(Annual General Meeting on 31-10-1945 at 5 p.m. at Mysore. Books closed from 15th October to 1st November, 1945).

Audited accounts for the year ended 30th June, 1945

The Company's working for the year ended 30th June, 1945, has resulted in a profit of Rs. 8,05,193-13-0. A sum of Rs. 1,57,772-15-8 has been charged off in the Profit and Loss Account towards depreciation on fixed assets for the year. This leaves a balance of Rs. 6,47,420-13-4 which together with the amount of Rs. 3,593-8-4 brought forward from the previous year amounts to Rs. 6,51,014-5-8.

The successive reductions in the controlled prices of yarn and cloth during the year, the unsettled working conditions due to inadequate supply of electric energy during the first half of the year, abnormal absenteeism and shortage of skilled labour have adversely affected profit margins.

A sum of Rs. 1,10,091 has already been paid as interim dividend at 6 per cent, free of Mysore income-tax, for the half-year ended 31st December, 1944. The Directors now recommend payment of a final dividend at 6 per cent (making a total dividend 12 per cent for the year), and a bonus of 3 per cent, both free of Mysore income-tax, on each paid up share, which will absorb a further amount of Rs. 1,65,136-8-0. There will thus remain

a balance of Rs. 3,75,786-13-8. This sum together with the net refund obtained by the Company in respect of taxes collected in previous years amounting to Rs. 1,13,962-9-0 will be available to meet income-tax, super-tax and excess profits taxes for the year 1944-45.

The mills' buildings, machinery and plant stocks and stores are insured for a sum of Rs. 36,95,385.

Chairman.—M/s. M. S. Ramchendra Rao.

Authorised Capital—Rs. 20,00,000. Issued—Rs. 19,92,075. Subscribed—Rs. 18,34,850 in 73,394 shares of Rs. 25 each, fully paid up.

Synopsis of balance sheet as at 30-6-1945.

(Annual General Meeting on 19-10-1945 at 4 p.m. Books closed from 21st September to 19th October, 1945).

Audited accounts for the year ended 31st March, 1945.

During the year the Company made a profit of Rs. 14,83,549; which, after adding the amount brought forward from last year's account Rs. 31,980; makes a total of Rs. 15,15,529; out of this sum, the Directors have decided to make the following appropriations:—

Depreciation Fund, Rs. 5,00,000; General Reserve Fund (including the approximate amount required for compulsory E. P. T. Deposit), Rs. 3,50,750; writing off tank foundations at Tatapuram, Rs. 776; leaving a balance of Rs. 6,64,003; which the Directors recommend be disposed of as follows:—

A dividend at the rate of Rs. 2-12 per share, free of income-tax, on 2,31,628 shares Rs. 6,36,977; balance to be carried forward Rs. 27,026; Total Rs. 6,64,003.

The Directors are glad to report that the sales of the Company's products during the year have reached a still higher total of Rs. 2.76 crores, as against Rs. 2.5 crores in 1943-44. It will, however, be noticed that this improvement in sales does not show a corresponding increase in the profits of the Company, because of increased cost of manufacture and controlled selling prices, resulting in a reduced margin of profit. The conservative policy of valuing raw materials in previous years has helped to maintain the profits for the year.

After providing Rs. 5,00,000 for Depreciation and Rs. 3,50,750 for General Reserve Fund (including Rs. 3,23,000 E. P. T. compulsory deposit), the Directors recommend a dividend of Rs. 2-12 per share. The above provision brings the Depreciation Fund to Rs. 27,00,000, which is still considered inadequate, particularly in view of the age of the Company's assets at the Cochin factory and the continued high pressure at which both the factories have been working during the last few years. The Directors are, therefore, anxious to continue the conservative policy of making substantial provisions for Depreciation as well as General Reserve Funds, whenever profits permit them to do so.

In view of the satisfactory results of the Company, the Directors have granted to all employees of the Company the same bonus as that of last year.

Operations.—The demand for the Company's products continued to be as keen as before and the Company managed to increase the production of some of its products, particularly of cocogem and pakav. Some toilet soap was also exported to the Middle East. Government demand for soap, glycerine, hair oil and vegetable product continued to be more or less the same as that of last year.

The Perfumery Department at the Sewri factory for the distillation and fractionation of indigenous essential oils increased its activities during the year under report and was thus considerably able to supplement the Company's requirements of perfumes, which were difficult to satisfy from foreign countries due to import restrictions, high prices, etc.

At the time of the explosion in the Docks in April, 1944, the Company's godowns in that locality suffered a loss of about Rs. 2.67 lakhs worth of goods, but the Directors are glad to report that the entire loss has been recovered from the Underwriters.

Labour.—The cost of living index at Cochin as well as Bombay increased still further during the year under report, necessitating a higher Dearness Allowance to all the Company's employees. However, at the Cochin factory, from July, 1944 onwards, instead of increasing the Dearness Allowance, the Company supplied rationed food-grains to the employees and their direct de-

pendents at such lower rates as prevailed in July, 1943, the loss on such supplies being borne by the Company.

The canteens and the fair-price Grain Shops at both the factories continued to be popular with the employees. An attempt is being made at the Cochin factory to supply noon-day meals at cost on the same lines as at Sewri, as soon as rice and other food-grains are available.

Increased advantage of medical facilities at both the factories was taken by the employees and the attendance increased considerably. Further medical facilities were introduced by employing a Dentist at both the factories and an Ophthalmist at the Sewri factory.

Mg. Agents.—M/s. Tata Sons Ltd.

Authorised Capital—Rs. 58,70,575. Issued and Subscribed—Rs. 57,90,700 in shares of Rs. 25 each.

PREMNATH TRANSPORT CO., LTD.

"The Directors of the Premnath Transport Co. Ltd. announce that their recent issue of capital was over subscribed. The Directors are proceeding to allotment immediately."

WALFORD TRANSPORT LIMITED

An extraordinary General Meeting will be held on 29th October, 1945, at 2-30 p.m. to consider and, if thought fit, to pass Resolutions to increase the capital of the Company by the issue of 1,05,100 new Ordinary shares of Re. 1 each, offering them in the first instance at a premium of Rs. 2 per share to the existing shareholders in the proportion of one new share for every four shares, irrespective of class, held as on 19th October, 1945. This offer must be accepted within the time which will be specified in the notice offering the shares. The full amount of Rs. 3 per share is payable with the application.

BRITANNIA ENGINEERING COMPANY, LIMITED

An Extraordinary General Meeting will be held on 2nd November, 1945, at noon to consider and, if thought fit, to pass Resolutions to increase the Capital of the Company to Rs. 10,00,000 by the creation of 25,000 new Ordinary shares of Rs. 10 each ranking for dividend and in all other respects *pari passu* with the existing ordinary shares in the Company and to offer these 25,000 new shares in the first instance at a premium of Rs. 5 per share to the existing shareholders as on 2nd November, 1945, in the proportion of one new share for every three ordinary shares held. This offer must be accepted within the time which will be specified in the notice offering the shares.

ALLAHABAD BANK LIMITED

An Extraordinary General Meeting will be held on 19th October at 3 p.m. to propose Resolutions to increase the authorised capital of the Bank by the creation of further 60,000 Ordinary shares of Rs. 100 each, and to issue 20,000 of these shares, offering them at a premium of Rs. 150 per share to the existing shareholders in the proportion as nearly as may be to the number of shares whether ordinary or preference held by them. These new shares shall rank for the final dividend in respect of the year ending 31st March, 1946, to the extent of one half thereof and for all subsequent dividends in full. Acceptance of this offer together with payment of one half of the nominal value and the premium of Rs. 150 i.e., Rs. 200 per share must reach the Bank within the time which will be specified in the offer.

CENTRAL KURKEND COAL CO., LTD.

(Continued from page 666)

It is understood that a final arrangement has now been arrived at with regard to the much vexed question of the Calcutta Electric Supply Corporation licences. According to the arrangement now agreed upon the licences which expire on various dates upto 1987 will be supposed to expire in 1950. That is to say, the option to purchase the licences and take over the working of the Electric supply undertaking could be exercised in 1950 the Company is to receive recompense as follows.—

- (1) Market value for its assets.
- (2) 20 per cent of the market value is to be paid in addition to No. 1.
- (3) In respect of licences which expire

after 1950 the Company is to receive compensation in the form of one year's gross revenue accruing in respect of these licences.

If the option is not exercised in 1950 the licences will be automatically extended for another 20 years.

The Electric Supply Corporation was not willing to make any alteration with regard to the provision of compensation which is now to be in terms of market value of assets.

Market value of assets is not easy to arrive at; and the method employed for ascertaining the market value is by appointment of arbitrators by each party.

By 1950, the market value of assets may come to a reasonable level, as with peace time production for 4 years, electrical

machinery and goods will soon be available at intrinsic prices as opposed to the present inflated prices.

In any case, the Government of Bengal will be justified in insisting on taking their stand on Mr. Clement Attlee's formula for nationalisation. Namely that the prices payable for nationalisation must be fair but not generous.

Even so, the terms now agreed upon must be considered exceptionally satisfactory for the company. With the additional 20 per cent payable and with one year's gross revenue on unexpired licences, the compensation received by the Company must enable the ordinary share-holders to get anything like four times the nominal value.

WATCH-DOG.

Befriending Britain

The scheme of international transactions which the American Delegation at the Keynes negotiations is said to contemplate is calculated to cause disquiet and indignation in India, and probably many of the Empire countries. For not only are the proposals unfair to India and the Empire countries, but it is difficult to follow the lines of thought which led the American Delegation to formulate the scheme. As is well known, the negotiations which Lord Keynes and Lord Halifax are now carrying on with the American Treasury originated in the action taken by President Truman after the Japanese surrender in declaring the end of the lend-lease act. This announcement, while it was in accordance with the undertaking given by Mr. Truman to the American Congress, was acknowledged on all hands to precipitate a grave situation in Britain's economic life. If imports from America which over a number of years had been made under the Lend-Lease Act had all of a sudden to be paid for in dollars, Britain would find herself in a short time incapable of procuring the necessary means of subsistence. For, the food and other materials which she needed were not available in any other country, and Britain has not the means of adding to her slender dollar resources. Since the gravity of this situation is recognised on both sides of the Atlantic and since President Truman had announced his readiness even from the start to discuss the issues involved with the British Delegation, it was easy to inaugurate the negotiations under propitious circumstances.

But the intrinsic difficulties and complications of this problem are not got over by mere cordiality of feeling. While for the American Government, it was out of the question to revive the operation of the Lend-Lease Act in its old form, Britain made it clear that she was totally opposed to adding to her commercial debts, if only because she had no sure grounds to expect smooth repayment. It was in these circumstances that the negotiations and discussions were begun; and at one stage it seemed as if the severity of the problem would be reduced by an outright free gift of food and clothing to start with and a large amount of commercial credits on the most favourable terms, both as regards interest and as regards repayment.

Up to this stage, the question was discussed as affecting the two Anglo-Saxon powers. It is not clear at what stage the American Government decided to widen the scope of the scheme to include the creditors of Great Britain. While the British Press sometimes contained hints of scaling down of these sterling debts, these suggestions were not related in any way to the Anglo-American negotiations. The link between the two, that has steadily become bigger and stronger during the last two weeks, is apparently at least wholly an American creation. It was reported some time ago that the American Delegation regarded the scaling down of Britain's sterling debts as a condition precedent to the grant of dollar credits to Britain by the U.S.A. Though it is not uncommon for a lender to insist on the solvency of his borrower being improved by the reduction of his indebtedness before fresh credits are extended to him, a great deal of uncertainty and vagueness was allowed to cling to these proposals. The news reports in this regard were intriguingly vague; and there was no means of ascertaining whether America was pressing for a reduction of the sterling balances of India and the Empire countries. Whether the uncertainty was intentional or fortuitous, it has served the purpose of preparing the public for the proposals now announced, without arousing prematurely the inevitable resentment against them. Even at this stage, the whole scheme is only in the nature of a news report without the authority or the authenticity necessary for the formal lodging of protest thereagainst. And since the reports are not authoritative, no defence of the proposals or exposition of the principles underlying them is available to the public.

Nevertheless, it is not difficult to guess that what the U.S.A. aims at is to grease the wheels of international trade, what time large scale credits are being made available to Britain. In their present form, the proposals envisage "a 5,000 millions loan to Britain, two-fifths of which will be made available to British Empire countries for purchases of American goods over the next five years. In return, Empire countries will be asked to scale down their blocked sterling balances by \$6,500 millions and also to extend a \$3,000 millions loan in their currencies for British purchases inside the Commonwealth. Both loans would start repayment in 1951 at the rate of 160 million dollars yearly over 55 years—100 million dollars to America and 60 million dollars to the Empire." It will be seen that America seeks a return for her help to Britain in the creation of comparatively favourable conditions for international exchange of goods and services. Of the \$5,000 millions which the U.S.

will give to Britain \$2,000 millions will be at the disposal of the Empire countries so that they will be free to buy American goods to that extent. At the same time Britain will be induced by a cut in her sterling obligations to the extent of \$6,500 millions and enabled by a fresh credit of \$3,000 millions to increase her purchases inside the Commonwealth. America probably holds that these transactions will overcome the accumulated inertia of international trade and that, of its own momentum, international trade will make satisfactory progress in the years to come. It is indeed tempting to picture the effect of these credits from America to the British Empire countries and from the Empire countries to Britain on the movements of trade. But the basis of allocation of the dollar credits of 2,000 million among the various Empire countries has not been made clear. If it is to have any relation to the sacrifices made by each country, either by way of scaling down of its sterling claims or by way of fresh credits to Britain, then India is not unlikely to have a larger allocation than any other Empire country. And it is possible that a considerable increase in Indo-American trade may set up widening ripples of activity in the otherwise placid waters of international trade. But the value of these transactions to the Empire countries as a whole and to India in particular would depend on a variety of considerations and circumstances to which it is impossible that America has given adequate consideration. These circumstances may be said to be, (1) the price paid in terms of suffering and material losses in the process of acquiring the sterling assets, (2) the realisability, ultimately or in the near future, of these assets, (3) the extent to which Empire countries may expect to be compensated for their losses of sterling by the probable improvement in international trade conditions and (4) the importance of the dollar credits now promised to future economic plans and programmes. The country, which is in a position to get its dollar requirements in the normal course of its trade with America, would hardly feel called upon to pay a large price in its sterling assets and get dollars through the intermediation of Britain.

So far as India is concerned, the majority of considerations cited above argue against India's acquiescence in the American dispensation. There can be no doubt that if the price paid for the sterling assets in human suffering and material costs is a consideration in deciding this question, then no country in the world can ask for the reduction of India's sterling balances by a penny. Considering that the demand for the scaling down of our sterling debts may be made by the third party, we must consider it extremely fortunate that the controversy over this question has raged long enough to settle beyond doubt every connected issue. Time was when honest doubts could conceivably prevail in certain sections about the equity of India's claims, on Britain. No suggestion was considered too ridiculous to be seriously put forward by the British Press. It was said at one time that our sterling balances originated in the generosity of Britain in the matter of the allocation of military expenditure as between the two countries. Then the ground was shifted to the high rupee prices and to the incidence of exchange rate which was artificially maintained. Charges of profiteering have also at times been made. Thanks to the report of the Parliamentary Committee on war expenditure on the one hand and the food crisis and the Bengal famine on the other, the ground has been cut from under those who would attribute India's sterling balances to high rupee prices and profiteering or suggest that our sterling balances are in the nature of unearned windfall. It must, of course, be conceded that, however they may have been earned, their value must depend on their realisability. It is open to America to suggest that India loses little by writing off a portion of sterling balances whose realisability is at best dubious. She may also argue that the dollar credits are a positive inducement, where in fact none should be needed. Such arguments can be advanced only when there is an adequate apprehension of the sacrifices which our sterling assets have entailed. In all these matters, it is indeed understandable that the future should rule men's minds more than the past. Not only a fraction of our sterling assets, but even the whole of them may be written off, if there are forthcoming reliable assurances that, in consideration of our sacrifices, all the help that we need for our economic development will be proffered to the fullest extent possible.

The sacrifice that India may be asked to make must be judged either in relation to the price we have had to pay to acquire our sterling balances or the inducements that are offered to us. But as things are, not only is there no adequate quid pro quo within the framework of the proposals now put forward, but even outside its scope, India has had nothing but discouragement from America and Britain in regard to her economic plans of the future. No one can overlook the fact

that America has thought out the proposals only from the standpoint of Britain and that she has taken little trouble to consider the question from the point of view of Empire countries and least of all, of India. The advantages which Britain will derive if this scheme is finally accepted are easily recognised. Britain gives away nothing and, so far as she is concerned, it is all take and no give. Up to a late stage, America was thought to be insistent on the abolition of Empire preference in return for American help to Britain; but the latest reports indicate that, in spite of Lord Keynes having given a vague assurance of accommodation to the American viewpoint, the U.S.A. is inclined to abandon their demand America, therefore, may be said not only to extend her old dollar credits but also to procure for Britain a reduction of her sterling debts to her Empire countries to the extent of about 30 per cent and also credits in Empire currencies to the tune of \$2,000 millions. India can well ask whether a similar, if by no means equal, solicitude to India's needs and interests is not due to this country. The part which India played in this war may not be as glorious as that of other countries, so far as the total population is concerned. But the achievements of the Indian Army are no less glorious and the sufferings of the common people are no less acute than in any allied country. If the United States can take into account the economic situation in Britain as a whole and make proposals to other countries who are not represented at the present negotiations, then she must at least be able to claim that the economic problems of Empire countries had been given equal attention and consideration.

India would perhaps be less carping in her comment on the proposals that are now attributed to the American Delegation, if some signs were discernible of American readiness to help in the industrial and economic development of this country. Strictly speaking, if the major interest of the States is the improvement of international trade, then the economic development of India is as important as the propping up of Britain's national economy. India has been throughout history one of the greatest trading nations of the world. Even in industry in which she is very backward, she takes the ninth rank among the industrial nations. Before her foreign trade was canalised into Empire channels, she traded with all parts of the world and had great importance in the multi-lateral exchange of goods and services. No one can doubt the contributions she will make to the recovery and progress of international trade, if she were enabled to develop her own economic potentialities. In the face of this, the Indian Industrial Mission which toured abroad only recently met with the most chilling reception both in Britain and in America. Machinery which India needs most urgently, we are told, will not be available for years, in spite of the fact that India has large holdings of foreign currency and her normal favourable balance of trade and her gold resources are sufficient for the settlement of any adverse trade balances. In the face of such treatment, it passes one's understanding how India is expected to agree to the proposals such as have now emanated from the United States.

Special Article

No Sterling Devaluation

By Dr. Paul Einzig

Persistent rumours are in circulation about an alleged impending devaluation of sterling. The origin of these rumours lies in the fact that under the Bretton Woods plan the value of sterling in relation to gold and the dollar would have to be fixed by the end of this year. And since there is a strong aversion in a large section of British opinion to any arrangement leading to an "overvaluation" of sterling that would handicap exports, it is widely assumed that the Government, when agreeing to a fixed rate, would want to have a safety margin by insisting on a deliberate undervaluation of sterling.

Beyond doubt, if a decision about the rate will have to be taken this year—which is far from certain—the Government will be faced by a particularly awkward dilemma. It is certain that the parity, once fixed, will be practically unalterable. Under the Bretton Woods Agreement it will become extremely difficult to devalue sterling beyond 10 per cent. And there is reason to believe that the United States Government will insist, as one of the conditions of American financial assistance to Great Britain, that the British Government should undertake not to make use of its right to devalue even to the extent of 10 per cent without American approval. This means that the new parity of sterling would be much more rigid than any parity has ever been throughout history.

In the circumstances there is naturally a strong temptation for the British authorities to play for safety by devaluing the pound before its parity is fixed for good. But it is by no means certain that the United States Government would accept a rate below the present rate of four dollars to the pound. Any devaluation would be detrimental to American exporting interests, and would be opposed.

But in any case, a careful examination of the arguments for and against a devaluation would lead to the conclusion that it is not to the interests of Great Britain to devalue the pound at this stage. On the basis of the present knowledge of the facts it is by no means certain that such a devaluation would be necessary. There is no evidence of an overvaluation of sterling at its present level. And the fact that in Lord Keynes's comparison of British and American war efforts the exchange rate chosen for that purpose was 6 dollars to the pound leads to the conclusion that at its present level sterling must be considered undervalued rather than otherwise. At any rate, there is certainly no obvious overvaluation to justify or necessitate a devaluation.

Nor would British exports appreciably benefit by a devaluation of the pound during the first few post-war years. The amount of British goods available for export is limited, and will remain limited pending the readjustment of industries for peace-time production. A large part of these exports would go to the Sterling Area, and would not be affected favourably by a devaluation of the pound which, one is inclined to presume, would be accompanied by corresponding devaluations of all the Sterling Area currencies. It is true, British goods would be in a better position to compete with American goods, for the price of the latter would rise in terms of any currency that is devalued. But since the total exportable surplus will remain limited there would be no increase of the volume of exports. As for exports outside the Sterling Area, their volume would remain, for the same reason, unaffected and, in consequence, their yield of foreign currencies would become reduced by the fact of the devaluation of sterling. Thus, on balance, this country would be decidedly a loser.

In a few years hence, when the supply of exportable goods will once more exceed demand, the position will be different. Then a devaluation might result in an increase in the volume of exports that would more than offset the decline in the yield of exports per unit as a result of the devaluation. So it may appear on the surface arguable that it would be wise to devalue now in order to be able to benefit by it three years hence. But in reality the chances are that the beneficial effect of a devaluation would wear off in three years. By that time prices and costs would have adjusted themselves more or less to the lowered exchange value of sterling, so that, in order to be able to stimulate exports, it would be necessary to devalue once more. Meanwhile the British consumer and producer would have to pay a higher price for imported goods as a result of the devaluation.

It is essential to reassure American opinion that nobody in Great Britain thinks of devaluation as an everyday event to be undertaken at the slightest excuse. This false impression may have developed as a result of British resistance to the Bretton Woods plan on the ground that it will make a devaluation too difficult. But it is quite clear that even in the absence of a Bretton Woods plan the British Government would not dream of devaluing light-heartedly. The reason why many people over here are anxious to reserve the right to devalue is that it should be possible to do so in case of major emergency, or when sterling is obviously and hopelessly out of equilibrium, and its maintenance would only be possible at the cost of a painful deflation of credit and a wages squeeze. This view is expressed thus in a few lines by a well-known London banker opposed to the Bretton Woods plan:—

Think not in terms of paper cash,
In dollars, pounds, or be so rash
To fix the rate of their exchange
To fluctuate within a range
Of cents or pence, without regard
To Acts of God or the reward
Of those who fought and toiled so hard
To keep your heritage!

It seems probable that, irrespective of any international commitments the pound will be devalued if its maintenance would mean wholesale unemployment and industrial unrest. For any Government which would denounce the international agreement that would prevent it from adjusting sterling in such circumstances would inevitably be compelled by the force of public opinion to change its policy. There is thus no need for devaluing in advance to meet a contingency that may arise in some years. The British Government can afford in this respect to meet the wishes of the United States by maintaining sterling at its present level.

Our London Letter

SCOPE FOR BRITISH ENTERPRISE IN INDIA

By HAROLD GUARD

London, Sept. 26.

On the assumption that there will be some day a transfer of political power to India, investors in this country are paying closer attention to Indian developments and their possible effect on investments in India.

Available expert comment generally is not particularly optimistic concerning an easy settlement of differences regarding commercial enterprise in India. During their recent visit to Great Britain, the Indian industrialist mission headed by G. D. Birla and J. R. D. Tata made it quite clear that important Indian interests would be only too glad to dispossess their British competitors in India. Mr. Tata even went as far as to say India's industrialists would aim at the exclusion of British investment in India.

However, British business quarters with considerable experience of India are not inclined to take a pessimistic view of the outlook. Their knowledge of India prompts their conviction that there will be strong opposition to unfair practices and that such opposition will not be confined to British interests in India.

While admitting the existence of political bitterness, prominent British business leaders maintain that there will always be a considerable fund of goodwill in India and that the majority of balanced opinion in India is fully aware of the value of British enterprise to Indian economy.

The "Financial News" recently quoted from a business review commenting on the situation, which said: "We think India will remain a good field for British commerce, though there will be periods when intemperate utterances may well alarm British investors to the detriment of share values."

With regard to the immediate future, the general opinion is not very bullish. It is generally agreed that there will be a recession in business and some quarters think there will be a serious slump. They contend that India has experienced a fictitious war prosperity and that the cessation of heavy government expenditure will seriously check profits while the reopening of world trade will expose Indian industry to the unfriendly blast of competition.

One feature of the Indian position which is stressed by London business quarters is the wartime growth of new banks. Some of the new flotations are not noted for their conservative management, so that if there is a serious recession there may be a tale of woe. If one such bank were to get into difficulties it could cause indirect losses all round, to the detriment even of the British banks and the sounder Indian banks.

Other competent commentators have expressed the belief that Japan's collapse may be India's opportunity. They contend that leadership in the East is open to the nation whose capacity will stand the strain of competition.

Shaken out of lethargy by the call of war for supplies of every kind, in possession of large financial resources, a

creditor nation urged forward by an ever swelling population that must be fed, India stands in the most favourable position of all the Eastern lands to assume leadership in manufacture and commerce.

Japan will again be turning to India for supplies, but not in the dominant mood of the past. India will now have no need of Japanese cottons which the wily Jap used before in his economic penetration of India.

Japan will have to go back to the old position in which the balance of her imports from India vastly exceeded that of her exports and, as a buyer, she has lost whatever goodwill there was in the past. India will be competing as a manufacturer for the markets of the east.

But, all commentators agree, there are political and economic rocks ahead which will make India's transition difficult. They deem it most necessary that whatever is the outcome of Britain's political

dealings with India, there must be a Treaty clause forbidding discriminatory legislation. Some caustic critics said any such clause would be of doubtful value since all treaties must depend on goodwill for their interpretation. Moreover, it is contended, it would be easy in the granting of licences to benefit some interests at the expense of others, in the way Indian economy would be planned in the event of their achieving self-government.

"Financial Times" just after the Congress rejection of the Attlee-Wavell proposals, commented on the future in anything but pessimistic vein. The "Times" took the view that whatever India's political future may be, India will continue to be attractive to investors.

It said: "Taking the long view, we think there is a great industrial future ahead of India, and that she remains a great field for British enterprise and investment."

'Desk Equipment' that spells efficiency!

A DESK that is smartly furnished is as essential to efficiency as a trim secretary is to an executive. That is why smart business people choose their desk equipment with the same care as they would a secretary. And a Doric Set is their invariable choice. For this modern streamlined 9-piece set not only enhances the smartness of their desks but it increases efficiency—turnover.

Doric Unit Set comprises double pen stand, ruler, paper-knife, pen-knife, pin-cushion, hand blotter, table pad and two paper weights. All highly finished and chromium plated. At Rs. 90/- at all stationers.

Questions & Answers...

Destination?

India Coffee House, Albert Hall, College Square.

Reason?

In its new address, the India Coffee House is better, brighter and bigger than ever.

Surely, not so central as in Central Avenue?

You wouldn't say so if you visited the new place. It is, so to say, in the heart of Calcutta. Centre of whatever is lively and vivacious. Easily accessible.

But, I suppose, there is not that variety of visitors?

People will travel far to get the admittedly and inevitably good coffee that you can, every time and at all times, get at the India Coffee House. The old patrons are all still there—and will ever be there—and many, many new patrons. Remember, it is a bigger, better, brighter place.

Editorial Notes

Indian Immigration into U.S.A.

The United States House of Representatives have passed the Indian Immigration Bill and it is certain the measure will be approved in the Senate also. As a gesture of American goodwill towards India, the measure should be welcomed. But it is difficult to be over-jubilant over it. It does not confer any considerable material benefit on India. The Bill provides that about one hundred Indians can enter the United States annually and the Indian residents in the United States can become American citizens if otherwise qualified. The Bill thus permits a "token" immigration. It also symbolises American willingness to do away with racial distinctions and it is this aspect that makes the measure a useful contribution towards inter-racial amity. But this measure by itself does not absolve the United States from every responsibility for the perpetuation of those distinctions which are jarring to the true internationalist genuine cosmopolitan. As long as the negro is kept aloof the stigma of racial prejudice will continue to be there. There are also reasons to believe that the Immigration Bill has behind it more than mere altruistic motives. During the debate which preceded the vote in the House of Representatives, a prominent member pointed to the need for counteracting Russian influence and the spread of communism in India; another extolled the Bill on ground of its usefulness towards the promotion of American business interests in India. It is open for America to advance her political and economic interests in any part of the world and as she enjoys a position of predominance at present, it will not be difficult for her to discover suitable methods for it. But if any section among the Americans thinks that such subtle measures as the present Bill would be productive of material advantages, for their own country, it will be putting the other party at too low a level of sophistication. It may be hoped however that this measure will be the first fruit of a liberal and generous policy which the Western nations led by the United States may be adopting in future both to their own non-white nationals and to the peoples of the East.

The Workers First

What a Reuter's Cable characterises as a new deal for the Indian worker is visualised by Mr. Francis Mascarenhas, a young businessman of Bombay now on tour in America. The essential feature of this plan which seems to have created some interest in American business circles is the basic priority it gives to the working conditions of the Indian masses. Mr. Mascarenhas feels that judged by existing trends of thought among Indian business interests and the Government, there is the likelihood of too many people involving themselves in the production of costly luxury goods such as motor cars, radio sets and air conditioning units and excessive competition ruining even these industries. The general attitude is to treat the people merely as labour, as one of the factors of production. According to him, industrialists should aim at easing the individual worker's labour and increasing his comforts and general standard of life. Priority in production should go to improved bullock carts rather than to motor cars, to milk separators rather than radio sets and to modern finishing craft rather than to air conditioning units. He

holds that transport and agriculture are the two primary fields with which the application of postwar plans should deal, and he sees in both the possibility and necessity for improvements suited to the needs of the country. For example, the existing type of bullock cart could be modernised and with its modernisation, suitable developments could follow in other basic transport units like buses, trucks and loading equipment. The tools of a number of basic trades could also be modernised. In so far as these suggestions represent a new approach to the future economic development, they deserve careful scrutiny from responsible quarters.

Marketing of Gram and Barley

The widely known Bengal Gram is considered to be of great economic importance for India. It is used both as human food and as cattle fodder. Nearly 73 per cent of the total area under gram is in British India. The United Provinces, the Punjab, Bihar and the Central Provinces, together account for about 88.7 per cent of this total. Hyderabad, Gwalior and Patiala are the important Indian States where gram is widely grown. The total annual production in India amounted to about 4.4 million tons during 1935-36 to 1939-40. The United Provinces grows more than 50 per cent of the total production in India; Punjab 20.8 per cent and Bihar 13.2 per cent. Among Indian States Hyderabad tops the list in the production of gram. During 1939-40 the annual imports of gram into India was roughly 17,000 tons. The Provinces of Madras and Bengal are the largest importers of gram. Exports of gram have of late been showing a decline. Gram exported to the United Kingdom, France, the Netherlands, Germany and Egypt is used for feeding cattle and horses; where as in other British territories, it is utilised for human consumption. The total demand for gram for the manufacture of parched gram in India is estimated at 284,000 tons, and the demand for stock feeding to 280,000 tons approximately. As far as the marketing of gram is concerned there is no reliable system of classification and trade description of gram for the purpose of price quotations. Only merchants in the leading market centres keep themselves informed of the latest prices in different markets. Of late, efforts are being made to broadcast prices among the producers also.

Only a very small quantity of gram is now being sold through the Regulated Markets in India. The wholesale distribution of gram is almost a monopoly of the 'Pucca arhatiyas' while a very small percentage is disposed of through Consumers' Cooperative societies.

The main recommendations contained in the Government Report on the marketing of gram are the formulation of a uniform system of contracts on the lines of the contracts already prevailing for other commodities, the encouragement of Co-operative sales in the important producing areas, the popularisation of richer varieties and the publishing of final forecasts of production in all the provinces as is now being done in the Punjab.

From the Report on the Marketing of Barley it could be seen that during the quinquennium ending 1938 the world production of barley amounted to 49 million tons annually; of which India's share was about 7 per cent. The total area under barley crop in India during the period 1934-35 to 1938-39 averaged to 7,001,000 acres. From a commercial point of view, the importance of barley in India

THE HEROIC SCALE

India must plan to increase her steel production if she is to develop the heavy industries essential for a country of her size. For the construction of iron and steel manufacturing plants on a massive scale the irreplaceable need is steel.

TATA STEEL

Issued by The Tata Iron & Steel Co., Ltd.
Head Sales Office:
102A, Clive Street, Calcutta.

is much less than other cereals. The small marketable surplus is due to the low price of this cereal. The cultivator prefers other food grains which will bring him a higher return. Imports of Barley into India amounts to 2,000 tons annually, and exports to nearly 450,000 tons. The main barley products received from abroad are ale, beer, pearl barley, and barley powder. The export of barley products from India is negligible. As a result of the shortage of the supplies of rice, the consumption of barley and other inferior food grains increased, during war. In respect of the marketing of barley also, there are no recognised standards of quality. Hence it is difficult to analyse the price differences. Owing to the low commercial importance attached to this cereal, virtually no information regarding prices is made available. At present barley prices are broadcast daily in respect of only the Hapur market.

The report contains the following recommendations for the better marketing of barley. The development and improvement of the malting and pearl barley industries in India, the cultivation of two-rowed barley in suitable areas and the development of the brewing industry. Production should be capable of improvement by large-scale distribution. For the internal barley trade, the desirability of adopting a standard contract is recommended. Efforts should be made to introduce an All India Standard for trade in barley as is being done in the case of wheat. Establishment of more regulated markets would also be of further assistance.

Russian Cotton Industry

In the process of reconversion to peace time production the Russian Cotton industry is making great progress. On one side coloured cotton—shades of pink and green on the bolts—is being grown. Mikhail Alexandro, Director of All-Union Cotton Research Institute, has reported that Selectionists' working on the development of woolly cotton and natural coloured cotton have produced "exceedingly interesting" results. One of these new varieties has a brown coloured fibre. At the Tarkemanian Experimental station, cotton of light and dark blue, green pink and smoke colour have been developed. Experiments indicate natural coloured cotton produces a greater length of better quality yarn than the mass of cotton. The colour is very fast and tends to depend rather than fade under the action of soap and even when washed in a weak solution of dye in hot water. The only exception is the brown fibre which tends to change colour under the influence of sunlight but industrial laboratories have developed methods of fixing the brown colour by processing it with copper and chromium salts.

New varieties of cotton have been brought about by intra-species crossing and the crossing of different species. These varieties including the coloured ones, are said to have excellent technical properties. For instance, one cotton produces a woolly staple 37-40 millimetres in length with a number between 5,500 and 6,000 and a breaking strength of 30-40 kilogram metres. When employed in industry cloths made from long staple cotton crease and remain creased when slightly crumpled but those woven from the woolly cotton are much more resilient. Suitings and coatings made from woolly cottons are said to be of very high quality and possess high porosity. Brown woolly cottons are commercially interesting because there is economy in dyeing in steam for processing the cloth, in electric and labour power.

In addition to the development of new varieties of cotton, the Institute has speeded up production by introducing belts, roller transporter and cranes into mills.

This tremendous increase in production of new varieties of tougher cotton and machinery for processing, described in a special article to the Indian Textile Journal will affect to a marked degree the future of the Russian Cotton Industry.

September Production of Jute Goods

The returns of Production of Goods during September are the highest recorded since June this year and, since the beginning of the year, are exceeded only by productions recorded during June and March. No doubt the latest returns reflect the more satisfactory position attained recently in the matter of coal deliveries to Mills and also in the combustible qualities of the supply.

The latest weight of goods produced in September was 86,173 tons, an increase of 6,849 tons or 8.8 per cent. on the previous month when 79,324 tons were turned out. The percentage of the production which was on Government account dropped from 19.4 per cent. in August to 15.9 per cent. in September, the relevant figures for these months being 15,400 tons and 13,750 tons respectively. The total quantity of hessians produced was about 1414 lakhs of yards weighing 36,755 tons. The total yardage of sacking was 1128 lakhs weighing 46,772 tons. Other manufactures accounted for 2646 tons.

The estimated jute arrivals for September total 7,38,000 bales as against 5,31,000 bales for the same month last year. The estimated arrivals for the period July-September 1945 is 16,55,000 bales

against 15,43,000 bales for the same period in 1944.

The Indian Jute Mills Association have notified member mills that an Order entitled the Jute (Price Control) Order 1945 was issued in the Gazette of India dated 6th October, 1945, the effect of which is to repeal the Jute (Price Control) Order 1944 and to replace it by the Jute (Price Control) Order 1945. The terms of the latter Order are identical with those of the former Order except in Section 5 and 6 which are new. Section 5 states that all consignments of manufactured jute goods intended for export shall be supplied in bales bound with iron loops and all consignments of such goods not intended for export shall be supplied in bales bound with rope. Section 6 provides that any person exporting raw jute shall, at the time of presenting the relative shipping bill, make before the Collector of Customs a declaration that the price, at which the raw jute to be exported has been sold, is not less than the minimum price determined in accordance with the provisions of the First Schedule to this Order (including Note 5 thereof.)

Increase in Note Issue

The return of the Reserve Bank for the week ended October 12, 1945 discloses an increase in both note circulation and notes issued. The large disbursements by the Central Government and the need for a good cash position, in order to repay the outstanding amount of 5 per cent. 1945-55 tax-free loan, have obviously been responsible for the further expansion of currency against sterling securities. The announcement regarding the reissue of 2½ per cent. 1950 bonds for Rs. 15 crores early this week was made in order to meet the demand of short-term investors. It is just possible that some of the holders might elect to place their money in either 8 per cent. 1963-65 or 2½ per cent. 1950 bonds.

Notes in circulation were Rs. 1,159.98 crores against Rs. 1,152.13 crores while notes issued were Rs. 1,168.82 crores against Rs. 1,162.50 crores. Expansion of currency is for Rs. 7 crores against sterling securities, there being an increase in the amount of sterling securities in the issue department by this figure to Rs. 1,049.32 crores. Rupee coin are further lower at Rs. 17.23 crores.

In the Banking department, Central Government balances are higher at Rs. 395.62 crores but other government accounts are lower at Rs. 17.11 crores. There is a sharp drop in bank balances with the Reserve Bank to Rs. 96.98 crores from Rs. 109.47 crores. Even with the transfer of Rs. 7 crores to the issue department sterling balances are higher at Rs. 509.44 crores against Rs. 508.85 crores.

Earlier in the week it was announced that the Government of India had decided to create a further issue of 2½ per cent. bonds 1950 for Rs. 15 crores "as it appears that there is a steady demand on the part of institutional investors and the market generally for a short-term investment." The securities are available for sale on Government account by the Reserve Bank of India through the usual procedure for the sale of special issues at prices to be ascertained from the Bank.

Indo-Southern American Trade

Before the war South America imported only a small number of articles from India. Japan flooded South American markets with cheap manufactures, such as household hardware, enamelled ware, rubber goods, crockery, glassware, the cheaper

TEA ESTATE FOR SALE

AT THE TEA BROKERS' ASSOCIATION SALE ROOM MISSION ROW.

Under instructions from the Assam Consolidated Tea Estates Ltd., the undersigned will offer for sale by Public Auction on Friday the 9th November, 1945, at 3 P. M. as a going concern as from the 1st January, 1946 that valuable property.

5

COAL ENQUIRY COMMITTEE

DURING THE WAR many have realised, perhaps for the first time, the importance of coal to the national life. It made the wheels turn, the factories work and the armaments roll off their assembly lines. Now as the problems of peace are tackled coal will still be reckoned as the prime source of power.

In its plans for peace time development, the Government contemplates appointing a Committee to investigate and report on the many problems connected with the production and distribution of coal. It is an opportune moment and a wise decision which the coal trade welcomes.

Inserted by the
INDIAN MINING ASSOCIATION
for the purpose of informing the public
of important matters concerning
India's most vital industry

kinds of tools and implements, toys and gadgets. With the defeat of Japan after a taxing and costly war it is probable that Japan will not be able to resume her trade soon. And these markets are open for the smart and prepared nations. Will India capture these markets? India has been exporting to South America cotton, woollen and silk manufactures, coir mats, nuts and dried fruits, spices and condiments, speciality skins, drugs and medicinal herbs, sports goods and arts and crafts.

South America is a 'Price Market', a market where price factor is a vital consideration with purchasers of competing products. Cotton and woollen manufactures are cases in point. Local mills are turning out inferior quality goods since the countries are generally poor and the bulk of home demand on which local mills subsist are for goods of low quality. Indian coir runners and carpets will sell owing to their cheapness. In the pre-war years, Java tea was a strong competitor to Indian tea mainly on account of its cheapness. Indian sports goods enjoy considerable goodwill in South America on account of their cheapness.

If India is to enter South American markets one of the first requisites, as Mr. J. R. K. Modi, Government of India Trade Commissioner in South America, observes in his report on the prospects of trade between the countries, is to establish direct transport of goods from India to the countries concerned. At present most of this trade is carried on either via the U.S.A. or the United Kingdom. Importers themselves express a preference to import all their requirements direct from the countries of production and in that case there would appear to be possibilities of introducing a number of other items on our production list which are either not known or have been coming in unprepared form from the western re-export markets. Among them may be mentioned ginger, cummin and coriander seeds, turmeric, nutmeg, tamarind, cardamom, etc. The desire for direct trade is particularly in evidence in the case of Indian spices and condiments the demand for which in South America has generally been met hitherto through the U.S.A.

Indian arts and crafts products cannot be a trade in large dimensions but can provide a lucrative business. Supported by judicious propaganda and with the arrival in South America of really first-class stuff, a profitable avenue of trade could be built up. In textile fabrics, Indian embroideries in silk and wool, delicate chicon work and fine handwoven cloth would be very acceptable to a discriminating taste. Indian cattle are highly prized and priced in South America. Owing to the location of a large part of South America within the tropical zone and the similarity in climatic conditions, there would appear to be, good prospects for the importation of selected strains of certain breeds of Indian cattle into the various countries. Brazil and Columbia have already considerable herds of Indian cattle which have thriven well. The report mentions an instance in which the equivalent of Rs. 275,000 was refused by a breeder in Brazil for a pedigree bull of Indian origin; bull calves of such a variety fetched the equivalent of Rs. 16,000. Naturally there are breeders and herdsmen in those countries who would like to import further specimens to grade up the existing standard and improve their cattle wealth. The Trade Commissioner's report gives a list of Indian goods in which the main South American countries are interested. It is to be seen how far Indian business captures these markets and how

far Government helps Indian business in this direction.

Java Sugar

The earlier reports that it would take some time for Java to organise the exports of her sugar have been falsified by the recent despatch from the Hague which says that a total of 14 lacs tons of sugar, excluding the new crop, is stored in Java and that, allowing about 4 lacs tons for local consumption, as much as 10 lacs will be left over for export. It is clear, therefore, that Java to-day has sugar about 1½ times the quantity produced in India in the 1944-45 season. Japanese occupation has not told severely upon Java's capacity to produce sugar, and even the decrease in crop has been done in order to implement a Grow More drive in that country. It is now known that sugar plant and machinery in Java are in tact, and, therefore, the country's capacity to re-enter world markets again in the near future has not been seriously curtailed. Indications are also there to show that the crop for the next season will be excellent, and in view of the fact that sugar is a rationed commodity in U.K., U.S.A. and many other countries besides, the news about the re-entering of Java's sugar into world markets will be received with great interest.

The significance of the re-emergence of Java sugar as a powerful competitor in international markets should be taken note of by the sugar interests in this country. India has still good scope for expanding her sugar industry and the post-war plans are contemplating the establishment of new sugar mills in Bombay, Bengal and Madras. The bottleneck of machinery, chemicals, etc., will soon be tackled but the chief problem before the sugar producers would be the reduction of the cost of production. Even as the war has ended long before we expected, Java sugar has appeared again as a forceful competitor before we are prepared for it. The Central and Provincial Governments here should evolve suitable plans for reducing the cost of sugar production in India, so that Indian sugar can face the competition with confidence and strength.

Outlook for Rubber

The hurry with which Britain and the United States are anxious to revive the rubber industry in the re-occupied territories would seem to suggest that in spite of the vast output of synthetic rubber the United States and recently of Germany natural rubber has still its advantages and that the fears that synthetic rubber might displace natural rubber are perhaps exaggerated. The news that shipment of rubber from Malaya had arrived at an English port was featured rather prominently in the daily press a few days back and there would seem to be anxiety to clear up available stocks as quickly as possible.

It is generally known that the large stocks of rubber accumulated by the United States in prewar years had become heavily depleted and that there is need for building up stocks afresh. Only, it is not clear whether the United States is anxious to build up strategic reserves so soon after the cessation of hostilities. This is perhaps attaching too much meaning to the action of the U. S. and U. K. in regard to rubber. But of greater relevance to the context is that there are expectations that consumption in post-war years will increase to a large extent and that with the extended uses of rubber, there may be demand for the whole production synthetic and natural.

The re-occupation of Malaya naturally gave rise to fears in this country that the Indian estates will be affected and the fall in prices, as a result of the availability of Malayan rubber, would affect earnings adversely. The expectations that there will be need for all supplies for two or three years should, therefore, have a reassuring effect on Indian planters.

It will be appropriate here to attempt a survey regarding the position of the rubber industry in Malaya and elsewhere. Different estimates have been published, but there seems to be general agreement that the states have not suffered much and that the problem of equipment and labour are the main obstacles in the way. About 10 per cent of the trees are reported to have suffered damage.

In order to co-ordinate the activities of the various estates the Malayan Rubber Estates Owners Company has been formed to provide for the speediest despatch of exports to Malaya in order to ascertain the condition of the various estates. It has also been charged with the task of finding supplies and equipment for more than two million acres. The Company is a joint venture and has been formed for the express object of ensuring a fair distribution among all companies and owners of over 100 acres of land the equipment and services, which will be in short supply, subject to the overriding need for the maximum production of rubber to meet world demands. The Company has been promised support in procuring priority for supplies of equipment shipping and other facilities which could properly be given by the Government, but does not require any financial assistance from the Government. The collective action must necessarily result in an early speed-up in production.

Malaya had an average of about 32 million acres under rubber in prewar period with an estimated output of six to seven lakhs tons per annum.

What exactly is the position in the N. E. I., which is the next important producer of rubber, is not clear. In any case the situa-

tion in the Dutch possessions is very unsettled and pending a satisfactory settlement of the political issues it would not be justifiable to make any definite estimate.

Apart from ready stocks which have been left unutilised in Malaya by the Japs, it will not be, therefore, reasonable to expect that rubber output will be more than four to five lakhs per annum for sometime. On this basis, there will be demand for all available rubber.

The rehabilitation of the rubber industry has given rise to other questions. It is felt that the whole problem of the reconstruction of industries in Burma, Malaya and other countries has not been properly considered and that H.M.G. has not still made a definite statement of policy in regard to compensation for losses on account of damage to property inflicted by the enemy or in respect of operations carried out under the denial policy. It may be said that the preparedness of the rubber estates to forego financial assistance from the Government enabled an early

start on reconstruction work, but the case of other industries is different and the merits of the case should be considered and a general policy evolved.

BY INVESTING IN WAR LOANS ASK YOUR BANK

EXTRA SUPPLIES OF ELECTRIC LAMPS

The following Government Stockists and their distributing agencies are in a position to supply adequate quantities of General Service Electric Lamps which were indented by Government during the war to supplement normal commercial imports and indigenous production.

Prices have been reduced and brought in line with prices elsewhere in consultation with distributors and indigenous manufacturers. Supplies now available will help large scale undertakings like Municipalities, Electric Supply undertakings and Industrial concerns, besides individual consumers, to meet their requirements for the restoration of pre-war lighting standards. Special prices have been fixed for lamps with Screw types of caps.

Provided orders are not less than Rs. 500 in value or not less than four standard packages of lamps upto and

including 200 watts non-Government indentors like Electric Supply undertakings and industrial concerns who normally purchase direct from producers and importers are entitled to supplies at the Stockists Issue Rates shown in Price Schedule in this advertisement.

The Rates to be charged for other consumers are also shown in the schedule. A definite quota is being allotted from these Government imported stocks for supply to Electrical Dealers for sale to consumers and retail dealers not entitled to get their lamps from Stockists.

Allocation of supplies by Stockists to Electrical Dealers will be at the discretion of the Stockists and subject to the conditions imposed by the Controller General of Civil Supplies just as in the case of release of commercial supplies through normal trade channels.

Clive Street Gossip

In my last week's gossip, I discussed in broad outlines the problem of the economic relations between the Government of India and the Indian States and, in particular, the grievances which Sir Manubhai Mehta, as representing the States, recently gave expression to. I pointed out that, whatever may be the ideal solution favoured by each section of opinion, so long as the States are separate political entities, it would be both unfair and unwise to overlook their special interests or refuse all consideration to them. I made it also clear that by special interests I mean the interests of the States' subjects, their need for specially accelerated economic development. Though it is manifestly wrong to frame economic policies with political separatism as a major promise, it is equally wrong to ignore that political separatism and treat the States as having been all along an organic part of India. The States are, indeed, part of India—there is not a single British Indian who thinks of the States' subjects as belonging to a foreign country or who thinks less of their well-being than of his fellow subjects. But the Government of India have acted as if there is an undeclared economic war between British India and Indian India and that every power that they have must be utilised to secure advantage for the former. While formerly the exigencies of wartime conditions served as a pretext for making various demands on the States Governments, now the requirements of planning have taken their place. The result is that the States are asked to accept equality of tax levels, common subjection with British India to central controls of all kinds and surrender of all their right to promote their industrial and economic development with special measures suited to their own needs and conditions.

One would have little to say against these demands if certain basic conditions had been satisfied. If there is to be equal taxation in Indian and British India, there ought to be clear understanding about the system of public finance that India is to have in the future and the financial relations between the States and the Central Government. Likewise, if the initiative for industrial and other development is to be surrendered, there ought at least to be some prior understanding about the plans that are to be put into effect. It cannot be pretended that the Government of India have got clear ideas on these matters. The future of our public finance is in the most nebulous state. Our sources of taxation are dubious, in direct proportion to their yield and their importance in present conditions. Little or no thought has been given to how the States will re-orientate their system of public finance to new needs and conditions. As for economic development, the Government of India have formed some ideas of the distribution of industrial activity in relation to a few industries; but these ideas have the loosest relation to the total potentialities of each administrative unit or each economic region. It is in these conditions that an unquestioning surrender of State authority is asked for. The consequences of a prolongation of this unequal fight between the Government of India and the States can be easily imagined. The States will be forced before long to adopt

measures which may have no relation to their internal plans and which will not be related to all-India plans, since no one knows when the latter will emerge in a concrete form. Nothing will be gained by such a course of development.

It is necessary therefore to give some thought to these problems, so that every step that will be taken now will be in accord with the distant as well as the immediate objectives. The question of tax levels is now to the fore. At the moment, the Government of India are concerned to secure a rise in State taxation to the level of taxation in British India. The reason for this demand is that the lower levels of taxation in the States is attracting British Indian industry to State territory. It is also contended that this tendency is aggravated by the States which offer special inducements to British Indian industrialists to turn their attention wholly or in part to the States. These allegations, no doubt, contain a core of truth. But not only is it grossly exaggerated, but its significance to other problems is gravely misunderstood. In the first place, differences of tax levels cannot be reckoned in normal times as one of the important differential advantages of different areas in regard to the establishment of industry. Secondly, a State like Mysore which is highly industrialised, for Indian conditions, has taxation which is roughly equal to British India's. Thirdly, no action on the part of a Government can reduce the importance of natural resources for development of industry. And lastly, if the Government of India were asked to list the industrial units which had been so enticed into State territory, it would be a very poor list, indeed.

But, as I have already said, these charges have little significance to the problems of public finance in the units as well as the Federal Government to be. No elaborate data are needed to conclude that the standard of public expenditure in the States is ridiculously low and that if the States' subjects are to have the same improvement in their material well-being as British India expects to have through planned development, the States will have to raise much more revenue than they are doing now and spend a bigger proportion of the total revenue on the people. I am not aware that any

enquiry has been made into the nature or extent of the sources of the additional revenue that will be needed in the future. Some of the States have a feudal, if not primitive, system of taxation. Not to speak of progressive taxation, the incidence of taxation in most cases falls heavily on the poor. Industry is more or less wholly absent. In these circumstances, it is by no means easy to evolve a system of taxation which will be adequate for purposes of development and which will at the same time fit into a reasonably sound framework of federal finance. The discussions that took place in and about the time of the passage of the Government of India Act of 1935 may not be found to be very helpful, since the leading ideas and concepts of the time have by now become more or less wholly obsolete. It would be simple indeed, if the States have the same kind of taxes as are enjoyed by the British Indian Provinces and are given the same right to financial assistance from the Centre as the rest of India. Some inconsequential variations may be made by way of respecting the susceptibilities of the Princes. I personally believe that public finance in the States will ultimately have to be modelled on that of the British Indian Provinces. But the economic conditions in the majority of States as they are now do not lend themselves to such uniformity. I believe that at present too many States have to rely on indirect taxation which in British India belongs to the Centre. The States will have slowly to get out of this dependence on indirect taxation and make themselves eligible for a share in the divisible pool at the Centre.

But all these changes are in the comparatively distant future. And these changes cannot come about unless the States can make up the leeway in economic development in general and industrial development in particular. And that means that not only the States should have authority and full control over their affairs, but there should be the best co-ordination of effort between British India and Indian India in the planned development of the future. The present attitude of tall orders, pressure and reprisals is more likely to worsen than improve the position.

The first step in the change to the new order is the regularisation of public finance in all the States. I believe that the States which have a regular budget with definite appropriations and audit, post or prior, are by no means in a majority. There is in addition the confusion of the personal expenditure of the Princes with the public expenditure of the State. The burden of taxation is by no means equitably distributed. No attempt is made to assess either the incidence of prevalent taxes or the potentialities of new levies. Every State needs to institute a scientific, expert enquiry into its system of taxation, into the standard of social service expenditure as it is and as it should be and formulate the measures by which, over a period, the position can be improved. These questions have also to be studied in relation to the system of public finance in British India and to the needs of public expenditure on planning in the States. But the immediate need, however, is to regularise the Budget so that, first and foremost, the credit-worthiness and the

borrowing capacity of each State will be definitely established. Once these are established, the States should be entitled to all the loans for which they can provide adequately for service of the debt. It will be understood that general conformity to the policies and practices of British India will be the guiding principle of all changes in public finance. But the taxable capacity of the people and the needs of public expenditure must be the paramount consideration in deciding the system of public finance for the time being.

It is idle to expect conformity to the British Indian system till the States' Governments are able to remove the hiatus between British India and the States. And this hiatus can be removed only after the States have been enabled to incur developmental expenditure. If the budgets are put on a proper basis so as to establish the credit-worthiness of the States and if the Government of India provides them all the loans which the States can safely incur, then the move to a better set of conditions will be afoot. I should perhaps add that the borrowing capacity should be judged not only by the surplus in the existing state of affairs, but also the productivity of the new schemes which the States will be able to formulate.

This, however, is not as simple as it may seem at first sight. While the grant of loans on the basis of credit-worthiness is easy enough, the developmental schemes are bound to create conflicts of interest and sharp disagreement. But they will only be apparent. So far as I can see, neither British India nor the States have taken even arm-chair planning to the point at which the plans can be studied in juxtaposition. A number of States have formulated post-war plans of their own with more or less impressive figures of outlay of public expenditure and investment. The Government of India on the other hand start with the notion that, far from being sinned against, the States are sinners and that they portend certain dangers from which British Indian industry ought to be protected. The new idea that some of the major industries should hereafter be subject to central control or direction is naturally thought to apply as much to the States as to British India. And the entire machinery of economic control, it is thought, should apply as much to the States as to the rest of India. While this view is not unreasonable, the attitude it begets in the Government of India is apt to be a prejudiced one. If the Government of India form their own ideas of the distribution of new industries or new factories and mills of existing industries, those ideas are unlikely to have taken account of the possibilities in States territories, since the States in most cases will form but a small part of larger areas in terms of which the Government of India had been thinking. While each State would judge by its resources of raw material or its local consumption of certain manufactured goods or other advantages for industrial development, the Government of India's dissent will be based on its own ideas of distribution among larger zonal units. And once room is given for such differences of opinion, there are bound to be numerous sources of friction; and a common system of control such as is envisaged in the Government of India's

statement on Industrial Policy will be felt as a serious hardship by the States.

Control of industry must be based on sound principles of distribution of industrial activity. Once a scheme of distribution is agreed on, control will not be feared as an instrument of unfairness or invidiousness. To secure such agreement, the distribution must answer to every test of economic rationale. It is obviously unfair to ask that the cotton resources of a State shall not be utilised in cotton cloth (Continued on page 697).

(From Our Correspondent)

NEW DELHI Oct. 18.

The week just past has been one of important conferences at which we have had announcements of Government policy on a number of matters of public concern. The features of transition economy have been outlined by the Planning and Development Member at the meeting of the General Policy Committee.

People who expected the controls to be withdrawn on the cessation of hostilities will be disappointed to learn that controls are not likely to be removed for some considerable time. Officialdom takes the view, and with some reason, that a sudden lifting of controls may well cause serious dislocation to our economy. Further, all planning involves regimentation in which controls are an integral feature, so that it may well be that the halcyon days of the pre-war peace era of competitive economy and free enterprise remain a memory and that we do not revert to it in the immediate foreseeable future.

The setting up of a Tariff Board to examine the claims of war-time industries to protection has been announced. The personnel of the Board is not yet known except that Sir Shanmukham Chetty will be the President. It should be noted that this Board implements only the immediate policy and that under the long-term scheme of tariff policy, the constitution of the Tariff Board is still a matter under consideration. The present Board will doubtless take after its predecessors, but it remains to be seen whether the more permanent institution to be set up later will embody the desirable features which have been considered essential in an institution of this kind, and which are characteristic of the Boards in other countries, notably the U.S.A. and Australia. There will be general agreement that the choice of Sir Shanmukham Chetty as the President of the Transition Tariff Board is a wise one. His parliamentary experience is unique; he was reputed to be the economic brain of the Swarajist party in the old Legislative Assembly; he certainly was one of the best informed of the party on matters of public finance. It is true that his leanings in the past appeared to be towards Imperial Preference, he having been a pro-Ottawa Agreement man, not that such an attitude is in itself open to criticism, but that ultra-nationalist opinion among the business community may feel a little suspicious. But, we have advanced to a stage when even the Government of India hold the view that the retention of the provisions relating to commercial safeguards is a hindrance to the industrial development of India, so that no undue importance need be attached to past affiliations of members appointed to the Tariff Board.

Government's statement on Industrial Policy announced in April last did contain a reference to an Industrial Finance Corporation for the financing of industry, but of what form it was going to take we had no indication before. The Planning Member's statement before the Policy Committee envisages the setting up of institutions on the model of the United Kingdom Industrial and Commercial Finance Corporation Ltd., and the Finance

Corporation for Industry Ltd., with the necessary changes to adapt them to Indian conditions. The Industrial Finance Corporation, as the title indicates, will finance medium and large scale industry, and provincial counter-parts, necessarily smaller, will provide finance for small scale and cottage industries.

Provincial Five Year Post War Plans have been formulated for an estimated expenditure of Rs. 750 crores. Schemes have been prepared for starting public works such as irrigation works, anti-erosion works, roads and a characteristic feature of these schemes is that they are capable of being put into operation at short notice and in which the ratio of expenditure on employment relatively to total expenditure is high. Tentative targets for food, education, agriculture, transport, forests and civil aviation have been fixed, so that it would appear that the schemes are well on the way to being put into operation without much delay. Prophets of woe, whose gloomy forebodings of a slump have begun to attract some notice which, however, is fortunately small yet, will see that the Governments, Central and Provincial, are planning by these measures to offer an effective challenge to the menace of depression.

The General Policy Committee meeting was also noteworthy in having elicited Government's intentions in certain financial matters. Sir Archibald Rowlands invited suggestions for a review of the taxation structure. That our fiscal system needs to be placed on a balanced and scientific basis has long been recognised; that the Tottenham Enquiry of 1924-26 is out of date will be equally clear. The springs which feed the Central Government's revenues are no longer indirect taxes such as customs duties; they are direct taxes such as Income-tax, Super-tax and Corporation tax. Excise duties on industry have assumed an important role in the tax structure, second only to taxes on income. Provincial revenues continue to be inelastic, although Sales Taxes have provided some relief. An exhaustive and immediate enquiry into the tax system is therefore called for. That the Finance Departments have a mass of material on this question is no answer to the demand. Possession of material is one thing; sifting of it by impartial experts and framing a scheme to suit conditions is another, which can only be done by a commission. The Statement of Industrial Policy made last April accepted the view for periodical enquiries into the tax system.

Two other points which Sir Archibald Rowlands dealt with related to the grant of an additional depreciation allowance on new machinery and equipment and to the treatment of expenditure on research as an allowable item in computing tax liability. On the first, the United Kingdom Government has already acted promptly and there would appear to be no justification for delaying its introduction in this country. As regards research, the Chetty Committee on Industrial Research Planning confirmed the view that the provisions of the Income Tax law as they stand at present are not conducive to giving encouragement to the manufacturer for making contributions for research associations or for universities for purposes of research in that such contributions are not treated as permissible items of expenditure. The Committee

recommended the adoption of the United Kingdom practice, namely, that research expenditure of a capital nature is allowed over a period of five years or over the life of the assets, whichever is shorter, as a deduction from profits for income-tax and excess profits tax and that any payment whether for a capital purpose or not made by the manufacturer to a research organisation approved by the National Research Council will be allowed as and when made as a deduction for computing income-tax liability.

The Finance Member referred to another important matter, namely, evasion of income-tax and suggested that the executive should be armed with the necessary powers. Official view seems to hold that the provision whereby tax officers are entitled to enter premises and stamp books of account, contained in the 1939 Amending Bill but rejected by the Legislature and again sought to be enacted in the 1945 Amendment Bill and which met the same fate, would be a potent instrument for stopping evasion. It is a pathetic view, for tax evaders are the black market operators and they are not likely to obligingly leave a record of their transactions for the tax officer to get hold of. Tax evasion calls for other stringent measures than a puny effort of this kind.

The Finance Member also stated Government's intention to retain some form of control over capital issues. In a planned economy, the need for mobilising capital and to direct it into selected channels will be obvious. Government's decision, therefore, does not appear to be open to criticism. The need for relaxing the procedure is, however, recognised and it is to be hoped that the delays which are now experienced will not in the revised scheme occur.

Gateway of India

Bombay, October 16.

According to Mr. R. G. Saraiya, Chairman of the Bombay Provincial Co-operative Bank Ltd., co-operative institutions are less moribund than they have been in the past and are looking forward to extending their activities. There has been a keenness for new types of co-operative institutions, which promises well for the development of co-operative banking. Although agricultural earnings during the past year were lower, it appears that the standard of repayments of members' dues to societies and of societies to the Bank was fully maintained. Mr. Saraiya stated that, if the Government of India pursued the objective of fair and stabilised prices to the agriculturists with unflagging zeal, co-operative banking would advance far. The Bank extended its activity in the field of providing crop finance to agriculturists during the past year, and it is heartening to note that the bank realises this to be its foremost duty. It is only fair to add that the Bombay Government has also been taking a helpful attitude in the matter. Thus, previously they had guaranteed those co-op. societies which had financed debt-adjusted agriculturists to the extent of 5 per cent of outstandings in the event of losses due to bad debts. But the guarantee was confined only to the operation of credit societies. Latterly, the government has widened the scope of the guarantee so that all loans advanced by co-operative societies to debtors are covered, provided such debtors come within the purview of the Agricultural Debtors' Relief Act. It seems a pity that the government does not undertake to cover all the losses arising in the course of providing crop finance, but co-operative banks appreciate nevertheless that the government policy goes some way towards meeting the wishes of banks in this respect. Adverting to the increase in the total advances of the Bombay Provincial Co-operative Bank from Rs. 1.82 crores to Rs. 1.96 crores during the year ended June 1945, the Chairman welcomed the increase in advances to individuals against agricultural commodities, and against pledge and hypothecation of stocks to co-operative societies: "this latter increase is welcome because, to my mind, it represents a form of finance which may play an important part in the development of the co-operative industrial marketing and supply societies that one badly needed for strengthening the weak links in our rural economy."

The salient features of the rail-road co-ordination scheme have been referred to on a previous occasion. It will be remembered that the allotment of shares in the companies to be promoted under the scheme was as follows: railways 30 per cent; provincial government 30 per cent;

promoters 10 per cent and operators 25 per cent. In spite of the fact that the provincial government and the railway have 65 per cent of the total shares and are in a position to outbid the operators, it would appear that the formation of the companies is well under way, and most operators from all the zones have put up promoters amongst themselves who have been accepted by the government in seven zones. In five of these schemes, complete unanimity has prevailed among the operators in regard to the choice of promoters, while, in the case of the other two schemes, the matter is still under discussion. Meanwhile, the articles of association of the new companies are being framed and the other preliminaries in regard to the flotation of the companies, such as the valuation of the vehicles to be taken over and obtaining the approval of the Railway Board are being completed. The transport situation in Bombay is expected to improve slightly since the G. I. P. Railway administration is operating a goods road service between Bombay and Poona while passenger bus services will be started on five routes radiating from Poona. The buses are to ply exactly like railways, with fixed schedules as to fares and time tables, and the buses have been specially built so as to take upper and lower class passengers. It may be mentioned that this is an interim arrangement which will continue until the road-rail companies are formed and will help to overcome the difficulties of the railway owing to the acute shortage of rolling stock. The existing operators are naturally grumbling at the advent of the new arrangement, but it appears that local operators have been invited to take up shares in the new company which will be liquidated when the road-rail company is formed and takes over the buses now put into operation.

The working class cost of living index number of Bombay during August rose 3 points over July while the index number for food articles rose by 6 points. In Sholapur, the rise in the cost of living has been sharper as it rose by 8 points. The food index number in Sholapur actually rose by 14 points. This clearly shows that the end of the war has not even now arrested the upward trend in the cost of living indices in industrial towns. The pity of it is that, neither in food prices nor in fuel nor in any of the other items which enter into the equation, has there been a tendency to decline. The pressure of war time demand on supplies of every sort continues unrelieved; and in fact, during the present transitional period when military personnel movement is large, the shortage of supplies at many points is acutely felt. It will not be long before employers in this country as in other countries start adjusting wages to the lower volume of orders placed with them. The tendency has already started in other countries and large industrial strikes are a global feature. In India, there is a time lag for everything and in the absence of the early execution of economic plans, industrial activity is bound to droop in the nature of things. The importance of increasing supplies so as to bring down the costs of living at least in industrial centres should be obvious. And yet, considering the position as regards rent, food, fuel and clothing, the most important elements in the cost of living index, the prospects of a reduction in the cost of living are anything but bright. The pity of it is that imports are mainly under the groups of articles which leave the middle classes and the working classes unaffected, so that relief by way of larger supplies of the essential articles has been practically nil. It seems inevitable that in India too the cost of living index will continue to

out-pace wages, with resultant inevitable pressure on industrial relations.

U.S. Post-War Production

Although many wartime restrictions have been removed, the continuation of excessive taxes and inadequate prices will prevent American industry from utilizing the full productive strength which made possible its outstanding wartime record. C. S. Davis, president of Borg Warner Corp., declared today in a statement relating to post war production.

Once released from these wartime burdens, he said, Borg Warner through its 23 divisions and subsidiaries is prepared with a postwar production programme involving large expenditures for rehabilitation and expansion of its production facilities.

Mr. Davis is optimistic over expansion of business in the automotive, agricultural and household equipment fields where the organization was prominent in pre-war days, and for continued development of its aviation and marine operations built up mainly during the war.

Removal by Congress of abnormal wartime taxes, and a change in OPA's policies to allow a fair price for products, he said, must be accomplished without further delay. These actions, coupled with a ready access to sufficient materials and manpower, Mr. Davis added, would set industry on its way to demonstrate to the world again its genius and ability to produce.

Industry's performance in the days that followed America's entry into the war be convincing evidence of that ability, he continued.

"The world knows and knows, his statement pointed out, "that without America's tremendous outpouring of mate-

rials, its genius to create and produce superior planes, ships, guns and tanks. the Axis powers could not have been pulsed in those dark days when not only the liberty of our Allies was threatened but our own nation's security was at stake.

"There can be no valid reason for lack of confidence in American industry, which is asking only to be given opportunity to perform in the same energetic manner it did when war and the production problems of war were thrust suddenly upon this nation. These problems to-day are the same, only now they involve a change from war to peace.

"The overwhelming burden of wartime taxes be drastically reduced. Industry accepted the excess profits taxes and other high operating taxes as necessary wartime measures. Now that the war is over, however, such emergency measures must be relaxed to enable industry, faced with heavy reconversion costs, to tackle the stupendous task of returning to peacetime production.

"These burdensome taxes, and OPA's failure to allow adequate prices for products, are the shackles crippling industry's efforts to-day. As I said recently in a statement before the House Banking and Currency Committee in Washington, business must be allowed prices that will encourage full production. And it must be remembered that the high volume of employment for which we are all striving can be had only as a result of a high volume of production.

"With the easing of unnecessary restrictions, the wheels of industry will move ahead with the necessary productive speed to satisfy the pent-up buying needs of the public, and to ease the dislocations and unemployment that are threatening our economic structure to-day.

"Once into full peacetime production. Jobs could be restored to the working men and women of the nation, and the public

deprived by war of its many necessities and luxuries, will return to a normal way of life and the high American standard of living assured."

(Continued from page 693).

production, simply because an important cotton mill centre in British India is not sufficiently far away. The States, especially the bigger ones, will naturally ask for a full development of all their natural resources; and while the Government of India may justly demand that development in the States should not disorganise industry in the adjacent British Indian areas, they have also to recognise that the State needs an increase in productive activity and productive activity is possible only with utilisation of raw material resources. These questions can be settled satisfactorily, only if planning is done carefully on the basis that the potentialities of every economic region should be fully realised. It is not sufficient if mere zonal divisions are contemplated for each major industry. Location of industry is different altogether from regional planning; and it is regional planning, and not mere zonal divisions for each industry, that is required. And if regional plans are formulated, then the conflicts which now loom so large will fade out of view. The claims of each area will then be capable of exact appraisal and controversies will be minimised. In the light of such plans, the capital requirements of each area, its needs of machinery and other essential material, its requirements of foreign exchange, all these can be determined with comparative ease.

For such plans, however, complete statistical information is indispensable. The States are most backward in the matter of economic statistics; and no time can be lost in instituting the machinery

(From Our Correspondent.)

Karachi, Oct. 15.
Now that the war is over, the local commercial community is much concerned with the prospects of wool export trade, which had been curtailed considerably for the duration. Restrictions on shipments of wool to the United Kingdom have already been removed. But they are now undertaken to the extent fixed by His Majesty's Government for the purpose. There is a sort of quota system in existence in respect of shipments of wool to the United States and Canada. The system is operated by the Government of India, who have fixed the quota of the various exporters on the basis of their reports for the three years ending March, 1944. The quota was fixed so that there would be ample supplies of wool available in the country itself for utilisation by the government for military purposes. And hence the total exports of wool during this period were much below the average exports of 150,000 bales a year.

It is estimated that government requirements of wool for military purposes amounted to nearly 60,000 bales a year. Deducting this from the average of exports in pre-war years, there should be an exportable surplus of wool of about 90,000 bales a year. But the figures of exports for the last four years fall much below even this average, and barely amount to 203,000 bales, leaving an unaccountable surplus of 156,000 for this period. It is felt that this quantity of wool must be lying in the country with either producers or dealers as undisposed stock. Hence an outlet for them will have to be found along with the current year's clip of 150,000 bales of Indian wool.

Karachi is the main port for the export of wool from India. In fact, about 85 per cent of the wool exports from India goes from Karachi. The local business community is therefore much concerned with the wool export trade and the Committee of the Buyers and the Shippers' Chamber has made a representation to the Government of India to remove restrictions on the export of wool to the United States of America and Canada, as early as possible, now that the war has ended.

India is to import 760,000 tons of wheat during the year ending April 30, 1946. Out of this quota allotted to India, about 250,000 tons of wheat are understood to have arrived by the middle of September, 1945 and the balance of 510,000 tons of wheat are still to arrive. The distribution of the wheat so imported will be on the basis of the extent of shortage in the deficit provinces. The Central government's storage depots at Calcutta, Coimbatore, Karachi and Bombay will hold a reserve out of the imported wheat of about 100,000 tons to meet any emergency conditions if and when they arise during the season. Sind has been assured of a supply of 10,000 tons of imported wheat from the Karachi depot which the Central government have agreed to keep ear-marked, should the supply position in the province require assistance later in the year.

Sind is consuming nearly ten seers of sugar cane per capita, merely for chewing purposes, its consumption perhaps being the highest in the country. In the current year, it is estimated that nearly 5,228 acres were under sugar cane. The major portion of the crop is being used for chewing purposes, though some quantity at places is also processed into gur. The crop would amount to nearly 75,000 tons of sugar cane

which is making allowance for the cane utilised for preparing gur, and works out at an average consumption of ten seers per person in the province.

There is some slight decrease in the acreage under cotton in Sind, according to the fourth forecast of cultivation of cotton, published by the Department of Agriculture. The estimated acreage under cotton for the current season is 824,696 for American varieties against the finally revised estimates of 840,686 for the previous year. The acreage under Desi varieties is 45,151 against 41,034 for the previous year. The yield is estimated at 426,417 bales for the American variety and 25,283 bales for the Desi variety. The acreage under cotton in the Khairpur State, however, has gone down to less than one-third, from 65,618 for the previous year to an estimated 20,582 for the current year.

It was evident for sometime past that the industrialists and financiers of Sind were in the habit of bypassing the Government of Sind when making application to the Government of India for seeking tariff protection or importation of machinery for starting new industrial ventures. It is pointed out that though it is true that the final decision in these matters lies with the Government of India, the Government of Sind would be in a position to express their opinion on the subject if it was sought. It is reported that recently some industrial establishments located in Sind have made applications to the Government of India for tariff protection. Three more concerns have applied to the Government of India for starting vegetable ghee factories. None of them has forwarded its application through the Government of Sind, with the result that they have been deprived of the opportunity of any recommendation on the part of the Government of Sind.

The authorities of the Karachi Port Trust have been approached by some local concerns for permitting them to start ship-building yards in the Karachi Port area. Though Karachi is a large port, ranking third in India, it has no ship-

building yard worth the name, while ports of lesser importance have.

The conditions of Sindhis who have reached Burma and other countries is stated to be pathetic, according to information received here from Rangoon. It is learnt that Mr. Jamnadas Mehta met Sindhis there who requested him to expedite their passage home. Mr. Mehta seems to have assured them that arrangements would soon be made to send them back home.

Sind Government, in consultation with the Centre has reduced the wholesale price of Kangni rice from Rs. 9 to Rs. 8-12 a maund and paddy from Rs. 5-8 to Rs. 5-3 per maund. This is not a statutory maximum price for the whole season and it is pointed out that this is in keeping with the policy of gradual reduction of foodgrain producer against any sudden or steep fall of the market which may be expected as soon as rice imports from Burma begin to arrive.

FACT No. 13

INDIA'S cotton textile industry in peacetime made available to the handloom industry an average of 398 million pounds of yarn per year. In 1943-4 the yarn available to the handloom industry was 512 million pounds, which represents an increase of about 30% over peacetime supply.

One of a series of statements of fact for the information of the public.

Investor's Supplement

Stock Markets to-day and to-morrow:

STOCK MARKETS STEADIER WITH BULLION

While the Calcutta Stock Exchange has remained closed on account of the Puja holidays the Bombay market has been quite firm with the strength of bullion and a rise in prices has been recorded all round. Following the publication of the scheme of the planning committee for the development of the cotton industry in the post-war period and the reports that the Textile Control Board will consider the question whether it is necessary to continue the Utility Cloth Scheme there has been good buying of textile issues in Bombay. Steels also came in for influential buying. With the result the general undertone is very steady. The publication of the Reserve Bank returns disclosing further expansion in currency was also considered a bullish factor.

In unofficial transactions in Calcutta a moderate rise in prices has been reported. Steel Corporations in particular are strong at Rs. 35-4 with Indian Irons at Rs. 41-3. Burrakur were steady at Rs. 45-1 and South Karanpura at Rs. 39-8. Howrah were steadier at Rs. 95. It is generally expected that, given the continuance of the present conditions, the reopening after the holidays would be active.

There has been a sudden jump in the quotation for Reserve Bank shares from Rs. 139 to Rs. 155. This sharp rise is due to the rumours regarding the possibility of an increase in the dividend to shareholders from 4 to 5 per cent. per annum. As the dividend for the year ended June, 1945 was only recently paid it is not clear how the rumours started. It will be remembered that the last dividend increase was in 1943, from 3½ per cent. to 4 per cent. Another reason for the rise is said to be the demand for proxies in connection with the election of directors and buying from special quarters.

The balance-sheet of the Central Kurkend Coal Company Limited for

SPECIALISTS IN

STEEL BRIDGES

KUMARDHUBI ENGINEERING WORKS

Agent: BIRD & CO. - CALCUTTA

the half-year ended June, 1945 must be considered rather encouraging. In recent years earnings have been maintained at high levels and for the third half-year in succession the dividend to ordinary shareholders has been increased. The latest dividend of 8½ per cent. on the ordinary shares is the highest in the history of the company.

As raisings were considerably higher in the first half of 1945 than in the previous half-year there was an increase in the net profit, before providing for taxation and depreciation, to Rs. 3,51,986 from Rs. 1,91,754 for the previous six months. The profits for the corresponding period in 1944, however, were slightly higher at Rs. 3,67,185. After providing Rs. 2.5 lakhs against Rs. 1.12 lakhs for taxation, transferring to Capital Redemption Reserve Rs. 10,000 (same) and setting aside to depreciation Rs. 35,000 (same) the dividend on ordinary shares has been increased from 5 per cent. to 8½ per cent. The jump in the quotation for the shares was perhaps in anticipation of the increase in dividend, though it was stated there was some buying from special quarters.

For the sixth year in succession the Mysore Sugar Company Limited is paying a dividend and bonus of 20 per cent. on ordinary shares. After the statement by the Chairman of the Company that the finances were being conserved to enable the Company have its own farms and be less dependent on the ryot for cane supplies the hopes regarding an early issue of bonus shares have been deferred. But the shareholder has the satisfaction of watching the equity value behind the shares grow. The net profit, before providing for taxation and depreciation, for the year ended June, 1945 was Rs. 18,74,968 against Rs. 18,38,996 for the previous twelve months. The amount set aside to depreciation is Rs. 4,39,034 against Rs. 4,53,531 on the former occasion while the provision for taxation is Rs. 7 lakhs against Rs. 6.51 lakhs. The allocations to funds take up Rs. 3 lakhs as before, the General Reserve receiving Rs. 2 lakhs and the Store Depreciation Fund Rs. 1 lakhs. As both the quantity of cane crushed and sugar produced were lower the higher earnings for the year was perhaps due to the better working of the distillery.

The balance-sheet as on June, 1945 discloses a very strong position. Reserves at Rs. 59,23,825 are considerably higher than the paid-up capital of Rs. 21,79,280. Sundry liabilities, including dividends and taxation, were Rs. 38,30,206 while liquid

assets were as much as Rs. 95,75,909. There is a substantial improvement in both cash and investments as the funds of the company increased and there was an appreciable reduction in stock to Rs. 7.75 lakhs from Rs. 16.72 lakhs. Investments show a rise of nearly Rs. 11 lakhs to Rs. 32.11 lakhs. There was an addition to the Company's farms during the year and lands were purchased for Rs. 2.22 lakhs.

With a lower selling price for both cloth and yarn, on account of the successive reduction in ceiling prices, there is a decline in earnings of the Ahmedabad Advance Mills and the Central India Spinning, Weaving and Manufacturing Company for the year ended June, 1945. The decline in earnings for the Ahmedabad Advance Mills is not very pronounced and would perhaps have been maintained at the previous year's level if there was no shortage of coal. The dividends, however, have been reduced in both cases. The net profit, before providing for taxation and depreciation, of the Central India Spinning and Weaving Mills for 1944-45 is Rs. 80,64,666 against Rs. 99,07,541. Total output was actually higher but sales were slightly lower at Rs. 4.3 crores against Rs. 4.39 crores and there was no corresponding reduction in the cost of production with the decrease in ceiling prices. Provision for taxation is Rs. 60.75 lakhs against Rs. 75.5 lakhs while the amount set aside to depreciation is Rs. 4.5 lakhs against Rs. 6 lakhs. The sum transferred to reserve is Rs. 6 lakhs against Rs. 7.75 lakhs. The final dividend of Rs. 9 per share with an interim dividend of Rs. 6 per ordinary share already paid makes Rs. 15 per share against Rs. 20 per share for the whole year. The amount carried forward is slightly lower at Rs. 19,223 against Rs. 32,682 brought in.

The net profit of Ahmedabad Advance Mills for the same working period is

SPECIALISTS IN

STEEL BRIDGES

KUMARDHUBI ENGINEERING WORKS

Agents: BIRD & CO. - CALCUTTA

Rs. 23,24,855 against Rs. 25,46,343 for 1943-44. Provision for taxation is not very much lower at Rs. 16.8 lakhs against Rs. 17.8 lakhs while the amount set aside to depreciation is Rs. 1.2 lakhs against Rs. 1.25 lakhs. The transfer to reserve is Rs. 3.65 lakhs against Rs. 4 lakhs. The final dividend on ordinary shares is Rs. 8 per share which, with the interim dividend of Rs. 5 per share makes Rs. 13 per share against Rs. 18 per share for the previous year. The amount carried forward is lower at Rs. 5,914 against Rs. 26,059 brought in.

Constructional engineering companies are assured of prosperous conditions for several years. With the large arrear demand and planned development of railways and other industries, engineering companies will have considerable work before them. With the larger supplies of raw materials and imported products, orders can be executed without any difficulty. The Indian Standard Wagon Company Limited has been able to report better results for the year ended March 1945 as, with the improved conditions in the supply of raw materials from India and overseas, the output showed a satisfactory increase. Apart from the normal business of wagon manufacture, the company's contribution to the war effort included the construction of armoured fighting vehicles, the manufacture of shell cases and other military equipment.

The net profit, before providing for taxation and depreciation, is very much higher at Rs. 20,77,518 against only Rs. 8,15,169 for the previous accounting period. The earnings are the highest for several years. Naturally, a good portion of the increase in earnings has been taken up by the provision for taxation, Rs. 13.7 lakhs against Rs. 4.6 lakhs. The directors have not been keen on paying a large dividend as it is necessary to conserve the resources of the company to provide for expansion and replacement to plant. It is pointed out in the report that a considerable portion of the existing plant is due

for replacement and that the new plant, when installed, will increase output and reduce the costs of production. After transferring Rs. 2.25 lakhs (nil) to plant replacement reserve and setting aside Rs. 1,51,196 against Rs. 67,933 for depreciation, the dividend payable to ordinary shareholders is 17½ per cent against 15 per cent. The amount carried forward is Rs. 23,157 against Rs. 18,233 brought in.

Speaking at the Annual General Meeting of the Indian Copper Corporation last month Sir Godfrey Fell was rather optimistic about the future. His remarks are very encouraging as it is for the first time in several years that the Chairman has felt confident regarding the increase in the activities of the company and also of its earnings. He stated that "this Corporation owning its own mine, which gives promise of continuing to produce ore for many years, a well-equipped mill and a refinery and a most loyal and capable staff can, I venture to prophesy, face the future with courage and confidence."

The statement regarding the life of the mine and the proposed extensions to mining equipment should re-assure the shareholders. It is expected that as a result of the installation of a cold rolling mill there will be a substantial increase in output with a decrease in the cost of production and that the operating profits will be higher by £40,000 a year. With the possibility of a substantial decrease in the tax liability next year, on the assumption, of course, that generous concessions will be given in regard to the liability under E. P. T., the shares have scope for appreciation in value. They have been rather sticky around Rs. 3-2 for a long time and the spectacular developments in the stock markets have never at any time affected these shares.

The net proceeds of sales and adjustments of stocks on hand as on December 1944 were higher by about £56,000 while mine administration and Indian taxation were lower at £32,000 and £7,000 respectively, but as the cost of ore treatment rose by £93,000 there was an increase in revenue by only £2,000. The dividend has been maintained at 10 per cent, taxable, after placing a sum of £25,000 to the credit of provision for capital expenditure. It is estimated that large sums will be needed towards capital expenditure and that it will be necessary to conserve the resources of the company to the fullest extent.

(Annual General Meeting on 26-10-1945 at 10-45 a.m. Books closed from 5th October to 26th October, 1945).

Audited accounts for the year ended 30th June, 1945.

The results for the period, after providing for taxation, show a profit of Rs. 1,70,314-10-10; to which has to be added the Carry forward from the previous year Rs. 30,042-1-10; from which has to be deducted:—Depreciation Rs. 1,75,000; leaving at credit of Profit and Loss Account Rs. 25,356-12-8. The amount reserved for Income and Corporation Taxes is considered adequate and the current rates of taxation have been taken in making the calculations. There is no liability for Excess Profits Tax.

The Company's Balrampur Factory commenced crushing on the 11th December, 1944 and continued until the 9th April, 1945, while the Tulsipur Factory commenced crushing on the 18th December, 1944, and continued until the 12th March, 1945. The factories' operations continued at a high level of efficiency.

India's production of white sugar for season 1944-45 was the lowest for many years past. The causes which contributed to this were the very high prices ruling for competing crops, coupled with the effects of the Government's campaign to increase the area put under food crops.

Climatic conditions were not generally unfavourable in the principal cane-growing areas. Except for a serious outbreak of Red Rot in a certain area the incidence of disease did not indicate any abnormal features, although Smut was reported to be very prevalent.

The sugar value of cane treated was less than in the previous season. This, coupled with the short season, had an adverse effect on the trading results.

The Government scheme for the compulsory investment of a portion of the cane price on behalf of growers in the United Provinces and Bihar, which had proved very unpopular, has been discontinued.

Cane plantings for the current season in the areas serving the Company's Factories have been on an increased scale and this has been due in no small measure to the fact that a bonus on cane delivered in excess of that offered made by the Company last Autumn of delivered last season.

Although rainfall has been a little below normal, the condition of the cane crop in the Company's areas may be considered satisfactory at the time this Report is issued. The yield, however, will probably be lower than what was at an earlier date anticipated.

Stocks of sugar have been valued on the basis of Government Control prices. The Company's property has been maintained in good repair.

(Annual General Meeting on 26-10-1945 at 10-15 a.m. Books closed from 5th October to 26th October, 1945).

Audited accounts for the year ended 30th June, 1945.

The results for the period, after providing for taxation and a bonus to employees, show a profit of Rs. 5,27,488-8-11; from which has been deducted:

Depreciation Rs. 1,00,000; Renewals and Improvements Funds Rs. 1,00,000; to which has to be added the Carry forward from the previous year Rs. 2,40,386-2-7; leaving at credit of Profit and Loss Account Rs. 5,67,874-11-6; this balance the Directors recommend should be disposed of in payment of a dividend of Rs. 2 per share for the year ended 30th June, 1945 Rs. 3,60,000; and Carry forward Rs. 2,07,874-11-6.

It has been estimated that the adjusted Standard Profits for the period of trading are Rs. 7,40,000.

The amount reserved for income and Corporation Taxes is considered adequate and the current rates of taxation have been taken in making the calculations. Part of the Excess Profits Tax, paid in previous years and now refundable, has been taken into consideration in making the reserve.

The Company's Barrah Factory commenced crushing on the 9th January, 1945, and continued until the 15th March, 1945, while the Champatia Factory commenced crushing on the 1st January, 1945, and continued until the 2nd April, 1945. The factories' operations continued at a high level of efficiency.

(Annual General Meeting on 26-10-1945 at 10-30 a.m. Books closed from 5th October to 26th October, 1945).

Audited accounts for the year ended 30th June, 1945.

The results for the period, show a profit of Rs. 46,834-4-0; to which has to be added:—Transfer from General Reserve Rs. 10,000; the Carry forward from the previous year Rs. 4,788-3-2; from which has been deducted: Debenture Sinking Fund Rs. 18,750; leaving at credit of Profit and Loss Account Rs. 42,872-7-2; this balance the Directors re-

commend should be disposed of as follows: In payment of a dividend of Re. 1 per share for the year ended 30th June, 1945 Rs. 40,000; Carry forward Rs. 2,872-7-2.

No provision for taxation has been made this year as the estimated Excess Profits Tax refundable is sufficient to cover the income and Corporation Taxes liabilities.

Further, it has been estimated that the adjusted Standard Profits for the period of trading are Rs. 1,59,000.

Crushing commenced on the 8th January, 1945, and continued until the 5th March, 1945. The factory's operations continued at a high level of efficiency.

The basic price of Rs. 16-4 fixed by the Government for the sugar produced last season to a small extent compensated for the increased cost of raw material, stores, labour, etc., but the lower production of sugar as a result of the short season had an adverse effect on the trading results.

HOOLUNGOOREE TEA COMPANY, LIMITED

Audited accounts for the year ending 31st December, 1944.

The season's working resulted in a profit of Rs. 1,06,131-8-5 after making sundry adjustments and providing Rs. 18,690 for depreciation. After bringing in the balance from last year, charging Secretaries' Commission and providing Rs. 33,000 for taxation there remains a balance of Rs. 93,320-8-4 at credit of Profit and Loss Account. From this the directors recommend a payment of Rs. 15 per share absorbing Rs. 65,250, leaving a balance of Rs. 28,070-8-4 to be carried forward.

A total crop of 8,953 maunds was secured of which 6,796 maunds were sold for export at an average price of As. 15 per lb. and 2,157 maunds for Internal Consumption at an average price of As. 12-1 per lb.

Climatic conditions were normal but shortage of labour prevented the production of a larger crop. Rainfall was 84.0 inches compared with an average of 75.6 inches for the previous seven years.

There was again a heavy loss on sale of rice and other foodstuffs to the labour force at concession rates.

Estimates for the current season have been framed for a crop of 9,000 maunds to cost Rs. 5,44,479.

Secretaries.—M/s. Andrew Yule & Co., Ltd.

BASMATIA TEA COMPANY, LIMITED

Audited accounts for the year ended 31st December, 1944.

The season's working resulted in a profit of Rs. 38,623-13-11 after making sundry adjustments and providing Rs. 7,047 for depreciation. After transferring Rs. 2,500 to Furlough Fund, bringing in the balance from last year, providing for Taxation and charging Secretaries' and Agents' and Directors' commission, there remains a balance of Rs. 49,334-9-6 at credit of the Profit and Loss Account. From this the directors recommend the payment of a dividend of As. 12 per share absorbing Rs. 25,500, leaving a balance of Rs. 23,834-9-6 to be carried forward.

A total crop of 3,130 maunds was secured of which 2,391 maunds have been sold for Export at an average price of As. 15-7 per lb. and 739 maunds have been sold for Internal Consumption at an average price of As. 14-5 per lb.

Climatic conditions were favourable but acute shortage of labour resulted in a considerable reduction of crop. Rainfall amounted to 91.41 inches compared with an average of 98.95 inches for the preceding ten years.

The crop of Tea Seed met with a ready demand and sold at satisfactory prices. There was again a heavy loss on sale of rice and other foodstuffs to the labour force at concession rates.

Estimates for the current season have been framed for a crop of 4,000 maunds to cost Rs. 2,37,745.

Secretaries and Agents.—M/s. Andrew Yule & Co., Ltd.

(Annual General Meeting on 26-10-1945 at 10 a.m. Books closed from 5th October to 26th October, 1945).

*The results for the period, after providing for taxation and a bonus to employees, show a profit of Rs. 1,04,985-2-7; from which has been deducted:—

Depreciation Rs. 50,000; Debenture Sinking Fund Rs. 20,000; to which has to be added the Carry forward from the previous year Rs. 23,146-15-11; leaving at credit of Profit and Loss Account Rs. 58,132-2-6; this balance the Directors recommend should be disposed of as follows:—

In payment of a dividend of As. 6 per share for the year ended 30th June, 1945 Rs. 44,962-8-0; Carry forward Rs. 13,169-10-6.

The amount reserved for Income, Corporation and Excess Profits Taxes is considered adequate and the current rates of taxation have been taken in making the calculations.

It has been estimated that the adjusted Standard Profits for the period of trading are Rs. 1,76,000.

It has also been estimated that Rs. 5,800 will be due in respect of these profits as a Compulsory Excess Profits Deposit under Section 10 of the Finance Act, 1942. This deposit is refundable with interest at 2 per cent per annum, and a Bonus equal to one-tenth of the Excess Profits Tax paid.

An appeal was made by the Company to the Appellate Assistant Commissioner of Income and Excess Profits Taxes in connection with the Profit of Rs. 57,407 on Land Sales and this was upheld. The refund thereof, in addition to the amount reserved, are considered sufficient to meet all taxation liabilities.

Crushing commenced on the 18th December, 1944, and continued until the 9th April, 1945. The Factory's operations continued at a high level of efficiency.

The Government scheme for the compulsory investment of a portion of the cane price on behalf of growers in the United Provinces and Bihar, which had proved very unpopular, has been discontinued.

In accordance with the conditions of the Debenture Trust Deed, the Company will redeem all the Debentures for Rs. 4,00,000 at a premium of Rs. 3 per cent on the 1st Day of October, 1945.

The Company's property has been maintained in good repair.

Over Rs. 112 Crores were invested in less than
eleven months in the First 3% Victory Loan
(1957) withdrawn during February 1945.

The 3% Second Victory Loan (1959-61) offers you
another opportunity to lend money to India on attractive
terms. You serve your country, help to lower prices,
and the 3% dividend per annum less Income-Tax is
sent to your address twice a year.

There is NO LIMIT to the amount you are permitted
to invest in the Loan, and the Government has
guaranteed to repay at par not earlier than 15th August
1959 and not later than 15th August 1961. If in the
meantime you want to realise your capital, the Loan
is readily salable on the market. You can obtain
refund of Income-Tax if you are not liable to it or
liable at a lower rate.

To buy this Loan, apply to your Bankers, or
to the Reserve Bank of India at Bombay.

Calcutta, Madras, Delhi, Cawnpore or to
the Branches of the Imperial Bank
of India in other places or to

MAYBE it is you, perhaps not in the same way as shown here but burning it all the same. Every time you buy needlessly and at inflated prices, you are in fact burning money, because it is plain commonsense that war-time prices give you bad value for money.

Many things have disappeared from the market—others are in short supply. Rationing and controls have been necessary to see that everyone gets a fair share of what is available. Prices of controlled articles even are in excess of pre-war prices, not to mention uncontrolled articles. We presume you are a good citizen and do not pay the fantastic Black Market prices. Why pay ten rupees for a thing which is not worth more than five? Much better to postpone your purchases till prices are normal again, when you will be able to buy better goods at lower prices.

**PLAN TODAY FOR TOMORROW
SAVE ALL YOU CAN**

But remember to invest your savings where they will be safe, and waiting for you when you need them.

National Savings Certificates, Government Loans, Post Office Savings Bank Accounts, Insurance, Co-operative Societies and Savings Bank Accounts are both safe and profitable. Do not risk your money by buying land, buildings, commodities, manufactured goods or jewellery. Their prices are very high these days and chances of depreciation are great. **SAVE SAFELY FOR THE FUTURE.**

Searching The Earth

You have hit the nail on the head in your note searching the earth on the question of importing experts. As you have said, hundred years is a long enough period for any Department to be Indianised, if Indianisation is really meant. The very fact that the country has not been completely geologically surveyed in one hundred years shows how little interest Government took in the mineral development of the country. And the fact that whatever was mined has been sent abroad as ore and was not worked points also the same way. It is too late in the day to say that Indians are not coming in numbers to get trained as geologists. For we have Indian Geologists as Wadia and Krishnan who are as good as any. Without analysing the reasons, if the Government of India were to say that there are not enough trained men to carry out the mineral development of the country what is the way out? Surely not to import experts who neither know Indian conditions nor Indian language. Best Indian youngmen from different provinces and States must be sent abroad for intensive and extensive training in the latest mining and geological methods and on return be entrusted with the mineral development. It has taken 100 years for the non-Indian officers to retire, if more men are imported at this stage history will repeat itself. If Government say that the development must be quick and can be done only with foreign experts then such experts should be brought only on short term contracts who will go home after training Indian youngmen.

J. N. Jagati.

Economics of Separation

You have presented the orthodox view on this question. You remark "The majority view is more adverse to separation than favourable." It is this conventional majority that is repulsive to the League mind. You also remark, "The value of the reports suffers also from the fact that Pakistan itself continues to be a vague and controversial conception." This is not so. While the definition of Pakistan has not been given and definition, be it noted, is the most difficult thing, there is no doubt in the League's mind that it wants Pakistan—a division of the country into two, Hindusthan and Pakistan, Hindus to have the former and Muslims the latter.

Apart from this, how are Messrs. Mathai Mody and Sarker competent to express an opinion on the desirability or otherwise of Pakistan. Have they been chosen by the country? We should remember that the League refused to have anything to do with the Non-party Leaders' Conference. The League did not put forth its case. It was not heard. Letting alone all these academic questions, let us realise facts. As C. R. has rightly said, instead of having parity and living like cat and mouse let us divide the country. That is realistic.

A Leaguer

Sale of British Ships

I think you deserve a Brick-bat for your very soft note on the above subject. The topic of shipping has been one of the saddest features in all Indo-British relations. The British Government would not allow the restriction of coastal trading to Indian ships. There is not enough space in British ships to bring food to the starving millions

of India, at the time of the famine. But there is enough space to bring and dump consumers' goods on India. Britain will neither sell ships nor allow India to build her own ships. Does it not show the good intentions of the British Government when it refuses permission to the British companies to sell ships to India even when the companies are ready. If it is said that the refusal is not only for India but also for the Dominions that does not make a difference. India for its coast line and population has had a fantastically small tonnage of ships. On the eve of the war India had barely 146,000 tons of shipping as compared with the 18 million of British shipping. And more than half of this small tonnage was lost during the war. And mark the discrimination in requisitioning ships. While 83 per cent of Scindia's (Indian owned) were requisitioned only a small percentage of ships owned by foreign lines was requisitioned. And the way in which the attempts to start shipbuilding factory at Vizagapatam were foiled is further evidence of the British intentions. This one instance is enough to make Indians get disgusted with British connection.

M. C. Parekh

Science and Reconstruction

In an otherwise good note Science and Reconstruction you have made one or two statements which one cannot endorse "Scientists have discovered the path to the removal of much evil from the world and the addition of much good. It is for them to

guide the steps of others along the same path." The fact is they have discovered both good and bad things; and often allowed their terrible discoveries as Atom bomb to be used by interested people for the destruction of innocent people. In my opinion Scientists can contribute in a large measure to the good of society which they have not done so far.

Instead of devoting attention on Atom bombs and poisonous gas if scientists would devote all their time and attention to the discovery of penicillin, the manufacture of synthetic vitamins at cheap prices, making land yield more and rich foods, will it not be better for the world? And will they not be doing a real service to society and guiding it in the right direction. That is their right role in reconstruction.

K. Niyogi

The Nations' Food

I am afraid Mr. Tandon has been very uncharitable in his remarks about your editorial 'The Nations' Food'. The occasion

Ofcourse, you need

LAL-IMLI

FABRICS

But the ARMY fighting for you must come first.

THE CAWNPORE WOOLLEN MILLS LTD. CAWNPORE, U.P.

EAST INDIA FUND

This Fund will be closed on October 31st, 1945. Upto September 27th 1945 the total receipts by the Fund were Rs. 1,22,29,041 and the total disbursements were 1,22,15,104 made up as follows: Payments for aircraft Rs. 1,03,73,333; Allocated to Charities Rs. 17,83,908; Expenses Rs. 40,142.

The Committee thanks sincerely all those who have given such generous support to the Fund.

Space Donated by Imperial Bank of India

for the editorial was the appearance of the final report of the Famine Commission and naturally the article was based on it. Nations' Food deals both with nations and with food and what more can we expect from an article with that heading? I am sure Mr. Tandon will agree with me that one cannot do justice to a subject of this magnitude in one short article. Therefore Mr. Tandon must thank himself if he does not find his own pet notions in the article. It deals in its brief compass with such an important question as the recommendations of the Famine Commission, an examination of the merits and demerits thereof. Credit has rightly been given to the Commission's suggestions for migrating Indians to less populous parts of the world and the method of improving the nutrition of Indians. India's food problem has been discussed in the light of the recommendations of the Famine Commission and in due

relation to other nations of the world. Judged with this background the title is appropriate and the article is carefully written.

Gulam Mohammed.

India's Export Trade

The statement of Sir Azizul Haque which you have quoted in your note India's Export Trade is indeed revealing. He is reported to have said "although there is a natural desire to capture export markets to the maximum, the present internal needs of the country and availability of the products of industries started during the war should be taken into account before framing a proper export policy." What he says sounds perfectly alright in theory. In the face of this, export is only a secondary consideration and there is not much use for the valuable reports of Trade Commissioners in different parts of the world

which have been reviewed from time to time in your esteemed columns. And the conclusion of your note is almost fantastic "but in the context now obtaining" you remark "India is going to lag behind and her only hope in the field lies in securing agreement with her international rivals by which they could agree to some kind of zoning of the Asiatic and European markets".

Will you consider the following questions? Who are the potential rivals of India? What are the commodities in which they are rivals? Is it possible to enter into agreement with each country and for every commodity? To say the least, your suggestion is not a practical proposition. Instead of attempting to befriend every rival in a competitive world it will be better not to have any foreign trade at all.

M. Chatterjee.

POWER FROM THE EARTH

India must plan to conserve and develop her mineral wealth, her valuable metals and coal. For mining equipment, cutting and crushing tools, raising gear, conveyors, grading and refining plants, steel is indispensable.

TATA STEEL

Fact Parade

Film Apparatus for India

Mr. P. N. Thapar, Joint Secretary, Film Branch of the Government of India's Information and Broadcasting Department, has arrived in Hollywood and immediately began negotiations with the film executives and heads of camera equipment companies for the purchase of 16 mm. film projection apparatus.

Mr. Thapar said that India was contemplating more than 1,000 mobile units for showing educational films throughout the country. She has already over 200 mobile units operating and has set aside over Rs. 30 lakhs for the purchase of additional equipment.

Social Insurance Scheme for Indian Seamen

The Government of India are considering a scheme of Social Insurance for Indian seamen which has been prepared by Prof. Adarkar. They have invited Dr. (Miss.) Laura Bodmer, International Labour Office expert on Seamen's insurances, to advise them in this connection. Dr. Bodmer arrived in India on September 19.

Economic Adviser to Bengal Government

At the invitation of H. E. the Governor. Mr. Noel Hall has arrived in Calcutta to serve for a few months as Economic Adviser to the Government of Bengal and to advise on the appointment of a permanent Economic Adviser.

Before the war, Mr. Noel Hall was Professor of Political Economy at University College, London, and Director of the National Institute for Economic and Social Research London. In 1937-38 he prepared for the Economic Committee of the Council of the League of Nations a report on measures of a national and international character to raise standards of living.

During the war, he has been Joint Director of the Ministry of Economic Warfare and later one of H.M.'s Ministers at the British Embassy in Washington.

Index of Industrial Raw Material Prices

A new series of index numbers of industrial raw material prices has been issued by the Economic Adviser to the Government of India. The base period is the year ended August 1939. It consists of 19 items under the group textile fibres, oilseeds, minerals and other materials. The combined index number was 232.5 in May, 138.1 in June, 144.5 in July, 242.4 in August and 238.1 in the first four weeks of September.

This index like the all-India index of wholesale prices of food articles, will be issued every week at the office of the Economic Adviser.

Government Fertiliser Factory, Sindri

It was announced in a Press notification dated the 20th Jan., 1945 that a Mission under the leadership of Sir James Pitkeathly, had proceeded to the U. K. for the purpose of negotiating the purchase of plant for the Government Ammonium Sulphate Factory to be erected at Sindri in Bihar. This Mission was especially charged with the responsibility of investi-

gating the processes and plant employed in the manufacture of ammonium sulphate, in both the U. K. and the U.S.A., with the object of securing for India the most up-to-date plant possible for the production of this type of fertiliser from indigenous materials. After lengthy investigations with U. K. and American experts, the Mission has submitted its recommendations, and on the basis of these recommendations the Government of India have now sanctioned the conclusion of agreements for the supply of plant and machinery for the factory, and for the erection of the factory. Two contracts have been sanctioned—one with a leading firm of American consultants for the design of the whole factory, supervision of the erection of the factory, and seeing it into production at its rated output—the other with a firm representing a consortium of British chemical plant manufacturers, who will arrange the supply of the necessary plant and the erection of the same, under the supervision of American experts. To supply the plant for this factory in the time required, it will be necessary to call upon the resources of a large number of firms including boiler-makers, manufacturers of turbo alternators, suppliers of electrical equipment, suppliers of mechanical handling and weighing equipment, in addition to utilising the resources of the chemical engineering industry for the supply of the main chemical plant. The supply of the major part of the plant will be by competitive tender. It is anticipated that large orders for fabricated steelwork, pipe work, tanks, vessels, etc., will be placed by the main contractors referred to above with Indian firms. In this way, it has been possible to secure the fullest Anglo-American collaboration in providing a

plant, of the most up-to-date design, and incorporating the best experience of both countries, whilst at the same time employing to the fullest possible extent the resources of Indian industrialists and Indian labour in the supply of such plant and equipment as can be made in India. Government are confident that, as a result of the work carried out by the Pitkeathly Mission, the Sindri factory, when completed, will be one of the most modern ammonium sulphate fertiliser factories in the world, incorporating every latest improvement known to science, both in England and America, and capable of supplying fertiliser at the lowest possible cost to the cultivator, consistent with the employment of indigenous materials.

Consumer Goods from the United Kingdom

Further Categories of consumer goods have been brought under the Open General Licence for importation from the United Kingdom.

The principal articles which can thereby be imported from United Kingdom

EMPIRE OF INDIA LIFE ASSURANCE CO., LTD.

THEIR NEEDS never ignored

As in every necessity of life, in clothing too, the peasant class is nowadays badly affected. The question of paying any price is an impossibility with them. They don't want to put up a show; what they need is durability and cheapness. Apart from the varieties of finer clothing we, also manufacture clothing of medium but durable texture which are available at a considerably cheaper price.

Our specialities:—
DOUSCHETE CHEQUER, Mock Coating, Thana Coating, Printed Mock Coating, Thana Chequer, Border Sarees, etc.

MOON MILLS LTD.

Managing Agents: ASIATIC TEXTILE COMPANY, LIMITED.
General Assc. Buildings, Fort, Bombay.

without licence are asbestos manufactures, certain brass manufactures, certain leather manufactures, packing and wrapping paper, woollen textiles, hosiery cotton twist and yarn, domestic earthenware and glassware, boots and shoes and cycles.

At the same time, certain chemicals such as alum, magnesium sulphate, hydrochloric acid, etc., have been withdrawn from the purview of the existing Open General Licence; individual licences, which are already required for import of these chemicals in bulk, will now be required for their import in small packings from the United Kingdom.

Richest Man In Show World:

Film star "Cooner" Bing Crosby at 41, is one of America's richest men. He is certainly the richest in show business. He is head of a chain called Crosby Investment Corporation. He makes three pictures a year at the equivalent cost of Rs. 3,90,000 each. He gets Rs. 19,500 per week from broadcasting. He gets at least one anna for each of his records that is sold.

Pictures, records and radio bring him in Rs. 32,50,000.

He owns real estate, breeds and sells craft factory and has a 10,000 acre ranch. Comedian Bob Hope once wise cracked: "Bing doesn't pay income tax any more. He just asks the Government what they need."

Sickness Benefit Scheme:

The Directors of Ruby General Insurance Co., Ltd., have great pleasure in introducing the Sickness Benefit Scheme which they believe is the first of its kind in the Indian Insurance World.

A policy holder insured under this scheme has to bear only half the charges of doctors' visit. Moreover he has the right to exercise complete freedom in selecting a doctor from among a number of qualified and experienced doctors who will be on the list of the company for this purpose.

Yet another advantage of the scheme is that he can bring into the scheme all his dependent family members living in the same place. The only restriction operative is that he cannot partially insure his family members. All members must be insured. Servants of the household can be similarly included or excluded at the option of the insured.

The scheme will for the present operate only in the city of Calcutta and suburbs which will include any municipality within 8 miles of Calcutta.

Indian Woollen Goods (Control) Order:

Under the Indian Woollen Goods (Control) Order, 1945, the Government of India have now issued detailed instructions to be observed by manufacturers of Indian Woollen Goods other than Controlled Woollen Goods, regulating the types, makings, specifications and ex-mill prices for the various kinds of woollen weaving yarns, woven and knitted goods.

These instructions lay down the various counts of yarns from which the goods should be manufactured, the quantities of yarn to be utilised in them, and the maximum admissible fabrication costs.

The maximum retail prices which dealers may charge in respect of Indian Woollen Goods, including weaving yarns and knitted goods falling under various categories, have been notified. All Indian Woollen Goods not manufactured and marked according to these directions must be disposed of within three months.

War Effort and Impact on Internal Economy

BRITAIN WORST AFFECTED

Washington, October 23.

The attention of this capital as well as others of the world has been directed in the past week towards Quebec and Montreal where three important international conferences have been in session. At Quebec, the Food and Agriculture Organisation came into being after the completion of its constitution by the Interim Planning Commission set up at Hot Springs Virginia Conference on Food and Agriculture in 1943. At Montreal, both the Provisional International Civil Aviation Organisation, an inter-governmental body, and the International Air Transport Association, comprising fifty-seven world airlines, have been meeting. One of the principal features at Quebec was the address by Sir Girja Shankar Bajpai, Indian Agent General in the United States, who outlined his country's aspirations and said, "We recognize that we must assume responsibility for our own problems." He urged the organisation to remain in touch with people by establishing regional bureaux and emphasized that no nation should be allowed to obtain monopoly of power in the organisation." He said that India must rectify balance between agriculture and industry and develop scientific research to improve home living.

The Transport Association has established nine regional traffic conferences to work in co-operation to prevent rates and subsidy wars and to ensure sound transport at reasonable tariffs to travellers and shippers. Much of its work will be in co-operation with and contingent upon that of the official aviation body. This organisation was established last year at Chicago and is charged with framing solutions to those troublesome political and economic issues which were left in dispute at Chicago. H. J. Symington, President of Tata and of Transcanada Air Lines, urged both his organisation and Picao to approach air transport as an international problem and to abandon selfish national and company ideas.

American, British and Canadian Governments released jointly last week a study of the relative impact of war on civilian consumption in their respective countries showing that British people's consumption of civilian goods declined in roughly the same amount as that of Americans and Canadians increased. The study was directed by the Combined Production and Resources Board whose economists and statisticians produced the yardstick with which they make their measurements in the three countries. The report said, "war effort has absorbed the major fraction of national resources first in the United Kingdom, nearly a year later in Canada and a year and a half later in the United States. The differences in the repercussions of the war on consumption were due in part also to the fact that Canada and the United States were geographically more removed from war." According to a study, per capita purchases of goods and services in the United Kingdom dropped fifteen to twenty per cent while those in Canada and United States increased ten to fifteen per cent, both based on pre-war levels. Outstanding contrasts were those in food and clothing consumption which declined eleven and thirty-four per cent respectively in Britain while increasing eight per cent and twenty-three per cent respectively in the United States and six and twenty-two per

cent. in Canada. On items consumption of which increased in Britain such as alcohol, tobacco, fuel and electric power, it was in markedly lower percentages than in other two nations. On items consumption of which declined British percentage was higher. The report demonstrated that in 1943-44 war production was approximately half of the total gross national product of the United Kingdom and Canada and forty per cent in United States. It was in the late months of last year and in early 1945 that war production and impact on civilian consumption reached its height in the United States.

Free Press Journal SPECIAL ECONOMIC (TRANSITION FROM WAR TO PEACE) SUPPLEMENT

Like the rest of the world, India has emerged from six years of the costliest war in all history, badly battered and scarred, with her internal economy in a sad state of disrepair.

But, unlike the rest of the world which made use of the war to develop new industries and expand existing ones, India could not have any measure of industrial expansion worth speaking of.

This is not all; Indian industries were worked practically nonstop, without any regard for repairs, renewals and replacements. Her capital equipment has been overworked almost to scrap.

Precious materials, raw and manufactured, have been poured, to sustain war efforts, against accumulating sterling credits in London.

Prices in India rocketed to a height unknown to any other country in the world, barring China.

There have been controls on all sides, necessary perhaps for the moment. Should they continue still, and if so how long?

Industry and commerce have not only been deprived of opportunity to develop and expand, but their future in this severely competitive post-war world is gravely uncertain.

The "Free Press Journal", through its weekly Economics Supplement, has been trying to place before the public factual and objective accounts of these many difficult economic problems.

Now we are face to face with the thorny economic problems of transition from war to peace. Every industry, every trade, has its genuine grievances, its natural right to expansion, and its legitimate demands on Government.

The "Free Press Journal" will publish a Special Economic (Transition from War to Peace) Supplement on December 8, containing articles, couched in simple and non-technical language, written by men of thought, men of knowledge and experience—industrial executives, university teachers, and representatives of the various economic interests, producers, sellers and consumers.

It is aimed to cover all the major industries and trades and the many economic problems that are integrally connected with their growth and development. The following are among those selected for such discussion:—

Textiles, (Rayon, Wool and Silk)	Bicycles
Textile Stores	Radios and Electrical Goods
Jute	Drugs and Chemicals
Iron and Steel	(Fertilisers)
Cement	Agricultural Machinery
Paper	Arms and Ammunition
Sugar	Non-Ferrous Metals
Drugs and Chemicals	Films
Toilets and Cosmetics	Agriculture
Stationery	Plantations
Shipping and Ship-building	Cottage Industries
Automobiles	Transport—Road, Rail & Canal.
Aircraft	

Besides these, pressing problems of the day like measures of control and de-control, and the question of the participation of Foreign Capital and Management in Indian Industry, will also be discussed.

There will naturally be a review of the fundamentals of a national policy of protection for our industries.

In this effort, the "Free Press Journal" solicits the co-operation of all concerned.

A special feature of the Supplement will be an Open Forum for our Readers' views on any topic within the scope of this supplement. These contributions should not exceed 150 words each.

Contributions, fully supported by facts and figures, illustrated wherever possible, are invited from students of economic problems. All accepted articles will be paid for.

[All Contributions and communications should be addressed to the Economics Editor, "Free Press Journal," 21, Dalal Street, Bombay, and should reach him before November 15, 1945.]

TREASURY BILLS

Central Government:

Tenders for Rs. 2,00,00,000 of three months' Government of India Treasury Bills were opened on October 23, 1945. Total amount offered was Rs. 1,84,75,000. Tenders at Rs. 99-14-6% and above were accepted in full. Total amount accepted was Rs. 1,84,75,000, the average rate of accepted tenders being As. 5-4% per annum.

Tenders for Rs. 2,00,00,000 of three months' Government of India Treasury Bills will be received on Tuesday, October 30, 1945 at Bombay up to 11 a.m. (S.T.) and up to the close of business on October 29, 1945 at other centres. Successful tenderers should make payment on November 2, 1945. Other conditions are as usual.

During the week ended October 19, 1945, Government of India Treasury Bills for Rs. 2,70,25,000 were sold in favour of the Issue Department of the Reserve Bank of India.

Assam Government:

Tenders for Rs. 3,50,00,000 of three months' Assam Government Treasury Bills were opened on October 24, 1945. Total amount offered was Rs. 6,30,00,000. Tenders at Rs. 99-14-6% were accepted in full and those at Rs. 99-14-3% were allotted

approximately 54%. Lower tenders were rejected. Total amount accepted was Rs. 3,50,00,000, the average rate of accepted tenders being As. 6-10% per annum.

Bengal Government:

Tenders for Rs. 3,50,00,000 of three months' Government of Bengal Treasury Bills will be received at the offices of the Reserve Bank of India, Bombay and Calcutta, up to 11 a.m. on November 1, 1945. Successful tenderers will be required to make payment and take up their bills on Tuesday, November 6, 1945. Other conditions are as usual.

Madras Government:

Tenders for Rs. 50,00,000 of three months' Madras Government Treasury Bills were opened on October 22, 1945. Total amount offered was Rs. 1,25,00,000. Tenders at Rs. 99-14-6% were allotted approximately 71%. Lower tenders were rejected. Total amount accepted was Rs. 50,00,000, the average rate of accepted tenders being Rs. 6% per annum.

WORLD OF INDIAN FINANCE

Calcutta, Friday Morning.

One of the first decisions taken by Mr. Dalton after assuming office as Chancellor of the Exchequer was to endeavour to reduce money rates from the level at which they have become stabilised since the end of 1939. It will be remembered that before the war discount rates were for a number of years around $\frac{1}{2}$ per cent. A few days before the outbreak of the war the Chancellor of the Exchequer, Sir John Simon (now Lord Simon) allowed himself to be persuaded to raise the Bank rate to 4 per cent. Under pressure from Parliament, he reduced it, however, to the pre-war rate of 2 per cent. Nevertheless, Treasury bill rates remained a shade over 1 per cent, and Treasury Deposit receipts bore interest at $\frac{1}{2}$ per cent. As critics repeatedly pointed out, this was $\frac{1}{2}$ per cent more than was really necessary. Sir Kingsley Wood and Sir John Anderson refused to yield pressure in favour of a reduction, on the ground that it would unbalance the entire structure of interest rates. If by this they meant that a reduction of Treasury Bill rates would entail an all-round reduction of interest rates, this was an argument in favour of a reduction, not against it.

It is to the credit of Mr. Dalton that he took an early opportunity to bring down interest rates. He realised that for six war years the Treasury paid unnecessarily high rates on its short-term borrowing. Before his advent to Whitehall, the Treasury officials were actually flirting with the idea of reverting to the orthodox system of fluctuating interest rates after the end of the reconstruction period. A few weeks after Mr. Dalton became Chancellor of the Exchequer he announced his intention of examining the possibilities of cheaper money. And when opening the savings campaign on September 15, he warned the public that this may be their last opportunity to be able to invest their money in Government loans on the basis of the prevailing interest rates.

Now the Treasury has taken the first step towards cheaper money by lowering its short-term rates. This made it necessary for the banks, in turn, to reduce their deposit rates. There never was any justification to pay 1 per cent and more before the war, when bill rates were at $\frac{1}{2}$ per cent. It was due to competition between the clearing banks trying to show the biggest possible figures of deposits even at the cost of paying unremunerative interest rates. Now deposit rates—apart from Home Safe and Savings deposits—have been lowered to $\frac{1}{2}$ per cent. As we forecast in our comments weeks back the banks have at the same time discontinued to pay interest on current accounts. Day-to-day money rate was also reduced from 1 to $\frac{1}{2}$ per cent.

There is no reason whatever to suppose that this reduction of short-term rates would lead either to a decline in savings or to an undue expansion of credit. Indeed, if the abolition of interest on current accounts and its reduction on deposit accounts should produce any effect at all, it would be to induce holders of such accounts to invest in Government issues. But as a matter of fact, interest rates were already so low in any case that they practically ceased to be a factor influencing the flow of funds.

The question is, will rates on long-term loans follow suit? There is reason to believe that they will to some extent. For in any case the trend is in that direction. The volume of liquid resources seeking re-investment in Trustee securities is very large. The trend is duly indicated by the recent reduction of interest on mortgages from $\frac{1}{2}$ to 4 per cent by a number of Build-

ing Societies. Even at 4 per cent it is too high. At the time when the Government's credit stood around 5 per cent the interest on first-class mortgages was also 5 per cent. Now that the Government can borrow for long-term at less than 3 per cent, there seems to be no reason why mortgagees should still pay 4 per cent. One of the means by which the new Minister of Health seeks to encourage building activity is to grant mortgage loans through the local authorities at $3\frac{1}{2}$ per cent. Before very long this rate is likely to become the standard rate for first-rate mortgages.

At the same time, interest is also likely to be lowered on industrial debentures, public utility issues, and, last but by no means least, on Government loans. That is, always provided that, meanwhile, a Stock Exchange boom does not develop. Should that happen, the diversion of funds from Government loans to equities would reverse the trend. Money would not be forthcoming freely enough for new borrowing or for renewal of expiring debts, and interest rates would tend to rise. The Government would have to draw on the banks to an increasing degree, and in order to enable them to lend, it would have to follow a policy of credit expansion on a large scale. The result would be inflation which again would accentuate the boom. The presence of a Labour Government tends to reduce the danger of a Stock Exchange boom, partly because of fears of anti-Capitalist legislation, partly through the maintenance of price controls, and partly because, if the worst came to the worst, a Labour Government is more likely to effect some form of direct intervention to stop a boom than a Conservative Government. Even so, the possibility of a setback in the cheap money policy through a boom in equities may not be dismissed out of hand.

The direct effect of the reduction of interest rates brought about by Mr. Dalton is estimated at £12,000,000, but from this amount it would be necessary to deduct the taxation revenue hitherto collected on it. On the other hand, as and when the cheap money policy begins to produce its effect on the interest rates on medium-term and long-term loans, the extent of saving will increase considerably. What is perhaps even more important, trade will benefit by the lowering of interest rates, especially since it is likely to affect also interest on overdrafts. This again will react favourably on the budgetary situation. In the building industry, for instance, private activity stands to be stimulated by low interest rates, and this will reduce the extent to which the Government and the local authorities have to spend public funds on housing schemes.

There is no likelihood of a reversal of the cheap money policy. The White Paper on Employment, published by the Coalition

FACT No. 3

HOW well has India's cotton textile industry withstood the strains of war? Based on the present difficulty of obtaining adequate supplies of such essentials as dhoties, sarees, towels, shirts and sheets in retail shops, a superficial judgement would be that the industry has failed to stand the strain.

What are the facts? The facts are: That today, India's cotton textile industry employs three lakhs more men and women than before the war; that production is now at the rate of 4,800 million yards of cloth a year as compared with 3,800 million yards before the war; that including the contribution of the handloom industry the cloth available for civilian consumption in the country in the year 1943-44 amounted to 5,868 million yards, which represents about 94% of average peace-time available supplies.

These facts and figures are irrefutable proof that during this war India's cotton textile industry has indeed "delivered the goods." There is no failure at the production end, the reason for the present "famine" must be sought elsewhere.

One of a series of statements of fact for the
information of the public.

ISSUED BY

THE MILLOWNERS' ASSOCIATION
BOMBAY

Not a Bad Solution

Our forecast which appeared in our Investor's Supplement of October 13, with regard to the final agreement between the Bengal Government and the Calcutta Electric Supply Corporation is confirmed by the statement which was issued on Monday at the Bengal Governor's Press Conference. The salient features of the agreement are as follows:—

- (1) The fourteen licenses are to be consolidated and the option to purchase will now pertain to the whole undertaking and can be exercised on January 1, 1950 or, alternatively, at intervals thereafter of twenty years.
- (2) If the option is exercised for purchase in 1950, the price payable will be "fair market value" plus twenty per cent on that value plus a sum equal to one year's gross revenue in the areas covered by licenses which were to expire in the later years.
- (3) If, however, the option of purchase is exercised in 1970 or thereafter, the price payable will be book-value, that is, original cost less depreciation at agreed specified rates.
- (4) Two years' notice is to be given of the decision to exercise the option.

We agree with His Excellency that these terms (together with the other consequential conditions) represent satisfactory progress towards the solution of a very complicated problem of great public concern. In this context, it is necessary to emphasise that the Electric Supply Corporation cannot escape liability for its share in making this question so extremely complicated. The Company must have known all the time that it would have been simpler and more prudent if the subsequent licenses had been taken on a basis which bore some correlation to the earlier licenses. The difficulties now stressed with regard to differing expiry dates did not suddenly jump out of the sky! They had been built up, stage by stage; and the Company was an active instrument in the accumulation of these complications. Appreciating that there was this prospect of licenses expiring at various dates, the Company must have planned its business and held its assets in a way which would enable easy location of assets against each license. The Company failed to take elementary and commonsense precautions. And it now finds that its remissness is to be rewarded.

Those officials on the side of the provincial government and other authorities, who were responsible for this complication becoming more complicated, are culpable of lack of clear-sightedness. In the result, the Company is able to put forward a plea for compensation; and we are asked to rejoice that such compensation could have been worse. We rejoice not because we agree to the principle of compensation or the method of calculating the compensation but because a matter which had been unnecessarily complicated has been simplified and it will now be possible to nationalise Calcutta's electric supply system. Amidst the offers and counter-offers between the Government and the Company, we were apt to forget that the declared policy of the State is to nationalise power generation. The tendency in some circles was to accept a later expiry date as a compromise. Such was, in fact, the original solution of the Bengal Government. It is a great gain to the cause of nationalisation that the expiry date is now fixed as January 1, 1950.

We are grateful to H.E., R. G. Casey for thus bringing the prospect of nationalisation so near. By this time in 1947, that is, in two years, the Bengal Ministry will be required to decide on nationalisation. We hope that, when that time comes, there will be a complete absence of the shilly-shallying that has marked the negotiations with respect to Calcutta's two utilities, electric supply and tramways. There is no question of further discussion: it is now definite and certain that State policy and public opinion are unanimous on nationalisation. We must, therefore, take it that the option to purchase in 1950 is bound to be exercised.

The Bengal Government need not have any apprehension about its ability to raise the requisite money for paying the purchase-price. The money is to be raised for a project which is a running business and which is paying surpassingly well. The easiest thing is, as any progressive Government knows, to raise a loan for purposes of productive capital.

The point which should engage the special care and attention of the Government at the time of purchase is to make sure that the market-value payable to the Company is fair but not generous. The formula of market-value lends itself to varied interpretations; and the Government must be specially particular that the authority to arbitrate on the market-value is not (as was the case in a recent instance) the same firm as are consultants of the Company. An independent and impartial authority must be secured. May be, the vast electric enterprises in Mysore or under Tata Group will furnish an expert satisfying the condition of impartiality.

Another point of equal importance is that the basis of reckoning the market-value must be somewhat as follows:—

- (1) Quotations from all world manufacturers of electrical goods must be obtained for the various categories of the Company's assets.
- (2) From the above quotations, deduction must be made for the years during which the present machinery have been in use.
- (3) Further deduction is to be made, due regard being had for the more up-to-date cum increased efficiency of similar plant currently available.

It may be presumed that the working of the Calcutta Electric Supply Corporation will be entrusted to a public board under some such name as Bengal Electricity Authority. The main reason given in favour of the setting-up of a public board of this kind is that the management of a commercial undertaking must be placed outside the pale of political influences and party intrigues. This is a fad which has grown into great vogue mainly because it has been tamely accepted. The province-wide electricity grid in the Madras Presidency is run departmentally. Similarly, the generation and distribution of power in the Mysore State is a departmental responsibility. The Punjab and the United Provinces have also been able to run electricity departments efficiently without recourse to the contraption of an independent public board.

It is this exaggerated emphasis on an independent authority that was responsible for the Reserve Bank of India being made a shareholders' institution. The nationalisation of the Bank of England removes the entire ground from under this argument. The logic of world developments and the force of Britain's example demand that the Reserve Bank be transformed into a State Bank.

It may well be that the new policies of progressive governments with regard to greater participation in, and control of, economic activities will have the effect of exploding the myth of an independent public board. Before the Ministry that will be in power in 1947 decides upon the exact method by which the nationalised Calcutta electric supply system is to be worked, it will be incumbent on them to make a careful study of the various plans of nationalisation that are finally decided upon in the case of industries of countries like Roumania, Hungary, Bulgaria and Poland as well as in the case of the coal mines and railways in Britain. Our contention is that there is no need at the moment to decide finally that the method to be adopted after the nationalisation of the Calcutta Electric Supply Corporation is the public board method.

Whatever may be the plan adopted in this regard, it is practical business to entrust to the same agency the formulation and execution of plans for equipping the whole of Bengal with a grid for electric generation and distribution. The Government of Bengal had a recent enquiry made into the possibilities of an electricity grid for the province. The report submitted by the consultants is not heartening. It is, therefore, particularly fortunate that the early prospect of the materialisation of the Damodar Valley's multi-purpose scheme also connotes an early prospect of the inauguration of an important section of the grid system for the province. With the generation of hydro-electric power as part and parcel of the Damodar Valley project it will be necessary and desirable to take on hand plans for the generation of thermal power by utilising the superabundant coal resources of Bengal. Thus, we hope, the nationalisation of the electric supply system of Calcutta is the first stage of a comprehensive plan of electricity grid for Bengal.

His Excellency's tackling of the much-vexed problem of the Calcutta Electric Supply Corporation also justifies the hope that some kind of fairly satisfactory solution is being found for the problem of the nationalisation of the tramway system.

This is only an Announcement and not the Prospectus

A copy of the Prospectus has been filed with the Registrar of Joint Stock Companies, Bengal, Calcutta.

JAY SHREE TEXTILES LIMITED

(Incorporated in the Province of Bengal under the Indian Companies Act VII of 1913).
(The liability of members is limited).

The certificate to commence business was obtained by the Company on the 21st day of February, 1944.

Consent of the Central Government has been obtained to this issue of Capital, subject to the condition that so much of the capital as cannot in that Government's judgment be properly expended until some uncertain future date is invested and kept invested in prescribed securities which will not be released until the Central Government (in consultation with the Crown Representative if any Indian State interests are involved), is satisfied that the time has come to make corresponding payments for purposes which are consistent with the enforcement of any measures of control or restriction that may be in operation at the time when such release is applied for. It must be distinctly understood that in giving this consent the Government of India do not take any responsibility for the financial soundness of any schemes or for the correctness of any of the statements made or opinions expressed with regard to them.

AUTHORISED CAPITAL - Rs. 5,00,00,000

Issued 5,10,000 shares of Rs. 10/- each .. Rs. 51,00,000

Allotted 4,00,200 shares of Rs. 10/- each .. Rs. 40,02,000

Now offered to public 1,09,800 shares of Rs. 10/- each - Rs. 10,98,000

Rs. 5/- per share to be paid with application and Rs. 5/- on call as and when made by the Directors but not before three months from date of allotment.

OBJECTS AND PROSPECTS OF THE COMPANY

The Company has been formed for the objects set forth in the Memorandum of Association and in particular for the purpose of establishing and carrying the business of Spinning, Weaving, Knitting, Bleaching, Dyeing, Mercerising, Printing and Finishing of Cloth and Yarn from cotton and other fibres. The Memorandum of Association forms a part of the Prospectus.

There is a great and growing demand in India for Textile goods. With the increase in population and expected rise in the standard of living the demand is likely to increase considerably

after the war. With an expanding home market, abundant supply of indigenous cotton and other facilities, it is expected that there will be a great expansion in the Textile Industry. Subject to proper facilities being available, it is intended to establish two mills at present, one in Bengal and the other in Bihar. The sites have not yet been chosen, but will be selected after examining the matter from every possible point of view. Though the cotton Textile Industry is the biggest national industry in India, yet it is apparent that the existing mills are not sufficient to cope with the demand for cloth in the country. Particularly the existing mills in Bihar and Bengal are unable to meet the requirements of their respective provinces and as such it is believed that Cotton Mills in these provinces, if established, will supply a great want therein.

MANAGING AGENCY AGREEMENT

By an agreement, dated the 10th day of March, 1945, made between the Company and Birla Brothers Limited, the latter have been appointed Managing Agents of the Company, for a period of 20 years from the date of the incorporation of the Company upon the following remuneration:—

- (a) An allowance of Rs. 2,500 per month, and
- (b) A commission of 10 per cent of nett yearly profits of the Company. The term 'nett profits' shall be deemed to include all profits made or earned by or accrued to the Company after allowing for all the usual working charges, but without deducting any amount for depreciation or bounties or subsidies received from Government or Public body or in respect of income-tax or super-tax or excess profits-tax or any other tax or duty on income or revenue or any other tax, cess or impositions levied by Government or a Public body or for expenditure by way of interests on debentures or legal loan or otherwise on capital account or on account of any sum which may be set aside in each year or half-year out of the profits for reserve or any other special funds.

The Managing Agents shall be entitled to charge and be repaid salaries, fees and commission, if any, payable to all persons employed solely in the Company's business whether employed in the Registered office or elsewhere if paid by them and all other expenses incurred by them on behalf of the Company. The Company shall also bear such proportion of remuneration of any person employed by the Managing Agents partly in connection with the business of the Company as may be thought fit.

THE MANAGING AGENTS HAVE INFORMED THE DIRECTORS THAT THEY WILL NOT CHARGE TO THE COMPANY—THE ALLOWANCE STATED IN (a) ABOVE TILL THE FACTORY IS INSTALLED AND THE COMPANY STARTS WORKING.

APPLICATION FOR SHARES

Application for the shares may be made on the form issued with the prospectus or a similar form. Applications should be for 25 shares or multiple of 25. Applications for a number below 25 may not be considered. Application money should be remitted either in cash or by a cheque along with the application for shares.

In case no shares are allotted the deposit will be returned and if the number of shares allotted is less than the number applied for the balance will be returned.

Prospectus and forms of application for shares may be obtained at the registered office of the Company, from the Company's Managing Agents or from the Company's bankers.

UNDERWRITING

All the 1,09,800 shares of Rs. 10/- each which are now being offered to the public have been underwritten.

SUBSCRIPTION LIST

The subscription list shall open on 29th October, 1945, and shall close on 3rd November, 1945, or earlier at the discretion of the Directors.

INSPECTIONS

A copy of the Managing Agency Agreement and the prints of the Memorandum and Articles of Association may be inspected at the registered office of the Company at 8, Royal Exchange Place, Calcutta during office hours on working days.

Electrification of Railways

Any plan for the economic development of India should necessarily take into consideration the conservation and proper utilisation of India's natural resources to the best advantage of both industry and agriculture and of the rural and urban classes. Provision should be made to correct the glaring omission in administration during the past one or two decades and the development scheme in one sector of national economy should be an aid and not a hindrance to the progress in another sector. For instance, the development of transport should be properly co-ordinated not only with the rising need for transport facilities, but should also be related in a rational manner to the development schemes of agriculture and industry in the different regions of India. There are some schemes which are particularly suited for the many-sided developments even during the period of transition from war to peace. Sir Padamji P. Ginwala's booklet on Industrialisation through Electrification of the Railways (issued under the auspices of the Indian Chamber of Commerce, Calcutta price is Rs. 1-8) outlines an excellent scheme which, if put into effect, will doubtless achieve progress on many sides at one stroke. He puts forward a *prima facie* case for the immediate electrification of those sections of the E. I. R. and the B. N. R., which are within a radius of 150 to 200 miles of the coalfields in Bihar and Bengal. An early electrification of 500 miles on the E. I. Ry. from Calcutta to Moghul Serai via Grand Chord has been advocated and the pros and cons of the scheme are discussed vividly on the basis of facts and figures.

The electrification of railways in the coalfield areas has been advocated first and foremost on the plea of the conservation of coal resources. India's coal is a great asset and unless proper use is made of this vital material, the distribution as well as the degree of expansion of her industries cannot be satisfactorily planned in future. Our coal resources, it should be remembered, are not inexhaustible but, on the other hand, experts have given their opinion that stocks would be exhausted within a measurable time. That the railways have been wasting coal resources has often been pointed out by those who are interested in the maximum utilisation of the key minerals in this country. Electrification of the railways has been many times suggested in the past as a corrective to the wastage of coal, and the railway administration have consistently been fighting shy of this proposal. Once in 1924 and again in 1935 they have set their face against the idea of electrification either on the main or on the suburban lines. Hence Sir Padamji has worked out the details and puts forward his arguments for electrification with renewed vigour. Since our annual production is only about 21 million tons out of a world production of about 1,250 million tons, there is force in the argument that with regard to this key industry the public can never afford to take a mere lukewarm interest. It cannot however be left to the railways alone to decide whether electrification is feasible or not. Since postwar plans are to be initiated shortly, and coal resources are to be conserved for the planned and rapid drive for more production in future, any scheme that helps in the conservation of coal and, at the same time, helps transport facilities should be given due consideration. Railways, it should be noted, consume annually more than 8 million tons of coal of which two to two and a half million tons are of good coking coal, and four to four and a half million tons are of steam or gas coal. Since only 4 per cent of the heat energy is being utilised in the burning of coal in a locomotive boiler, the enormity of wastage is self-evident. The loss to the nation will indeed appear considerable if one remembers that valuable constituents and derivatives of coal such as ammonia, hydrogen, naphtha, benzene, tar and its by-products dyes are also wasted. It is time that an attempt is made to stop any continuation of this enormous waste.

The scheme for electrification from Calcutta to Moghul Serai that is proposed aims at doing this. According to the author of the booklet, in this area there is a vast amount of inferior coal which will not repay the cost of transport and is therefore not marketable elsewhere. It can only be used for generating electricity for the areas. If electrification of railways is achieved for the line suggested it would provide the minimum heavy load necessary for the generation of cheap electricity for the industries and the rural areas in the districts covered. Schemes for the electrification of villages have in the past often been thrown out on the point of view of the technician that minimum load was not available. The electrification of the railways if achieved will offer a great opportunity in making rural electrification schemes a success in Bihar and Bengal. The distance suggested by Sir Padamji is long enough to offer a heavy load and the railway transmission lines can also provide the basis of a grid from which

electricity can be cheaply distributed to other consumers in the neighbourhood of the railways. Since the villages have shown a tendency to migrate towards the railway lines, electrification of the railways will simplify and facilitate the supply of electricity to the rural areas. After all, taking a long view of things, India's traffic is bound to increase by leaps and bounds and both for short distance as well as long distance traffic the railways can not give the maximum help unless they switch-over from coal to electricity as rapidly as possible. It is the experience in almost all progressive countries that with the coming in of electricity, the railways will provide cleaner, quicker, greater, more comfortable and more frequent service.

In the suburban lines of Bombay and Madras cities the advantages of electrification have been already amply proved. The only possible objections to the scheme are carefully considered by Sir Padamji and suitable replies given. For the contention that there may be shortage of water in the area it is pointed out that the waters of the Ganges, the Sone, the Damodar and the Burra Kur can be made available for the purpose and suitable reservoirs can be constructed for giving a constant supply of water for the generating stations. The iron and steel companies have already done so. The storage of water is simpler and better than the haulage of coal for long distances for the use of the locomotives. The view that electrification of the suburban railways should precede that of the main lines is proved to be meaningless in view of the fact that the main line is usually preceded by the suburban line only because the latter is more paying since it has the opportunity of carrying heavier traffic. In the area under consideration it is felt that suburban electrification will be more costly and hence there is nothing wrong in starting with main line electrification. As regards the objection that the railways will lose their coal traffic and that the steam locomotives will have to be scrapped if electrification is approved the answer is simple. The coal carried by the railways for their own use can only be a deadweight and cannot yield a large profit particularly when all the railway lines of India are controlled by a single authority. As regards locomotives, though electric locomotives will have to be imported the existing steam ones can be transferred to other lines where they are at present urgently needed. Regarding the scare that electrification of railways introduces the danger of the breakdown of the whole line when the generating station fails, it is also pointed out that delays and breakdowns on the electrified routes of the G.I.P., B.B. and S.I.R., have involved less delay in a year than on many of the other lines used by steam locomotives going "sick". Power stations with emergency equipment should be able to tackle any unforeseen breakdowns.

The total expenditure for the whole installation necessary for the electrification scheme proposed by Sir Padamji is estimated at Rs. 6.25 crores and the annual expenses on account of maintenance and repair, including depreciation and interest on investment, would amount to Rs. 47 lakhs. The density of traffic in the section on the main lines is heavy enough so that direct operational savings through electrification are estimated to be sufficient by themselves to meet the annual charges of interest and depreciation on the new capital investment.

While the estimates submitted by Sir Padamji Ginwala may require fuller investigation and expert study his main contention that mere financial aspects should not be given priority over the more important question of national policy should be duly appreciated. If the railways will think that the circumstances do not permit of an early electrification in the line suggested, the public should be apprised of the arguments in full. Other provinces are fast progressing on the path of electrification and Bengal and Bihar should not lag behind in this respect. The scheme proposed being highly interesting and valuable, the Government of India should appoint a committee presided over by an independent non-official to go into the question in detail. A proposal which conserves coal, brings electricity to the villages, diverts coal for industrial development and, at the same time, asks for better railway service is indeed one that should be given the earliest and the most careful consideration by the authorities.

Marketing of Agricultural Produce—VIII

(Contributed)

In the two previous articles in this series I have indicated the manifold directions in which the Regulated Markets have proved of advantage to producers. My visits to the Regulated Markets in various parts of India and the replies I have received to a detailed questionnaire on the working of the markets leave the impression that the present advantages derived by the producers by no means exhaust the usefulness of these institutions and it is possible that both by internal

improvements and through the aid of complementary institutions, the Regulated markets can become the pivotal centres of a well co-ordinated system of Regulated marketing of agricultural produce.

There are Regulated markets functioning in many Provinces and States; but except in the Hyderabad State, where the marketing Department is in direct supervisory control of the markets and the Market Superintendents are appointed by the Chief marketing officer, each market exists as more or less an oasis with no exchange of views or pooling of experience or discussion of common problems with other markets even within the same Province. The autonomy of the market committee is being stretched to ludicrous extremes of exclusiveness. There is a vague administrative control exercised by the Marketing or Agricultural Department but the measure of centralisation thus gained except satisfying administrative requirements does not seem to bring any good to the committees. On the other hand in the Nizam's Dominions, not only are the Superintendents appointed by the Chief Marketing Officer, but each one of the Assistant Marketing Officers has been made responsible for the supervision of the markets situated in a particular zone. Besides, periodical conferences of the market superintendents are held, and the discussion in these conferences have been found to have led to a number of improvements in the conduct and administration of the markets. Though in deference to democratic principles and with a view to keeping Government interference at a minimum, the administration of the markets can continue to be the responsibility of Market Committees representative of the different interests involved, there is a clear need for a more centralised direction. Through periodical discussions on an All-India scale of problems affecting the internal working of the markets, it would be possible to bring all the markets to the same level of efficiency if not to around improvements.

From the table I have given in the previous article, it will be found that though generally, the vast bulk of those who bring their produce for sale in the Regulated Markets are producers, in a few markets like Tiruppur the percentage of producers sellers is scarcely what it ought to be. It is likely that the Market committee authorities exaggerate the proportion of the producer-sellers. But in more than one case, personal inquiries on the spot and the testimony of the Marketing Officers have been utilised to test the accuracy of figures otherwise obtained. These figures are more than mere "guesstimates." As the purpose of Government legislation in this field is mainly to protect the grower the proportion of bonafide growers among those who take advantage of the facilities afforded by the Regulated markets is a vital point in this discussion. And if their percentage is low, it is necessary to go into the reasons.

In Tiruppur, hardly 25 per cent among the sellers in the Regulated Market are growers. This is because Tiruppur is primarily a lint market and the small producer sells it out-side the market to the middle men. As for Kapas, the big British firms like Volkart Brothers and Rally Brothers who form the major purchasers stick to their own traditional methods of purchase, through their own agents who go out to the Districts and collect it. The establishment of the Regulated market has not yet seriously disturbed these traditional methods.

Long established social and economic traditions and communal habits also have their influence in this respect. In the Marathwada regions of Hyderabad, more than 70 per cent of those who bring their produce to the markets are growers; while in the Telingana areas, the percentage hardly reaches 40. One of the reasons for this disparity is to be found in historical factors, not so apparent to a casual investigator. In the rice growing districts of Telingana, the villages are larger, and fairly self-sufficient; rice can support a larger population within a given area; and therefore the people have cultivated a habitual reluctance to move away from their villages. In a Marathwada, with cotton jowar and fruits occupying a larger role in agricultural production the latter type of produce have to be marketed through a larger area; the villages themselves are smaller interdependent, with their weekly itinerant markets and traders. A larger number of Regulated Markets are necessary for a specified area for Telingana than for Marathwada.

In Cuddalore, similar problems arise in respect of the proportion of sales in the market centres as against those in the market yards. Loans and supplies of gunnies by the wholesale dealers in the market centres to the small trader and growers in villages preclude the latter from taking their produce direct to the market yards. Besides the supply of gunnies loans and such other small services which the big traders in the market centre extend to the ryots, there are

certain other factors that go against the market yards. A section of the trade still continues to be antagonistic and the carts that come to the yard are often diverted by them into the sheds erected on the road side outside the market centre. Due to the long distance that separates many interior villages from the Market yard the bad condition of village and feeder roads and the lack of carts to transport the produce many a poor ryot is forced to dispose off his produce to traders nearby. Some of the ryots will have so small a quantity that it will not be worth while paying for a cart and taking it to the yard. Above all, there is a traditional personal attachment between the grower and his trader which does not easily yield to small material advantages. The conservatism of a few of the ryots persuades them to go direct with their produce to those old premises where they used to call before the market yards came into existence. Some of the decorating agents who are also registered traders do not go into the open market to purchase groundnut decorticated in their own premises. Many ryots cannot afford to have a cart of their own. They have to hire a cart and the professional cartmen are found to exercise a strong influence on the innocent peasant folk and they manage to drive the carts to their customary trader who takes care that the cartman is duly rewarded for helping him to secure custom. Customers who induce their neighbours also to sell to a particular merchant, gets either a preferential price or a present from the latter. Illicit traders in villages who run the risk of detection in the market yard, try to sell away their produce under false names as growers in the trader's premises where they are shielded. Sometimes, traders give a slightly higher price than what the grower could reasonably expect in the yard but the difference is more than compensated by adjustments in weight of which the seller never knows. The yards themselves have certain limitations. Sellers have to wait for a longer time in the yards to obtain their sale proceeds as they have to wait for several traders to assemble for the bids to take place. They get none of the services the merchants give them. They have got to bring money from home for the day's expenses as it will be late in the day when they secure cash.

I have made mention of the various handicaps which prevent the grower from taking advantage of the market yard. It should be the concern of every Market Committee to investigate fully this question and try to discover means by which more and more growers might be attracted to the market yard. When monetary obligations to traders prevent them from taking their produce to the yards, the committees may not be able to render any assistance. It is here that co-operative societies can play a useful role as also in making available to the ryots those small services which the traders are rendering. But of this, I shall deal in the next issue.

Special Article

Nationalisation of the Bank of England

By Dr. Paul Einzig

Even a few years ago the idea of a nationalisation of the Bank of England would have appeared revolutionary—almost Utopian. Although in many countries which are not Communist nor even Socialist the Central Bank has for many years been owned by the Government, such a thing was considered inconceivable by the majority of Englishmen accustomed to the idea that the monetary policy of a country should be run by private interests. But the changes during the 'thirties went a long way towards overcoming hitherto irresistible opposition to the nationalisation of the Bank. From 1932 onward one of the main functions of the Bank, that of looking after sterling, was taken over by the Exchange Equalisation Account, a Treasury department. In subsequent years the conception that for the purposes of monetary policy the Bank must confine its activities to advising the Treasury and execution of the policy decided upon by the latter, even if it is contrary to the advice proffered. Already before the war the Bank of England came to be regarded as a Government-controlled institution in fact if not in name. The idea that the determination of the level of interest rates may be left in the hands of a few bankers had long been discarded. The last occasion on which the Bank rate was raised without consulting the Treasury was in 1929. Ever since that occasion the Bank rate has been decided by the Treasury. During the war the control became entirely watertight, and the Bank of England came to be regarded as a Treasury department.

Thus, the present change is now considered by many people as merely placing an existing state of affairs on legal foundations. Mr. Churchill himself, when opening the Debate on the Address in August, admitted that the nationalisation

of the Bank, foreshadowed in the King's Speech, raised no new principles.

As for the banking community and especially the senior executive officials of the Bank itself, they were prepared for something much worse, so that they were greatly relieved by the moderate terms of the Bank of England Bill as far as it concerns the Bank itself. The compensation paid to the stockholders is considered by most people as highly satisfactory, even though in some quarters it is argued that the Bank has hidden reserves running into something like £100,000,000. No information is available on this matter, but Government supporters contend that even if this figure should be correct the terms of the compensation are perfectly adequate, for most of this enormous reserve would have been accumulated out of profits made on the Government's account, and it is only fair therefore that it should revert to the taxpayer. However, the chances are that the figure of £100,000,000 is a gross exaggeration, and that the actuarial valuation of the Bank's assets (as distinct from its goodwill) would fall short of the £58,212,000 to be paid to the stockholders.

The extent to which the Bank will be allowed to retain an outward form of independence was also a pleasant surprise to the city. It will not be converted into the banking department of the Treasury. Nor will its Court of Directors be packed with Treasury officials and Socialist politicians. Outwardly there will be practically no change. The Bank will continue to operate as a financial institution; it will continue to earn profit, subject to taxation. Its surplus of profits will be added to its reserve after the payment to the Treasury of an amount corresponding to what has hitherto been paid to stockholders.

What is not yet realised is the degree of genuine independence the Bank will enjoy. Although the Governor, Deputy-Governor and 16 directors of the Bank are appointed by the Government, there are no provisions in the Bill about the Government's power to dismiss them before their term expires. This means, on the face of it at any rate, that they will be in a position to criticise in public the Government's policy, even if under the terms of the law they will be bound to obey instructions.

The part of the Bill which has given rise to much concern, and which is expected to be subject to strong opposition, is the section under which the Bank would have the power to instruct all banks in the United Kingdom to supply it with information and to adopt policies prescribed. Even this drastic provision is considered, however, as acceptable by the clearing banks themselves, because it does not amount to their nationalisation. As a result of the general election, the Government would be in a position to carry out the programme of the Socialist Party concerning the nationalisation of the clearing banks. The latter are therefore naturally relieved that this is not being done.

In respect of the powers of the authorities over the banks, as in respect of the nationalisation of the Bank of England, the new Bill merely confirms an existing state of affairs. Already before the war the Bank's requests have long been regarded by all banks as commands. A clearing bank would no more have thought of disobeying them than the Bank would have thought of disobeying the Treasury. So in future their obedience will be based on law instead of being voluntary.

This view is far from being accepted universally. Many people envisage the application of the new powers for sinister purposes. They credit the Government with intentions to seek information about the accounts of their political opponents. They imagine that the Bank, acting on instructions by the Treasury, would direct clearing banks to grant a loan to Mr. Smith, a good Socialist, but withhold facilities from Mr. Jones, a staunch Conservative. In reality, such abuse of the powers seems to be most unlikely. It would be so utterly contrary to established moral standards and traditions that public opinion would not stand for it. The information requested would in all probability be confined to totals for statistical purposes, and the instructions given would concern broad lines of policy, not individual transactions.

"But if that is so extreme", the critics argue, "then what is the use of seeking such powers? If the Bill does no more than to give legal right to the authority to do what they could do perfectly well in any case, then it is superfluous. If, on the other hand, the powers will be used well in excess of the prevailing practice, then it is dangerous." To this the supporters of the Bill reply:—"The object of the measure is to ensure co-operation of the banks. If they intend to co-operate in any case then the bill is, from their point of view, quite harmless. If, on the other hand, they envisage disobeying the Labour Government then, from the latter's point of view, the Bill is very necessary."

As a matter of fact, it is possible to visualise situations in which the Government will use its powers far in excess of the existing practice, not for political purposes, but in pursuance of its economic programme aiming at full employment. In the past the clearing banks were technically in a position to neutralise a credit expansion effected by the Bank, by allowing their cash ratio to rise instead of lending to the limit of their resources. In future, the authorities will be in a position to direct banks to maintain their cash ratio at a certain level. Or they will be in a position to direct the banks to increase credits to certain branches of trade which require stimulus and to curtail credits to other lines which have to be discouraged.

Taken as a whole, the measure is in keeping with the Government's policy to collaborate with capital and private enterprise, as far as this is possible in spite of its policy of nationalisation.

OUR LONDON LETTER

FUTURE OF STERLING BALANCES

BRITISH ECONOMIST'S VIEW

LONDON, October 18.

How can Britain liquidate her sterling debt to India in a manner disadvantageous neither to India nor to Britain?

This question has become important owing to India's immense and urgent need for industrial goods, for which, in the form of sterling balances, she has equally immense resources to pay.

Britain can only supply a part of India's industrial needs. Neither qualitatively nor quantitatively is Britain in a position to supply all of India's industrial requirements in a short time. Britain's productive capacity, though large, is yet limited. Her own internal needs after six years of war austerity is very great.

Secondly, demands for goods from other sterling countries shall have to be met—at least partly. On top of this, food and other goods shall have to be supplied to devastated Europe and Russia. All this will mean Britain keeping full time on the job, and yet not be able, in a short time, to supply goods to India so as to liquidate the debt. To wait until enough goods are supplied by Britain so as to liquidate the debt will mean a long period which will be disastrous to Indian economy.

What, then, is the alternative? Can India import part of her requirement from other countries?

The United States of America is the only other important country left from where India could import her remaining needs. But payment to the United States necessitates conversion of sterling into dollars, which would have a very adverse effect on Britain's financial position.

If Britain cannot supply at least some minimum of the goods which India requires, then it is only fair to India that she should be allowed to import goods from the United States. What amount of dollar exchange India can have for this purpose must be considered in the light of Britain's difficult financial position. Much depends on the financial talks now being held in Washington between Britain and the United States.

Another important point dependent upon the present talks is whether Britain will be a free trade country.

Britain's economy is such that in order to maintain her prewar standard of living—let alone improving on that standard—she must export in order to pay for imports which are a necessity to her. She has to compete with a giant rival, the United States, to whom exports are only a weapon to avoid serious unemployment and all the political problems arising therefrom. Distribution of her present national income does not allow the United States to take imports in return—a fruit of highly capitalistic society. This state of affairs suits very well many importer countries, at least for the immediate future, when many war-ridden countries need so much and have so much less to pay in return. Britain cannot afford to offer such luxurious terms.

The amount of her trade will, inter alia, then decide Britain's dollar resources. This in turn will decide how much dollar ex-

change can Britain make available to India.

Thus in order to liquidate her sterling debt to India, in a relatively short period, Britain has to consider three points from her side. They are the demands on Britain's productive capacity from countries other than India and including Britain herself, Britain's present dollar resources, and the amount and direction of her foreign trade.

From India's side, Britain must consider the former's immense and urgent need for industrial goods. If famines and other social miseries are to be avoided, India must soon industrialise. No vested interest must, therefore, come in the way of her industrial development.

Considering all these points, and with goodwill on both sides, an agreement, as to how and within what time Britain can liquidate her debt to India, can be reached between Britain and India.

It will be noticed that another important factor affecting the present problem has not been so far touched. The degree and shape of industrialisation that Germany will be allowed and the amount and form of reparations that would be exacted of her by Britain and other countries, chiefly European, will be a powerful factor affecting the economy of Britain and Central Europe.

With the turn of the month, the buzz of rumours about the future of the exchange rate between the United States dollar and sterling has grown less insistent.

Rumour reached its peak on September 30—the last day on which a balance on an American sterling account could be remitted at the guaranteed rate of 4.02½. The withdrawal of this guarantee was the originating cause of the whole flurry. Since its announcement, overseas centres, principally New York and Bombay, have been agog with allegedly new reasons for an imminent depreciation of sterling. Before the end of September many sections of the British press had commenced echoing the welter of "well informed" reports forecasting a reduction in the sterling-dollar as from October 1.

This belief, however, has never taken root in the City. Banking quarters admit it as quite impossible to know whether sterling is over-valued or undervalued at its current level and nobody in the banking world can be expected to foresee yet how relative sterling and dollar prices will settle down at the end of the major reconversion phase.

Britain's difficulties on capital account, which are the immediate cause of public speculation about the rate, have however long been apparent to the British authorities who contend that the broad principle of the problem has not been materially altered by the abrupt ending of Lend-Lease. It is also the official view that for the next few years there will be a sellers market throughout the world, which is offered as an argument against sterling depreciation. Officials said the only justification for exchange depreciation at any time is to restrain imports and to provide a necessary stimulus to exports by relieving the pressure on domestic costs.

Board of Trade quarters said that in the transition phase Britain's imports will be very limited by direct action and it is imperative that the cost of them shall not be increased by cheapening sterling. Conversely, during this phase, the limiting factor upon British exports will not be on the level of British costs but simply the capacity of British industry to produce the goods and the willingness of the British to do without them.

Several commentators have defended sterling along the same lines. It is the unanimous opinion that overseas markets for British goods will for a long time have voracious appetites. Whilst it may be against Britain's long term interests to exploit this situation by charging up to the very limit of what the traffic will bear, there is emphatically no case for price-cutting, which is what exchange depreciating would amount to. The big majority of City banking circles have agreed that while these conditions obtain, it would be sheer folly to reduce the sterling dollar rate and enquiries among official quarters prompted no reason whatever to suppose that the authorities do not share this view.

Bankers said if such an important step as depreciation had been contemplated the authorities would never have indicated its timing. Nor, for that matter, would their freedom to act have been significantly limited by continuance of the guaranteed rate. Had they wanted to change the rate on July 1, or even on May 1, they would hardly have been deterred by the cost of implementing the guarantee—for the amount of sterling on American account cannot be very large.

Consensus of opinion in London is that the main consideration behind the withdrawal of the guarantee was one of prestige—a kind of modern version of making the pound sterling look the dollar square in the face.

The usually well informed weekly "Economist" forthrightly asserts "it can be said with confidence that the pound sterling dollar rate will continue for a considerable time."

The "Economist" said the case for the pound sterling is just as strong as it was before discontinuance of the guarantee rate.

"Indeed," the paper said, "it has lately been buttressed by the forging of yet another link in the chain of financial agreements that is establishing stable exchange relationships within the whole group of western European currencies."

"INDIAN FINANCE"'S FORECAST FULFILLED

LABOUR'S CHEAPER AND CHEAPER MONEY POLICY INAUGURATED

On September 1, the following article appeared in "Indian Finance", forecasting reduction in British Treasury Bill rates, Deposit rates, and generally in the structure of interest rates.

"Neither the Indian money market nor the Indian financial authorities seem to have a correct appreciation of the trends and developments in the London money market since the advent of the Labour Cabinet. A measure of the striking change that has taken place in London is provided by the rise in the 2½ per cent Consols from £82½ at the beginning of this month to £88½—an astonishing rise. As our London Correspondent points out, for this usually very staid Government issue. That gilded should be an exceptionally bullish feature, is an index of the City's confidence in Labour's financial policy. Yet, in the pre-election charges and counter-charges, the Conservatives sought to make out that the credit of Britain will collapse if Labour came to power. In other words, a sharp fall in gilded securities was predicted. So was a debacle in India sterling stocks forecast by Mr. Winston Churchill, while he fought the Indian Constitution Bill in the mid-thirties. Mr. Churchill's jeremiads both with regard to Labour Government in Britain and Federation in India have been proved false. India has, in the last decade, demonstrated the highest credit-worthiness both at home and in London. And events in the London gilded market at the threshold of the Labour Government's regime are also likely to prove Mr. Churchill a false and malicious prophet.

If the National, Conservative and Coalition Governments of the last fourteen years in Britain have professed and practised cheap money, the avowed and determined policy of the Labour Government is "cheaper and cheaper money." That this policy will be carried out in a practical and successful manner, may be taken as certain from the announcement that Lord Keynes will continue as Economic Adviser of the Treasury. Lord Keynes has been the prophet of cheap money in Britain even as—with apologies for our immodesty—"Indian Finance" has been the prophet of cheap money in India, and, in recent months, of cheaper and cheaper money. Every time Keynes came out with a forecast of cheap money, its uses and significance, the City circles in London as well as the financial editors received his views with respectful scepticism. So has our lot been in India. The war borrowings of the British Treasury are the highest testimony to Keynes's insight, respectful judgment and leadership.

To revert to the Labour Government's monetary policy. Our London Correspondent, writing on August 10, gives prominence to the following report (though unconfirmed, as he says):

"On top of these startling developments has come an unconfirmed report that the new Labour Government intends to lower the Bank rate from 2 per cent to 1 per cent in order to cheapen money for big government loans for reconstruction. This has driven the old 2½ per cent Consols from £83½ at the beginning of the month to £87, an astonishing rise for this usually very staid Government issue.

"According to this report, the new Chancellor of the Exchequer, Dr. Dalton, is planning a huge loan at less than 2½ per cent interest rate; if true, this would make most of the British Government stocks look cheap even at current levels. A good many observers question this report, mainly on the ground that the new Government simply has not yet had time to draft such a plan even in the roughest form."

The "Economist" of August 13 also contains references to this report, as is shown in the following extract:

"Despite its preoccupation with the surrender negotiations, the City early this week was still actively debating the possibility of moves towards still cheaper money. The discussion opened last week with suggestions that the Labour Government might seek to place a large long-term housing loan at a very low rate, possibly 2 per cent. The City is by no means convinced, however, that steps will not be taken to lever down the structure of short-term money rates, either with or without a further reduction of Bank rate."

The "Economist" is inclined to believe that some reduction in short money rates is worth while. Since October 1939, British Treasury Bill rates have been 1 per cent, twice the prewar level. Labour M.P.s have, from time to time, drawn pointed attention to this anomaly. It seems, therefore, likely that the British Treasury Bill rate may, in the near future, fall to ½ per cent. This means that the clearing bank's rate for call money loans to the money market will also be reduced from 1 per cent to ½ per cent. Another corollary is that deposit rates in the case of deposits outside London will also be reduced. The interest on current accounts may be reduced to ½ per cent or even abolished; and the maximum interest on other deposits may be fixed at ½ per cent as against the present rate of 1 per cent. The "Economist" does not foresee any great harm from such a reduction in the deposit rates: "To some slight extent, they might lead to switches from bank deposits to savings bank accounts; but, given the limitation upon such holdings, the movement could hardly be large. In any case, the differential between the rate of interest paid on deposits and that paid on savings is already so wide that a further slight widening would be of little significance. Moreover, by far the greater part of interest-bearing deposits must be in the hands of business concerns. If allowances were cancelled or reduced, a part of these idle funds might flow into short-dated 'tap' securities; but, for the rest, the loss of interest would be a negligible influence upon business profits."

