of constitutional changes. It is, indeed, strange that Sir Ardeshir should have thought of consulting British industrialists, when the whole scheme of safeguards will be rendered obsolete if a new constitution should be formed on the basis of recent declaration of the British Government. Sir Ardeshir's statement reinforces the view that we have expressed, that instead of seeming to seek favours abroad while paying very much more than is reasonable for our needs, India will be well advised to turn her attention for the moment to the bases, rather than the superstructure, of her national economy.

The Case for Uniformity of Rates

By Prof. L. A. NATESAN

The end of the World War II marks the termination of the emergency situation which called for a system of priorities and restrictions on rail traffic. Abandonment of wartime controls cannot, of course, be accomplished in one step, and the transition to peacetime economy may take some time. Not only railways, industries also require some time for the inevitable shift to peacetime standards of production. This will bring up a number of difficult problems connected with the release of labour from war production, reconversion of plant, etc., before one can visualise the return of normal times. On the success of this readjustment depends the resumption of production and distribution on the full scale of civilian consumption. Indian industries may before long have to compete with the superior organization and earlier preparation of foreign industries to meet this situation. Domestic production in many lines cannot contemplate a free field to itself. An appeal for protection in the present temper of the consumers, may receive but little support.

To many industries, peacetime production may mean little more than a return to pre-war conditions. The movement towards industrial expansion received an artificial impetus from the conditions of wartime demand for domestic production of many goods. Of the many industries which have thus come into existence of late, some depending entirely on military requirements, may now have little economic justification and may even have to face extinction. But there are undoubtedly some others which will strive to survive, and will. To these, the return of peace brings a new situation. The adaptation of production and marketing to post-war conditions raises special problems to all industries. During the emergency the normal volume and flow of traffic have been

AVERAGE RATE CHARGED PER TON PER MILE (In pies).

S. I.	5.54	5.42	5.15	11.40	10.80	10.60	9.60	9.61	9.71

The figures included in the table refer only to the two pre-war years and the first year of the war, as the later years do not present a true picture of normal conditions. The statistics of the average rate per ton per mile, it should be remembered, represent not so much the rate as the revenue earned per ton per mile, which depends on a number of other factors besides the rate. Even with this limitation, a glance at the figures indicates the difference from railway to railway. Coal rates in 1939-40, for instance, varied from 2.58 pies on the B. B. & C. I. to 5.15 pies on the S. I. per ton per mile. The rates on grain and oil seeds extend from an average of 5.48 pies on the E. I. to 10.6 pies on the S. I. These differences have to a certain extent a definite justification. The rates charged by a railway must have some bearing on the costs of working. These differ according to the nature of the territory traversed, the density of the traffic carried, the length of haul, the proportion of the high-rated to the low-rated traffic, etc. A railway administration must earn enough to meet its operating expenses and the fixed charges from the commodities carried by it. It is only proper that differences

distorted beyond recognition by the priority controls and restrictions. One of the immediate tasks for transport and industry alike will be to restart the movement of traffic along the pre-war channels. Another is to make trade sensitive again to the rating system which has had little significance in terms of markets and movements during the last four years. The lifting of transport controls will render the rating system operative again. But not all industries are certain about the manner in which it will help them in re-establishing themselves in their market areas, and the uncertainty is even greater in the case of the new industries. Railway rates will prove a crucial factor in determining their future.

There has come about a remarkable change in the status of Indian railways during the war, which may have a profound consequence on future rating policy. This is the final termination of company-management of railways and the operation of all State-owned railways by the State. The contractual rights of companies stood, or were at least supposed to stand, in the way of certain reforms long desired and long deferred. One of these relates to the correction of the unduly individualistic character of the rating systems. This is the result of the practice followed by each administration which endeavoured to improve their revenues by discriminating in favour of short lead, and against long lead, traffic.

That this practice is not to the interest of Indian industries was recognized. But it was defended on the ground that company railways could not be coerced into accepting a policy which might affect their revenues. Whether this view is correct or not hardly matters at the present time. With complete State-management these objections are removed at a single stroke and there is nothing to prevent an overhaul of the entire rating system removing all these anomalies. When the State owns and operates the railways, it is more likely to be interested in the financial results in the aggregate than in those of individual railways. There is certainly something to be said in favour of a policy which does not discriminate between the users of poor and prosperous lines. Such discrimination is unavoidable in an arrangement where the poorer railways are expected to pay their way by charging higher rates, the incidence of which is likely to fall on those obliged to utilise them. A national policy will incline towards levelling these differences. The pressure of traders will also be towards securing a uniformity of rates throughout the country.