These developments in London must be properly appreciated by the authorities in India. If the old Consols have staged sensational rise of over five points, why should 3½ India Rupee Paper be in a state of mild depression? If the Bank of England is likely to reduce the official minimum to 1 per cent, why should the

With a view to the most economical State financing of reconstruction, Britain's Labour Government has taken a drastic step towards still cheaper short-term money.

It has decided to reduce the rate of interest on Treasury Deposit Receipts to five-eighths of one per cent.

These Receipts are Securities by which the Treasury borrows direct from banks. As a consequence the rates on Treasury Bills and on loans against these Bills are also expected to fall by one-half of one per cent.

These reductions will cost banks £12,000,000 a year, most of which will accrue to the Treasury. Banks are, therefore, eliminating all interest on current accounts and reducing the maximum rate on other deposits from one per cent to one-half of one per cent. No change is made in the rates on small savings, which may run up to as much as 2½ per cent on limited amounts.

Government supporters expect that over £30,000,000 a year will be saved by this decision, and cheaper loans for housing and other national and local development plans will be one of the first results.

Opposition commentators consider that although it may lead to some switching from bank deposits to savings accounts and other attempts to avoid a fresh blow at the return for lenders' services, it seems certain that it will help the downward movement in interest rates generally, including long-term, although these are not now affected. Such commentators explain that the reason for this is that Treasury Deposits represent two-fifths of bank's assets and banks are in no position to resist the Government's actions or restrain the Government's borrowing power.

The "Financial Times" however, takes no gloomy view. The latest decision, it says, is obviously intended as a preliminary move towards tightening the cheap money screw generally. "It has in fact long been clear that one indispensable step towards securing the lowest possible level of long-term interest rates is first to reduce the short-term rates to the absolute minimum. For this reason, the possibility of lowering rates at the short money end of the interest rates structure has been noted from time to time ever since 1939.

"As a result of the Government's announcement, the Treasury Bill rate may be expected to settle down around its pre-war level, about half of one per cent. The percentage rate will thus be nearer the American rate on three months' paper of only three-eighths per cent. It is significant that in the United States the yield on 10-Year Government Securities has been only about 2 per cent and on the longest-term bonds only 2½ per cent."

Reserve Bank of India hesitate to reduce the rate here at least to 2 per cent? If the next loan of the British Treasury is to be on a 2 per cent basis, why not pursue, with more vigour and more self-assurance, the series of 2½ per cent loans in India? If it is "cheaper and cheaper money" in London, why not cheaper and cheaper and still cheaper money in India?

London, October 21.

Editorial Notes

British Interim Budget:

Dr. Hugh Dalton's first postwar budget of Britain reveals a happy combination of budgetary sagacity and cautious acquiescence in the present demand for tax relief. War time austerity conditions are not yet over in Britain and the important Anglo-American talks on the subject of dollar loan is running a dubious course making it difficult for the Chancellor of the Exchequer to get a glimpse of what is in store for Britain in the immediate years to come. The 'interim' budget now presented reveals certain salient features of the financial policy of the Labour Chancellor. No assurance is given that British budgets will be balanced any time before 1949; in times of crisis budgets need not be balanced and the theory of cyclical budgets which has gained popularity since the Depression has now found full acceptance at the hands of Dr. Dalton.

It was estimated last April that the total revenue of the British Government for the year would be £3,265 millions and expenditure £5,565 millions, the deficit to be covered by borrowing to the tune of £2,300 millions. The development in the yields of the various items of revenue are stated to conform approximately to the estimates made and the final deficit for the 1945-46 will not be very much different from the original estimate. The Chancellor said that he would hold the present cost of living steady even if it involved increase in the subsidies. Last year the cost of living subsidies rose up to 200 millions pounds a year; but, now owing to the cessation of Lend-Lease, the figure, it is expected, would be above £300 millions. Imports will be restricted to the minimum necessary to ensure essential supplies of food and raw materials with a view to conserving the dollar. Urgency to speed up British production and exports is considered unrelated to the Washington talks and tax relief and other reconversion measures would be speeded up to place the country on a peacetime basis. No substantial tax relief is promised for the coming six months before April next and certain untaxed allowances on earnings will be reverted to pre-war level and this measure is expected to relieve 2 million persons of income tax. Tax relief is proposed to be doled out little by little with a view to avoiding inflation and its consequences.

Notable among his other proposals are the increase in surtax the cessation of new post-war credits for income tax payers and a reduction of the excess profits tax to 60 per cent with effect from Jan. 1. Changes in the income tax are estimated to cost the British exchequer nearly 90 million sterling annually. It is also announced that the purchase tax on a number of articles of special importance to the Housing Programme will be abolished. Regarding taxation of private cars the present method of calculating the horse power according to the cylinder bore is proposed to be discarded in favour of one based on the cubic capacity. It is hoped that this interim budget will only be a first instalment of a series of budgets which will reveal an ever developing and expanding plan for Great Britain.

Demobilisation Problem for Punjab

All the provinces in India are faced with the problems resulting from the sudden reconversion from war to peace;

but for the Punjab these are most acute; because, of the 2 million soldiers recruited in India during the war, about 1 million have been from the Punjab. In the immediate future the Government of Punjab will have to undertake the responsibility of providing employment for the vast majority who will be released from among this one million now in the Indian forces. The Punjab has a Rs. 100 crore post-war plan, but it will take at least 20 years to complete, while the task of finding new jobs for the ex-service men cannot be spread over more than two years. The Punjab Government propose to spend nearly fifty crores of rupees on Irrigation projects, none of which is likely to be completed in less than ten to fifteen years' time. In the field of industry, while the starting of new schemes has to be held up on account of the lack of ready supplies of plant and machinery, there is a likelihood of a good number of the industrial units started during war closing or facing a heavy shortage in production in the ensuing months. Many of the engineering workshops which have sprung since the war in the district towns have already closed putting thousands of men out of employment. Though funds for investment in industrial enterprises are ample within the Province those who have surpluses are reluctant to invest owing to the meagre prospects which most of the industries hold for the future. Even some of the owners of war factories are trying to dispose off their machinery and equipment and find that no suitable offers are forthcoming. The inadequacy of raw materials, shortage of electric energy, the operation of control and the indifference of the Central Government are held to be the reasons why many industries had to sink down during the war years. The lethargy that is becoming apparent in some of the joint stock concerns floated during the war acts as a scare for investors. Taking particular industries, handloom textiles have registered a sudden drop in prices and off-take since the end of the war, hosiery and rubber have been severely affected by shortage of raw materials, a general dullness crept into the sports goods field, and brass utensil manufacturers have suffered heavily through the slump in scrap prices. Among the industries which are comparatively unaffected by the war and which show better prospect of survival are cutlery, surgical instruments, and agricultural implements, electrical goods and those that belong to a similar category. But even these may have to be protected for a time. Thus the industrial position does not offer any large prospects of absorbing the ex-soldiers. Nor has the Punjab enough ready land. To top all, the political situation is least conducive to a strong and stable policy.

Prison Reforms in Indian States

Though not well known, prison administration in the Indian States has improved very much in recent years. Not only the material well-being of prisoners as in matters of diet, health and labour conditions but also their moral and intellectual well-being have been taken care of. New buildings have been constructed in many States to house prisoners. In a few States radio sets have been installed in prisons to keep the prisoners cheerful. Non-official visitors have been appointed in a number of States to look after the welfare of the prisoners and to see that the administra-

tion of jails is carried on properly. Revision Boards have been set up in Indore and Hyderabad. These consist of official and non-official members. On the recommendation of these Boards the parole system has been introduced under which convicts of good behaviour are permitted to leave the jail for a few hours at fixed intervals. Efforts are made to spread literacy among prisoners. In Travancore elementary education has now been made compulsory to prisoners under thirty years of age. Regular classes for the education of prisoners are held in several States. Side by side with secular education religious and moral instruction is also given to prisoners. Libraries for prisoners have been provided in various States.

To keep prisoners in good stead after release they are given training in arts, crafts and many cottage industries. In Hyderabad jails such industries are run on commercial lines. The sewing factory in Hyderabad jail has tailored about 1 million articles to the Supply Department of the Government of India. Prisoners in Gwalior make furniture, pottery and iron and brass articles. Several States have provided opportunities to prisoners to learn carpet weaving, coconut fibre matting, furniture making from rope and cane, shoe making, basket making and printing. To give greater incentive for work to prisoners and to provide them with some money at the time of their release, prisoners in Cochin and Travancore and Khairagarh are given extra remuneration for extra work. In a number of States there are Discharged Prisoners' Aid Societies which find employment for discharged prisoners and provide food and clothing if necessary and do useful work by persuading employers to abandon their old prejudices and employ these unfortunate members of society. The ideas regarding punishment are slowly changing. Capital punishment has been abolished in some States. The attitude towards the prisoners should be to reform and reclaim them. To this end they should be given proper work in the jails and provided with suitable work on being released.

Model Road Plan for Delhi

The Government of India have drawn up the broad outlines of a road plan for India at a cost of Rs. 450 crores, and the provincial Governments have followed suit in drawing up plans suited for provincial economies. Till now the road plans have placed much emphasis upon the total mileage and the routes, but the benefits accruing from the construction of roads in a particular area

could not be fully calculated in the absence of special studies for the purpose. Last year there was a report about the road pilot scheme carried out in Bombay. But even to-day we are still in the planning stage and the need for passing on from generalities to actualities has been underlined by Mr. A. W. H. Dean, President of the Indian Road Congress, in his address to the Council of the Congress held in Delhi last month. While the road plan for India has resulted in a crop of questions of jurisdiction, allocation of responsibility between Province and Province State and Province, and above all, between the Centre and the Province or the State, engineers should be interested in producing actual designs with detailed drawings and specifications for the road scheme in any particular area in India. An estimate of requirements in labour, plant and materials should be ready for any area before actual work can be started. The delay in executing the road plan already evolved in different parts of India is partly due to the uncertainties of their financial implications. Financial sanctioning, authorities are timid and demand a clear statement of works expenditure anticipated before they will sanction the funds required for the road plan. In order to satisfy their requirements, pilot schemes are felt necessary. In view of the urgent problem of finding work for demobilised soldiers on a large scale, the road construction programmes have to be speeded up here and now. Modern methods of road construction cannot be adopted and new designs and new specifications cannot be followed on the provincial scale unless their financial implications and general usefulness are proved beyond doubt. Some experimental work is being carried out by the Punjab along this line and Mr. Dean now proposes a pilot scheme for the Delhi Province.

Delhi is a big city with a population of 664,000 and is large enough for new ideas to be worked out on a practical scale. Apart from the urban needs, the agricultural area lying in the vicinity of the city can be immensely benefited if roads are suitably constructed for growing the market garden crops needed by the city population. A traffic census already carried out on all the roads leading to Delhi has yielded accurate data to examine and decide the best type of surfacing to be provided for the roads. Construction of specially designed cycle tracks, pedestrian sub-ways, a road with dual carriage ways, segregating traffic and roundabouts to provide for crossings are some of the hall marks of the model pilot scheme suggested for the Delhi area. Pilot schemes carried out in different chosen areas like Delhi should yield valuable information regarding the actual benefit derived by the urban and the rural classes and by the rich and the poor. It will also reveal how far

demobilised soldiers could be absorbed if the road plan for India is put into effect. Controversies on many points are at present rampant regarding the utility of highways and by-ways to different areas and these will all be set at rest on statistical basis. The Delhi pilot scheme, if put into effect, will no doubt shower great benefits on the capital of India and if similar schemes are launched in other important centres much valuable information will be gained for the correct phasing of the provincial and state road plans.

Miracle Grass

The demand for insecticides created by the war and the shortage in supply of rotenone and pyrethrum has led to the discovery of the D.D.T. But more striking and important but not so well known, is the discovery by Dr. Edward Morgan of Caracas, Venezuela, of a grass with discriminating tastes, which co-operates with man in a most satisfactory fashion. The grass has been identified as *Melinis minutiflora*, a native of tropical Africa. The genus *Melinis* consists of about 16 species all of which are confined to tropical continental Africa. But during recent years it has been cultivated in Rhodesia and South Africa. The plant is especially suited to dry soil. It yields a heavy crop.

The grass drives away mosquitoes, ticks and snakes. It drives away the big, fierce bachacho ants which can invade and destroy a cornfield in a few days. Hardly a single malaria bearing mosquito can be found over a pasture sown with it. So powerful is it that cattle infested with blood-sucking ticks are freed of them in a few days after being turned into such a pasture. Even the dreaded bush-monster, the most venomous of tropical snakes, will not come within smelling distance of such a field. The plant accomplishes this beneficial purpose through an oily substance which exudes from its stems, especially during the blossoming period. It also has a peculiar penetrating and pleasant odour, especially in the early morning before the dew is dry. The fresh plant yields about .001 per cent of volatile oil. When examined by Dr. T. A. Henry at the Wellcome Chemical Research Laboratories the oil was found to be brown in colour and had a consistence similar to that of soft paraffin. The natives of Portuguese Congo had a knowledge of its insecticidal and preventive properties. They made nests of this grass for their setting fowls and used it as bedding for dogs when about to give birth to young as it prevents the fowls and dogs being attacked by fleas. At the same time the grass provides luxuriant pasturage on which livestock thrives and grows fat. According to the Pan-American Sanitary Bureau the grass is one of the richest of all feeds for horses, cows and mules.

In India the mosquito is a real menace to the health of the people. In the villages where there are no hospitals snakes are a perpetual danger. The necessity of providing adequate pasturage to the half-fed cattle and sheep of this country cannot be over-emphasised. Dr. Morgan, who discovered the grass is of the opinion that it should be planted around every house in the tropics.

Dr. Morgan's dictum is particularly necessary for India. According to the "Indian Farming" attempts are said to be made in the Forest Department and elsewhere to produce this miracle grass in India and to raise seeds therefrom. More details about the attempts and how far

the attempts have been successful, the public will be interested to know.

Housing Policy in Australia

In the matter of raising the standard of living of the people the Government of

India can learn a valuable lesson from Australia. In the matter of housing policy the Australian Government have followed a consistent policy of helping the poorer classes. The commonwealth, it is well known, is a country of vast spaces occupied

THE FROZEN MAMMOTH

COLD is the great preserver. In Siberia bodies of the prehistoric mammoth have been found with the flesh still edible after 10,000 years in the frozen earth. This is a drawing of the mammoth discovered on the River Beresovka in 1902. Refrigeration is now general practice, but the action of Nature has been replaced by mechanical processes, developed by the chemist and physicist and made possible by the products of the British chemical industry. Mechanical refrigeration processes, of which the domestic refrigerator is a familiar example, do their work by making liquid chemicals, like anhydrous ammonia or methyl chloride, boil in a confined space. The heat for this boiling is taken from surrounding objects, either foodstuffs to be refrigerated, or water to be turned into ice. Research in low temperatures has already enabled substances to be chilled to within a fraction of what is known as the Absolute Zero, representing 491 Fahrenheit degrees of frost! Sometimes a solid refrigerant has advantages over mechanical refrigeration, but ice melts into water and thus raises all sorts of corrosion problems. Nowadays "dry ice" or "Drikold," the solid form of carbon dioxide gas, is increasingly used, because it evaporates into the air instead of dissolving into water. Refrigerated storage and transport of foodstuffs are to-day vital to our very existence. Refrigeration is also necessary in industry. Solid CO₂ is used, for example, in testing aircraft components for use at high altitudes, for joining engineering parts together by "shrink-fitting," and in aircraft construction for delaying the natural hardening of light alloys which would otherwise make them unworkable. British chemists, physicists and engineers have always led in research into low temperature problems. The British chemical industry supplies the chemicals which make possible the increasing use of refrigerating processes in the service of mankind whether at war or peace.

S. R. BATLIBOY & CO.,
Calcutta.

OBJECTS OF THE COMPANY:

The Company has been formed for the purpose of carrying on business of Mechanical, Electrical & General Engineers and Contractors, Manufacturers & Importers of and Dealers in Electric, Magnetic, Galvanic & other Apparatus, and also as Manufacturers, Importers of and Dealers in all kinds of Electrical Goods such as Transformers Refrigerators, Fans & Measuring Instruments, Insulations, Domestic and Industrial Equipments & Power Plants.

The Company has taken over from Messrs. Lakhprasad Loknath & Company the business carried on by them as Lessees of the Workshop of Messrs. Siemens (India) Ltd., situated at 51/2, Hazra Road, Calcutta. The business is being carried on and the Factory is working on account of the Company with effect from 1st day of April 1945. The results during this period have been satisfactory. On a rough estimate it appears that for the period ending 30th September 1945 the profits will exceed one lac.

The factory of the Company will be fully modernised and equipped with latest type machinery. Orders have already been placed and delivery is expected before the end of this year of a considerable number of most modern machines. Negotiations for importing additional machinery and equipment are in progress and steps have also been taken for securing the services of experienced technicians.

MANAGING AGENTS:

Messrs. Lakhprasad Loknath & Co., have been appointed Managing Agents of the Company in terms of the below mentioned Managing Agency Agreements for a period of twenty years commencing from the date of incorporation of the Company upon the following terms as to remuneration and other terms and conditions appearing in the said agreement:

- (i) An allowance of Rs. 2,000/- per month commencing from the date of incorporation of the Company.
- (ii) A commission at the rate of 10% on the net profits of the Company, under sec. 87C of the Indian Companies Act 1913-36.

AGREEMENTS:

The following agreements have been entered into:

- (a) Managing Agency Agreement between the Company & Messrs. Lakhprasad Loknath & Co.,
- (b) Agreement between the Company & Messrs. Lakhprasad Loknath & Co., for taking over the business as Lessees of the Workshop of Messrs. Siemens (India) Ltd.,

Copies of the said documents may be inspected at the Registered Office of the Company at any time during the office hours on previous appointment.

BROKERAGE:

Brokerage at the rate of As. 4 per Ordinary share and Re. 1/- per Preference share will be paid to recognised brokers the stamp of such brokers or Bankers.

APPLICATIONS:

Applications for shares should be made on the forms which may be obtained at the Registered Office of the Company or at the principal office of the Company's Bankers. Applications for less than 10 Preference shares and 100 ordinary shares will be not entertained.

CONSENT:

"Consent of the Central Government has been obtained to this issue of Capital, subject to the condition that so much of the capital as can be properly expended until some uncertain future date is invested and kept invested in prescribed securities which will not be released until the Central Government (in interests are involved), is satisfied that the time has come to make corresponding payments for purposes which are consistent with the enforcement of any measures of control or restriction applied for. It must be distinctly understood that in giving this consent the Government of India do not take any responsibility for the financial soundness of any scheme or for the correctness of any of the statements made or opinion expressed with regard to them."

by a population less than that of the City of London. Scope for agricultural expansion is great and thanks to the war-time industrial progress, the country's capacity to launch a vigorous housing policy has also increased. In 1943 the Federal Government set up a body called the Commonwealth Housing Commission to report on the subject of housing. Its report is now available and the chief recommendations are that the Federal Government should subsidise houses erected by the Government authorities in such a way that the payment made by the occupant should under no circumstances exceed 1/6 of the family income for rental and 1/5th for home purchase. Care should be taken, it is advised, that the subsidised dwelling is not in any way of inferior standard. According to the report of this commission, those who buy houses which are not financed by the Government can be helped through abolition of the sales tax through government advances to semi-government institutions and private organisations for the purchase of houses on easy terms, and by offering technical advice and services at a low cost. It is held that if the Government guarantees an approved portion of advances made by private financial institutions for home purchase it would add fillip to the housing programme. The policy of paying subsidies for the encouragement of housing schemes will also encourage investigation into the up-to-date methods of building which will eventually lower the cost of building to such a level where the payment of subsidy will itself become unnecessary.

Interest in housing, is not confined only to the Government. Private institutions are also doing their best in offering financial and other facilities, particularly for the low income groups, to build suitable houses at appropriate sites. The various States of Australia have already passed legislation under which advances are made to assist persons of limited means to buy or erect houses. The chief banks have been administering Government funds for speeding up the construction of houses. Advances by way of over-draft have been given by trading banks, and the life insurance companies played a part and offered better terms than the trading banks. There are a large number of private building investment companies in Australia ready to finance home building schemes but since their interest rates are above the means of low income groups further state action had been felt necessary. The report of the Commonwealth Housing Commission contains very valuable suggestions and it is reported that they would be taken up for favourable consideration at an early date.

The Government of India are now considering a scheme for housing its industrial labour and a Building Research Station is being set up by the Council of Scientific and Industrial Research. Delay in evolving a housing policy for India would involve the loss of many lives owing to bad weather and the ravages of disease. It is hoped, therefore, that the Government of India would give the housing programme a high priority in their post-war plans.

Petroleum Resources

Among the petroleum producing countries of the world, India occupies an unenviable place her contribution to world production being not more than 0.2 per cent. This small output is due to her not having explored the full petroleum resources available. That vast reserves of petroleum and natural gas exist in India and that these could be exploited on a commercial scale is the view expressed by Mr. Abdul K. Mehta, a noted geophysicist and petroleum geologist. Mr. Mehta holds that Baluchistan, North-

West Frontier Province, the Punjab, Sind, Bihar, Bengal and Assam contain vast unexploited reserves and that the areas covered by the Indo-gangetic plain and the foot of the Himalayas are particularly favourable for prospecting oil and gas. The southern portions of the Punjab, Rajputana, Gulf of Cutch and areas near Madras though less favourable for prospecting should also be explored. The science of mineral prospecting has also made rapid advance in recent years. The discovery of oil and gas has been made comparatively easy by the development of modern geological and geophysical methods. With the aid of the latest instruments available the geologists can probe far deep into the earth in search of rocks which may hold oil. Mr. Mehta suggests that the Central Government should establish a separate department for petroleum exploration and development with two branches, one for petroleum geology and the other for petroleum geophysics. Those Provinces and States where there is scope for petroleum development should maintain similar departments and they should be put in charge of a competent and technically trained petroleum advisers to the

governments concerned. Mr. Mehta wants the Government to extend financial and other legislative aid to any new reliable concern which may undertake to explore and develop the petroleum industry.

The suggestion is also made for a pool system under which the activities of the various governments and private agencies could be co-ordinated, are now being undertaken for the expansion of geological department of the Government of India; and it is to be hoped that prospecting for petroleum will also figure prominently in the propaganda for the future.

Marketing of Bananas

The area under bananas in India in 1940-41 is estimated at 404,550 acres. The principal banana growing provinces are Madras, Bengal, Bombay, Assam and Bihar. Travancore and Mysore have also large areas under banana cultivation. India exports bananas in small quantities; and nearly 12,293 maunds of bananas valued at Rs. 57,806 were exported during the three years from 1937-40. India does not import bananas or plantains. Bananas are classified into different types. In Madras 'Poovan'

BOOK REVIEWS

PLANNING ECONOMIC TRANSITION FROM WAR TO PEACE IN INDIA.

(By Dr. V. K. R. V. Rao published by Vora & Co. Publishers Ltd., Bombay. Price Rs. 1/8/-, pp. 80.)

Messrs. Vora and Co. have done well in collecting the author's essays on the all important subject of Transition published in various journals at different times. The problems of transition are many and difficult. The principles of planning, so far in the realm of academic discussion, have to be applied to solve the transitional problems. Such questions as demobilisation, re-employment of the demobilised personnel, expenditure, income, prices, disposal of surplus goods, taxation and above all the economic policy during the transition which will facilitate the inauguration of planned economy, have been discussed thoroughly. The final chapter is very valuable as it summarises in a short compass the main conclusions of the author. The small but weighty volume will certainly stimulate thought in its readers on the important problems discussed.

BANKING PRINCIPLES IN INDIA.

(By Mr. K. N. Garg, M.A., B.Com., Published by Kitab-Mahal, Allahabad, pp. 278, Price Rs. 4-8-0. Second edition.)

Owing to galloping currency inflation during the war, banks have increased in number as well as in economic strength. If postwar plans are to be initiated shortly and the standard of living of the people raised, surely the role that banks have to play in accelerating the economic progress of this country is bound to be vital and many-sided. Moves are already afoot for introducing fundamental reforms in the banking structure in order to make it possible for agriculture and industry to develop side by side. It is, therefore, essential for the public to know the actual situation in regard to supply of credit in this country, so that they may be fully equipped to understand and criticise the coming reforms. Mr. Garg's book on banking, written in simple and lucid style, will enable the student and the lay reader to understand almost all the major

an exalted moral purpose. The Journal has discovered more reasons than one why it is in the interests of the colonies themselves that they should continue to be under Western domination. The most powerful of these reasons is that if the Western powers remove the top floor of a highly mixed racial culture, as is obtaining in many of the South Eastern countries it might leave the nation worse off than it is now. The presence of potentially predatory neighbours is put forward as another vital factor that should enter into the policy of the Imperialist powers in respect of the Far East. "If the European powers were to withdraw, the Chinese would very quickly establish hegemony in Malaya and Indo-China and probably in Siam as well." And "The Economist" righteously concludes that in the possible substitution of one form of domination for another, it is impossible to strike a clear and definite balance of advantage. Hence let the European nations have no qualms of conscience over their Far Eastern possessions!

problems of Indian banking. The second edition which is under review has incorporated some of the important changes that have happened during the past four years. It will serve as a useful guide to the students, the businessmen and the administrators who are interested in a valuable text book touching almost all the facets of Indian banking structure.

TEN YEARS OF CO-OPERATIVE EFFORT IN SURAT DISTRICT

(By C. M. Gandhi, published by Messrs. Mangaldas & Sons, Bhasaltap, Surat.)

The book, as its title itself suggests, is a review of the different lines of co-operative effort urban and rural in the Surat District. Among the many institutions now functioning the cotton Sales Societies and the District Central Bank show very satisfactory progress and should serve as models to corresponding institutions in other districts who could not boast of similar progress. The land mortgage Bank and the producers' and consumers' co-operative Societies however have just managed to keep going. The handicaps that beset these institutions as well as the general and inherent defects of the Co-operative movement, as a whole are discussed at the appropriate contexts in the book. The author also draws some conclusions on the basis of the data presented. Among these the one bearing on the future role of Government is particularly noteworthy. That in India the movement has its origin and is propped up mainly through State initiative and the spontaneous effort of the agriculturist is conspicuous by its absence, has to be acknowledged. Against this background, we find it difficult to support the author's plea for the relaxation of Government controls over the Societies. The view that expansion is not possible unless the direction of the function of organising societies were changed, and people were freely allowed to organise such Societies as they pleased as a popular movement though representing the ideal towards which co-operators should strive, cannot be accepted as providing a basis for the expansion of the movement under conditions obtaining at present.

WHITHER AGRICULTURE

(By Baljit Singh, Professor of Agricultural Economics, B. R. College, Agra. Published by N. R. Agarwal & Co. M. K. Garden, Agra, Price Rs. 8/-, Library Edition Rs. 8/8/-.)

Of late, a number of experts drawn from among administrators, economists and business men have been applying themselves to the study of Indian agricultural Economy and the long standing complaint of scarcity of publications on the subject no longer holds good. But every addition to the existing literature will be welcome if it views the whole problem from a new angle or makes fresh practical suggestions to put Indian agriculture on a more efficient and progressive basis. The historical survey of conditions, which occupies the major part of Mr. Singh's book covers familiar ground. The review of wartime measures has however brought it fairly up-to-date. The author has also dealt exhaustively with the work of the Central and Provincial Governments and such bodies as the Imperial Council of Agricultural Research in the field of scientific Research, Co-operation and marketing. In outlining a future agricultural policy, the author feels that a fall in the price of agricultural products has to be prevented at all costs and as a safeguard against the possibility of a fall in prices he pleads that there should be no free markets for major agricultural and industrial products.

Clive Street Gossip

Journals are institutions; and it is not perhaps easy to say when and how often in their careers they should look back on their record to see how substantial it is and how far they have justified their existence. The average individual does not care to justify himself that way; and those exceptional people who regard their life as a mission would probably have as many failures to regret as triumphs to cherish. Some years ago, Lord Keynes characterised a collection of his writings as the croakings of a Cassandra, though, if he were to make a similar attempt to-day, he would be inclined to regard his achievements in the field of public policy as distinctly more heartening. Despite the fact that any institution thrives or dies, or drags on an indifferent existence, according to the personalities behind it, there is a sharp difference between the career and achievements of individuals and the record of an institution. For, in the latter case, success is conditioned by the environment, though on the whole an institution is to be judged by the extent to which it is able to act on the environmental condition in which it found itself.

Big business houses have their way of celebrating and publicising their jubilee or centenary as the case may be. And when the occasion comes, the bosses try to dig into the history of the firm and when old facts are brought to new light they feel a tingling glow of pride at the pioneering efforts of their distant predecessors. The story of the firm is told in attractive little brochures, adorned with gilt and bright ribbon and the doings of the brave days of old. But newspapers and periodicals are in a different category. To most of them, it is enough to have lived over a long period, to have served the public with news or comments or both for decades. Colour and glow are lent by stories of prosecutions in the past. Through the Jubilee Number, the jubilee is easily turned into an occasion for pleasure, pride and profit. But the real test for a journal to apply itself is its contribution to the public good. Does it find public life purer than when it first saw the light of day? How many good causes can it count as having received its strong and effective support? What evils did it nip in the bud through timely exposure? How far can it claim to have charged the public mind with dynamic, but concrete, ideas of social good? Has it been a forlorn champion of lost causes or has it pulled its weight effectively in causes of immediate benefit to the people at large?

These are stern tests. But, to my mind, journalism would degenerate into sordid business or slip into the position of pedagogy, on a country-wide scale, if it has to flinch from all or any of these tests. The most difficult part of journalism is that it has to answer these tests without neglecting any of the commonplace standards by which its average reader would insist on judging it. The reader, let it be remembered, is a severe taskmaster, the more so because he is normally an indiscriminating and none too fair judge of the journalist's work. A brilliant, painstaking and practically useful study of a major problem is no help in covering up the shortcomings of

the printing press or a slip in the maintenance of routine features. The managerial and business side has its demands to make, which are often incompatible with the main functions of a journal. In the reconciliation of these conflicts, the milieu of general conditions in which a journal has to function is, of course, the deciding factor. But the responsibility to ensure that first things come first and that there is always a *raison d'être* other than self interest can never be repudiated.

In Britain, the U.S.A. and other progressive countries of the West, the great national newspapers and periodicals are always in a position to justify their existence. In so far as every political party is the champion of a political idea and the sections to which that ideal has the most appeal, close association with a political party assures a journal not only of its status in the public life but of the means of fulfilling its primary duties. Every party and every organised interest has its associated group of influential politicians, accomplished writers, specialists in particular branches of study or of business life. The process of watching the course of current affairs from a special standpoint is perfected, particularly as material resources are by no means inadequate.

Far different is the position in India. The conditions in which the press has to function are by no means calculated to raise either their technical efficiency or their effective usefulness to the advancement of the public interest. Nearly in every respect in which the press in the West has an advantage, the press in India has to labour under a handicap. The building up of journalistic ventures into stable and efficient public institutions is not only an uphill task, but even those cases in which it is conventionally deemed to have been accomplished, leave a great deal to be desired. If this is true of ordinary daily journalism, how much more true should it be of specialised journals? When "Indian Finance" was first started, there were indeed financial journals owned and managed by British interests. There were also one or two Indian journals. But financial journalism was in its swaddling clothes. The British-owned journals were naturally content with meeting the felt needs of their readers, who were predominantly British. They

could hardly feel the urge to pose, study and expound the special economic problems which the public and the Government should give their special attention to. A new loan of the Government or the announcement of the Central budget, not to speak of the provincial budgets, hardly caused a ripple of special interest in the placidity of those times. On the one side was the Indian daily press, one section of which had learned to fasten on certain features of the Budget like the expenditure on defence and to set its criticism of these features in special relief against a background of monotonously adverse comment on the Government's doings. On the other was the British press which saw nothing of interest in the happenings of the financial world. One would indeed be surprised at the indifference displayed towards vital financial and economic problems. Today the position is different. Not only are there more financial journals, but the financial press gives more space to the problems which are its special concern. Even the daily press agrees to shift the limelight off the political controversies and focus it on financial and economic problems. Professors and students of economics have learned to keep an eye on current developments instead of being too much absorbed with book-lore. Various aspects of the Indian economic problem are being studied by professors and young aspirants to special degrees in economics. Chambers of Commerce have learned to look beyond the narrow self-interest of their members and watch the background of general economic conditions in the country on which, in the last resort, their welfare depends.

It is difficult perhaps at a time, when new financial journals are so easily started and when almost every one talks of in-

flation and the sterling-dollar rate, to recognise the change for which "Indian Finance" may claim the lion's share of the credit. In the pre-"Indian Finance" days, interest was centred round the sixteen pence ratio and protection to Indian industry. And such interest was naturally at other times to the levels of supine indifference. To keep a week-to-week watch of developments, to scan all the available data, statistical and other, with a view to detect the prevalent trends, to set important problems in proper relief, or throw out concrete suggestions which the Government in spite of its composition and complexion could not but adopt and generally to enliven the economic conscience and consciousness of one and all—all these fell to the lot of "Indian Finance" to attempt and achieve. Publication of Statistics and periodical returns was till a late stage a palpable waste of public revenue. Seaborne trade figures were probably used by a few professors after the volumes had grown dusty enough to be regarded as respectable economic history. But little use was made of the weekly returns or of such publications as the annual report of the Controller of the Currency. For a long time after I started "Indian Finance," I had no other theme for public speeches except "How to study the various statistical publications." It was some time before I could break down the initial distaste for so forbidding a theme. But before long I found a widespread eagerness to follow the tale told by figures. The tendency was strengthened by the Monthly Trade and Finance Supplement of "Indian Finance" which presented in an illuminating form all the statistics relating to the month under review and the usually comparable periods. To this Supplement was soon added statistics of international trade and finance. The phenomena connected with the great depression were discussed with the utmost clarity in the columns of this paper; and the Indian public learned to follow the developments in this country against the wide background of international conditions. Even in such questions as protection, "Indian Finance" did a great deal to wean the public from its uncritical and largely sentimental attitude to Indian industry. Without relaxing the demand for protection, the reciprocal obligations of industry to the consumer came to be insisted on. In due course, the emphasis was shifted from mere protection to planned development. When the Congress accepted office in the Provinces, "Indian Finance" renewed and re-inforced its plea for planning and a series of Supplements called National Planning Series helped to present the problems in the proper light. To have whetted the appetite for economic studies, to provide food therefor and inspire the quest for more, to improve the tone and stamina of economic thought in the country—these were accomplished when they were most needed.

I have said at an earlier stage of the importance of concrete suggestions which the authorities concerned can accept. From the details of financial reconstruction of particular Companies to the loan policy of the Government, there have been many instances of the suggestions made in these columns being accepted and duly acted on. I have heard that at one time a grateful reference to this paper in specific terms was made in the draft

of an official statement and was afterwards modified in deference to form and tradition. Running my mind over the last eighteen years, I recall how even such a detail as the separate mention of ways and means advances to the Government in the weekly statement of the Imperial Bank of India originated in a suggestion in these columns. The appointment of Sir Walter Layton as the Financial Assessor of the Simon Commission in response to our demand belonged to an even earlier stage. Even the Monthly Review of Business Conditions was anticipated by our Monthly Trade and Finance Supplement. Government response on larger questions of policy is, of course, conditioned by the nature and constitution of the Government. But "Indian Finance" has been guided in its comments by the criterion, not of extremist sensationalism, but immediate effectiveness. The loan policy of the Government of India has been, so to say, its special charge. "Indian Finance" has held aloft, often against odds, the banner of cheap money, low borrowing rates, and a credit policy that places the interests of the tax payer and the investor in proper relation. Scepticism and the inertia caused by old habits of thought and failure to see the trends of the time were no ordinary barriers. "Indian Finance" threw itself like a battering ram on these barriers; and many developments, which ten years ago it was deemed crazy to predict or plead for, have now come to pass. The battle is by no means ended. The triumphs of

the past are not by themselves sufficient to carry conviction. Even to-day the hiatus between the British bank rate and the Indian persists. Before the crucial task of converting 3½ per cent paper, the authorities quail. Conditions in the money market, the large volume of savings waiting for investment, the Government's needs for economic development the intentions and plans of the British Government, these conditions have not weighed sufficiently—individually or cumulatively—to push the Government farther on the path.

But I have no doubt that the logical developments must take place. Despite many a disheartening circumstance, I am firm in my faith that Indian economy must develop and expand in the years to come. Potentialities have their promise and their threat alike. If planning holds out prospects of prosperity, it also contains the possibilities of costly mistakes, of corruption, inefficiency and bungling. More than all is the danger of inadequate study of the issues involved, failure to ventilate their pros and cons and the liability of the public to fall into fits of apathy and indifference. The future calls for far more than was brought into play in the past. If I have let myself talk of the record of "Indian Finance" during these eighteen years, it is as a prelude to the vigorous efforts that "Indian Finance" will put forth to secure an even brighter and even more useful record in the future.

(From Our Correspondent)

NEW DELHI Oct. 16.

Among the statements made by Sir Ardesir Dalal at the meeting of the General Policy Committee one does not appear to have received as much attention as its importance at the present stage would warrant, that is, how the commercial safeguards provisions contained in sections 111 to 121 of Government of India Act, 1935 would hinder the post-war industrial development of India. Government have declared it as their policy to take "positive steps to encourage and promote the rapid industrialisation of the country to the fullest extent possible." The existence of the Commercial safeguards provisions in the Statute Book, however, render it possible for British interests in India establishing industries in the country and to retain control over them. It would also be possible for well-established companies to do likewise. The prospects of nascent Indian industry being able to compete with these powerful interests are very scanty and in the presence of these provisions the Government of India is powerless to assist Indian industry. A few concrete examples will illustrate the point.

Taking the Tobacco and Cigarette Industry, it is estimated that the consumption of cigarettes in India is of the value of Rs. 6 crores annually. There are in India 38 companies engaged in the Tobacco Industry and trade with a total paid-up capital of Rs. 4,86,40,860, the subscribed capital being Rs. 4,89,95,989 and the authorised capital Rs. 9,89,32,857. (These figures relate to the immediate prewar year). Adding the rupee equivalent of two British Companies with sterling capital, the paid-up capital of all the companies engaged in this industry would amount to about Rs. 5,33,00,000. Two British companies with rupee capital account for as much as Rs. 4,38,50,000 and with the sterling capital of the other two British companies, the figure amounts to about Rs. 4,75,50,000. The position therefore is that thirty-six Indian companies together command a total paid-up capital of only Rs. 5,75,00,000, that is an average of Rs. 1,50,000 each. One British company which is the distributing agency has a paid-up capital of Rs. 4,16,00,000 and it is estimated that 80 p.c. of the cigarette trade in the country is in its hands. It is obvious that the chances of Indian interests establishing themselves in the trade in opposition to these powerful rivals are very slender indeed.

Let us take the Soap industry. The number of companies engaged in this industry in India in the immediate prewar year were 32, with an authorised capital of Rs. 1,29,45,000, the subscribed and paid-up capital being respectively Rs. 93,51,775 and Rs. 92,93,327. One British Company accounts for a paid-up capital of Rs. 34,00,000 and another is stated to have an authorised capital of Rs. 10,00,000. While therefore one British Company has a paid-up capital resource of Rs. 34,00,000 thirty other companies between them command about Rs. 59 lakhs or an average of less than Rs. 2 lakhs each.

A similar tale can be recorded of the Match Industry. The number of companies at work in this industry in British India in the year 1938-39 were thirty-six and their authorised, subscribed and paid-up capital were respectively Rs. 2,74,75,940, Rs. 87,27,429 and Rs. 85,40,888. One non-Indian company accounts for as much as Rs. 2,00,00,000, authorised capital and Rs. 70,00,000, subscribed and paid-up capital. The thirty-five

other Indian companies together have only a paid-up capital of about Rs. 15,00,000, representing an average of Rs. 40,000 each. Their ability to compete, individually and in combination with a concern with a paid-up capital of Rs. 70,00,000 can well be imagined.

Indigenous industries asked for protection against the non-Indian combine, but the Tariff Board felt precluded on grounds of high policy from discriminating between Indian and foreign enterprise and interests. This was in 1928, before the time of commercial safeguards and when every foreigner was treated as having equal rights in India along with nationals and our policy was an "open door" one. The Board then pointed out that in the Indian fiscal law "there is no express provision which recognises the method of penalising unfair competition except where such competition arises from the payment of bounties." The non-Indian combine was thus enabled to enjoy the protection afforded to the Indian Industry. Measures of protection to Indian industry have led to foreign interests establishing themselves in India and themselves enjoying protection.

The examples can be multiplied but they require some diligent research. The above however illustrate the force of the Planning and Development Member's contentions.

The Labour Government in Britain have decided to retain war-time controls for a period of five years more. While in India there is reason to hope that Government will be prepared to relax industrial controls which cause interference and delay, any facile optimism that the end of hostilities will see the withdrawal of all the wartime controls is clearly unwarranted. The announcement made by the Director General of Civil Supplies however that distribution control may disappear by December should afford some satisfaction to the trade; and the consumers' interests are safeguarded by the statement that price control will remain for another year although its enforcement would rest with provincial governments. As regards food, we have already been told in unambiguous terms that the present controls with regard to procurement, distribu-

tion, movement, prices and rationing cannot be relaxed before 1946 without the risk of a serious breakdown in our food economy. The Rationing Adviser to the Government of India Mr. W. H. Kirby, has been more emphatic and has expressed his belief that to decontrol food control measures at the present circumstances is to court disaster.

We have heard during the week that the United States Senate Committee has recommended the immediate withdrawal of the Excess Profits Tax. In Britain there appears to be a strong public demand for the repeal of the Excess Profits Tax and at the time of writing the statement of policy by the Chancellor of the Exchequer is yet to be made. A similar demand will doubtless be made by our business interests for the abolition of its Indian counterpart although at the moment one cannot say that it has been very vocal. Clearly Excess Profits Tax being an emergency tax to finance the war, there would appear to be no justification to extend it beyond this financial year; it would further be a breach of faith with assesses if it were not withdrawn. It is however equally clear that the Government cannot afford to lose this revenue particularly when there are reconstruction schemes to be put into execution. The revised estimate of revenue from Excess Profits Tax from Corporation and other assesses in the year 1944-45 was Rs. 110 crores and the budget estimate for the year 1945-46 was Rs. 90 crores. Apart from the anti-inflationary effect of the tax, it is a source of revenue which Government can ill afford to forego at this stage. But technically the tax will have to be repealed and be substituted by another with some such designation as the National Betterment Tax. In the first place, as His Excellency the Viceroy observed, we seem able to find all the money required for a war by radical and unorthodox methods but for productive purposes and for purposes of national advancement we find ourselves with out adequate resources and hesitate to adopt the adroit measures so readily undertaken in war. Further Government have already announced it as their policy to prevent excessive profits to private capital; and it is well recognised that in the normal course the tax system should be employed to prevent excess-

BOMBAY, Oct. 25

The prohibition of the return of insurance companies except as a group to Burma and other countries of the Far East is likely to inflict great hardship on Indian insurers, besides being fraught with danger to future expansion. The precise reasons for the ban are not understood, but it is believed that the object in permitting a whole body of insurers only to resume business is to favour those companies who are suffering from dearth of staff. This is not necessarily an insurrection against preferential treatment to British business, but it is certainly a fact that Indian insurers have been left in the cold. In a statement recently issued, Mr. K. C. Desai, who is the President of the Indian Life Assurance Offices' Association, points out that Indian life insurance companies ought to be allowed to return to Burma. The demand is eminently reasonable. Indian companies have a large number of policies on the people in Burma who could not remit their premiums owing to the enemy occupation and who require to be contacted now to collect the arrears of premium. Otherwise, the policies will unnecessarily expire. Moreover, claims might have matured in the last three years owing to the death of the policy holders concerned. It is common equity that facility should be accorded for collection of the amounts in the policies. Otherwise, the fair name of Indian companies will receive a most undeserved smudge for no fault of their own. Mr. Desai therefore pleads that representatives of life offices should be permitted to return to Burma. The Association has appealed to the Government of India for proper facilities for discharging their duties as insurers. If steps are not taken soon enough, a valuable insurance market will be lost to Indian companies.

Representatives of the oilseeds trade discussed recently the question of resumption of futures trading which, it will be remembered, was closed in May, 1943. It was represented to the government that the time has come when the producer needs the price insurance and the division of risk available through the restoration of forward trading. Now that the war time conditions are slowly disappearing, there has been a slow and steady shift in the nature of demand. Hitherto, the requirements of H.M.G. and of the Government of India held the pride of place in the demand for oilseeds. Now that other sources of supply have been opened up and countries like Argentine, East Indies have become sources of supply, the position of the Indian producer has changed. It might well be necessary for him hereafter to sell his produce and to minimise the risk of price declines through the machinery of the forward market. After all, there is no risk now that revival of futures trading will lead to unstable markets. The experience of cotton is an instance in point. It is hoped that the Government of India will grant the necessary permission for forward trading at an early date.

Mr. M. K. Vellodi's stewardship of the office of Textile Commissioner has drawn forth unstinted praise from all quarters. Within the sharp and serious limitations with which control has had to work, Mr. Vellodi had made a success of the job. It may be that even to-day cloth shortage is as acute as ever, but there has certainly

been less of diversion of supplies to illicit channels and greater availability of cloth throughout India. The complete success of control on the manufacturing side is certainly a feather in Mr. Vellodi's cap. His sea-green incorruptibility shines like a good deed in a naughty world, marked by unedifying and incredible corruption in the ranks of officialdom. A gentleman to his finger-tips, Mr. Vellodi brought to bear upon his momentous task a diligence and conscientiousness such as we seldom see among officials. There were not a few who felt that the allowed himself, perhaps against his better judgment, to be swayed by the opinions of a certain group of mill-owners. But it was idle to expect a realist of the type of Mr. Vellodi to use the big stick. He was content to let that be done by Sir Akbar Hydari. They both made a fine combination and it seems a pity that both of them are leaving the great tasks, which they began so well in 1943, unfinished.

On the eve of his translation to the Deputy High Commissionership, Mr. Vellodi summarized the main achievements of cotton textile control. Put briefly, it is that some order has been evolved out of

the Satanic chaos that prevailed three years ago and that the skeleton of a proper distribution of scarce supplies among alternative users has been evolved. The success of the standard cloth scheme and the reduction in prices are not to be cavilled at. On the question of the future of textile control, Mr. Vellodi could not obviously commit himself much, but few will demur to his observation that, even if supply ever copes with demand, it may not be feasible to go back to the conditions that existed in the pre-war days. It is characteristic of Mr. Vellodi's habitual generosity that he has paid a tribute to the part played by the Indian cotton mill industry in the war effort. Everyone will endorse his statement that "sufficient recognition has not been given to the magnificent contribution of the cotton textile industry in providing textile materials to the defence forces of the United Nations." The only "quid pro quo" which the industry asks of Mr. Vellodi is that he should, in his new mission, do his utmost to procure for the industry the capital equipment it has worn out so unselfishly in the cause of the war effort and that it needs so vitally.

South India

(From Our Correspondent)

Madras, October 23.

The Southern India Chamber of Commerce in a representation to the Commissioner of Civil Supplies states that it has received reports of attempts being made by different collectors to help sugar cane factories in particular areas. It advocates a uniform policy through out the province so that the welfare of the sugar cane cultivators is not gravely jeopardised. The Government have not introduced any policy to maintain sugar cane prices; but have only notified minimum price in certain areas, leaving the cultivators in other areas to the tender mercies of the factory owners. The Chamber urges the Government to give a clear lead to the collectors. It is said that the average area under sugar cane in the Madras Province during the five years ending 1943-44 represents 3.4 per cent of the total area under sugar cane in India. An increase in area is reported in East Godavari, Kiswa, the Deccan, Coimbatore, Trichinopoly, the South and the West coasts. This increase in area is due to the favourable prices for jaggery.

According to a Press Note issued by the Madras Government, arrangements are being made to improve the food grains position in the Province. It reports that the stock of food grains is inadequate to meet the current requirements. The prospects of the paddy crop in the non-delta areas are not bright. The Department of Civil Supplies states that the Index numbers of import and export prices in general for the Madras Province have advanced by 28 points to 239 and 21 points to 218 respectively.

Declaring open a branch of a new bank in Trivandrum, Sir C. P. Ramaswamy Iyer, Dewan of Travancore emphasised that he was a very strong advocate of State Socialism in many things and many departments of activity. He believed that the time had come when agricultural operations and bigger industries should be nationalised. Large scale public utility enterprises such as water supply, electricity and power transport should be conducted and managed by government as trustees for the people. In this respect he says, banking in India is approximating to the status of a state enterprise and it is likely to be entirely nationalised in the course of the next few years. He has also advocated a new system of controls, transport and sale to facilitate the transition from war to peace.

Delivering a lecture under the auspices of the Osmania University Dr. B. V. Narayana-swamy Naidu, principal Pachiyappa's College made an emphatic plea for full employment as the principal objective of economic reconstruction. The ultimate objective of economic reconstruction, he said is the raising of the standard of living of the masses and promoting their material welfare. For this agriculture must be rationalised and improved, and a radical alteration in the existing land tenure is required. The development of industry, agriculture, and communications must be dovetailed to have the maximum benefits. He further emphasised the necessity for state control in all these spheres and remarked that it is the duty of practical administrators to promote for the material prosperity and progress of this country.

The Rural Reconstruction Department of the Hyderabad State with a view to improving the castor cultivation in the State has formulated a scheme for a fair distribution of superior castor seeds. The total expenditure estimated at Rs. 48,980 will be met by the Nizam's Government and the Imperial

Council of Agricultural Research. The scheme will be experimented on four lakhs of acres of land in the important districts.

Speaking on behalf of the Madras Provincial Handloom Cloth Merchants' Association, Mr. S. Venkateswaran, the provincial textile commissioner, discussed the grievances of those engaged in the trade. A number of representatives from the various districts explained the difficulties and hardships caused by control orders. So far as control measures were concerned, he felt that they would not be continued a day longer than it was necessary to continue them. He assured them that if in any instance those engaged in the trade found it difficult to get the allotted supplies from the producers, the matter could be reported to the Department for necessary action.

The Government of Madras have sanctioned a special engineering division to work out designs and calculations for the proposed dam project over the Godavari. The officer-in-charge will also frame designs for the Rama Pada Sagar Reservoir and for irrigation canals leading therefrom. The Government have also created the Manimuthar Special investigation sub-division to investigate and report on the possibility of bulding a reservoir across the Manimuthar river near Singampati. It is to store the extra water flowing into the river Tambaraparni, from its tributary Manimuthar river and to let it down again into the Tambaraparni river for supplying the scarce supply in the river during the Kar season in the Tinnevely district. The reservoir is expected to store 3,300 million c. ft. of water and the estimated cost is between 15 and 20 lakhs of rupees.

(Continued from page 732).

sive accumulation of profits. There will be greater justification for such a tax because the tariff policy will be designed to assist industries and an industry sheltered from conditions of foreign competition can have no justifiable objection to the tax. After all, the purpose of all these reconstruction schemes is to raise the standard of living of the mass of the people and to increase their purchasing power, which will provide a condition under which industry can look forward to a continued period of prosperity. It has been recognised by Government that the profit motive has to be harnessed to social needs and a limitation of profits would appear to be the most feasible way of achieving the object.

A recent decision of the Government of India to regulate the amount of commission chargeable by middlemen in the coal trade while maintaining the ordinary trade channels of supply, raises an interesting issue of principle. Controversy has long raged in England as to the role of the merchant and as to the need for and justification of this intermediary but in the special needs of that country's export trade it has been generally accepted that this institution serves a useful purpose. In war-time the Hoarding and Profiteering Prevention Ordinance has limited the middlemen's remuneration whatever their number and the principle has been accepted in other controls such as textiles. In some industries obviously, the intermediary is a fifth wheel in the coach and there should be no regret at his passing away in such circumstances.

AGENCIES AT ALL IMPORTANT CENTRES OF INDIA

A Resume of Commodity Markets

There has been two-sided fluctuation in prices in the commodity markets in the past fortnight, bullion prices being irregular on reports regarding the possibility of a further rise in the price for U. S. domestic silver and the subsequent rumour that the Bill for bringing about an increase in the price of domestic silver had been withdrawn. The raw jute market has been very weak even though it was reported that coal arrivals had been satisfactory, and that a fresh order for B. twills had been received by the Calcutta jute mills. The raw cotton market has been easier in sympathy with the weaker bullion market in the latter half of the week. In the piecegoods market steady conditions have continued to prevail though business has been restricted on expectations that ceiling prices might be reduced shortly. With the approach of Diwali there is greater demand for the finer styles but not much stock is available and black market dealers are reported to have a flourishing trade. In Madras, there is considerable difficulty as supplies from Ahmedabad and other producing centres have been rather slow in coming. The weakness of the raw jute market is due to the expectations that supplies would be considerably in excess of mill requirements and exports and that stocks in up-country centres are greater than market and official expectations. Otherwise, there is no justification for the sudden weakness in the past fortnight and the reports that transactions are being concluded even below minimum prices.

Coal arrivals have been quite satisfactory. With the discussions going on for the de-requisitioning of mills, mill consumption might possibly show an increase. As for exports it is feared that the restriction on buying and the difficulty in respect of shipping space will prevent any appreciable increase. The same difficulty may be experienced in regard to jute manufactures as well as with the repatriation of the Forces from overseas to the Home countries and the new problems regarding the re-occupation of territories by the SEAC, there has been considerable dislocation of shipping and stocks in the last two months have tended to increase. Whether there will be any appreciable improvement in the situation before the end of the year cannot be stated.

It is also said that the position after April next will be particularly acute unless special arrangements are made by the British Government for the necessary shipping space. The shipping pool will terminate in March next year. As the bulk of the available shipping is owned by the U. S. A., unless there is a transfer of ships to the registers of other countries the difficulties in respect of exchange might present new problems. That is perhaps the reason why balers are anxious to do business and shippers are not prepared to commit themselves freely.

In the jute manufactures market mills are prepared to offer a substantial discount in prices for positions early next year. Apart from the slight improvement in prices on the announcement of a new order for 50,000 bales of 'B' twills, delivery November-February, weak conditions have been noticeable throughout the period and quotations in the Heavy Goods section especially are lower by more than a point.

The Bombay raw cotton market has been rather uninteresting and closing prices are lower on balance. The market expressed satisfaction with the First Cotton Forecast figures for 1945-46, but as Karachi advices were lower it was feared that American subsidies of cotton will prevent the revival of the Indian export trade and prices were marked lower.

It was announced during the week that the U.S. Export and Import Bank will provide credits amounting to 100 million dollars for the financing of exports of approximately one lakh bales of cotton for European markets. Among the eight countries named is the Netherlands. Cotton may be shipped by the use of these credits. Similar facilities are reported to be under consideration for the benefit of the liberated and war devastated countries in the Far East. The Government of each country for which a part of the credit may be assigned will designate one or more banks to handle the portions of credit at the foreign end.

A 12 percent decrease in the area under cotton cultivation in India during 1945-46 from last year's corresponding figure, is estimated in the first cotton forecast issued during the week. The reasons, it is stated, are chiefly the unfavourable conditions at sowing time and the "grow-more-food" campaign. The total area under the crop is estimated at 9,297,000 acres comprising Bengal 1,411,000, American 2,972,000, Comras 2,877,000, and others 2,037,000 acres. The forecast which refers mainly to early cotton relates to the period upto the end of July or beginning of August 1945.

The statement of Sir Stafford Cripps that futures trading in the Liverpool market will not be resumed for a considerable period and that the policy of bulk buying of cotton will continue has come in for a great deal of controversy and has led to representations from the various cotton trade associations.

In the absence of any futures trading in the Liverpool market, it will not be possible to open markets in Alexandria and other centres and the trade will be deprived of a very useful and effective hedge. The President of the Board of Trade will be discussing the matter with the officials of the Liverpool Cotton Association shortly.

Bullion prices have fluctuated rather widely in the past fortnight. The reports regarding the failure of the Anglo-U.S. talks and the legislation for increasing the domestic price for silver in the U.S.A. to 1.29 dollars an ounce encouraged bull activity and led to forced covering. But as it was known later that in spite of difficulties a settlement in regard to U.S. talks will be reached and that the higher domestic price for silver will not have any effect on inter-market values, prices came down. The reduction in the level of taxation in the U.K. is also taken to mean that the financial difficulties of the U. K. are not so great as presented, and that the confusion in the international economic situation will be cleared up before long.

The abolition of wartime taxation on profits of the silver mines in Mexico will stimulate production to a great extent. With the eagerness of Empire producers to take advantage of present conditions and the higher level of silver output outside the sterling area, it may be not therefore difficult to bring in imports at an early

EXTRA SUPPLIES OF ELECTRIC LAMPS

The following Government Stockists and their distributing agencies are in a position to supply adequate quantities of General Service Electric Lamps which were indented by Government during the war to supplement normal commercial imports and indigenous production.

Prices have been reduced and brought in line with prices elsewhere in consultation with distributors and indigenous manufacturers. Supplies now available will help large scale undertakings like Municipalities, Electric Supply undertakings and Industrial concerns, besides individual consumers, to meet their requirements for the restoration of pre-war lighting standards. Special prices have been fixed for lamps with Screw types of caps.

Provided orders are not less than Rs. 500 in value or not less than four standard packages of lamps upto and

including 200 watts non-Government indentors like Electric Supply undertakings and industrial concerns who normally purchase direct from producers and importers are entitled to supplies at the Stockists Issue Rates shown in Price Schedule in this advertisement.

The Rates to be charged for other consumers are also shown in the schedule. A definite quota is being allotted from these Government imported stocks for supply to Electrical Dealers for sale to consumers and retail dealers not entitled to get their lamps from Stockists.

Allocation of supplies by Stockists to Electrical Dealers will be at the discretion of the Stockists and subject to the conditions imposed by the Controller General of Civil Supplies just as in the case of release of commercial supplies through normal trade channels.

NOTES:

- The above prices come into force from the 15th October, and hold good until further notice.
- The Stockists' Issue Rates—
 - are f.o.r. any railway station in India by goods train or free within six miles of Stockists' warehouse.
 - 1 per cent extra on these rates will be charged if passenger train delivery is required.
- The Wholesale Rates are free ex the supplying dealer's warehouse.
- Insurance of despatches, if required, will be at the purchaser's cost.
- Claims for breakages or replacement of defectives will not be entertained by Government or Government Stockists.
- The above rates are exclusive of Provincial sales taxes, terminal taxes, etc., which are chargeable to purchasers at cost.

GOVERNMENT OF INDIA

Directorate General of Munitions Production.

Jute and Jute Manufactures

Special to "Indian Finance"

(From Our Correspondent)

Calcutta, 25th Oct., 1945.

During the period under review markets have again been featureless if we except the latest Government Order for 58,000 bales of 'B' Twill sacking placed with Mills at the end of last week. The official notification of the placing of the other made little impression on a market already ruffled for it over the past week or two by persistent rumours regarding the orders' existence. Led by that popular gambling medium, the B Twill 'Phutka' market, quotations had been gradually hardening in anticipation of more Government orders for heavy goods but apparently the size of the order must have come as a disappointment to the 'Phutka Wallahs' as a slight recession in prices was noticed very shortly after confirmation of the business came to the market. Since then, rates have subsided and on Wednesday last a strong reaction set in B Twill prices dropping a rupee in a matter of hours.

Business in the raw material has been practically negligible and the immediate outlook is gloomy with a general feeling of uncertainty pervading the market. There has occurred nothing of a favourable nature which might be expected to induce mills to commit themselves to large purchases of jute. A declaration by Government as to their intentions regarding the fate of the current Jute (Price Control) Order which will expire in March next year would no doubt assist Mills to determine a policy for future purchases of raw material. Mills should not be expected to create now or before March next, a 'long' position in their jute purchases books thereby accepting the risk of seeing either a reduction in minimum prices or the abolition of price control when the present Order becomes inoperative. Therefore it is logical to assume that under existing circumstances mills will buy jute only according to immediate requirements whilst keeping their stocks of the fibre at what they consider to be a reasonable margin of safety until Governments' intentions regarding controls become known.

It is regrettable that despatches of jute goods are not being maintained at a very satisfactory level. More and more godown space is being taken up by increasing stocks of manufactured goods. The position may worsen as production figures are again on the increase due to better coal supplies and, as far as we know, there has been as yet no definite settlement as to when the release of requisitioned premises is to be made by the Military Authorities. Political strife and the economic dislocation now apparent in Far Eastern Countries which before the Jap occupation provided important markets for jute goods is seriously hampering a return to normal trading conditions. It was expected that these countries would require large quantities of jute goods in the immediate post-war period to assist in the work of rehabilitation but at present it is impossible to say how long this period of transition from war time to peace time conditions will last.

Meanwhile sellers of raw jute find themselves in an unenviable position and many are despondent. Unable to make substantial sales for some time, holders of raw jute stocks (which were rashly built up after the declaration of the end of the war in anticipation of a boom in the trade), are confronted with an increasingly serious position. Paradoxically, prices in many mofussil centres have recently shown an upward tendency due to the falling off of

imports whilst in Calcutta there is great pressure to sell large quantities of all descriptions at minimum rates without meeting response from buyers. Cultivators have been reluctant to dispose of their holdings, (particularly of the better qualities) at ruling prices and have been demanding four to eight annas more; the general expectancy being that demand in Calcutta will revive soon. The recent heavy rains was also responsible to some extent for holding up imports.

Jute imports into Calcutta and the Mills' Stations during September 1945 totalled 34,60,589 maunds as against 25,92,723 maunds for the same month last year. For the first three months of the current season, i.e. July, August and September, the total weight of imports amounts to 80,13,960 maunds compared with a total of 75,92,448 maunds during the same period last season.

The Indian Jute Mills Association issued the following statement of total reported sales for the week-ended Saturday, the 6th October, 1945:—

	This & next month	Forward
	Yards	Yards
Hessian	28,19,000	30,15,950
40" 8 oz. Hessian (included in above)	2,60,000	Nil
Twill	7,93,387	2,31,875
Plains	5,10,748	26,51,632

The estimated Jute arrivals for the first half of October 1945 is 3,05,000 bales compared with 2,90,000 bales for the first half of October 1944. The estimated total arrivals for the season upto mid-October stands at 19,40,000 bales as against last years' total for July to mid-October of 18,33,000 bales.

In the Pucca Bale Market there is no business of importance to record. Dealers are free sellers for all qualities at minimum rates.

The Loose Jute Market is unchanged and has been practically idle. Small business was done in District Tossa marks at Rs. 15 for Middles and Rs. 12 for Bottoms with sellers over and some special Tossa Jat Bottoms also came to business at Rs. 13-12.

The Government order for B Twill was the only bright spot in an otherwise dull market for Manufactured Goods. Business during the week was chiefly confined to inter-bazaar transactions. At time of writing the market continues its downward

trend with considerable 'bear' selling in evidence. Hessian prices are easier in sympathy with a dropping market for Heavy Goods.

The following are the prices quoted for Manufactured Goods on Thursday 25th October 1945:—

	Oct.	Nov.	Jan.	Apr.
	Rs.	Rs.	Rs.	Rs.
8 oz./40" hessian	22-2	22-2	21-4	20-4
10 oz./40" hessian	28-0	27-8	26-4	25-4
Plain C's	65-0	64-8	62-0	60-0
B Twills	64-4	63-0	60-8	58-8
Liverpools	71-0	71-0	70-0	68-0
Cornsacks	63-0	63-0	62-8	60-8
Sugars	73-0	73-0	71-8	69-8

Jay Shree Textiles Ltd.

Only recently the Planning Committee on cotton stated that there was need for an increase in production in cotton goods by atleast 50 per cent in the next few years. Several cotton mills have already been floated but Jay Shree Textiles, the announcement is published elsewhere in this issue is started under influential auspices. It is stated that two mills will be started one each in Bihar and Bengal, the two deficit provinces.

The authorised capital is Rs. 5 crores but the issued capital is Rs. 51 lakhs all in ordinary shares of Rs. 10 each. 4,00,200 shares have already been taken up by the managing agents, the directors and their friends. Only 1,09,800 shares are offered to the public. The whole of this issue is underwritten. The Managing Agents, have agreed not to charge the company the allowance stated in the prospectus till the factory is installed and the company starts working.

ISSUED BY THE FINANCE DEPARTMENT, GOVERNMENT OF INDIA.

(Continued from page 713)

Government in 1944, was flirting with the idea, but it seems most unlikely that any British Government will ever revert to the outdated device of checking trade booms by means of high interest rates applied indiscriminately to prosperous and depressed branches of trade.

Cheap conditions continue to prevail in the money market and call money rates are quoting $\frac{1}{2}$ per cent in Calcutta and $\frac{1}{4}$ per cent in Bombay. There is no dearth of funds and even with the larger expenditure on account of the Puja festivities, deposits of banks have continued to increase and a moderate increase in advances has made no difference to the market. In spite of the easier conditions in the market, however, the Central Government was not able to get its requirements of treasury bills in full and response at the auctions held this week was rather poor. The drop in the application evidently has been due to the larger demand on account of the Provincial Governments, Madras asking for Rs. 50 lakhs, Assam Rs. $3\frac{1}{2}$ crores and Bengal Rs. 3 crores.

As treasury bills maturities have been on a rather small scale and as there is greater attraction in provincial treasuries, banks have not been very keen to take up Central Government bills. The decline in the discount rate last week even with the smaller amount of applications must have, therefore, been due to special bidding, presumably by the Imperial Bank. This week total applications amounted to only Rs. 1.85 crores against the offer of Rs. 2 crores. All the tenders which were at Rs. 99-14-6 were accepted in full and the average discount rate increased to 5 annas 4 pies per cent from 5 annas only last week. The offer has been maintained at Rs. 2 crores for next week.

Against the offer of Rs. 3.5 crores by the Assam Government applications received were as much as Rs. 6.3 crores and the average discount rate was 6 annas 10 pies per cent per annum. The Madras Government secured its requirements of Rs. 50 lakhs at 6 annas. The Bengal Government is asking for Rs. $3\frac{1}{2}$ crores of three months treasury bills and applications will be received up to November 1, 1945.

The returns of the Reserve Bank for the week ended October 19, show no important change in the issue department. Total notes issued were only slightly higher at Rs. 1,169.10 crores owing to the improvements in rupee coin by Rs. 19 lakhs to Rs. 17.42 crores. Notes in circulation, on the other hand, were slightly lower at Rs. 1,159.85 crores.

In the banking department, Central Government balances have improved further to Rs. 399.59 crores from Rs. 395.62 crores. With the jump in foreign balances by Rs. 525.63 crores one would have expected a bigger increase but as bank deposits with the Reserve Bank have jumped by nearly Rs. 16 crores to Rs. 112.83 crores, even with the larger interest in the gilt-edged market, it is to be presumed that large payments have been made by the Centre. It is interesting to note in this connection that it was during this week that the outstanding amount of 5 percent 1945-55 had to be repaid, on October 15. Notice of redemption on this date had been given earlier. One would have expected a bigger increase in bank deposits as it was reported that the conversion offer earlier this year was not successful and that there was still a large amount to be repaid on account of the taxfree loan.

As the return of the Imperial Bank this week does not show any important change, investments remaining unchanged at Rs. 152 crores, it would appear that the Govern-

ment effected considerable open market purchases of the taxfree loan and that the holdings were cancelled on the due date and re-invested in loans like 3 percent 1963-65 and 3 percent 1970-75.

Subscriptions to the recent re-issues should have been satisfactory as without any large subscriptions it would not be possible to repay the outstanding amount of 5 percent taxfree loan without expansion of currency. It is true that in the week ended October 12, there was an addition to the currency by Rs. 8 crores and a suitable cash position built up but that was only a fraction of the amount needed for the purpose.

Other Government accounts are slightly lower at Rs. 16.77 crores against Rs. 17.11 crores while Other Deposits have improved slightly to Rs. 12.69 crores from Rs. 12.14 crores.

The statement of the Imperial Bank for the same week shows a jump in deposits to Rs. 249.11 crores from Rs. 244.43 crores. Investments are not very much unchanged at Rs. 152.52 crores while advances have declined by Rs. 1 crore to Rs. 48.61 crores. There is a rise in cash balances to Rs. 58.08 crores from Rs. 52.29 crores.

The statement of scheduled banks for the week ended October 12, reveals an increase in Demand liabilities to Rs. 260.86 crores from Rs. 256.99 crores. Cash on hand is Rs. 1.23 crores higher at Rs. 34.74 crores but balances with the Reserve Bank are sharply lower at Rs. 98.51 crores against Rs. 112.61 crores. As advances show only a small rise to Rs. 250.93 crores from Rs. 249.81 crores

and bills discounted by Rs. 8 lakhs to Rs. 13.15 crores a large sum has been invested in Government securities, perhaps in anticipation of the surplus funds as a result of the redemption of the 5 percent taxfree loan referred to above. A sum of Rs. 21.2 crores is to be accounted for and it will not be wrong if Rs. 20 crores of this sum found its way into Government securities. Tap sales of 3 percent, 1963-65 are now effected at Rs. 99-8 and those of $2\frac{1}{2}$ percent, 1950 at Rs. 102-1.

(Continued from page 735).

stage. The position in regard to lend-lease silver also is not very clear and it is suggested that facilities will be given to the countries concerned for effecting the return of supplies conveniently.

It is satisfactory to note that both the Central and the Provincial Governments are more alert and the fears regarding the possibility of a repetition of famine conditions in Bengal and other provinces have been taken note of. Officials of the Central Government left for Burma to find out whether it would be possible to bring into this country Burmese rice at an early date. Siam also is reported to have surplus rice and the difficulty is only in regard to shipping space. If the Siamese surplus rice of 500,000 tons can be brought into this country and imports are also arranged from Burma, the shortage can be got over. The Government of India have adequate stocks of wheat and regular imports are coming in at intervals.

A TRIBUTE THAT SWAYS

"Policy" The world renowned insurance magazine of London, in a recent issue sums up Warden's achievements thus:—

"The Warden is obviously managed with considerable ability and energy, upon sound and constructive lines, calculated to combine financial strength with modern progress".

—POLICY

In ten years, the progress of a generation; in 1944, almost double the business transacted in 1933,—this is the proud record of Warden, whose amazing progress has attracted international attention.

"Policy's" tribute is borne out by the following figures;

New Business in 1944 exceeds Rs. 1,00,00,000
Assets ... Rs. 45,00,000

Behind these soaring figures lies the organisational strength of a network of organisers, field workers and agents who are co-sharers in the company's prosperity. To those who intend to take insurance as their calling, "Warden" offers a career full of prospects.

Chairman:—Sir Chinubhai Madhowlal, Bart.

Managing Director:—S. H. Thaker.

$\frac{1}{2}$ YEARLY DIVIDENDS —delivered to your door.

Over Rs. 112 Crores were invested in less than
eleven months in the First 3% Victory Loan
(1957) withdrawn during February 1945.

The 3% Second Victory
Loan (1959-61) is issued
on attractive terms similar
to the First, and is today's
soundest investment for
the big or small investor.
There is no limit to the
amount you are permitted
to invest.

The Loan is backed by
India's wealth, and Govern-
ment has guaranteed to
repay at par not earlier than
15th August 1959 and not
later than 15th August
1961. If between now and
then you wish to realise
your capital, the Loan is
readily salable in the market
at all times.

Interest at 3% per annum
less Income-Tax will be

paid half-yearly on 15th
August and 15th February
and the dividend warrant
will be sent to your ad-
dress. You can cash it just
like a cheque, and you have
the satisfaction of knowing
that your investment is
counteracting inflation, and
earning for you a good
return.

Stock Markets to-day and to-morrow:

SHARP RISE IN MCLEODS

Very steady conditions were noticeable in the stock market, both in Bombay and Calcutta and a fair amount of business was reported. The reopening after the holidays on the Calcutta Stock Exchange was not quite active as expected. There was no large accumulation of orders. There was actually a little profit-taking in mid-week. A definitely better feeling is noticeable in Friday's session and the strength of the jute section has toned up the markets generally. The small losses in mid-week have been completely regained.

The reopening on Monday this week in Calcutta was not quite active as unofficial transactions were reported during the holidays on a large scale with a slight rise in prices. Indian Irons improved to Rs. 41-10 from Rs. 40-12, Steel Corporations to Rs. 35-6 from Rs. 34-12, Burrakurs to Rs. 45-8 from Rs. 44-10 and South Karanpuras to Rs. 40-2 from Rs. 39-6. The losses of a few annas on Tuesday and Wednesday have been completely recovered on Friday and closing quotations in most cases are at the highest levels for some time. Howrahs in particular have been firm on expectations of a higher dividend at Rs. 97-2.

In the Bombay market both textiles and steels remained firm till Thursday especially as the bullion market registered further gains. In Friday's session, however, the reports regarding labour unrest in Jamshedpur and the reduction in ceiling prices for cloth and yarn led to selling and there was a heavy decline in prices.

In the weekly money market article in the main issue, as well as in a London communication, detailed information is given with regard to the various important measures which the Labour Chancellor of Exchequer, Dr. Dalton, has inaugurated in pursuance of his party's financial programme of cheaper and

cheaper money. I may briefly discuss the significance of these developments with reference to stock exchange securities.

British funds may be confidently expected to forge ahead; it follows that the immediate prospect for gilt-edged in India is extremely favourable. Government securities in the past few days have shown remarkable firmness and gained a few annas in price. There is scope for further substantial rise. Directly reflecting the rise in prices of Government securities, Imperial Bank shares must also show satisfactory gains. With the lesser yield on Government securities the average investor's expectations on equities must necessarily go down. This is another way of saying that the very factor of lower interest rates in London demands an upward adjustment of all high class shares both in Britain and India. Bank and Insurance shares, also Utilities, will be the first to benefit. This should further accelerate the upward tendency in jute shares.

Now that E. P. T. in Britain is to be reduced from next April we may expect a similar announcement in India. Where no relief in general terms is to be looked for any change in E. P. T. will have the effect of stressing the investment advantages of such companies as did not have a favourable standard profit. Cotton mills come under this category. Selective purchase of shares of cotton mills under good management and with an honest earnings record will prove remunerative.

It was expected that the proposals for nationalisation of the Calcutta Electric Supply would be favourably received by the market and that a rise in prices would be recorded. The terms of the provisional agreement given below, were completely anticipated in these columns in the issue of Investor's Supplement dated October 13. The market, seems to be of the feeling that in the absence of any definite particulars it is not possible to make a precise estimate of the purchase price payable by the Bengal Government as the later options are more favourable from the purchaser's point of view. With the long period of waiting, six years at least for repayment of capital dividends for the earliest date, and the difficulties in the method of computation of the purchase price the shares can be regarded as fully priced.

The following is the text of the 'communiqué' published by the Government of Bengal regarding the nationalisation of the Calcutta Electric Supply Corporation—
"The Calcutta Electric Supply Corporation supplies electricity under 14 separate licenses

(each license dealing with a separate area) granted on various dates from 1907 to 1935. All these licenses include options of purchase by the Provincial Government; the terms of purchase specified in the licenses in almost all cases being "fair market value" at the time of purchase plus 20 per cent extra. The earliest dates on which the options can now be exercised are October, 1948, for 5 areas October 1958 for 7 areas, February 1970 for 1 area, and November 1980 for 1 area. The areas to which these licenses apply lie on both sides of the River Hooghly and are served by 3 inter-connected generating stations. Of these generating stations, two, namely the Cossipore and the Southern, are part of the undertaking for the purpose of the purchase, but the third, Mulajore, is expressly excluded in the license from the option to purchase.

In accordance with their declared policy of nationalization of the electric supply industry in the province, Government have been considering for sometime past the acquisition of the Calcutta Electric Supply undertaking as a measure of public utility. Government are of the view that dismemberment of this undertaking by the exercise of the options as they fall due on each license at different dates spread over a long period of years would be very much against the public interest. This piecemeal form of acquisition involving dismemberment until the last license or option fell due would give rise to almost insuperable administrative and technical difficulties and would be likely to disturb the existing uniformity in rates of supply over the existing system. Great confusion to the disadvantage of the public would be inevitable, for the complete undertaking could not, in terms of the existing licenses, pass to Government before 1980.

PAYMENT OF DIVIDENDS

By Companies under the management of

ANDREW YULE & COMPANY, LTD.

All dividends proposed ON AND AFTER 1st JANUARY, 1946 by the undernoted Companies will be declared payable to registered shareholders or their mandatees only, and IT WILL NOT BE NECESSARY FOR SHAREHOLDERS TO APPLY FOR THEIR DIVIDENDS.

(Application should however CONTINUE to be made as hitherto for any dividends declared BEFORE THE END OF 1945.)

It is accordingly recommended that—

- (1) All persons holding shares on blank transfer should forthwith register their shares in their own names.
- (2) All shareholders desiring dividends to be paid to banks or other mandatees, should register mandates with the respective Companies forthwith, on Mandate forms which will be supplied on application to the Managing Agents.
- (3) Intimation of any change of address should be notified immediately to the Company.

Dated, the 18th October, 1945.

It was a simple affair. On a sheet of paper Wilberforce put down twelve clauses which in the course of parliamentary procedure laid the foundations for a great event. Slavery was abolished. In the unceasing efforts of man towards a better social equity, it was a big step ahead. Not one but millions of sheets of paper will still be needed before a perfect Bill of Human Rights is drawn up.

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, October 26.

Markets reopened after the long Puja holidays on Monday this week in quite a steady fashion and a fairly large amount of business was put through. As even during the holidays there had been a moderate rise in prices and as there were no particularly favourable developments in the four days under review, there is nothing of importance to be reported. The general undertone of markets, however, is steady. If investment support were more freely forthcoming the upward trend would be maintained.

The important developments in the week are the announcement of the terms of agreement between the Calcutta Electric Corporation and the Bengal Government for the acquisition of the former undertaking and the commencement of business in the ordinary shares of McLeod & Co. Coal shares opened rather steady but have been rather irregular in the last three days while Jute shares have remained quite firm on rumours of higher dividend payments. In the Engineering section there is nothing of importance while, among miscellaneous shares, Calcutta Electric actually came down to Rs. 43-8 on the announcement of the proposals for nationalisation. McLeod & Co., jumped to Rs. 340 from Rs. 265.

The gilt-edged securities section has been very firm with a larger amount of interest taken by the investing public. The continuance of easy money conditions and the large surplus funds with banks led to good buying of all types.

It is reported that the Reserve Bank has been able to sell a good parcel of 3 percent 1963-65 at Rs. 99-10. 3½ percent paper improved to Rs. 103-4 but towards the close was slightly easier at Rs. 103-1. Among terminable loans 3 percent Defence Bonds 1949-52 were Rs. 101-15, 3 percent 1946 Rs. 102-3, 3 percent 1963-65 Rs. 99-7 3 percent 1966-68 Rs. 98-10 and 3 percent 1970-75 Rs. 97-5. No business has been recorded in provincial loans. 5 percent 1945-55 loan was duly repaid on October 15.

Among bank shares, there was a jump in the quotation for Reserve Bank during the holidays to Rs. 153, heavy buying being reported in Bombay on rumours of the possibility of a higher dividend. After being done up to Rs. 157 the quotation is now around Rs. 148. Calcutta National were Rs. 16. United Commercial Bank improved to Rs. 31 premium on reports of an increase in the activities of the bank while Imperial Bank fully paid very steady at Rs. 2,288 and Contributions at Rs. 571.

There is a slight revival of interest in the Cotton section though no appreciable change in the quotations is recorded. Bengal Nagpur quoted Rs. 47-6, Kesoram Rs. 18-14 and New Victoria Rs. 8. Calcutta Textiles were Rs. 12-11 and Elgins Rs. 67-2. There was special buying of Basanti and the quotation suddenly improved to Rs. 14-8.

In the coal section, South Karanpura were rather active early in the week being done up to Rs. 46. On profit-taking at the higher levels there has been a setback to Rs. 39-15. Burraur also opened at Rs. 45-8 but slipped back to Rs. 44-10. There was no change in Bengal at Rs. 755 as also Equitable at Rs. 73 ex-dividend. Bokaro & Ramgur were very firm at Rs. 56 and Amalgamated at Rs. 55/8 Bhalgora improved to Rs. 26-2 to quote low at Rs. 25/12. New Beerbhoom were unchanged at Rs. 47-12, Raneegeunge at Rs. 64-8 and Western Bengal at Rs. 15-2.

There was nothing of importance in the Jute section till Wednesday this week but on Thursday afternoon there were rumours of the possibility of higher dividend payments by Anglo-India and Howrah. There is no confirmation of these rumours so far. Anglo-India have improved steadily in the past four days from Rs. 545 to Rs. 562-8. Howrah were steady at Rs. 96. There was a setback to Rs. 95-10. On fresh buying there has been a recovery to Rs. 96-7 at the time of writing. Chitavalah were active at Rs. 41. Kinnison at Rs. 500, Empire at Rs. 63-8 and Champdany at Rs. 285. India were unchanged at Rs. 777, Nuddea at Rs. 143-12 and National at Rs. 35-12. Reliance were steady at Rs. 86-12.

In the Engineering section there was good enquiry earlier in the week for Indian Irons. The quotation was done up to Rs. 41-10, Steel Corporation improved to Rs. 35-6 from Rs. 34-12 before the holidays. But the improvement has not been held, Indian Iron are again now around Rs. 41-5 and Steel Corporation Rs. 35-1. Burn and Co., quoted Rs. 436. Jessop and Co., were steady at Rs. 27-7. Kumardhubi Engr. were Rs. 11-3 and National Iron and Steel Rs. 11-8. Texmaco were well held at Rs. 16-5.

There is nothing of interest in the Sugar section, Carew and Co., quoting Rs. 31-13, Champarun Rs. 42-1, Ramnugger Cane and Sugar Rs. 22-4, Samastipur Rs. 21-12, Belund Rs. 15-12. There are reports that the working for the year ended September, 1945 has been quite satisfactory and a dividend might be paid.

In the Miscellaneous section, Burma shares were quiet. B. B. Petrol were marked lower at Rs. 5-7 and Burma Corp. at Rs. 6-8. Indian Copper were steadier at Rs. 3-6. There was good buying of Assam Bengal Cement ordy. and there is a rise of three points to Rs. 23-4. Calcutta Electric came down to Rs. 43-8 from Rs. 45-2 as the market felt that there might be delay in the acquisition of the Calcutta Electric Supply Corporation by the Bengal Government and that the purchase price was not definitely ascertainable. The close is a shade better at Rs. 43-12. Indian Aluminium were steady at Rs. 250 while there was a sensational rise in McLeod ordy. to Rs. 347 from Rs. 265. There are buyers even at the higher levels and only a small block of shares is reported to have changed hands. Among Paper shares, Titagur were steady at Rs. 33 and Orient at Rs. 14-14.

THE ARRAH-SASARAM LIGHT RAILWAY CO., LTD.

NOTICE is hereby given that the Seventy-Fifth Ordinary General Meeting of the abovenamed Company will be held at the Registered Office, No. 12, Mission Row, Calcutta, on Tuesday, the 13th November 1945, at 11-5 a.m., for the purpose of receiving and considering the Directors' Report, the Statement of Accounts and Balance Sheet for the half-year ended 31st March, 1945, and to transact any other ordinary business of the Company.

The Share Transfer Books of the Company will be closed from the 6th to the 13th November, 1945, both days inclusive.

COMPANY MEETING

THE NATIONAL INSULATED CABLE CO., OF INDIA LTD.

CONTRIBUTION TO WAR EFFORT

SIR BIJOY PRASAD ON FUTURE PROSPECTS

At the Third Annual General Meeting of the Shareholders of the National Insulated Cable Co. of India, Ltd., held on the 27th September, 1945, the Chairman, the Hon'ble Sir B. P. Singh Roy, Kt., K.C.I.E., said in the course of his speech:

"I wish to take this opportunity of this meeting of all Shareholders to make a few further observations.

PROFIT AND LOSS ACCOUNT

Although the Company has made a profit of Rs. 9,08,008-5-10 during the year under review which, I think you will agree, is a gratifying figure, nearly 40% of this, viz., Rs. 3,75,000 has to be set apart for taxation. Out of the balance, the Directors have provided full statutory depreciation as also a general reserve of Rs. 1,25,000. These measures are calculated to strengthen the position and finances of the Company in the post-war period when it will probably be subjected to severe world competition. After making all these allowances for tax, depreciation and reserve, we are left with a balance of Rs. 1,65,911-1-5 which your Directors have decided to distribute to the Shareholders leaving Rs. 10,911-1-5 to be carried forward.

WAR SITUATION WHEN COMPANY STARTED

You will recall that at the time of incorporation of the Company in 1942, the war situation both in the East and in the West was at its worst for us. The Japanese had treacherously attacked the British and American possessions in the Far-East and were making rapid spectacular advances in Burma. Even India, to some extent, was threatened and the eastern ports inclusive of the Calcutta Industrial area had assumed strategic importance.

WARTIME LOCATION AND CONTRIBUTION TO WAR EFFORT

In these circumstances, the Government of India advised us to locate our Works somewhere in Central India. From the business point of view, any location of the Factory except Calcutta was disadvantageous to us but then we had to agree to Government's proposal in the best interests of war effort. The factory was, therefore, established at Mehgaon (C.P.) in the Jubbulpore District, and was operating there till 31st March, 1945. Its entire capacity on full three-shift working has been utilised by Government for production of Copper Wires against Defence Department requirements. It will be a great satisfaction to you to learn that thousands of tons of Copper Wire, manufactured by your Company and supplied to Government, have been used in many parts of India as well as outside to help communications, during the period of stress.

PRESENT LOCATION OF FACTORY

The location of our Factory at Mehgaon gave rise to several handicaps and difficulties not the least amidst which was the malarial nature of the place and transport conditions, especially under stress of war. The Directors had, therefore, to look upon this as only a wartime expediency and they actively pursued the feasibility of retransferring the Works to a more convenient and economical location. Fortunately the Managing Agents were able to arrange an ideal site adjacent to other Companies under their Management offering several facilities in the Calcutta Industrial Area, viz., Maulajore via Shannagar, B. & A. Rly. which is only about 20 miles from Calcutta. As the war situation had considerably improved, the Government of India had no difficulty in approving this location and permitting us to commence our construction activities. They were also pleased to agree to a closure of our Mehgaon Factory.

Realising firstly our Industry is not merely for the duration of the war and secondly none but the most modern plant, equipment and personnel will have a chance in the post-war period in the face of world-wide competition, the Directors spared no pains to design your Mulajore Factory on the most modern lines and expert technical advice available.

GOVERNMENT RECOGNITION AND ASSISTANCE

The Government of India have always recognised the important part this Company has played in establishing a capacity for a strategic material, and they have encouragingly given all assistance to the Company in obtaining its plant requirements, in construction of the Factory and recruiting Personnel. I wish to convey on your behalf our best thanks to the Government of India, especially in the Department of Supply, Directorate General of Munitions Production, Calcutta.

PRESENT ACTIVITIES

The construction of your Mulajore Factory and installation of all Plant and Equipment are nearing completion. As each section was completed it was put into commercial production, with the result that we are now meeting all demands of Electrolytic Hard drawn Bare, Copper Wire, Solid or Stranded, in any size. We have established an efficient Testing Department to ensure that our products are of the best quality and conform to British Standard or Indian Stores Department Specifications. We expect to be able to put other sections in commission by the end of the year, and we will then have a complete range of Rubber or Varnished Cambric Insulated Cables and Cotton Covered Wires of any sizes and types in demand by the Electrical Industry.

One of the criticisms very often levelled against Indian indigenous product is that in an effort to make it cheap its quality is sacrificed, compared to a foreign manufacture. I wish to assure you on this occasion that your Directors and the Managing Agents are conducting the affairs of the Company in such a manner that these criticisms can never apply to this Company. As a matter of fact, they wish to make one and all of the Shareholders to feel proud that this Company's products are of same quality, if not superior, to any imported material.

FUTURE OUTLOOK

The transition from war to post-war conditions naturally brings in its wake a more or less thorough revision of conditions under which an Industry has to work. While the blessings brought about by peace are unquestioned, the Industries, especially those established during the War in India, have to pass through a critical period. Only those that are strong and pursue a correct policy will survive. Even so, no Industry can be assured of a prosperous existence unless it is given adequate support of the Government of the country. The need for emphasis on this aspect has now been felt by the Government of India more than at any time past in the history of Indian Industry. We are now very fortunate to have a Viceroy who believes in improving standards of living in India through rapid industrialization in the country, and he is out to use his best offices in promoting these. Moreover the country has made such sacrifices and contributions to the Allied War Effort and established such key Industries that no force, whether in India or outside, can now retard its progress.

In the foregoing paragraphs I have sounded a note of warning as well as of hope about our future. We earnestly hope that in fighting the international trade competition or in settling the post-war currency problem the Government of India will keep the interest of Indian Industries and of India's economic advancement in the forefront and will, I am sure, extend all possible help to the development of optimism is produced firstly by our confidence to manufacture and supply goods equal, if not superior, to what Indian Consumers have so far been accustomed to, and secondly the rapid extension of the generation, distribution and use of Electricity in every Province."

The speech was concluded with the following words:

"Gentlemen, before concluding, I wish you to join me any my co-Directors in conveying our best thanks to the Managing Agents, Messrs. Associated Industrial Development Co., Ltd., for the energetic and business-like way in which they have managed the affairs of your Company. You will note from the Report and Accounts that in order to build up financial strength of the Company, they have voluntarily relinquished a sum of Rs. 1,46,543-4-5 to which they were entitled as commission during the year under review. This is the third time in succession they have relinquished the commission due to them from the Company. Our thanks are also due to the Executive, Staff and Work people of the Company for their strenuous and loyal services to the concern."

National Insulated Cables

With the generous assistance of the Government the National Insulated Cables Company Limited has played an important part in the country's war effort. The Company made a profit of Rs. 9,08,008 in the last accounting period. After providing for taxation and depreciation, the surplus has been utilised to strengthen the position of the Company.

As a security measure the company's factory was first located in the Central Provinces. But as the emergency is over it has been considered advisable to shift the factory to the Calcutta area and the construction of the new factory is going on satisfactorily without any great interruption to the activities of the Company.

Electric Construction and Equipment.

Electric Construction and Equipment Company Limited has been started to take over the business from the vendors who are the Managing Agents carried on by them as the lessees of the workshop of Messrs. Siemens (India) Ltd. The promoters are to be allotted Rs. 10.01 lakhs in preference and Ordinary shares. Shares for Rs. 25 lakhs are issued in addition. Rs. 15 lakhs in preference shares of Rs. 100 each and Rs. 10 lakhs in ordinary shares of Rs. 10 each. As the annual profit is expected to be about Rs. 2 lakhs and it is expected that the earnings capacity will increase with the installation of new machinery, which is expected to be received before the end of the year, dividends can be expected to be paid at an early date.

Div. % Pref.	3½	3½	3½
Div. % 'A' Pref.	3½	3½	3½

(Half-yearly General Meeting on 6-11-1945 at 12 noon. Books closed from 29th October to 6th November, 1945).

Audited Accounts of the Company for the half-year ended 30th June, 1945:—

The profit for the half-year, after providing for Debenture Interest, Depreciation and Taxation, was Rs. 2,81,253-9; To which is added the balance brought forward of Rs. 1,96,262-13-11; Making a total of Rs. 4,77,516-6-11.

Out of this the Directors have transferred Rs. 50,000 to General Reserve, leaving a balance of Rs. 4,27,516-6-11 available for distribution, which they recommend be dealt with as follows:—

Dividend on Cumulative Preference Shares at 7 per cent per annum, free of Income Tax Rs. 7,000; Dividend on "A" Cumulative Preference Shares at 7 per cent per annum, free of Income Tax Rs. 14,000; Dividend on Ordinary Shares at 25 per cent per annum, free of Income Tax Rs. 1,12,500; Bonus of Rs. 2-8 per share on Ordinary Shares, free of Income Tax Rs. 90,000; and Balance carried forward Rs. 2,04,016-6-11.

During the half-year, the extension of one of the paper-making machines was completed and whilst this work resulted in a drop in production, it is anticipated that the improvement effected will prove a source of profit in future years.

Many difficulties were again experienced, notably the scarcity of skilled staff, caused by illness and military service, and absenteeism on the part of the labour. Moreover, it was necessary in this period to lay off a number of Boilers for repair. As a result output was adversely affected owing to shortage of steam.

These matters have been engaging the very close attention and the Directors have every hope that the staff problems will be very considerably eased in the near future. Every endeavour is also being made to hasten the delivery of plant to replace worn units which have been overworked during the War.

A large portion of the Mill's output was again supplied to the Central and Provincial Governments and State Railways.

Managing Agents:—Burn & Co.

Authorised Capital—Rs. 18,00,000. Issued and Subscribed—Rs. 15,00,000 in 36,000 Ord. shares of Rs. 25 each, 4,000 Cum. Pref. shares of Rs. 50 each, and 4,000, 7 per cent 'A' Cum. Pref. shares of Rs. 100 each, all fully paid up.

*Stores Depreciation Fund.
(Annual General Meeting on 7-11-1945 at 4 p.m. at Bangalore. Books closed from 18th October to 3rd November, 1945. Dividend payable on and after 12th November, 1945 to registered shareholders as on 17th October, 1945).

Audited Accounts for the Year ended 30th June 1945:—

The Accounts show a net profit of Rs. 7,35,933-13-10 after setting apart the sums needed for Depreciation and provision for Income and Super Taxes. If to this is added the balance of Rs. 88,451-9-11 brought forward from the last year's Profit and Loss Account, the total comes to Rs. 8,24,385-7-9. The Directors propose to dispose of this amount as follows:

1. To declare a Dividend of 10 per cent. together with a Bonus of 10 per cent. free of Income-tax Rs. 4,35,856; 2. To Reserve Fund Rs. 2,00,000; 3. To Stores Depreciation Fund Rs. 1,00,000; 4. To Carry Forward Rs. 88,529; Total Rs. 8,24,385.

The Factory commenced crushing of cane on 8th September 1944 and continued milling till the 20th May, 1945 when it was closed down for the annual overhaul.

The quantity of cane crushed during the year was 1,80,696 tons and that of sugar produced was 17,322 tons.

The Distillery at Mandya continued to work steadily and satisfactorily.

Secretary: D. C. Subbarayappa.

Authorised Capital—Rs. 25,00,000. Issued and Subscribed—Rs. 21,79,280 in 2,17,928 shares of Rs. 10 each, fully paid up.

(Annual General Meeting on 26-10-1945 at 11 a.m. Books closed from 19th to 26th October, 1945).

Audited Accounts for the Year ended 31st March, 1945:—

After providing for taxation, depreciation and all other charges and placing Rs. 2,25,000 to Plant Replacement Reserve the profit on the year's trading amounted to Rs. 3,12,548-10; To which has to be added the balance carried forward from last year of Rs. 18,823-2-6; Making a distributable balance at credit of Profit and Loss A/c. of Rs. 3,31,371-12-6.

The Directors recommend that this sum be disposed of as follows:—

Payment of Interest at 7% per annum on Preference Shares for the year ended 31st March, 1945, amounting to Rs. 1,37,655; Payment of a Dividend of 17½% on the Ordinary Shares for the year ended 31st March, 1945, amounting to Rs. 1,70,559-6; Balance to be carried forward to next year's account Rs. 23,157-6-6.

During the next few years it is essential that considerable expenditure be incurred in the installation of modern and up-to-date Plant. A considerable portion of the existing Plant is now due for replacement and the Directors have considered it prudent to conserve the Company's finances and set aside the sum of Rs. 2,25,000 to a Plant Replacement Reserve in the first instance. The new Plant, when installed, will increase output and reduce costs of production.

With improved conditions in the supply of Raw Materials from India and Overseas, the output of the works showed a satisfactory increase, the results of which are reflected in the accounts. The prospects for the current year may be regarded as favourable. Now that the War is over it can be stated, and Shareholders may be interested to know, that, apart from the normal business of Wagon Manufacture, the Company's contribution to the War effort included the construction of Armoured Fighting Vehicles, the manufacture of Shell Cases and other Military equipment.

The general behaviour of Labour was on the whole satisfactory.

(Half-yearly General Meeting on 7-11-1945 at 3 p.m. Books closed from 1st November to 7th November, 1945).

Audited Accounts for the half-year ended 30th June, 1945:—

The Profit, after deduction of all working charges and commissions, amounts to Rs. 3,51,986-6-1; Credit balance brought forward from the previous half-year Rs. 4,930-3-9; Total Rs. 3,56,916-9-10; After providing for—Reserve for Taxation Rs. 2,50,000; Depreciation Rs. 35,000; Capital Redemption Reserve Fund Rs. 10,000; There remains a balance of Rs. 61,916-9-10; which the directors recommend should be dealt with as follows:—

In payment of a dividend for the half-year on 1,200 Preference Shares at the rate of 6 per cent. per annum, without any deduction in respect of Income Tax paid by the Company Rs. 3,600; In payment of a dividend for the half-year on the Ordinary Shares at the rate of 17½ per cent. per annum, without any deduction in respect of Income Tax paid by the Company Rs. 52,500; and To be carried forward Rs. 5,816-9-10.

The raisings showed an improvement over those of the previous half-year but were rather lower than those of the corresponding period of 1944. The labour situation continued to be unsatisfactory.

(Annual General Meeting held on 23-10-1945 at Bombay. Dividend payable on or after 6th November to registered shareholders as on 5th October, 1945).

Audited Accounts for the Year ended 30th June 1945:—

The Profit for the year, after making a provision of Rs. 1,20,000 for depreciation and of Rs. 16,80,000 for taxation, amounts to Rs. 5,24,855. Adding thereto the balance brought forward from the accounts of the previous year Rs. 26,059; the total comes to Rs. 5,50,914.

Less—Amount paid as Ad-interim Dividends, free of income-tax, for the half year ended 31st December, 1944:—On Preference Shares @ Rs. 2-8 per share Rs. 25,000; On Ordinary Shares @ Rs. 5 per share Rs. 50,000; Reserve Fund Rs. 3,65,000; Leaving a balance of Rs. 1,10,914.

The Directors recommend the appropriation of this sum as follows:—

Payment of final Dividends, free of income-tax, for the year ended 30th June 1945:—

On Preference Shares @ Rs. 2-8 per share Rs. 25,000; On Ordinary Shares @ Rs. 8 per share, Rs. 80,000; and carried forward Rs. 5,914.

The profit for the year is a little less than that of the previous year, roughly 9 per cent, as a result of successive reductions which were made in the ceiling prices of cloths and yarns during the year. The mill's productive activity was steady throughout the year, except for the loss of 20 working days through intermittent closure of mills in Ahmedabad due to acute shortage of coal.

The mill has been generating its own motive power by means of a Turbo Alternator set which was installed in 1928. This plant has been in use for 18 years now, including 6 years of continuous double shift. Due to the heavy wear and tear to which the plant was subjected during the last few years, it now requires, apart from ordinary repairs and renewals, the replacement of some of its major components. Rather than spend large amounts on repairs and replacements, entailing a complete shut down of the mills for 2 to 3 weeks. The Directors have decided to change over from mill Turbine to electric power to be supplied by the Ahmedabad Electricity Co., Ltd., as that plan was considered the best from the view point of efficiency and economy in power cost. Orders for 2 Transformers of 1,000 K. W. each with the necessary Switchgear & Static Condensers etc., have been placed. The estimated cost of the total equipment for the change-over is about Rs. 1,50,000.

The Company's buildings, machinery and stocks have been insured for Rs. 1,32,14,000. Profits and Standing Charges have been insured for a sum of Rs. 25,00,000 per annum.

the indemnity being payable for 24 months. Insurance has also been taken under the War Risk (Factories) Insurance Ordinance for a sum of Rs. 50,51,500. Under the War Risk (Goods) Insurance Ordinance all insurable stocks were kept fully covered throughout the year.

(Annual General Meeting held on 22-10-1945 at Bombay. Dividend payable on or after 6th November, 1945 to registered shareholders as on 5th October, 1945).

Audited Accounts for the Year ended 30th June 1945:—

The Profit for the year, after making a provision of Rs. 4,50,000 for depreciation and of Rs. 60,75,000 for taxation, amounts to Rs. 15,39,666. Adding thereto the balance brought forward from the accounts of the previous year Rs. 32,682; the total comes to Rs. 15,72,348.

Less—Amount paid as Ad-interim Dividends, free of Income-Tax, for the half-year ended 31st December, 1944:—On Preference Shares @ Rs. 12-8 per share Rs. 1,25,000; On Ordinary Shares @ Rs. 6 per share Rs. 2,81,250; Reserve Fund Rs. 6,00,000; Leaving a balance of Rs. 5,66,098.

The Directors recommend the appropriation of this sum as follows:—

Payment of final Dividends, free of Income-Tax, for the year ended 30th June, 1945:—On Preference Shares @ Rs. 12-8 per share Rs. 1,25,000; On Ordinary Shares @ Rs. 9 per share Rs. 4,21,875; and To be carried forward Rs. 19,223.

Although the production of cloths and yarns was higher during the year, the figure of profit shows a considerable decline due mainly to reduction in ceiling prices from time to time without any corresponding decrease in cost of production.

To establish closer contact between the employees and the Management, the Mills have engaged the services of a Labour Officer to handle all labour matters which will benefit both the parties concerned.

The Directors have sanctioned the construction of a building at a cost of about Rs. 10,000 for a Canteen for supply of tea and light refreshments to the employees. The Canteen will be run under the supervision of the Mill Management.

The properties of the Company at Nagpur and other places and stocks have been insured against fire and riot risks for Rs. 3,71,44,174. Profits and Standing Charges have been insured against fire and riot risks for Rs. 85,00,000 per annum, indemnity being payable for 24 months. Insurance has also been taken under the War Risks (Factories) Insurance Ordinance for Rs. 1,53,69,200. Under the War Risks (Goods) Insurance Ordinance, all insurable stocks were kept fully covered throughout the year.

Mg. Agents:—M/s. Tata Sons, Ltd.

(Half-yearly General Meeting on 2-11-1945 at 11-15 a.m. Books closed from 24th October to 2nd November, 1945).

*Includes Rs. 85,000 transferred from Taxation Reserves Account.

Audited Accounts for the half-year ended 30th June, 1945:—

After making sundry adjustments, the results for the half-year show a profit of Rs. 2,85,837-10-4. After bringing forward the balance from the last account and providing for Insurance Fund, Managing Agents' Commission and Taxation, there is a balance at the credit of the Profit and Loss Account of Rs. 1,69,518-10-7. From this the Directors recommend payment as follows:—

Dividends on Preference shares at Rs. 3-8 per share, Rs. 24,500; and on Ordinary shares at Rs. 8 per share, Rs. 1,12,000; thus absorbing Rs. 1,36,500 and leaving Rs. 53,018-10-7 to be carried forward.

The weekly hours of working under the Indian Jute Mills Association Working Time Agreement remained unchanged throughout the half-year at 54 hours per week with all looms operating. Out of a total of 1,374 working hours for the half-year the mill only worked 314 hours, however, and remained closed during the remaining 1,060 hours.

Credit in full has been taken in these accounts for sums recoverable from the Pool on account of Khoraki paid and loss incurred on supplies of subsidised foodstuffs to the labour during the closed periods. In view of the position of the Pool Fund however, the Credit taken in the accounts for loom hour payments has been limited to 50% of the full amount due under this head from 1st July, 1944 to 30th June, 1945, less the amount taken into last half-year's account. Such loom hours as are paid for in full by the Industrial Pool will be cancelled under the Working Time Agreement. But apart from loom hours lost since the introduction of the Industrial Pool, the Company is still entitled to make up a total of 599 hours mentioned in our last report.

HINDUSTAN COMMERCIAL BANK

The Karachi branch of the Hindustan Commercial Bank Ltd., was opened on the 20th October, 1945, before a distinguished gathering of leading businessmen. Good business is reported to have been done on the opening day. The opening of this branch will considerably help the development of Bank's business particularly in the Punjab where the Bank has already a number of branches and some more will be opened in the near future.

PAYMENT OF DIVIDENDS

By

CONCORD OF INDIA INSURANCE COMPANY LIMITED.

All dividends proposed ON AND AFTER 1st JANUARY, 1946 will be declared payable to registered shareholders or their mandatees only and it will not be necessary for shareholders to apply for their dividends.

(Application should however continue to be made as hitherto for any dividends declared before the end of 1945).

It is accordingly recommended that

- (1) All persons holding shares on blank transfer should register their shares in their name forthwith.
- (2) All shareholders desiring dividends to be paid to banks or other mandatees, should register mandates with the Company forthwith, on Mandate forms which will be supplied on application to the Company.
- (3) Intimation of any change of address should be notified forthwith to the Company.

CONCORD OF INDIA INSURANCE COMPANY, LIMITED.

(Continued from page 741)

"Government therefore have been negotiating with the Calcutta Electric Supply Corporation to reach an agreement under which their complete undertaking will pass to Government at the earliest practicable date on a purchase price the basis of which is clearly defined in the agreement. These negotiations have now been satisfactorily concluded. The terms agreed upon are as follows:—

- (1) The options to purchase on the various dates specified in the fourteen licenses are to be withdrawn and their place will be taken by a single option to purchase the whole undertaking (i.e., the enterprises covered by the whole 14 licenses) on the 1st January 1950— or alternatively at intervals thereafter of twenty years.
- (2) These options to be in respect of the purchase of the whole undertaking, including the Mulajore Generating Station.
- (3) The Calcutta Electric Supply Corporation will forthwith apply to Government for a consolidated license to replace existing licenses, to give effect to the above.
- (4) The purchase price upon the exercise of the option of 1950 to be in accordance with section 7 (1) of the Electricity Act, 1910 (reproduced on sheet attached), the percentage addition being twenty (except as provided below): together with a sum equivalent to one year's gross revenue (calculated at the average of the three years—1947-49) received by the Corporation for supply of energy and rent of meters and other apparatus on consumers' premises, in the area covered by the Bally-Uttarpara, Howrah, Serampore, Lilloah, Rishra-Konnagar and Kotrung, Badyabati-Champdany and Bhadranswar, Panihati-Khardah and Tita garh, Bhatpara-Nowpara-Garulia and North Barrackpore and Budge Budge-Bauria Licenses in compensation for the surrender of those licenses in 1950: Provided that, in respect of new plant and assets created and brought into operation by the Calcutta Electric Supply Corporation after 1st January 1947, the percentage addition shall be 15 per cent. only.

- (5) Upon the exercise of the option to purchase in 1947 or subsequently, the purchase price to be not as described in para 4 above but to be the original cost of all lands, buildings, works, materials and plant, less depreciation at agreed specified rates.
- (6) Contracts for new plant, etc., entered into by the Calcutta Electric Supply Corporation but not completed at the time of purchase to be binding on the purchaser, but during the "notice period" (i.e., the two years' prior to 1st January 1950) any single item involving an outlay of more than £10,000 to be approved by Government.
- (7) Two years' notice of decision by Government to purchase to be given to the Calcutta Electric Supply Corporation.
- (8) In the event of the option of 1950 not being exercised, the Provincial Government may at any time thereafter appoint a committee constituted according to the law governing the control of rates of supply electrical undertakings in India as may be in force at the time, to examine the rates of sup-

ply of the licensee with reference to principles laid down in such enactment; and if the Provincial Government approves the recommendations (or any of them) made by such a committee, they shall be binding on the licensee. No such committee shall be appointed within five years of the acceptance by the licensee of the recommendations of an earlier committee.

These terms are now being embodied in an application by the Calcutta Electric Supply Corporation for a new consolidated license replacing the existing 14 licenses. The application will be published in the prescribed manner and objections, if any, received thereto will be considered by Government before the new consolidated license is granted. The terms agreed upon are in that sense provisional, but Government believe that they represent satisfactory progress towards the solution of a very complicated problem of great public concern.

"Apart from the agreement as to the terms of a new consolidated license, Government are glad to announce that they have been able, in the recent negotiations, to arrive at an agreement with the Corporation on the raising by the Corporation of additional capital hereafter; and also on the training of Indians for the superior posts in the Corporation and the future of the existing employees of the Corporation, as follows:—

"No future issue of capital whether in the form of shares or debentures to be made in England unless the prospectus is published in India and in England, applications invited in both countries and allotments made pro rata according to applications received: Provided that the Corporation may reserve such amount of any contemplated issue of capital not exceeding 25 per cent. as the Corporation may decide, for offer in the first place exclusively to the stock-holders of the Corporation in such form as the Directors may decide.

Government to offer to take over all employees in the Calcutta Electric Supply Corporation's service at the time of purchase. Provided that any change in the conditions of service during the notice period to be made after consultation with Government.

The Calcutta Electric Supply Corporation to declare a policy for promoting Indianization and to submit a scheme before the grant of the license of training apprentices designed to fit them to fill Officer posts.

With regard to these negotiations Government desire to record their appreciation of the spirit of co-operation and good will with which their proposals and views have been met by the Managing Body of the Calcutta Electric Supply Corporation."

The important development of the week is the commencement of transactions in ordinary shares of McLeod & Company for the first time since it was constituted into a public limited company in March this year. For some time, there have been rumours that the public would be allowed to participate in the capital of McLeod & Company and that an announcement would be made in this connection. These reports, however, were not correct as the sale of McLeod's ordinary shares is only on behalf of individual shareholders of the company and there is no issue of shares to the public as was the case with Indian Aluminium some months back.

McLeod & Co. started business as a private firm in 1887. The business was later trans-

ferred to a private limited company in 1936 which was again converted into a public limited company in March this year. As our readers are aware this well-known managing agency house, has under its administration several jute mills, tea companies, light railways and an engineering company and possesses also valuable agencies' including insurance and engineering.

The authorised capital is Rs. 80 lakhs. The issued and subscribed capital at the end of December 1944 was Rs. 50 lakhs; Rs. 10 lakhs in 5 percent cumulative first preference shares of 100 each; Rs. 20 lakhs in ordinary shares of Rs. 100 each; Rs. 15 lakhs in 5 percent cumulative second preference shares of Rs. 100 each; and Rs. 5 lakhs in 50,000 deferred ordinary shares of Rs. 10 each all fully paid. This is the capital as a result of the reconstruction during the year, 20,000 preferred ordinary shares of Rs. 100 each having been converted into 15,000 5 percent cumulative second preference shares and 50,000 deferred ordinary shares of Rs. 10 each. The management and ordinary shares were consolidated into 20,000 ordinary shares. After the close of accounts for 1944, bonus shares have been issued to the shareholders as fully paid up free, 5000 ordinary shares of Rs. 100 each being newly created by the capitalisation of reserves. Another Rs. 5 lakhs ordinary shares of Rs. 100 each were issued to the shareholders at a premium of Rs. 50 per share and Rs. 5 lakhs 5 percent second preference shares of Rs. 100 each at a premium of Rs. 20 per share, thus bringing the issued capital to Rs. 65 lakhs.

As it is felt that even on the increased capital it will be possible to pay an ordinary dividend of 17½ percent and above, there was naturally great activity in the ordinary shares and the quotation has jumped by nearly Rs. 100 in three days. It is stated that a prominent firm of brokers was able to get a lot at Rs. 210 and that this block was soon sold out. Actually in the market transactions were reported at Rs. 265 and on Friday the quotation is around Rs. 345.

The issue of shares of established companies has always found favour with the investing public and as has been said above the outstanding instance of this year is provided by Indian Aluminium. The offer of Rs. 40 lakhs ordinary shares and Rs. 20 lakhs preference shares at par was heavily oversubscribed and only a small allotment could be given to individual applicants. The ordinary shares of Rs. 100 each are now quoting Rs. 250 after being done up to Rs. 340.

bilities Rs. 55.45 lakhs. On the assets side goodwill of Rs. 20 lakhs has been depreciated by Rs. 10 lakhs. Stocks were Rs. 4.79 lakhs and debts, advances and deposits Rs. 48.33 lakhs. Investments at Rs. 52.14 lakhs had a market value considerably in excess of the book value. With the reduced liability under E.P.T. and the possibility of a further increase in earnings, there is no reason to believe that the dividend distribution on ordinary shares will be adversely affected by the new issues during the year. The increased ordinary capital ranking for dividend in 1945 now is Rs. 30 lakhs against Rs. 20 lakhs and second preference capital Rs. 20 lakhs against Rs. 15 lakhs.

One important development of the war period is the intensification of food production and other articles of necessity for the human population. With a growing population and with the need for an improvement in dietary standards the need for development in this direction cannot be over-emphasised. In this country old methods are still being pursued. If as a result of the new development more modern methods are brought into use the natural resources of the country could be more effectively utilised.

Sundarbans Agricultural Farm Limited, has been formed to carry on the business of fishery, poultry, farming, etc. The Company was incorporated in 1939 and the develop-

ment work was first undertaken in 1942. Since then quite a lot has been done, so that the initial obstacles may be said to have been already overcome. The Managing Agents have financed mostly the entire cost of development. The authorised capital is Rs. 5 lakhs in 45,000 ordinary shares of Rs. 10 each and 10,000 deferred shares of Rs. 5 each. The subscribed capital on June 30, 1945 was Rs. 39,050 and the paid-up capital Rs. 13,938. 17,215 ordinary shares are now being issued. Of this number the managing agents directors and their friends have taken up 11,000 ordinary shares and the balance is offered for public subscription.

Rs.34,00,000 a day invested!

Over Rs. 112 Crores were invested in less than eleven months in the First 3% Victory Loan (1957) withdrawn during February 1945.

The 3% Second Victory Loan (1959-61) offers you another opportunity to lend money to India on attractive terms. You serve your country, help to lower prices, and the 3% dividend per annum less Income-Tax is sent to your address twice a year.

There is NO LIMIT to the amount you are permitted to invest in the Loan, and the Government has guaranteed to repay at par not earlier than 15th August 1959 and not later than 15th August 1961. If in the meantime you want to realise your capital, the Loan is readily salable on the market. You can obtain refund of Income-Tax if you are not liable to it or liable at a lower rate.

To buy this Loan, apply to your Bankers, or to the Reserve Bank of India at Bombay, Calcutta, Madras, Delhi, Cawnpore or to the Branches of the Imperial Bank of India in other places or to any Government Treasury.

(From our Readers)

Well Done; Go Ahead:

As one who has been a reader of "INDIAN FINANCE" almost from its start let me congratulate you on its achievements and on its entering the nineteenth year. The success and popularity of the paper in the country speak for its quality.

I read your Gossip reviewing the life and work of the paper and was struck by the words "To have whetted the appetite for economic studies, to provide food therefor and inspire the quest for more, to improve the tone and stamina of economic thought in the country—" these are achievements entitling you to the readers' gratitude and praise.

But this is no time to rest on one's oars. The transition from war to peace, planning the future agriculture and industry of the country and other numerous problems demand careful examination and constructive suggestions. The task before you in the future is great. It is gratifying to see the ideal you have set before yourself "Indian Finance" will put forth vigorous efforts to secure an even brighter and more useful record on the future." There you are. Well done, go ahead.

K. R. KRIPALINI

Searching The Earth:

Searching the Earth is the first thing to be done before we think of industrialisation. Yet we are putting the cart before the horse. We hear so much talk on industrialisation. But the thought of searching our buried treasures has come only recently. No doubt we have had a Department for 100 years. But still we have not geologically surveyed even a part of the country.

The war created a demand for minerals. And Government spent large sums to work the mines with European experts—the Sulphur operations at Koh-i-sultan, the Mica Mines at Mahesh and the copper mines at Zawar. When the war has stopped these operations are also being closed.

Government's intentions about importing experts raise doubts in the minds of your readers. As one of your correspondents has rightly said: "It has taken 100 years for the non-Indian Officers to retire, if more men are imported at this stage history will repeat itself." Therefore for the mineral development of the country we must train Indian Geologists and Mining Engineers with minimum possible delay and not depend on experts from abroad.

S. K. SARKAR

Sale of British Ships:

Those who read the report of Mr. Master's speech to the South Indian Chamber of Commerce will be easily convinced about British intentions towards Indian shipping. Shipping has been and is her forte and she does everything to maintain it. And small wonder! She does everything against the growth of Indian shipping.

It is this understanding that has made your note on the subject so balanced and valuable. The position to-day is this. The British Government and the Government of India have not helped the establishment of a ship-building industry. And what is more during the war there was discrimination against Indian owned shipping Companies in the matter of requisitioning ships. But the most disheartening feature is that the British Govern-

ment would not even allow English Companies to sell ships to India. And we cannot buy ships from America. But any change in this policy can be expected only when a national Government is formed and not till then.

R. B. PATEL

Economics of Separation.

A Leaguer and a Nationalist Muslim have expressed their views on Pakistan. The questions to be considered by the Muslims are whether their relations with their co-religionists are so bad as to demand separation, whether Pakistan will take them to the promised land, whether the Pakistan areas are economically self sufficient and most important of all whether it is possible to have Pakistan with such far reaching changes as change of population etc. These questions should be answered by the people and not by the vociferous leaders.

It should not be open to the Leaguers

to say that Muslims want Pakistan whether it is advantageous or not. That would mean that the League can say it wants Pakistan even if majority of the Muslims want it or not.

A READER

Miracle Grass:

I read with great interest your Editorial note Miracle Grass appearing in Indian Finance dated October 27, 1945. If it could be grown all over India it will surely bring about an Agricultural Revolution in this country. Snakes, fleas, mosquitoes, ants all driven away by a plant is something astonishing!

As Dr. Morgan says it should be planted around every house in the tropics. In India the snake, the mosquito and the flea are some of the greatest menaces. And sooner we are rid of them the better.

But the authorities do not seem to have the same enthusiasm as you or some of your readers have. Here is a discovery which saves man from death and disease and provides excellent fodder for cattle. Is not growing this grass a matter which demands immediate action on the part of Government?

Fact Parade

Air Training Centre at Karachi :

The biggest air training centre in India is to be established at Karachi in a few months. The institution will be situated in the present airport at Drigh Road. Wing Commander Mookerjee of the Indian Air Force, who has gone to the United States, Canada, and England as one of the delegates of India's War Memorial delegation, will, on his return, submit a report to the Commander-in-Chief about this institution, based on the Empire Air Training Scheme undertaken by the Canadian Government.

Cure for Cattle Disease :

An English agriculturist believes that he has solved the problem of foot and mouth disease. He is Sir Albert Howard, who for 40 years has been carrying out research in India.

The outcome of this research is a new theory—that foot and mouth disease is rather a simple consequence of malnutrition than a virus disease. Cattle will be immune, says Sir Albert, if fed on a balanced diet produced from healthy soil.

During the test period of seven years, he claims that 20 pairs of oxen fed on a balanced diet produced from good soil, in which no artificial fertilisers had been used, were allowed to mingle freely with cattle infected with disease. At the end of the check period no diseases, either foot and mouth or any other, had occurred among the selected animals.

Increasing Potato Output in Bengal :

With a view to increasing the production of potatoes in Bengal during next season, the Government of Bengal have arranged the import of 110,000 mds. of seed potatoes from Simla, 60,000 mds. from Assam, 30,000 mds. from Darjeeling 10,000 mds. from the N-WFP and 10,000 mds. from Bihar for distribution to the cultivators.

Dairy Development in Mysore :

Mr. Zal R. Kothwala, Dairy Adviser to the Government of India, who was invited by the Government of Mysore to advise them on dairy matters, made an extensive tour of the State for about a fortnight.

National Institute of Sciences :

The Government of India have recognised the National Institute of Sciences as the premier scientific body in India and steps are being taken with authorities in England to give it a Royal Charter.

National Savings Scheme :

The Government of India have decided that the National Savings drive which was started primarily as a wartime measure shall now be made permanent. It is felt that a movement of this kind encouraging thrift amongst the masses will play a prominent part in advancing the condition of the people.

Col. C. K. Daly, National Savings Commissioner, Government of India is now touring all the provinces and States in India to discuss the best way of implementing this policy.

It is expected that a bill to give permanency to the scheme will be placed

before the Central Assembly sometime in 1946 by which time all arrangements will have been made.

Central Gov't August Accounts :

The Central Government's monthly accounts for August 1945 show that, excluding periodical adjustments and the transactions of Railways and Posts and Telegraphs, expenditure in the first five months of the financial year 1945-46 exceeded revenue by Rs. 86½ crores against Rs. 73 crores in the corresponding period of the previous year. Revenue was better by Rs. 24½ crores but Defence expenditure increased by about Rs. 32½ crores to Rs. 158½ crores and Civil expenditure by Rs. 5½ crores. Net receipts from Railways were better by Rs. 5 crores.

There has been an increase of about Rs. 137½ crores under Permanent Debt during this period.

Wages of Railway Employees :

The total amount of wages paid to railway employees rose from Rs. 32,41,37,030 in 1942-43 to Rs. 37,72,67,540 in 1943-44, according to the latest annual report on the working of Payment of Wages Act.

Madras Housing Scheme :

The Government, it is understood, will shortly constitute a committee of officials and non-officials to consider and frame proposals for providing housing accommodation to Government servants and industrial labourers employed in the city.

The Government have informed the City Corporation that they will give the necessary assistance in the matter of procuring building materials for the execution of its

scheme for the construction of middle class houses in the city.

Glass Bangle Industry in Madras :

The Government have approved the proposal of the Director of Industries and Commerce to organise a centre for training students in the manufacture of glass bangles and glass beads on improved lines. Twelve students will be trained at a time, nine in the glass bangle industry and three in the glass bead industry, for a period of one year and a stipend of Rs. 25 per mensem will be paid to each student for 11 months in the year. The Director has been permitted to incur an expenditure not exceeding Rs. 8,650 on non-recurring items and Rs. 5,000 on recurring items in connection with the above proposal.

American Exports to India :

In the final year of the war the United States for the first time displaced the United Kingdom as the principal export supplier for the Indian market.

Exclusive of Lend-Lease shipments, private American exports to India for 1944-45 aggregated to 168,000,000 dollars. The United Kingdom's exports to India for the same period were 134,000,000 dollars.

A New Germ-killer :

Three members of the Columbia College of Physicians and Surgeons have discovered a new germ-killing agent—bacitracin—which gives results comparable to those obtained by penicillin, says a New York message. The current issue of Science says the new germ killer is effective against pus-forming, poisoning streptococci; staphylococci and gonococci with encouraging results in cautious tests on some infections in human patients.

U. S. 1945 Cotton Crop :

The 1945 cotton crop for the United States is estimated at 9,779,000 bales of 5,000 lbs. gross weight.

This is a decrease of 247,000 bales, or 2.5 per cent below the forecast, and compares with 12,230,000 bales produced in 1944.

National Laboratories :

The Government of India project for the establishment of five national laboratories in different parts of the country has been given a start already with the commencement of construction of the building for the glass and silicate research institute in Calcutta of which Dr. Atmaram will be the director.

Plans are also complete for the remaining four research stations namely the fuel research institute at Dhanbad, the metallurgical institute at Jamshedpur, the chemical laboratory at Poona and the physical laboratory at Delhi.

Karachi Tramways :

The Karachi Municipal Corporation has decided to take over the East India Tramway Company's undertaking with effect from April 9, 1946. The company is owned and controlled by Europeans.

Aerial Photographs to Aid Geological Survey :

Aerial photographs in future will be used to aid the geological survey of India in its

quest for underground wealth. The future life of the Bihar mica belt may well depend upon such survey which the expanded geological survey of India is likely to undertake.

Trans-Arabian Pipeline :

The "News Chronicle" understands that the American Trans-Arabian Pipe-line Company is laying a twelve-hundred-mile pipeline from the Saudi-Arabian Dhahran-oil-fields to the Palestine coast at a cost of forty million sterling.

Negotiations with the British Government are proceeding satisfactorily. Lord Gort, High Commissioner for Palestine is expected to sign an agreement at Jerusalem shortly giving the company the right of way through Palestine.

U. S. Gold for China :

A second consignment of gold from the United States, valued at 50,000,000 United States dollars (about Rs. 16,25,00,000) arrived in Shanghai to help stabilise Chinese currency.

नारंगी ...
(NARANGI)

the bitter sweet orange of Hindustan, still growing wild in the foot-hills of the Himalayas, has been cultivated in India from time immemorial.

The tree flourishes in a cool, temperate climate in any moderately fertile soil, well drained and moist. The grower may expect each tree to produce many hundreds of fruit, year after year, both in his own lifetime and in that of his son.

The fruit should be picked as it ripens. Then is the danger-point; once picked, it over-ripens quickly. The grower must have good, smooth ROADS to send his fruit to market. Good oranges and good ROADS go together.

TREASURY BILLS

Central Government:
Tenders for Rs. 2,00,00,000 of three months' Government of India Treasury Bills were opened on Tuesday, the 30th October 1945. Total amount offered was Rs. 3,55,50,000 (Rupees three crores, fifty-five lacs and fifty thousand only). Tenders at Rs. 99-14-9 per cent were accepted in full and those at Rs. 99-14-6 per cent were allotted approximately 53 per cent. Total amount accepted was Rs. 2,00,00,000, the average rate of accepted tenders being Rs. 0-5-10 per cent per annum.

Tenders for Rs. 2,00,00,000 of three months' Government of India Treasury Bills will be received at all centres on Tuesday, the 6th November 1945 upto 11 A.M. (Standard Time). Successful tenders should make payment on Friday, the 9th November, 1945. Other conditions are as usual.

During the week ended the 26th October 1945 Government of India Treasury Bills for Rs. 1,95,00,000 were sold in favour of the Issue Department of the Reserve Bank of India.

WORLD OF INDIAN FINANCE

Calcutta, Thursday Evening.

Easy conditions have continued to prevail in the money market and call rates are quoting ½ percent in Calcutta and ¼ percent in Bombay. But with the larger investment in gilt-edged and the smaller amount of treasury bills maturities, there has been no great anxiety to place fresh money in short-term bills without any increase in the average discount rate. At the auctions of Central treasury bills this week there was rather poor bidding. It is satisfactory to note, however, that, unlike on the former occasion, applications have been larger and it has been possible for the Central Government to get its requirements in full even though there was an increase in the average discount rate. The total amount of applications was Rs. 3,56 crores against Rs. 1,85 crores. There were some tenders at Rs. 99/14/9 and those at Rs. 99-14-6 percent were allotted approximately 53 percent. Last week there were no tenders at Rs. 99-14-9 but all the tenders accepted were at Rs. 99-14-6 and only for Rs. 1,85 crores. The average discount rate has increased this week to annas 5 and ples 10 percent per annum from annas 5 and ples 4 percent last week. The offer for next week has been maintained at Rs. 2 crores.

As from next week treasury bills maturities are on a bigger scale it can be expected that the response at the treasury bills auctions will be more satisfactory and that in order to get its requirements the Central Government might not be obliged to concede any large increase in the discount rate. But if it is intended to raise more money on a short-term basis, there may be a further rise.

The returns of the Reserve Bank for the week ended October 26, disclose a decline in the amount of note circulation to Rs. 1,156.13 crores from Rs. 1,159.85 crores. As rupee coins were higher at Rs. 18.19 crores against Rs. 17.42 crores total notes issued were better at Rs. 1,169.77 crores against Rs. 1,169.01 crores. Notes held by the banking department, as a result, have improved to Rs. 13.65 crores from Rs. 9.16 crores. There is no change either in sterling or rupee securities. In the banking department, there is a jump in Central Government balances due perhaps to the reports that subscriptions to Government loans have been very satisfactory. Sterling receipts during the week were also satisfactory, the total of sterling balances revealing an increase of Rs. 7.39 crores to Rs. 533.02 crores. Other Government accounts were better at Rs. 13.32 crores against Rs. 16.77 crores while Bank balances showed a small decline to Rs. 110.88 crores from Rs. 112.83 crores. Other deposits were lower at Rs. 11.48 crores against Rs. 12.69 crores. The Reserve Bank's holdings of treasury bills are practically nil being only Rs. 75,000 against Rs. 2.21 crores in the previous week.

The statement of scheduled banks for the week ended October 19, shows a further rise in Demand and Time liabilities. Advances were lower by Rs. 1 crore at Rs. 249.93 crores. Cash balances have improved to a great extent especially as holdings of 5 per cent tax-free loan were redeemed during the week. Demand liabilities were Rs. 658.11 crores against Rs. 655.43 crores in the previous week while Time liabilities were Rs. 262.32 crores against Rs. 260.82 crores. Cash on hand

was higher by Rs. 1.19 crores at Rs. 25.92 crores as also balances with the Reserve Bank by Rs. 13.12 crores at Rs. 11.63 crores. Against the increase in working capital by Rs. 4.19 crores cash balances are thus higher by Rs. 14.3 crores. There is a drop in advances and bills discounted by only Rs. 76 lakhs.

As there is an excess of Rs. 9.45 crores in cash balances over and above the increase in the working capital and the decline in total advances, the affluence of banks is mainly due to the receipts on account of the maturing 5 per cent 1945-55 loan. The returns for the next week will show how much of this surplus balances have found their way again into gilt-edged securities. Even during the week ended October 19 the rise in total cash balances might have been more pronounced but for the fresh investments in 2½ per cent 1950 bonds and the 3 per cent 1963-65 loan.

It has been stated that during the four weeks ended October 20, 1945 total investments in Central Government loans were for Rs. 32.5 crores of which subscriptions to the 3 per cent Second Victory Loan 1959-61 were Rs. 11.75 crores and receipts from other loans on sale through the Reserve Bank Rs. 20.75 crores. In this connection, it

EXTRA SUPPLIES OF ELECTRIC LAMPS

The following Government Stockists and their distributing agencies are in a position to supply adequate quantities of General Service Electric Lamps which were indented by Government during the war to supplement normal commercial imports and indigenous production.

Prices have been reduced and brought in line with prices elsewhere in consultation with distributors and indigenous manufacturers. Supplies now available will help large scale undertakings like Municipalities, Electric Supply undertakings and Industrial concerns, besides individual consumers, to meet their requirements for the restoration of pre-war lighting standards. Special prices have been fixed for lamps with Screw types of caps.

Provided orders are not less than Rs. 500 in value or not less than four standard packages of lamps upto and

including 200 watts non-Government indentors like Electric Supply undertakings and industrial concerns who normally purchase direct from producers and importers are entitled to supplies at the Stockists Issue Rates shown in Price Schedule in this advertisement.

The Rates to be charged for other consumers are also shown in the schedule. A definite quota is being allotted from these Government imported stocks for supply to Electrical Dealers for sale to consumers and retail dealers not entitled to get their lamps from Stockists.

Allocation of supplies by Stockists to Electrical Dealers will be at the discretion of the Stockists and subject to the conditions imposed by the Controller General of Civil Supplies just as in the case of release of commercial supplies through normal trade channels.

GOVERNMENT STOCKISTS

1. M/s. Philips Electrical Co. Ltd.
Calcutta.—Heysham Road.

Bombay.—C/o. Precious Elec. Co.
Yusuf Bldgs., Churchgate Street—P. O.
Box 752.

2. M/s. General Electric Co. (India)
Ltd.
Calcutta.—Central Avenue (South).
Bombay.—Kaiser-I-Hind Building.
Ballard Estate.

3. M/s. Greaves Cotton & Crompton
Parkinson Ltd.
Calcutta.—4 Mission Row Extension.
Bombay.—1 Forbes Street.

4. M/s. F. & C. Osler Ltd.
Calcutta.—P. O. Box 137.
Bombay.—New Queens Road.

5. M/s. Siemens Elec. Lamps & Sup-
plies.
Calcutta.—E5 Clive Buildings.
Bombay.—Eruch Shaw Building, 249
Hornby Road.

6. M/s. Associated Electrical Industries
(India) Ltd.
Calcutta.—6 Mission Row.
Bombay.—Post Box 484.

7. M/s. Balmer Lawrie & Co. Ltd.
Calcutta.—103 Clive Street.
Bombay.—5 Graham Road, Ballard
Estate.

8. M/s. International General Electric
Co. (India) Ltd.
Calcutta.—7 Wellesley Place.
Bombay.—Thackersey House, Ballard
Estate.

9. M/s. Kaycee Industries Ltd.
Calcutta.—Chittaranjan Avenue.
Lahore.—Lakshmi Mansions. The
Mall.
Bombay.—Asian Building, Nicol
Road, Ballard Estate.

10. M/s. Volkart Bros.
Calcutta.—8 Clive Street.
Bombay.—Graham Road, Ballard
Estate.

11. M/s. Oriental Mercantile Co.,
Limited.
Calcutta.—36 A. & B. Pratapaditya
Road.
Bombay.—11 Bank St., Fort.

12. M/s. Lux Lamps Ltd.
Calcutta.—Norton Buildings.

NOTES:

- The above prices come into force from the 15th October, and hold good until further notice.
- The Stockists' Issue Rates—
 - are f.o.r. any railway station in India by goods train or free within six miles of Stockists' warehouse.
 - 1 per cent extra on these rates will be charged if passenger train delivery is required.
- The Wholesale Rates are free ex the supplying dealer's warehouse.
- Insurance of despatches, if required, will be at the purchaser's cost.
- Claims for breakages or replacement of defectives will not be entertained by Government or Government Stockists.
- The above rates are exclusive of Provincial sales taxes, terminal taxes, etc., which are chargeable to purchasers at cost.

GOVERNMENT OF INDIA

Directorate General of Munitions Production.

A Sickly Peace

The world is now afflicted with a rickety peace which threatens to do more harm than the world war at its worst. While the war raged, there was much to encourage the hope that on this occasion post-war reconstruction would be taken up soon after the cessation of hostilities with greater mutual understanding between the Allies, less of rancour between victors and vanquished, a realistic grasp of the needs of the situation and a greater spirit of accommodation than ever before. These are not vague expressions of more or less empty sentiment. This war was unique in the way the two sides were again and again reshuffled. The Allied nations, in spite of all their co-operation and co-ordination of effort, were at no time a compact unit. China was in no respect on a par with the Big Three. Russia had and has little in common with the Western democracies, barring the antagonism to the Fascist aggression. In the treatment of the enemy, the fact that the Axis was a far more formidable and ruthless enemy than the Triple Alliance was a serious obstacle to all the lessons of Versailles being usefully borne in mind by the victors. And as for the interests of the victorious allied nations, it was far easier for the Council of Four to get on together than it has been for the Big Three. The general background of international conditions and problems, too, was much more sombre on this occasion than in 1918. For then, the war effort did not absorb all the energies of each belligerent nation; and it was always possible to see the lines and pace of more or less automatic recovery once the war was brought to a victorious end. The enemy countries had colonies which could be shared out on a mandatory basis; and there was also a blissful ignorance about the ultimate fate of reparations. The colonial problem had not developed new facets or a special urgency.

Considering these special features, what was actually done during the war to sustain the hope of speedy post-war reconstruction must be deemed a great achievement. It is true that the formidable character of the Axis threat and the consequent need of the Allies to secure support from as wide a sphere as possible made it easier for allied statesmen to subscribe to new principles of stable rebuilding. Nevertheless, the Atlantic Charter and the subsequent insistence that it shall be applied to all parts of the world are a great gain. The acceptance of the responsibility to relieve the sufferings caused by the war regardless of the nationality of the sufferers was another encouraging development. Even more heartening were the efforts, which were made, even while the issue of the war hung in the balance, to lay down the basis of international organisations for the regulation of international finance and for safeguarding world peace. The work done at Brettonwoods and Dumbarton Oaks had no counterpart in the history of the last war.

Perhaps the most significant development was a more explicit acceptance of democratic self-Government as a natural, and by no means remote, goal for all the peoples of the world. Though Mr. Churchill succeeded in whittling down the Atlantic Charter, so far as the British Empire was concerned, the U.S.A. did everything possible within the limits set by friendliness to her allies to make it clear that she did not fight to perpetuate the domination of one people by another. That her efforts towards this end were foiled is not of much importance in any appropriately long term view. What is important is that the smug complacency with which the mandatory system was accepted as a fulfilment of democratic aspirations and sympathies had been broken. Since the Far Eastern Empires of the European Powers had been overrun by Japanese forces, there was a fair promise that their return to their previous overlords was not to be a matter of course or simply taken for granted. The political emancipation of these countries was thought of together with their economic development. Since the brunt of economic reconstruction fell on the U.S.A. Americans gave a great deal of thought to the work of such organisations as the U.N.R.R.A., the International Monetary Fund, the International Bank and the United Nations Organisation. The fact that the war ended sooner than expected also helped to raise hopes of speedy reconstruction.

The actual course of international affairs during the last few weeks has, however, been of the most disheartening kind. Taking first the settlement with the enemy countries, more or less serious differences have arisen even among the Big Three. Russia staked her claim to obtain reparations in part from

German property in her occupied zone; and all reports agree that industrial machinery and even some high grade technicians have been taken to Russian territory. She has also put forward claims to similar machinery in the zones occupied by the French. While the principle was granted at Potsdam, the case of plant and machinery which represent American investments is on a decidedly different footing. In the Far East, Russo-American friction threatens to become more pronounced owing to the inability of the Chinese Government to make up its differences with the Communists and the room thus given for the two foreign powers to be suspected of helping the side on which the sympathies of each lie. Apart from these differences, the major task of weaning Germany from her Martian proclivities and enabling her to take the place among the nations which her general culture entitles her to is hardly begun. The problem of re-educating Germany is still in the state of animated public discussion.

The position in regard to Germany's allies is hardly better. The task of drawing up the terms of settlement was left by the Potsdam Conference to the Council of Foreign Ministers. But the first meeting of this Council was an unrelieved failure. It is said to have foundered on sundry Russian demands. But there are competent critics who urge that more vital and fundamental differences have been allowed to arise because of the old suspicions between Russia on the one side and Britain and the U.S.A. on the other. But whatever the cause, it is clear that the whole schedule of work in regard to post-war reconstruction is put off by the delay in the settlement with Germany's satellites.

The position in China is, if anything, even more disturbing. It is, indeed, incredible, that a country that has had a far longer war period than any other belligerent except Japan and has suffered the worst ravages of all should at all be in the mood for civil war. But that indeed is the plain truth. The talks between Chungking and Yunnan promised at more than one stage a successful termination. But extreme partisanship and the consequent intransigence seem to characterise both sides, though in different degrees; and in these cases, failure to arrive at a settlement automatically leads to war. Once active hostilities are begun, it is inevitable that foreign powers who happen to be near or on the scene should be drawn into some kind or other of abetment. The Japanese are said to have supplied arms to the Communists, while the Russians are suspected of even more sustained help. The worst part of the civil war in China is that it jeopardises the smooth working of the recent Sino-Russian Pact and prejudices the good relations between Russia and the U.S.A.

But potentially the most explosive part of the present world situation is the rise of the freedom movement in South East Asia. Even in Burma, conditions are not quite similar to those in India. The recent effort of the Governor to reconstruct his Council with the inclusion of representatives of the Anti-Fascist League led by a former General of the Burmese National Army has failed; and there was indeed no reason to hope for its success since the Governor reserved four of the most important portfolios for his own nominees. There is no guarantee that political developments in Burma will hereafter follow the Indian pattern. For the movement in the South East has all the look of a vast racial uprising. While it must be split up to the extent that three different powers are holding sway over different territories, there is a certain degree of unity imparted by the various ties among the peoples affected. The fact that for some time these peoples were freed from their subjection to European nations would seem to be a more potent factor in future developments than their surprisingly quick liberation from the Japanese would lead us to suppose.

While the movement is to be welcomed as a great formative force for a stable world order, its actual course has been such as to cause grave concern. The absence of sufficient French and Dutch forces in their colonial territories to keep the peace has led to ugly developments. While the U.S.A. sticks to a special brand of neutrality, Britain is obliged by her position as well as her special interests to take a hand. There was misunderstanding all-round. But just when the situation was promising to clear up came the death of Mallaby which has let passions on both sides. The Indonesian movement is not so well equipped as to withstand the forces which the European powers will feel little compunction in bringing to bear on it. It is quite on the cards that the Indonesians will be compelled to make an unconditional surrender and take what the powers concerned will be prepared to offer. In this

context the wisdom of Congress adherence to non-violence is set off in special relief. Once the fight is pushed to the extreme point, negotiation and intervention of friendly outsiders is made almost impossible. The situation in South East Asia is another factor working for delay in post-war recovery.

The outlook on the economic side, too, has worsened. The deterioration may be said to start with the cessation of lend-lease supplies. The efforts of Britain and the U.S.A. to find in the first place a substitute for lend-lease and secondly a means of stimulating and sustaining international exchange of goods and services have not so far been crowned with success. At one stage it seemed as though the two nations would arrive at a settlement at the expense of Britain's creditors like India. But the latest reports indicate that the differences are still too wide. It is quite possible that the final discussions are reserved for the forthcoming meeting between Mr. Attlee and President Truman. But there is no doubt that unless adequate international credits are provided, world trade and economy are bound to languish for a long time to come. The formal inauguration of the World Charter or the ratification of the Brettonwoods Agreement will do little to bring about the recovery of the war ravaged world. The attitude of the great powers to the backward peoples has to change fundamentally. But of such change, there is still no sign.

Marketing of Agricultural Produce—IX

(Contributed)

In my last article, I discussed the various factors which handicap the ryots from bringing their produce to the market yards. It is possible for Government to compel sales in the yard. Such compulsion is also desirable but any precipitate attempt in this direction would put the ryots to serious inconvenience. Before adopting compulsion, the authorities should have a clear understanding of the reasons which prevent them from going to the Market Yards. If, for example it is indebtedness and consequent obligation to sell to a merchant, the Government by compelling him to sell at the market yard puts him to the necessity of breaking with the merchant, his only source of credit; the merchant will stop financing him if sales in the yard is made compulsory or the merchant will seek devices to take the produce through his agents to the yard. More yards should also be opened so that the producers will not have to cover long distances. Marketing is the final stage in the process of agricultural production and is closely linked up, under circumstances obtaining in India, with crop finance. Prior financial obligations impair freedom in marketing and until a way is found to release ryots from those obligations through direct state help or co-operative credit, any element of compulsion at the later stage i.e. in marketing is bound to cause him hardship.

Apart from finance, the ryots are also found to receive many small services from the merchants. It is in this field that co-operative effort can make itself most useful. The Co-operative Marketing Societies in India generally take a narrow view of their functions. In foreign countries, Co-operative Societies usually underake wider functions; for example many small dairy retail societies in England have been providing a good market for their members' eggs and other produce. One of them carried a small business in farm requisites. Among the egg and poultry societies in England, there were many who were supplying their members with poultry food, appliances and other requirements. Now that the Regulated Markets have taken over the function of protecting the producers from exactions of middlemen, the co-operative sale Societies will have to concentrate more on extra services to the producer. If the conditions in each market is closely studied it will be found that there will be enough scope in this field. When I visited Nizamabad in 1942, I found that the private rice mills were taking heavy indirect perquisites. The miller gives a small commission to the Adaya for sending the carts to him and this commission is charged to the cultivator. The miller does not give any receipt to the owner of the paddy when he takes it in. Only the names of the owner and the Adaya are noted in a Register. If the paddy is not sufficiently dry, it is milled according to the convenience of the management; nor does the latter take care to see that it is dry enough before it is actually milled. When paddy which is not fully dry is milled, the rice may either be broken or damaged and fetches a lower price. A good portion of the rice also goes along with the brown husk which is not accounted for

at all. The miller demands an allowance of 2 seers on account of temperature and the rice sticking to the bag. This is considered high by many producers. Rent for the gunny supplied by the Adaya is another item where economy is possible. If a sales society were to run a rice mill in the town, there is no doubt that it will be a great boon to the producers. Baskets for fruits jaggery etc., can also be purchased by the societies and rented to the producer on a charge that will just meet the cost. I referred to the inability of the smaller ryots to engage a cart; frequently they may not have enough quantity for one cart. In such cases transport becomes difficult and costly. In heavy seasons, carts are also sometimes not available at reasonable rates. This is another field where co-operative sale societies might prove useful. Some of the wool marketing Societies of England have developed a form of organisation which, in outline is as follows. For short distances up to 10 miles, the members are requested to deliver their wool at the depot; over this limit and up to 50 miles the Society pays carriage; over 50 miles and up to 100 miles the consignor pays carriage. In one case, the society pays carriage up to 100 miles and gives an allowance to all members who convey wool to the depot irrespective of distance. I cite these instances only to indicate the lines on which sale Societies can expand their functions. Sales Societies undertaking such services are a necessary complement to the Regulated markets. In the West, the Societies organise price pools etc., but in India it may take some time before the producers come to recognise the usefulness of such methods.

It is in the improvement of quality that sales societies can be most useful. Though this is now a responsibility of the market Committees, the Committee staff in many of the markets do not seem to give as much attention to this aspect of their work as is necessary. Propaganda to be effective should be regular and steady for some time and in many markets the staff has tight work with the routine duties. Moreover though the market Committees can do a lot in this direction, co-operative organisations are better suited for this type of work. In Cuddalore, I was told by some of the leading merchants that immediately after harvest, groundnut pods with as much as 20% drriage come to the yard and to the merchant's premises. The exporting firms find it a bother to dry it and they will be willing to pay better prices, if the pods are available in better condition. In the Nizamabad market (Hyderabad State) turmeric is frequently brought in a wet condition and the Superintendent's efforts to improve matters have not been fully successful. If an extra inducement is offered to the ryots for bringing dried turmeric, there is no reason why the experiment should not succeed. In some marketing societies of the West, there is also the practice of imposing fines on those members who bring inferior produce. Under conditions obtaining in India, fines may scare away the timid cultivators. In the provision of warehousing facilities, co-operatives can play a leading role.

Another problem concerns the methods of sale. Open auction prevails in most of the markets. One objection raised against this system is that the purchaser may bid high in the auction and then try to compensate it by demanding allowances for quality. It is also possible that he may eventually secure the produce at a lower price than what he would otherwise be prepared to pay; there is what may be called a freakish element in open auctions. It is argued that when the agents are bidding they can offer the maximum consented to by their principals, if it were in private bargaining or cover bidding. They may knock off the produce at a smaller price at the open bid. Other arguments advanced against open auction are that it takes more time, that it will be difficult in big markets unless some system of grading is developed, and when among the bidders, genuine buyers are few, prices may go much lower than if the bidders were mutually ignorant of their offers. In open auction, there is also the chance of the bid going to an unreliable dealer who may not be very scrupulous or prompt in his dealings and in any case, it prevents the producer from having stable contacts with any dealer. As against these, the open auction method has its advantages. Rates are likely to go higher in case of keen competition, the margin for deception is small, the very absence of mystery is a salutary circumstance and contributing to honesty in dealings; and it is possible for the seller to dispense with dalals. As for the objection that dealers will bid high and then demand unreasonable deductions, the nature and amount of deductions are regulated and there are also facilities for the settlement of disputes by a third party, the Superintendent or the Disputes Sub-committee. It is also possible for the seller to withhold sale, if he finds a buyer who offers a better price than that

offered by the highest bidder in the auction. On the whole, the open auction method appears to be the best from the point of view of the seller and it is also the one that holds the field.

The practice obtaining at Nanded (Hyderabad State) whereby the highest bidder of the day may be compelled to purchase the whole produce offered for the day is feasible only where the buyers are powerful enough to effect such large purchases. A small buyer will be scared off the Market if the commission agents join together and thrust on him a whole day's arrivals.

Where the bidding takes place in heaps, it removes the possibility of disputes. But this method is not practicable for commodities like cotton nor is it necessary where standard grades are fixed. Even for produce like rice and wheat, it may become unmanageable in the larger markets in busier seasons where there should be more than one auction proceeding simultaneously. The complaint that those whose produce is sold late in the day get less price has also force. This can be met in part by adopting the method prevailing in Nizamabad of beginning the sales from different corners of the Markets in different days.

(To be Concluded)

India's Unexplored Mineral Wealth

By Dr. CYRIL FOX

It is, I think, true to say that the most optimistic type of person in the world is the Prospector who is still on the search for gemstones or gold or other mineral substance of great value. It is also true that such men serve a very useful purpose by their untiring and detailed examination of new areas.

Quite different to this is the misinformed person who writes that only 500,000 square miles of India have been geologically surveyed, and conclude from this erroneous statement that more than two-thirds of the country remains to be surveyed, and presumes that much may be discovered when this remainder is properly mapped. The assumption beneath these conclusions is that if so much has already been found much more must be hidden.

As this figure of 500,000 square miles of India having been geologically surveyed was referred to in a speech by Mr. B. M. Birla (to the Geological, Mining and Metallurgical Society of India, on the 24th September, 1945), and in a leader on the 8th October 1945, "Unexplored Wealth", the "Statesman" goes even further and says that "Geologically India is a land as yet lamentably little known, only about a tenth of its area of 1,547,679 square miles having been mapped..." I have been trying to discover the source of this information.

In a lecture I gave in New Delhi on the 5th March, 1940, to members of the Government of India, on the "Utilisation of the Geological Survey of India" I said, "The official geologist in India maps about 500 square miles per field season. He can cover a larger area where the geology is simple, and not so much where great detail is necessary. Since its initiation in 1846 roughly 100 geologists have been employed on the Geological Survey of India. Each officer has averaged about 10 field seasons. On this basis 500,000 square miles would represent the average total area surveyed... We have, of course, mapped a far larger extent of the country..."

After my 32 years' service with the Geological Survey, largely as a field officer, who, perhaps more than any other, has visited almost all parts of India, I feel confident in saying that the geology of India is fairly well-known. By this I mean the general occurrence of the rocks, their structural features and geological age. Problems of mineral wealth—coalfields, iron and manganese ore deposits, chromite, magnesite, mica, sulphur and the common ore deposits—are not now dependent on mapping so much as on exploration. The oil companies spend lakhs of rupees in this exploratory work in a search for oil. Prospecting requires outlay, and should not be linked to the operations which follow later and yield

profits. The entire expense in exploration may yield no monetary returns if the deposit proves uneconomical to work.

Geological mapping is of course desirable, and should be carried out in a routine manner by the Geological Survey of India, but this is quite a different matter from the utilisation of India's mineral wealth. I will repeat that if Indian industrialists think that the mineral resources of India are rich, but await discovery, then I think there is no hope for mineral development in this country. There is a great deal of mineral wealth in India, but much of it is in the form of substances which are not amenable to treatment by recognised European processes. It has been by devising new processes for the treatment of their aluminium ore (bauxite) and other mineral substances, including high ash and high sulphur coal, that the Soviet industrialisation was so grand, and not because Russia is a rich mineral country. It is not, but it has hard working scientists who really carry out industrial research and do not stop when they find their raw materials have certain defects which render them unsuitable for treatment by well-known processes.

Much of the unhappiness and misery caused by war in France and Germany has been due to the rich iron ores in Lorraine to which the term "minette" is applied. Now, the word "minette" was originally applied to these ores to mean that they were useless, because at that time these low grade, phosphoric ores were not suitable for treatment by the Acid process in vogue for steel making. The ores became of immediate value and importance as soon as the Basic process for steel making was evolved. Here in India we have millions of tons of high grade gypsum, but I am not aware that scientific industrial research in this country has discovered any process for the economic extraction of sulphur which we so greatly lack. It is the same with the phosphatic, Apatite, rock, which might be made into a useful fertiliser, but appears to be difficult to treat because of a very small percentage of hydro-fluoric acid. In the case of manganese ore and mica Indian producers, with little outlay, act more safely by exporting than in developing industries to use these materials. As regards Indian bauxite the story is still fairy-like for its future, although millions of tons of the rock are available. An effort by the Government of India to try opening up mineral deposits, such as old lead-zinc mines and sulphur deposits, by establishing an Utilisation Branch of the Geological Survey, was referred to as a "tremendous farce" by the "Amrita Bazar Patrika" in a leader "Stop this Expansion", in its issue of the 29th September, 1945.

There is a tendency towards much hope for the future from discoveries, which might be made, or when the Indian geologist and mining engineer takes the place of so-called foreigners who have been carrying on the work and facing all difficulties and risks for sometime. In my Presidential address to the Geological, Mining and Metallurgical Society of India, when I pleaded for the formation of an Indian Economic Minerals Bureau, I stated that every year young men—M.Sc's and mining degrees—were being turned out of Indian Universities and Colleges, but were unable to get work. The reason for this lack of employment is that firms require experienced men to conduct their explorations and mining, and these young graduates, not having this experience can seldom be employed. It is not a question of scholarships, etc., which will often make matters worse in my opinion, but of providing sound practical training to graduates under Indian not European or American conditions. Furthermore, the explorations of, say, ancient copper or lead or zinc ore mines, is a financial risk until the richness of the ore and the extent and workability of the ore-body is established. Few industrialists are prepared to accept these risks, as real risks, at a cost of more than 2 to 3 lakhs of rupees. And yet when the Government of India, to show the way, face an expenditure somewhat larger, the effort is called a farce.

At the present time there are many Indian States who are carefully studying their natural resources by having a kind of Mineral Audit made of their mineral deposits and water supply prospects, rather than in indulging in any systematic geological survey which must take several years and require modern maps which are not available. I think this is a wise measure, provided rates of royalty and terms for leases are made generous so as to encourage industrialists or the State itself to open up the deposits and establish industries. Merely mining and exporting raw materials, such as manganese ore, mica and the like mineral substances, does not improve the labour conditions much, whereas industries do, and provide some scope for learning skilled work and drawing higher pay and enabling social uplift to be naturally induced.

OUR AMERICAN LETTER

American Self-Sufficiency and Difficulties of Trade Expansion

Wartime Growth of Industries and Fear of Economic Isolation

Washington, October 18.

America becomes more self-sufficient, economically, and less self-sufficient, politically, with each passing year, according to expert opinion here. The political phases of this situation are in the hands of statesmen. The economic phases are receiving increasing private attention among business and financial men throughout the United States.

Many people, remembering the lessons of the recent war, want this country to achieve complete economic independence for emergency purposes only. But they emphasize the words "emergency purpose"; they hope there will develop at the same time a two-way foreign commerce which will promote world prosperity and prevent economic isolation.

There is perhaps a surprising number of businessmen here, who regard the United States not only as currently the world's greatest exporting country, but as the world's best single market for imported goods. They hope other nations will be as aggressive in seeking the American market as are many American salesmen abroad in promoting the sale of U. S. products.

Chairman John Abbink of the National Foreign Trade Council puts it this way: If American import trade is ever to reach the ten-billion-dollar-a-year level sometimes suggested, foreign sellers must "do something more about it than merely bid us to come over and buy".

Abbink is certain that many dozens of foreign products could find a ready market here, but have not simply because of lack of aggressive salesmanship. One of the first steps in such promotion, he advises, is the commission of American research firms to analyze the markets so that an intelligent approach can be followed. This would cost considerable money in many cases, but Abbink believes the producers would find it a profitable approach.

Abbink favors plans for establishment of big U.S. emergency stockpiles of strategic materials such as tin and rubber. But even if such a programme involved spending \$1,000 millions dollars a year for a number of years, he thinks would be merely a "shot in the arm" to our import business. The total business can and should far exceed such stockpiling, he believes.

Discussing other phases of the international trade picture, Ralph Hendershot, financial editor of the New York "World-Telegram," writes:

"Between the two world wars we continued to export more than we imported and we also expanded our loans to other countries. The result was that we drained the rest of the world of its gold. There was no point in importing manufactured goods we could make as well or better here at home and, besides, we felt we needed to protect our workers with high tariffs.

"What has happened in the past is of small consequence to what is certain to happen in the future, however. Germany and Japan are probably out of the picture for good as competitors and many other countries have had their manufacturing facilities bombed to such an extent that they can't be very effective in world markets for a time at least.

"Our facilities, however, are at the peak of their efficiency. And, besides, we have developed at least two important products—synthetic rubber and artificial silk—which are certain to reduce our normal imports. Moreover we have a large merchant marine which will make it unnecessary to pay as much for shipping services.

"Our position, therefore, is that the rest of the world needs our goods more than ever before and we need their goods less than ever before.... We are in a position to ship goods in large quantities to the needy in other parts of the world, but they are in no position to repay even if we sell on

credit. They might be able to ship goods to this country in repayment at some later date, but if we accept them it may aggravate a possible unemployment situation here....

"Under the circumstances we probably would save headaches if we made our trade arrangements with all nations in terms of gifts rather than loans or credits. That might help us in our attempts to make democratic peace terms too. At any rate we should be a bit realistic about the problem."

The American artificial silk industry (rayon, Nylon, etc.) hopes to keep most of the market supplied by Japanese silk before the war. It now appears, however, this industry may face considerable competition from a group of Texas citizens who hope to produce genuine silk at favorable prices.

The budding new industry in Texas was made possible by Swedish-born Gustaf Beckman, who has intended a mechanical device to unwind the filaments from the silkworm. His five-spindle pilot plant worked well last season, and he will have a twenty-spindle model ready for this season's crop.

After the gum in the cocoons is loosened with hot water, the loose outer end of the filament is started into Beckman's machine, which pulls off five to fourteen sets of filaments at a time. Beckman estimates this does the work of up to 60 persons using methods traditional in the Orient, and more than overcomes the labor-price advantage held by Asiatic production.

Sponsors of this new industry foresee the day when 750,000 acres of Texas land will be devoted to the growth of their hybrid mulberry bush—with leaves twice the ordinary size—and claim this would produce over 100 millions pounds of raw silk per year. If their visions come true, the artificial silk producers will not benefit from curtailment of the Japanese industry as much as they anticipated.

Silver experts here say that behind the recent rise in price of foreign silver bought by this country was this fact: When the U.S. entered the war, it had about 1,305 millions ounces of non-monetized silver. At the end of the war with Japan, this total was down to 550 millions ounces, of which 300 millions have since been used in coins or pledged against paper currency. This left a total of only about 250 millions ounces.

Service to Shareholders

Away from the centres of trade, industry and Stock Exchange, it is scarcely possible for our shareholders to select from a wide and varied range of investments. The J. K. Investment Trust offers to its shareholders the advantages of pooled operations in the investment field and eliminates the risk of loss. Its Board of Directors consists of persons possessing vast experience of investment markets, finance and industry. Some of them are closely associated with the famous industrial group known as J. K. Industries.

Our London Letter

British Cotton Textile Industry

DISSATISFACTION WITH EXPORT QUOTA FOR OCTOBER-JANUARY

By HAROLD GUARD

London, October 25.

Exporters in Britain have been keenly disappointed at the allocations of textiles for the period October 1, 1945 to January 31, 1946 being generally no larger than those for the previous period and that there were still no allocations for countries in Europe.

An official statement has been issued regarding this situation in connection with market allocations for woven wool tissues and Board of Trade officials said similar conditions pertained in the textile industry as a whole.

"We feel" officials said, "that traders are entitled to an explanation of the present unsatisfactory position and that it would be helpful if such explanation could be known overseas."

During the war, as the pressure on manpower increased, the Government had to withdraw about 100,000 of the most active workers for service in the Armed forces and munitions, out of a total labour force of about 230,000. For various reasons the return of operatives to the industry is proving a slow process; by the end of September the number returning had barely replaced the elderly workers retiring and others, particularly married women, who had been allowed to leave the industry. Consequently, production is still at a very low ebb.

A CONTRADICTION

In the issue of "Indian Finance" dated October 20, 1945, the following passage occurred in "Our London Letter" by Harold Guard:—

"During their recent visit to Great Britain, the Indian industrialist mission headed by G. D. Birla and J. R. D. Tata made it quite clear that important Indian interests would be only too glad to dispossess their British competitors in India. Mr. Tata even went as far as to say India's industrialists would aim at the exclusion of British investment in India."

We are informed by Mr. J. R. D. Tata that "the statements attributed to me are wholly devoid of truth and are a gross misrepresentation of my views on the subject."

As is well known, production has to be allocated by the Government between the Armed forces, the Home Civilian Trade and Exports.

Direct Government needs, which had been drastically pruned in 1944, do not show the diminution which might have been expected at the end of the War, chiefly because the increased rate of demobilisation has meant the increased demand for demobilised men's suits. As everyone is aware the supplies available for the home market are so restricted that it had been necessary to prolong the ration coupon period. It was decided to do this rather than to curtail the amount available for export, but in the circumstances there could, of course, be no question of increased supplies for export.

It is hoped that by the time the next allocation period starts on February 1, 1946, production will have increased and Government's demands decreased so as to make possible larger allocations for export. It must be remembered, however, that no provision has yet been made for trade with Europe or with the Far East, so the field to be covered is an increasing one. The first markets in Europe with which trade will be restarted through normal channels are expected to be those with which payment arrangements are in force, namely: Belgium, Denmark, France, Finland, Holland, Portugal, Spain, Norway, Sweden and Switzerland.

Such supplies as go to other European countries are expected for a time to be sent through U.N.R.R.A. on a Government-to-Government basis.

It is also hoped that some Far Eastern markets will be reopened in the early part of 1946. No decision has yet been made on how any increased quantity will be distributed to exporters, but it will be of interest to traders to know the lines on which it is proposed to tackle the question: whether it will be possible to do so in the next period cannot be decided until the amount available for distribution is known.

The Board of Trade said they are anxious to get away from the very rigid system of allocations which obtains at present. There are really two problems here: the first to give recognised exporters greater liberty to choose their own markets; the second to make it possible for firms to participate in exports who have been debarred from doing so because they had no export performance in the basic year. The maximum effort will be wanted from everyone and both these problems will have to be tackled. It is felt, however, that it will be necessary to proceed by two steps, dealing with the first of these two matters before the second.

No increase in production which is likely to be achieved in the next few months will restore export trade to its old level. On the other hand Britain will still be committed to

provide supplies for certain countries which have been dependent upon her. It will be impossible, therefore, to give traders complete freedom of choice as to markets and some basic market allocations will have to continue. The present idea is that they should continue approximately at the existing levels, subject to any adjustments which may be necessary, in view of the essential needs of the countries concerned. Any balance available for export above this quantity might then be distributed to traders with liberty to export to any accessible market.

When supplies improve still further, the next step will be to permit the participation in the allocations of firms which had no performance recorded for the basic year. The precise method by which this would be done will have to be worked out.

Board of Trade said they would continue to press for maximum allocations and for maximum freedom to which allocations can be shipped. However, it must be emphasised that a production drive must precede an export drive though, of course, the extent of any improvement which can be made depends largely on the rate at which labour can be returned to the industry.

No. 2

FACT No. 14

It is estimated that the Indian cotton handloom industry produced before the war an average of 1,990 million yards of cloth per year. It is estimated that in 1943-4 the handloom industry produced 2,580 million yards of cloth which represents an increase of about 30% over peacetime production.

One of a series of statements of fact for the information of the public.

Editorial Notes

Bewoor Plan for Posts and Telegraphs

Among the salient features of India's lopsided economic development, the want of an adequate communications system is by no means the least important. For the past three or four decades India's population has been growing fast, villages are springing up and towns are assuming more and more varied importance. But while it is to be admitted that the Posts and Telegraphs Department have done their best to cope with the new demand for their services, the fact cannot be denied, particularly when India is placed in contrast with other countries, that the large masses of our rural population are not yet in a position to take advantage of the Posts and Telegraphs services. While this is partly due to the extreme poverty and ignorance of the people, the authorities cannot deny that a bolder policy could have been initiated. If the objective of the Posts and Telegraphs Department had been the service of the nation and not merely to make the services pay, the progress probably could have been much greater. It is also true that even in places where the Department was prepared to expand its services in the rural parts, the inadequate road system served as a bottleneck. Now that the Government of India and the Provincial Governments have all evolved suitable road plans for the different regions, expansion of the Posts and Telegraphs Services should be possible and must be achieved at an early date.

A 15-year plan for the expansion of Posts and Telegraphs services in India was outlined by Sir Gurnath Bewoor, Secretary to the Department of Posts and Telegraphs, in an interview to the press. His plan consists of three progressive stages, each stage being spread out over a period of five years. The target fixed for achievement during the first five years is 19,000 new post offices in the villages all over the country and approximately 10,000 telegraph offices in the district towns. It is proposed that every village in the land with a minimum population of 10,000 will be served by a post office while telegraph offices will be established in towns with a population of 20,000 and over. Considering that at the close of 1942-43 there were only 25,671 post offices in India, the proposed expansion cannot be condemned as too modest. On 31st March, 1943 there were only 4,062 telegraph offices worked by the Post Office. The target fixed in the fifteen-year plan can, therefore, be considered satisfactory if one remembers

the difficulties, technical and otherwise, which may have to be confronted during the development years.

Sir Gurnath also stated that an innovation in inter-village communications would be introduced. Postal work will be expedited by the use of motor transport which will gradually replace the out-of-date means of transport now being widely used. Further, every district headquarters with a population of 20,000 would own a telephone exchange which will be connected with the main trunk system. Already much progress has been attained regarding telephone cables which are to-day functioning from Kashmir to Cape Comorin and from Karachi right across to Calcutta. The plan envisages the expansion of telecommunications system into the heart of India's villages. Construction of better buildings to house the new post offices and to provide residential quarters for their staffs also forms part of the contemplated scheme. There has been a considerable expansion in the P. & T. Department during the war and this progress will be maintained during the initial years of peace. If the road plan goes well according to schedule, the Communications Scheme will be geared up on parallel lines so that transport and communications can serve the growing needs of India's commerce and industries.

Sub-Committee for Shipping Target

The decision to appoint a Sub-Committee to recommend suitable tonnage targets for Indian shipping and measures to regulate the shipping industry, arrived at the second meeting of the Policy Committee held a few days ago at Delhi, is welcome, though belated. The terms of reference to the Sub-Committee are, "to consider the departmental statement on post-war shipping policy and in the light of that statement and of relevant considerations to recommend:

- (1) What would be a suitable tonnage target for Indian shipping to be obtained within a period of five to ten years;
- (2) What percentage shares of the maritime trade of India and other trades in which India is interested, both coastal and overseas, cargo and passenger, should be secured for Indian shipping; and
- (3) What measures should be taken: (a) to regulate the shipping industry with a view to preventing the formation or establishment of combines or monopolies or excessively large units within the country and to ensuring that the number of shipping companies operating is no longer than is economically adequate; and (b) to ensure a fair and equitable distribution, in existing and those yet to be established, of trades which may hereafter be secured for Indian shipping. The Sub-Committee consists of Sir C. P. Ramaswami Ayyar (Chairman), Mr. K. C. Neogy, Sir A. H. Ghaznavi, and Mr. W. L. A. Radcliffe, and should therefore be considered acceptable.

The need for a strong merchantile marine and a strong navy has been emphasised by Hon'ble Sir Azizul Haque in the course of his speech at the meeting. He outlined the objectives of the post-war shipping policy and said that an increased share of the coastal trade including trade with Ceylon and Burma will be aimed at. A substantial share in the trade with the

Mid East, East Africa, Malaya and Dutch Indies is also contemplated. The Government also favour a fair share in the eastern trade especially those trades of which Japanese shipping will have been dispossessed. It is also stated that a fair share in the trade between India and the U.K., the continent of Europe, the North America, will also be secured. The objectives have been couched in delightfully vague words and the public have not yet been aware as to the real meaning of the words "fair," "substantial," "increased," etc.

Nationalist opinion has demanded in recent years that Indian shipping should be enabled to participate in the various trades and that the whole of the coastal trade, 66 per cent of the trade with adjacent countries, not less than 50 per cent of the overseas trade, such as trade with U.K. and America, and not less than 33 per cent of the trades in the Orient should be secured for Indian shipping in the post-war period. How far the present Sub-Committee would go to achieve the popular demand is yet to be seen. There is no doubt that India with her long coast line and heavy foreign trade should have a very strong mercantile marine and should be protected against the inroads of foreign shipping interests. The danger of India being planned against by the foreign countries planning for their own shipping is real and should not be overlooked.

Export Problems

War-time favourable balance of trade has been achieved more by the cessation of imports than by the increase of exports, and this is clearly brought out by the developments after the end of hostilities. The end of European war has raised the imports into India by about 70 per cent in 1944-45 while on the export side the gain has been hardly 6 per cent. While favourable balance of trade with the Empire countries has been obtained, India's trade balances with non-Empire countries like the U.S.A., Egypt and Iran are growing adverse. Compared to pre-war years, cotton, oilseeds, hides and skins and raw jute have suffered in export, while cotton manufactures, jute manufactures and tea may be said to have recorded some gain. Every attempt should be made even during the present transition period to raise India's export trade to the maximum extent possible without injuring the economic interests of India as a whole.

Pleading for a correct export policy Mr. G. B. Kotak, President, Indian Exporters Association, Bombay, pointed out at the annual general meeting held a few days ago, that the Government of India should not remain content with a mere announcement of the distant intention of capturing markets lost by Japan but should formulate a clear-cut policy in consultation with the exporters and industrialists. The elaborate plan for increasing export trade by appointing export development groups for different industries achieved in Australia has been recommended. The direction and distribution of India's foreign trade during the war cannot be characterised as natural but were the result of India's adjustment to British requirements. The artificial nature will soon be exposed and India should be prepared to cultivate the most profitable markets wherever they are found. Substantiating his charge that the Government of India are not proceeding in the right direction in the matter of export planning, Mr. Kotak pointed out that the recent decision to reduce the

export of textile goods from 600 million yards to 400 million yards from 1946, will have adverse effect on India's export trade at this stage. In view of the considerable reduction in military requirements and also because of the necessity of cultivating markets to retain them subsequently, the heavy curtailment is considered a retrograde step. Only 3 per cent of India's total production is exported and this cannot be a heavy strain on the national economy. The utility scheme, he stated, has failed and since the competition with the better goods from U.K. and U.S.A. has to be faced, an early start in quality production is advocated. The unhelpful attitude of the Government of India is also evident from the fact that they allowed, contrary to the International Tea Agreement of 1933, the export of India's tea seeds to East Africa in order to enable the extension of tea plantations there while in India the acreage has been kept strictly under control. During last ten years East Africa increased her plantation to the extent of 58,233 acres while India could increase only by 0.29 per cent. This discriminating policy does not indicate that the authorities are keen in helping India's chief exports. As regards the oilseeds the terms of the Standard Contract are shown to be inconvenient and necessary amendments to protect the legitimate rights of Indian exporters are advocated. Abolition of unnecessary controls and release of shipping will go a long way in helping Indian exporters to capture markets which will not be available if undue delay is tolerated.

Index Number, New Series

Thanks to this war the necessity for an all-round economic planning for India has been recognised by the Government of India, and planning is impossible without an adequate and efficient statistical service. Since the Economic Adviser's office was established a starting point has been made for creating the necessary prerequisites for a comprehensive economic intelligence service. Some of the recent publications like the "Guide to Government Statistics" have made a start in pointing out the existing limitations of the published figures and indicating the coming reforms. Last year a scheme was originated to construct a comprehensive and thoroughly reliable general purpose index for which the need has been felt for a very long time. The revised index of wholesale prices of food articles initiated about a year ago marked the first stage. The attainment of the General Purpose Index was proposed to be

completed in four more stages, namely: (1) an index for industrial raw materials; (2) an index for semi-manufactures; (3) one for manufactured articles and (4) an index for the miscellaneous group. A press report states that the work regarding the compilation of the index for industrial raw materials has now been completed.

Industrial raw materials cover a very wide range of articles but the selection of articles to be included in the wholesale price index has been limited by the lack of price information. The difficulty was felt particularly in regard to mineral products. However, it is felt that none of the items which had to be omitted on price index has any claim to any appreciable weightage from the point of view of the relative value of the output. Nineteen commodities have been included in the compilation of the index. Under textile fibres raw cotton, raw jute, raw silk and raw wool have been included. Under Oilseeds come groundnuts, linseed, castor, rapeseed, cotton seed and copra. The Minerals group cover coal, manganese ore, mica and iron ore. Other materials comprise raw hides, raw skins, lac and rubber. For the purpose of calculations important and representative varieties of these commodities and their wholesale prices in their main markets have been taken into account. The year ended August 1939 is taken as a base period, and for the purpose of comparison it is proposed to bring the index number of food prices in line with this new basis.

The weights assigned to the various items in the index are proportionate to their values and the commodities determined from the estimated quantities marked and the prices prevailing during the year 1938-39. For instance, in the case of coal the quantity consumed by the miners has been left out of account. As regards cotton and jute as well as oilseeds and hides and skins a rough allowance has been made for the amounts retained by the producers. The estimates of the proportion of the output retained by the producers as arrived at in the marketing reports and in the Handbook of Commercial Information and similar sources have been utilised in this connection. It has been assumed, in the absence of evidence to the contrary, that the whole of the remaining output has been put in the market. In the case of commodities like raw cotton, silk, wool and copra the value of retained imports has also been taken into consideration before distributing the weights.

Hides, raw	..	3
Skins, raw	..	2
Lac	..	1
Rubber	..	1

100

Explaining the procedure adopted in introducing weights in the compilation the Press Note says "The price relatives for the individual varieties of each commodity are averaged geometrically into a single price relative for that commodity. The geometric average of the nineteen price relatives, thus obtained, the proper weights being assigned to each as specified above, is the final index for each week. A separate average is also worked out for each of the four sub-groups, namely, textile fibres, oilseeds, minerals and other materials."

The combined index number was 232.5 in May, 238.1 in June, 244.5 in July, 242.4 in August and 238.1 in the first four weeks of September 1945. This all-India index number of wholesale prices relating to industrial raw materials will, hereafter, be regularly issued every week by the office of the Economic Adviser.

Irrigation Research in India

The problems of river irrigation have been realised and tackled only recently in this country. There are at present seven irrigation research stations and the work they have done has contributed to the success of large irrigation undertakings in various parts of the country. Research into the flow of water in channels and transport of silt has enabled efficient channels to be designed which will not scour or become blocked by silt. In addition, sand excluders are now constructed at the head works and sand ejectors in the canals. Research on uplift

pressures on hydraulic structures founded on sand has saved failures of all kinds of structures from small regulators to large barrages. Devices have been specially designed to measure the flow of water, and others to distribute it equitably and economically.

Control of floods and many other problems await solution in connection with the utilisation of water to its best economic advantage in combined purpose schemes embracing irrigation, hydro-electric power and flood control. The Damodar is one striking instance in point. With increased utilisation of rivers and the consequent division of available waters between different provinces and states on a river system this subject will come into prominence and demand the co-operation of Provinces and States. It is necessary to make countrywide investigations for estimating future river supplies from a study of rainfall, snow and glaciers data and the research committee of the Central Board of Irrigation has decided to make concrete proposals for this. A large number of tube wells are being installed all over the country in pursuance of the Grow More Food campaign. Methods of construction and maintenance of tube wells, their maximum spacing in a grid system, and their effect on lowering the sub-soil water table and thus relieving the water logging trouble which has followed canal irrigation in some parts of the country are matters which need careful examination.

Railways in Indian States

Though railways owned by the Government of India serve the Indian states also yet many of the Indian States as Hyderabad, Baroda, Gwalior, Mysore own and manage their own railway systems. They are about 6,800 miles. These railways are being extended to remote towns and commercial centres and are run quite efficiently. The total capital investment on the railways amounted to 16 crores of rupees upto the end of 1943-44.

Special lines have been laid to facilitate the exploitation of forests and mines and for the development of forests. The Forest Tramway of Cochin is a magnificent engineering feat and is the only one of its kind in India. It was built at a cost of twenty lakhs of rupees, and has proved very useful for tapping the resources of state forests. The Mysore

State Railway joins the Kolar Gold Fields with the rest of the country. The Rajkot Tramway connects the limestone quarries at Bamanbore with Beti and Rajkot city.

Every year thousands of passengers and a huge tonnage of goods are carried by these railways, and the number of passengers and the tonnage of goods carried are on the increase. During 1944-45 the Nizam's State Railway carried over 17 million passengers, nearly twice the number carried in 1938-39. The earnings of the Railways are increasing and now yield a return of approximately 9 per cent on the capital outlay. Efforts are made to make travelling by trains, especially in the lower classes, cheap and comfortable. New waiting rooms, and covered platforms are being constructed to provide adequate shelter and rest to the travelling public. Arrangements have been made for the sale of wholesale refreshments at railway stations, supply of good drinking water and avoidance of overcrowding in trains. The Nizam's State Railway has installed fans in third class carriages and has provided diesel engine air-conditioned rail cars for lower class passengers. Baroda has formed sanitary committees on all important railway stations which are responsible for the maintenance of proper sanitation. The State has also opened railway dispensaries with full time medical officers to provide medical aid to the travelling public.

In order to obviate the evil effects of wasteful competition between railway and road transport service and to link remote villages and towns with big industrial centres many state governments have taken effective measures to ensure close co-operation between railway and road services. The future rather than the past is of interest. The war has increased railway earnings but has strained the railways to a great extent. Many state governments have formed planning committees to chalk out plans for the development of railways. Jodhpur has created a reconstruction fund. Mysore Government has a five-year programme, of which one item is the electrification of Mysore-Bangalore line. Jaipur has three major projects. Expansion of the railway, increased amenities to lower class passengers at all stations, and cheap transport are expected in the post-war period.

Non-ferrous Metals

The criticisms against the Government control of non-ferrous metals mainly take two lines; one is that the 400 tons of metal sheets subsequently reduced to 150 tons which the Government sell at controlled rates to selected manufacturers deprives the village craftsmen of their source of supply and the other is that while the control has already been lifted in the United Kingdom, there is no reason why it should be continued any longer in India. An official spokesman of the Government has issued a statement in answer to these criticisms. It is held that the sale of 150 tons of metal sheets to selected manufacturers at controlled rates is an advantage because, otherwise the whole quantity would have gone into the black market and sold at uncontrolled prices, and that this amount of control has ensured effective control over manufactured utensils. Before the introduction of control, the price of manufactured articles varied from Rs. 4-8 to Rs. 5 per pound as against the price of Rs. 1-8 to

Rs. 1-12. Brass sheets released by the Indian Copper Corporation before the Government took over their distribution, have sold for over Rs. 200 as against the Government controlled price of Rs. 80. As for the lifting of controls in the United Kingdom, it is contended that the position in the United Kingdom is entirely different from that in India. In the United Kingdom the control was lifted with a view to enable manufacturers to export to those starved overseas markets wherefrom they could obtain the best prices. In India, the main consideration, on the other hand, is internal supply to make adequate quantities available to the consumer. Until the internal supply becomes adequate to meet the demand, the relaxation of control will not be justified. Under present conditions, free imports into India might result in a steep rise in the prices of brass scrap, copper scrap etc. Another point advanced in favour of retention of import control is that Indian industry cannot produce aluminium at less than about twice the cost of the imported metal. Open imports would result in the loss of market for the products of Indian industry. The Government have fixed the quantity of import with reference to the total internal demand and internal production and have fixed a pool price based on the value of the imported and the local metals.

Industrial Statistics

According to the Provincial Reports on the working of the Indian Factories Act, the number of factories working in British India increased from 12,527 in 1942 to 13,209 in 1943; thus during the year 682 new factories have come into being. Of these, 210 were started in Bombay 211 in Madras and 103 in the Punjab. This increase is however confined to the perennial factories. The number of seasonal factories showed a decline from 3681 to 3675 for the same period. Notified factories increased from 2505 to 2690; 130 new factories were started in Madras and 55 in Bombay. During the year, under review, the percentage of total women to the total factory population stood at 10.8 as against 11.5 in the previous year; that of adolescents stood at 1.2 and of children at 0.5. The average daily number of women adolescents and children employed in factories was 302,690 while in the previous year it was 299,838. It is revealed in the reports that inspite of the labour shortage in some areas there does not appear to have been any serious attempt to substitute women, adolescents or children for men. The number of convictions under the Act also showed a slight decline. It was 1792 for 1943 as against 1806 in 1942. Accident figures rose from 54,174 in 1942 to 59,176 in 1943. This increase was held to be generally due to factors such as longer hours of work and the employment of new hands. On an average there were 2429 accidents per one lakh operatives during 1943 while the corresponding figure for 1942 was 2374. In the number of accidents, Bengal's record for the year is brighter. In Bengal the total number of accidents decreased from 18065 to 16316. In respect of fencing and safeguarding of machineries, provisions of the Act have been adhered to, though the formation of safety first committees in some provinces did not make much progress.

Return to Pre-war Pattern

The official account regarding foreign trade in wartime, published last week, gave the impression that India had gained on

account of the large expansion in exports and the drastic reduction in imports and that a large favourable balance was built up. While the benefits of these favourable balances are illusory and the credits in hard currencies have been utilised by Britain for her purposes, the new contacts have to a certain extent improved the scope for Indian exporters.

But the developments in recent months clearly show that we are gradually reverting to the prewar pattern of trade and that with the increased production in the U.K. and elsewhere and the bid for markets by the highly industrialised powers, India will gradually lose her grip on the newly created markets and revert to the position of an exporter of raw materials or semi-manufactured goods as in prewar years. It is for this reason it has been emphasised in responsible quarters that there should be planning in respect of foreign trade and that in view of the need for large funds and the effective utilisation of natural resources in the post-war reconstruction programmes nothing should be lost by lack of direction and waste of opportunities.

It is true that trading with the Middle East, South America, Canada and the United States can be on a larger scale but it is questionable whether we will be able to resume trade with the Continent and the Far Eastern countries at an early date.

The figures for the first quarter of the financial year do not make satisfactory showing. While exports have remained stationary, and have even tended to decline, there is a large increase in imports mainly from the U.K. Imports of foreign merchandise, which amounted to Rs. 18.32 crores in April increased to Rs. 23.36 crores in June. Exports moved from Rs. 16.4 to Rs. 17.64 crores. During the quarter ended June 30, the unfavourable balance, after making adjustments for re-exports, was Rs. 11.56 crores which is in complete contrast with the position attained during the war period. Of the increased imports the share of manufactured goods was large, the total for the first quarter under review being Rs. 22.25 crores against Rs. 8.9 crores in the corresponding period last year. Arrivals of raw materials also have gone up by Rs. 8.48 crores. There was a substantial improvement in oils, grains and pulses.

In regard to Indian exports there is a sharp drop under manufactured articles to Rs. 27.48 crores from Rs. 32.64 crores. Exports of oilseeds, raw cotton and raw jute showed a rise.

Regarding the direction of trade, imports from British Empire increased during the quarter by Rs. 5.88 crores while exports to this area declined by Rs. 5.17 crores. Arrivals of American goods were valued at Rs. 21.61 crores as against Rs. 7.75 crores in the same quarter last year. There was no corresponding improvement in exports which were only Rs. 1.9 crores higher at Rs. 12.03 crores. The figures of imports, exports and re-exports for the three months ending June 1945 and for the month of June 1944 and 1943 are given in the table below:—

	(In crores Rs.)		
	Imports	Exports	Re-exports
1945			
June	23.36	17.64	0.56
May	21.45	16.14	0.38
April	18.32	16.39	0.46
1944			
June	14.21	18.95	0.29
1943			
June	8.68	18.00	0.28

Transport Plan for Turkey

For her size Turkey is most poorly served by transport facilities. A mountainous country particularly on the western side, the railways could play very little part in accelerating economic development and in facilitating the movement of population. During the war when the country was caught amidst contending armies, the weakness of Turkish transport system was felt very acutely. Though during the years before the war, the Turkish railways made some improvements in service, they are even to-day utterly inadequate for the economic or defence purposes of the country. Heavy congestion has been felt during the past five years and the lorry transport could not afford the relief needed. The road development programme of the Government is still in infancy and the bottleneck of tyres and spare parts for lorries has made an early improvement impos-

TRANSITION FROM WAR TO PEACE

Disposal of Australian Wool Clip—Reciprocal Lend-Lease—Tariff Board Report—Overseas Trade—Australian Car.

Commercial buyers in the United States purchased a record weight, 992,355 bales, of Australian wool in the 1944-45 season.

There was a substantial increase also in total shipments from Australia, according to the annual report of the Central Wool Committee, tabled in the Australian Federal Parliament.

Direct shipments to United Kingdom ports totalled 1,014,483 bales, an increase of 351,310.

Shipments against commercial orders to countries other than the United Kingdom totalled 960,572 bales, which was 123,257 bales more. The increase was mainly due to the increased demand from the United States, but the figures for most of the approved countries showed improvement.

Since the end of the European war, France has placed a fair volume of orders for Australian wool, and there have been inquiries from Belgium and other European countries.

The Defence Supplies Corporation in U.S.A. continued the sale of its stock pile of Australian wool. These sales, which amounted to 620,000 bales, now have been discontinued.

Since the Corporation commenced to liquidate this stock pile in February, 1944, approximately 866,000 bales have been disposed of by auction in the U.S.A. The balance of approximately 154,000 bales will be disposed of other than by auction.

The amounts paid to the credit of the United Kingdom Ministry of Supply for wool shipped on commercial account during the season were: London credits £stg. 1,922,094; United States credits, £Stg. 19,268,867.

Mainly due to the excellent co-operation of the Australian topmakers, the quantity of tops exported from Australia during the year reached the record figure of 11,036,788 lb, valued at £Stg. 2,593,043, with a carryover of 326,642 lb awaiting shipment at June 30.

The report says that severe drought conditions resulted in a greatly reduced wool clip.

Industrial trouble in the latter half of the season caused shearing delays in Queensland and certain New South Wales districts. As a result, a considerable volume of wool which would ordinarily have been included in the appraisement for the 1944-45 season was carried forward into the 1945-46 season.

Wool purchased by Australian manufacturers for the season totalled 389,535 bales, against 447,622 for the previous season.

On June 30 the quantity of wool stored in Australia on behalf of the Government of the United Kingdom was 5,136,000 bales.

Australia's contributions under reverse Lend-Lease were the equivalent of 113 U. S. dollars per head of population, com-

pared with 96 dollars per head by the United States itself under Lend-Lease, and 84 dollars per head by Britain under Mutual Aid. Reporting this to Cabinet in a survey of reciprocal aid provided by Australia to United States forces in the war against Japan, the Australian Prime Minister (Mr. Chifley) stated that total recorded expenditure to June 30 last was £258,000,000. This was made up of:—provisions, £69,500,000; technical equipment, £7,400,000; motor transport, £25,700,000; aircraft stores and equipment, £20,900,000; general stores, £42,900,000; transportation and communications, £20,000,000; shipping, £25,200,000; works, £40,700,000; miscellaneous, £6,200,000. Food supplied to American forces to June 30 included: meat 179,000 tons (£16,800,000); fruit and vegetables, 212,000 tons (£13,000,000); canned goods, 87,000 tons (£11,800,000); fresh milk, 40,800,000 pints, condensed and evaporated, 38,000 tons (£5,600,000); cereals, including flour, 231,000 tons (£5,000,000); eggs, 35,000,000 dozen (£4,800,000); butter and substitutes, 35,000 tons (£4,000,000); potatoes, 74,000 tons (£1,000,000); miscellaneous 54,000 tons (£7,000,000).

Mr. Chifley pointed out that use of an exchange rate of 3.2 dollars to the Australian pound resulted, as United States authorities acknowledged, in an understatement of the Australian effort. "Reciprocal aid in Australia represents a magnificent achievement in co-operation and planning for a common objective," he added. "The extent of reciprocal aid, and the spirit in which it was given, had been freely acknowledged in the United States. I am sure that this spirit of friendly co-operation will be maintained now that the war is ended."

Against the foregoing background, recommendations by the Tariff Board in its annual report are all the more interesting. The Board considers that it may be necessary to burden the community permanently with high protection for industries essential to national security, or that promise exceptional social benefits. It urges, however, the greatest discrimination in dealing with wartime industries that might require abnormal protection to survive in peace-time. It recommends immediate consultations with the British Government concerning a temporary arrangement to protect worth-while Australian industries, until reviews in accordance with the Ottawa Agreement are possible. It considers, however, that, while many war-time activities must disappear, Australia should not have to sacrifice industries with prospects of permanence by too rigid adherence to an agreement that was not drafted with the present state of affairs in mind.

The report continues that, although in the next few years it will be impossible to measure the merits of Australian industries by comparing their costs with those of other countries, it is essential that Australia's post-war reconstruction should be on the lowest cost basis possible. This should be sought as a means of maintaining and improving living standards, and not at their expense. Increased efficiency offers the only means of doing this. But, alterations in the Australian-British tariff are still governed by the Ottawa Agreement, whatever may be the result of the

inter-national discussions on the question. During the war new industries have been established in Australia and older industries have expanded. In some cases their products are entirely unprotected under the British preferential tariff, and in others the duties are so low as not to be protective.

The representative in Australia of the British Ministry of War Transport, Sir Thomas Gordon announced that the regulations controlling exports from Australia to the United Kingdom would be eased from November. At the same time, the senior British Trade Commissioner, Sir Robert Dalton, predicted that, with the lifting of export controls in Britain, there would be an almost complete revival of export trade between Britain and Australia. He pointed out, however, that while increasing quantities of machinery, machine plants and other capital goods could be expected, restrictions would continue on textiles.

The Leader of the Opposition in the Senate, Senator MacLeay, who was a member of the Australian Delegation at the San Francisco Conference, said on his return from abroad that many large American industries were anxious to become established in Australia, but they were asking for assurances that they would be guaranteed a fair return. Financial and economic questions were so urgent that the Prime Minister himself should go to America and London as soon as the Parliamentary Session ended. America realised more than ever that to maintain successful contact with Australia, she would have to buy more than before.

The Post-War Reconstruction Minister Mr. Dedman, stated that a light passenger car was expected to be in production in Australia by the middle of 1947. Five companies were examining the possibilities of manufacture of motor chassis here. They were:—General Motor Holdings Ltd., the Ford Motor Co. of Australia Pty. Ltd., Nuffield (Aust) Pty. Ltd., Chrysler-Dodge Distributors Pty. Ltd., and Rootes (Aust) Pty. Ltd. Discussions between General Motors-Holdens and the Ford Co. and the Secondary Industries Commission had revealed that, as a result of engineering progress in Australia during the war years, there were no technical difficulties in the manufacture of chassis. Bodies had been made here for many years. General Motors hoped to be in production by 1947. Discussions with the Ford Co. were still proceeding. The other companies proposed to continue the local manufacture of bodies, gradually increasing the proportion of locally manufactured chassis components.

At a Tariff Board enquiry as to whether certain import duties on timber should be suspended until the end of next year, evidence on behalf of the Controller of Timber was that all essential timber needs could be met, if Commonwealth and State Governments adopted a bold procurement policy. The most serious shortage expected was of seasoned wood. Timber consumption in Australia during the war had reached about 900,000,000 super-feet. Post-war imports were estimated at about 180,000,000 super-feet a year, compared with 324,000,000 in 1939.

[Note: Unless otherwise indicated, sums of money are given in Australian currency values. Australian equals Rs. 10-10-8.]

Clive Street Gossip

Eavesdropper writes from Shillong:—

Two or three months hardly suffice to change the look of things in what was once almost a theatre of war. All along the way from Calcutta to Shillong, I found that conditions now are not materially different from those of war time. The hustle is no longer there. One sees nothing of that peculiar look which nearness to the war zone imparts to the common people. But otherwise, conditions are much the same as they were before the surrender of the Japanese. The preponderance of men in khaki, in trains and station yards, the strain on accommodation, the high prices, all these have continued unchanged. Indeed, there is no reason to expect a change. Over the whole of India, war conditions bid fair to stay for quite a long time. Some features of war economy have also come to stay. One vital difference between the last war and this is, while last time the return to peacetime conditions was more or less automatic and was therefore a question of time, on this occasion, all countries have to work hard to get out of wartime conditions. For, so far as peace economy is concerned, all Governments burnt their boats; and it is no use looking at the calendar to see whether peace is not old enough to make itself felt on the national economy.

While this is true of nearly all countries and of all parts of each country, I consider that it is specially true of India and, within India, of Assam. For a country like India, an automatic return to prewar conditions is out of the question. Look at the manifold ways in which the structure and the contours of the national economy have been changed by the war. Every war, it is true, occasions a great deal of inflation, rise in prices, profiteering, redistribution of wealth, reshuffling of income groups and a thorough revision of the handicaps in economic competition of the various classes and groups. But those of us who are old enough to remember what happened during the last war should have no difficulty in recognising the contrast. All the features I have mentioned are no doubt common to both the war periods. But there is a point at which quantity must rank as quality and the quantitative differences must be reckoned as qualitative differences. The kind of inflation that just puts up prices and incomes and increases the number of men who can go about looking for avenues of new investment is one thing. The inflation that creates millionaires by the thousand, lifts the lowest classes from their lifelong penury and makes rentiers of them on a small scale through National Savings and creates pools of savings of varying size amongst all classes is quite another. Inflation of the former kind is easily annulled by post-war deflation. The effects of the latter are not wiped out by any policy that may be subsequently pursued by the authorities. The tide had indeed flowed so high, that the ebb tide cannot affect all the lakes and pools of recent creation—the class structure has been altered for good.

This result of inflation is also confirmed

by the changes in the price structure. I doubt if we can get our agricultural prices back to peacetime, whatever we may do with our currency and our note circulation. I don't mean to deny that, if the monetary screw were tightened hard enough, this could not be done. But within the limits set by normal considerations of social justice and political prudence, it is impossible. To the natural changes in the price structure must be added the effects of the price control and the relative scarcity of consumer goods. I sometimes wonder what would have happened if an advanced industrial country like Japan had kept out of the war and piled up huge stock of the goods which, anyone could have foreseen, would be needed in peacetime. But such is not the case. All the great industrial nations were drawn into the vortex of the war; and in every country the Government has to consider the effect of the sudden impact of pent-up purchasing power on the meagre stock of goods and services. The result is, the controls have to remain. Prices have to be maintained. Inflation has to have another lease of life and is not to yield place to drastic deflation. Most of the landmarks of war economy will continue to distinguish the peace as well.

Now these features are more or less pronounced according to the industrialisation of the country or area in question. In the case of the U.S.A. for instance, it is a question of time when the vast capital equipment of the country will be able to turn out consumer's goods at the same rate as it turned out war material. Countries like Britain may have to tighten their belts for sometime more. But a country which has got adequate capital equipment has an altogether different set of problems. We in India have nothing except a vastly increased quantity of fiduciary notes and coins of silver alloy. To let all this purchasing power loose on the available goods is to court the worst disorganisation imaginable. At the same time, as I have said already, this purchasing power is not drained by mere deflation. The only way out of this difficult situation lies in planned development and the bridging of the gap between purchasing power and supplies of goods, partly by increasing the latter and partly by decreasing the

former through investment. Likewise, the price problem has to be solved by a suitable reduction in the general level of prices without any undue importance being attached to prewar prices.

If the whole of India has more need for planning than any other country in the world, it is equally true that Assam has more need for it than any other part of India. Because all the circumstances which make planning indispensable in the country at large are present in a specially aggravated form in this Province. You need no statistics to convince you that Assam is more backward in economic and industrial development than any other part of this backward country. Assam's geographical position is, no doubt, responsible to a large extent for this backwardness. The difficult terrain has set severe limits in the development of transport in normal times. And when transport is restricted, progress is necessarily limited. To the extent that the exigencies of war have compelled the improvement of transport Assam is better off, at least it is enabled to have a better start in post-war planning than it would have had otherwise. But what makes planning an inescapable necessity is the combination of this backwardness with the surfeit of purchasing power created by Assam's special importance in the war that is over. If I remember right, I had occasion some time ago to refer to the plethora of funds in the hands of the local population, thanks to the war contracts that were executed in this Province and the presence of large numbers of servicemen. The prosperity which Assam saw during the war cannot be allowed to become a mere flash in the pan. The good of the Assamese is not the only consideration in this regard. India has moved far from the time when the North West was considered the only vulnerable part of our frontiers and other parts could be neglected. In the second world war, it was the Assam frontier that was most threatened. And if it is true that another war cannot be put out of consideration

altogether, the development of Assam and the contentment of its people are important factors in the future security of India.

The indispensability of planning cannot however make the technical aspects simpler or easier. It is too soon for me to seek to give even a definiteness of outline, not to speak of concreteness, to the ideas that are forming in my mind in regard to the planned development of Assam. But as one who has given a great deal of thought to planning in Indian conditions, I have little hesitation in saying that it is wrong to regard the various parts of an economic plan in the same way as you would look at the items of entertainment in a variety programme. No doubt, they have all to be thought together as a composite whole. There has to be variety, genuine value in each item and an order of succession. But there has also to be a readiness to shift the order when a change in the circumstance seems to call for it. About this time last year, nobody thought that the war in the East would come to an end so soon. Our ideas of planning were formed on the assumption that we should build from below, taking great care about the foundation, the supporting walls, the quality of the material used and all the rest of it. But peace has come sooner than we had any right to expect. And in this context peace must be deemed an unwelcome development. If the fair weather necessary for building operations should unexpectedly yield place to foul, it is not wrong to insist that we might even try to build from the roof down, that is, in so far as the law of gravity will permit it.

It is time I discarded metaphors which are inevitably confusing beyond a certain point. What I meant to emphasise is the need to revise the order in which schemes ought to be taken up because the war has ended sooner than expected. Planning has to serve an immediate and imperative purpose of preventing a thorough disorganisation. I am therefore inclined to the view that what time atten-

Save your Mysore sandal soap

In these days it isn't easy to cope with the demand for this exquisite soap. Help us by using it economically. Wet your hands and make a lather with the soap; rub the lather and not the soap on your face and body; keep the soap-dish dry—your soap will last longer.

tion is paid to the basic conditions such as education, public health and the like, the schemes which will increase productive employment and add to the wealth of consumable goods should also be worked out without the least avoidable delay. A Province like Assam has greater need to hurry up the execution of productive schemes under the ownership and management of the Government than any other Province. Most other Provinces have a large business community which, whatever its real capacities, can set up a formidable clamour for more opportunities of private business. In Assam, new schemes will have to wait long, if they are to be run by private businessmen belonging to the Province.

There are other and perhaps even more convincing grounds for the Government of Assam taking a large share of the work of economic development of the resources of the Province. In the first place, the large schemes which I said need to be taken up immediately as a counter measure to the post-war slump are in the nature of public utilities, where, it is now agreed on all hands, private enterprise is more or less wholly out of place. Take hydro-electric development, for instance. Usually, private enterprise would be unwilling to step in unless the demand for it is there already waiting impatiently for the completion of the projects. To say that it is hydro-electric schemes that must develop the demand for energy would appear to most of our entrepreneurs like putting the cart before the horse. But in economic planning there is no such thing as putting the cart before the horse. Since the Province can make no progress of any kind without the development of power and since industries can be developed only if there is an assurance of power supply the Government will have to step in and accomplish power development first and then industrial development also, since the one cannot remain without the other.

The third reason for my insistence that the Government should take on itself the brunt of planned development is that from the point of view of public finance, it has no reason to neglect or despise any possible source of additional revenue. I attach the greatest importance to the observation of Sir Jeremy Raisman in his last budget speech that in this country too little thought is given to the possibilities of increasing revenue by increasing the commercial enterprises of the State. The Government of India has derived a lot of revenue during these years from its commercial enterprises and that is sufficient proof of the extent to which State enterprise can stand the Exchequer in good stead. I hope no one will tell me that it would have made no difference if the Railways and the Telegraphs were private enterprises, as the profits of these undertakings would have flowed in large part into the Treasury in the shape of E.P.T. We know only too well what proportion of real profits is profits for purposes of taxation. The advantage of the State owning the Railways and telegraphs is solid and incontestable.

If this is true of the Central Government, which has the wealth of the whole country to tap, how much more true should it be of the Government of a poor

Province like Assam? And remember, private enterprise will either be indifferent to new propositions in Assam or ask for unconscionable terms. This would be the case with hydro-electric power, the working of Assam's coal mines on new and scientific bases, the stringing up and tightening of Assam's transport and communications and the establishment of the small number of new industries for which alone there is now immediate scope. All this, the Government have to take on themselves immediately. And it is only by the successful and profitable working of all these projects that Assam can hope to achieve all the ends that economic

planning has set before the country. The normal financial resources of Assam are even poorer than those of other Provinces. The vicious circle formed by the relation between taxable capacity and economic development is more vicious in this Province than elsewhere. And this vicious circle can never be broken unless the Government of Assam will take courage in both hands and start all the new enterprises for which there are good prospects. Such enterprises can arrest the post-war slump in employment and cheerfulness, lay the foundations of further economic development, give the State the

(Continued on page 782)

Free Press Journal SPECIAL ECONOMIC (TRANSITION FROM WAR TO PEACE) SUPPLEMENT

Like the rest of the world, India has emerged from six years of the costliest war in all history, badly battered and scarred, with her internal economy in a sad state of disrepair.

But, unlike the rest of the world which made use of the war to develop new industries and expand existing ones, India could not have any measure of industrial expansion worth speaking of.

This is not all; Indian industries were worked practically nonstop, without any regard for repairs, renewals and replacements. Her capital equipment has been overworked almost to scrap.

Precious materials, raw and manufactured, have been poured, to sustain war efforts, against accumulating sterling credits in London.

Prices in India rocketed to a height unknown to any other country in the world, barring China.

There have been controls on all sides, necessary perhaps for the moment. Should they continue still, and if so how long?

Industry and commerce have not only been deprived of opportunity to develop and expand, but their future in this severely competitive post-war world is gravely uncertain.

The "Free Press Journal", through its weekly Economics Supplement, has been trying to place before the public factual and objective accounts of these many difficult economic problems.

Now we are face to face with the thorny economic problems of transition from war to peace. Every industry, every trade, has its genuine grievances, its natural right to expansion, and its legitimate demands on Government.

The "Free Press Journal" will publish a Special Economic (Transition from War to Peace) Supplement on December 8, containing articles, couched in simple and non-technical language, written by men of thought, men of knowledge and experience—industrial executives, university teachers, and representatives of the various economic interests, producers, sellers and consumers.

It is aimed to cover all the major industries and trades and the many economic problems that are integrally connected with their growth and development. The following are among those selected for such discussion:—

Textiles, (Rayon, Wool and Silk)	Bicycles
Textile Stores	Radios and Electrical Goods
Jute	Drugs and Chemicals
Iron and Steel	(Fertilisers)
Cement	Agricultural Machinery
Paper	Arms and Ammunition
Sugar	Non-Ferrous Metals
Drugs and Chemicals	Films
Toilets and Cosmetics	Agriculture
Stationery	Plantations
Shipping and Ship-building	Cottage Industries
Automobiles	Transport—Road, Rail & Canal.
Aircraft	

Besides these, pressing problems of the day like measures of control and de-control, and the question of the participation of Foreign Capital and Management in Indian Industry, will also be discussed.

There will naturally be a review of the fundamentals of a national policy of protection for our industries.

In this effort, the "Free Press Journal" solicits the co-operation of all concerned.

A special feature of the Supplement will be an Open Forum for our Readers' views on any topic within the scope of this supplement. These contributions should not exceed 150 words each.

Contributions, fully supported by facts and figures, illustrated wherever possible, are invited from students of economic problems. All accepted articles will be paid for.

[All Contributions and communications should be addressed to the Economics Editor, "Free Press Journal", 21, Daini Street, Bombay, and should reach him before November 15, 1945.]

Olympus

(From Our Correspondent)

New Delhi, October 30.

The Government of India's ratification of the United Nations' Charter has been announced in the week. It would appear that our elaborate legislative machinery is only a show piece and that in important matters the Bureaucracy take the decision themselves. The legislature has been sought to be made a matter of pure convenience and this is not the first instance in which it has been ignored. There is perhaps some force in the argument that since the legislature has been dissolved and the new elections will not be ready until after the end of the year, it could not be consulted; the answer to that would be that a decision on the question should have been taken before it was dissolved or after it has been reconstituted.

India's postwar shipping policy was discussed in New Delhi last week. We are told that shipping with all that it means in the world of to-day is one of the most vital elements in the economic and strategic life of a country and that the Government of India are pledged to a policy of assisting in the development of an Indian Mercantile Marine. A brave statement, for what it is worth; and it is worth little considering that India's participation even in the coastal trade extends to only 20-30 per cent. Government's objectives are stated to be to obtain an increased share of the coastal trade, to obtain a substantial share in the Near East trades, a fair share in the Far Eastern Trades and a fair share in the trade between India and the U.K. the European Continent and the Americas.

I had occasion last week to refer to the provisions of the Government of India Act regarding Commercial safeguards. Government recognise that in many of the trades in which Indian shipping already participates or will in future wish to participate U.K. shipping has at present an exclusive or predominant interest. The Commerce Member reiterates that India has a just and rightful claim for a proper and adequate share of the shipping tonnage. What the public are interested to hear is how this is proposed to be accomplished. We are informed that the Government of India are in close touch with His Majesty's Government.

The acrimonious and fruitless debates in the Indian Legislature about fifteen years ago regarding the Indian Coastal Shipping Bill are now a memory but students of history will recall to mind the famous navigation laws with the aid of which British, Continental and American merchant navies grew. In Britain, there was over a period of two hundred years a series of navigation laws to encourage British Shipping and navigation. Some of the methods which were adopted may be mentioned; prohibition of the import into Britain of goods except in British vessels or vessels of the country which produced them; called the rule against third party carrying; the provision that goods imported in non-British bottoms should not be consumed in the country; such goods may only be warehoused at British ports for re-export; prohibition of the import of produce of Asia, Africa and America via a European port, the object being to obtain for British shipping a long haul from these distant continents and to prevent continental entrepôts making supplies to Britain. The effect of this provision was

that if there was a scarcity of some tropical commodity, stocks could not be replenished from a European market but the next cargo in a British vessel had to be awaited.

France adopted similar methods in building up her mercantile marine. She always had, like the United States, the monopoly of coastal shipping. The Surtax de Pavillon was a special tax on goods imported in vessels other than French or of the country producing them. Then there was the Surtax d'entrepôt aimed at the re-export trade of London and Hamburg.

The British navigation code was reputed to be the strictest in Europe and stricter even than of the United States. The Navigation Laws were repealed in 1847 when British supremacy in merchant tonnage and her position in the International carrying trade was unassailable. In India our small share even in the coastal trade is enjoyed by the courtesy of British shipping interests. There is in the world and in history no instance of a country which had a tariff which did not also have navigation laws to encourage its shipping. The Commerce Member's plaintive cry will not carry us far.

HULL-BRO.

The most famous Tyre

DUNLOP RUBBER CO. (India) LTD.

(Continued from page 771)

sible. It is reported that in Istanbul alone about 700 lorries have been immobilised for want of tyres. The price of tyres has rocketed up to undesirable heights. The Minister of Communications, General Ali Fuad Cebesoy, is now examining a plan to speed up the mercantile marine of Turkey. Recently a delegation visited America with the object of buying vessels urgently needed for re-organising Turkish mercantile marine. Canada, it appears, has agreed to build four or five 4000-5000 ton cargo boats for Turkish requirements. Since the cessation of hostilities in the European front active steps have been taken to release Turkey's ships for plying freely in the Mediterranean. Boats which have been laid up during war and motor boats used in coastal traffic will shortly be calling at foreign ports. The French are reported to be anxious in buying back the 11 vessels sold to Turkey some years ago. If the transaction is completed, Turkey would have 5½ million liras which can be used for buying new craft.

As regards railways, Turkey gains by acquiring the line between Uzunköprü and Karagach from the Greeks. On the communications front, a scheme has been evolved already for scrapping the old Morse telegraphic apparatus and for replacing it with more modern equipment. The target seems to be an up-to-date radio telegraphic communication for Turkey. A country so badly served by railways and other land routes has to depend upon the sea lanes and air transport. Passenger planes necessary for a good start are already on the way from America, and if U.K. or the U.S.A. work according to schedule in supplying the 1000 or 2000 lorries for which orders have been placed, the road plan for Turkey evolved some time ago can be made an early success. The Ministry of Communications have also drawn up schemes for improving the telephone, posts and telegraph services and if the plans are initiated at an early date, Turkey would face the future with the minimum requirements on the transport sector of national economy for purposes of industrialisation.

Relief for the Small Tax-payer

Among the British Chancellor's proposals in regard to tax relief in the coming financial year those regarding income-tax aiming at the restoration of personal allowances which would exempt 2,000,000 persons from liability to tax are significant. Illustrating the extent of relief the Chancellor stated: that no single person would have to pay income-tax next year unless his annual income exceeds 57 shillings a week; no married couple without children unless it exceeds £3. 17; no married couple with one child unless it exceeds £4. 18; no married couple with three children unless it exceeds £7. 1. and no married couple with five children unless it exceeds £9. 3.

Let us attempt to put the proposals in a form in which their significance will be more readily understood by the Indian public; they mean that an English married couple without children with an annual income corresponding to Rs. 2,704 pay no income-tax whatever; that a married couple with one child with an annual income corresponding to Rs. 3,432 pay no income-tax whatever; that a married

couple with three children with an annual corresponding to Rs. 4,888 pay no income-tax whatever; that a married couple with five children with an annual income corresponding to Rs. 6,344 pay no income-tax whatever. In India a married couple irrespective of the number of children and generally speaking they are numerous, with an income of Rs. 2,704 will have to pay income-tax of about Rs. 90 at the rates of tax and surcharge in force in 1944-45; a married couple with an annual income of Rs. 3,432 a tax of Rs. 156; a married couple with an income of Rs. 4,888, a tax of Rs. 273 and one with an income of Rs. 6,344 a tax of Rs. 450. Indian families in general are more prolific and it is a universal condition in the country that the poorer they are and the smaller their income, the more numerous are their families. And yet the Government of India have been advised by experts that "the taking into account in determining the amount of tax payable of the domestic circumstances of the married assessee would be comparatively ineffective since the married state is the general rule in India and the proportion of unmarried assessee is not great enough to justify the complication that would be involved in an attempt to differentiate in favour of the remainder" and that "unless the total yield of tax were to be seriously diminished, it would be necessary to counter balance the concession of the various

allowances claimed by increasing the rates of tax with the result that the principle of differentiation would be little more honoured than at present." The specious nature of the arguments will be obvious. This was ten years ago and although our tax system is based on this view to date, one may hope that in a matter of transcendent equity petty considerations of administrative convenience will not prevail. Fortunately there are indications that the interests of the small man have begun seriously to attract the attention of the Government of India and we may expect that before long his just claims will receive due recognition.

AGENCIES IN ALL IMPORTANT CITIES OF INDIA

South India

(From Our Correspondent)

Madras, October 30

The Madras Government, it is understood, is shortly issuing a series of booklets outlining its reconstruction plans, in most of which the employment of released servicemen is an important consideration. One of the priority items in the Government's programme is the provision of road projects costing crores of rupees and giving employment to thousands of demobilised soldiers. Another item is the construction of public buildings. These works will be undertaken by Co-operative Labour Societies composed of demobilised personnel and are considered to be of immense benefit to the demobilised soldiers. The Railways have embarked upon a vast tele-communications programme to improve and speed up train services. Wireless has been introduced to give a direct and flexible means of communication. Many other improvements to train and traffic control offices are also in operation.

Pointing out the heavy damage caused by the cyclone on the East Coast, Mr. T. Prakasam, President of the East Coast Cyclone Central Relief Committee, has appealed to the citizens of Madras to contribute liberally to the fund. He has stated that the sum of Rs. 5,000 sanctioned by the Madras Government to each of the affected districts for immediate relief will not be sufficient in view of the seriousness of the damage caused. Hoping that the Government would realise the seriousness of the situation and come forward with further aid to the stricken people, the President proposes to make arrangements for distribution of building materials for rebuilding houses. The relief centres functioning at Guntur, Masulipatam, Cocanada, Bezawada and other places should work in co-operation with the Central Relief Committee. He requests the various Chambers of Commerce, public bodies, businessmen and other philanthropic institutions to assist the stricken people in the hour of need.

Interviewed by the Associated Press of India on the famine conditions in Bellary and Ananthapur, Pandit Hridayanath Kunzru remarked that as the surplus rice available from the year's crop would soon be exhausted, and that the quantity allowed for rural areas would be utterly inadequate to satisfy the needs of the districts. Production would be affected seriously if the drought prolonged further. There was scarcity of rice in both the districts. The leaders of Ananthapur suggested an irrigation scheme which should be made an important feature of the five year development plan of this Province and that arrangements should be made with the Railway authorities for transshipment of rice and its despatch by rail to both the districts.

The Joint Textile Commissioner, in reply to a memorandum, drawing attention to the needs of the handloom industry in Coimbatore, remarked that his department was trying its best to help the handloom weavers and yarn merchants. They could not meet the demand of the weavers in full owing to the limited quantity of yarn available. Now there were more handlooms in the Province and still it was getting only its old rate quota. To meet the needs of the Province, the Government was obliged to restrict the export of handloom products outside the Province. He assured them that he would try his best to redress their grievances and would consider the question of dyeing charges.

Declaring open the Mysore State Depressed Classes Conference Dr. T. C. M. Royan,

minister for education and public health said that the Government had adopted a progressive policy designed to improve the lot of the Depressed Classes. In the field of education, agriculture, industry, recruitment to the state service, and in conferring special privileges, that policy had secured substantial good for the community. It was the earnest desire of the Government to provide equality of opportunity socially, economically, and culturally. Too much dependence on the Government killed initiative, enterprise and freedom of action. The Conference, he said, should become a fruitful organisation and their work must reach every district and taluk.

Discussing at great length the food situation in the State of Mysore, the Dasara Session of the Mysore Representative Assembly criticised the policy of the Government in not encouraging their own ryots by paying them proper prices for produce. Due to the mismanagement of the Food Department the Government had incurred a loss of several lakhs of rupees

The distribution system had not proved satisfactory. It was the duty of the Government to improve agriculture by giving encouragement to the ryots. Regarding the question of fair prices it is assured that the ryots would be protected by the Government by making every endeavour to secure proper distribution and supply of food stuffs to the people.

Replying to the welcome addresses presented to him by the Indian Chamber of Industries and Commerce, Bezawada, and the Chundri's Charities' Trust, Sir C. V. Raman the eminent Scientist, made an emphatic plea to the Indian Industrialists to concentrate on manufacturing machinery in India. He opined that the general tendency on the part of the Industrialists in India had been to import machinery from abroad and produce numerous articles in order to accumulate enormous profits. He wanted all Industrialists to produce complete machinery making use of the available raw materials. He pointed out the vast and varied scope in this direction.

Airway Port

(From Our Correspondent).

Karachi, October 26.

A fortnight of intense political activity at Karachi has climaxed in the complete discomfiture of Mr. Jinnah and the League High Command. With Bengal shaky, the United Provinces galvanised by the crusade of Pandit Nehru, the Punjab dominated by the Unionists, it was the aim of Mr. Jinnah to make Sind the lynchpin of his Pakistan and his ambition was to capture all the 35 Muslim seats. But he did not bargain for the inherent flair for intrigue in this Province. For the 35 seats, there were as many as one hundred applicants. In the nature of things, it was impossible to give League tickets to all of them. In the Muslim camp itself, there are several groups in Sind. There are the Mirs, the Pirs and the Syeds, each jockeying for power. When members of the League High Command came here, they established a Provincial Parliamentary Board and left the selection of candidates to them. But the provincial League Council met and passed a resolution that they had no confidence in the Provincial Board. It was at this time that Mr. Jinnah burst upon the scene. On his way to Quetta, he camped here and wrestled with the complexities of the local situation. His mission was to achieve unity in League ranks.

The stormy petrel of Sind politics is Mr. G. M. Syed, who has all along been a rebel. He would not brook dictation from any outside body in provincial affairs. He has created plenty of headaches both for the League Ministry as well as Mr. Jinnah. At the outset, he made a pose of surrender to Mr. Jinnah, but when he discovered that his group would be nowhere in the elections, he revolted. Nawabzada Liaquat Ali Khan, Nawab Ismail and Mr. Hossain came to Karachi a week back with the idea of bridging the gulf in the League ranks. They held protracted parleys, but found that they could not bring about unity between the various groups. Ultimately, they whistled for Mr. Jinnah, who came here five days back from Quetta. He met all the local leaders and ultimately, the names of 27 candidates for the Assembly approved by the Central Board was announced. It was a slap to Mr. Syed, whose group got only paltry representation. The result has been an open rebellion. Mr. Syed after consultation with his followers intends announcing independent League candidates. Thus complete chaos prevails in the League camp in Sind. Whatever might be the result of the elections, Pakistan has gone by the board. Congress election prospects are very rosy and if a few Nationalist Muslims get returned, there is the possibility of a non-communal Ministry functioning in Sind. The Congress Party hopes to capture at least twenty seats.

The mercantile bodies in Karachi have taken up the question of the Indianisation of higher posts in the Karachi Port Trust with the Government of India. Though this question has been agitating the minds of the mercantile community for the last two decades, in spite of its declared policy of Indianisation, the Government have done very little in the matter. The argument of insufficiency of Indians with the requisite qualifications for such posts was for many years resorted to in denying the demand of the mercantile community. The Karachi Indian Merchants' Association and the Buyers and the Shippers' Chamber took up the matter with the Government of India in 1940 for the Indianisation of the post of Chairman of Karachi Port Trust. The representation was supported by the Federation of the Indian

Chambers of Commerce and Industry. But one Mr. Busby was selected for the post. His term expires in December and the demand for an Indian Chairman has again been revived. There is a rumour current in the city that Mr. L. T. Ghollap, I.C.S., ex-Finance Secretary of Sind Government, who is at present Shipping Controller might be selected for the post.

A letter of protest condemning the policy of the British Government in using Indian troops in Indo-China, Malaya and Dutch East Indies to suppress the freedom movement in those countries is the subject matter of a resolution passed by the Managing Committee of the Indian Merchants' Association at a recent meeting.

Mr. B. R. Patel, Director of Civil Supplies, Sind, who has returned to Karachi after attending the food conference at Delhi stated in an interview that there was no fear of the recurrence of famine in Bengal. The Bengal Government as also the Government of India had taken up adequate measures to meet any shortage of foodgrains, natural or artificial, in any district by storing large quantities of grain for emergency. He also said that the Government of India had decided not to export foodgrains outside India as in the past years.

The Sind rice crop this year, which has started coming to the market is reported to be a bumper one—in excess of five lakhs of tons. It is learnt that Sind's total consumption per annum is about three lakhs of tons. Accordingly, Sind has committed itself to export the remaining two lakhs of tons to the deficit areas—Bombay, Madras, Travancore and Cochin within the period from November 1, 1945 to December 31, 1945.

It is learnt that the Government of Sind have arranged to import 1,000 tons of bajri from the Punjab. This would enable the local authorities to replenish their stocks so that bajri might be available in the rationed areas of Karachi and Hyderabad throughout the year.

The Karachi branch of the Hindustan Commercial Bank was formally declared open by Rao Bahadur Shivratn Mohatta. In doing so, he said that the war had done one good to India in that it had given a fillip to the banking industry in this country. He warned bankers however of the danger ahead of concentrating in large urban areas and advised them to spread out in rural districts also.

"The preponderant influence of India in shaping world opinion is increasingly realised

in all responsible circles in Great Britain, the United States and Canada," observed Mr. B. T. Thakur, General Manager of the United Commercial Bank, who passed through Karachi, after his two-month visit abroad. He added that wherever he went, he found a general desire on the part of the people to see India industrialised so that she could act as a stabilising force in world politics. He discussed leading bankers in the United Kingdom, the United States and Canada and discussed with them the problem of India's sterling balances. They were impressed by India's contribution, both material and financial, in winning the war. They felt that the problem of sterling balances must be solved in a manner satisfactory to India and the world alike.

The possibility of every villager in Sind and elsewhere in India being in possession of a cheap radio set the value of which would not exceed Rs. 50 was envisaged by Mr. M. E. Chivers, an industrial investigator into the radio industry, who has just completed five weeks' tour of India. The set would be adjusted to provincial wave lengths with a range of about 500 miles.

Sir Archibald Rowlands, Finance Member of the Government of India is at Karachi. His visit is in connection with discussions regarding the financial aspects of post-war reconstruction schemes vis-a-vis the Government of India and Sind. Sir Archibald has conferred with Sind Ministers and reconstruction authorities.

AGENCY IN ALL IMPORTANT TRADE CENTRES

A Resume of Commodity Markets

There was a slump in the raw cotton market following the announcement regarding the reduction in prices for both cloth and yarn to be effective from the beginning of November. Bullion markets continued firm though with the weakness of raw cotton and the anxiety of bulls to take profits, the discount for forward positions widened. In the raw jute and jute manufactures markets, there is nothing of importance. Mills are still keeping out and are awaiting further developments.

With the continued weakness in the Heavy Goods section, in spite of the recent Government orders, and the anxiety of mills to do business for forward deliveries, generally easier conditions have been noticeable in both the raw jute and jute manufactures markets. It is feared that in the absence of any large increase in shipments local stocks might increase and that if the Far Eastern situation does not show any signs of improvement at an early date, mills might be even obliged to accumulate unsold stocks. No decision has yet been reached regarding the de-requisitioning of mills and there is considerable speculation over the recent visit of the Jute Controller to New Delhi.

Even if a large number of mills were de-requisitioned no substantial change in the position is expected. There will be work for all the mills as considerable arrears have to be made up but it would not be possible to bring about a proportionate increase in production. Immediately after the de-requisitioning of particular mills, the Foster units might work only on a single shift basis. What exactly will be the immediate effect of de-requisitioning on the industry is perhaps a little too early to say.

The raw jute market, however, has been unaffected by the speculation over the prospects for the jute industry. It is felt that stocks in upcountry centres are rather large and that even with the larger mill consumption in the rest of the season, it may not be possible to absorb all surplus supplies. Unless mills were asked to buy definite quantities in a stipulated period and efforts were made to increase exports of raw jute, it may be even difficult to stabilise prices around the minimum level. This question seems to be under consideration of both the Central and Provincial Governments and the recent orders for Heavy Goods might be calculated to lend support to the market and enable mills to effect larger purchases of the raw material. But in view of the recent reports that mill purchases up-to-date are in excess of last season and that stocks on hand will enable them to complete their orders without any difficulty, a clarification of the position in regard to the future of jute prices, is necessary.

The raw cotton market registered a rather sharp decline in prices in the past few days on the announcement that the Liverpool market would not re-open for futures trading and that there would be a fresh reduction in prices for both cloth and yarn. It was also reported that the yield from the current season's crop would be higher even though the acreage registered a decrease of 12 per cent. The prospects for exports of Indian cotton have not been so far encouraging but it would appear that the decline in prices was due mainly to the reduction in ceiling prices for cloth and yarn and the feeling that new crop trading commenced at a rather high level. Bulls are now feeling that the quotation for Jharilla cotton cannot be very much higher than the September contracts which expired some time back. It is true that the parity price of American and other cottons are higher and that Indian cotton would com-

mand a greater market if movement were more free and adequate shipping space were available. But apart from the possibility of a slight increase in exports to the U.K. there is no hope of any large increase in consumption by the textile industry in China and Japan.

Pending further satisfactory developments prices for raw cotton may not, therefore, show any appreciable improvement. The only redeeming feature from the point of view of the cotton-grower is the report that coal supplies to the Indian cotton industry have been increased to a great extent and that in the next quarter the output can be expected to be at the highest level.

The reduction in the ceiling price for cloth and yarn was announced by the Chairman of the Textile Control Board at its meeting held in Bombay on Friday last. The reduction applies to all prices of grey cloth and amounts to 2 annas in the rupee on very coarse cloth made from Indian cotton, 1½ annas in the rupee on all coarse counts of cloth made from Indian cotton, ¾ anna in the rupee on cloth made from African cotton and ¼ anna in the rupee on cloth made from Egyptian cotton. The cut in yarn prices works out to 12 annas per 10 lbs. bundle on counts from 4's to 15's and 8 annas per 10 lbs. bundles on all other counts. These prices are to be effective from November 1, 1945.

The Chairman added that a further reduction in prices was dependent on the revision of the taxation policy of the Central Government.

The question of distribution also was considered and it is reported that decisions have been reached to prevent the accumulation of stocks in the hands of wholesale dealers in the various centres. In spite of

the changes in the distribution scheme in recent months and the stricter supervision by Provincial Governments, supplies of cloth and yarn have not been reaching the average consumer regularly. Recently there have been many complaints to the effect that there is acute scarcity in certain areas. Even when large stocks were held by wholesalers they were not in a position to release their stocks to the public. The Chairman suggested that the Central Government should issue a directive to all Provincial Governments and Indian States to the effect that cloth and yarn held by wholesale dealers should be automatically free for sale after it was held for thirty days unless the disposal orders were received before the maturity date by the dealers.

The working of the Utility Cloth Scheme also has been reviewed. It is proposed to prevent mills from manufacturing any cloth which is not marketable and not in demand. It has been stated that certain mills have produced coarser varieties, which are not acceptable to the public, to a larger extent and that only smaller quantities of finer styles have been manufactured, though in these cases an attempt has been made to maintain quality even higher than the standards prescribed under the scheme. The consumer will be grateful to the proposal that the output of dhoties and sarees in wider widths of looms and longcloth will be considerably increased. But more than any other statement the reference to the possibility of a relaxation in control measures from the beginning of next year is welcome. The improvement in the supply position after some time might be so pronounced as to enable the authorities to do away with all control measures except price fixing so that the consumer

(Continued on page 782).

DIWALI GREETINGS

To our many friends whose co-operation and understanding have helped us through the difficult days that are passed.

With them we look forward to a better future.

THE TATA OIL MILLS COMPANY LIMITED

Jute and Jute Manufactures

Special to "Indian Finance"

(From Our Correspondent)

CALCUTTA, Oct. 31

Several trade interests are apparently in some doubt as to the true position with regard to the tenure of the Government controls affecting the prices of loose jute. Last week, in attempting to analyse the causes of the present lack of buying interest we stated, in effect, that mills, in determining their policy for future purchases of raw material, might be assisted therein by a declaration of Governments' intentions with regard to the fate of the existing Jute (Price Control) Order, adding that 'the Order will expire in March next year'. What we had in mind was a Press Note issued about the middle of February last stating that the Government of India will guarantee a minimum price of raw jute on the basis of Rs. 15/- per maund for Jat Middles at Calcutta and at the appropriate parity price at selected jute purchasing centres upcountry. The Government of India were also to fix a maximum price for raw jute on the basis of Rs. 17/- per maund of the same quality at Calcutta, reserving the right to requisition on the basis of this price. The Government would undertake to buy all crop offering, old and new, at Calcutta and at selected upcountry centres in Bengal with a view to maintaining the required price level.

This agreement which was reached between the Central and Bengal Governments, the Press Note stated, will be in force between the two Governments till 31st March 1946. The same Press Note also announced that the Jute (Price Control) Order 1944 fixing maximum selling prices for manufactured jute goods will be in force.

The Gazette of India dated 6th October 1945 carried the notification of an Order entitled the Jute (Price Control) Order 1945 (referred in our issue of 20/10/45) the effect of which was to repeal the Jute (Price Control) Order 1944 and to replace it by the Jute (Price Control) Order 1945. The terms of the latter Order are identical with those of the former Order except in sections 5 and 6 which are new and in which do not concern sales of loose jute in Calcutta.

We have it on good authority that the tenure of the Current Jute (Price Control) Order is indefinite and that no time limit has been set which would fix the date for the expiration of that Ordinance.

The September issue of the 'Journal of Scientific and Industrial Research' contains a most interesting and informative article on the potential uses of jute waste written by Mr. C. R. Nodder of the I.C.J.C.'s Technological Research Laboratories.

In the course of his article Mr. Nodder explains how jute cuttings are passed through a teaser-card and the waste from this machine together with the waste falling below other cards, looms etc. is taken to a machine termed a "dust shaker". In this operation the fibrous material is retained and can be re-used for mixing in sacking weft batches. The dust and waste rejected by the "dust shaker" forms the only real waste and is often burnt in the boilers.

The dust shaker waste is too dirty for use in the manufacture of paper as its cellulose content is low but there is some possibility, Mr. Nodder states, that it

might be of use in the manufacture of synthetic plastics, though it is doubtful if it could be used without being largely supplemented by other materials such as the short fibre from the dust shaker and by fillers such as wood flour or jute fibre of reasonable quality and moderate purity. In considering possible uses, it is to be remembered that it may contain 5 per cent or more of mineral oil. There may be possibilities of using it, along with other combustible materials, in making briquettes for fuel. Mr. Nodder also considers that possibilities for the shaker fibre exist in the manufacture of needle felts and tarred roofing felts and the like.

There are also a number of products obtained in Jute processing which may be diverted to other uses instead of being re-used in spinning. There are—

- (a) Cuttings (stiff barky fibre cut off from the long jute).
- (b) Caddis (short fibre that falls below cards, drawing frames, looms, cropping machines etc.) and
- (c) dust-shaker fibre.

Cuttings may be used along with other raw materials (rags, sabal grass etc.) in the manufacture of low to medium quality paper, cardboard etc. Their price, including cost of transport to the paper mill, is the factor which determines whether or not this is worthwhile. A certain amount of Cuttings has been so used from time to time for a long while. Some forms of caddis, especially hessian loom caddis and cropper caddis, are of fair purity and could be used for paper of a better quality than that for which Cuttings are suitable. Price, at the Paper Mill, is again the governing factor. Jute fibre is a good insulator for heat and there are possibilities of using caddis as a packing material for such purposes, either loose or compressed. Teased cuttings are cheap and might be similarly used.

Dust-shaker fibre can be used for low quality paper and for making strawboards and insulating boards (for sound and heat) and similar products. It has been found suitable, after disintegration, as a filler in plastic compositions for injection moulding.

Fibres of very low quality, such as that extracted from jute left in the field until the seeds are ripe, falls along with Cuttings as regards possible uses. Jute waste can hardly compete with cotton linters as a

raw material for rayon, on account of the high proportion of non-cellulosic impurities.

Mr. Nodder says that the paper trade is doubtless aware of the possibilities and would have taken advantage of any materials offered at a suitable price. Generally speaking, prices in relation to that of competitive products, and the costs of transport, are the facts which mainly govern the development of uses of jute by-products. As mills are able to use very low quality fibre for sacking weft they are not faced at present with serious problems in disposing of waste and as such, concludes, Mr. Nodder, no revolutionary development could be visualised in the disposal of shaker waste.

All sections of the jute market have witnessed a repetition of the very dull conditions reported during the past few weeks.

In the Pucca Bale section there is nothing of importance to record and dealers are free sellers for all descriptions, except special marks, at minimum prices.

Small business passed at minimum rates in the Loose Jute market where large quantities of all qualities are on offer with sellers pressing for business.

At the time of writing the Manufactured Goods market is slightly steadier at the decline but with no overseas support there is plenty of 'bear' selling in evidence by the bazaar in the forward positions. Quotations are nominal in the absence of any business of importance but it was reported that one group of mills sold Cornsacks (with the option of Liverpools) at Rs. 60/8 for Jan./March shipment. There were also reports of B. Twills having changed hands in the bazaar at the end of last week at the rate of Rs. 64/- for Ready delivery.

The following are the quotations on Wednesday 31st Oct. 1945:—

	Ready	Nov.-	Jan.-	April-
	Rs. a.	Dec. a.	Rs. a.	June. Rs. a.
8 oz. 40 ins. Hessian	21 12	21 8	21 0	20 2
10 oz. 40 ins. Hessian	28 0	27 0	25 12	25 4
Plain C's	64 4	64 0	60 12	59 12
'B' Twills	63 8	62 2	59 8	58 8
Liverpools	70 0	69 8	67 8	67 0
Cornsacks	62 8	62 8	60 8	59 12

resources necessary for expenditure on adequate schemes of education and public health and set Assam on the industrial map of India.

Without attempting to outline or list such schemes, I may end the week's gossip with a reference to the salient features of Assam's economic life. Assam has a population of 11 million of which 89 per cent according to the last census are employed in agriculture. Transport facilities are poor with only 1,300 miles of railways and 6,000 miles of roads of which only 700 miles are metalled against an area of 67,000 square miles. The difficult terrain and the uneven distribution of rivers make transport one of the most difficult problems the Province has to face. But the natural resources are far from inconsiderable. Coal occurs in much larger quantities than are being mined under the present difficult conditions of transport. The scope for hydro-electric development is large, though there are some nice technical problems to be solved. Agricultural products are varied but some of the staple industries of India are yet to be established there. Assam's forests can be as good a source of wealth as her cultivated and cultivable fields. The development of all these resources can be accomplished stage by stage; but the necessary preliminary of all that development is the courageous attitude of the Government.

EAVESDROPPER.

(Continued from page 780).

will be free to get his requirements without any difficulty.

Regarding the working of the Utility Cloth Scheme, the Chairman's remarks are uninteresting:

"During the period under review, production has been maintained at the optimum possible level. The introduction of the Utility Cloth Scheme has resulted in an increase in production which in the case of mills in Bombay Panel Area amounts to 3 to 7%. It has not been possible to estimate the increase in production over all the mills in India. The necessity of continuing the Utility Cloth Scheme in view of the cessation of hostilities and consequent substantial shrinkage in the volume of Defence Service orders has been discussed in some detail by the Rationalisation and Standardisation Sub-Committee of the Industry's Committee who have recommended certain changes in the scheme with a view to preventing mills from manufacturing any cloth which is not marketable and is not in demand. Certain drastic restrictions have also been placed on mills manufacturing dyed and printed cloth. These steps will, it is hoped, go a long way in allaying the public misapprehension about the scheme and also to ensure the supply of such types of cloth which are largely in demand. For example, the production of dhoties and saris in wider widths of looms and longcloth will be considerably increased."

The bullion market has been quite steady. Gold ready fluctuated around Rs. 78-8 and Silver ready Rs. 133. There has been some selling for forward positions but the general undertone is steady. The reported failure of the Anglo-American talks had a slightly encouraging effect but it is generally felt that a compromise will be reached and trading in the new year might witness a decline in prices.

Agrarian Reforms in Egypt

Like India, Egypt suffers not only from want of facilities for speeding up industrialisation but the need to correct the un-economic distribution of land has also been felt for some time past. The percentage of the landless proletariat has been rising during the recent decades and owing to war-time inflation there was a marked tendency for land to get concentrated in the hands of a few people. A position has arrived when any measure intended to increase agricultural prosperity served to help the upper classes more than the cultivators down below. The distribution of land in Egypt is un-economic and its social effects are also felt to be quite unsatisfactory. The Egyptian Government is, therefore, planning to improve the position of the small peasants or the Fallaheens and the landless labourers. Three-fourths of Egypt's land owners are known to possess an average of two-fifth of a Feddan and the income of the small peasants has only been £E 20, possibly the lowest in the world. That the agricultural set-up of Egypt requires re-modelling and reorganisation can be easily inferred by the fact that about 1,450 persons own 2½ million acres (38 per cent) of the arable land. Statistics show that in the Province of Assuan more than half the total acreage is owned by 13 landlords. The Egyptian Government appears to be convinced now that any scheme for the improvement of the standard of living of the peasants can only be possible if the enormous disparity of income and property is reduced at an early date. As a first step to achieve the purpose it is proposed that at least ¼th of the acreage in each village should be the property of the small land owners. Under the present conditions this proposal involve the expropriation of ¼th of the land owned by the big land owners in some areas but the Government proposes to purchase land and resell it to the landless labourers and small Fallaheens on long term and easy instalments. An additional facility proposed to be given to the cultivator is that the Government should buy a buffalo for every farmer possessing less than half a Feddan and for every tenant cultivating less than 2 Feddans. The payment will be adjusted to the convenience of the beneficiary. To ensure that the agrarian reforms are not nullified in practice, it is laid down that the Fallaheen should not sell his cattle to others but should allow the cattle to be supervised by the veterinary officer. The scheme will now be introduced in two villages and if the experiment is

successful, will be extended to other places. The funds required for this scheme are not inconsiderable but the five-year plan has already made provisions for this.

SATURDAY NOVEMBER 3, 1945

Price Re. 1

Stock Markets to-day and to-morrow:

BIRD-HEILGERS COAL GROUP RESULTS

After earlier quietude there has been a firming up in the stock markets in both Calcutta and Bombay. Even with the approach of the year-end for Gujaratis and Marwaris prices have been marked higher and there has been no effort to make the usual year-end adjustments. As a matter of fact, for some time the significance of the year-end has been overlooked and operators have not been very anxious to make the usual tax adjustments. The general recovery in the markets in the last three days is due to the satisfaction with the dividend announcements by Anglo-India, Fort Gloster and Fort William and the persistent reports that Howrahs also may pay a higher dividend for the half-year ended September 1945.

In the Bombay market, too, on reconsideration it was accepted that a reduction in the ceiling price for cloth and yarn would not affect earnings adversely to a proportionate extent as output is expected to show a further increase and cotton prices are relatively lower. Considerations of tax relief also have given rise to the feeling that there may not be any appreciable reduction in the dividend distribution in respect of the current year's working. Reports that the labour unrest in Jamshedpur has not led to any stoppage in production at the works of Tisco and that the difficulties would be got over, have resulted in a recovery in Tata deids. and ordys.

The change in general sentiment has to a certain extent been surprising but there was a feeling that developments in both the national and international spheres have not been properly appreciated and that the significance of the British Government's policy regarding cheaper money and the reduction in British taxes were not fully understood. With the weight of surplus funds still seeking investment and the possibility of substantial relief under

E. P. T. and income-tax, as pointed out last week, industries having a low profit in the standard period stand to gain considerably.

As expected, the Bird & Heilgers group of coal companies have been able to report a higher level of earnings. A higher dividend (details were given last week) is to be paid by the Burrakur Coal and Standard Coal Company. The Bhulanbararee Coal Company is able to report satisfactory progress but the heavy liability under taxation prevented the payment of a higher dividend.

The report of the Burrakur Coal Company Limited, for the half-year ended June, 1945 has come as a disappointment to the market. As there is no large increase in earnings the higher distribution to shareholders has been only due to the smaller tax provision. The net profit, before providing for taxation and depreciation, is Rs. 24,87,905 against Rs. 24,68,709. Raisings and despatches were considerably higher than the figures for the previous half-year, raisings being 5,44,277 tons against 4,64,086 tons and despatches 5,28,168 tons against 4,73,448 tons. The Company has earned Rs. 4,71,533 under the First Target Bonus Scheme and the maximum of Rs. 1 lakh under the Second Target Bonus Scheme. Credit has been taken to the extent of 75 per cent of the estimated earnings under the bonus schemes in the latest accounts. The higher raisings were due to quarrying operations in the Teetulumuri quarry, the Directorate of Open Cut Coal Mining continuing to provide mechanical equipment. Owing to the seasonal drop in output the earnings under the target schemes for the six months ending September, 1945 are expected to be considerably lower. Only Rs. 50,000 is estimated to be earned under the First Target Bonus Scheme and Rs. 1 lakh under the Second Target Bonus Scheme. In view of the fact that earnings have not shown a proportionate increase with raisings and despatches, production expenses are considerably higher. It may not be possible for the company to pay the same bonus as now, in respect of the current half-year's working.

The provision for taxation is Rs. 15,84,200 against Rs. 17.1 lakhs formerly while the transfer to reserve for post-war contingencies is Rs. 2.49 lakhs against Rs. 2.3 lakhs. The amount set aside to depreciation is Rs. 1,22,797 against Rs. 1,27,139. Premium written off on new purchases of Government securities is Rs. 3,438 against

Rs. 23,075. The dividend has been maintained at 8 annas per share but the bonus is higher at 8 annas against 4 annas. The amount carried forward is lower at Rs. 31,114 against Rs. 41,199 brought in.

It is satisfactory to note that the Company has proposed to incur large-scale capital expenditure on capital equipment so that it would be possible to effect a substantial increase in raisings. As special depreciation for taxation purposes has been sanctioned in respect of certain class of equipment, and this allowance amounts to 75 per cent of the capital cost to be written off in two years, it can be expected that a substantial portion of the sum involved can be found from tax relief alone. The largest single item in new expenditure is the projected sand ropeway scheme at an estimated cost of approximately Rs. 50 lakhs.

The Standard Coal Company has earned a net profit before providing for taxation and depreciation, for the half-year ended June, 1945 of Rs. 3,71,918 against Rs. 3,09,116 for the previous half-year and Rs. 1,52,799 for the corresponding period in 1944. The amount set aside to depreciation is Rs. 67,247 against Rs. 68,166 while provision for taxation is very much higher at Rs. 1.5 lakhs against Rs. 1.05 lakhs. The transfer to Dividend Equalisation Fund is Rs. 25,000 (same) and Stores Revaluation Reserve Rs. 25,000 (same). The dividend on ordinary shares has been maintained at Rs. 1 per share. There is to be a bonus of 4 annas in addition. The amount carried forward is slightly higher at Rs. 21,092 against Rs. 16,559 brought in.

Raisings during the half-year were slightly lower at 86,785 tons against 88,669 tons while despatches were 82,313 tons against 93,115 tons in the previous half-year.

THE BANK MANAGER SAYS...

"So you bought a nice little plot of land with half your savings and with the rest cloth, jewellery and other odds and ends. . . . Yes, prices were going up then and you thought you would make easy money by selling at higher prices. Well, the prices did not go up but went down instead and now you have lost a lot of money. I had warned you at the time."

Being a well-informed and a competent business man, the Bank Manager's advice to his client had been to avoid unsafe and speculative investments because their prices were high and the trend of prices was downwards and not upwards. His advice today is the same. Why not ask your own Bank Manager?

**PLAN TODAY FOR TOMORROW
SAVE ALL YOU CAN**

But remember to invest your Savings where they will be safe, and waiting for you when you need them.

Today's best and safest investments are National Savings Certificates, Savings Bank Accounts, Government Loans, Insurance, Co-operative Societies and Post Office Savings Bank Accounts.

Do not invest your money in land, buildings, manufactured goods, commodities or jewellery. Their prices are likely to depreciate.

SAVE SAFELY FOR THE FUTURE.

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, November 1.

Rather quiet conditions were noticeable on the Calcutta Stock Exchange earlier in the period under review and there was no great disposition to enter into fresh commitments. With the year-end, Bombay was irregular and there was a tendency on the part of local operators also to await further developments. The market was not devoid of any new features, however. There was a sudden rise in Howrah and a general broadening of interest in the Jute section on expectations that after some time there will be a large increase in the demand for jute goods and that jute mills will be able to improve earnings. The Coal section has been uninteresting throughout while Engineering shares did not show much activity. Sugar shares, however, were fairly steady. In the Miscellaneous section, there was a sudden rise in the quotation for Calcutta Trams. Calcutta Electrics came down to Rs. 42, but closed slightly higher at Rs. 43. After Wednesday a slightly better feeling has been noticeable and in Thursday's session a general rise in prices was recorded. The declaration of higher dividends by prominent jute companies has had a stimulating effect on all the sections.

In the gilt-edged securities section, steady conditions continue to prevail though in mid-week, there appeared to be a tapering off in demand and $\frac{3}{4}$ per cent Paper was temporarily quoted lower at Rs. 102-14. With the large surplus funds seeking investment, there is good demand for short and medium-dated loans. Subscriptions for even the Second Victory Loan have been on a large scale $\frac{2}{4}$ per cent 1948-52 quoted Rs. 100-7-6, 3 per cent 1951-54 Rs. 101-14, 3 per cent 1953-55 Rs. 101-10, 3 per cent 1957 Rs. 100-12, 3 per cent 1963-65 Rs. 99-9-6, 3 per cent 1966-68 Rs. 98-10-6 and 3 per cent 1970-75 Rs. 97-4. There was no business in Provincial loans. In spite of the continuance of easy money conditions the Central Government has not been able to get its requirements of treasury bills at the same rate as last week. As maturities were rather small the average discount rate is higher at 5 annas 10 pies per cent per annum against 5 annas 4 pies last week.

In the Bank section, there is nothing of importance, Reserve Bank fluctuated around Rs. 148 and United Commercial Bank Rs. 31 premium. Bharat Bank deferreds were Rs. 2-3 and Hindustan Commercial Bank Rs. 53.

In the Coal section, there was disappointment over the report of the Burrakur coal and there was a decline in the quotation for the shares to Rs. 44 from Rs. 45-6 last week. There was, however, a slight recovery to Rs. 44-6. On the report that South Karanpura will be included in the clearing scheme, there was a rush for covering and the quotation improved to Rs. 40-12. As deliveries are coming in more freely at the present moment the quotation is slightly lower at Rs. 40-6. Standard were better at Rs. 47 while Bhalgora were unchanged at Rs. 26. Central India were uninteresting at Rs. 13 and Western Bengal at Rs. 14-10. Equitable were easier at Rs. 71-14 and New Beerbhoom Rs. 46-15.

The Jute section was active throughout the week as it was reported that several companies would be increasing their dividends and that many of the companies have large postwar schemes on hand. Howrah led the section with a rise in the quotation to a new high level of Rs. 100-2 on rumours of a higher dividend and the possibility of a new issue on bonus terms. There has been some sell-

ing at the higher levels and the quotation is now around Rs. 98-10. Anglo-India improved to Rs. 564 from Rs. 558, but there has been a setback to Rs. 560. The Dividend for the half-year ended September, 1945, has been increased to Rs. 10 per share from Rs. 7-8 per share. Auckland were very firm at Rs. 386. In order to extend the capacity of the company and instal new machinery it has been proposed to issue additional preference capital. Lawrence also have been better at Rs. 402. There was a rise in Nuddea by four points to Rs. 147. Reliance, in sympathy with Howrah, improved by 2 points to Rs. 90, Standard were 5 points higher at Rs. 358. There was no change in Craig and Presidency which were quoted at Rs. 13-2 and Rs. 14-2 respectively.

In the Engineering section, not much interest was taken in Indian Irons and Steel Corporation and the quotation for most part of the week was around Rs. 41-8 and Rs. 35 respectively. In Thursday's session a slightly better feeling was noticeable and the quotations at the time of writing are Rs. 41-12 and Rs. 35-4 respectively. Burn & Co., were a shade better at Rs. 436 while Braithwaite were unchanged at Rs. 14-12, Jessop & Co., continued steady at Rs. 27-2. There was better demand for Kumardhubi Engineering and Marshalls. Kumardhubi improved from Rs. 10-12 to Rs. 11-3 and Marshalls from Rs. 6-3 to Rs. 6-8.

In the Sugar section, there was a rise in Carew & Co., to Rs. 32-15 earlier in the week on reports of a higher dividend though on profit-taking there was a setback to Rs. 31-15. The quotation is again higher at Rs. 32-6. Balrampore were sticky at Rs. 16. Champaran were Rs. 39-12 ex-dividend, Belsund Rs. 15-12 and Darbhanga Rs. 27-4.

There was not much interest in the Tea section, Tezpor being unchanged at Rs. 21-6. Baradighi were Rs. 84-4, Namburnadi Rs. 13-8 and Jaybirpara Rs. 41-8.

In the Miscellaneous section, with the exception of Indian Copper mining issues were rather quiet, Burma Corporation were Rs. 6-6 and Consolidated Tin Rs. 4-6. Calcutta Electric came down to Rs. 42 though there has been a late recovery to Rs. 42-12. On reports that the Calcutta Corporation might take over Calcutta Trams, as from the beginning of the New Year, the quotation for C. T. C. improved from Rs. 54-8 to Rs. 57-8. Indian Aluminium were sticky at Rs. 250 and McLeod & Co., at Rs. 240. B. B. P. were quiet at Rs. 5-6, Assam Bengal Cement improved to Rs. 23-4 earlier in the week on reports of a dividend, but with heavy profit-taking at the higher levels the quotation came down to Rs. 21-10, there has again been a rise to Rs. 22-14. There was good enquiry for Dalmia Cement with the final dividend of 8 annas per share for the year ended October 1944. Paper shares were steady with Titagur Paper at Rs. 32-12 and Bengal Paper at Rs. 235. Midnapore Zemindary were uninteresting at Rs. 172 and Assam Saw at Rs. 6-10.

BOMBAY STOCK EXCHANGE

(From Our Correspondent)

Bombay, October 31.

All the Bombay markets were closed on Wednesday in celebration of the birthday of Sirdar Vallabhai Patel.

The Stock Exchange witnessed a violent setback last week following the announcement on Friday regarding a further reduction in the ceiling price for cloth and yarn which will be effective from November 1st. This news came as a surprise to the market and there was considerable selling of textile issues. There was a mild recovery only on Tuesday, when a general reconsideration of the position of the textile industry in relation to the possibility of early relief under E.P.T. and the relatively low prices for raw

cotton prevailing at the present, led to a substantial reversal in the general trend. Towards the close on Tuesday, there was actually heavy investment demand for scrips which registered heavy declines earlier. Another report that accelerated the downwards movement in Steels related to the labour unrest at Jamshedpur. But later, when no confirmation of the report was available, prices recovered on Tuesday to even better levels than those prevailing at the close of last week.

Government Securities practically remained steady throughout the week and there was moderate enquiry for all loans. $\frac{3}{4}$ p.c. Govt. Paper was sticky at Rs. 102-15 while $2\frac{1}{4}$ p.c. 1948-52 was slightly higher at Rs. 100-8. Others were steady at last levels.

Quotations for Bank shares declined earlier in the week due to profit-taking but a general advance was noticeable at the close. Central Bank improved to Rs. 91-4 from Rs. 89-4 while Imperial Bank fully paid quoted higher by 7 points at Rs. 2,327-8. There was continued enquiry for Bank of India, the quotation improving to Rs. 209 from Rs. 200. Reserve Bank drew less attention this week.

Among Textile issues, Bombay Dyeing came down to as low as Rs. 1,978-12 from Rs. 1,988-12, but the recovery on Tuesday pushed up the quotation by more than 10 points to Rs. 1,990. Other shares in the group followed the general trend, Central India improving to Rs. 399 after being lower at Rs. 395. There was a brisk rise of 7 points in Svadeshi to Rs. 573. Vishnu also improved to Rs. 505.

In the Engineering section, on rumours of labour unrest Tata Deferreds encountered considerable selling, the quotation dropping to Rs. 2,307-8. On Tuesday, however, better sentiment resulted in a substantial buying interest, the quotation sharply advancing to Rs. 2,348-12, a gain of more than 30 points over last week's closing rates. The Ordinaries, likewise, closed higher at Rs. 432 after being lower by 9 points. Alcock also rose sharply to Rs. 460 while Premier Construction improved to Rs. 213.

Among utility undertakings in the Miscellaneous group, Tata Power were outstanding with a rise in the quotation to Rs. 1,910 from Rs. 1,892-8. Tata Hydro also improved to Rs. 213 from Rs. 204-8; Andhra Valley recorded a moderate gain of 5 points over the week. Associated Cement and Scindia Steam Navigation after showing further losses earlier in the week were again prominent.

Audited Accounts for the half-year ended 30th June, 1945 :—

After providing Rs. 56,413-9-4 for Depreciation the balance at credit of Profit and Loss Account is Rs. 4,48,758-13-9 to which has to be added the sum of Rs. 25,802-7-9 brought forward from the previous account, making a gross total of Rs. 4,74,561-5-6.

From this has to be deducted Rs. 3,85,039-11 for Income-Tax, Super-Tax, Excess Profits Tax, E.P. Tax Compulsory Deposit, Contingency Reserve and Commission leaving a balance of Rs. 89,521-10-6 with which it is proposed to deal as follows :—

To pay a Dividend of Rs. 7-8-0 per share Rs. 63,000-0-0; to carry forward in Profit and Loss Account Rs. 26,521-10-6; and Total Rs. 89,521-10-6.

During the period under review the Company's lighters and tugs were throughout operated under the Lighterage Pool and although they were fully employed, a reduction in the General Import Boating rate made at the instance of the Regional Port Director, has brought about an appreciable drop in revenue from Boating. As long as the Pool continues the initiative will remain out of the Company's hands.

Repairs to Steamers and Lighters have been steadily carried out by the Workshops, which have also been engaged on repairs to Government craft.

Managing Agents—Hoare, Miller & Co. Ltd.

Authorised, Issued and Subscribed Capital—Rs. 8,40,000 in 8,400 shares of Rs. 100 each, fully paid up.

Synopsis of balance sheet as on 30-6-1945.

(Continued from page 785)

year. But for the sum of Rs. 37,432 under the First Target Bonus Scheme and Rs. 91,702 under the Second Target Bonus Scheme, for which credit has been taken in the latest accounts at 75 per cent, earnings would actually show a decrease on the previous half-year's figures.

Owing to the seasonal shortage of labour and the completion of extraction in 16 seam, it is expected that no bonus payments will be received in respect of the half-year ending September 1945. But in view of the remaining credit of 25 per cent on the bonus payments, it can be expected that earnings will not be very much lower and that it will be possible to pay the dividend of 20 per cent per annum.

Bhulanbarree Coal Company Limited has earned a net profit, before providing for taxation and depreciation of Rs. 2,37,475 against Rs. 2,00,904 for the previous six months. This Company has done very well in the past two half-years, there being a substantial improvement in raisings. If it had been possible to despatch all the coal raised, as in the previous half-year, the increase in earnings would perhaps have been more pronounced. Stocks have shown an increase in value from Rs. 8,630 from the end of 1944 to Rs. 1,17,718 on June 30, 1945. A sum of Rs. 10,104 was earned under the First Target Bonus Scheme and Rs. 39,837 under the Second Target Bonus Scheme. As in the case of Standard Coal Company only 75 per cent of the estimated earnings under the bonus scheme have been included in the accounts for the half-year ended June, 1945 and the balance will be included when the figures have been confirmed and payment has been made by the Coal Commissioner's office.

The provision for depreciation is Rs. 51,647 against Rs. 54,326 while taxation accounts for as much as Rs. 1,03,928 against Rs. 70,000. There is provision for post-war contingencies to the extent of Rs. 9,000 and Stores Revaluation Reserve receives Rs. 20,000. In view of the complete absorption of the deficiency in respect of E.P.T. it is expected that taxation provision will have to be on a very much larger scale in future years. It is for this reason there has been no increase in the distribution to shareholders, the dividend being maintained at 8 annas and the bonus at 4 annas.

While jute mills in the Begg Dunlop group have made pooring showing in the half-year ended July '45 and Alliance has paid a smaller dividend, Rs. 12-8 per share against Rs. 15 per share, the reports of Fort Gloster and Fort William make better showing and higher dividends have been paid. With the payment of larger ordinary dividends by the latter companies and the persistent reports that Howrah also would be increasing its dividend for the half-year ended Sept., 1945, there has been greater activity in jute shares and a general improvement in prices has been recorded. As Auckland is issuing additional capital for renovating and re-equipping the mills and as Anglo-India will electrify the Upper Mills after de-requisitioning, it is generally felt that the prospects for jute mills are satisfactory and that the extensions to plant will result in an appreciable increase in the earning capacity of mills. It is perhaps too early to say anything in this regard but the directors of Fort Gloster and Fort William seem to be of the feeling that the long-term view is rosy "though the transition period from administration of prices and controls to a return to normal peace-time trading is likely to be one of

uncertainty with its consequent restrictive effect on business."

Thus the recent rise in prices for jute shares is only due to the preference of the average investor for this class of shares and not to any immediate prospect of an increase in earnings or dividends. As a matter of fact, conditions in the raw jute and jute manufactures markets are far from satisfactory and mills have shown a definite anxiety to dispose of their output for forward positions. It cannot however be denied that if mills could dispose of the whole output at present prices for jute manufactures there is a good margin of profit especially as raw jute prices are low.

The net profit of Anglo-India Jute Mills for the half-year ended September, 1945, is lower at Rs. 14,14,865 against Rs. 17,07,555 for the previous six months. The increase in the dividend to Rs. 10 per share from Rs. 7-8 per share is due to the smaller provision for taxation, as there was an excess provision in previous years, to the extent of Rs. 4.75 lakhs. Estimated liability for the last half-year's profits is Rs. 8.2 lakhs. But as there was an excess provision of Rs. 4.75 lakhs, the transfer to taxation reserve is Rs. 3.45 lakhs against Rs. 7.3 lakhs. Allocation to War Contingencies Reserve is Rs. 1.5 lakhs against Rs. 1 lakh while Labour Welfare Reserve receives Rs. 1 lakh (nil) and the Dividend Equalisation Reserve Rs. 2.5 lakhs (nil). The amount carried forward is Rs. 162,367 against Rs. 181,24

lakhs while provision for depreciation has been maintained at Rs. 1.25 lakhs. The dividend on ordinary shares has been increased to Rs. 12 from Rs. 10 per share.

Font William Jute Mill Company has earned a net profit, before providing for taxation and depreciation, of Rs. 3,47,236 against Rs. 3,16,361 for the previous six months. The provision for depreciation is Rs. 40,000 (same) while the charge on account of taxation is Rs. 2.1 lakhs against Rs. 1.9 lakhs. The dividend has been increased to Rs. 5 per share from Rs. 4 per share formerly. The amount carried forward is lower at Rs. 52,924 against Rs. 60,688 brought in.

The first jute mill to plan for post-war reconstruction is the Auckland Jute Company Limited. As it is felt that there

need for replacement of old and obsolete machinery especially the preparing and spinning machinery provisional orders have been already placed with Messrs. James Mackie and Sons of Belfast for all the machinery; and they have indicated that deliveries of the machinery could be made at the earliest by the spring of 1947. It is estimated that the cost of new machinery including freight, insurance, landing charges, customs duties, erection and other charges subject to differences arising from changes in labour rates in the United Kingdom and other costs will be approximately Rs. 43 lakhs.

As the company's existing resources are insufficient to finance the above proposals it is proposed to issue fresh capital for Rs. 30 lakhs in the form of preference shares

and debentures. The preference capital for Rs. 15 lakhs will be in 4½ per cent redeemable preference shares of Rs. 100 each at a premium of Rs. 2 per share and Rs. 15 lakhs in 4 per cent first mortgage debentures of Rs. 1000 each at a premium of 2 per cent. It is proposed to offer the new redeemable shares and the debentures in the first instance to the existing shareholders. The preference shares are to be issued in the proportion of one new redeemable preference share for every 2 existing ordinary and/or preference shares as on October 2, 1945.

The redeemable preference shares can be repaid at par at any time after a period of 10 years from the date of issue on giving six calendar months prior notice.

NOW

you can get those needed tyres!

IN NOVEMBER 35,000 TYRES ARE BEING RELEASED BY GOVERNMENT TO CIVILIAN USERS!

And remember!—even if you have been refused a permit before as a "non-essential" user Government has now specifically authorised the issue of permits to users who are not engaged in essential services.

YOU CAN APPLY FOR NEW FIRESTONE TYRES TO-DAY

If you find it difficult to complete the formalities of application, go to your nearest Firestone dealer. He will gladly give you all the help you need.

WHY YOU SHOULD INSIST ON FIRESTONE TYRES

There is that extra "something" in every Firestone tyre which no other tyre has got. The exclusive patent Firestone Gum-Dipping process locks cord to rubber as no other process does. That is why a Firestone tyre yields so many extra miles of safe service.

Fact Parade

More Cement for Civilians:

With the cessation of hostilities and consequent reduction in Defence demands for cement the Government of India have decided to make larger supplies of cement available to the Civilian public for private repairs and construction of new buildings. They have also decided to reduce, with effect from November 1, 1945, the price of all Portland cement from Rs. 68-12 to Rs. 63-12 per ton f.o.r. destinations in full wagon loads.

Latest Industrial Raw Materials Index Stationary:

The Economic Adviser's All-India Index Numbers of Wholesale Prices of Industrial Raw Materials (Base: year ended August 1939-100) worked out to 238.0 for the week ended Oct. 6, 1945 as compared with 237.8 for the previous week.

Latest Food Index: Rises by One Point:

The Economic Adviser's All India index of weekly wholesale prices of Food articles worked out to 235.8 for the week ended 20th October, 1945, as compared with 234.7 for the previous week.

Between the two weeks 'Cereals' and 'Pulses' advanced by 2 and 8 points respectively while 'other food Articles' declined by almost one point.

Chrome Compounds Control Order, 1945:

The sale and disposal of chrome compounds, such as potassium or sodium chromates and bichromates and chrome alum except under a valid licence issued by the Director, Chemicals, Directorate-General of Supply or by the Textile Commissioner, Bombay is prohibited by a notification under the Defence of India Rules published in the Gazette of India dated Nov. 3, 1945. Licences to acquire chrome compounds for use in textile industry will be issued by the Textile Commissioner and in other cases by the Director, Chemicals, Directorate-General of Supply, and manufacturers, holders of stock, consumers and dealers in chrome compounds are required to maintain accounts of stocks and disposals for inspection by authorised persons.

Private Trade with Denmark:

Denmark is no longer enemy territory under the Defence of India Rules. Persons and concerns in India may now carry on private trade with persons and concerns in Denmark, subject to the existing export, import and financial regulations in force.

Comparative War Expenditure:

The history, in figures, of a world at war, from the demographic, economic and financial standpoints, has been compiled by the League of Nations.

No country, whether or not belligerent, has escaped the rising tide of public expenditure and India figures among the countries which have suffered most during the war. In 1944 the United States expenditure for the war was about 250 million dollars daily and the United Kingdom's £14 million, i.e., 56 million dollars.

The following table shows the expenditure on the war, or on national defence,

in a number of countries during the years 1940, 1943 and 1944.

	1940	1943	1944
United States (£)	6,301	87,039	88,000
(000,000's)			
United Kingdom (£)	3,220	4,950	5,125
U.S.S.R. (Rouble)	56,000	124,700	137,000
Australia (A.£)	170	544	405
India (Rupees)	748	3,136	4,566

In Japan, the war expenditure voted between 1937 and March 1944 reached 112,000 million yen.

The expenditure which various countries have been obliged to meet as a result of their occupation—(occupation costs, clearing deficits, etc.) is now beginning to be known. Thus, in Belgium, the actual occupation costs amounted, from May 1940 to July 1944, to 71,500 million francs, while other expenditure in favour of the occupying Power—chiefly creditor clearing balance totalled 65,400 million francs.

As regards France, the occupation costs from 1940 to 1944 are estimated as not far short of 700,000 million francs, and the clearing deficit of nearly 170,000 million francs.

International Debt Position (in thousands of millions) at the end of 1944 was as follows:—

	1944
United Kingdom (£)	235
United States (\$)	21.1
Germany (Reichsmarks)	345
Belgium (Francs)	159
France (Francs)	1610

Empire Scientific Conference:

India will be represented at the Empire Scientific Conference, being held in London during the summer of 1946, by Sir C. V. Raman, Dr. Meghnad Saha, Dr. K. S. Krishnan, Dr. H. J. Bhabha, Dr. Sir J. C. Ghosh, Dr. S. S. Bhatnagar, Dr. M. Qureshi, Dr. Mata Prasad, Dr. S. Siddique, Rao Bahadur Dr. D. V. Bal, Sir J. J. Ghandy, Dr. S. Krishna, Dr. Jivraj N. Mehta, Dr. A. S. Kalapesi and Dr. D. R. Malhotra.

Physics, Chemistry, Engineering, Agriculture, Iron and Steel Industries, Forestry, Medicine, Geology, Non-Ferrous and Railway Industries will be the branches represented at the Conference.

Tea and Industrial Output

Few matters have received such detailed attention since the war began as the efficiency of industrial production. In India the problem has been greater than in most other countries because, to meet the basic needs of the fighting forces, a great new industry has had to be created without the help of either a large machine tool industry or a large mass of skilled labour accustomed to factory conditions.

That tea—India's own product—has played a valuable part in achieving unprecedented output figures is a matter for no small satisfaction. The part that tea has played—is playing, and will continue to play—is to promote concentration. In the old days it was accepted throughout the world, as an unavoidable fact that output would fall towards the end of a working shift. Today this is no longer accepted, because it has been proved over and over again that tea served to the workers on the job renews concentration and flagging energies with the result that output remains at its peak level right to the end of the shift.

To those interested in this subject much valuable advice and assistance will be gladly given by the Indian Tea Market Expansion Board, 101, Clive Street, Calcutta.

TREASURY BILLS

Central Government:

Tenders for Rs. 2,00,00,000 of three months' Government of India Treasury Bills were opened on Tuesday, the 6th November, 1945. Total amount offered was Rs. 3,44,00,000. Tenders at Rs. 99-14-9 per cent were accepted in full and those at Rs. 99-14-6 per cent were allotted approximately 52 per cent. Total amount accepted was Rs. 20,00,000 the average rate of accepted tenders being Re. 0-5-9 per cent per annum.

Tenders for Rs. 2,00,00,000 of three months' Government of India Treasury Bills will be received on 13th November, 1945, at Bombay upto 11 a.m. (Standard Time) and upto the close of business on Monday, 12th November at other centres. Successful tenderers should make payment on Friday, the 16th November, 1945 or on Thursday, the 15th November, 1945, where Friday is a holiday and on Saturday, the 17th November, where Thursday, and Friday are holidays. Other conditions are as usual.

During the week ended 2nd November, 1945, Government of India Treasury Bills for Rs. 1,07,00,000 were sold in favour of the Issue Department of the Reserve Bank of India.

CONFERENCE OF LABOUR AND MANAGEMENT

President Truman on need for settlement of differences

Washington, November 6.

The Labour-Management Conference, which is destined to become historic in the annals of industrial relations, opened here this week with an address by President Truman which rapped the knuckles of both business and labour and told them that the American people expect their conference to devise a formula for industrial peace. Mr. Truman saw in the conference international implications telling the delegates, "the whole world now needs the produce of our mills and factories—everything stand ready primed for the great future. But stipulations and circumstances can change rapidly. Our unparalleled opportunity may not long remain open. We must have production—vast production. We must have it soon". This reflected the widespread apprehension at industrial strife in this country lest it should weaken the United States' position in world leadership. But it was on behalf of the American people that Mr. Truman spoke most emphatically. He told labour and management that wartime Government controls must soon disappear. "Many of them have already gone. And yet, as soon as the first ones were taken off industrial strife appeared. Some of it was expected by American people in this period of readjustment. But I am sure that they never expected anything like the amount of strife which has been threatened. And I know American people do not like it".

The delegates representing the management and labour at the conference in which the Government "has no hand in the direction or recommendations" listened solemnly as Mr. Truman told them, "our country is worried about our industrial relations. It has a right to be. Their (peoples) eyes are turned here in expectation that you will furnish broad and permanent foundation for industrial peace and progress. The rush of strikes which broke out immediately upon the end of the war was mainly concerned with the labour's demand that its high wartime wages be continued in the postwar period and management's contention that this would result in high prices and lower purchasing power. A week ago, Mr. Truman said in a radio address that he felt there is room for "substantially" raising basic wages, but admonished labour not to expect the same income it had during the war. Wages and prices are not on the agenda in the present conference. It is concerned with the management's acceptance of collective bargaining, management's right to manage, union representation and jurisdictional questions, conciliation, etc. But labour, already before the first day has elapsed, demanded that wage increases be placed on the agenda and a lively controversy is expected to centre about this proposition. It behoves the conferees to reach successful conclusions. For, as the President implied, unless they do, answers will be found elsewhere—in all likelihood in the form of Congressional enactments.

WORLD OF INDIAN FINANCE

Calcutta, Thursday Evening.

Easy conditions continue to prevail in the money market with call rates nominally quoting $\frac{1}{2}$ per cent. in Calcutta and $\frac{1}{4}$ per cent. in Bombay. Lenders are rather keen to advance funds as there has been so far no appreciable increase in loans and surplus funds are daily increasing. With the larger treasury bills maturities there has naturally been greater interest at the auctions of Central Government treasury bills this week though it should be said that the decline in the average discount rate is only small, the rate of 5 annas 9 pies per cent. per annum comparing with 5 annas 10 pies last week. Applications were slightly lower at Rs. 3.44 crores against Rs. 3.56 crores. The offer for next week has been maintained at Rs. 2 crores. The Bengal Government was able to get its requirements at rather cheap rates, the offer of Rs. 3.5 crores being keenly bid. Total applications amounted to Rs. 6.1 crores. The average discount rate was 6 annas 10 pies per cent.

The returns of the Reserve Bank for the week ended Nov. 2, show a further increase in the note issue, there being expansion against sterling securities for Rs. 10 crores. Month-early disbursements, following the redemption of the outstanding 1945-55 loan in the middle of last month, have naturally led to fresh expansion. The increase in note circulation is even more pronounced at Rs. 1,167.9 crores against Rs. 1,156.13 crores. Notes held in the banking department were lower at Rs. 11.73 crores against Rs. 13.65 crores. Total notes issued were Rs. 1,179.63 crores against Rs. 1,169.77 crores. Sterling securities are Rs. 10 crores higher at Rs. 1,059.33 crores. There was a decline in rupee coin to Rs. 18.04 crores from Rs. 18.19 crores.

In the banking department, in spite of the month-yearly disbursements, Central Government balances are appreciably higher at Rs. 429.33 crores against Rs. 411.23 crores. While the rise is in part due to the sterling receipts from the British Treasury, it would appear that subscriptions to loans and tax payments have been on a rather large scale and there has been a return of funds that were paid out in connection with the redemption of the taxfree loan. Other Government accounts show a decline to Rs. 15.39 crores from Rs. 18.32 crores. Bank deposits also are lower at Rs. 99.03 crores against Rs. 110.88 crores. Foreign balances are Rs. 540.52 crores against Rs. 533.02 crores. If the transfer to the issue department of Rs. 10 crores is taken into consideration total receipts during the week were thus Rs. 17.5 crores. The Reserve Bank has been able to dispose of a certain portion of its investments. Total holdings were Rs. 20.1 crores against Rs. 21.71 crores.

The statement of the Imperial Bank for the same week shows a slight decline in deposits to Rs. 252.75 crores from Rs. 253.73 crores in the previous week but there is a large increase in investments to Rs. 157.63 crores from Rs. 152.42 crores. Advances also are Rs. 2.17 crores higher at Rs. 49.96 crores. Cash balances show a decrease to Rs. 55.15 crores from Rs. 63.67 crores.

The statement of scheduled banks for the week ended Oct. 22, shows no important change in Demand liabilities, there being only a small rise of Rs. 30 lakhs to Rs. 658.41 crores. Time liabilities are higher by Rs. 2.52 crores at Rs. 265.89 crores. Cash on hand has declined to Rs. 35.46 crores from Rs. 35.92 crores while balances with the Reserve Bank were Rs. 8 lakhs higher at Rs. 111.17 crores. Advances were

nearly Rs. 2 crores lower at Rs. 247.99 crores. Nearly Rs. 5 crores has therefore been invested freshly in Government securities.

With the latest addition to the total of notes issued, one's attention is drawn to the rapid accumulation of sterling balances in recent months. Despite the cessation of hostilities in both the West and the East, foreign balances in the banking department have shown a large increase. In the week ended Nov. 2, total receipts have been over Rs. 17 crores. A study of the returns relating to both the issue and banking departments for the whole of this year reveals that the total receipts of sterling in the period ended June 1, to Nov. 2, 1945 were Rs. 186.47 crores, foreign balances in the banking department showing an increase of Rs. 146.97 crores to Rs. 540.52 crores and sterling securities in the issue department an increase of Rs. 40 crores to Rs. 1,069.33 crores. In the first six months of 1945 foreign balances in the banking department increased by Rs. 51.2 crores to Rs. 395.5 crores. In the issue department there was a rise of Rs. 115 crores to Rs. 1,019.33 crores.

It may be that the recent large receipts of sterling are in payment of goods and services rendered in earlier months, but it is important to emphasise here that while the future of sterling balances is hanging in the balance and the United States is pressing for a reduction in the total in order to enable the British Government to honour her obligations to the United States and the Empire, and in return for a specified dollar credit, any further accumulation should not be allowed and there should be a change in the basis of settlement. It is not also clear whether the sterling payments are made on account of the United Kingdom or whether they do not represent amounts which are in conversion of hard currencies. In view of the adverse balance of trade with the United States in recent months, it is unlikely that dollar credits were on a large scale. But as was emphasised by the members of the Industrial Delegation earlier there should be no mix-up of India's finances with those of the British Government and this country should be free to utilise her favourable balance with the respective countries to the greatest advantage. If the latest reports regarding the break-up of the Empire Dollar Pool are correct, it need not be pointed out that this country will be benefited. In view of the different unofficial estimates regarding India's contribution to the dollar pool in the war period an official account should be given.

Recently, a report in the daily press emanating from New Delhi put the unofficial estimate of the dollar contribution to the Empire pool at roughly one million dollars or Rs. 350 crores while an American Senator

Terms on application.

SAVINGS BANK—Deposits received and interest allowed at 1 per cent. per annum.

W. G. GROUNDWATER, General Manager.

Tie up the Loose Ends

The incessant touring which Sir Archibald Rowlands, the Finance Member, has been doing of late is presumably a necessary preliminary to the formulation of concrete ideas regarding the financial plans of the Government of India in the months to come. We have in these columns pleaded so often for the Government of India clarifying their financial and economic policies and their response to our suggestions has in the past been such that we venture to indulge the hope that before long the country will have the benefit of a reasoned statement of policy covering all the important problems on hand. Though the Government have not been without an impressive record of achievement during the long war period, it will be admitted on all hands that their preparation and readiness for tackling the problems of the post-war period still leave a great deal to be desired. For one thing, the end of the war in the East came much sooner than was expected; for another the numerous and extreme uncertainties of the political situation, which were if any thing heightened by abortive attempts at resolving the deadlock, have militated against the authorities tackling their tasks with greater enthusiasm and firmness. Another reason for the present unsatisfactory state of affairs may be found in the nature of the tasks that have to be attempted, particularly when they are taken together with the special problems relating to the liquidation of the war effort in general and demobilisation in particular.

The solution of the various problems of the post-war period in India has to be attempted with notable firmness and continuity at the various levels of governmental authority; and what is more, the personnel of the Government would require not a little assurance that the authors of the various plans would be entrusted with their execution and that the assumptions on which the plans are drawn up would as a rule be proved valid. These conditions have not been satisfied. At the Centre, the emphasis was shifted at quite an early stage from post-war reconstruction conceived as an extended liquidation of the war effort to the planned development of the country's economic resources. Various committees have been engaged in the task of drawing up more or less ambitious plans with comparatively little regard for the manner in which the resources for these purposes will be found. The indifference to means was necessitated by the fact that in most cases concern for means might lead to tinkering with the problem even on paper. The result is, a number of plans have been formulated for different departments of the national life. But the attempt to give each of these schemes an integral place in a comprehensive programme is yet to be made. The Government too for their part have been enunciating from time to time the principles which will guide their policies in respect of industry and agriculture. Probably in some respects decisions of importance alike to administration and policy have been taken; but the multiplicity of loose ends has been allowed to persist and though it is a few months since the end of the war the authorities are not in a position still to present to the country a compact programme of action.

The position on the side of means and resources is hardly better. The provinces as a rule have tried to take full advantage of the conditions of expanding revenue which prevailed throughout the war period and many of them have found it possible to lay by large sums for the purposes of post-war reconstruction. But from the point of view of the country as a whole and the Government of India in particular, it is a fact of not a little importance that the provinces have suffered extreme inequalities of advantage. At the one end are the Provinces like Sind, where the Government have realised profits on the trading in grains, paid off a great deal of their debts and retained considerable sums for expenditure in the years ahead. At the other end is Bengal, where the war has occasioned a disastrous famine and huge deficits which have been covered only in part by grants from the Centre. The large majority of provinces stand midway between these two extremes. While, compared to pre-war standards, the allocations to the post-war reconstruction funds in the provinces are very considerable indeed, they suffer greatly by juxtaposition with the funds that will be needed for planned economic development. In the case of the Government of India too, the expansion of revenue during the war period, however striking it may seem in the light of the meagre provision of pre-war years, cannot be regarded as a reliable prop for post-war planning, except on the basis of vital assumptions in regard to the currency and taxation policies of the Government of India in the future.

What is heartening is not so much the increase in the central revenue as the decision of the Government of India to

adopt a strikingly optimistic attitude regarding the availability of funds for post-war planning. Immediately on the publication of the Bombay Plan, Sir Jeremy Raisman in his budget speech said that it would not be difficult for the Government to find as much as a thousand crores by way of outlay on planning for the first five years. Since then, though the emphasis on such quantitative estimates has been lightened, the Government of India have been ready to encourage the Provincial Governments to go further on the policy of planning. Sir Ardeshtir Dalal toured the provinces before his recent tour in Britain and America in order to induce the Provincial Governments to complete the provincial plans. At a recent meeting of the general policy committee he announced the readiness of the Government of India to contribute a fourth of the outlay of each province on its economic schemes, subject to a maximum of Rs. 50 crores. These announcements have sufficed to dispel the general uncertainty and defeatism that might have prevailed in consideration of the large financial issues that are yet to be decided.

It will be seen therefore that, while a general expansion of resources and a number of plans capable of immediate execution can be relied on, the two have not been brought into the close relation necessary for a clear cut plan of action. Since large scale planning involves to a large extent the outlay of borrowed funds, it is necessary in this context to examine the position of the public debt and the loan policy of the Government of India. It is a matter of common knowledge that, thanks to the large-scale accumulation of sterling, India has been able to repay all her sterling obligations and to substitute from stage to stage rupee loans in their place. What is more, the Government of India have had to find funds not only for their own direct needs but also for the needs of the allied Governments, whose purchases in India have had to be financed by them. The scale of Government borrowing has therefore increased vastly during the war period. That these loan programmes have been accomplished not only without an increase in the borrowing rate, but with a considerable reduction in the interest is a great achievement both for the Government of India and those who inspired that effort. This achievement would have been and in fact, was considered impossible at the early stages of the war, when the majority of the people, clinging to outworn theories of interest rates persisted in their belief that the effect of a large-scale war on Government Securities must be to reduce their prices and to increase their yield. But those who like ourselves read aright the signs of the times, who realised that by far the greatest single benefit following from the great depression was the perfection of the technique of currency and credit management could have seen that neither the state of public opinion nor the development of monetary technique would allow a large-scale war to be financed by the payment of undue bounties to the investor in Government Securities. All the world over, the technique by which governments could realise all their requirements of new borrowing without any increase in the interest paid thereon was well established and the war has ended with every government in full control of the money market and confident of its ability to secure all its requirements of capital for post-war reconstruction at rates of interest which will if anything be lower than what was paid during the wartime. In Britain, the Labour Cabinet lost no time in announcing through the medium of the King's speech its determination that the flow of national savings shall be regulated in accordance with the best interest of the country. The nationalisation of the Bank of England, the necessary legislation for which is now before Parliament, is conceived as one of the principal means of ensuring that the capital for new development will be neither inadequate nor unreasonably costly. There can be no doubt that the other governments too, will follow suit, though probably not on identically similar lines. Just as the war was financed with the rate of interest lower than before the war, one may venture to prophesy that post-war development will be carried out with the interest rate at still lower levels.

We have endeavoured in the foregoing to indicate the principal respects in which economic development in the years ahead calls for early decision and clarification if it is to fulfil the hopes raised in the country and if it is to stop effectively the onset of a post-war slump. We expect the Government not to stop on their tracks, nor look at the political uncertainties, but to give concreteness to the shapeless mass of ideas that are now entertained in regard to planning, to make clearcut decisions on all the financial issues, whether of taxation or of currency policy and to complete the good work of raising Government credit to the levels to which, by all standards, it undoubtedly belongs. The work on the planning side is the responsibility of Sir Ardeshtir Dalal, the Planning Member.

And it should be certainly within his knowledge that the plans have not been brought up to the stage of immediate execution. The Provincial Governments, it is true, have not been unresponsive to the goading that Sir Ardeshir subjected them to some time ago. But the pace is still unsatisfactory. It was given out by the Financial Adviser to the Governor of Bengal in a recent Press Conference that the Government of Bengal have not got plans ready for an outlay of Rs. 40 crores, which should be deemed to be the sum available on the basis of the help offered by the Government of India. The same may be said of Assam as well. What is required is that efforts should be put forth immediately to get together from among the plans that have passed the stage of initial consideration, sufficient schemes to call for the contemplated outlay. Sir Archibald Rowlands, too, may utilise every occasion during his present tour to speed up Provincial planning so that the undesirable effect of demobilisation will be counteracted in time.

We may now turn to the tasks that face the Finance Member. These may be said to fall into two divisions, those which concern taxation and public revenue and those which concern the loan policy and what may be called the background of financial conditions in which alone planning can be attempted with reasonable hopes of success. We have made the plea before, and we repeat it in this context, that nothing shall be done in the sphere of currency and credit which will bring down incomes and public revenue to the low levels at which the Government will feel like being bound hand and foot in regard to developmental schemes. In the inescapable relativity of all economic factors and considerations, planning with a view to secure full employment provides the only sound starting point, the point to which every other question can be referred back in the process of tentative or final appraisal. The old cries that favour a return to pre-war conditions or some undefined normal for prices or currency circulation have to be tested by the criterion we have set above. India cannot consider for a moment the possibility of a precipitate decline in public revenue. And on this basis, the problems of public finance have to be thought out. Cheap money is the indispensable basis both of the maintenance of public revenue and the maintenance of public credit. In between the two there lies the problem of putting an end to the grave evils of profiteering, tax evasion and black money. Now that the war is definitely over, there is less excuse than ever before for these evils being allowed to continue. Many countries like Finland, Canada and Britain have started to scotch black money by setting limits to the currency of wartime note issues and issuing new series of notes. There is no reason why India should lag behind in this respect. Measures for ridding the country of black money have been extremely slack during the past; and we trust Sir Archibald will not allow this slur to stick for long.

But the most momentous and the most impressive achievements await Sir Archibald in the sphere of the loan policy. This is indeed so familiar a theme that we shall be content with indicating the main issues and the principal facts and considerations. The main issue is no more and no less than this: Are the Government of India to rest on their oars at this stage of the progress of our public credit, content with having financed the war and replaced the sterling loans with rupee loans and without any thought for the vast needs of the future in respect of planning, or are they to play a few more swift strokes and get to the point at which the future Government will find it possible to raise as much of new money as it may want for planning and at rates which will be no millstone round the neck of our planned enterprises? We take it that in this form nobody will think it admits of two answers. If the Government have moved far away from the time of higher interest rates and futile appeal for new money, if they are now in a position to issue comparatively small loans with an yield of less than 3 per cent, is that any reason why they should look with unconcern at the anomalous phenomenon of 3½ per cent. Paper being quoted at a premium and their doing nothing about its conversion to a lower interest basis? The continued presence of 3½ per cent. Paper is a reminder that the alternative to further progress is not stagnation but a sliding back; and that would be unspeakable disaster for a country which is planning an outlay of thousands of crores on its future development. The Government have therefore no choice in the matter of accepting cheaper and cheaper money as the only sound policy in the present condition. But such is the weight of the unwholesome traditions of dear money that the Government are unprepared even to follow the lead of Britain, where, strictly speaking, they should themselves have led. We say India should have led the way, because even after the recent reduction in Treasury Bills and Treasury deposit rates in England, money rates in India are

far lower than in England. Treasury Bill rates in India are, in fact, lower than those not only of Britain but also of the U.S.A. Even if small differences are overlooked, there is no denying the fact that the structure of money rates in India justifies a bank rate even lower than that of the British bank rate. The denial of all interest on current accounts is familiar in India, though not common. It is in the face of all this that the 3 per cent. bank rate has been stuck to and the conversion of 3½ per cent. Paper has been shirked again and again with a faint heartedness for which there is no warrant in the facts of the situation.

What we ask of Sir Archibald Rowlands is that he will give the fullest consideration to all the facts and circumstances we have cited and make up his mind to put an end to this inchoate state in crucial questions of public policy. It is time that the Finance Member in consultation with the Planning Member issued a statement clarifying all the issues and signifying the determination of the Government to take the fullest advantage of all the circumstances favourable to the immediate and successful pursuit of an ambitious economic plan.

An Interim Tariff Board

The Government of India have now appointed a new Tariff Board redeeming the promise given as early as 1940 that those industries which helped in the war effort and were run on business lines would not be left unaided to face the rigours of foreign competition during the years of peace. The new Board consisting of Sir R. K. Shanmukham Chetty (Chairman), Mr. C. C. Desai and Professor H. L. Dey will be generally welcomed all over the country. The terms of the announcement clearly indicate the desire of the Government of India that the appointment of this Board should be regarded as a temporary measure intended to meet the special conditions of the period of transition. Any action that the Government of India will take on the recommendation of this Board should not be deemed to prejudice the case for comparatively long-term measures in future in accordance with the tariff policy that may be announced at a later date. At present the general conditions are viewed as quite unsettled for the evolution of a permanent tariff policy. What has happened is that industries which have sprung up as a result of the war effort have put forth their claims for protection during the difficult period following the establishment of peace. These claims have been submitted to a *prima facie* enquiry by the Government. On the basis of this enquiry a few selected industries have been declared as deserving of detailed examination. Certain war industries to which the Government feel that they are under a special obligation have been given the assurance of protection on the Government's own initiative. The present Tariff Board has been asked to examine the case of those industries for which the Government have, on their own initiative, given assurances of protection.

This special approach to protection that has now been adopted involves a revision of the guiding principles of the former tariff enquiries in this country. The previous Tariff Boards were guided by the principles laid down by the Fiscal Commission, namely, (1) possession of natural advantages (2) the indispensability of protection for establishment or for adequate progress, (3) ultimate capacity to do without protection for withstanding the competition of foreign products. But now a slight modification in the principles, already accepted and followed, seems to have been decided upon. In the first place, the discretion of the Tariff Board in regard to the period of protection has been limited to three years; secondly, distinction is sought to be made between the protective duty and additional or alternative measures. The scheme of protection contemplated by the Government, it appears, is only a kind of reward to industries for their war service. The Interim Tariff Board has been asked to take account of the fact that the industries whose claims have now been admitted for examination have come into being, and that it should address itself only to the question of whether they are "likely, within a reasonable time, to develop sufficiently to be able to carry on successfully without protection or State assistance." It is, however, gratifying to know that "it is not the intention that the industries which are granted protection or assistance under the terms of this resolution should be considered ineligible for protection or assistance beyond the transition period." When the longterm tariff policy of the Government is announced, they can apply for protection in accordance with the future policy. The appointment of an Interim Tariff Board has been criticised in some quarters on the score that during the transi-

tion period the weight of foreign competition is not likely to be severe because, throughout the world, there is scarcity of goods of almost all varieties and that the existing productive capacity is not likely to catch up with the demand for many years to come. Even in India, the purchasing power of the people has gone high, the market is large and, in view of the pent-up demand of the war years, the scope for expansion is so wide that no special interim arrangements are necessary. This contention is wrong and dangerous in its implications, because, from the reports which we are able to gather, it is evident that the industrial power of the chief foreign competitors has considerably increased during this war, and that at any rate their capacity to penetrate our market is greater than is popularly supposed. The period required by foreign interests to resume their prewar export activities may be much shorter than anticipated here in India. Planning is done better and moves faster abroad; and if the difficulties of transition are resolved in England, Europe and the U.S.A. the complacency in India that the transition period is comparatively safe for Indian industries will prove dangerous. It may be too late then to make amends. An interim arrangement, therefore, is welcome so far as it goes, though during the transition period assistance other than tariff duties, such as for example subsidies, facilities for scientific research, better transport arrangements, technical help, etc. may also be acquired. The importance of the tariff cannot be minimised; and the Interim Tariff Board can function as a special body formed for the task of examining urgent cases during the unsettled years of the transition period.

If economic planning has come to stay as part of the public policy of the Government of India, it is not quite understandable why the Government should remain content with establishing an interim Tariff Board and take their own time in formulating a permanent tariff policy for this country. Between the two Wars the economic development of India was the main responsibility of private industry and the Government limited its interference in economic matters to a consideration of how far industries were suffering from foreign competition and whether they deserved assistance and protection. The policy of Discriminating Protection laid down in 1923, though good in essentials, was out of tune with the policy of rapid industrialisation recommended by the Industrial Commission in 1918. Discriminating Protection in practice was half-hearted and inadequate. The ad hoc Tariff Boards appointed had to work only in accordance with their limited mandates. There was no permanent body to ensure continuity of policy, consistency of decisions and independence of judgment. The Board, instead of being a permanent expert commission, even served as a jumping board for many for higher appointments. During the era of planning that is before us, the authorities have to plan the tariff policy in relation to all India economic planning indicating what industries should be established and developed, outlining the priorities involved in industrialisation, fixing targets for all sectors of national economy and establishing organisations for the execution of the schemes. The question, therefore, is not one of liberalising the existing policy of Discriminating Protection but linking the tariff policy with other issues involved in the postwar development of India as a whole. The Tariff Board in an era of planning cannot be the same ad hoc body of restricted scope that it was before the war. Thanks to the war effort there has been an increase in the tempo of industrialisation and India's industrial and agricultural potentialities are revealed in clear terms than ever before. An appropriate tariff policy can be evolved for India only if an exhaustive industrial survey has been conducted for basic data and, in this respect, we hope that the Government are taking steps to collect adequate details as much for the use of the Tariff Board as for the correct formulation of other development plans.

If the Government of India are sincere in their talks of economic planning, it is the Planning Department that will,

on the recommendations of the twenty-nine industrial panels, decide which industries should be established and fostered and also indicate what should be their output. Vital decisions regarding the tempo of industrialisation, regionalisation of industries and the co-ordination of industrial development to the progress in other sectors of national economy, all will be within the purview of the Planning Department. A Tariff Board, permanent or otherwise, asked to examine and report on the particular industries cannot, under planning conditions, exercise the functions of the Planning Authority but will only give expert advice as to the best way of achieving the goals fixed. The Tariff Board will still have very important functions to discharge. Besides investigating schemes of particular industries for protection it can also review the question of renewal or withdrawal or modification of the protection granted. It should also be open for this Board to examine the effects of excise duties on Indian industries and to consider the repercussions of Imperial preference and other commercial treaties on the national economy. Its field of activity can also be widened to include a close investigation on questions regarding tariff treatment given to Indian goods abroad; and it should also be an expert body to investigate complaints against the working of cartels and combines of manufacturers against the interests of Indian producers or consumers. While the Planning Authority can lay down general principles which govern India's commercial policy against the background of national and international trade, and with direct relation to maximum utilisation of India's resources, the Tariff Board should be enabled to review year by year the actual working of the industries, study the tariff systems of other countries and recommend timely measures for protecting national interests against foreign dumping. In the past the functions of the Tariff Board were too limited. For instance, it was not open to it to take into account the possible reduction in the cost of production through inter-related developments in more than one industry. In the course of its investigations into the claims of a particular industry, the Board should also study how far the required raw materials should be made to be developed within the country and tariff changes should be made to achieve this purpose. This vital aspect of the inter-related developments in the industrial structure of India has been woefully neglected in the past. On the eve of a period of economic planning, and during the transition, it should be much easier to see the nature and extent of such a development than in the prewar period.

The immediate task of the Government of India is to give an assurance that the problem of tariff policy is not considered merely as a wing of the demobilisation plan, just for putting back the industries recruited for war on a peacetime footing. It should also be made clear that the problem of India's tariffs will be determined in relation to the supreme necessity of economic planning. Protection for industry should be viewed, not from the point of view of the consumer only, nor from the point of view of the capacity of an industry to come into its own and the like, but it should be properly related to an all-round co-ordinated economic development to correct the deficiencies in the national economy and to stabilise on a rational basis India's place in world economy and international trade.

I. F. SPECIAL

Deadlock in Washington Money Talks!

By DR. PAUL EINZIG

LONDON, October 28.

By the time this article appears in print, possibly an agreement will have been reached in Washington between Great Britain and the United States on the terms of the financial assistance to be granted by the latter to the former. At the time of writing, however, the talks appear to have reached a deadlock.

Managing Director,
S. R. DAS.

To understand the present position it is necessary to give a brief account of the history of the negotiations. They began early in 1943, when Lord Keynes and Mr. Harry White published rival money plans. Efforts to induce the United States to accept any substantial points of progressive Keynes Plan were of no avail. After twelve months of negotiations between London and Washington, a joint plan was published which bore so much similarity of the original White Plan that it was nicknamed in London as the "off-White Plan."

This joint plan was then submitted to the Bretton Woods Conference on which all United Nations were represented. It is to be hoped that some day a participant of that Conference will publish a full account of its inner history, just as Lord Keynes published, in his "Economic Consequences of the Peace" the inner story of the Paris Peace Conference. It could very appropriately be called "The Economic Consequences of Lord Keynes." For, this greatest economist of our generation has proved himself to be the worst negotiator of our generation—which is saying a great deal. Indeed in his case "negotiation" is merely a euphemism in conceding all that the Americans demand, in the same way as Mr. Chamberlain conceded everything at the Munich "negotiations."

An inner account of Bretton Woods would indeed make an interesting reading. There was, for instance, the Soviet delegation, very silent, very mysterious, sending and receiving endless coded messages, holding out for a hundred per cent, and receiving a hundred per cent. There was the American team, sharply divided between Harry White-ites and anti-Harry White-ites, the latter gaining the upper hand and forcing the former to whittle down even the inadequate face-saving concessions Mr. Harry White had granted during earlier negotiations. And there was, towering over and above all, Lord Keynes Himself, thoroughly enjoying his own oratory, and basking in the sunshine of his American popularity, blissfully oblivious that it was the popularity of Father Christmas who gives away everything without asking anything in return. The chronicler of Bretton Woods will perhaps be able to indicate the extent to which the terms of the money plan which is meant to affect mankind for a generation or more were affected by the clash between the intellectual snobbery of Lord Keynes and the inferiority complex of Mr. Harry White.

The Bretton Woods plan was received without enthusiasm in Great Britain. Considering that it means to strip sterling of all its defences and to disrupt the economic unity of the British Empire, this was hardly surprising. Mr. Churchill himself, having brought this country on the gold standard in 1925, was most reluctant to repeat the performance, and was marking time for nearly twelve months, until he ceded his place to the Labour Government, leaving it to the latter to face the dilemma whether to antagonise the United States by rejecting the plan or to sacrifice the vital interests of Great Britain and the Empire by accepting it.

Bretton Woods loomed large in the negotiations that followed the termination of Lend-Lease. But now the American negotiators wanted even more. The changes that have taken place in the mean-time at the White House, the U. S. Treasury and the State Department resulted in a further stiffening of

the American terms. There is reason to believe that, were Great Britain to accept them, she would be unable to devalue sterling even to the inadequate extent of 10 per cent permitted under the Bretton Woods plan. In addition to the acceptance of Bretton Woods in an aggravated form, this country was now expected to drop Imperial Preference, and to abandon its right to safeguard its balance of payments by means of bilateral or regional agreements.

The British delegates, after weeks of bargaining, gave way. As usual, Lord Keynes conceded all. In return for a loan of \$5,000,000,000, the British negotiators were willing to accept terms the result of which would have been the conversion of Great Britain into Little England struggling with a perennial trade deficit and dependent for its day-to-day existence on new dollar loans that would be forthcoming at a price. The Treasury officials were satisfied because interest on the loan would be very low.

At this stage, however, the American negotiators, encouraged by the appeasement-at-all-costs attitude of the British negotiators, further stiffened their terms. They now wanted to reduce the amount of the loan to \$4,000,000,000, of which \$3,000,000,000 to be handed over to holders of sterling balances. And for this net assistance of \$1,000,000,000 Great Britain was asked to pay an interest of 2 per cent on \$4,000,000,000.

This was too much even for the financial appeasers of Whitehall. While they were willing to sacrifice Empire trade worth hundreds of millions of pounds per annum, they refused to accept terms which would have meant an additional budgetary burden of some £15,000,000 and an additional dollar requirement of \$60,000,000. Having been willing to concede vital issues, the negotiators were instructed to refuse to accept this further sacrifice, trifling as it would be in comparison with what they were ready to sacrifice.

Official American circles are, nevertheless, optimistic. They are convinced that Lord Keynes, having swallowed many camels, would end by swallowing the gnat. Being accustomed to unconditional surrenders on the part of Lord Keynes, they consider him incapable of holding out for very long. They are therefore not in a mood for weakening.

Evidently, this matter has been hopelessly mismanaged from the British side from the very outset. But for the weakness of the British attitude all along, the United States might have been willing to deal with the matter on a give-and-take basis. The instance of the civil aviation negotiations, last year, in which Great Britain flatly refused the American claim to some 80 per cent of the world's international air lines, shows that it is possible for this country to stand up for its vital interests without losing the friendship of the United States. Being accustomed to business like negotiations, the American negotiators naturally hold out for the best possible terms; they naturally want to secure the largest possible extent of advantages at the lowest possible cost. So long as they have reason to suppose that they can do so they will not relent. It is only if and when they realise that the British Government means to defend its vital interests at all costs that they are likely to offer better terms.

Editorial Notes

Road Rollers

The action of the Government of India in securing 1000 road rollers from Britain reveals that the reason for the delay in the execution of the postwar economic schemes lies not so much in the anxiety of the authorities to leave the field free for the representatives of the National Government but to secure for the British industry the maximum possible benefits from India's development plans. As in the case of the manufacture of vegetable ghee, the road plans are also evolved and initiated in such a way and at such moments when a case can be plausibly made out for imports from England. The War Transport Member has with a sense of great achievement announced the orders for 1000 road rollers to be shipped from U. K. in March next. But the public have got a right to know whether alternative sources of supply have been considered with a view to speeding up the road development schemes. It should be made clear in the first place whether the Disposals Boards, the American particularly, have no road rollers which they can turn over for civilian use. For, it cannot be forgotten that the Americans have an impressive record in respect of road making in India. They made roads over mountains in unbelievably difficult conditions and, therefore, it is difficult to believe that they have no surplus equipment useful for our purpose. Secondly, the public are eager to know what attempts have been made, and with what success, to secure an earlier supply from the American manufacturers. Are the U. S. manufacturers unwilling, or unable to meet our needs, or is it that conservation of our dollars for others' needs is standing in the way? Thirdly, before imports are allowed the people should know how Indian industry is placed in regard to the manufacture of road rollers.

Sir Edward Benthall's statement on the development of road transport does not throw much light on these questions. We are told that the stock of road rollers in this country is extremely short because there have been no imports during the last six years, that wear and tear has been heavy owing to war work, and that the Army authorities are shortly to return the rollers for civilian use after the necessary repairs in the munitions factories.

As regards indigenous manufacture we are told that tenders are being invited for the manufacture of power rolls on the basis of the steady recurring market of the future but the tendering firms will be asked whether they can temporarily increase their production to meet the immediate needs. Plans are also being

examined for the temporary manufacture against immediate demands in munition factories in India. It is estimated that for the next three or four years about 3000 road rollers would be necessary and out of this number only a thousand are to be imported.

If imports are allowed recklessly and indigenous manufacture neglected now, it will be more difficult in future to establish a road roller industry on a satisfactory basis. The Road Committee must examine the problem in all its bearings. It must assure itself in the first place that dependence on imports does not entail delay and that advantage will be taken of all the most up-to-date developments in road making. They must ask the question, on behalf of the public, whether development in India must, in every respect, wait on the convenience of British manufacturers. A detailed statement regarding these questions would allay the public suspicions, expressed very often, that the Government is speeding up the transport plan only to help the postwar prospects of British industry.

Export Control Liberalised:

Export control was established to conserve supplies required for the prosecution of the war, to prevent key-commodities reaching the hands of the enemy and to conserve essential consumer and other goods in short supply in India. Now that the war is over the first two considerations are not important. But the third is valid, especially for commodities that are in short supply. And some articles are scarce all the world over and their distribution has to be regulated if there is to be equitable distribution.

But the export policy need not be so strictly controlled as in the past. The export trade of the country has to be rebuilt. And the present opportunities for cultivating new markets should not be missed. The Government have, therefore, done well in reviewing their export control policy. As a result of this review numerous items have been freed completely from control. Exports of many other commodities are to be more free than before.

More than one hundred commodities have been removed from the list of controlled items. They include natural indigo, a number of chemicals and chemical preparations, scientific instruments of indigenous origin, certain classes of containers when used as containers, pyridine, cashew nuts, certain gums and resins, kapok, lac, cigarette and jewel cases made of wood, articles mainly or wholly made of mica, animal oils, many essential oils, perfumed spirits, soapnut and bilawan nuts, talc, cigars, cigarettes of indigenous manufacture and unmanufactured tobacco including flue-cured tobacco, toys and requisites for games and sports if not wholly and mainly of rubber, fibres for brushes and brooms, hairs of all kinds, animal bladders guts and casings, furs and skins, a number of metals and ores (aluminium ore, antimony ore, chrome ore and metal, iron ore, magnesia, manganese ore and manganese, zinc ore, etc.), raw cotton, turkey red oil, essential oil seeds, spices of all sorts excluding pepper and cinnamon and pickles, chutneys, condiments and curry powder.

More than 20 commodities, the export of which was hitherto totally prohibited, have now been transferred to control by the Chief Controller of Exports who will allow small quantities to be exported. This category includes agar-agar, bees wax, certain classes of buttons, candles, cinematograph films, cutlery, glue and raw materials for

SPLISH SPLASH

... drops the water from the wheel of pots as the ox plods wearily in a circle to keep the water on the move. Where electricity is available this old method of irrigation gives way to modern pumps. Water and electricity are closely allied, for power can be obtained from moving water to generate electric current. From hydro-electric head-works electric power is distributed by high-tension cables over a wide area.

LAND OUT ALONG THE MOST MODERN LINES OUR WORKS ARE EQUIPPED WITH THE LATEST TYPE OF MACHINERY FOR THE PRODUCTION OF ULTRA MODERN CABLES. A HIGHLY SKILLED TECHNICAL STAFF EXERCISE RIGID CONTROL AT EVERY STAGE OF PRODUCTION ENSURING STRICT CONFORMITY TO ANY SPECIFICATION—I.S.D. OR INTERNATIONAL. Right now we can only quote for Electrolytic H.D. Bare Copper Wires.

Installation of hydro-electric plants and increased availability of electrical power will be one of the essential factors in the industrial and agricultural development of India. To this end we are equipped to supply the Nation's demand for cables to carry the current to every town, village and homestead.

Underground Women Workers:

In 1938, India ratified the International Labour Convention prohibiting the employment of women for underground work. From 1938 to 1943, the Government ban was in force. In 1943 the exigencies of the war compelled the Government to lift the ban and allow the employment of women in underground jobs. It was one of the measures with which the Government tried to meet the shortage of labour. Though the reasons for the lifting of the ban were well understood by the public, criticism was directed against the absence of adequate facilities and safeguards and it was also felt in some sections that the labour shortage could have been met even without bringing women to work. The replies given by Dr. Ambedkar to questions asked in the Central Assembly revealed the uncomfortable position of the Government in regard to this issue. The Government, however, declared their policy that the ban would be reimposed as soon as the emergency conditions were over. A recent Press Note announces the reimposition of the ban which will take effect from 1st February 1946. The early announcement, it is held, will help the employers to make the necessary adjustments. But Government's obligations to the women who are thrown out of employment are not mentioned in the Press Note. It is necessary that steps should be taken to resettle them in suitable employment so that the standard of life to which these women became accustomed during the war is maintained. Innumerable families are bound to suffer, as a consequence of the women finding themselves out of employment. It is the duty of the employers and the Government to provide new avenues of income for these families.

Agricultural Training:

The Government of India has decided to increase the annual admissions to the Imperial Agricultural Research Institute at New Delhi from 12 to 50. This might be considered as one of the preliminary steps towards implementing postwar agricultural plans. There is admittedly a lack of qualified and trained personnel in the agricultural service. But the present step while remedying it to some extent, is inadequate to solve certain deeper problems concerning the general equipment of men in the agricultural service. The agricultural graduate who possibly gets an additional training is the pivot of the whole system. The curriculum and training, as obtaining at present in the agricultural Colleges, is one which makes the graduates more or less sectional-minded experts incapable of a liberal and comprehensive approach to rural problems. This is because the diversion to the technical course takes place at too premature a stage. The curriculum itself has too much of an academic bias and the lack of facilities for practical study of rural problems is a serious handicap. The knowledge that the student acquires in the college is often entirely unrelated to the practical needs of the ryot; there is also much necessary and useful material in the traditions and practices of the villager, which will amply repay investigation and study. In the future, the scope and functions of the agricultural service are bound to develop and the officers will have to share heavier responsibilities in the direction and guidance of the different stages of production. It is, therefore, essential that beside turning out larger numbers of graduates, the college course should be liberalised giving emphasis to such subjects as sociology, economics and politics. A six months' term of

practical training might be provided at the end of the academic course. To open agricultural colleges in rural areas would be ideal but this is a development which may have to wait till our rural areas become considerably urbanised, which itself should be one of the ideals for which the agricultural services should strive.

Rs. 348-Crore Plan for Hyderabad:

The Government of Hyderabad have announced, at a recent Press Conference, a 15-year economic development plan for the State at an estimated cost of Rs. 347.68 crores. The chief objective is to raise the standard of living of the people and to increase the national wealth. The agricultural schemes cost Rs. 51.28 crores cover bunding of lands in famine zones as part of anti-erosion measures, extension of dry farming, establishment of agricultural stations, etc. Emphasis is laid on the provision of cheap and abundant manures, reclamation of vast tracts, improvement of cattle breed, and increase of milk production. A notable feature of the Agricultural plan is the formation of cooperative farms of 250 acres each at taluka head quarters for demonstrating the results of simultaneous application of improved agricultural methods and organisation of farmers under various associations, like better farming societies and farmers' unions. In order to liquidate the rural indebtedness and elimination of usurious village money lenders a chain of Land Mortgage Banks is proposed to be established.

The irrigation plan holds out an ambitious target of more than 2½ million acres of land to be brought under irrigation. The Tungabhadra and Godavari valley projects are estimated to bring about 1½ million acres of land under irrigation and generate more than 92,000 kilowatts power.

Industrial schemes give special importance to textiles and oils. The textile industry will be expanded by the addition of 40,540 spindles and 7111 looms. This involves the establishment of six new mills and the conversion of existing ones into economic units. A central oil factory with a capacity of 30,000 tons of vegetable ghee and deadard wood oil, is also in consideration. Hyderabad further proposes to have a factory for the manufacture of plastics and another for chemical fertilisers. A cement factory will be located in the Godavari development area. If the implementation of hydro-electric power schemes are combined with irrigation projects the Godavari valley will develop into an important industrial area.

The Public Health scheme envisages the establishment of a network of organisations reaching down to every village. Indigenous system of medicine has been given a proper place in the proposed health organisation and about 16,000 primary village health workers will receive six months training to be able to man the organisation. The public health scheme, together with the expansion of water supply and drainage costs Rs. 11.5 crores. Education gets 45.25 crores, and Public Works gets an allocation of Rs. 7.38 crores for village and district roads. Construction of major roads and high ways is estimated to cost Rs. 32 crores.

Research and Minor Industries:

Cottage industries in a predominantly agricultural country like India promote the well-being of multitudes by providing employment to a large number of men and women in gainful occupations over a wide region. They serve to relieve the excessive dependence on land in rural areas. They have contributed impressively to the war effort and supplied a variety of goods

required by the Civilians when normal imports were cut off and local production was diverted to meet the demands of the war. But minor industries are individually small and disadvantageously situated.

Minor industries provide a striking parallel to agriculture. The advancement of both is determined by the nature and extent of assistance rendered to them by Government. Improved seeds, fertilizers,

COSTLY RELATIONS

HERE are the loathsome rat, his cousin the rabbit, and that unwelcome relation, the squirrel. What is the connection between them and the British chemical industry? All rodents are the enemies alike of the farmer and fruit grower, the market gardener and merchant. The damage they do has been estimated at many lakhs of rupees a year — and almost all of this is foodstuffs. It is characteristic of rodents that they destroy even more than they devour. Thus rats not only eat the grain in stack and granary; they render an even greater quantity unfit for human consumption by fouling it. Besides eating the eggs and young of birds, squirrels play havoc in orchard and garden, wantonly nipping off fruit or vegetables and laying by stores which they often forget all about. All such pests must be ruthlessly kept down and it is here that the British research chemist and the chemical factory enter, by evolving new and more effective ways of attacking them. To trapping, snaring and shooting have been added methods of chemical warfare. Rats are poisoned by the use of baits containing such chemicals as arsenic, phosphorus, zinc phosphide, barium carbonate and red squill. They can also be gassed with sulphur dioxide or the exhaust gas (carbon monoxide) of car or motorcycle. Far the most humane as well as efficient way of exterminating rodents is by cyanide-gas poisoning. It is also safe and simple — a level tablespoonful of cyanide dust is placed in the entrance to the burrow, which is then sealed with earth. The rodents within are rapidly and painlessly killed. As for the squirrel, the best two methods of settling accounts remain trapping and shooting. But in the total war against rodent pests, chemical warfare is most effective.

IMPERIAL CHEMICAL INDUSTRIES (INDIA) LTD.

A copy of this Prospectus has been filed with the Registrar of Joint Stock Companies, Bhavnagar, and a copy duly certified under Section 277(a) of the Indian Companies Act has been delivered to the Registrar of Joint Stock Companies, Bombay.

Consent and recognition of the Central Government has been obtained to this issue of Capital, subject to the conditions (1) that all moneys payable to the Company in respect of this issue by persons in British India or by persons outside British India to whom the provisions of the Defence of India Act apply are received only in British India and (2) that so much of the Capital as cannot in that Government's judgement be properly expended until some uncertain future date is invested and kept invested in prescribed Securities which will not be released until the Central Government (in consultation with the Crown Representative) is satisfied that the time has come to make corresponding payments for purposes which are consistent with the enforcement of any measures of control or restriction that may be in operation at the time when such release is applied for; and the consent of the Namdar Darbarshri of Bhavnagar State under the Defence of India Rule 94A as in force in Bhavnagar State has been also obtained to the issue of Capital. It must be distinctly understood that in giving this consent the Government of India and Namdar Darbarshri of Bhavnagar State do not take any responsibility for the financial soundness of any schemes or for the correctness of any of the statements made or opinions expressed with regard to them.

(The subscription list has opened on 7th November, 1945, and will close as soon as the present issue of the Capital is fully subscribed and in any case not later than 15th November, 1945).

PROSPECTUS OF

THE BHARAT STEAMSHIPS COMPANY, LTD.

(Incorporated and registered at Bhavnagar in Bhavnagar State under the Indian Companies Act VII of 1913, as adopted in Bhavnagar State).

(The liability of the Members is limited).

The Company has a place of business in British India, at Mehta House, Apollo Street, Fort, Bombay.

Authorised Capital - Rs. 3,00,00,000

DIVIDED INTO 3,00,000 SHARES OF Rs. 100 EACH.

Present Issue - Rs. 1,00,00,000

DIVIDED INTO 1,00,000 SHARES OF Rs. 100 EACH.

Out of the above issue:—

- (1) The Bhavnagar State has agreed to take up 25,000 shares of Rs. 100 each.
- (2) The Porbandar State has also agreed to take up 5,000 shares of Rs. 100 each.
- (3) The Directors, Managing Agents and their friends have agreed to take up 40,000 shares of Rs. 100 each. The balance of 30,000 shares is now offered to the public at par for subscription.

Payable as follows:—

The Shares will be payable as follows:

Rs. 25 per Share payable on application;

Rs. 25 per Share payable on allotment, and the balance of Rs. 50 per share will be liable to be called up in such call or calls and at such intervals as the Board of Directors may in their absolute discretion determine.

ALLOTMENT.

The shares shall be under the control of Directors who may allot or otherwise dispose of the same to such persons on such terms and conditions and at such times as the Directors think fit.

Railway authorities at the ports it serves for through booking arrangements and so find avenues of expansion of new trade.

The Company will be able to take the fullest advantage of the importance of Bhavnagar as a flourishing and a fine port in Kathiawar. At the port of Bhavnagar vessels up to 8,000 tons can call alongside the Jetty. Goods can be loaded direct from wagons into steamers and vice versa. There is an adequate number of modern ware houses served by suitable Railway sidings. Indian owned Shipping Companies have definitely assured prospects in terms of post-war planning. A steamship Company like the Bharat employing and utilising the trade and special facilities (Ports and transports) at Kathiawar had very attractive prospects.

It may be pointed out that the promoters of this Company have been remarkably fortunate in being able to secure one Norwegian ship at a remunerative price.

To fight the War in all its far flung theatres the combatant countries entered upon an intensive programme of shipping constructions, with the result that one of the Allies, viz., the U.S.A., have now nearly four times their normal tonnage. As this amount of shipping is greatly in excess of their requirements, it is expected that some of the surplus ships will be offered for sale at no distant date and it is very probable that the Company is likely to pick-up some good ships at reasonable prices because of its direct contact with the country.

In fact negotiations are already in hand to purchase more ships which may constitute a fair nucleus of the Company's fleet.

MINIMUM SUBSCRIPTION.

The minimum subscription upon which the directors, will proceed to allotment is 10 per cent of the shares offered to the public for subscription; and the same payable

Meeting of the Board and the actual travelling and other expenses, if any incurred in consequence of his attending the Board Meeting. If any Director, being willing shall be called upon to perform extra services, Company shall remunerate such Director either by a fixed sum or by a percentage of profits or otherwise as may be determined by the Directors. The expression "extra services" shall include work done by a Director as a member of any Committee formed by the Directors or in relation to signing Share Certificates or to make any special exertions in going or residing out of India or otherwise for any of the purposes of the Company.

AGREEMENT.

The following agreement shall be entered into on behalf of the Company:—

An agreement between the Company on the one part and Messrs. Dinshaw Limited on the other part whereby Messrs. Dinshaw Limited are appointed as the Managing Agents of the Company, upon the terms and at the remuneration therein provided.

MANAGING AGENTS.

The Articles of Association of the Company provides for the appointment of Messrs. Dinshaw Limited and their successors or assigns as the Managing Agents of the Company for the period and upon the terms, provisions and conditions set out in the Agreement, the copy of which is attached as Schedule A to the Articles of Association of the Company.

Messrs. Dinshaw Limited, its successors and assigns have been appointed as the Managing Agents of the Company from the date of the Registration of this Company for a period of twenty years renewable by mutual agreement. The remuneration of the Agent Company as Managing Agents shall be (1) an office allowance of Rs. 3,000 per month operative as from the date the first ship begins to ply; and (2) a commission of 10 per cent on the net annual profits of the Company as defined in Section 87 C(3) of the Act before setting aside taxes. The above commission will become payable only after a declaration of Dividend to Shareholders.

The aforesaid office allowance and commission payable to the Managing Agents of the Company shall be exclusive of and shall not include the rents of office premises, the expenses of office establishment, the salaries, wages and emoluments payable to the office staff and clerks, servants and other employees engaged by the Agent Company for the Company's business whether in Bhavnagar or elsewhere and the remuneration and wages which shall be payable to Bankers, Solicitors, Accountants, Experts, Managers, Secretaries, Captains, Chief Engineers or other Officers, Crews, Servants and Workmen who may be employed by the Agent Company for or on behalf of the said Company, or any expenses of like nature incurred for carrying on and conducting the business of the said Company.

RESTRICTIONS ON RIGHT TO TRANSFER VOTE

The Directors may at any time in their absolute discretion and without assigning any reason decline to register any proposed transfer of share or shares. This clause shall apply notwithstanding that the proposed transferee may be already a member.

On a show of hands every member present in person shall have one vote, and upon a poll, every member present in person or by proxy shall have one vote for every share held by him.

No member shall be entitled to be present or to vote on any question either personally or by proxy or as proxy for another member at any General Meeting or be reckoned in a quorum whilst any call or other sum shall be due and payable to the Company in respect of any share or shares of such member.

RESTRICTIONS ON DIRECTORS IN RESPECT OF THEIR POWERS OF MANAGEMENT

The Management of the business shall be vested in the Directors, who in addition to the powers and authorities given in the Articles of Association or otherwise expressly conferred upon them, may exercise all such powers and do all such acts and things as may be exercised or done by the Company and are not by the Articles of Association or by the statute expressly directed or required to be exercised or done by the Company in General Meeting, but subject nevertheless to the provisions of the statutes and of the Articles of Association of the Company and to such regulations not being inconsistent with the provisions as may from time to time be made by the Company in a General Meeting.

INTEREST OF DIRECTORS.

Mr. Minocher N. E. Dinshaw and Mr. Gunvantrai T. Kamdar are members of "Messrs. Dinshaw Limited," and are interested accordingly.

COMMISSION AND BROKERAGE

The Directors have decided to pay brokerage at the rate of eight annas per share to recognised brokers or Bankers on allotment made in respect of applications bearing the stamp of such brokers or Bankers.

DOCUMENTS

Copies of the Memorandum and Articles of Association of the Company, the Bhavnagar State notification under which the Company is incorporated; the sanction of the Central Government and of the Namdar Darbarshri of Bhavnagar State for the issue of Capital, and the draft of the Agreement with the Managing Agents and the Prospectus will be available for inspection during the usual business hours at the Registered Office of the Company, Bhavnagar, and at the Company's Office in Bombay.

APPLICATIONS FOR SHARES

Application for shares should be made on the form accompanying the Prospectus which may be obtained at the Registered Office of the Company or at the Branches of the Central Bank of India, Ltd., and Bank of Baroda Ltd., being Bankers of the Company or at the office of the Brokers of the Company. The shares when issued will be subject to the rights and obligations stated in the Memorandum and Articles of Association of the Company.

The Application Money may be deposited with any of the Branches of the Company's Bankers and in the case of such deposit, the application should be accompanied by the Banker's Receipt. The application for shares can also be sent directly to the Company's Registered Office.

Where no allotment is made, the amount paid as a deposit will be returned in full and where the number of shares allotted is less than the number of shares applied for, the balance of the deposit will be applied towards the amount remaining payable on shares allotted and any balance if any thereafter remaining will be returned. The Prospectus has been approved by a resolution of the Board of Directors.

methods of stock breeding and such scientific practices are infiltrating into rural agriculture, thanks to researches conducted by Departments of Agriculture and propagation of the results. The methods adopted for improving agriculture are applicable to the minor industries as well.

Big business is keenly alive to the value of research for the promotion and advancement of industry. But big business has the means for providing a research service. "Co-operative Research Associations" and "Industrial fellowships" have been adopted by industrially advanced countries to foster medium sized industries. Research for small industries demands the attention of Government and scientists. What is needed is a network of laboratories in all the Provinces and States and the organisation of a research information service which will convey to the craftsman in the language he understands technical information which he can readily utilise for improving his craft. Even in such an advanced country like America the need for such a research service has been emphasised. Maury Mavrich, till recently Chairman of the Smaller War Plants corporation recently said "One of the things that American small business needs is technical assistance in a manner comparable to that given to farmers by the Department of Agriculture."

In a brochure published by the All India Manufacturers' Organisation, Sir M. Viswasvarayya envisages a workable scheme for rural industrialisation. He recommends the grouping of villages into convenient units, a central organisation for propagating research information. But the investigational work is the special responsibility of the Government. The application of research to Cottage industries will, as the Journal of Scientific and Industrial Research points out, benefit millions of people by raising their economic and cultural status.

Milk and its by-products:

It is estimated that India's annual production of milk is 230 million tons—a quantity hardly sufficient to meet the nutritional needs of the 400 millions. The minimum requirements for a balanced diet can be met if the consumption of milk is increased two to three times. When this is so, there is no dairy industry in this country which can utilize all the by-products of milk to advantage. The most important by-product of the dairy industry is skimmed milk, about 46 lakhs of maunds of which are produced every year. Considerable amount of this is not put to proper use. It is being used for adulterating whole milk or converted into Dahi and sold as whole milk Dahi. Skimmed milk differs from whole milk only in the amount of fat it contains. In all other milk constituents whole milk and separated milk are equally rich. Skimmed milk is not suitable for infants and children. It is not so palatable as whole milk. The value of skimmed milk, the public should be made to realize by suitable propaganda. Skimmed milk powder can be manufactured but this requires skimmed milk of high quality, costly plant and equipment and large amounts of separated milk in the same locality. As the price of skimmed

milk does not warrant its being sold as a fluid, casein has come to be manufactured out of separated milk. If by a simple method involving no special equipment it is possible to prepare edible casein hygienically and on a small scale, say, with 100 to 250 lbs. of separated milk, it would be very useful to the ordinary man. Casein is useful for the manufacture of foods for infants, sick and convalescent.

Next to separated milk, whey is the most important by-product of dairy industry. In whey almost one half of the total solids of the original milk remain including 90 per cent of the milk sugar, 4 of the milk-protein, 2/3 of the valuable milk salt and some portion of butterfat. In Switzerland "Ziger Cheese" is made from whey. By heating and straining whey a product known as Fleetings is also produced in many places. Mysost, a highly concentrated sugared whey, is popular in Norway. But it is difficult to say how far these products will suit Indian taste. But they are nourishing foodstuffs and will solve the problem of whey which otherwise goes to waste. Lactic acid is prepared from whey by fermentation which is of considerable value, in industrial and food processes. If it is not possible to use whey as suggested, the absorption of whey in bran for cattle could be easily encouraged. Proper utilization of the by-products of milk, as an article in "Indian Farming" points out, will add to the income of the dairymen, increase the food resources of the country and improve the health and well-being of its inhabitants.

British Motor Car Industry:

British industrialists are naturally anxious to regain their pre-war export trade and ambitious targets have been fixed for different industries. The manufacturers of motor cars have, for sometime past, been hoping that the pent-up civilian demand will be released with particular intensity during the transition years and if the Government gave facilities for immediate revival of export trade by allocating quotas and shipping facilities an excellent start can be made to gain a foothold not only in the British Empire but also in other countries. It was also urged that the designs for overseas purchasers should be completed at an early date and all attempts should be made to fix the prices that would encourage the purchase of British cars. The latest Budget announcement in favour of a tax on the cubic-capacity of the cylinders instead of the tax on the diameter of the cylinders, it is hoped, would go a long way in giving full freedom to the technicians for designing the British cars for the approval of the world market.

While the fiscal policy of the British Government has been changed so as to serve the immediate interest of the motor industry, the permanent interest of the industry can be served only if the mass production methods of America are quickly followed. The remarkable growth of the American automobile industry and trade has been not a little due to the standardisation of types and the limitations imposed on the range of types produced by individual manufacturers. If the British industry is to emerge again as a powerful competitor to the American Automobile Industry it will have to follow the American practice and rationalise itself as early as it can. As regards the price factor the quotations recently announced by some of the manufacturers for their models, which are by no means up-to-date, show that there is still scope for reduction. In the brave new world, bold planning will be essential, if the British Automobile Industry is to hit the target fixed.

A TRIBUTE THAT SWAYS

"Policy" The world renowned insurance magazine of London, in a recent issue sums up Warden's achievements thus:—

"The Warden is obviously managed with considerable ability and energy, upon sound and constructive lines, calculated to combine financial strength with modern progress".

—POLICY

In ten years, the progress of a generation; in 1944, almost double the business transacted in 1943,—this is the proud record of Warden, whose amazing progress has attracted international attention.

"Policy's" tribute is borne out by the following figures;

New Business in 1944 exceeds Rs. 1,00,00,000
Assets Rs. 45,00,000

Behind these soaring figures lies the organisational strength of a network of organisers, field workers and agents who are co-sharers in the company's prosperity. To those who intend to take insurance as their calling, "Warden" offers a career full of prospects.

Clive Street Gossip

By all tokens, the Labour Government in Britain to-day is not suffering from the inhibitions and the defeatism which made the Labour Cabinets of the past indistinguishable from the Liberal and the Conservative Governments whom they sought to displace. The large majority which the Labour Party secured in the last general elections has indeed much to do with the change. But an even more powerful factor is what I may call the time spirit, which is born of the combination of the changes in objective conditions and the natural development of public opinion in the direction of the strikingly progressive change. The changes which the war and war economy have wrought on the national economic life and the new possibilities of social organisation to which they have opened the eyes of the people are together responsible for a climate of opinion in the country which not only encourages the Government to embark on radical measures of economic reform but even forces such changes on them. It is for these reasons, I think, that the Labour Cabinet had no hesitation in stating clearly in the King's speech that they will embark as soon as possible on many of the well-known socialistic measures of economic reform. As an earnest of the vast programme which they are having in mind, they have already brought before Parliament a measure for the nationalisation of the Bank of England. Nationalisation of transport and the coal industry is to follow soon after.

It must be remembered that it is not only in Great Britain that these seismic rumblings of the socialist world are heard. The French demos declared itself unequivocally in favour of the leftist parties. Australia and New Zealand have had socialist Governments for a long time. The U.S.S.R. is an avowedly communist commonwealth; and the U.S.A., which in many ways is the paradise of private enterprise, has had more than a faint beginning of constructive doubt as to the merits of laissez faire. It is obvious that a totalitarian war was not fought and won in vain. Democracy has no doubt won, but not without important concessions to the rival standpoints which insist on society coming well before the individual. Socialism in our time which was the watchword of even the earliest Fabians might be relied on by the present generation with full certainty, whatever may be one's reactions to the prospect.

It is necessary, therefore, that people in India, too, should begin to ask themselves where this country stands in relation to these unmistakably strong world trends towards socialism. I may first consider the trend of opinion in the country. It is significant that none of the big political parties has yet developed a strong socialist bias. The Muslim League is openly accused by members of their own community of being a party which is representative only of the landlords and the more well-to-do classes. As for the Congress, the well-known and self-evident sympathy of the Mahatma for the poor has not sufficed to keep that

great national organisation above all suspicions of partiality for the richer classes. The Mahatma himself is believed in certain quarters to have a soft corner for the millionaires. In any case, his social philosophy is in many ways anti-socialist to scientific socialism. There is also the fact that the Congress High Command has not looked with favour on the Congress socialists or any of the leftist groups that the country has inevitably thrown up in the last decade and more. Indeed, when one thinks of it the attitude of the principal parties and the shortcomings, not to say defection, of the leftist groups suggest that the growth of a genuinely scientific socialist party in India belongs more or less wholly to the future.