Decisions on these important questions of policy may have to be reached during the present period of transition. The rating systems in India reveal differences from railway to railway. The tariffs published by each railway present many instances of variations of rates on the same commodity. Some idea of this may be conveyed by the crude statistics of the average rate charged per ton per mile published by the Railway Board. The statistics of manufactures might have been more illuminating. But unfortunately nothing more homogeneous than 'Coal' and 'Grains and oil seeds' is at present available, and these may be seen from the following table:

Railways	Coal for Public.			Grain and Oilseeds.			Other Commodities.		
	1937-38	1938-39	1939-40	1937-38	1938-39	1939-40	1937-38	1938-39	1939-40
B. N.	3.45	3.39	3.53	9.51	9.06	9.38	4.55	4.76	5.43
B. B.	2.56	2.58	2.58	7.77	8.27	8.64	9.96	10.30	10.80
E. B.	4.36	4.25	4.32	8.85	8.31	7.83	9.01	8.77	8.59
E. I.	3.12	3.22	3.23	5.52	5.57	5.48	7.38	7.40	7.21
G. I. P.	2.56	2.86	2.71	7.32	6.96	7.12	8.16	7.93	8.40
M. & S. M.	4.03	3.95	3.58	6.64	7.13	7.31	8.53	8.50	8.55
N. W.	2.31	2.47	2.36	7.24	7.58	7.93	8.81	9.04	9.55
S. I.	5.54	5.42	5.15	11.40	10.80	10.60	9.60	9.61	9.71

in the transportation costs should be reflected in the rates charged by each railway, and the unevenness in rates cannot be avoided so long as these differences persist. But this is not to say that all the present differences can be justified on this ground alone.

The effects of the existing system of different rates levels in the country are not to be minimised. They have led to considerable unevenness in the economic development of the country. The mischief is not so great in respect of intra-railway movements of traffic, that is, those originating and terminating within the territorial limits of each railway system. The case is entirely different with inter-railway traffic. Producers situated in the high-rated area find themselves at a disadvantage in competing with those of an area enjoying lower rates. The cost of procuring raw materials and consequently the cost of manufacturing for the former tend to be higher than those for the latter. They suffer from a twofold disadvantage—higher cost of production and unfavourable rates. When competing with each other in a common market,

the producers in the high-rated area will be compelled to absorb the rate differences out of their own profits and will be placed in a position of disadvantage. The existence of industries in such regions of higher-rate levels, is not a sufficient justification of the prevailing rating system; industrial development might have occurred in spite of rate disadvantages and might have proceeded faster under a different level and structure of rates. Wartime emphasis in the distribution of industry in India has led to hopes of increased support to industrial development in provinces where it has been backward. One of the important factors in promoting such relocation of industries is the railway rating policy.

The demand for uniformity of rates, particularly inter-railway rates, has behind it a strong case at the present time. Besides removing the present unjustifiable rate differences, it would serve to facilitate location of industries in the most advantageous places unhampered by unfavourable rates. The freight rates not only influence the pattern of industrial distribution; they also affect the output of existing locations. For railway rates limit the market area served by a producer or group of producers. Finally, uniformity at the inter-railway level would help to simplify the present complexity of the rates structure.

But the case for uniformity, particularly with State-management, is likely to be pressed too far. Rates cannot ignore the differences in transportation costs. Nor can it disregard differences in rate policy founded on demand and cost factors. The need for caution is also underlined by the danger of impairing the position of long established industries resting partly at least on rate advantages which may be cancelled by uniformity of rates. Too radical a change from the present system may thus prove a doubtful gain to many interests.

It is on such considerations that one is induced to seek a compromise in a system of regionalised rate territories. If the present railways are regrouped into a fewer number of consolidated systems, each unit will represent a territory much larger than each railway system at present does, and this will make for greater uniformity of rates within each such territory. The inter-railway rates, when this change has been carried out, will cease to reflect the disparities of many systems and will lend themselves to smoother adjustment. The proposal for amalgamation of the existing railways is supported for other and stronger reasons. The rates aspect is not negligible. In fact, a decision to expedite consolidation will, from this one consideration alone, be amply justified.