Nevertheless nationalisation which is a principal plank of socialism has not had to wait for the development of a socialist party. Not only the Government of India, which may conceivably have some special reasons for restricting the scope and powers of Indian industrialists, but the Indian industrialists, too, have given full support to the policy of nationalisation in certain conditions and within certain limits. The authors of the Bombay Plan had little hesitation in owning that so large a development programme as they sponsored could hardly be worked by sole reliance on private enterprise. They concede that the brunt of planned development in India would have to be borne by the Government and that, in so far as planning requires the co-ordination of effort in all branches of national economic life, private industry must be prepared for the exercise of State control. Likewise, the Government of India, too, viewing the problems of planning as practical tasks, have recognised that, so far at least as some of the more important industries are concerned, there is need for direction and control from the Centre. The principle that industrial development should be regarded as the responsibility of the Provincial Government has been sought to be modified by declaring that such industries will come under the Centre, notwithstanding the provisions of the Government of India Act. There is thus a general support for nationalisation being

built up from quarters which are influential, though they may not be part of either the political parties of the present time or the government of the future.

There is also the fact that India has already a strong tradition in favour of nationalisation which has grown in spite of the conservative outlook of by far the larger part of the people of the country. This tradition originates in the circumstance that the transfer of ownership of the Indian Railways from foreign hands to India could be effected in the conditions of the time only by the simple process of nationalisation. The contracts between the Government of India and the Railway Companies contained provisions for the Government buying all their interest at a later date. The state of Indian capital market at the time was not such that there could be a clamour for the Indian Railways being transferred to private investors. It is doubtful whether, even if the savings had been on an adequate scale, the investors would be ready to buy the shares. The same considerations apply equally to the telegraphic system. And once there are in existence commercial enterprises of the State on a large scale, the phenomenon of state ownership of commercial enterprise becomes familiar to the public at large. If private enterprise is to be a strong obstacle to state ownership, it has to be both private and enterprising. In India, neither condition has been satisfied adequately in the past. For one thing, conditions in the country were such that no industries or other ventures could be started without the help of the state in some form or other. The fact that most, if not all, of our industrial enterprises depended on the grant of protection by

the state shows that private industry has a distinctive public aspect about it. And investment in protected industries cannot lay claim to enterprise, in the right sense of the word. It is significant that during the years before the war, the demand was made in some quarters that the protected industries should be subject to state supervision and that, in consideration of the price paid by the nation for the development of such industries, the right of the State to buy up such industries in certain conditions should be generally conceded.

I have referred to these aspects of our national economic life only with the view to show that the aloofness of the political parties from socialist ideals and proposals will not constitute a serious hinderance to the progress of nationalisation in India. I have also, I believe, indicated the important circumstances which will strengthen the trend towards socialism. The existence of large commercial enterprises owned and managed by the state, the need for state assistance in various forms and at every stage for the establishment and development of productive activities, the comparative lack of com-

petency in private enterprises in this country—these are powerful factors which are bound to prove effective even in the face of the apathy of political parties. When a country has, in one big attempt, to make up a leeway of centuries in the matter of economic development, the consequences of this forcing of the pace on the social structure and on the social ideology may be easily imagined. Even the average man will be able to see that the credit for the development of any industry or any enterprise belongs far more to the Government than to the private interests that may be allowed to participate in it on a proprietary basis. If at a later stage proposals are put forward for the complete nationalisation of any such industry, the interests concerned will find it extremely difficult to raise any sympathy in the public mind for their lot.

It is against this background that the public's ideas on nationalisation in India ought to be formed. If one understands the line of reasoning I have attempted to sketch in this gossip, one will realise that, in the special conditions of this country, there is little need and even less justification for ideological bias on the lines familiar to other countries. We have to look at the whole question from the point of view of the most appropriate division of labour between the state and private enterprise and this division of labour is necessarily related to the conditions of each stage of development. What we may be obliged to leave to private enterprises to-day, we might feel incumbent on us to nationalise to-morrow; and if some of the state enterprises seem better fitted for private management, we shall be prepared to make the necessary change. The extent of nationalisation is naturally conditioned by the circumstance obtaining at each stage of development.

The theoretical and logical position in regard to the allocation of spheres between the State and private enterprise is, however, not so opportunist. Amongst theoreticians, it is generally agreed that, where there is no scope for the realisation of economies through competition, or where, by its very nature, a business has to be of the monopolistic kind, or where the major part of the work of development falls on the Government, the case for private enterprise is altogether negligible and the case for State ownership unassailable. It is easy to see from an application of these principles what a wide sphere will fall to the share of the State. The enterprises that have by their very nature to be monopolistic are the Railways, telegraphs, telephones and communications in general, electric supply and the public utilities and businesses that have to be worked on a nation-wide basis. If we apply the principle that businesses, in which a large part of the work of development falls to the State, should be state-owned, then private ownership will become the exception rather than the rule. The social importance of a business is also held to constitute a good ground for state ownership. In this view, banking and insurance will also have to be drawn into the socialist net.

But it is well not to overlook the difference between state ownership and nationalisation. While state ownership

means the right of the state to keep a new business to itself and ask private capital to keep off the grass, nationalisation implies the presence of private interests in a pre-existing business. The former right, nobody can question, whether in law or in equity—the old dictum that the best Government is that which governs least is discredited. On the question of transferring private business to the state by compensating the previous owners, there is room for some diversity of opinion. But, as I have pointed out at every stage, theoretical arguments have lost their validity; and in India they never had, and never will have, any validity.

Without trenching on the realms of theory, we can adduce powerful arguments for state ownership leaving the question of nationalisation to be tackled from time to time according to the merits of each case. There is first the fact that state enterprise in India has a bigger start than has fallen to the lot of any other country in the world. Since the bulk of our industrial and economic development is to be effected in the future, there will be enough to do for the state without any invasion of private enterprise of dubious ethics. The principles which were accepted and the policies which were laid down in the past still leave a great deal of scope for completion. Transport, communications and public utilities have not yet been completely brought under state ownership. Industries of key or national importance must be under state control which will be a reality. Measures that are necessary for the financing of the plan cannot be fought shy of. And in all gigantic new enterprises which can be made possible only by the state, the state must have full control which will be exerted in the public interest. I may also recall a point which I dealt with at length in these columns last week, the importance of increasing the number of state enterprises with a view to add to public revenues. While I deprecate playing with the cry for nationalisation, I plead for a clear perception, on the part of the public, of how closely our economic fortunes are bound up with the extension and intensification of state control of commercial enterprise.

OUR AMERICAN LETTER

NATIONAL FOREIGN TRADE CONVENTION

ALL PHASES OF INTERNATIONAL TRADE TO BE COVERED

Washington, October 18.

Foreign trade quarters here, now that the 19th annual meeting of the Propeller Club of the United States and the American Merchant Marine Conference has ended, are looking forward with interest to the scheduled 32nd National Foreign Trade Convention.

The convention seated for Nov. 12, 13 and 14, will be held in New York under the auspices of the National Foreign Trade Council, Inc. As at the Propeller Club meeting, all phases of foreign trade are expected to be covered at the three-day convention.

One of the many conclusions reached at the Propeller Club meeting, and a subject likely to undergo discussion at the Foreign Trade Convention, was the need to fight discrimination against American foreign trade and shipping.

The Propeller Club, in one of 20 resolutions approved by its membership, demanded that the United States Government refuse to grant loans or credits to foreign governments or their agencies which persist in discrimination against interests of the United States foreign commerce.

The meeting commended the efforts of the federal government to accomplish the elimination of blocked currency restrictions, empire preferences, tax discriminations and other discriminatory practices militating against the best interests of American merchant marine and the American producer. It urged the government to exert even greater influence to bring about a return throughout the world to sound principles of non-discriminatory, multilateral trade in accordance with the spirit of the Atlantic Charter and the United Nations agreements.

The National Foreign Trade Council has adopted a similar stand. In a statement made public by Council President Eugene P. Thomas, the Council advocated that financial aid that may be extended by the United States to Great Britain, or to any other countries, "should be conditioned on the effective removal for future operations of discriminations and restrictions against American foreign trade."

This action, the Council said, calls for an agreement on the part of Great Britain to modify the sterling area arrangement to the extent required to restore fair competitive opportunities in the sterling area countries and to the adjustment of trade and exchange controls which enforce this arrangement. It also calls for an agreed revision of British Empire preferences and determination by both parties to maintain a firm dollar-pound relationship.

"The removal of discriminations and restrictions against American foreign trade should also be called for in the case of any other agreements which the United States may enter into for the extension of financial aid to other countries," the Council added.

The Propeller Club and the National Foreign Trade Council were not the only organisations to discuss recently the subject of the British sterling area. The Institute of International Finance of New York University has issued, through Dean John T. Madden, a bulletin entitled, "The Pound Sterling and the Sterling Area after World War II."

Dean Madden warned that Great Britain may refuse to ratify the Bretton Woods agreements if no adequate financial assistance is granted to her. Also possible in this event would be a devaluation of the pound sterling and continuing and ever-widening of the sterling area.

After almost six years of war, the bulletin explained, Great Britain has outstanding a short term external debt consisting of foreign-owned sterling balances of between \$12,000,000,000 and \$14,000,000,000. The country has divested itself of a substantial portion of its best foreign interests with the result that the income from abroad in the form of interest, dividends, and profits will be considerably smaller than in pre-war years. The outlook for earnings abroad by shipping and insurance companies in the near future is uncertain if not bad.

"In view of the decrease in the current income from abroad, Great Britain would have to raise the volume of post-war exports 50 per cent above the 1938 level in order to be able to pay for imports equal in volume to that of 1938. Dean Madden continued. "Britain's ability to export depends on the importation of large quantities of raw materials and semi-manufactured goods. Such imports must be paid at least in part with 'Free' (hard) currencies, notably United States and Canadian dollars which the country is lacking.

"Before Great Britain can ratify the Bretton Woods agreement, which requires gradual elimination of foreign-exchange control and abandonment of bilateral trade agreements, it must first liquidate in one way or another the bulk of its short-term foreign debt and obtain a sufficient amount of hard currencies to meet its obligations during periods when imports are bound to be large while exports will of necessity be relatively small."

Dean Madden revealed it was generally believed that if adequate financial assistance were granted by the United States to Great Britain during the next two or three years, the latter will be able to extricate

itself gradually from its post-war difficult position and adopt the principles embodied in the Bretton Woods agreements.

Asserting that the nature and extent of the assistance is of vital importance, the bulletin pointed out that Britain is unwilling to accept a foreign loan even of long maturity and at a very low rate of interest, since payment of principal and interest would further aggravate her balance of payments problem.

Concluding, Dean Madden said:

"The sterling area must be looked upon as a currency union, comprising a number of countries whose currencies are freely convertible into one another and as a rule move in unison in relation to gold or the United States dollar. So long as the pound sterling could be freely converted into other currencies or gold, the sterling area aided rather than impeded international trade in general, even though it gave certain discriminatory advantages to the member countries.

"On the other hand, the sterling area—an aggregation of a wide variety of large natural resources and industrial plants—surrounded by a fence of foreign-exchange restrictions is likely to cause serious friction in the relationship between the United States and the sterling area. The only solution of this problem lies in the creation of conditions that would enable the individual countries, notably Great Britain, to remove the exchange restrictions and to stabilize the pound sterling in terms of gold or the dollar.

"This can be achieved only through close mutual co-operation and particularly by the adoption by all countries of policies and measures aimed to foster the international exchange of commodities and services.

"It is possible that the establishment of the International Monetary Fund and the International Bank for Reconstruction and Development provided by the Bretton Woods agreement, the recently increased resources of the Export-Import Bank of Washington, a settlement of World War I debts and lend-lease obligations, and the grant of financial aid by the United States to Great Britain will enable the latter to improve her international financial position and abolish foreign-exchange control."

Gateway of India

Bombay, November 6, 1945.

Two important suggestions were made by Mr. Master, President of the Indian Merchants' Chamber, at the third quarterly general meeting. After outlining the various obstacles to industrialisation in India, Mr. Master urged that this country should have its share in the machinery and capital equipment which the Allies would be taking away from Japan by way of reparations. This is a legitimate claim because India bore the brunt of the Japanese attack and for a long time was one of the main theatres of the war in the Far East. If neither Britain nor America can supply the equipment we need, the least they could do is to let India have a part of the equipment and machinery which are undoubtedly being dismantled in Japan. The conscience of some may perhaps revolt at the thought, but in Europe neither Britain nor Russia seems to be unduly squeamish about looting German industries and spiriting away the excellent German plants and whole factories to their territories. What is sauce for the Allies in Europe can be sauce for India in the Far East. A nationalist government at the Centre would surely endorse an act upon Mr. Master's bold suggestion, which in the present circumstances is apt to be put out of court. The other suggestion of Mr. Master was that both industrialists and government should immediately take up the question of establishing capital goods industries in this country. The time has gone when a proposal of this thought seemed fruitless and mere weariness of the flesh. For in the last few weeks there have been two companies promoted, one in the south at Coimbatore and another at Ahmedabad in the north for manufacturing textile machinery. The prospects of manufacturing some items of sugar machinery are also attracting the attention of some bold entrepreneurs. In fact, an American industrialist has already bruited the suggestion that, instead of waiting at the doorstep of Britain for equipment or of America for dollars, it might be easier and more practical for India to take up the question of making machinery with the help of foreign experts.

Both the spokesmen of the Indian shipping industry have been active in the past week. Mr. Master had a dig at the authors of the Bombay Plan for the conspicuous omission of reference to the Indian shipping industry. He declared that this country with a coastline of over 4,000 miles has only a tonnage of one lakh, while the world tonnage was nearly 18 million. Even the official statement of industrial policy is bereft of any worthwhile reference to expansion of this important industry. The agitation for a forward policy has always met with cold response from official circles, and it is only recently at the second meeting of the Shipping Policy Committee that a Sub-Committee was appointed to recommend a suitable tonnage target for Indian shipping and other measures to regulate the shipping industry. The terms of reference to the Sub-Committee include (1) the target of tonnage to be attained within five to ten years, (2) the percentage shares of the maritime trade of India and other trades in which India is interested, both coastal and overseas, cargo and passenger, which should be secured for the Indian shipping interests and, finally (3) the measures to be taken to prevent monopolies. To ensure an economically adequate size for the industry and to achieve equitable distribution among the different companies, of the trade that may be handled by Indian ship-

ping. The Sub-Committee is not debarred from making other relevant recommendations though they may be strictly outside these terms of reference. The presence of Sir C. P. Ramaswami Iyer to guide its deliberations and of Mr. Master and Mr. K. C. Neogy should go far to command confidence in the Committee. It is interesting to record here the fact that the Commerce Member went so far as to promise that steps would be taken to secure for Indian shipping an increased share (beyond the present 30 per cent.) of the coastal trade including trade with Ceylon and Burma, besides substantial shares in the trade with countries of the Eastern and Western Sea-boards like East Africa, Malaya, Dutch East Indies.

As usual, it was inevitable that Mr. Walchand Hirachand should have indulged in a forthright but fair criticism of the discriminatory policy of the Government of India in regard to the national shipping industry during the past four years. Lack of space forbids a detailed comment upon all the series of handicaps deliberately imposed by a foreign government in the way of the only Indian shipping company. Mr. Walchand's speech is a scathing indictment of these and gives a vivid account of the parlous plight of Indian shipowners.

The newly appointed Tariff Board will be meeting in Bombay a few days hence. Applications have been received from about 14 industries for protection and these, it is said, include non-ferrous metals, plywood, aluminium, calcium chloride, abrasives and some others. The exact order in which consideration of these will be taken up is not yet known and in fact, the method of procedure and other aspects will only be cleared up after the Board meets. It is interesting to note that the vacancies in the Board could be filled up only after several non-official members had been approached and had declined the official invitation to serve on the Board. There is real anxiety among industrialists and members of the commercial community that the Board has already been given, not a *carte blanche* to make its recommendations with a free and unbiased mind, but pre-decided decisions of the Government of India to advocate in its reports. It is up to Sir Shanmugham Chetty to dispel these, may be, uncharitable presumptions, by a full and fair enquiry into the war babies of Indian industry. The gains made by India in industrialisation have been few enough in all conscience, compared with the impressive achievements of Australia, Canada and other countries. It is, therefore, felt to be of the greatest importance whether the Board approaches the question of protection in the spirit laid down by the Fiscal Commission's obsolete canons of protection which will only make the enquiry useless or whether it will be animated by an active desire to help the new industries to carry on and to shield them from the blasts of foreign competition. It is hoped that a fetish of "discriminating protection" will not be made and that the Board will advocate a truly liberal fiscal policy. The official communique from New Delhi announcing the resolution for the formation of the Board says that industries which may be granted protection or assistance on the recommendation of the Board will still be eligible for protection beyond the transition period. By this, it seems to envisage fresh consideration from time to time of the assistance to be provided. The revisions of tariff policy which this statement implies have not been received well in commercial circles, for official opinion, which may now be inclined to be favourable, may veer round to an adverse degree in the uncertain future. The Government of India resolution has set

forth the names of the ten industries that have applied for protection, and also affirms the decision of the government to stand by its assurance of protection to the industries like bichromates, steel pipes and tubes, calcium chloride, starch, aluminium, the growth of which was considered essential to the war effort by the government. It is stated that the bichromates, calcium chloride and starch industries have already applied for protection and their case will be taken up immediately for consideration. The conditions for giving protection have also been stated and the excessive emphasis placed on the familiar conditions—whether the industries are likely to develop sufficiently within a reasonable time to carry on without assistance, whether the national interest and the consumers' interest justify the cost incurred by the State or by the community in giving such protection—fill manufacturers' minds with some misgiving. It is, however, unfair to prejudge the issue. These doubts are voiced in commercial circles only in view of the reported moves of foreign big business—the pseudo "India Limiteds" to set up subsidiary industries to object to protection on the ground of higher costs for their raw materials, while some Indian concerns are asking for a subsidy to cover the difference between the landed cost and their cost of production in preference to a protective import duty. Foreign chemical manufacturers may be putting up a spirited fight against the grant of assistance to the slender Indian new industries and it is not altogether going to be a cake-walk for Indian industries to obtain the requisite quantum of assistance, with which alone they can keep their heads above water.

By Special Cable

Nationalisation of Cable and Wireless

LONDON, Nov. 5

Commenting on the Government's decision to take over the services now operated by Cable and Wireless, Ltd. the Manchester Guardian financial editor points out that at present the operating company which was formed in 1929 to end the competition between cable and wireless services is owned by Cable and Wireless (Holding), Ltd.

Share-holding in the joint operating company, which is now to be transferred to public ownership, is the main asset of the group, except for the manufacturing business of Marconi and considerable outside investments. The public holds shares only in the holding company, which has issued £16,767,000 of 5½ per cent Cumulative Preference shares and £6,883,000 of ordinary stock. The value of this stock has been based on the fact that the operating company is entitled to a standard net revenue of £1,200,000 a year fixed by an agreement with Empire Governments. The actual profits in the last eight years have been considerably higher, and the group as a whole has provided £7,000,000 for Excess Profits Tax. Of any remaining revenue above the standard amount, one-half goes to reduction of rate and other purposes approved by the Commonwealth Communications Council.

Traffic has enormously expanded during the war. In 1938 the Company handled 231,000,000 words; in 1943, 644,000,000 words; and in 1944 705,000,000 words.

There are two aspects to Cable and Wireless nationalisation the larger Empire scheme and the interests of the present stock-holders. The scheme is not new and owes nothing to the beliefs of the present Government, which has simply accepted the recommendations of the Commonwealth Communications Conference. This met in London in July and broke up before the Labour Government had held its first Cabinet meeting. The main points are that public utility corporations should be formed in the United Kingdom and Dominions and India to take

over the cable and wireless services and that a new central authority should be set up to be responsible for policy and collect the net revenues of various corporations in order to redistribute them after deducting common expenditure. Reports from South Africa and Australia have indicated that the Dominion Governments are about to take similar steps.

Bharat Steamships Company

Bharat Steamships Company is the second large steam navigation company to be floated in recent months. This new company (the prospectus is published elsewhere in this issue), however, is started under influential auspices. Registered in the Bhavnagar State the promoters have been able to persuade the Bhavnagar and Porbandar States to take up a substantial portion of the capital. The authorised capital is Rs. 3 crores in shares of Rs. 100 each. The issued capital is Rs. 1 crore in 1 lakh ordinary shares of Rs. 100 each. The Bhavnagar State has agreed to take 25,000 shares and the Porbandar State 5,000 shares while the directors and their friends have taken up 40,000 shares. The balance of 30,000 shares is offered for public subscription.

EAST INDIAN RAILWAY

TENDER NOTICE.

Annual Contract Items Costing Over Rs. 8,000 Class I Contract.

Sealed tenders are invited for the following and will be received in General Manager's Office, E. I. Railway, 105, Clive Street, Calcutta, on the 10th December, 1945, at 12 noon.

Tender No. SP/D/45/Hb2/Pt.I for Section Positive Stone's Standard Tenum 15 plate.

Tenders forms with full particulars can be had from the Office of the Controller of Stores, E. I. Railway, 105, Clive Street, Calcutta, on payment of Rs. 2 per copy to the Treasurer, E. I. Railway, 105, Clive Street, Calcutta, and on production of his receipt when applying for the same.

Firms outside Calcutta may, however, remit the amount to the Controller of Stores direct by Money Order. No refund is permissible after payment.

Sealed tenders delivered by hand should be presented for registration in the General Manager's Office, and then put into the tender box outside the Deputy General Manager's (Works) room by the tenderer or his representative.

(From Our Correspondent)

Madras, November 6.

Explaining the Employment Exchange Scheme of the Government of India (Labour Department) the Regional Director of Settlement and Employment stated that, in addition to the Regional Exchange functioning at Madras, it has been decided, in consultation with the Provincial Government, to open nine Sub-Regional Exchanges in the Province for the present. He pointed out that the number of persons likely to be released during the first stage of demobilisation in Madras Province was about 154,350 beginning from Nov. 15. It was proposed to set up a network of Employment Exchanges in the Province, for securing civil employment for demobilised workers. The Sub-Regional Exchanges would be located at Vizagapatam, Bezawada, Anantapur, Coimbatore, Calicut, Madras, Trichinopoly, Vellore and Madras. The Federal Public Service Commission would select the proper authorities for the management of each Exchange. There would be an Appointment section at the Regional Exchange, to meet the needs of demobilised men and women. The Director also explained the Employment Index-card system by which the Exchanges register ex-service men. He further added that an Employment Information Bureau would be set up to act as a link between the ex-service men and the Sub-Regional Exchanges. These boards would be supplied with information regarding all schemes initiated by the Government of India, Provincial Governments, and local authorities as regards opportunities for employment.

The Regional Rationing Advisory Panel consisting mainly of the food experts of the Madras, Mysore, Travancore, Cochin and Coorg Governments have formed a sub-committee to study the problem of nutrition and diet in South India and make recommendations to the Provincial and state Governments. The Panel have also considered the possibility of utilising the services of the maternity and child welfare centres and similar institutions in food matters.

In reply to a memorandum on behalf of the Madras Provincial Handloom Cloth Merchants' Association the Government of India in a communication advises the Export Trade Controller, Madras, to give preference to fine handloom cloth while licensing export of handloom cloth to Ceylon. There is however no objection to the Association taking up the matter with the Government of Madras. Necessary instructions in the matter are being issued by the Central Board of Revenue to the Collector of Customs, Madras.

Addressing a meeting under the auspices of the students' club of the Agricultural College at Bapatla, Dr. V. I. Vidyathan, Director of Irrigation Research Madras, remarked that there was a great need for co-ordination between irrigation and agricultural research. Regarding irrigation research he said that the problems of each province differed from those of the other. It was meant to tackle problems of silt clearing, construction of dams, location of tube wells and so on. In India the Punjab has done pioneer work on these lines. He hoped that the Madras Province would soon expand its research in agriculture, irrigation and industries.

Elaborate re-settlement plans are being carried out at the headquarters of the Madras Sappers and Miners at Bangalore. The plan includes a variety of subjects as modern methods of agriculture and cottage industries. Separate trade courses are run for those having some technical experience. At the initial stages of training, the Com-

merce and Industries Department of Mysore gave valuable assistance by providing skilled instructions. The Scheme is now in full swing.

Inaugurating the live stock Improvement Scheme and the fisheries development scheme launched by the Mysore Government, the minister for Agriculture referred to the 'melancholy paradox' that while India bears the largest cattle population in the world, millions of Indians were among the most under-nourished peoples of the world. The minister appealed for the co-operation of the villagers with the departments of agriculture and animal husbandry to see that India occupied her place among the leading nations of the world in farming and food production.

Delivering a speech under the auspices of the Company meeting of the Mysore Spun Silk Mills, Ltd., Dewan Bahadur Mr. K. R. Sreenivasa Iyengar, Chairman and Managing Director stated that the Mills continued to contribute their share towards war effort during the period of war under the flature expansion scheme of the Government of India. He then referred to a scheme for the expansion of the Mills with a view to increase the production in the factory and improve the quality of the products.

Declaring open the Sri Chitra Exhibition at Trivandrum Sir C. V. Raman paid a tribute to the rapid industrialisation of Travancore and to the keen intellect of the people. He pointed out that the Exhibition was indicative of the shape of things to come and a pointer for stimulating and progressive effort. The Dewan also explained what the exhibition was intended to serve and indicated the hopes and aspirations of The Government.

A Resume of Commodity Markets

There are no important features in the commodity markets in the past week though it should be said that in the latter half of the period under review a definitely steadier tendency has been noticeable in the bullion market, particularly in gold. The continued expansion of currency and prominent bull operators' buying have resulted in a rise in prices for the yellow metal. The raw jute market has continued quiet but in the last three days a slightly better feeling has been noticeable and mills have been buying in larger quantities. The jute manufactures market, too, has been steady and a slight improvement in prices is to be noted. The raw cotton market has been irregular. Lower Karachi advices resulted in an earlier decline in prices. Later, there was some covering with the strength of the spot market. The gains have not been fully held. The seeds markets has been uninteresting as the British Ministry of Food has not made fresh purchases. Only the reports from Madras that the groundnut crop has suffered damage in the cyclone areas have had a steadying influence.

The raw jute market is featureless and prices are barely around minimum rates. Mills, till Wednesday this week, kept out of the market and only a very small amount of business was reported. In the last two days, however, slightly more interest has been displayed as shipments of jute goods recently have been more satisfactory and it is felt that the offtake in the coming weeks might be more than market expectations. It is felt, however, that there is no important development to warrant a revision of the ideas held by the trade. A substantial discount is still available in both the hessian and heavy goods section, for forward positions. While the discount may be in part due to the expectations of a lower cost of production and lower prices for raw materials, the bazar is still of the feeling that it would not be possible to dispose of all the output of mills if the present coal arrivals were maintained and there was an increase in the rate of production. Unless it is possible to take a definite view of the prospects for the next year, it cannot be expected that there will be a substantial improvement in prices for some time yet. From the general tone of the market, however, it appears that the feeling of despondency has been got over and that the weakness noticeable in both the jute and jute manufactures markets is only a passing phase.

Like the raw jute market the raw cotton market is undecided. Speculators took the opportunity to push down prices for raw cotton when the announcement regarding the reduction in the ceiling prices for cloth and yarn was made some time back. Karachi advices also were lower but as mills were purchasing rather liberally and Calcutta operators were inclined to take a more optimistic view, there was hasty covering and the losses were regained. Towards the close, however, there has been selling pressure and the general tone of the market is irregular. It was also reported earlier that the outlook for Indian cotton exports was not quite satisfactory. In the last two days rumours have been circulated to the effect that there was some enquiry from Liverpool for Indian cotton and that arrangements might be made before long for larger exports of Indian cotton. The emphasis on the larger consumption of non-American cotton by Lancashire is regarded as a favourable factor for India.

The bullion market, as stated above, has been steady in the latter half of the week

Gold ready especially is higher by more than a point at Rs. 79-3. In spite of the reports that there will be a change in the basis of trading on the bullion exchange and that the settlement of transactions will be on a monthly basis, bears have not been able to take any immediate advantage of these reports. Prominent bull operators have been able to control ready stocks.

In the silver market, however, bulls appear to lose their grip on the market as advices from upcountry centres were not very encouraging and it was not possible for prominent operators to rail silver to upcountry centres in order to reduce local stocks.

The coincidence of the announcement regarding the increase in sugar rationing with the news that substantial stocks of sugar have been seized in Java has given rise to the fears that the Indian sugar industry will before long have to meet competition from Netherlands East Indies. It need not be emphasised that the reports in this regard have been exaggerated and that even with Java as an active producer in 1941, the Indian sugar industry was able to hold its own and the production of sugar of over 11 lakhs tons

was easily absorbed. Last season the output was considerably lower at 9,80,000 tons. But for the stocks carried over from the previous years it would not have been possible to meet the demand. It is estimated that production in 1945-46 will be 1.1 million tons and that, with the reduction in defence requirements, it would be possible to increase sugar rationing.

As regards the stocks of sugar in Java it is stated that the quantity of 1.6 million tons will be distributed among the United Nations. While this distribution will help the United Nations to a considerable extent, of greater significance to the Indian market is the fact that the sugar industry was working rather satisfactorily under Japanese occupation and that it was possible to build up stocks. With the export markets cut off, Java in normal years exported from 50 to 60 per cent, under Jap occupation it is not clear whether this surplus was built up after providing for exports. In any case, it would be reasonable to conclude that the sugar industry in that area is in a satisfactory condition and that but for the political unrest in Indonesia it would be possible to expect a large production from that source.

Don't DETACH YOUR FAN BLADES

Almost all reputable brands of ceiling fans manufactured after 1935 are of the enclosed type—i. e. the motor, armature and the coils are fully protected against dust and grime. It is therefore not necessary to remove the blades during winter in those parts of the country where fans are not generally used.

Damage is very often caused to the threads of the screw or the fixing slot in the blades by removal and separate storage. Loose fitting will result in the development of noise and unbalanced rotation.

Run the fans for a few minutes once in three weeks during the cold weather when they are not in regular service. Thus you will be able to prolong their life until you get new "Orient" fans.

Sale of fans to public is still subject to Government restrictions. As the War is over we expect an early removal of these restrictions. We shall then be able to supply in full civilian demands for the next year.

"Orient" fans are constructed to give noiseless and uninterrupted service over a period of years. They economically transform your current into a cool breeze.

Jute and Jute Manufactures

Special to "Indian Finance".

(From Our Correspondent)

CALCUTTA, Nov. 8

Little can be written this week regarding conditions in the Calcutta Jute Market that would not be a repetition of our recent reports of the depression existing in all sections of the trade at the present time. Indications of a revival of overseas enquiry for jute goods are still lacking and shippers demands have been spasmodic. During the first part of the week business passing was almost entirely confined to "Lucky Day" contracts principally in the Loose Jute section but there was also a little 'Diwali' business done with Mills in Hessian goods.

In contrast to the almost stagnant conditions prevailing in Calcutta, jute trade circles in Dundee are carrying on what appears to be a hopeless struggle to meet the enormous demands of the home trade for jute goods as well as an ever increasing demand from foreign markets. Spinners and Manufacturers in Dundee are getting plenty of orders but due to an acute scarcity of yarn are compelled to refuse even large orders that would normally be the subject of very keen competition. Dundee Spinners are failing in their efforts to increase their complements of hands and as a result manufacturers have been compelled to lay-off many weavers because yarn is not available in sufficient quantity to keep all looms working. Production is also being curtailed by the irregular attendance of Mill workers who come or go just as they please, realising of course that, as far as the Dundee jute trade is concerned, labour is top-dog for the present. Employers have so far been unable to overcome the reluctance of most of their former employees to return to the Mills. These former jute mill operatives having had the experience during war time of working for better pay under more congenial conditions are in no hurry to return to the mills in spite of the offer of better terms of service compared with those in force in pre-war days.

Recently we noticed an advertisement in a Dundee newspaper inserted by a certain group of associated jute companies appealing for the return of old employees. We have heard since then that the Association of Jute Spinners and Manufacturers in Dundee is taking this line of action in all local papers in an attempt to put their case before ex-employees in the hope of inducing them to return to the trade. Jute manufactures and yarns are very urgently required in the home trade to assist in the rehabilitation schemes of the country, particularly in the building trades and for certain types of furnishings such as carpets and linoleum backing etc.

Apparently the only solution to the labour problem in Dundee is to instal new high speed machinery which will enable mills not only to run with fewer workers but also to reduce costs of production. Unfortunately a considerable time must elapse before new machinery can be introduced on a large scale and meantime the situation can be truly described as serious for there seems little likelihood of an early re-opening of mills and factories now closed for lack of labour.

The estimated jute arrival for October 1945 totals 7,05,000 bales compared with 6,47,000 bales for the same month last year. The total estimated arrivals for the period July to October this year now stands at 23,40,000 bales as against 21,90,000 for the same period in 1944.

The Indian Jute Mills Association issued the following statement of total reported sales for the week ended Saturday 27th October, 1945:—

	This & next month Yards	Forward. Yards
Hessian	40,57,929	66,73,168
40" 8 oz Hessian (included in above)	Nil	Nil
Twills	1,23,45,638	1,21,60,478
Plains	6,50,574	16,63,200

After showing a tendency to fall away again during the last four weeks, the daily average receipt of wagons at the Indian Jute Associations' dump for the first four days of the current week has reached the

very respectable figures of 101 wagons. During the period extending from the week-ending 13th October to week ending 3rd November the daily average was 64 wagons but sufficient stocks had been accumulated to enable the steam driven mills to operate for the time being.

It the Pucca Bale Market the only business reported has been in the Short Group and Long Group Dundee Daisee at minimum rates for export to the U.K. The business was not extensive and dealers are free sellers at minimum rates for all descriptions except special marks.

The Loose Jute market has been more or less idle with large quantities on offer at minimum prices and sellers continuing to press for business. Some business was done on "Lucky Day" contracts for Indian marks at Rs. 12 per maund for Bottoms alone. Also small lots of Tossa Middles at Rs. 16-2 and Tossa Bottoms at Rs. 13-7. European Jat Tossa Middles and Bottoms in 50-50 assortment came to business at

in volume
1st

There are **MORE** Chevrolets

GENERAL MOTORS INDIA LTD.
P.O. BOX 39 BOMBAY

Rs. 16 for Middles and Rs. 13-4 for Bottoms. A distressed lot of Jungli Tossa Bottoms changed hands at Rs. 11-8 per maund.

Interest has been lacking in the Manufactured Goods section in which trading has been mainly confined to inter-bazaar transactions with some covering business reported done with Mills. The 'bear' element in the market is not now quite so strong as it was and prices gradually moved up during the week but the undertone remains one of uncertainty. Early in the week there were reports of 'Diwall' business being done in the bazaar in 10 oz/40 fms. hessian at Rs. 25-8 for shipment in Jan./March next. A small lot of 9 porter 7½ oz. hessian was done with mills at Rs. 18-2 for April/June shipment. Covering business in 11 Porter hessian at maximum price was done with Mills for November delivery. On the whole, "Lucky Day" business was smaller than expected and prices are tending firmer.

The Heavy Goods market opened easier all round at the beginning of the week with 'bear' speculators depressing prices but later on the market took a turn and at time of writing prices of heavy goods are about one rupee higher than the lowest point touched recently. Reports state that mills have sold Ready B. Twills at Rs. 63-8 but confirmation of this is lacking at the moment.

(Continued from page 799.)

has stated that the figure may be as much as 2,500 million dollars. Even if the credit of 1,000 million dollars proves to be correct, there should be a substantial sum left over after adjustments for imports from the U.S.A. both on lend-lease and private account. It was estimated by the Finance Member in his last budget speech that total cash payments in regard to lend-lease materials was about Rs. 515 crores and that further purchases would be less than the credits derived on reverse lend-lease. The favourable balance of trade on private account has not been, therefore, utilised to any great extent.

The gilt-edged market has maintained lively activity at full rates. While prices for the whole front are better 3½ per cent. Paper has shown exceptional strength. After touching Rs. 103-8 this stock is now quoting Rs. 103-3. We consider it necessary to utter the strongest warning in this connection. Operators who are bull at current rates have serious disillusionment in store. For, though there has been so far no sign of Government's intentions with regard to our repeated suggestion for the redemption of this loan, it may be taken as certain that the developments in the Indian gilt-edged market and, more so, the policy of the British Government and their future loan operations will force the hands of the authorities in India to give three months' notice

to the holders of 3½ per cent. Paper and redeem it. This means that those who are foolish enough to buy this scrip at this high premium will find themselves obliged to accept payment at par. In this context, we must add that transactions that account for the rise of 3½ per cent. Paper to above par level may not amount to more than a few lakhs. It must also be added that the holders of this stock except for a infinitesimal minority must have their book values for this investment at well below par. The redemption of the loan will, therefore, cause no loss to any holders worth mentioning. At the same time the Government will do well to bear in mind that further delay in the repayment of this loan and further persistence at a hefty premium will only make redemption unnecessarily complicated and embarrassing. With the recent operations of the British Treasury underlining and emphasising their determination and ability to cause a substantial reduction in the structure of interest rates, the Government of India and their advisers must certainly be able now to get a clear idea of the in-

evitable future of money rates in India. The repayment of 3½ per cent. Paper cannot be far off—and must not be far off.

FACT No. 4

INDIA'S cotton textile industry now produces per year nearly 14% of the estimated world production of cloth, over 13% of the estimated world production of yarn. Today the industry employs 3 lakhs more men and women than prewar. In 1943-44, cloth available for civilian consumption in India was about 94% of peace-time supply.

The mills which make the cloth then are not responsible for the present shortage in the retail market. No, indeed! The facts and figures given here demonstrate that India is one of the major textile-producing countries of the world, that a 6% reduction in normal peacetime consumption should be sufficient to equate demand with supply.

Who then is responsible? The movement of cloth and yarn after exit from the mills is entirely controlled by Government. Therefore, if you are unable to obtain necessary cloth or yarn you should approach the Textile Controller of your province. The mills are making enough cloth for essential civil needs.

Price Re. 1

Stock Markets to-day and to-morrow:

SUDDEN RISE IN PRICES

The behaviour of the stock markets in both Calcutta and Bombay on Tuesday and Wednesday this week suggested that we were on the eve of a boom in prices and that the general expectation of operators was one of rising prices for some time. In the Moorat session in Bombay quite firm conditions were noticeable and business was put through at increasing rates. The sudden firming up in prices early this week is not due to any special development either in the national or international spheres. Only with the continued pressure of surplus funds seeking investment and the feeling that with a lower yield basis and assured prospects for Indian industries, share values should be marked higher.

I remarked last week that the market had not properly understood the implications of the Interim Budget proposals made by the British Chancellor of the Exchequer or the announcement regarding the reduction in interest rates on short term loans in Britain. The pursuance of a policy of cheaper money and the promise of tax relief at an early date necessarily mean that a similar policy will be pursued in this country also and that, under the peculiar conditions prevailing in the stock markets, there is every reason to expect that further investment buying will be reflected in a sharp rise in prices.

It is reported that outside buying has not increased to any great extent in the past two weeks and that most of the business has been on account of inter-market operators. As a matter of fact, for many months most of the business transacted has been mainly on account of prominent operators and, as has been pointed out on earlier occasions, the operations of bull syndicates in specified counters have resulted in a rather sharp rise in prices which, in most cases, had no relation to the intrinsic value for the shares or prospects for the company. This develop-

ment, it might be said, would lead to the discouragement of genuine investment buying and would result in a smaller public participation in business on the stock exchanges.

For this reason, I have emphasised the need for strictly enforcing the rules and regulations in regard to the transaction of business. While the rules regarding the enforcement of deliveries on the due dates have been observed to a certain extent, there is still need for tightening up control.

In spite of the manipulations in prices of certain counters by particular operators, it should be said that the more important shares have not been subjected to any special influences and that, given the assurance of fair trading, investment buying will continue to be on a large scale.

The developments in the money and stock markets in the past few months have been so striking and the reaction to the announcement of the end of the war has been so negligible, that investors have not yet made up their minds whether there should be a greater disposition of funds in equities and fixed interest bearing securities. The rise in Time liabilities of scheduled banks is perhaps an indication that the discerning investor is likely to await further developments but the accumulation of funds in the hands of banks necessarily means greater support for the gilt-edged market. If, with larger buying of gilt-edged securities by investment institutions and the expectations of a reduction in the Government's borrowing rate, gilt-edged prices move up further, it need not be pointed out that greater interest will be shown in equities and fixed interest bearing securities and that there will be a general rise in prices.

It is perhaps a little early to say that we are on the eve of a postwar boom in prices as the general public has not followed up the rise this week, and on Thursday and Friday, there was slight profit-taking. But it will not be surprising if there is a sustained rise in prices from now on till March next year as there are no great uncertainties regarding the Central Budget proposals and tax relief may be according to market expectations.

The announcement by the British Chancellor of the Exchequer regarding the nationalisation of Cable and Wireless affects this country in so far as the Indian Radio and Cable Communications Ltd., is concerned. This Company is working under an agreement with the Government of

India, which is liable for termination at twelve months notice, and is operating wireless and cable telegraph, radio telephone and photo telegram services between India and overseas and is also trading in apparatus for wireless communications, broadcast transmissions and radio receivers.

The Company was until 1932 known as the Indian Radio Telegraph Company Ltd. In February 1932 it entered into a merger agreement with the Cable and Wireless Communications Ltd., under which the company changed its name as on May 1, 1942 to the Indian Radio and Cable Communications Company Ltd. From July 1, it took over the cable telephone service in India.

Not many shares are held by the outside public and therefore the proposal by the Government to take over the undertaking has no great significance. But as adding to the revenues of the State and furthering the principle of nationalisation, this move is to be welcomed.

At the present moment there is great speculative activity in shares of companies which are expected to be nationalised. An instance is provided by the shares of the Calcutta Tramways Company. On the rumours that the company will be taken over by the Calcutta Corporation there has been a sudden rise in the shares to Rs. 62/8. Nothing is yet definitely known regarding the intentions of the Bengal Government but it would appear that there is interested speculative activity in these shares. In the absence of any definite statement of policy either by the Government or the Calcutta Corporation, the market has been rigged up. If it ultimately turns out that the proposals do not prove to be correct, the genuine investor who purchases

(Continued on page 827)

FACTORIES IN THE MAKING

India's post-war plans must include the starting of new industries throughout its length and breadth. These industries will require boilers, furnaces, tanks, pipes, pumps, trolleys, cranes, mills and machinery, none of which can be made without steel.

BOOMLET IN STOCK MARKETS**TATA STEELS AT NEW HIGH LEVEL**

By ANALYST

BOMBAY, Nov. 8

The new year has commenced very well with boomlike activity in evidence and prices ruling at record levels in Dalal Street. Tata Steels have led the show as usual. In Calcutta, Jutes have forged ahead in the expectation of higher dividends by most of the leading jute companies. Madras is slightly better due to the strength in Bombay and Calcutta.

The substantial rise in the market in the last fortnight is due to the belief that the Government of India will follow the cheap money policy, particularly now that Britain has come out with an interim budget and with definite proposals to maintain short term as well as long term money rates at as low a level as possible.

Gilt-edged securities in India have moved up with $3\frac{1}{2}$ per cent Paper around Rs. 103-3. Other dated securities also have forged ahead. Bank shares have had a remarkable spurt in the last fortnight. Bull operators, therefore, argue that share prices also must move up substantially.

Sir Ardeshr Dalal's speech in the General Policy Committee meeting a month ago, regarding the steps to be taken by the Government to bridge the transition period from war to peace, also seems to have added to the bullish enthusiasm.

All told, the stage seems to be set for a boom. The only point we have to consider is whether it is advisable to buy shares at today's market prices or wait for a normal market reaction. We have, of course, first of all, to discuss the prospects for every industry and after pitching upon the selection to be made, the actual buying of a particular share should be done only after mature consideration.

I have been always bullish in Steel shares, particularly Tata Steel Deferreds which touched a high of Rs. 2,390 yesterday. Bearing in mind that these shares have

FABRICATED STEELWORK**MECHANICAL PLANT****ROPEWAYS****STEEL CASTINGS**

Surplus capacity now
available for civilian orders

KUMARDHUBI
Engineering Works Ltd.
KUMARDHUBI Dist. MANBHUM

MANAGING AGENTS **BIRD & CO.** CALCUTTA

become ex dividend only very recently the shares have touched the highest in the history of the company. In January last, the shares touched a high of Rs. 2,427-8 inclusive of practically 9 month's dividend (Tata Steel's financial year being 31st March). In the long run, I do expect still higher prices for Tata Steels, but there has been rapid rise in the market in the last one month, i.e., more than Rs. 200 per Deferred share and also I hear that many important operators have realised their profits. I would, therefore, recommend profit-taking of holdings over Rs. 2,400 and would suggest fresh purchases whenever the shares react to somewhere below Rs. 2,300, say between Rs. 2,250 and Rs. 2,300. The reason why I recommend a level between Rs. 2,250 to Rs. 2,300 is because the previous low was Rs. 2,210 and from Rs. 2,210 the market has risen to Rs. 2,390. Since I feel that the market is a rising market the next bottom must be higher than the previous low of Rs. 2,210. If one buys, therefore, say around Rs. 2,250 or Rs. 2,300 he should put a stoploss at Rs. 2,200 because if the market tanks Rs. 2,210, we might see still lower levels before the trend is changed. Investors, therefore, may not be far in the wrong if they book their profits in the coming weeks in all steadier markets despite excellent long-term prospects.

Indian Irons also have moved up to Rs. 42-12. But main activity has been in Steel Corporations which touched Rs. 37. From Rs. 34 onwards there has been knowledgeable buying by professional speculators and big investors who have accumulated large blocks of shares. Since I hear that buying still continues, it would not be surprising if further higher levels are touched. I would not, however, recommend fresh purchases at Rs. 37 but would recommend retention of holdings with a view to book one's profits between Rs. 39 and Rs. 40.

BURN & COMPANY LIMITED.

NOTICE is hereby given that the Fifty-first Ordinary General Meeting of the Shareholders of BURN & CO. LTD. will be held on Thursday the 29th November, 1945 at Eleven O'clock in the forenoon at the Registered Office, 12, Mission Row, Calcutta, to transact the following business :-

- (1) To receive and adopt the Director's Report and Audited Balance Sheet and Profit and Loss Account for the year ended 30th April, 1945, and to declare a dividend.
- (2) To elect a Director in place of Sir Josna Ghosal, who retires and is eligible for re-election.
- (3) To appoint Auditors for the current year and to fix their remuneration.

The Transfer Books of the Company will be closed from the 22nd to the 29th November, 1945, both days inclusive.

By Order of the Board,
BURN & CO.,
Managing Agents.

Calcutta, 8th Nov. '45.

Note.—If the Dividend as recommended by the Directors is passed at the meeting, it will be paid on or after 29th November, 1945, to those Shareholders whose names are on the Company's Register on the 21st November, 1945.

Calcutta, 6th Nov. 1945.

The Week in the Exchanges**CALCUTTA STOCK EXCHANGE**

CALCUTTA, Nov. 9, 1945.

After remaining closed for three days the Calcutta Stock Exchange reopened for business on Tuesday this week. Active conditions were noticeable from the start and in the first two days of the week under review quite a large amount of business was reported. Jute shares led the market. The declaration of satisfactory dividends by some of the important companies and the heavy speculative activity in Howrah resulted in a general rise in prices. Even coal shares which were in least demand last week returned to favour. Burrakurs recorded a rise of more than a point to Rs. 46-2. In the Engineering section, Steel Corporation were outstanding with a rise to Rs. 37 on special buying while in the Miscellaneous section Calcutta Trams provided the feature with a rise to Rs. 62 on the reports that Calcutta Corporation will be taking over the undertaking as from the beginning of the New Year. After Wednesday, however, slightly easier conditions were noticeable on heavy profit-taking. Outside support has not increased to any great extent and operators are awaiting further developments. The general undertone is quite steady.

The gilt-edged securities section continued firm as conditions in the money market remained easy and there was a large investment demand. $3\frac{1}{2}$ per cent paper was at one time recorded at Rs. 103-8. There was profit-taking at the higher levels and the quotation receded to Rs. 103-3. 3 per cent paper was steady at Rs. 97-5. Among terminable loans, there was a small rise in 10 per cent Defence Loan 1949-52 to Rs. 102, 3 per cent 1953-55 to Rs. 101-12 and 3 per cent 1970-75 to Rs. 97-5. There was good enquiry for Provincial Loans but there were no sellers. The only transaction recorded was in 4 per cent Punjab Loan 1948 at Rs. 101-12.

With the continued strength of the gilt-edged market, Bank shares were firm. The Bank fully paid and contributories remained at last week's high levels of Rs. 2,330 and Rs. 575 respectively. Reserve Bank were sticky at Rs. 148 for some time but there has been a rise to Rs. 151 towards the close. United Commercial also were better at Rs. 32 premium.

A larger amount of business has been recorded in the cotton section but no appreciable rise in prices is reported. Basanti quoted Rs. 16-2, Cawnpore Textiles Rs. 13-1, Elgin Rs. 67-8 and Dakeswari Rs. 27-8. New Victoria were a shade easier at Rs. 8-6 while Mahalaxmi quoted Rs. 35-12.

In the Coal section, there was not much activity in the earlier part of the week but as the Jute section was very active it was felt that the fears regarding the coal industry were exaggerated and that the reports of a drop in raisings were only seasonal and prices have improved further. Bengal were done up to Rs. 780, but closed easier at Rs. 770. Burrakur were firm at Rs. 57-12. Bhalgora were done up to Rs. 29-4 but the quotation is easier at Rs. 27-12. After being higher at Rs. 73-8 Equitable are now quoted Rs. 72-13. New Beerbhoom improved by one point to Rs. 47-5. South Karanpura touched Rs. 41 though closed lower at Rs. 40-12.

In the Jute section, Howrah led the market with the quotation at one time as high as Rs. 105. There has been no increase in the ordinary dividend for the half-year ended September, 1945, the dividend being only Rs. 1-12 per share the same as before. There is still a feeling that bonus shares might be given though no con-

(Continued on page 848)

(Continued from page 825)

shares at the present inflated levels will be put to a heavy loss. It need not be emphasised that on questions relating to nationalisation, there is need for an official announcement of plans and everyone concerned should be given an opportunity to study the various problems at issue.

The Bally Jute Company Limited, is the fourth important jute mill in recent weeks to announce an increase in the dividend for the half-year ended September, 1945. Apart from the increase in ordinary dividend, the accounts for the last half-year should be regarded as extremely satisfactory in that Bally is the first mill to be able to report a decline in working expenses and a higher net profit in spite of a reduction in sales by Rs. 10 lakhs. Total sales were Rs. 77.48 lakhs against Rs. 87.23 lakhs. The net profit, before providing for taxation and depreciation, is Rs. 16,48,253 against Rs. 15,23,065 in the previous half-year. The amount set aside to depreciation is slightly higher at Rs. 60,000 against Rs. 50,000 while the provision for taxation is Rs. 12 lakhs against Rs. 11.5 lakhs. After transferring to Reserve Rs. 2 lakhs (Rs. 174,150) the ordinary dividend has been increased to Rs. 6 per share from Rs. 4 per share. The amount carried forward is Rs. 67,435 against Rs. 69,183 brought in.

The results of Bokaro and Ramgur Limited, for the half-year ended June 1945 make very satisfactory showing. The net profit, before providing for taxation and depreciation, at Rs. 3,51,717 compares very favourably with the figures for the previous half-year of Rs. 98,146. The higher earnings have been mainly due to the raisings from the newly developed collieries of Kuju and Pipradhi. Development is progressing satisfactorily at these two collieries and it is stated in the report that the output in the period April to September 1945 was even better and the target bonus relating to raisings in this

EAST INDIAN RAILWAY**TENDER NOTICE.**

Annual Contract Items Costing Over Rs. 8,000 Class I Contract.

Sealed tenders are invited for the following and will be received in General Manager's Office, E. I. Railway, 105, Clive Street, Calcutta, on the 10th December, 1945, at 12 noon.

Tender No. RI/Hd/46/D for teakwood Casing, Capping and Boards teakwood of various sizes.

Tenders forms with full particulars can be had from the Office of the Controller of Stores, E. I. Railway, 105, Clive Street, Calcutta, on payment of Rs. 2 per copy to the Treasurer, E. I. Railway, 105, Clive Street, Calcutta, and on production of his receipt when applying for the same.

Two drawing Nos. 4518/53 S.D. dated 9th March, 1923 and 11031/94-72 (Revised) may be purchased at Rs. 1-8 per two (i.e., one copy of each). The value to be deposited with the Treasurer. Drawings to be obtained from the Chief Electrical Engineer's Office, E. I. Railway, 105, Clive Street, Calcutta, on production of Treasurer's receipts.

Firms outside Calcutta may, however, remit the amount to the Controller of Stores direct by Money Order. No refund is permissible after payment.

Sealed tenders delivered by hand should be presented for registration in the General Manager's Office, and then put into the tender box outside the Deputy General Manager's (Works) room by the tenderer or his representative.

period will be substantial. The bonus under the Government target bonus scheme in respect of the six months ending March 1945 is included in the accounts now presented. This item is not shown separately as in the case of the accounts of other companies. But, presumably, the large sales amounting to Rs. 12.8 lakhs against Rs. 5.59 lakhs include this sum. The provision for taxation is Rs. 1.87 lakhs (Rs. 5,000). The amount set aside to depreciation is very much higher at Rs. 70,000 (Rs. 40,000) as it was considered desirable to depreciate the value of certain items of machinery recently purchased with the object of increasing the output and qualifying for special depreciation allowance by the full 50 per cent permitted. The amount written off mining and surface leases is Rs. 10,000 (Rs. 5,000). The dividend has been increased to Rs. 6½ per cent (5 per cent). The amount carried forward is higher at Rs. 9,941 against Rs. 5,223 brought in.

Mention is made for the first time in the report regarding the negotiations that are going on between the Company and the Tata Iron and Steel Company regarding the sale of coal bearing lands (Reference has been made in these columns to these negotiations more than a year ago.) A private limited liability company under the name of West Bokaro Limited has been incorporated and the negotiations between that Company and Bokaro and Ramgur with regard to a sublease of a large area of coal bearing land will, it is expected, be finalised in time for the next report to give the shareholders information with regard to the nett salami arising from this transaction.

An area of 419 highas of coal bearing land adjacent to the Kargali Colliery has been subleased to the Indian State Railways. The nett proceeds resulting from this transaction have been credited to the Capital Reserve Account. This newly created reserve has to its credit a sum of Rs. 87,772.

(Half-yearly General Meeting on 19-11-1945 at 11-25 a.m. Books closed from 5th November to 19th November, 1945).

Audited Accounts for the half-year ended 30th June, 1945.

Accounts.—The Profits and Loss Account, after providing Rs. 1,22,796-12-0 for Depreciation, Rs. 15,84,200 for Taxation, setting aside Rs. 2,49,000 as Provision for Post-War Contingencies and including the sum of Rs. 41,198-12-11 brought forward from last half-year, shows an available balance of Rs. 5,66,230-8-9 which the Directors propose to dispose of as follows:—

In paying a Dividend on the Preference Shares at the rate of 7 per cent. per annum without any deduction for Income Tax paid by the Company Rs. 80,493-0-0; In paying a Dividend on the Ordinary Shares at the rate of 10 per cent per annum, without any deduction for Income Tax paid by the Company Rs. 2,27,312-0-0; In paying a bonus of annas eight per share on the Ordinary Shares without any deductions for Income Tax paid by the Company Rs. 2,27,312-0-0; In carrying forward Rs. 31,113-8-9; Total Rs. 5,66,230-8-9.

During the half-year the Director of Open Cut Coal Mining continued to provide mechanical equipment at Teetulumuri Quarry from which a considerable output was obtained. It is expected that this quarry will be worked out within six to nine months' time.

In spite of an increase in production the supply of coal is still inadequate to meet the country's demands for internal consumption without taking into account the large potential export market. The shortage has had serious effects on many industries and it is therefore satisfactory that the risings of the Company have shown a further increase.

Under the Colliery Control Order despatches were made in accordance with the instructions issued by the Coal Commissioner.

The Directors hope that the present measures of Coal Control will be maintained so long as the shortage of coal continues as their removal might lead to an unhealthy rise in coal prices with serious repercussions both on consuming industries and eventually on the coal industry itself.

Loyabad Coke Plant.—During the half-year 36,230 tons of coke were manufactured and 35,777 tons despatched as compared with 33,047 tons manufactured and 35,512 tons despatched during the previous half-year.

The demand for coke was well maintained and the plant was operated to the maximum capacity permitted by the restricted coal supplies.

Market.—Apart from minor adjustments, coal prices remained unchanged throughout the half-year at the levels fixed by the Coal Commissioner on the 1st June, 1944.

Target Bonus.—It is calculated that in respect of the half-year ended 31st March, 1945, the Company has earned a sum of Rs. 4,71,532-12-0 under the First Target Bonus Scheme and the Maximum of Rs. 1,00,000 under the Second Target Bonus Scheme. These figures, however, have not yet been confirmed by the Coal Commissioner's Office and it is possible that adjustments may have to be made. In view of this fact 75 per cent. of the estimated earnings under the Bonus

Schemes have been included in the Accounts for the half-year ended 30th June, 1945, and the balance will be included when the figures have been confirmed and payment has been made by the Coal Commissioner's Office.

Owing to the seasonal drop in output the earnings under the Target Schemes in respect of the six months ending 30th September, 1945, will be considerably lower. It is estimated that Rs. 50,000 will be earned under the First Target Bonus Scheme and Rs. 1,00,000 under the Second Target Bonus Scheme for the next half-year.

Labour.—The volume of labour working at the Collieries during the half-year has been satisfactory but there has been a marked deterioration in the number of shifts worked per man per week. Miners can, if they wish, earn increased wages, but with the absence of consumer goods on which to spend their earnings there is a general tendency for the labour to work not more than four days a week. In addition absences from work due to the celebration of festivals and marriages are longer than was usual in normal times.

Women in Mines.—It is hoped that with the stoppage of Military Works more male labour will become available and that it will soon be possible to replace female labour by male labour for underground loading, etc.

Stores and Equipment.—Although certain items have been received during the half-year, the general shortage of plant and equipment continues and is a serious obstacle to increased production.

Transport.—There was the usual seasonal shortage of wagons during certain months of the half-year but on the whole the wagon supply was fairly satisfactory.

Sale of Property.—During the half-year the sale of the Company's royalty rights in the Jumoni Properties was completed. The purchase price realised was Rs. 6,00,000.

Stowing.—During the half-year stowing was carried out at the Collieries and Limited financial assistance was received from the Coal Mines Stowing Board.

The position in the majority of the Collieries is now such that stability can only be achieved, coal conserved, and raising increased or even maintained, if stowing is undertaken on a scale much greater than has been done in the past. The Directors have been giving serious consideration to this matter and have now decided to proceed with the installation of a ropeway system for the supply of sand to several of the Collieries, a system which it is expected will be in operation by the end of 1946.

Special Depreciation.—Special Depreciation for Taxation purposes has been sanctioned in respect of the purchases of certain plant, equipment, etc. The largest single item is the projected Sand Ropeway Scheme, the estimated cost of which approximately Rs. 50 lakhs. The Special Depreciation to be allowed on the above items is 75 per cent. of the capital cost and it is of primary importance to the financial stability of the Company that, as far as possible, this Special Depreciation be provided in the accounts of the Company in the same years as it is allowed for taxation purposes, that is in the two years immediately following the installation of the plant and equipment in question.

The profits of the subsidiary Companies were credited to the Profit and Loss Account of The Burrakur Coal Co., Ltd., to the extent of dividends received.

Managing Agents.—Bird & Co.

Authorised Capital—Rs. 1,00,00,000. Issued and Subscribed—Rs. 68,46,040. 4,54,624 Ord. of Rs. 10 each and 22,998, 7 per cent Cum. Pref. shares of Rs. 100 each, both fully paid up.

Audited Accounts for the half-year ended 30th June, 1945.

The reduction in output has been due to mining difficulties experienced in the depilaring districts of the Mine. As a result, however, of careful attention by the mining

HOWRAH MILLS COMPANY, LIMITED.

NOTICE is here given that the One-hundred and tenth Half-yearly Ordinary General Meeting of Shareholders will be held at the Registered Office of the Company, No. 4, Clive Row, Calcutta, on Friday, the 7th December, 1945, at 12 o'clock noon, for the following purposes:—

- (1) To receive the Directors' and Auditors' Reports and pass the Accounts for the half-year ended 30th September, 1945.
- (2) To declare Dividends.
- (3) As special business, to consider and if thought fit to pass, with or without modification, the following resolution, namely:—

"That in compliance with the recommendation of the Committee of the Indian Jute Mills Association the Company contribute to His Excellency the Governor of Bengal's Red Cross and St. John's Ambulance Appeal on the basis of Rs. 7-0-0 per loom, the Directors be and they are hereby authorised to make a donation of Rs. 13,580 to the said fund from the assets of the Company."

- (4) To transact any other business that may be brought before the meeting.

Company will be closed from 16th November to 7th December, 1945, both days inclusive.

By Order of the Directors,
JARDINE, SKINNER & CO.
Managing Agents.
Calcutta, 2nd Nov., 1945.

REDUCTION IN CEMENT PRICES.

NOTICE.
With effect from First November 1945 the prices of all brands of A.C.C. and Dalmia Companies Cement marketed by the Cement Marketing Co. of India Ltd. : throughout India have been reduced by Rupees Five per ton.

BALMER LAWRIE & CO., LTD.
Agents,
THE CEMENT MARKETING CO.,
OF INDIA LTD.

staff, these difficulties have now been largely overcome and it is hoped that subject to seasonal fluctuations, raisings will shortly show an improvement.

Under the Colliery Control Order despatches were made in accordance with the instructions issued by the Coal Commissioner.

Accounts.—The Profit and Loss Account after making provision for Excess Profits Tax, Income Tax and Super Tax, amounting to Rs. 2,22,142, setting aside Rs. 28,000 as Provision for Post-war Contingencies, providing Rs. 11,858-0-0 for Depreciation and including the sum of Rs. 3,011-0-7 brought forward from the last half-year shows an available balance of Rs. 41,515-3-4 which the Directors propose to dispose of as follows:—

In paying a Dividend on the Preference Shares at the rate of 6½ per cent per annum without any deduction for Income Tax paid by the Company Rs. 13,000-0-0; In paying a Dividend on the Ordinary Shares at the rate of 10 per cent per annum without any deduction for Income Tax paid by the Company Rs. 25,000-0-0; In carrying forward Rs. 3,515-3-4; Total Rs. 41,515-3-4.

Authorised, Issued and Subscribed Capital—Rs. 9,00,000 in 50,000 Ord. shares of Rs. 10 each and 4,000, 6½ per cent Cum. Pref. shares both fully paid up.

Audited Accounts for the half-year ended 30th June, 1945.

The High Court at Patna has not as yet taken up the hearing of the appeals instituted by the Rajah of Bamgarh Court.

Prospecting.—Prospecting has continued during the half-year.

Religara.—It is expected that despatches from the area subleased to the Karanpura Mining Syndicate will commence in the last quarter of 1945.

Accounts.—In view of the liabilities involved under the litigation now in progress, it has been considered desirable to create a general reserve in the Company's accounts and an allocation from this half-year's profits has been made for this purpose.

The Profit and Loss Account, after providing Rs. 6,353-14-0 for Depreciation, writing off Rs. 21,485-3-3 from Prospecting and transferring Rs. 50,000 to General Reserve, shows an available balance of Rs. 41,506-0-2 which the Directors propose to dispose of as follows:—

In paying a Dividend at the rate of 7½ per cent. per annum on the Founders' Shares without any deduction for Income Tax paid by the Company Rs. 18,750-0-0; In paying a Dividend at the rate of 2½ per cent. per annum on the Ordinary Shares without any deduction for Income Tax paid by the Company Rs. 18,750-0-0; In carrying forward Rs. 4,006-0-2; Total Rs. 41,506-0-2.

Audited Accounts for the half-year ended 30th June, 1945.

Mining conditions at this Colliery continue to be extremely difficult and it is unlikely that there will be any appreciable improvement in raisings until such time as sand is available from the Ropeway Scheme which is likely to be in operation by 1946-1947. In addition work is now in hand on reopening 3 and 4 pits to raise coal from 10 and 11 seams.

Karanpura Mining Syndicate.—During the half-year a further 10 per cent. call has been made on the Company in respect of its share in the Karanpura Mining Syndicate making a total of Rs. 35,000 subscribed to

date and leaving the contingent liability at Rs. 1,40,000.

Accounts.—The Profit and Loss Account, after providing Rs. 16,073-8-9 for Depreciation and including the sum of Rs. 8,851-12-11 brought forward from last half-year, shows an available balance of Rs. 27,341-15-2 which the Directors propose to dispose of as follows:—

In paying a Dividend at the rate of 5 per cent. per annum without any deduction for Income Tax paid by the Company Rs. 20,000-0-0; In carrying forward Rs. 7,341-15-2; Total Rs. 27,341-15-2.

(Half-yearly General Meeting on 23-11-1945 at noon. Books closed from 12th November to 23rd November, 1945).

Audited Accounts for the half-year ended 30th June, 1945.

These show a profit on Revenue Account of Rs. 13,85,879-3. On transfer of this sum to Profit and Loss Account and after reserving Rs. 8,20,000 to meet the liability for current Taxation, there is a balance at credit of that account of Rs. 7,96,113-11-5, of which were transferred Rs. 1,50,000 to War Contingencies Reserve. In addition, the sum of Rs. 4,75,000, representing excess provision in former years, becomes available on Taxation account as a result of the Company's successful appeal before the Income Tax Appellate Tribunal. Of this, we have placed Rs. 1,00,000 to Labour Welfare Reserve and Rs. 2,50,000 to Dividend Equalization Reserve and now recommend that the following dividends and bonus be paid, without any deduction for income tax paid by the Company:—

On Preference Shares:—Dividend at the rate of 7 per cent per annum Rs. 3-8-0 per share Rs. 96,677-0-0; On Ordinary Shares:—Dividend at the rate of 15 per cent per annum (Rs. 7-8-0 per share) Rs. 3,69,052-8-0; Bonus at the rate of 5 per cent per annum (Rs. 2-8-0 per share) 1,23,017-8-0; Total Rs. 5,88,747-0-0; leaving a balance of Rs. 1,62,366-11-5 to be carried forward.

As the military continue to occupy Upper Mill and part of Middle Mill manufacture was carried out at Lower and Jagatdal Mills which worked 120 hours per week. Output continued to be adversely affected by night work and poor labour supply, many of the Company's regular workers having left for employment with the military establishments in the district.

It is intended to electrify Upper Mill after de-requisition and contracts for the necessary plant etc. were placed in the United Kingdom as soon as import licences were granted in August last while arrangements have been made for the additional supply of energy required.

(Half-yearly Annual General Meeting on 19-11-1945 at 3-10 p.m. Books closed from 5th November to 19th November, 1945).

Audited accounts for the half-year ended 30th September, 1945.

The accounts after writing off for Depreciation Rs. 1,25,000, show a profit of Rs. 11,22,945-7-3; to which has to be added the balance brought forward from the last account, namely Rs. 53,412-3-3; giving a total

of Rs. 11,76,357-10-6; from this is deducted the amount set aside as a Reserve for Taxation and as provision in respect of E.P.T. Compulsory Deposits Rs. 9,10,000; leaving a balance for disposal of Rs. 2,66,357-10-6.

It is recommended that this should be dealt with as follows:—

To paying the dividend on the Preference Shares for the half-year ended 30th September, 1945 at the rate of 7 per cent per annum (i.e. Rs. 3-8 per share), without any deduction for Income-tax payable by the Company Rs. 49,000-0-0; To paying a dividend on the Ordinary Shares at the rate of 24 per cent per annum (i.e. Rs. 12 per share), without any deduction for Income-tax payable by the Company Rs. 1,68,000-0-0; To carry forward Rs. 49,357-10-6; Total Rs. 2,66,357-10-6.

The shortage and very inferior quality of coal supplies continued during the period under review to be as difficult a problem as ever and resulted in serious losses of production and earning power to many steam-driven mills.

At a special meeting held in June it was decided to extend the period of the Mills' Industrial Pool agreement up to the end of 1945. The financial position of this scheme has been affected adversely by reduced income from monthly cess according to the time mills have worked, and its liabilities for purchase of loom hours are increased. During the past half-year the Company's mills lost further 191 working hours and the Pool since 1st July 1944 has been able so far to settle our claim to the extent of 60 per cent of the amount due under this head; reimbursement was granted in full for compensation payments made to workers when idle through fuel shortage, and in respect of loss incurred on subsidized food issues.

The hot season exodus of labour this year was greater than usual whilst many workers found employment at better pay with military units, but the main reason for loss of productive capacity has been the inadequate and unsatisfactory deliveries of coal.

World stocks of jute goods have been reduced in the years of war and, in view of the quantities of foodstuffs or other materials that now require to be moved, an active demand for manufactures may be anticipated, though the transition period from administration of price controls to a return of normal peace time trading conditions is likely to be one of uncertainty with its consequent restrictive effect on business.

(Half-yearly General Meeting on 19-11-1945 at 3-10 p.m. Books closed from 5th November to 19th November, 1945).

Audited accounts for the half-year ended 30th September, 1945.

The accounts, after writing off for Depreciation Rs. 40,000, show a profit of Rs. 3,07,236-0-6; to which has to be added the balance brought forward from the last account, namely Rs. 60,687-9-11; giving a total of Rs. 3,67,923-10-5; from this is deducted the amount set aside as a Reserve for Taxation and as provision in respect of E. P. T. Compulsory Deposits Rs. 2,10,000; leaving a balance for disposal of Rs. 1,57,923-10-5.

The Directors recommend that this should be dealt with as follows:—

To paying the dividend on the Preference Shares for the half-year ended 30th September, 1945 at the rate of 7 per cent per annum (i.e. Rs. 3-8 per share), without any deduction for Income-tax payable by the Company, Rs. 35,000-0-0; to paying a dividend on the Ordinary Shares at the rate of 10 per cent per annum (i.e. Rs. 5 per share), without any deduction for Income-tax payable by the Company, Rs. 70,000-0-0; to carry forward Rs. 52,923-10-5; total Rs. 1,57,923-10-5.

The shortage and very inferior quality of coal supplies continued during the period under review to be as difficult a problem as ever and resulted in serious losses of production and earning power to many steam-driven mills.

During the past half-year the Company's steam mill lost further 150 working hours and the Pool since 1st July, 1944, has been able so far to settle our claim to the extent of 63 per cent of the amount due under this head; reimbursement was granted in full for compensation payments made to workers when idle through fuel shortage, and in respect of loss incurred on subsidized food issues.

landed in Bombay and the Company had to undertake the work of building small trawlers, landing craft, patrol boats and to do ship repair jobs as required by the Government from time to time. The Company's organisation that was being built up at Vizag for construction of large ocean-going ships was thus transformed into a small temporary workshop at Bombay. Even in this Yard, the progress of work was always slow and unsatisfactory because the Government could not supply materials as and when required for the execution of their orders.

The Company was permitted to resume its activities on very small scale at Vizag from the end of 1942 as the Government wanted to maintain that port as a repair base. Whatever small orders the Company could get from the Government during the last three years, the Company tried to execute promptly, but a large number of orders have been cancelled both at Vizag and Bombay due to shortage of materials and sudden cessation of hostilities. The Directors regret that the Yards at Vizag and Bombay could not work to their maximum capacities owing to various restrictions under which they had to work.

During the last three years, the Government released building materials in very small quantities from time to time to enable us to complete the machine shops, slipways, jetties, etc., at the Shipyard at Vizag and if all the required materials are now released by the Government, the Directors hope to complete the Yard at Vizag in about 6 months more. The Company has now obtained the Government's permission to close the Bombay Yard and to shift all the machinery to Vizag. If the required transport facilities are made available, it is hoped to transfer all equipment to Vizag by the end of this year. The Company hopes to lay the keel of the first 8,000 tonner at Vizag in the beginning of 1946 provided it gets the required steel in time.

When the Directors consider the facilities obtained by Shipbuilding industry in England, America, Canada and Australia and other countries during the war, they strongly feel about the most unfair treatment meted out to the shipbuilding scheme of the Scindia Company. While other countries have produced tonnage on very extensive scale in the last 3/4 years, we have not been able to obtain steel to build even one ship and as a result of continuous representations from the Company, the Government has been so far pleased to issue licences for 1,400 tons—quantity just enough to cover half a ship. Does this position need further comments?

The plant and equipment of the shipbuilding Yards have been maintained in good order and the fleet of the Company has been as efficiently maintained as the war conditions permitted. When the war-time restrictions are removed, most of the Company's ships will have to undergo heavy repairs deferred during the last 4/5 years.

The fleet of the Company has been insured for marine risks for Rs. 2,362,523. The steamers of the Company, other than those requisitioned by the Government are at present insured for Rs. 1,388,095 against war risks. Buildings, machinery, stores, etc., at the Shipbuilding Yards at Bombay and Vizagpatam have been insured against fire for Rs. 60,52,470 and Rs. 61,14,210 respectively.

Agents.—Messrs. Narottam Morarjee & Co.

Authorised and Issued Capital—Rs. 2,25,00,000. Subscribed—Rs. 2,24,83,575. Called up—Rs. 2,22,57,303 in 14,83,716 shares of Rs. 15 each, fully paid up. Plus Forfeited amount Rs. 1,563.

KOTHARI TEXTILES, LIMITED

Audited accounts for the year ended 30th June, 1945.

The result of the Company's working for the period under review, after allowing depreciation of Rs. 1,00,000 is a profit of Rs. 8,82,496-5-11; Add amount brought forward from last year's account Rs. 42,199-13-9; taxes Rs. 7,20,000; leaving a balance of Rs. 2,04,696-3-8; Less amount appropriated for Reserve Fund Rs. 1,00,000; leaving a balance of Rs. 1,04,696-3-8.

The Directors recommend appropriating the same in the following manner:—

To pay a dividend of 6 per cent per annum (free of tax), on the Preference shares for the year ended 30th June, 1945, amounting to Rs. 18,000; to pay a dividend at Re. 1-8 (free of tax), per share on the Ordinary shares for the year ended 30th June, 1945 amounting to Rs. 75,000; leaving a balance of Rs. 11,696-3-8; Total Rs. 1,04,696-3-8, which the Directors recommend carrying forward to the next year.

The Company has already paid the Optional Excess Profit Tax Deposit for the year 1941-42 of Rs. 38,634, the compulsory Excess Profit Tax Deposit for the year 1942-43 of Rs. 2,97,946 and also the compulsory Excess Profit Tax Deposit for the year 1943-44 of Rs. 3,11,536 making a total of Rs. 6,48,116. Over and above the payment of the above deposits we have paid during the year under review an advance of Rs. 8,67,906-13-9 till the end of June 1945 and a further one lakh and fifty thousands in July, 1945 against Excess Profit Tax and Income-tax and this will be more than sufficient for taxation for the year ending June, 1945.

The reduction in ceiling prices made by the Government from time to time affected the profits. Still, the Directors consider the profits to be satisfactory. The incidence of taxation continues to be heavy.

The Excess Profit Tax which was introduced during the course of the war is as yet continuing although the wars in the West and the East are over.

Trading Conditions.—The period under review witnessed continuous reduction in the ceiling rates of yarn whilst on the other hand the prices of foreign cotton for manufacture of finer counts of yarn continued to be the same.

Mg. Agents.—Messrs. Kothari & Sons.

Audited Accounts for the year ended 31st March 1945.

The Company has earned a net profit during the year, after writing off depreciation on tools, furniture and plant and providing for depreciation of stock, of Rs. 1,01,564-1-5.

This amount, together with Rs. 4,873-0-4, the balance brought forward from last year, makes a total of Rs. 1,06,437-1-9, which the

Directors recommend should be disposed of as follows:—

Dividend at the rate of 10 per cent per annum (free of Income-Tax) Rs. 20,000-0-0; Bonus at the rate of 10 per cent. (free of Income-Tax) Rs. 20,000-0-0; Provision for Income-Tax, Super-Tax and Excess Profits-Tax Rs. 56,000-0-0; carried forward to next year's account Rs. 10,437-1-9; and Total Rs. 1,06,437-1-9.

The stock has been carefully taken and is fully insured.

Chairman.—Messrs. H. W. Smith.

Authorised, Issued and Subscribed Capital—Rs. 2,00,000 in 4,000 shares of Rs. 50 each, fully paid up.

MCLEOD & COMPANY, LIMITED

Audited accounts for the year ended 31st December, 1944.

Trading.—The improvement in trading results for the year 1943 has been maintained in 1944 and can be considered very satisfactory. This improvement was principally brought about by increased commissions from the Jute Mills. Tea Garden Commissions remained steady despite smaller crops which were due to a general shortage of labour. A slightly increased Commission was obtained from our Engineering Company. Increased profits were also obtained from the Local Sales Department.

The Accounts of McLeod House, Limited, for the year ended 31st December, 1943, are attached in accordance with the provisions of Subsection (1) of Section 132A of the Indian Companies Act. Early in 1945, the concern was placed in voluntary liquidation with a view to its absorption by Messrs. McLeod & Co., Ltd. It is anticipated that the liquidation will be completed in course of this year; the Balance Sheet for the year ended 31st December, 1945, will, therefore, include the assets of McLeod House, Limited.

Capital.—The Capital of the Company has been reconstructed during the year. 20,000 Ordinary Shares of Rs. 100 each have been converted into 15,000 5 per cent. Cumulative Second Preference Shares and 50,000 deferred Ordinary Shares of Rs. 10 each. The Management and Ordinary Shares have been consolidated into 20,000 Ordinary Shares and it is proposed to make application to the Examiner of Capital Issues for permission to issue to the existing Ordinary Shareholders one share for every four shares held, absorbing the amount at credit of Capital Reserve Account. The amount set aside to Capital Reserve Account out of the current year's profits, for the proposed issue of bonus shares to the Ordinary Shareholders, together with the cash dividends paid, represents 22½ per cent. on the Ordinary Capital.

Profit and Loss Account.—The profit for the year amounts to the sum of Rs. 22,04,492-4-7; to which has to be added the adjustments on account of the year 1943 amounting to Rs. 39,346-15-10; Total Rs. 22,43,839-4-5; and the balance brought forward from last account amounting to Rs. 65,843-0-3; Total Rs. 23,09,682-4-8. Out of this sum the Directors paid the following dividends:—

On 10,000 5 per cent. Cumulative First Preference Shares, after deduction of tax, for the half-year ended 30th June, 1944 (gross), Rs. 25,000-0-0; On 20,000 Preferred 5 per cent. per annum) for the half-year ended 30th June, 1944 (gross), Rs. 50,000-0-0; on 8,250 Ordinary Shares at Rs. 14 per share for the half-year ended 30th June, 1944. Rs. 1,15,500-0-0; transferred to Capital Reserve Account for the purposes referred to in the preceding paragraph, the sum of Rs. 1,84,500; transferred to General Reserve Account Rs. 1,00,000; and made a provision

for taxation amounting to Rs. 15,20,000; making a total appropriation of Rs. 19,95,000; and leaving a balance of Rs. 3,14,682-4-8. Which the Directors recommend should be distributed as follows:—

Dividend at 5 per cent. per annum on the First Preference Shares for the half-year ended 31st December, 1944, which is subject to deduction of tax (gross) Rs. 25,000-0-0; Dividend at 5 per cent per annum, without deduction of tax, on the Second Preference Shares, for the half-year ended 31st December, 1944 Rs. 37,500-0-0; Dividend at 7½ per cent. per annum on the Ordinary Shares or Rs. 7-8 per share, making with the distribution of Rs. 15 already made, a total distribution of Rs. 22-8 for the year ended 31st December, 1944, Rs. 43,750-0-0; leaving to be carried forward Rs. 58,432-4-8.

Authorised Capital—Rs. 80,00,000. Issued and Subscribed—Rs. 50,00,000 in 10,000, 5 per cent Cum. Pref., 20,000 Ord., 15,000, 5 per cent 2nd Cum. Pref. all of Rs. 100 each and 50,000 Deferred Ord. shares of Rs. 10 each, all fully paid up.

Synopsis of balance sheet as on 31-12-1944.

Audited accounts for the year ended 31st March 1945.

Accounts.—The profit for the year before providing for taxation, Depreciation and General Reserve amounted to Rs. 9,08,008-5-10. To this has to be added the balance brought forward from the previous year Rs. 13,531-11-7 making a total of Rs. 9,21,540-1-5 from which is to be deducted Depreciation Rs. 2,55,629 Taxation Reserve Rs. 3,75,000 and Rs. 1,25,000 as General Reserve leaving a balance of Rs. 1,65,911-1-5 which is proposed to be disposed of as follows:—

(a) In payment of Cumulative Preference Share Dividend at 5½ p.a. free of tax for the year ended 31-3-45, Rs. 55,000; (b) In payment of Dividend at Rs. 0-8-0 per share free of tax, on Ordinary Shares for the year ended 31st March, 1945, Rs. 1,00,000; (c) Balance carried forward to next year Rs. 10,911-1-5. With a falling off in bulk orders from Government for Copper wire, due to cessation of hostilities, the Company has been successfully popularizing its products to cater to Civilian demands.

The Company has been receiving assistance in a generous measure from the Government of India in the Department of Supply.

Mg. Agents.—Associated Industrial Development Co., Ltd.

ANNOUNCEMENT

The Malayan Branches of the Bank at SINGAPORE, PENANG and KUALALUMPUR have reopened for business since 17th September 1945, under the British Military Administration in Malaya.

same idea ...

... modern methods

OF key importance in the task of raising the living standards of India's fast growing population is the Transport development plan. Only by fully implementing it can there be any real hope of success.

Premnath Transport will be glad to place at the service of the nation their country-wide road-transport organisation to build which has gone years of experience both in peace and war.

Our part in the operation of transport vehicles is to make the fullest use of India's roads. The roads that we have today and the roads that will be there in the future. This is the job we understand well and you can rely on us for a completely satisfactory service throughout India.

PREMNATH TRANSPORT CO. LTD.

NAIK GIAN SINGH THE V.C. SAYS..

"I appeal to every Indian to support the INDIAN RED CROSS"

Who has a better right to appeal to us than the wearer of the Cross inscribed "for valour"?

Who should know intimately what the Indian Red Cross does for sick and wounded fighting men—if it is not this brave man of the 15th Punjab? Gian Singh knows how vital the Indian Red Cross is to the well-being of his comrades. Do you? ★

Do you realise that money is needed to care for released Indian prisoners-of-war and sick and wounded men still in hospital, and the Indian Red Cross will need money for many weary months to come.

Please send your donations to the Hony. Treasurer, Indian Red Cross Appeal (Bengal), Government House, Calcutta.

★ A four-page leaflet, "What is the Indian Red Cross" is now available free in English, Bengali, Hindi and Urdu. Send a p.c. to P. O. Box. 2128, Calcutta. Your name and address in block capitals please.

(Continued from page 827)

firmation is as yet available. As there is heavy speculative buying and scrips were in short supply the quotation improved to Rs. 105 on Thursday. At the higher levels there was some selling and the quotation dropped to Rs. 103-8. There has been a recovery to Rs. 104 on Friday afternoon. There was a parallel movement in *Reliance* and the close is nearly 5 points higher over the week. *Anglo-India* registered a rise of 15 points to Rs. 580 to quote again at Rs. 574. *Chitavalah* quoted Rs. 40-12, *Kamarhatti* improved to Rs. 840 from Rs. 820. *Kankarnah*, likewise, registered a rise of 15 points to Rs. 733; *Nuddea* registered a rise of 7 points to Rs. 152; *Kinnison* were steady at

Rs. 517. *Rameswara* were in request at Rs. 22. *Presidency* suddenly improved to Rs. 14-12 from Rs. 14-2 but *Craig* were sticky at Rs. 13-2.

In the Engineering section, *Indian Iron* in sympathy with the rise in *Steel Corporation* rose to Rs. 42-14. But the higher prices have not been held and the quotation is not very much changed on balance at Rs. 42-4. *Steel Corporation*, on the other hand, have maintained the rise, being quoted 1½ points higher at Rs. 36. The highest level touched for the week was Rs. 37-2. *Jessop & Co.*, also were better at Rs. 27-12; *Kumardhubi Engr.* were Rs. 11-8 and *Marshall's* Rs. 6-4. *Burn & Co.* quoted Rs. 447 against Rs. 436 last week.

In the Sugar section, there is no important change in prices *Carew & Co.*, quoting Rs. 32-7, *Champarun* Rs. 40-4, *Balrampur* Rs. 16-13 and *Belsund* Rs. 16-2.

In the Miscellaneous section, *Burma shares* were unchanged, *Burma Corporation* quoting Rs. 6-7, *Consolidated Tin* Rs. 4-6 and *B.B.P.* Rs. 5-8. There are fresh rumours regarding a bonus issue and *B.I.C.* were marked up to Rs. 8-8. There was a sensational rise in *Calcutta Trams* to Rs. 62-6 from Rs. 57-3 last week on reports that *Calcutta Corporation* is making the necessary arrangements for taking over the *Calcutta Trams*. *Calcutta Electric* were sticky at Rs. 43-8. *Aluminium Corporation* are slightly higher at Rs. 16-2. *Rohas Industries* were unchanged at Rs. 15-8.

SHAPE FOR STRENGTH

Any master plan for the development of India will include in its scope the starting of a powerful automobile industry. Among the chief requisites of such an industry are sheets and plates which, moulded into the desired shape by great presses, acquire a new strength to fulfil their purpose. The body of a modern automobile cannot be made without steel.

Fact Parade

Latest Food Index: Rise By One Point

The Economic Adviser's All-India index of wholesale prices of food article (Base) last week of August 1939-100) worked out to 236.8 for the week ended October 27 1945, as compared with 235.8 for the previous week.

Between the two weeks 'cereals' and 'other food articles' remained stationary, while 'pulses' advanced by about 8 points owing to advance in price of Dal at Lahore. The average for October 1945- was 235.9.

Youngest Graduate:

At Yale, America's Oxford, 14-year-old Merrill Wolf won the distinction of being the youngest graduate in varsity history, getting his degree after completing three years' work in 18 months.

A Yale psychologist assured him that he could look forward to continuance of his intellectual superiority; freedom from insanity, alcoholism and delinquency; smaller family than average; an annual income in 20 years of 4,500 pounds.

Improved Potato Cultivation:

The potato and wheat breeding sub-station of the Imperial Agricultural Research Institute at Simla, has developed a tuberless method of cultivating the potato crop. The new method consists of raising the potato plant from the sprouts. The sprouts, when they are about one to two inches in height, are detached from the tuber and suitably planted in beds. Within about a week's time, the sprouts develop roots and within the next two or three weeks, they develop a crown of leaves and at this stage, they can be transplanted.

Reparations Conference:

Mr. H. V. R. Iyengar, Joint Secretary, Planning and Development Department, and Mr. B. K. Nehru of the Finance Department, have left for Paris to represent India at the Reparations Conference called to meet there shortly.

Britain to Harness Atom to Industry:

Britain is losing no time in the race to be the first in harnessing the atom to industry.

The new Atomic Research station, which is to be set up at Harwell, near Didcot in Berkshire, will have relatively little concern with the destructive potentialities of atomic energy as demonstrated in atom bomb.

A large team of scientists, including some who worked on the atom bomb, will be assembled at Didcot station, charged with the task of working out the technical application of atomic energy to the service of man.

Construction is to be given Number One priority to cut down the advance in technique made by America owing to war conditions.

Petroleum Supply in U. S.

The U.S. War Petroleum Administrator announces the removal of all restrictions over foreign supply and transportation of petroleum and petroleum products with effect from November 1.

More Textile Mills for Russia:

Dozens of textile mills are under construction or being restored in the Soviet

Union. A number of new cotton mills are being built mainly in Central Asia, in Bakaul and Shverdlovsk.

They will be equipped with most up-to-date machinery. Besides catering for the needs of the population, they will turn out materials needed by industry: belts, cloth and fireproof and waterproof fabrics.

The centres of textile industry created during the war in the Urals in Siberia and in Central Asia will increase their output seven-fold in the next five years.

"Telephone the World":

"Telephone the World" will be Britain's postwar programme. More telephone equipment and more exchanges to connect up the 238,000 potential subscribers now on the waiting list, a quicker service on long-distance telephone calls, new telephone facilities, particularly in country areas, and a world-wide telephone link-up as in pre-war days are all included in Post Office development plans. Less than six months after the V-E Day, it is now possible to speak from anywhere in Britain to 40 per cent of the world's telephone subscribers.

and prices to the United States and Australia are actually cheaper than they were before the war. In spite of wartime restrictions and much actual destruction due to bomb damage, Great Britain has to-day approximately 150,000 more telephones installed than in 1939. One of the future developments pictured by manufacturers of telephone equipment is automatic multi-dialling for trunk calls. You will dial "Glasgow," or "Penzance" just as easily as you now call local exchange.

England-India Telephone:

It is understood that arrangements are being made to restart the England-India telephone service for public use from about the middle of November.

U. S. Meteorological Equipment for India:

The War Department has announced the orderly liquidation of army and air forces weather services. The Department said that meteorological equipment was being turned over to the Government's concerned. It added that India was ready to assume operation of stations operating in India.

The Fatigue Factor

The ideal length of a working shift for various types of work has been, and still is, a matter of considerable thought and research. The International Labour Office at Geneva has in particular paid a great deal of attention to the subject. Many factors have to be considered in addition to that of the nature of the work concerned. Type of workers, factory conditions, physical strain, mental strain, rest pauses and many others. Of recent years it has been particularly noted that even during a shift well within the physical powers of the workers output frequently falls during the middle portion. Formerly this fall off was termed the 'fatigue factor', but modern industrialists now know that it is not due to loss of physical energy but to falling concentration.

One of the most valuable means of combating falling concentration is tea. Hot tea served to the worker on the job is eliminating the 'fatigue factor' completely in many thousands of factories throughout the world. To those interested in this subject much valuable advice and assistance will be gladly given by the Indian Tea Market Expansion Board, 101, Clive Street, Calcutta.

TREASURY BILLS

Central Government:

Tenders for Rs. 2,00,00,000 of three months' Government of India Treasury Bills were opened on Tuesday, the 13th Nov., 1945. Total amount offered was Rs. 5,25,00,000. Tenders at Rs. 99-14-9 per cent were accepted in full and those at Rs. 99-14-6 per cent were allotted approximately 31 per cent. Total amount accepted was Rs. 2,00,00,000, the average rate of accepted tenders being Re. 0-5-9 per cent per annum.

Tenders for Rs. 2,00,00,000 of three months' Government of India Treasury Bills will be received on Wednesday, the 21st November, 1945 at Calcutta upto 11 a.m. (Bengal time) and upto the close of business on Tuesday, the 20th November, 1945 at other centres. Successful tenderers should make payment on Friday, the 23rd November, 1945. Other conditions are as usual.

During the week ended the 9th November, 1945, Government of India Treasury Bills for Rs. 1,63,00,000 were sold in favour of the Reserve Bank of India.

WORLD OF INDIAN FINANCE

Calcutta, Wednesday Evening.

Since the middle of last week there
has been such strong buying of 3 per cent.
1970/75 loan that the Reserve Bank in
Calcutta had to stop sales for a time
owing to the shortage of scrips. The tap
rate was Rs. 97-4. The unsatisfied buyers
from Calcutta have, however, been able
to buy 1970/75 loan through the Bombay
brokers.

This sudden emergence of 3 per cent.
1970/75 into vigorous popularity must be
presumably due to the fact this is the
only 3 per cent. scrip which has the
highest discount. There is general
expectation that the redemption of 3½ per
cent. Paper cannot be far off. It is, there-
fore, argued that all the 3 per cent.
Defence loans will show considerable
price advances. In which case, it is
further argued that more rapid rise in
prices is possible up to par level than
above par level. The scrip that falls in
line with this kind of reasoning is 3 per
cent. 1970/75. The transfer of affections
and activities to 3 per cent. 1970/75 must
be deemed a welcome development. Till
recently the market could not shake off
its unreasoning partiality for scrips of
earlier maturity. The later the maturity
date the less fancied was the scrip. Real
help for the gilt-edged market implies a
proper appreciation for long-term securi-
ties on the part of investors. It is of the
utmost importance to individuals and for
sustaining the confidence that cheap
money is the declared policy not only for
to-day and to-morrow but for all time.
Surely, the monetary technique that has
been learned and perfected in the inter-
war years and the war years and that is
responsible for the Government's deter-
mination and ability to enforce and
maintain cheap money is not a technique
that will be easily forgotten or that will
become unnecessarily difficult at a distant
date. Dear money is dead as Dodo. It
is a fact that must soak into the minds
of everyone connected with the Treasury
and everyone connected with the money
market.

The behaviour of 3 per cent. 1970/75
loan last week and the developments in
connection with it suggest the practic-
ability and the advisability of utilising
this scrip to strengthen the gilt-edged
market in the same way as 3½ per cent.
Paper was utilised for this purpose in the
latter half of 1943. Our readers will
recall that "Indian Finance" put forward
the suggestion that 3½ per cent. Paper
which was then being sold on tap at
Rs. 94 should be taken up by stages to
Rs. 98 or over. Our plan was that the
tap rate must be gradually increased by
limits of eight annas or one rupee every
few days. We also pointed out that once
the market knew that the tap rate was to
be stepping up sales of this stock would
show substantial increase. Government
acted on this suggestion; and, while the
tap rate was stepped up from Rs. 94 to
Rs. 98, the sales beat all previous records.
We only repeat this suggestion in con-
nection with 3 per cent. 1970/75 loan.
For a long time, the tap rate has remained
unchanged at Rs. 97-4. We have no
doubt that the time has arrived for the
rate being increased to Rs. 97-12. We
have no doubt that it will accelerate sales
which will facilitate in raising the tap
rate further to Rs. 98-4, and so on.

Cheap conditions have continue to pre-
vail in the money market and call money

is quoting nominally at ½ per cent in
Calcutta and ¼ per cent in Bombay. There
has been slightly more demand for funds
for the movement of cotton but the addi-
tions to the note issue and the redemp-
tion of the 5 per cent taxfree loan have
kept the market well supplied. As trea-
sury bills maturities now equal sales there
has been greater demand for government
securities, referred to above. At the
auctions of Central Treasury Bills this
week there was a greater amount of appli-
cations, Rs. 5.25 crores against Rs. 3.44
crores but bidding was not very much
keen and the average discount rate is un-
changed at five annas and nine pies per
cent. The offer for the next week has
been maintained at Rs. 2 crores. As we
are going to press earlier on account of
the holidays it is not possible to review the
bank returns (Reserve Bank and Imperial
Bank) for the week ended November
9.

The statement of scheduled banks for
the week ended November 2 shows a large
increase in demand liabilities in spite of
the month-early withdrawals. Demand
liabilities were Rs. 662.77 crores against
Rs. 658.41 crores and time liabilities

THE COMILLA UNION BANK

Chhapra, Jaynagar, Sitamarhi, Bettiah, Madhubani, Khatwa,
Katihar, Kibanganj, Forbesganj, Raxaul, Sahabganj, Baga-
pur, Patna, Patna City, Baireganj, Colgaon, Samastipur,
Nagachia, Ballia, Purnia, Benmankhi and Deogarh.

Branch in Orissa—Sambalpur.

Rs. 265.16 crores against Rs. 264.89 crores. Cash balances were Rs. 33.31 crores against 35.46 crores. Balances with the Reserve Bank also were lower at Rs 104.72 crores against Rs. 111.71 crores. As the increase in advances and bills discounted by Rs. 5.11 crores is nearly equal to the increase in deposits, the decline in cash balances amounting to Rs. 9 crores must be due to investments in gilt-edged securities.

The bullion market was very active

last week and on heavy speculative buying a sharp rise in prices was recorded. The rise in gold especially was very pronounced, Gold ready being at one time as high as Rs. 84-9. Cornering operations by a particular group of dealers and the anxiety regarding developments in the international situation were mainly responsible for the upward swing in prices but as it was later realised that the British Premier would exert his influence to bring about a satisfactory settlement and there would be no untoward developments

closing quotations are much below the highest levels for the week. Quotations, however, are higher on balance. Gold ready quoted Rs. 82-8 and forward Rs. 81-12.

As no definite news is available regarding the U.S. intentions for increasing the price for domestic silver, activity in the silver market is not so pronounced even though there was a slight rise in prices in sympathy with gold. After being higher at Rs. 134-12 silver ready is now quoting Rs. 134-2.

THIS IS ONLY AN ANNOUNCEMENT AND NOT A PROSPECTUS.

(A copy of the prospectus has been filed with the Registrar of Companies, Bombay).

Consent of the Central Government has been obtained to this issue, subject to certain conditions. It must be understood that in giving this consent, the Government do not take any responsibility for financial soundness of any schemes or for the correctness of any of the statements made or opinions expressed.

THE BOMBAY SILK MILLS, LTD.

(Incorporated under the Indian Companies Act, 1913).

Authorised Capital - Rs. 25,00,000

Divided into 34,000 Ordinary Shares of Rs. 50/- each and 8,000 5 per cent. (Free of Tax) Redeemable Cumulative Preference Shares of Rs. 100/- each.

Issued Capital - Rs. 12,50,000

Divided into 17,000 Ordinary Shares of Rs. 50/- each and 4,000 5 per cent. (Free of Tax) Redeemable Cumulative Preference Shares of Rs. 100/- each.

Bombay Mutual Bldg., Pherozshah Mehta Road, Fort, Bombay.

MANAGING AGENTS :

Messrs. HANSRAJ SONS,
Colaba Road, Bombay 5.

REGISTERED OFFICE :

Colaba Road, Bombay 5.

OBJECTS :

The Principal object of incorporating this company is to develop on a large scale, the business of sericulture, Silk-throwing, silk-waste, spinning, weaving, bleaching, dyeing and printing of silk, artificial silk and allied and mixed fabrics.

SCOPE AND PROSPECTUS :

This Industry has a promising future. Thanks to the rapid development of the sericulture industry with the active aid of the Government in this country particularly during the present war, India promises to be self-sufficient in this respect.

The Bombay Silk Mills have earned a very good reputation all over India and occupied an important position among the pure silk weaving mills in this country. This company is being formed to develop the present mills into a large scale Mill for manufacture of spun silk, yarn, and silk fabrics in general.

APPLICATIONS FOR SHARES :

Applications for Shares should be made upon the forms accompanying the Prospectus which may be obtained at the Registered Office of the Company, or at the Offices of the Company's Bankers and sent duly filled in accordance with the directions contained therein with a remittance of the amount payable on application to the Company.

India's Foreign Balances

The Anglo-American negotiations following the cessation of supplies under the Lend-Lease Act have formed another context in which India's claim to dollars has been thrown up in bold relief. Much water has flowed since the Indian delegation raised the question of India's sterling balances at the Brettonwoods conference. At that time, the delegations of all countries who did not have wartime balances in sterling, combined to scotch the proposal that the settlement of the sterling balances of India, Egypt and other countries should be regarded as an international concern and brought within the ambit of the international financial organisations. The American attitude at that time was explained by the American belief that the inclusion of sterling balances within the scope of the International Monetary Fund and the International Bank would complicate the work of these institutions and jeopardise their smooth working, and that, if only for this reason, the settlement of war balances should be deemed to be the direct concern of the countries themselves. However, the international significance of this problem can hardly be denied. If it is true that the prospects of postwar recovery in every country depend on the recovery of international trade, then an understanding as to the availability of these balances for foreign payments was a condition precedent to the solution of all international economic problems of the postwar period.

To this day, the stand taken by the American delegation in the momentous Brettonwoods conference has not been adequately explained. It seems charitable to suppose that the international significance of the problem of India's sterling balances was not clearly perceived or adequately appreciated either by the American Government or by the American public and that wisdom dawned only when the end of the war and that wisdom dawned only when the end of the war necessitated an examination of postwar economic problems at a comparatively close range. In any case, recognition of the mistake committed at Brettonwoods was a slow, though steady process in the States. Even before lend-lease supplies were stopped, there were prominent Senators like Mr. Emanuel Celler who began to appreciate the fact that American acquiescence in the freezing of India's sterling assets and the perpetuation of the Empire Dollar Pool would in practice mean keeping a number of all countries closed to the foreign trade of the United States. It began to be contended in certain quarters that it was manifestly unfair that India should be denied the use, not only of the sterling which Britain could conceivably use, but also of the dollars which originally belonged to India and which she was earning from year to year through her favourable balance of trade with the States. It was inevitable that up to a stage these contentions should have been made by mere individuals, however eminent and well-placed. This view began to enter into the American Government's policy only when the British outcry for a substitute for lend-lease compelled the American Government to go into the whole question of the U.S.A.'s financial and economic relations with her former allies and the rest of the world.

In the setting of the negotiations which Lord Halifax and Lord Keynes are carrying on with the American Government the problem of India's sterling balances is necessarily seen in a different light and from a different angle. While at Brettonwoods the American delegation could conceivably have insisted on Britain agreeing to some definite pace of unblocking the sterling holdings of her creditors, in present negotiations changes in the foreign exchange resources of India and other countries have to be related to what the U.S.A. is prepared to do for Britain. In other words, the improvement in the position is viewed as part of the quid pro quo for the sacrifices which U.S.A. is prepared to make in consideration of the stoppage of lend-lease supplies generally and the critical position of Britain's national economy. America naturally regards the question of her aid to Britain in two different aspects. There is firstly the obligation which she owes to Britain as an ally in the Second World War; and from this view, the exact computation of the two sides of the account is not only difficult but even to a large extent unbecoming and out of place. The other aspect is that of enabling a great trading and industrial nation like Britain to resume her position of importance in international trade and thereby helping herself and world economy in more or less equal degree. Though these two aspects are separable in thought, the direct provisions inter-mingle a great deal; and the American view has been at every stage that in return for what America may be prepared to do to help Britain in the postwar economic crisis, Britain, too, should play her part in helping the recovery of world economy. Britain has not unfortunately been quick to recognise the essential fairness of the American demand that, if she can approach America for the discharge of obligations to an ally which, so to say, are not

in the bond, the least she can do is to respect the claims which others have on her, both in law and in equity. It may be somewhat speculative, but it is nonetheless valid, to say that if the course of discussions in the British press on the problem of sterling balances had been more reassuring about Britain's ultimate discharge of these obligations, the American proposals might have been differently conceived.

But as things are, America has felt obliged to make certain provisions regarding the improvement in international trading conditions as part of the understanding with Britain which is at present being negotiated. Though no official announcements regarding the proposals on either side have been made, it seems to be clear that America is thinking of a large loan to Britain on a low rate of interest a part of which will be handed to Britain's creditors. This idea of giving all the members of the British Commonwealth a fair amount of dollar loan by way of a start in post-war international trade is common to all reports. There are varying degrees of doubt about the other attendant proposals. It has been said that the U.S.A. has asked for the cancellation of the sterling debt of India and other creditors of Great Britain for amounts very much in excess of the dollars that will be made available to them as a result of these negotiations. It is not clear whether the dollars will be owed by India and these countries to the United States of America directly, or through the intermediation of Britain. And what is more, around these proposals there is what may be called a penumbra of other proposals like those relating to the minimisation of imperial preferences and the breakup of the Empire Dollar Pool.

The Anglo-American negotiations have not followed a smooth course. While at various stages the public was told that an amicable settlement was near not only have fresh difficulties cropped up, even serious and almost unbridgeable differences are subsequently known to have persisted. Premier Attlee's visit to the States may probably make some difference. But it is difficult to see how, in the absence of Britain's agreeing to modify the imperial preferences and discontinue the Empire Dollar Pool as also to distribute the benefits of the dollar loan over a wider area of the globe, the negotiations can be successfully terminated. On the American side, the Government would seem still to be somewhat nervous of approaching the Congress for accepting and ratifying its proposals. The size of the loan has been altered more than once. The nervousness may be due in large part to the fear that public opinion would insist on the proposed measures being calculated, not only to help Britain, but also to stimulate world trade from a number of different points. But the three principal aspects of the American scheme, namely, handing over of a part of the dollar loan by Britain to India and her creditors, modification of the imperial preference policy and the dissolution of the Empire Dollar Pool are all organically inter-related. The same thing may also be said of the other proposal of writing off of a part of the sterling owed by Britain to India and other members of the Commonwealth. Necessarily, the last mentioned has to be treated as being on a different footing. The U.S.A. cannot be deemed to be entitled to demand reduction of her sterling credits from India, unless India has approached her for a dollar loan and negotiations are instituted in which the U.S.A. will be found to have a position of vantage.

At the moment, India is not a supplicant for American favours, though she can do with a large dollar loan if American manufacturers are in a position to supply all the goods that India will need for her economic development. The present negotiations are between Britain and America and India is not represented in these parleys. A distinction must, therefore, be made between the advantages which may accrue to this country as an indirect result of the understanding between Britain and America and the advantages that India may be obliged to seek directly of America. The value of the dollar credits to India depends on the one hand, on the extent of the dollar resources which she can claim as her own and on the other, the extent to which she can possibly effect purchases in the United States. The latter is obviously conditioned by the possibilities of trade between the two countries. And here it is apt to be forgotten that one need not necessarily go by the volume of the favourable trade balance. India's purchases from the United States can be increased with the increase in American imports of Indian goods. And since the trade balance is normally in our favour and since America can well afford to increase her imports from this country, and American manufacturers are not in a position to supply all the machinery that we need immediately, India's immediate need for dollars may be easily exaggerated. There is no reason therefore why India should agree to reduce debts owed to her by Britain in return for dollar loan at second-hand which she may not be able to utilise.

The proposition will however get a different complexion, if it is provided that a part of America's loan to Britain should be given to India in payment of an equivalent part of Britain's sterling debts to this country. Since that appears to be too remote a prospect, American insistence on the abolition of imperial preferences and the Empire Dollar Pool is of greater importance to this country. While the modifications of Imperial Preferences will certainly appeal to the politically minded, the actual significance of a change in our trade relationships can not be appraised except with more reliable knowledge of the trends of post-war trade. But there can be no two opinions that no time should be lost in effecting a dissolution of the Empire Dollar Pool and in handing over to India the amounts which are due to her. It is unfortunately that in spite of the importance of this problem, the authorities have not yet divulged to the public the state of our accounts. The promises that was made by the Finance Member at the General Policy Committee meeting to publish these accounts is yet to be redeemed. It is interesting however that unofficial estimates place India's credit in the Empire Dollar Pool at roughly Rs. 350 Crores. India's favourable balance of trade with the U.S.A. was to the tune of \$135 million from 1939-40 to 1944-45. India's holdings of dollar balances and securities at the time of the constitution of the Empire Dollar Pool are estimated to have amounted to \$25 million. Dollars accrued under various other items are said amount to \$155 million. American sources state that U.S.A.'s direct purchases from India unconnected with lease lend operations account for \$490 million, while the expenditure on the U.S. troops in India amount to \$192 million up to Sept. 1945. The dissolution of the Empire Dollar Pool and rendering to India what is India's would mean that this country would come by dollar resources to the tune of \$842 million. Mr. Celler in a letter to the Assistant Secretary of State is reported to have stated that "India legally possesses \$2,500 million balance against us."

There can thus be no doubt that the dollar resources which are strictly ours should more than suffice for our immediate requirements and that India need feel no urge to sacrifice any part of her claims on Britain. Even should the British succeed in evading the American demand for the dissolution of the dollar pool, the promise made by British Government to give India 20 million a year out of the pool over and above current needs should leave us with as much as 40 million at the end of the year. We must, therefore, urge that it is not till concrete plans are made for utilising these dollars to the full extent that any need for more can be established. While thus there is reason for delay in the formulation of concrete plans involving the purchase of American goods, India must continue to be interested in the course of Anglo-American negotiations, which by reason of a number of favourable circumstances, might result in substantial good which this country unfortunately is not in a position to secure by her own efforts.

Problem of Housing—I

Though the Bombay Plan has given prominence to house building, the Post-War Reconstruction Committee set up by the Government of India has accorded to it an equally high priority. The Committee have made considerable progress in the matter of agriculture, fisheries, road development, electrical development, health, education, labour legislation, sickness, insurance etc., but sufficient attention has not been paid to housing. "House" is a term which covers a wide variety of standards of accommodation. The grass huts of Chota-Nagpur, the nicely thatched mat-walled dwellings of Travancore and Assam, the many storied buildings of great cities like Calcutta and Bombay—all are "houses". But this diversity of standards is not peculiar to India; it is found in Great Britain, America and Australia; the middle class man in India at present is barely accommodated—he hath a place whereon to lay his head. There is need to define how much space a man needs. The Bombay Plan gives an answer: "On the basis that a person should have about 3,000 cubic feet of fresh air per hour the accommodation required would be about 1,000 sq. feet of house room per person." The quality of the house depends on climatic conditions, customs, manners and social conditions for more than physical needs. Before a house plan can be enunciated, a survey has to be undertaken of the existing resources of each town, their industries and population. Such a survey will show that several towns have either insufficient industries or lack of balance of industries to support their growing population. Many towns have be-

come so heavily overburdened that the living conditions are almost chaotic and remedial measures cannot have much effect. In order to make planning possible it will be necessary to fix the maximum size for natural growth of our existing towns. With a sound local administration and proper control by Government, it should be possible to adjust existing unsatisfactory boundaries and simplify the complex problems of the plan.

The Royal Commission on labour in 1931 made a comprehensive survey of the conditions in which the labour population live. The Commission recommended a vast improvement of housing conditions of the labourers. The recommendation suggested a passing of Town Planning Act, to provide houses for the working classes, for surveys of industrial areas, to determine and plan for housing needs including sanitation and for fixing minimum standards of living. Their progress during the past fourteen years has not been marked though several individual firms effected improvement under enabling legislation. Important cities in India too, have no doubt, made some progress in the direction of social improvement. In Bombay, Calcutta, Allahabad, Lahore, and Cawnpore Improvement Trusts have come into being. The Bombay Improvement Trust has done good work; but it has since ceased to exist and its work is being carried on by the Bombay Municipality. The Calcutta Improvement Trust has opened up congested areas in the city, provided open spaces, improved the building sites, laid out and altered streets and done some substantial work in re-housing the poorer working classes. The Delhi Improvement Trust established in 1937 has attended to slum clearance in the old Delhi and general expansion of the new city. Rehousing of workers has been among the trusts undertaking. Recently a plan has been put before the Bombay Municipal Corporation to encourage private landlords to build fifty to sixty thousand one and two-roomed tenements. This does not seem to be very sound. One room tenements should be ruled out of the new plans. There are already too many of them and they are acknowledged to be the city's main source of overcrowding and disease. The most satisfactory method would be to develop the suburbs for industrial housing. The Calcutta Improvement Trust has a plan to establish such a "satellite town". The Greater Bombay Committee appointed by the Bombay Government has three plans, one on housing and another on house planning and the third for transport. It is expected that the recommendations of the Committee will be comprehensive and form the basis on which re-housing of Bombay will be done.

It will be readily admitted that housing in the city must differ to a great extent from housing in the villages. The problems of the city and the villages are different especially in a country like India. While considering city housing schemes a revolution in housing that has recently taken place in England should be mentioned. Every new house that is going up in Britain, temporary or permanent, pre-fabricated or traditional, whatever its price, has one progressive and outstanding feature namely a completely fitted kitchen.

Gone are the days when the dejected house-wife could only recognise her kitchen by the pipe sticking out of the wall in a dark corner. The kitchen of the new houses that are already being built are complete with every need of the working house wife—cooker, refrigerator, cloth-washer-cupboards, space for working at an even and convenient height.

Prefabrication is the secret of these fitted kitchens. Made to Standard measurements, these can be put in all types of houses. They are made by semi-skilled labour in the factories, and are virtually lifted bodily into the houses. Many of the permanent houses in Britain are prefabricated to make the best use of labour. In the two years following the war the British Government contemplate building of 300,000 permanent houses. Already, 20,000 foundations have been laid for these prefabricated houses; 5,000 are in the course of erection; and 1,000 are actually occupied. The first twenty-two houses, called the 'Howard' type are being put up in aircraft factories by those very women who had been doing supplementing Britain's building labour force and utilising with building. When the parts arrived at the prepared site, The first gang erects the steel frame of the first pair of houses and moves on to the next. The second gang covers the house with asbestos cement sheets. A third gang completes the roof and so on; and as the roof is on within three working days,

all the other stages of erection can be carried on under cover, so that bad weather does not cause delays. To do away with unnecessary noise the working section of the house—that is kitchen, bathroom, lavatory are all planned as a separate unit from the living and sleeping accommodation. To lessen noise and to concentrate all the piping, and save drainage costs the noisy section of adjacent houses are placed next to each other. The rental will be fixed by the local authority and will be around 15 shillings a week. This is the sort of house which the lower middle class in England is likely to get. And newly-weds and bombed-outs are to have priority for these houses.

While houses of this kind may be considered suitable for cities they are neither possible nor necessary for Indian villages. The materials required for building these houses are steel and concrete—obviously too costly for the Indian peasant. The "good design" of the houses might seem offensive to the aesthetic eye of the Indian. As one writer put it the visitor of 1954 will be quite unconscious of his surroundings—Blackburn, Wigan, Bath—or Moscow, perhaps. "Indian villages can be planned in the same way as of old. Havell says in his *Ancient and Mediaeval Architecture*: "The most advanced science of Europe has not yet improved upon the principles of the planning garden cities of India based upon the Indian village plan as a unit."

When the men of the fighting services are demobilised, they can be provided with work if a comprehensive housing-scheme is put into effect. Private builders should be encouraged to build decent houses by the State procuring the necessary building materials at low cost.

The cost is the chief obstacle in this as in all other schemes. The authors of the Bombay Plan assume that a house will cost Rs. 400 in rural areas and twice as much in urban areas. To build new houses and reconstruct old ones the total expenditure required would be about Rs. 1,400 crores. At 7½ per cent. of the total capital expenditure including the value of the existing housing, the yearly cost of maintenance would be Rs. 258 crores. "The house" as the plan rightly points out, "in addition to providing accommodation, must conform to certain standards regarding site, type, ventilation, lighting, heating, waste disposal, water supply etc." The importance of housing in any scheme of reconstruction cannot be overemphasised. And expenditure on that score is productive of many advantages. The chief elements in a housing plan are the expansion of the industries which produce building materials, increased provision for technical assistance in house building and financial schemes drawn up in close reference to the different conditions and needs of different class. The targets for iron and steel, cement and refractories, to mention only the more important, have to be fixed in relation to the vastly increased quantities of these materials needed for house building. And as for financial schemes, there can be no doubt that without a variety of them, ranging from large sized building societies to co-operative labour in small and close communities, it would be vain to look for substantial improvement in housing. These special aspects will be examined in later articles of this series.

Marketing of Agricultural Produce—X

(Contributed)

In the course of the last two articles I have endeavoured to show that the two main directions in which efforts for improving the usefulness of the regulated markets should be made are the better organisation of rural credit and the development of complementary co-operative institutions. I shall conclude this series with a few more suggestions.

Though a study of comparative prices obtaining in the regulated markets and unregulated area has not been attempted, it is possible to maintain that the prices obtained in the regulated markets are generally higher than in the unregulated areas. But do even these prices give the cultivator a fair and adequate percentage of the consumers' price? This should be the subject for a separate enquiry. It is not however difficult to see that where competition is not keen among the buyers and where the buyers themselves hold a virtual or near monopoly of purchase, the prices are bound to be smaller than what the seller could legitimately expect under conditions of keener competition. The Regulations protect the grower from the unscrupulous exactions of the middlemen. But even with these exactions removed, there is still the possibility that the grower may fail to get a fair price, for commodities whose prices are

determined by world factors or primarily by large exporting firms on whom there is no serious check through internal competition. It has to be admitted that as far the price factor goes, the Regulated Markets could not be of much use. In commodities like rice, wheat, sugar, which are consumed within the country, the competition becomes keener in the Regulated Markets and the prices have a stronger tendency to approximate to competitive levels. The development of industries within India and the growth of a keener competition for the buying firms who now control the demand for more than one commodity can alone secure fair prices for the ryot.

There is a good case for extending the scope of regulation to all commodities within a market. This will have two vital advantages. The income of the Regulated Markets will increase. When a few commodities alone are subject to Regulation the traders and commission agents seek to compensate the fall in profits in the regulated commodities, by trying to secure heavy profits from the unregulated commodities. They will be deprived of this opportunity if all the commodities are regulated.

The representation of producers in the market Committees presents certain difficulties. When the notified area is just a few square miles and the growers' constituency is identical with the notified area the growers who actually bring the produce to the market and who mainly contribute to the income of the Committee are excluded from the representation. On the other hand if a whole District were to be formed into the growers' constituency, the elections become cumbersome and costly. It is found that the Cuddalore market Committee spent Rs. 5,000 on stationery and printing alone in connection with an election. A compromise method has to be sought which while expanding the limits of the grower's constituencies so as to correspond with the area served should keep the electoral machinery and methods simple and cheap. It is frequently found that professional people and traders who own some lands get themselves elected as growers representatives. This should be prevented by making the necessary changes in the regulations. Only those who derive their main source of income from agriculture should be eligible for a vote from the growers constituency. In the Nizam's Dominions, the Chairman of the market is considered an official as provided in the Act. This might be considered inconsistent with the representative principles and detracting from the democratic complexion of the committee. But conditions in Hyderabad State are not yet ripe for an absolute surrender of initiative and control to popular representatives. Even as it is, the committees work smoothly. The Ideal however should be elected non-official Chairmen.

The Superintendents or Secretaries of the Committee should be departmental hands and liable to transfer from one market to another. When the Superintendent is appointed by the Committee he is easily prone to be subservient to party and factional interests in the Market Committee. Transfers of superintendents will also go a long way towards facilitating contacts between one market committee and another. A wider diffusion of experience will also result. At present the committees do not insist on any special qualification for Superintendents. It would be advantageous if persons qualified in and familiar with agricultural economics and allied subjects are entertained as far as possible.

The complaint is raised by the merchants in more than one market that the committee is giving licences indiscriminately to all and sundry, as the licence fees are a source of income to the committees. Such indiscriminate issue of licences not only brings down the morale of the trade but is ruinous to the amateurs who get into business. In a period of boom these persons persuade themselves to take to trading but after carrying on for some time they find it difficult to compete with the established and more efficient traders and consequently withdraw with loss of money and possibly of reputation. Such 'casualties' are avoidable if the committee is more rigorous in granting licences. In many of the markets, there are too many Adatyas with their agents and underlings; not all of them are prosperous, many have incomes ludicrously small. The Market Committee should aim at reducing the number of functionaries to an optimum so that those who continue in the business may get a decent earning.

An important cause for grievance for the Market Committee in the C.P. is the provision in the Act that the surplus balances with the committees should be handed over to the respective Municipalities. This provision should be amended. The surplus balances should be at the disposal of the Market Committee itself; it accrues primarily from payments made by the agriculturists who bring their produce to the market. In many markets these facilities are far from being adequate. The

Municipal Committees may be paid a fixed sum for the maintenance of approach roads, unless as in the Wun market this is also made a responsibility of the market committee. It is manifestly unjust to pay the Municipalities for the maintenance of roads and at the same time hand over the surplus funds also. The present provision in the C.P. Act encourages extravagance by the Committee and also gives rise to bickerings within the Committee, between the municipal representatives and the representatives of growers. The surplus if retained by the committees can also be utilised for propaganda, village uplift and such other schemes calculated to promote rural welfare.

In the Central Provinces, the markets now under the control of the Municipalities should be brought under the Agricultural Produce Markets Act. It is labelling the obvious to prove the conflict of interests between the municipalities and the agriculturists.

In Hyderabad half the funds collected through the market cess in the grain markets goes to the Municipality towards the maintenance of roads and sanitation. There is no check on the expenditure of this sum. In Madras no part of the Committee funds is transferred to the Municipality on any account. It should be possible for C.P. and Hyderabad to follow the Madras practice.

At present trading in futures is not officially recognised in any Regulated Market. But forward transactions are carried on within the Regulated areas in some places. It is likely that these transactions would increase in volume and sooner or later the market committees will have to face the issue of whether or not to recognise forward sales. While forward sales have certain advantages in the wholesale markets and for dealers who have specialised in speculation, their introduction into the Regulated Markets which are intended to safeguard the interests of the smaller ryots will not only neutralise all the advantages now derived through markets but also bring into the whole system a growing element of uncertainty and chaos amidst which the unsophisticated producer will be the sole loser.

I. F. SPECIAL

London as International Banking Centre

By PAUL EINZIG

Will London ever resume its traditional role as an international financial centre? The question is encountered frequently. The correct answer to it is that London has never ceased to be an international financial centre: it is only its character and functions as such a centre that have changed.

Needless to say, in the orthodox sense of the term, London ceased to be an international financial centre with the outbreak of the war, when exchange restrictions were adopted. Even before 1939, London only played a limited international financial role, owing to the fluctuation of sterling and the embargo imposed on foreign loans. For the conventional idea of an international financial centre implies a stable currency and an absolute freedom of international financial transactions. To fulfil those conditions, a country must be a creditor country with ample liquid reserves and with a favourable trade balance, allowing for invisible items. Already after the first World War Great Britain ceased to fulfil altogether these conditions. Yet the change of situation was ignored and London continued to act as a world banking centre as if nothing had changed. The result was an immobilisation of its external reserves, leading to the crisis of 1931.

During the 'thirties London continued to some extent to play the part of an international financial centre. Her foreign exchange market provided unique facilities, and so did her bullion market and discount market. Short-term credits continued to be granted for international trade. But long-term lending practically ceased, and the instability of sterling reduced the extent to which it was used for international transactions. This latter consideration did not, however, affect countries of the Sterling Area, which continued to depend on London as much as ever as their natural financial centre where they kept their liquid reserves and whence they borrowed.

London's loss in importance as a world financial centre did not mean a corresponding gain to other financial centres. Neither New York nor Paris assumed the role formerly played by London to a full extent. Both the United States and France had too many internal difficulties of their own to do so. From the crises of the 'thirties New York emerged as the leading

banking centre of the world, but its lead was not incontestable. London had a much better record during the banking crisis, and its technical facilities were also considered in many ways superior to those of New York. Above all, London was considered to be better equipped psychologically to play the part of the world banker, owing to the inclination of American banks and American investors to turn panicky at the sight of trouble, and to cut their credits and liquidate their investments in a hurry instead of nursing their debtors over the difficult period. For this reason London would have been in a position to resume the lead during the late 'thirties, after the Exchange Equalisation Account has succeeded in accumulating an impressive gold reserve, if the Government had been willing to return to the gold standard.

By that time, however, the Government became sufficiently enlightened to realise that to act as an international financial centre in the orthodox sense of the term would be more trouble than it was worth. Indeed, as one writer put it, it would be worth while for Great Britain to pay £10,000,000 or more to the United States each year in return for relieving London of the burden and nuisance of having to act as a world banking centre. In a good year that function yielded a few million pounds of invisible exports, but in a bad year the losses on bad debts absorbed the profits of ten good years. And the country's economy was unduly affected by the international movements of funds and the measures adopted to counteract them.

Great Britain remained thus off gold, in spite of strong pressure from within and from without, and made no bid for the recovery of her lead in the sphere of international finance. Instead, she developed the Sterling Area that was to assume such importance during the war.

When the war broke out private international financial transactions became reduced into insignificance. Nevertheless, the authorities during the first few months of the war were slow in tightening up exchange restrictions, because some quarters still entertained a desire for resuming the functions of international banking centre after the war, and were reluctant to jeopardise the changes for doing so by adopting watertight exchange control. It was not until the summer of 1940 that exchange restrictions came to be applied in all earnest.

Within the Sterling Area, a high degree of freedom of transactions was maintained throughout the war. London was not in a position, however, to lend. On the contrary, owing to various war-time circumstances, Great Britain's balance of payments became strongly adverse in relation to all countries of the Sterling Area. The result has been the accumulation of vast sterling balances by these countries. These balances could be used freely in transactions between Sterling Area countries, so that to a large degree London continued to play the part of a clearing centre, in spite of Great Britain having become a debtor country with an adverse trade balance.

Will Great Britain continue to play the part of the clearing centre of the Sterling Area? Or will the Sterling Area be liquidated in compliance with the American demand? If the latter should be the case, London's role as an international financial centre would undergo once more a fundamental change. It is conceivable that as a result of funding agreements with holders of sterling balances, and of obtaining a large dollar loan, an attempt will be made to resume the old role. Possibly the United States will prefer to lend to other countries to some extent through the intermediary of Great Britain. But the position would be far from stable. It remains to be seen whether under a regime of free trade and free finance Great Britain would be able to balance her international accounts. If not, a persistent drain on her resources would inspire distrust in sterling, and its role as an international currency would be limited. In any case, fear of Socialist legislation or of trouble in Europe would result in, from time to time, an outward flow of funds, which in itself would reduce the centre.

On the other hand, if instead of experimenting with the return to a regime of freedom, Great Britain and the countries of the Sterling Area were to endeavour to consolidate their present system, London's role as the financial centre of a very large part of the world, as the chief intermediary between the Sterling Area and other currency areas, would increase in importance. Sterling would be safeguarded against shocks by the fact that withdrawals of Sterling Area balances would have to assume the form of the purchase of British goods and services. The essentially unilateral character of the trend during the war would cease, and once a solution of the problem of war-time balances is found there is no reason why London's role as the clearing centre of the Sterling Area should not function smoothly.

Our Australian Letter

War Plants and New Industries—Savings Banks and Customs—Manpower Controls—Living Conditions—Harvest Prospects—Steel Industry—Transport—Post Office Expansion.

War factories at Goulburn, Orange and Bathurst, New South Wales, have been taken over by private companies for the manufacture of civilian goods. The Bathurst munitions plant will soon be turning out American brands and styles of women's and children's footwear. Negotiations with the Federal Government have been completed by Emmco (Electricity Meter Manufacturing Co. Ltd.) for a long-term lease of the Orange factory. It plans to employ over 1,000 workers on the mass production of important domestic appliances, using much of the existing machinery at Orange and other Government factories. About £750,000 capital will be involved. It has also been announced that the Pacific Chenille-Craft Co., of Alexandria, New South Wales, will soon begin production at Goulburn of household furnishings and women's apparel.

These are far from being the only recent instances of post-war expansion in Australian industry. Not long ago Australian Paper Manufacturers Ltd. successfully offered £2,250,000 worth of 2½ per cent debentures for public subscription, the money to be used for extensive enlargements of the company's activities. The issue was notable as one of the first large sums of new money to be raised for post-war development, and as being a debenture issue; a comparatively rare method in Australia of financing major industrial operations. This move was quickly followed by the formation by Felt and Textiles of Australia Ltd., in association with The Carpet Manufacturing Co. Ltd., of Kidderminster, England, of the British Australian Carpet Manufacturing Co. Ltd., with a capital of £750,000 to manufacture carpets in Melbourne. A further move of interest was the issue of a further 150,000 shares of £1 each by Australian National Airways Pty. Ltd., notwithstanding the Federal legislation to nationalise interstate airways in Australia. Buyers of the shares were Huddart Parker Ltd. Union Steamship Co. of N. Z. Ltd., Holyman Bros. Pty. Ltd., Adelaide Steamship Co. Ltd., Orient Steam Navigation Co. Ltd., £28,216 each, and Airlines of Australia Ltd. £8,920. The money is to be used towards the purchase of four 44-passenger, four-engined Douglas planes. Delivery of the first is hoped for by next January and of all by April. As each plane will cost about £140,000, further capital will be needed to complete the purchases.

Savings bank deposits in August again increased by slightly more than £10,000,000. The new record level was £584,704,000. During the last five years there has been aggregate increase of £345,338,000 in deposits, or an average percentage increase of 144.27.

For the three months ended September 30 last customs and excise revenue increased by £117,228 over the corresponding period last year to £16,817,730.

All remaining restrictions on the right of employees to leave jobs and on the right of employers to dismiss employees will be lifted immediately, but for a limited period some control will continue to be exercised over engagement of labour for work of low priority. This is the effect of an announcement by the Minister for Labour, Mr.

Holloway, that all remaining protected undertakings—about 11,000—are to be "deprotected" as soon as legal formalities can be completed. Mr. Holloway said that this followed a conference in Melbourne with representatives of employers' and employees' organisations.

About two months ago Cabinet "deprotected" all except the 11,000 undertakings referred to. Restrictions on the engagement of labour were eased to the extent of making permits unnecessary for high priority undertakings, or in the case of ex-Servicemen or persons under 18 years.

With the lifting of many war-time restrictions, there has been a slow return to more normal living conditions. A quick return to pre-war standards is not expected. The Government is anxious to end clothing rationing as soon as possible, and the Rationing Commission will review the situation this month, when the present rationing period will expire. But this does not necessarily mean that rationing will end then. Meanwhile, the coupon ratings of various items of men's and women's wear have been reduced, and the styling restrictions on clothing manufacture removed. However, shortages of cotton and rayon textile, as well as limited spinning capacity will restrict clothing supplies for some time, especially in view of the labour shortage. Moreover, the increasing number of discharges from the forces is creating a serious problem, particularly with men's suits and hats. However, much of women's pre-war equipment for keeping beautiful has reappeared in the stores.

Australia has greater demands on her food supply now than at any time during the war. Britain has asked for the immediate shipment of 13,333 cases of tinned milk for Hong Kong and 42,660 for Borneo. Last month 21,000 tons of food was to go to India and Ceylon. This is in addition to large Service orders and shipments to Britain. Beef, pork and lamb is expected to be in short supply for another year. Neither sugar nor butter rationing will be lifted for some time, and fats, cheese, oils and tinned fruit remain scarce. Although restrictions on all deliveries to households were lifted on November 1, retailers claim that shortage of vehicles and labour will prevent them from reintroducing them, notwithstanding the protests of housewives.

There has so far been little change in the civilian tobacco supply, which is expected to improve as more labour becomes available. By Christmas beer supplies are expected to receive a fillip with the arrival of shipments of barley from the U.S.A. While there has been a slight increase in the petrol ration, no full relief has been promised, although many assume that it will be given once future supplies have been arranged for. However, a full supply of motor tyres is not expected for at least six months because of a lag in local production.

Other points are the complete removal of travel restrictions, and the gradual vacating by the Army of private dwellings occupied for military purposes. Finally, with an easing of paper restrictions, special wrappings will again brighten packages next Christmas.

Signs of various kinds are constantly appearing of the inherent solidity of the Australian economic position. While the effects of last year's disastrous drought are still being felt, a gradual improvement is evident. Just how serious were its effects

was recently revealed by the discharge of a shipment of 300,000 bushels of wheat, imported from Oregon—the first wheat to be brought to this country for a century. It was urgently needed for stock feeding in drought-ravaged areas. Prospects for the new season's crop are less satisfactory than a month ago. Estimates are now for a 135,000,000 bushel crop, compared with a previous forecast of 150,000,000. Crops in many parts of Victoria, Riverina and South Australia need good rains, and if dry weather continues much longer, the wheat harvest may fall below the present estimate. Officials are hopeful that a surplus of 50,000,000 bushels will be available for export, compared with no exports this year, because the crop totalled only 50,000,000 bushels in all.

Important immediate expansion of the Australian steel industry costing £7,000,000, has been announced by Broken Hill Proprietary Co. Ltd. It comprises five major projects:—The construction, costing £1,000,000 of an ore extraction plant, deep sea port and town on Cockatoo Island, at Yampi Sound, Western Australia; the building, at a cost of £2,500,000 at Whyalla, South Australia, of four 12,500 ton steamers for carrying Yampi ore to Port Kembla, New Wales, and fresh food and other supplies to Yampi; the construction, at a cost of £1,250,000, of a new battery of modern by-product coke ovens at Port Kembla; the building, costing £1,000,000, also at Port Kembla, of a new 10-inch rod, merchant bar and strip rolling mill; and the mechanisation, at a cost of £1,250,000, of collieries at Bulli and Newcastle coal-

Agencies throughout India.

fields, New South Wales, to increase supplies to steel works. There are, in addition, many minor projects, while other large proposals are being investigated. The projects will be financed from the company's own funds.

Before the war B.H.P. group employed 22,451 workmen. At the peak of its war effort its payroll numbered 34,141. The present number is 26,000. Actual steel making plant, with an annual capacity of 2,00,000 ingot tons, is already available, but is not at present in full use because of lack of sufficient coal, coke, and labour. The keynote of the present plan is the development of the Yampi Sound iron deposits, which will supplement supplies from Whyalla. The carrying out of the plan is already well advanced, and Yampi ore is expected to begin to arrive at Newcastle and Port Kembla about the end of next year. Meanwhile, B.H.P. scientists are exploring a new ore field in New Caledonia.

Federal and State Ministers and State Railway Commissioners have reached agreement in principle on the railway gauge standardisation recommendations of the Director-General of Land Transport. Agreement has been reached on the proportion in which costs are to be divided between Federal and State Governments. This will be discussed at a conference of State Premiers with the Federal Government. The Minister for Transport, Mr. Ward, stated that he could see no obstacle to the work being undertaken at an early date.

In a statement issued by the Sydney office of the P. and O. and Orient shipping lines, it was announced that bigger and faster liners were planned for the Australia-England service. A 29,000 ton vessel was now under construction, and a second would be laid down early next year. Each vessel would complete the voyage from Melbourne to London in 28 days. Both lines had lost about half their fleets, and the remainder was being used still for the transport of troops. When that was completed, each liner would have to be reconstructed, up to nine months being needed in each case. Cost of shipbuilding had almost doubled, and to reduce the burden of interest and depreciation charges, new liners would be larger to carry more passengers and fast enough to make four voyages a year compared with three before the war.

A programme of Post Office development, the first stage of which will cost £18,000,000, is outlined in the report of the Postmaster-General for 1943-44. The first section will mainly comprise urgently needed improvements in postal tele-communications and broadcasting services. About one-third of the money will be spent on new buildings or remodelling premises. In addition to buildings, the main work in capital cities will be establishment of new automatic telephone exchange and provision of additional underground plant to serve the expected increased telephone demand. In country districts many post offices will be rebuilt or remodelled. Important trunk line routes will be modernised and increased and a large number of automatic exchanges will be installed in rural centres. The net gain in telephones during 1943-44 was 32,883 (compared with 28,180 in 1942-43.) The number of telephones in service on June 30, 1944, was 799,729. Australia, with an average of one telephone to every ten persons, still occupied seventh place in world telephone density.

Post Office revenue continues buoyant. A Treasury statement revealed that for the three months ended September 30 last it totalled £6,993,800 compared with £6,876,977 for the corresponding period last year.

Our London Letter

INTERIM BUDGET PROPOSALS WELL RECEIVED

PLANS FOR INCREASING PRODUCTION OF RADIO SETS FOR CIVILIAN USE

London, Oct. 27.

Usually critical of Socialist principles generally, City quarters had little fault to find with Mr. Hugh Dalton's interim budget which, as an essay on economics, financial quarters found sound and constructive.

In the Stock Markets the budget received an enthusiastic reception because few people expected the 40 per cent. cut in Excess Profits Tax as well as a reduction in the Standard Rate which itself will lead to an increase in the profits of all companies although the reduction in profits tax must have much more striking effects on available net profits.

Comment on the budget, however, has not been all bouquets. Greatest defect apparently was Mr. Dalton's omission of emphasis on the need for public economy. In spite of the early end of the Japanese war, the Chancellor observed that his predecessors' estimates of expenditure around £5,565,000,000 against revenue of £3,265,000,000 still hold good. Mr. Dalton explained this by announcing that provision must be made this year for heavy outgoings in gratuities to demobilised Servicemen and compensation to contractors for the termination of contracts. Next year there will be greatly increased expenditure on social services, family allowances, education, housing, colonial development and higher old-age pensions.

Mr. Dalton promised that from April next year the normal practice of departmental estimates would be resumed and that the exercise of stringent economy at every point would be observed, but critics of his plans found in his figures a warning that his forecast of a balanced budget by 1948-49 might be wishful thinking.

Meanwhile Members of Parliament are receiving increasing postbag from middle class taxpayers who contend that, in the long run, they will lose rather than gain under the budget. They find that on working out the new scales of income tax there is a fairly hefty nigger hidden in Mr. Dalton's otherwise attractive woodpile. This results from the abolition of post-war credit not being accompanied by any raising of the rate of earned income relief. For instance, a married man with one child and £500 a year earned income pays £28/7/6 on his Pay As You Earn payments. But he loses a post-war credit of £31/10/0, which leaves him some £3 out of pocket. A married man with one child earning £700 earned income gains £37/7/6 on P.A.Y.E. but loses a tax credit of £38/10/0.

Although the increases are slight the flaw has been a matter for considerable surprise that the defect should have escaped the Chancellor of the Exchequer. It seems probable that the matter will have to be remedied, otherwise Mr. Dalton will leave himself in the position of saying that post-war credits are of no account.

Two possible remedies have been suggested. One is to retain post-war credits so far as the difference in earned income allowance is concerned. The other is to restore this cut, too, by raising the earned income allowance from one-tenth to one-sixth again. The latter appears most widely favoured but Inland Revenue officials said it will cost some £50,000,000 or more.

Licences have been granted to seventy British manufacturers for the production of about one million radio receiving sets

during the next twelve months. Of these, 400,000 are intended for export.

Undertakings have been given by the industry, says the Board of Trade in making this announcement, that 50 per cent. (by value) of the production for the home market will be devoted to sets to be re-tailed at £15 or less, exclusive of the purchase tax of 33 1/3 per cent. on the whole-sale selling price.

With the cancellation of war contracts, the supply position for most of the principal components for civilian production has improved and adequate quantities should be available for the present programme for maintenance of existing sets and for export," the Board of Trade said.

The supply of timber for radio cabinets, however, is not too good, owing to the many claims on limited quantities. During the third quarter of this year releases were only about 50 per cent. of the industry's requirements. But substantial increases will be made in the current quarter and this improvement, with the support of plastic materials, is calculated to go a long way towards overcoming difficulties.

Before the war the average annual production of radio sets was about 1.4 millions. Of this quantity the average export was 66,000. Therefore, the present programme visualises an overall production of about 70 per cent. of the pre-war figures, but places an emphasis on exports.

If exports mature on the scale licenced the industry will, in relation to pre-war trade, be making a noteworthy contribution to the Government's policy of increasing export business.

Production of television receivers has not yet begun. Recommendations on the future of the service in this country have been made by the Government Committee set up under the Chairmanship of Lord Hankey. The Lord President of the Council, Mr. Herbert Morrison, announced in the House of Commons recently that the Government should give general approval of the recommendations and it is understood the necessary action has been set in train.

Apart from sound and vision receivers, many firms are producing transmitters, communications equipment, medical and industrial electronic apparatus and many other highly specialised products for which there is likely to be a heavy demand both in Britain and overseas. No manufacturing licences are required by firms engaged on production of this character, but Board of Trade said every effort is being made to assist the manufacturers concerned in the reconversion of their production programmes to peace-time needs.

Editorial Notes

Labour Unrest

The increase of labour strikes observed particularly during the recent months threatens to obstruct the smooth solution of transition problems and hamper post-war development schemes. This menace is not confined to a single country; but affects the Allied, the Liberated and erst-while enemy countries. Before 1939, even during the period of recovery from Trade Depression, unemployment was rife in many countries, developed and undeveloped. When the war broke out there was a necessity for the maximum utilisation of national resources for a cause supremely important. Crisis brought in all-round Government interference in national economic affairs more than ever before. Planning for war effort necessitated proper co-ordination of the different factors of production. Both the employer and the employee were bound to co-operate in the prosecution of war and they kept their grievances in abeyance for the duration of the war. Profit motive was kept in check on the one hand, and irresponsible labour agitation was also made impossible on the other. The national output was maximised as a result. In fact the remarkable strides in industrialisation achieved in some the countries like Australia and Canada is the result of a planned and willing co-operation between labour and capital.

Now that Peace has come, there seems to be a danger of a move-back from government control of economic affairs to the partial restoration of capitalism and imperialism. The problems of transition, by no means easy to solve, are facing every country. A policy of full employment is difficult to be sustained because it is impossible to maintain the wartime expenditure. Armies have to demobilised, peacetime industries have to be restored and the preliminaries have to be done for the usual commercial competition in the world markets. Tax relief has to be given and capital are to-day in a mood to act with more freedom than they were able to enjoy during the war years. Since the end of the European war, and particularly after the Japanese surrender, news is streaming in from far and near that everywhere labour strikes are growing. In the U.S.A. the strike fever has affected the Automotive Industry involving General Motors, Ford and Chrysler Companies and also the steel and oil industries. Even the lift men of the New York sky-scrappers struck work. Miners, dock-yard labourers, transport workers are everywhere abandoning their no-strike pledge and are taking to direct

action whenever they feel necessary. In India also strikes have increased in the recent months. There was a big tramway strike in the city of Calcutta and today about 12 thousand workers have struck work in the engineering industries near the city. At Broach, Nadiad, and Billimoria notice of strikes have been given. At Surat, Navsari and Boroda strikes are on. There was a strike at Vizagapatam recently. Labour trouble has just been averted at Ahamadabad and Jamshedpur.

The situation is thus causing great concern. If harmony between capital and labour is to be restored to problems of transition should be carefully solved. If demobilisation is hurried up without any relation to the constructive activities in India unemployment will be the result and labour situation cannot improve. War-time inflation has already affected the working population severely and if during the coming years the cost of living is kept high while unemployment is on the increase, labour unrest will cause great concern to all alike. Of late an attitude of vacillation and indecision is discernible in Government quarters and this has been partly responsible for the prolongation of the strikes. The Government should activity interfere, arbitrate effectively and do their best in restoring industrial relations. Though the immediate issues for the strikes that have now been declared in India may be regarding wage rise or dearness allowance, the larger back-ground of labour discontent is the threatening unemployment and, if the authorities desire absence of strikes to facilitate economic development plans, the best way to achieve it is to launch on the post-war reconstruction plans immediately.

Electricity in Indian India

The achievements of some of the Indian States in the sphere of hydro-electric development have been remarkable. The first hydro-electric scheme undertaken in the East was on the Cauvery in the Mysore State. This was in 1902. It was undertaken to supply power to the gold fields at Kolar. The second stage in the expansion of the electrical industry in Mysore State was reached in 1940 to generate 20,000 K.W.A. The completion of the Jog scheme to generate 48,000 K.W.A. at a cost of Rs. 408.7 lakhs marks the third stage in the hydro-electric development of the State. The total amount spent by the State on hydro-electric works up to 30th June, 1945, is estimated at Rs. 94 lakhs. Kashmir was the next Indian State to develop its hydro-electric resources. A power station was built thirty six years ago to utilise the waters of the Jhelum. Most of the energy produced from here is used in factories including the world famous silk Factory. The State has three more power generating stations. The Dhirangarh project is important among the schemes to be undertaken by the Kashmir and the Punjab Governments. This will generate 250,000 K.W. peak load and is estimated to cost over Rs. 12 crores.

After a survey of the water power resources of the State Travancore began the development of the resources of the river Muthirapuzha. The project, known as the Pallivasal hydro-electric project, one of the most economical ones, completed its first stage in 1940. About 72.5 per cent of the power generated is used for industries and the balance for domestic and agricultural purposes. Electric production of Aluminium, tea factories, ceramics, textiles, paper, plywood, oil mills, saw mills, tile factories, mineral factories, engineering workshops etc. are

the main industrial lead. Three more generating sets are being laid. The additional power generated will be used mainly for aluminium production and the production of aluminium sulphate.

An important event of far-reaching consequence in the development of irrigation and electric power for Hyderabad is the agreement between the Nizam's Government and the Madras Government to distribute the waters of the Tungabhadra and the joint construction of the dam near Mallapuram. Apart from the generation of electric power the project would bring about 625,000 acres of land under cultivation. The project will cost Rs. 20 crores. Other important schemes proposed to be developed are the Godavari Project, Jalding Falls project and Kistna power Project. For purposes of irrigation two dams have been constructed across the Parvati river in the Gwalior State.

The State of Gwalior, Indore, Jaipur, Udaipur, and Kotah have entered into an agreement to undertake jointly the harnessing of the waters of the Chambal river by throwing a dam across the narrow valley of the river, thus creating a huge lake for the storage of water. The total energy likely to be produced has been estimated at 1,000,000 H.P. out of which, 20,000 H.P. will be placed at the disposal of Jaipur for utilisation in the construction of tube wells for industrial purposes and for electrification of all towns and a large number of villages. Jaipur has chalked out another hydro-electric scheme involving the construction of a dam across the river Banas at Charnokadeh. The Cochin State proposes to generate energy from the falls of the Chalakudi river. It has been estimated that the scheme will cost over a crore of rupees and will involve an annual recurring expenditure of Rs. 3,65,000. One outstanding feature in the hydro-electric development of the States is the close co-operation between not only between Indian States but also between States and provinces. And this should be a step in the full exploitation of the whole country and co-operation between these units in other spheres also.

Shipping and Industrial Development

Progress in the industrial sector of the national economy is directly related to the development of the transport services and if the economic progress of India is to run on national lines for the benefit of the masses of this country a strong mercantile marine is essential. Commercial circles are not convinced that the Government of India are taking suitable steps for liberating Indian commerce from the clutches of foreign shipping interests.

In an interview to the Press Mr. M. A. Master, President of the Indian Merchants' Chamber, Bombay, has pointed out that the absence of any mention of the shipping industry in the Bombay Plan or the statement of Industrial Policy issued by the Government of India is quite significant. Considered from the point of view of the length of the sea coast or the tonnage of foreign and coastal trades, India deserves to have a strong mercantile marine. Her annual maritime trade exceeds 30,000,000 tons. Further, that the foreign shipping companies will never give a square deal to the Indian interests is evident from the rate wars declared by them in the past and by the treatment meted out to the 50,000 Indian seamen working under the British companies. The way in which Indian shipping was pressed to war service in 1940 reveals that Government is anything but kind to this vital industry. Unless Indian shipping industry developed and Indian ships carry Indian cargo to foreign countries the rate policy of the foreign companies will not improve. In fact, it was only after the advent of the national shipping that the rigorous policy of preference to foreign interests was made to slacken.

To-day out of a total of 80 million gross tons of shipping in the world trade Great Britain shares 18 million tons while India has only one lakh of gross tons. The scope for increase in foreign trade is very bright in the immediate years to come and the needs of national defence have to be attended to. If post-war plans are initiated according to schedule the need for efficient transport services will be keenly felt and a strong mercantile marine will be invaluable to relieve the pressure on the railways. The history of Indian shipping industry is full of instances of callous neglect of the national interests. Mr. Master voiced forth the nationalists' opinion when he stated that the "British shipping exploits us, dominates us and keeps us under subjection. Without the development of Indian shipping there can be neither economic prosperity nor political freedom". It is to be hoped that the Sir C. P. Ramaswami Committee will recommend measures for the building of a strong Indian mercantile marine for the defence of our long coasts and for helping an energetic export drive now reported to be under the consideration of the Government of India.

Capital Goods from Australia

Judged by all accounts, the prospects of securing from America or Britain capital goods for the development of Indian industries will continue to be bleak at least for some time to come. India has to manufacture basic machinery herself or to seek possibilities elsewhere. Mr. R. R. Saxena, Indian Trade Commissioner in Australia thinks that Australia could be of assistance to India in this direction. If Australia could develop her industrial potentialities speedily she would be in a position to supply India machinery for processing raw wool, for the manufacture and processing of various types of food, for the manufacture of paper, hardware, plastics, plywood and straw products, perfumery, toilet requisites, buttons, toys, bicycles, furniture, electric wires and cables, leather goods, mining, shipping and engineering, oil-milling, chrome electro-plating and electrical switch gear and accessories. Australia would also be in a position to supply agricultural

Marketing of Sheep and Goats

Nowadays, the leading sheep raising countries of the world rear sheep mainly for the production of wool. In India sheep are reared for different purposes in different areas. Goats are maintained primarily for their meat, though they are also valued for their milk and skin. The raising of sheep and goats is an important occupation in the Madras Province, and the states of Bikaner, Kashmir and Mysore. Sheep population is very dense in the Provinces of Madras, Ajmer-Merwara, and the Punjab, showing 115, 78, and 54 heads of sheep per square mile respectively. As regards goats, the provinces of Bengal, the United Provinces, Bihar and Delhi, record respectively 84, 78, and 64 heads per square mile. The Province of Baluchistan tops the list with 1,989 heads of sheep and 1,013 heads of goats per thousand persons. Sheep and goats are a negligible factor in India's foreign trade. In many parts of the country they are used for manurial purposes and as pack animals. The chief factors that govern their price are the distance between the markets and the producing areas, and the number of times the animal changes hands before reaching the final consumer. Sheep and goats are usually assembled for sale in the three types of markets, 'melas' (livestock fairs), 'hats,' 'shandis' or 'paimths' (periodical markets) and 'mandis' (daily markets). Movement of sheep and goats by road has been preferred to rail transport. The low cost of movement and the opportunity of grazing flocks 'en-route' are the advantages in moving these animals by road. The main recommendations made by the Agricultural Marketing Adviser to the Government of India, in the report on the marketing of sheep and goats, are the improvement of the present markets by providing enclosure walls, and adequate shelter for these animals, proper arrangements for feeding and watering them, a detailed classification of the different breeds of sheep and goats, fixing the rate of remuneration for brokers in all the important markets, adequate transport facilities as concessional freight rates, and attaching animal wagons to trains. It is hoped that proper action would be taken on the basis of these recommendations.

Geological Survey in Mysore

The progressive administration in Mysore has been preparing for a planned economic development even before the war and since 1935 attempts at collecting the statistical data and conducting a survey of the mineral resources of the State have

PRESENT ISSUE

22,500 Ordinary Shares of Rs. 100/- each - - - Rs. 22,50,000
25,000 Deferred Shares of Rs. 10/- each - - - " 2,50,000

Rs. 25,00,000

The deferred Shares shall carry the same rights as regards voting as the Ordinary Shares, but as regards profit and repayment of Capital on winding up, the holders of Deferred Shares shall, rateably and in proportion to the number of such shares held by them, have the rights following, that is to say:—

(a) The right to one half of the profits of the Company of each year which shall remain after paying or providing for the payment thereout a dividend to the close of such year at the rate of 5 per cent (free of income-tax), per annum, on the amounts for the time being paid up on Ordinary Shares and after making such provision for reserve as may seem expedient.

(b) The right to one-half of any part of the reserve fund aforesaid, or the income thereof, which it may at any time be determined to divide among the members.

(c) In the event of the Company being wound up the right to half the surplus assets of the Company which remain after providing for the payment of the amounts for the time being actually paid up on the shares including that paid up on the Deferred Shares.

The Company will have the right to increase and reduce its capital and to divide its capital for the time being into shares of different classes and attach to any such shares such preferential deferred, qualified or special rights, privileges or conditions and to vary, modify or abrogate any of such rights, privileges or conditions in such manner as may for the time being be provided by the regulations of the Company.

Out of the present issue 10,400 Ordinary Shares of Rs. 100 each and 21,370 Deferred Shares of Rs. 10 each have already been subscribed by the promoters, directors and subscribers to the Memorandum of Association and their friends and allotted to them at par prior to the issue of this prospectus. The remaining 12,100 Ordinary Shares of Rs. 100 each and 3,630 Deferred Shares of Rs. 10 each are offered for public subscription at par. The amount payable in respect of these shares is as follows:—

	On each Ordinary Share.	On each Deferred Share.
	Rs. a.	Rs. a.
Payable with application	10 0	1 0
Payable within one month after allotment	15 0	1 8

Balance as and when may be called by the Directors subject to the provisions of the Articles of Association of the Company.

OBJECTS OF THE COMPANY.

The Company has been formed for the objects set forth in its Memorandum of Association. The present issue is for the purpose of embarking upon the manufacture of Electrical Machinery and Plastic goods, such as Electric Motors, pumps, fans, transformers, refrigerators, aircoolers, plastic switches, ceiling roses, lamp-holders, wall-plugs, fountain pens, pencils, bangles, spectacle frames, combs, buttons, imitation ivory articles etc. India's vast hydro-electric potential of 70,00,000 H. P. lies unharvested. Of this huge power only 1.3 per cent. has so far been developed. Provincial Governments are concentrating on harness-

proceeded at a rapid pace. The industrialisation in the State itself created conditions favourable for speeding up the work of the Geological Survey in Mysore. New lines and methods of mineral investigations have been taken up to speed up and attain accuracy. In 1936 core drilling was introduced and geo-physical methods to ascertain the underground disposition of mineral deposits and to locate concealed ore bodies have been adopted since 1939. The Mysore Geological Department does not conduct random surveys but restricts its activities primarily to those industrial minerals required for furthering the industrial output of the State. The improved methods of prospecting have, during the past ten years, proved the existence of the following minerals:—High calcium limestone, 3 million tons; high grade chromite, 30,000 tons; low grade chromite, 100,000 tons; bauxite, 300,000 tons; quartz, 2½ million tons; felspar, 200,000 tons; asbestos, 25,000 tons; graphite, 50,000 tons; kyanite and sillimanite, 50,000 tons and kaolin, 450,000 tons. The Chemical section of the Department conducts assays and analyses of ores and minerals, ore beneficiation by chemical methods, and utilisation of minerals in chemical industries. The Metallurgical section has conducted successful investigations on the possibility of utilising the local asbestos for the manufacture of cement asbestos products, of the graphite for the production of black lead pencils and crucibles, of the kyanite sillimanite concentrates for the preparation of refractory bricks, of the locally available ochres for the production of paints and pigments and of the local china clay to serve as fillers in the paper and textile industries. Special schemes for the production of refined Kaolin and

for the improvement of gold mining and extraction have recorded remarkable successes.

As regards the scope for future development Mr. Rama Rao, Director of Geology in Mysore, states (in an article in the Mysore Dasara Exhibition Official Handbook and Guide, 1945) that "We may envisage the large-scale abrasive and refractory industries, manufacture of cement asbestos products, ornamental and gem-stone industries, extension of cement production, production of chemical salts like alum, magnesium sulphate, copper sulphate, potassium or sodium permanganate, etc., from locally available minerals." It is estimated that apart from the gold reserves, the resources of building and ornamental stones and the minor minerals, the other minerals available in the State are estimated at Rs. 10 to Rs. 12 crores. Hardly one-fifth has been till now utilised and the other four-fifths remains to be exploited. As a preliminary to the inauguration of a new policy of mineral exploration and exploitation the Department has been reorganised in October 1944 and opportunities have been created for the geologists to come into contact with the general public and appraise of them of the results of their work.

S. E. Asiatic Countries' Conference:

The suggestion made by U. Aung San, leader of the Chinese nationalists, for holding a South East Asiatic countries Conference has acquired a wide response from Indian leaders. The proposal itself is the expression of the identity of political interests among the South Asiatic countries. All these countries are in political bondage

to European nations; the war has strengthened the urge for emancipation; and the war-time promises of the Imperialist powers, though neutralised by their subsequent conduct, have been an additional source of encouragement. For the realisation of their political aspirations, a United South East Asiatic front will be of great spectacular significance in the struggle of these countries towards freedom. But recognition of the commonness of interest stops with the political field. In the economic sphere, no two of these countries are able to see eye to eye; though here too, interests are not always mutually conflicting. The very industrial backwardness common to all Asiatic countries should provide a meeting ground and a basis for joint planning. On the other hand mutual bickerings and rivalries are conspicuous. Burma nurses grievances against India. The relations between India and Ceylon are anything but those befitting good neighbours. Java has always been a keen competitor with India, in more than one commodity. The presence of the foreigner has to some extent kept these antagonisms submerged; but they are slowly raising their head as inevitable elements in the general political upheaval. A dispassionate and constructive approach to the economic problems of each of these countries will reveal that it is also a field where apparent points of conflict could easily be reconciled. The urge for a closer alliance will have little practical consequence, if it springs only from the passing needs of the moment. Fortunately, there are several deep seated factors which would provide the basis for enduring co-operation. Unless the countries of South East Asia recognise these factors, the enthusiasm for common action is bound to be shortlived.

INDIA RECONSTRUCTION CORPORATION LIMITED—(Contd.)

FACTORY LAND

The Company has agreed to acquire for erecting its factory building the four acres plot of leasehold land in the Factory Area at present owned by Sir Har Govind Misra the Chairman of the Board of Directors. The said leasehold land is held on a lease from the Improvement Trust, Cawnpore, for a period of 999 years and the rent payable is Re. 1 per year. Land in the locality in which the said plot is situated is not available below Rs. 4-8 per square yard. Sir Har Govind Misra has, however, agreed to part with the said plot of land to the Company at the concessional price of Rs. 77,440 calculated at Rs. 4 per square yard which will be paid in cash out of the proceeds of the present issue. The copy of the lease in respect of the said land will be open for inspection at the registered office of the Company during office hours on working days.

MINIMUM SUBSCRIPTION

The minimum subscription, at which the directors will proceed to allotment and which conforms to the requirements of Section 101 of the Indian Companies Act, is Ordinary Shares of the nominal value of Rs. 8,00,000 and Deferred Shares of the nominal value of Rs. 2,00,000 (including the amount already allotted to the directors and subscribers etc.).

UNDERWRITING COMMISSION AND BROKERAGE

The Company has not appointed any underwriters to underwrite the present issue. No underwriting commission is, therefore, payable by the Company. Brokerage at the rate not exceeding 2½ per cent of the face value of shares will, however, be paid by the Company on allotment made in respect of applications bearing the stamp of the Company's recognised Bankers and Brokers.

MANAGING AGENTS

Messrs. Alliance Traders, a partnership firm with its head office at Industrial Area, Kalpi Road, Cawnpore, shall be the first Managing Agents of the Company and shall continue to hold that office (unless they shall voluntarily resign earlier) for the terms

of 20 years from the date of incorporation of the Company, namely, the 19th April, 1945. The remuneration of the said Managing Agents shall be:—

- An office allowance at the rate of Rs. 1,500 per month from the date of incorporation of the Company and,
- A commission at the rate of 10 per cent of the net annual profits of the Company as defined by Section 87C of the Indian Companies Act.

The Managing Agents have renounced their monthly allowance for the first six months.

APPLICATION

In terms of the consent of the Government to this issue of capital, out of the 25,000 Deferred Shares, 6,750 Deferred Shares shall be allotted to the holders of Ordinary Shares in the ratio of three Deferred shares to every ten Ordinary shares. Application for shares may be made on the form accompanying the Prospectus or a similar form and the application money may be paid at any of the following places:—

- Registered office of the Company.
- Imperial Bank of India at any of its principal branches and offices.
- Chartered Bank of India, Australia & China, at any of its principal branches.
- The Central Bank of India Ltd., at any of its principal branches. Where no allotment is made the deposit will be returned in full and when the number of shares allotted is less than the number applied for the balance of the deposit will be utilised against the allotment amount and the surplus if any will be refunded. The shares when allotted will be subject to the Memorandum and Articles of Association of the Company, a copy of which can be inspected at the registered office of the Company during office hours on any working day.

Copies of the Prospectus and share application forms can be had from the registered office of the Company or its Bankers.

Germany's Food:

The immediate postwar years are difficult for all nations. Particularly for Germany and Japan, they may be calamitous. In Germany, the possibility of suffering is greatest on the food front; there are many factors which tend to make the problem of feeding Germany in the years ahead, acute. The division of Germany into different allied zones is from the economic point of view, arbitrary; and though mutual co-ordination among the different administrations is formally guaranteed, serious hitches and bottle-necks are bound to occur. In the largest province of the British zone, the year's crops of wheat and oats were about 20 per cent less than normal. There is a considerable dearth of fertilizers, and living conditions have not yet returned to normal. Austria and the Central European States are trying to throw back on Germany the Germans who had settled in their territories, and this has resulted in a large influx of refugees. For example, the rural district of Ost-Navemblind to the

north west of Berlin, which before the war had a population of less than a lakh, is reported to have already taken 30,000 refugees and is expecting 50,000 more; and these areas are no longer the rich blooming gardens they used to be; besides a substantial part of their production is exported as reparations. In the French zone, large scale removal of food stuffs has been taking place and the Russians too are no more indulgent towards Germans in this respect. Both France and Russia would continue to feel the pinch for some time to come, and neither seems to be squeamish about exercising the victors' privilege. In the Russian zone, according to reports, a clean sweep has been made of machinery of every kind and of food stocks. There is regular depletion of food stocks from the Eastern regions which normally provide a large part of the food consumed in Western Germany. If the Allied Control Council do not take brisk measures and show signs of more earnest collaboration, Germany might have to face a severe famine before long.

The Oil Seed Trade

The Indian oil seeds trade was one of the worst affected by the closure of the European markets consequent on the war. Not only did stocks accumulate, prices began to decline at an alarming rate. But the critical period did not last long. The indigenous oil crushing industry was quick to respond to the opportunity presented by the stoppage of imports of oil and consequently enabled prices to rise again. When shipping position improved Britain revived her purchases first for herself and then for the liberated countries. But the advantage of this partial revival of exports was to some extent neutralised by the monopoly of purchase set up by the British food Ministry. While countries like Argentina who compete with India in the international market for oil seeds, have devised measures to make the maximum profits out of war time trade, India is being dictated to by great Britain, in respect of the terms of purchase. The lack of uniformity in the control measures instituted by the various provincial Governments has been another factor which adversely affected the trade. A memorandum submitted to the Government by the Marwari Chamber of Commerce, Calcutta, makes mention of the difficulties of the trade and pleads for a revision of the ceiling prices fixed for oil seeds in some of the Provinces. For example it is held that the controlled price for linseed, which is Rs. 8 in the United Provinces and Rs. 9 in Bihar, is ridiculously low, especially in comparison with the prices of other agricultural commodities. A similar memorandum submitted to the Bombay Government by the Bombay Seeds Traders' Association, points to the need for lifting the ban on hedge contracts in view of the heavy demand for exports of oil seeds at stabilised prices. The usefulness of the British Ministry of Food as an intermediary between India and her European markets should be deemed to have disappeared by now. The question of gradual relaxation of controls to the extent they adversely affect the export trade should also be taken up for consideration though it is obviously impossible for the Government to review individual items except as part of the export policy as whole.

India Reconstruction Corporation

Numerous companies have been floated in recent months but very few have been able to get the assurance regarding early import of the necessary machinery. With the scarcity in regard to building material and machinery many have been obliged to wait for a long time. Such progress as has been made in the war period is mainly in connection with the war effort and with the help given by the Government authorities. The India Reconstruction Corporation Limited, the prospectus is published elsewhere in this issue, is therefore fortunate in having been able to arrange for the early import of machinery for a plastics factory. The Corporation has been formed to start a plastics factory and a textile mill. The plastics factory will be located in Cawnpore and a textile mill in the province of Bihar.

The plastics industry is assured of good prospect and the Company will have a good start especially as the machinery will be of the latest design and will incorporate labour saving devices. The land for the factory in Cawnpore has been acquired at a moderate cost. With the early imports

of machinery it is expected to commence production well before the end of 1946. The Chairman of the Board of Directors, Sir H. G. Misra, was able to make the necessary arrangements for the construction of the plastics factory. As Sir Har Govind is also a partner in the firm of Managing Agents, Messrs. Alliance Traders Limited, the company is assured of a bright future.

The authorised capital of the Corporation is Rs. 1 crore in 90,000 ordinary shares of Rs. 100 each and Rs. 10 lakhs in 1 lakh deferred shares of Rs. 10 each. The present issue is for only Rs. 25 lakhs in 22,500 ordinary shares and 25,000 deferred shares.

The Managing Agents, directors and their friends have agreed to take up 10,400 ordinary shares and 21,370 deferred shares and the balance of 12,100 ordinary and 3,630 deferred shares is offered for public subscription.

Asian Assurance

We have more than one occasion referred in these columns to the spectacular progress made by insurance companies in the war years and stated that with the increase in the insurance habit and the higher level of income of the masses nearly all the prominent life offices have been able to report a large increase in the amount of new business written and that the total funds at the disposal of the life insurance companies represent a very large sum. A stage has been reached where the bigger companies can usefully partake in industrial development, as in other countries, and can find useful employment for its funds. As new business written is very much higher and as the lapse ratio has been smaller the total addition to funds in the war years is very much more than the increase in the 'thirties. While the decline in the general level of prices and the reduction in the income of particular groups might result in a decrease in business the total amount will still be considerable and the total of balance sheets might record satisfactory increases. The entry of new companies, however, might create keener competition and lead to unsatisfactory results. It is expected that the new amendments to the Insurance Act will prevent any developments which will undermine the structure of insurance companies.

Speaking at the Annual General Meeting of the Asian Assurance Company the Chairman was rather enthusiastic regarding the progress made in the war years and in 1945 satisfactory results were recorded. In the last year 8,275 proposals for sums amounting to Rs. 2.07 crores were received out of which 7,313 resulted into policies of the total amount of Rs. 1.77 crores. The increase in the amount of new business is 50 per cent. The premium income showed an increase from Rs. 27.30 lakhs to Rs. 35.33 lakhs while income from other sources was higher at Rs. 5.59 lakhs against Rs. 4.84 lakhs. The claims experience was satisfactory, the total of claims on account of death and maturities being Rs. 9.18 lakhs.

After providing for all the outgoings the life fund shows an increase of Rs. 18.13 lakhs to Rs. 1.31 crores. Investments are shown in the books at market value but the appreciation in the market value of investments has been transferred to Investment Fluctuation Reserve.

In the Fire department, the net premiums after deducting re-insurances amounted to Rs. 1,24,784. After providing for expenses and commission the reserve for unexpired risks has been kept at 40 per cent.

« COAL PROBLEMS »

6

THE CONSUMER'S END

One of the problems of scarcity has been the mushroom growth of innumerable middlemen. Although coal prices have been fixed, there has been no adequate control of the surcharge which middlemen could impose on consumers. The Coal Trade realised the heavy burden this put on to consumers and, while those middlemen who had long been in the business and performed a real service in distribution are entitled to their reward, it was clear that some restriction was necessary.

Accordingly the coal industry drew up a scheme which, to protect the interests of the public, they recommended Government to adopt. A notification under the Colliery Control Order resulted from this.

In future, consumers will have the option of paying the controlled price for their coal without any additional charge whatsoever. But if the consumer buys his coal from a merchant (i. e. one who has first bought the coal himself) the most he can charge over the control price is Rs. 4 per ton for hard coke and Re. 1/8 per ton for coal or soft coke.

Colliery owners themselves will meet the charges of any brokers they may employ.

It is the constant care of the Industry to ensure reputable dealings with consumers. The identity of interests between coal producers and consumers is expressed in this recent attempt to stabilize prices.

What have they done with the new, the peacetime Lanchester—these men who made it so lovely a car before the war? What have they learned from five years of wartime engineering miracles?

The answer may well be beyond your boldest hopes. There will, of course, be Daimler's Fluid Transmission. That was one thing they could not hope to improve upon. But the rest—the grace of the lines and the depth of the comfort, the hush of the engine and the thrift of the running costs, the ease and vision and tirelessness of driving—it is hard for words to overstate. The Lanchester was always called 'Queen of British Light Cars.' A title not lightly won. A title with new meaning in this new, lovelier Lanchester.

Clive Street Gossip

As the readers of these columns know, I have been pleading hard for nearly a year for the Government being ready with a number of schemes of economic development in general and public works in particular, which can be put into execution well ahead of the appearance of tendencies towards post-war slump. Though the reasonableness and soundness of this pleading have been widely recognised, it cannot be pretended that it has had full effect. Apart from the practical difficulties which the disorganisation of the post-war period occasions, the plans, too, have not been brought to the stage in which they are ready for execution. Foresight and forewarning have not had as much effect as they should have. Nevertheless, there is keen consciousness in Government circles of the danger of giving a start to the forces of post-war slump. In the language of last week's leading article in "Indian Finance", the loose ends are being tied up with notable expeditiousness. The main divisions into which the anti-slump measures may be said to fall are firstly, the plans for new industries and extension of existing industries whether by private business or by Governmental authorities, secondly, developmental expenditure of the Central and Provincial Governments which require a great deal of co-operation from the people for full distribution of their benefits and for being fully effective, and thirdly, public works measures which are more or less wholly the concern of Governmental authorities. Of these three, industrial expansion would probably have to come last, depending, as it does to so large an extent, on the supply of machinery and technical assistance by foreign countries with whom apparently the war is still not at an end. Developmental expenditure also is not decided on with ease, since it would depend a great deal on the general economic conditions and the size of the Central and Provincial budgets in the years to come. Public works therefore may be deemed to stand on a distinctly different footing from either of the other two, though most of the disabilities and considerations are to some extent common to all.

It is for this reason that Sir Edward Benthall, the War Transport Member, finds himself in a position to make more heartening statements than his colleague in the planning portfolio. In his speech in the Transport Policy Committee, he was more concerned to chalk out with some clarity the main outlines of development in the immediate future in the sphere of transport. He did not indulge in the vague generalisations that alone are possible with most others in their talk about the future. Sir Edward recognises that "we are now face to face with the immediate short-range post-war problems which for the moment outweigh in their urgency the execution of the long-range plans which we have been preparing." He dismisses the suggestion made in certain quarters that "at the time when elections are pending, to be followed, it is hoped, by a fresh development of popular government, some of these problems might well be left over to our successors." It is this recognition that so many Governmental agencies are

reluctant to make. It is natural perhaps, but not less dangerous for that reason, to assume that because the present Government is one of a transitory kind, the more fundamental problems ought to be left to the Government of the future without prejudicing their judgment by taking certain steps in the present. Far from being fair to those successors, it would end by making the tasks much heavier than they should be if, out of certain mistaken notions, those who are now in power and have the responsibility fail to take proper steps at the proper time. For his part, Sir Edward is conscious "that we stand to-day at a point in the evolution of the transport in India at which certain decisions have to be taken and when a definite policy is necessary." There are developments in the immediate future which will neither be delayed nor lose anything of their practical significance by the fact that constitutional changes are impending. All these developments impinge on the problems and conditions of our transport in a manner that failure to lay down the policy at the moment would involve serious handicaps in the future. These developments are indicated by Sir Edward in the following: "Surplus army vehicles will soon be available for release, and possibly in large numbers; ex-service men trained to drive will be demobilised, also in large numbers; railways are already restoring some of their previous passenger services and are daily finding themselves better able to handle civil goods traffic; inland steamer companies are anxious to make their plans for the future; civil motor transport is being released from war works of various kinds; and all available new motor transport vehicles can now be appropriated to rehabilitation, by replacement of old vehicles and to the extension of bus services badly needed; and finally it seems to me to be very necessary that we should reach agreement regarding the National Highways."

Even without the factors for disorganisation mentioned above, India's transport system was suffering from a grievous lack of co-ordination for decades before the war. In a country like India, with vast distances to be traversed, a long coast line and internal trade many times the foreign trade of the country,

and with an economic policy which not only was not directly aimed at ordered development but even subordinated the good of their country to interests of foreign countries, it is indeed idle to expect that the kind of co-ordination which we have come to value could be had either as a chance growth or as an automatic development. In fact, talk of co-ordination would probably have come much later but for the fact that the railway systems happened to be owned and managed by the State. It is only the historical accident of the railways being State-owned that accounts for our placing the co-ordination of transport in the forefront of our planning programme and with good hopes of success. But in actual life State-ownership of railways has not provided a good starting point for the co-ordination of transport. One might even go to the length of suggesting that because of the large interests of the State in the financial position and prospects of the railways, the development of motor transport had to suffer considerable handicaps in the decade before the war.

The acrimony and the bitterness caused by the road-rail disputes of the earlier years may now be put an end to, since the problems of transport are no longer viewed from the virtually irreconcilable viewpoints of competing interests, but are being studied and appraised from the standpoint of a country-wide plan of economic development. What can be said of internal land transport is not still true of shipping. The abortive attempt to reserve coastal shipping for Indian Shipping Companies, the lack of ship-building facilities in India and the jealousy with which the great shipping nations of the world are apt to regard the advent of a new-comer, these are substantial handicaps in the development of national shipping and its co-ordination with a national system of transport. Transport regarded as a vital branch of the national economy offers more problems than that of fixing new targets for the mileage of roads and railways, tonnage for shipping and volume of railway and motor equipment. For the aim must be to make the various means of transport fit into a compact and organic whole, each part of it being a necessary and a valuable supplement to the others. Duplication, in so far as it is a source and channel of waste, has to be carefully avoided. Appropriateness of the means of transport to each locality and purpose has to be ensured; and above all, it has to be remembered that freight, whether of the railways or on the roads or on shipping, is an element in the cost of production of goods and services. The proof of the efficiency of transport lies ultimately in the smooth working and development of the national economic life. From this point of view, the adjustments of freights between the nodal points of the soundness of each transport organisation on the one hand, and on the other, the effectiveness of the services rendered to trade and industry is at once the most difficult and the most crucial part of the task. In India, the habitual subordination by the Government of the interests of the national economy to other considerations has led to a serious and almost fatal indifference to the correlation of freights to the posi-

tion, needs and prospects of Indian trade and industry.

Even if we leave out other systems of transport and take into consideration only the Indian railways the freight rates are acknowledged by most people to do signal disservice to trade and industry. In the matter of shipping, the predominance of foreign interests and the threat which the development of Indian industry is supposed to hold for British Industry show us what to expect in this sphere. Motor transport has been disabled in various ways for rendering valuable and effective help to the national economy. In the years before the war when motor transport was in its infancy, its competition and rivalry with the railways and the bias of the authorities in their favour accounted for the curbing of its growth. With the outbreak of war, the shortage of petrol and the difficulty of replacement of vehicles and other obstacles came into prominence. And there was all the time the fear that motor transport will never be allowed to come into its own. With the end of the war and the rise of the cult of the planned economy, it is possible to envisage the development of motor transport throughout the country and its correlation with local and national systems of transport. Transport in small rural localities suffers from the extremely bad state, if not of the utter absence of roads, the poor quality of draft animals and the primitive character of carts and vehicles. In these conditions, transport may be said to be almost non-existent and it is idle to expect the development of rural economy in these conditions.

It is often thought that the cry for more and better roads and for more efficient forms of transport is a cry raised by interested parties prone to exaggerate the dependence of economic development on the transport system. But a little reflection will show that far more depends on transport than one would think. In a country like India where the villages and hamlets are widespread and where the state of agricultural development will prevent for a long time to come large aggregations of population, except in the big cities, the incentive to production derives mainly from the presence of markets within easy reach. If you take the case of the primary necessary of life,

namely food, so large a part of foodstuffs consist of perishables that the rural population, which must be engaged in their production, will see no profit in producing the goods, when they are more likely to perish from lack of transport and markets than to yield a profit to the producer. It is therefore a respectable superstition that, once the country is equipped with an efficient system of transport, productive activity will spring spontaneously from the individual's instinctive appreciation of new opportunities of profitable work.

The high priority of transport in national economic planning cannot therefore be questioned; but though it is readily granted, the implications of this priority are often sought to be evaded and obstacles to the growth of such a system are interposed by insistence on the crude criterion of immediate profitability. From the point of view of the nation as a whole, road building is an investment, the dividends from which are realised through what may be called the subsidiaries. The exact sequence of cause and effect may be seen differently from different points. But to those who are unduly concerned about the economic and financial soundness of road building and development, I would present this sequence somewhat in this way. Transport increases opportunities of production and therefore the annual output of consumable wealth. This leads to an increase in taxable capacity and as taxable capacity increases, public revenues may be trusted to expand at all stages of governmental authority, from the village union to the Central or federal Government; and the authorities are therefore in a position to make adequate appropriations for capital expenditure or for revenue. The chain thus completes itself; and the fear of roads being uneconomic arises only when one views it from the wrong angle. It may be that there is a time lag in the relation of these effects and the question of means may seem formidable at the starting point. But this can hardly vitiate the economic character of large scale development of roads. The economic value of road building in the short view lies in its suitability as an emergent anti-slump measure. If it is true that the onset of slump is fought only by the institution of public works, then it is also true a large scale plan for road building is the handiest form of public work. At the present moment in India both these considerations are of equal validity and urgency. We need roadbuilding not only as an integral part of an economic plan, but also as a handy and valuable means of fighting the post-war slump.

As Sir Edward has pointed out, "this is the first time when we have been able to take a comprehensive and co-ordinated view of transport developments in India." But completeness is not claimed for the programme. For the inland steamer aspect has not been considered and discussed. Nor has the programme been settled with the Provinces, though their views have been ascertained. But the Committee have had in mind "not only the development of roads and railways and of road-rail co-ordination, but also the co-ordination of river service with road and rail transport and the bringing of air transport also into the complete picture." The revival of transport on decayed and decaying waterways is the concern of the

Central Waterways Irrigation and Navigation Committee. The co-ordinating problems in this regard are wholly the concern of Eastern India. And we are told that work in this connection is being carefully attended to. From the point of view of immediate developments, therefore, only roadbuilding and road-rail co-ordination can be said to have attained the stage of early practicability. The details of the practical schemes may not be gone into at length in this context. It should suffice to say, that, so far as roadbuilding is concerned, the national highway system has come to be recognised as having a high priority. Though the position of the States in this regard is different from that of British India care is bound to be taken that these jurisdictional differences will not affect the quality and efficiency of the system.

As regards road-rail co-ordination, the main idea that has been evolved in recent times is that of the railways participating in the road business in partnership with existing operators on reasonable terms. While the Punjab has decided against the acceptance of this policy, progress has been made in some Provinces in the formation of Companies. It is said that the Central Government and the Provincial Governments concerned have arrived at an agreement in regard to the choice of promoters and managers. Some difficulty is inevitably experienced in settling the terms on which the new ventures are

to be formed. Obviously, it would be inequitable to take into account the inflated gross earnings of a period of extreme shortage of transport facilities. But these difficulties are bound to be overcome, and the assurance that the interests of the existing operators are being carefully respected is of great value. Road-rail development, then is for the moment the only part of the transport programme which will bear the brunt of the work of absorbing demobilised men and arresting the tendencies towards a post-war slump. The target figure in regard to roadbuilding must be expected to cause a considerable amount of dissatisfaction. But in

PUBLIC NOTICE.

The Controller of Supplies (Disposals) wishes to inform the public that copies of all tenders for the sale of Military Salvage and Scrap as well as Surplus Stores will be on view on the Notice Board of his Office at 2, Fairlie Place, Calcutta. The public who are interested in purchasing such stores may see the Notice Board regularly and obtain copies of the tender forms in which they are interested direct from the Office.

A TRIBUTE THAT SWAYS

"Policy" The world renowned insurance magazine of London. In a recent issue sums up Warden's achievements thus:—

"The Warden is obviously managed with considerable ability and energy, upon sound and constructive lines, calculated to combine financial strength with modern progress".

—POLICY

In ten years, the progress of a generation; in 1944, almost double the business transacted in 1943,—this is the proud record of Warden, whose amazing progress has attracted international attention.

"Policy's" tribute is borne out by the following figures;

New Business in 1944 exceeds Rs. 1,00,00,000

Assets Rs. 45,00,000

Behind these soaring figures lies the organisational strength of a network of organisers, field workers and agents who are co-sharers in the company's prosperity. To those who intend to take insurance as their calling, "Warden" offers a career full of prospects.

these as in most other matters, a sound start must be deemed to hold all the possibilities of overcoming subsequent difficulties in a smooth and efficient manner. For my part, I hold that in the matter of transport, well begun is more than half done, and an early inauguration of the road-building programme will be the most reliable and tangible assurance that the talks of planned development which have raised high hopes in the country are not meant to be a mere make-believe.

A variety of subjects from the atom bomb to food subsidies has been covered

by Mr. D. C. Driver in his presidential address at the third Annual General meeting of the Engineering Association of India. Mr. Driver hopes that the disintegration of the atom will lead towards the integration of nations. In a picturesque metaphor, he refers to the rise of a Black market empire in India during the war and deplores Government's inability to track the culprits. Taxes on profit are condemned and present day planning is held to be a castle in the air, till it acquires a foundation in the form of a strong National Central Government. In strong contrast to the complacency pre-

vailing in many quarters regarding the prospects of full employment in the years ahead, Mr. Driver's views are characterised by a stern realism, he holds that unemployment cannot be totally avoided, but that it could be cushioned by such measures as food subsidies. Those who overdo the conflict of interests between Britain and India may not readily profit by his suggestion for greater mutual trust and sympathy. But it should have salutary influence on the development of public opinion in the critical years that lie ahead.

Bombay, November 11.

The outlook for re-employment of the workers discharged from the wartime establishments is very gloomy. Indeed, there are only too many signs that neither the Central nor the Provincial authorities are hardly prepared to temper the wind for these shorn lambs. There is on the one hand the large army of employees, mostly clerks, for whom there is no more need as the offices in which they work are being wound up. The second category of unemployed workers is from the technical branches of the war effort, like the workers in the Ordnance factories, the docks, the automobile establishments and sundry other factories which had been put on the war effort directly. It is distressing in the extreme to reflect that their technical skill avails them nothing and is allowed to run waste and that little or no effort has been made to chalk out a plan for their absorption into old or new industries. The official Resettlement Bureau and the Employment Exchange are already at their wits' end as to what to do with the thousands of discharged workers and servicemen who have applied to them for jobs. In fact, Mr. Temple who is the Officer in charge has not minced words in portraying the unenviable position in which he finds himself. It appears that, while in the past two months nearly three thousand workers sought jobs, hardly 300 could be provided for. And more and more workers are being discharged every day. We have still to reckon with the thousands whose demobilisation will only be completed by the end of the year. The avenues for employment of this swelling stream of idle hands and wasted skill are pitifully poor. One has heard nothing of the much vaunted post-war plans. If they are at all to be implemented, it is obvious that they are put into execution better now than later. The social and economic repercussions of a mounting army of unemployed people, conscious of their abilities and of their rights, thanks to the war, can become formidable. And yet, it is very doubtful whether there is a sufficient degree of awareness of these in official circles. Rather it seems to be the case that retrenchment is their sole obsession at the moment; and not perhaps until they have gone fully down the Gadarene slope of unemployment misery will they ever look back or stop to think of re-employment. Prune the budget, pare the expenditure—these seem to be the all

EAST INDIAN RAILWAY

TENDER NOTICE.

Annual Contract Item Costing over
Rs. 8,000
Class I.

Sealed tenders are invited for the following and will be received in the General Manager's Office, East Indian Railway, 105, Clive Street, Calcutta on 21-11-45 at 12 noon.

Tender No. SP/C/Gb10/RI/68/46 for supply of 84400 Nos. Baskets Jhanker.

Tender form with full particulars can be had from the Controller of Stores' Office, East Indian Railway, Calcutta on payment of Rs. 2 per copy to the Treasurer, East Indian Railway, Calcutta and on production of his receipt when applying for the same.

Firms outside Calcutta may, however remit the amount to the Controller of Stores, direct by money order.

No refund is permissible after payment. Sealed tenders delivered by hand should be presented for registration in the General Manager's Office and then put into the tender Box outside Dy. General Manager's (Works) room by the tenderer or his representative.

important considerations. The cost of living has not come down one whit. Those without jobs will therefore go through a winter, and probably a summer too for aught we can say, that will expose them to miseries hardly less acute than the dispossessed and war-ravaged peoples of Europe.

To this cloud of imminent suffering, the G. I. P. railway administration has provided the only silver lining. In the course of a press communique, the railway authorities have stressed their intention to take in hand post-war reconstruction work immediately so as to cushion the impact of retrenchment on the workers. Two projects are visualised. The first is the removal of infringements of standard dimensions on the ghat section between Kalyan and Igatpuri and Kalyan and Poona. This work is expected to entail an outlay of Rs. 2 crores and employ about 3,000 skilled labour and 8,000 unskilled personnel for three years. The second is the re-playing of a dismantled line which will employ about 2,000 skilled labour and 2,000 unskilled labour for two years. Both these works had the sanction of the Railway Board and will be started soon. The administration is also trying to obtain sanction for undertaking traffic surveys for two new railway construction schemes. They will provide employment for 10,000 skilled labourers and an equal number of unskilled workers for five years. These construction works may be started in about a year. Besides these, a large 5-year programme of repairs and construction is also being prepared. It must be borne in mind that with these schemes the railway may be able to provide employment for only some of those discharged from other directions; for the most part, these schemes may absorb only a few servicemen while continuing on its rolls the existing workers. The discussions of the Policy Committee (Transport) suggest that early commencement of road-building is likely after the power-rollers are received from abroad. It is right that transport should come first in the post-war plans, but unless other sectors of the national economy also witness rehabilitation and expansion, the problem of unemployment will not be solved, nor will the rigours of unemployment be mitigated.

The raw cotton market is trying its best to reconcile itself to the diminishing hopes of revival of exports of cotton to foreign countries. Apart from the export drive fathered and fostered by the American administration, the indigenous trade is also up against the apathy of the government here which does not provide ships and the apathy of foreign importers themselves. Even the United Kingdom, which one would have thought would increase its offtake of Indian cotton in an effort to conserve dollars, is a very sluggish customer. In fact, the U.K. seems to be more interested in Brazilian varieties at the moment, though reports from Manchester suggest more active purchases in the Indian market. The January Contract is fairly stable around Rs. 390, and purchases of the mills are helping to steady prices. Hopes of increased consumption by the mills rest on slender foundations in view of the difficulties of equipment; and hence the estimates of a bigger crop this year, notwithstanding the reduction in acreage, have also been a damper to enthusiasm. The statistical position however is exceptionally sound and should favour the maintenance of prices. The difficulty of assessing stocks with the trade has been commented upon by me previously, and one has to go by estimates supplied by cotton brokers. It

South India

(From Our Correspondent)

Madras, November 12.

Discussing with the Southern India Chamber of Commerce the question of future transport policy, Sir Edward Benthall, Transport member, Government of India said that his functions were confined to proper co-ordination and securing of an adequate measure of uniformity regarding road construction and road transport. The Madras Government had well-thought-out plans for road construction and the Central Government only proposed to take over certain sections of roads as national highways. He considered that though the policy of the Madras Province was in favour of ultimate nationalisation, at present, the co-ordination of transport by Government, railway and private operators was desirable. He also mentioned some of the improvements under consideration.

Pandit Hridayanath Kunzru speaking on the question of the future of Indian Ship-building stated that it depended on two important factors, the development of the Royal Indian Navy and a monopoly of the coastal trade of India. India had a right to demand the reservation of coastal trade to Indian Shipping Companies over and above a share in the overseas trade of India. He asked why the India Government should not follow the same policy with regard to her own nationals.

Presiding over a meeting of the Senate of the Madras University, Sir A. Lakshmanaswami Mudaliar, Vice-Chancellor said that it was a matter of importance to open courses in the University for all the important branches of science. There was immense possibility for increased facilities for training in Leather and Textile Technology, and now these are being given in co-operation with the Government Textile and Leather Institutes. The Vice-Chancellor announced that an Inspection Commission would be entrusted with the responsibility of framing a definite scheme of scientific education to suit modern requirements. Regarding the report of the Post-war Educational Reconstruction Committee, the Vice-Chancellor invited the considered view of the house to be forwarded to the Provincial and Central Governments for necessary action. Referring to the noteworthy features of the Committee's recommendations he pointed out that the bifurcation of secondary education into preparatory and technical courses was designed to place both the technical and academic instruction on a more or less equal status. A plea was made for the creation of a permanent All India Educational body with Provincial branches to safeguard the educational interests and guarantee academic freedom.

Declaring open the Industrial Exhibition organised by the Exhibition Society of the Osmania Graduates' Association, H.E.H. the Nizam of Hyderabad made an emphatic plea for co-operation on a larger scale between the Agricultural Department and the Exhibition Committee. A greater part of the national wealth of the country was derived from agriculture. Hence it was necessary that cultivators should be taught the latest methods of agriculture and use of modern implements. The Nizam advocated the opening of an agricultural college and agricultural schools in the districts.

Presiding over the District Food Council, Dewan Bahadur V. N. Viswanath Rao col-

lector of Tinnevely District, referred to the serious failure of the Kar crop and said that he would consider the question of withdrawing the present practice of giving ration in imported cholam after consulting with the District Rationing Officer. As regards the shortage of cotton seeds the collector stated, that arrangements were being made for importing large quantities to the district by the Commissioner of Civil Supplies.

The Co-ordination and Finance Committee of the Mysore Economic Conference have approved, as a second stage of the Jog Falls Project, a post-war hydro electric power expansion scheme costing five crores of rupees. The Committee has been constituted to consider the financial aspects of the scheme and suggest ways and means of finding the necessary resources. The scheme after completion, it is expected, will be capable of generating 1,20,00 k.w.

It is learned that with the impending transfer of the Hindustan Air Craft Factory from U.S.A.A.F. to the Supply Department of the Government of India retrenchment of employees has been commenced. It is also stated that a cut in pay and emoluments of the employees may be effected when circumstances required.

Addressing a meeting of the Badagas, the President of the Provincial Backward Classes League referred to the steps taken with the object of ameliorating the economic condition of the Badagas. The newly opened banks in Coonor and Kotagiri with head office in Ootacamund, would open stores in the different parts of the district where the Badagas could obtain all their requirements.

INDIAN FINANCE

877

Jute and Jute Manufactures

Special to "Indian Finance"

(From Our Correspondent)

CALCUTTA, Nov. 13

Stocks of manufactured goods returned by Mills as at the end of October show a further serious increase, which is not minimised by the fact that, at the end of the previous month, stocks of Heavy Goods held on Commercial account had apparently been underestimated by almost 2,000 tons. So that the end of September actually showed an overhead increase in stocks of 14,800 tons instead of 12,000 tons as previously reported. This large accumulation of goods is now followed by an increase of 9190 tons at the end of October, bringing the total quantity of goods in stock in Mill godowns to 195,872 tons, the highest figure recorded since June 1944. There has been a rapid heavy advance in the quantity of goods in stock of the nature of 28,000 tons since the end of July this year. The reasons are probably three-fold. First, the diversion of much available shipping towards the repatriation of prisoners of War and internees from the Far East during these months. Second, the fact that considerable orders placed for Far Eastern markets can not yet be shipped on account of the regrettable disturbances in several sectors which prevent the resumption of more normal trading conditions which had been looked forward to. And thirdly, the aftermath of the recent strike of Dock Workers in almost all U.K. ports which must inevitably have held up much shipping for the best part of a month. It is to be hoped that the influence of these factors will be less marked on the shipping position in the coming few months, as an over-weighted stock position cannot but detract from the buoyancy of markets.

Examining the stock figures in detail, only Sandbags held on Government account show any material contraction, being 1457 tons lower. Sacking goods on Government account, on the other hand, show an increase of no less than 7617 tons. On the Commercial side, Hessians only show a slight increase of 204 tons, but Sacking goods are again higher by no less than 2020 tons and Rove, Twine etc. also higher by 892 tons. The aggregate Hessian stocks are 73,379 tons, or 2872 lakhs of yards, divided as to Commercial stocks, 43,150 tons, or 1630 lakhs of yards and Government stocks 30,229 tons, or 1242 lakhs of yards. Total Sacking stocks aggregate 118,027 tons, or 2860 lakhs of yards, of which 87,628 tons, or 2122 lakhs of yards are for Commercial account and 30,401 tons, or 738 lakhs of yards for Government account. Rove, Twine etc. account for 4486 tons of which 3926 tons is for Commercial account. As noted above, the total tonnage of goods in stock stands at 195,872 as against a revised figure of 186,682 tons at the end of September.

The terms of the Jute (Price Control) Order, 1945, which has superseded the similar Order of 1944, have now been published in full and it appears that the only variations in the new Order are comprised in Sections 5 and 6, of which the first lays down that all consignments of manufactured jute goods intended for export shall be supplied in bales bound with iron hoops and all consignments of such goods not intended for export shall be supplied in bales bound with rope; while the second provides that any person

exporting raw jute shall, at the time of presenting the relative shipping bill, make before the Collector of Customs a declaration that the price at which the raw jute to be exported has been sold is not less than the minimum price determined in accordance with the provisions of the First Schedule to the Order. Whether, in point of fact, any such declaration made with regard to current business can be punctiliously accurate is somewhat open to doubt, for the reason that orders coming forward from Dundee on a sterling basis work out to no more than the bare minimum prices laid down in the schedule, with no allowance at all for commissions either here or at the other end. It is to be presumed that business is not being done on a purely altruistic basis and the fact that regular shippers cannot handle any of the business in other than their own marks lends colour to the doubt. On the other hand, it is acknowledged that there is a margin of anything from Rs. 6/- to Rs. 10/- or more per bale in the packing costs of export jute at the present time, due to the original fixation of Baled jute rates at an inflated level as compared with the rates fixed for the corresponding grades of loose jute, coupled with the fact that jute is purchasable in the bazar at rates considerably below the scheduled minima laid down in the Control Order. Baler-Shippers are therefore in a position to accept the bare sterling rates offered by Dundee for their own marks by eliminating brokerage at this end and no doubt means can be evolved for remunerating their agents on the other side otherwise than by a direct commission on the sale.

It is understood that an orderly procedure is being, or has been worked out for the progressive release of requisitioned mill premises as soon as such de-requisitioning can be commenced. Prior consideration will be given to the release of godown which, particularly in the case of the so-called "foster" mills, has all along been a major headache to the management and is particularly acute now on account of the accumulation of unshipped

manufactured goods already referred to. When de-requisitioning will actually start, it is yet impossible to say, but there is a reasonable hope that at least the premises occupied by the American Army will all be vacated by the end of March next year. So far as our own Air Force is concerned, the transition may take longer.

It is common knowledge that legislation is pending to bring India into line with international labour obligations by reducing the maximum working week to one of 48 hours as compared with the legal present maximum of 54. It is contemplated that the reduction in working hours should entail no loss in wages to the workers and and thus the production costs of jute goods will inevitably be increased. Whether this will be compensated by any relative increase in production by the reduction of the fatigue factor due to a shorter working day will remain to be seen. It is almost axiomatic in industry that an increase in wages, which a reduction in working hours without a corresponding reduction in wages actually boils down to, has never yet resulted in an increase in production. It will be therefore interesting to see if the Jute mill worker seizes the opportunity to show himself the exception which proves the rule.

In the open market for export jute there has been nothing doing for the reasons referred above. All grades are on offer at minimum rates with sellers eager for business owing to the margin of profit possible under present local market conditions. A small business was placed with Mills in M. C. and N.Cs. at minimum prices.

In Loose jute there has been a little more animation in the market and business has been reported with Mills in European Jat White Bottoms at Rs. 12/-, in Supervised District White Bottoms at Rs. 11/8 and in Supervised District Tossa at Rs. 15/- Mids and Rs. 12/- Bottoms.

A TATA PRODUCT

Balers have purchased European packed Jat Tossa at Rs. 16/- Mids and Rs. 13/4 Bots and Special District Tossa Bots have fetched Rs. 13/-. The volume of turnover however has been far from sufficient to satisfy sellers of whom there are plenty left over at the close at these prices. Mofussil markets are workable at these rates and imports in some stations show an increase in volume while the tone generally remains steady.

The Goods market continues largely in the hands of speculators and has fluctuated according to their day-to-day views with insufficient fresh enquiry coming in from consuming markets to influence the position. In Hessians, prices steadily declined since our last report from Rs. 27/10 for ready 10 oz./40 till Rs. 26/14 was touched. Then there was a slight revival in sympathy with Heavy Goods for which the rumour of a substantial Government order was responsible and the closing quotations are Rs. 27/6 ready, Rs. 26/8 December and Rs. 25/2 Jan./March. Mills are reported to have sold a moderate quantity of 11 porters towards the end of last week on the basis of Rs. 26/- 10 1/4 Jan./March. With minor fluctuations, the tendency of Heavy Goods has been downwards, ready "B" Twills being quoted down from Rs. 63/2 to Rs. 62/4 at the close. The only business reported was on the basis of Rs. 60/- for "Bs" Jan./March, in some cases with the option of Liverpool Twills at Rs. 69/-.

(Continued from page 869)

The debit balance carried forward from last year's accounts has been wiped out and there is now a credit balance of Rs. 12,975.

Bombay Silk Mills

The Bombay Silk Mills Limited has been formed to develop the Bombay Silk mills, which has a very good reputation all over India, into a large scale mill for the manufacture of spun silk yarn and silk filatures in general. The authorised capital is Rs. 25 lakhs in 34,000 ordinary shares of Rs. 50 each and 8,000 redeemable cumulative preference shares of Rs. 100 each. The issued capital is Rs. 12.5 lakhs in 17,000 ordinary shares and 4,000 five per cent tax-free preference shares. As the Managing agents and their friends have taken up 5,200 ordinary shares and 1,000 preference shares the balance is offered to the public for subscription. The issue is underwritten.

The directorate consists of influential businessmen. In view of the spectacular progress made by the silk industry in the war years and the large increase in the demand for silk goods the new company is assured of a good future.

(Continued from page 875).

appears however that against an output of about 3,900,000 bales during the 1944-45 season, total consumption might be about 5,200,000 bales, so that the previous season's stock should be lesser to the extent of 1,300,000 bales. The carry over into the 1945-46 season might be about 2,100,000 bales which in any case is the lowest for several years. Should mill consumption in the coming season expand further for any reason, the statistical position should improve much more. What a pity that, against such a favourable background at home, the Indian cotton producer should be deprived of the assistance of a vigorous export trade.

Over Rs. 112 Crores were invested in less than eleven months in the First 3% Victory Loan (1957) withdrawn during February 1945.

The 3% Second Victory Loan (1959-61) offers you another opportunity to lend money to India on attractive terms. You serve your country, help to lower prices, and the 3% dividend per annum less Income-Tax is sent to your address twice a year.

There is NO LIMIT to the amount you are permitted to invest in the Loan, and the Government has guaranteed to repay at par not earlier than 15th August 1959 and not later than 15th August 1961. If in the meantime you want to realise your capital, the Loan is readily salable on the market. You can obtain refund of Income-Tax if you are not liable to it or liable at a lower rate.

To buy this Loan, apply to your Bankers, or to the Reserve Bank of India at Bombay.

Calcutta, Madras, Delhi, Cawnpore or to the Branches of the Imperial Bank of India in other places or to any Government Treasury.

It's different when you're young, but
 at 55 a man needs security,
 comfort, freedom from care...

"You see, I know. This year I was 55 and retired from my job. Was I worried about it? Not at all.....I had saved enough money to make my retirement free from financial worry. How did I do it? It is quite simple. I started the saving habit when I was still young. At that time I did not earn a big salary, but every month I saved something and invested my savings in safe investments."

It is not everybody who can put away money in such amounts as Rs. 1,000 or Rs. 5,000. Too often people who find their surplus income amounting to a few rupees only consider it futile to save so small a sum. They are wrong. The simple secret of successful saving is to put away a little each month, however small it may be. You will be surprised to see these small savings grow in time to a useful sum....Systematic saving that is the tip.

PLAN TODAY FOR TOMORROW SAVE ALL YOU CAN

But remember to invest your savings where they will be safe, and waiting for you when you need them.

ISSUED BY THE FINANCE DEPARTMENT, GOVERNMENT OF INDIA.

You can invest quite small amounts in National Savings Certificates, Government Loans Post Office Savings Bank Accounts, Insurance, Co-operative Societies and Savings Bank Accounts. Your money will be safe there and increase as time goes by. Do not risk your savings by buying commodities, manufactured goods, jewellery, land or property. Their value is likely to depreciate.

SAVE SAFELY FOR THE FUTURE.

THURSDAY NOVEMBER 15, 1945

Price Re. 1

Stock Markets to-day and to-morrow:

BURN & COMPANY 1944-45 ACCOUNTS

With the continued strength of the bullion markets and favourable advices from overseas, stock markets in Calcutta remained active upto Monday and in Bombay till Wednesday. There is some fear, however, on the part of operators both in Bombay and Calcutta to follow up the rise completely. With the holidays intervening there was a tendency on the part of some operators in Calcutta to realise their profits on Monday and the closing quotations were in most cases lower than the best levels. In unofficial transactions, on Tuesday and Wednesday, a further fall in prices has been recorded in the popular counters, Howrahs being noted as low as Rs. 105-12 against Rs. 108 touched earlier in the week, Burma Corporation Rs. 7-4 against Rs. 7-13, Indian Irons Rs. 41-6 against Rs. 41-12 and Steel Corporations Rs. 36-8 against Rs. 37-2. The undertone, however, is steady especially as the Bombay market has continued firm and profit-taking has been fully absorbed.

From the table given below it will be seen that the recent rise in prices has been rather abrupt and there was no suggestion at any stage of the possibility of a sudden rise in prices. General expectations of a revival in activity in Calcutta after the Puja holidays did not materialise. As a matter of fact, operators were to a certain extent surprised by the strength of the markets before the Diwali holidays. The Moorat session in Bombay was very active and a large turnover was recorded. Since then, both Bombay and Calcutta have moved up side by side.

In Wall Street, in spite of the large-scale strikes in several industries and the anxiety to await the decision of the Labour Management conference, the turnover has

been the largest for many years and prices are, at the present moment, at the highest levels for four years. In London, too, generally firmer conditions have been noticeable and there was heavy buying of mining shares. As all the principal markets have been bullishly inclined, the question is being asked whether we are really on the eve of boom conditions.

I can only emphasise, at the risk of repetition, that the outlook for the Indian stock markets especially is very satisfactory and that, with a declining yield basis and the expectations of tax relief, equities should be marked higher gradually. Only investors should not be led into hasty buying and shares, which are relatively undervalued, should be picked up. The recent bouts of profit-taking have, therefore, to be welcomed. These will enable the markets to consolidate the ground gained and prevent unhealthy speculation.

the expectations of issue of additional capital by several companies on bonus terms to shareholders and the better prospects for the jute industry in the postwar period. The strength of the jute section was naturally reflected in other shares, too. It will be noted that Bengal Coal have risen to Rs. 792 from Rs. 751 and Titagur Paper to Rs. 37-2 from Rs. 32-14. Bombay Dyeing were Rs. 2,011 against Rs. 1,980, and Tata deferreds Rs. 2,390 against Rs. 2,235.

As stated above, it is the strength of the Calcutta and Bombay markets and the London and New York markets that gives rise to the expectations of boom conditions continuing to prevail for some time and that the postwar boom might after all materialise.

The accounts of Burn & Company Limited, for the year ended April, 1945, have been favourably received by the market even though the directors have decided not to effect any increase in the ordinary dividend to the shareholders. The earnings are the highest for several years. It would have been easily possible to pay a higher dividend to the shareholders but for the decision to conserve the resources of the company in order to provide enough funds for the large programme of replacement and expansion in the next few years. In the war period even though the company was besieged with orders, it was not possible to execute them owing to the scarcity of imported supplies and raw materials. The better showing of the results for the last accounting period is mainly due to the removal of the bottleneck in regard to raw materials.

With the improved conditions in the supply of war materials from both India and overseas, the output of the company's branches showed a satisfactory increase. The net profit, before providing for taxation and depreciation, for 1944-45 is Rs. 44,21,424 against Rs. 29,21,439 for 1943-44. The provision for taxation is considerably higher at Rs. 25.5 lakhs against Rs. 16.5 lakhs while the amount set aside to depreciation is Rs. 3,47,231 against Rs. 3,14,174. The General Reserve receives Rs. 6 lakhs (nil). The ordinary dividend has been maintained at Rs. 17-8 per share. The amount carried forward is slightly higher at Rs. 1,00,217 against Rs. 92,024 brought in.

Explaining the decision of the directors to maintain the ordinary dividend at the previous level, the directors state in their report that they made "a careful and studied review of the postwar position of the company's plant, and it is essential during the next few years that considerable expenditure be incurred in the replacement of worn out and obsolete plant and the modernising of the company's works. Rehabilitation programme under consideration includes the remodeling and mechanisation of the company's foundries at Howrah and the improvement and modernisation of kilns at the Refractory works at an estimated total expenditure of Rs. 30 lakhs. To provide for this Rehabilitation Programme it will be necessary to conserve the company's finances and as a commencement, the directors have decided to set aside out of profits the sum of Rs. 6,00,000 to a Rehabilitation Reserve. This modernisation and replacement scheme when completed will increase output and reduce costs of production."

Regarding the prospects for the current year the large civilian demand will offset the reduction in war orders and the earnings are expected to be maintained at fairly high levels.

Since the publication of the report there has been a rise in the quotation for the shares from Rs. 436 to Rs. 460. As the company is assured of satisfactory trading for a long time and the financial position is very sound, the shares at Rs. 460 cum-

Dated, 18th October, 1945

dividend should be regarded as correctly priced.

The results of the Gourepore and Nuddea Mills Company Limited, for the half-year ended September, 1945 are now available. While the Gourepore Company has been able to report a slight increase in earnings, the net profit of Nuddea Mills has declined for the third half-year in succession. The ordinary dividends in both cases have been maintained at the previous levels. The net profit of Gourepore Company is Rs. 22,20,119 against Rs. 21,16,159 for the previous six months. Provision for taxation is unchanged at Rs. 8 lakhs, as before. No sum has been set aside to depreciation. After paying the ordinary dividend of Rs. 12-8 per share the amount carried forward is considerably higher at Rs. 1,82,376 against Rs. 1,41,757 brought in.

The net profit of Nuddea Mills Limited, is Rs. 12,61,091 against Rs. 15,03,493. The provision for taxation is lower at Rs. 9.3 lakhs (Rs. 11.75 lakhs) while the amount set aside to depreciation is unchanged at

Rs. 75,000. The ordinary dividend is maintained at Rs. 2 per share. The amount carried forward is slightly lower at Rs. 84,630 against Rs. 95,773. The company's North Mill is still under requisition by the Government and during the half-year under review double-shift in the South Mill was continued. The company was able to work the maximum number of hours permitted by the working time agreement of the Indian Jute Mills Association, in double-shift working.

New Savan Sugar and Gur Refining Company Limited, has been able to report a higher level of earnings for the year ended May, 1945. The output of sugar was higher by nearly 35 percent. Although cane was in short supply there was a distinct improvement over the previous year's figures, total output in 1944-45 being 158,064 mds. of sugar against 117,385 mds. last year. But for the higher prices paid for cane supplies earnings would have made better showing. The net profit, before providing for taxation and depreciation, is Rs. 2,91,053 against Rs. 1,39,824. After providing for depreciation Rs. 53,314 (nil)

and for taxation Rs. 1 lakh (Rs. 50,000) a sum of Rs. 25,000 (same) is transferred to Special Reserve. The dividend has been maintained at 12 annas per share. The amount carried forward is Rs. 30,239 against Rs. 29,887 brought in.

Watch-dog

THE BRITANNIA ENGINEERING COMPANY, LIMITED

NOTICE is hereby given that dividend at the rate of 10 per cent. per annum on the Ordinary Shares for the year ended 31st December, 1944, has been declared payable to the Registered Shareholders. Warrants may be had on application to the undersigned. Where standing instructions as to the disposal of dividends have already been registered, Warrants will be sent accordingly.

ROW UPON ROW...

pineapples thrive
when planted in a well-
drained soil of sandy loam. An
easy fruit to cultivate, over four thousand five
hundred pineapples can be produced annually
from a single acre.

Fresh, the fruit is cooling and delicious. In cubes or slices, canned on the day of picking, it is always welcome, especially when other fruit is not readily available.

In many countries the pineapple is cultivated on a large scale, both for domestic and export markets. In India too, when more ROADS are built to link the village and the town and to speed his crops to market, many a farmer will turn to the cultivation of that king among fruits, the pineapple.

(Annual General Meeting on 29-11-1945 at 11 a.m. Books closed from 22nd November to 29th November, 1945).

Audited accounts for the year ended 30th April, 1945.

After providing for Taxation, Depreciation, and all other charges and placing Rs. 6,00,000 to a Rehabilitation Reserve, the profit on the year's trading amounted to Rs. 9,24,192-14-3; to which has to be added the balance brought forward from last year of Rs. 92,023-10-3; making a distributable balance at Credit of Profit and Loss Account of Rs. 10,16,216-8-6.

The Directors recommend that this amount be dealt with as follows:

In payment of the Interest on Preference Shares for the year to 30th April, 1945, amounting to Rs. 1,81,000; in payment of a Dividend of Rs. 17-8-0 per share on 42,000 Ordinary Shares Rs. 7,35,000; to carry forward to next year's account Rs. 1,00,216-8-6; Total Rs. 10,16,216-8-6.

A careful and studied review has been made of the post-war position of the Company's Plant, and it is essential, during the next few years, that considerable expenditure be incurred in the replacement of worn out and obsolete plant and the modernising of the Company's works. Rehabilitation Programme under consideration includes the remodelling and mechanisation of the Company's Foundries at Howrah and the improvement and modernisation of kilns at the Refractory Works at an estimated total expenditure of Rs. 30 lacs. To provide for this Rehabilitation Programme, it will be necessary to conserve the Company's finances, and as a commencement, the Directors have decided to set aside out of Profits the sum of Rs. 6,00,000 to a Rehabilitation Reserve. This modernisation and replacement scheme, when completed, will increase output and reduce costs of production.

With improved conditions in the supply of Raw Materials from India and Overseas, the output of all the Company's branches showed a satisfactory increase. Considerable cancellation of War orders following the cessation of hostilities has taken place, but orders on hand, nevertheless, are satisfactory and prospects for the current year may be regarded as favourable.

It may be of interest to shareholders to know, that, apart from the customary manufacture of Rolling Stock, points and crossings. Structural steelwork and general engineering, the Company's contribution to the War effort included the building of trawlers, assault craft, pontoons, tank landing craft, armoured cars and the manufacture of shell cases, anchors, Bren gun parts and other military equipment.

A shortage of skilled labour persisted during the year. Whilst periods existed when labour was unsettled, resulting in several short lightning strikes, the general behaviour could not, on the whole, be termed unsatisfactory.

Managing Agents. Messrs. Burn & Co. Authorised, Issued and Subscribed Capital—Rs. 70,00,000 in 13,000, 7 per cent Cum. Pref., 15,000, 6 per cent Cum. Pref. and 42,000 Ord. shares, all of Rs. 100 each, fully paid up.

*Includes Rs. 17,000 transferred from EPT Reserves.

(Half-yearly General Meeting on 5-12-1945 at 3 p.m. Books closed from 28th November to 5th December, 1945).

Audited accounts for the half-year ended 30th June, 1945.

The Profit, after deduction of all working charges and commissions, amounts to Rs. 3,51,717-0-7; credit balance brought forward from the previous half-year Rs. 5,223-14-8.

After providing for:—

Reserve for Taxation Rs. 1,87,000; Depreciation Rs. 70,000; and the following sums written off:—Mining Leases Account Rs. 8,000; Surface Leases Account Rs. 2,000; there remains a balance of Rs. 89,940-15-3.

Which the Directors recommend should be dealt with as follows:

In payment of a dividend for the half-year at the rate of 12½ per cent per annum, without and deduction in respect of Income-tax paid by the Company Rs. 80,000; to be carried forward Rs. 9,940-15-3; Total Rs. 89,940-15-3.

The bonus which it is estimated that the Company, is entitled to receive under the Government Target Bonus Scheme in respect of the period October, 1944, to March, 1945, is included in the Profit shown above and provision has been made for the Income-tax which will have to be paid thereon.

The Directors have allocated to Depreciation a larger amount than in the previous half-year because they consider it desirable to depreciate the value of certain items of machinery recently purchased with the object of increasing the output and qualifying for special depreciation allowance by the full 50 per cent permitted.

The development of the two new collieries, Kujua and Pipradin, is progressing satisfactorily and it was largely due to the output of these collieries that the bonus referred to above has been earned.

The output of the period April to September, 1945, was even better and a substantial bonus is assured.

An area of 419 bighas of coal-bearing land adjacent to the Kargali Colliery has been sub-leased to the Indian State Railways. The net proceeds resulting from the transaction have been credited to Capital Reserve Account.

A private Limited Liability Company under the name of West Bokaro Limited has been incorporated and the negotiations between that Company and the Company with regard to a sub-lease of a large area of coal-bearing land will, we hope, be finalised in time for us to give you information with regard to the net salami arising from this transaction in our next report.

Mg. Agents.—M/s. Anderson, Wright & Co. Authorised, Issued and Subscribed Capital—Rs. 12,80,000 in 1,60,000 shares of Rs. 8 each, fully paid up.

THE ONDAL COAL CO., LTD.

Audited accounts for the half-year ended 30th June, 1945.

Raisings.—The raisings from the sub-leased properties exceeded the tonnage on which minimum royalty is payable. Sale of Property.—During the half-year the Company's rights in Mouza Dalooband have been disposed of. The purchase price realised was Rs. 25,000.

Karapura Mining Syndicate.—During the half-year a further 10 per cent call has been made on the Company in respect of its share in the Karapura Mining Syndicate, making a total of Rs. 60,000 subscribed to date and leaving the contingent liability at Rs. 2,40,000.

It is expected that despatches will commence in the last quarter of 1945.

Accounts.—The Profit and Loss Account after including the sum of Rs. 2,537-8-8 brought forward from last half-year shows an available balance of Rs. 13,728-4-7, which the Directors propose to dispose of as follows:—

In paying a Dividend on the Preference Shares at the rate of 5½ per cent per annum, without any deduction for Income-tax paid by the Company, Rs. 6,500; in paying a Dividend on the Ordinary Shares at the rate of 2½ per cent per annum, without any deduction for Income-tax paid by the Company, Rs. 3,125; in carrying forward Rs. 4,103-4-7; Total Rs. 13,728-4-7.

Mg. Agents.—M/s. F. W. Heilgers & Co. Authorised Capital—Rs. 6,50,000. Issued and Subscribed—Rs. 4,50,000 in 25,000 Ord. shares of Rs. 10 each and 2,000, 6½ per cent Cum. Pref. shares of Rs. 100 each, both fully paid up.

(Half-yearly General Meeting on 23-11-1945 at 12 noon. Books closed from 12th November to 23rd November, 1945).

Audited accounts for the half-year ended 30th June, 1945.

The Profit and Loss Account, after including Rs. 5,808-11-4 brought forward from the previous half-year, shows a credit balance of Rs. 1,520-2-8, which the Directors propose to carry forward.

During the period under review the demand for iron ore was lower than in previous half-years. Owing to restriction of supply of wagons no manganese ore was despatched during the six months.

Managing Agents.—Messrs. Bird & Co. Authorised, Issued and Subscribed Capital—Rs. 10,00,000 in 1,00,000 shares of Rs. 10 each, fully paid up.

(Half-yearly Annual General Meeting on 19-11-1945 at 10-30 a.m. Books closed from 5th November to 19th November, 1945).

Audited Accounts for the half-year ended 30th June, 1945.

Target Bonus.—It is calculated that in respect of the half-year ended 31st March, 1945, the Company has earned a sum of Rs. 10,103-12-0 under the First Target Bonus Scheme and a sum of Rs. 39,837-4-0 under the Second Target Bonus Scheme. These figures, however, have not yet been confirmed by the Coal Commissioner's Office and it is possible that adjustments may have to be made.

Owing to the seasonal drop in output due to labour shortage, particularly for the excavation of sand at the river end of the Rope-way, the Company will not qualify for any bonus in respect of the six months ending 30th September, 1945.

Taxation.—During the half-year the balance of the Company's deficiency in respect of E. P. T. has been absorbed. The effect of this will be felt in future half-years until this form of taxation is removed.

Accounts.—The Profit and Loss Account, after providing Rs. 51,647-0-0 for Depreciation, transferring Rs. 20,000-0-0 to Stores Revaluation Reserve and including the sum of Rs. 4,753-3-8 brought forward from last half-year, shows an available balance of Rs. 57,653-9-6 the Directors propose to dispose of as follows:—

In paying a Dividend at the rate of 10 per cent per annum without any deduction for Income Tax paid by the Company Rs. 35,750-0-0; in paying a bonus of 4 annas per share without any deduction for Income Tax paid by the Company Rs. 17,875-0-0; in carrying forward Rs. 4,028-9-6; Total Rs. 57,653-9-6.

Managing Agents.—F. W. Heilgers & Co. Authorised, Issued and Subscribed Capital—Rs. 7,15,000 in 71,500 shares of Rs. 10 each, fully paid up.

(Half-yearly General Meeting on 21-11-1945 at 3-30 p.m. Books closed from 3rd November to 21st November, 1945).

Audited accounts for the half-year ended 30th September, 1945.

The result of the half-year's working is a profit of Rs. 16,54,217-9-1; Add—Interest on Investments Rs. 5,401-3-0; Transfer Fees Rs. 340; Deduct—Interest paid Rs. 11,706-4-1;

Amount transferred to Taxation and Special Reserve Rs. 12,00,000; and adding balance of Profit and Loss Account brought forward from last half-year Rs. 69,182-8-3; giving a total sum at the credit of Profit and Loss Account for disposal of Rs. 5,17,435-0-3.

The Directors recommend that this should be dealt with as follows:

Pay a Dividend on the Preference Shares at the rate of 7 per cent per annum, (Rs. 3-8 per share), free of income-tax Rs. 70,000; Pay a Dividend on the Ordinary Shares at the rate of 12 per cent per annum (Rs. 6 per share), free of income-tax Rs. 1,20,000; Write off Depreciation Rs. 60,000; Transfer to Improvement and Replacement Reserve Rs. 2,00,000; Carry forward Rs. 67,435-0-3; Total Rs. 5,17,435-0-3.

HOSIERY MILLS
CAWNPORE

BOUQUETS & BRICKBATS

(From our Readers)

The Truth about the Cloth Famine!

Sometime back 'Eavesdropper' was kind
enough to make a thorough survey of the
developments relating to the cotton textile
industry and nicely scolded the cotton mills
as being anti-social and taking undue
advantage of the conditions in the home
market. It cannot be denied that these
mills were in league with the Government
and made large profits. The Government
of India did not apply the screw to any
great extent as the inflated profits for
cotton mills brought them large revenue
in the shape of Excess Profits Tax. Recently,
however, there seems to be a rift in the
ranks? The Bombay Millowners' Associa-
tion has been publishing advertisements in
the daily press which tend to give the
impression that the industry has done its
part and that it is only the Government
that failed. But consumers like me have
no illusions in this regard. We are defi-
nitely of the feeling that the industry,
which was helped so much by the Indian
public in its difficult days, did not come
to the aid of the distressed consumers when
they were in need. There can be no two
opinions regarding the existence of a
shortage of supplies. Only there has been
no planned distribution and no serious
effort was made at any time to increase
production. The Government spokesmen
have come out with a denial of the indus-
try's claims but both the Government and
the industry must be completely exposed
and the cotton industry should be made to
understand that it cannot afford to dis-
regard the interests of the Indian con-
sumer.

What is the future of Bullion prices?
I have been following rather keenly your
comments regarding the future of bullion

prices and was inclined to agree with your
opinion that prices for both gold and silver
should come down with the cessation of
hostilities and the restoration of normal
trading. The general expectation also
seemed to be inclined that way but recent
developments have belied all expectations
and quotations are now even higher than
the levels of mid-August, that is, before
the Japanese surrendered unconditionally.
It is true that the cornering of stocks by
certain operators and the action of the
United States in raising the price for do-
mestic silver in line with the price for
foreign silver have helped bull operators.
It may be that with the investments of
black market money there will be no large
selling unless useful employment can be
found for these funds. It is rather satis-
factory to note that the small investors
have come out as sellers with every rise in
prices but good support is given to the
market by the middle classes who have

still to buy gold for marriage and other
purposes so that over a period the black
marketeer will be afforded ample opportu-
nities for liquidating stocks at fairly high
levels. The developments relating to gold
and silver are so complicated that it is not
possible to have any clear idea of the
future. Will you enlighten your readers
with a detailed discussion in your paper?

This month MORE TYRES for YOU!

IN DECEMBER 43,000 TYRES ARE BEING RELEASED BY GOVERNMENT TO CIVILIAN USERS!

And remember!—even if you have been refused a permit before as a "non-essential" user Government has now specifically authorised the issue of permits to users who are not engaged in essential services.

YOU CAN APPLY FOR NEW FIRESTONE TYRES TO-DAY

If you find it difficult to complete the formalities of application, go to your nearest Firestone dealer. He will gladly give you all the help you need.

WHY YOU SHOULD INSIST ON FIRESTONE TYRES

There is that extra "something" in every Firestone tyre which no other tyre has got. The exclusive patent Firestone Gum-Dipping process locks cord to rubber as no other process does. That is why a Firestone tyre yields so many extra miles of safe service.

Fact Parade

Latest Food Index Remains Stationary:

The Economic Adviser's All-India index of wholesale prices of food-Articles (Base: last week of August, 1939=100) worked out to 236.7 for the week ended November 3, 1945 as compared with 236.8 for the previous week.

Industrial Raw Materials: A Slight Rise in Index Number:

The Economic Adviser's All-India Index of wholesale Prices of Industrial Raw Materials (Base: year ended August, 1939=100) worked out to 240.6 for the week ended October 27, 1945, as compared with 239.8 for the previous week.

The group indices for fibres, oilseeds and minerals showed fractional increases during the week.

Coir and Coir Manufactures Decontrolled:

In pursuance of their policy of liberalising the export trade, by reviewing the Export Control from time to time in the light of changing circumstances, the Commerce Department, by a Notification published in the Gazette of India dated November 17, 1945, have entirely decontrolled the export of coir, both raw and manufactured.

Coir and coir goods can now be freely exported to all destinations with which facilities for private trading exist without a licence from the Chief Controller of Exports.

Government considering gratuity payment for Demobilised Labour:

The Government of India, it is reliably learnt, are in consultation with the Provincial Governments on the question of payment of gratuity to demobilised labour from war industries.

The question of payment of railway fares to labourers to reach their home towns after demobilisation is also under consideration.

Govt. Set Up New Organisation For Improving Factory Conditions:

The Labour Department of the Government of India have recently set up a new organisation to advise the Central and Provincial Governments on the improvement of working conditions in factories.

The Chief Adviser, Factories, is the head of this organisation which will not only give technical advice on the design and lay-out of factories, on standards of housing, on the most suitable working condition to assure efficiency of production and welfare of the workers but will also arrange for the training of managements and workers in safety measures and welfare methods adopted in progressive countries.

The establishment of an industrial museum on the lines of the one in the United Kingdom is also contemplated.

Cinchona Production:

There was a large extension of acreage under cinchona during the year 1944-45, states the Report of the Principal Quinine Officer, Government of India, on cinchona and quinine for that year. The Government of Madras worked to a programme of 1,000 acres and the Government of Bengal 400 acres. Most of these acres were close planted with a view to obtaining an early crop. 1,01,419 lbs. quinine sulphate and 62,355 lbs. of cinchona febrifuge were added, mainly due to production by the Government of Bengal and Madras to the total stocks.

INDIAN FINANCE

893

Location Near Madras For India's First Rayon Plant:

India's first rayon plant will shortly be established near Madras, it is learnt. Contracts for the entire plant have been placed with a well-known American firm, whose rayon chemists and engineers will erect and start the plant. Indian engineers will also be trained in the industry to gain experience in starting new plants, prior to the establishment and operation of the new plant near Madras.

It is learned that the project has the support of the Madras Government. If dollar exchange is forthcoming, the rayon plant is expected to produce and replace one million dollars worth of rayon yarn imports annually.

According to the agents of the American firm in Bombay deliveries of machinery will begin in six months.

Mysore Govt.'s Plans for Aircraft Factory:

The future of the Hindusthan Aircraft Factory is being discussed both in Govern-

ment circles and in the local press. From December 15, 1945, the Managing Agency agreement between the U.S.A. Air Force and the Hindusthan Aircraft Co. will terminate. From that date it will be administered by the Supply Department of the Government of India and will be engaged mainly on R.A.F. work.

After one year, it is likely the Government of Mysore will take over the factory and work it as an aircraft factory, if possible. The Mysore Government hope such a factory would be of great use to them in the implementation of their post-war civil aviation plans. If, however, it becomes impossible to continue it as an aircraft factory—the purpose for which it was originally founded—the Mysore Government are preparing alternative schemes to engage the factory, after the lapse of these 12 months. This interval will provide the authorities with valuable data to enable them to take a decision whether the factory should be run as an aircraft factory or realigned to suit some other industry.

(Continued on page 918).

Tea and Industrial Output

Few matters have received such detailed attention since the war began as the efficiency of industrial production. In India the problem has been greater than in most other countries because, to meet the basic needs of the fighting forces, a great new industry has had to be created without the help of either a large machine tool industry or a large mass of skilled labour accustomed to factory conditions.

That tea—India's own product—has played a valuable part in achieving unprecedented output figures is a matter for no small satisfaction. The part that tea has played—is playing, and will continue to play—is to promote concentration. In the old days it was accepted throughout the world, as an unavoidable fact that output would fall towards the end of a working shift. Today this is no longer accepted, because it has been proved over and over again that tea served to the workers on the job renews concentration and flagging energies with the result that output remains at its peak level right to the end of the shift.

To those interested in this subject much valuable advice and assistance will be gladly given by the Indian Tea Market Expansion Board, 101, Clive Street, Calcutta.

TREASURY BILLS

Central Government:

Tenders for Rs. 2,00,00,000 of three months' Government of India Treasury Bills were opened on Wednesday, the 21st November, 1945. Total amount offered was Rs. 4,84,50,000. Tenders at Rs. 99-15-0 per cent were accepted in full and those at Rs. 99-14-9 per cent were allotted approximately 89 per cent. Lower tenders were rejected. Total amount accepted was Rs. 2,00,00,000, the average rate of accepted tenders being Re. 0-5-0 per cent per annum.

Tenders for Rs. 2,00,00,000 of three months' Government of India Treasury Bills will be received on Tuesday, the 27th November, 1945, at Calcutta up to 11 a.m. (Bengal time) and upto the close of business on Monday, the 26th November, 1945 at other centres. Successful tenderers should make payment on Friday, the 30th November, 1945. Other conditions are as usual.

During the week ended the 16th November, 1945, Government of India Treasury Bills for Rs. 1,41,25,000 were sold in favour of the Issue Department of the Reserve Bank of India.

ANGLO-U. S. FINANCIAL TALKS

NO FINAL SETTLEMENT YET

Washington, November 20.

There has been no clearcut reaction to the Truman-Attlee-Mackenzie King atomic mission communique here unless it was a kind of resignation to the fact that they perhaps did all that could have been expected under the prevailing conditions. The Congressmen were guarded in their public comments but privately they indicated no great degree of satisfaction. Those who advocate universal sharing of atomic secrets held that the statement did not go far enough while those who want secret, if there are any kept, indefinitely felt that the statement went too far. The scientists who were responsible for the development of the atom bomb who are now united in an association passed a resolution the day after the communique was issued in which they expressed grave concern that an atomic weapons race would be instituted unless the Big Three Conference was called immediately to prevent such.

The Anglo-American financial negotiations are still not concluded at the time of writing. The chief obstacle now seems to be whether interest should be assessed on that portion of the loan that will be assigned to the Sterling area for partial reduction of balances of which India is the largest holder. Reliable reports are that the United States is willing to grant a 4 billion dollar loan, half to go to the United Kingdom and half to the Sterling area. The United States wants a uniform 2 per cent interest rate but Britain holds that she will derive no benefits from the dollars allotted to the Sterling area and hence, she should pay no interest. She is willing to pay 2 per cent interest on the United Kingdom's share. There is also a controversial waiver clause under which the United States proposes that in any year after a five year moratorium at the beginning in which Britain has an unfavourable trade balance, she should pay no interest. But Britain, remembering animosities aroused between the two wars when she was in default of payments, prefers some arrangements under which she would feel sure to meet her commitments.

In a radio address last week, Secretary of State, Mr. Byrnes, outlined the United States views on foreign loans and world trade. He said that his country should make loans to Governments whose credit is good. For, in this way the United States foreign markets will be expanded. He also said that the United States will propose for international control over cartels and monopolies so that they cannot restrict commerce. Finally he said that the United States advocates international studies of problems created by primary commodities with producers and consumers alike to have voice in decisions.

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

Easy conditions have prevailed in the money market and call money is quoting $\frac{1}{2}$ per cent in Calcutta and $\frac{1}{4}$ per cent in Bombay. Even with the large increase in investments in gilt-edged securities surplus funds are large and with the continued expansion of currency deposits have shown a consistent increase. At the auctions of treasury bills there was keen demand. Applications were actually lower at Rs. 4.85 crores against Rs. 5.25 crores but tenders were at lower rates and those at Rs. 99-14-9 could be allotted only 89 per cent. Last week tenders at Rs. 99-14-9 were allotted in full and those at Rs. 99-14-6 were allotted approximately 31 per cent. In view of the easy conditions in the money market and the depleted cash position of the Central Government, on account of the repayment of the tax-free loan, the offer for next week has been increased to Rs. 4 crores. The increase in short-term borrowing will obviate the need for unnecessary expansion of currency. At the present moment treasury bills sales are equal to maturities. The average discount rate of five annas per cent shows a decline of nine pies per cent over last week.

The returns of the Reserve Bank for the two weeks ending November 16 have to be reviewed this week. In the week ended November 9 there was further expansion of currency for Rs. 10 crores. Disbursements by the Government were on a large scale. There was an increase in the note issue to Rs. 1,188.39 crores from Rs. 1,179.63 crores and in note circulation to Rs. 1,179.98

The Bank grants advances and undertakes on behalf of its constituents the Safe Custody of Shares and Securities and the collection of dividends and interest thereon. It also undertakes the sale and purchase of Government Papers and all description of Stock at moderate charges. Terms of application.

SAVINGS BANKS—Deposits received and interest allowed at 1 per cent. per annum.

W. C. GROUNDWATER, General Manager.

It is necessary therefore to examine the steps by which savings can be counted on with more confidence. In a sense savings are the sheet anchor of successful planning. For a lower percentage of savings will affect not only the provision of capital, but also the distribution of consumer's goods and their prices, since the flow of a larger volume of purchasing power into current consumption will affect their prices and their availability for all the income groups for which they are intended. It is of course true that in a regime of planned economy, new enterprise is less dependent on voluntary saving than in a purely individualist regime. For in a planned regime the authorities will always find it feasible to make up for the shortage of savings from the level of capital required by putting in State funds, or bank credit meant to be made up in course of time. This may not be as unsound as it looks since such measures would only amount to the substitution of compulsory savings through a circuitous process instead of voluntary savings and investment. The ultimate purpose of savings is to put men to new work by finding the means of their sustenance during the productive stages. If these means are found by created currency or bank credit, the effect from the standpoint of increased production is the same, though its effects on distribution are not of the desirable kind. But in India distribution is not less important than additions to production and any measure of an inflationary nature is apt to upset the delicate mechanism of distribution on which depends the improvement of the working classes and their efficiency, as also the quality and stamina of the growing generations. The planning authorities would not be well advised to neglect the regulation of the savings of individuals by choosing to rely on state funds and bank credit for the prosecution of their programmes of new capital expenditure. Needless to say, savings do not by themselves comprise the whole of the new capital required for the progress of the plan. The resources of the capital market are no more confined to savings than the re-

We may turn to a consideration of the circumstances which pertain to each individual. As we have mentioned already, differences of outlook and temperament have a great deal to do with the provision which one makes for the future of oneself or of one's children. The normal issues involved are generally exaggerated. But more important than these are the vicissitudes of individual fortune. Frequent unemploy-

ment may leave the most provident of individuals with little or no savings, while frequent illness in the family may chance a drain of normal income which may be both heavy and steady. The general background of conditions of life has thus great importance to the question whether the average man is able to fulfil the expectations entertained of him in regard to his savings.

Considered from these three different angles, a variety of measures seem to be needed to ensure sound domestic budgeting in the case of the bulk of the people and a fair rate of savings for the twin purposes of individual provision for the future and adequate capital resources for the society as a whole. In the first place, the hybrid character of rural economy must go as early as we can manage. It should be possible for the average villager to make a recognisable budget for his house-hold for the year which will make due provision for present needs and for future. And whatever measures may be needed to secure this end must be duly instituted. These measures depend so much upon the kind of agrarian reform that we shall expect in the future that we cannot enquire into their nature in this context. Likewise public opinion has to be organised against social customs which are destructive of the soundness of individual domestic budgets. If it is feasible to penalise the entertainment of guests beyond a certain stipulated number, it should be possible to prohibit excessive expenditure on special occasions. The average individual is so helpless against long-established social customs that he needs extraneous help in throwing off their tyranny.

But when one considers the question from the stand-point of the vagaries of the average individual, it would seem that the certainty of savings can be attained only through institutional activities which leave little scope for individual variations. Planning implies that the needs of the average individual will be met not only in respect of current consumers goods but also in respect of durable goods and even such forms of capital wealth such as houses, provident funds, and insurance policies. While it is no doubt not quite desirable to impart a rigid and stereotyped design to individual budgets, the purposes of planning will be met more satisfactorily by schemes devised to make certain kinds of expenditure the first charge on individual income. To make provident funds, insurances, house building ownership of certain kinds of appropriate durable goods compulsory on all earning members would not only ensure the smooth working of the Plan in respect of the production and consumption of the goods concerned but also the provision of savings and of capital on an adequate scale. For this purpose schemes of insurance, building schemes, and systems of instalment payments for durable goods will all be necessary. But once the basic conditions are assured by providing a pure money economy, the abolition of vicious social customs and steady employment and reasonable wages, there can be no doubt that the schemes we have suggested for ensuring savings and consumption alike on a healthy scale will work smoothly and efficiently.

World Economic Survey—I

(Contributed)

All around us there is increasingly disturbing evidence that we are living to-day in a world from which the sense of the fitness of things—the sense of normalcy—has departed. Each one of us is suffering consciously or subconsciously from a feeling of acute political, social and economic insecurity. The uneasy peace that has been ushered in after the war contains a foreboding of political or economic disaster at some date approximate enough to appeal. More than ever, the apprehension persists that we have by no means seen the last of the wars to end wars. There is a widespread feeling of the incompatibility of the individual with his environment on the one hand and, on the other, of the incompatibility of national ambitions with a world organisation for security. This regnant and universal insecurity stems directly from the shocks caused by the war. The atomic bomb has underlined only too clearly the possibility of wholesale decimation of the world. Man has not yet plumbed the cataclysms to which indiscriminate use of this deadly weapon exposes the peoples of the world. And yet, far from obviating the possibility of another holocaust, the prevailing race among the big nations to wrest the secret of the atomic bomb points dangerously to the possibility of another war. The situation is thus "a race between understanding and catastrophe," to use the words of Mr. H. G. Wells.

We are as far away as ever from a solution of the fundamental problems of human society—the relation of the individual to the national State in which he finds himself

embedded, the relation of the national State to the whole body of mankind, and the most elusive problem of all, the relation between these two relations. Victors and vanquished are alike bogged in economic problems of a most serious character, but which unfortunately are giving rise to serious political misunderstanding. Instead of striving for collective economic security, there is only endeavour for collective economic insecurity. It is a mordant commentary on the progress of the human mind that it should bring to such a pitch of perfection the art of waging war—economically and ballistically—while the ultimate problems of human society should be in a pitifully inchoate state.

Nowhere else is this so conspicuous as in the economic field in which it was clearly borne out that war has become largely a matter of war economy. The highly mechanised character of modern warfare presented enormously increased demands upon the production systems of nations to a far greater degree than the First World War. Yet the mobilisation of resources, human and material, was done so thoroughly that a survey of world economy during the war years is not altogether without its interesting features. The essence of war economy is the complete sacrifice of immediate social welfare to other needs. A study of its working has, therefore, what may be called a minimal utility, that is, if only as pointing the way to the management of an economy in pursuit of an over-riding consideration, whether it be war or social betterment. From that point of view, the lessons learnt from the war have an applicability to experiments of social amelioration. The need for the continuance of the discipline of controls instituted during the war into the post-war period, such as we see in Britain to-day, is itself an instance of the applicability referred to above. Even to India, a continuance of a measure of that self-abnegation cultivated by the people during the war period into the immediate future would seem to be desirable. The Bombay Plan, for instance, postulates a sacrifice of consumption for many years in order to step up the national income. In any case, to repair the ravages of war will call for the continuance of this subordination of individual wants to the national interest for a much longer period, though the primary justification, namely war, may no longer exist. The conditions of a normal peace economy resting on the successful anticipation of the future wants of the population through the instrumentality of the entrepreneur will only be created slowly.

A survey of world war economy falls into two parts: first, the means by which the transition to war economy was achieved; secondly, the effect of these changes on the various forms of economic activities.

The diversion of the available resources to the production of such goods and services as were necessary to the successful conduct of war was effected partly by the checking of private consumption and more or less complete suppression of private capital investment and partly by taking steps to utilise the available labour force to the maximum in order to raise the national output to the highest level. The required diversion of the flow of goods and services was also brought about by financial methods, by the business world itself in response to the stimulus of the money demand represented by the greatly increased expenditures of the State. To a large extent, however, the State had resort to direct command and control over the employment of labour, the supply of raw materials, the use of industrial plant and the distribution of consumers' goods. The methods of direct control adopted in these spheres and the financial methods operating through the control of the money flow form a very interesting study.

The problems of war economy therefore resolved themselves into the utilisation of idle productive resources, the maximisation of existing resources by curtailing domestic consumption and capital exports; by each nation living on its consumable capital, namely, either by failing to replace the wear and tear of machinery or by allowing the land to get out of good condition or by selling its foreign investments and other wealth abroad in order to obtain in exchange the materials and implements of war; lastly, every government had made use of its credits to borrow internally and abroad. The demands of modern war on national economies have been so gigantic that almost every belligerent government soon found that the first few of the resources enumerated above had been tapped fully and had to resort to deliberate credit expansion and borrowing. The latter could not be helped because almost every government required to obtain purchasing power more rapidly than it could by increased taxation. Indeed, the measure of the extent to which the burden and the cost of war have been passed on to future generations. By letting capital assets of all kinds run down; by making inadequate or no

provision for depreciation of machinery, governments have been living on the future. The result in many cases has been a load of debt and a debt structure which is causing serious strains after the war, which will be aggravated further, if a slump in prices causes changes in the distribution of income. The entire social fabric has been damaged by inflation. And lastly, the utilisation of capital resources and equipment to a threadbare stage has created a state of poverty from which recovery is both protracted and painful.

These consequences had, however, been anticipated to some extent and many governments have by suitable policies reduced borrowing to a minimum, cushioned the impact of inflation as much as possible, and have even made provision to facilitate recovery after the war. The introduction of compulsory saving schemes, under which part of the taxes paid is held as savings deposits repayable by the State after the war, is an instance. This ensures a reserve of purchasing power available at the end of the war to the consumer and thereby may help in the transition from war to peace economy. The restriction of civilian consumption through compulsion is a highly effective instrument used with advantage during the present war. Likewise, the tendency to rely on heavy taxation rather than borrowing in national budgets obviated to a large extent the risk of rendering the financial structure too rigid owing to the creation of fixed money obligations on a great scale. A variety of direct controls over the instruments of production, rationing, price control and anti-inflationary measures of all sorts have enabled governments to improve the technique of war economy. Nevertheless, inflation has not been avoidable and prices have been rising rapidly in all countries. It is, however, not a flat rise in all countries. Naturally, in countries like India, China, Iran, inflation has been most acute for the obvious reason that in these countries the measures, social and economic, taken to offset such inflation were relatively much more innocuous than in the socially advanced countries of the West. In the next article, a detailed analysis of the working of these controls and of their incidence on the national economy of the various States will be attempted.

I. SPECIAL

It is Worth-While to Save?

By Dr. PAUL EINZIG

There has been lately a certain feeling of uncertainty about the future of saving and investment. Until recently it was generally taken for granted that saving was one of the highest forms of civic virtue, as well as the function of our fundamental instinct of self-preservation. The Victorian prosperity of Great Britain was built on saving. Lord Keynes characterised perfectly the general attitude towards saving in a single sentence of his world-famous book, "The Economic Consequences of the Peace":—"After all even the rich man may enter the Kingdom of Heaven, if only he saved."

During the last month or two, however, this implicit faith in saving has weakened somewhat. It is true, the majority has responded satisfactorily to the Government's savings campaign. And judging by the rising tendency of the Stock Exchange, there must be still a great many people who prefer to invest their money rather than spend it or keep it in cash. But it would be idle to deny it that a certain amount of doubt has crept into the minds of some people. They ask themselves, and each other, whether it is really worth while to save, whether it would not be wiser to have a good time now rather than make provisions for the uncertain future.

This change of attitude is not very widespread. But it should not be ignored. Its main causes may be summarised as follows:—

- (1) The wealthier classes dislike and distrust the Labour Government. Some of their members, like Lord Hinchinbrooke, M.P., feel that those disapproving of Socialism should withhold their support from the Government by abstaining from lending to the Government. Others feel that under a Socialist Government the country's finances are apt to deteriorate, and that saving in such circumstances no longer means security.
- (2) The Government's policy of nationalisation has raised the question whether investors in industrial shares are likely to receive adequate compensation if their undertaking is nationalised.
- (3) The Government's declared policy of reducing interest rates, low as they are already, and continued high taxation, has led some people to the conclusion that it is hardly worth while to save.
- (4) Uncertainty in the international political situation,

coupled with the menace of the atomic bomb, has induced many people to live for the date instead of providing for the future.

The satisfactory result of the "Thanksgiving Weeks" shows that investors in general regard saving as a national matter and not a Party matter. So long as this spirit prevails there is no danger of wholesale inflation, since the Government will be in a position to re-borrow what it spends. It is true, the Socialist Government pursues a more expansionist financial policy than a Conservative Government would have pursued, though even the Coalition Government had pledged itself to a policy of full employment and social security. The additional expenditure that the Socialist Government is likely to incur will be a mere fraction of the war expenditure. As to the cost of nationalisations, it assumes the form of an increase of the public debt, not of an increase of expenditure.

It is therefore entirely unjustified to suggest that reckless Socialist finance is liable to endanger the people's savings. Mr. Churchill himself, in a speech soon after the advent of the Socialist Government, declared that the nation's credit will be upheld. It must be admitted that Mr. Dalton is the ablest Chancellor of the Exchequer Great Britain had for a very long time. He will no doubt do his best to maintain the purchasing power of the pound.

The compensation paid to stockholders of the Bank of England is considered by most people as satisfactory. On the other hand, the coalowners are said to have rejected the Government's terms of compensation. What shareholders of other industries that are to be nationalised are likely to be offered is impossible to guess. Nevertheless, judging by the fairly steady tone of the Stock Exchange, investors are not unduly worried.

Beyond doubt the meagre yield on safe investments may tend to discourage saving to some extent. In the past it was the dream of the middle classes to save a few thousands of pounds, in order to be able to live on the interest of their savings after the retiring. This end has now become unattainable to all but the few who are able to save, not thousands but at least tens of thousands. With interest at 3 per cent on Government loans, and with Income Tax at 9s in the pound (it is not likely to decline below 7s. 6d. in our lifetime) it would be necessary to save a very large amount to be able to live reasonably on its interest. The result is a preference for jobs which secure a pension. When recently it was announced that the staff of the Refreshment Department of the House of Commons would henceforth be entitled to a pension, applications were pouring in, even by members of the staffs of luxury hotels where earning possibilities are very high, but where the staff is not entitled to a pension.

But people will not stop saving, merely because they still need the capital for rainy days as much as ever. And many people who have hitherto played for "safety first" when investing their money will now be inclined to take a reasonable risk by investing in industry instead of Government loans.

Nor is the awe inspired by the atomic bomb likely to endanger the saving habit. There are admittedly, many people who feel that the outlook is so uncertain that the best thing one can do is to eat, drink and be merry—as far as it is possible amidst the prevailing scarcity of most things worth having. But this attitude is largely a reaction from the war. It was noticeable to at least the same extent also after the first world war, even though at the time the public believed in the prospects of perpetual peace. After this war we are all much more pessimistic. And we know that if there should be another war it would be incomparably more destructive than the last. Even so, it would be absurd if our fear of a war and of the new lethal weapons induced us to abandon our saving habit.

Life must go on normally even under the shadow of the atomic bomb. After all, nobody, not even the most extreme pessimist, can be certain that statesmanlike wisdom will not avert the disaster by devising an international organisation to safeguard peace. Those who squander away their wealth and earnings for fear that they may not live to enjoy the fruits of their thrift get now very little for their money, for whatever is obtainable is extremely expensive. And they will look very foolish if, after all, there will be no war, or if, after all they survived the next war as they survived the last.

In most parts of the world life and property was not very safe during the greater part of history. Yet the peoples continued to save and invest, generation after generation. Bitter experience of the destruction of savings through wars, revolutions, economic crises, and mismanagement by unwise Governments, had failed to discourage millions of human beings to build again on the ruins of their fortunes. There is no reason to suppose that it will be otherwise in the future. So long as there is life there is hope. And so long as there is hope saving will go on.

Our London Letter

THE NATIONAL INVESTMENT BOARD AND ITS IMPLICATIONS

London, November, 14.

By some curious reasoning, the Cabinet's Press Officer summoned only Political Correspondents of various papers and not City Editors to the conference at which the P.R.O. explained the Government's plans for the "National Investment Board." But Political Correspondents, being unfamiliar with the City's machinery for new capital issues, wrote only briefly and rather vaguely on a theme which would have interested financial writers keenly. The result was there was not only rather lukewarm press reception but considerable uneasiness in the Stock Exchange over the possibility that the British public might misinterpret the character of the scheme, jump hastily to lurid conclusion that the Labour Government intended to prevent them from ever selling their investments, and begin dumping their securities upon the market before the scheme came into effect.

There is no doubt that the "National Investment Board" is a wholly misleading title for what should be more accurately described as "Control of New Capital Issues Board." The Government spokesman explained that the Government had no plans for interfering in any way with John Citizen's ordinary investments but only intends to control, in the interests of its policy of "full employment," the access of private companies to new capital market.

The basic idea is that the new Board will guide Britain's supply of new savings into those channels where they are most needed from the national point of view. This Board, will, it is confidently forecasted, prevent such situation as developed in the late 1920's when Britain's staple industries such as heavy industries and cotton textile were starved for capital while private savings were poured into new semi-luxury industries.

The Board will consist of the Chancellor of the Exchequer, the President of the Board of Trade, any other Minister whose department would be immediately affected, the Governor of the Bank of England and representatives of industry and finance.

Unfortunately Dr. Dalton some weeks ago, announced that the new scheme would not interfere in any way in what private companies did with their own reserve funds. This would appear to mean that the Government will not interfere in any way with over-expansion of any industry so long as it is financed from the industry's own resources. Since a very large part of the country's annual savings are those made by industries and withheld from the investors, the comment is already made that the new Board will find it extremely difficult to control booms and slumps. As Dr. Dalton is a professional economist, there is some surprise at his seeming failure to close the gap in his scheme; perhaps the debate in the House when the Bill is finally introduced will clarify the situation.

Another Minister whose activities are much discussed is Mr. Tomlinson, Minister of Works, who is now engaged behind the scenes in drastically bringing down prices of building materials. It is said that he has already clashed with the cement ring

which is highly indignant to his conception of proper price for cement. Another manufacturing ring is that of electrical equipment makers who, it is reported in parliamentary circles, have objected to the Government's proposed price of £11 for electrical cookers. They said calmly: "We can sell to the public all the electrical cookers we can make at £15 and hence we are not interested in the Government's offer to buy at £11." According to one report, Mr. Tomlinson looked the manufacturers straight in the face and replied slowly: "Every cooker you make for the next five years you will sell to the Government at £11 each. Is that clearly understood?" One enthusiastic account of this historic interview says: "At the end of this interview a senior and very starchy Civil Servant who had sat pop-eyed through the strange proceedings, went up to the Minister and said gravely: 'I have been waiting for this for twenty years. I am going out to-night to get drunk.'"

There may well be an explosion some day if the Labour Government's policy is actually one of "getting tough" with Britain's rings and combines, for the latter have had things all their own way for the past quarter of a century. But the public in Britain is much more "conditioned" to the existence of combines, much more reconciled to high non-competitive prices, than the American public seemingly is. One reason is that there was vague but widespread conviction that these trusts and combines, by stabilizing prices tend also to stabilize employment. Chronic unemployment is Britain's biggest private dread.

The Stock Exchange has continued to move within narrow range. There was much talk about inflationary forces which should quietly lever prices upwards, but it is noticeable that this alleged inflationary process furnishes little or no support to shares whenever they come under specific pressure. There have been a number of minor cracks in specific shares suggesting that dealers are not too pleased with the general outlook and hasten to mark down prices.

Certainly some of the stock exchange's vague uneasiness may be political in origin. There has been much discussion about the failure of the Conservative Party to put up good fight against the various innovations of the Labour Government. Some blame Mr. Churchill for the various strategic blunders. For example, when the Labour Government had got itself into unpopular position by its slowness in demobilising men and women in armed forces, Mr. Churchill, it is argued, blundered seriously when he suggested that the Government should demobilize forces which are now idle at home and compensate those who are marooned in the Far East by giving the latter extra compensation. This produced an uproar of protest from Far Eastern forces and enabled the Labour Government to recover itself. Another blunder for which Mr. Churchill was criticized was his demand that high-up Generals, Admirals and Air Marshalls should receive handsome lump sums as a reward for winning the war. The Government received much popular applause for sternly rejecting this idea and some commentators believe that it is responsible for the Labour's sweeping victories in local elections throughout the country.

In short, according to this theory, the leadership of the Conservative Party is not sufficiently shrewd in scoring off Government's errors and is not doing much to convince the British middle classes that it alone contains statesmanship which Britain needs. If there is no improvement, then investors and businessmen must reconcile themselves to more or less indefinite continuance of the Labour Government.

The sudden proposal to nationalise the Cable and Wireless concerns has caused a rather violent movement in various securities of that group. Actually, the set-up is one of the most complicated in Britain and expert analysts have themselves disagreed as to the probable effect of the nationalisation upon the various classes of securities. Hence the abrupt falls and equally abrupt recoveries in prices on successive days without any real clarification of investment sentiment.

"The conference wishes to place it on record that it is emphatically in favour of the maintenance of the system of Imperial Preference, and convinced that the prosperity of the British Empire is closely bound up with that system and that the economic stability of so large a part is of vital importance to the world as a whole," says a statement issued by the Federation of British Chambers of Commerce of the British Empire issued after its London conference just concluded.

Editorial Notes

Apportioning Blame

After nearly two and a half years of control the Bombay Millowners Association has felt compelled to explain the achievements of the Indian cotton textile industry and say that the crisis in the cloth trade is mainly due to the administrative authorities. According to the Millowner's Association the cotton mills have delivered the goods but it is only the maldistribution of existing supplies that is responsible for the acute scarcity in the deficit areas. What exactly prompted the Bombay Millowners' Association to justify their position is not clear but it can at once be said that there is general dissatisfaction with the method of control and there was at no time any serious effort to improve production at the mills. The fault may be with the administrative authorities in not providing adequate supplies of stores and fuel but even available production capacity was not utilised satisfactorily and from the beginning neither the mills nor the Government had any clear idea how the control measures should operate and where the difficulty would arise.

It would appear from the claims of the Bombay Millowners Association that enough cloth has been provided for the Indian masses and that it is only the Government that is responsible for the present muddle.

It need not be mentioned that this claim is very extravagant and does not in the least correspond to facts. It is true that production has recently tended to improve but at one stage as much as 35 per cent capacity was reserved for the requirement of the Defence services and out of the rest there were uncontrolled exports. It was only after considerable agitation that exports were reduced to 400 million yards per annum but even this smaller quantity formed a substantial portion of the available supplies for civilian consumption. The production of many coarse varieties and complete disregard of the tastes of the consumer led to the accumulation of the standard cloth in large quantities. Even now the utility cloth scheme has met with considerable opposition and some of the styles under this scheme are not liked by consumers.

While the industry is not free from blame the Government authorities have also muddled and have not been quite sincere in their efforts to increase production and make effective use of available supplies. In the early stages of control it was said that there was complete co-ordination between the industry and Government and control would be effective. It was forgotten that the initial

success of control measures was due to large dehoarded stocks and once they were quietly absorbed the crisis came about in the middle of last year. Since then the position has been acute and cloth rationing has been only an effective way of discouraging consumption for not infrequently the ration shops had not the necessary stocks of cloth which were liked by the consumers. With the introduction of rationing black market activity has increased further and there has had to be a radical change in the method of distribution. The experiment in Bengal is yet to justify itself.

It looks as if with the reduction in military requirements, a lower rate of exports and imports of finer styles from Britain the position will get automatically corrected especially as supplies of rayon fabrics and silk goods may become more plentiful. The problem for the poorer classes, however, will continue to be acute for sometime. Decontrol might possibly result in an immediate improvement in the situation but opinion seems to be divided on a relaxation or continuance of control measures. The Textile Commissioner expects that control should be continued for five years while only recently the Chairman of the Textile Control Board said that with an improvement in production it will be possible to relax control measures to a great extent. Who is correct and what is the mystery about the cloth scarcity?

Imports of Burma Rice:

Reports on the prospects of the import of rice from Burma range from expressions of buoyant optimism to forebodings of despair. Only a few days ago, Sir J. P. Srivastava asked us to expect that considerable imports would arrive before the year is out. Bengal Government Officials have been repeatedly affirming their faith and confidence that the situation would never go out of hand. Judging by these assertions it looks as though that the food position is and will continue to be safe in the months ahead. But the official statements do not go unchallenged. The tour undertaken by His Excellency the Governor in the interior of Bengal cannot be out of academic curiosity. It is quite likely that His Excellency wants to test the accuracy of official reports by first hand information. In any case non-official representatives who have been keeping in close touch with the crop position are not inclined to view the prospects with complacency. Nor do news reports of conditions in Burma reinforce the hopes inspired by the Central Government Food Member. An A.P.I. message of last week presents a picture far from agreeable in this respect. It is estimated according to this report that the crop now coming to harvest is expected to yield less than three million tons which is just a subsistence level for the country and half of her normal yield of six million tons. The serious disruption of her internal communications has already been admitted and this is a factor which delays the revival of exports. It is also gathered that whatever stocks are now available for export have to be shared among more than one country in South East Asia. If in the face of these facts the authorities still feel that the prospect of an adequate food supply for Bengal are in no way difficult it should be on the basis of data which they have not chosen to reveal. It also shows an earnestness on their part which is in striking contrast to the apathy it has gradually displaced.

Grain Banks:

It is now a few years since H.E.H. The Nizam's Government started a grain Bank at Pattancheru. In spite of the fact that it was a novel institution for the peasants, it caught and is thriving—a fact which shows that there is a vast scope for similar institutions all over rural India. The Hyderabad Government themselves have found such expansion useful and within the last few months 3,000 grain banks have been registered in the State; the professed target of the Government is a grain Bank for every one of the 20,000 villages in the State. The Government have utilised the grain levy system for purposes of the scheme. By means of the levy collection order, every cultivator is compelled to sell a portion of his produce to the Government or an agency authorised by the Government. The Government have given the cultivators the option to deposit one eighth of this levy grain as a share capital into the grain banks. The fact that as many as 3,000 Banks have been registered since the Government started the scheme is proof that the inducement thus held out to the cultivators is meeting with a large response. The grain collected is given as loan at 2.5 percent interest to the members of the Bank for cultivation purposes or for domestic use. The success of the scheme could be determined only on the strength of its working for a sufficiently long period. If the local authorities take care to study the practical difficulties wherever these arise, in the working of the scheme, suitable adjustments and improvements could be made from time to time. The advantages of grain banks to the rural community are manifold. The credit mechanism understood and availed of by the urban population has yet to secure a stable foothold among the village folk.

The barter method of which the grain Bank is an elaborated adaptation will have a greater appeal to the cultivators than the money dealings of the Banks. When grain is made to serve the ends which money does, the whole credit mechanism becomes simpler and better understood by the comparatively illiterate ryot. Some of his problems like inadequate and inefficient storage facilities will also be solved, if the grain Banks take a large view of their functions. Above all the existence of an institution where one can deposit the small surpluses of grain and possibly earn a profit thereby, is itself an inducement to thrift and prudence of which the Indian peasantry is notoriously lacking. The Hyderabad experiment will be watched with keen interest but even before its full results are known other Governments can copy it.

Sharp Increase in Customs Revenue:

A study of the foreign trade figures for the first months of the financial year indicate a large increase in imports particularly from the United Kingdom. Customs revenue has been consistently on the increase since the beginning of this year and the figures for the three months ending October, 1945 show that the upward trend has been maintained. This development is favourable (?) from the point of view of the Central budgetary position; for, the total receipts on account of customs duties might well exceed the most optimistic expectations. The spurt in imports, which is a direct result of the cessation of hostilities, could not be fully anticipated earlier.

The gross Indian Sea and Land customs revenue, excluding salt revenue, collected in British India during the month of October, 1945 amounted to Rs. 11.14 crores against Rs. 11.06 crores in the previous month and Rs. 8.85 crores in October, 1944. The total gross central excise duties on

motor spirit, kerosene, sugar, matches etc., amounted to Rs. 2.80 crores in October against Rs. 3.50 crores in September and Rs. 3.37 crores in October, 1944. The total of gross customs and excise revenue realised in the seven months ended October,

1945 was Rs. 100.73 crores against Rs. 66.53 crores. Of this amount import duties alone accounted for Rs. 73.99 crores, export duties for Rs. 1.98 crores, land customs and miscellaneous for Rs. 53 lakhs and central excise duties for Rs. 24.23 crores.

"FLANNEL'D FOOL"...

... and "Muddled Oaf." Britain's wars have been won on her playing fields as her "flannell'd fools" and "muddled oafs" are proving once again to-day. From playing fields to laboratory may sound a far cry, but sports and games make direct calls on both the chemist and the British chemical industry. The grass of British playing fields, lawns and golf greens is the envy of the world, but it is not the unaided product of the British climate. The chemist has supplied ordinary fertilisers and special mixtures to kill weeds and nourish the grass; mercurial preparation to prevent the mildews and soil fungi which damage golf greens; chemicals to check worms and to destroy leather-jackets. All of these are even more essential in India. As with grounds, so with equipment. Chemical research has helped to make balls travel farther, bounce better or last longer as each game demands. Tennis balls, for example, contain pellets of ammonium chloride and sodium nitrite. These react to produce nitrogen gas which increases the pressure and therefore the bound. The leather and rubber for bat and racquet handles, sporting gloves, footwear and footballs are all variously processed to impart the right degrees of softness, elasticity, strength or durability. After the war

India will see fresh proof of sport's dependence on chemistry in the shape of tennis racquet strings and fishing tackle made from nylon instead of ordinary gut.

M. R. KOHLI, M.A., F.I.B. (London)
Managing Director.

Comparing the figures for April to October, 1945, with those for the corresponding period of the preceding year, there were increases under import duties on motor spirit, tobacco, liquors, machinery, kerosene oil, metals other than iron and steel, silver and block tin, railway plant and rolling stock, electric lighting bulbs, batching, fuel and lubricating oils, iron and steel, dyes derived from coal-tar and coal tar derivatives, artificial silk fabrics, motor vehicles, paper and stationery, artificial silk yarn and thread, fabrics of artificial silk mixed with other materials, cotton hosiery, silk fabrics, wireless reception instruments and apparatus, wheat and wheat flour, toys, games and sports goods and spices. Under export duties on raw jute, rice and agricultural produce other than jute, rice and coffee and under excise duties on tobacco, matches, sugar betelnuts, tyres, tea, vegetable product and coffee. On the other hand, import duties on raw cotton, silver bullion, coin, sheets, plates, etc., betelnuts and cotton yarn and thread, export duty on manufactured jute, land customs receipts and excise duties on motor spirit, kerosene and steel ingots showed decreases.

Planning for Sugar

While official planning has been rather vigorous in respect of industries like cement, cotton textiles and iron and steel, there is so far no mention regarding the development in the next few years of the sugar industry. Naturally, many organisations interested in the affairs of the sugar industry have expressed the need for the formulation of a definite policy by the Central Government especially as some of the Provincial Governments have indicated a desire to continue the present method of administration relating to the industry.

The U. P. Government has formulated certain suggestions and is of the view that the control of the sugar industry should still be vested in the Provincial Governments though quotas for particular areas should be declared previously and the development or extension of factories should be in accordance with the quotas announced. In their opinion there is no need for a central licensing system and that only marketing facilities should be provided for on an all-India basis.

This view, however, does not seem to be shared by the Sugar Mills Association. At its Annual General Meeting recently it urged the Government of India to give effect at an early date to the policy of centralising the sugar industry. The Association asked for the establishment of an All-India Sugar Board consisting of representatives, of manufacturers and cane-growers and governments of various sugar producing provinces and States to advise the Government of India in all matters connected with the industry.

It cannot be denied that further developments of the sugar industry should be on a planned basis and that in future no difficulty should be experienced regarding transport as in recent years. Concentration of the industry in the Provinces of U. P and Bihar has been mainly responsible for the difficulties in respect of distribution. As the surplus capacity of the factories in these two provinces was such as to provide for the increase in consumption of the whole country for some years it was feared that it would not be possible to encourage the development of the industry in other provinces. Even now there seems to be a feeling that sugar consumption will not increase appreciably and that there is no scope for factories

which are proposed to be constructed in the Provinces of Madras, Bombay, Orissa and Bengal. In our opinion the increase in consumption noticeable in war years is not a mere passing phase and that with the spread of the sugar habit more and more sugar will be used in place of gur and the total consumption will increase as the years go by. As Bombay and Madras are ideally suited for the further development of the sugar industry, the yield of sugarcane per acre in those areas being higher than in U.P. and Bihar and as satisfying the principle of regionalisation and dispersal, the Government of India should formulate certain proposals which would provide for the further development of the industry on definite lines and at the same time protect the interests of sugar mills in the U.P. and Bihar.

Foreign Capital:

The first resolution of the National Planning Committee which met last week in Bombay relates to the investment of foreign capital in India. In the past such investments, to use the words of the resolution, have resulted in the acquisition by foreign interests of a measure of control over India's economic and political life which has both warped and retarded national development. The resolution therefore recommends not only the repeal of all statutory safeguards and protection now enjoyed by foreign interests in the capital and management of Indian industries but the imposition of sufficient safeguards in the future against any possible encroachment of these interests. Ordinarily investment of foreign capital in a form which would entitle it to ownership and management in respect of industries of national importance should not be permitted. But in the case of key industries involving the use of secret processes which would not be otherwise available to the country, such ownership and management might be permitted subject to limitations. Here, however, the question is not whether foreign management should be permitted, but whether foreigners would be willing to give us the benefit of secret processes evolved by them under any condition. We are too much in the controversy to consider the obstinate nationalistic trends in current discussions. It has also to be recognised that in the future the whole attitude of foreign investing interest is likely to be overhauled. In the altered economic world environment, it will no longer be a competition among the more industrially advanced and surplus-owning nations to invest in the less developed countries but an anxiety to conserve as much capital as they can within their own countries or spheres of influence. The political developments in the backward countries will be a more impressive factor in considerations in this sphere than possibilities of dividends. New groupings and alignments of economic interests are also emerging among the different nations in the light of which the whole question of foreign investment may have to be reviewed. That India may not need much of foreign capital if her present surpluses are wisely utilised and her future resources promptly harnessed is an argument which seems to have far greater validity.

Civil War in China:

News reports do not give either an adequate or a clear picture of the civil war in China. But two points emerge clearly from whatever reports are available to the outside world. In spite of the repeated efforts at a compromise between the Communists and the Chungking Government,

Questions & Answers...

Destination?

India Coffee House, Albert Hall, College Square.

Reason?

In its new address, the India Coffee House is better, brighter and bigger than ever.

Surely, not so central as in Central Avenue?

You wouldn't say so if you visited the new place. It is, so to say, in the heart of Calcutta. Centre of whatever is lively and vivacious. Easily accessible.

But, I suppose, there is not that variety of visitors?

People will travel far to get the admittedly and inevitably good coffee that you can, every time and at all times, get at the India Coffee House. The old patrons are all still there—and will ever be there—and many, many new patrons. Remember, it is a bigger, better, brighter place.

INDIA COFFEE HOUSE
ALBERT HALL, COLLEGE SQUARE

the rift has been widening in recent months. The abrupt end of the war with Japan left a legacy of consequences which tended to encourage dissensions. The large body of American troops in the South whatever be the measure of interest they take in the internal politics of China gives a handle to the Communists for raising the charge of active American assistance to Chiang Kai Shek. Stray squabbles between U.S. soldiers and Communist armed parties inevitable in the disturbed state of the country might be given an exaggerated complexion and utilised for propaganda. As against this, the presence of Russian troops in the North provides the Chungking authorities with material for counter-charges. A common ideology with the Soviet while it has been a source of strength to the Chinese Communists has always been a disturbing factor in Chinese affairs. Even if Stalin's men have no orders to extend any co-operation to the Communist forces, their very withdrawal from the Northern districts is of immense direct assistance to the latter; it gives them a clear ground for extending their jurisdiction and stabilising their strength. It is something like a windfall accretion of strength to the Chinese Communists, and this circumstance also might have contributed to the large additions to the Communist forces reported of late. Judged by the latest developments and the comparative strength of both sides, it is not likely that the issue would be settled in the near future unless both sides are willing to arrive at a compromise.

British Farmers' Plan:

The recommendations made by the British National Farmers' Union for a permanent agricultural policy bear several points of interest to India. The acute food shortage which Britain had to face during the war compelled her to adopt measures many of which in all probability would become more or less permanent features of her internal economy. That it ought to be so is one of the principles recognised in the proposals of the National Farmers' Union. The Union takes the view that permanent stability for British agriculture could not be achieved unless the distribution problem both national and international is tackled along with problems of production. For this, control of imports and organised marketing of home products are essential. Compulsory powers exercised by the Government during war time are also held to be fundamental to the success of marketing schemes. The Union is encouraged to take this view by the unexpected measure of success which attended the policy of guaranteed markets and fixed prices applied during the war. The county war agricultural committees who administered the agricultural controls might be replaced by committees with more limited functions but retaining the responsibility for ensuring satisfactory standards of husbandry. In this respect the Union makes an important recommendation. It proposes a contract between the Government and the farmers on lines similar to the one obtained during the war under which the farmers, in return for guaranteed prices assured to maintain proper standards of estate management and husbandry and to ensure the maximum economy in marketing. Such a quid pro quo for the benefits derived by the producers through Government guarantees and concessions would not only tend to eliminate waste but indirectly safeguard consumer's interests. The Report embodying these recommendations also accepts the necessity of planning production mainly on a mixed farming basis and tackling the whole question of future policy on international lines.

Clive Street Gossip

What has happened in Calcutta during Wednesday and Thursday may on a superficial view appear to involve only questions of citizens' rights on one hand and on the other, Government's obligations in regard to law and order; but strictly speaking it should afford food for all sections of politicians within the country and the British Government in all its ranks. On a superficial view the scope and significance of the events that happened during the middle of the week are extremely limited and within that narrow range certain differences of opinion are possible. For as I see it, to insist that a procession of juvenile demonstrators might, without any sacrifice of serious principles, be allowed to take the routes of its choice, is to emphasise the importance of respect for law and obedience to authority. The trouble originated in the determination of the student population to hold a large intensive demonstration to show their sympathy for the members of the I.N.A. who are standing their trial in a court martial. The demonstrators included a large procession which moved down Dharamtolla Street towards Esplanade on the afternoon of Wednesday last. As it was nearing the Esplanade end of Dharamtolla Street it was stopped by a cordon of police and told to disperse as the route they wanted to take was not acceptable to the authorities. The young demonstrators chose to squat in the middle of the road. No amount of obstinacy on the part of the police availed to dissuade the youngsters who sat down for hours blocking the road to traffic. I do not know what actually set the forces of violence in motion. Mr. Sarat Chandra Bose in an appeal which he issued at a later stage to the demonstrators referred to agents provocateurs. It is possible that some of the mischievous onlookers on the fringes of the students' crowd took it into their heads to force the pace of developments and hurled a few stones. But whatever it was, so far as I am able to ascertain, the students themselves remained peaceful till firing and lathi charges were resorted to. But the students did not budge an inch. They stuck to their guns in the face of unmistakable danger to life and limb. The casualties were heavy. But when it was found that firing would not force the demonstrators to return home, the gravity of the situation was appreciated by the authorities. One can imagine what a grave view the Government took of it if one remembers that even late at night His Excellency the Governor of Bengal was himself personally present on the spot and was holding conversations with Dr. Shyama Prasad Mukherji and other leaders as to the best way of solving the problem. Dr. Shyama Prasad and Congress leaders also joined in the appeal to the youngsters who were told that the Congress was not in favour of such demonstrations and that their persistence only worsened the position for all concerned. But whether out of a sentiment provoked by the firing of the evening or whether the students had developed a new sense of independence of leaders, they refused to accept the advice that was tendered to them. Most of them were ill-clad for the cold of a mid-November

night. They stayed on till well into the morning when they departed only to resume their activities at a later stage of the day. It is fortunate that on the afternoon of Thursday the police decided to allow the procession to go on its way. This is indeed a significant contribution to the pacification of the prevailing unrest in the city, but it must be said that it may prove to have come a little too late. For by the time the procession was allowed to take the route of its own choice, a great deal of the mischief had already been done. The news of the firing in Dharamtolla Street and the casualties caused have shaken the public mind too deeply and rudely. Everywhere people keep on asking themselves whether this is not an instance of Government's readiness to utilise every pretext and opportunity for the employment of force and the urge to show that the people were undismayed by such violence was felt by large numbers. It should not be forgotten that there is not only the political unrest but also the labour unrest which is inseparable from the economic conditions of the post-war period. In spite of adequate publicity having been given to every strike that is on, the scale and significance of labour troubles of the present moment are not properly appreciated. Large sections of the engineering industry have long had a strike of considerable dimensions. The Tramway workers contrived to bring about a long period of cessation of transport in the city. In the Municipal Corporation the workers are on strike. In these conditions any political development of an adverse kind finds quick emotional response in large numbers of the urban population. It is no wonder therefore that throughout Thursday large groups of men moved about in all parts of the city shouting slogans, interfering with the traffic and carrying on such demonstrations as are occasioned by incidents of an untoward kind. What might have passed for an ordinary street accident in normal times caused in Kalighat a severe reprisal on the offending lorry and driver alike. And violence, once it got started, gathered momentum till the police rushed to the spot and as usual opened fire and caused a heavy list of casualties. In the Dharamtolla area too firing had to be repeated.

The general excitement did not end with the passing of the procession through the prohibited areas. The repetition of firing on Thursday and Friday, and in more than one part of the city, has increased the tension of the public mind. For, the students can hardly be expected to overlook the fact that their comrades had suffered in life and limb in spite of their having shown exemplary order and discipline during the long hours in which they felt obliged to sit down in the middle of Dharamtolla Street. It is generally agreed now that the violence did not originate in the students; that even in the face of firing they remained calm and resolute; that throughout the night they sat there determined to have their way, so far as peaceful procession was concerned. Firing in these circumstances caused serious heart burnings. The sympathy of the non-student public is also deeply aroused. But by far the most disquieting part of the present situation is that the disturbances have occurred against the background of labour troubles. Labourers who are out of work are apt to loiter in the streets, swell the crowds at street corners and stimulate unrest and excitement where otherwise they might have died down. Nothing restores order so much as a general feeling that order is returning; and nothing prolongs disorder so much as an impression that things are on the move. This impression that things are indeed on the move, that there is a stir all over the city, that a challenge is being thrown or taken up, is the most dangerous feature of the present situation. And it cannot be removed unless the problem is attacked from various angles at the same time and all parties equally make their best contribution to the situation.

ISSUED BY THE FINANCE DEPARTMENT, GOVERNMENT OF INDIA.

On the side of the Government, it is necessary that the authorities should make it clear that it is not their intention to regard the position as a challenge to authority and meet the disorders in such a spirit. The firing on Wednesday and Thursday is far from being reassuring on this point. If it is true, as is generally conceded, that the violence originated from outside the ranks of the students, then the firing appears altogether indefensible. At any rate, it is at variance with the personal interest shown by H.E. the Governor in a peaceful settlement. The circumstances in which firing was started call for special enquiry. If it is known all over the city that everything will be done only in accordance with the fine spirit shown by Mr. Casey, it would be an invaluable help in the restoration of order.

But indubitably far more rests with the public. Apart from the strikes and the labour troubles which require separate attention and treatment, there is to-day

in the public mind a lamentable confusion about the priorities of our political programme. If the students of Calcutta unwittingly created a crisis over the demonstration of their feeling for the I.N.A., it is mainly because little help has been given by leaders in the concentration of public interest on the more important political tasks. On the other hand, there have been speeches which threw the main task out of focus. Ever since Lord Wavell decided to exert himself towards the solution of the political problem and failed to make a success of the Simla Conference, it has been clear that not a single forward step can be taken without making the forthcoming elections a resounding success in the cause of unity and freedom. Whether the British Government are sincere or not in their promises to this country is more or less irrelevant to this main task. For, if they are sincere, they will be prepared to abide by the verdict of the electorate and accept the findings and recommendations of the Constituent Assembly. If they are not, the fight lies there, ahead, inescapable

and indispensable; and the position will be better and stronger, not worse or weaker, after the success in the election. In either case, nothing is gained by disorder which will only provide the occasion for the forces of reactionism to assert themselves and secure severe repression of the forces of nationalism. This truth has been exemplified a number of times in the past and recently in Indonesia we had had another lesson.

In the face of all this, there is hardly any room for difference of opinion that unplanned and unpremeditated clashes with authorities over issues that are not vital to the tasks ahead will wreak untold harm. Of course, it is tempting to whip up the public into a fit of frenzy over various issues. Feeling on these issues is also strong and genuine. But it is not less necessary for that reason to try to foresee the consequences of particular courses of action and what relation these consequences will bear to the main task. If the effect of these demonstrations were to let loose the forces of disorder on the one side and violence on the other, then every one concerned will have to manoeuvre for position in relation to the situation thus created. The opportunity for severe repression and terrorism is what the Congress should be most anxious to avoid. And it is encouraging to some extent that the Congress has dissociated itself from what is now afoot in the city. But there would seem to be need for categorical statements from higher authorities in the Congress dissuading the public from purposeless heroism. Such statements, however, cannot be expected if the Government should fail to show similar anxiety for peaceful conditions.

EAVESDROPPER

(Continued from page 900).

At the sessions, over which Lord Balfour of Inchrye presided as the new President, delegations attended from the United Kingdom, Canada, Australia, New Zealand, South Africa, Eire, Newfoundland, India, Southern Rhodesia, Northern Rhodesia, Ceylon, East and West Africa and the West Indies.

The discussions covered a wide range of Empire affairs. On Imperial Preference the manifesto said: "The conference finds that Great Britain is a vitally important market for every constituent country of the British Empire, and for some, almost their only market. The ability of Great Britain to take these imports, which in practice means its ability to pay for its imports with exports, is, therefore, a matter of fundamental concern to the entire Empire."

"Without the Preference which Great Britain gives to all Empire products many of these industries would cease to exist, and those engaged in them would consequently cease to provide a market not only for British but for goods of other origins. The Preferences do, in fact, contribute to an increase in the total volume of world trade."

The fact that there is no Central Government, but the Empire States are themselves each and equally sovereign and able to give or withhold preferences, does not deprive them of the right to lower the inter-State tariff walls which divide them should they so decide, whilst maintaining a higher wall against the rest of the world.

"The right to do this," says the statement, "is claimed by every political entity and is implicit in the Federation's motto 'Unity in Commerce and Defence,' since both things are intimately connected." Only by a policy of expansion both in efficient production and the means of distribution, can wide and lasting prosperity be found, the conference believed.

Further, the Conference resolved, that it was convinced that direct trading between Governments is normally undesirable, though in some cases "a measure of Government support will be called for," whether in the form of buffer pools or otherwise.

A large home market is an essential basis for a successful export trade, and Governments should study and take into account the consequent influence of domestic taxation upon overseas trade.

The conference realised "that all parts of the British Empire have seriously impaired their resources in the preoccupation of the war, and face grave difficulties, but after a careful analysis it concludes that the human and material sacrifice of Great Britain has been infinitely greater than that of any other Empire country."

"The continued solvency of Britain, the best customer, in some cases the only customer of most Empire countries and many other countries must be the vital concern of the whole Empire, and in fact the whole world."

Members believed, therefore, that in their own interests all nations need a full understanding of the position in which Britain finds herself.

A multilateral system of international payments being necessary if the potential mutual advantages of world trade are to be fully realised, the Conference considered that the attempt at Bretton Woods on the part of 44 nations to co-operate to that end marked a notable step forward, and that an effective solution of the British problem is a prerequisite to the inauguration of the Bretton Woods plan.

"If the discussions in Washington were to prove unfruitful," said the report, "the self interest of other countries demands that they co-operate to bring about an early solution of the British problem," or if it were found impossible for component parts of the British Empire and other countries concerned to deal with the British debt in the form of blocked sterling balances in such a manner as to make possible a revival of world trade, the prospect would indeed be dark.

"In that case it is obvious that Britain would be compelled, however unwillingly, to restrict her imports from abroad within the narrow limits of her capacity to make purchases abroad, and thereby lead the world in the adoption of similar restrictions. Not only would austerity be the watchword of Britain, it would become universal."

"There must be no reversion to a position where the primary producers of any one country in the world, having a surplus for which they cannot immediately find a market, may find themselves again compelled to dispose of that surplus at prices ruinous to the economy of other nations. A co-ordinated balance should be aimed at in the commonwealth, firstly, and then in conjunction with the primary producing countries. Such measures as may be taken to give stability and confidence should be operative for at least five and preferably ten years."

Regarding capable communications the report records the view that inter-State cable rates within the Empire are a domestic matter which should not be subject to international discussion."

BURMA SCHEDULED BANKS

In view of the impending departure of Banks' Rangoon Evacuation Offices to Burma, notice is hereby given that such Evacuation Offices will be closed after 30th November, 1945 until such time as the Banks are able to open in Rangoon.

The dates of departure for Rangoon and opening there have not yet been fixed, but a notification will be published in due course.

November 9, 1945.

IN LINE WITH THE BIGGEST

Standing counts, but planned drive carries away the trophy in insurance world. This is the secret of "Warden's" outstanding leadership.

Let figures speak. Out of 191 life insurance companies in India, only 22 have passed the much-coveted crore mark in new paid-for business in 1944. The standing of almost all these 22 companies varies from 30 to 70 years. And Warden is the youngest in this top-notch group.

Equally striking is Warden's speed record in business. While most companies of ranking took 22 to 62 years to write their first crore paid-for new business in a year, Warden has broken this record in 11 years. Thus age for age, it ranks as one of the largest life insurance under-writers in the East.

With conservative traditions of rigid economy and scrupulous efficiency, this great company is playing the role of a true Warden of its policy-holders.

Chairman: Sir Chinubhai Madhwalal, Bart.
Managing Director: S. H. Thaker.

Our Australian Letter

Community Centres—Farm Mechanisation—New Breeds of Wheat—Aid to Irrigation—Sheep Cured—Rationing.

Throughout Australia, community centres are springing into being, thanks largely to the efforts of Dr. Lloyd Ross, of the Ministry of Post-war Reconstruction, and the community activities section of the Ministry.

Letters are pouring in to the section asking:

"How do we start a kindergarten?" "How can we form a co-operative electricity scheme?" and so on.

The section, in liaison with other Government Departments, is not only giving advice and encouragement, but is conducting surveys of existing and recommended facilities for a number of local governing bodies, including Paramata (New South Wales), Heidelberg (Victoria), St. Kilda (Victoria) and Drummoyne (New South Wales).

Each month sees more community efforts launched. There is no standard procedure or plan. Patterns range from the almost entirely co-operative towns of Nuriotpa, Barmera and Berri, in South Australia, where practically everything, from public utilities to shops and hotels is co-operatively owned, and where the profits from commercial ventures have built hospitals, libraries, parks, theatres, to such small isolated co-operative enterprises as the free children's library which has just started with more than 1000 books in the small centre of Mittagong, New South Wales. Here, also, classes for children and adults in all types of craftwork are co-operatively run. Ballarat, Victoria, has commenced a youth centre in a building provided by the local council, which has also donated the funds. Swan Hill, Victoria, has launched a centre for social activities for people of all ages. Mildura Community Centre Committee recently bought a large hall for social activities. The Tasmanian State Government gives grants to local committees on a Li-for-Li basis.

One of the most valuable wartime legacies to Australian agriculture is the New South Wales Farm Mechanisation Scheme. Introduced in June, 1943, as the only possible means of meeting the nation's demand for food production, it is finding increasing favour in both coastal and inland districts. By Government advances to dairy and other co-operative societies for the purchase of machinery for use on community lines, the scheme enables the adoption of methods otherwise financially impossible for many Australian farmers. Such a service, it has been realised, has potentialities far beyond the purpose for which it was primarily designed.

"On July 2, 1944, there were 45 societies registered and operating under the scheme. Advances to these societies totalled more than 12 lakhs", states Mr. L. Judd, Executive Officer of the scheme, in a recent report. "On June 30, 1945, the figures had increased to 63 societies registered and operating, the amount advanced being Rs. 17,62,825. During this period a substantial increase in food production was brought about as the result of extension in the acreage cultivated, which included large areas that had not been cultivated for a considerable time previously. Although the majority of the societies are located on the coast, inquiries are now being received in increasing numbers from inland areas, these being mostly concerned with water and fodder conservation."

Fodder conservation, that long-neglected need in Australian farming, has made

a definite advance as a result of the operations of the scheme. In a seasonal report on the dairying industry, Mr. G. McGillivray, Chief of the Division of Dairying, writes: "Farm machinery pool schemes are at work on the Upper Hunter, sinking pits and filling them with surplus feed from the grazing paddocks. Orders for this work are coming in at a fast rate—so much so that available equipment may not be able to cope with the needs of the farmers. This is the first occasion on which conservation of surplus grazing feed has been undertaken on such a highly organised basis, and it is expected that it will have a far-reaching effect in stabilising production within the dairying industry."

As a result of intensive research and plant breeding over many years, two new varieties of wheat will be recommended, one for a trial throughout New South Wales (Australia) and the other for growers in the north-western areas of that State.

The Wheat Advisory Committee said that the new wheat marked a step forward in combining the characteristics of rust resistance and quality in commercial wheats.

In addition to the new varieties, three more are being tested at experimental plots.

The new wheats are named Charter (a cross between Kenya and Gular) and Gabe (Robin Bobin-Gaza).

The Army Inventions Directorate of Australia, in collaboration with Victorian State Rivers and Water Supply Commission, has designed a machine to de-silt irrigation channels.

In a normal year it costs about Rs. 7,49,000 to keep the 3000 miles of channels in the Mallee districts of Victoria clear of wind-blown sand. In dry years up to 5 million cubic yards of sand may have to be removed, at a cost of about Rs. 19,26,000. That was by the old method of elbow grease, shovels, mattocks and horse-drawn scoops.

Difficulties about designing a machine to do the job include: permanent channel obstructions, inequality of channel walls, proximity of fences.

The machine now being built, which is based on the composite submission of three men—the design was decided on after more than 300 had been submitted—is of the elevator-conveyor type, with capacity

of 150 cubic yards an hour. A helical screw cutter will cut into the sand and feed it into a bucket elevator. This will deliver it into a conveyor chute, which can be swung to either side of the bank to deposit sand away from prevailing winds.

The machine, powered by a crawler-type tractor, will climb in and out of channels. Cost—about Rs 37,000.

Wasting disease, or coast sickness, was for many years a serious complaint of sheep and cattle in Western Australia.

Animals gradually lost appetite and starved, even in presence of abundant feed.

Moving affected stock from coastal regions to inland pastures, or feeding licks containing limonite, a crude iron ore, often caused complete recovery, and led to belief that lack of iron was the cause.

The problem was tackled by Western Australian research workers, Dr. E. J. Underwood and Dr. J. F. Filmer, who found that livers and spleens of affected animals contained abundant iron, and that iron free extract of limonite was just as effective in curing disease as was limonite itself.

A search then began for a constituent of limonite which had curative properties.

By careful analysis and feeding trials, it was shown that cobalt was the real factor responsible, and that disease could be prevented by including small quantities of cobalt salts in diet.

This was the first demonstration that cobalt was essential for animals. Subsequent work showed that similar diseases in New Zealand, South Africa, Scotland and U.S.A. were also due to cobalt deficiency.

There is no prospect of the lifting of rationing on meat or butter in Australia before 1947, it was stated on high authority.

Although service demands for these two commodities had decreased sharply following the end of the war, it was stated that all surpluses above the minimum home consumption requirements would have to be exported to maintain the people of the United Kingdom, and to provide relief in certain liberated areas.

Already at the request of the British Ministry of Food, it was disclosed, Australia was sending considerable quantities of processed milk to Borneo, Singapore, and Hong Kong.

(From Our Correspondent)

New Delhi, Nov. 21.

The problems of the Sugar Industry came in for discussion last week at New Delhi at the annual meeting of the Indian Sugar Mills Association.

The capacity of the industry is 1.5 million tons a year, but this maximum production has not so far been reached. In 1943-44, production amounted to 1.24 million tons and in the last season it declined to 0.96 million tons, a reduction of about 20 per cent over the previous year.

This shortage in production is a direct result of Government's control policy in maintaining cane and sugar prices at a level lower than the Food Department's minimum prices for other staple commodities. Whereas the current index number for Rice is 333, for wheat 338, for groundnuts 224, that for sugar stands at 167. This has been a direct inducement to cane cultivators to switch over to the production of crops which give a better cash return.

This policy has given rise to a position which the Tariff Board when recommending protection to the industry expressly desired to prevent. Protection to the industry was given mainly because "sugar-cane cultivation in the agricultural economy of the country is at all times a matter of definite national importance" and that otherwise the area under sugar-cane might decline. This the Board thought would be regrettable because the cultivation of cane helps to promote the spread of intensive agriculture, is valuable from the point of view of provincial irrigation schemes, in which a considerable capital has been employed and gives a better monetary return than any other staple crop. That sugarcane is the most important cash crop is no longer true, thanks to Government's policy of keeping cane and sugar prices low. If the commodity is treated similarly with other staple crops, sugarcane would again come into its own and the industry will have ample supplies of raw material adequate to meet the home demand and the demand from adjacent foreign countries.

It is, however, to be admitted to the credit of the sugar industry that it is the only one which has not victimised the consumer in the war years. There was racketeering in the textile industry in the early war years; there probably still is but to a less extent; other protected industries too, forgetful of their obligations to the consumer who by his sacrifices in the period of protection helped the industry to establish itself, have treated the consumer shabbily until Government stepped in with its control measures. Throughout the war the consumer has had his sugar at practically the pre-war rates.

The captains of the sugar industry who were in conclave here were clearly dissatisfied with the margin of profit which Government allows to them. This is a 10 per cent gross profit on block, the figure which was recommended by the Tariff Board some years ago. Judged by war-time profiteering standards, this is admittedly low but sugar industrialists do not appear to have much cause to grumble. In the year 1943-44, the profits of the chargeable accounting period of 78 assesses were as much as Rs. 213.86 lakhs as against the standard profits of Rs. 110.56

lakhs; the excess profits were therefore Rs. 103.29. A price control under which it was possible to make these profits cannot surely be criticised as allowing an inadequate margin.

The problem of finding a profitable outlet for bye-products appears to be as serious today as it was ten years ago; the price of molasses has declined alarmingly and the question of using it as a raw material for the manufacture of industrial alcohol has not been appreciably solved. In the war years the shortage of petrol afforded an opportunity for the development of this industry; in fact Government's policy was to encourage it but the unavailability of plant prevented any advance being made. Producer gas plant using charcoal fuel came in for official encouragement instead. Although with the end of the war, plants may hereafter be available, the demand, unless measures for compulsory admixture are prescribed, is not likely to be pronounced in view of the easier petrol position.

The per capita consumption of sugar in India is still the lowest of civilised countries. The place of sugar in a well-balanced dietary is recognised, but nothing much appears to have been done to increase production; on the other hand, as we have seen, Government's policy has tended to reduce the acreage under sugar-cane cultivation.

The Association is fortunate in having Lala Shankar Lal as its President for the current year; he is also the Vice-President of the Indian Central Sugar-cane Committee. His dual position, will, we may hope, promote a closer liaison between the industry and the Government.

The need for the revision of the Indian tax structure has already been referred to in these columns, previously; and confirmation that business interests take the same view is available in the communication which the Federation of Indian Chambers of Commerce & Industry, has addressed to Government. The Second Report of the Reconstruction Committee on Industrial Policy recognised that India's tax system requires to be placed on a sounder basis than the haphazard and anomalous structure which circumstances have contributed to create. But the Hon'ble the Finance Member would appear to regard this as associated with the question of stopping the rather widespread and large-scale evasion which is believed to be occurring. The time is most opportune for such a revision for the country's reconstruction economy, which we are entering into, requires that Government finances should be placed on a stable and suitable long-term footing adjusted to the changes which have occurred as a result of the war.

Apprehensions concerning India's food front should have been allayed by the assurances recently given by Sir J. P. Srivastava, the Food Member. The Food Department has displayed commendable vigilance and would appear to be doing all that it can to improve our food economy. Government have arranged for the import from Burma and Siam of 1,60,000 tons of rice for this year and have taken steps to impress upon the Combined Food Boards in Washington India's need of another 1,60,000 tons of rice for the coming year in addition to substantial quantities of wheat. This is as satisfactory as can be.

November 24, 1945

Gateway of India

Bombay, November 21.

At a meeting held here last week under the Chairmanship of Pandit Nehru, the National Planning Committee adopted a series of resolutions on the major financial problems of India. Sterling balances, the Empire Dollar Pool, the participation of foreign capital in Indian industry, these were the subjects to which the Committee directed its attention. The character and composition of the Committee invest its views on these burning questions of the day with an importance which few will deny. It is too early yet to gather the reactions to the resolutions, but there is a general disposition to concede that the Committee has stated the national point of view succinctly and, on the whole, with a moderation that entitle the resolutions to careful pondering both by the British Government and those British businessmen who have a stake in India. It is natural that the National Planning Committee should refer to the present financial talks between the British and American Governments in which scaling down of the sterling balances of Empire countries has figured so prominently on the American side as a "quid pro quo" for a loan to Britain. The Committee warns that "no arrangements made between the present Government of India and the British Government or any other party which would prejudicially affect these dues (sterling balances) as well as the prospects for industrialisation and economic development of this country will be acceptable to the Indian people." That is a reasonable warning as anyone will admit. The resolution on sterling balances is notable for the clarity with which the position has been stated. A prominent financial journalist who has recently returned from Britain has confessed to an amazement as to the woeful ignorance prevailing amongst the people of Britain as to the true character of India's evolution as a creditor to Britain. It appears that, apart from officials of the Treasury, few even among financial journalists and fewer still among the ordinary people are aware that the sterling balances "have arisen out of the ordinary supply of goods services, provided from this country, to a large extent depriving (India's) nationals of their primary needs, to aid Britain in her war effort." It is therefore right and proper that the National Planning Committee should affirm that the suggestions heard now and again in British circles as to these balances being inflated on account of higher prices are entirely in contradiction to the actual facts of the situation. It has also stressed the fact that the supply of goods and services to the war effort was an addition to the equally enormous contribution obtained from India in the shape of additional war expenditure charged to this country far in excess of India's capacity. The second part of the resolution deals with the liquidation of these balances. Starting from the premise that, inasmuch as these balances are not convertible into hard currencies such as can be utilised for India's needs of economic development, the resolution states the conclusion that "these balances are tending to a new and more objectionable type of Imperial preference and excludes India for markets in the countries other than those in the sterling area." This has been constructed in some circles to mean that India is reluctant to buy from Britain and would fain buy from others. That, however, does not appear to have been the

intention of the Committee since all that it meant probably was that the existence of these blocked balances tends towards undue canalisation and restriction of foreign trade.

As the continued increase in sterling balances—latterly, the tempo of accumulation has risen notwithstanding the end of the war—tends to render the ultimate settlement more and more difficult, the Committee urges that a partial liquidation of these balances should be immediately achieved through a mobilisation and acquisition of British assets in India and the transfer of the same to the Indian government. The proposal will conceivably evoke strong reactions in the minds of British businessmen and its feasibility is open to grave doubt. There are some who point out that this summary treatment to those foreign interests who had helped to build up Indian industry can hardly be conducive to free flow of outside capital into the new industries of India in the future. It is said that we cannot hope to eject foreign capital with one hand in unceremonious fashion and with the other hand ask for co-operation of foreign capital which we would certainly need to develop new industries. The National

Planning Committee has also demanded a full and clear account of the transactions in the Dollar Pool to enable India to know her contribution to the Pool. The corollary to this is that further accumulation should stop immediately. In view of the reports that the accounts of the Dollar Pool will shortly be published, it is unnecessary to comment more on the resolution beyond giving expression to the

A Resume of Commodity Markets

There is nothing of importance in the commodity markets in the past week. The raw jute market has been slightly steadier with firmer mofussil advices while the jute manufactures market has been irregular. The raw cotton market has recovered the losses of two previous weeks to a certain extent, the expectation of an increase in exports and the emphasis on the sound statistical position being encouraging factors. The bullion market has been irregular. The silver market was definitely easier.

The raw market has been slightly steadier with greater mill buying and better advices from mofussil centres. It is reported that there has been a rise in prices by eight annas per maund. In the Calcutta market, sellers have not been anxious to push up rates as owing to the difficulty in getting business they do not want to discourage mill buying. Business is still possible at the minimum though for lower assortment a slight increase in prices is demanded. There is no large increase in mill buying but, as pointed out last week, there seems to be a feeling on the part of holders that consumption might increase next season and that there would be demand for all available supplies.

This picture, however, does not fit in with the reports from Narayanganj. It is said that about fifty lakhs bales of raw jute, worth thirty crores, is reported to be still with growers and that Indian balers who are overburdened with stocks, cannot sell to mills as European balers are reported to be not buying from Indian balers. Indian balers usually buy seventy five per cent of raw jute and supply to mills. Hence it is said that the present programme of buying has resulted in a depressed, market and black market transactions in reverse have been reported as low as Rs. 9 per maund. The Dacca District National Chamber of Commerce is said to have represented the matter to the Central and Provincial government authorities but with no success.

As regards the jute manufactures market the stock and production figures for the month of October show that the offtake is still on a small scale and that local stocks might increase further if there was no large improvement in the shipping position. The mills have been "complaining" that the difficulty in regard to godown accommodation has prevented any largescale buying of jute. It is, therefore, important that mills should be allowed every facility to export goods which are in demand overseas.

The raw cotton market has been steadier with a rise in quotations by about ten points in a week. Karachi advices were higher and it was reported that there might be an increase in exports to Britain and other countries. As mill buying in the ready market was satisfactory and as emphasis was laid on the sound statistical position of cotton it would appear that the worst phase has been passed.

In the Bullion market there is no tendency to follow the rise in prices. At the higher levels there is considerable selling from mofussil centres and large arrivals have had a depressing effect. The position in the silver market especially is stated to be not quite satisfactory. With the attempt to corner existing supplies in the gold market prices have been kept up though the efforts to push up prices further have

been defeated. The latest reports that silver dealers in the United States are not agreeable to an increase in the price for domestic silver and that there is also opposition in the Congress to the proposals of the silver bloc might possibly have a discouraging effect but in the present circumstances it is only a question of a trial of strength between the bull and bear operators.

The future of the rubber industry is being actively discussed and a conference of British American and Dutch experts is to take place this week. The question is obviously one of regulation of production and distribution of existing supplies and deciding the future of the natural and synthetic rubber industries. The interest of the United States is to gain control over the production of strategic materials though it would be said that she is the largest consumer of rubber and is an important producer of synthetic rubber.

It is admitted that there will be a large increase in demand for natural rubber for sometime and that the increased production will be taken up. But in the absence of any new uses for rubber it cannot be expected that it will be possible to absorb all production.

The problem facing the group is to work out an arrangement satisfactory to both natural and synthetic producers and consumers. The American synthetic industry now has a capacity greater than the world consumption of rubber in 1939; some indication is now due on the proportion of this plant which is to be kept in use.

For security reasons a large part will be maintained intact but much of it probably cannot compete with natural rubber. An

actual output of 200,000 tons a year with about twice as much held ready for emergencies seems to be expected.

One direct result of the recapture of Malaya and other territories is the loss in importance for Indian rubber. Even with the large increase in production in the war period total output did not amount to much compared to the figures of Malaya and other countries but the quantity produced was very important and came in handy at a time when it was badly needed.

The Government of India does not any longer find the need for encouraging Indian output and there is to be a reduction in prices from February next year.

It will be remembered that sometime back there was an increase in prices, it being considered that the bonus scheme did not operate satisfactorily. The following is the text of the communique issued this week:—

"The question of the revision of purchase prices of raw rubber have been under consideration of the Government of India and it has now been decided that the present purchases shall stand upto January 31, 1945.

"From February 1 onward, however, the prices of No. 1 RMA sheet (Group 1) will revert to the basic price of Rs. 77-5 per 100 lbs., delivered at Government Purchase Depot, Cochin.

"The prices of other groups will likewise revert to those prevalent in June, 1943, as published in Groups (2) date June 5, 1943 for 1 to 7.

"The Government of India have made this decision after careful investigation of the production costs, local conditions and having due regard to producers' interests."

THEIR NEEDS
never ignored

As in every necessity of life, in clothing too, the peasant class is nowadays badly affected. The question of paying any price is an impossibility with them. They don't want to put up a show; what they need is durability and cheapness. Apart from the varieties of finer clothing we also manufacture clothing of medium but durable texture which are available at a considerably cheaper price.

Jute and Jute Manufactures

Special to "Indian Finance"

(From Our Correspondent)

Calcutta, November 22.

Total production of Jute Goods by Mills of the Association during October has been returned at 89,593 tons, which is an improvement of 3,425 tons over the September figure, the increase being due in the main to the better coal supplies enabling those mills which rely on coal for their motive power to keep working more consistently. It is regrettable that this increase in production, and more, is merely going into stock in godowns so far. Of the total production, 15,270 tons or 17 per cent was for Government account as compared with 13,750 tons or 15.9 per cent the previous month. Of Hessians, 1,390 lakhs yards was produced on Commercial account and 125 lakhs yards on Government account, making a total hessian yardage of 1,515 lakhs. In Sacking goods the yardage on Commercial account was 864 lakhs and on Government account, 311 lakhs making a total yardage of 1,175 lakhs.

Since the beginning of the seasonal year in July, production of goods of all descriptions now totals 336,656 tons for the four months, an average of 84,164 tons per month. This figure is only slightly better than the average over the last seasonal year ended June, when the figure was 83,600 tons per month, but if coal supplies continue on their present level the margin of improvement should steadily increase.

Turning now to the question of Despatches of goods from mills, with an increase in stocks of goods at the end of October amounting to 9,190 tons, it is apparent that despatches during the month totalled 80,408 tons. For the four months July to October, despatches fall short of production by 16,584 tons which might be disquieting were not the main reason the lack of sufficient shipping space and the continued closure on account of disturbed conditions of several potential importing centres. It is to be hoped that these political or quasi-political disturbances will shortly be settled so that these important avenues of export trade may be again re-opened for much wanted supplies of jute goods.

The October production figure provides a pointer to a consumption of raw material during the month amounting to 4,95,477 bales, while for the season since the beginning of July, total production indicates a consumption of 18,61,707 bales or at the rates of approaching 56 lakhs of bales for the season. As suggested, however, this annual rate might easily be improved on if production continues to advance, as there is every possibility it should do.

Official figures for the import of raw jute into Calcutta and mill stations during October are now available and show no material change from the previous month, though the distribution over the different means of transport varies somewhat. Shipments by Flat for instance are less by one and three-quarter lakhs of maunds, which is made up by increased arrivals by rail to the extent of some three-quarter lakhs of maunds and by country boat of well on to one lakh of maunds. Rail arrivals are 65,000 maunds better than the corresponding month of last year and flat arrivals are 266,000 maunds higher, while arrivals by country boat have fallen off to the extent of 23,000 maunds. The figures for the past two months reflect the much more adequate service now at the disposal of the trade by the large river carriers.

Estimated arrivals of jute during the first half of November amount to 4,36,000 bales against 2,72,000 bales for the same period last year. This brings the total arrivals of jute from the beginning of the season till mid-

November to 28,04,000 bales as compared with 24,62,000 bales for the similar period last season.

The incidence of excessive moisture in jute imports, particularly in jute arriving for sale in the local Bazar, has prompted the Committee of the Calcutta Baled Jute Association to issue to their members a circular on the subject, urging them to refrain from buying moist jute with a view to discouraging the pernicious evil of offering wet jute for sale. Complaints of a similar nature from mills have also been rife of late and it seems a pity that when Government is regulating the trade in so many directions as at present, some effective steps could not have been taken to make the adulteration of jute with excessive water, a penal offence.

The export of raw jute from India during October is returned at 1,64,270 bales, the highest figure recorded since October 1941. It is to be hoped that this is a happy indication of the gradual return of trade to normality. Last year the October export amounted only to 82,000 bales. For the four months of this season exports total 5,11,000 bales against 2,83,000 bales for the same period last season. We have to go back to season 1941-42 to find a comparable figure. Then the export amounted to 5,42,000 bales, but in the corresponding pre-war period the figure was 12,82,000 bales.

A quite imaginary grievance is being ventilated by some of the local Press to the effect that 50 lakhs of bales of jute to the value of 30 crores of rupees is being held up in the mofussil in the hands of cultivators and balers because European Mills are not buying from Indian balers, with the result that the price of jute upcountry has dropped to Rs. 9 per maund, while the fixed minimum is supposed to be Rs. 12 per maund. In the first place, it is nothing unusual for 50 lakhs of bales to be held upcountry at this time of the season. Rather is it the normal situation, and it is less surprising just now when mill godown accommodation is greatly limited owing to military requisitioning. In addition, while shipping space from the mofussil is in better supply than last year for instance, the combined transport facilities never have been sufficient to move the total jute crop from the mofussil within four months as the aggrieved would appear to demand. The implication that mills have been confining their purchases to European balers to the exclusion of Indian balers is utterly false. European balers are complaining just as bitterly as Indian of the lack of business from mills at the moment. Then as for the suggestion that this inactivity on the part of mills has forced the price of jute down Rs. 3 below the minimum. Rs. 12 never was the minimum upcountry. That is the minimum price for landed Calcutta. From that has to be deducted an average of Rs. 2-4 for handling charges and freight to arrive at the appropriate minimum in the mofussil. The truth is that the agitation arises from a group of speculators, who took the view that jute would rise in price and laid in heavy stocks, which they now find it inconvenient to hold on a dull market. There is no undue pressure from the cultivator who still holds jute to clear his hands. In fact, the price levels in most of the main districts is just nicely adjusted to enable a baler to land jute in Calcutta at minimum price—if he can find a buyer—which is not too easy at the moment. The reasons why mills are inclined to hold off are two-fold, restricted storing accommodation and a dull goods market with no clear indication of early improvement. Even if they had the necessary storage space, is there any good reason why mills should hold the baby for speculators who have taken a wrong view of the market? If we take the official forecast of the crop as being approximately accurate, the arrival figures show that the transport agencies

have, in the first four months of the season, brought to Calcutta just about one-third of the crop. By the end of this month the proportion carried looks like being considerably greater. Mill purchases of jute in the three months August, September and October for the past three seasons are recorded as 1943, 4,86,000 bales; 1944, 13,26,000 bales; 1945, 16,42,000 bales. The last figure is far in excess of what all the European balers combined could produce. When examined therefore in the light of facts, there is no substance whatever in the complaint which is, to put it mildly, disingenuous in the extreme.

TOTAL REPORTED PRODUCTION OF MANUFACTURED GOODS EXCLUSIVE OF ALL GOVERNMENT ORDERS.

Total		2,778
Grand Total		89,598

N.B.—Returns of two mills have not been received. An estimate of their production has been incorporated in the total.

Since we wrote last week, the London Jute Association has issued a schedule of minimum sterling prices for Export Baled Jute which leave a shipper a margin of five shillings a ton to cover his own profit and a commission to his agent in the U.K. This virtually puts him out of business and the only man who can trade is the Shipper/Baler who, by virtue of the wide margin between packing cost and minimum selling price, can afford to accept the rates offered by the Control. There is therefore no outside business doing to report.

Loose jute has also ruled very dull and stagnant with plenty of offerings at minimum rates and no takers. Upcountry markets, however, remain steady.

There is only a very limited turnover in the goods market with speculators generally undercutting local prices to secure export orders. Mills are reported to have sold "B" twills for early December shipment at Rs. 63. Most prices are purely nominal at the close due to the disturbances in Calcutta.

(Continued from page 893).

Rayon Industry for Travancore

Mr. R. Douglas, Managing Director, Messrs. Dubson and Barlow, Ltd., England (Rayon Machinery Manufacturers), Mr. Nickles, Mr. Ed. S. Hoare, the Consulting Engineer and Mr. W. D. Woellwarth a leading businessman in London, have arrived in Madras from England in connection with the Travancore Rayons Limited. After visiting the site at Alwaye, they will be back in Madras on 16th inst. to conclude an agreement with the Travancore Rayons Limited, for the supply of machinery.

Prof. Gogate's Plan for Model Villages for India:

Plans for the construction of self-contained, model villages for 500 persons, on co-operative basis, which should prove of immense educative value and serve to revitalise the existing villages in India were visualised by Prof. B. V. Gogate, adviser to the UNRRA delegation in India, in an interview.

One of the main ideas behind the plan is to put to use the ability of hundreds of young men in India who fail in examinations and cannot proceed further for college and university education but, if properly trained they could be absorbed as "a crew which will serve in the building up of village economy and new types of villages."

Prof. Gogate explained that a ten-year plan, divided into two periods of five years each, could be drawn for the purpose. He estimated that in the initial stages about Rs. 2,00,000 per year would have to be spent and 40 students, trained abroad in advanced countries such as Sweden, Denmark, the U. S. or the U.S.S.R., would be required for carrying out the project.

The plan involved funds for (1) financing practical education in foreign countries for Indian students, (2) purchasing real estate in which modern farms and houses could be set up and (3) administration and guidance expenses to make the scheme feasible.

Senate Move to bring Gold into Circulation:

A Bill to return gold to circulation, by providing for its coinage as money is being introduced in the Senate. The Bill does not set a gold price, but is regarded as a companion to the two Bills introduced early this year to raise the price of gold.

The Bill would permit coinage of fifty-dollar gold pieces, provide for free circulation of gold and convertibility of gold with currency, authorise the President to raise the gold price above the present 35 dollars per

ounce and permit persons tendering gold bullion to the mint to receive in return either coin gold or currency.

Rail Coach Construction:

The Government of India, it is learnt, have asked the present management of Hindustan Aircraft Factory to prepare blue prints, cost estimates and realignment plans for undertaking the construction of eight rail-coaches in that factory, with a view to meeting such demand from several railways in India. For purposes of comparison, it is understood, certain other industrial concerns have also been asked to provide similar estimates and blue prints.

Tariff Board:

The newly established Indian Tariff Board has started functioning in Bombay, with its headquarters located in Block "Q"2, Hutments, Queen's Road, Bombay-1. Its telegraphic address is "Tarboard", Bombay.

Dr. Nadir Ahmed, till now Director of the Technological Laboratory at Matunga, assumed charge of his office as Member of the Tariff Board in Bombay on November 15.

(Continued from page 915).

views of a section of businessmen who feel that, if the terms of Indo-American trade are against India as they are in all probability at the moment, it might pay India to continue in the Pool.

By far the most important resolution of the Committee is that which deals with the terms on which investment of foreign capital is to be permitted in Indian economy, according to the Committee. The resolution reads: "The investment of

foreign capital in Indian agricultural, mineral and industrial concerns, since the establishment of British rule, has resulted in the acquisition by foreign interests of a measure of control over India's economic and political life which has both warped and retarded national development. It is important that the investment of foreign capital in Indian enterprise should not ordinarily be permitted hereafter in a form which would entitle it to ownership and management in respect of industries of national importance. It is possible in view of India's vast capital requirements in the coming years that she may need capital from other countries. It is not, however, in her interest to accept it if it is required for essential industries except in the shape of loans or credits raised by or through the state. India's credit in the world market is sufficiently high to justify the expectations that she will be able to secure enough capital assistance in this form and for her to insist as a matter of national policy that foreign capital should be admitted only on these terms for essential industries." In the economic evolution of India, the stage has undoubtedly been reached when these questions have to be faced up with realism and frankness. It is better that Indian and foreign businessmen know now where they will stand rather than continue the existing position by postponing clarification. The great significance of the resolution of the NPC is that it postulates the advent of a national government in India which would be entirely justified in stating the terms on which alone industrial progress will be worthwhile for the country and which would not flinch from realities.

FACT No. 5

TODAY as always India's cotton textile industry is pledged to serve India's public to the limit of its resources.

And the resources of the industry are not negligible; nearly 14% of the estimated world production of cloth is made each year in India, 407 mills contribute to this gargantuan total. Over ten million spindles. Over 200 thousand looms. Eight lakhs of workers are employed each day; three lakhs more than in the days of peace. In 1943-44, there was available for civilian consumption, 5,868 million yards of cloth in India, which is only 6% less than the pre-war average available supply.

So, you see, India's cotton textile industry remains faithful to its pledge to serve India's public to the utmost. The responsibility for the present cloth shortage does not lie at the door of the producers; through this war they have assuredly "delivered the goods."

Approach the Textile Controller of your province if you cannot obtain necessary cloth or yarn. Movement of cloth and yarn is entirely controlled by Government.

One of a series of statements of fact for the information of the public.

Stock Markets to-day and to-morrow:

MARKETS CONTINUE FIRM

Trading on the Calcutta Stock Exchange has been interrupted by the commotion in the City though the Bombay market has been open throughout the week. In mid-week definitely steady conditions were noticeable and the upward trend was resumed under the leadership of jute shares. The reopening after the long week-end was a little hesitant but greater professional activity and the rise in jute shares toned up the market. Operators in Calcutta seem to be of the feeling that there is scope for rise in some of the shares though, as pointed last week, they have a fear that the earlier rise in prices has been rather abrupt and that investors will be scared away from the market. The only favourable factor for operators is the continued strength of the gilt-edged market and the search on the part of genuine investors for shares which are relatively undervalued.

The fresh issue of 3 per cent 1970-75 loans for Rs. 25 crores at the higher tap rate of Rs. 97-8 is a clear indication of the unsatisfied demand for gilt-edged securities and the anxiety of investors to place funds in long dated loans to realise a higher yield on their investments. As the 2½ per cent borrowing rate on short-dated loans has thus come to stay it is not surprising that there is good demand for first class preferences and debentures and the issue of additional capital by existing companies is eagerly taken up.

The accounts of the Central Government for the first half of the current financial year show that there has been a slight reduction in expenditure and that with the large receipts under Customs revenue the authorities can contemplate

safely on substantial relief under direct taxation.

The strength of the Jute section is inexplorable except that the issue of bonus shares, if it is decided upon by the important companies, will result in an increase in the capital value of holdings. Most of the jute companies have ample reserves and it is not clear why there is any need for fresh issue of capital for financing additions to plant. There is still no confirmation regarding the issue of bonus shares by Howrah Mills.

The position in the jute and jute manufactures markets has not changed to any great extent. The raw jute market is quiet while the jute manufactures market is unchanged and no outside business has been reported. There has been no substantial improvement in the shipping situation and local stocks have continued to increase but if the expected improvement in the shipping situation takes place early next year mills will be able to make satisfactory earnings.

It was reported during the week that the United States might import jute goods on a larger scale but without any improvement in the situation in Indo-China and Netherlands East Indies it cannot be hoped that mills can export in any large quantities. The developments in the next few weeks will determine the prospects of the jute industry.

Khardah Company has been able to make only a smaller amount of net profit, before providing for taxation and depreciation, for the half year ended September, 1945, Rs. 19,57,614 against Rs. 23,79,200 for the previous six months. Only with the smaller provision for taxation, Rs. 19,57,614 against Rs. 23,79,200, it has been possible to maintain the dividend at Rs. 15 per share on the ordinary shares. The amount carried forward is slightly lower at Rs. 5,02,227 against Rs. 5,22,772 brought in.

The announcement by the Government of India that, as from February 1, 1946, the prices payable for rubber by Government will revert to the basic price is rather discouraging news for the Indian planters. The communique issued by the Government states that this decision was reached 'after careful investigation of the

production costs, local conditions and having due regard to producers' interests'.

As soon as Malaya and other rubber producing areas were reoccupied it was realised that the prosperous trading days for the Indian rubber industry were numbered especially as it was reported that the damage to the rubber plantations were not severe and the difficulty in stepping up production was only due to the scarcity of labour. The introduction of the bonus scheme in India and later the addition to the purchase price increased the earnings of the rubber estates though the planter has been maintaining that his interests were not properly safeguarded. The reversion to the basic prices therefore mean lower earnings.

As the conference of British, American and Dutch experts will decide on the regulation of the output of natural rubber the long term view is not quite satisfactory. For sometime, however, it is said that there will be demand for all rubber, natural and synthetic.

The improvement in the quotation for Titagur Paper A and B ordinary shares to Rs. 37-4 sometime back has given rise to speculation regarding the possibility of issue of bonus shares free to the shareholders, at an early date. While the market at the present moment is inclined to view the possibility of a rise in the quotation for the shares on the expectations of bonus issues free or on advantageous terms to the shareholders in the case of additional issue of capital, there is perhaps some justification in the case of Titagur Paper as the debenture capital amounting to Rs. 25 lakhs is due to be redeemed on March 31, 1946 and the directors might

Technical Reaction Due in Stock Markets

By ANALYST

Bombay, November 21.

Last week, the boomlike activity continued under the leadership of Calcutta particularly Jute shares. In Bombay, Tata Deferreds touched Rs. 2,400 for a few seconds and ruled throughout the week around Rs. 2,380. As there was heavy profit-taking I stick to my opinion that holdings may be sold out around Rs. 2,400 with a view to rebuy around Rs. 2,300. In Bombay, there seems to be a feeling that markets might react if America agrees to give a loan to Britain. Some of the operators argue that with a loan from America Britain will be in a strong position and will be able to successfully export consumer goods which might adversely affect many Indian industries. There is some sense in this argument. I, however, expect a reaction in the market more as a technical correction since Bombay and Calcutta markets have been booming for the last few months without anything of a normal reaction.

I favour booking profits in most of the Bombay Textiles at current levels and when markets react, I would recommend buying Bombay Dyeings. Among the Textile Mills, which are undervalued and represent a comparatively sound financial position, Krishnarajendra Ordinary shares look cheap at the current price of Rs. 70 on the basis of a dividend of 15 per cent free of Mysore Tax, i.e., Rs. 3-12 per share. The yield works out to 5 per cent in the last five years. The Company has been able to build up substantial reserves and as on June 30, the total of the tangible assets (fixed assets fully depreciated to date together with floating assets) is worth Rs. 59 lakhs and deducting current liabilities of Rs. 16.25 lakhs, the net worth amounts to Rs. 42.75 lakhs which is more than twice the paid-up capital. Investments in Government Securities amount to Rs. 27.28 lakhs. The directors also have a scheme of expansion, i.e., to increase the capacity of the spinning department by 50 per cent and the weaving and hosiery department by 100 per cent. I recommend investment purchases.

Bombay has been continuously buying Buckingham and Carnatics around Rs. 372 on the expectation of a bonus issue which, however, could not be confirmed. From the financial point of view, of course, a bonus issue is not improbable. Madras also followed suit on genuine buying enquiry from Bombay. I expect further rise in Madras. Azamjahi is the one scrip which is neglected in Bombay but I feel this also looks cheap on the basis of the break-up value and also bearing in mind that the plant of this company is a brand new one erected in 1934. Last year's bonus issue which has been postponed might fructify this year even if the directors decide against the bonus issue which they passed by a resolution in December last year. The shareholders have nothing to lose now that E.P.T. has been removed in Hyderabad. Azamjahi would be in a position to pay substantially higher dividends even after allocation of substantial amounts to reserves.

"THE JAGATJIT DISTILLING & ALLIED INDUSTRIES, LTD., HAMIRA, N.W.R., (KAPURTHALA STATE)

NOTICE is hereby given that ad-interim dividend at the rate of Rs. -/9/- per share has been declared payable to the Registered Shareholders of the Company as on the 1st December, 1945. The Transfer Books of the Company will close as from 1st December, 1945, to 15th December, 1945, both days inclusive."

PAYMENT OF DIVIDENDS

By Companies under the management of McLEOD & COMPANY LTD. All dividends proposed on and after 1st January, 1946, the the undenoted Companies will be declared payable to registered shareholders or their mandatees only, and it will not be necessary for shareholders to apply for their dividends.

(Application should however continue to be made as hitherto for any dividends declared before 1st January, 1946).

It is accordingly recommended that:—

- (1) All persons holding shares on blank transfer should forthwith register their shares in their own names.
- (2) All Shareholders desiring dividends to be paid to Banks should register mandates with the respective Companies forthwith, on Mandate forms which will be supplied on application to the Managing Agents. (This does not apply to Shareholders who have already registered mandates which have been accepted.)
- (3) Intimation of any change of address should be notified immediately to the Company.

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

Calcutta, November 23.

The period under review is short of two working days as on account of the disturbances in the City it has not been possible to do business on the floor of the Calcutta Stock Exchange. In the three days markets remained open firm conditions continued to prevail though reopening after the Id-holidays a slightly easier feeling was noticeable and there was a disposition on the part of operators to await further developments. The fresh rise in prices for Jute shares, however, has caused a resumption of the upward movement and the close for the week was rather firm in spite of the weaker advices from the Bombay market. The strength of the jute section is due to the expectations that the companies will do well in future years. Engineering shares also have been steadier. There is nothing of importance in the Miscellaneous section.

The gilt-edged securities section has been very steady with a fresh rise in 3½ per cent Paper to Rs. 103-13. The further issue of 3 per cent 1970-75 for Rs. 25 crores at the higher tap rate of Rs. 97-8 has had an encouraging effect on the market. Among terminable loans, 3 per cent Victory Bonds were Rs. 100-11 and 3 per cent 1963-65, Rs. 99-8-6. 2½ per cent 1950 were noted at Rs. 100-1. There are not many sellers. No transactions have been recorded in provincial government loans.

In the Coal section, there was not much interest and quotations were fluctuating around previous levels. Bengal were, however, higher at Rs. 802, and there was a rise in East India to Rs. 46-2 on expectations of relief under E.P.T. Burrakur were actually lower at Rs. 43-6 ex-dividend. South Karanpura were quoting for the most part of the week at Rs. 40-8 but the close was better at Rs. 41. Bhalgora were steady at Rs. 28 and Talcher at Rs. 14. Bokaro and Ramgaur were very strong at Rs. 59-2.

In the Jute section there has been a general rise in prices. Howrah were not very much changed at Rs. 107-4. Actually, in unofficial transactions earlier in the week a decline in the quotation to Rs. 105-12 was reported. All the bigger denomination shares are five to ten points higher on balance. Anglo-India were Rs. 583 against Rs. 578, Bally Rs. 478 against Rs. 472 and Champdany Rs. 307 against Rs. 292. There was no change in Craig but Presidency were higher at Rs. 15-2. India were in good request at Rs. 819 and Standard at Rs. 378. Megna were very strong being done upto Rs. 190-4. The quotation was only Rs. 176 last week. Nuddea were Rs. 156 against Rs. 152.

In the Engineering section there was greater speculative activity in Indian Irons and Steel Corporations and the quotations were marked upto Rs. 42-8 for Indian Irons from Rs. 41-6 and Steel Corporations to Rs. 38-15 from Rs. 38-10. Braithwaite were one point higher at Rs. 15-10, while Jaisop were very strong at Rs. 28-7. Texmaco also were bought upto Rs. 17-4 and Marshalls to Rs. 7 from Rs. 6-10. Burn & Co. were steady at Rs. 470.

In the Sugar section Carew were strong at Rs. 32-14, but there was no change in other shares. Balrampur were Rs. 16-14, Ramnugger Rs. 22-7 and Belsund Rs. 16-2.

(Half-yearly General Meeting on 12-12-1945 at noon. Books closed from 28-11 to 12-12)

Audited Accounts for the half-year ending 30th September, 1945:—

The Revenue Account, after deduction of Insurance, Commission in Staff, etc., shows a profit of Rs. 19,57,613-15-5; Adding the amount carried forward from last half-year Rs. 5,22,771-12-2; the total is Rs. 24,80,385; From this sum there has to be deducted:— Reserve for Taxation Rs. 13,80,000; Amount written off—Furniture, Cars and Lorries Rs. 1,108-9-0; Kutcha Cooly Lines Rs. 29,000; Leaving an available balance of Rs. 10,70,277-12-2.

Which the Directors recommend should be dealt with as follows:—

For payment of the Dividend for the half-year on the Preference Shares at the rate of 6 per cent per annum, without any deduction in respect of Income Tax paid by the Company Rs. 27,000; for payment of a Dividend for the half-year on the Ordinary Shares of Rs. 15 per share, without any deduction in respect of Income Tax paid by the Company Rs. 5,40,000; and carried forward Rs. 5,03,227-2-7.

Following the last report, No. 1 Mill continued to work double shift and loom hours on a 54 hours per week basis have been maintained. Coal supplies to the industry have continued inadequate, but the mill, being electrically driven, has been able to work without interruption. (At a special meeting of the Indian Jute Mills Association held in June, it was decided to extend the period of the Mills Industrial Pool Agreement to 31st December, 1945, and the Company's contribution by way of loom hour cess, during the period under review, has been Rs. 2,61,682.

The policy of supplying the Mill labour force with essential food supplies at concession rates from the Company's Labour Welfare Shop continues.

Managing Agents.—Messrs. Anderson, Wright & Co.

Authorised Capital—Rs. 54,00,000. Issued and Subscribed—Rs. 45,00,000 in 9,000, 6 per cent Cum. Pref. and 36,000 Ord., both of Rs. 100 each, fully paid up.

Synopsis of balance sheet as on 30-9-1945.

Reserve Funds	50,000	30,000	60,000
Other Funds	50,000	65,000	...
Dividend A'mt	2,70,000	2,70,000	2,40,000
Carry F'd	48,777	30,167	30,167
Div. % Ord.	22½	22½	20

(Annual General Meeting held on 24th November, 1945).

Audited Accounts for the year ended Aug. 1945.

The Net Profit after making provision for Income Tax, Super Tax and Excess Profits Tax, payable thereon, amounted to Rs. 5,10,635-0-5; of which an Interim Dividend of 5 per cent was paid in May 1945 Rs. 60,000; and Victory Bonus to Staff Rs. 17,910-0-0; Total Rs. 77,910-0-0; Leaving for disposal Rs. 4,32,725-0-5; the Directors recommend that such balance be disposed of as follows:—

Payment of a final Dividend of 17½ per cent Free of Income Tax, making 22½ per cent for the year Rs. 2,10,000-0-0; Allotment to Special Depreciation Rs. 1,00,000-0-0; Transfer to Dividend Equalisation Reserve Rs. 50,000-0-0; Transfer to General Reserve Rs. 50,000-0-0; Leaving Rs. 22,725-0-5; to which is to be added the amount brought forward from last year Rs. 26,652-6-8; to be carried forward, subject to payment of Bonus to Staff Rs. 48,777.

Once again the Directors have to report that, in the past year, the bulk of the production of the Brewery was reserved for Military personnel. As a result or representations, they are hopeful that, in the coming year, a bigger quota of production will be available to the general public.

In the Distillery Section, the sales of Country Spirit have improved, and there has been a slight increase in sales of Malt Whisky.

It will be observed that the net profit for the year, after making provision for taxation, shows a satisfactory increase.

For some years past, the Nowhere Property has been redundant to the Company's activities. With the favourable market for property ruling at the moment the Directors considered it was a good opportunity to dispose of this property. The sale was effected during the year and, as shown in the Profit and Loss Account, resulted in a profit of Rs. 24,990.

The Directors have tried to maintain the past traditions of prudence without being over conservative, and the sum of Rs. 1,00,000 has been put to Special Depreciation as the machinery has been subjected to extra wear and tear during the year, due to increased production.

Authorised Capital Rs. 24,00,000 Issued and Subscribed Rs. 12,00,000 in 2,40,000 shares of Rs. 10 each on which Rs. 5 have Called and Paid up.

Synopsis of the balance sheet as on 31-3-45.

(Annual General Meeting on 14-12-1945 at 12 noon).