The Marketing of Agricultural Produce in India—IV

(Contributed)

In my previous articles in this series, I discussed the various factors that impair the efficiency of agricultural marketing, deny the grower his full and legitimate share of the price and keep down the reputation of Indian produce in overseas markets. The Agricultural Departments in India have been doing much to improve the quality and to increase the quantity of the cultivator's outturn, but in securing for the grower the best possible financial return for his produce, these Departments have not been of much help; in fact marketing was not considered within their province at all. Till the appointment of the Royal Commission on Agriculture, there had been no attempt at a thorough and comprehensive investigation into the problems concerning marketing. To investigate among other things the existing methods of transport and marketing of agricultural produce and stock was a special task assigned to the Commission and it could be said that with the publication of their report a new era in Indian agriculture began.

Among the various recommendations of the Commission for the improvement of marketing conditions, the establishment of a sufficient number of well regulated markets easy of access to the cultivator should be considered the most important, as far as protection of the producer's interest goes. Within the last fifteen years, most of the Provincial Governments and many prominent Indian States have given effect to this recommendation. The first piece of legislation in India establishing regulated markets dates back to 1897 when the Berar Cotton and Grains Market Law was notified by the Foreign Department of the Government of India. Being the first attempt to regulate markets, this measure could not effectively do away with many of the malpractices then existing and the merchants could depend on their ingenuity to defeat most of the provisions intended to defend the ryots' interest. The measure, however, continued in force till it was superseded by the Cent-

ral Provinces Cotton Market Act, of 1932 and the Central Provinces Agricultural Produce Markets Act of 1935. The Bombay Cotton Markets Act of 1927 came next, though actually its provisions were enforced only much later and the Act itself repealed under the provisions of the Bombay Agricultural Produce Market Act of 1939. In 1939, the North West Frontier Province and Punjab also passed similar measures and in the next year Sind followed suit. Bills were introduced in Bihar, U.P. and Bengal also. The Congress ministries in Bihar and U.P. resigned before they could see the legislation through, while in Bengal, the measure is still pending with the Legislature. Sind and the N. W. F. P. are yet to enforce the Act, while in the Punjab the Government had to encounter opposition and open demonstrations from the mercantile classes before they could put the Act into force. Among Indian States, the Nizam's Dominions was the first to establish Regulated Markets. Subsequently, Gwalior, Baroda and Mysore have passed legislation, though regulated markets have been started only in the first two States. The authorities in Mysore are making arrangements for starting two regulated markets this year.

As the very term 'regulated market' implies, the legislative enactments referred to above are intended to regulate transactions; the existing agencies of distribution are not done away with; they are only controlled. By implication, the usefulness of the functions of middlemen is recognised, though their emoluments are fixed and regularised and openings for corruption and fraud minimised.

The procedure adopted in the establishment of regulated markets and the machinery and methods of their administration are more or less uniform wherever legislation has been enacted. The Provincial Government or the chief revenue authority of the District concerned would notify a particular area within which the Government propose to regulate the purchase and sale of agricultural produce. In the definition of "Agricultural produce" there are significant variations. According to the Bombay Agricultural Produce Markets Act of 1939, agricultural produce includes all produce of agriculture, horticulture and animal husbandry specified in a schedule. According to the Central Provinces Act of 1935 as amended by the Act of 1937 "agricultural produce" shall not include cotton, the Act giving the term a residual definition, without limiting its scope by any specified schedule. In C.P. cotton is covered by a special Act enacted in 1932. The Sind and Punjab Acts take the model of Bombay and gives a list of the commodities that come within "agricultural produce" though this list could be expanded or items from it removed by fresh notifications; the Madras Act, as the name of the measure itself indicates, concerns only "commercial crops" in which are included, cotton, groundnuts and tobacco. Under the Hyderabad Act, agricultural produce means any produce of land which is declared as such by the Government by notification, excluding cotton which itself is separately defined as to include ginned cotton, unginned cotton and cotton waste but for cotton markets also, the same provisions apply. The North West Frontier Act is the most comprehensive of all, agricultural produce under the Act covering all produce of agriculture or horticulture, animals and their hides, skin and wools and any articles of food and or drink wholly or partially manufactured from "agricultural produce."

Usually the limits of the notified area would be a specified radius from the market yard or from premises of any familiar government institution like the Revenue Headquarters. In the Nizam's dominions, the notified area ranges from a radius of two miles around the market yard as in Nanded and Latur to a radius of ten miles as in Badepally and Raichur and to twelve miles in Aurangabad. In Madras a whole District is the notified area for groundnut. The notified area refers only to the limits within which commercial transactions in agricultural produce are prohibited except under the rules and regulations prescribed. The produce that is being bought and sold within the notified area will be brought from a much larger distance, sometimes even as far as 80 miles from the market yard. Within the notified area no person would be allowed to set up any place for the purchase and sale of agricultural produce, except under a license granted by the respective Government and except in accordance with the provisions of the Act and the conditions and rules specified in the license. Generally an exception is made to this in the case of bonafide agriculturists or their agents disposing of their produce to a buyer who purchases it for his own private use.