Audited Accounts for the year ended 31st May, 1945.

After providing Rs. 3,78,407-15-0 for Excise and Rs. 53,214-0-0 for depreciation, and after providing Rs. 1,00,000 for taxation and placing Rs. 25,000 to special reserve, there is a profit on the year's working of Rs. 82,851-12-9. After adding to this the credit balance of Rs. 28,887-9-3 brought forward from the previous year there remains Rs. 1,12,739-6-0 at the credit of Profit and Loss Account which the Directors recommend be applied as follows:—

Dividend at 7½ per cent. Rs. 82,500; Carry forward Rs. 30,239-6-0.

Although cane was again in short supply there was a distinct improvement over the previous year resulting in 1,58,064 maunds sugar being produced against 1,17,385 maunds last year. The cost of cane at Rs. 1-0-5.17 per maund against last year's price of 13.49 annas per maund showed a further increase however as a result of the rates fixed by Government.

There was one breakdown during the season which lasted for six days due to the Piston Rod of No. 1 Mill Engine snapping. In common with other Factories in the Saran district a labour strike was threatened during the season but this was happily averted.

(Continued from page 921)

possibly take advantage of this opportunity to either issue additional capital at a small premium to shareholders or capitalise reserves and create new shares. As in November 1936 the debenture capital might be replaced by preference capital in 5 per cent tax free second cumulative preference shares of Rs. 100 each issued to shareholders at a premium of Rs. 2/- per share. Since 1936, the financial position of the company has considerably improved and the liquid assets are more than Rs. 1 crore if the tax refunds are taken into consideration. There is every possibility that the new capital, if any issued, will be in fully paid up shares and issued

free to shareholders, and the necessary sum would be capitalised out of reserves.

As on March 31, 1945, the debenture redemption fund amounted to Rs. 22.5 lakhs against the debenture capital of Rs. 25 lakhs. Reserves were Rs. 47.92 lakhs and other funds 11.52 lakhs. Sundry liabilities including dividends were Rs. 1.4 crores. The liquid assets were Rs. 2.55 crores so that even after providing for redemption of debenture and sundry liabilities a sum of Rs. 90 lakhs is left over which will be enough for company's purposes.

As the Government of India will be paying the compulsory deposits in a short period and tax refunds also will be made at an early date the financial position of the

company will be strengthened further. The compulsory and voluntary E.P.T. deposits paid by the company as on March 1945, amounted to Rs. 34.85 lakhs as a sum of Rs. 16 lakhs in respect of 1944-45 was expected to be paid, the total under this head will be over 50 lakhs. No credit has been taken in the accounts for the amounts which would be repaid by the Government from E.P.T. on account of optional and compulsory deposits made, or to be made and no credit has been taken for the interest on these deposits. It can be safely estimated that the tax refunds and interest on these deposits will amount to more than Rs. 20 lakhs.

MISRA HOSIERY MILLS CANNORE

BOUQUETS & BRICKBATS

(From our Readers)

India's Unexplored Mineral Wealth

Sir Cyril Fox former Director of the Geological Survey, in an article with the above caption in your Journal (Nov. 3, 1945) has remarked. "It is not a question of scholarships, etc.....but of providing sound practical training to graduates under Indian not European or American conditions. The Daily paper tells us that the Government of India is contemplating sending geologists to be trained in Melbourne University. The reason given is the geology of Australia is very similar to that of India. If geologists are to be trained in a country with geology similar to India why not train them in India itself, as the Government of India's one-time expert urges?"

B. M.

Capital Goods from Australia

You have argued in a plausible way that Capital goods can be imported from Australia as England and America may not be able to spare them for us. Yes, Australia is in the sterling bloc. She is nearer to India than the other two countries. She is able to spare capital goods.

But you have missed an essential point. Australia was in a less advantageous position than India before the war in the matter of industrial development. Still she has developed her industries so well that she will be able to supply capital goods to India now. India has to learn that lesson and manufacture her basic machinery herself.

M. RAMA CHANDRA, M.A.

Labour Unrest

You have suggested the launching of post war plans immediately to avoid strikes. Strikes are not the peculiar feature of the present time, though strike fever is spreading now.

If Post war plans are put into operation, demobilised men will get employment. But the problem of inadequate wages is always there. The gulf between employer and employed, rich and poor is still wide. Labour can no more be silenced by token blessings. Unless the inequality of incomes is reduced substantially, and the worker is made to feel that he will be entitled to benefit as much from his exertions as the one who gives the capital, there is bound to be the unrest. Let us begin with cutting higher salaries and profits and increasing lower salaries.

LABOURITE.

Agricultural Training

Your note 'Agricultural Training' appearing in Indian Finance dated Nov. 10, '45, is as little valuable as the Government's scheme to increase the admission into the Imperial Agricultural Institute from 12 to 50. How far this increase is going to affect the agricultural development in India is beyond my comprehension. I am glad you realise the knowledge that the student acquires is entirely unrelated to the practical needs of the ryot? But I fail to understand how 'A six months' practical training at the end of the academic course can give them the necessary knowledge'. The most fantastic of your suggestions is the starting of Agricultural colleges in the rural areas. How many colleges are to be started? Have we got the necessary finance and personnel? These questions I want you to consider. What I consider as necessary is to keep all

the good customs and practices and teach the agriculturist practical knowledge of modern developments. The agriculturist requires finance, better purchasing and selling organisations to meet his needs than 'advice' from agricultural graduates.

Agriculturist.

Cheaper Cheaper Money:

The persistent reports regarding a reduction in the Bank Rate, the refuge of black market money in bullion and stock exchange securities suggest that the further cheapening in money conditions anticipated in your columns will come about and that the Central Government will be able to finance its post-war reconstruction plans without any difficulty. While the successful monetary technique of the war period has resulted in a gradual reduction in interest rates the government should promulgate measures to dehoard currency. For this purpose notes of five, ten and one hundred rupees should be withdrawn from circulation at the earliest opportunity and new notes issued. The dehoarding of currency notes as a result of the cancellation of notes referred to above should enable government to make an enquiry into the newly acquired fortunes of individuals and get its rightful share of taxes plus penalty.

B. GHOSE.

Electricity in Indian India.

Eulogistically have you written about the development of Electricity in the Indian States. But statistics tell us that India is not using even a small part of the potential electrical energy in the country. It is no use sitting with folded hands seeing the few electrically lit-cities or a handful of factories electrically worked in the cities. Would you give us a study of the use of electricity in urban areas and rural areas, in British India and Indian India, the rates for different kinds of energy, whether the poor people can benefit by it, how far they benefit by it, what appliances are manufactured in India, etc. Such a study will tell us as what has been achieved and what more has to be done. That is the kind of lead that your readers expect from you.

PREM CHAND.

Apportioning Blame.

The blame for the Indian consumer going without cloth is with the Government as well as with the Mill owners. It is true—that the Mills have not done justice by the consumer who has supported the industry in its dark days. In my opinion, instead of blaming the Mills the consumer has to thank himself. If he had supported the Khadi movement, I am sure, it would have stood him in good stead. On the side of the Government, it also helped the Mills in such a way to get as much supply for military purposes as it could. At home the British Government, even in the darkest days, saw to it that everyone got something. But in India while the Mills and the Government vied with each other in blaming one another no serious attempt was made to co-operate to cloth the poor Indian. I only wish that Indians learn a lesson from this and begin to spin and support Khadi.

A CONGRESSMAN.

AND AT ALL STATE TREASURIES FROM 11 A.M.

Copies of the prospectus and Application Forms can be obtained at any Receiving Office and at the Office of the Comptroller of Finance and Accounts, Trichur.

INFORMATION OFFICER,
Government of Cochin.

Fact Parade

Latest Food Index : Rise by One Point

The Economic Adviser's All-India index of weekly wholesale prices of Food articles (Base: last week of August 1939=100) worked out to 237.9 for the week ended November 10, 1945, as compared with 236.7 for the previous week.

Between the two weeks 'Cereals' remained stationary while 'Pulses' declined by one point and 'Other food articles' advanced by about 2 points.

Further Removal of Restrictions on Publication of Statistics :

In their press note dated September 21, 1945 the Government of India had announced the removal of all restrictions placed on the publication of Indian trade and production statistics, except those relating to munitions of war and movements of shipping. As it is no longer necessary to keep even these statistics confidential, it has been decided to include them in the relevant publications which will be made available to the public in due course.

Facilitating Capital Goods Imports :

With a view to facilitating early consideration of applications for registration of requirements of capital goods for the cotton textile industry, it has been decided that the Deputy Chief Controller-machinery, millstores and component parts, should receive such applications on behalf of the Chief Controller of Imports, New Delhi.

Applications for registration of such goods should, therefore, in future be addressed to the Deputy Chief Councillor of Imports, Bombay, in the first instance, in the prescribed form.

It has also been decided that imports of capital goods for stock and sale, whether for the requirements of the cotton textile industry or any other industry, will require registration only if the value of any of the individual units included in the stock order is Rs. 25,000 and over (or Rs. 10,000 and over in the case of machine tools), irrespective of the total value of the order.

It has further been decided that, in future, when once an application has been accepted for registration, an import licence will be issued as quickly as possible after issue of the Registration Certificate, from whatever country import has been registered and whatever the goods concerned. In other words, acceptance of registration carries with it automatically the right to an import licence.

Proposal To Levy Cess on Mica :

Levy of an "ad valorem" cess on exports of mica from India, it is learnt, is engaging the attention of the Government of India in the Labour Department. The object of the proposed cess is the creation of a Mica Mines Welfare Fund to finance welfare measures for labour employed in the mica industry. It is proposed that the proceeds of the Fund should be devoted to the provision of water supply, transport, housing, sanitary arrangements, medical and educational facilities and other amenities, in consultation with an advisory committee composed of representatives of both employers and employees. The

administration of this Fund may be left initially to the Coal Mines Welfare Commissioner.

The views of the industry and provincial governments concerned have been invited and it is likely that their representatives will shortly meet the Coal Mines Welfare Commissioner.

Building Ships in India :

For the first time in India's shipping annals in the last two or three hundred years, ships are to be built in an Indian shipyard at Vizagapatam. The first ships to be built are two 8,000-ton cargo ships. Their construction is expected to begin early in 1946 and will take 12 to 18 months. An 8,000 tonner cost Rs. 10 lakhs before the war but is now estimated to cost Rs. 30 lakhs.

It is stated that the shipbuilding yard at Vizagapatam will be able to construct 15 ships at a time.

Travancore Land Revenue Policy :

The Travancore Government has certain far-reaching proposals under consideration, one of them being the abolition of land revenue and the substitution of it with a nominal basic tax and a graduated income-tax. This tax will depend, not upon periodical land settlements but on the net income derived by land-holders.

In Travancore State, out of a total annual revenue of Rs. 6,25,00,000, only a sum of Rs. 50,00,000 is derived from land revenue.

Under the new proposals the small land-holders will have to pay only a nominal amount as basic tax for their holdings.

Indian Cloth for Ceylon :

Large shipments of Indian cloth are expected in Ceylon before the Christmas season. It is understood that about 2,000 bales of mill-made cloth—approximately three million yards of cloth—are shortly due from Bombay. Elsewhere from India another four million yards of handloom products, though of an inferior quality, as the finer quality is banned for export from India, are expected before December.

Organisation plans for big sales drive :

As part of a big drive by the Nuffield Manufacturing Organisation, to extend the pre-war markets and share motor vehicle sales in the new territory, Sir Miles Thomas—the Organisation's Vice-Chairman—is flying to Calcutta following the launching of the £3,000,000 (about Rs. 4,00,00,000) "Hindustan Motors Limited" which will assemble Morris cars in India.

Also as part of an export development plan, Lord Nuffield himself and other company executives will travel overseas to investigate potential markets and act as ambassadors for British motor industry.

The Nuffield Organisation is buying a £250,000 building in Piccadilly, London, to be converted into the London headquarters of "Nuffield Exports Limited." A part of the building may be converted into showrooms.

Import Restrictions to continue in Britain :

The British Government's whole policy is based upon the desire to raise the standard of living of the British people, said Mr. H. A. Marquand, Secretary of the Department of Overseas Trade, speaking at a luncheon of the Institute of Export.

The Government realises, he said that that could not be done in Britain without paying for a large volume of imports and the payment could only be made by exports.

Britain's immediate ability to export was considerably below the pre-war level. Therefore, for a long time to come whatever assistance the country might receive from friendly allies, she would have rigidly to restrict her imports.

Giving details of the Government's support to the policy, Mr. Marquand said: "The Government is seeking to improve its own services so as to assist exporters. The Government will give guidance whenever it is asked for and will pay particular attention in this respect to constructional projects and the export of retail goods."

Sir Miles Thomas, Vice-Chairman of the Nuffield Organisation, declared that there was £500,000,000 worth of overseas trade waiting for the automobiles, and added, "In British industry we can fulfil a great deal of that market if we can get the labour we are urgently wanting for, but we shall not fulfil those overseas requirements on a long basis term unless we produce goods of the right style and at the right price."

Abolition of Raw Film Control :

In a Press Note dated the 14th August, 1945, the Government of India announced their decision to cancel the Raw Cinematograph Film Control of Distribution Order, 1943, with effect from December 15, 1945 or from such earlier date as may be possible. They have now finally decided to cancel the Control Order with effect from the 15th December, 1945.

Advisory Board for Electric Supply Services :

To promote the healthy growth of electric supply services and to standardize their rates, profits and reserves, the Labour Department in the Government of India has prepared a Draft Code of rules and regulations, which is now to be scrutinised by a representative Advisory Board, as suggested by the Policy Committee on Electricity and Public Works held in February, 1945.

The Board will be constituted as follows: Mr. H. M. Mathews, Electrical Commissioner with the Government of India (Chairman).

Mr. D. L. Mazumdar, Joint Secretary to the Government of India, Department of Labour.

Mr. P. B. Advani, Special Officer (Electricity Grid), Bombay.

Mr. K. V. Karantha, Chief Electrical Inspector to the Government of Madras, and Mr. A. R. Colley, Commercial Manager of the Calcutta Electrical Supply Corporation Ltd. (Members).

The Draft Code contains the general principles relating to the control of finances of public utility electric supply services and provides for the proper maintenance of reserves. The underlying object is to ensure that the rates fixed for the use of electricity are neither excessive to the consumer nor insufficient to the undertaking. The Draft Code was prepared by the Electrical Commissioner to the Government of India some time ago and the views of Provincial Governments, Federation of Electric Supply Undertakings, some selected public utilities and two well-known firms of Chartered Accountants on the provisions of the Code have been lately obtained.

A Questionnaire for Bombay Industrial Survey :

A rapid survey of the different groups of industries in Bombay Province and the position of each industry is being undertaken by the Provincial Industries Committee appointed by the Government of Bombay with Mr. I. H. Taunton, Adviser to the Governor, as Chairman. The Committee has divided itself into six sub-committees in order to speed up the work. A special sub-committee

has been appointed to suggest suitable sites for the location of various industries after taking into consideration the supply of labour, water, electric power, raw materials and markets for the products. A questionnaire has been issued to commercial bodies in order to elicit relevant information.

Ceylon Copra Trade :

Ceylon's present copra contract with Great Britain, if it was extended for another year, would result in the loss of the Indian market and the market in Great Britain, observed Mr. Emanuel Muttukumaru, Chairman of the Chilaw Negombo Planters' Association at its meeting. The Indian market which was extremely short of copra would in the meantime get used to Malayan copra and it would then be difficult for Ceylon to recapture the Indian market.

Movement of Rice by Rail :

The Punjab Government have restricted movements of rice and paddy by rail from the U. P. to stations in the Ambala, Hissar, Gurgaon, Rohtak and Karnal Districts of the Punjab and have prohibited the movements of rice and paddy by road to these districts and to Delhi Province. Stocks moving contrary to the provisions of these orders are liable to confiscation in addition to other penalties. This action has been taken to prevent illicit movements across the border in view of the wide disparity in the prices of rice prevailing in the Punjab and the United Provinces.

Abolition of penny per word press rate feared :

A section of the Empire Press Union fears that the Empire penny-per-word press rate may be abolished with consequent weakening of Empire ties at the International Telecommunications Conference, opening in Bermuda on November 21. The rate was introduced by Cable and Wireless Limited, in 1941.

The Australian section of the Union at its annual meeting to-day, passed a resolution declaring that "press communication among the British countries and also between British countries and the United States should be maintained at a penny per word and access of newspapers to radio transmissions should be developed freely as transmissions develop".

The Canadian section urged that the Canadian delegation to the Bermuda Conference should be instructed to "withstand any pressure from non-British sources towards abolition of the rate".

According to American press reports, the American delegation will press for the abolition of Empire preference rates, including the penny press rate and acceptance of a rate of uniformity in all areas controlled by countries sending delegates to the conference.

Co for Exploiting Oil Bearing Sites

To undertake production of petrol, kerosene and other fuel oils by exploitation of oil bearing locations in the country, a limited concern with a capital of Rs. 1,00,00,000 has been floated here. Arrangements regarding the necessary plant are nearing completion and steps are under way to secure expert technical staff from the U.S.A.

Telegrams About Shipping Matters :

All restrictions on telegrams exchanged with India on shipping matters are withdrawn with the exception of those on ship-shore radio-telegrams, says a telegraph notification issued by the Chief Superintendent, Central Telegraph Office, Bombay.

TREASURY BILLS

Central Government :

Tenders for Rs. 4,00,00,000 of three months' Government of India Treasury Bills were opened on Tuesday, the November 27, 1945. Total amount offered was Rs. 4,23,25,000. Tenders at Rs. 99-14-9 per cent and above were accepted in full and those at Rs. 99-14-6 cent were allotted approximately 85 per cent. Total amount accepted was Rs. 4,00,00,000, the average rate of accepted tenders being Re. 0-5-3 per cent per annum.

Tenders for Rs. 4,00,00,000 of three months' Government of India Treasury Bills will be received on Tuesday, the December 4, 1945 at Calcutta upto 11 a.m. (Bengal Time) and upto the close of business on Monday, the December 3, 1945, at other centres. Successful tenderers should make payment on Friday, the December 7, 1945. Other conditions are as usual.

During the week ended the November 3, 1945, Government of India Treasury Bills for Rs. 3,10,25,000, were sold in favour of the Issue Department of the Reserve Bank of India.

LLOYD'S BANK

LIMITED

(Incorporated in England.)

BANKING FACILITIES FOR ALL

Lloyds Bank offers a complete
and up-to-date service to those
desiring banking facilities.

It is fully equipped to meet
the requirements of every type of
customer from the private person
of small means to the large
commercial establishment.

It gives to all a personal con-
sideration and courtesy in keeping
with its traditions, together with
a service which, throughout its
long history, has been steadily
improved and modernised.

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

Money market conditions have, in an emphatic degree, reflected anticipations of further reductions in the structure of interest rates. Throughout Wednesday, there was all round expectation in financial circles that the Bank Rate would be lowered on the morrow. When, however, the rate was posted on the board in the Reserve Bank hall at 11 A.M. on Thursday, it was revealed that there was to be no change. Though disappointed, market circles were not disheartened. Particularly in the Stock Exchange, operations were on a large scale and at rising prices, in the full confidence that the reduction in the bank rate would not be long postponed. It was, perhaps, these considerable price-advances in stocks and shares that influenced the monetary authorities in deciding on keeping the bank rate unchanged. For, there can be no doubt that, had the bank rate been reduced this week, the boomlet now in evidence in the share market would have flared into a boom.

In general terms, it may be said that official policy must be designed to promote reasonable stock exchange behaviour and to prevent anything like a boom or slump. The question is not whether current conditions warrant a boom or not. A boom as such is unhealthy. If a more confident view of the future is justified, even so a boom is not justified. There must be an orderly progressive rise in prices. We, therefore, consider that lowering of the bank rate in the current week might have led to undesirable repercussions. We must not, however, be construed as suggesting that the reduction in the Official Minimum can be indefinitely put off. Cheap money is a settled policy; it is not merely a short-term policy, it is the only policy possible in the new kind of monetary world that inter-war years have fashioned and perfected. The British Chancellor of the Exchequer, Dr. Dalton, is we hear, contemplating the issue of 1½ per cent exchequer bonds. It may be remembered that exchequer bonds issued by the British Government carried interest at 1½ per cent. Dr. Dalton may well be hoping to raise his long-term reconstruction loans at less than 2½ per cent. Such being the case, a further decline in the structure of interest rates in Britain and India is inevitable. It follows that the reduction of the Reserve Bank Rate is inevitable.

It is also necessary, in this context, to consider the pros and cons of the strident advances registered by most shares in the last few days. There is definitely an apprehension in certain quarters that the recent rises are too rapid and too substantial to be healthy. In other words, there are quite a few jeremiahs prophesying a collapse. We are not inclined to take so pessimistic a view. A factor which has not received sufficient

OUR AMERICAN LETTER

AMERICAN INTEREST IN MEXICO

ANXIETY TO DEVELOP RESOURCES TO FACE FOREIGN COMPETITION

Washington, Nov. 12.

U.S. money, materials and technology are flowing into Mexico as junior partners in an industrialization programme which will be watched closely both by America's industrial competitors and by the so-called "backward" nations eager to develop their own resources.

The flow is being handled almost entirely by private enterprise in both Mexico and the United States. It has the blessings of the Mexican Government, which hopes many new factories arising in that country will raise living standards, and of Americans anxious for promotion of this country's foreign trade.

The new factories produce a wide variety of goods—many of them exporting goods already to Mexico's neighbours. The equipment and technology has come chiefly from the United States. But to preserve the Mexican character of the new firms, U.S. capital has been limited usually to less than 50 per cent.

Americans hope their share in Mexican factories will help them "hold their own" in what they think will inevitably be a severe struggle for Latin-American markets. British and continental European trade missions are already actively bidding for Latin-America's post-war business, often with a price advantage caused by higher U.S. production costs. Americans feel their lower production costs in Mexico will help them meet this challenge, and at the same time be beneficial to Mexico's own economy.

Less than one per cent of Mexico's exports went to other Latin-American nations in 1938. The total was ten per cent last year. Trade experts think this was only partially due to the war in Europe; they think Mexican exports to her neighbours will continue to increase.

Up to now, these exports have been chiefly in textiles. Mexico's cotton goods output for export in 1940 totalled about 100 millions pesos; by 1944 this had risen to almost 500 millions pesos—although this rise was partially offset by the fact prices almost doubled.

Now Mexican-American factories have been built or are building for production of plastics, agricultural and electrical machinery, rubber products, drugs and many other items. To help get them started, the Mexican Government has exempted many of them from income taxes for the first two or three years. In some cases, the equipment was imported from the United States duty-free under the Mexican Government's policy of providing all reasonable encouragement to industrialization.

Many American businessmen consider this economic policy much more liberal than that of China, India or many other countries seeking intensified liberalization. At the same time, they concede the desirability of the Mexican Ministry of National Economy's supervising the new joint enterprises to ensure against corruption and "exploitation".

Some of the more recent Mexican-American Companies are: Reynolds International de Mexico, S.A., which is building an aluminium fabricating plant outside Mexico City; La Celanese Mexicana, S.A., which is already producing synthetic yarns

and fibres; the steel works Altos Hornos de Mexico S.A., one of the few new enterprises founded with the aid of U.S. Government capital in Mexico (6 millions dollars credit advanced by U.S. Export-Import Bank in 1942); Compania Fundidora de Fierro y Acero de Monterrey S.A., Mexico's largest steel producer which is turning out welded pipe and wire products; and Envasas Generales Continentales de Mexico S.A., in which the Continental Can Corporation has a 20 per cent financial interest and provides technical direction and training of Mexican workers.

Progress of U.S. reconversion was rapid during the weeks immediately following Japan's surrender but since that time has bogged down, says the November newsletter of the National City Bank of New York. The letter explains:

"In the industries reports of hindrances and delays in production have been numerous, and the most common reasons are that the labor supply is short, and that strikes have interfered with the supply of materials and parts which manufacturers need.

"The coal strikes which extended over four weeks not only reduced the supply of coal, but caused a substantial loss in steel output. This in turn is delaying deliveries of steel scheduled for fabrication into civilian goods. At the same time strikes in various plants making automobile parts have put the automobile industry behind schedule. . . .

"Loss of production and employment through strikes or slowdowns or oppressive government controls and deplorable, and never more so than at present when inflation is menacing, demands are almost insatiable and every possible effort should be made to get goods into the markets quickly.

"As far as physical difficulties of reconversion are concerned, the industries have made more rapid progress in clearing plants of war work and re-equipping them for peace-time production than most people believed possible. . . .

By establishing a worldwide export organization, British aviation interests "have fired the first gun in the competitive race now beginning between British and American aircraft manufacturers to become the world's leading exporters of aircraft," according to a trade expert writing in the New York 'Herald Tribune'.

The writer, Raymond L. Hoadley, reports.

"The Society of British Aircraft Constructors, Ltd., is setting up branch export offices in all the attractive new aircraft markets such as the Dominions, India, Latin-America and the Middle East and Far East with the specific approval and encouragement of the British Government. . . .

"It is freely admitted in aircraft trade circles here that the British are more active in foreign markets than our plane makers. . . . The general feeling has been here that British aircraft makers would have nothing to offer foreign buyers for several years. That belief is no longer held among well-informed members of the industry, as the British have no less than twenty different designs either in production or in an advanced stage of development, ranging from single-engine French and passenger-carriers to an eight-engine trans-Atlantic land plane weighing 110 tons. . . .

"In fact, some observers point out that, although the British may be a bit slow in getting their new equipment on the production lines, their financial control of the sterling bloc nations and their head start in sales promotion elsewhere gives them a substantial advantage over American competitors who in many instances are closing plants because of lack of advance orders."

The Twentieth Century Fund will issue late in November a special report by Stuart Chase reminding Americans that "trade is a two-way street. If a nation wants to sell, it must also buy—unless traders are to be replaced by Santa Claus." The report will urge greater purchase of goods abroad by this country as a means of expanding U.S. exports.

End Emigration

The report that the Government of India have turned down the Burma Government's request for Indian sweepers and men for farm labour will be welcomed in the country as signifying a sense of discrimination which the authorities never displayed in the past so far as this question is concerned. But it is not certain whether this is part of a revised policy or whether the refusal to oblige the Burma Government is based on special circumstances which have little to do with the general policy. The time is however, come when our policy in regard to emigration should be clearly laid down, instead of being left to be shaped by the decisions of the Government on the various issues as and when they arise. Public opinion too, is not based on a careful weighing of relevant considerations. It is, by and large, a mass of sentiment, to which cultural affinities with neighbouring countries, resentment against ill-treatment of Indians abroad and a sense of duty to Indian business interests in foreign lands are all mixed up in a manner by no means conducive to careful consideration of vital issues. India's relations with neighbouring countries have developed according to what may be called vaguely, but none the less sufficiently expressively, as historical forces. Past glories and present degeneration have pressed equally hard on this problem. It was inevitable that, when India was in the vanguard of material civilisation, her sons should sail the high seas, trade with all the lands that were accessible by sea transport, establish colonies and bring all the foreign peoples close to herself by cultural and other ties. Nearly the whole of Asia owed her spiritual allegiance through the phenomenal spread of Buddhism. The lands that came later in modern times under the sway of European Empires constituted in many ways a greater India. The civilisation of the peoples bear the unmistakable impress of Hindu culture. It is natural therefore that our ideas of our relations with these lands should be coloured so largely by our historic associations with them.

But as we have mentioned already, present degeneracy has been for all practical purposes an even more powerful factor. With the acquisition of India by the British and the establishment of French and Dutch Empires in the Far East, all the inheritors of ancient civilisation came to be looked upon only as an inexhaustible reservoir of cheap labour with which to produce all the raw material needed by industry in the West. This labour was assumed to be mobile and easily transferable from one country to another according to the needs of the imperialist powers. And so indeed it was. The poverty of the people enabled the Government to induce large numbers of Indians to take up work in the lands in which it suited the European settlers to import Indian labour. Indians were not, of course, placed in the same position in all the countries to which they emigrated. There was the difference between European colonies which had attained a status of independence and the lands which, by reason of large local population, remained dependencies under European powers. In between the two was Burma which till recently was part of India and admitted of free movement of population across the Bay of Bengal. But these differences did not alter the relations between the Indian immigrants and the rest of the population. For wherever Indians have gone, they have inevitably excited the hostility of the other sections of the population. In South Africa, Kenya and other countries, the Indian is not only looked down on with contempt as belonging to a subject race but he is also feared to some extent as an effective competitor. In Burma and countries of the Far East he is looked upon as an interloper while the trading classes are regarded with a mixture of jealousy and animosity.

The reason for the strained relation of Indians abroad is to be found in the fact that emigration for India was neither a wholly natural phenomenon as the spread of the European races over America, Africa and Australia, nor the effect of a deliberate policy of colonisation designed and worked by a national Government in the interest of its own nationals. Considering the cultural and other ties that existed between India and her neighbouring countries through thousands of years, one would expect that the Indian emigration movement should have a certain minimum element of naturalness about it. But that naturalness did not extend beyond a certain degree of instinctive readiness on the part of the working classes to settle in countries in which the culture, customs and manners were by no means unfamiliar. But it is also a fact that Indian labourers were not more reluctant to proceed to countries like South Africa than to Burma and Malaya. What was decisive was the fact of poverty and of the efficiency of the methods adopted by the Government of India to oblige capitalists of their own ways

in foreign countries by persuading the requisite number of Indian workers to agree to go abroad. That this persuasion had at later stages to be supplemented by exertion of force of various kinds is another matter. What is important is that the two factors which govern emigration from this country on a large scale were the poverty of the people and the policy of the Government. While the former has remained largely unaffected to this day the Government's policy has had to feel the full pressure of public opinion, which is growing more and more sensitive to the wrongs inflicted on their countrymen abroad and which learnt to insist firstly, that the policy of emigration should not be continued under such unsatisfactory conditions and secondly, that the Government should not be sparing in their efforts to secure improvement in the position of Indian settlers in foreign countries. The success achieved by public opinion in this regard is not much to boast of. The people themselves had learnt not to be taken in by the rosy picture painted of the conditions of life in the countries to which they were invited. Mahatma Gandhi's historic struggle in South Africa not only woke up the people to the folly of sending our men abroad without adequate guarantees of fair treatment, but also quickened the conscience of the Government. But it took decades of strenuous struggle on the part of the people and the leaders, both here and in the countries concerned, before Indian representatives were accredited to foreign nations with the special purpose of looking after the interests of our countrymen in those countries.

The stage has now arrived when the whole problem of Indian emigration has to be thought out in all its various facets. First of all, there is the question of the future of Indian settlers, which common sense would suffice to tell us will not be solved till India attains complete political freedom. It is a well-attested principle of international relations that every Government is entitled to represent the grievances of its nationals abroad to the Governments concerned and to champion their cause by appropriate measures. While the case of Germany and Sudetans in Czechoslovakia is an extreme instance of this principle, its general validity and equity can hardly be questioned. Flagrant instances of ill-treatment of the nationals of one country by the Government of another have been regarded at all times as just cause for even extreme measures like war. And to that extent, such ill-treatment may well come within the cognisance of any international organisation of the future. But whether redress is to be had by resort to extreme measures or by the beneficent intervention of international organisations, the independence of India is a condition precedent to it. To some extent therefore, though not wholly, the question of the interests of Indians already settled in foreign countries has to be kept in abeyance till India grows to the status of an independent nation.

Meanwhile, our attitude to further emigration has to be carefully defined. With the neighbouring countries like Ceylon, Burma and Malaya it is less easy to make a sharp distinction between the past and the future. For it is not till the emigrants have settled for good in the countries of their adoption to the point of forgetting the ties with their native villages and kinsmen that they can be regarded as Indian settlers. Till that stage is arrived at there is a continuous process of visiting and revisiting the homeland, taking away more of dependents along with them and so to say, exercising the rights of more than one domicile. The problems relating to this transitory period are extremely complex and they tend to become even more complicated when large material interests are acquired by Indian settlers, and what is more, they fall into a state of confusion as in the case of Malaya and Burma by reason of the Japanese occupation during the last war. The intricate problems arising from these conditions require for their solution a careful study of the merits of each problem and patient negotiation with the interests concerned over every material detail. The inequity of treating the present confusion as a pretext for depriving Indians of their lawful positions of the past need hardly be mentioned. And here as in matters concerning South Africa and Kenya, the political status of India is an extremely important factor. The fact that the countries of the Far East will shortly have National Governments of their own is one that may tend to complicate matters still further. As recent experience has shown, the position of a foreign Indian in the midst of a large local population is never a powerful factor for peaceful and cordial relations. And in the case of Indian settlers abroad, there have been, in each case, a number of special circumstances which have tended to aggravate the evil. Thanks to the indifference of the Government of India, and more often than not, their partiality for interests other than Indian, India has had a huge and complicated problem laid up for her National Government of the future.

Whatever the complexities of the problems on hand, it is necessary that the more important lessons of past experience should be singled out with a view to provide guidance for the future. As we have mentioned already, the two factors that have determined Indian emigration are firstly the poverty of India and the policy of the Government. How far the poverty of India necessitates and renders desirable the emigration of Indians in large numbers to countries where the initial entrance is not difficult to secure is a question that has been thought of without relation to other relevant considerations. The poverty of India is itself a relative term. If Indians can make a living abroad by the sweat of their brow, it is a natural question to ask whether similar exertion on their part in their own native soil should prove fruitless. Popular misconceptions about the population problem in India are now being slowly dispelled. While it is uncontested that the growth of population is more than can be deemed desirable with the present rate of increase in productive activity, and while it is also undeniable that a smaller population would render many problems less formidable than they are, the idea that the rate of population growth is phenomenal or that it is too much for the country to support in any set of conceivable economic conditions is altogether false. Other countries are known to have had a faster rate of increase in population. Other countries have been able to support a larger population per square mile than India is now called upon by nature to do. And what with acceptance of planned economic development as the established policy of the Government, and with the progress made with various schemes of economic development, it would be wrong to suggest that India is under any kind of necessity to suffer an exodus of population in a large scale to foreign countries. We may now command more confidence than ever before, of our ability to sustain the country's population even at the present rate of growth, since all our examinations on the problems of planning shows that our aim of trebling the national income and doubling the per capita income in a period of 15 years is by no means visionary or impractical.

Given this freedom from the pressure of population, there is no need to take ill-considered and hasty action. It is possible that while India may be able to rise above all needs of emigration, the neighbouring countries may not outgrow their need for Indian settlers. In spite of the helpless position in which Indian settlers have often found themselves and in spite of the fact that poverty at home was among the reasons for their emigration, the fact remains that these countries have need for Indian settlers. The Indian worker is industrious, conscientious, cheap according to prevalent wage standards and pre-eminently a law abiding citizen, while the local population of the country to which he emigrated were by no means conspicuous for these qualities. It may well be that for the kind of development work for which Indian workers were required in the past more of our nationals may be required in the future as well. To the extent our own political and economic position may be better in the future, India may be able to secure good terms and conditions, and what is more important, to assure their strict observance. In these conditions it is of enormous importance that our relations with the neighbouring countries and our goodwill with the local populations should be carefully preserved. In the past it has been too frequently the case that goodwill towards the Indian emigrants and esteem for the country from which they come have both been difficult for the foreigners to maintain. For, by and large, Indian settlers in Burma, Malaya and other countries fall into two sharp divisions, one representing the menial workers with little or no education and with no means of winning the respect and affection of the people around them and the other consisting of money-lenders and merchants with acquisitive instincts which were too strong to be liked by their customers. In nearly all the lands to which Indians have emigrated, India is judged either by the low class of menial workers to which the local population easily feel superior or by a class of rapacious money-lenders whom they could regard with just indignation. It is, of course, not practicable for every Indian emigrant to be, so to say, an ambassador of Indian culture. But it is necessary that the Indian emigrant in foreign lands should be drawn from all sections of the population and should be free from those elements which will tend to besmirch the fair name of this country. The Government of Burma is today in dire need of 20,000 sweepers. The fact that India can find the requisite number is by itself no argument for complying with the Burma Government's request. For, in our policy in regard to emigration the need to maintain the respect and affection of foreign peoples for this country must be kept above all other considerations. It is in the broad national interest that nothing

should be done which will weaken that respect which historically is ours, in the fact of India having been the spiritual teacher of the greater part of Asia.

World Economic Survey—II

(Contributed)

Economic mobilisation for war had come to dominate world economy long before war actually broke out. Tension had been increasing since 1938 and though there were great differences in the degree of economic preparedness in different countries, industrial activity was increasingly determined by government expenditure on armament programmes. Money markets, currencies and the financial systems were provided a "dress rehearsal" thanks to the Munich crisis, and so when the war actually broke out in September, 1939, the financial disturbances were much less severe in impact upon national economies than in 1914 when it was found necessary to impose a general credit moratorium. It was only a question of greater or less preparedness for war. The dictatorships had naturally an initial advantage in this matter while the democracies took time to swing into the rhythm of war. German, Italian and Japanese economy had been on a war footing for years and when the blow was struck, the economic adaptation necessary in Allied countries took time to complete itself. It is worth recalling that in the great majority of countries, trade and production were in an expansive stage in 1939, partly due to the stimulus of rearmament expenditure and partly due to peacetime factors. The recession which started in 1937 and had its epicentre in the United States had been halted by 1938, to give place to a recovery. As it turned out, this phase of expanding production proved a great help when the national economies had to be geared to the war effort and the greatest emphasis came to be placed on production. The twilight flash seen just before the war put one strongly in mind of the fact that, for many years before 1939, the growth of national restrictions on foreign trade and exchanges, the erection of high tariff walls, the emergence of monetary blocs, the increasing spread of state control over all aspects of national activities for purposes of defence and the epidemic of experiments in autarchy had all led to a disintegration of world economy which could only have culminated in a second great depression of unparalleled severity if war had not broken out. Lord Keynes wrote long ago that wars have been the only form of large-scale expenditure, which statesmen thought justifiable. The experience of the years after 1938 lend some point to this sardonic observation of Keynes. It is not therefore surprising that the economic world was more or less ready, in a way it was not in 1914, to carry out a global war. We mention this to stress the fact that in all future wars the economic apparatus has been developed to such an extent that it became capable of facile application for any emergency. It is a sad commentary on human ingenuity that, while the science of averting an economic depression is still in its infancy, the all-out effort required for total war could be brought about with such completeness and efficiency.

The wartime control of production and the steps taken to maximise it constitute a study of absorbing interest. The world entered the war in 1914 relying more or less on the free price system to bring about the required adjustments in production and consumption; and it was realised very soon in the first world war that this reliance did not produce the required results and so the measure of state control over industry and trade was enlarged. In the years between the wars however, governments had perfected the art of state control and administrative agencies had come to acquire valuable experience in this art. It was an instance of the executive taking more powers to deal with a special situation. The great New Deal organisations in the United States, though they were created to bring about economic recovery (and failed), were clearly the fore-runners of the extensive organisations endowed in this war with blanket powers over production, trade and distribution. Both the experience of the first war and the totality of effort required by the second war clearly put out of court the idea of achieving a transfer from peace to war economy through the unaided workings of the free price system, and clearly pointed the way to, and the necessity for, direct mobilisation of resources by the State. From the purely economic point of view, the administrative machinery of control is not of so much interest as the content and the implications for the future of the instruments of policy employed by the State in wartime. It is needless to add that

wide emergency powers were taken by all governments to ensure full control over every aspect of national economies.

A review of State control in wartime falls under three main heads: the efforts to keep prices down, to divert resources from civilian to war purposes and to expand resources. To take up the question of the supply of war material or of essential civilian supplies for the war effort first, it was noted that, starting from a system of priority for State contracts, governments slowly built up a complete system of priorities for raw material, labour, machinery, etc. Out of this grew the specific controls over factors of production and out of those specific controls were evolved far-reaching measures to rationalise production and expand productive capacity. Naturally, it is idle to look for one pattern of development in all countries. That depended upon the earlier preparedness of each country for war and the inherent economic and constitutional set-up of each country. Thus, in the fascist countries, the transfer of resources and the mobilisation of manpower was achieved more easily and quickly than in Britain for instance, where such transfer had to be achieved, at least in the beginning, by indirect means. The concentration of industry was a "fait accompli" in Germany long before 1939, whereas in Britain it was not until the middle of 1941 that the policy of industrial concentration was at all decided upon. While in Germany intensive use of machinery and factories' space was speeded up by a fiat of the dictatorship, in the United Kingdom it was rather a tedious process, starting from the preparation of censuses of machines and tools, licensing of the same by the Ministry of Supply to gradual co-ordination ultimately. The production of durable consumers' goods was practically prohibited in order to conserve the capacity of plants, while production of consumers' goods were standardised. In addition, the manufacture of goods directly competing with the defence effort in regard to scarce resources and raw materials was also more or less prohibited. An aspect of the concentration of industry which deserves notice is that the small firm was enabled to preserve its identity and yet make its due contribution to the war effort. Obviously, this was dictated by the necessity to keep an eye on the export trade after the war. In Britain, two plans were followed, the first in which one firm acts for a group of firms and secures contracts from the government ("Parent Loan Scheme"); the second is the "Embodiment Plan" under which the government obtains parts and accessories from one firm and supplies them to another firm for the higher stage, namely assembly. Building control likewise became essential as a consequence both of the necessity for location of factories and the shortage of building materials. As for expansion of plant, centralisation was inevitable to get over the financial problems connected with outlay. The United States presents a very interesting study in this respect. The Administration itself provided the plants to be operated by private management; in some cases, private construction was encouraged by an official undertaking to reimburse contractors for their expenses; the Reconstruction Finance Corporation was itself operating certain plants which were leased to private firms. An incentive to manufacturers to make additions to existing plants was offered by allowing them to amortise the cost of such additional outlays out of earnings over a period of years.

Since the war effort depended upon a sufficient and continuous supply of raw materials, control over them was naturally the most comprehensive though differing from country to country. The Nazis found it essential to introduce a complete official monopoly of foreign trade to build up their war machine. Thus, foreign currency was strictly allocated according to priorities in which preference was given to importers of strategic materials; likewise, the export industries which were essential for accumulating further foreign exchange supplies were preserved. The government was in a position

to decide over the entire range of business what and how much should be produced. Germany's serious deficiencies were in respect of leather, textiles, tin and copper, oils and fats. Vast investments in these industries were sponsored by the government and a large number of synthetic industries made their appearance under official auspices. Later, in occupied areas, the Germans adopted the system of regular looting of available stocks of raw materials, war materials and food to overcome the domestic inadequacies.

In the British Commonwealth, steps were taken to accumulate reserves of stock, while in regard to imported materials an elaborate system of licensing and allocation was resorted to. It was nearly a year before all commodities were brought under control and a priority scheme was drawn up with vital war industries coming first and export industries as well as domestic consumption industries next. Apart from a system of subsidised production, measures to stimulate domestic raw material production were largely indirect. The repeated coal crises were proof of the reluctance of the government to go all out for blanket control as in Germany. The U.K. was, of course, helped by the vast reserves of raw materials which it could tap from Colonial and Dominion primary producing countries and later from America through lend-lease. In the Dominions, the control of raw materials was less drastic than in Britain and Canada was a large exporter of raw materials and foodstuffs to the U.K. even though her war industry was expanding. The same was more or less the case with Australia whose wool clip was entirely taken over by Britain. In the U.S.A., the most notable thing was the building up of strategic stock piles of commodities. The R. F. C. was given the powers to create special reserve companies, while the Department of Agriculture was even authorised at one time to exchange surplus commodities for strategic materials. At home, domestic production of strategic materials was increased, while the countries of Latin America supplied the raw materials. The Office of Production Management had however to institute a system of compulsory priorities as scarcities developed in respect of various materials such as copper, nickel, zinc, magnesium and aluminium all of which were badly needed for the war effort.

(To be continued)

I. F. SPECIAL

Bilateralism in Western Europe

By Dr. PAUL EINZIG

During the last twelve months or so the British Government has concluded a series of payments agreements with all Western European countries, the last being the Anglo-Norwegian Payments agreement concluded recently. Although these agreements vary in some respects, they are all based on the principles of bilateralism. Under that system the proceeds of an export surplus on the trade between the two contracting parties cannot be collected in the form of gold, nor can it be converted into foreign exchange that would enable the country concerned to spend the surplus in a third country. The only way to withdraw the money is in the form of the import of goods and services, as an alternative to leaving it in the debtor country.

The result of the operation of this system is a tendency towards a balancing of the trade between the two countries concerned. For the country with an export surplus has a strong inducement to buy its debtor's goods and services, or alternatively not to press on its debtor more goods and services than the latter can afford. The system was first applied in

the form of exchange clearing agreements during the early 'thirties. Owing to its extensive use and abuse by Germany, it has come to be regarded, quite erroneously, as a German invention, and is popularly referred to as "Schachtian devices" even by people who are expected to know better. The truth is that it was first introduced by Switzerland and Hungary in 1931, at a time when Dr. Schacht was not even holding any official post. It was not until several months later that Germany began to imitate the arrangement, and by the time Dr. Schacht returned to office in 1933 Germany already possessed a network of bilateral clearing agreements. The subsequent abuse of the system by Dr. Schacht and his successor had gained a great deal of publicity. As a result, bilateralism has come to be identified with aggressive Nazism, in spite of the fact that countries other than Germany had applied the system for years with results satisfactory to both contracting parties.

The application of bilateralism is strongly opposed by multi-lateralists on the ground that it was already responsible for the war, and that, unless it is eliminated, it would lead to another world war. The contention that Germany's bilateralist system was responsible for the war is based on two arguments: (1) It was the contraction of world trade through bilateralism that gave rise to an aggressive spirit. (2) It was thanks to the raw materials gained by the "artificial" means of bilateral trade that Germany was able to rearm and to accumulate strategic reserves of raw materials.

The two arguments cancel each other out. If as a result of bilateralism Germany was able to import additional raw materials then it cannot be true that her aggressive spirit was due to a contraction of world trade. But in any case the assumption that bilateralism necessarily leads to a contraction of world trade is quite false. In the case of the countries of Central and South Eastern Europe during the 'thirties it produced the opposite effect. Owing to the fear that their foreign exchange reserves may decline below the safety limit, these countries would have cut down their imports to the utmost limit of possibility, had it not been for the arrangements that had enabled them to import without having to spend their foreign exchange resources. Rumania would not have dared to import Czechoslovak textiles if she did not know that no payment in foreign exchange would be expected. Hungary would have kept down her import of Rumanian oil if she had not been assured that payment would be accepted in Hungarian goods.

The same position prevails now more or less in Western Europe. The foreign exchange resources of most countries are depleted. Their requirements for vital imports for reconstruction are immense, and they are most anxious to reserve their foreign exchange resources for those requirements. Their Governments are naturally reluctant to authorise any imports of luxuries. Thanks to the bilateral payments agreements, however, this has now become practicable. Great Britain is safe in importing French wines and cosmetics, knowing that

the transaction does not involve any loss of foreign exchange. France, in turn, is safe in importing British high-class textiles, in the knowledge that no foreign exchange is sacrificed. The luxury trades of both countries are therefore in a position to resume exporting much earlier than they would be under a multi-lateral system.

Admittedly, the principle of bilateralism is not applied in the payments agreements with Western European countries to its full extent. It is subject to two limitations :—

(1) A maximum limit is fixed to the amount of sterling balances accepted by Western European countries in payment for their export surplus to this country, and a maximum limit is fixed to the amount of Western European balances accepted by this country in payment of British export surpluses.

(2) Sterling balances can be used not only in Great Britain but throughout the sterling area, franc balances can be used throughout the franc area, Belgian francs in the Congo, and Dutch guilders in the Dutch colonies. Thus bilateralism does not operate between two countries but between currency areas.

Notwithstanding these limitations, the adoption of the principle of bilateralism in Western Europe is of considerable importance. It does expand the sphere in which foreign trade can be transacted free of fears of foreign exchange difficulties. From a British point of view, the arrangement is, admittedly, not an unmixed blessing. The great advantage of the sterling area is precisely that highly industrialised Britain and mainly agricultural countries are complementary to each other. The admission of industrialised countries of Western Europe does tend to increase competition for the sterling area markets in manufactures. On the other hand, British exports gain access to French, Belgian and Dutch colonies.

Unfortunately, it seems that the advantages of bilateral trading will be purely temporary. If, as now appears probable, the terms of the Washington loan include the abandonment of bilateral and regional trading after five years, then bilateral trading will not be able to develop properly even during the permitted period of grace. Industries would be reluctant to carry out extensive conversion of their plants in order to be able to satisfy the requirements of markets which they are likely to lose once bilateral trading is terminated. One the other hand, the temporary existence of bilateral arrangements, condemned as they are to termination after five years, would tend to handicap trade with other countries. This country would thus tend to get the worst of both worlds.

There can be no doubt that on balance the countries of the Sterling Area will be worse off if the newly concluded payments agreements with Western European countries are discontinued. Under existing arrangements the continent is in a position to import the products of the British Empire, without having to fear that foreign exchange is diverted from more urgent requirements. In the absence of bilateral arrangements countries of Western Europe are likely to cut down their purchases not only in Great Britain but also in other sterling area countries.

Our Australian Letter

Farm Mechanisation—Marketing Australian Wool—Decentralisation of Industry.

November 20, 1945.

One of the most valuable wartime legacies to Australian agriculture is the New South Wales Farm Mechanisation Scheme. Introduced in June, 1943, as the only possible means of meeting the nation's demand for food production, it is finding increasing favour in both coastal and inland districts. By Government advances to dairy and other co-operative societies for the purchase of machinery for use on the community lines, the scheme enables the adoption of methods otherwise financially impossible for many Australian farmers. Such a service, it has been realised, has potentialities far beyond the purpose for which it was primarily designed.

"On July 2, 1944, there were 45 societies registered and operating under the scheme. Advances to these societies totalled more than Rs. 12 lakhs," states Mr. L. Judd, executive officer of the scheme, in a recent report. "On June 30, 1945, the figures had increased to 63 societies registered and operating, the amount advanced being Rs. 17,62,825. During this period a substantial increase in food production was brought about as the result of extension in the acreage cultivated, which included large areas that had not been cultivated for a considerable time previously. Although majority of the societies are located on the coast, inquiries are now being received in increasing numbers from inland areas, these being mostly concerned with water and fodder conservation."

Fodder conservation, that long-neglected need in Australian farming, has made a definite advance as a result of the operations of the scheme. In a seasonal report on the dairying industry, Mr. G. McGillivray, Chief of the Division of Dairying, writes: "Farm machinery pool schemes are at work on the Upper Hunter, sinking pits and filling them with surplus feed from the grazing paddocks. Orders for this work are coming in at a fast rate—so much so that available equipment may not be able to cope with the needs of the farmers. This is the first occasion on which conservation of surplus grazing feed has been undertaken on such a highly organised basis, and it is expected that it will have a far-reaching effect in stabilising production within the dairying industry."

What is claimed by the Australian Federal Minister for Commerce and Agriculture to be the country's largest commercial organisation, the Australian Wool Realisation Commission, will at the outset handle assets valued at about 100 million sterling. The Commonwealth Government's investment will be £40 million sterling.

The Realisation Plan was recently concluded between the Governments of the United Kingdom, Australia, New Zealand and South Africa, and personnel have now been announced. The commission succeeds the Central Wool Committee.

The organisation will supervise the entire procedure of marketing Australian wool, and will dispose of commencing stocks in conjunction with the marketing of current clips under a system designed to ensure price stability.

It will administer the policy of the four Empire Governments in regard to reserve price, and will buy growers' wool that does not bring the reserve prices at auction sales when they commence.

Until the auction system commences (it has been suspended during the war) the commission will administer the appraisal plan as has been done by the Cen-

tral Wool Committee throughout the war. The commission will take over all the assets and obligations of the Central Wool Committee.

Australian Government plans for decentralisation of industry are proceeding well. Already, every available country munitions factory in New South Wales has been taken over by private firms for civil production, and additional factories are being built, says the Premier of New South Wales (Mr. W. J. McKell).

Since 1941, 173 factories were established throughout the State, and of these 149 were in country areas. New country industries now employ 4,901 men and 5,700 women, with an annual payroll of Rs. 3,21,00,000.

Additional factories in course of erection will cost Rs. 6,42,000, and will go into immediate production.

Plywood manufacture at Grafton and Wingham (northern New South Wales) and production of ceramic ware at Mudgee, are among the most important of the new industries, but other goods made range from false teeth to footwear, wattle bark extraction to woolscouring and weaving, ad cuddle-seats to clothing.

Cuddle-seats are harness-like contraptions, inventions of an Australian mother as the simplest way of carrying a young child, and are being exported in large numbers to the United States.

FLUID TRANSMISSION GAVE DAIMLER A LEAD OF YEARS!

In 1930 the announcement of the perfected Daimler Fluid Transmission was motoring's biggest news. Now, in 1945, car manufacturers in other countries echo Daimler's lead by fitting and featuring this transmission. In other ways Daimlers have made history. England's Royal House has always favoured Daimler cars. Wartime's ruthless thrust-and-parry has seen Daimler Armoured Cars and Scouts ride the deserts of Africa and the roads to Berlin. Soon will come the peacetime Daimler, its fluted radiator proclaiming an owner for whom quality is a greater consideration than mere cost.

Editorial Notes

Seaborne Trade in August:

The August seaborne trade figures make satisfactory showing as it is the first month in the current financial year in which there is no adverse balance. Total imports were Rs. 21.17 crores against exports of Rs. 21.39 crores. There is an increase under both imports and exports, imports being Rs. 1.11 crores higher and exports Rs. 3.01 crores. With the easier shipping situation and the improving labour situation in Britain it has to be expected that imports will continue to increase and after sometime the tendency will be more pronounced. With the growing adverse balance of trade there was naturally great anxiety to stimulate Indian exports especially as it was feared that with the fate of sterling assets in the balance and their effective utilisation doubtful it was important that there should be no undue increase in the adverse balance. For this reason, the increase in the export trade in August is to be welcomed.

But if it is noted that the increase is only due to re-exports there is no reason for any great enthusiasm. Re-exports were as much Rs. 4.62 crores against Rs. 1.13 crores. So that it would be clear that Indian exports were actually smaller than in the previous month. The brisker re-export trade is possibly due to the anxiety of importing firms to take advantage of the improved conditions in neighbouring countries and to that extent the adverse balance is reduced. But it should be made sure that essential requirements are not sent out on profit motives and artificial conditions are kept up within the country.

The increase in imports was mainly due to the intake of oils of various kinds for an additional Rs. 2.48 crores. There was a decline under raw cotton, raw wool, drugs, chemicals and medicines. There was an increase in exports under tea and jute but cotton textiles dropped by Rs. 21.5 crores.

The unfavourable balance of trade for the first five months of the current financial year was Rs. 13.01 crores against a favourable balance of Rs. 11.05 crores for the corresponding period in 1944 and Rs. 38.82 crores in 1943. Total imports were Rs. 104.35 crores against Rs. 80.29 crores and exports Rs. 91.34 crores against Rs. 93.37 crores in the corresponding period in 1944. The increase in imports from Empire countries was Rs. 4.25 crores and from other countries Rs. 20.81 crores. Imports from Britain were higher by Rs. 5.63 crores while those from Kenya and Australia showed a decline. Canada's share was higher by Rs. 75 lakhs. The

increase in imports from foreign countries by Rs. 20.81 crores was mainly due to the United States. (Rs. 20.18 crores.) The British Empire has consumed less of Indian articles so that there was a drop of Rs. 11.43 crores in the export trade to these countries. It is satisfactory, however, to note that foreign countries have increased their share by Rs. 4.66 crores, the U.S.A. alone accounting for Rs. 3.34 crores. It remains to be seen whether the shrinkage in the trade to Egypt, South America and British Empire is only temporary.

Reconstruction in Travancore and Cochin:

The importance of planned reconstruction in the post war period is now recognised. The Government of India on the one hand and the Provinces on the other have plans both independent and co-ordinated for reconstruction of British India. The Indian States are not lagging behind. They have their own plans.

In a recent broadcast the Reconstruction Officer of Travancore gave the basic ideas of the reconstruction plans of Travancore and Cochin States as raising the standard of living of the common man and ensuring freedom from want. Revitalization of agriculture with a view to augmenting food resources, extension of irrigational facilities, planning and development of industries promotion of social services like medical aid, public health and education and development of communications are, therefore, some of the items included in the post war reconstruction scheme of these states. To augment the food resources of the state the area under cultivation is to be increased by reclamation of back waters, throwing open for cultivation suitable lands out of the reserve forests and what is more introducing intensive and improved methods of production and extension of irrigational facilities. The Travancore Fertilisers and Chemicals started with a capital of three crores is making good progress in the installation of plant and machinery for the production of fifty thousand tons of ammonium sulphate. A sum of nearly one crore of rupees has been set apart by the Travancore Government for the construction of the Perun Choni Reservoir, and for the restoration and improvement of major irrigation works. The Travancore Government have initiated a five year programme of development of the Pallivasal Hydro-Electric Project costing over Rs. 3 crores. The Travancore project now supplies electricity to Cochin. But Cochin has decided upon a programme of development of its power resources. Over 80 per cent of the total production of rubber in India is from Travancore. There is already a factory in the state manufacturing motor tyres. But this was supplying, so far, for war purposes. The production will now be turned over for civilian use. A cement factory to meet the demands of Travancore and adjoining areas will soon be established and steps are being taken to develop the Ceramic factory on a cottage industry basis. The establishment of a Rayon Industry will soon be an accomplished fact. Prominent among the industries sought to be developed in Cochin are those based on forest and fishery resources, sugar, cotton, textile, rope, paints and glass.

The aim of Cochin is to provide road communication so that every village group can be brought at least within half a mile from a main public road. The Road development programme of Travancore State in addition to connecting villages with

inspite of difficulties of getting building materials and machinery. The trust has a five year plan aiming at the development of neglected areas to relieve the land-hunger and congestion of Nagpur, the opening up of the communications to and from the heart of the city, removing slums and general improvement of the health and sanitation of the town.

The working programme of the trust in the immediate years falls under three divisions:—

(1) Ordinary town planning and development. (2) Sewage and drainage for Nagpur as a whole and (3) Housing.

If the plan is put into effect by 1949-50 about Rs. 50,00,000 will be spent on acquisition and a little over a crore on construction. The most important construction work will be the canalisation of the Nag river and the Phutalanala near their confluence. There are a number of nalas in Nagpur which are open sewers. The canalisation of the nalas forms part of the town sewage and drainage problem. The Panchpaoli housing accommodation scheme which will provide 2,250 model houses with modern amenities, mainly for the poor is an important housing scheme. An industrial basti is being developed on the southern side of the city to accommodate 7,500 industrial workmen. But the experience of Bustis in cities like Calcutta is not very happy. It is hoped that conditions will be different in Nagpur. There is a scheme to accommodate about 1,000 sites for middle class and 1,640 for poor classes in the eastern side of the city. The entire town is to be girdled by a green belt. When these plans are carried out it is expected that in the next few years a well-planned modern town will spring up.

Nurses' Education:

The propaganda done during war and the increased facilities for training and improved conditions of service offered have been an inducement for more and more Indian girls to take up the nursing profession. The progress of women's education, slow as it is and the growing spirit of individual independence among them have tended to weaken the prejudice against the profession and to emphasise its advantages. The work of such institutions as the Red Cross has also awakened the public to the opportunities for disinterested service the nursing profession affords. But inspite of these, lack of sufficient number of nurses continues to be the most serious handicap in the way of expansion of medical and public health facilities in India. This deficiency made itself acutely conspicuous during war. In his recent address at the Conference of the Trained Nurses Association, Sir Jogendra

Singh said that for the 51,000 hospital beds in the larger hospitals of the country there should be 17,000 nurses, if these hospitals were to be staffed according to standards obtaining in Western countries. The actual number of nurses employed is only 7,000. In the smaller hospitals, there is only one nurse to twenty beds. If the curative and preventive services in the villages were to be expanded and improved, the demand for qualified and trained nurses is bound to go up several fold. It is well that the Health Member recognises the vast need in this direction and it is learnt that the Government propose to take several steps calculated to attract enough numbers to the service. A Bill for the establishment of an All India Nursing Council is under preparation. Plans are being considered for starting an Indian School of Higher Nursing which might ultimately blossom into a College. Already a select number of nurses are given facilities for foreign training. These proposals when they materialise might go a long way towards improving the position, but only a complete overhaul in the attitude towards the service which is still far from conceding to the service a status equivalent to other professions such as teaching or medicine, can be a radical corrective.

Mineral Wealth of Rewa State:

A thorough mineral survey is an essential pre-requisite of any scheme of industrialisation. Realising this the Rewa Government has got the services of Sir C. S. Fox to visit the state and investigate the minerals of the state. In his report "The mineral resources of the Rewa state" Dr. Fox is impressed with the mineral wealth which appears to exist in the state. The examination of the coal despatched from Umaria to see whether by air-drying or even steam-drying superior coal cannot be obtained, encouraging the establishment of a big portland cement factory, a re-examination of the Purwa water falls on the Tons river to see what power can be got, an irrigation project below the confluence of the Son and Boras Rivers, a thermal power station in the Umaria coal-field, establishment of an up-to-date abrasive industry, starting of a pottery industry, a glass industry, a paint industry are some of the schemes recommended by Dr. Fox.

The most important of the pressing questions in planning to carry out the schemes enumerated is that of railway and road communication to what are now more or less inaccessible places, particularly in the rains or bad weather such as the central and middle eastern areas of Rewa State. It is, therefore, gratifying to note that the Government of Rewa has under consideration a comprehensive programme for development and expansion and the improvement of the various state departments.—Roads, buildings, irrigation, agriculture, education, public health, etc., leasing, working of the minerals and creating mineral industries in the state. A revision of the Rewa state mining rules is necessary to bring them up to date. The mineral wealth of the Rewa state appears to offer one of the most satisfactory means of finding funds to carry out other items of planned programme. The attractive mineral wealth has not been sufficiently well known. When Rewa is opened up it will offer a great opportunity for enterprise and for demobilised troops in the

immediate future. It will become an important territory for cheap electric power, both for thermal stations and also for hydro-electric prospects.

Joint Works Committees:

The French Provisional Government which functioned during the early weeks of this year have been responsible for introducing a novel institution in industrial organisation. By an order dated 22nd February, it was made compulsory for every commercial and industrial undertaking employing more than 100 persons to set up Joint Works Committees. The scope of this order might be extended to undertakings employing less than 100 workers, as also government departments and the liberal professions, through Decrees issued by the Minister of Labour and Industrial Production. Each Committee is to consist of the head of the undertaking or his representative who will preside at meetings and from five to eight representatives elected from among the workers. Though all workers are eligible for vote in the election of the workers' representatives, the representatives themselves are elected from a smaller panel drawn up by the most representative trade unions for each class of worker. The workers' representatives will be chosen from the different classes of workers. Elections are by ballot. There is also provision for the election of deputy members. The head of the undertaking must allow the workers members time necessary for the performance of their functions up to fifteen hours a month and this time must be paid for. The main function of these committees is the management of all social welfare schemes set up in the undertaking for the benefit of the workers and their families; they can also suggest new lines of activities in welfare work and should cooperate with the management in a consultative capacity, in the improvement of the general working and living conditions of the staff. Wages are excluded from the purview of the committees. The management is also obliged to supply the committee once a year with certain information regarding the organisation, management and general progress of the undertaking. In larger concerns employing more than 500 persons and all joint stock firms, the committees are also given certain powers in the selection of auditors and in the scrutiny of accounts. Though wages are outside the scope of these committees, the habit of cooperation between the management and labour which the institution engenders will be found to be of immense assistance in smoothening differences, if they could not be prevented. The workers will imbibe a greater sense of responsibility to which firsthand knowledge of the problems of management is a useful aid. It has to be seen to what extent the incidence of labour disputes could be reduced, as an indirect result of this innovation.

Iran:

Recent events in Iran bear a close resemblance to the post-war internal conflagrations in several countries in Asia and Europe. There might be the germs of conflict in internal politics but the context and complexion of its manifestation show that more than purely national issues are involved. Russia, Britain and

America had to get their military forces into Iran for strategic reasons; but before Iran admitted these forces she was given the assurance that they would be withdrawn within six months of the cessation of hostilities. There was an unmistakable reluctance on the part of each of these powers to fulfil the latter condition. This reluctance could be explained only on ground of mutual suspicion rather than on any desire to encroach on Iranian independence which was for a long time limited by the presence of formidable foreign economic interests. The revolt in Azarbaijan helped only to exacerbate feelings on every side. The Government of Iran, though taking a cautious attitude, could not help feeling that it was a move engineered by the Soviets. Charges of Soviet interference with Iranian troop movements, to the North have been denied; but the latest statement from Russia that Moscow regards with considerable sympathy the demands for autonomy set out by Persian Azarbaijan would only inflame the situation further. With a large Russian force massed within and near the borders of Iran, such unequivocal expressions of sympathy with the separatists' cause might provoke developments which Russia herself might not quite relish. On the same day that Russia avowed her sympathy with the rebel forces, the United States Government has proposed to Moscow and London that all foreign troops should withdraw from Persia before the end of the year. This note strikes a departure from the hush-hush declarations that have been coming from the United States till now. To imagine that Iran would be permitted to become the nucleus and starting point for a larger struggle would be to exaggerate the importance of the local differences among the Big Three. But that Iran has created yet another sore in the international body politic should not be overlooked.

Civil Aviation:

According to News-reports, the Government of India are contemplating the construction of 114 new aerodromes. There are already 77 aerodromes in India; there were 30 before the war to which 47 were added for defence purposes. When the new aerodromes are also finished the total comes to 191. The States may have their own quota to add. Such a large number of aerodromes might become necessary for a vast country like India, when it attains full industrial development. But in the immediate future there is little prospect of such a rapid development. Under conditions obtaining to-day many of these aerodromes will have either to starve or be having some nominal use. The construction of these aerodromes might absorb a few thousands of workers for a few months but this expenditure is one for which priority could be justified on no other ground. It is likely to be a large waste of public funds. Aerodromes are getting rather out of date even for military strategy. The circumstance that the Government have no immediate scheme on hand for the manufacture of aeroplanes in India provides a more serious objection to the present proposals. It looks like yet another of those insidious moves designed to dump foreign goods on India and in this particular case it is a type of goods which is not only not essential for our economy but is likely to prove a source of recurrent waste.

Clube Street Gossip

It is a common topic of conversation of late that the end of the war has not meant the end of the privations of the war period. For the average man, it is somewhat difficult to reconcile himself to the continuance of these scarcities and the denials well into the post-war months. The reasons of course are well understood. But it is felt that, even if there should be difficulty in restoring the comforts and luxuries of life to pre-war standards, at least in regard to the necessities there ought to be a sufficiency of supplies. This feeling is most acute in regard to rice, which is the staple food of by far the bigger part of India's population. Though it is well-known by now that, even in the pre-war period, there were large sections of the population who did not have a full meal, the idea that rice could be in shortage even for those who are possessed of the requisite purchasing power is something which Indians find it hard to swallow. The scarcity of rice during the war period all over the country and the disastrous famine in Bengal in particular have, far from familiarising the public with the idea of scarcity, actually induced the notion that, if human will and State policy count for anything, such a scarcity will never arise again. That feeling stands to reason in a country in which all the requisites of rice production in adequate quantities are undeniably present within its own borders. Hence the peculiar sense of grievance and resentment which the average man feels whenever he hears the rice problem being talked as if the war were not over and the scarcity has come on us all of a sudden like a bolt from the blue.

While this is true of India as a whole, in the case of Bengal there are other factors for the annoyance and exasperation of the public. Discussions in the press since the last Bengal famine have been conducted against the background of fear that the recurrence of famine is not to be ruled out completely. It is not easy for a public which has passed through the nightmare of an acute and widespread famine so soon to live down its fears completely. The failure to do so has also been helped by the absence of a real improvement in rice stocks. Vagaries of the weather, with late and ill-timed rains, cause the Press to play up, as the phrase goes, the stories of disheartening crop prospects. The press was naturally accused of crying, "wolf." I do not know whether, before the Bengal famine occurred, such cries were raised and dismissed as savouring of scaremongering. But between crying "wolf" and letting the dread animal come on us as a surprise, the former, I am sure, is the lesser evil, though in this particular case a scare about shortage is more likely to defeat its purpose by encouraging hoarding and aggravating all the adverse features of the situation.

If the press on the one hand has exposed itself to the charge of painting the picture in somewhat sombre colours, the Government too might be deemed guilty of shouting before we were out of the wood. Indeed, optimism in official circles was running so high that actually Bengal was exporting rice to other countries when her

own rice bowl was none too full. That this optimism was proved to be false is a circumstance that will certainly weigh with the public at large. It is perhaps to be expected that estimates in regard to stocks, crops and consumption should very often prove to be wide off the mark. For instance, deterioration in rice stocks is a factor which cannot be accurately reckoned, since it is the function of a number of unknown factors, of which the efficiency of a large organisation in its lowest ranks is by no means the least important. In any case, it was clear some time ago that, without appreciable imports of rice from outside Bengal, the position would become more or less serious. It is welcome news that imports from Burma have been arranged for. Indeed, I have with me an invitation to witness the unloading of Burma rice at the Calcutta docks. And the purpose of the invitation presumably is to dispel the last shred of suspicion in the public mind that supplies of rice may not be adequate.

The special efforts to secure imports from Burma are only to be expected. Considering the furore that was caused over the Bengal famine by sensitive minds abroad, Whitehall or Delhi can ill afford another disaster of that kind to come over any part of India. While I welcome these special efforts and share in the gratification at their success, I feel bound to say that the relief which was so laboriously sought on the other side of the Bay could have been secured much nearer home. The rice position was so far from being reassuring that it is no matter for surprise that Mr. Hutchings has paid a flying visit to Burma and, perhaps, to Siam as well. Burma or Siam is not so well placed after the Japanese occupation that Mr. Hutchings could have found it an easy matter to complete his task of procurement of rice. All of which, I say, enhances the importance of exploiting domestic resources to the fullest extent before putting out one's hand to others.

It was only last week I was engaged in an economic survey of some of the States in the Eastern India group, in which what struck me forcibly was the fact that Mr. Hutchings would have more profitably undertaken trips to States like Patna and Sonapur in his quest for surplus rice. I

grant, the journey is by no means as pleasant or speedy as the flight in a bomber to Rangoon. One has to travel quite a good bit on the B.N.R. and wait quite a long time for a connecting train. After reaching the branch terminus, you will have to undertake the crossing of the Mahanadi by boat. Thereafter, unless you have been careful to make some special arrangements previously you will have to jostle with a huge crowd in an uncomfortable bus. The pre-arranging of a special car is not however so difficult. Even so, the journey of 80 and odd miles may be pretty trying as it is not all rivulets that have bridges. The roads are wellnigh shocking. Altogether, you are happier when you have finished the journey and reached the destination. I am emphasising the difficulties of travel in these two States, as it seems to me that these are the reasons why the full possibilities of these States for feeding Bengal, and other deficit areas are not yet fully explored. I conducted a fairly detailed investigation into the agricultural conditions of the Patna and Sonapur States

As elsewhere in India, no regular statistics are available; but the conclusion is not less reliable for that reason that plenty of rice, and rice of good, if not high, quality, is available in these regions.

Both the States I have mentioned have, as a rule, an early harvest. By the third week of November, more than 50 per cent. of the paddy crop is harvested and the rest of the crop is ready for the sickle. I am not much of a judge about the condition of crops; but the colleagues who were with me were able to estimate the outturn per acre in the neighbourhood of 30 mds. I was also told that this outturn is considered quite satisfactory in relation to rice production in other parts of India. I was told by the Maharajkumar who was with me that the yield this year could not be considered the best in relation to Sonapur's norm. By the middle of December, the rice crop in Patna and Sonapur will have been completely harvested.

If the quantity and quality of the rice available in the States is satisfactory, the

price should be deemed even more so. The present price of rice in the States is Rs. 6 per maund; and in some places it is even lower. When the full weight of the harvested crop comes on the market, there is a likelihood of the price coming down to Rs. 5 per maund or thereabout. Here is Bengal clamouring for rice and prepared to pay as much as Rs. 12 per maund and ready to pay even higher prices for good qualities! Yet a few hundred miles away, rice seems to be in superabundant supply, almost a drug at Rs. 5 per maund.

It might be thought that there must be some miscalculation behind the notion that the surplus of rice in two small States like Patna and Sonapur could come to the rescue of the tens of millions of people in Bengal. It is true, as I have said, already, that statistics were not available. But to me the estimate of the surplus in these States had a two fold purpose. I had to find out the quantum of surplus which, for want of remunerative outlet, was weighing down prices and making the agriculturists poorer than they need be. And I was also interested to know the extent to which this surplus could relieve the scarcity in Bengal, so that the export from these States could be twice-blessed. Confronted by the absence of statistics, I have been naturally more searching in my queries and more than usually careful in the choice of persons to whom I addressed them. It would not be easy to detail here all the precautions I took to ensure that the ultimate findings would be reasonably reliable. Suffice it to say that, on the testimony of people competent to judge, the surplus must be of the order of 3,00,000 maunds in Sonapur and in Patna 2,00,000 maunds. This surplus is in terms of rice and not of paddy. The State authorities will only be too glad to undertake to supply these quantities as the presence of this surplus militates against any betterment in the conditions of the agriculturists. Here then are two States between whom as much as half a million maunds of rice could be procured, and who would be benefited by this "sacrifice."

I do not suggest that this rice can be purchased at anything like 5 or Rs. 6 per maund. The moment large scale purchases are started by the State, the price is bound to shoot up. Even allowing for this, the States must be able to offer large quantities of rice at an average price below Rs. 10. This is a fair price for quality rice. If the price of rice in the States should rise as a result of the removal of the surplus, you may be sure that this

will provide a powerful incentive to growers to produce more next year. In other words, the surplus from these areas will be far bigger by the very fact of this year's surplus being taken away.

As things are, the acquisition of the States' surplus by Bengal is not as simple a matter as one would suppose from the need of the States to dispose of the surplus or the need of this Province to make good its deficit. As I understand the situation, the States have first to notify their surplus to the Political Agent. He takes his time studying and correlating the figures received from the various authorities. In due course, he communicates his views to the Government of India in the Political Department. That Department, I suppose, must take its own time to communicate with the Food Department. The Food Department may be again leisurely correlating these figures with the requirements of the Provinces. And then will ensue the consultations of the Government of India with Bengal. This conformity to constitutional form or administrative routine will of course pay little heed to the evil effects of scarcity in Bengal or plenty in the States. And when time is lost, the situation is altered for the worse. I suggest that there should be quicker and more effective ways of getting rice from surplus areas to deficit areas. Neither inter-Provincial red-tapism nor red-tapism between British India and the Indian States must be allowed to delay the quick movement of much-needed rice. The spectacle of India having to beg from countries like Burma and Siam is not edifying. If it is proved that large surpluses are available within the country and that such surpluses are not being utilised just because Government machinery works neither surely nor speedily, it will be a matter for all-round regret. Today the crisis may have been tided over by frantic appeals at the last moment to Burma. But it is extremely unsatisfactory that we should be obliged to take the rice bowl again and again to other countries. If the war has taught us anything, it is the folly of neglecting our own resources and resting precariously on outside help. Alike in the long view and the short, more attention needs to be paid to the resources of areas adjacent to Bengal.

(From Our Correspondent)

NEW DELHI, Nov. 28.

Public Health has been much in the news during the week. His Excellency the Viceroy stated at Gwalior that India was preparing expensive schemes for attack on a broad front against malnutrition and ill-health. The Provincial Directors of Public Health met in a four-day conference in New Delhi to consider raising the existing standards of medical facilities and public health measures. It is a matter for satisfaction that the health of the individual in the scheme of national economy is receiving increasing recognition. It used to be said that the Government of India regarded citizens of the country only in the mass as consumers of salt or kerosene or frequently as the victims of epidemics and disease. The hospitals in the towns, the few of them that are there, were out of reach of vast numbers of the rural population. Medical facilities were absent and unknown in the villages where seventy per cent of the population live. Thanks to the public health consciousness which the Government of India have commendably developed in recent years, we may see our villages made safe for healthy living. The establishment of rural dispensaries and mobile hospital units has been planned in our reconstruction schemes. How long they will take to become accomplished facts it is difficult to say, but the urgency of the problem ought to be apparent to all. For instance, even now, said the Director General of the Indian Medical Service, we do not know the size of the problem of tuberculosis in India; we only know that at least 5,00,000 people die of it every year. Provision of medical facilities may therefore be regarded as an insurance to preserve the citizen's earning capacity and thus the individual's contribution to national wealth. The Bhoré Committee, which was entrusted with the investigation of the problem of the improvement of the public health of the country does not appear to have yet completed its report, but when it is we may expect that the whole problem will have been dealt with comprehensively, including the steps to be taken to provide adequate facilities by way of health services and prevention of disease.

The Famine Commission have dealt with the problem of promoting the nutritional standards of the people and the Food Department has been tackling it although only in a small way and in an uncoordinated and disjointed manner which may not yield any substantial results in the immediate years ahead. However, a beginning has been made and with drive and initiative, the campaign could be made more pronounced and with promise of better results.

A conference of much significance to the Provincial Governments, namely the annual meeting of the Central Board of Irrigation, was inaugurated yesterday by His Excellency the Viceroy. Apart from technical and administrative matters, the meeting will discuss methods for the determination of a standard of productivity for irrigation and hydro-electro projects. The conference is expected to last a week and I hope to review its work in my next week's letter.

Figures relating to the foreign trade of India in the five months of the financial

year are now available. Although the accounts relate to a period when the war was still on, certain pronounced trends and tendencies are discernible which subsequent months will doubtless exhibit more markedly. Imports of foreign merchandise are registering a steady increase over the two previous years; for the corresponding period in the year 1943 the imports were of the value of Rs. 43.18 crores; for the same period in 1944, they were Rs. 80.29 crores, while in the current year they advanced to Rs. 104.34 crores. Most items of imported goods, some to a slight extent and others in a marked degree, share in this increase. Substantial increases are recorded in the imports of oils, vegetable, mineral and animal, dyes and colours, electrical goods and apparatus, machinery of all kinds (which from Rs. 4.18 crores in 1943 and Rs. 5.89 in 1944, increased to Rs. 8.62 crores in the current five months period), metals and paper.

The countries which have notably shared in the increase in our imports are, among Empire countries the United Kingdom, Australia which has become an important source of supply, Kenya Colony and Canada. The United States of America has been the largest supplier, the value of merchandise imported therefrom in the five months period April to August 1945 being as much as Rs. 35.08 crores as against only Rs. 20.86 crores from Britain. Even Iran has accounted for as much as Rs. 22.58 crores in the same period.

Compared to the imports, the export trade displays certain features no less clear though contrary. Exports in the five months period have declined by about

Rs. 7 crores over last year, the total figures being Rs. 48.19 crores as against Rs. 91.01 crores in the previous year. The large demand for consumer goods and capital goods, the sterling credits accumulated by India which will be sought to be liquidated in degrees by payments in goods and services, will lead to larger imports and conceivably to a heavy adverse balance in merchandise trade not only in the coming months but in the coming years. It is the reverse of the process which before the war we in India had to perform. We were a debtor nation and we had to discharge our annual liabilities by exporting our goods and naturally these always, generally speaking, exceeded our imports.

Gateway of India

Bombay, Nov. 27.

In a very timely interview to the press, Dr. John Matthai stated that the outlook for the steel industry in India is reasonably good, at least for the next five years. This conclusion from one who is both a great economist and is also closely associated with the Tata Iron & Steel Company has naturally gone far to reassure those doubting Thomases who are inclined to view the future for Indian industry with misgiving: the Bombay Stock Exchange at any rate, accorded a warm reception to Dr. Matthai's statement and steel shares witnessed a flare-up in prices. It was gratifying to hear that the steel industry is rapidly taking steps to switch over from war production to peace needs. He did not underrate the difficulties in the way of return to normality not to say expansion, but that phase is bound to be over in a short time. A doubling of India's steel production from 15 to 30 lakhs tons is on the cards as a result of post-war plans. The normal demand for steel which has been in abeyance during the war years and the new demand rising from post-war plans may together be expected to keep the steel industry not only in India but all over the world fully engaged for some time. In the interregnum between the end of war production and the normal flow of peace needs, a decline in prices may occur and Dr. Matthai gave his reasons for the possible temporary decline in prices. Firstly, it takes time to organise replacements and extension of existing industries; and secondly, one has always to make allowance for the common tendency of purchasers to hold off the market for a time in the hope of being able to place their orders at reduced prices. But anything like a real slump is entirely out of the question. The public should not expect any large decline in prices since the great increase in the cost of coal and labour which the war has brought about militates against lower prices. Indeed, unless these two factors in the price structure return to normal as early as possible, the Indian steel industry will find itself at a serious disadvantage with foreign steel in the event of competition. Coal might make or mar the future of our industry and sufficient and cheap coal mining would go far to enable our industries to carry on with a price structure that facilitates standing well up to competition.

Mr. Norman Neville, who has just concluded a tour of India investigating, on behalf of the British Chemical Plant Manufacturers' Association, the possible machinery requirements of India, refuted the impression that the U.K. was not in a position to give reasonable deliveries of capital equipment. He gave a clear picture of the position in this respect and has made some suggestions which those who place orders in Britain for capital equipment might usefully remember. Now that the prospects of obtaining dollar exchange and importing plant from America are as remote as ever, India perforce has to rely on Britain to supply capital goods. In fact, Indian orders on the order books of British manufacturers are considerable and it will take some time for the latter to get through the backlog. Mr. Neville pleaded for an

orderly flow of orders from India and hoped that the Planning Department would iron out the load on the British capital goods industry over a period of time. He mentioned the difficulties, such as shortage of labour and of raw materials in the U.K. which prevent production from getting into full swing; but it would also appear that in a matter of months or so, the Indian orders will be executed. Exports are given the highest priority, particularly exports to India. Indian industrialists are cautioned against wasting time in mere enquiries. Mr. Neville stated that a large proportion of enquiries from India often appeared to be made without serious intent; and even in cases where quotations have been given and accepted, it was often noticed that the buyers had failed to apply for registration under the capital goods registration scheme, thereby wasting much valuable time. Indian capital equipment requirements are of two kinds—complete unit process or equipments for factories, and individual items of equipment (spare parts, etc.). Owing to the shortage of specialists, of drawing and designing personnel, complete plants are, it seems, difficult to provide for some time; and India may have to be content with obtaining the individual items of capital equipment. Mr. Neville made no reference to prices, which is rather significant as our industrialists in their recent tour were of the view that they were rather too high for Indian industries to go in for capital equipment. Apparently, if India wants plant, she cannot afford to put too fine a point on the capital to be spent on block; and if we are beggars for capital equipment, as we assuredly are, we cannot be choosers. It is, however, to be hoped that the capital equipment that Britain may spare for India will not be a sort of gift horse which India cannot look in the mouth.

In this connection, importers of machinery welcome the decision of Delhi to authorise the Deputy Chief Controller of Imports at Bombay to issue the necessary licenses. The interval between an application for registration of capital goods requirements and the grant of an import license for the same will be reduced. Also, acceptance of registrations automatically confers the right to an import license. Further, such registration is necessary only if the value of any of the units to be imported is over Rs. 25,000. This means that the small items can be imported without much red-tape coming in.

Land is to be the first venue of absorption of the demobilised servicemen in Bombay and the provincial government is framing the necessary legislation by which the returning soldier will have first option on all agricultural land offered for outright sale or on short term lease. A Governor's Act will soon be promulgated which will include provision for the setting up of District Boards to which landholders should notify any decision to sell or lease their land. Such Boards will purchase the plots offered, with loans made by themselves or from funds put up by the soldier. A special officer has been posted in each of the main districts to promote resettlement. They are also to see that the returned serviceman is not ignored in the reconstruction projects. Doubts are entertained about the success of the scheme and it is thought that the

serviceman might not be capable of that patience, sustained effort and the proper attitude which alone can ensure success for the experiment of settling the soldier on the soil. Furthermore, unless land values take a downward trend (which seems unlikely in view of the continuing inflation) it is very improbable that there will be sales of land; on the other hand, land is very frequently a venue of investment even at these inflated levels. The prospect of obtaining good cultivable land is not therefore very bright.

One has frequently heard of the complaint that exports of textiles are being permitted from India (in however small a volume) at a time of acute shortage within the country. It is an axiom of faith with such critics of our export policy that the Indian textile industry need only concentrate on the internal market and not bother about foreign markets. Sir Victor Sassoon belongs to the opposite school of thought. He would have India take advantage of the existing conditions of cloth shortage in other countries to build up an export trade of large dimensions, even though such a course might necessitate imports of textiles into India. He says that it is very much easier to stop imports whenever necessary than to find an export market, since you cannot create an export market when you want it once the present opportunity is missed. Our foreign trade position could certainly do with a more vigorous export trade, but it is highly doubtful whether Sir Victor's suggestion would commend itself to the consumer in India suffering from acute shortage of supplies. Moreover, imports of foreign cloth (if at all anybody can spare much) are likely to be definitely costlier than the internal production. A compromise view would be for India to export textiles of the sort turned out by the handloom industry which has greatly improved its technique during the war years and import such items only as would be ordinarily beyond the capacity of the Indian mills, who have to concentrate on qualities of cloth required by the average consumer. Imports might bless him that gives and him that takes, but to talk of imports of foreign cloth at the moment is to provoke the suspicions of the indigenous industry.

(From Our Correspondent).

Karachi, November 22.

The forthcoming general election is still the dominating topic of discussion in Karachi. It was at one time thought that Sind was one of the strongholds of the Hindu Mahasabha. That illusion has been dispelled by the decisive swing of popular opinion in favour of the Congress. The Congress party intends contesting almost all the general Hindu seats for the Sind Assembly. Seven to eight seats are going almost uncontested in favour of the Congress. For the one Hindu seat in the Central Assembly, the Congress party scored an initial success by having an uncontested return of its nominee, Seth Sukhdev Udhaydas, in whose favour two other contestants withdrew. If Congress party is able to capture seventeen to eighteen seats, then the chances of a League Ministry functioning in Sind can be ruled out completely. The Congress would make an alliance with Nationalist Muslims to instal a non-communal Ministry. At the present moment, the League is split into two camps. Mr. G. M. Syed, who heads the revolt against Mr. Jinnah has been threatened with disciplinary action. If he is expelled from the League, he will put forth his own candidates against the nominees of the League High Command and is likely to come out triumphant in the trial of strength. For the Central Assembly election too, the sitting member, Mr. Yusuf, who has been given the League ticket is being opposed by Mr. Ali Mahomed Rashidi and one cannot forecast who will win ultimately.

In the post-war scheme, high priority was accorded to the direct railway link between Karachi and Bombay. The line will be broad gauge and will link Hyderabad with Badin and thence connect Ahmedabad. The journey from Karachi to Bombay will not take more than twenty-four hours. Work on this is expected to begin almost immediately. Expecting severe competition in their passenger traffic, some of the shipping companies propose to put into operation boats with high cruising speeds, which will cover the distance from Karachi to Bombay in about the same time as the proposed railway route. As a result of the proposed railway project, the highway connecting Hyderabad with Ahmedabad will be abandoned. But the Sind-Baluchistan "National Trail" from Karachi to Quetta is expected to be taken up by the Central P.W.D., who will begin a survey of the 500-mile route early next month. The road is expected to cost Rs. 2 crores and will be completed within three years. The road is expected to be twelve feet wide and will bring the hill station of Mustang, the capital of Kalat, within easy accessibility of Karachi.

The sterilising of lentils and foodgrains of Karachi, prior to export abroad is understood to have been agreed upon by local exporters, at the instance of Mr. Ahuja, the India Government's Trade Commissioner in Canada. It is learnt that Mr. Ahuja pointed out, in a communication, that the loss from infestation in shipments of foodgrain from India was far heavier than similar shipments from other countries to Canada. Fumigation at the source has been agreed upon, and arrangements are being made accordingly.

The Indus water dispute regarding the distribution of water between the Punjab and Sind has now been settled between the engineers of the two provinces, subject to

the satisfactory settlement of the financial issue. The agreement arrived at contemplates the distribution of water of the Indus between Sind and the Punjab during the khariff and the rabi seasons and is intended to replace previous arrangements and sanctions. Even the distribution of water for future projects is within the scope of the agreement. With regard to the financial issue, it is understood that both the Governments have agreed to refer it to an independent Committee. The composition, scope and terms of reference of the Committee are yet to be mutually decided.

The Karachi Municipal Corporation is expected to take over the East India Tramway Company's tramway service with effect from April 9, 1946. The Corporation has served on the East India Tramway Company the requisite notice of six months under the Tramways' Act. It is however learnt that the Tramway Company has raised the question of whether their buses and accessories come within the terms and whether in the event of purchase price not being paid on the date stipulated, the Company could carry on the concern on behalf of the Corporation.

During the coming year, Sind's surplus rice will be sent to South India, while Bengal will be provided from other surplus areas in India, besides rice imports to the extent of 161,000 tons, according to the khariff procurement and distribution plan decided upon by the government of India. It is learnt that the Food Department has requested the provincial government to carry out the procurement and distribution scheme expeditiously so that neither Bengal nor other parts of South India would be faced with a food crisis similar to the one last time which cost so many lives. The need for proper facilities for transport of the food grains by the quickest method is being emphasised and in view of past complaints, storage arrangements are also expected to be improved.

With the end of war, there is a regular race between foreign companies to capture the field of commercial aviation. British, American, Dutch and French companies are vying with one another in the international skyway and Karachi being the aerial gateway of India, one comes across planes

(Continued on page 953).

Tea and Industrial Output

Few matters have received such detailed attention since the war began as the efficiency of industrial production. In India the problem has been greater than in most other countries because, to meet the basic needs of the fighting forces, a great new industry has had to be created without the help of either a large machine tool industry or a large mass of skilled labour accustomed to factory conditions.

That tea—India's own product—has played a valuable part in achieving unprecedented output figures is a matter for no small satisfaction. The part that tea has played—is playing, and will continue to play—is to promote concentration. In the old days it was accepted throughout the world, as an unavoidable fact that output would fall towards the end of a working shift. Today this is no longer accepted, because it has been proved over and over again that tea served to the workers on the job renews concentration and flagging energies with the result that output remains at its peak level right to the end of the shift.

To those interested in this subject much valuable advice and assistance will be gladly given by the Indian Tea Market Expansion Board, 101, Clive Street, Calcutta.

South India

(From Our Correspondent)

Madras, November 27.

It is understood that the Laboratories of Fermentation Technology, in the Institute of Science, Bangalore have evolved a standardised process for the preparation of compressed yeast on a commercial scale. There was till now no compressed yeast industry in India, in spite of the availability of abundant raw material for the industry. It is highly desirable that Fermentation Technologists should be trained at the Indian Institute to handle the industry, and their services would be a great contribution to the health of the rice-eating South Indians who often suffer from the deficiency diseases due to lack of vitamin (B) in their diet.

During his short stay in Bangalore Sir Edward Benthall, Member for War Transport, Government of India, visited the Hindustan Aircraft Factory and examined the scope and possibilities of assistance to the Factory from his Department. The manufacture of Railway coaches was one of the many directions in which the factory could expand. It is gathered that representations were made to the Transport Member at Mysore by the authorities for allotment of locomotives for Mysore, which needed them badly. In this respect Sir Edward assured them of his best consideration.

Addressing the annual general meeting of the Travancore Chamber of Commerce Mr. D. S. Thompson, Chairman declared that the Government have seriously considered the question of relaxation of controls which had hampered their progress during the last six years. Reviewing the economic conditions in the State during the war period and referring to the particular problems facing Travancore State, he congratulated the Government for the energetic steps taken at the moment of crisis. Emphasising the importance of coconut industry in Travancore, Mr. Thompson remarked that as the Government of Travancore were participating in the Indian Coconut Committee, it is possible that no action would be taken by the Government of India without prior consultation with the Travancore Government. The general industrial policy of the Government had made the people increasingly industrial and commercial minded. He called the attention of the Government to the necessity for the adoption of suitable measures for the promotion of the export trade of the country. He thanked the Government for the active pursuit of a programme of agricultural development with a view to making Travancore self-sufficient in the matter of food.

Referring to the demand of State subjects to use water from Cauvery for irrigational purpose, the Pudukottah State Council assured the members that the Durbar were evincing as keen an interest in taking early steps in consultation with the Madras Government to bring the scheme to fruition. The State's ryots were prepared to contribute their just share of the cost involved. The new scheme might bring 20 to 25 thousand acres under cultivation.

Mr. Grahame Williamson, animal, husbandry Commissioner, during a visit to Madras made a strong plea for the co-operation of village breeders in livestock breeding. No improvement in the quality of the cattle will compensate the present grave loss caused by contagious diseases. He said that the Madras Province is in a position to produce all the vaccines needed. One of

the main obstacles to progress is the shortage of trained staff. Arrangements had been made to enlarge the Madras Veterinary College. But it is essential he said, that a very large number of students would have to be trained to meet the requirements in the initial stages.

It is recorded that the Revenues of the Madras Government have increased as compared with the revenues in the previous year. The chief items of increase are Excise and General Sales tax. Receipts under Entertainments Tax and Motor Spirit Taxation Act have also increased. The increase in land revenue is due to the extension in area under cultivation as a result of the Grow More Food Campaign and the enhancement of Education Cess in many districts.

The Southern Army Joint Civil-Military Food Stuffs Co-ordination Committee which met at the Madras Secretariat discussed the question of fresh supplies for the military in the Southern Command area. The meeting was attended by representatives of the provinces, Food Department of the Government of India and most of the State governments in the area. Mr. Dixon who represented the Madras Government expressed his appreciation of the useful work of the organisation.

It is learned that the Government of India have appointed a committee to enquire into the system of forced labour in this country. It is a feature in certain areas in British India where agricultural labourers are compelled to work often without payment of wages.

THE ALUMINIUM CORPORATION OF INDIA LTD.

NOTICE is hereby given that the Seventh Ordinary General Meeting of the Shareholders of the Corporation will be held at the Registered Office of the Corporation at 9, Clive Street, Calcutta of Friday, the 14th December, 1945 at 12-30 P.M. (Bengal Time) for the following purposes.

- (1) To receive and pass the Directors' Report and the Audited Accounts for the year ended 31st March, 1945.
- (2) To elect Directors in place of Messrs. Nirmal Kumar Jain, Dayaram Poddar and Rao Bahadur Jivatlal Puratapshi, the Directors retiring by election.
- (3) To elect Auditors and to fix their remuneration.
- (4) To transact any other business that may be brought forward.

The Share Transfer Registers of the Corporation will remain closed from the 7th to the 14th December 1945, both days inclusive.

By Order of the Board,

A Resume of Commodity Markets

The feature of the week is the strength of bullion and cotton markets. In the bullion market gold prices especially had been marked substantially higher with the tussle between bull and bear operators. The raw cotton market has been very firm as Karachi advices were higher and offtake in the ready market was more than arrivals. But for the announcement by the Government that they intend to dispose of all their stocks of cotton in the spot market, the rise in prices would have been more pronounced. There is nothing of importance in either the jute or jute manufactures markets.

While business in the raw jute market is on a restricted scale and mills have been buying only sparingly, there is considerable speculation regarding the policy of the Government about minimum prices for the next season. It is stated that the uncertainty regarding the developments in the next season has prevented any large buying though it should be said that the immediate problem is the absence of any large business in the jute manufactures market and difficulties in regard to godown space. It is also stated that dealers are now prepared to sell stocks from the current crop as hedge against the 1946 crop at minimum prices. Mills are not prepared to take any interest at this stage, pending an improvement in the outlook and the decision of the Government about the size of the crop for the next season. While there is a feeling that prices for the 1946 crop might be slightly lower, the new Government that will come into being after the elections might possibly oppose any great reduction in prices. A general revival in activity in the raw jute market, therefore, is dependent on the improvement in the shipping space and an increase in the offtake from mills. The de-requisitioning of mills early in the new year might also be a helpful factor.

In the jute manufactures market there is nothing of importance to report. On month-end covering, prices have recovered to a certain extent in the hessian market. Earlier in the week there was some speculative activity and mills were not free sellers for ready positions.

The raw cotton market has been rather steady and a substantial increase in prices has been reported. Until Tuesday this week, the upward trend was uninterrupted, Jharilla January being marked as high as Rs. 420 against Rs. 402 last week and March Rs. 425 against Rs. 405. After Wednesday, a slightly easier feeling was in evidence on the announcement by the Government that they intended to dispose of all their stocks of cotton in the open market. The firmer tendency in recent weeks is due to the smaller arrivals of raw cotton and further fresh buying by mills. The decision of the Government to dispose of their holdings of cotton in the present market is perhaps well-timed as it is felt that until the new year arrivals from upcountry centres will be behind mill consumption and that a steady level of prices will be ensured. Report from overseas countries also have been encouraging as Lancashire mills are experiencing a shortage of American styles and with the dollar scarcity, it will not be possible to import large quantities from the United States. There may thus be a revival in Indian exports to Britain sooner than expected. The reports by the various Indian Trade Commissioners abroad have also struck an optimistic note. It is noted

that the United States might possibly take up large quantities of short staple cotton for mixing purposes as soon as shipping space improves. It is not clear, however, what policy the United States will adopt and what time the textile mills in the occupied areas will commence production. But, in any case, the statistical position is regarded as sound and added emphasis is laid on this fact. With the continued strength of the stock and bullion markets, prices might yet record further rises.

The bullion market has been active in spite of the large stocks of silver and arrivals of increased quantities of gold earlier in the week. Speculation regarding Anglo-U.S. talks and the disturbances in Iran and the Far East have increased activity. In the silver market however, there is no important change and quotations are in comparison with gold only slightly higher. The improvement in values for gold which incidentally are at the highest levels for over two years is mainly due to the large operations carried out by a prominent bull operator and forced covering by bears.

Developments in the bullion market should be regarded as due mainly to technical factors as reports from the U.S.A. have not been encouraging either for gold or silver. It is said that there is opposition to the proposal by certain congressmen to put gold into circulation. As regards silver, the fresh increase in prices for domestic silver is not wholly favoured as dealers seem to be of the opinion that high prices would discourage industrial consumption and that it will prove to be ultimately prejudicial to silver interests. It is also suggested that the American Government might not insist on the return of lease-lend silver within the stipulated period and so far as India is concerned, the time allowed may be extended by five to ten years. As considerable quantities of lease-lend silver have been utilised in small coinage and the minting of quaternary rupee coins and as some sales have been effected in the open market, it will not be possible for the Indian Government to return the lease-lend silver at an early date. If it were necessary to purchase these stocks in the open market there will be a sky-rocketing in prices.

The rubber study group does not seem to have reached any decision as it has been reported that there will be a considerable surplus of rubber in the next two or three years and that it will not be possible to utilise all available rubber unless new uses were found for this material. Apparently, it has not been possible to make any immediate decision regarding production of synthetic and natural rubber. It might be that the United States is keen on maintaining the synthetic rubber industry which has been developed in war-time at great cost and it is felt that with the progress of research the cost might be further reduced. Unless the policy of the United States and other countries producing synthetic rubber is definitely known, the future for natural rubber is rather uncertain. As has been stated earlier there might probably be demand for all available production for some time owing to the exhaustion of stocks but later the problem will present itself and there will be need for regulation of production.

It is satisfactory to note that large supplies of rice will be coming into India before the end of the year from Burma and Siam and that the quantities will be imported directly

into the deficit areas. The Central Government has not given any figures regarding the actual imports into this country from abroad as it is stated that such information might have a disturbing effect on the markets in this country. If the anxiety of the Government was to prevent any undue decline in prices the reluctance on the part of the authorities is excusable. Only it should be made sure that regular imports are brought into this country and no great difficulties are experienced. Reports during the past few days, however, have not been wholly favourable as it is said that Siam has no large surplus of rice in 1946 and that Burma is experiencing difficulties in the cultivation of paddy. Famine is also said to have extended to Malaya and other areas and rice rationing has been cut by half the amount. Whether this statement in the daily press is intended to prevent any optimistic expectations regarding an improvement in the situation is not clear but it is important that the opportunities available for increasing rice cultivation in countries like Siam, Burma and Indo-China are not wasted and that the requirements of all the countries concerned will be taken into consideration.

"The preliminary estimates for this year's winter (Katki and Kusmi) lac crops are fairly satisfactory", states the report of the Crop Statistician, Indian Lac Cess Committee. The final yields will be determined by the climatic conditions in November and the cutting and collection of crops.

The Balsaki and Jethua brood-lac, which serve as seeds for the winter crops, had been well preserved during the summer due to general rainfall in the month of April. As the monsoon was late this year the lac-insects emerging out of the Balsaki and Jethua brood-lac got sufficient time to settle down on host-trees. Damage due to insects being washed away by rain was very small and the development of lac-incrustations is satisfactory. A comparative estimate in maunds of the Katki and Kusmi crops is given below:

Previous five years' average—Katki 230,650 mds. and Kusmi 118,850 mds.

1945 PRELIMINARY REPORT.

Bengal—Katki 14,500; Bihar—Katki 143,125, Kusmi 172,500; C. P. and Berar—Katki 54,000, Kusmi 7,000; U. P. of Agra and Oudh—Katki 17,500; Rest of Indian Provinces (except Assam)—Katki 6,500; All Indian States—Katki 25,000, Kusmi 15,000; Total production of India (except Assam)—Katki 244,875, Kusmi 195,000.

1944 FINAL REPORT.

Bengal—Katki 6,000; Bihar—Katki 57,250, Kusmi 23,250; C. P. and Berar—Katki 42,750, Kusmi 3,750; U. P. of Agra and Oudh—Katki 1,500; Rest of Indian Provinces (except Assam)—7,500; All Indian States—Katki 20,000, Kusmi 12,750; Total production of India (except Assam)—Katki 135,000, Kusmi 39,750.

1943 FINAL REPORT.

Bengal—Katki 11,500; Bihar—Katki 124,500, Kusmi 166,000; C. P. and Berar—Katki 38,000, Kusmi 7,000; U. P. of Agra and Oudh—Katki 1,250; Rest of Indian Provinces (except Assam)—Katki 6,500; All Indian States—Katki 20,000, Kusmi 12,750; Total production of India (except Assam)—Katki 201,750, Kusmi 185,750.

(Continued from page 935)

applications against the offer of Rs. 4 crores was Rs. 4.23 crores against Rs. 4.85 crores in the previous week. Maturities were only Rs. 2 crores so that there was a net intake for a like amount. The offer for next week is to be maintained at Rs. 4 crores.

The returns of the Reserve Bank for the week ended November 23, do not show any important changes so far as the issue department is concerned. Notes in circulation were lower at Rs. 1,175.27 crores against Rs. 1,179.12 crores while notes issued were slightly higher at Rs. 1,188.28 crores against Rs. 1,188.22 crores. Rupee coin were higher by Rs. 7 lakhs at Rs. 16.7 crores. Notes held in the Banking department were Rs. 13.02 crores against Rs. 9.10 crores.

In the Banking department, Central Government balances are sharply higher at Rs. 451.67 crores against Rs. 439.87 crores and Other Government accounts at Rs. 15.54 crores against Rs. 11.9 crores. Bank deposits with the Reserve Bank, on the other hand, have declined for the fourth week in succession to Rs. 85.54 crores from Rs. 91.72 crores. Other deposits were Rs. 13.28 crores against Rs. 12.82 crores. Foreign balances were Rs. 550.84 crores against Rs. 544.48 crores. The increase in Central Government's balances was due to further receipts of sterling for Rs. 6.36 crores, larger subscriptions to loans and increased tax receipts.

The statement of the Imperial Bank of India for the same week shows an increase in deposits to Rs. 253.10 crores from Rs. 252.25 crores. There is no important change in investments at Rs. 163.91 crores but Advances are sharply higher at Rs. 55.26 crores. The increase is mainly under Bills discounted and purchased to Rs. 7.45 crores from Rs. 3.67 crores. Cash on hand is lower at Rs. 43.95 crores against Rs. 46.74 crores.

The statement of Scheduled banks for the week ended November 16 shows a continued improvement in the working capital of banks, Demand liabilities being higher at Rs. 669.48 crores against Rs. 665.07 crores and Time liabilities at Rs. 267.89 crores against Rs. 266.73 crores. Cash on hand was lower at 34.94 crores against Rs. 35.3 crores. Balances with the Reserve Bank also showed a decline to Rs. 91.86 crores from Rs. 97.96 crores. Both advances and bills discounted have increased, advances being Rs. 256.97 crores against Rs. 252.68 crores and bills discounted Rs. 16.24 crores against Rs. 15.64 crores. Against the increase in the

working capital by Rs. 5.49 crores, advances and bills discounted have improved only by Rs. 4.78 crores. As there is a drop in cash balances by Rs. 6.11 crores it is to be presumed that as much as Rs. 7 crores has been disposed of in new investments mainly in gilt-edged securities.

The gilt-edged market has continued steady with 3½ percent Paper quoting Rs. 103/12 and 3 percent 1970-75 Rs. 97/9. Sales of the First Development Loan are made by the Reserve Bank at the tap rate of Rs. 97/8 and the higher rate in the market is due to the small buying by investors from brokers. As pointed out last week Scheduled banks buy from the Reserve Bank at the tap rate without any brokerage on the assurance in writing that such purchases are merely for their own investment and that, they will not re-sell any portion of the lots thus purchased. The demand for long-dated issues like 1963-65 and 1966-68 is so great that it has been possible for the Reserve Bank authorities to increase the tap rate for 3 percent 1963-65 from Rs. 99/8 to Rs. 99/12. Only last week it was pointed out that with the reports of the possibility of an early closing of the list for the 3 percent 1959-61 loan there may be a rise in the quotation for 3 percent 1963-65.

With the persistent rumours regarding the possibility of a reduction in the Bank rate from 3 percent to 2½ percent, the gilt-edged market would have been more active but for the anxiety of banks to liquidate a portion of their investments in short-term and medium-dated issues and to reinvest them in long-dated issues and the First Victory Loan. This movement has not yet gathered momentum and such selling as was reported in Bombay earlier in the week was on a small scale. It is perhaps too early to say that banks would decide on an early liquidation of investments in loans like 3 per cent. 1949-52, 3 per cent. 1951-54 and 3 per cent 1953-55. It is not yet clear whether withdrawals of deposits will not be on a large scale after sometime and that it will be profitable to buy securities which are now quoting at a discount. The developments in the gilt-edged market in the next few weeks will prove to be interesting.

The exchange market has been steady with a fair amount of business passing. Sterling rates are unchanged. The U. S. dollar bill's and T. T. buying rates have been raised as from Thursday this week. Banks are selling T.T. on New York at Rs. 332½ while they are buying private bills, 90 days sight at Rs. 327 and at sight at Rs. 328-8.

(Continued from page 950).

belonging to all nationalities passing across. Even the Persian and Afghan governments may operate air service and the Italian air mail Ala Littoria, which operated via Karachi to Tokyo before the war will cease to function.

The Government of Sind are taking active steps to increase tree plantations in the province. The heavy cuttings in the war period, the growth of population and the development of the province in the immediate future make it imperative that the tree plantation programme be accelerated. The plantation of trees on canal banks and roads is to be taken up soon.

While consumer goods have begun to arrive in plenty at Karachi, the outlook for Sind is distinctly brighter. There is heavy demand for Sind cotton from abroad and now that the shipping position has improved, regular shipment is taking place. The bullion market here is almost identical to that of Bombay. Many Sindhis who had returned to India from odd corners of the world are packing up their kit to restart their adventure. Their attention has been turned particularly to the Far East countries.

Jute and Jute Manufactures

Special to "Indian Finance"

(From Our Correspondent)

Calcutta, Nov. 29.

We have previously touched lightly on the subject of the proposal to introduce legislation limiting the hours of work for factory operatives to 48 per week. It would appear that the proposal is actuated to some extent at least to meet the special conditions obtaining in the cotton industry where, at the moment, the demand seems unlimited. By working to the present limit of 54 hours per week the cotton mills can only work two shifts. By a reduction of hours to 48 per week, they would be enabled to run three shifts of eight hours each, thus increasing production by probably twenty-five per cent and at the same time providing for the absorption of a considerable volume of the prospective unemployed discharged from war-time industries. This idea presupposes that the labour will be agreeable to work six days of eight hours each. Conditions are by no means identical in the Jute industry. In the first place it is improbable that the reduction in hours would result in the employment of any more labour. For two reasons. First, that in the present state of trade and as far as anyone can safely venture to look ahead, employers would rather welcome a reduction in working hours with a view to bringing production more in line with apparent export requirements. And second, that for many years, except in the abnormal case of "foster" mills taking over the productive capacity of a neighbouring requisitioned mill, even double shift working has been unnecessary, sufficient loomage having been established since World War I to take care of all probable world requirements under single shift working. Indeed, if and when 48-hour working becomes a "fait accompli", we do not visualise the jute operative working six days of 8 hours. He is too fond of his half-day off, and the arrangement will most likely be, five days of 9 hours and a short day of 3 hours, or something of that nature. We do not, however, agree with a statement appearing in the press that, when the Indian Jute Mill Association reduced working hours from 60 to 54, it was found that production hardly fell at all. Admittedly it did not fall in direct proportion, but it certainly fell materially, and we anticipate that the same will occur if and when hours are reduced from 54 to 48 per week. The reduction in production will not be of the nature of 16 per cent, but more probably by about 10 per cent.

It certainly seems inevitable that India should come into line with the rest of the world by reducing factory working hours, but so far as the Jute trade is concerned it should never be forgotten that the industry has attained its present prosperity by producing the cheapest wrapper and container material in the world, therefore costs, not only of production but of raw material, must once again affect this prosperity in the competitive days looming in the near future. There is a tendency in these days of Labour and Socialist supremacy, to insist that increased wages for the workers is the panacea for all the ills of the past and the present, forgetful of the fact that

an all round advance merely means inflation by the reduction of the purchasing power of money, so that in the long view the worker, though in receipt of higher wages, may not necessarily be a whit better off.

On the subject of working hours and wages, it is of interest to note that the operatives in the Dundee Jute industry are demanding a reduction in hours from 48 to 44 per week, plus a 20 per cent increase in wages. They, also, require their day of relaxation, for the hours are to be spread over a week of 5 days—8 hours 48 minutes per day. It might save a few headaches if a compromise were arrived at for a 45-hour week, 5 days of 9 hours.

Adverting to the spurious agitation we discussed last week on the subject of the purchasing policy of the local jute mills (though it purported to apply only to European managed mills) we have gone further into the matter in the light of official figures with which we have been furnished. Since the opening of the 1945-46 season in July, local mills have purchased 20,38,000 bales of jute against a production of goods during the same period of the equivalent of 18,61,000 bales. During the same period their stocks of manufactured goods have increased by 16,500 tons, and their stocks of jute by over 35,000 tons. Admittedly all the jute may not yet have actually arrived in the mills, but preparation must be made for its reception when delivered. We have many times emphasised the restricted godown space for storage left to mills after requisitioning, and there is no immediate prospect of this space being returned, however badly wanted it may be. There is also the question of finance to be considered. At present controlled prices of jute, a normal stock represents a far higher figure of money tied up than in pre-war days. In respect of stocks of manufactured goods, no small proportion of these also represents money tied up, for while commercial buyers must ordinarily pay for their goods against delivery order if delivery is not taken when the goods are due, the same does not apply to Government held goods. It is no small grievance with mills that Government do not pay until delivery is actually taken of the goods even though this may not be for months after they were ordered to be ready. Even after delivery is given and taken, months often elapse before payment is made, for it is notorious that the purchasing and the paying departments of Government are kept separate and strictly watertight, and the time-lag achieved by the paying department is such as would never be tolerated in any business concern. All these factors militate against any inclination on the part of mills to carry larger stocks of raw material than absolutely necessary, though we have shown that not only have they purchased considerably more jute this season so far than they did in either of the corresponding periods in the two previous seasons, but have also actually purchased more jute than they have produced in goods. And in a market showing no definite pointer to indicate a purchasing or selling policy, it is as much as can be expected of mills if they buy from month to month to the extent of their monthly production.

We have suggested that disgruntled speculators are at the back of most of the agitation. Speculators who, at the time

of the Japanese collapse, thought that a boom period was due and that purchases of jute, though quite outside their normal sphere of activities, would show substantial profits. Owing to disturbed conditions continuing in many parts of the world, the boom has not transpired and jute prices have declined. Also there is no little anxiety as to the policy of Government with regard to the maintenance of price control. It is clearly realised that the present level of prices, both for raw jute and for manufactured goods, is artificial and inflated, and any relaxation of control would almost certainly result in a slump. At the moment, Government policy is doubtless largely influenced by the imminence of the elections and until these are over, none would be so bold as to suggest even a review of the price situation. But once the elections are a thing of the past and one party or the other safely is in power, it is quite on the cards that hard economical facts may be given greater weight, and it is this eventuality that is causing uneasy emotions in the hearts of speculative holders.

There is no change to report in the Export Jute market. Shippers, as such, are frozen out of business by the relation between the fixed sterling and rupee minima, and any business passing can only be done direct by Baler/Shipper without the business appearing on the open market at all. A very limited trade in lower grades and in Cuttings is reported with mills at minimum rates.

The Loose Jute market continues practically idle with sellers offering freely and mills sitting out. There is no inducement for mills to hasten their buying or to buy in quantity, and offerings are such that a policy of very selective buying can be followed to fill any day-to-day requirements.

Mofussil markets rule steady with no anxiety evinced by cultivators to press their holdings. In some markets an improvement in quality is reported, an indication that the usual held-back early jute is now being marketed.

The Hessian market has been featureless and closes practically on the same level as when we last reported, any intermediate fluctuations having been ironed out, while no business of importance has been recorded. 10 oz/40 quotes at the close Rs. 27-12 December and Rs. 25-8 January/March. There has been a keen contest for supremacy in the "B" Twil Fatka market which has dominated the Heavy Goods section to the exclusion of all else. The price of ready "Bs" has been forced up from Rs. 63-4 to Rs. 66-4, with moderate quantities reported done at each advance. The December however remains at Rs. 60-12 and February Fatka at Rs. 58-12.

DO YOU KNOW ...

whether the tomato is a vegetable or a fruit? Whichever it is, whether raw or cooked, it enriches the diet with its high vitamin content. Its juice, fresh, canned or bottled, is cooling and satisfying. It is an essential ingredient of many rich sauces and chutneys. There is a steady and growing demand for this health-giving fruit.....or vegetable.

The cultivation of the tomato is not a matter of difficulty, though care and attention are required, birds finding the young fruit greatly to their liking. It may be grown in the hills or in the plains, given a soil of fine sandy loam. A good crop will give the farmer fifty to a hundred maunds of fine fruit to the acre.

But the ripe fruit perishes and bruises so quickly that the farmer must have good, smooth ROADS to bring this profitable crop to market in saleable condition.

Vol. XXXVI. No. 22 SATURDAY DECEMBER 1, 1945 Price Re. 1

Stock Markets to-day and to-morrow:

BOOMLET IN MARKETS

With the prevalence of very active conditions in the stock markets in both Bombay and Madras, the month of November might very well prove to be the beginning of the postwar boom period in the stock exchanges. The continued strength of the bullion markets and the optimistic statements made by the leaders of industry have encouraged operators in the stock markets. With the large volume of funds seeking investment and the lack of scope for profitable speculative activity in other directions quite a sharp rise in prices has been recorded in the past week. The activity in the past few days alone has accounted for more than half the rise in prices since the reopening after the Puja holidays. In spite of the fact that some of the leading industrials offer a return of slightly more than 3 per cent, there is no sign of a retrograde movement.

The opening on Monday this week was quite confident but there was no suggestion that there would be such a sudden rise in prices as operators were awaiting larger public participation. On Wednesday, however, the reports that there might be a reduction in the Bank rate to 2½ per cent from 3 per cent caused a sudden upswing and the leading operators bought heavily.

There is a substantial improvement in prices in almost all the sections. Tata Deferreds were nearly 200 points higher at Rs. 2,560 and Ordinaries 25 points higher at Rs. 460 in little more than a week. Indian Irons improved by 4 points to Rs. 46-8, Steel Corporations by 3 points to Rs. 41-12, Howrahs by 8 points to Rs. 114, Burrakurs by 2 points to Rs. 40-8 and South Karanpura by 4 points to Rs. 44-15. After the hectic rise there has naturally been some profit-taking and quotations are about Rs. 1 lower than the highest levels for the week. But there is still a feeling that the peak has not yet been reached and that with the almost

certain prospect of a reduction in the Bank rate at an early date and the expectations of tax relief, there is nothing to prevent a further rise in prices.

Expectations regarding a lower Bank rate are justifiable as the borrowing rate of the Central Government on short-dated loans is only 2½ per cent and with the successful issue of the short term bonds at a slight premium it might be expected that the term for the loans will be gradually extended. As the Government has announced that postwar plans will be put into effect rather vigorously and that the Industry's Delegation will be afforded opportunities for purchasing useful equipment from surplus war stores in the United States and the necessary dollar credits will be given, there is a tendency to believe that the targets proposed for the various industries might after all be achieved and that the existing companies will be allowed to participate in the large programme of industrial development. Only last week Dr. Matthai, a Director of Tata's said that it was proposed to double the capacity of the steel industry in 5 to 7 years and that

The current week's developments in the Stock Exchanges with particular reference to the monetary situation are discussed at some length in the weekly review of the money market in the Main Issue.

the prominent producers, namely, Tata Iron and Steel Corporation would benefit considerably. As extensions and replacements to plant will require additional capital and as the financially sound companies will be able to issue bonus shares in the event of additions to plant, there is naturally considerable speculation in the shares of companies which are likely to make bonus issues. That is the reason why in these cases the yields are relatively lower.

As the general outlook is considered satisfactory and so far activity has been confined to the leaders, it would benefit the small investor if he enters the market on a sharp reaction and picks up shares which are relatively under-valued. For instance, in the Jardine Skinner group while Howrahs have risen by nearly 20 points to Rs. 113, Reliance have not appreciated in the same proportion. Kamahattys are definitely under-valued at Rs. 88.

South Karanpura among coals have improved by 8 points to Rs. 44-14. In the same period Burrakurs are higher by only

3 points at Rs. 46-8. Similarly, Indian Irons are 3 points higher at Rs. 45-8 while Steel Corporations are 6 points better at Rs. 40-12.

It can be said that the pronounced rise in particular counters is due to technical reasons and that it will not be justifiable to make comparisons but it often happens that in a rising market it is more safe to pick up shares which are quite good for investment purposes and which are not subject to the activity of prominent speculators.

Even with a rise in the quotation by 17 points to Rs. 113, Howrah are not regarded as dangerous and there are still hopes that the shares have good prospects of a bonus issue. A prominent operator is said to be interested in these shares and has accumulated a large number. In view of the great interest in the affairs of this company the accounts for the half-year ended September 30, 1945 have great significance. It has been already said that the expectations of a higher dividend have not been fulfilled, the ordinary shares receiving only Rs. 1-12 per share the same as before. The net profit, before providing for taxation and depreciation is Rs. 22,99,523 against Rs. 21,93,049 for the previous six months. The provision for taxation has taken up the whole of the increase in earnings, the actual provision being Rs. 14.7 lakhs against Rs. 13.83 lakhs. The sum reserved for E. P. T. deposit is Rs. 2.79 lakhs against Rs. 2.59 lakhs. After paying a dividend on ordinary and preference shares the amount carried forward is not very much changed at Rs. 1,09,074.

It is necessary to examine the balance-sheet as on September 30, 1945. The paid-up capital is Rs. 52.5 lakhs, Rs. 26.25 lakhs being in 262,500 ordinary shares of Rs. 10 each, Rs. 8.75 lakhs in 7 per cent

cumulative preference shares of Rs. 100 each and Rs. 17.5 lakhs in 17,500 7 per cent cumulative 'A' preference shares of Rs. 100 each. The Reserve Fund amounts to Rs. 40,10,843 and Other Funds Rs. 29,95,549. Of the latter sum Rs. 21.91 lakhs is the amount reserved for E. P. T. deposit. Sundry liabilities including dividends are Rs. 98.21 lakhs to Rs. 49,11,450. General amount reserved for payment of taxation.

On the assets side, the gross block of Rs. 1.47 crores has been depreciated by Rs. 98.21 lakhs to Rs. 49,11,450. General Stores and Mill Furnishings were substantially higher at Rs. 29,67,364 against Rs. 18,84,798 on March 31, 1945 and stock-in-trade at Rs. 79,76,175 (Rs. 73,79,446). The increase in stocks is mainly due to the larger holding of jute. The total under this head is Rs. 44,52,318 against Rs. 37,22,575. Outstanding were Rs. 38,82,870. There is no important change in investments at Rs. 17,89,932 but cash balances are appreciably higher at Rs. 13,95,141. Liquid assets at Rs. 1,85,84,704 are very much higher than sundry liabilities of Rs. 1,11,30,688. The company has, therefore, a comfortable financial position. There is no need for any additional capital issue. If the directors decide on any extensions to plant and machinery the necessary finance could be found. The decision, if, any, regarding bonus issues could be expected to be taken only when plans for extension are definitely decided on and the machinery is ordered.

The balance sheet on September 30, 1939 shows that the General Reserve was very much the same at Rs. 40,10,842 but other Funds were only Rs. 304,599. Sundry liabilities, including dividends were Rs. 9,81,639. General Stores and Mills Furnishings were Rs. 5,72,346 and stock-in-trade Rs. 20,25,921. Investments were Rs. 16,01,129 and cash Rs. 1,79,933. Net liquid assets were Rs. 44,34,122 against the figure in the latest balance sheet of Rs. 74,54,016. The reduction in value of the net block by slightly over Rs. 3 lakhs has added to the net liquid assets but allowing for this sum there is still a balance of Rs. 27 lakhs, which is mainly due to the compulsory E.P.T. deposits. As about Rs. 10 lakhs will be got back as tax refunds, the addition to the total funds in wartime is thus of the order of Rs. 40 lakhs.

The Reliance Jute Mills Company also, for the same half-year has been able to report a higher level of net profit, even with the decrease in the sales to Rs. 75.44 lakhs from Rs. 81.13 lakhs. The net profit, before providing for taxation and depreciation, is Rs. 11,14,921 against Rs. 10,89,631. Provision for taxation is Rs. 7.2 lakhs against Rs. 6.87 lakhs and the transfer to reserve for compulsory deposits Rs. 1.10 lakhs against Rs. 1.11 lakhs. The dividend on ordinary shares has been maintained at Rs. 1-4 per share. The amount carried forward is not very much changed at Rs. 93,144.

With the activity in Howrahs there has naturally been an improvement in the quotation for the shares of this company too. At the time of writing they are around Rs. 98 against only Rs. 94 some time back and Rs. 88 two weeks back.

The balance-sheet of this company is equally sound. The paid-up capital is Rs. 38.5 lakhs; Rs. 16.5 lakhs in ordinary shares of Rs. 10 each and Rs. 20 lakhs in 20,000, 7 per cent tax-free cumulative preference shares of Rs. 100 each. The Reserve Funds are Rs. 37,57,468 and other Funds Rs. 18,23,044. Sundry liabilities including dividends are Rs. 75,32,646.

On the assets side, gross block amounting to Rs. 88.4 lakhs has been depreciated by over Rs. 50 lakhs to Rs. 38,37,814. Stores

(Continued on page 973)

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

Calcutta, November 30.

Hectic conditions have prevailed on the Calcutta Stock Exchange in the past week and a jumpy rise in prices has been recorded in almost all the sections. Reopening after the Calcutta disturbances quite firm conditions were noticeable on Monday, but prices did not improve abruptly. Till Wednesday a steady rise was noticeable, but on Thursday there was feverish activity the reports regarding the possibility of a reduction in the Bank rate bringing forth large buying. As rumours regarding the Banks rate did not materialise, there was some selling after the close on Thursday. There is no suggestion of weakness in the undertone and even the lower prices on Friday are substantially higher on balance. The Engineering and Jute sections led the market, Howrahs recording a rise to Rs. 114 from Rs. 106-8 earlier in the week and Steel Corporation to Rs. 41-12 from Rs. 38-12. Indian Irons also improved to Rs. 46-8 from Rs. 42-8. As the speculative counters were 4 to 5 points higher there was a general improvement and as operators got busy on the side lines some of the counters were marked up suddenly. After the recent rise in prices, there is a tendency to take profit at the higher levels.

In the gilt-edged securities section, there is nothing of importance, but prices have been fully maintained, 3½ per cent Paper quoting Rs. 103-13, and 3 per cent Paper Rs. 97-8. Among terminable loans, 3 per cent 1963-65 were Rs. 99-12, 3 per cent 1970-75 Rs. 97-9, 4 per cent 1980-70 Rs. 113-4, 3 per cent 1951-54 Rs. 101-12, 3 per cent 1953-55 Rs. 100-11 and 3½ per cent 1947-50 Rs. 103-7. It is reported that banks have sold out parcels of medium dated issues and replaced them with long-dated ones. Easy conditions continue to prevail in the money market in spite of the increased offer of treasury bills for Rs. 4 crores, but the average discount rate is not very much higher at 5 annas 3 pies per cent per annum.

Bank shares were very firm, but there were very few sellers business being impossible in Imperial Bank fully paid and contributories owing to the absence of sellers. Reserve Bank were firm at Rs. 157, United Commercial Bank at Rs. 41 premium and Calcutta National Bank Rs. 16-4.

Cotton shares did not participate in the upward movement earlier in the week, but later with the strength of Bombay prices have been marked higher, *Cumtore Textiles* quoted Rs. 13-12 against Rs. 13-4, *Elgin* Rs. 73-8 against Rs. 68 and *New Victoria* Rs. 8-10 against Rs. 8-4. *Basanti* were unchanged at Rs. 15-14 and *Mahaluxmi* Rs. 36-8.

Popular Coal shares are substantially higher though it should be said that activity in this section has not been on the same scale as in Jute and Engineering shares. *Bengal* have improved by nearly 40 points to Rs. 823 and *Bhalgora* by 1½ points to Rs. 30. *South Karanpura* again provided the feature for

this section with a rise by 4 points to Rs. 44-14. Heavy selling at the higher levels has resulted in a setback to Rs. 43-6, *Burra-kur* have been rather slow in following up the rise, but a level as high as Rs. 46-8 was recorded. The quotation earlier in the week was Rs. 44-8, they are now Rs. 47-10. *Equitable* were sticky at Rs. 73 for most part of the week, but they have suddenly come into prominence and are now quoting Rs. 75-4. *New Beerbhoom* were unchanged at Rs. 47-8 and *Ramesgunge* at Rs. 68. *Central India Coalfields* had sellers at Rs. 15-4. *East Indian* are further higher at Rs. 47-6 ex-dividend.

Jute shares have been very active again under the leadership of Howrahs which rose by nearly 8 points. The quotation at the end of last week was Rs. 106-8. The highest level for the week was Rs. 114. They are now quoting Rs. 113. The larger interest in Jute shares is due to the persistent rumours of the possibility of bonus issues by several companies and the hopes of a large improvement in exports after sometime. The bigger denomination shares are as much as 50 points higher. *Anglo-India* closed on Thursday at Rs. 598 against Rs. 568 on Monday this week, *Auckland* Rs. 424 against Rs. 397, *Chandany* Rs. 331 against Rs. 308, *Fort Gloster* Rs. 1,060 against Rs. 1,035, *Ganges* Rs. 702 against Rs. 677, *India* Rs. 865 against Rs. 819, *Kamrhaty* Rs. 900 against Rs. 840, and *Kankarrah* Rs. 771 against Rs. 738. *Megna* were very strong last week and improved by 10 points to Rs. 192. The have put on further 8 points to Rs. 200. *National* are 2½ points higher at Rs. 40-4, while *Standard* were Rs. 422 against Rs. 370, *Naihati* also are higher by 40 points at Rs. 440, *Reliance* are Rs. 98-8 against Rs. 94-8. *Presidency* were firm at Rs. 16 as well as *Craig* at

ANNOUNCEMENT

THE BOMBAY SILK MILLS LTD.

The date of the closing of the subscription list has been extended to the 15th December, 1945, at the request of the underwriters and of numerous prospective investors because the announcement regarding the prospectus has been published in many newspapers at a date much later than that of the opening of the subscription list.

ORIENTAL INDUSTRIAL INVESTMENT CORPORATION, LIMITED

SECOND ANNUAL MEETING

CHAIRMAN'S SPEECH

Presiding over the Second Annual Meeting of the Oriental Industrial Investment Corporation, Ltd., held at the Registered Office, Dalal Street, Fort, Bombay, on Monday, November 19, 1945, the Hon'ble Sir Shantidas Askaran, the Chairman said:—

GENTLEMEN,

The Report and Accounts for the year ended September 30, 1945, have been in your hands for some time and with your permission I shall take them as read.

We meet here to-day on the occasion of the second annual meeting of our company and I propose, first of all, to touch upon the results we have been able to achieve for the past financial period. When addressing you a year ago, I stated that our policy is to conduct the affairs of the company in a safe and cautious manner, with the idea of obtaining as high a yield as possible, compatible with that safety and caution. Also, our object is to utilize our resources so that our capital profit can be attained, in order to strengthen our financial position.

Gentlemen, on a perusal of the accounts, I think you will agree that in the second year's working of our company both of these objects have again been achieved. Although this financial period covers twelve months compared to fourteen months last year, you will note there is a very satisfactory increase in our income from investments, decrease in our dividend declarations in many cases, whilst we have also been able to make a larger capital profit of Rs. 1,65,147 compared to Rs. 1,53,139 last year. Unfortunately, opportunities for underwriting did not crop up during this financial period and only one small proposition was undertaken. On the expenditure side, you will observe that actual working expenses are lower even than last year and for this we must again extend our best thanks to the Secretaries, as also for the fact that they have voluntarily foregone half the minimum commission to which they were entitled.

After meeting the allocations as set out in the Report, we propose this year to pay a dividend at the rate of 5 per cent per annum, less tax on the Preference shares and at the rate of 3 per cent per annum or and at the rate of 3 per cent per annum or the Ord. Re. 1-3 per share, free of tax, on the Ordinary shares. This will then leave the very substantial amount of Rs. 75,754-3-11, which we propose to carry forward, subject to taxation. The Directors trust these results will be considered very satisfactory, particularly as we have now been able to build up a Capital Reserve Fund of over Rs. 3 lakhs after two years' working.

During the period under review it has been possible for us to take more advantage of investments in industrial equities, without, nevertheless, impairing the liquid state of our portfolio. You will observe that at the end of the year, we had approximately 19.9 per cent invested in Government Securities; 21.7 per cent in Fixed-Interest-Bearing Investments; 37.4 in Ordinary shares and 21 per cent in Cash awaiting re-investment. No less a proportion, therefore, than 62.5 per cent was in Fixed-Interest-Bearing Securities or Cash at the end of the year.

We meet here to-day with the war over both in the West and in the East, but the aftermath can only be described as a very troubled peace. Starvation stares millions in the face on the Continent and this is only one of the many problems confronting the Allies in the West. In the Far-East, Malaya and Burma are settling down gradually after their liberation, but elsewhere unrest exists. It is fervently to be hoped that peace in its true sense will soon fructify in those troubled lands.

Heavy war-time taxation is a great handicap upon the advancement of India's industries. The burden of the Excess Profits Tax has sapped their strength. Reserves, usual in times of war and the depreciation necessitated by the overworking of the machines, have not been adequately provided for and last but not the least, the capital accumulation which would have been diverted to further industrialisation has been swallowed by the moloch of war expenditure. This evil side of the Excess Profits Tax has not been hidden from the Government Department concerned. In fact the Finance Member of the Government of India had himself been looking forward to an early termination of this tax. While referring to the subject in his Budget speech he stated "it is, therefore, to my mind desirable that this war-time expedient should vanish with the circumstances, the business community is entitled to ask the Government of India to put an end forthwith to this objectionable imposition for which there is absolutely no justification to-day as quite a few months have now elapsed since the war, both in the East and the West, has ended. In view of the undertaking given by the Government, I trust it is not their intention to wait until the next Budget session for the abolition of this unwanted tax, but to follow the lead of Great Britain.

There is, moreover, another matter connected with another Department of the Government of India to which I should like to make reference. The Hon'ble Member for Planning and Development, in his speech last month before the Policy Committee at New Delhi, referred to the need for India to delay the enunciation of its long-term economic policy until the international economic picture becomes more defined. Possibly it was the intention of the Hon'ble Member to wait for the implementation of resolutions of Bretton Woods and similar other international Conferences before he can make up his mind with regard to India's long-term economic policy. I beg to submit, however, that this approach to the subject of India's future economic policy is bound to prove detrimental to our interests. Nobody to-day denies the need for India's participation in international Conferences, but such participation should not be an excuse for the Government to sit with folded hands, when precious time is wasted in awaiting international decisions, which, in fact, might, or even might not, eventuate. India like other members of the United Nations would like to work in harmony with other countries, but such co-operation does not pre-suppose inactivity at our end. India's international policy should be based upon such national policy as has been evolved in the interests of the country. No doubt at a later stage if some modification of such a policy is required the same may be undertaken, but no modern country has yet awaited the international conferences to indicate to it the national policy it should follow. International co-operation at least in its early stages has to follow the lines of national policies. Therefore, as regards the critical period through which are passing to-day there is no need for India to postpone the formulation of her economic policy upon the framing of international resolutions.

A closely allied subject and one without which industrialisation of this country would be highly handicapped, is that of protection to our national industries and I take it as a sign of happy augury for the new Tariff Board, recently appointed by the Government, which has already started functioning, that its deliberations will not be hampered by the vexatious limitations inherent in the policy laid down for the Tariff Boards of the past. I trust that all the industries started during the war, which stand in need of protection in times of peace, will not hesitate strongly to urge their cases, and that the Tariff Board will rise to the occasion which the end of the war has provided, for the furtherance of the industrial growth of India.

And, what about the future? I am sure you will expect me to say a few words about it as I did last year, and I think I can claim that the remarks I passed then have been fully substantiated by subsequent events. I am not, at any time, as depicted by the immortal Shakespeare, like Cassius the lean and hungry kind, so I do not feel at this juncture that one is entitled to view the months to come with anything else, but cautious optimism. I say cautious with, I think, justifiable reason, not because of any uncertainty in my mind about the future of our industrial prospects, but because of international perplexities, with which our future must inevitably be interlinked. But, other nations will require our primary products and we are marching more rapidly along the road, when we can hope to attain complete industrial self-sufficiency. In the realm of iron and steel, textiles, cement, engineering, sugar and many other industries we can stand proudly on our own feet and supply our own needs and even those of others and in my opinion we face a future of infinite promise, one opening up a vista of great potentiality".

PAYMENT OF DIVIDENDS

By Companies under the management of McLEOD & COMPANY LTD. All dividends proposed on and after 1st January, 1946, the the undernoted Companies will be declared payable to registered shareholders or their mandatees only, and it will not be necessary for shareholders to apply for their dividends.

(Application should however continue to be made as hitherto for any dividends declared before 1st January, 1946).

It is accordingly recommended that:—

- (1) All persons holding shares on blank transfer should forthwith register their shares in their own names.
- (2) All Shareholders desiring dividends to be paid to Banks should register mandates with the respective ter mandatees with the respective Companies forthwith, on Mandate forms which will be supplied on application to the Managing Agents. (This does not apply to Shareholders who have already registered mandates which have been accepted.)
- (3) Intimation of any change of address should be notified immediately to the Company.

Div % Ordy.	4	4	4

(Half-yearly General Meeting on 14th December, 1945 at 12-30 p.m. Books closed from 2nd December to 14th December, 1945).

Audited Accounts of the Company for the half-year ended 30th September, 1945.

They show, after providing Rs. 1,77,428-11-6 for Depreciation on Block at the statutory rates and Rs. 6,50,000 for Taxation, a profit for the half-year of Rs. 2,56,500-4-6; add balance brought forward from last half-year Rs. 20,149-15-2; or an amount available of Rs. 2,76,650-3-8; which the Directors recommend should be dealt with as follows:—

Payment of Dividend of Rs. 4 per share Rs. 2,36,656-0-0; and leaving a balance to be carried forward of Rs. 39,994-3-8.

Buildings.—These continue to be maintained in good order and condition so far as is possible under the circumstances and are, as usual, fully covered by insurance.

Machinery, Electrical Machinery.—Expenditure under these accounts represents the balance of the cost of the equipment for the manufacture of Pre-fabricated Bituminised Surfacing at Champdany Mill.

Working Hours.—Both Mills have worked in accordance with the hours laid down by the terms of the Working Time Agreement. At Wellington Mill however due to the continued shortage of labour it has not been possible to operate the full complement of mill machinery and looms.

Jute.—The Company continues to maintain an adequate supply of raw material at an average price which compares favourably with current market rates.

Manufactured Goods.—Up to the cessation of hostilities in August the demand for hessian and sacking was maintained with prices fluctuating within comparatively narrow limits. Since then, however, a considerable falling off in demand has been experienced and this coupled with increased coal supplies has caused a noticeable reduction in prices especially for sacking qualities.

Until international conditions return to a greater degree of normality it is not possible at this juncture to forecast future results with any degree of accuracy. Since the requisitioning of Hastings Mill is not entirely subject to the general terms of settlement as agreed upon between the Government of India and the Indian Jute Mills Association but is for special treatment, it has not yet been possible to assess definitely the amount of Wellington Mill's liability towards Hastings. Pending settlement of Hastings Mill Ltd's claim against Government, the Directors have sanctioned and paid to that Company the sum of Rs. 6,90,673-8-0 on the basis which found its justification on the decision of the Indian Jute Mills Association to pay 12 annas per loom-hour under the Industrial Pool Agreement.

Prospects therefore for the current period are uncertain.

Mg. Agents.—M/s. James Finlay & Co. Ltd.
Authorised Capital—Rs. 60,00,000. Issued and Subscribed—Rs. 59,16,400 in 59,164 shares of Rs. 100 each, fully paid up.

Synopsis of balance sheet as on 30-9-1945.

Liq. Assets 152,87,330

(Continued from page 958)

are Rs. 9,48,117, stocks Rs. 29,93,767, outstandings Rs. 15,06,399, investments Rs. 27,44,366, E.P.T. deposits Rs. 243,125 and cash Rs. 6,22,674. Liquid assets of Rs. 90,58,448 compare very favourably with sundry liabilities of Rs. 35,72,646.

It is unthinkable that the managing agents of Howrahs will decide on a bonus issue by one company alone when the financial position of the whole group is sound as the general programme of extensions and additions to plants will be decided for the groups as a whole it can be very safely expected that if any decisions were made regarding the issue of bonus shares it will be for all the four companies. It will be remembered that the ordinary shares of Reliance were quoted before the war 10 points higher than Howrah.

In a country where the experience of investment trusts has been none too happy it is satisfactory to note that corporations like the New India Corporation, the Industrial Investment Trust and the new entrant, the Oriental Industrial Investment Corporation, have been able to report satisfactory progress. With the continued rise in prices for both giltedged and equities it is not surprising that almost all the companies concerned have been to report a large profit. But the available earnings have not been distributed as dividends to shareholders and the financial position has been considerably strengthened. The Oriental Industrial Investment Corporation has been able to report a higher level of profit for the year ended September 1945 than the figures for the previous period of fourteen months. A larger capital profit of Rs. 1,65,147 against Rs. 1,53,139 of the previous accounting period was made. After meeting the allocations decided by the directors a dividend of 5 per cent per annum taxable on the preference shares and 3 per cent per annum on the ordinary shares is to be paid. The investment portfolio of the company constituted approximately 20 per cent in Government Securities, 21 per cent in fixed investment securities, 37.4 per cent in ordinary shares and 25 per cent in shares awaiting re-investment. No less a portion, therefore, than 62.5 per cent was in fixed interest securities or cash at the end of the year.

Watch-dog

CHAMPDANY JUTE CO., LTD.

NOTICE IS HEREBY GIVEN THAT THE FORTY-FIFTH ORDINARY GENERAL MEETING OF THE CHAMPDANY JUTE COMPANY, LIMITED, will be held at the registered office of the Company, 1, Clive Street, Calcutta, on Friday, 14th December, 1945, at 12-30 p.m. for the following purposes:—

(Continued from page 958).

Rs. 14-2. It is rather interesting to note that even with the present speculative activity in the market *Hukumchand* have not been recorded in any transaction.

In the Engineering section, with the continued strength of Steel Corporations and the enthusiastic statement by Dr. John Matthai on the bright future for the steel industry a general hopeful view was taken of the prospects for engineering shares. From Rs. 35-12, *Steel Corporation* improved to Rs. 41-12 to close lower at Rs. 40-12, *Indian Iron* during the same period improved from Rs. 42-8 to 46-8 to quote again at Rs. 45-6. *Braithwaite* were not very much higher at Rs. 16, but *Jessop* were 1½ points higher at Rs. 38-8 and *Marshall* 2 points higher at Rs. 8-6. *Teagmaco* were 1½ points higher at

Rs. 18-9. *Burn & Co.*, were Rs. 485 against Rs. 470.

Sugar shares were uninteresting with the exception of *Carew* which were marked up to Rs. 33-2 at one time on rumours of a higher dividend. *Balrampore* were Rs. 16-12, *Champanur* Rs. 42-8, and *Ramnugger Cane and Sugar* Rs. 23-1.

In the Tea section, not much interest was taken *Tezpur* quoting Rs. 23-14, *Hattikhira* Rs. 28-4 and *East India* Rs. 22-8.

In the Miscellaneous section, *B. I. Corporation* were steady at Rs. 18-8 while there was considerable selling of *C. T. C.* and the quotation dropped by 3 points to Rs. 57-8. *Indian Cable* were Rs. 34-12 against Rs. 34-4; *Indian Aluminium* were higher by 10 points to Rs. 255. There was some buying of *Rohtas*

industries at Rs. 17-1. *Burma* shares were unchanged with *Burma Corporation* quoting Rs. 7-6 and *B. B. P.* Rs. 5-13. *Indian Copper* improved to Rs. 3-11 on reports that the company is negotiating with an Australian firm for the production of articles from copper. At the present moment the Corporation is only manufacturing brass sheets and copper.

Paper shares were very firm with *Titaghar Paper* being marked further higher at Rs. 39. There was good buying of *India Paper Pulp* and the quotation improved to Rs. 260 from Rs. 248. *Midnapore Zemindary* were Rs. 192 against Rs. 185. There was a jump in *I. G. N.* from Rs. 222 to Rs. 242. *C. E. S. C.* after being sticky for the most part of the week at Rs. 40-8 have improved to Rs. 41-12. *Karanpura Development* jumped to Rs. 48-8 from Rs. 44.

End Emigration

Surely you deserve a Bouquet for your leading article demanding of the Government to state their policy with regard to Indians going abroad. The position of Indians abroad is a twice told tale. Indians have gone abroad either as labourers or as money lenders. The first is treated with contempt and the second is looked upon with hatred. There is no country that welcomes them on terms of equality. If men of any other country in the world from China to Peru come to India they can live here like free citizens. Indeed white-skinned men are given special privileges here.

It is no use complaining. For Indians are 'slaves' in their own homeland. And how can they expect better treatment outside? The first step in improving the position of Indians abroad is by improving position of Indians at home. But this will take time. The Government should, therefore, stop all emigration. If 400 millions can manage to live in this country with all man-made inconveniences a few more also can live.

R. N. Chatterji.

Civil Aviation

I am able to see neither logic nor reason in your note Civil Aviation. I do not see the connection between aeroplanes and industrial development. I suppose a country like India with its distances needs aeroplanes to conquer distance and time.

"It looks like yet another of those insidious moves designed to dump foreign goods which is not only not essential for our economy but is likely to prove a source of recurrent waste," you remark. I fail to understand what foreign goods are required for Aerodrome construction. Apart from the minor maintenance expenditure how is it going to be a recurrent waste? You will excuse me for saying that you cannot take any stick to beat the Government.

A good number of aerodromes have been constructed during the war. To link the whole country by air if some more are necessary they should be built. I however, agree, with you that aeroplanes should be manufactured in this country. The tragedy of the automobile and locomotive industries should not be repeated.

P. S. Sharma.

Agricultural Training

Your support for the Government scheme to increase the admission into Agricultural Institute, as if it is a great step, seems to me to be funny if not ridiculous. The problem before the country is one of growing two corns where one grows now. To this end the agriculturist must be helped, by consolidating his holdings by supplying him with better seeds, manures, capital to meet his working needs. Of course he has to be taught the modern Agricultural methods. In this and this alone can the Agricultural officer help. So what we want is to train Agricultural officers who know the latest developments who have the capacity to contact the agriculturist and give him the benefit of their advice. I know cases where agriculturists have never been met by the demi-God Agricultural officers, and also cases where with half knowledge agricul-

ground, a common and hygienic shed where these animals could be housed. These are points which are in the real interests of the nation but which have unfortunately not been mentioned either by the Agricultural Adviser or by your journal.

Kasturi Lal.

(Continued on page 982)

B. B. Majumdar

Marketing of sheep and goats

The recommendations made by the Agricultural Marketing Adviser for getting better returns by rearing sheep and goats are perfectly sound in theory. Unlike other countries where these animals are reared for their wool and flesh, in India there is a very great necessity to rear them for their milk. The diet of the Indian, it is proverbial, is deficient in many requirements. A good dose of milk alone can go some way in making it balanced. Cattle being too costly almost every house in India must be encouraged and helped to maintain sheep and/or goats. To this end, it is absolutely necessary that in every village there should be pasture

Questions & Answers...

Destination?

India Coffee House, Albert Hall, College Square.

Reason?

In its new scheme, the India Coffee House is better, brighter and bigger than ever.

Surely, not so central as in Central Avenue?

You wouldn't say so if you visited the new place. It is, so to say, in the heart of Calcutta. Centre of whatever is lively and vivacious. Easily accessible.

But I suppose, there is not that variety of visitors?

People will travel far to get the admittedly and inevitably good coffee that you can, every time and at all times, get at the India Coffee House. The old patrons are all still there—and will ever be there—and many, many new patrons. Remember, it is a bigger, better, brighter place.

INDIA COFFEE HOUSE

ALBERT HALL, COLLEGE SQUARE

Fact Parade

New Central Assembly

The Budget Session of the new Central Assembly will begin on January 21, 1946, says a Press communique. Three days—February 12, March 6 and April 2—have been allotted for non-official bills and four days—January 28, February 4 and 11, and April 1—for non-official resolutions.

Members of the Assembly who have been elected may give notice of bills and resolutions.

Small Coins Output in India

India's output of small coins during the year 1944 surpassed the total output of the rest of the world, it is learnt. During this year the three mints in India produced 24,000 million small coins, compared with the small figure of 900 million coins per annum produced by the three mints in pre-war years.

"India's annual output of small coins during the war, exceeded the total output of small coins by other nations of the world, Soviet Russia and America included," said Col. A. J. Ransford, Master of His Majesty's Mint, Bombay.

Railway Equipment for India

India imported over 275 American and Canadian broad-gauge locomotives for the Indian State Railways, which have arrived in this country during the last year ending October, 1945.

During November 20 Canadian locomotives have been received and are kept in reserve for the N. W. Railway. The American locomotives which arrived in this country, were given under Lease and Lend arrangement. The cost of each locomotive is about Rs. one lakh.

Pre-fabricated Houses for Burma

A consignment of pre-fabricated houses, weighing over 5,000 tons, has arrived in India from the United States and Canada. These houses are intended for Burma and the Far East and can easily be moved from one place to another. The consignment consists of iron doors, hutting material, flooring and iron beams.

The shipment is in pursuance of the undertaking of the U. S. and Canadian Governments to supply these materials to the Governments of Burma and Malaya.

Indo-Ceylon Phone Service

The Indo-Ceylon telephone service has been reopened to the public as from November 29.

India-U.K. Telephone Service

As a preliminary step towards the re-opening of India-United Kingdom telephone service, a test call from New Delhi was made to London recently by Mr. P. J. Edmond, Chief Engineer, Indian Posts and Telegraphs Department, and Mr. A. S. James, Deputy Director-General of Telephones. They talked to Mr. Middleton, representing the British Telephone Department, London.

It is reported that the talk pertained to certain technical matters and that the transmission was quite good, without much of atmospheric interruption or fading. The service re-opened on Monday, December 3, 1945.

C. P. Financial Surplus

The final financial position of the C. P. and Berar Government for 1944-45 shows a net surplus of Rs. 1,32,00,000, as compared to Rs. 3,66,00,000 anticipated in the revised estimates. The final revenue receipts amounted to Rs. 9,61,68,00,000 and the expenditure to Rs. 9,60,36,00,000. The fall in receipts occurred under Excise, Motor Vehicles, Irrigation, Navigation and Embankment, Agriculture and Civil.

Food Yeast Manufacture in India

It is learnt that the Government of India are starting a factory for the manufacture of food yeast, mostly based on a process worked out in England, at Patna, at an estimated cost of Rs. 25 lakhs. Yeast is a vegetable protein food, which contains many essential vitamins.

3 Per Cent Fall in Cotton Acreage

The area under Indian cotton is estimated to be 12,583,000, representing a fall of three per cent. over the preceding year.

states the second cotton forecast issued by the Department of Commercial Intelligence and Statistics.

On the average of the last 10 years, the area reported in the forecast has been 83.7 per cent. of the total area reported in the final forecast. The forecast is based on reports relating to sowings up to October 1.

The figures below show the present estimates of area (in acres) classified according to the recognised trade descriptions of cotton:—Bengal 1,506,600; Americans 3,111,000; Oomras, 3,698,000; Broach 459,000; Surti 292,000; Dhollerias 747,000 and others 2,710,000. Total 12,583,000 acres.

U. S. War Surplus Disposal

Disposal agencies for the sale of 500,000 items of American Overseas war surplus have been established in six cities of India, Thomas B. McCabe, United States Foreign Liquidation Commissioner, announced on November 27. The six disposal offices are at Chabua, Ledo, Calcutta, Madras, Bombay and Karachi.

Tea and Industrial Output

Few matters have received such detailed attention since the war began as the efficiency of industrial production. In India the problem has been greater than in most other countries because, to meet the basic needs of the fighting forces, a great new industry has had to be created without the help of either a large machine tool industry or a large mass of skilled labour accustomed to factory conditions.

That tea—India's own product—has played a valuable part in achieving unprecedented output figures is a matter for no small satisfaction. The part that tea has played—is playing, and will continue to play—is to promote concentration. In the old days it was accepted throughout the world, as an unavoidable fact that output would fall towards the end of a working shift. Today this is no longer accepted, because it has been proved over and over again that tea served to the workers on the job renews concentration and flagging energies with the result that output remains at its peak level right to the end of the shift.

To those interested in this subject much valuable advice and assistance will be gladly given by the Indian Tea Market Expansion Board, 101, Clive Street, Calcutta.

Anglo-U. S. Film Marketing Drive

The formation of a world-wide distribution agency to market on a global basis outstanding British and American films was announced last night by a group of leading cinema men of both countries. The new organisation, called "United World Pictures Company Inc." will be headed by J. Arthur Rank, British film magnate, but a half interest is owned by Leo Spitz and William Goetz of Hollywood's International Pictures Inc. and Universal Pictures Inc., the announcement said. Offices will be opened in all parts of the world.

Yangtse Valley Development

The U.S. Secretary for the Interior, Mr. Ickes, announced recently that engineers of the US Bureau of Reclamation would assist the Chinese Government in working out a plan for comprehensive development of the Yangtse River Valley.

Announcing the signing of the contract between the Bureau and representatives of the Chinese Government, Mr. Ickes said that Bureau engineers would prepare designs and specifications for what may be the largest concrete dam ever built and for other engineering works to control the river basin and free millions of people from the threat of floods and famine.

A feature of the programme would be the creation in the heart of China of a lake 250 miles long.

The plan would also include hundreds of miles of irrigation canals and the world's largest hydro-electric plant using the Yangtse River in the economic development of China.

Under the contract, the Chinese Government would supply funds to the Bureau to provide for its technical assistance. The cost of such a work is estimated at 500,000 dollars.

Furniture From Coffee

From surplus grade Brazilian coffee beans a new kind of plastic called 'cafelite' has been developed, from which furniture and many other articles are being made. It is claimed that there will be big future possibilities for this coffee by-product.

Corruption in U.N.R.R.A.

A sweeping two months' investigation into the black market activities of the United Nations Relief and Rehabilitation personnel has resulted in the dismissal or arrest of more than 600 of the Organisation's members in the British, American and French zones of Germany, Mr. Leo J. Margolin, Chief of UNRRA Information Bureau in Europe said.

Mr. Margolin said most of those punished were American and British workers "involved in selling foodstuffs and clothing intended for victims of war."

Bank of France to be Nationalised

The French Government laid before the Assembly a bill providing for the nationalisation of the Bank of France from January 1, 1946.

Jobs for Britons in Germany

A thousand British demobilized soldiers may get jobs in Germany as a result of an agreement signed by F-M Montgomery and UNRRA.

Meanwhile, Gen. Sir Frederick Morgan, Chief of UNRRA operations in Germany, has provided for UNRRA to take over responsibility for the welfare of displaced persons in the British zone of occupation.

Poverty and Plenty

It interested me very much to read your gossip of December 1. As one of the witnesses of famine in Bengal I am shocked to see that rice to the extent of 50,000 mds. available at a distance of a few hundred miles from Calcutta has not been utilised for the advantage of starving millions. Strange indeed is our Governmental machinery talking of shipping space, was priorities and other tall things while you don't utilise what is lying under your very nose.

The agriculturist in the States are poor because the price they get for their produce is very low. And the unattractive price does not induce them to adopt improved methods of cultivation and increase the yield of land.

It looks as though we live in two different worlds the one having too much and another too little—all within a distance of a few hundreds of miles.

We talk of planning and planning. Let first things come first. Let us plan our food distribution. In this we have made a useful contribution, which should be food for thought for the Government.

Truth about Cloth Famine

Crying over spilt milk, post-mortem examination, blaming each other, are all that we hear to day in discussing the cloth situation. The Mill owners blame the Government, the Government blame the industry and the Congressman talks of achievements and the poor naked Indian realising it is no use blaming any one curses himself and appeals to his fate. The truth about the cloth famine is there is not enough cloth. What is available is sold at prohibitive prices in the Black Market. The underdog is always under. For purchasing Khadi you have to spin and the majority of Khaddar wearers have not spun and there will be another Black Market there also.

This truth must make us produce more cloth, export not till the home demand is satisfied, induce the Congress to remove the new restriction and thus encourage people to buy more Khadi. It is not possible to supply Khadi to all people in India unless every one spins, which is on the face of it an impractical proposition.

Produce more cloth by machine or by hand and clothe the Indian. That should be the aim of the Government and Public.

"PLAIN SPEAKER."

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

Cheap conditions continue to prevail in the money market and rates are nominally at $\frac{1}{2}$ per cent in Calcutta and $\frac{1}{4}$ per cent in Bombay. There has been slightly more demand for funds but deposits with banks have continued to increase and the poorer response at the auctions of treasury bills this week was only due to the larger subscriptions to Government loans and the smaller maturities. The total amount of applications was further lower at Rs. 3.54 crores against Rs. 4.23 crores last week. All the tenders were at Rs. 99-14-3 and were accepted in full. The offer was for Rs. 4 crores. The average discount rate is rather sharply higher at 6 annas per cent per annum against 5 annas 3 pies per cent last week. Tenders at the previous auctions were at higher rates, those at Rs. 99-14-9 per cent being accepted in full and those at Rs. 99-14-6 being allotted approximately 85 per cent. It would appear that there has been no bidding from special quarters and that applications during the week were mainly from outside sources. The offer for next week, nevertheless, has been maintained at Rs. 4 crores.

The returns of the Reserve Bank for the week ended November 30, do not show any important change so far as the issue department is concerned, total notes issued being only slightly higher at Rs. 1,188.54 crores against Rs. 1,188.28 crores. The small increase is again due to the higher level of rupee coins. Notes in circulation were little more than Rs. 1 crore higher at Rs. 1,176.38 crores. There is no change either in sterling or rupee securities. In the banking department for the second week in succession there is a jump in Government balances, the increase during the week under reference being very pronounced. The total was Rs. 470.05 crores against Rs. 439.87 crores. Other Government accounts were Rs. 12.38 crores against Rs. 11.9 crores. Bank deposits with the Reserve Bank show a rather sharp decrease to Rs. 82.99 crores from Rs. 91.72 crores. In view of the further increase in the working capital of banks, the rise in Central Government balances must be mainly due to the investments in Government securities. Sterling receipts also have been on a large scale, foreign balances showing an increase of Rs. 19.7 crores to Rs. 564.13 crores. There is a small increase in investments to Rs. 19.87 crores.

The statement of scheduled banks for the week ended November 23, shows that Demand liabilities are further higher at Rs. 673.35 crores against Rs. 669.43 crores and Time liabilities at Rs. 270.57 crores against Rs. 267.89 crores. Cash on hand is higher at Rs. 36.26 crores against Rs. 34.94 crores but balances with the Reserve Bank were lower at Rs. 84.86 crores against Rs. 91.86 crores. Advances showed a rise of Rs. 95 lakhs to Rs. 257.92 crores as also bills discounted by Rs. 58 lakhs to Rs. 16.72 crores. Against the increase in the total working capital by Rs. 6.6 crores cash balances have dropped by Rs. 5.67 crores while advances are Rs. 1.43 crores higher. The sum invested in gilt-edged securities is, therefore, over Rs. 5 crores. The figures for the week ended November 30 might possibly show

whether greater interest was taken in Government securities this week. It is just possible that banks effected large purchases in that period as there were persistent rumours regarding the possibility of a reduction in the bank rate to $2\frac{1}{2}$ per cent from 3 per cent.

The urge to appraise the significance of the Anglo-U.S. Financial Agreement and trace its practical effects is better resisted. But, if the attempt must be made, it is necessary to remember a few important circumstances. Firstly, that the Agreement can have no direct consequences on the markets but can only affect them indirectly and over a period through the use to which the dollar loan is put, particularly its utilisation in the settlement of the problem of sterling balances and provision of credit facilities, its place in the maintenance of adequate reserves of gold and foreign exchange, its help in the pursuit of specific policies of internal credit and last but not least in the ratification of the Bretton Woods Agreement and the smooth working of the International Monetary Fund. One has, therefore, to visualise the various steps in the regulation of international finance, and the promotion of conditions in which stability of exchanges and expansion of international trade will be achieved. If all these steps for which the Anglo-U.S. Financial Agreement is the starting point should be smoothly accomplished, most of the misgivings and untoward developments which made the interwar period the dark age of the world's economic history will be avoided. For deflation and restriction of trade, there would be no need. Likewise, competitive currency depreciation will be absent both because there will be incentive and because the Bretton Woods Agreement will not permit it. In other words, the best conditions will be provided for imparting stability to all the features of the present position which are not palpably insecure. For our part, we incline to the view that no effects of a seriously unsettling character need be expected in the markets, though the agreement definitely cries halt to every kind of unhealthy speculation.

Problems of Cheaper Money

In a recent issue, it was pointed out in these columns that the real health of the gilt-edged market implies a change-over of the investors' interest from short-dated to long-dated loans. There are reasons to think that such a movement is just getting under way. It is too early to say whether this movement will gather momentum in easy style, or in the early future. If the Government of India's policy is, following that of the British monetary policy, also one of cheaper and cheaper money, it is obvious that there must be suitable encouragement to the strengthening and broadening of the shift towards long-term securities. We have, for the past so many years, been witnessing such a marked preference on the part of banks for short-dated and medium-dated loans, that we have naturally come to believe that the normal preference of investors is against long-dated scrips. If, however, we recall the conditions which prevailed in the gilt-edged market two decades ago, that is, in the mid-thirties, we would realise that during that period, there was definitely wider interest, and greater activity, in long-dated securities than in short-dated ones. One of the most interesting episodes in the annals of gilt-edged in India is the care and scientific skill with which Sir Basil Blackett as Finance Member fashioned and developed the Government securities market into greater and more intrinsic health. When Sir Basil entered office, the borrowing rate of the Government of India was nearly 6 per cent free of tax. In the case of most new loans issued by the predecessors of Sir Basil, the general practice was to put out on the market a five-year loan, and a ten-year loan. The tax free 1925 loan and 6 per cent tax free 1930 loan were both issued in 1920; the 6 per cent 1926 loan and the 6 per cent 1931 loan both issued in 1921; and so on. The experience in the case of these loans was that the short-dated loans used to receive larger subscriptions than the long-dated ones.

Such were the conditions which confronted Sir Basil as he assumed his duties as Finance Member. There were certain definite objectives which he set out in the forefront as far as his gilt-edged policy was concerned. The first objective was that the new loans to be issued must be subject to tax instead of tax-free. The second objective was that a drastic break must be made from the 6 per cent type of loan. The third objective was to stimulate keener interest in the longer-dated issues. One of the first steps which Sir Basil took towards the attainment of these objectives was to adumbrate the scheme for the reduction or avoidance of debt. This was a kind of sinking fund arrangement based on the total of the public debt outstanding on the first day of the financial year. There was thus an amount in the neighbourhood of Rs. 6 crores to Rs. 7 crores available every year for open market operations as and when necessary. This sinking fund arrangement had the desired effect. By the end of 1925, stock exchange operators found that, whereas in previous years fixed-interest-bearing securities and gilt-edged were neglected and came in only for occasional transactions, there was widespread interest, both among the professionals and the outside investors, in the whole range of Government securities and Trustee securities. This kind of activity rapidly grew in volume; and the first half of 1926 was one of the most active periods for the gilt-edged market.

In this period of intensive gilt-edged activity, there were important developments which were at total variance with the developments in the first half of the 'twenties. In the first place, 3½ per cent Rupee Paper forged ahead of 3½ per cent Sterling Paper and, for long periods, the rupee stock was quoting 8 to 10 points higher than the corresponding sterling stock. Thus was the intrinsic strength of the Indian gilt-edged market asserted and demonstrated. In the second place, short-dated securities took a special place in the affections of the investors. 3½ per cent Rupee Paper and 5 per cent 1945-55, which were then the two prominent long-dated stocks, were installed in great popular favour. Conditions being so propitious, Sir Basil took the fullest advantage of them to make a long-dated issue in May 1926 in the form of the 4 per cent 1960-70 loan at Rs. 88. Long before the list opened in the first week of June, the new loan was quoting at Rs. 2 premium in the market. When the list opened, the applications were so heavy that it had to be closed within three hours. Rs. 25 crores was subscribed before lunch hour on the day the list opened. Bankers during that period were none too particular as to whether their gilt-edged holdings were long-term or short-term. On the other hand, in many circles there was preference or partiality for the long-dated loans.