The enforcement of the provisions of the Act and the administration of the market in general are vested in a market committee constituted for the purpose. The market committee would consist of representatives of growers, of traders and

manufacturers, the Government and invariably of the local body having immediate jurisdiction over the area. The different enactments show variations in the total number of members for a Market Committee and the proportion of representation allotted to different interests. For example the Madras Act provides for a maximum number of 12 members in a committee, leaving the minimum unspecified and the proportion of traders and growers to be determined by the Government for each market committee independently. In the Central Provinces a minimum of 10 and a maximum of 16 members is fixed for each committee of whom not less than one half should be elected from the growers, 2 elected from local bodies, 1 from the Government and the remaining seats to be filled up with elected representatives of the traders. In Bombay, the membership of the committee varies from 12 to 15, with growers and traders each allotted not less than one third of the seats, with one representative of the local body, the rest being made up by Government officials. In Punjab, the membership of the committee is either 9 or 16 and the allocation of seats to the different interests depends on the actual total number in any committee.

These committees function as corporate bodies and usually, hold office for two or three years. They are empowered to appoint Sub-Committees like the Finance Sub-Committee and the Disputes Sub-Committee. The executive work of the committee is entrusted to a Superintendent with a staff under him; when a single market committee has more than one market yard within its jurisdiction, each market yard will have a separate staff. Each market committee has its own set of bye-laws for the conduct of its business. The Acts define the powers of the committees in respect of borrowing, imposing levies, and also the circumstances under which the Government might suspend or cancel the committees. Among others, one important function of the committee is to check weights and measures in use within the regulated market.

All the functionaries in the market such as the Adatya and weighman will have to take a license from the committee or to get themselves registered on payment of specified fees. Invariably the weighmen who function in the market area are given badges from the market committee even when they are not regular employees of the committee. The Acts fix the rate of commission the adatyas can charge and the customary deductions from the seller's price are either entirely abolished as in Madras and Bombay or their number reduced and the rates specified as in Hyderabad. When deductions on account of charity or gorakshan are permitted, the market committee makes itself responsible for controlling the expenditure. Many market committees have arrangements for a news service and also undertake propaganda towards improvement of the quality of the produce that comes to the market. In return for all the services they render the committees charge a small cess on the produce, invariably collected from the seller and this cess forms one of the main sources of income for the committees.

OUR LONDON LETTER:

New Government & Stock Markets

Optimism Probably Overdone

Extremism of Young Labour M.P.'s

LONDON, August 10.

The City continues to discuss the election debacle, the dimensions of which exceeded its worst fears. There is grave nodding of heads; but, nevertheless, there are some optimists in the City of London. Some of them recall that 35 years ago, when Lloyd George became Chancellor of the Exchequer, the favourite gloomy prediction was that "grass will soon grow in the streets of the City." They now point out triumphantly that although, owing to the blitz, there are plenty of grass, weeds and flowers growing in the City, it is all confined to the vacant plots where buildings once stood—there are none visible in the streets! In short, if we were too pessimistic then, perhaps, we are too optimistic now.

However, in so far as charts are reliable guides, London appears now to have entered unmistakably a "bear market" with railway shares and leading industrials breaking into new low ground. Every few days, the selling appears to dry up for a day or two, whereafter it starts again.

The Editor of the weekly "Investors' Chronicle" issues a sharp warning against the prevailing optimism. He writes: "Investors would do well to get one fact firmly fixed in their minds—the Labour Party of 1945 knows quite as much about stock markets and investments as most people know. Nine out of every ten economists are Left Wing in sympathy these days. Not only has the Labour Party the necessary intellectual equipment to 'have a go' at Socialization, but it is energetic, vital and ruthless. I believe it will push on with its election programme of nationalization. I discount this talk of there being a compensatory inflation. We may indeed get inflation, but from the stock market point of view, it will tend to be profitless inflation on the lines seen in some totalitarian countries, 'sin without fun,' as they say.

Broadly, both Home Rails and Industrials have now lost about 9.5 per cent of their pre-election market values. On the whole, considering the strong rise which had occurred since the dark days of June, 1940, this fall is not excessive. In June, 1940, the Financial Times index for leading industrials was 61.10; it still stands at 132.83 after the recent decline. In June, 1940, the index for home rails was as low as 31.90; it is now 69.48.