All these favourable features of the gilt-edged market could not be retained for long. If the position worsened, it was not because the technique and skill shown by Sir Basil had become out-moded. The main reason for the substantial deterioration in the gilt-edged market was the persistent deflation that was being pursued on account of the grim determination of the Indian financial authorities to maintain the 18d. ratio and to subordinate every other consideration to this end. The bank rate was kept unnecessarily high; there were repeated doses of contraction and the demon of deflation cast its shadow over the entire financial world. With money tightening and currency in short supply, progressive deterioration in the gilt-edged situation was inevitable. The loan issue in 1927 had to be of the 4½ per cent type. The rate of interest had to be raised year after year till the Mount Everest of 6½ per cent was reached in the summer of 1931. In the quinquennium following the sensational success of 4 per cent 1960-70 loan, trends in the gilt-edged market were again reversed. The new loan had to be more and more short-dated. The interest had to be higher and higher. The subscriptions became poorer and poorer. The tragic conditions thus brought about by deflation can be better understood when it is recalled that the 6½ per cent 1935 loan was kept open for four months in the course of 1931 and realised only Rs. 15 crores.

Investors in this quinquennium suffered heavy losses in their gilt-edged holdings. Banks found that substantial appropriations from published reserves and from current profits had to be made in order to offset the depreciation in the gilt-edged portfolio. Even the Imperial Bank, which at one time had taken some measures to change-over into short-dated securities, had to provide a very large sum from published reserves against depreciation in gilt-edged. As a result of this experience, bankers became quite shy with regard to long-term securities. The vogue of short-dated securities began from this calamitous period when, due to persistent deflation, the gilt-edged market was going to pieces.

It may thus be said that the most favourable conditions prevailed in the gilt-edged market in 1925 and the first half of 1926; and that the most unfavourable conditions prevailed in the quinquennium ending December 1931. During the period when gilt-edged conditions were favourable, short-dated securities were not in as large demand as long-dated securities. It was the latter period of depressed gilt-edged that gave rise to, and accentuated, the vogue of short-dated securities.

The history of the gilt-edged market subsequent to the separation of the link between the rupee and gold (following the divorce of sterling from gold) is one of advancing strength. With the growing depreciation of rupee in terms of gold, a deflationary policy was no longer necessary; and, there has been since then, a continuous policy of reflation. The result is that the gilt-edged market has become healthier and healthier. The rate of interest on the new loans has gone down step by step. The first loan after the de-linking of the rupee from gold was the 5½ per cent loan. The next one was a 5 per cent loan. Then followed loans with progressively lower interest rates. In this progressive decline, the Government of India were able to issue a loan at 2½ per cent basis. Another characteristic during the period of reflation was that a gradual change-over from short-dated to medium-dated has been successfully accomplished. This brings us to the war years during which the Government of India's technique with regard to defence loans must be considered a great triumph. The capacity of the Indian gilt-edged market has been increased several times. New loan issues now are for amounts, which are three to four times the average new loan issues of the 'twenties and 'thirties. It has been possible to issue 2½ per cent bonds for substantial amounts.

At the threshold of peace, the gilt-edged market is thus in the healthiest possible state. The fullest advantage of this position can be taken also because the British Government, too, are determined to carry out a policy of cheaper and cheaper money. The first 2½ per cent loan that has been issued is a short-dated one, the period of the loan being five years. The aim must be to issue the 2½ per cent series on the basis of each subsequent loan being on a longer maturity. We have no doubt that the Government's planning of reconstruction loans will conform to these main ideas.

Meantime, it is of the utmost importance to instal, in the minds and affections of investors, the same confident outlook about long-dated loans as prevailed in the halcyon days of Sir Basil Blackett. As we have remarked already, an increasing preference for long-dated loans seems to be in evidence. This will mean that, once this movement becomes stronger and more widespread, there will be a reversal of the

present position as regards yields. That is to say, short-dated loans may be giving a higher yield than long-dated loans. The point may be reached when some of the holders of short-dated loans may stop to think before reinvesting in long-dated loans. But before such a stage is reached the prices of short-dated securities are bound to be depressed, thus increasing the yields on such securities. If such a situation materialises, it may give the impression that the policy of the Government towards cheaper and cheaper money is negated by the behaviour of the short-term bonds. The Government and the Reserve Bank should from now be prepared for such a contingency. It may be necessary for the authorities to step in and purchase a considerable amount of short-dated securities. A suggestion worth consideration in this connection is that the ad hoc treasury bills held in the issue department may, by this means, be converted into marketable short-dated loans. The official policy must definitely be designed to encourage the movement from short-dated to long-dated loans; and, towards this end, open market operations must be speedy, effective, appropriate and substantial.

India's Foreign Trade

The latest trends in British foreign trade and the nature of the recent Anglo-American financial negotiations are an unmistakable indication that whatever might be the formal declarations and assurances given during the war, both Britain and America have entered into the scramble for export markets. Britain has to export or perish. For America exports are a comparatively negligible percentage of her total trade, but as one of the main factors determining the level of production and the scope of employment, her exports have a vital role in her economy. For India, the war reversed certain conspicuous trends in her foreign trade. There was a large shift in favour of exports of manufactures as against raw materials. Of the total value of Indian merchandise exported during the war, manufactures which formed 29.8 per cent in 1938-39, improved their position to 54.3 per cent in 1944-45, while raw materials declined from 45.8 per cent to 21.8 per cent over the same period. Imports also showed a reversal in the opposite direction. The dominant place which manufactures held among imports gradually passed to raw materials which rose in value from 22 to 59 per cent. The cessation of trade with some of her important customers like Germany and Japan led to the expansion of trade in other directions especially with the Empire countries, America and the Middle East, resulting in a wider distribution of her export markets. The balance of payments rose up to such a level as not only to wipe off her foreign debts, but to leave her a creditor nation with a large accumulated surplus in her favour.

These are favourable developments consequent on the war. But it is not wise to exaggerate their significance. It is stating the obvious to say that the ascendancy in the proportion of manufactures in our exports and their decline in imports were but the consequences of the serious curtailment in production which other industrial nations involved in the war had to face. The productive capacity of the nations in the West has been greatly enhanced during the war, and this in its turn creates the need for larger export markets. It is also noteworthy that within the few months of the end of the war, these favourable trends have already received a set-back. In discussions about the future, we have to leave these ephemeral advantages out of account. The only dependable gain accrued during the war consists in the surplus we have built, which if Britain does not find devices to evade their repayment, would be of considerable assistance in the settlement of international obligations arising out of our needs in respect of foreign goods during the transitional years.

Any discussion of problems concerning international trade has also to take into account another vital change in the attitude of nations. The war has hardened the craving for economic self-sufficiency, by bringing into bolder relief the military risks of excessive interdependence. And this sentiment inevitably seeks expression in protective tariffs, bilateral trade agreements and restrictionism in general. World trade shrank by about half during the six years of the war mainly through the operation of preferences and controls which were designed for military purposes. This tendency is not likely to be offset in any substantial measure by professions of Free Trade sympathies such as those contained in the Atlantic Charter and the mutual agreement between Britain and America, concluded in 1942.

It is in this back-ground that India has to frame her commercial policy for the future. Here a distinction has also to be made between the needs of a period of transition and those which would form the basis of more stable policy. Immediately, however, the transitional needs alone are relevant; objectives for longer periods could be visualised with any measure of clarity only with reference to international developments both in the political and economic sphere of which no reasonable forecast seems possible at present.

In the immediate years ahead, India's commercial policy will have to subserve the undoubted national objective—industrialisation. The steady import of capital goods is an essential condition for any progress in this direction. The bulk of India's imports during the coming years should therefore consist of machinery. There is an opinion which favours the import of consumer goods in view of the existing scarcity. Though this might afford temporary relief, an open door for manufactured consumer goods from countries which are actual or potential competitors with India would result in entrenching their position in the internal market, from which it would be difficult to disturb them; it might also affect the pace of revival of internal production even within the limits possible with the capital equipment now available. As long as our imports consist of capital equipment, the problem would be not how to control our imports, but how to induce foreign nations to give us the essential machinery in such quantities and at such time as to fit in with our industrialisation schedule.

On the export side our immediate problems appear to be simpler. The Reports of Indian Trade Commissioners in foreign capitals reveal the existence of ready markets for different types of luxury goods produced in India and for consumer goods for which internal demand is not so keen. In America, there is a demand for products like silks, woodware, ivory ware, brassware and spices. Australia and Middle East countries are also willing to import different lines of goods. But the one warning which comes from more than one official Indian representative is about the quality and price of goods in demand. The India Government Trade Commissioner in New York complains that a large consignment of spices recently received in America was found to be heavily infested with weevil; and that importers are averse to placing further orders unless they are assured that the turmeric available in India is clean and in good condition. He also mentions that future purchases of kapok are not likely to be made from India both on grounds of quality and price. Indian kapok has a malodorous smell and the price is about 66 per cent higher than kapok that is available from France and Ecuador. Such complaints about quality of Indian goods are not new. Unless Indian exporters pay keener attention to quality and are able to sell at competitive prices, they run the risk of losing valuable and long-established markets. The Government should also take a larger view of their responsibilities in this direction.

In respect of commodities such as raw cotton, oil seeds, hides and skins, jute and tea, the loss of Japan and the European market is not likely to be completely offset by increased demand in other countries. But the position does not present any serious difficulty. The bogey of substitutes for jute seems to have disappeared for the time being at least; and the external demand for jute could be expected to attain its pre-war level within a short time. Tea has an expanding market, which was sustained even during the war. The internal demand for tea has also developed considerably. A remarkable expansion has also taken place in the internal demand for oil seeds owing to the development of the oil crushing industry. There is also a good case for a gradual reduction in the export of oil seeds to foreign countries in view of the fact that oil cake is a source of soil nutrition and to the extent that we export oil seeds the soil becomes impoverished. It is in respect of raw cotton that the problem becomes most acute. The Grow More Food campaign has resulted in the diversion of a considerable acreage particularly in Bombay and the Central Provinces from cotton to food crops. But the effect of such diversion on the total exportable surplus is not considerable. It is also problematical whether the compulsions and inducements under which the change-over became feasible would be continued as a permanent policy. It will also take a number of years before the cotton textile industry expands to such an extent as to absorb the whole output of Indian raw cotton. In any case, for the moment it is the recapture of the old and the discovery of new markets for raw cotton that should take first priority among the problems of our export trade.

I. F. SPECIAL

Back to the Gold Standard?

High Price for American Aid

By Dr. PAUL EINZIG

At the time of writing, it looks practically certain that, in return for a loan of £875,000,000, the British Government will agree to accept the Bretton Woods agreement. In fact, there is reason to believe that the preparation of a Bill embodying the essential points of the Bretton Woods plan, is well on its way. Even though under the British constitution it is not necessary for the Government to obtain a ratification of international agreements, still less to pass legislation embodying national agreements, the United States Government is believed to have insisted on this, partly because the U.S. Congress has ratified the plan, and partly because it would bind the Government even more rigidly than the actual acceptance of the plan would. The proposed Bill embodying the Bretton Woods plan should be called, properly speaking, the "Gold Standard Act of 1945". For its adoption would mean a return to the gold standard, not as it operated before 1914 or even between 1925 and 1931, but in an incomparably more rigid form.

The following are the reasons why the Bretton Woods plan must be regarded as amounting to an exceptionally rigid form of gold standard:—

(1) Under the plan the gold parity of sterling will be fixed by law. In the past, no gold parity was ever actually named in any Act on the Statute Book of Westminster. The ratio between the Bank of England's official selling price of gold and the official selling price of other countries was conventionally regarded as the parities of sterling, but these parities were not fixed by law. It would have been possible and conceivable to regard the ratio between buying prices as the parity, instead of that between selling prices. Now for the first time in British financial history sterling will be legally defined as representing a certain weight of gold, or, which amounts to the same thing, as being equivalent to a certain number of dollars, the latter representing a quantity of gold fixed under American law.

(2) Under the old gold standard the limits of the fluctuations of sterling in terms of other currencies were not fixed by law. The gold points provided a somewhat elastic limit in practice, liable to fluctuations. Moreover, in given circumstances, the sterling rate rose or fell temporarily beyond these limits. Under the proposed gold standard the limits of the fluctuation of sterling in terms of the currencies of other participating countries will be rigidly fixed by law.

(3) Under the old gold standard there were no limits, legal or practical to the fluctuations of forward sterling. Under the new gold standard, its fluctuations will be rigidly fixed by law.

(4) Under the old gold standard there were no legal limits fixed for the fluctuation of the price of gold in the London market. Under the new gold standard the maximum and minimum price at which gold can be bought and sold in London will be fixed by law.

(5) Under the old gold standard the Government was entitled, subject to Parliament's approval, to change the gold value of sterling. Under the new gold standard this will require the consent of the International Stabilisation Fund. It is true, in theory the Government will be entitled to change the gold parity within ten per cent of the original parity. In practice, however, it is understood to have been agreed during the course of the Washington negotiations, to abstain from doing so without the consent of the United States Government.

(6) Under the old system Great Britain was at liberty to go off the gold standard whenever she considered this to be in accordance with her vital interests. Under the new gold standard she would expose herself to economic boycott by the remaining participants in the scheme.

It is true, under the Bretton Woods plan there will be no legal obligation to buy and sell gold freely as under the gold standard. In practice, however, it will be the duty of the Government to maintain sterling within the legally fixed limits, and since after five years it will not be permissible to do so with the aid of exchange restrictions the only way in which it will be possible to comply with the rule will be by means of buying and selling gold or gold exchanges freely whenever the exchange rates threaten to rise or fall beyond the legal limits. Moreover, under the plan any country which does not voluntarily undertake to buy and sell gold freely has to incur additional obligations which are liable to be very onerous: it

has to support in its markets the currencies of every other member country against depreciation.

If in spite of the above arguments there are people who contend that the Bretton Woods Plan is not the gold standard, it is mainly because under it there is no direct connection between the operations engaged in the defence of sterling at its parity and the volume of credit. In other words, if, as a result of the adverse trade balance of Great Britain, the British authorities lose gold, this does not entail a corresponding contraction of credit as under the old gold standard. This is the substance of the argument used by Lord Keynes when he defended the Anglo-American Joint Statement, which formed the basis of the Bretton Woods Plan, before the House of Lords in June 1944. He appears to have overlooked the fact that the effect of gold movements was systematically neutralised in Great Britain between 1927 and 1931, and in the United States before 1933, in order to prevent undue fluctuations in the volume of credit. If the system, under which industry is not exposed to credit contractions through the defence of the overvalued currency against depreciation, is not the gold standard, then neither Great Britain nor the United States were on the gold standard before 1931 and 1933 respectively! The fact that at the time Lord Keynes and every other authority recognised that both countries were on the gold standard reduced the argument to absurdity.

Supporters of the Bretton Woods Plan have mobilised all the weapons in the armoury of sophistry to lead the British public into believing that the adoption of the plan would not mean a return to the gold standard. The reason for this is that the experience of the 'twenties and 'thirties has utterly discredited the gold standard, and any open attempt at returning to it would encounter strong opposition. For this reason the tortuous brains of the Bretton Woods Conference have devised a scheme so complicated that they may feel reasonably safe in denying that it is the gold standard, since the general public cannot possibly see through the screen of involved rules behind which the fundamental facts of the system are concealed. This obscurantism has succeeded in confusing the issue to such a degree that the ordinary man does not even try to understand it and leaves the whole matter to the experts—which is precisely what the Bretton Woods men want.

Under the late Government Sir John Anderson had left no stone unturned to induce the War Cabinet and Parliament to endorse the plan. He failed, because Mr. Churchill, having once put Great Britain on the gold standard in 1925, was most reluctant to make the same mistake. While he did not like to say "no" to President Roosevelt and his successor, he succeeded in marking time for nearly twelve months after the Bretton Woods Conference. If Mr. Attlee's Government should now decide to accept the Bretton Woods Plan, aggravated as it is by an undertaking not to devalue sterling even to the extent of 10 per cent, it will incur grave responsibility for the consequences. Its political opponents are certain to take full advantage of the unpopularity of the measure. For even though at the present stage it is possible to deny that the plan is the gold standard, within a few years the consequences of the unprecedented rigidity of sterling are bound to make themselves felt, and then the Labour Party will have to face the next general election with the consequences of Bretton Woods to the debit of its account.

So far no Minister of the Labour Government has made any public pronouncement in favour of Bretton Woods. It is to be hoped that, should the Government decide to adopt it, no attempt will be made to mislead the country about the true character of the system to be imposed on it. In 1925 the gold standard was adopted openly, and the country shared responsibility for it by failing to object to it. If in 1945 or 1946 the gold standard is smuggled in under false pretences, the Government would incur exceptionally grave responsibility. It would be much wiser and ever so much more straightforward to tell the country quite frankly the reasons why the Government felt compelled to accept Bretton Woods, even though many of its key Members fully realise its immense disadvantages. The correct line to take would be to say: "We don't like Bretton Woods, but we have to accept it as a price that we have to pay for American financial assistance and American friendship, for the sake of which it is worth this country's while even to put up with the grave inconveniences of the gold standard." It is of course open to argument whether the passing advantages of a dollar loan are worth the permanent disadvantages of being crucified on a cross of gold, and whether the friendship of the American people can only be bought at the cost of such unilateral sacrifice on the part of a country that can ill-afford to make such sacrifice. But the issue will be made clear before the public.

Our London Letter

STRATEGIC POSITION OF THE PROPRTIED CLASSES

THEIR PART IN SHAPING GOVERNMENT POLICY

London (By Air Mail).

The strategic position of the propertied classes can now be described both geographically and politically.

Geographically, the strongholds of the Conservative party are now found only in the northern part of Scotland—all above the 56th parallel and in the extreme Southern part of England, specifically the four pleasant counties of Hampshire, Surrey, Sussex and Kent. In these areas, the Labour Party polled less than 25 per cent of votes. These are areas of great landed estates and although there is what Communists call an "agricultural proletariat", the Labour Party was quite unable to wean them from the party favoured by the landed gentry.

Over all the rest of the country, both rural and urban, the landslide of the General Election tore scores of erstwhile Conservative strongholds from the grip of the well-to-do. What Labour Party pamphleteers dub "feudalism" has now retreated to the farthest North and farthest South.

When it comes to weapons of political control, there has been similar retreat. Needless to say, the Labour has virtually an unbreakable grip upon the House of Commons, and recent elections for urban boroughs gave them control of many towns and cities heretofore denied to them while everywhere else their power was increased. But it is generally expected that Conservatives will very largely retain control of the county councils at the forthcoming elections. In the important field of local government they have retreated from the urban districts to rural districts. Here they may be expected to make their stand and, up to a point, be a nuisance to the Labour Government, especially in its post-war planning. However, they will have to be cautious for all county councils depend upon grants from the Government and the Labour Party presumably will not hesitate to use "the power of the purse".

But real strength of the Conservative Party lies somewhere else, namely, in the skilful control of the "political climate" of Britain. They have indoctrinated a large part of leadership and the rank and file of the Labour Party with many useful ideas, such as that of wickedness of taking property rights away without payment of full compensation, the benefits of British Empire to all subject peoples, and the claim that the British Nationalism is more disinterested than Nationalism displayed by others, not excluding the United States and Russia. And there are many others, such as the idea that strikes which have not been officially blessed by salaried trade union officials carry an ethical odium, or the idea that when a Labour Government establishes peace-time conscription for armed forces, that is a very different institution in its economic and international repercussions than when it is established by the Conservative Government.

The importance of this is that it explains the curious "feebleness" of the Conservatives in the Opposition. Some

newspapers, notably the "Daily Mail", are greatly agitated by the Opposition's alleged failure to pound the Labour Government day after day. But this alleged "failure" may be less a sign of weakness than a shrewd sense of realities for as long as the Cabinet retains its adhesion to these useful ideas, nothing would be gained and much might be lost by the attacks which drove the Labour Ministers further and further to the Left. Thus, far from attacking Mr. Bevin's foreign policy, the Conservatives cheer him as a patriotic Englishman. On India, the Conservatives conspicuously hold their hand until they are quite sure that the Labour Government is carrying out the policy of which they approve.

But the Conservatives are not the only ones who are displaying certain tactical caution; the Labour Ministers are equally canny. Occasionally Prof. Harold Laski makes a speech wherein he exults and boldly claims that the Labour Party has "seized power" but this imagery is noticeably absent from the speeches of His Majesty's Ministers. They often refer to "powers" to do this or that, and they stress frequently their "mandate" from the "country" but their speeches never refer alarmingly to "power" or to anything so continental and abhorrent as a struggle between "classes".

This is why the British Labour Government arouses so little opposition when it proposes to nationalise the Bank of England or colliery companies or, as forecast in the King's Speech, railways and other forms of inland transport. It is taken for granted that compensation which will be paid will ensure that the present owners will continue to enjoy approximately the same share of the National Income as they did before.

But there are possible (though still remote) issues which would assuredly arouse most intense opposition from the Conservatives. For example, ever since Estate Duties were levied, both the Conservatives and the Liberals have resisted all suggestions that when a great estate has to be broken up for payment of these fairly onerous Death Duties, that the Government should retain ownership of land, or, in the case of securities, should retain ownership of the said securities. Such a policy would mean that in the course of a few generations virtually all land in the United Kingdom would have been painlessly nationalised; furthermore, the Government instead of dissipating the proceeds of these duties in current expenditures would have accumulated an immense stock of earning assets.

The net effect of these Death Duties as managed under the Conservative and Liberal Governments has been to dissipate the holdings of individual families—the Duke of Bedford, for example, to-day owns only a fraction of the vast estates which at one time were in his family—but the ownership has still remained within the class which now consists of the landed gentry plus many thousands of small landlords and speculators. Thus private ownership of the land is politically stronger to-day than

was when the Death Duties were first imposed half-a-century ago.

There are other ideas in the offing which, if forced into the orbit of the British politics, would quickly alter its character, and precipitate a struggle of revolutionary significance. One of them—popularised with at least a small section of what might be described as "Leftish Middle Class"—is Sir Richard Acland's argument that "wealth is personal, not institutional". By this he means that if the country decided to nationalise its industries at one stroke, it should not pay full compensation to owners for then they would continue indefinitely to draw approximately their present share of the National Income but, instead, the compensation should be wholly personal and limited. For example, as a great landowner the Duke of What-His-Name would receive for his lifetime a fixed sum say £2,000 per annum (perhaps free of income-tax if such arrangement would placate him and prevent him from starting a Counter-Revolution). In this way, according to Mr. Acland's theory, Socialism could start without an enormous fixed debt extending indefinitely into the future.

Events may force these and similar issues into the consciousness of the Labour Party but in the meantime much that passes for political controversy is mainly shadow-boxing.

Editorial Notes

Speeding Up Planning:

It was announced only last week that the Government of India have decided to go ahead with post-war planning and that the provinces will be afforded substantial financial relief in the schemes which were put into immediate operation to maintain employment at a high level and which were aimed at offsetting deflationary tendencies. This announcement was made following the Finance Member's flying visit to the various provinces. At the meeting of the General Policy Committee Sir Ardesir Dalal said that the provinces would be enabled to formulate schemes which could be put into immediate effect and that the centre would be prepared to bear its share of expenditure upto a maximum of Rs. 50 crores or one fourth of the total expenses which ever was less.

It is understood that a technique of Central financing of provincial schemes for the Transition Period has since been evolved with the object of enabling the Provinces to go ahead immediately, pending the finalisation of their five-year plans, with the main object of ensuring a high employment level during the transition period. It is expected that the schemes for the transition period will prove to be beneficial in the execution of the final schemes for the long period.

For this purpose the various provincial governments have been asked to furnish the necessary data to the Central Government by the middle of this month for examination from an all-India angle and for general approval as quickly as possible.

It has already been made clear that there should be no delay in the launching of schemes on account of financial considerations and the Government of India are reported to have decided to offer the Provincial Governments the following assistance:—

(1) Loans to the extent necessary for financing projects which the provincial governments may decide to debit to loan money. All self-financing schemes—i.e. schemes which on completion and the lapse of the necessary time for their full operation will yield adequate revenue to cover the interest on capital at charge, working expenses and maintenance and depreciation charges are likely to be debited.

(2) Pending a decision on the methods to be adopted for the distribution of Central grants for the Provincial developments payments to the extent desired by the provincial governments during the years 1945-46 and 1946-47 for the execution of unproductive schemes selected from the provincial plans and approved generally by the Central Government, but not exceeding the expenditure actually incurred upto and inclusive of 1946-47. Unproductive schemes are those which, while considered to be of economic importance, are not likely to be self-financing. Such schemes are, for instance, minor irrigation, roads, anti-erosion, agricultural measures, afforestation, etc. Payments by the Central Government in regard to schemes of this nature will be treated as advances made to provincial governments. They will not be recoverable but will be adjusted against the scheme for grants for post-war development as a whole.

As the main intention is to maintain a high level of employment in order to provide work for the demobilised men and the workers discharged from war work the schemes will naturally be designed to provide a high proportion of employment relatively to cost.

Development of Heavy Industries:

India's industrialisation has been badly retarded partly through insufficient attention and partly due to discouragement of heavy industries. The estimated income from industries in India before the war was not more than Rs. 15 per head of population while the corresponding amount was about Rs. 800 in the U.K. and Rs. 1,100 in the U.S.A. Even during the war Indian heavy industries were not given any stimulus, unlike other countries. The few heavy industries the country has have grown irregularly. The absence of statistics for industries prevents people from knowing what industries exist, how much capital is invested in them, what the present condition of the industries is.

A sound scheme of industrialisation is necessary for the whole country with heavy, medium scale and minor and cottage industries. Heavy industries will help large scale production of commodities attended with economy of cost. They also help to keep large sums of money in circulation; they materially add to the Government revenue. Imports of goods which interfere with the growth of local industries will be reduced, unrequited drain of the country's wealth will stop, both leaders and workers will acquire technical skill, occupations and employment will increase and there will be a general rise in income and standard of living of the local population. The All-India Manufacturers' Organization, Bombay has prepared a scheme aiming at establishing two new key or heavy industries in each British Indian province. Some provinces might take up more than two. Many of the Indian States have large savings and will be willing to come into the scheme. Altogether 24 industries are proposed to be started. The distribution is purposive, heavy industries will

W. G. GROUNDWATER, General Manager.

come to be evenly distributed throughout
the country, the resources of all the pro-
vinces in all parts of the country will be
utilised. The total initial cost of the
24 industries is likely to come to about
Rs. 100 crores. It should not be difficult
to find this capital. In Canada in 1942 the
capital invested was nearly Rs. 1,816 crores
and the gross value of products was
Rs. 2,499 crores. If the industries are
carefully chosen for each province similar
favourable results may be expected in
India.

Some important and urgent measures to
speed up industrialisation are, manu-
facture of heavy machinery and tools in
India if they could not be got from abroad,
starting of a Technological Institute on
the lines of the American M.I.T., training
of students abroad, starting an Industrial
Finance Corporation and establishing an
Economic Council and Planning Office.

The statement of Industrial policy of
21st April has declared, Government of
India's intention to take 'positive' steps
and 'encourage and promote' rapid
industrialisation. The public expect the
Government to give effect to their decision
and in doing so the scheme of the A.I.M.O.
is worthy of careful consideration.

Impending Crisis:

From all accounts, a railwaymen's strike
on an All-India scale looks almost inevit-
able. From press reports it is gathered
that the Railway Board's replies to their
demands are considered unsatisfactory by
the All-India Railway Men's Federation.
The two main points at issue are retrench-
ment and the scale of wages. From the
Transport Member's statement at the Indian
Railway Conference Association it ap-
pears that the apprehensions about re-
trenchment had been based on exagger-
ated reports; for while the Railway Board
was reported to have decided to retrench
250,000 men, Sir Edward Benthall says
that the number likely to be affected im-
mediately would be only about 8,000.
Though the Railway Men's Federation
take a rigid stand for no retrenchment,
the Transport Member's statement should
be considered to have brought the differ-
ences to much narrower limits. If it is
only a question of jettisoning 8,000 men,
who represent only one hundredth of the
labour employed by the railways, it does
not look difficult for the Government to
avoid it and thus avert the crisis. The
suggestions offered by the Railway Men's
Federation for an expansion of employ-
ment needs closer attention than seems
to have been accorded to them. But we
are afraid Sir Edward is inclined to be
more optimistic than circumstances

warrant, though we wish it were
otherwise. The next point of differ-
ence is over wages. Here again, we have
the assurance from Sir Edward that no
alterations in scales are contemplated ex-
cept when the price levels register a radi-
cal decline. On the other hand, he has
held out a promise of higher salaries and
wages to both gazetted and non-gazetted
staff. Public interest and anxiety to
avert a general strike could hardly be
exaggerated. Even in normal times, a
general strike in such a vital department
would have far-reaching repercussions.
At the present moment, such a develop-
ment would be nothing less than a cata-
strophe. It would not only aggravate the
privations and hardships which are the
lingering legacy of the war but would
needlessly put off recovery. If the Gov-
ernment and the labour leaders take up
a reasonable attitude the points of differ-
ences could be adjusted and the crisis
averted.

The Forty-eight Hour Week:

The government have given their appro-
val to the principle of the forty-eight
hour week for India. It is several years
since this principle was embodied in a
recommendation by the International
Labour Office; and it has been accepted in
practice by several nations. In fact, in
Great Britain the opinion in favour of the
early introduction of the forty hours week
is gaining strength. Industrial conditions
in India are different from those in Britain,
and to some extent this is a reasonable
plea for the belated introduction of such
reforms. The forty eight hour week is
already in operation in some industries
such as jute without adversely affecting
output per head. The industry that is
likely to be most affected by the change
immediately is cotton. Here the change
can bring in clear advantages. The eight
hour day allows three shifts, which will be
a great boon in the immediate future both
from the point of view of employment and
output. These two considerations, not to
speak of the increased efficiency of the
worker resulting through greater
leisure and recreational facilities, would

justify the reform. The fact that the em-
ployers on the whole are not taking a
hostile view is a good sign. The change
will however be advantageous to the com-
munity as well as to the different sections
directly involved, only if it is accompanied
by progress in two other directions. The
leisure thus made available to the worker
should yield him the maximum benefit
and this is possible only if welfare arrange-
ments in the industrial units are adequate.
The other test of the measure is output;
the cotton textile industry in India has
not kept pace with the industry in other
countries in its technical equipment.
Unless this gap is bridged up, the forty-
eight hour week might prove a handicap
rather than a blessing.

Towards Global Interdependence:

True global interdependence must be
preceded by a broad programme of
universalisation such as that which in the
past gave the International Postal Service,
the Morse Code, the Greenwich Meridian,
Standard Time and other beneficent
systems. It is also obvious that we cannot
entertain the thought of building inter
and trans-continental super highways
designed to foster inter-dependence until
the United Nations have agreed on a
common rule of the road. One half of
the world cannot persist in hugging the
left side of the road while the other half
holds to the opposite view. Universal
metric system as advocated by Lord Kelvin
and a host of others should be adopted.
For the same reason we shall soon be faced
with the necessity of discarding our
Fahrenheit thermometric scale in favour
of the centigrade on which fresh water
boils at 100 degrees (instead of 212
degrees F) and freezes at zero (instead of
plus 32 degrees F). Another great saving
of headaches and man-hours should come
to the world with the adoption of a new
calendar, eliminating the vagaries and
inconsistencies of our present Gregorian
calendar. The world calendar which has
been favoured by the League of Nations
and approved by Fourteen countries may
be adopted. The need for a rational and
perpetual calendar is unquestionable. The
adoption of these measures is really a test
of whether the United Nations are to
work as self-sufficient isolated units in the
confusion of old Babel or as interdepen-
dent neighbours of a community deter-
mined to live in peace. Unless the United
Nations can agree now on such matters
of self evident interest to all how can
they be expected, as Edgard Prey asks in
the 'Free World,' to deal successfully with
issues of far greater importance? How
much stronger is the argument then for
such far reaching measures in India
itself? No time could be better chosen for
a switch to the changed system than at
present when we are changing from war
to peace.

Bullock Cart Wheels:

Mr. C. O. B. Morgan writing in the Illus-
trated Weekly of India offers a few sug-
gestions for improved bullock-cart wheels.
The present bullock cart wheel seems to
have been handed down from a long dis-
tant past; apart from its clumsiness it
has a destructive effect on roads. The
new design suggested by the writer pre-
sents a flat tyre surface to the road sur-
face at all times, allowing the wheel to
align itself to any inequalities in the road
surface. The damage to road surface is
caused by the wheels which fitting loosely
on the axle wobble and sway from side
to side as the cart progresses; and it is

seldom that they present a flat tyre sur-
face on the road. To prevent the wheels
from this swaying with varying strength
of pressure on road surface, the only way
is a selfcentering and self-aligning hub.
To design such a hub is a fairly intricate

task; but Mr. Morgan claims, he has
achieved it. Mr. Morgan's design has two
distinct merits. It is not a revolutionary
innovation; the only difference between
his design and the existing wheel is in
the hub and the end of the axle. These

"ALL FLESH IS GRASS"

THOUGH the green and fertile island of Britain produces the
best grass in the world, grass is a crop which does not grow there
in winter. Thanks largely to the chemist, the problem of winter
feeding in Britain has been solved. There is a parallel to this in the
dry months in India, and the methods adopted by the British chemist
have a useful application in this country. A century of research is
embodied in the simple tables which enable the British Farmer to give
correctly balanced rations to each kind, class and age of beast. The
chemist has shown how to use industrial by-products for stock
feeding. It was on these largely imported foods that British farmers
depended, before the war compelled them to support their stock on
what they could grow — no mean problem when nearly half their
grassland is ploughed to grow food for Man. But the emergency did
not catch the chemist unprepared. Already in 1935 the co-operation
of the British chemical and engineering industries had shown the
world how the high food value of summer grass could be preserved
for winter by drying it in a machine under control, instead of leaving
it to dry into hay in the course of Nature. The British chemist proved
how similar results could be achieved by ensiling grass with molasses.
To many dairy farmers grass drying and silage have spelt salvation
these past five years. The Chemist has also found a means of turning
straw into a useful food for cattle and sheep. The process is simple.
The straw is first steeped in a weak solution of caustic soda, and then
washed. The pulp which results is then ready to feed. In India, paddy
straw similarly treated yields a cattle feed of very considerably
increased value. These achievements of the British
chemist are today enabling British farmers to fatten
beasts and to keep up the nation's milk supply
in the hour of emergency. Many of them
will remain as part of the new agricultural
practice that will emerge from wartime conditions.

journals besides giving to the wheel complete freedom to adjust itself to inequalities on road surface, reduce rolling friction and tractive effort; they also enable the cart to ride more smoothly. It is also claimed that the cost of the new design is well within the means of any one who could go in for the older type. The new pattern seems to be still in an experimental stage, but there can be no doubt that the advantages claimed for it would give it a ready and wide response in the country.

Railway Rates:

The statement made by Sir Edward Benthall in the Indian Railway Conference Association on the revision of railway rates indicates a policy scarcely in accord with the needs of an expansionist industrial economy. The War Transport Member gave three reasons why he considered a revision of rates could be shelved for some time. These are the complicated nature of the problem, the fact that railway rates have not been raised during war time and the expediency in waiting to see how far the increased volume of post-war traffic under existing rates will more than balance the rise in operation costs. That the problem is not simple can easily be admitted. In fact it is the complicated nature by the existing rates more than the circumstance that they have been evolved without due consideration to the needs of the nation's industry and commerce that makes a revision imperative and urgent. Investigations in connection with post-war rating policy now being carried on by Mr. K. L. Crawford should have brought the stage of final discussions nearer. That there was no increase in rates during the war could not be maintained as an excuse for perpetuating a worn-out system. A war time increase in rates was wisely ruled out on the ground that it might have an inflationary effect. The "let us wait and see" argument has force only if the Government contemplate adherence to the existing system if the anticipated balance fails to materialise. As long as the need for revision is recognised and some work in this connection has already been done, a postponement of decision is neither necessary nor advantageous. On the other hand, a timely resettlement of rates making them simpler and in closer conformity with the needs of a national economy will itself aid industrial and commercial progress.

Economics and Democracy:

Most people will agree that democracy, though the most difficult, is still the best form of Government. Democracy ensures liberty but eternal vigilance is the price of liberty. The question arises as to the kind of vigilance. The citizen, if he is to play his rightful part in the administration of his democratic government must be an informed and constructive critic. This is at once his right and duty. To discharge this a knowledge of economics is absolutely essential as the view expressed by Hedley Shepherd in his book 'Economics—A tool of democracy.' (Kitab Mahal pp.—46. Price Re. 1/-.)

No more a dismal science economics contributes as much as any other science to the well-being of man. And Hedley Shepherd clearly shows that it is no more just a subject for examinations but an instrument of democracy. He traces within a short compass, in lucid style, the growth of economic thought and suggests to the lay man 'what to read.' Few will disagree

with the author's remarks "do not think economics can be mastered in five minutes; it takes several years of reading to become familiar with the general outline of the subject and its fundamental principles: it takes good many years to become really knowledgeable on the subject." But does he not expect too much of the 'lay reader' in asking him to answer 'if the world can protect itself from a general slump?'

Birth of a Republic:

The decision of the Yugoslav Constituent Assembly to proclaim a Republic brings to an end the amorphous state which has characterised the internal politics of the country ever since Hitler overran it. Though on the strength of the Subasic-Tito agreement monarchists could still argue that the Constituent Assembly went beyond its powers, in attempting to settle the form of government, the overwhelming majority which Marshal Tito has secured makes any active resurgence of the controversy improbable. Moreover the future of the monarchy was one of the main issues in the elections to the Constituent Assembly and the vote for the Assembly is clearly a vote against monarchy. The opponents of Tito might explain the Assembly's verdict as mainly due to Soviet influence if not interference; but in the face of events in Austria and Hungary, in neither of which, the popular verdict could be considered pro-Russian, this charge could be hardly sustained. But while the Democracies have no reason to be jubilant over developments in Austria and Hungary, they cannot view without serious irritation Marshal Tito's unqualified triumph. If, as could be expected, the establishment of Yugoslav Republic ultimately leads to a Balkan Federation, it would be still farther from what the Democracies would wish for South East Europe. The end of the Yugoslav ruling dynasty might foreshadow a similar fate to other monarchies which are awaiting popular verdict. Belgium, Italy and Greece will shortly be called upon to say whether they want their kings. In strong contrast to Britain, the record of most of the European royal families has seldom been such as to inspire instinctive loyalty and support from their people. Even if particular claimants for the vacant European thrones happen to be popular figures, the social benefits of the institution which they represent are no longer impressive. The exit of the Yugoslav monarchy is a portent.

Bengal's Needs:

"Bengal's industrial wealth (real and substantial as it is) is a top dressing which only serves to hide an exiguous and unstable rural economy that lies beneath and upon which the vast majority of her 45 million inhabitants depend for the mere means of subsistence and the small cash income with which, if they are lucky, they are able to meet their not very elaborate social and family obligations" says Mr. Geoffrey Tyson in the course of a broadcast speech at Delhi. It is an admirable and succinct summery of economic conditions not only of Bengal but of India as a whole. Though India can claim a place among the industrial nations of the world, her industrial progress has been just a scratch, in relation to her needs and potentialities. Nor has this comparative backwardness in one direction compensated by progress in the

other. The scope for improvements in agriculture is equally vast and its need more acute. It is therefore appropriate that the Bengal Government have given priority among reconstruction schemes to the liquidation of the permanent settlement, comprehensive irrigation and land reclamation projects, the development of subsidiary industries, improved agricultural, veterinary and health services, the construction of over 3,500 miles of new roads and expansion of education. It is not only the relative strength or economic needs but also the existence of certain handicaps in the way of immediate industrial expansion which justifies this priority for schemes that have a rural bias. The inevitable delay in getting essential capital goods naturally postpones major industrial schemes. Nor can the latter absorb as large a proportion of men released from military services connected with the war, as the development programme envisaged for the immediate future. Further industrialisation will be smoother if the internal market for the expanding supply of comforts and luxuries, is strengthened and enlarged through improvements effected in our agricultural economy. As Mr. Tyson says the essence of planning is the correct arrangement of priorities, and in this Bengal has taken a correct lead.

Letter to the Editor

Sir,

I read with much interest the paragraph on the Indian Silk Industry which appeared in "Editorial Notes" in your issue of the 1st December and, as this is a subject of which I happen to have some knowledge, I hope you will permit me to make a few comments. I may mention that my firm was until about 20 years ago engaged in the manufacture of Raw Silk in the districts of Bengal but gave it up because it did not pay.

There is no doubt that some parts of India are suitable for the culture of silk-worms and the manufacture therefrom of Raw Silk. But it is only in the tropical and semi-tropical regions that 7 crops of silk-worms can be grown. Silk-worms which produce only one crop of cocoons per annum are known as "univoltine" and those which produce more than one crop as "multivoltine". The cocoons produced by univoltine worms contain a much larger quantity of silk than those produced by multi-voltine worms and moreover the quality of the former is much better than that of the latter. Raw Silk has to be re-reeled and treated in various other ways before it is ready to be woven into cloth and the re-reeling factories greatly prefer the Raw Silk from univoltine, and the climate of that country is eminently suitable for that class of worm. Japan does not, in the strict sense, grow 3 crops a year; that is, the worms do not re-produce 3 times per annum. The Japanese allow a proportion of the silk-worm eggs (technically known as seed) to hatch out in the ordinary natural way in the spring after their winter hibernation, but the hibernation of the remainder is artificially delayed by putting the seed in cold storage and only allowing it to hatch out when the second and third crops of mulberry leaf are ready. Mulberry leaves, of course, are the only food given to silk-worms.

The Japanese mulberry silk industry attained its great success for two main reasons, which are really inter-related, firstly because of the good quality of the raw silk, to which reference has already been made, and secondly because no rearer was allowed to produce his own seed and rear worms from it but had to purchase all his seed from Government nurseries. In these nurseries all moths found to be infected with the dread silk-

worm disease known as "pebrine" were destroyed and only healthy moths were allowed to mate and produce seed. Pebrine is a hereditary disease transmitted by the female parent. Large numbers of worms affected with pebrine die before they have reached the cocoon-reproducing stage but usually not before they have consumed a great deal of mulberry leaves. The rearer has paid for this mulberry so it is easy to understand that he is not likely to make much money out of his crop of silk-worms if a large number of them are affected with pebrine. The rearer, unlike the nurseries, cannot detect the presence of pebrine in the body of the moth nor has he the facilities which the nurseries have for producing disease-free seed. In Bengal, when my firm was engaged in the raw silk industry, there were Government nurseries but not enough to produce more than a fraction of the seed required by the rearers for the production of cocoons from which to make Raw Silk, so the rearer had perforce to keep back part of his crop for the produc-

tion of seed for the next crop and, if this seed was largely infected with pebrine, he made little or no money, or even a loss, out of his crop. I do not know what the present position with regard to Government nurseries in this province is, but if the Raw Silk industry is to become a flourishing one it is in my opinion essential that the capacity of the nurseries should be large enough to produce sufficient seed for the needs of all the rearers so that they will not have to use seed from stock reared in insanitary rearing-houses but will be able to procure seed guaranteed to be, if not absolutely, then at least almost entirely free from disease. And further, as pebrine is not confined to Bengal but is found throughout the world wherever there are silk-worms, it would be inadvisable to attempt to start a silk industry in any other part of India without making arrangements to combat disease from the very beginning.

Yours etc.,
IAN A. CLARK

**Transportation
Progress....**

It has been truly said that a country's transport system is measure of its greatness. It is no surprise therefore that launched on an extensive programme of industrialisation India is facing up to the task of expanding and modernising transport facilities throughout her vast extent.

Road, Rail, River, Air, will each play their part. But in each only the best will be good enough.

Premnath Transport operate a huge fleet of vehicles on the most modern and efficient lines. They face the future determined to play their part to the full in the expansion and improvement of India's transport system.

Anglo-U. S. Financial Agreement

WASHINGTON, Dec. 6

By the time this appears in print, the Anglo-American financial agreement will have been concluded and its more important provisions will have been broadcast all over the world. But it may not be without interest to know the position in what is assuredly the last stage of these protracted talks.

For the first time during the last five, six weeks there is hope on both sides that conclusions can be reached and announced before the week ends. The American officials seemed to be aware for the first time, after Sir Edward Bridges, Permanent Secretary of the Treasury and Secretary to the Cabinet arrived here, that the British Cabinet carefully considered the results of a possible break-down in the negotiations. On the American side, apparently the possibility was never considered that Britain might decline the loan. Now that the Americans know, however, that on the planned economy segment, the Cabinet has alternative courses in mind, they are more than ever desirous of completing satisfactorily the loan terms. The issue uppermost in these last stages is that of unfreezing the sterling into dollars. Sir Edward's arrival coincided with the news that advocates of planned economy feared that the American proposals on unblocking of sterling might bring about such freedom of international trading as would be injurious to internal economy plans. On the other hand, the Americans realise now that in the absence of a loan, Britain could not ratify the Bretton Woods proposals or participate in prospective international trade organisation. In as much as this country pins many of its economic hopes on the successful functioning of these bodies they feel it is urgent that the loan terms be reached and will take that line in presenting the matter to the Congress. The Cabinet's alternative course mentioned above would be to launch a course of bilateral restrictive trading which would be nothing if not harmful to this country which places the greatest reliance on multilateral trade as the surest cure for the type of pre-war restrictions which tie up commerce and ultimately threaten peace. America now proposes that a certain portion of the dollar loan be set aside for reimbursing the sterling area countries in current and future transactions. This is regarded as more acceptable to the Congress which might be opposed to the original position that half the loan should be used to retire a portion of Britain's wartime sterling debts.

President Truman's Labour-Management conference ended last week without producing machinery for settling the industrial strife which has plagued the nation since the war ended and the President a few days later presented his own solution to the Congress. When the Conference was convened, Mr. Truman warned the delegates that, without Government participation or interference, they must settle their differences if they were to avoid the enactment of legislative curbs on their activities. It now "becomes the duty of the Government to act on its own initiative", Mr. Truman told the Congress in proposing the law to carry out these procedures, firstly, when the Secretary of Labour finds that industrial

dispute may affect public interest, to investigate and propose means of settlement; secondly, for 30 days' strikes would be prohibited while the Board made its investigation. It remains to be seen how the Congress will accept the plan; but it was immediately apparent that it was unacceptable to the Labour and only partially satisfactory to Management. Meanwhile, employees of the General Motors Corporation, the world's largest industrial concern, remained on strike and Mr. Truman announced that in advance of Congressional action on his plan he was setting up a fact-finding board to propose settlement terms for that automobile manufacturing company's strike. He urged, without success thus far, that the strike be ended while the Board made its investigation. These were the latest

developments of the labour situation which is upsetting the reconversion of American economy. Many current difficulties stem from Government labour policies during the past few years which now seem to be firing back and Government will have to set in to solve them rather shift them to private hands.

Clive Street Gossip

At long last, the negotiations over the Anglo-American financial settlement have drawn to a successful end. Not only has one of the major uncertainties of international economic relations been removed by this agreement, but the basis for the smooth regulation of post-war international finance and international trade has to some extent been well and truly laid. Though the benefits of this agreement may not be equally distributed among all the nations, the consequences of failure would not be confined to the two nations directly concerned. In appraising the value of this agreement, it is useful to speculate on the possible results of failure. In the first place, Britain would have no readily available means of maintaining, not to speak of reviving, her national economic life. It is almost certain that, faced with insoluble problems, she might feel forced to desperation and would utilise every means in her power to arrest the deterioration of her national economy and to conserve to herself all the advantages that should accrue from her position as the head of the British Commonwealth. It is certain that the Empire would be ringed round more closely as a special preserve for herself; and it goes without saying that India and other dependencies would suffer far more than the self-governing members of the Commonwealth. Every effort would have been made to maintain the sterling area, while sterling itself would be tossed up and down in the stormy seas of international exchange. The consequences of these conditions on international trade can be easily imagined. Though partisan supporters of imperial preferences might argue that the Empire is as self-contained and fertile an area as any other block in the world there can be no doubt that total effect on the Empire and imperial trade would be of an undesirable kind. So far as India is concerned the chances of settlement of our problem of sterling balances and our being able to proceed with the policy of planned economic development would become more slender than they are and the general outlook, both in the political and economic spheres, would be extremely bleak, indeed.

If only in consideration of these adverse consequences of failure, there should be general satisfaction that the Anglo-American negotiations, which threatened to break down at more than one stage, have at last been crowned with success. The positive benefits of this measure are by no means inconsiderable. There is no reason why Britain should feel dissatisfied with the final terms of the settlement although it would be some time before certain sections of financial opinion will be able to reconcile themselves to some of the implications of this arrangement with the U.S.A. Already, the opinion has been expressed by Dr. Paul Einzig in a special contribution to this journal that the Anglo-U.S. agreement would involve a return to the gold standard and that the disadvantages of such a return which had been amply demonstrated in the history of the inter-war period will by no means be adequately compensated by the advantages that the settlement holds out.

It will be seen that this question can gain practical importance only at a much later stage of the working of the agreement and that, at the moment, the immediate benefits should indeed weigh far more.

Strictly speaking, it is unquestionably a matter of immediate urgency that Britain should have large dollar loans assigned to her by the United States. Those who are inclined to weigh the pros and cons too fine forget the crisis brought about by the cessation of supplies under lend-lease and overlook the fact that, before Britain can take up the question of reviving her export trade and strengthen her national economy, she will have to satisfy the claims of her creditors who hold large sterling balances in London. The possession of large dollar credits is a necessary and, to a large extent, even sufficient starting-point for unravelling the tangle of her economic and financial problems. Though there were extremists in Britain who talked tall about giving up the negotiations and falling back on imperial preferences and the sterling area, it is practically inconceivable that Britain could have taken a single step on the path of recovery without the kind of help that she has now acquired from the U.S.A. Considering the urgency of the need in which Britain found herself, not a little credit is due to British diplomacy for having so often turned the tables against America and making the U.S. Government feel that they had more reason than Britain to fear a possible breakdown of the negotiations. The British Government have effectively prevented further reduction in the free lines of credit which certain sections of American opinion favour and she has also brought down the effective rate of interest to as low as 1 6/8 per cent, with the additional facility of suspending interest payments in any year, in which foreign reserves of the British Government may not be adequate for providing for them. There is no doubt that the British Government would have liked to secure the loan without any conditions attached thereto in regard to the settlement of wartime balances, in sterling or the availability of current sterling balances for its creditors for conversion into other currencies. Since British help in the freeing of trade and the promotion

of multi-lateral trade was the only consideration which the U.S. expects in return for help to Britain, it is impossible that Britain could have had her way in this matter. Nevertheless, the form which has been given in the agreement to these obligations must be deemed another triumph for British diplomacy.

It is perhaps true in one view that American interest in the conclusion of the negotiations with Britain is nearly as great as Britain's need thereof. For, America's relations with the rest of the world in the post-war period are thought of in terms of economic rehabilitation and expansion of international trade and it is to the increasing prosperity of world economy that America looked for the reassurance against a third world war which she regards as the true return for her part in the first two. The American programme of action in this regard is the grant of large-scale dollar loans to her chief allies, the provision for a wide distribution of their benefits among other nations and further trade negotiations with a view to secure, on the basis of these dollar credits, a steady expansion of international trade. In this programme, Britain naturally comes first not only because of the racial and other affinities between the two nations, but also because Britain is the centre of a financial, economic and political Empire. Dollar loans granted to other countries cannot be expected to have the same stimulative effect on world trade as dollar credits granted to Britain. And in so far as the stability of sterling currencies and free trade in the countries politically attached to Britain could be ensured as part of the debts agreement, it is understandable that Britain should be regarded as the pivot of the whole American policy. That British diplomacy has been able to take advantage of this overriding American interest in the success of the negotiations is a circumstance which only a very small section of American opinion would regret or resent.

A study of the main provisions of the Anglo-U.S. financial agreement must be based on the recognition of the three divisions into which its provisions may be said to fall. Firstly, there are the clauses which defined financial obligations which Britain incurs directly to the U.S.A. Secondly, there are the broad commitments which Britain has entered into in regard to helping the U.S.A. in the pursuit of an international economic policy. Thirdly, there are the obligations which in consideration of American help Britain has taken on herself in respect of wartime balances in sterling.

The provisions in regard to the first are, as may be expected, clear-cut and well-defined. The United States has agreed to lend Britain \$4,400 millions of which \$3,750 millions will be 'line of credit' for trading purposes and \$650 millions will be in final settlement for lend-lease goods now in the United Kingdom. The U.S. Government will grant waiver of the amount of interest due in any year at the British Government's request "in view of the present and prospective conditions of international exchange and the level of the gold and foreign exchange in reserve". There is no reference in the latest report to the International Monetary Fund acting as the judge of whether Britain's foreign exchange position would or would not allow the payment of interest charges. The loan is to carry an interest of 2 per cent per annum. And it has been calculated that the total amount that will be repaid would be \$5,562½ millions and that the rate of interest will work out to 1 6/8 per cent, taking the five-year period of grace into account. The effective rate of interest may be deemed to be wholly in accord with the level of international money rates that will prevail in the years to come. It is also possible that this effective rate of interest for a large international loan may give a rough indication of the floor of interest rates in the future. As I have said already, Britain has every reason to be satisfied both with

the amount of the loan and the rate of interest.

I may now turn to the obligations that Britain has taken on herself in return for American help. These obligations may be said to have been conceived mainly from the point of view of helping the movement of international trade. In so far as Britain's blocked sterling balances are one of the principal obstacles, the agreement includes specific provisions in this regard. The reports that have been received so far leaves a great deal to be desired in respect of clarity. Necessarily, the distinction is sought to be made between sterling receipts from current transactions and sterling balances which have been accumulated by sterling area and other countries before the settlement which the British Government intends to make with her creditors. So far as current sterling receipts are concerned, the British Government have undertaken to complete the arrangements as early as possible, whereby such receipts will be freely available in any currency area without discrimination. As for the sterling balances, settlements will be on the basis of a division into three categories; firstly, balances to be released at once and convertible into any currency; secondly balances to be released by instalments over a period of years beginning with 1951; and thirdly, balances to be adjusted as contribution to a settlement on post-war indebtedness. It is pointed out that sterling balances released or otherwise made available will be freely available for current transactions not later than one year after the agreement.

Countries like India, which hold large amounts of sterling balances and which till now have had no reason to hope for early settlement satisfactory or otherwise, may to some extent take courage from the fact that the settlement of this problem is part of the understanding between Britain and America. But it would depend a great deal on the proportion of

each of these three categories to the total sterling obligations, whether or not the settlement will be welcomed. The British Government's statement on this question possibly represents a modified form of the original proposal which the American Government was credited with, namely, that a part of Britain's dollar loan will be made over to the holders of sterling balances in return for the writing off of a part of the sterling owed by Britain to such countries. Evidently, Britain has succeeded in getting America to agree that the terms of the settlement of the sterling balances problem must be a matter for negotiation between herself and each of her creditors, and that, so far as America is concerned, she should be content with the assurance that these sterling balances would be released and made available for current payments freely and at as fast a rate as possible.

It is not possible to foresee the lines on which Britain would be prepared to settle with the holders of the sterling balances. The mention of a third category of balances to be adjusted as a contribution to the settlement of post-war indebtedness seems ominous, particularly in the light of an earlier proposal that Britain's creditors should write off amounts in sterling much larger than what would be made available to them in the shape of a part of Britain's dollar loan. At the moment, the assurance that sterling receipts from current transactions will soon be made available for conversion into other currencies and the prospect of immediate release of a certain part of accumulated balances and of unblocking of another part in instalments should be welcomed as the first ray of light in the gloom that has so far enveloped this question. It may be presumed that negotiations between the Government of India and the British Government will be instituted with a view to arrive at a settlement, even before the introduction of any constitutional changes.

If Britain's obligations in respect of sterling balances are vague, her commitments in regard to the freeing of international trade are even more vague. The joint statement affirms that the purpose of the American loan is "to assist the United Kingdom to assume the obligations of multilateral trade"; and in a statement to the press, Mr. Viason, the U.S. Treasury Secretary, has been careful to point out that by means of the agreement "the likelihood of the world being divided into several economic blocs will be lessened." There is no doubt, that on the strength of the dollar credits now obtained, Britain should find it comparatively easy to relax imports and exchange controls and generally move forward with the United States and other countries "towards the common objectives of expanding multilateral trade." The joint statement observes that "these arrangements, if carried out, will put an end to the fear of an economically divided world and make possible throughout the world expansion of employment and production, exchange and consumption of goods and bring into being for the first time a common, good and equitable rules for conduct for international trade policy and relations." One can by no means be dogmatic on the extent of the British contribution to these lofty purposes. It has been already reported that Britain's

part in the international trade conferences which America proposes to convene would be to endorse the American announcement of the scope of the agenda without committing herself in advance to any statement of policy upon the various subjects to be discussed at the conferences. It has also been mentioned that the international trade conference will be preceded by an Empire Trade Conference to be held in London in January.

So far as America is concerned, as I have mentioned already, the British loan

is the starting point of a vigorous policy of distributing dollar credits all over the world and obtaining in return comparative freedom of trade relations. It was reported some time ago that America would negotiate with other countries for reduction of tariff in terms of groups of commodities on which she would offer to lower the rates of her import duties. It would now appear that America has returned to the old methods of an amorphous conference, the wisdom of which is by no means supported by past experience.

CALCUTTA.

OBJECT:

The present war has shown the necessity of using Herbs and Plants in preference to synthetics. So far Indigenous Drugs have not been carefully and systematically cultivated, collected and preserved by the Botanical Drugs Dealers in India.

We have had a considerable experience both in medicinal and economic Botany and from the experience we have gained we are convinced that so far as India is concerned this branch is at a stand still for want of accurate scientific guide. The Government of India emphasises the necessity of establishment of Medicinal Farms in well selected localities to exercise scientific control over the cultivation of Medicinal Herbs. As a matter of fact almost all the medicinal Plants of British Pharmacopoeia may be cultivated in India.

There is great scope for manufacturing concentrated Extract of Botanical Drugs and their various derivatives including extracts and alkaloids such as Ephedrine, Berberine, Santonine, Caffeine, Hyoscyamine, Digifoline, Strychnine, etc., bulk Vitamin natural, essential Oils and concentrated insecticide bases—particularly Pyrethrum, Rotenone and Red Squills preparations.

The object of this Company is (1) To cultivate Botanical Drugs as Cinchona, Ipecacuanha, Coptis Teeta, Pyrethrum, Polygala Senega, Red Squill etc., etc., for which there is a constant demand in India and overseas countries.

(2) To collect Herbs and Drugs from Himalayan Region in scientific method and to trade in India and abroad.

(3) To manufacture various Extracts and Alkaloids from Indigenous Drugs and their trading in India and abroad.

APPLICATIONS FOR SHARES ARE INVITED. AGENTS AND BROKERS MAY CONTACT IMMEDIATELY

Our Australian Letter

Utmost Efficiency—Training Designers.

CANBERRA, November, 25.

As a token of its faith in the future of wool, the Australian Government recently decided to build and equip colleges at Sydney, N.S.W., and Melbourne and Geelong, Victoria, at a total cost of Rs. 26,75,000.

The plan serves the double purpose of developing the Australian textile industry, and fitting into the Commonwealth's post-war reconstruction training scheme for service men and women.

Wool-growing is Australia's most important primary industry, and the pivot upon which the whole of her economy revolves.

Australia's average annual production of greasy wool is about 1,000,000,000 lbs. Of this amount, more than 800,000,000 lbs. was exported unprocessed in pre-war years. There is thus considerable scope for expansion in the textile industry in Australia, and it is in order to make Australia a world leader in textile processing that the new colleges of textile instruction are being established.

Australia's flocks comprise approximately one-sixth of the world's sheep, produce more than one quarter of the world's wool requirements, and maintain an industry worth Rs. 80½ crores. Britain bought the whole of the Commonwealth's clip during the last five years.

In addition, Australia grows a third of her own requirements of raw cotton, producing in 1940 4,000,000 lbs. of ginned cotton from 41,387 acres.

Australia has another important industry in flax. Because of the war, her flax acreage leapt from 1358 in 1939 to 70,000 by 1942. To-day there are 27 factories handling flax in four States, and employing a fluctuating staff of 2,000 employees.

In 1939, Australia's 29 woollen and tweed mills employed 20,000 operatives, and her 313 hosiery and knitting mills another 20,000. Synthetics such as nylon or rayon are not yet manufactured in Australia.

Australia recognises that competition with synthetics will be kept in the post-war years, but she is confident that the world will continue to demand the plain honest-to-goodness wool off the sheep's back, which is warmer, stronger and more resilient than any artificial product.

For some time now, an advisory committee sponsored by the Ministry of Post-War Reconstruction has been investigating the needs of the Australian textile industry. A careful survey soon led the committee to recommend speedy provision of adequate technical training course.

The committee pointed to the national importance of the textile industry, the great national economic value of the wool-growing industry, the increasing strides being made in the production of other textile fibres, and the expected increased competition from synthetic substances in the post-war years.

Training facilities must be provided to ensure utmost efficiency in all stages of manufacture of woollen, cotton and other textile materials, the committee urged.

In keeping with modern trends, Australia's technical training scheme places special emphasis on the value of day-training. The Government's expert advisers consider that an early sound training outside the industry is beginning to be more highly-valued in many quarters than an early start in the industry, and an evening-class education.

Real need exists for more highly-qualified men in the textile industry. Progress will demand ability to explore new methods, new sources of raw materials, new processes and new applications of science, art and technology.

In Australia's technical training scheme, the college diploma will not be an end in itself, but the needs of the industry will be anticipated and studied intelligently, and live contacts will be maintained within the industry.

The growing complexity of industrial organisation, increasing applications of science, the evolution of new technical processes, and larger business units, demand more of the managerial group.

Aims of Australian educationists are to see that the technical man should have business training, and that the business manager should know the technical side.

The student designer, after a "colour blindness" test at the beginning of his course, will be given a training which blends art and science. Industry has been awakened to the need for original design. It is hoped that the Australian-trained designer of the future will be able to combine his appreciation of artistic forms with the technical side of textile production.

The success of the industry depends largely on the operatives' skill in handling

delicate threads. During the war, Australia was forced to employ much semi-skilled labour in the all-out drive for increased production. While production was stepped up, loss in efficiency demonstrated the urgent need for technical instruction.

Two British experts, Mr. Willsden, from the Torridon Research Station, near Leeds, England, and Professor Speakman, of Leeds University, have arrived in Australia to advise the Commonwealth Government on wool textile research.

Australians recognise that competition with synthetics will be keen. Manufacturers of synthetics spend millions of dollars a year employing the world's best research chemists in textile research, and even more dollars in advertising. The superior quality of wool is not enough, observers point out; it must be demonstrated and stressed.

Australians also are confident that, despite all that is being done to produce synthetics—and partly because of it—the world will continue to demand wool. Synthetics, it is believed, will never equal the warmth, resilience and tensile strength of wool.

In the creation of yet finer woollen products, Australia intends taking a leading place, and the new textile colleges are part of the plan to achieve this objective.

(From Our Correspondent)

DELHI, Dec. 4

The past week has been one of conferences in New Delhi. We have had the annual meeting of the Central Board of Irrigation, to which a passing reference was made in last week's letter. There was then the Seventh Labour Conference and the week was filled in by another conference of railway men.

Hitherto, the policy of the Government of India and the Provincial Governments has been to favour irrigation and hydro-electric projects which were productive in terms of direct addition to the revenue. The indirect benefits which accrue to the community, to local bodies and to Government have not been measured, and the Conference has now recommended the setting up of machinery by which these additional benefits may be assessed and taken into account in determining the productivity of irrigation and hydro-electric works. Irrigation is a provincial subject, but it has been felt that the development should be on the regional basis as opposed to isolated schemes by individual provinces and states. Recently there have been disputes between the Provincial Governments in respect of irrigation rights and the point is of interest as now the Irrigation Board favours the policy of inter-provincial co-ordination.

Turning to the biennial Conference of the Agents of State Railways, Sir Edward Benthall raised a point which appears to have passed unnoticed. He stated at the Conference that it is not quite the time "to settle finally what the post-war rates will be, because we are still faced with the inescapable fact that railway rates have not been raised during the war anything like the present level of prices." This is a surprising statement to make, and the argument would have been perfectly legitimate had Indian railways adopted the policy of basing their rates on the price level. It is well known that in the slump which the country had to face in the years 1931 to 1935, price levels of primary commodities dropped to half or even a third of their pre-slump values, and the railways did not pay any attention then to the argument that rates should be reduced in accordance with the fall of the price level. It was then argued that railway operating costs were more or less fixed and could not be easily manipulated to correspond with fluctuations in the price level. The example of the South African Railways, where freight rates are based on the price level of commodities and slide according to variations in the price level, was pointed out, but to no purpose. The railways are trying to have the best of both worlds, which certainly is not fair to the agricultural and trading community.

What may be called the Indian Industrial Workers' Bill of Rights was adopted at the Seventh Labour Conference. The Government appear to be solicitous of the workers' welfare and at their suggestion the principle of the forty-eight-hour week in factories has been accepted, the consideration being that the worker is entitled to a reasonable amount of spare

time away from the factory. Another important measure which will be of interest to workers is the recommendation for the statutory provision of industrial canteens.

Before the war India used to rank as the eighth amongst the industrial countries of the world. At the present moment she has probably advanced herself two steps, as Germany and Japan have dropped out for the time being. Although she occupies such an important place, in point of welfare measures she still has a great leeway to make up. Dr. Ambedkar took stock of the position at the Conference and one or two points of interest which emerged from his survey are that out of 357 recommendations made by the Royal Commission on Labour for the improvement of the working classes 133 which required legislation have been mostly given effect to. The Committee's recommendations were made in the year 1932 and it has taken thirteen years to give legislative effect to these recommendations. For the prominent rank she occupies in the International Labour Conference, India has a poor showing to her credit in the matter of giving effect to international conventions for the improvement of labour standards. Out of sixty-three conventions which have so far been adopted, India has ratified less than a fourth of them.

The Finance Member's recent visit to the Provinces is understood to have been in connection with the formulation of provincial post-war reconstruction plans. The Government of India would appear to have agreed to give liberal grants to the provinces to enable them to push on with their schemes during the two year transition period. It is likely that the Finance Member discussed with the Provinces the question of their agreeing to Central legislation in the matter of sales taxation. Provincial Governments will require considerable sums of revenue if the post-war schemes which they have under preparation are to be adequately financed. Sales taxes can be made to provide an elastic source of revenue, but only a few provinces have taken advantage of this form of tax. Sales taxation is in force only in five provinces and only

in one is it yielding any considerable revenue. The desirability of a uniform standard in the provinces in the matter of sales taxation will be generally agreed to, and it may be supposed that this question was doubtless one of the subjects of discussion during the Finance Member's visits to provincial centres. Another point which doubtless would also have been reviewed may have related to the question of death duties. This source of taxation, although it is not believed to be a potential source of any considerable revenue, raises important legal, economic and constitutional questions, and the attempt to hustle the provinces now into accepting legislation should be avoided when the elections to the legislatures are taking place. A fair opportunity should be given to the new popular governments to review the position and they should not find themselves in the position of having to face a 'fait accompli' which the Government of India, in consultation with adviser regimes in the provinces, may consider necessary in connection with the post-war schemes. New measures of taxation should not therefore be undertaken hastily, whatever the need or justification for them may be. For the success of the post-war schemes themselves, it is desirable that popular support and sympathy are secured and that the new provincial legislatures have an opportunity of having their say on such important questions.

INDIAN HEMP ASSOCIATION

Detrimental Effect of the Agmark Scheme

Mr. B. L. JALAN on the Industry's Difficulties

Gentlemen,

I have great pleasure in welcoming you to the 3rd Annual General Meeting of the Indian Hemp Association. The end of the war has brought immense relief to all throughout the world as well as to the Indian Shippers who had to curtail their activities to a great extent mainly due to the closing of the continental ports, and restriction in shipping space. We hope the Indian Shippers will be allowed to switch on their selling to markets throughout Europe and America without further delay through usual trade channels and that sufficient shipping space will be allotted to them in the near future.

The Agmark scheme introduced as an experimental measure has failed totally. It has done no good but has added an extra cost of 5 shillings per ton which the Trade can hardly afford now when they have to compete with the Italian and the Sisal fibres. It is vital that the scheme should be totally abolished, as a fair trial has already been given to it for three years and frankly speaking, instead of helping the trade it has only come in the way of its smooth development. On the other hand the scheme formulated by the Association, will, if adopted, help buyers and sellers alike and it will ensure better grading of Hemp than the impracticable Agmark scheme which has been found wanting.

My predecessors in office have consistently drawn the attention of the Government to the detrimental nature of the Scheme but the Government had all along ignored their suggestion. Besides this, the Government scheme was not only unworkable in its nature but in the course of its operation it revealed other drawbacks. Inspectors appointed by the Government were inexperienced and Hemp which under the private mark was classed at No. 1 was put one and often two grades lower. The smooth flow of trade was so much hampered that the balers had to ignore the Government marks and stick to their own standards.

The Scheme which the Association has formulated, divides Hemp into two categories viz: Long Group Marks and Short Group marks according to their quality. It provides that a list of the marks registered with the Association is to be published and no one other than the person registering it will be permitted to use the mark. Furthermore it is laid down that a person having experience and reasonable Financial backing will be eligible for membership and will have to obtain a trade licence before exporting goods. Provision has been made for issuing a "passed certificate" to the exporter to maintain the standard quality of mark before the goods are exported and the marks of a shipper are liable to be deleted from the Association's register of marks after due warning if repeated complaints are received against him.

The Scheme was submitted to the London Hemp Association, with whom negotiation has been going on. They had already discussions with the representatives of the India Office, the Raw Materials Department, the Ministry of Supply, the Hemp Controller and the Adviser on Rope Supplies. We hope the views contained in the scheme would eventually find favour with the Government as it would prove very helpful.

Shippers have been experiencing great difficulties on account of shut out charges due to no fault of their own which charges ultimately they have to bear. Even though Government have assured from time to time that they would see that legitimate claims in respect of these charges were borne by the buyers, concrete instances referred to them do not appear to have been decided yet and I would therefore stress upon the

urgency of arriving at a satisfactory conclusion on the matter without further delay.

It is matter of regret that prices of Hemp have been fixed in an arbitrary manner from time to time and that they were lower than those of last year's and below the comparative level of other agricultural products. From the very beginning of this year the Association has repeatedly drawn the attention of the Government of India to this method of price fixation, carried out only in consultation with the United Kingdom Ministry of Supply ignoring reasonable trade views. It is vital that an important matter like this should be decided upon only after consulting the trade. Although the yield of crop was less than that of last year's and was far below the parity of other fibres and other agricultural products yet rather than increasing the price, it was further reduced. Moreover, owing to the enormous rise in the cost of living the agriculturists have no alternative but to cut down the crop area further which may not be more than 50 per cent of last year's. These points have been taken to the Government's attention time to time and again and the Association had again sent an express telegram to the Government in view of the expected increased demand which has already been forth coming from the Continent and America and I presume that a good portion of the crop has already been purchased by U.S.A. and by which India can balance foreign import to a certain extent. In reply the Government of India pointed out that the prices of Hemp have been fixed in consultation with important sections of the trade and that owing to the confidential nature of the discussion it had not been possible to invite the Indian Hemp Association to such conferences. It has not been possible for me to appreciate the force of this contention as all the important balers and shippers in the country are members of this Association and to my knowledge discussions have not been taken place with any such members. Further, another argument addressed by the Government of India that even though there has been a 50 per cent decline in the output of Benares Hemp, the demands of the Ministry of Supply had been entirely met does not appear to be convincing. With the many methods of purchase open to them it may have been possible for the Government to meet the Ministry's requirements but it has at the same time affected the hemp crop to a very serious extent and if the situation should continue to show the same trend, I feel that there is likely to be progressive diminution in the acreage under hemp cultivation and Benares Hemp known for long in the field for its quality might altogether disappear from the market. It is, therefore, very important so far as the Indian cultivator is concerned, apart from the interests of the Indian shippers and Indian export which are bound to be affected, that the prices should be left to the buyers and sellers. There should not arise any question of fixing prices at this stage. As India is industrialising, it is important that all the raw materials which are exported from India such as jute, hemp, etc., must get reasonable and adequate prices to pay for the import of machinery and capital goods which is bound to be heavy.

Great difficulties were being experienced in Railway transport throughout the season, especially as far as movement of Green Hemp was concerned. In one case, certain quantities of Hemp were lying undepatched for 18 months and on being informed the Association was ultimately able to persuade the Railway Authorities to allot sufficient wagons. In another case although the Association had taken up the matter with the Adviser on Rope Supplies and the Railway Authorities yet no wagons had been allotted for movement of Green Hemp (the Ganjam or C. P.

Hemp) from Vizagapatam area to Calcutta so that shipment could be effected from here. In reply it was stated that it would not be expedient to remove or relax restrictions on movement of hemp but the Adviser on Rope Supplies assured that the situation would be reviewed by the Government in March '45. But nothing has so far been decided. As a matter of fact there are several shippers and balers who have their press Houses in Calcutta and it was not possible for them to pack in Vizagapatam where there is only one Press House which cannot cope with the situation nor have the shippers any control over the Press House concerned to persuade them to pack in their Press House. It is hoped the Government will pay immediate attention to the matter and come to the relief of the Shippers.

It is expected that the Commerce Department will allow export of Indian Hemp to continental ports and America and see that sufficient shipping space is allotted so that Export may rise in no time to the highest peak. It is likely that there will be great demand for Hemp from Europe provided adequate facilities are given by Government. The attention of the Commerce Department was drawn to this as far back as September last year. The situation has tremendously improved and I hope the Government will be in a position now to assist the Indian Shippers.

Another aspect of the matter which has recently come to our notice concerns the exports of hemp to the U.S.A. It has been found that the prices offered by American buyers have invariably been higher than those offered by the Ministry of Supply but that all the same the Government have begun to enforce many restrictions in shipments of hemp to America mainly with a view to fix arbitrary prices as was done in the past which is unfair and unjustified. This situation is being regarded with very serious apprehension by the trade and it is essential that exports to America at such prices as are obtainable thereby a free negotiation are encouraged with a view to building up there a market for Indian hemp before other parties step into the field I hope the Government will take immediate steps in the matter.

There is no reason why the Indian Hemp with cheap labour at its disposal should not be able to compete in international markets. If the agricultural Department (Continued on page 1006)

MADRAS, Dec. 4.

The Indian Rubber Production Board which met at Trivandrum under the Presidentship of Sir C. P. Ramaswami Ayyar decided to recommend to the Government of India that the Rubber Control and Production Order should be withdrawn at the end of March 1946, and the Board should also cease to exist. It was also decided that there was no need to set up a marketing organisation on the lines of the Indian Coffee Board in succession to the Indian Rubber Production Board. The Board protested against the decision of the Government, which was taken without the prior consultation with the Board, the producing interests or dealers, to lower with effect from February 1, 1946, the schedule of prices paid by the Government for the rubber purchased by them. By reason of the proposed reduction of price, it was pointed out that the producers in India would lose about Rs. 57 lakhs during the period from February to September 1946. A committee was appointed to consider the question of the proposed planters' training centre and the organisation of rubber research in South India. Sir C. P. Ramaswami Ayyar promised that the Government of Travancore would meet half the cost of the research scheme. Ob- serving that the proposed reduction of price is excessive in the absence of any corresponding reduction in the cost of production, and it is not the interests of producers that have been taken into consideration, some members of the Board issued a joint statement on their resignation from the Rubber Production Board. In this connection it was pointed out that the Ministry of Food have recently granted an additional allowance to compensate for increased costs of production of tea in Travancore and that the factors in the costs of production of tea and rubber are more or less identical.

Declaring open the administrative block of the Fertilisers and Chemicals' Factory at Alwaye, H. H. the Elayaraja of Travancore referred to the programme of the concern for the manufacture of ammonium sulphate fertiliser in large quantities, besides other chemicals. His Highness appreciated the aims of the concern and congratulated them on the preliminary work they had already accomplished and hoped that their finished products would have begun to revitalise the soils of Travancore.

Elaborate plans for the industrial development of Mysore at an estimated cost of Rs. 5395,000 have been recommended by the Industrial Planning Committee. The main recommendations are the expansion of the Government Electric Factory, the installation of high tension testing equipment at the Government Porcelain Factory, the establishment of a cement asbestos sheet manufacturing Factory, and Gold mining. The Committee adopted a resolution recommending to the Government that a deputation of the non-official members of the Committee be sent abroad to study modern development plans and suggest suitable schemes for industrial expansion in Mysore.

The Chief Engineer to the Madras Government, Mr. Govindaraja Ayyangar who is visiting the United States to gain technical assistance in connection with the construction of the proposed Ramapadasagar Reservoir, disclosed that he spent the day in a series of Conferences with the Bureau of Reclamation and Army Engineering Officials and told the U.P.A.

that he will consult the engineers and see how far they could assist in the construction of the Ramapadasagar dam—which will be India's largest—across the Godavari river, 350 miles north of Madras. The secondary purpose of his visit is to purchase available machinery for the Tungabhadra Reservoir Project on the Hyderabad-Madras border.

Mr. K. Subba Rao, President of the Anantapur District Congress Committee described to the Revenue Board member the plight of the people in the district due to adverse seasonal conditions. Both food grains and drinking water had become scarce and the people could not get sufficient quantities to meet their needs. The future looked gloomy for the poor and Mr. Subba Rao urged for the opening up of grain and fodder depots and provision of irrigation facilities by digging wells. The Revenue Board Member promised necessary relief.

(Continued from page 999)

Nevertheless, it is certain that America will exert herself to the utmost. In so far as her agreement with other countries includes provisions for freedom of trade, she will have the means of exerting pressure on them with a view to change post-war policies more in the direction of free trade.

Now that the agreement with Britain has been concluded, one may expect events in the field of international finance to move at a faster pace. Ratification of the Brettonwoods agreement by the various countries may now be taken for granted, either in return for the direct benefit of the loan, or in consideration of the indirect benefits that each country may expect to obtain therefrom. The fear that ratification of Brettonwoods might mean a return to the rigidity of the gold standard may easily be overdone, in as much as one has to remember the essential difference between the condi-

tions of the last post-war period and those of the present. After the last war, deflation and protectionism combined to kill internal industry and foreign trade alike. On the present occasion it is possible that a liberal credit policy in each country at home and greater freedom of foreign trade relations consequent on the availability of dollars may lead both to an increased internal productive activity and expansion of international trade.

The death of Mr. Wajahat Hussain at the early age of 48 will be keenly felt in the banking world in India. Though a stranger to banking when he was appointed Dy. Governor of the Reserve Bank, he entered into his duties with becoming humility and an early grasp of essentials. His term coincided with the increased efforts of the Reserve Bank to ensure the soundness of every bank by examining its affairs and tidying up the position. The brunt of this task fell on Mr. Hussain; and its inevitable unpleasantness was overcome by the suavity and genuine sympathy which Mr. Hussain showed, particularly to the small banks. His death leaves vacant a place which in the past it was never easy to fill.

A Resume of Commodity Markets

The feature of the week is the rather sharp rise in prices for both gold and silver, gold especially, though towards the close on the announcement regarding the conclusion of the agreement between the United States and Britain for the grant of a loan, there was some selling and a decline in prices has been recorded. The raw jute market is uninteresting as mills are still buying only in small quantities. The jute manufactures market is dull. The raw cotton market, in sympathy with the bullion and stock markets, improved further especially as it was stated that in the event of a failure of the Anglo-U.S. talks, exports of Indian cotton might improve. With the lower bullion market and profit-taking at the higher levels an easier tendency has been noticeable in the cotton market too.

There is nothing of importance in the raw jute market and business passing is still on a very small scale. Mills are inclined to await further developments. As has been stated before, in the absence of any large increase in forward sales, there is no reason for mills to effect fresh purchases of raw jute in large quantities especially as the immediate outlook for raw jute is not very satisfactory and any quantity could be purchased in the open market at bare minimum prices without any difficulty. Great emphasis is naturally laid on the need for a considerable improvement in the shipping situation and a definite statement of policy regarding the regulation of jute prices in the future. As the quota for the next crop will have to be decided before February, it is believed that the Provincial Government will complete the necessary preliminaries though, as pointed out last week, they might hesitate to decide on any appreciable reduction in the minimum prices for raw jute before the formation of the new government.

In the jute manufactures market, outside enquiry has not been very large and business has been confined to inter-bazar operators.

In the heavy goods section speculative activity in B. twills has not been so much in evidence and prices are a little easier for ready positions.

The raw cotton market was very active earlier in the week with firmer Karachi advices and a good offtake in the ready market. At the end of last week a slightly easier feeling was noticeable following the announcement of the Central Government that they intended to dispose of their holdings of cotton in the open market. As the rise in bullion prices was rather aggressive in the early part of the week and as it was believed that cotton exports might improve, prices registered a substantial improvement. Jharilla January being done as high as Rs. 424 against Rs. 413 last week and March Rs. 432-8 against Rs. 420-4. It is not perhaps correct to argue that the conclusion of the financial agreement with the United States by Britain will necessarily result in any large increase in imports of American cotton into that country and that the consumption of Indian cotton will be correspondingly lower. The United States might possibly insist on the purchase of commodities on the former scale but Britain would as far as possible try to make effective use of the resources within the Empire. As the policy of the United States in regard to the working of the textile mills in Japan and other territories has not yet been decided, it is not possible to take any definite view. The developments in the next few months will probably reveal the trend.

The forecast published last week gives the area under cotton at 12,583,000 acres representing a decline of 3 per cent over the figures for the corresponding forecast of 1944-45. On the average of the last

ten years the area reported in the second forecast is 83.7 per cent of the total area quoted in the final forecast. The figures are based on reports relating to sowings up to October 1.

The present estimates of area (in acres) classified according to the recognised trade descriptions of cotton are: Bengal 1,506,000, Americans 3,171,000; Oomras 3,698,000; Broach 459,000; Surti 292,000; Dholleras 747,000; and others 2,710,000. Total 12,583,000 acres.

In the bullion market very firm conditions were noticeable till Wednesday. Forced bear covering and large-scale buying by prominent operators resulted in a rise in the quotation for gold ready to Rs. 86-6 from Rs. 83-12 at the end of last week. Forward quoted Rs. 86-4 against Rs. 83-11. At the higher levels there has been some selling and the quotations for both forward and ready are Rs. 84-8 and Rs. 84-6 respectively. During the same period silver improved to Rs. 135-3 from Rs. 133-9 at the end of last week and forward to Rs. 135-3 from Rs. 133-9. In sympathy with gold the quotations are lower at Rs. 133-3 for both positions. On Friday a slight discount was available for forward over ready.

Bull operators expected that in the event of the breakdown of the Anglo-U.S. talks there will be a scramble for the available gold holdings as it would be the means of payment for exports from outside the sterling block and that until such time the dollar continued to be scarce gold would be valued very much. As the effect of the agreement that has just been concluded is to relieve the scarcity in regard to dollars the importance of bullion will be minimised.

It is understood that at the conference of representatives of the Provincial and the Central Governments to be held in

Jute and Jute Manufactures

Special to "Indian Finance".

(From Our Correspondent)

CALCUTTA, Dec. 6

The Indian Central Jute Committee has held meetings this week and it is understood that the principal item under discussion was the estimated requirements of jute for the season 1946-47. It is known that, some months ago, the Committee recommended one of the now popular five-year plans, forecasting the probable requirements of raw jute for the trade at 100 lakhs of bales per annum. This figure was to be reviewed each year about November to decide whether conditions likely to prevail in the near future required any modification of this target figure. It is believed that the recommendation for next season is to stand at the figure of 100 lakhs of bales. In arriving at this recommendation, the Committee were doubtless influenced by the tendency of the carry-over of jute from one season to the next to contract, leaving the available margin of stocks at a dangerously low level, having in view the possibility of bad weather conditions deleteriously affecting any coming crop. For the season 1944-45, the last for which complete and reliable figures are available, the opening stock was 43½ lakhs of bales and the closing stock only 31 lakhs of bales. And in that season less than 10½ lakhs of bales were exported. The forecast estimate for the current season is greater than that of the previous season by 9½ lakhs of bales, but against this, Mills, with better coal supplies, are liable to increase their consumption by several lakhs of bales as compared with last season, while the indications are that export will also take off a considerably greater quantity. There is therefore a possibility that the carry-over at the end of the current season will show a further contraction certainly it is not likely to register an increase which would bring the figure to a level such as would be considered comfortable by the trade. Hence, presumably, the recommendation that the target aimed at should be a hundred lakh crop.

This of course is not to say that such a target will be attained even if the local and Central Governments accept the recommendation. The most important factor likely to affect the size of the jute crop, or at least the extent of the sowings of jute, will be the relative price of rice around the sowing time. Paddy and Jute being for the most part alternative crops, the prime consideration of the cultivator is not what the Indian Central Jute Committee of the Government of anyone else may recommend, but purely and simply which crop is likely to bring him in most cash. Relative to the price available for jute, even at the current enhanced controlled prices, rice is still, to the cultivator, the more attractive proposition. It is however only secondarily a cash crop, in which respect jute takes first place. So jute will not be entirely neglected, but so long as the price of rice remains around its present level and an atmosphere of scarcity prevails, there is little prospect of the target figure of 100 lakhs of bales of jute being nearly approached.

In arriving at their decision, the Committee doubtless also reviewed carefully the prospects of the world consumption of jute goods. The potential demand is undoubtedly there, and for more than Mills are at present producing. But there are a number of factors militating against the

marketing of the possible off-take of jute goods. Primarily there is the position of shipping, which while better than it was, likely to improve, is still short of requirements. Secondly there is the continuing disturbed state of affairs in many parts of the East, which normally are large potential markets for jute goods. An amelioration of these conditions would almost certainly be promptly reflected in demand from these markets. Then there are still controls of various sorts in other markets which restrict the free export of goods to them. For some of these restrictions, the Indian jute manufacturing industry is itself to blame. For instance in the case of the U.S.A. The quota of hessian cloth allotted to that market by the Combined Resources Board is based on the total quantity produced by the Indian Mills. The target figure for the Mills is 14 crores of yards per month, of which 7 crores is allocated to the U.S.A. There is little doubt that, in present circumstances, the U.S.A. could absorb considerably more than this quantity, but so long as controls remain, it will only be when Mills show an increased production that the U.S.A. quota will be increased. There is a strong demand for jute goods also in the U.K.—more than the local manufacturing trade can supply. But in this case the import of only such types of fabrics as the Control consider necessary, is permitted. That policy is probably dictated by considerations of finance. But it leads to the farcial position that extremely poor quality 10 ounce 40 hessian cloth dyed in very crude colours, is exposed for sale as a furnishing fabric at the modest price of 7/11d. per yard. If free import of Calcutta-made goods were permitted, similar, and we hope much better quality, goods could be retailed at a comfortable profit at eighteen pence a yard. These mentioned are only a few of the handicaps under which Industry in India is at present labouring, and so long as they subsist it is difficult to take a long view of market prospects. As we have said, the potential demand is there though at the moment concrete evidence of it is unfortunately sadly lacking. The removal of hampering restrictions and the restoration of peaceful conditions where these do not yet exist, are the consummations most devoutly to be wished by the Jute trade. Perhaps the settlement of the Loan conditions between the U.K. and America may go some way towards the release of controls at least.

Restriction on the movement both of raw jute and manufactured jute goods to many parts of the world during the war years gave a flip to the cultivation of rival fibres and also to the more extensive

manufacture of these fibres in countries which previously relied mainly on imports of jute goods for their requirements of containers. Fortunately for the Indian Jute trade, it would appear that many of these new fibres, while satisfying the temporary war-time demand, were found not to be entirely satisfactory, and so long as the price of jute and jute goods can be adjusted to a competitive level, there seems little reason to fear that jute may not re-establish its supremacy in many markets from which it has been largely excluded of recent years.

There is little on which to comment in the Export Jute market. Dundee has been showing some interest in Tossa but at prices which only Balers can consider if they are direct shippers. A quantity of a special Tossa mark for export to the U.S.A. was put through at Rs. 80/-. Mills have bought a small quantity of Lightning grade at minimum price. It is believed that the quantity of raw jute already sold for export this season exceeds 12 lakhs of bales. If demand is maintained at this level and the necessary shipping is available, last season's export figure of 10½ lakhs of bales looks like being left well behind.

There has been a little more activity in the Loose Jute market, demand from Mills concentrating mainly on Bottoms from Jat districts. There are plenty of sellers to be found of reputable marks at minimum price, so that the buying has been rather selective. Good quality is scarce and enquiry for that is difficult to meet, even though mofussil reports speak of some improvement in the quality of imports in certain stations. Balers have shown some interest in Tossa grades against export enquiry. Estimated arrivals of Jute into Calcutta stations during November are placed at 7,92,000 bales against 5,69,000 bales for last November. Total arrivals for the season July/November thus now amount to 31,60,000 bales as against 27,59,000 bales during the same period last season.

In the Fabrics section there has been little activity, export demand being very meagre and generally only for small quantities of special goods. After sundry minor fluctuations, ready Hessians are quoted almost a rupee lower than a week ago, at 26/12 for 10oz./40. December quotes Rs. 26/8 and January/March Rs. 25/-. Mills are credited with having sold considerable quantities of January/June Hessians to the Bazar but this can hardly be considered satisfactory business, in that it has to be marketed again before export.

HOWRAH

(Continued from page 1004)

New Delhi next week, the possibility of relaxing control over the distribution of cloth will be considered. The Utility Cloth Scheme, according to the industry, has proved a success but even with the new arrangements for making a speedy distribution of available cloth supplies by the provincial governments, the consumer still experiences difficulty in getting his cloth supplies and there has been an accumulation of large stocks in several centres. The question of the abolition of the Standard Cloth Scheme will also be considered as with the introduction of the Utility Cloth Scheme the continuance of the "unwanted" Standard Cloth scheme is considered unnecessary.

It is rather interesting to note that the industry is very keen to defeat the scheme for the distribution of cloth on the quota basis to those engaged in the trade in the years 1940-42. Some mills are reported to be producing deliberately inferior varieties of cloth and dumping them on the quota holders who find considerable difficulty in disposing them of to the consuming public. It is suggested that such mills as deliberately reduce the quality of production should be allowed to distribute their output without any restriction so that they would be compelled to improve the quality of their products if they are to satisfy the consumers. This suggestion, however, cannot be considered advisable as it would defeat the whole object of control over both production and distribution and would only lead to more mills being left out of the scheme. If it is felt that consumers interests would be more satisfactorily served by mills making their own arrangements for distribution, it would be advisable for the Textile Control Board, which is to meet in the third week of this month in Bombay, to consider ways and means that would result in an improvement in both the quality of cloth manufactured by mills and an effective distribution of available supplies to the consumer. It is rather un-

fortunate that control measures are still in an experimental stage and that mills are able to flout instructions almost at will. If as a result of the developments in the past few months there is a deterioration in the general standard of output the efficiency of the industry will be impaired. It is time that producers realise that they should equip themselves properly to meet any foreign competition that may materialise in the coming years.

Indian Hemp Association

Like everyone else, expect perhaps the soldiers, the Indian Hemp Association is jubilant at the close of the war. The prospect of opening European and American markets is encouraging to the industry. There is doubtless truth in the grievance that prices of hemp have been fixed arbitrarily or after consulting the home Government but not the trade which is vitally concerned in it. Great difficulties were experienced in railway transport throughout the season, especially as far as movement of Green Hemp was concerned. American buyers have offered better prices than the Ministry of Supply but Government have begun to enforce many restrictions in shipments to America to fix arbitrary prices. The Indian Hemp industry has a bright future, as Mr. Jalan said in his presidential address, if the agricultural department of the Government of India devote their attention to introduction of superior variety of seeds, improve quality of the fibre and provide adequate facilities of steeping water.

(Continued from page 1002)

Instead of diverting their attention to the unbusiness like Agmark grading extend their full co-operation and assistance towards introduction of superior variety of seeds, properly distributed so as to yield a richer crop per acre and improve the quality of the fibre, adequate facilities of steeping water, etc. I am sure that a number of half-fed peasants will be immensely benefited and receive a fresh lease of life. For this purpose, a proper Research and Development Department should be immediately started on the lines as adopted for sugarcane and I hope time will reveal its value as it has proved in

the case of cane in Bihar and U.P. which had saved the Sugar Industry from its crisis; on the contrary, as practically nothing was done in Bengal, so far Bengal Sugar Mills have had to face a disaster. In this way it would be obviously possible for Indian Hemp to compete with all other fibres in the world such as Sisal, the Italian Hemp and other continental fibres.

In the post-war plans for improvement, this should be one of the principal aims of the Government to improve agricultural products. I am told that a good quantity of fibre can be procured from linseed plants now destroyed and it will help peasants to some extent to earn an extra income from by-products which are at present being wasted. Demand for this appears to be already existent in America, for manufacture of high quality type of paper. There are many other agricultural by-products which are now being thrown and destroyed but which can be used for commercial purposes which could contribute to improving the standard of living of the masses. It is the Government of India's duty to improve the agricultural products of India in every possible way as they can easily afford with huge funds at their disposal.

It is expected that the Government of India would enlighten the public through respective Commercial bodies about the actual position of the different countries in reference to the price they can pay for the surplus raw materials which India can afford to export so that better and adequate prices may be procured. Similarly, it is most vital for Indian Industrialisation that the Government of India should maintain a list of manufacturers and suppliers in order to help Indian buyers to buy cheaply and also have a technical Department to see that only the right types of machinery are sold to Indian Industrialists so that third rate and unbalanced and uneconomical plants are not thrown upon their shoulders just as it happened in almost all Industries. Furthermore, the Government should see that the so called foreign experts, technicians and engineers should land in India unless they are certified by Government experts and Government should help industrialists to secure genuine and right type of experts from all over the world through the Indian Trade Commissioner's office and also with the help of the Governments of countries from which they came. I believe this is the key-note to run industry in India economically, profitably and without any difficulties from the very beginning.

Before closing I must thank the members of the Association, the Committee and the Secretaries for their active co-operation and assistance.

Stock Markets to-day and to-morrow:

LATE RALLY IN MARKETS

After the hectic activity in the stock markets in Bombay and Calcutta easier conditions have been noticeable in the past few days. As outside buying was not on a large scale, professional operators wanted to await further developments and the conflicting reports relating to the Anglo-U.S. talks had a restraining influence. As on Wednesday it was reported that an early announcement regarding the success or failure of the talks was likely there was a desire to await the news. Actually, the announcement regarding the successful conclusion of the talks was known to the market just when it opened for business on Thursday. But in the absence of any details there was a disposition to mark down prices as it was regarded that an increase in imports would diminish the prospects for industries. There was selling in both the bullion and stock markets and the lowest levels for the week were touched.

On second thoughts it is regarded that the agreement is more a bullish than a bearish factor for the stock markets and that there is no reason to expect a reversal of the upward movement that has been in evidence for sometime.

In the absence of the text of the agreement it is not possible to understand the full implications so far as this country is concerned but this much can be said. The increase in international trade as a result of the agreement and the unblocking of the sterling balances will considerably improve this country's position. (The question has been discussed in "Clive Street Gossip" at great length). The prospect of a speeding up of postwar plans, as a result of the import of capital goods from the United States and other countries, should considerably strengthen Indian in-

dustries. It is not correctly understood that a proper solution of the sterling balances problem alone constitutes the biggest bullish factor for the markets. It is on these considerations, perhaps, that the market has staged a recovery in Friday's session and closing prices are very much higher than the lowest levels for the week.

The Bombay market also has favourably received the proposals and Tata Deferred have registered a rise of over 30 points to Rs. 2,590.

While operators are not quite convinced of the favourable effect of this agreement on stock exchange values, dealers in bullion realise that the artificial prices for gold and silver cannot obtain for long and the availability of dollars for large sums would reduce the importance of gold and that once exchange restrictions are lifted there can be no justification for the present level of prices. If there has not been any big decline in prices it is only because of the technical position in the markets.

The accounts of the Indian Steel and Wire Products Limited for the year ended March, 1945 do not make encouraging reading as on account of a lower level of output, profits have been adversely affected. The directors point out that the lower level of production was due to the cut in the supply of raw materials from the Tata Iron and Steel Company Limited. As working expenses also were higher the decline in earnings is more than in proportion to the drop in output. The net profit, before providing for taxation and depreciation, is Rs. 55,19,279 against Rs. 78,62,924 for 1943-44. The provision for taxation is naturally lower at Rs. 34.45 lakhs against Rs. 54.25 lakhs. In order to be able to discard old and obsolete plant and instal new machinery for the manufacture of specialised lines the provision for depreciation has been kept at a rather high level, Rs. 6,99,734 against Rs. 7,00,169. The Ordinary shares receive a dividend of Rs. 3 per share against Rs. 3-8 share and the deferred shares Rs. 2 per share against Rs. 2-8 per share.

It is satisfactory to note that the directors have decided on the complete renovation of existing plant and have set aside large sums for this purpose. It need not be emphasised that the Company has a strong financial position and has large sums at its disposal for effecting the necessary alterations and additions to plant.

The balance sheet as on March, 1945 shows paid-up capital at Rs. 22,26,580, General Reserve at Rs. 26 lakhs and other

funds as Rs. 6,03,197. Sundry liabilities including dividends are Rs. 85,89,396.

On the assets side, the net block is shown at the very small sum of Rs. 4,19,762. Stores are Rs. 12,57,742, Stock-in-trade Rs. 10,47,826 and outstandings Rs. 17,21,495. Advance payment for taxation is Rs. 10,78,139, Investments Rs. 21,22,500 and Compulsory deposits under E. P. T. Rs. 15,75,509. Cash Balances are rather high at Rs. 51,71,958.

That the financial position has considerably improved in the course of four years will be evident from a comparison with the balance sheet for 1940-41. As on March 1941, the General Reserve was only Rs. 10 lakhs. Sundry liabilities, including dividends, were Rs. 55,04,383. Net Block was Rs. 21,54,138, Stores Rs. 5,72,768, Stock-in-trade Rs. 6,14,506, Outstandings Rs. 12,68,693, Investments Rs. 7,61,500 and Cash Rs. 43,72,917. Net liquid assets have thus increased in four years from Rs. 21,17,739 to Rs. 97,81,722. The reduction in the block has increased surplus funds but even then there is an addition of nearly Rs. 60 lakhs to total funds.

The publication of the accounts of the Alkali and Chemical Corporation of India Ltd. for the year ended June 1945, has had a rather stimulating effect on the quotation for the shares. The Company is paying out of the profits for the last accounting period a maiden dividend of 2½ per cent on the ordinary shares. The net profits is not very much higher but the Directors seem to be confident of improved working results for the current year and state that the Company's performance last year justifies the payment of a small dividend. The earnings for 1944-45 would

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

CALCUTTA, December 7.

After the hectic rise in prices for over a fortnight easier conditions have been noticeable on the Calcutta Stock Exchange in the past week. With the anxiety over the Anglo-U. S. talks and the tendency to realise profits a decline in prices has been recorded. The news regarding the conclusion of the Financial agreement was received on Thursday afternoon. As the exact implications were not understood and as it was felt that the effect would be bearish on the bullion market there was selling in the stock market and the lowest levels for the week were touched towards the close on that day. Naturally, the leading speculative counters have lost ground to a greater extent than others. But the reopening on Friday has been marked by a firmer tone and on covering some of the losses have been regained. The next stage of the upward movement will be in evidence only after the market has had time to digest the proposals. The general undertone is quietly steady and it should be said that there is resistance to selling pressure at the lower levels.

In the gilt-edged securities section, there is nothing of importance and business passing has not been very large. After the earlier large purchases following the reports regarding the possibility of a reduction in the Bank rate dealers are awaiting further developments. $\frac{3}{4}$ per cent Paper is a shade easier at Rs. 103-6 and 3 per cent Paper at Rs. 97-4. Among terminable loans, 3 per cent 1970-75 were Rs. 97-8, 3 per cent. 1946 Rs. 102-4 and 3 per cent 1951-54 at Rs. 101-11. Easy conditions have continued to prevail in the money market but the Central Government was not able to get its requirements in full owing to the smaller amount of maturities and the large investments gilt-edged in recent weeks. There is a sharp rise in the average discount to six annas per cent from five annas per cent.

There are still no sellers of Imperial Bank fully paid or contributories in the local market. Reserve Bank improved to Rs. 159 earlier in the week and United Commercial Bank to Rs. 41-8 premium. They are now slightly lower at Rs. 157 and Rs. 39-8 respectively.

Earlier in the week there was some activity in Textile issues and Cawnpore Textiles were marked as high as Rs. 13-14. They are now lower at Rs. 13-4. Elgin are Rs. 72 against Rs. 74-8 last week. There was some buying of Kesoram in midweek and the quotation improved to Rs. 21.

In the Coal section, there is not much activity. With the exception of South Karanpura which has shown some recovery other quotations are appreciably lower. Thus, against the highest quotation last week, Bengal are now quoting Rs. 810. Burrakur were Rs. 44-8 against Rs. 46-12. Actually a level as low as Rs. 44-2 was reported in unofficial transactions. South Karanpura have recovered from the lower level of Rs. 42-4 to Rs. 43-6. Equitable were Rs. 75-12, Bokaro and Ramgur Rs. 61-12 and Bhalgora Rs. 29-4.

In the jute section, speculative activity in Howrahs was less pronounced and on some selling there was a decline to Rs. 113-8 from Rs. 117-6 last week. There has since been a recovery to Rs. 114-8. Anglo-India

were ten points lower at Rs. 584, Kamahatty were Rs. 885 against Rs. 898, India Rs. 865 against Rs. 885, Ganges Rs. 698 against Rs. 710 and National 38-4 against Rs. 40-4. Nuddea were nearly fifteen points lower at Rs. 163. Reliance were two points lower at Rs. 96-8. There was some buying of Craig and the quotation has moved to Rs. 16-10 from Rs. 14-9 last week. The Bird-Heilgers group of jute companies have published their results for the half-year ended September 1945 and most companies have paid higher dividends.

In the Engineering section also prices have been marked lower, Indian Irons being more than a point lower at Rs. 46-2. They are now quoting Rs. 41-7. Jessop were relatively steady at Rs. 30-5. Texmaco were Rs. 18-4 and Marshalls Rs. 7-11. Earlier Kumardhubi Engineering were as high as Rs. 13-4. They are now quoting Rs. 12-7.

In the Sugar section, Carew were bought in large quantities early in the week and the quotation was as high as Rs. 34-12. But on selling there has been a setback to Rs. 32-12. As the dividend is reported to be Rs. 1-8 per share there has been later recovery to Rs. 33-4. The Raza Sugar Company is maintaining the dividend and bonus at 25 per cent, while the Buland Sugar Company is paying only the dividend of 20 per cent. There is to be no bonus. On reports of a good dividend there was a sharp rise in Ramnugger Cane to Rs. 26-4. With selling at the higher level there has been a recession to Rs. 24-12.

There was slightly more business in the Tea section, Bishnauth being Rs. 46-8 and East India Rs. 24. Tezpor are two points better at Rs. 25-10. Bateli were Rs. 20-8 and North-Western Cachar Rs. 410.

In the Miscellaneous section, Burma shares were rather quiet with Burma Corporation at Rs. 7-2 and Consolidated Tin at Rs. 4-3. There was a sharp rise in Indian Copper Corporation to Rs. 4-1. B. I. C. were done upto Rs. 8-13 though there has been drop to Rs. 8-8. National Tobaccos were Rs. 32-4 and Indian Cable Rs. 35-4. Indian Wood Products were Rs. 33-4. Karanpura Development were steady at Rs. 49-8. Only towards the close

they were easier at Rs. 48. Among Paper shares, Titagur Paper have receded to Rs. 37-4 and India Paper Pulp Rs. 250. Midnapore Zamindary were lower by ten points at Rs. 190. I.G.N. were Rs. 243 against Rs. 252 earlier in the week. Assam Bengal Cement is steady at Rs. 22-12. C. T. C. were sharply lower at Rs. 53 while C. E. S. C. after improving to Rs. 41-12 have come back to Rs. 41.

THE SONE VALLEY PORTLAND CEMENT CO., LTD.

NOTICE

is hereby given that the Directors have sanctioned payment of an interim dividend of 3% (Free of Income Tax) on the Ordinary Shares of the Company for the current financial year.

The Share Transfer Books of the Company will remain closed from the 20th December, 1945, to 3rd January, 1946, both days inclusive.

Payment will be made on or after the 3rd January, 1946 only to those Members or their Mandates whose names appear on the Register of the Company on the 19th December, 1945.

No application for warrants will be necessary. Claims on behalf of holders of shares held on blank transfer will not be entertained.

By Order of the Board,
MARTIN & CO.,
Managing Agents.

Dated, 4th December, 1945.

T. Sscap. Intending purchasers may inspect the vehicles ex. where lying".

THE MYSORE PAPER MILLS, LIMITED

SUBSTANTIAL IMPROVEMENT IN FINANCIAL POSITION

REVIEW OF ACHIEVEMENTS IN WARTIME

At the 10th Ordinary General Meeting of the Shareholders of the Mysore Paper Mills Ltd., on 25th November, at Bangalore, the Chairman, and Managing Director, Mr. M. L. Narasimha Iyengar, B.A., B.E., said:—

Gentlemen,
Since we met last, an event of profound significance and importance not merely to this Industry but to the entire world has happened. The War which has inflicted such unprecedented devastation on the peoples of Europe and parts of Asia, and occasioned such cataclysmic changes in the political economic life of nations has at last, mercifully, ended. It is impossible not to share in the general sense of relief and thankfulness at the conclusion of hostilities and restoration of peaceful conditions, however much an industry might have benefited from the fortuitous conditions created by the War.

So far as the Mysore Paper Mills are concerned, they have had their own share of these adventitious advantages, counterbalanced by the numerous disadvantages inherent in a war economy. The career of this concern so far, may be said to have coincided more or less with the progress of this War. For, though the Company was registered in 1936, we began regular production and marketing of our products just a few months prior to the outbreak of hostilities. The War solved—and more than solved—the problem of market for the products of this concern, as of many others, but it gave rise to various other problems affecting the production side of our activities. Shortages essential raw materials and chemicals have not only prevented our attaining maximum production but often jeopardised the very continuity of operations. Manufacturing costs have greatly increased due to abnormal increase in cost of coal, raw materials, chemicals, etc., tending progressively to diminish our returns. Our profit margins have still further narrowed down as a result of the imposition of price control and the acquisition of the greater portion of our production by the Government of India at rates substantially below even the controlled rates fixed for civil consumption.

But the gains during these war years have not been inconsiderable. We have standardised our production methods and attained a fairly high degree of technical efficiency in operations, thereby gradually reducing the manufacturing costs to the extent possible. The internment of the foreign technical staff of the Mills during the war gave an opportunity for Indian personnel to demonstrate their potentialities and develop self-confidence. Besides, the Mills have also derived tangible financial advantages. Not only have all arrears of depreciation been made up and losses of previous years written off but it has also been possible for the cash credit loan of over Rs. 14 lakhs from the Imperial Bank of India to be liquidated. We have besides been able to create Reserves which total up to the modest figure of Rs. 7 lakhs. Though we might not have been able to do better than this, we have the satisfaction of having helped to do what we could to sustain the economy of the country at a time of unparalleled national emergency. The net profit of Rs. 2,87,891 for the year ended 30th June 1945 might appear modest

judged by wartime standards of industrial profits. But if we make allowances for the numerous limitations and handicaps under which operations have had to be carried on, I am sure you will agree that we have done as well as possible in the circumstances, and that the working results cannot be deemed to be unsatisfactory. Throughout the year, operations have had to be conducted on a restricted scale, the Mills working mostly two shifts, or from 14 to 16 hours a day, owing to insufficiency of coal supply. Not only has coal supply been inadequate, but also uncertain, rendering operations even on a restricted basis often precarious. Recently I had the opportunity of making personal representations to the Coal Commissioner in Calcutta in this matter. After hearing our case in detail, he was kind enough to appreciate our position and to order the despatch of 500 tons of coal by the all-rail-route—a very timely assistance as our stocks were disquietingly low—and promised to bestow greater consideration to our needs in the future.

The difficulty in procuring adequate and timely supplies of chemicals like caustic soda and other essential auxiliary materials, such as rosin and limestone due to want of sufficient transport facilities have also had an adverse reaction on the continuity of operations. Delay in obtaining these materials led to some shut down for small periods at different intervals.

I am sure you need no assurance that the management have done and have been doing everything in their power to avert shut downs by taking necessary precautionary measures well in time, but they had to yield whenever they became inevitable. Our experience has shown what a vital part transport plays in the well-being and success of an industry, for our difficulties have often arisen not so much from actual shortage of required materials as from inability to secure sufficient transport facilities to move available supplies to the Mills. Difficulties attendant on the transport of salt and delay in finalising the arrangements under which we have to obtain our requirements from Bombay sources, have come in the way of manufacture of white paper, though, thanks to the quotas of imported bleached wood pulp being allotted by the Director of Paper, we have been able to make and supply certain special varieties in great demand. The close of the war has to be welcomed, if for no other reason, at least for the gradual improvement and easing of the transport problem that might be expected in course of time. In spite of these handicaps, however, we have found it possible to attain production of a fairly high tonnage of paper by stepping up the rate of production.

The working results for the year under review are really better than would appear from the amount of the profit shown in the Profit and Loss Account. We sold a major portion of our output to the Government of India on the understanding that these supplies would be paid for at certain provisional rates and that we would be reimbursed to the extent necessary if after investigation of our cost accounts our margin is found to be less than 9 pies per lb. We have now been paid at provisional

rates and when prices are finalised, the difference between the provisional prices and prices on the basis of cost plus 9 pies will go to the current year's account, though it really accrued during the year under report.

For the year 1945-46, the Government of India have placed with us an allocation for 1,000 tons which we have accepted on the same basis of cost plus 9 pies per lb.

The Government of Mysore were pleased to sanction a cash credit accommodation of Rs. 10 lakhs against which an advance of Rs. 2.47 lakhs was made during the year, pending the execution of the necessary documents, to enable us to make payment of provisional assessment for 1943-44. We were however able to pay a sum of Rs. 5.25 lakhs towards provisional assessment for the year 1942-43 from out of our own cash balances. With the subsequent realization of our outstanding debts and increased liquidity of our resources and improved cash balance position, we were able to pay back the amount of advance obtained from Government.

The relations between the management and labour continued to be cordial. The management have always followed a sympathetic policy in respect of labour and have been endeavouring to translate their good intentions into practice subject to the limitations imposed by financial resources. A War bonus equivalent to a twelfth of the earnings of the employees during the year has been sanctioned.

The rates of dearness allowances have been enhanced and war allowances sanctioned involving a total expenditure of Rs. 10,000 per month. The question of constituting an Amenities Fund is being kept in view. Steps have been taken to secure the services of a wholtime medical officer.

A programme of capital works (including among other things, the construction of a primary school and improvements of housing facilities in the Paper town and provision of drinking water to the labour colony) and estimated to cost Rs. 2.5 to Rs. 3 lakhs in the aggregate is contemplated.

The Paper Industry, as indeed the entire economic life of the country, is passing through the difficult and uncertain period of transition from war to peace and the change-over needs careful watching and readjustment. There has latterly been a considerable and progressive relaxation of the Paper Economy Orders, and imported foreign papers have begun to appear in the market. It is reported that at the recent conference in Delhi, it has been decided to make all possible relaxations in the Paper Control (Economy) Order, consistently with the supply position, but the distribution and price control orders should remain in force for the present. We must be prepared for progressive reductions in controlled prices hereafter as the supply position improves, until all controls are eventually lifted and prices are left to find their own level. It will perhaps be sometime before the Indian Paper Industry is again exposed to the full blast of foreign competition, but even when this contingency arises and the volume of imports assumes its normal dimensions, there is no reason to feel pessimistic about the future of the Indian Paper Industry. With all the plans of Postwar development in the various departments of Industry and trade that are being evolved, together with the far-reaching plans of educational expansion in the offing, all of which presuppose a large increase in consumption of paper and board, there should be a great future for this industry, a future the advent of which

can be greatly assisted and hastened by the pursuit of a liberal tariff policy.

The Paper Panel set up by the Department of Development and Planning, of which the Government of India have done the honour of appointing as Chairman, visualise a bright future for the Indian Paper and Board Industry as a whole, and the plans they are engaged in drawing up are expected to provide for its fullest possible development consistent with the probable future needs and requirements of the country.

In the context of these future developments, the prospects for this concern cannot be regarded as unpromising. There is good scope for expanding the capacity of the plant so as to enable the Mills to take a greater share in supplying the future needs of the country. The time for taking active steps in this behalf is not yet, in view of the present difficulties in procuring the capital goods needed, though steps have been taken to register our requirements with the appropriate authorities. Broadly speaking, our plans, which are in a very preliminary and tentative stage and which should ultimately be dovetailed into the All India plan, envisage the expansion of the capacity of the Paper Plant to 10,000 tons a year which is considered to be an economical unit, and the installation of a card board plant capable of handling a production of 3,000 tons per annum. In view of the warning of the Indian Industrialists mission which recently visited the U. K. and the U.S.A. that the capital goods market in those countries at present is a sellers' market and that it is inadvisable to buy in present conditions, and in view of the desirability of having before us a clearer picture of postwar needs as well as possibilities before launching on any expansion plans, your Board of Directors will take up the question for earnest consideration in all its aspects in due course.

Before concluding these remarks, it is my duty to give expression to our sense of gratitude to the Government of His Highness the Maharaja of Mysore for their continued solicitude for and sympathetic interest in the successful conduct of this undertaking.

(Continued from page 1009)

have been higher but for the shortage of labour and various teething troubles such are normally to be expected in starting up an Ammonia Soda Plant. As the quality of the Soda Ash has shown an improvement during the year and as working expenses will be lower, the next accounts can be expected to show a substantial increase in net profit.

The net profit after providing for taxation and depreciation for 1944-45 was Rs. 6,21,312 against Rs. 4,30,724 for the previous year. After setting aside Rs. 4,92,095 against Rs. 1,07,274 for depreciation, the ordinary and preference dividends are to be paid. The amount carried forward is lowed at Rs. 2,08,036 against Rs. 3,29,719 brought in.

The half yearly reports of the Bird-Helgers group of jute companies for the period ended 30th September, 1945 have just been received. Auckland is paying an ordinary dividend of Rs. 6 (Rs. 5), Dalhousie Rs. 6 (Rs. 5) Kinnison Rs. 5 (same), Lawrence Rs. 4 (Rs. 2), Nalhati Rs. 2 (same), Northbrook As. 6 (same) and Union Rs. 8 (Rs. 7-8) Lansdowne is paying only the dividends of dividend on the preference shares in full.

In spite of various handicaps, the Mysore Paper Mills has done satisfactorily in the

year ended June 1945. The net profit figure would have made better showing but for the large sales to the Government and the small profit on such sales. These supplies have been paid for at certain provisional rates but the Company would be reimbursed to the extent necessary if after investigation of cost accounts the margin is found to be less than 9 pies per lb. It is expected that some balance would be due from Government and that the difference between the provisional prices and prices on the basis of cost plus 9 pies will go into the current year's account though it really accrued during the year under report.

The net profit, before providing for taxation and depreciation, for the year is Rs. 6,44,085 against Rs. 6,12,414 for 1943-44. The provision for depreciation is Rs. 3,56,194 against Rs. 1,77,961 and the amount set aside for taxation is Rs. 1,31,833 against Rs. 3,28,355. The dividend is 64 per cent against 5 per cent for the 9 months ended June 1944.

The operations in the mills had to be suspended for some days in March, April and June 1945 for lack of essential chemicals. Difficulties in regard to coal supplies also restricted working.

The picture presented by the Chairman at the annual general meeting of the shareholders recently was encouraging. He stated that production methods had been standardised and that operations had attained a fairly high degree of technical efficiency. On the financial side too, the achievement is noteworthy. All arrears of depreciation have been made up and the losses of previous years written off. It has also been possible for the cash credit loan of over Rs. 14 lakhs from the Imperial Bank to be liquidated besides the creation of Reserves amounting to Rs. 7 lakhs.

With the improvement in transport facilities, consequent on the termination of the war, it would be possible for the Company to report a higher level of earnings for the current year. The Chairman's remarks regarding the scope for expanding the capacity of the plant are not without significance though he stated that the time for taking active steps in this behalf was not yet. Steps, however, have been

THE ALKALI & CHEMICAL CORPORATION OF INDIA, LTD.

NOTICE

NOTICE is hereby given that the Eighth Ordinary General Meeting of the Company will be held at the Registered Office, 18, Strand Road, Calcutta, on Friday, the 21st December, 1945, at 3-30 p.m. to transact the following business:—

- (1) To receive and adopt the Directors' Report and Audited Balance Sheet and Profit and Loss Account for the year ended 30th June, 1945.
- (2) To declare dividends.
- (3) To elect Directors.
- (4) To appoint Auditors for the current year and to fix their remuneration.

The Share Registers of the Company will be closed from the 19th January, 1946 to the 29th January, 1946, both days inclusive.

By Order of the Board,
Imperial Chemical Industries (India) Ltd.
Calcutta.
29th November, 1945.

taken to register the Company's requirements with the appropriate authorities for getting capital goods. As a result of the plans for the extensions and additions to plant, the output of paper would increase to 10,000 tons a year which is considered to be an economical unit. A cardboard plant capable of handling a production of 3,000 tons per annum is also to be installed.

Watch-dog

DARJEELING ROPEWAY CO., LTD.

Notice is hereby given that the Eighth Ordinary General Meeting of the Darjeeling Ropeway Co., Ltd., will be held at its Registered Office, "Goenka-Chamber", Darjeeling, on Friday, the 21st December, 1945 at 11 a.m. to transact the following business:—

- (1) To receive and pass the Directors' Report and the Audited Accounts for the year ended 31st March 1945.
- (2) To elect a Director in place of Mr. J. Stodart who retires by rotation but being eligible offers himself for re-election.
- (3) To appoint Auditors for the current year.
- (4) To transact such other business as may be brought forward before the Meeting.

The Share Transfer Register of the Company will remain closed from 14th to 21st December, 1945, both days inclusive.

By Order of the Board,
GOENKA & CO.,
Managing Agents.
Darjeeling,
26th November, 1945.

THE INDIAN IRON AND STEEL CO., LTD.

NOTICE

The Twenty-Eighth Ordinary General Meeting of the Shareholders of the Indian Iron and Steel Company, Ltd., will be held on Tuesday, 15th of January, 1946, at 11 a.m. at the Registered Office of the Company, 12, Mission Row, Calcutta, to transact the following business:—

- (1) To receive and adopt the Directors' Report and Audited Balance Sheet and Profit and Loss Account for the year ended 31st March, 1945:
- (2) To confirm the payment of the ad-interim dividend which was paid on and after 22nd November, 1945.
- (3) To elect a Director in place of Mr. K. L. Jatia who retires and is eligible for re-election.
- (4) To elect a Director in place of Mr. C. H. Heape who retires and is eligible for re-election.
- (5) To elect a Director in place of Mr. P. J. P. Thomas who retires and is eligible for re-election.
- (6) To appoint Auditors for the current year and to fix their remuneration.

The Transfer Books of the Company will be closed from 8th January to 15th January, 1946, both days inclusive.

By Order of the Board,
BURN & CO.,
Managing Agents.

(From our Readers)

Railway Rates:

Your note on Railway Rates does very little justice to Sir Edward Benthall who has clearly stated the reasons why decision on this vital matter has to be postponed for some time. I can quite understand your impatience for the revision of the railway tariff which has been fixed long ago and does not bear any reasonable relation to the present day demands of the country. Every one will agree with you that the railway rates policy should be carefully co-ordinated with the needs of an expansionist economy. But, in my opinion, you have not given due attention to the serious implications of a premature revision of the freight rates particularly in a country of vast distances like India. The Government of India have not finalised their industrial plans. We do not know how the foreign trade currents will flow in the years to come and very little is made known about the customs tariff during the Transition and after Railway lines are to be increased in length, new areas are to be covered and electrification of the railways is also to be considered. The road plans are there to complicate the cost as well as the demand for railway transport in different regions. The future of our coastal trade and inland water transport remains confused. Further, the present railway rate structure is serving regional commercial interests and if it is suddenly scrapped and the telescopic rates adopted we may be injuring certain local interests without perceptibly benefiting the long distance trade. Besides, when the export prospects of our staples are not clearly perceived, how is it possible to revise the rates from interior centres to the ports and from the ports to the interior?

Railway rates should be considered the second line of defence and there is an advantage in fixing them after the customs tariff is made clear for all the import items. Premature fixing of the rates may defeat the main purpose of the railway transport since the background against which the railways have to serve is as yet not perceived either by the authorities or by the general public. Why not wait for a few more months to get a clear picture of the Transition so that the transport policy can be correctly adjusted to post-war progress?

T. K. CHOUDRY.

Civil Aviation:

Your comment, that putting money in aerodromes is not useful, seems to me to be fair and timely. Doubtless we want the country to be connected by airlines. But the Government must recognise that first things come first. The Roads in the country are what they should not be. The rivers have no bridges nor used for irrigation. The country is not connected by railways as well as it should be. Industry and agriculture of the country have not been cared for for years. We are only putting the cart before the horse by launching a scheme of aerodrome construction. And we do not build our aeroplanes either. Even the factory started to manufacture aeroplanes has remained only a repair factory. Therefore the money spent on aerodromes cannot be said to be usefully spent.

A. B. S. MANT.

Nurses' Education:

You have hit the nail on the head when you remarked "only a complete overhaul in the attitude towards the service (nursing) which is still far from conceding to the service a status equivalent to other professions." There is absolutely no doubt in what you have said. Caste and colour prejudice should not stand in the way of entering the services. For the noblest form of service is service to the sick.

But you have not touched the question of numbers. During the war many men have been trained as nurses. Though not to compete with women yet to find the adequate number young men, with a real love of service could be taken and trained as nurses. It is also for consideration whether restrictions on marriage for women nurses do not discourage recruitment.

R. DE SILVA.

Impending Crisis:

The strike fever that has been raging for sometime is to have another crisis if the Railway men go on strike on all India basis. Already Rail-travel is none too convenient. But inconvenient travel is better than no travel at all. It is simply impossible to imagine how inconvenient it will be if the Railways stop work. Citizens of Calcutta knew, in a very very small manner what it will be like from the tram strike.

It is up to the Government to avert the strike. The points at issue are two—retrenchment and wages. If Government have no plans to settle demobilised men they have to thank themselves for it. But the two points on which the strike is likely to come are such that the Government can meet them easily. It is up to the Government to prevent this, strike.

The other side of the Medal:

Allow me to congratulate you on a particular phase that has marked the 'Indian Finance' of recent issues. It is this that you are giving authoritative information of the London Money Market by getting such eminent Economists and Financiers to write for your Paper as Dr. Paul Einzig. Students like myself, I feel must be greatly beholden to you for this service that you are rendering Indian Economists in giving place to such publications in your widely read Journal.

I, however, have one point of view to express and I take the liberty of write me quite freely. It seems to me that Dr. Einzig with his great eminence, is trying to pitchfork British financial interests in a very particular manner. For instance, in the issue of December 1st, I have read an Article on "Bilateralism in Western Europe" with great care. It does seem to me that it is a very special pleading. I feel certain, on the other hand that this bilateral type of international trade will hardly suit the needs and requirements of our country. I think you would be doing a great service again if you could also extend the hospitality of your pages to English Economists and Financiers of the opposite school of thought, namely to those who believe in the efficiency of multilateralism. I wonder if you consider my request to be unreasonable?

S. K. RUDRA.

Savings Bonds:

British Savings Movement emphasises the facts concerning the recent announcement by the Chancellor of the Exchequer that (1) the issues of 3% Savings Bonds and 2½% National War Bonds will be closed from the 15th December 1945 and (2) that the maximum holding of 3% Defence Bonds will be increased to £2,000 under all issues of Defence Bonds combined. A large number of the many who acquired the old

Capital Issue Limit :

The Government of India have decided to increase from Rs. 1,00,000 to Rs. 5,00,000 the figure up to which issue of capital in any period of 12 months may be made without their consent or recognition, according to a press note. This applies to all companies except banking and insurance companies.

All-India Manufacturers' Association :

Sir M. Visvesvaraya, has been re-elected unanimously President of the All-India Manufacturers' Organisation for the year 1946. The sixth annual conference of the All-India Manufacturers Organisation will be held on December 28, and 29 at Madras under the presidentship of Sir M. Visvesvaraya.

More Deep-Sea Ports :

A press note announces that the Government of India proposes immediately to appoint a Committee to explore the possibility of having more deep-sea ports on the long seaboard of India and particularly in the east coast and examine and advise on harbour schemes which have been put forward.

Exhibition of Indian Railways :

The first post-war Exhibition of Indian Railway will be held in New Delhi in February next (says an Associated Press message). It is learnt that the Railway Board has sent communications to the various Railways in the country asking them to submit for the Exhibition details of the improvements or modifications in the wagons, carriages, coaches, track improvement and other progressive steps contemplated by them for employment in the post-war period. Models of improved carriages have already been submitted to the Railway Board and these exhibits will be displayed in the Exhibition.

Indian Society of Agricultural Economics :

The sixth annual Conference of the Indian Society of Agricultural Economics will be held at Benares on December 26, 27 and 28. Sir Manilal Nanavati will preside. T.V.A. approach and its possibilities in Indian Agriculture, social factors in rural economy, costs in relation to size of farms and the Indian food policy, will be the subjects that will be discussed at the Conference.

Orissa Scheme for Improved Cattle :

Plans are now set for the conversion of 16 "Goshalas" in the Province of Orissa into cattle-breeding and dairying centres to help to increase the local milk production as well as to afford a supply of pedigree bulls to the neighbouring areas. Under the scheme, Government propose to subsidise these institutions and also provide free technical advice and veterinary aid on the spot.

Sales Tax for Bombay :

The Government of Bombay has decided to levy a sales tax of half an anna in the rupee on the sale of goods, or, more accurately, on the turn-over with effect from April 1, 1946, or as soon as

practicable thereafter, with the object of augmenting provincial revenue to meet post-war reconstruction expenses.

The Government proposed to repeal the Bombay Sales Tax Act, 1939, under which a tax is levied on the sale of motor spirit.

Under the Sales Tax Bill published today for public information, it is proposed to levy the tax on the sales of goods to actual consumers and will be collected from dealers whose turnover exceeds Rs. 10,000, a year. All dealers whose turnover exceeds Rs. 10,000 a year will be registered. It is intended to exempt from this levy certain essential articles, such as foodgrains and cheap cloth, as also articles which are already subject to a separate Central or Provincial Tax, such as matches, sugar, liquor, opium and electricity, and also sales of goods to addresses living outside the Province.

Loan to France :

The signing of a loan to France of 550 million dollars for rehabilitation was announced by the French Embassy and the Export Import Bank will make the loan.

Anglo-U.S. Tele-Communications :

The Anglo-United States Tele-communications Conference ended after reaching agreement on the new rate structure for telegraphs between the British Commonwealth and the United States, says a Bermuda report.

Uranium in South Africa :

Indications that the Witwatersrand gold-mines may yield considerable quantities of ores containing uranium—the main constituent of the atomic bomb—are being investigated, says a statement issued from the office of General Smuts, the Prime Minister of South Africa.

New Soviet 5-Year Plan :

Blue-prints for the Soviet fourth Five-Year Plan covering almost every aspect of Russian life heavy and light industry, housing, education, motor-car production, health, railways and roads, canals, ship-building, agriculture and electric power—are almost complete.

The Fatigue Factor

The ideal length of a working shift for various types of work has been, and still is, a matter of considerable thought and research. The International Labour Office at Geneva has in particular paid a great deal of attention to the subject. Many factors have to be considered in addition to that of the nature of the work concerned. Type of workers, factory conditions, physical strain, mental strain, rest pauses and many others. Of recent years it has been particularly noted that even during a shift well within the physical powers of the workers output frequently falls during the middle portion. Formerly this fall off was termed the 'fatigue factor', but modern industrialists now know that it is not due to loss of physical energy but to falling concentration.

One of the most valuable means of combating falling concentration is tea. Hot tea served to the worker on the job is eliminating the 'fatigue factor' completely in many thousands of factories throughout the world. To those interested in this subject much valuable advice and assistance will be gladly given by the Indian Tea Market Expansion Board, 101, Clive Street, Calcutta.

INSERTED BY THE INDIAN TEA MARKET EXPANSION BOARD

December 15, 1945

Egyptian Loan to Finance Cotton :

The Egyptian Government has decided to float a £30,000,000 internal loan to finance the 1945-1946 cotton crops.

Refusal to accept Tax :

For the first time in history, the Austrian Exchequer is refusing to accept taxes, reports Reuter. People in Vienna are queueing up to pay next year's taxes, because under the new law the present Austrian currency will be invalid after December 20. Black marketeers in particular are attempting to unload enormous sums for which they cannot account.

Removal of Export Control :

Enquiries are being made consequent on the recent removal from export control of a large number of commodities, on the correct procedure for exporting decontrolled commodities out of India, says a Press Note. The position is that, once an article is removed from export control, it can be exported freely and without reference to the Export Trade Controllers. Articles like raw cotton and tobacco, for instance, can now be sent out of India to permissible destinations without the formality of securing export licences.

British Purchase of Ceylon Copra :

It is officially announced that the British Ministry of Food's present contract to the Government of Ceylon for purchase of copra and coconut oil which is due to expire on December 16 has been extended by six weeks pending negotiations between the Ceylon Government and the Ministry of Food for a long-term contract.

Cure for Anaemia :

Dr. Thomas Spies, Associate Professor of Medicine at Cincinnati University, has announced discovery of a new cure for four types of anaemia. Dr. Spies said that he has found properties in synthetic folic acid to stimulate production of red corpuscles in the bloodstream. He believes that the new treatment may be more valuable than liver extract now commonly used for anaemia U.P.A.

Separation of Cashewnut from Fruit :

The age-old problem of separating cashewnut from the fruit has been solved in Lourenco Marques by a Portuguese named Antonio Manuel Proem, who has taken out patents in Portugal and London. A factory using the method is expected to start operating next year. Hitherto, supplies of the cashewnut crop of Portuguese East Africa used to be exported to India for treatment, but the method employed in India was unsatisfactory and nuts were seldom recovered clean and whole.

Reconversion of U.S. War Plants Completed

President Truman announced at a Press conference that the reconversion of U.S. war plants is virtually completed and the general reconversion process is well ahead of schedule.

Upper India Chamber of Commerce :

Mr. H. A. Wilkinson, M.L.C., Director, Messrs. Begg, Sutherland & Co., Ltd., Cawnpore, has been elected President of the Upper India Chamber of Commerce, Cawnpore, for the year 1946.

YEARS AHEAD

WITH FLUID TRANSMISSION

Now eagerly adopted by car manufacturers in other countries, the Daimler Fluid Transmission has been a Daimler feature for years. It was this transmission system, too, that kept Daimler Armoured Cars and Scout Cars always on the go in the long gruelling chase from El Alamein to the heart of the Reich. England's kings have chosen Daimler cars. Soon you will choose your peacetime Daimler, proud of that famous fluted radiator which tells that highest quality is your first consideration in a car.

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

Cheap conditions continue to prevail in the money market with call money at 1 percent in Calcutta and 1 percent in Bombay. But the Central Government has again had difficulty in getting its requirements of treasury bills. With the rather sharp increase in demand for funds, on account of cotton and sugar, banks have not been very keen to invest in either treasury bills or gilt-edged securities. As a result, for the second week in succession there has been a sharp rise in the average discount rate to 6 annas 9 pies per cent per annum against 6 annas per cent last week and 5 annas 3 pies percent two few weeks back. The total amount of applications was very much lower at Rs. 2.72 crores against Rs. 3.54 crores and tenders at Rs. 99-14-3 and above were accepted in full. The amount of accepted tenders was only Rs. 2.12 crores against Rs. 3.54 crores last week. It will be clear, that bidding has been less keen and that banks are not interested in treasury bills except at higher rates. Maturities of Central treasuries are around Rs. 2 crores per week. The Assam Government asked for Rs. 1 crore and applications will be received till December 22, 1945 in Bombay and in Calcutta till December 21, 1945. In view of the unwillingness of banks to lend freely on a short-term basis, the average discount rate might prove to be above 7 annas percent.

The returns of the Reserve Bank for the week ended December 7, 1945 show a rather sharp increase in the total of notes issued, it being necessary to effect expansion of currency for Rs. 13 crores against sterling securities in order to meet the large month-early disbursements. Total notes issued were Rs. 1,200.54 crores against Rs. 1,188.54 crores while notes in circulation were Rs. 1,190.45 crores against Rs. 1,176.39 crores. The increase in note circulation is more than the increase in notes issued. As a result, notes held in the banking department are lower at Rs. 12.09 crores against Rs. 12.17 crores. Sterling securities are Rs. 13 crores higher at Rs. 1,082.33 crores while rupee coin are Rs. 1 crore lower at Rs. 15.95 crores.

In the banking department, Central Government balances were appreciably lower at Rs. 455.76 crores against Rs. 470.05 crores. Disbursements have been rather heavy and nearly the whole of the additional note issue has found its way into circulation. Other Government accounts were Rs. 2 crores higher at Rs. 14.31 crores while bank deposits were better at Rs. 85.36 crores against Rs. 83.99 crores, in spite of the large increase in advances and loans. It is not clear how banks found the necessary funds for effecting an increase in advances by as much as Rs. 13.5 crores. Balances held abroad are lower at Rs. 555.78 crores against Rs. 564.13 crores. If the transfer to the issue department of Rs. 13 crores is taken into consideration, there has been a net receipt of Rs. 4.65 crores during the week.

The return of the Imperial Bank for the week ended December 7, 1945 does not show any important change in deposits, the figure of Rs. 253.14 crores showing only a slight decline of Rs. 20 lakhs over the previous week. There is no change in investments at Rs. 163.93 crores but advances are Rs. 2.84 crores higher at Rs. 56.45 crores. There is a drop in cash balances to Rs. 42.89 crores from Rs. 45.74 crores. In the week ended November 30, 1945 advances declined to Rs. 53.69 crores

from Rs. 55.26 crores owing to a drop in the amount of bills discounted and purchased. During the same week scheduled banks were busy making advances to the tune of Rs. 13.5 crores. This figure must have been in respect of banks other than the Imperial Bank and it is not definitely known in what connection these advances were made.

The statement of Scheduled banks for the week ended November 30, shows a slight increase in Demand liabilities by Rs. 38 lakhs to Rs. 673.74 lakhs while Time liabilities were Rs. 2.48 crores higher at Rs. 273.15 crores. Cash on hand is only Rs. 6 lakhs higher at Rs. 36.33 crores while balances with the Reserve Bank were slightly lower at Rs. 84.56 crores. Advances were Rs. 271.33 crores against Rs. 257.92 crores and bills discounted Rs. 17.68 crores against Rs. 16.72 crores.

Against the increase in total advances by Rs. 13.37 crores working capital was higher by only Rs. 2.97 crores. As cash balances do not show any appreciable change, it must be presumed that banks effected sales of short-dated securities in the open market and the necessary cash was found. As these sales have been taken up by private investors there was no need for the Reserve Bank to support the gilt-edged market. The Imperial Bank also has not added to its investment portfolio.

We understand that the Government of India have decided in favour of setting up an Industrial Corporation with an authorised capital of Rs. 25 crores and a paid-up capital of Rs. 5 crores. What was a mere proposal in the Second Progress Report of the Reconstruction Committee has thus made striking progress towards becoming a concrete measure for early execution. There must be general relief at this sign that Government mean business in respect of a vital requirement of industrial development. In the absence of an authentic account giving details, we must be content with stressing certain important principles in regard to its constitution, its administration and its actual working. About its constitution, there should be no need to emphasise that the Corporation should not be a means of private profit, that it should not be liable to be controlled by any caucus and that its Directorate should contain men chosen for their special competence for the work involved, and not political considerations or personal glamour. For the main purpose of the Corporation is to ensure that industrial development does not suffer by entrepreneurs failing to secure the necessary financial help and guidance. In so far as the big industrialists are sure, through the financial institutions under their control and the public glamour for their name, of the necessary finances, the new Corporation is meant for the small scale industrialist or the entrepreneur who cannot secure financial support by his own unaided efforts. The Corporation can serve a useful purpose in providing guidance for the small investor alike by the prevention of mushroom concerns and by directing him to sound propositions. It can take upon itself the control of capital issues, which has already been relaxed in the case of companies with a capital of less than Rs. 5 lakhs. That control, which has worked well within the limits set for it, has been of the non-committal kind, disowning responsibility for the soundness of the issues which it permits. There is no

reason why an official Investment Corporation which is properly manned with experts should not pronounce definite opinions on new issues and thus help deserving entrepreneurs to go to the investing public directly instead of seeking the costly association of a big name. At present, there is no means by which a competent technician can start a new enterprise without slipping into the position of a wage-earner under a managing agency. The capital market is bossed over by a small number of businessmen. All these unhappy features could be eliminated by an Investment Corporation constituted with a view to keep out caucus control, to ensure expertness in all its rungs and genuine public support in its functioning by limitation of dividends.

The share markets have marched forward in aggressive style. There is, as yet, no occasion to cry 'halt'; but it is necessary to point out that most of the transactions are on account of professionals and of speculative 'gambling' may be an apter word) classes. The general body of investors have mostly kept aloof, except to unload some of the holdings nursed from 1937 boom. Reserve Bank's tap-sales of securities have been very satisfactory. Rs. 60 crores was invested in Central Government loans during the five weeks ended 24th November, 1945. Rs. 35 crores of this amount was received for 3 per cent Second Victory Loan 1959-61 and sale of other loans through the Reserve Bank accounted for another Rs. 25 crores. In the past fortnight, 3 per cent 1970-75 has been avidly taken up both by banks and private parties. The raising of the tap-rate from Rs. 97-4-0 to Rs. 97-8-0 had, as expected, the effect of accelerating sales. The market has been looking forward to further rise in the tap-rate; and, in the absence of such rise, there is a disposition to mark time. The stage is set for further increase in the tap-rate—this time by eight annas. If it is recognised that progressive stepping-up of the tap-rate induces and strengthens sales, there must not be such a long interval. The operation must be carried out in speedy fashion and in confident style.

TREASURY BILLS

Central Government:

Tenders for Rs. 4,00,00,000 of three months' Government of India Treasury Bills will be opened on December 11, 1945. Total amount offered was Rs. 2,72,00,000. Tenders at Rs. 99-14-3 per cent and above were accepted in full. Lower tenders were rejected. Total amount accepted was Rs. 2,12,00,000, the average rate of accepted tenders being Re. 0-6-9 per cent per annum.

Tenders for Rs. 4,00,00,000 of three months' Government of India Treasury Bills will be received on December 18, 1945, at Calcutta up to 11 a.m. (Bengal Time) and up to the close of business on December 17, 1945, at other centres.

During the week ended December 7, 1945, Government of India Treasury Bills for Rs. 3,67,00,000 were sold in favour of the Issue Department of the Reserve Bank of India.

Assam Government:

Tenders for Rs. 1,00,00,000 of three months' Government of Assam Treasury Bills will be received at the offices of the Reserve Bank of India, Bombay till 11 a.m. on Saturday, the 22nd December, 1945, and at Calcutta upto the close of business on Friday, the 21st December, 1945.

Successful tenderers will be required to make payment and take up their bills on Friday, the 21st December, 1945.

Other conditions are as usual.

U. S. LOANS TO FOREIGN COUNTRIES

PUBLIC OPINION IN FAVOUR OF FINANCING INTERNATIONAL TRADE

Washington, Dec. 1.

Arguments pro and con American loans to foreign nations continue to hold the centre of interest in international trade circles.

Government officials, business leaders and various organizations recently have offered opinions on the subject.

The recently-concluded three-day 32nd National Foreign Trade Convention heard arguments for and against such loans, but members of the National Foreign Trade Council, Inc., sponsor of the convention, supported an earlier stand by the council on the subject. The council, as well as the Propeller Club of the United States, have taken the view that American credits to foreign countries should be withheld until the nations looking for loans act to eliminate currency blocs, exchange controls, Empire preferences and other measures restricting international trade.

Council members also urged that the volume of new American loans and investments abroad should be related directly to the capacity of the borrower to put the additional capital to productive use.

A forum conducted by the National Industrial Conference Board in New York brought forth some interesting comments on the subject of foreign loans. Willard L. Thorp, deputy to the Assistant Secretary of State for Economic Affairs, admitted in his talk before the board that the United States will take a "real" risk in launching a new program of foreign investment, but asserted it was a risk "which must be incurred if we wish to stimulate world recovery and free foreign trade from its restrictions."

His statement, however, met strong opposition from another speaker, J. Reuben Clark, Jr., former ambassador to Mexico and chairman of the executive committee of the Foreign Bondholders Protective Council, Inc., who warned that unless the United States either "substantially" raises its taxes or resumes peacetime deficit spending, it is in no position to make loans to foreign governments from its national funds.

Thorp said the United States alone can check the present trend of rising barriers to international trade, but only by dealing with the basic cause—the lack of balance in so many countries between requirements and resources.

"This circumstance must dictate the shape which American foreign policy should take. On this basis, a program must be devised capable of arresting and turning the present dangerous trend toward governmental control and governmental participation in international trade in peacetime."

The state department official explained that although private investment will have a responsibility when the transition period is over and normal conditions return, the initial task of reconstruction and rehabilitation is one for the government of the world.

"And that," he said, "can only be done if this country takes the lead."

"At the moment, there are many governments who agree that economic barriers are an abomination, but they are helpless

in the face of these economic requirements. The world cannot be changed by any grand gesture. It will require time and patience and ingenuity and wisdom. But the future is being made in the present. We are striving to draw the world together politically and we must do the same thing economically.

"Political co-operation is difficult in a world of economic warfare. Full employment is difficult in a world where trade channels are blocked. We must place international economic relationships on a new basis. Our foreign loans can be investments in prosperity and peace."

Clark told the board forum that foreign countries are not at this time good credit risks since "the 'gimme' spirit is too strong and too universal."

"Surely it would be wrong to risk the American taxpayers' money in any such wild-scheme of public international financing as is projected so long as we are and the world is as it is," Clark said. "We should leave the making of further loans to foreign countries to private investors who have money to lose, or who wish to gamble. Equally, it is sure there is no justification for further mulcting the taxpayer to carry the financial burdens of the world, when private individuals are prepared to do it."

He stressed that the most important element in the repayment of foreign loans is the debtor's will to pay.

"It is demonstrable that during the war period many debtor governments, perhaps most of them in number, have had sufficient dollar exchange to pay service-interest and sinking fund—on their obligations, but they have stubbornly refused to do so, preferring—inspired by our peace-time deficit spending policy—to use their funds in their own country, not infrequently for grandiose schemes and plans that will be social luxuries in their countries for a long time to come," Clark said.

"This lack of the will to pay was, for most of them, the real reason for the non-service of their bonds for years before the war. I repeat again, this attitude, practically universal in the governmental borrowing field, constitutes a real hazard to international lending that is of particular importance when the lender in putting out other peoples—the tax-payers' money whenever the government loans—instead of his own, as is the case when the citizens make the loan instead of the government."

Clark also suggested that the purposes for which a loan is made should be carefully considered.

Rep. William M. Colmer, D., Miss., Chairman of the special House committee postwar economic planning, also addressed the forum of the National Industrial Conference Board.

He explained that his committee has recommended to Congress that before large scale loans can be made the borrowing nations should make certain reasonable concessions and that this nation's

financial assistance should redound to the interest of the creditor as well as the debtor.

The committee, the congressman said, believes loans should be used to increase world production and get other nations on their feet and off relief, but feels strongly "that we should not let nations use our funds to flout our own policies; loans must be made an instrument of total foreign economic policy."

Discussing Great Britain, Rep. Colmer said his committee feels that a solution to the present problems involved in American foreign trade with countries within the so-called sterling area must be worked out as a prime requisite for large-scale loans to Britain. It recognizes, he said, the basic need of Britain for exports to maintain the living standards of its population. The great burden of loans from the empire and other countries has resulted sterling balances in London that cannot be liquidated on any short-term basis.

"The committee feels that while it is natural for England to resort to a continuation of import controls, government purchases, and quotas, there must be assurance of freeing trade within the shortest possible period, exchange controls through London be the first to go," he said.

"It is also felt that productive loans can be made to England and to the countries to whom England owes large sums of blocked sterling for war debts. We are convinced that scaling down and funding of the British war debts to these countries is a preliminary step to any agreement to furnish loans by the United States. All loans, settlement of lend-lease agreements, and surplus property agreements should be made contingent upon the willingness of England to remove the temporary restrictions on imports, with a schedule agreed upon for their timely removal.

"The same principle would apply to the removal of exchange controls which have been made necessary in wartime and are continued as a result of war debts in neutral areas and countries of the sterling area. These controls effectively prevent at the present time any large purchases from the United States by countries like India and Egypt. They are supplemented by bilateral agreements presently being negotiated and by a continuation of the Ottawa agreements affording tariff preference within the Empire. They should also be modified."

EXPANSION OF STEEL INDUSTRY'S CAPACITY

TORY DEMAND FOR NATIONALISING DOCKS

LONDON Dec. 2.

Investors in Indian securities are showing considerable stolidity in the face of the "Quit India" demonstrations reported. Perhaps the most sensitive group consists of shares of Indian public utilities like Calcutta Electric, Delhi Electric and Madras Electric which have lost some 6 per cent or 7 per cent in the past week but they are still substantially above their peaks of last year. Bank shares have been extremely firm.

The Steel Industry is hustling to put its house in order before the Labour Government commits itself further about its long-distance plans for nationalising the industry. The latest development is a scheme for £8 million universal beam mill to be established at Tees-side which will strengthen one of the weakest features in the industry, and remove one of the greatest handicaps from which British structural engineers have suffered.

What the trade calls "grey" mills, rolling broad flange beams and joists of various weights, have long been commonplace both in the United States and the Continent, the first one was constructed in Luxembourg over 30 years ago; the designer, oddly enough, was a British subject, but he was not honoured in the Mother Country.

Always in the past when a British firm, in competition with an American or Continental rivals, tendered for a big structural contract, one of its problems has been a peculiar one. If it needed a beam, say, 12-inch by 5-inch, it had a choice of only two weights,—30 lbs. per foot or 32 lbs. Often these were much too heavy and their excess weight was an additional item in British firm's costs. American firms, on the other hand, could count on securing such 12-inch beams in weights as little as 14 lbs., 16-lbs. and 19 lbs.—weights which frequently were entirely adequate for the job. The British firm frequently buys these on the Continent and steel merchants do quite a business servicing such firms.

In dealing with columns—of which the important thing is that it shall not buckle—British firms have been similarly handicapped. The British steel mills turn out some columns of high repute: notably one 8-inches by 8-inches which weighs 38 lbs. If this is not sufficiently strong, the next size available is 10-inch by 10-inch which weighs 61 lbs. In this 8x8 size the Americans roll in various weights from 38 lbs. to 61 lbs., enabling the American contractor to figure closely what he needs.

The proposed universal beam rolling mill will be high-speed mill and can furnish a wide range in sizes and weights. At long last, and on the very eve of nationalisation, the steel industry is repairing a weak sector.

The Government's broad nationalisation programme has upset the inland road haulers. They reacted instantly and violently against the suggestion that they will be compulsorily purchased. They consist of several large firms and about 10,000 very small ones.

The reason for their emotion is clear enough. Over the past two decades, inland transport has been an expanding industry. It is possible for an energetic man to buy, on hire purchase, a small fleet of

two, three or more lorries and to find himself a rich man in ten or fifteen years. The field is intensely competitive and fair percentage of these small entrepreneurs end in bankruptcy. Also, they are charged with violating laws designed to prevent them from over-working their drivers, and sometimes end in trouble with the law. Nevertheless, they all believe firmly that there is a pot of gold at the end of a rainbow and they have no desire to be bought out before they have reached it.

But there is very little that they can do. Mr. Bevin's famous union, Transport and General Workers' Union, had had a great deal of trouble with some of these firms and will stoutly support the Labour Government's decision to bring them into a reorganised and nationalised industry. This Union, needless to say, has very great influence with the Cabinet.

Perhaps the oddest event of the past week has been the Tory demand that the Labour Government should nationalise the docks by buying out all firms of stevedores who now load and unload vessels. This surprising development occurred in one of the Standing Committees of the House of Commons while considering the Government bill which will give the force of law to agreement between stevedores and dockers providing for the permanent employment and "de-casualisation" of dock labour. This agreement is now being negotiated by employers and men with the Ministry of Labour holding a "watching brief".

To the astonishment of the Labour members, the Conservatives poohed the bill, predicted that a workable agreement would never be reached and urged the Labour Government to add to the docks to its extensive nationalisation programme.

The Labour members were caught slightly off their balance by this and could only protest that it was not a practical proposition at this time. One of the young "Tory Reformers", Captain Peter Thorneycroft, denounced the Labour members hotly as "reactionaries".

It is quite possible that the Tory forecast may prove correct and that the Cabinet, before it is through with the dockers, will fervently wish it had included docks in its programme. These firms of stevedores have only one heavy item in their costs, namely labour, and they have fought to keep these costs down. The industry has thus developed much the same psychology as coal mining, with men hating employers, with hate which comes from long and bitter memories.

On the whole, the British public is not showing much disturbance of mind over the proposed nationalisation programme. So far as they have any opinions, it is probably that they have been affected, to some degree, by severe public criticism of the various sectors of the British industry, complaints that they are less efficient than they should be. This has gone on for several decades and probably has convinced many who are not especially politically-minded that a change to a different system can do little harm.

Coal miners, who are one of the most politically conscious sections of the working class, have shown their enthusiasm for nationalisation in a practical fashion for per capita production of much-needed coal has increased. However, the average age of miners is still too high and the return of young miners from forces seems still too slow to bring the per capita production up to the pre-war level.

Negotiations between the Ministry of Fuel and the Mining Association over the compensation still continue behind closed doors. The Financial Times claims that certain issues in dispute will be referred to Arbitration, but the Ministry has not confirmed this.

INDIA'S TWO 'MUST' MAGAZINES

"INDIAN MARKET" and "ONE NATION", edited by H. G. Mudgal, M.A. (Columbia), are indispensable to the nation's industrialists, businessmen, statesmen, political leaders, educators and in fact, to all those who are working for India to become a free, great world power.

INDIAN MARKET

INDUSTRIAL & COMMERCIAL NEWSMAGAZINE.
EVERY SATURDAY—RESUMING JANUARY 5.

To protect consolidate, expand and modernize our industries, trade and commerce and help India to become an Industrial Leader and World Trader. Full coverage of industrial, commercial and marketing news, statistics and interpretative features.

ANNUAL SUBSCRIPTION inclusive of monthly Supplements and Quarterly Review : In India Rs. 60 Foreign Rs. 90 payable in advance.
Contract Advertising Rates : Rs. 240 a page and pro rata.

ONE NATION

ILLUSTRATED POLITICAL NEWSMAGAZINE,
EVERY SUNDAY—OUT JANUARY 6.

To take possession of our freedom, to advocate uncompromisingly the promotion and defence of India ONE and INDIVISIBLE in order to make India a WORLD POWER, to cover and interpret news and events in India and Asia and create Continental Solidarity.

ANNUAL SUBSCRIPTION inclusive of monthly symposium : In India Rs. 30, Foreign Rs. 45 Payable in advance.

Contract Advertising Rates : Rs. 300 a page and pro rata.

Size of Printed Page of both Weeklies: 10" x 7" divided into 3 columns of 10" x 13 cms.

Advertising space is limited due to paper restrictions and for the same reason copies are rationed to News Agents. Please reserve your copy in advance with your local agent or subscribe direct.

India Must Join

The immediate problem posed by the successful conclusion of the loan agreement between the United States and the United Kingdom is whether or not India should signify her adherence to the Brettonwoods agreements before the end of the year. The House of Commons is debating, this week, the result of the Washington negotiations and the Brettonwoods agreements; and as expected, the British Government have sought Parliamentary approval with the utmost speed. It may now be taken as certain that the Brettonwoods Agreement Bill will receive Royal assent in time to enable His Majesty's Government to communicate, before December 31, 1945, their decision to abide by the Brettonwoods agreements. The United Kingdom will thus qualify as an original member of the Monetary Fund and of the Bank for Reconstruction and Development. The United States have already signified their adherence to the agreements.

The urgency for India's decision in this matter has been precipitated by the success of the Washington talks. Before these talks began, as well as when the talks were in progress, there were certain sections in Britain who were not enthusiastic over the Brettonwoods agreements. There was a general fear that this would mean the re-establishment of the gold standard; and the experience of deflation and depression in the 'thirties after the linking of pound sterling to gold on the pre-1914 parity has made most Britons look upon the gold standard as a nightmare. Britain is now aiming to have freedom with regard to devaluation of currency and freedom from the shackles of the gold standard. The general apprehension is that Britain will not be able to have such freedom once she agrees to abide by Brettonwoods proposals.

Moreover, the final plan as settled at Brettonwoods was in line with the original American scheme of Mr. White rather than with the British scheme of Lord Keynes. It is consequently apprehended that, by joining the United States in the execution of Brettonwoods agreements, London as the world's leading financial centre will be replaced by New York; and that British monetary policy and Britain's financial prestige will become subordinated to the monetary policy and financial prestige of the United States. There has thus been a definite reluctance on the part of Britain to support the Brettonwoods proposals unreservedly.

The question whether India should take any action before the end of the year was raised at the meeting of the General Policy Committee three months ago. Sir Archibald Rowlands gave a historical survey and impartially narrated the advantages and disadvantages of taking action before December 31, 1945. In the discussion that followed, the consensus of opinion was that the conditions as prevailing at that time did not make it possible for a clear decision to be arrived at; that the decision must, for the time being, be postponed; and that, meanwhile, the Finance Member should officially send a representation requesting that the day by which adherence to Brettonwoods proposals must be signified be changed from December 31, 1945 to June 30, 1946.

One of the main obstacles in the way of a definite decision at the meeting of the General Policy Committee was the amorphous stand of the United Kingdom in this matter. It could not be known at that time, with any degree of clearness, whether the United Kingdom would at all come to a final decision before the end of the year and qualify to be an original member of the Fund and of the Bank. That uncertainty has now been removed. It is now positively known that the United Kingdom is becoming an original member of the Fund and of the Bank. In relation to this factor taken by itself, it follows that India, too, must now decide on becoming an original member.

There is, however, a practical difficulty. Sir Jeremy Raisman, the last Finance Member, gave an undertaking to the General Policy Committee that, before India announces her intention to join the Fund and the Bank, the Central Legislature would be given an opportunity of discussing the matter. This pledge cannot be fulfilled in the present circumstances as the new legislature is just coming into being and will not be in session till the latter half of January. It is not, therefore, practical politics to expect the carrying-out of Sir Jeremy Raisman's pledge if India is to have the advantage and prestige of being an original member of the Fund and of the Bank.

There is, we believe, no reason to think that the new legislature will be unwilling to adhere to the Brettonwoods proposals. Sir Chintaman Deshmukh, one of the delegates to

Brettonwoods, has publicly declared that it would be to India's interest to join the Brettonwoods scheme. The non-official delegates have made statements making a similar recommendation. Thus considered ratification by the Legislature may be regarded as a formality.

It may be added that, when Sir Jeremy gave the undertaking, he gave the clearest proofs of his bonafides. His conduct as the head of the Indian delegation to Brettonwoods conference has been greatly praised by his colleagues who have further averred that both the official and non-official sections of the delegation worked as a team and without any differences. It can, therefore, be said that, so far as India's attitude towards Brettonwoods proposals is concerned, there is complete common ground between the Government of India and non-official opinion. We stress this point in order to show that the Brettonwoods Bill in the new Central Legislature should not prove a matter of controversy.

By all tokens, the moves taken by Sir Archibald Rowlands in this matter are equally bonafide and convincing. His presentation of the case to the General Policy Committee was fair and impartial; and he expressed his intention of abiding by the decision of the Committee. On the present occasion, realising the urgency of the matter in view of the United Kingdom deciding to become an original member of the Fund and of the Bank, Sir Archibald is consulting the three all-India commercial bodies and has asked for their views. At the same time, he has made it clear that, even if the Government of India do notify their adherence to the agreement before December 31, 1945, he proposes to bring the matter before the Legislature early in the next session. The Legislature would be free to recommend India's withdrawal from the Fund and from the Bank, and there would be no technical difficulty in securing such a withdrawal since the agreements provide for it.

It may, however, be presumed that there will be no need for such a withdrawal. For, it will be definitely embarrassing to withdraw so soon after the adherence. This will create an unfavourable impression on the minds of Americans. It will be admitted, on all hands, that there is much for India to gain from the goodwill of the United States. One of the moves by which India can sustain and strengthen America's goodwill is participation from the beginning in the Fund and in the Bank, to which both the Administration and the people in the United States attach far-reaching significance in the expansion of multi-lateral trade.

It is, therefore, important and imperative that India becomes an original member of the Monetary Fund and of the Bank for Reconstruction and Development; and, if Sir Archibald Rowlands, by communicating this adherence before the end of the year, finds himself unable to carry out the pledge of his predecessor, it will be admitted in his favour that he was perfectly justified in dispensing with what must be deemed mere formality in the circumstances as they are to-day.

Sir Archibald will no doubt realise that before announcing India's adherence, His Majesty's Government should give an assurance firstly that India shall be released from the dollar pool; that she shall be recouped for her war contribution to the pool; that an adequate proportion of our sterling balances be converted into free exchange including dollars; and that, once and for all this talk of scaling down our balances must stop.

Insurance Funds and Development of Cottage Industries

(By S. S. SHUKLA)

In my last article which appeared in "Indian Finance," dated 4th August, 1945 I had taken over myself the task of discussing our various economic problems of national importance and finding out how the vast accumulated funds with the Insurance Companies in this country could be harnessed to solve them.

I had shown how our biggest Industry—Agriculture—was suffering from lack of credit facilities and how the Insurers could help by subscribing liberally to the share capital or debentures of Land Mortgage and Central Co-operative Credit Banks. After agriculture the next important occupation of the people of this country is in the various Industries in which are engaged about 10 per cent of our population.

When I say that the development of our Industries is also suffering from lack of proper finances I run the risk of being dubbed as an ignorant man. Perhaps people will dangle before my eyes shares of certain joint stock companies which had been issued at a premium and even then large amounts of application money had to be refunded. But when I talk of Industries in this context I donot mean those gigantic Industries which are the creations of Rockfellers, Rothschildes and Nuffields of India. They are meant to exploit the masses rather than to help them. And then what proportion of the total population engaged in Industries is employed by these large scale enterprises. Out of a total of 7,851 thousand workers engaged in different industries 6,369 thousand, i.e., about 80 per cent, are engaged in small scale and cottage industries. In this category are included small factories which employ five to fifty workers. Some times a unit consists of one family only.

The economic condition of these persons is really pitiable. They have no credit or exchange facilities of any sort. Our banks which are the creations of big industrialists and capitalists will have nothing to do with them. They are left entirely at the mercy of unscrupulous money-lenders. When they require raw material they go to the sowcar to provide funds. When they cannot find a ready market for their production they again go to the money-lender to advance them money on the security of these goods with which to pay the workers. And every time the poor man has to pay an exorbitant rate of interest which naturally adds to the cost production and makes the prices uncompetitive.

Due to rise in the value of land, cost of building material, machinery, etc., the expenses of setting up new industries have enormously increased and it is beyond the means of average middle class people. Due to this factor many of the talents in this country remain dormant and pass their lives in working for others. It is really a diseased social order which does not give equal opportunities to all its members to rise to their full stature. We should strive for a society in which a talented worker of a factory may aspire to become its Director. Persons who are well placed in life criticise our educated youngmen and say that they have no enterprise in them. They have, they say, developed a sort of slave mentality and hanker after jobs. Instead of cursing the economic order which has reduced them to this state they throw the blame at the door of these poor youngmen. The crying need of these industries at present is (1) the liquidation of the evil of money-lender and the middle man, (2) arranging for the collective purchase of raw materials, and (3) assistance in the disposal of the goods at remunerative prices. The co-operative movement though having great potentialities in this direction has not been able to do much because of the paucity of funds.

Ordinary commercial Banks cannot be very helpful in this direction firstly because the nature of the funds with them is such that they cannot be locked up for a long time, and secondly, they have not the necessary expert staff who may judge the various new schemes on their merits and form an idea about the chances of their success. This latter condition is important because the success of a new venture depends upon so many factors and the people of ordinary intelligence and with meagre information at their command cannot foresee all the difficulties which beset them in their path. These financing institutions will run serious risks if they start investing indiscriminately without first weighing the pros and cons of a new enterprise. For this the financing agency should have at its command experienced and expert staff to advise.

The Government also can help in this respect by constituting Local Industrial Advisory boards which will determine in a particular locality what industries can more economically be developed and would also prepare plans for production and

distribution in these territories after studying the various factors. If some person wants to start some industry he should first approach the local board which shall thoroughly examine his scheme and then recommend his case for financial help to the agency.

These agencies should be established under special charters granted by the Provincial Government—the development of cottage and other small industries still remains the responsibility of Provincial Government. A limit may be placed at the power of the Board to distribute dividends and for certain period Government should also guarantee the capital and interest because it is possible the capital may feel shy of coming forward. The Central Government in their communicate explaining their Industrial policy have given an assurance that in suitable cases they may give such guarantees of capital and interest to the investors.

Our Insurance companies can play an important part in the development of these Industrial Financing Agencies by participating in their capital either by subscribing to the share capital or the debentures. As I have already said investment in new Industrial undertakings should be done very carefully after weighing the pros and cons of that business. It requires expert knowledge and some times one has to go deeper into fine technicalities even to know whether an enterprise will come through or it will prove a flop. The Insurance companies have not the benefit of such an advice and if individual insurers will try to set up their own organisations for the purpose it will be expensive and may also prove to be a diversion of their main activities. Therefore, they can only play an indirect role by participating in agencies set up for this purpose.