But the most curious feature of this situation is one which is very difficult to describe, since no names can be quoted, namely, the fact that there are quite a few not unimportant figures in the City of London, who are not sorry to see the Conservative Party get terrific drubbing. They may be slow to say this publicly; for they know it would give deep offence in many important quarters, but they talk quite freely in private. The gist of their argument is that the Conservative Party had fallen into the grips of its Right Wing extremists, who view foreign affairs from the single point of view, namely, how can Soviet Russia be overwhelmed and Bolshevism destroyed; and all domestic problems viewed from a single angle—how can the useful surplus of unemployed labour be maintained so as to act as a check upon the excessive wage demands. These critics claim that these extremists have deeply offended the entire country and all but destroyed the Party which, since the "khaki election" of 1918, they have virtually controlled.

However, this criticism of the Party which Baldwin, Chamberlain and, to a lesser extent, Churchill, have led does not mean that critics welcome the Labour Party as such. These men still consider themselves Conservatives; but they are closer to "Young Tories" than to the "old gang" and the timid ministers, who took their cue from the extreme right.

It is taken for granted that the new Government will draft, as soon as possible, its bill for buying out colliery companies and nationalize the entire industry. The National Mineworkers Union seems convinced that mere knowledge that mine owners are being eliminated from mines will so buck up the spirit of miners so as to have a big effect upon coal production; but coal consumers will expect the new Ministry of Fuel and Power to produce in addition such interim measures as will prevent severe fuel famine in the next winter. The country needs more than 200,000,000 tons of coal for domestic consumption; but the present indications are that not more than 180,000,000 tons will be produced in this year, including some 10,000,000 tons produced by the exceedingly expensive, and not too satisfactory, method of stripping off thin layers of soil above coal beds and using machines for digging out coal so exposed. Something like 10,000,000 tons have been saved by various fuel economy campaigns and these just barely saved the country last winter from coal famine, but even the most optimistic students do not suggest that the future of new savings can reach more than a few additional millions.

In short, two big and highly complex problems will tax all the resources of the new Labour Government, namely, coal and housing. Both of these are heritages from the long and practically unbroken Conservative regime. If the new Government displays courage, it can command practically unlimited help from the technicians; but if the leaders show themselves to be irresolute and over-eager to patch up, instead of to reconstruct, the technicians will hesitate to come forward and jeopardize their professional positions for nothing.

In short, the new Battle of Britain seems likely to take place within the Labour Party, between its well-entrenched Right Wing and its largely, though not completely, Left Wing membership in the House of Commons. Mr. Attlee has filled chief places in his cabinet with his older colleagues, all of them "step-at-a-time" men, but will probably try to disarm the Left by bringing into minor posts some of the more articulate spokesmen.

This device may not work, for the new Labour M.P.s seem men of strong views.

Editorial Notes

A Labour Defence:

Sir John Burder's speech as Chairman of the annual general meeting of the Imperial Bank is notable, among other features, for a laboured defence of the doings of the Imperial Bank in regard to the Indianisation of the Bank's supervising staff. To Sir John, it is "a matter on which there appears to be a great deal of misunderstanding". To readers of "Indian Finance", we are sure, it is a matter in which the facts and figures adduced in our columns from time to time leave no room for misunderstanding of any kind. In fact, the case we have made out is so much of a cast iron kind that it can be ex-parte without risk of any injustice to the other side. And if, indeed, there is a defence, one would expect it to be publicised in these columns where the charges were made rather in those of contemporaries whom this burning topic has left strangely cold. Time was, indeed, when the important announcements and statements comprised by the speech of the Chairmen of the Imperial Bank were publicised in the columns of this journal on a business basis. The speeches of Mr. Bunbury and Mr. Wright were duly advertised in this journal and contained important pronouncements which had a bearing on the question of Indianisation. In 1931, Mr. Bunbury was concerned to dwell on the fall in the number of the Europeans in the officer grade and the increase in the number of Probationary Assistants. He was happy to announce that it had been decided to discontinue the recruiting of European officers for the Bank. He was anxious to emphasise that the increase in establishment costs was temporary and could be trusted to yield good return to the shareholders in course of time. In the year following, Mr. Wright made the following announcement:

"I will now revert to the intimate affairs of the Bank, and will touch on the progress towards Indianization. During the year under review, the lower grade Probationary Assistants, have been increased by 16 Indians, that of the Second Grade Assistants by 25 Indians and all the promotions to Officers Grade viz., 5 have been Indians. No Europeans have been engaged—indeed 23 have resigned or died."

For the defence of the failure to follow that policy, our readers have to turn to other sources. However, it is necessary to note that what has stood in the way of the rise of Indian Officers is, according to Sir John, the formation of what he calls a "promotion bloc", which is attributed to the initial spate of appointments

in the first few years of the Imperial Bank's existence. And this, again, was necessitated by the Bank having had "necessarily to embark on an intensive campaign for the recruitment of Officers with previous banking experience". It would, indeed, be interesting to know how many "with previous banking experience" were washed into the portals of the Bank by this spate. If there was a promotion block which was bound to keep Indians out of the supervisory staff for decades to come, it only means that the Bank had, from the beginning, made a foregone conclusion of the failure of Indianisation. We maintain, however, that, even within the limits set by earlier action, it should have been possible for the authorities to follow the policy of Indianisation in a right spirit, raise Indians to positions of responsibility and create contentment, where considerations of seniority necessitate the continuance of competent Indians in comparatively subordinate posts. But the fact is that no Indian has risen to any reasonable level of substantive salary, no Indian has been given a position of any great importance in the organisation; and, what is more, the general feeling among Indian members of the staff has been such that many have left the service without regard to pensions and other material benefits which they have thereby had to forego. We trust that, while Sir John has put up the best defence he can, he has also made up his mind to improve the conditions in the Bank and make of Indianisation a live policy, instead of a hollow make-believe.

We know, Sir John is the kind of Briton who seeks to be scrupulously fair. This is what impels us to make the suggestion that he should personally interview some of the Indian officers and persuade them to speak to him freely and frankly of what they feel about their service, treatment and prospects. From our knowledge of scores of officers, staff and other, we may say that he will receive a shock when he hears the same story of how boys with brilliant qualifications started their career in great hopes and are now stagnating, discontented, dispirited with no zest in their work, with no hope for the future, and counting the years to qualify for pension.

A Case for Confidence:

Whether peace will usher slump, as was the case in earlier postwar periods, or whether peace will spell prosperity, as is hoped in the conditions of the new economic world which is taking form and shape, will largely depend upon the answer to this poser which the United States of America furnishes in terms of concrete developments in the next few months. In authoritative U.S.A. circles, there is vigorous optimism that the post-war period on the present occasion will belie its predecessors and turn out to be an era of greater good for a greater number of the population. On the eve of the war, the conundrum facing our American friends was whether the war in the Far East would end abruptly or would come to a close in stages. While some people thought that, in the purely economic sense, the country would benefit if the industrial readjustment was cushioned and spread out by tapering war orders rather than concentrated as it would be if war demands ceased abruptly, there were many others who questioned this view and pressed their opposite opinion with stout arguments and convin-

cing figures. The August letter of the National City Bank of New York expressed itself in favour of a sharp and swift shock; and it expounded its case in the following extract:

"As long as war orders have to be met the bottleneck problem will persist. There will be shortages of...raw materials...of one component or another...of key machines. There will be labour bottlenecks...The task of breaking down these bottlenecks in our complex industrial organisation is not insurmountable, but we are now learning that it is difficult and time-consuming."

"On the other hand, if war should be terminated at once, problems that are now acute...would be rapidly solved...The shock would be more severe and the recession temporarily greater. But reconversion would be more rapid."

"Time" agrees with the suggestion that the jolt from a sudden collapse of war work may not be as painful as most people have feared. The argument relied upon by "Time" is that "industry has prepared its own shock absorber". The Department of Commerce has made an industry-wide survey of the various kinds of reserves which have been built up during the war years with a view to utilise them in after-the-war period. According to the information collected by the U.S.A. Department of Commerce, the manufacturers in America propose to spend some \$4.5 billion for plant expansion during 1946. Public Utility Companies and the Railroads will spend \$1.5 billion on this account. Industrial concerns will be spending another \$2.8 billion to re-stock its depleted inventories of non-military goods. Finally, civilians may spend as much as \$100 billion for goods in 1946. On the strength of these figures, "Time" concludes: "The question seemed not to be so much whether industry would collapse if war orders were suddenly cancelled but whether industry could hustle fast enough to meet the pent-up peacetime demand for its wares". It seems, therefore, certain that so far as this and the next years are concerned, the U.S.A. has not to fear a slump but to be prepared for a broad-based boom.

Reports from the United Kingdom are equally emphatic and hopefully mention the great orders which industry will receive in connection with the vast reconstruction work and in connection with supplies to feed the long-starved consumer markets. Compulsory savings during the war period provide a smooth solution to the financial problem presented by the impending demand for goods of various kinds. The general conclusion is that, both in the U.S.A. and the U.K., the near post-war outlook is one of hope, confidence and optimism. The economic outlook in these two leading countries will govern and determine the general world economic outlook.

Jump in Imports:

Foreign trade statistics for 1944 reveal certain interesting developments in India's seaborne trade. Owing to the easing of the shipping position last year there has been a sudden jump in the value of imports which rose to Rs. 200.07 crores in 1944-45 as compared with Rs. 117.60 crores in the preceding year. Exports, on the other hand, recorded only a moderate improvement, rising from Rs. 199 crores

to Rs. 211.1 crores in 1944-45. Re-exports were valued at Rs. 16.7 crores, which is an improvement over the previous year by Rs. 5.7 crores. The favourable balance of trade in merchandise has dropped sharply from Rs. 42.3 crores in 1943-44 to Rs. 16.8 crores in 1944-45. As regards the direction of trade, imports from the U.S.A., U.K. and Iran have recorded increases. The U.K. continues to be the biggest single market for Indian exports and the U.S.A. comes next, but for the first time since 1939, the U.S.A. tops the list in the list of countries exporting to India. On the side of imports, it is seen that the largest increase was recorded under the group "raw materials and produce and articles mainly manufactured." Under this group there has been an increase of about Rs. 15.32 crores in 1944-45 compared to the previous year. With regard to exports it is found that "raw materials and produce and articles mainly unmanufactured", increased by Rs. 3.8 crores while the group consisting of "articles wholly or mainly manufactured" showed an increase of Rs. 2.1 crores. There has been a decline of Rs. 26 lakhs under the group 'food, drink and tobacco' indicating that the food position in this country has improved last year as compared to the previous year.

If details are examined, it is found that during the eleven months ending February, 1945, Mineral Oils imports recorded an increase of Rs. 3.8 crores as compared to the corresponding period during the previous year. Increase under Machinery came up only to Rs. 4.4 crores while Chemicals recorded an improvement of Rs. 3 crores. There has also been an improvement in imports of Iron and Steel to the tune of Rs. 1.3 crores. Imports under "Other Metals" and "Paper and Pasteboard", etc., also point out the same tendency.

A sudden increase in imports, greater than the expansion observed under exports, has created an impression in commercial circles that the flood of foreign imports have started coming in to the detriment of Indian industries. The achievements of the Hydari Mission are shrouded in mystery, though vague promises are made to our industrialists. Since the war has now come to a close suddenly the problems of reconversion and the disposal of war stores have started scaring the people. A sudden increase in imports, together with the other problems, have naturally created some nervousness amongst businessmen, who are already depressed owing to the drastic curtailment of war orders. While it is not denied that imports go a long way in relieving the severe scarcity of consumer goods in India, the public have a right to expect that the imported articles are selected and restricted in quantity as to facilitate the smooth transition of Indian industries from war to peace. Care shall have to be taken to import only such goods as cannot be manufactured in India at present.

No More Lend-Lease:

The programme of lend-lease by which the United States has been supplying war goods to other nations since 1941 has now been terminated. President Truman having issued the order closing it. It is estimated that \$39,000,000,000 worth of military goods and civilian supplies have gone out of the United States under lend-lease to the fighting countries mainly Britain, Netherlands, Belgium, France, Russia and China. The manner of repaying or compensating the United States

« COAL PROBLEMS »

3

LABOUR WELFARE

MODERN INDUSTRY has agreed that welfare is a cardinal feature of its attitude to labour. The coal miner works under trying conditions which make welfare no gratuity but a part of his everyday needs. For this purpose a levy of four annas per ton of coal is paid into a special fund which is used for the health and benefit of the miner.

Apart from this, clothes and food are procured for labour at low rates, and many varie-

ties of consumer goods are made available. Free medical care, milk and maternity benefits are provided in the Collieries. The establishment of creches for the care of miners' children is already under way. More important than these tangible measures is the principle which underlies them. In a community that knows the value of coal and consequently the value of the coal getter, welfare for the miner must always be paramount.

by the countries, who have received lend-lease supplies, seems to be a point on which the creditor Government has not yet expressed their full and final views. At any rate, it appears America would have to write off much of the lend-lease obligations owing to her; for these obligations are more or less charity payments to countries hard pressed by the war. On this ground alone, the termination of lend-lease, once the exigency that necessitated it has disappeared, could be justified. But the end of the war has in most cases altered only the complexion of the needs of most of the countries concerned. Continental Europe is in dire economic distress and is likely to continue so for some time. Leaving alone industrial output, Europe which in pre-war days was approaching self-sufficiency in the matter of food is now facing an unprecedented famine thanks to the devastation of war. The relief afforded by the U. N. R. R. A. would be found to be much too meagre, in comparison with actual needs. The industrialisation of countries like India might also call for assistance with vast quantities of materials, on credit. It is believed that the letters of notification drawn up by the Federal Economic Administration would advise the purchasing representatives of the affected countries to propose immediately other bases on which they would like to receive goods from the U.S.A. Though lend-lease in the form in which it operated during the war could justifiably end with the war, the principle might be adapted in postwar years to facilitate international exchange of credit and goods.

Sales Tax on All-India Basis:

If it is conceded that economic planning is urgent for this country and that planning can be done only on the basis of All-India requirements, it stands to reason that the financial system should also be as far as possible centralised. The responsibility for planning for the country as a whole, and also for the different regions, now rests with the Central Government and all the promising heads of revenue can best be centralised to ensure the successful implementation of the development schemes. Even as the Central Government co-ordinates the provincial and State plans to evolve a satisfactory All-India plan it should also collect the main taxes and distribute the receipts to the satisfaction of all the areas concerned. The Government of India, it is reported, are now considering Sir Jeremy Raisman's proposal for levying the sales tax on an All-India basis to finance the postwar development plans and distributing the net proceeds among the Provincial Governments in proportion to the gross contribution made by the territories

within their respective areas. At present a tax on sales or turnover is levied in Madras, Bengal, Bihar, Punjab and Assam. Though the nature of the tax differs from province to province, the lesson is clear that, as in foreign countries, the tax can be made to yield substantial revenues for the exchequer. At present the yield is respectable only in Madras while in other provinces the receipts are meagre. If a general sales tax is levied on a uniform basis all over India a sizable income can be expected. If the Government of India initiate the development plans, then the receipts would doubtless grow by leaps and bounds.

The Provincial Governments' opinion in the matter of centralising the administration of the Sales Tax is not yet known. Since the basic principle has been accepted in the case of the income-tax there should be no difficulty in agreeing to the

proposal now in consideration. Sales tax has come to stay and the argument that it is regressive in practice cannot lead to its abolition but only to administrative improvement. Certain Provinces, however, are known to hold the view that they should administer the sales tax in such a way as to suit local conditions. What these conditions are and how the locality will be adversely affected if the All-India sales tax is agreed to are not yet made clear. It is, however, to be hoped that the overriding importance of planned development for India would be borne in mind before the Provinces say 'no' to the proposal from the Centre. If they are agreeable, the Government of India will approach the Secretary of State for India with a request that Section 137 of the Government of India Act should be amended to transfer the Sales tax from the provincial to the Federal Legislative List.

Woollen Industry in Egypt:

The woollen textile industry occupies a prominent place in Egyptian industrial production; it is second only to cotton textiles. The progress of this industry began in 1926, when the first mechanical plant was installed at Assiut. The establishment of the Institute of Textile Research in 1933, marked the next step forward. The production of yarn on a large scale for mechanical weaving and knitting commenced with the establishment of the "Misr" factory at Mehalla El Kobra. In 1940, the next big plant came into operation in Cairo. The present equipment for the industry comprises 15,840 spindles, which give an annual output of 1,600 tons of woollen and worsted yarn. A substantial contribution to this branch of production is also made by "Village" producers. In 1943, rural production was 750 tons of wool cloth, 1,800 tons of blankets, 260 tons of carpets, 1,000 tons of Kelims and 50 tons of tarbouches. Closely allied to this and fairly widespread in the country is the industry that produces press cloth for the extraction of vegetable oil, from such raw materials as goat hair and palm leaf fibre. About 15,000 handlooms are working on the production of Kelim and 800 in the carpet industry. The "Village" industry in all its branches employs over 15,000 workers, while the mechanised plants in spite of their large output, absorb a much less number. There are innumerable factories in Egypt producing pull-overs, sweaters, socks, stockings and a variety of other goods. Cotton, rayon and wool are used for these products. The annual production of knitted goods varies between 100 and 150 tons and there is virtually no export at all. Before the war, Egypt, out of an average annual production of 6,000 tons of raw wool, used to have a small margin for export. With the progress of her woollen industries, her whole output of raw wool is being consumed internally.