They can very well expect a dividend of about 7 per cent and a net interest yield on these investments of about 6 per cent which should give them a fair margin to distribute profits to their shareholders and policy-holders. Else when I have tried to show that even with net yield of $3\frac{1}{2}$ per cent prudent insurers can show a title surplus.

Then if these investments are guaranteed by the Provincial Governments as regards capital and interest the Insurers will have 30 per cent more fund for investments in these channels because Section 27 of the Insurance Act provides that out of the 55 per cent to be invested in Government and other approved securities 25 per cent is to be invested in Government paper and the balance may be invested in other approved securities. An investment guaranteed as regards capital, etc., by a Provincial Government will come in this category.

With this article my series on the Investment policy of the Insurance companies in India comes to an end. In this series I have tried to show how our insurance companies by exercising too much caution for the safety of the capital have jeopardised their very existence by earning very low interest yield. I have also stressed that the vast accumulated funds with the Insurers belong to the public, and public funds entail a public liability. It is the responsibility of the Insurance Companies to utilise their resources for the welfare of the masses and in the good of the people the good of the Insurers is also included. Is not the dire poverty of the people of this country a hindrance in the development of this industry.

What is required is the complete re-orientation of the investment policy of the Insurers. I know it is an uphill task. First they will have to bear the wrath of the Grand Moghul of Insurance Companies, namely, the Superintendent of Insurance who is provoked by even a slight deviation from the beaten track of investment in Government paper. Then they will have to convince their policy-holders and shareholders who view the fast developing industries in this country with suspicion and distrust. But all this should not desist them from the sacred duty.

I. F. SPECIAL

Is That Dollar Loan Really Necessary?

By Dr. PAUL EINZIG

The prolonged negotiations for the £1,000,000,000 loan from the United States are on the point of conclusion. Yet there is no rejoicing over the prospects of the addition to the none too plentiful foreign exchange reserve. For one thing, the public vaguely realises that this is going to be the most expensive loan in the history of modern finance. It is expensive even in terms of actual interest charge; for, since a large part of the proceeds is passed on to holders of blocked sterling, the 2 per cent rate on the whole amount will work out to be a much higher actual rate for the amount that is retained. But the major part of the cost of the loan will result from the political conditions attached to it: renunciation of Empire trade, self-imposed handicap of an overvalued currency, reversion to the obsolete system of anarchic multi-lateral trade, relaxation of exchange control.

Moreover, on the eve of the conclusion of the largest single loan transaction between two countries, many thinking people are beginning to ask themselves: Is that dollar loan really necessary? Supporters of the loan have for months done their best to make our flesh creep by describing the disastrous consequences of a breakdown of the negotiations. According to them, it would mean the cutting down of food rations. It would also mean that there would not be enough raw materials obtainable from abroad to proceed with reconstruction at a reasonable pace. Indeed, we are told, our industries would have to remain idle for lack of imported raw materials. No price is high enough, we are told, to pay for a loan if it obviates such disastrous developments.

A brief news story appearing in "The Financial Times" on November 30 went a long way towards calling doubt on the belief that the loan would be a vital necessity as the only way to avoid grave privations. "The Financial Times" stated that an American exporter made an offer for the early delivery of a large quantity of much-needed foodstuffs, against payment in blocked sterling which he was prepared to keep for years, and which he would like to withdraw eventually through the export of British goods. While the Ministry of Food received him with open arms, the Treasury vetoed the transaction on the ground that (a) the transaction would be an addition to the amount of £1,000,000,000 agreed with the United States Treasury; and (b) in any case the whole arrangement appears to be very much like barter, which is disapproved by the United States Treasury. Nor is this an isolated instance. It seems that the principle has been adopted that there should be no private loans and credits in addition to the large amount to be granted by the United States Treasury. Thus, while countries of the British Empire, and also foreign countries, are expected and encouraged to export to Great Britain against payment in blocked sterling, no American exports are accepted on such terms.

Yet there is every reason to believe that, if only American exporters and British importers were given a free hand to make their own financial arrangements, there would be no difficulty in obtaining very large deliveries of American goods on a basis similar to that described above. It stands to reason that American exporters are very anxious to retain their permanent British markets. If the alternative to exporting to Great Britain cotton and tobacco would be the development of cotton and tobacco-growing within the Empire, American exporters would be only too willing to sell to Great Britain against blocked sterling. In doing so they would merely follow the example of many other countries which continue to accept blocked sterling, in spite of the large size of the British external floating debt. Indeed, as the Chancellor of the Exchequer stated recently, since the end of the war the amount of the blocked sterling has actually increased—a high compliment to the prestige of the pound and of British credit abroad.

There would be no difficulty in obtaining through private credit transactions all the American goods we urgently need, without having to use up our dollar reserve. The chances are that Treasury bill rates would be accepted by American holders of blocked sterling, so that the cost of the transactions in interest charges would be incomparably lower than that of the impending loan. What is much more important, there would

be no political conditions attached to the arrangements, and this country would not be called upon to sacrifice its Empire trade and jeopardise her foreign trade for the sake of immediate relief. If it is possible to obtain external assistance privately on much more satisfactory terms, there seems to be no justification for concluding the official loan and telling would-be private lenders that their assistance is not required.

There are even people in this country who feel that the acceptance of the big American loan is in itself fundamentally wrong, apart altogether from its direct and indirect burden. They are convinced that the £1,000,000,000 would not be accepted even as an unconditional gift, let alone an expensive loan. There are indeed many weighty arguments against the acceptance of such a spectacular assistance. It will tend to demoralise British producers and consumers alike. In the absence of a loan, the Government could appeal to the country to make supreme effort to work out our own salvation by producing more, spending less, saving more, submitting to iron discipline as during the war, rationalising our system of production &c. The Government could claim that a state of emergency still exists in the economic sphere, and that consequently the self-sacrificing attitude displayed during the war must continue. In all certainty, the response of the country would be satisfactory. Party strife and class antagonism would be forgotten, most people would put up with austerity for the sake of working out our own salvation.

As a result of the big loan, the spirit of the country would be totally different. The Government's appeal to coal miners and other workmen to do their utmost to increase the output is likely to meet with no response. The workmen are tired, they want to rest, or at any rate to take it easy for a time. In face of the large American assistance it will be difficult to convince them that it is essential for them to continue to do their utmost. Presumably, there will be a demand for a reduction of working hours, and the output per hour will also fall. Savings campaigns would produce scant results. Most people would feel that thanks to the big loan now we could afford to import more, and therefore the consumers would be justified in spending more. There would be a scramble for a share in the proceeds of the loan, in the form of irresistible wages demands. It would be impossible to enforce economic discipline, or to re-establish the united national front.

Is it worth while to put up with such consequences for the sake of having a comparatively easy time in the near future? The proceeds of the loan will be spent in a year or two, and then the nation will have to face austerity in any case. But meanwhile, Great Britain would miss the unique chance provided by the post-war scramble for goods, to restore her position in the world markets. The loan would bolster up inefficiency and would maintain slackness in productive efforts just long enough to give our rivals a chance to entrench themselves in all our vital markets.

So much for the psychological effect of the loan. Its material effect will be that the consequences of inefficiency and slackness will remain camouflaged for a long time, so that the factors making for a revival of the national effort will not be set in motion till later. The trade deficit due to inadequate production and excessive consumption will be covered out of the proceeds of the loan, and while the proceeds last, there would be the minimum of inducement to work harder and consume less.

There will be a strong temptation to import superfluous goods. The Government could not resist the pressure to admit more luxuries, financed with the aid of the loan. The result will be that a large part of the loan would be spent without any real benefit from the point of view of reconstruction and of national production.

For this reason, the answer to the question whether the big American loan is really necessary must be emphatically in the negative. The chances are that it would do much more harm than good even during the period while its proceeds are being spent, quite apart from the additional burden it represents, and quite apart from the sacrifices it involves. Nevertheless, the loan will be concluded. Possibly, there will be even some rejoicing over the event; at any rate, it will be considered gratifying that the three months' negotiations have led to an agreement at last. But the rejoicing will be short-lived. For immediately after the conclusion of the loan the first instalment of the exorbitant price will be paid, in the form of the passing of a Gold Standard Act (under a different name, of course) which will chain sterling to gold. And there will be more to follow.

Editorial Notes

Coal Inquiry Committee :

The Government of India have decided to set up a Committee to go into the problems concerning coal production. The Committee is to "review the recommendations made by the various committees dealing with the problems of the coal industry which were set up by the Government from time to time, and to consider which of these recommendations have been adopted and with what measure of success and what further action needs to be taken by Government in respect of the recommendations which have not been adopted or which have been adopted only in part. The Committee is also to consider and report on what further economic and administrative measures are necessary to deal with the problems of the industry of a non-technical character and in particular, to report on the conservation of high-grade metallurgical and steam coal, the problem of

fragmentation of colliery holdings, the opening of new fields, the economics of the coal industry and the stabilisation of coal prices". The Committee will consist of five members, of whom two are businessmen, one a member of the Central Assembly and two officials of the Supply Department. In technical matters, the Committee will be assisted by a panel of experts. In the last twenty-five years, three Committees have gone into and reported on certain specified problems concerning the coal industry. The first of these in 1920 made recommendations on Mr. Trehearne Rees' report on avoiding waste of coal deposits due to defective methods of extraction. The second in 1926 was entrusted with the task of proposing measures necessary for stimulating the export of suitable coal from Calcutta to other ports in India as well as outside. The third in 1937 reported on measures for the prevention of avoidable waste of coal deposits and for securing the safety of those employed in coal mines. But a number of the recommendations made by these Committees were not given effect to. And new issues have emerged since they reported. The coal industry in India will have to play an important part in economic planning. This is possible only if as has been discovered during the war, a vigorous policy is pursued in respect of both conservation and distribution. The appointment of the present committee is opportune, its personnel sufficiently representative, and the terms of reference comprehensive.

Chemical Industry in India :

The importance of a well developed chemical industry in India cannot be over estimated. It is a basic industry without which industrialisation is impossible. Practically the entire industrial, economic and social life of the world is consuming chemicals in one form or another. Chemical products are used in large quantities in a number of industries like textiles, paper, glass, tanning, paints, pigments, soap and glycerine, matches, minerals and vegetable oils. While, in war, the chemical industry has played a great part, its role in peace is no less distinguished. The present age has rightly been called the chemical age. There is hardly any aspect of our daily life that is not intimately connected with the chemical industry. Artificial silk, and fibres are growing in considerable importance: artificial leather, artificial boards, and artificial building materials have begun to oust the natural materials for many purposes. Plastic products like bakelite have not only made it possible for electrical industries to develop into enormous proportion but also invaded fields like tableware, glass panes, etc. Chemical fertilisers and drugs have become essential for existence. Chemical foodstuffs, like fats and vitamins are no longer items of curiosity. Research is finding new uses for a number of chemicals. There are two peculiarities of the chemical industry. Nearly 4/5 of the chemicals produced in the world are consumed in the chemical process industries themselves. Another characteristic is, that for the same product a number of different raw materials are available. Hence the economic conditions prevailing in different countries alter the yields of major products and determine the number of bye-products.

The chemical industry in its modern form really began in a number of countries only in 1914. For a long time the U.S.A. was foremost. But the absence of statistics at present and the development of the industries in various countries during the war have made it difficult to decide the comparative growth of the industry. The expansion of the industry is particularly notable in Canada where the war production of chemicals and allied products is four times the pre-war. In India it is still in its infancy. If the progress of the industry is to be stimulated a correct realisation of the present position of the industry must be obtained. And with this object the All-India Manufacturers' Organisation has brought out an informative brochure on the Indian chemical industry.

Indo-Canadian Trade

The emphasis on quality, continuity of supply and price has become the key note as it were of the advice that Trade Commissioners abroad tender to Indian businessmen. The broadcast talk of Mr. Ahuja, Indian Trade Commissioner in

Canada on the possibilities of Indo-American trade begins with the same note. "However hard India's Trade Commissioners may strive to push the sale of Indian goods and however sincerely India's diplomatic representatives abroad may try to uphold her position in the international sphere, in the final analysis it is by the quality and finish of her goods and the nature of the services she renders to the world at large that she will be judged". He deprecates the tendency to cash in on present shortages and make money somehow. That this type of admonition should come from more than one quarter is no agreeable reflection on Indian businessmen. If the charges implied are true, self-interest if not business ethics, demands a thorough overhaul in the attitude that inspires commercial dealings. Trade with Canada offers wide scope for expansion. In the war period both exports to and imports from Canada registered a considerable rise in value and with the disappearance of several countries from the field, India rose to be the third best customer to Canada, and her third most important source of supply. In addition to the traditional lines of export, India was able to sell goods such as edible nuts and minerals, that Canada was unable to procure from her pre-war sources of supply. There may be difficulty in maintaining this position, when these sources of supply are revived. But there is a vital factor which would be of India's advantage. The economic structure, national resources as well as the actual and potential lines of exports both of India and Canada are not only non-competitive but also complementary so that there is no likelihood of Indian and Canadian goods clashing either in the internal markets or in their respective foreign markets. Mr. Ahuja testifies to the existence of a good deal of goodwill in Canada towards Indian aspirations which might also facilitate strengthening of commercial ties. But these favourable circumstances could be availed of, only if India's internal production rises and expands to such levels and at such speed as would enable her to forestall her competitors in the export markets.

A Useful Lead

In a message to the United States Congress, President Truman has urged the speedy passage of legislation to provide adequate means for avoiding industrial disputes and settling them with the least delay when they become unavoidable. Within the few months of the end of the war, not only Britain and America but several countries have witnessed industrial strife in a persistent form and in a very large scale. The British Dock workers were on strike for several weeks and have only arrived at a truce. In America several lakhs of workers have laid down tools and do not seem to be willing to respond to half measures. Sporadic occurrences of strike are being witnessed in India also. President Truman's anxiety for speedy legislation has therefore to be shared by administrators all over the world. In his message, he says that the objective should be to cover by legislation only such stoppages of work as the Secretary of Labour would certify as vitally affecting national public interests. He recommends that in cases of breakdown of negotiation the President or any other person authorised by him

should be empowered to appoint a fact-finding board within five days after the Secretary of Labour has made the above certificate. During this interval, strikes, lockouts or any change in the rates of pay, hours of work or working conditions should be unlawful. The Labour Government in Britain are also contemplating drastic measures affecting industrial economy in general. Strikes are for industrial health what epidemics are to public health and the recognition is gain-

ing ground that preventive measures ought to take a more prominent place in the future than efforts at settlement. The whole question of the legitimacy and the role of strikes has to be viewed afresh in the context of a planned economy. The implications of national interests should weigh more strongly than the immediate issues between the employer and the employees, though this is possible, only if a more equitable relationship between wages and profits is attained. For India particularly the loss occasioned by strikes on production should be considered a more serious factor than it is in industrially more developed countries. The arbitration experiments successfully tried during the war should be enlarged in scope, and endowed with greater sanction to become a permanent feature of industrial economy. It has to be admitted that the machinery for the enforcement of labour legislation needs considerable strengthening and improvement. It will not be found difficult to keep off strikes altogether if the Government take prompt and effective steps for prevention in particular cases and carry legislation to the level consistent with the growing needs and aspirations of labour.

Problems Of Sugar:

It was said some time back that sufficient attention had not been paid to the problems of the sugar industry and that the Central Government had been rather late in formulating proposals for the development of the sugar industry in the post-war period. As the prominent producer of sugar the United Provinces has naturally been anxious to maintain its position and has said that development in the post-war period should be directed by the Provincial Governments and that there was no need for licensing of new factories by the all-India body. Only in order to ensure proper regionalisation quotas should be declared for the various provinces and the starting of new mills should be in localities which would facilitate easy transport and would not create a bottleneck in emergent periods. It was also pointed out that, as far as possible, local conditions should be taken into consideration. For this purpose we had suggested the increase in the output of sugar in the Provinces of Bombay and Madras. With the larger sucrose content of sugarcane in these areas and the proximity to the various consuming centres, there would be a proper dispersal of the industry.

Thus, while the further development of the sugar industry will be the subject of controversy and the provinces may well press their claim for becoming less dependent on others for their sugar supplies opinion seems to be divided regarding the prospects for new sugar mills in the coming years. It is feared that with the expiry of protection next year the industry will be faced with new problems and that Java may again become a serious competitor. That protection will be continued for a further period, perhaps on a smaller scale, need not be emphasised as it is admitted on all hands that the sugar industry has made good progress on the technical side and that the relatively high cost of production is only due to the poor yield of cane per acre and the lack of proper utilisation of by-products. « COAL PROBLEMS »

5

COAL ENQUIRY COMMITTEE

DURING THE WAR many have realised, perhaps for the first time, the importance of coal to the national life. It made the wheels turn, the factories work and the armaments roll off their assembly lines. Now as the problems of peace are tackled coal will still be reckoned as the prime source of power.

In its plans for peace time development, the Government contemplates appointing a Committee to investigate and report on the many problems connected with the production and distribution of coal. It is an opportune moment and a wise decision which the coal industry welcomes.

Inserted by the
INDIAN MINING ASSOCIATION
for the purpose of informing the public
of important matters concerning
India's most vital industry

Industrial alcohol can be put to numerous uses and that molasses can be used in its production, as well as in other directions, it can be safely expected that, with the greater emphasis on improving the efficiency of agriculture, the cost of production will decline as the years go by. The only question now to be discussed is that the Government, having afforded protection the second largest industry of India for a fairly long period, should continue its helpful attitude towards the industry and that any new policies instituted should be from an all-India angle.

These questions are discussed at length in the publication by Mr. M. P. Gandhi entitled "Sugar Problem of India" (published by Messrs. Gandhi & Co., Bombay, Pp. 266, Rs. 12 and the "Indian Sugar Annual, 1944"). Mr. Gandhi is rather optimistic regarding an increase in consumption and feels that there will be a large increase in consumption in the future and that it will be necessary for the industry to raise production substantially. The present capacity of the industry is only about one and a half million tons. If sugar rationing were abolished, there might be demand for the output of mills in this country especially as it has been stated that in the war period the introduction of rationing has resulted in the spread of the sugar habit in the mofussil. Till recently, the urban areas were prominent consumers of sugar. Against this opinion of Mr. Gandhi, however, others who claim to have an intimate knowledge of the industry state that without a large increase in the standard of living of the masses it cannot possibly be expected that sugar consumption will rise very much above 1.1 million tons and that any further additions to the capacity of the industry should be made after ascertaining carefully the prospects for new enterprises. While it is difficult to be definite regarding the target for the sugar industry, it can be said without any hesitation that during recent years sugar consumption has been on the increase and that with the general preference for the refined commodity, there will be no idle capacity as in former years and that given the proper utilisation of available resources, sugar will prove to be a cheap article and within the reach of all classes. It cannot be denied that tastes have changed during the war period and that the various planning schemes will result in a general increase in the standard of living.

New Use for Sugar

Discussing about the problems of sugar it is interesting to note among the many new food products, which have emerged as a result of wartime research, is a concentrated vitamin food made from sugar. Though this product has been first discovered and manufactured in England, it will be the sugar producing countries like India who could take the best advantage of it. Other countries have, however, stolen a march over India in its adoption. For example, Mr. John Hock in writing in the "Illustrated Weekly of India" points out that Jamaica has already completed plans for starting the process and it is expected that a single factory would immediately provide enough of this food for nearly two million people. Mr. Hockin who has seen the pilot factory

at work in London gives some details about the process. The plant consists of several metal cylinders with a network of connecting feed pipes filters and tanks. A warm solution of molasses is poured into the first vessel, and the dry yeast a straw coloured, flaky powder eventually finds its way into a storage bin at the other end of the plant. While the pilot factory in England is having a daily output of only 100 lbs., the factory constructed at Jamaica has a production capacity of 12 tons per day. Sugar production in Jamaica is hardly one-fiftieth of that of India. The immense scope for the manufacture of this product in India is thus easily seen. It is claimed that this new vitamin yeast has nutritional qualities possessed by no other foodstuff known to medical science. It ranks No. 1 in a long list of highly nutritious foods that include whole milk, cheese, eggs, beef and ox liver. Its high vitamin content makes it specially valuable for people in the tropics whose diet consists largely of starchy foodstuffs such as rice and it would undoubtedly prove of immense value in preventing many of the diseases most prevalent in India. This food yeast adds weight and stamina to the body as has been proved by experiments in British schools. That it is easily transportable, keeps unimpaired in quality for several months and can be used for a variety of culinary preparations are other advantages claimed. The product affords a good venue for industrial enterprise in India.

Public Administration in Bengal:

The Famine Commission Report and the Report of the Rowlands Committee on the administration in Bengal have been not inaptly described as stable companions. The objects of both are similar and both should go paripassu. The causes of the last famine have been examined in the former. But more important is, means should be found to see that past mistakes are not repeated. This is all the more necessary because this has not been done in the past when so many commissions have reported. If the hope of the Commission, namely, that this should be the last Famine Commission and the First Food Commission is to be realised, it will at once be realised that the administration of Bengal should be reformed. The Rowlands Committee, whatever it has done or not, has made clear that the administration should be overhauled. There will be differences of opinion as to how this could be done. And the best administration is that which is capable of doing the greatest good to the people. History provides us with many examples of bad administrations being improved. But foreign experiments are foreign. And they can tell us now we should set about our business.

Public opinion in this country has not been as alert as in countries like the U. K. and U.S.A. with regard to the suitability of the machinery of public Administration. Nor are there Political Science Associations and Institutes of Public Administration for conducting research into administrative problems and enlightening public opinion on these questions.

In view of all this Government should have tried in a more systematic way to interest the people in the administration.

To help those who are responsible for the reorganisation of the administration

of the province Dr. N. C. Roy has brought out a brochure (a critical study of some aspects of public administration in Bengal, Calcutta University). All important aspects of the administration, as the Civil Service. Local Self-Government, communal representation, co-ordination and regrouping of portfolios have been discussed. He suggests, among other things, the replacement of the civil service by a new body of men with zeal and ability. Studies as the present one are valuable and indeed necessary and should be useful in reorganising Bengal's administrative machinery.

(Continued from page 1019)

maximum of £1,000 of Defence Bonds are now purchasing Savings Bonds through their Bankers. On the 15th of this month those standing instructions will, in view of this announcement, become inoperative.

The Movement strongly recommends that in all such cases Bankers should be advised at once that the standing instructions should in future be applied to the purchase of 3% Defence Bonds.

With the cessation of hostilities the need for savings has not lessened. The danger of prices rising in a disastrous post-war inflation, during the period that must elapse before the wheels of civilian supply can get turning, is apparent to us all. Continued savings instead of spending will reduce, if not eliminate, the danger. The flow of savings into Certificates and Bonds is also necessary to provide the capital requirements for reconstruction and the means for social security in our country.

DOCTORS SAY...

that an adult needs ten ounces of fresh vegetables every day.

One of the more popular vegetables, the phul gobi or cauliflower is only obtainable for a few months in the year, but when in season it is in great demand.

The cauliflower may be grown on any fertile soil which retains moisture and is easily drained. A normal crop yields one hundred and fifty maunds to the acre.

Like other vegetables, the cauliflower needs fast and easy access to the market. Once its crisp freshness is lost, it is no longer tempting. India must have more and better ROADS before her town dwellers can receive the fresh vegetables they so urgently need.

GOOD ROADS ARE AVENUES TO PROSPERITY

Clive Street Gossip

The Indian mind, it is generally agreed, is unique in its susceptibility to rational doubt. While all the rest of the world is so cocksure about the efficacy of force or the value of ever increasing material wealth, India alone pauses to ask herself whether she cannot do better than follow the rest of the nations. It is so in all walks of life. In politics, the Congress clings hard to non-violence, though non-violence has yielded pretty little so far. While violence, whether of the aggressive or of the defensive kind, has to its credit much that is apparently impressive. As for economics, in no other country could a Gandhian Plan of economic development have held the field in rivalry with the Bombay Plan or the plans of the Central and the Provincial Governments. There is something in our racial mind which stimulates a kind of ratiocination unknown in any other part of the world. Individual Indians, no doubt, react violently to the formulation in uncompromising terms of what this gift for reflection suggests in every walk of life. But these violent reactions are more in the nature of aberrations or of questionings which end with confirming what they meant to doubt or challenge. Personally, I have no doubt in my mind that the refinements of the Indian national mind which Mahatma Gandhi embodies in himself, exemplifies in his life and proclaims to the four corners of the world through his cult will before long be hailed as not only the essence of individual culture but the bedrock of a civilised social order.

I say this because not all of us, nor even a few of us at all times, are able to retain the stable sense of values which can inform our activities, energise us in worthwhile action and give us a sense of fulfilment and happiness in life. How many can claim to be clear in their understanding of their material wants or of their needs in the realm of the spirit? How little of the original there is in all thoughts and efforts and how much that is crudely imitative? If in our individual lives there is so much room for woolly thinking, hazy perception and aimless and blind groping, one can imagine how much more difficult it is to clarify the ideals for a whole nation and direct the thoughts and energies of millions along the right channels. It is Mahatma Gandhi's unique achievement that he has kept a firm hand on the thoughts and aspirations of the people of this vast country so as to ensure that, before his span of life will be ended, the nation will be set on the right path without fear of swerving to either side.

In the nature of things, his task in shaping our ideals is more difficult in the economic than in our political life. For, between the two major political sciences, economics has attained far more of rigidity and set form than politics. Indeed, those who profess the latter have not had the temerity to claim that their branch of knowledge is a science. Economics, on the other hand, claims to be a body of scientific knowledge with its own laws and theories, its suggestions of irrefutable validity to practical policy and its clear-cut answers for attempts to

transgress the laws of nature with which it is concerned. Both the ordinary businessman and the average student of economics have a sardonic smile with which to greet the supporters of any system of economic thought which is not their own. It has to be remembered therefore that it is far more difficult to keep our economic ideals in trim than our political ideals. The hectic developments in the rest of the world, the rise in our population, the exhaustion of agricultural land, the competition in industry which leaves us no alternative to complete and up-to-date industrialisation with all that it involves to the social structure and to individual life—all these not only complicate and prejudice the problem, but make it more and more difficult for the best of men to see clearly through the mist. The ideals of individual life tend to become confused to the same extent as the ideals of the community or the nation. The sensations of careerism either in business or office or other walks of life enslave most men of parts. Like the lunatic who only the other day climbed the topmost girder of Howrah Bridge because he had taken a bet with another lunatic that he would do it, most of us are ready to start a crazy climb to seen or unseen heights of pomp or wealth. Open more opportunities of making money, and those who have most of superfluous wealth are the first to seek to avail of it. One of the first questions that the Bombay Plan provoked on its publication was whether its aim was not to make the rich richer and the poor poorer. The question was by no means wrongly framed. What was wrong was the assumption that it rested with the authors of Bombay Plan or any limited group of individuals to answer the question. Whether economic planning in India is to make all people more unhappy by making the rich richer and the poor poorer is a question which rests with one and all of us to answer, and not alone the authors of the Bombay Plan or the Directors of our economic plans of the future.

For, the answer depends on the clarification by the individual of his idea of a comfortable, satisfactory and happy life, an idea formed in relation to his objective needs and not too arbitrarily subjective wants. To stick to that idea,

despite all the forces that may threaten to make it shifty and fluid, is to put one's material life in its proper place and enable one's personality to flourish and fructify. In that sphere, economics holds no sway. Its writs cannot run. And if it is true that a society is to a large extent, if not wholly, a collection of its constituent members, then what is true of every individual must be in some way true of the community as well. If the happiness of the individual consists in setting a rational limit to his wants, by what legerdemain can it be true that the salvation of society lies in the illimitability of human wants? And if there is something fatally fallacious about unlimited wants, the teachings of economics patently need re-examination and reconsideration. Economic planning in India cannot be based on the unquestioning

acceptance of these teachings. India cannot plan her economic life on the basis that every Indian will meekly agree to play the Economic man, living his life only to validate the theories of the economist. The test of a social organisation is the extent to which it enables the individual to live the life which appeals to the best minds in the society concerned and has therefore the sanction of the social conscience.

There is need, therefore, for us in India to reconsider our economic ideals in the light of our ideas of a good life for the individual. If our political conscience should create and sustain our devotion to non-violence and if at the same time we should seek our economic development on lines that would lead to conflict abroad and discords at home, there can

be no co-ordinated social development of any kind. Let us therefore, while there is still time to give useful and effective thought to it, try to think out our ideals of life for the individual, re-examine some of the basic concepts of the science of economics and bring our ideas of economic policy into some definite and rational relation with the condition necessary for the realisation of the ideals of a good life for the individual.

Doubtless, ideas of the good life must have an irreducible element of individuality about them; and one set of ideas may not have the same appeal for all. But that cannot be said of the economic ideas which will determine the economic policy of the country. If I may proceed to the more debatable from the less, I should ask whether India should not be

the first to disown the axioms of economic science, namely, the illimitability of human wants, the desirability of unlimited wealth and the ubiquitous nature of the Economic Man. I know that the economist as an ordinary human individual does not believe that human wants are unlimited. He would have nothing to do with an endless list of requirements for himself. He knows as well as any other the value of contentment. If he regards the illimitability of human wants as the starting point of his studies, it is because he is not having any one individual or any one generation in mind. He takes note of the fact that not only individuals strain themselves to acquire and own more and more, but through the whole course of history, human needs have kept on increasing ceaselessly. Even to-day when man has luxuries and comforts that no forebear of his could have dreamt of, there is no sign of a limit to human wants. It is not enough for him to fly round the world in a matter of hours, but he must land in a rocket on the Moon or Mars and see what he can take there or carry back here. The illimitability of human wants is a fact that stares you through all the pages of recorded or imaginatively reconstructed history.

And from this are deemed to follow the other facts which are deemed equally axiomatic. If human wants are illimitable, then the average individual has to be consciously or unconsciously an equally restless being, never content with what he has, refusing to draw the line anywhere or spare himself in the effort to get more and more. How could the race have gone on increasing its wants and achievements unless each generation has done its part and by far the large majority of people are activated by the impulse to get more and more? The net result is the Economic Man, the queer being that has an eye alike for the cheapest market to buy and the dearest market to sell. Let thousands and tens of thousands of such a being jostle together and you get markets, the see-saw of demand and supply, prices, money and what is hardly different from it, money-making, and all the complications and involutions of a modern economy. You can rank the ten or twelve or twenty of the richest men in the world and miss therein the name of a scientist or a scholar or a statesman and react to it as you like.

But I am going off the track. What I wanted to stress is that the illimitability of human wants as a fact of the history of the race is one thing; it is quite another to deduce from it, either as another fact of life or as a rule for guidance, that every individual is, or must be, insatiable in the matter of his material possessions and that a contented individual means irrefutably the stagnation and death of the race. For the relation between individual ambition or discontent and social progress is altogether misunderstood when any such deduction is made. It is not the self-seeking, greedy or rapacious individual that lays the foundation of racial progress or supplies the spur or the incentive to inventive effort. The inventor, more often than not, is a contented individual, so far as his material life is concerned, his discontent being reserved for the sphere of research and

of invention. This fact should suffice to indicate that individual contentment is no bar to social progress. If the comforts and luxuries of material life still leave scope for addition, the additions do not depend to any extent on our agreeing to unleash the dark forces of selfishness in each of us.

The illimitability of human wants is not to be understood or deduced from as it is in economic science. It is true of the race as a whole for as long as we can see. It is true of each generation: and it is true of the average individual up to a point. But its limitations should not be overlooked, nor should its validity be taken for granted in all manner of contexts. Whether the human race will ever reach a point at which it can reasonably and effectively say to itself that it will suffer no further additions to the amenities, comforts and luxuries of life is a question which we cannot usefully address ourselves to. Shall we set a limit to the speed of the aeroplane, or call a halt to the search for new sources of power or declare that we shall be content with plastics and will not have it displaced by a new invention? Shall we say that rayon is bad enough and fabrics made of glass are worse? Shall we taboo further development of the rocket? Shall we insist that motor cars shall be as we have known them and that they should not take on the characteristics of a helicopter? These questions lack practical importance. Restless spirits that will defy all external restraints in their quest for new inventions there will always be. Our attitude to new developments cannot possibly be determined by our sense of wonder at the old ones when they were fresh. No technical development can be the last word in its line. If some one could describe the effects of the distribution of atomic energy to every home and factory, we should be saints to refuse to have them. In any case, a self-denying ordinance would be proved futile in no time.

In that sense, human wants are literally illimitable. But the import of it will be seriously and dangerously misunderstood if it is taken to indicate a special value for crude discontent in each individual. What it means is that there can be no limit to the resources which human ingenuity can contrive to find for tackling the increasingly heavy task of enriching, materially and spiritually, the life of the common man. Progress in respect of these resources will be helped, and not impeded, by individuals agreeing to set voluntary limits to their acquisition and use of existing values. The argument that the scientist and the inventor are responding to the same stimulus as the salesman and the piece-worker is as absurd,

put forward in crude terms as when it is a subtle suggestion coming at the end of a long chain of deductions.

The scientists, the inventors, the men of genius who are ever striving for the better, these are a race apart. The economic problem is the problem of making the best of technical developments for the sake of the common man. So long as the springs of new invention have not dried up, there will arise from time to time the question of displacing old methods with new and deciding whether the costs of the change-over are worth while. The loss on discarding the old and the direct costs of installing the new have both to be carefully reckoned. That is a technical problem which is not made easier of solution by translating the illimitability of human wants into the crude terms of individual insatiability. Till recently, private industry was supposed to decide these questions with unimpeachable wisdom and its own interests were supposed to coincide with those of society at large. That superstition has been blown up. Delay in rationalisation and alacrity in buying up new patents of enormous social value and putting them in cold storage with a view to secure continuance of private profit are among the most heinous sins of private enterprise. And the time has come when society will lose nothing by recognising that the self-seeking individual is not the engine of economic progress.

I have been at pains to examine the idea of illimitability of human wants since the notion is both deep-rooted and widespread that contentment in the individual is a serious obstacle to social progress. On the other hand, the individual who voluntarily sets limits to his income and avoids both self-sacrifice and self-aggrandisement is a far more efficient instrument of social good and social progress than the individual with a highly developed instinct of acquisition. In subsequent issues of "Indian Finance" I shall examine the other basic notions of economic science before proceeding to clarify the type of individual which it should be the aim of economic planning in India to develop.

In the reference which I made last week to the death of Mr. Wajahat Hussain, I observed at the end that "his death leaves vacant a place which in the past it was never easy to fill". It is not easier now, as the authorities know and must recognise. The question of finding a successor to Mr. Hussain must be taken up before long, and if old traditions are to retain their force, the new appointment will be determined by extraneous considerations rather than the need to find a sound,

(Continued on next page)

GROWTH BY SECTIONS

As India's post-war plans are implemented, large new structures will spring up in her towns and villages—factories, offices, hospitals, schools. No large building with a wide roof-span can be built without steel.

Our Australian Letter

New Industries—Australian Whaling—Agricultural front—Overseas trade.

CANTBERRA, Dec. 8

A new company—Bitumen Oil Refinery of Australia Ltd.—is to refine petroleum products in Australia. It will have an issued capital of £1,250,000, and its sponsor, Caltex Ltd. has undertaken that 60 per cent of the share-holders will be Australian and 40 per cent American; also that it will obtain its crude oil and other raw material from sterling sources. It proposes to operate a refinery at Sydney or Newcastle, and later a second, probably near Melbourne. Newspaper reports state that the company will produce bitumen at about one-third of the cost of the imported product. It will import 1,00,000 barrels of crude oil annually from Bahrain, Persian Gulf, and its equipment will be provided by the California Texas Oil Co. which will send experts to Australia to instal the plant and train local personnel.

This project will mean an increase of oil refineries in Australia from two to five, both the Shell Co. and Vacuum Oil Co. having already announced their intention to extend along similar lines. All three companies intend to produce bitumen—for the first time in this country. Vacuum Oil Co. proposes to spend about £250,000 in the initial stage of its proposed plant, compared with £600,000 for the new company's first refinery. The location has not yet been decided upon.

Another new industry will be the manufacture of rayon in Australia. According to Press reports, as soon as transport facilities are available and certain taxation matters have been ironed out, Court-aids, the British rayon firm, intends to spend £5,000,000 on a factory near Newcastle, N.S.W. A representative of the firm stated that 1,700 acres had been bought at Tomago, New Newcastle. The factory would cover 500 acres and employ 4,000 people.

There have also been a number of announcements of extensions of existing industries. Among these are: A £15,000,000 post-war development programme by the Victorian Railways that will take 2,000 men ten years to complete, to be carried out concurrently with Victoria's share in the national gauge unification scheme; a £400,000 expansion by Kraft Walker Cheese Co. Pty. Ltd. that will employ several hundred workers in addition to the 1,100 already employed; formation of a special company by Drug House of Australia Ltd. to develop the export market for drugs; and plans by Bradford Cotton Mills Ltd. for expanding the cotton textile industry if circumstances are favourable.

Goldmining.—The financial editor of Melbourne "Herald" wrote that expert opinion believed that gold would become a major factor in Australia's economy; give it purchasing power in world markets; prove a big and permanent employer of labour, ultimately re-employing pre-war staffs of 30,000 (at present 6,000); hold its place as Australia's third greatest export above its present record high price of £10/15/3 an ounce. He stated that Australia's gold-mining industry was planning for a 1946 recovery. After having expanded steadily from 1931 to 1940, when the year's yield was £17,500,000, gold-mining was partly suspended during the war. In the peak year of 1940 Australian gold-mining companies had paid £3,175,000 in dividends, employing Australian capital in Australia, New Guinea, Fiji and New

Zealand. To date this year 23 Australian companies had declared dividends. Western Australia, which normally produced about three-quarters of Australia's gold, won 472,588 fine ounces from 1,777,128 tons in 1944, compared with 1,172,950 ounces from 3,739,120 tons in 1938. Action was now being taken to obtain key men, overhaul and replace machinery, increase workings and test new prospects. High hopes, too were held for a strong revival in Victoria.

Arthur M. Flanders, Vice-President of Bruck Silk Mills, Ltd., of Montreal, Canada, after exploring the possibilities of establishing rayon weaving mills in Australia, proposes to bring experts from Canada to train Australians in the new industry. He expects to form a company which will be virtually all-Australian, and will employ 500 workers.

A model city surrounding factories manufacturing electrical equipment, is to be built by Crompton Parkinson (Aust.) Pty. Ltd. at Campbelltown, about 30 miles from Sydney, Australia.

The firm has bought 255 acres of land in what at present is a prosperous dairying district. Part of the estate will be used for industries manufacturing electric motors and general electrical apparatus. Areas will be set aside for the homes the company intends to build for employees.

Mr. T. Malcolm Ritchie, director of Crompton Parkinson (Aust.) Ltd., is in England completing plans with the English principals of this company.

Mr. G. Setter, of the Fisheries Division of the Department of Post-War Reconstruction, will represent Australia at the international whaling conference to be held in London. A Press report quoted an External Affairs Department official as stating that in the past Australian indifference had resulted in the exploitation of Antarctic whaling by other Powers. Australia would try to have at least one floating-factory ship. With a crew of 300 to 400, the operation of such a ship would be worth £1,000,000 each season. Reports indicated that British and Norwegian interests were trying to secure former enemy-owned floating-factories. Australia's role in the Pacific war and her territorial rights in the Antarctic justified her claim for at least one Japanese ship. Before the war Japan had had six. One ship could produce all Australia's whale oil requirements and provide 15,000 tons for export; as well as producing 40,000 tons of meat meal for stock and poultry feed. Failing obtaining one ship, efforts should be made to establish a land-based station in Western Australia.

Wheat.—An inter-departmental committee has been appointed by the Australian Minister for Commerce and Agriculture, Mr. Scully, to devise a plan for the wheat industry's future stability. It will consist of representatives of the Departments of the Treasury, Post-War Reconstruction, and Commerce and Agriculture, and Prices Commission. Mr. Scully stated that no plan would be implemented without full consultation with wheat growers' organisations. During the war the Federal Government had taken control of the industry as a war measure, and material changes from the pre-war marketing structure had of necessity taken place. With the advent of peace constitutional difficulties in relation to the continuance of the wheat plan had presented themselves. The Committee had been charged a basis of the war-time organisation. It was essential that the industry should not be permitted to drift back to its pre-war conditions with all its uncertainties and

difficulties. He believed that the majority of wheat growers desired a sound comprehensive stabilisation scheme.

The Acting Commonwealth Statistician, Mr. Carver, has shown the extent to which Australia's wheat and flour export trade suffered as a result of last season's drought. The value of Australian wheat exported during July, August and September was £55,000, compared with £5,142,000 in the corresponding period of 1944, while flour exports fell from £1,864,000 to £717,000. Exports during those months this year went to British countries only. During the corresponding period last year large shipments were sent to U.S.A., Italy, South America and the Middle East, as well as to British countries. Provided conditions for the next two months were normal, the wheat and flour export position should be restored next season.

The Commonwealth Director of Agriculture, Mr. Bulcock, stated that, because of the dry September and October, Australia's wheat yield for the forthcoming season was now estimated at between 120 and 130 million bushels. Earlier it was thought that the harvest would reach 160,000,000, compared with last year's production of only 57,000,000.

Meat.—Mr. Bulcock also stated that exports of mutton and lamb were being adversely affected by the cumulative effects over many parts of Australia of four bad seasons. Although October rains had been helpful, the holdings of stock were low. However, bee exports from Queensland were unusually good for this time of year, due to excellent rains outside the usual seasons in cattle areas.

Eggs.—Australia's commercial production of eggs for 1945-46 reach the record of 115,000,000 dozen, Mr. Bulcock said. This compared with 104,000,000 dozen last year, and the pre-war figure of 65,000,000 dozen.

Sugar.—Drought conditions had affected the sugar crops, and present indications were that 630,000 tons would be harvested, compared with an anticipated harvest of 700,000 tons, according to Mr. Bulcock.

Olympus

(From Our Correspondent)

NEW DELHI, Dec. 12.

The Government of India have imported from the United Kingdom a town planning expert to make Indian towns brighter. The appointment has naturally evoked comment and some criticism. It may be argued that there is not such a poverty of town planning talent in this country to necessitate the importation of a foreign expert; that the transplantation in a tropical country of town planning ideas and practices of a country enjoying a temperate climate and whose citizens live a vastly different mode of domestic life and whose social system bears no resemblance, may not be ideally suitable. But this does not mean that we have no lessons to learn from British improvements in town planning, particularly as regards the re-construction, if that is possible, or at any rate the improvement of our industrial cities and towns. In recent years there has been a very great advancement in British town planning schemes—the creation of garden cities, satellite towns and trading estates. There is very much room for us to improve in these directions.

The packed and pestilential towns of thirty years ago have now become enormously more so and are veritable death traps to the citizens inhabiting them. The 1941 census revealed an increase in the population of our cities ranging from 100 to 200 per cent over, that of the 1931 census figures, and since 1941 there has been steady migration to the cities, which has resulted in extreme congestion preventing normal domestic life, unspeakable housing conditions and slum areas, the squallor of which beggars imagination or description. Almost every municipality of note in India has a town improvement scheme, but the kind of extensions which have been made have been merely additions of excrescences on a piece with the parental obnoxious, and stink only slightly less violently.

The advice of a British expert with experience of tackling these problems may therefore be welcome. About the time of the appointment of the town planning expert, we have information of the appointment of a subcommittee by the Labour Department to enquire into and report on matters connected with the provision of housing for India's industrial workers. The institution of Building Societies which, in other countries, have performed very useful functions in housing industrial workers, has for some reason or other made little headway in India.

The relaxation of capital issues control just announced, exempting companies other than banking and insurance companies issuing capital to the extent of not more than five lakhs from having to take Government's sanction is a welcome, though belated, move. The concession is of value since by far the great majority of Indian companies are those with a capital of between rupees one lakh to five lakhs. Companies making larger issues have of course to go through the process, by now well known, of obtaining Government sanction. The concession has encouraged the belief that a further instalment will be made in the near future, and the more optimistic, without any justification it would seem, even foresee complete de-control. As long as we have a planned economy, and plans which have now been laid or are being laid, will go on for fifteen years certain, there must naturally be some control to divert capital into approved channels, and de-control may create a chaotic or unbalanced growth which may prejudice the plan-

ning. We are informed that the procedure for making applications will be simplified. At the moment we have no definite information of the form which this simplification will take.

The Government of India recently invited industrialists to intimate them of their needs in respect of textile machinery and the results are due for further examination at a meeting at Delhi on the 18th instant. We understand that the response has been bigger than any one could have anticipated. Applications have apparently been made on the assumption that a cotton mill is one of the simplest industrial projects. The meeting which was held on the 10th instant to consider these replies which were tabulated with great effort by the Deputy Controller of Imports, could not finish its task. And it is appropriate to emphasise that allotments should be made with due regard for these principles, namely, a wise regional distribution of cotton goods manufacture, prevention of caucous control of the industry and preference to new entrants. The defects of the cotton mill industry as they were revealed during these war years suggest that these principles should be carefully adhered to.

HILLBIRD.

(Continued from previous page).

competent person to act as Sir Chintaman's Deputy. Though I am the first to recognise that Mr. Wajahat Hussain grappled nobly with his task, justice to him does not require us to overlook the fact that at the time of his appointment he was not marked out by experience or knowledge to the place he was called to fill. Indeed, the strain of having to fill an altogether new role, with which his earlier training and experience had nothing in common, may have had something to do with his sadly untimely end. Both in the interest of the individuals concerned and in consideration of the work which the Deputy Governor of the Reserve Bank will be called upon to do, the authorities will be well advised to stop experimenting with random choice. With the Bretton Woods Agreement ratified and India an original member of the I.M.F. and the International Bank, with Indian banking in an increasingly favourable position to branch out into foreign countries and the growing need for more and more varied banking facilities, the Deputy Governorship of the Reserve Bank of India can be neither a sinecure nor an administrative job of a routine kind. The days when the Reserve Bank could be regarded as but a branch of the Finance Department or an ordinary bank with none of its problems to solve are being fast left behind. It helps no one, neither the individual favoured, nor the party that is so placated, to pitchfork an unqualified person into a position of such consequence and responsibilities. In the limited and narrow outlook of olden days, it may have been a convention to earmark jobs for particular communities. But to respect that convention is to jeopardise the interests of the country as a whole and the particular community, not less than any other. I go much further and say that, if a competent person can be found only in a foreign country, better far to import such a person on whatever terms may be necessary than to continue the costly process of improvisation.

Sir Renwick Hadow's speech as President of the annual session of the Associated Chambers had of necessity to

deal more with the Congress attitude to foreign capital than with other topical questions. And in his criticism, Sir Renwick had to include the Government of India as well, in as much as the Planning Member declared at a meeting of the Policy Committee that "it is not possible for the industrial development of India to proceed unhindered so long as these constitutional provisions (regarding commercial safeguards) remain on the Statute Book". That British business in India is sore about the Congress attitude to them is only to be expected. But not all their spokesmen have been able to command the same restraint and dignity that Sir Renwick has displayed. To the Planning Member's statement, his answer is, "it will certainly be no part of our policy to adopt an attitude which will in any way impede the rapid achievement of that goal". And as for the Congress attitude, he points out that "to be consistent they should equally be in favour of the withdrawal of all Indian capital at present invested in other parts of the Empire". But so large a problem as the future of British business in India is not solved either by dialectical retorts or verbal assurances. What is heartening in Sir Renwick's speech is the emphasis on "give and take", the importance of reciprocity in commercial relations and goodwill. Personally I hold somewhat special views on Indo-British co-operation in industry, and I welcome every utterance that is helpful to the creation of such a spirit of co-operation.

Bombay, December 12.

The proposal to levy a sales tax in the Bombay Province is meeting with increasing opposition allround. The tax will be passed on to the consumer who has borne enough in all conscience, what with the large number of direct and indirect taxes and that most onerous of all taxes, namely, the continued existence of acute inflation. The trades are afraid that a sales tax would add to the already excessive scope for official interference, which, even as it is, is fairly complete and that therefore the scope for corruption would also increase 'pari passu'. The respective trades are examining the proposed tax and their final reactions have not yet been made available. That a taxation measure of this nature should not be undertaken on the eve of the return of popular government in this province is common ground to all. No real case has been made out for the imposition of a tax like this, as I pointed out on an earlier occasion, in view of the prosperous state of provincial finance. Unfortunately, post-war planning talk (and not action) serves as a convenient argument for bringing fresh burdens on to the breaking backs of the people. The proof of the pudding is in the eating, they say, and one wishes that these taxes follow, and not precede, actual reconstruction projects. The cost of living is pretty high already and the tax would only add to it, especially in the case of those commodities which pass through many hands and, in which a sales tax might have to be paid at every stage, thereby asking the consumer to pay an inequitable price. It is hoped that the Bombay Government will bow the public opinion and cast around for some other means of raising revenue rather than resort to a sales tax.

It is reported that there is considerable difference of opinion among the members of the textile pannel of the Planning Committee (Official) as regards the use of new textile machinery if and when available. There are some millowners who desire to take such new machinery as is available and run it along with the old equipment; there are others who point out that new machinery should be supplied to the mills only on condition that, for whatever new equipment supplied, there should be a corresponding throwing out of the old plant. Opinion is fairly divided among the members, it appears. Those who take a long view of things feel that the mills should not employ the old machinery when they could replace it with new equipment. They say that, in the interests of efficiency and of tariff protection, as little of the inefficient units as possible should continue to operate. In view of the possible monkeying with the quantum of protection in the future, the validity and importance of this view can hardly be exaggerated. Unfortunately, the continuance of inflationary conditions and of shortage is a serious temptation to many a millowner to go in for second or even third rate machinery if now available, so as to cash in on the present conditions. In fact, some time ago a millowner of high standing brought forward such a proposal in the Industry Committee, but fortunately, it was promptly put out of court. The tendency to view things from the short-term point of view is to be greatly deplored. On the other hand, one would like to see our millowners taking the long range view of economic conditions, even though it might mean a

small sacrifice of potential gains in the present. The textile industry in India will stand or fall according as it develops correct ideas of efficiency and equipment or no.

Years before the people and the government in this country became planning-minded, "Indian Finance" had, in one of its prolific supplements, put forward a scheme of regional industrialisation for India. Even to-day, except in a few estoteric circles, there is very little awareness of the importance as well as the desirability of giving to planning a regional bias. It is, therefore, highly gratifying to note that a person of the eminence of Sir M. Visvesvaraya has thought deeply about the subject and prepared a note for the benefit of the people and the Planning Department. Many will be disposed to agree with his criticism voiced at a meeting of the Central Committee of the All-India Manufacturers' Association that the official plans

of reconstruction are all fragmentary and did not constitute a proper nation-building plan. The scheme put forward by the A. I. M. O. includes the immediate establishment of two new heavy industries in each province, rapid development of cottage industries in every district and the adoption of a five year plan for the growth of all kinds of industries. The country is to be divided into six administrative units, each regional unit being guided by a "Safety Committee" which would be charged with the duty of making the people self-reliant in that region. Twenty-four heavy industries, including shipping and ship-building, steel, coal, automobile, aeroplane, internal combustion engines, machinery manufacture, aluminium and rayon, are on the list and these are expected to involve a capital outlay of Rs. 100 crores, of which about half will be spent on buying machinery abroad. That, of course, is the snag, but not an insuperable one.

Airway Port

(From Our Correspondent).

KARACHI, Dec. 7

It will take at least three months for Karachi to switch back to the normal. It is still putting on war paint in the sense that soldiers in uniform are careering about its streets. Many of them are Yankees returning home. Karachi is one of the main ports of embarkation and the crowd and rush will last till the end of February. Apart from this, we also witness the arrival of hundreds of Indian troops from European and Middle East fronts. There is a floating population of nearly two thousand camped at the air trooping transit camp at Mauripur. They are British troops, either on their way back to England or returning from England after their leave, to be posted in India or Indonesia or other storm centres. We have thus to feed and lodge more than six thousand army personnel per day. It is but natural that the prices of commodities should retain their pre-war level and the housing problem should remain as acute as it was before.

An outline of post-war civil aviation in India involving a capital expenditure of 15.5 crores and an annual expenditure of Rs. 45 lakhs during the next ten years is now available. The future aerodrome organisation is planned on an all-India basis, including the Indian States. The proper supervision of such an organisation cannot be efficiently carried out by one officer such as the chief aerodrome officer, whose office is at present at Karachi. It is therefore proposed to adopt a regional organisation, dividing the country into six regions, namely, Karachi, Delhi, Calcutta, Bombay and Madras, each under a regional aerodrome officer. The proposed future aerodrome organisation will comprise of a total of 111 aerodromes, which will be classified as four super aerodromes, 14 major aerodromes, 34 immediate aerodromes and 54 minor aerodromes. Sind, according to this proposed scheme, will have a super aerodrome at Karachi, an immediate aerodrome at Jacobabad and six minor aerodromes. Of these 111 aerodromes, 91 are existing aerodromes and 20 new ones will shortly be constructed. Such of the existing 47 R.A.F. aerodromes as can be made available will be taken over. It is estimated that 20,000 acres of land will be required for the 20 new aerodromes at an average rate of Rs. 200 to Rs. 300 per acre, involving an expenditure of 60 lakhs of rupees. Extensive hanger accommodation will be required at the four super aerodromes to accommodate not only aircraft maintenance facilities for internal traffic but also to house the air craft to be operated on the internal air services. A proposal is nearing completion for the establishment of a Civil Air training school at Karachi. At the attached aerodrome school, officers will be trained in administration and flying control duties.

There has been wheat shortage in some of the Sind districts which has been further accentuated by the demand for wheat seed. The rice crop is above the average, but cloth distribution is in a disorganised state. These were the observations of Mr. R. R. Pearce, Additional Director of Civil Supplies, at a press interview. He said that cloth rationing would be introduced in rural areas on the same lines as in urban areas from February 1, 1946, and that to relieve wheat shortage,

Government had provided 26,400 maunds for wheat seed. They had also sent wheat stocks from Karachi to rural areas to be sold at controlled rates under official supervision. Mr. Pearce hoped that improvement in the cloth situation in rural areas would follow the introduction of rationing and accurate registration for the purpose.

The Karachi Buyers and Shippers' Chamber has drawn the attention of the Government of India to the British Supply Mission (Middle East), which has come into existence after the dissolution of the War-time Middle East Supply centre. The Chamber states that overseas trade has already suffered immensely during the war. But now that trade conditions were improving and were fast coming to the normal, it is expected the Government of India would strengthen Indian business and trade connections with foreign countries. This British Supply Mission, it appears has been established on behalf of the British Government and it proposes to concern itself with all the items of Indian export trades with the active assistance of the British Government and British trade and

shipping interests. The Karachi Buyers and Shippers' Chamber has registered its vigorous protest with the government of India and has urged the latter to get all the items of Indian export trade excluded from the sphere of activities of the British Supply Mission.

The Committee of the Indian Merchants' Association has passed a resolution that it views with alarm the situation created by the government of Bengal by their resorting to unwarranted and indiscriminate use of revolvers and lathis in dealing with peaceful and unarmed demonstrations of Calcutta students, resulting in loss of several precious lives and injuries to hundreds of others.

It is understood that the Geological department of the Government of India will shortly start a survey of the Mangho Pir area near about Karachi in order to find out if there are further sources of sulphur deposits or spring for which the place is well known. The survey of Husri tract for the granite deposit has already started.

A Resume of Commodity Markets

There are again no important developments in the commodity markets in the past week though it should be said, that the conclusion of the Anglo-U. S. financial agreement has resulted in a decline in prices in the bullion market, gold especially. But for the shortage of ready stocks and the control of bulls over the market, the decline in prices would have been more pronounced. The raw jute and jute manufactures markets are unchanged while the raw cotton market has turned easier. It was feared that American cotton might compete more effectively with Indian cotton. The selling by the Central Government of waste cotton had also a discouraging effect. As a result a large portion of the gains of last week has been lost.

There is nothing of interest in the jute and jute manufactures markets. Mills are still buying in small quantities and will increase their purchases only when more orders are forthcoming. In view of the satisfactory settlement of the Anglo-U. S. talks, it is expected that business will increase. The hopes of larger international trade should result in greater consumption of both raw jute and jute manufactures.

Even with the present difficulties in regard to shipping demand for goods for ordinary consumption should be considered satisfactory and in recent months there has been a persistent decline in commercial stocks. The stock figures for the month of November show a decline in respect of goods on civil account. Hessian stocks were 14.6 crore yards against 15.41 crore yards at the end of October and on military account 12.08 crore yards against 12.39 crore yards. Sacking goods, on civil account, also show a decline to 20.17 crore yards from 21.23 crore yards. On military account there is a small increase to 7.79 crores from 7.38 crore yards. As coal arrivals were reported to be satisfactory it should be expected that the output in November was at a higher level and that the offtake during November was more than the previous month. The production figures will show whether there was actually an improvement in the situation both in production and shipping.

As soon as it was announced that the Anglo-U. S. talks had been concluded, bear operators in the bullion market sold heavily on the expectation that the ratification of the Brettonwoods plan by Britain would prevent competitive currency depreciation and that the lifting of exchange controls would result in freer trade in the bullion markets in the various parts of the world. The report that the British Government actually agreed to the continuance of the present sterling-dollar rate gives the quietus to the rumours regarding the possibility of the devaluation of sterling before Britain agreed to the U. S. plans. If the various proposals came into effect it need not be emphasised that the present artificial prices for both gold and silver cannot be maintained. In view of the uncertain U. S. policy in regard to silver, operators are inclined to take a bearish view only regarding gold. Earlier in the week, gold ready came down to Rs. 80-12 from Rs. 85-10. Covering at the lower levels resulted in a slight recovery to Rs. 81-10. The shortage of ready stocks has prevented a further drop in prices, but if the stock position gets easier, it can be expected that the downward movement will continue to be in evidence.

The silver market has been lower in sympathy with gold but no appreciable drop in prices has been recorded. The market is still in the grip of powerful bull operators.

The raw cotton market has been definitely easier as it was felt that the conclusion of the Anglo-U. S. financial agreement would help Britain purchase American cotton more freely though, as pointed out last week, there is no justification for this view. It should be expected that with the improvement in shipping to the U. K. and the availability of labour there will be an increase in exports of Indian cotton. The continent also might take more of Indian cotton. The weakness of the market in the past week should be attributed more to the selling of holdings of waste cotton by the Central Government than to any other reason.

In this connection it is rather surprising to note that Japan is not aware of our large stocks of short staple cotton and that the Chief Director of Japan's Textile Association is said to have stated that "since India's spinning industry with its wartime extensions now consumed virtually the whole of India's output of raw cotton, the Japanese textile industry was planning reluctantly to manage without India's raw materials in the future". How this impression got round is not clear. If Japan is in immediate need of Indian cotton, there is no difficulty in providing her requirements especially as our problem is one of disposing of large accumulations of short staple cotton in the war years. It was pointed out in these columns some time back that the American occupation of Japan and other areas might possibly cut out Indian cotton, and that an attempt would be made to use as far as possible American cotton. If the United States is keen on displacing Indian cotton, it would not be possible to effect any large increase in exports. It is hoped that the Central Government will make proper representations and do the needful. The report that this question is already engaging the attention of the Government is satisfactory.

Despite restricted acreage of cotton cultivation and increased consumption of Indian cotton by Indian mills, there is a large and growing surplus of Indian short staple cotton available for export. This is accounted for by the fact that, as a result of the war, an annual market to the tune of 2½ million bales mainly of short Staple cotton had been lost to India by the loss of the European Continent and Japan as markets.

Jute and Jute Manufactures

Special to "Indian Finance"

(From Our Correspondent)

CALCUTTA, Dec. 13

A welcome drop in stocks of goods held in godowns by mills is recorded at the end of November. The decrease is a substantial one of 8700 tons, bringing the total back almost to where it stood at the end of September. Every item with the exception of Sacking goods held on Government account contribute to the decrease. Commercial hessians are lower by 181 lakhs Yards or 4071 tons. Hessians held on Government account are lower by 31 lakhs yards or 1272 tons. Commercial Sacking goods are down by 106 lakhs yards or 4042 tons while similar goods on Government account show an increase of 41 lakhs or 1835 tons. In the aggregate therefore stocks of hessian now stand at 2668 lakhs yards, a reduction of 212 lakhs yards or 5343 tons from the previous month. These stocks are fairly evenly distributed between Commercial and Government account. Sacking goods in the aggregate stand at 2796 lakhs yards in stock, a reduction of 65 lakhs yards or 2207 tons. Here as usual the preponderance of stocks is on Commercial account, 2017 lakhs yards against 779 for Government. The total quantity of goods in stock stands at 187,000 tons, roughly two months production at the present rate of working. The reduction in stocks is attributable to a better supply of freight space having been available, and it is to be hoped that these conditions continue to prevail. It would also be a great relief if some of the Government stocks of Sandbags could be disposed of. These amount to 15,000 tons almost.

Some anxiety must be felt in certain quarters over the interpretation to be placed upon the announcement that an Ordinance has been issued in amendment of the D. I. Act with regard to properties requisitioned by Government. This Ordinance lays down that Government will have the option to acquire requisitioned property if any works erected on the property at Government expense could be preserved or secured for Government purposes, or if the restoration of the property to its original condition would involve excessive cost. It is further provided that, in cases of such acquisition, the market value at the date of its requisition and not at the date of its acquisition would be considered. Such a proposition so far as it might concern Jute Mills, could only be described as an act of gross injustice. As a gesture towards the war effort, Jute Mills agreed to hand over to Government for the duration, thousands of square feet of their property at a nominal rental of three rupees per hundred square feet per month. The appropriate rental, based on construction costs at that time should have been nearer twelve rupees per hundred square feet. In addition to this, Mills have provided free accommodation for thousands of personnel, with light, fans, water etc. not to mention scores of acres of open ground free for truck parks and so on. Out of the lavish remuneration of three rupees, mills had to cover the premises against fire risks and for much of the time against war risk also; so there was not a great deal of change left out of their three rupees at the end. As a matter of fact they were usually well out of pocket owing to the notorious dilatoriness of Government in paying up their dues. If now Government decide that they wish

to retain any of these premises, they generously propose to acquire them at pre-war level of costs, which is just about one third of what it would cost a mill to replace them today. If this were the Government attitude in all directions, not so much might be said about it, but with the continued evidence of squandering mania which has been so notorious in other directions during the war years, this sudden reversion to a policy of cheese-paring is somewhat startling to say the least. It ought also to be remembered that Jute Mills throughout the war have supplied all Government requirements of their productions—and of many productions which mills had never attempted before—on the basis of cost plus 7½ per cent. Out of which modest profit, income tax and E. P. T. took the largest share. We cannot say of course that any mill properties will be acquired under this Ordinance, but if they are, mills deserve, we will not say more generous, but merely fair treatment. It is believed that de-requisitioning of mill premises has already started on a small scale.

Another matter of great interest to mills was stressed at the meeting of the Associated Chambers of Commerce this week when a resolution welcoming the setting up of the Indian Coalfields Committee was discussed. This was the recommendation that the Committee should review, and it was hoped would recommend, the application of the system of grading to all Indian coal and not only that for export. Mills, and in fact all industries, not to speak of householders, have had cause for bitter complaint about the deplorable quality of much of the so-called coal which has been foisted on them under war conditions. The speaker at the Chamber meeting instanced stuff containing as much as 50 per cent ash, but many unfortunate consumers could instance deliveries which could not be even reduced to ash at all, which were to all intents and purpose incombustible. Even with more generous deliveries of coal of recent months, this evil has not been eradicated and there are still many complaints to be heard of inferior quality. Not only is the consumer stung the same price for this rubbish as for decent quality coal, which is tantamount to taking money by false pretences, but it is patently false economy, at a time when wagons are still not in adequate supply, that two or more wagons should be hauled to do the work for which one would suffice if proper quality were being furnished. If, as seems probable, control has to be retained

over the coal industry and supplies for some considerable time to come, it is eminently desirable that this recommendation for grading should be carefully considered.

There have been strong rumours current today that the import quotas for jute goods have been totally withdrawn. We cannot yet vouch for the truth of this, but if it is correct it is good news for the jute industry as the first step back to open competitive trading. There has been evidence of more enquiry from overseas markets in the past few days though little of it seems to have crystallized into defining orders yet. But granted shipping is more freely available, there is little doubt that mills could be kept very fully employed for a long time to come, making up the back-lag of world demand for jute goods. In the U. K. alone the demand is far beyond what the local manufacturers can tackle, but imports from India of all but selected goods, are kept cut.

The only item of interest in the Pucca Sale market has been the purchase by the French Mission of a fair quantity of jute for Decr/January shipment. The business could as usual only be touched by Baler/Shipppers, for the prices were cut to the absolute Calcutta minimum with no allowance whatever for commission. Thus the shipper, as such, was frozen out of the business. There was also reported to be enquiry for Dacca Tossa 2s and 3s, but this grade is not at present easily obtainable and no business was reported. The prices in the local bazar have firmed up sharply in the past two weeks, more particularly for good quality. What might be called the "black" margin in baling has contracted to around Rs. 25/- per bale for good quality grades and to Rs. 10/- per bale for common quality. Not long ago these margins were Rs. 5/- wider.

Mills have shown a moderate interest in Loose Jute and business has been put through in European packing and in Supervised Jat at Rs. 15/- and Rs. 12/-, the minimum rates for such Mids and Bots. Enquiry for Mids alone was not so easy to meet. District Tossa Bots sold at Rs. 12/- and Jungli at Rs. 11/- to Rs. 11/8. At the close, sellers are steadier in their ideas and seem to expect prices to appreciate in the near future. Wishful thinking perhaps, but offerings are on a more restricted scale. Mofussil markets are generally steady to firm and on a parity with Calcutta minima or higher.

The Hessian market has not been active but the tone is rather more buoyant and quotations have been marked up somewhat. Business has been reported in Jan/June eleven porters at Rs. 26/- and at Rs. 26/4. Ready 10 oz/40 quotes 27/4, an advance of eight annas since last week. December quotes Rs. 27/- and Jan/March Rs. 25/8. In the Heavy Goods section, ready "B" Twills are quoted fractionally lower at Rs. 62/12 but forward positions have firmed up with Decr. quoted at at Rs. 61/12, Jan/March at Rs. 59/12 and April/June at Rs. 57/12. February Eatka is quoted at Rs. 59/4. There has been some enquiry for heavy goods for the West Coast of South America, but offers sent out have not yet come back accepted.

(Continued from page 1040)

The Colonial Sugar Refining Co. stated that the summer demand might not be fully supplied. The refined sugar ration in N.S.W. was this week cut in half, Victoria having had this added restriction for the past three months. Industrial troubles, coal shortage and inadequate man-power had reduced the refinery production during the year by more than 60,000 tons, or sufficient to meet the retail trade requirements for four months. The company had been unable to supply the winter demand for sugar by Empire and Allied forces, and by civilian customers in N.S.W., Victoria and Tasmania. The British Ministry of Food wanted more sugar than was now in prospect.

Overseas Trade.—Australia's overseas trade has fallen off slightly since the end of the war. For the first quarter of this trade year the value of commodity exports was £38,526,000, compared with £39,409,000 for the corresponding quarter last year. Imports declined from £59,128,000 to £55,442,000.

Lead is being sold cheaper in Australia than anywhere else in the world. The price, fixed by the Prices Commissioner in February, 1940, remains at £22 a ton. Domestic price of lead a ton in England is £30 sterling, America £36 sterling, and Canada £25/5- sterling. All lead disposed of outside Australia is now being sold on the open market, except for a relatively small tonnage being supplied to the British Government at a fixed price.

During the war, sales by Broken Hill Associated Smelters Pty. Ltd. were approximately 1,150,000 tons of lead and nearly 50,000,000 ounces of silver. The mines also produced zinc concentrate containing about 800,000 tons of zinc metal.

Note:—Unless otherwise indicated, sums of money mentioned are in Australian currency. £1 Australian equals Rs. 10.27.

(Continued from page 1043)

An ambitious plan to construct a reservoir about fifteen miles long with approximately a million cubic feet of water by diverting the hill torrents on the mountain range to the west of the province in the rainy season is under the consideration of the government of Sind. The stored water will be utilised for irrigating the vast areas of land to the extent of more than five lakhs of acres. The Government of India, it is understood, have agreed to the proposal of the provincial government to send an officer of the geological department to examine the texture of the hilly tracts. In the meantime, the Public works department are going to examine the question of sites for the tanks required for reserving water in various parts of the tract. The new scheme is expected to prove a paying proposition and will augment food crop production in Sind province.

The Government of Sind have made a representation to the Government of India for the construction of additional railway lines in this province. The projected lines are Hyderabad to Khipro via Umerkot and Sanghar, Tatta to Sujawal, Karachi to Quetta (direct line) and conversion into broad gauge of the Jacobabad Kashmir line.

Never after the ill-fated Quetta earthquake has the province of Sind suffered such a disaster as the one which fell to her lot in the wake of a short but sharp earthquake which descended on her. The quake as such did not bring about either any damage or casualty, but five hours after the tremor, there was a tidal wave which wrought unprecedented

havoc to hundreds of people living in the sparsely populated Makran coast. A couple of telegraphic outposts were completely obliterated. Several country craft littering the coast were washed away. It appears there was a volcanic eruption under water which threw up a couple of islets about 150 miles west of Karachi harbour. Estimates of damage and casualties vary, but it is certain that they must be considerable. Sind government will shortly issue a note surveying the disaster and giving official figures of the loss sustained.

(Continued from page 1044)

Consequently, despite restricted production and increased local consumption, the carry-over stocks at the end of every season have been progressively on the increase in the hands of the trade.

At the end of 1938-39 season, i.e., practically on the eve of the outbreak of the war in the west, stocks of Short Staple cotton, i.e., cotton less than 7/8 inch staple amounted to 526,000 bales with the trade. They progressively increased to 2,300,000 bales at the end of the 1943-44 season and are estimated to have amounted to 1,780,000 bales at the end of the 1944-45 season.

Between 1936-37 and 1940-41 seasons, Japan's offtake of Indian cotton most of which was short staple, varied between 826,000 and 2,324,000 bales a year. It is understood that the Commerce Department are taking steps to clarify the position to the proper quarters and apprise them of the vital interests of India in the cotton trade with Japan.

Glenfield VALVES & SLUICE GATES

HYDRO-ELECTRIC undertakings involve the control of large quantities of water often at considerable pressures, and the provision of adequate safeguards and controls is a matter of major importance. Glenfield control valves and safety devices are being specified in constantly increasing numbers because of their proved strength, absolute reliability, and general "fitness for purpose."

Our illustrations show three 60" diameter cast steel Glenfield Hydraulically Operated Round Body Sluice Valves in the portal valve house of a recently completed Hydro-Electric Scheme. In this illustration can also be seen a 69½" diameter Glenfield Automatic Self-Closing Balanced Disc Valve, with automatic, hand and remote tripping gear, also an 18" Glenfield Anti-vacuum Valve for the automatic ventilation of the pipe line in the event of a burst, and to allow the escape of air during the filling of the penstock.

The smaller illustrations show a Glenfield Electrically Operated Balanced Disc Regulating Valve, specially designed for use in Hydro-Electric Pipe Lines, and, below, two Glenfield Free Roller Sluice Gates, each 25 feet by 31 feet, installed on the Tongland Dam at Galloway.

We are at all times glad to give engineers the fullest co-operation in the design and construction of water control appliances of every description, and invite enquiries in connection with any problem of water control in which they may be concerned.

Price Re. 1

Stock Markets to-day and to-morrow:

SHARP RISE IN INDIAN IRONS & HOWRAHS

Stock markets, both in Bombay and Calcutta, have been in fine style in the past week and a fresh rise in prices has been recorded allround. The weakness of the bullion market has not had any effect on prices and the close on Friday this week has been very firm. Last week, with the announcement regarding the conclusion of the Anglo-U.S. financial agreement there was selling in both the bullion and stock markets and prices were marked down. It was, however, felt that the Anglo-U.S. financial agreement could not in any way affect the course of stock markets and that far from its being a bearish factor it would have a stimulating effect on stock exchange values.

The behaviour of markets this week justifies this view. Engineering and Jute shares have been very active in Calcutta while in Bombay a moderate rise has been recorded by Steels and Textiles.

The further expansion of currency and the publication of satisfactory accounts by the Indian Iron and Steel Company are favourable factors for the markets. There seems to be a general expectation that nearly every important company will be effecting extensions to plant in order to be able to cater to the increased demand in the coming years. It is difficult to be confident regarding the success of the various planning schemes but with the major hurdles got over and the pursuance of a more helpful policy by the Central Government towards Indian industries it might be possible to ensure a high level of activity and earnings.

With the pressure of surplus funds seeking investment and the greater attraction of equities there is an increasing tendency on the part of prominent operators to buy up available shares and the diminishing supply of scrips has resulted in a smart rise in prices with

fresh buying. It is rather interesting to note that there has been no anxiety on the part of genuine investors who are in a profit to take advantage of the present inflated prices as the problem of re-investment is difficult.

Advices from Wall Street have been very favourable and it is reported that turnover has been the biggest for over nine years. A big jump in prices has been recorded. With the unsettled conditions in regard to labour, the boom in Wall Street is to a certain extent surprising but it is pointed out that the domestic troubles will be settled soon and that the increase in international trade as a result of the financial agreement would have a favourable effect on industries. As it is said that the United States is anxious to negotiate a reciprocal trade pact with India and enable her in the programme of industrial development it will not be incorrect to say that the outlook is satisfactory. As the forthcoming budget has no terror for the market the upward movement should continue in evidence. Only, as has been stated earlier, the rise in prices has been rather abrupt and bouts of profit-taking should be welcomed.

The rise in Indian Irons, Steel Corporations and Howrahs on Friday afternoon was rather unexpected. A prominent bull syndicate has been taking up shares and forced bear covering has resulted in a jump in values. Indian Irons are 2½ points higher at Rs. 50 and Steel Corporations at Rs. 43-12. Howrahs have jumped by six points to Rs. 120 ex-dividend.

Having regard to the difficulties about coal supplies the results of the "Indian Iron and Steel Company Limited" for the year ended March, 1945, should be considered satisfactory. But for the rise in working expenses there would not have been even the small decline in earnings. There was a feeling that the directors were unduly conservative and that the dividend could have been maintained at the previous year's level. The larger provision for taxation, however, forced a reduction in the dividend.

The net profit, before providing for taxation and depreciation, for 1944-45 is Rs. 96,40,119 against Rs. 98,61,025 for 1943-44. The amount set aside to depreciation is Rs. 25 lakhs (same) while the transfer to Debenture Sinking Fund is Rs. 3,51,920 (Rs. 3,38,400). The provision for taxation is higher at Rs. 28.25 lakhs

(Rs. 25 lakhs) even with a lower level of profits. After paying the ordinary dividend of Rs. 1-8 per share (fourteen annas final and ten annas interim) the amount carried forward is Rs. 2,75,572 against Rs. 2,71,267 brought in.

Sales were actually higher at Rs. 4.83 crores against Rs. 4.63 crores. Purchases of raw materials and stores amounted to as much as Rs. 2.61 crores against Rs. 2.06 crores. Salaries and wages, on the other hand, were Rs. 20 lakhs lower at Rs. 29.22 lakhs. There is an increase in stocks by Rs. 15 lakhs.

As coal supplies will be more regular and in adequate quantities henceforth the earnings for 1945-46 might make better showing.

The production figures are awaitable for the first time after so many years. Pig Iron and Coke produced during the year was 4,35,464 tons and 5,24,423 tons respectively. These figures are below capacity production and were occasioned to a large extent by restricted supply of coal delivered to the Works. The coal position caused considerable anxiety as apart from shortage of supplies there was a deterioration in the quality.

The foundries at Kulti were actively engaged throughout the year, the total output of Castings being 53,604 tons, of which 21,812 tons were in Cast Iron Pipes.

From the collieries, gross raisings totalled 3,51,133 tons, of which 1,87,881 tons came from Noonodih Jitpur, 1,09,212 tons from Ramnagore and 50,040 tons from Chasnallah Collieries.

Bye-Products from the Coke Plants at Hirapur and Kulti were as follows:—Coal Tar, 16,737 tons, Sulphuric Acid 8,013 tons, Sulphate of Ammonia 5,380 tons and Naphthalene 92 tons.

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

Calcutta, December 14.

FIRM conditions have continued to prevail on the Calcutta Stock Exchange and a large amount of business has been done throughout the week. Except in the giltedged securities section which was a little quieter on account of bank selling, quotations are higher all round.

The feature of the week is the sharp rise in Indian Irons to Rs. 49-4 from Rs. 46-12 at the end of last week on the publication of the balance-sheet for the year ended March, 1945. Jute shares also have continued firm, Howrahs being done up to Rs. 116 ex-dividend. The bigger denomination shares were 15 to 20 points higher. Coal shares were uninteresting except for the sharp rise in Bhalgora and Kuardi. In the miscellaneous section, National Tobaccos staged a rise of over 5 points to Rs. 38-8 on reports of a new issue.

The general undertone of the markets is steady and even the weaker bullion market has not had any depressing effect on values. As it was felt that the Anglo-U. S. agreement will prove to be beneficial to this country in the end, operators are inclined to take a bullish view of both the short-term and long-term outlook.

In the giltedged securities section, business passing has been on a restricted scale. Quotations are even slightly lower on balance, 3½ per cent Paper being quoted Rs. 103-8, 3 per cent Victory Loan 1957, Rs. 100-7, 3 per cent 1970-75, Rs. 97-8, 3 per cent 1949-52 Rs. 101-12 and 2½ per cent 1948-52 Rs. 100-6.

Among Bank shares, there are no important features, Reserve Bank being quoted at Rs. 157. Business in Imperial Bank shares was again difficult owing to the paucity of sellers, but Contributors in the Bombay market have registered a rise of one point daily, and the quotation at Rs. 608 represents a gain of over 10 points in the past few days. Hindustan Mercantile Bank were a shade better at Rs. 48, while Calcutta National Bank were steady at Rs. 16-4.

Among Cotton shares, Cawnpore Textiles recovered to Rs. 13-14 from Rs. 13-2 while Elgins were Rs. 72-12 against Rs. 71. Kesoram were steady at Rs. 20-12 and New Victoria at Rs. 8-10. Basanti were Rs. 16 and Mahalaxmi Cotton Rs. 38-8.

In the Coal section, Bhalgora and Kuardi were very active, Bhalgora recording a rise of 2 points to Rs. 33-14 and Kuardi 8 points to Rs. 36-8. Other shares also recorded a slight improvement in prices, but there was dissatisfaction with the report of South Karanpura Coal Company for the half-year ended August 1945. The quotation is lower at Rs. 42 against Rs. 43-4 earlier in the week. Bengal were Rs. 830 against Rs. 810. Barrakur Rs. 45-8 against Rs. 44-10 and Equitable Rs. 77 against Rs. 75-12. Western Bengal, were Rs. 15-13 against Rs. 15-4, Bokaro and Ramgur and Central Kurkand were unchanged at Rs. 6-12 and Rs. 49-12 respectively.

Jute shares have continued active on the publication of satisfactory results by the Bird-Heilgers group and the persistent rumours of the possibility of bonus issues by pro-

minent companies. The issue of bonus shares by Hooghly Mills Ltd., have increased expectations in this regard. Alliance, Barnagore, and Empire have all recorded sharp rises. Howrah have continued active being done upto Rs. 116 ex-dividend against Rs. 113. There was more buying of Kamardhubi and the quotation is nearly 60 points higher at Rs. 945. Kanknarrah also were better at Rs. 802 against Rs. 774. Reliance were Rs. 98-12 against Rs. 96-8, Anglo-India Rs. 602 against Rs. 584, Alliance Rs. 818 against Rs. 770, Barnagore Rs. 358 against Rs. 341, Ganges Rs. 712 against Rs. 700 and India Rs. 895 against Rs. 865. On special buying there was a sudden jump in the quotation of Empire to Rs. 68 from Rs. 62-8. National were steady at Rs. 39-4, Nellimarla Rs. 45-5 and Nuddea Rs. 175. Presidency were unchanged at Rs. 50-10 and Standard at Rs. 425 against Rs. 410.

In the Engineering section, Indian Irons were very active on large buying by prominent operators and the quotation is 12 points higher at the time of writing at Rs. 48-8. The highest level touched during the week was Rs. 49-10. Steel Corporation also improved in sympathy to Rs. 43-4 from Rs. 41 at the end of last week. They are now quoting Rs. 43-2. Braithwaite were 8 annas higher at Rs. 17, Kumardhubi Engineering were Rs. 12-9, Marshalls were firm at Rs. 8-3 and Jessop at Rs. 13-8. Indian Standard Wagon, were Rs. 126 and Burn & Co. Rs. 469.

Among Sugar shares there is nothing of importance, Carew & Co., improved to Rs. 34-12 on expectations of a dividend though it closed easier at Rs. 34-6. Balrampore were Rs. 18, Belsund also were quoted at the same level, Champarun were Rs. 43-2 and Darbhanga Sugar Rs. 29-2. There was considerable activity in Ramnugger Cane & Sugar and the quotation is nearly 2 points higher at Rs. 27.

Tea shares were considered relatively undervalued and there was greater buying especially as the dividends in all cases are payable in the next two or three months. East India were very active throughout the week and have risen by 3 points to Rs. 27-4. Tezpur were in good demand and were quoting Rs. 27-12 against Rs. 25-10, Bishnauth did not attract much attention being quoted at Rs. 47-8, Central Cachar were Rs. 137-8, Eastern Cachar Rs. 15-5 against Rs. 14-4, Sapoi Rs. 30 against Rs. 28-12 and Hattikhira Rs. 32-4 against Rs. 29-12.

In the Miscellaneous section, National Tobaccos were prominent with a rise to Rs. 38-8 from Rs. 33-12 last week. Calcutta Trams improved on covering from Rs. 53 to Rs. 55-12, but C.E. S. C. were quoted at Rs. 41. Burma shares are higher with Burma Corporation at Rs. 7-12, B. B. P. Rs. 5-13 and Consolidated Tin at Rs. 4-10, Indian Copper have improved further to Rs. 4-10 from Rs. 4-1. Indian Wood Products are higher by 2 points at Rs. 35-8, B. I. C. were Rs. 8-11, Dunlop Rubber Rs. 80, Indian Cables Rs. 35-12 and Rohtas Industries Rs. 16-10. Among Paper shares, Titagur Paper were quiet at Rs. 37-13 and India Paper Pulp at Rs. 255. Midnapore Zemindary are lower at Rs. 192; Assam Saw were very firm at Rs. 7-6 and I. G. N. Rs. 252. Alkali and Chemical were rather quiet at Rs. 34-8; A. B. C. were steady at Rs. 23. Karanpura Development have been very active. In spite of profit-taking at every rise they have forged ahead from Rs. 48-4 last Thursday to Rs. 56-8 at the time of writing.

THE INDIAN JUTE COMPANY, LIMITED.

NOTICE.

Notice is hereby given that the Fifty-seventh Ordinary General Meeting of the Shareholders of the above Company will be held at the Registered Office of the Company, No. 16, Strand Road, Calcutta, on Monday, the 24th day of December, 1945, at 12-10 p.m., for the following purposes:—

1. To receive and consider the Directors' Report and the Accounts for the half-year ended 30th September, 1945.
2. To declare Dividends.
3. To confirm the appointment of Directors.
4. To transact any other competent business that may be brought forward.

The Share Transfer Books of the Company will be closed from the 15th day of December, 1945, to the 24th day of December, 1945, both days inclusive.

Holders of scrip under blank transfer are reminded to send in their shares for registration in the books of the Company as soon as possible.

By order of the Board,

Div. % Ord.	6	5	5
Div. % Pref.	3½	3½	3½

(Half-yearly General Meeting on 22-12-1945 at 11-40 a.m. Books closed from 8th December to 22nd December, 1945).

Audited accounts for the half-year ended 30th September, 1945.

They show a profit of Rs. 9,04,415-3-10. After providing Rs. 6,12,513-0-0 for taxation (including Excess Profits Tax), Rs. 97,535-0-0 for depreciation and placing Rs. 30,000-0-0 to War Contingency Reserve, there is an available balance at credit of Profit and Loss Account of Rs. 1,70,636-13-9, which includes Rs. 6,312-9-11 brought forward from last half-year.

The Directors propose to dispose of this as follows:—

In paying a Dividend on the Preference Shares at the rate of Rs. 7 per cent per annum, without any deduction for income-tax paid by the Company, Rs. 35,000; in paying a Dividend on the Ordinary Shares of Rs. 6 per cent per annum, without any deduction for income-tax paid by the Company, Rs. 1,20,000; and in carrying forward Rs. 15,633-13-9; Total Rs. 1,70,636-13-9.

Stocks of jute have been taken at or under cost price and manufactured goods at contract rates.

In accordance with the working time agreement of the Indian Jute Mills Association the normal working hours of 54 weekly, with all looms operating, continued throughout the half-year. The acute coal shortage did not affect the mill, which is electrically driven, and no working hours were lost.

The life of the Mills' Industrial Pool has been extended up to 31st December, 1945 and the Company paid to the pool a cess of As. 2 per loom-hour worked.

All hessian sales made during the half-year were at the price maxima as fixed by the Jute (Price Control) Order, 1944. Demand from overseas was fairly well maintained, but uncertainty about post-war conditions and the shortage of the world's shipments have made buyers hesitant, and at the time of writing this is a very quiet market. As regards sacking, the absence of good demand from outside has had a depressing influence on prices and the bulk of the trading has been at rates below the fixed maxima. Mills have been able throughout the period to cover raw jute requirements at prices well below maxima. Transport from up-country is easily available, but storage at mills, owing to requisitioning, is still restricted.

For the first five months of the half-year the labour situation failed to improve, but with the cessation of hostilities and the consequent reduction in wartime establishments, some workers have been released and have returned to work in jute mills. The labour force in the mill is now almost back to normal strength, but efficient workers are still scarce.

The Company has throughout the half-year continued to supply all workers with essential foodstuffs at rates below Government controlled prices and the regular amenity allowance of Rs. 2 per week has also been paid.

Mg. Agents.—Messrs. Bird & Co.

Authorised, Issued and Subscribed Capital—Rs. 30,00,000 in 10,000, 7 per cent Cum. Pref. shares and 20,000 Ord. shares, both of Rs. 100 each, fully paid up.

(Half-yearly General Meeting on 22-12-1945 at noon. Books closed from 8th December to 22nd December, 1945).

Audited accounts for the half-year ended 30th September, 1945.

They show a profit of Rs. 6,37,094-8-10. After providing Rs. 4,36,000-0-0 for taxation (including Excess Profits Tax), Rs. 51,207-0-0 for depreciation, there is an available balance at credit of Profit and Loss Account of Rs. 1,74,075-9-3 which includes Rs. 18,138-0-5 brought forward from last half-year.

The Directors propose to dispose of this as follows:—

In paying a Dividend on the Preference Shares at the rate of Rs. 6 per cent per annum, without any deduction for income-tax, paid by the Company, Rs. 24,000; in paying a Dividend on the 'A' Preference Shares at the rate of Rs. 7 per cent per annum, without any deduction for income-tax, paid by the Company, Rs. 28,000; in paying a Dividend on the Ordinary Shares of As. 12 per share, without any deduction for income-tax, paid by the Company, Rs. 1,20,000; and in carrying forward Rs. 2,075-9-3; Total Rs. 1,74,075-9-3.

The Old Mill is still closed owing to requisitioning. The New Mill worked 168 hours weekly by means of a double shift using a sufficient number of looms to absorb the total loom-hours permissible in the two mills. By virtue of being electrically-driven, no working hours were lost on account of coal shortage.

At the Directors' meeting held on 28th July, it was decided by a majority of the board to appoint as from 1st August, 1945, Mr. Ramprasad Bajoria as "Directors in charge". Mr. Ramprasad Bajoria has since retired in favour of Mr. Ramnath Bajoria. The Directors in charge have been authorised to direct the purchasing and selling policy of the Company as regards raw jute, manufactured goods and stores, and to visit the mills in order to supervise the work carried on in the mills. The Managing Agents will continue to be responsible for the working of the mills and the conduct of the Company's business in accordance with their agreement and with the Company's Articles, and will give instructions to the mill staff. The question of remuneration for the Directors in charge was left for consideration at the General Meeting of shareholders.

At the Directors meeting held on 20th September, 1945, the Directors in charge were authorised to decide through which Companies insurances are to be effected in future and through what Agents the business is to be placed. The chairman and Sir Kenneth Nicolson did not vote, being interested. At the same meeting sanction was given for the construction of a new jute godown, if the Directors in charge so decide, at a cost not exceeding Rs. 75,000. The Directors in charge were also authorised to take such steps as may be necessary to build additional cooly lines.

Mg. Agents.—Messrs. Bird & Co.

(Half-yearly General Meeting on 22-12-1945 at 11-45 a.m. Books closed from 8th December to 22nd December, 1945).

Audited accounts for the half-year ended 30th September, 1945.

They show a profit of Rs. 8,92,214-9-5. After providing Rs. 5,61,931-0-0 for taxation (including Excess Profits Tax), Rs. 64,405-0-0 for depreciation and placing Rs. 60,000-0-0 to War Contingency Reserve, there is an available balance at credit of Profit and Loss Account of Rs. 1,63,758-10-7 which includes Rs. 9,758-1-2 brought forward from last half-year.

The Directors propose to dispose of this as follows:—

In paying a Dividend on the Preference Shares at the rate of Rs. 7 per cent per annum, without any deduction for income-tax, paid by the Company, Rs. 52,500; in paying a Dividend on the Ordinary Shares of Rs. 6 per share, without any deduction for income-tax, paid by the Company, Rs. 1,34,362, and in carrying forward Rs. 8,395-10-7; Total Rs. 1,95,758-10-7.

In accordance with the arrangements, the mill has worked 168 hours per week, thus utilising all the loom-hours that both the mill and Northbrook Mill were entitled to work and also the equivalent of 199 looms of Kinnison Mill. Coal supplies to the mill were well maintained except in August, when full working was not possible and 140 hours were lost. It is hoped that this lost time will be made up at a later date.

The financial arrangements, between the Company, The Northbrook Jute Co., Ltd., and The Kinnison Jute Mills Co., Ltd., for the distribution of profits have continued during this half-year.

Shareholders will recollect that in 1942, Company issued Bonus Ordinary Shares in the proportion of one Bonus Ordinary Share for every two Ordinary Shares held. Fractional certificates, each representing half a share, were also issued to shareholders entitled thereto. These fractional certificates entitled the bearer of every two of them to apply to the Company for an allotment of one further Bonus Ordinary Share and shareholders could either acquire a further fractional certificate and apply for an allotment of a share or they could sell their fractional certificates. Up to date 46 fractional certificates are still outstanding and the Managing Agents have informed the Directors that they are prepared to purchase the fractional certificates on the basis of the current market rate for the shares. Shareholders still in possession of fractional certificates may accordingly get in touch with the Managing Agents for the purpose, if they so desire.

Mg. Agents.—Messrs. Bird & Co.

(Half-yearly General Meeting on 22-12-1945 at 11 a.m. Books closed from 8th December to 22nd December, 1945).

Audited accounts for the half-year ended 30th September, 1945.

They show a profit of Rs. 6,01,776-4-3. After providing Rs. 3,40,706-0-0 for taxation (including Excess Profits Tax), Rs. 38,302-0-0 for depreciation and placing Rs. 25,000-0-0 to War Contingency Reserve, there is an available balance at credit of Profit and Loss Account of Rs. 2,13,890-10-4 which includes Rs. 16,122-6-1 brought forward from last half-year.

The Directors propose to dispose of this as follows:—

In paying a Dividend on the Preference Shares at the rate of Rs. 7 per cent per annum, without any deduction for income-tax, paid by the Company, Rs. 52,500; in paying a Dividend on the Ordinary Shares of Rs. 5 per share, without any deduction for income-tax, paid by the Company, Rs. 1,50,000; and in carrying forward Rs. 11,390-10-4; Total Rs. 2,13,890-10-4.

In accordance with arrangements, the Standard Mill has absorbed the working hours of 662 looms throughout the half-year. Further, the Dalhousie Mill has absorbed the working time of 199 looms, leaving a balance of 389 looms out of a total of 1,250 still not accommodated. The question of compensation for the idle loom-hours has again been raised with Government, but no decision has been arrived at so far. The total of loom-hours lost is accumulating at the credit of the Company under the working time agreement of the Indian Jute Mills Association. Coal supplies have been maintained in full except for a short period during August, when both Standard and Dalhousie Mills were closed due to coal shortage; it is hoped that the hours thus lost will be made up at a later date.

The financial arrangements, already reported, between the Company, The Standard Jute Co., Ltd., and The Dalhousie Jute Co., Ltd., for the distribution of profits have continued during this half-year.

The amount realised for the sale of certain unused stores which were no longer required owing to the requisitioning of the mills, has been credited to Provision for Repurchase of Stores Account.

The amount realised for the sale of machinery parts and furnishings has been credited to Machinery Account, thus reducing the value of machinery shown in the Balance Sheet.

(Half-yearly General Meeting on 22-12-1945 at 11-50 a.m. Books closed from 8th December to 22nd December, 1945).

Audited accounts for the half-year ended 30th September, 1945.

They show a profit of Rs. 4,19,920-2-10. After providing Rs. 2,41,854-0-0 for taxation (including Excess Profits Tax), Rs. 75,811-0-0 for depreciation, there is an available balance at credit of Profit and Loss Account of Rs. 1,08,573-4-8 which includes Rs. 6,318-1-10 brought forward from last half-year.

The Directors propose to dispose of this as follows:—

In paying the arrears of Dividend on the Preference Shares for the half-year ended 31st March, 1945, at the rate of Rs. 7 per cent per annum, without any deduction for income-tax, paid by the Company, Rs. 52,500; in paying a Dividend on the Preference Shares at the rate of Rs. 7 per cent per annum, without any deduction for income-tax, paid by the Company, Rs. 52,500; and in carrying forward Rs. 3,573-4-8; Total Rs. 1,08,573-4-8.

Coal supplies during the half-year were inadequate and the mill worked only intermittently. Out of the total of 1,364 permissible working hours, only 440 could be utilised, and results for the six months were seriously affected.

Under the arrangement previously reported, a cess of As. 2 per loom-hour worked has been paid into the Mills' Industrial Pool which has been extended up to 31st December, 1945. The financial position of the pool at the end of September, while not permitting of benefit to the full extent of As. 12 per loom-hour not worked owing to coal shortage, is rather better than had been expected, and credit has been taken for As. 7 and a half per loom-hour during the fifteen months during which the pool has been in existence. Recently better coal supplies, and the Government promise of more consideration in this respect to the industry, give reason for hope that coal-burning mills will run more regularly and that the pool will be further strengthened financially.

(Annual General Meeting on 18-12-1945 at 12 noon. Books closed from 15th December to 27th December, 1945).

Audited accounts for the year ended 30th June, 1945.

After providing for obsolescence, the Accounts show a profit for the year of Rs. 2,03,324-5-8. The Board recommend that this amount should be disposed of as follows:—

To Payment of a Dividend of 6 per cent on the Preferred Ordinary Shares Rs. 30,000; to Payment of a Dividend of 3 per cent on the Ordinary Shares Rs. 71,250; to Carry forward subject to taxation Rs. 1,02,074-5-8; Total Rs. 2,03,324-5-8.

The Board regret that the results for the year do not permit of a larger dividend being paid on the Ordinary shares, but this is due to the fact that the whole of the increase in the Company's capital has been locked up in securities during the year, and has not been employed capital; hence Excess Profits Tax is payable on the basis of the original capital. The whole of the Company's capital is now being brought into use, and judging by the results of the first three months' working we have every reason to believe that the usual dividend will be restored in the next financial year.

The Board propose utilising a portion of the premium on Ordinary and Deferred shares account in writing off the Development Account, which at present stands at Rs. 4,22,520-5-8. As Shareholders are aware, a portion of the Company's profits has hitherto been set aside for writing down this account.

The whole of the organisation continues to be under contract with the Government of India, and operations have been carried out in accordance with their instructions. The Company's activities have expanded very considerably, and this has led to a large expansion in ground organisation. During the year flying operations involved a total of 10,79,924 miles, an increase of 2,32,159 miles over the previous year. These operations were carried out with a remarkable

(Continued on page 1057)

INDIAN TEA LICENSING COMMITTEE

(Export Quota 1946-47)

TEA PRODUCERS IN INDIA ARE HEREBY reminded that in terms of Rule 8 of the Indian Tea Control Rules, 1938, as amended, Tea Estates desiring to be allotted an export quota for the year 1st April, 1946 to 31st March, 1947, are required to submit an application for such which must be filed with the Indian Tea Licensing Committee not later than the 1st of February 1946. No export quota shall be allotted unless application under this rule is duly filed. Application forms have already been issued to all registered Estates, but the Indian Tea Licensing Committee will not hold themselves responsible for any omission in this respect. Proprietors, Agents, Managing Agents or Secretaries who have not received the application form are requested to apply for these, in the case of Estates situated in North India to the Joint Controller, Indian Tea Licensing Committee, 1, Council House Street, Calcutta, and in the case of Estates situated in South India to the Joint Controller, Indian Tea Licensing Committee, Coonoor.

THE MEGNA MILLS COMPANY, LIMITED.

NOTICE

Notice is hereby given that the Forty-ninth Ordinary General Meeting of the Shareholders of the above Company will be held at the Registered Office of the Company, No. 16, Strand Road, Calcutta, on Monday, the 24th day of December, 1945, at 12 noon for the following purposes:—

1. To receive and consider the Directors' Report and the Accounts for the half-year ended 30th September, 1945.
2. To declare a Dividend.
3. To confirm the appointment of Directors.
4. To transact any other competent business that may be brought forward.

The Share Transfer Books of the Company will be closed from the 15th day of December, 1945, to the 24th day of December, 1945, both days inclusive.

Holders of scrip under blank transfer are reminded to send in their shares for registration in the books of the Company as soon as possible.

By order of the Board,
MACKINNON, MACKENZIE & CO.,
Managing Agents.

Calcutta, the 4th December, 1945.

SHREE SITARAM SUGAR COMPANY, LIMITED.

NOTICE is hereby given that a General Meeting of the Shareholders of the Company will be held at its Registered Office, 5, Royal Exchange Place, Calcutta, on 29th December, 1945, at 12 noon to receive and adopt the Directors' Report and the audited Accounts of the Company for the year ended 31st August, 1945, to declare dividends, to elect Directors, to appoint Auditors and to transact such other business as may be brought forward with the permission of the Chairman.

The Share Transfer Books of the Company will be closed from 15th to 29th December, 1945, both days inclusive.

By Order of the Board,
KARAM CHAND THAPAR & Bros. Ltd.
Managing Agents.
Calcutta, 4th December, 1945.

NOTICE

IMPERIAL BANK OF INDIA,

Bombay, the 21st November, 1945.

NOTICE is hereby given that the Principal Register and the Branch Registers of the Imperial Bank of India will be closed for transfer of shares from Wednesday, the 2nd January, 1946, to Wednesday, the 16th January, 1946, both days inclusive.

A. R. CHISHOLM,
Managing Director.

(Continued from page 1052)

degree of regularity by Indian pilots, and without any accident involving injury to passengers or property.

The latest programme of regular services involves flying to the extent of 17,15,000 miles per annum, which figure reflects the steady expansion of the Company's activities.

Future Operations.—The early inauguration of internal services on a commercial basis, as distinct from operations entirely governed by contractual arrangements with the Government of India, is engaging the Board's constant attention, and it is hoped that much will be achieved during the current year. In order that the Company may be ready to take its proper place in Civil Aviation in India the Board have placed an order for 6 Vickers Viking 24 seater aircraft of the latest type, and 2 Bristol "Wayfarer" aircraft of the freight cum passenger type. Arrangements have already been made for the training of Indian pilots on these new types, and it is hoped that the new fleet will be in operation commencing July 1946. Meanwhile, in order that there may not be any delay in the commencement of commercial services the Board have purchased 2 Douglas D.C.3 type aircraft from the American Liquidation Committee, and will machines are now being modified, and will be placed in service at the beginning of 1946. As soon as the new fleet arrives these aircraft will be relegated to subsidiary routes.

The Company has been admitted as an active member of the International Air Transport Association, and its representative has been elected a member of the Executive Committee of the Association.

Mg. Agents.—M/s. Govan Bros. Ltd.

Authorised Capital—Rs. 30,00,000 in 50,000, 6 per cent Preferred Ordinary shares of Rs. 10 each, 2,37,500 Ordinary shares of Rs. 10 each and 1,25,000 Deferred shares of Re. 1 each, all fully paid up.

(Continued from page 1049)

All Plant and Machinery and Buildings at the Works, Ore Mines and Collieries were maintained in good order.

Considerable capital extensions are in process of completion, the principal being the installation of a new Spun Pipe Plant. This Plant when installed will enable pipes to be centrifugally cast instead of vertically cast. One of the advantages of Spun Cast Pipes will be that longer and lighter lengths stand up to higher pressure can be supplied than is possible by present methods. Work is also proceeding on a link up Railway track between Kulti and the Hirapur Works. With the installation by the Steel Corporation of Bengal of a Duplex Plant at Napuria, the Corporation's offtake of Hot Metal will be greatly increased, and when one of the Hirapur Furnaces are down for periodical relining, the capacity of the remaining Hirapur Furnace will not be capable of fully supplying the Corporation requirements of Hot Metal. With the completion of this linking track deficiencies of supply from Hirapur will be met from the Kulti Furnace.

The Directors have also under consideration the installation of a new set of Coke Oven batteries and the mechanisation of Kulti Foundries. It is not expected however that these two latter extensions can be completed before the expiry of two to three years.

Considerable interest attaches now to the negotiations that are going on between the Calcutta Tramways Company and the Calcutta Corporation. With only two weeks left to complete the formalities the Corporation seems to be feverishly engaged in completing the necessary formalities but it is not clear whether the negotiations could be got through in time. The position in this regard was fully explained by the Chairman of the Calcutta Tramways Company at the annual general meeting of the shareholders some time back. On the report that the deal would not be completed in time there was a decline in the quotation to Rs. 53 from the highest level of Rs. 60-8. There has since been a recovery to Rs. 55-12. The market is concerned with the break-up value of the shares. As will be evident from the following extract from the Chairman's speech the position is not clear and the purchase price might be subject to arbitration. Against the Tramway's estimate of Rs. 9 crores the Corporation is stated to have offered less than Rs. 4 crores.

The Chairman of C. T. C. said at the last annual general meeting:

"Turning now to our negotiations with the Corporation, a matter which no doubt is upmost in your minds, I find it difficult to give you all the information I would wish while these negotiations are pending. I am sure you will appreciate that to enter here into a discussion of matters relevant to those negotiations is not advisable. There are questions on which in normal circumstances shareholders might well require more definite information, the furnishing of which in the existing circumstances would not, in my judgment, be in the best interests of the company. The position is under constant consideration by the directors with the assistance of the best legal advice in Calcutta and in London. They ask you therefore to extend your confidence to them until a definite proposition can be put before you for your consideration."

"The company's circular letter of the 7th February, 1945, informed shareholders of the course negotiations had taken up to that date.

As a result of those negotiations an agreement under which the company has remained in possession of the undertaking, which was drawn up by our legal adviser in London, was finally agreed and accepted by the Corporation last month. It has now been executed. Before the Corporation can implement this agreement it will be necessary for it to obtain assents from other local authorities and also to procure the enactment of legislation by the Government of Bengal extending the powers and local jurisdiction of the Corporation under the Calcutta Municipal Act, 1923. . . ."

"This, however, is not the whole story. We are informed that the Government of Bengal has undertaken to form a Transport Board for Calcutta and the outlying districts and that it is proposed that the tramways and the interests of the motor-bus owners shall be included therein. We have no official information of the intentions of the Government nor of the lines on which it proposes to proceed towards its object. We are advised, however, that it is within the powers of the Government, by legislation, to abrogate the

BIRDS INVESTMENTS LIMITED.

NOTICE is hereby given that the Ninth Ordinary General Meeting of the Shareholders of Birds Investments Ltd. will be held at the Registered Office of the Company, at 4, Lyons Range, Calcutta, at 11 a.m., on Saturday, the 29th day of December, 1945, for the purpose of receiving the Directors Report, passing the Audited Accounts for the year ended 30th September, 1945, declaring the Dividend recommended by the Directors, appointing Auditors and for transacting any other ordinary business of the Company.

The Share Transfer Registers of the Company will be closed from 15th December to 29th December, 1945, both days inclusive.

By order of the Directors,
LOVELOCK & LEWIS,
Secretaries.

Note:—Dividends will be paid to Registered Shareholders only.

4, Lyons Range,
Calcutta,
11th December, 1945.

GOVERNMENT OF INDIA—Department of Supply

TENDER NOTICE.

Tenders are invited for the purchase and removal of the following stores:—

LOCATION	STORE	QUANTITY	CONDITION
D.G.M.P. Stores Ramkrishnapore.	1. Arsenic Trioxide	Lbs. 1681	Good (Packed in barrels)
Do.	2. Boric Acid Powder (Comm.)	Cwt. 10,728	Good (packed in one Cwt. bags.)

2. The stores will be sold without guarantee of their condition and subject to the "Conditions of Contract" laid down in form Con. 117.

3. The stores may be inspected at site.

4. Offers in tenderers own form in sealed covers superscribed "Tender No. CDD/CHM/41/Sr.-2108 due on 19th December, 1945" should be accompanied by a deposit call Receipt for Rs. 1,000 deposited as Earnest Money in the Imperial or Reserve Bank of India or a Government Treasury in favour of the Controller of Supplies (Disposals) Calcutta.

5. Tenders should reach the Controller of Supplies (Disposals) 2, Fairlie Place, Calcutta, by 4 p.m., on 19th December, 1945.

6. Offers should remain open for acceptance upto 18th January, 1946.

7. The delivery of the stores will be ex-site and removal should be completed within 15 days from the date of issue of sale order.

8. Tenderers are at liberty to quote for the entire quantities or a portion thereof.

Corporation's right to purchase and to acquire the undertaking directly from the company.

"In such event, it may be reasonably anticipated that, in the assessment of compensation for such acquisition, the Government will proceed upon the basis of the terms of purchase as provided by the agreement with the Corporation, which was sanctioned by the local Government by the Calcutta Tramways (Electric Traction) Act of 1900, and by the several agreements, including those with the Secretary of State, under which the portions of the undertaking outside the jurisdiction of the Corporation are operated."

"These latter agreements (with the exception of that relating to the tramway over the Howrah Bridge) all provide for purchase on terms similar to those stipulated in the agreement with the Corporation."

It appears that the matter has been referred by the Calcutta Tramways to the London Office. If the purchase price is to be settled by arbitration there might possibly be an extension of the contract period to which the Chairman of the Calcutta Tramways Company referred in his speech at the annual general meeting.

The results for the year ended December 1944 make very satisfactory showing. There

has been an increase in traffic and sundry receipts of £330,505 compared with those of 1943 which then constituted a record. The expenses in Calcutta, as shown in the revenue account, have increased by £85,759 resulting in a working profit for the year of £585,469 compared with £340,663 in 1943, both figures being subject to the London expenses, the usual allocation to the general reserve and provision for taxation. The provision for taxation has not been agreed with the authorities but, as estimated at £397,264, it will absorb the greater part of the working profit referred above.

BOUQUETS & BRICKBATS

(From our Readers)

Coal Enquiry Committee:

Your note on the subject seems to bless the Committee and also the Government which has ordered its creation. The coal resources of India are not very great. The country is yet to be developed industrially. And the need for coal in industrial development will easily be realised. Yet Government seems to take a ilght view of the coal question.

The Government is always famous in de feating in practice what it gives in theory. And the present is a good example. In the statement on industrial policy which the Government of India gave out in April last coal was put in a class by itself and that raised hopes in the minds of the public that nationalisation of the coal industry, conservation of coal, production of electricity from inferior coal electrification of railways to avoid wastage of coal and such other far reaching charges would take place.

But here we find a committee appointed to review the work of the past committees how far past recommendations have been given effect to etc., a term of reference unknown and unheard of in the history of any other committee.

There is hardly any mention of electrification of railways or nationalisation of the coal industry. The problem is a complicated one. And committees appointed so far were asked to deal with parts of the question.

If economic planning in this country is to be a success a bold policy is essential for putting the coal industry on a firm basis.

It is therefore, very depressing for a reader to read your remarks that the terms of reference of the committee are comprehensive.

Railway Rates:

The refixing of the Railway Rates is long overdue. If we have to wait till the conditions which Mr. Choudhury stipulates in his letter appearing in your interesting column "Bouquets and Brickbats," Indian Finance December 15, 1945. We do not know how long we have to wait. He says that we do not know how the foreign trade currents will flow in the years to come. The road plans are there to complicate the cost as well as the demand for railway transport in different regions. Yes, can these questions be settled in a short time? And still he asks us to wait for 'a few more months to get a clear picture of the transition'. The war is over. The post-war period is a few months and we do not know where we are. How can few more months make "clear" what is not visible at all? The need for revision as admitted. And home work has already been done. The sooner it is done the better.

End Emigration:

Your recent editorial "End Emigration" is timely. The problem of unemployment and poverty on the one hand and the greed to make money on the other, made Indians leave their homeland. The condition of Indians in foreign countries is none to enviable. Generation after generation Indians have toiled in the countries they have adopted and still they are treated as foreigners and what is worse the native population is set against them. Is it not a cruel irony that Englishmen should plead

many know the existence of the surplus rice in those states. In British India rationing difficulty makes private people move rice from place to place. And Indian states have

Fact Parade

U. S. Public Debt:

The U. S. Department of Commerce has announced that the nation now has a public debt of \$275,000,000,000 (£67,750,000,000), a figure four and a half times greater than the debt in the summer of 1940, when American rearmament began.

The debt includes Federal and local loans, the Federal portion being more than 94% of the whole.

Nuffields and Indian Market:

Sir Miles Thomas, managing director of the Nuffield organization, on leaving England by air for Calcutta said: "I am going to India to see that the Indian market gets what it wants, and is not merely offered surplus home products which might be unsuitable and need modification."

Sir Miles added: "I am going to consolidate technical arrangements and see that sales and service arrangements are up to our accepted standard. We must export experience and technique as well as physical goods. Whichever way the American loan goes, whether it becomes operative or not, we must increase our export activities if we are going to have sufficient food and live a life other than one of regimented austerity."

Future Of Japanese Textile Industry:

An International Textile Board consisting of three Americans, one Englishman, one Chinese and one Indian has just proceeded to Japan to investigate the future of Japan's textile industry. India's representative on the Board is Sir Shriram of the Delhi Cloth Mills. The members of the Board are now en route to Japan via America.

Italy-Spain Commercial Pact:

It was reliably reported on Monday that Italy and Spain had signed a commercial agreement containing provisions for the settlement of Spain's civil war debt and interchange of commerce, says an A.P.A. message from Madrid.

Plan For Nigeria:

Plan for a ten-year development scheme costing £55,000,000 will be placed before the Legislative Council of Nigeria. Sir Arthur Richards, Governor of Nigeria, said at the opening of the 23rd session of the Council, says a message from Lagos. The scheme will demand increased taxation and theraising of a loan of £8,000,000.

New X-Ray Tube:

Development of a revolutionary new X-Ray tube capable of producing rays of an intensity hundreds of times greater than heretofore attained is announced by Prof. George L. Clark, of the University of Illinois.

Indian Cotton:

Consumption of Indian cotton by the mill industry in the country during Sep-

tember is 367,017 bales compared with 341,034 bales in the corresponding month last year, states a communique from the Indian Central Cotton Committee.

Sind's Surplus Budget:

The next budget of the Sind Government will be a surplus one. This was revealed by Mr. D. C. Halford, Finance Secretary, at a Press conference. The surplus will be of Rs. 135 lakhs, but Rs. 1 crore would have to be spent on emergency measures.

Studying Effects of Atom Bomb:

Dr. S. Parthasarathi, the Indian physicist, who was among the scientific group which has just completed investigation of the destruction caused by the atom bomb dropped on Hiroshima, has arrived in Washington. He will go to Britain for a brief visit before returning to India to report to his Government on his observations at Hiroshima.

Scholarships For Foreign Studies:

Six hundred foreign scholarships will be granted by the Central and provincial Governments to Indian students for studies abroad during 1946-47, says a Press Note. Of these 253 will be Central Government scholarships and 347 will be awarded by provincial Governments.

Indian Economic Conference:

The Indian Economic Conference will be held at Lahore on December 30, 31 and January 1. Prof. D. G. Karve of Poona will preside. Among the subjects for discussion at the conference are the post-war monetary policy of India, the food situation, railway rates and tariff policy.

Trade Commissioner For Hyderabad:

The Nizam's Government have decided to appoint a Trade Commissioner in London with a view to establish contact with British business firms and place orders for both light and heavy industries.

Tea and Industrial Output

Few matters have received such detailed attention since the war began as the efficiency of industrial production. In India the problem has been greater than in most other countries because, to meet the basic needs of the fighting forces, a great new industry has had to be created without the help of either a large machine tool industry or a large mass of skilled labour accustomed to factory conditions.

That tea—India's own product—has played a valuable part in achieving unprecedented output figures is a matter for no small satisfaction. The part that tea has played—is playing, and will continue to play—is to promote concentration. In the old days it was accepted throughout the world, as an unavoidable fact that output would fall towards the end of a working shift. Today this is no longer accepted, because it has been proved over and over again that tea served to the workers on the job renews concentration and flagging energies with the result that output remains at its peak level right to the end of the shift.

To those interested in this subject much valuable advice and assistance will be gladly given by the Indian Tea Market Expansion Board, 101, Clive Street, Calcutta.

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

Stringent conditions have continued to prevail in the money market though there has been no change in the call rates which are nominally quoting at 1/2 per cent. in Calcutta and 1/4 per cent. in Bombay. The call money rates are nominal because there are not many lenders at these rates. With the need for keeping large cash balances for the year-end and the rush of subscriptions for 3 per cent. 1959/61 loan, there is not much surplus money in the market at the present moment. There has certainly been more demand for money in connection with cotton and sugar though the cotton crop has not yet started coming in on a large scale and the movement is rather late this season. It is reported that banks have advanced large sums against gilt-edged securities to constituents and that the increase in advances is, to a certain extent, due to the overdraft against gilt-edged securities. The large applications to the Cochin loan also seem to have immobilised Rs. 6 to Rs. 8 crores, the loan of Rs. 1 crore being reported to be oversubscribed seven to eight times.

It is not surprising, therefore, that response at the auctions of treasury bills this week was again poor and that there was a further rise in the average discount rate to seven annas per cent from six annas and nine pies per cent. The total amount of applications was only Rs. 1.41 crores against Rs. 2.72 crores. The amount of accepted tenders was Rs. 96.50 lakhs against Rs. 2.12 crores. There were no tenders above Rs. 99-14-3 and those at this level were accepted in full. The offer has again been maintained at Rs. 4 crores.

The returns of the Reserve Bank for the week ended December 14 show that there has been further expansion of currency and that notes issued are higher at Rs. 1,204.56 crores against Rs. 1,200.53 crores. Notes in circulation were Rs. 1,197.08 against Rs. 1,190.45 crores. As the increase in note circulation is more than the notes issued there is a reduction in notes held in the banking department to Rs. 7.48 crores from Rs. 10.09 crores. Rupee coin were nearly Rs. 1 crore lower at Rs. 14.98 crores. Sterling securities show an increase of Rs. 5 crores.

In the Banking Department, Central Government balances were Rs. 458.55 crores against Rs. 455.76 crores while other Government accounts were sharply lower at Rs. 10.06 crores against Rs. 14.31 crores. Bank deposits also are lower at Rs. 74.34 crores against Rs. 85.35 crores. As deposits are reported to have been on the upgrade the reduction in cash balances must be due to the fresh investments in gilt-edged and further advances. Sterling receipts were Rs. 4.7 crores during the week, if the transfer to the issue department of Rs. 5 crores is taken into consideration. In the Banking department, the figure shows a slight reduction to Rs. 555.48 crores from Rs. 555.78 crores.

The statement of the Imperial Bank for the same week reveals a slight reduction in deposits to Rs. 252.48 crores from Rs. 253.13 crores. There is an increase of Rs. 30 lakhs to Rs. 164.22 crores under investments and Rs. 3.09 crores in advances to Rs. 59.54 crores. Cash balances, as a result, are lower at Rs. 38.86 crores against Rs. 42.89 crores.

Treasury Bill Policy

The developments with regard to treasury bill tenders in the last four weeks and the current position in the money market suggest the necessity of examining the objectives of the present treasury bill policy and of ascertaining what positive measures must be taken for the successful achievement of such objectives. As from the end of November, the weekly offer of treasury bills was raised to Rs. 4 crores, the previous figure being Rs. 2 crores for a considerable period. It is obvious that the increase to Rs. 4 crores per week is connected with the aim and object of gradually stepping up the capacity of the Indian treasury bill market. In an examination of the structure and capacity of the Indian Capital market, we had, as our readers will recall, put forward the plea that, both from the point of view of streamlining the mobility of the money market and from the point of view of cheapening the overall cost of borrowings, the Finance Member must fashion his treasury bill policy so as to bring up the capacity of the market to, say, Rs. 150 crores. To provide for a floating debt of Rs. 150 crores cannot be considered undue strain for the capacity of the Treasury Bill market. Not long ago, treasury bill outstandings in the hands of the public used to be as high as Rs. 120 crores.

In spite of this record in the recent past, there has been noticeable, in the current month, a definite disinclination on the part of the market to respond adequately to the increased offer of tender bills. On November 30, the offer of treasury bills was Rs. 4 crores for the first time after a considerable break, and applications came only to Rs. 4.23 crores. The full quota of Rs. 4 crores was allotted; but the average discount rate registered a rise from five annas per cent per annum to 5 annas 3 pies. On December 7, tenders did not come up to the full offer and amounted only to Rs. 3.54 crores. All the tenders received allotment; but there was a rather sharp rise in the discount rate to 6 annas per cent per annum. The results on December 14 were not satisfactory. Applications were only for Rs. 2.72 crores; and the allotment was only Rs. 2.12 crores. A further sharp rise in the discount rate to 6 annas 9 pies per cent per annum was recorded. On December 18, the position showed still further deterioration. Tenders were on the small side at Rs. 1.41 crores. Total amount allotted was Rs. 96.50 lakhs. The average discount rate rose to 7 annas per cent per annum.

It is not difficult to find the explanation for this poor response. In the first place, it is obvious, as has been repeatedly pointed out in "Indian Finance", fresh sales of treasury bills are, under present conditions, directly linked with the treasury bill maturities during the week. For a long time now, the weekly discharges of treasury bills have been Rs. 2 crores or even less. During October, for example, the maturities were only Rs. 2.30 crores for all the four weeks, that is, an average of Rs. 56 lakhs per week. In relation to the volume of the treasury bill maturities, weekly sales in the excess of Rs. 2 crores may, therefore, be not easy. In the second place, there is reason to think that banks are over-invested in gilt-edged securities. The expected increase in the tap rate of 3 per cent. 1970/75 loan possibly accounts for banks, investment institutions and professional speculators buying this scrip in excess of their immediate requirements. In the third place, and arising from the last circumstance, there is noticeable a definite stringency in the money market. Call money rate is still quoted at ½ per cent nominal. On earlier occasions, the rate being nominal was due to the fact that there were no borrowers. The rate is nominal in the last few days for the reason that there are no lenders at all. In the fourth place, we are now in the closing days of the calendar year; and, against the preparation of the accounts as at December 31, banks are generally reluctant to make any large investments or even advances. The year-end vogue of window-dressing is still prevalent; and banks would like to show as large cash balances as possible.

It does not follow that response to treasury bills will be automatically better after the necessity for window-dressing ceases to have any force. An important factor to be considered in this context is that there are now available a large number of short-term bonds with relatively attractive yields. Practically, for every year up to 1953, there is some one or other short-term bond maturing. The 3 per cent. 1946 bonds are repayable next August. This is as good as a seven months' treasury bill. The redemption yield on this stock is nearly 1½ per cent. The redemption yield on 3½ per cent. 1947/50

(which can be considered a longer treasury bill) is 1½ per cent. So long as banks and investment institutions in India regard treasury bills as a short-term investment, the yields available on treasury bills will be compared to their disadvantage in relation to short-term bonds which mature in the next few months.

We give below the list of loans maturing in the next ten years:—

MATURING LOANS YEAR BY YEAR

Amount outstanding on 31-7-1945 (in crores)	Type of Loan	Quotation	Redemption yield
Rs.		Rs. a.	Per cent
16.71	2½% 1950	100 1	2.50
87.01	2¾% 1948-52	100 6	2.69
65.14	3 % 1946	102 4	1.24
55.94	3½% 1947-50	103 7	1.75
66.64	3 % 1949-52	101 15	2.68
86.72	3 % 1951-54	101 11	2.79
114.59	3 % 1953-55	101 9	2.83
113.98	3 % 1957	100 9	2.95

From this point of view, the conclusion is inescapable that the Government must be prepared to pay a higher rate of interest for treasury bills. We had anticipated this development and advanced a plea for a higher return on treasury bills in our issue dated September 29, 1945, from which we quote the following extract:—

"It may be necessary—we may go so far as to say that it is necessary—to make the yield on treasury bills more attractive. A return of ¾ per cent may be considered suitable in relation to the target of a floating debt of Rs. 150 crores".

Thus, even if applications in the coming weeks are not satisfactory and biddings only lukewarm, resulting in a week-to-week rise in the average rate of accepted tenders, the Government must persist with a weekly offer of Rs. 4 crores. If the average rate mounts up to twelve annas, it is not an unwelcome development in relation to the important role of a well-sized treasury bill market in the functioning of the monetary mechanism.

At the same time, the time is opportune for the Government to consider our suggestion that, if Indian banks are to be educated to look upon treasury bills as a monetary instrument and not merely as a short-term investment, it is necessary to offer special inducements in the early years. An appropriate inducement in this regard is a declaration by the Reserve Bank that it will, at all times and at any time, be prepared to rediscount treasury bills at, say, 1/16 per cent below the average discount rate of that week. We reinforce our suggestion by extracting below the argument we put forward in our issue of September 29:—

"We suggest that the Reserve Bank must be ready and willing, at all times, to re-discount treasury bills at 1/8 per cent or 1/16 per cent lower than the average discount rate in the auction of the week. Bankers will thus know that treasury bills can be converted into cash at any moment; that, meantime, they are earning interest; and that, further, there is a small profit if the bank is obliged to rediscount. Bankers and investment institutions must be made treasury bill-minded; and we consider that the facility proposed by us is worth the serious consideration of our financial authorities."

It is no less important that the liveliness and vitality of the gilt-edged market is maintained in full. The increase in the tap-rate of 1970/75 loan from Rs. 97-4 to Rs. 97-8 was responsible for quickening the activity of the gilt-edged market. One of the reasons for this quickening was the hope that the next increase in the tap-rate would not be far off. The hope in this regard has not so far been fulfilled. The result is that the gilt-edged market in the last few days has been positively listless. We consider that the policy of the Government in regard to tap-rates can be more aggressive and in tune with the necessity to facilitate and accelerate the transfer of the affections and activities of investors from short-term to long-term loans.

The Government are in a position to dominate and lead the market. Why, then, be content to be led by the market? Conditions are propitious for an aggressive, confident and ambitious policy.

NOW IN PRODUCTION

ALUMINIUM COMPOUNDS FOR USE IN INDUSTRY

ALUMINIUM HYDRATE
(Iron-free) for manufacturing heavy chemicals.

ALUMINIUM OXIDE
For abrasives, abrasive compounds, grinding wheels, etc.

ALUMINA SILICA
For making high grade refractories.

ALUMINA WHITE
For the manufacture of printing inks.

ACTIVATED ALUMINA
For the dehydration of edible and non-edible materials.

ALUMINIUM SULPHATE
(Iron-free) for use as a mordant in the dyeing of textile goods, tanning, sizing of paper pulp, etc.

ALUMINIUM STEARATE
For water proofs, lubricants, Greases, etc.

SODIUM ALUMINATE
For water softening and purification.

SODIUM SULPHATE
Used in Glass industry as a flux, and also B. P. & C. P. chemicals.

RED COMPOUNDS
For manufacture of paints.

CALCINED BAUXITE
For filtration of oils and juices.

ACTIVIX
For decolorization of vegetable ghee, deodorizing oil, refining of sugar etc.
ACTIVIX S Acidic finish.
ACTIVIX O Alkaline finish.

Disappointment at Poor British Reception to U. S. Loan

Washington, Dec. 19.

The Anglo-American Financial Agreement and accompanying undertakings to remove trade discriminations seem enigmatically to have been received far less kindly so far in Britain than in the United States. When the terms of the 4.4 billion dollar credit were first revealed, it was forecast freely here that despite rather violent opposition in certain segments in the Congress the Agreement would be approved without changes in substance. But at this point one might well ponder how contagious may become the abuse heaped on the Agreement in the House of Lords and the House of Commons and whether this abuse might provoke unfavourable atmosphere in portions of the Congress here such might not have otherwise been the case. Although Congressmen who now approved the Loan do so out of conviction it is in this country's best interest, they are also convinced it is in Britain's interest and an expression of the United States' desire to help that nation regain her feet financially. Many Britishers, however, feel that credit terms and parallel provisos regarding the Dollar Pool, Empire Preferences, etc., are harsh in character. This feeling is known here but not very well, if at all understood. And continuing harangues of certain British orators seem to be serving less to foment appreciation of motives behind their opposition than to justify allegations in some quarters here that Britain is less than grateful for the credit offer.

The thought is probably running through the minds of the negotiators of the Agreement that, firstly, the fact is being overlooked that without the credit Britain would be forced into all manner of discriminatory trade practices which would bring contraction rather than expansion of world commerce and, secondly, that without the type of concessions Britain made the Congress would not approve the credit. The continued adverse criticism in Britain is already laying groundwork here for contentions that Britain is preparing to default on credit departments—this before funds were even made available. For example, there was a senate speech this week of Senator Warland Brooks who usually reflects the viewpoint of isolationist "Chicago Tribune." Mr. Brooks said, "English themselves have warned you that they take it (loan) only because they are desperate. They have practically told us they could not stand a loan. They have—in words as plain as involved diplomatic double talk can make it—they cannot pay such a loan." To which Liberal New York Newspaper, "P.M." rejoined, "he did not mention that without such loan we would find the markets of India, Egypt and other British Sterling Bloc countries closed to our exports." Meanwhile, the United States, last week, issued invitations to fourteen countries, including India, to participate in a preliminary conference next spring to pave the way for international trade conference to be called next summer as provided in the Anglo-American Financial Agreements. Among them they represent all trade barriers and trade systems of the world. During this preliminary conference the United States will signify her willingness to begin bilateral negotiations to reduce tariffs as evidence of her intention to carry out her commitments in the Financial Agreement with Britain to eliminate barriers to trade expansion.

The Anglo-American Financial Agreement

TERMS OF LOAN IN DETAIL

The following is the text of Financial Agreement between the Governments of United States and United Kingdom.

Effective date of the Agreement.—The effective date of this Agreement shall be the date on which the Government of the United States notifies the Government of the United Kingdom that the Congress of the United States has made available the funds necessary to extend to the Government of the United Kingdom the line of credit in accordance with the provisions of this agreement.

Line of credit.—The Government of the United States will extend to the Government of the United Kingdom a line of credit of \$3,750,000,000 which may be drawn upon at any time between the effective date of this agreement and 31st December, 1951 inclusive.

Purpose of the line of credit.—The purpose of the line of credit is to facilitate purposes by the United Kingdom of goods and services in the United States, to assist the United Kingdom to meet transitional post-war deficits in its current balance of payments, to help the United Kingdom to maintain adequate reserves of gold and dollars, and to assist the Government of the United Kingdom to assume the obligations of multilateral trade as defined in this and other Agreements.

Amortisation and interest.—The amount of the line of credit drawn by 31st December 1951 shall be repaid in 50 annual instalments beginning on 31st December 1951 with interest at the rate of 2 per cent. per annum. Interest for the year 1951 shall be computed on the amount outstanding on 31st December 1951 and for each year thereafter interest shall be computed on the amount outstanding on 1st January of each such year. 49 annual instalments of principal repayments and interest shall be equally calculated at the rate of \$31,323,000 for each \$1,000,000,000 of the line of credit drawn by 31st December 1950 and the fiftieth annual instalment shall be at the rate of \$31,640,736.65 for each such \$1,000,000,000. Each instalment shall consist of the full amount of the interest due and the remainder of the instalment shall be the principal to be repaid in that year. Payments required by this section are subject to the provisions of section 5. The Government of the United Kingdom may accelerate repayment of the amount drawn under this line of credit.

Waiver of interest payments.—In any year in which the Government of the United Kingdom requests the Government of the United States to waive the amount of the interest due in the instalment of that year, the Government of the United States will grant the waiver if (A) The Government of the United Kingdom finds that a waiver is necessary in view of the present and prospective conditions of international exchange and the level of its gold and foreign exchange reserves and (B) the International Monetary Fund certifies that the income of the United Kingdom from home produced exports plus its net income from invisible current transactions in its balance of payments was on the average over the five preceding calendar years less than the average annual amount of United Kingdom imports during 1936-8 fixed at pounds sterling 866,000,000 as such figure may be adjusted for changes in the price level of these imports. Any amount in

excess of £43,750,000 released or paid in any year on account of sterling balances accumulated to the credit of overseas Governments, Monetary Authorities and Banks before the effective date of Agreement shall be regarded as a capital transaction and these shall not be included in the above calculation of the net income from invisible current transactions for that year. If waiver is requested for an interest payment prior to that due in 1955 the average income shall be computed for the calendar years from 1950 through the year preceding that in which the request is made.

Relation of this line of credit to other obligations. (1) It is understood that any amounts required to discharge obligations of the United Kingdom to third countries outstanding prior to the effective date of this Agreement will be found from resources other than this line of credit. (2) The Government of the United Kingdom will not arrange any long term loans from Governments, within British Commonwealth after 6th December 1945 and before the end of 1951 on terms more favourable to the lender than the terms of this line of credit. (3) Waiver of interest will not be requested or allowed under section 5 in any year unless the aggregate of the releases or payments in that year of sterling balances accumulated to the credit of overseas Governments Monetary Authorities and Bank (except in the case of Colonial Dependencies) before the effective date of this Agreement is reduced proportionately and unless interest payments due in that year on loans referred to in (2) above are waived. The proportionate reduction of releases or payments of sterling balances shall be calculated in relation to the aggregate released and paid in the most recent year in which waiver of interest was not requested. (4) The application of the principles set forth in this section shall be the subject of full consultation between the two Governments as occasion may arise.

Sterling area exchange arrangements.—The Government of the United Kingdom will complete arrangements as early as practicable and in any case not later than one year after the effective date of this agreement unless in exceptional cases a later date is agreed upon after consultation under which immediately after the completion of such arrangements the sterling receipts from current transactions of all sterling area countries (apart from any receipts arising out of military expenditure by the Government of the United Kingdom prior to 31st December 1948 to the extent to which they are treated by Agreement with the countries concerned on the same basis as the balances accumulated during the war), will be freely available for current transactions in any currency area without discrimination with the result that any discrimination arising from the so-called sterling Area Dollar Pool will be entirely removed and that each member of the Sterling Area will have its current sterling and dollar receipt at its free disposition for current transactions anywhere.

Other exchange arrangements.—(1) The Government of the United Kingdom agrees that after the effective date of this Agreement it will not apply exchange controls in such a manner as to restrict (A) Payments or transfers in respect of products

of the United States permitted to be imported into the United Kingdom or other current transactions between the two countries or (B) The use of sterling balances to the credit of residents of the United States arising out of current transactions. Nothing in this paragraph (1) shall affect the provisions of Article VII of the Articles of Agreement of the International Monetary Fund when those Articles have come into force. (2) The Governments of the United States and the United Kingdom agree that not later than one year after the effective date of this Agreement unless in exceptional cases a later date is agreed upon after consultation they will impose no restrictions on payments and transfers for current transactions. The obligations of this paragraph (2) shall not apply (A) to balances of third countries and their nationals accumulated before this (2) becomes effective or (B) to restrictions imposed in conformity with the Articles of Agreement of the International Monetary Fund provided that the Governments of the United Kingdom and the United States will not continue to invoke the provisions of Article VII Section 2 of those Articles after this paragraph (2) becomes effective unless in exceptional cases after consultation they agree otherwise or (C) to restrictions imposed in connection with measures designed to uncover and dispose of assets of Germany and Japan. (3) This section and Section 9 which are in anticipation of more comprehensive arrangements by Multilateral Agreement shall operate until 31st December 1951.

Import Arrangements.—If either the Government of the United States or the Government of the United Kingdom imposes or maintains quantitative import restrictions such restrictions shall be administered on a basis which does not discriminate against imports from the other country in respect of any product provided that this undertaking shall not apply in cases in which (A) its application would have the effect of preventing the country imposing such restrictions from utilizing for the purchase of needed imports in convertible currencies accumulated up to 21st December 1926 or (B) there may be special necessity for the country imposing such restrictions to assist by measures not involving a substantial departure from the general rule of non-discrimination a country whose economy has been disrupted by war or (C) either Government imposes quantitative restrictions having equivalent effect to any exchange restrictions which that Government is authorised to impose in conformity with Article VII of the Articles of Agreement of the International Monetary Fund. The Provisions of this Section shall become effective as soon as practicable but not later than 31st December 1946.

Accumulated Sterling Balances.—(1) The Government of the United Kingdom intends to make Agreements with the countries concerned varying according to the circumstances of each case for an early settlement covering the sterling balances accumulated by Sterling Area and other countries prior to such settlement (together with any future receipts arising out of Military expenditure by the Government of the United Kingdom to the extent to which they are treated on the same basis by Agreement with the countries concerned). The settlements with the Sterling Area countries will be on the basis of dividing these accumulated balances into three categories (A) balances to be released at once and convertible into any currency for current transactions (B) balances to be

similarly released by instalments over a period of years beginning in 1951 and (C) balances to be adjusted as a contribution to the settlement of war and post-war indebtedness and in recognition of the benefits which the countries concerned might be expected to gain from such a settlement. The Government of the United Kingdom will make every endeavour to secure the early completion of these arrangements. (2) In consideration of the fact that an important purpose of the present line of credit is to promote the development of multilateral trade and facilitate its early resumption on a non-discriminatory basis the Government of the United Kingdom agrees that any sterling balances released or otherwise available for current payments will not later than one year after the effective date of this Agreement, unless in special cases a later date is agreed upon after consultation, be freely available for current transactions in any currency area without discrimination.

Definitions.—For the purposes of this Agreement (1) the term current transactions shall have the meaning prescribed in Article VI (1) of the Articles of Agreement of the International Monetary Fund. (2) the term Sterling Area means the United Kingdom and the other territories declared by the Defence (Finance) (Definition of Sterling Area) (No. 2) Order 1944 to be included in the sterling Area namely the following territories excluding Canada

and Newfoundland that is to say (A) any Dominion (B) any other part of His Majesty's Dominions (C) any territory in respect of which a mandate on behalf of the League of Nations has been accepted by His Majesty and is being exercised by His Majesty's Government in the United Kingdom or in any Dominion (D) any British Protectorate or protected state (E) Egypt the Anglo Egyptian Sudan and Iraq (F) Iceland and the Faroe Islands.

Consultation on Agreement.—Either Government shall be entitled to approach the other for reconsideration of any of the provisions of this Agreement if in its opinion the prevailing conditions of international exchange justify such reconsideration with a view to agreeing upon modifications for presentation to their respective legislatures.

THE UNITED STATES FOREIGN LIQUIDATION COMMISSION

The United States Foreign Liquidation Commission announces that United States Govt. surplus property is now available for sale in lot quantities to the general public.

These stocks include automotive equipment, canvas and duck bags, boats, technical books, cable and wire, candy, chemicals, electrical supplies and equipment, engineering supplies and equipment, generators, hardware, hospital supplies and equipment, photographic supplies, plumbing equipment, rope and cord, tools and equipment and radio tubes.

For full information pertaining to description of articles, inspection of stocks, method of accomplishing bid forms and general procedure relating to sales and when additional catalogues will be published, please call at the following Branch Sales Offices:—

Lt.-Col. J. C. KELLY,
FLC Sales Officer, Hindustan Building, Calcutta.

Capt. FINNEGAN,
FLC Sales Officer, Keeling Road, New Delhi.

T/Sgt. A. J. SALERNO,
FLC Sales Representative, Warden House,
Sir Pherozshah Mehta Road, Bombay.

Lieut. H. W. HANNA,
FLC Sales Officer, C/o American Consulate, Madras.

Lieut. W. D. HUMAN,
FLC Sales Officer, U.S. Army Hq. (Int. Section), Chabua, Assam.

Lieut. M. D. CASTLE,
FLC Sales Officer, C/o American Consulate, Ranchi.

Editorial Notes

Control of Rivers in Bengal

The irrigational needs of Bengal have been explained by Mr. Casey, the Governor of Bengal, in his recent broadcast on the control of the river system of this province. It is not so much for want of rainfall or for the absence of water sources that agriculture in this province suffers; in fact Bengal has got in a sense too much water for her land. What is required for orderly development of agriculture in the different districts of this province is a scheme for harnessing the major rivers that flow into the territory with a view to rationalising and controlling water supply. The agriculturist, here as in other provinces, is a slave of the monsoon and, if regulated water supply is achieved, his crops will increase by more than 50 per cent. Mr. Casey rightly pointed out that the flow of the big rivers into the province should be regulated and controlled as between summer and winter so that they may provide adequate and balanced output into the subsidiary rivers. This would avoid floods during the monsoon season, would cure the dry rivers and provide irrigational facilities from the subsidiary rivers. The principal rivers which have to be controlled under the irrigation plans are the Ganges, the Teesta, the Brahmaputra, the Damodar and the Mor. Some means must be found to tap the Ganges and the Teesta so that their waters may be diverted into the rivers of North and South Bengal.

A big dam across the Teesta river in its narrow gorge in the Himalayas is suggested to impound about 3 million acres-feet of water which would bank up for forty miles behind the dam. This dam would facilitate the generation of lakhs of electric horse power. A barrage across the Teesta near the Jalpaiguri town would feed

many of the dry rivers in North Bengal, provide road and rail communication across the Teesta, provide water transport for about forty miles in the Teesta valley and generate power for starting rice and sugar mills, tobacco factories, chemical factories, paper manufacture and tea gardens. South Bengal will benefit if a big barrage across the Ganges is constructed to bank up its water with a view to drawing it off into canals to feed the dry rivers in this region. Water supply in eastern Bengal will improve if the old Brahmaputra river which pass through Mymensingh and Dacca districts is revived and this can be achieved by a barrage at a point where the new Brahmaputra and the old Brahmaputra divide. West Bengal will be served by speeding up of the Damodar Valley project which, it is now known, will serve for purposes of flood control, irrigation, generation of electric power and also for navigation. The Damodar irrigation works will also give employment to about 25,000 skilled and unskilled workmen for about three years. The Mor scheme, which the Government of Bengal have taken up already, is intended to benefit Beerbhum, Murshidabad and Burdwan districts and will irrigate an area of six lakhs of acres. More than fifteen thousand skilled and unskilled labourers will be employed for about three years to complete the project.

As the governor pointed out, financial considerations should not stand in the way of the early execution of these vital irrigation projects. Bengal needs more foodgrains and her population will have to be protected against the ravages of recurring floods. Better distribution of industries within the province can be achieved by the irrigational projects since they involve hydro-electric development also. It is estimated that the Mor project which will cost about Rs. 7½ crores of rupees will increase the yearly value of new and better crops to the extent of about Rs. 4½ crores. It is clear, therefore, that the irrigation projects can pay back the capital outlay incurred. In view of the pathetic malnutrition of the rural masses in this province, it is hoped that the government would speed up their irrigation plans for rationalising the river system in Bengal and to increase the efficiency of agriculture.

Sales Tax in Bombay

The Government of Bombay have announced their decision to levy a tax on the sale of goods with effect from the 1st April 1946. The tax is at the rate of half an anna and will be levied on all the sales of goods to actual consumers and will be collected from dealers with turnover exceeding Rs. 10,000 a year. Those dealers who are liable to this tax will be duly registered and the registration certificate will indicate the article sold by the dealer. While such goods may be sold to him free of tax for purposes of resale, sales by the registered dealers to the general public, or to unregistered dealers, or to other registered dealers where the goods sold are not covered by certificates of registration, are liable to the levy. Essential articles like foodgrains, and cheap cloth are exempted. Articles which are already subject to the Central or Provincial tax, such as matches, sugar, liquor, opium and electricity, are also outside the purview of the tax pro-

posed. Exports of the goods outside Bombay need not pay the sales tax. As usual officers entrusted with the administration of the tax are empowered to call for documents, to inspect any accounts or registers, enter and search any business premises and also require dealers not keeping proper accounts to maintain accounts in prescribed form. It is stated that the accounts and other details supplied by the registered dealers will be treated as confidential.

Opposition to the imposition to the Sales Tax runs on familiar lines and it is asked if the Government of Bombay could not have waited for the establishment of a responsible government at the Centre and the Provinces to decide on such an important issue like the proposed tax. While there cannot be any doubt about the fact that the Bombay Government require more revenue to implement the postwar plans drawn up, opinion is strong that the sales tax which is regressive and inflationary should have been avoided at this stage. The Bombay Government's decision to levy the tax is also interpreted as their reply to the Central Government's query regarding the centralisation of the sales tax. Like Punjab, Bombay seems to favour provincial administration of the tax which promises to be a good source of income in future when industrialisation in the provinces is speeded up.

Review of Food Policy:

An improvement in Government's power to secure control of stocks of food grains, the maintenance of prices at carefully calculated levels, the forestalling of local shortages by planned movement of supplies, building or helping to build over a million of tons capacity of new storage accommodation, establishing a central organisation to improve standards of inspection and quality, importing wheat on the scale recommended by the Gregory Committee, securing for India an immediate allotment of rice from stocks available in Burma and Siam and the setting up of machinery to progress the recommendations of the Woodhead Commission for the removal of the threat of famine and for the creation of a healthy and vigorous population, are claimed to be the highlights of the Central Government's food policy during the past twelve months, in a Press Note issued last week.

While renewing the minimum price guarantee for wheat, jowar and bajra, it has been possible to bring about slight reductions in statutory maximum prices

for rice in Punjab and Sind, as also for bajra and jowar. The quantum of basic rations in deficit areas with the exception of four towns has been progressively raised to a daily minimum food ration of 1 lb. per adult. In accordance with the Famine Commission recommendations, a Planning Section has been set up in the Food Department which has started inquiries that are expected to lead to the formulation of a dietary standard for health, based on reliable and comprehensive data. While Government could derive satisfaction on the improved efficiency of food administration at a stage when emergency conditions have begun to relax, they are still unable to hold out prospects of an easy or early return to full adequacy in supplies. "India with the rest of the world is left in an unhappy state of food shortage at the end of the war and there will be needed patience, forbearing and self-sacrifice if food regulation is to ensure adequate and a fair distribution to the hungry nations of the world". To pose the problem for the future in a world setting, it might be hoped, would not be an excuse or cover for incompetence or evasion of specified and clearly understood national responsibilities.

Index Number For Gwalior

If postwar planning has suffered for want of statistical data in British India, the position in the Indian States is much worse in comparison. But of late the state governments have realised the importance of collecting relevant and comprehensive data in order to facilitate the phasing of economic plans according to schedule. A new table of index number of prices has been compiled for the Gwalior state and Mr. Radakamal Mukherjee, Economic Adviser to the Gwalior Government, has explained the advantages of having a distinct set of index numbers of prices in the Indian State. The index number will record the difference between the price levels in the State and British India and will clear the misunderstanding that exists between the Indian India and British India at present. The analysis of price movements of different groups of commodities and their relation to the economic structure of the state, as well as the country as a whole, are of immediate importance not only to the businessmen but also to the administrators of States and British India. As an apparatus for comparing the movements of prices in Gwalior and outside the Index number will help in the formulation of a correct policy in controlling trade, industry and public finance. Disparities between the price structure of Gwalior and that of British India, when revealed and correctly measured, will only help in correcting the defects in the planning of the different sectors of national economic life. The index number of prices for Gwalior, corrected and made up-to-date, will further indicate opportunities for industrial and agricultural expansion. Mr. Mukherjee has stated that the shortcomings of official statistics will be removed by the application of scientific methods to the analysis of primary data and their correct co-ordination. The price index is only a first step for the reorganisation and strengthening of the statistical machinery of the Gwalior state. The present index is based on prices of 23 commodities with the week-ended 19th Aug. 1939 as a base period.

If the other states follow the excellent example of Gwalior in the matter of statistical reorganisation and scientific compilation of price data, the development plans of the State can be correctly outlined and co-ordinated activity between British India and the States can be achieved.

Forest Resources Of The States

The conservation and development of forest wealth forms a conspicuous aspect of the economic reconstruction in many of the Indian States. Within recent years, several States have employed Forest Utilisation Officers, a few of them have opened forest produce museums and have also arranged with Commercial Museums in big cities in British India to display samples of their forest products. In Mysore which holds the world's monopoly of sandalwood, the extraction of various timbers and the collection of minor forest products such as fibres, resins, grasses, dyes, gums, tanning barks, bamboos, drugs and spices afford profitable occupation for thousands among the rural population. Transport is planned with a view to improve marketing facilities for forest produce, and to exploit new areas. The Forest Tramway of Cochin is a remarkable feat of engineering. In the State of Junagadh, the forest roads and cart tracks extend over a length of 314 miles. New varieties of trees are being introduced in many States. The "Abor Day" is being celebrated once a year, inaugurating an extensive campaign of tree planting. Hundreds of small nurseries are also being maintained. Bikaner has nurseries at Ganganagar, Karanpur, Rai Singhnagar, and Jetsar. Bahawalpur has started two experimental forests known as the Gnaffor Forests and Yazman. Besides a rich variety of timber, the forests also yield innumerable herbs and drugs which, from time immemorial, have been used in the indigenous system of medicine. New herbs have been discovered and their cultivation encouraged. For example, pyrethrum which has been found to be a herb of great medicinal value is being widely grown in Kashmir, Mysore, Mayurbhanj and Bastar. Among industrial raw materials, many trees and shrubs yield fibre suitable for paper manufacture. The 900 square miles of bamboo forest in Mysore feeds the Bhadravati paper factory. It is estimated that Travancore can yield about 35,000 tons of reed for pulp annually. The Kusum Shellac of which a large quantity is produced in Mayurbhanj is useful for a variety of products such as gramophone records, varnishes, polish, fountain pens and radio cabinets.

Foreign Trade in September

As marking the transition from war to peace economy and indicating the progress of reconversion, the foreign trade figures are very important. The changes in imported commodities will also indicate how far particular items were badly needed in the war effort. The September trade figures show that the inflow of imports has continued unabated and there was again an adverse balance of trade on Indian account. There was a decrease in the volume of imports but it was due mainly to two items, namely, cotton and oils of all kinds. Hitherto, imports of foreign cotton were mainly in connection with defence requirements. As there has been a reduction in Government orders imports of foreign cotton have been natur-

ally smaller. The drop in oil intake also is to be explained this way. If the decline under cotton by Rs. 1.15 crores and under oils by Rs. 2.06 crores is accounted this way, it would be clear that there has been a further rise in imports under other heads. The total figure for September at Rs. 18.86 crores shows a decrease of only Rs. 2.31 crores against the drop under cotton and oil by Rs. 3.19 crores. The increase took place under raw wool, chemicals, metals, pasteboard, cotton textiles and dyes and colours. Under exports, there was a decrease of Rs. 2.69 crores to Rs. 18.7 crores including re-exports of Rs. 85.43 lakhs (Rs. 4.62 crores).

It is satisfactory again to note that allowing for the decline in the re-export trade there was actually an increase under Indian exports by Rs. 1.12 crores. Exports of tea, raw jute, raw wool and cotton textiles were higher while those of seeds of various categories, jute manufactures and woollen manufactures declined. Cotton exports were as much as Rs. 1.13 crores. The adverse balance of trade on account of September was, therefore, only Rs. 16 lakhs.

The figures for the six-month period show an adverse balance of trade of Rs. 13.18 crores against a favourable balance of Rs. 20.99 crores for the corresponding period of 1944 and Rs. 44.37 crores for 1943. Imports were Rs. 23.21 crores against Rs. 93.66 crores in the corresponding period in 1944 and exports Rs. 110.03 crores against Rs. 114.65 crores. Imports from the British Empire and foreign countries were higher by Rs. 5.32 crores and Rs. 24.03 crores respectively. As the increase in imports from Britain were as much as Rs. 6.31 crores there was a reduction in the trade with Empire countries, there being a drop of Rs. 1.71 crores from South Africa. The United States has been securing a larger share of the Indian market. As against the increase in imports from foreign countries by Rs. 24.03 crores, as much as Rs. 23.19 crores was on account of the U.S.A. Notable increases in imports occurred in oils of various kinds, raw wool, cutlery, hardware, implements and instruments, dyes and colours, electrical goods, machinery and metals. Exports to U.K., Ceylon, South Africa, Kenya colony and Australia showed a decline, while those to U.S.A., rose about Rs. 3.44 crores.

HEAD OFFICE—CALCUTTA

THIS IS ONLY AN ANNOUNCEMENT AND NOT A COMPLETE PROSPECTUS.

(A copy of the complete Prospectus has been filed with the Assistant Registrar of Joint Stock Companies, Madras).
Consent of the Central Government has been obtained to this issue under defence of India Rule 94A. It must be distinctly understood that in giving this consent, the Government of India do not undertake responsibility for the financial soundness of any schemes or for the correctness of any statements made or opinions expressed with regard to them.

Application will be made to the Madras Stock Exchange Association, Limited for listing the shares of the company.

THE SUBSCRIPTION LIST OPENED ON WEDNESDAY THE 19th DECEMBER, 1945 and WILL CLOSE ON MONDAY, THE 24th DECEMBER, 1945, or earlier as soon as it is estimated that applications have been received for the amount now issued.

THE SUDARSAN OIL MILLS LIMITED

(INCORPORATED IN BRITISH INDIA.)

Authorised Capital - Rs. 25,00,000		Issued Capital - Rs. 12,50,000	
5,000 6 per cent. (tax-free) Redeemable Cumulative Preference Shares of Rs. 100 each	Rs. 5,00,000	2,500 6 per cent. (tax-free) Redeemable Cumulative Preference Shares of Rs. 100 each	Rs. 2,50,000
2,00,000 Ordinary Shares of Rs. 10 each	Rs. 20,00,000	1,00,000 Ordinary Shares of Rs. 10 each	Rs. 10,00,000
	Rs. 25,00,000	Total	Rs. 12,50,000

PAYABLE AS FOLLOWS:

PREFERENCE SHARES:
With application Rs. 25 per share. On allotment Rs. 25 per share.
The balance of Rs. 50 will be called up in two instalments of Rs. 25 each with an interval of not less than one month between the two calls.

ORDINARY SHARES:
With application Rs. 2-8 per share. On allotment Rs. 2-8 per share.
The balance of Rs. 5 will be called up in two instalments of Rs. 2-8-0 each with an interval of not less than one month between the two calls.

The Preference Shares carry the right to a fixed Cumulative (tax-free) dividend of 6 per cent. per annum, and rank as regards repayment of capital and payment of arrears of dividend, whether declared or not, in priority to the ordinary shares, without any further right to participate in profits or surplus assets. The Company has the option to redeem them at par any time after 31st December, 1960, on giving three months' notice.

DEBENTURE ISSUE:
2,500 4½ per cent. (tax-free) Debentures of Rs. 100 each Rs. 2,50,000
With application Rs. 50 On allotment Rs. 50

The Company has the option to repay the debentures at any time after 31st March, 1952, and in any case on 31st March, 1958, on terms and conditions mentioned in the Trust Deed. The Company, may, with the consent of the Trustee, repay earlier than due date any portion of the Debentures. No Debenture will be issued raking *pari passu* with these debentures. Interest is payable half-yearly commencing from 1st October, 1946. A sinking fund of not less than Rs. 25,000 will be provided annually from out of the profits commencing from the accounting year ending 31st March, 1948.

Of the above issue, the vendors will be allotted 500 Redeemable Preference Shares of Rs. 100 each and 20,000 Ordinary Shares of Rs. 10 each, both as fully paid up.

Out of the balance the signatories to the Memorandum, Directors, Managing Agents and their friends have agreed to take 500 Redeemable Preference Shares of Rs. 100 each and 30,000 Ordinary Shares of Rs. 10 each to a total face value of Rs. 3,50,000. The entire debenture issue has been subscribed for.

Therefore, 1,500 Redeemable Preference Shares of Rs. 100 each, and 50,000 Ordinary Shares of Rs. 10 each to a total face value of Rs. 6,50,000 are available for Public Subscription.

The entire Debentures issue and the present public issue of Rs. 6,50,000 have been underwritten by Messrs. SOMAYAJULU & CO., Stock and Share Brokers, Madras.

DIRECTORS:

1. Sri. B. GOPAL REDDY, Ex-Minister to the Government of Madras, Director, Chemicals, Ltd., Hindustan Ideal Insurance Co., Ltd., Buchireddipalayam, Nellore District.

KATPADI (North Arcot District).

Groundnut Protein

Rosin and Alum have been most widely and universally used for over a century for the sizing of paper, that is to render its surface resistant to the spreading and penetration of inks. Among the imports which were stopped on account of the war alum and sulphur were important for the Paper industry. Supplies of sulphur being short, sulphuric acid and alum could not be manufactured in the country. And Rosin which is required for sizing purposes in the paper industry was required for other war industries, e.g., textiles, soap, varnishes, etc.

Experiments were initiated in the forest Research Institute, Dehra Dun, to find out methods of sizing paper and boards which would lead to economies in the use of alum and rosin or if possible to find substitutes for one or both. Employment of proteins for the preparation of rosin-protein dispersions, resulting in the economies in the use of both rosin and alum protein bearing indigenous materials such as lentils, pulses, oilseed cakes, etc., were tried. Of these groundnut cake residue, after extraction of the oil, was found to be cheapest and most easily available source of proteins and it was, therefore, used for investigations.

Cost is one of the tests for preferring a substitute. Taking the average pre-war level of prices of rosin and groundnut cake at Rs. 300 and Rs. 60 per ton respectively, it appears the use of groundnut cake for sizing as a substitute for rosin is neither economical nor attractive, particularly as there is no saving in the use of the alum at all. But the use of groundnut cake protein as such or in the form of 'Gronut size', for the preparation of rosin protein dispersions or combined rosin-protein dispersions for sizing paper appears to be promising. There is a fair amount of saving in the use of alum. The equipment required for the preparation of 'Gronut size' from groundnut cake and carbonating the dispersions is ordinarily simple and not very expensive. For hand-made papers the use of 'Gronut size' by itself is likely to be profitable, provided the hand-paper making units can afford the cost of simple equipment necessary for preparing it.

The investigations, described in Indian Forest Bulletin No. 126 (Groundnut Proteins in the Sizing of Papers by Chattar Singh and Kartar Singh, Forest Research Institute, Dehra Dun, price As. 9) show that in post-war period, the use of rosin

protein dispersions, prepared from protein extractions of groundnut cake, promises to be a profitable proposition.

Australian Wool for Indian Handlooms

A new source of commercial contact between India and Australia is visualised by Mr. J. P. Abbot, Vice-President of the Australian Wool Board. Discussing the markets for Australian wool, he suggests the development of village co-operatives and cottage hand spinning and weaving and a new type of cheap mass-produced hand looms and spinning wheels. The suggestion is intended primarily for Australia, but India has equal possibilities in this direction. Though it is closely linked up with the question of a radical rise in the purchasing power of the masses, the vast scope for expansion that the woollen industry offers could not be denied. Neither internal production of raw wool nor textiles manufactured from wool is sufficient for the needs of internal consumption. Australia has a large exportable surplus in wool and it is

(Continued on page 1095)

THE SUDARSAN OIL MILLS LIMITED—contd.

OBJECTS:

The Company has been formed generally for the purpose of carrying on all or any of the objects specified in the Memorandum of Association (which is annexed hereto and forms part of the Prospectus) and primarily for acquiring the fixed assets of the Sudarsan Oil Mills, which is now being run as a private concern at Katpadi and to carry on the business of manufacturing and sale of REFINED OIL and VEGETABLE GHEE (VANASPATHI) and other by-products.

SCOPE OF THE INDUSTRY.

The scope for the development of Oil Industry in India is enormous. The total production of oilseeds which comprise groundnut, linseed, cotton seed, castor, sesame, rape and mustard, mahua, copra, etc., on a conservative estimate, exceeds 3 million tons per annum. Vanaspathi or vegetable ghee has now become very popular not only as a wholesome cooking medium, but also in the manufacture of chocolate, banking, pharmaceuticals, cosmetics, etc.

India has more than a third of the world's total acreage and production, of which the Madras Presidency accounts for more than 50 per cent of the total production of groundnuts in this country. There are now about 22 factories in our country with a total production capacity of about 1,80,000 tons per annum. Even on the basis of a minimum consumption of 2 lbs. of vegetable ghee per head per annum, which it may be noted is ridiculously low, the present production capacity in our country should be increased at least by another 2,00,000 tons.

In order to meet the existing demand, the Government of India have permitted starting of 27 vanaspathi manufacturing factories with a total annual production of 1,05,000 tons in different parts of our country. The Government of India in consultation with the Government of Madras have permitted seven factories to be started in this Province with a total annual production of about 21,000 tons. It may be noted that the Government of this industry on a regional basis, so as to avoid overlapping and competition. The Government of India have also appointed a Committee to plan the future expansion of the vanaspathi industry. The future of this industry is, therefore, assured.

ADVANTAGES OF THE FACTORY.

- (a) The Company is now acquiring a running oil mill, and has the benefit of earning income even from the day of its starting.
- (b) Katpadi is in the North Arcot District, which is one of the largest groundnut producing centres in South India. The neighbouring district, Chittoor, is also another important groundnut producing centre.
- (c) Both the winter and summer crops are grown in this area and there will be a continuous supply of groundnuts throughout the year.
- (d) Katpadi is an important railway junction and is connected with other central markets in this Province both by rail and road.
- (e) It has also got special advantages such as the supply of cheap hydro-electric power, and abundant supply of water, both of which are not of utmost importance to any hydrogenation plant.
- (f) Abundant supply of cheap labour is always available.

LOCATION OF THE FACTORY.

The Directors propose to acquire the entire fixed assets of the Sudarsan Oil Mills at Katpadi and add to it a Refining and Hydro-generation plant of 15/10-ton capacity. The property of the oil mills abuts the Katpadi-Madras Road, occupying a very important place at a distance of about half-a-mile from the Katpadi Railway station. The fixed assets of the Sudarsan Oil Mills, which are to be acquired, consist of a big plot of land measuring about 5½ acres, a running Oil Mill fitted with four expellers, one electric motor of 75 h.p., and a boiler of 7 h.p., factory buildings with a

floor space of 11,710 sq. ft., godowns having storage capacity of 1,200 tons of groundnut seeds, extensive drying yards, oil storage tanks, office building, office quarters, watchmen's quarters and a number of miscellaneous items. About 3½ acres of this land are enclosed by a wall 6 feet high. The entire machinery is in good working condition. Mr. C. R. Narayana Rao, B.E., A.M.I.E., Chartered Engineer, Madras, who recently valued these properties, estimated the value of the entire fixed assets at Rs. 2½ lakhs.

PLANT AND MACHINERY.

The Directors have already made arrangements for placing an order with Messrs. Power Gas Corporation, Ltd., London, through Messrs. Volkart Brothers, Madras, for the entire plant and machinery which would produce 10 tons of vegetable ghee and 5 tons of refined oil per day. They have also placed orders for some more expellers which are expected to be ready in the next few months. It is expected that it would take about 12 to 15 months for obtaining the plant and machinery and to commence production. But this company will have the advantage of running the existing mill in the meanwhile. Arrangements are also now being made for obtaining materials necessary for construction of buildings.

ESTIMATES OF PROFITS.

Estimates prepared by experts on the basis of current prices have placed the cost of production of vegetable ghee at As. 8 per lb. The current price of vegetable ghee is about As. 12 per lb. Even assuming that the price of vegetable ghee is likely to come down after the normal conditions are restored, and making no allowance for a proportionate fall in the cost of production, it should be possible for the Company to earn at least a profit of one anna per lb. Even on this basis of a minimum profit of One Anna per lb., the total profits are likely to be in the vicinity of Rs. 4 lakhs per year, which would amount to about 30 per cent of the paid-up capital, without taking into consideration of profits that may be earned by selling refined oil and other products.

After making provision for the Managing Agency Commission, Debenture Sinking Fund, Depreciation and Taxation, etc., and after paying dividend on Redeemable Preference Shares, it should be possible to pay decent dividend on Ordinary Shares.

MANAGING AGENTS.

The remuneration of the said Managing Agents shall be as follows:—

- (a) An office allowance of Rs. 1,000 per month.
- (b) 10 per cent of the net profits of the Company as defined by Section 87C(3) of the Indian Companies Act.

BROKERAGE AND UNDERWRITING.

The entire Debenture issue and the present public issue of Rs. 6,50,000 has been underwritten by Messrs. SOMAYAJULU & CO., Stock and Share Brokers, Madras, for a commission of 2 per cent on the face value of the debentures and shares. The Directors are satisfied that the resources of the underwriters are adequate for fulfilling their underwriting obligations.

A brokerage at the rate of one per cent on Debentures and Preference Shares and As. 2 per share on Ordinary Shares will be paid to recognised Bankers, Brokers, and authorised agents in respect of applications received through them bearing their stamps on the basis of shares actually allotted. This brokerage will be paid and borne by the underwriters.

Applications for shares should be made in the form accompanying the Prospectus which may be obtained at the Registered Office of the Company or from the Bankers and Brokers mentioned herein, and also from the Sudarsan Oil Mills, Katpadi.

Where no allotment is made the deposit will be returned in full and when the number of shares or debentures allotted is less than the number applied for, the balance of the deposit will be refunded.

Clive Street Gossip

The principal point in my last week's gossip was that the axioms of modern economics are not true in the form in which they are understood by economists and adopted as the basis of deductions important to the scientific development of economic thought. Of these axioms, I made special mention of the illimitability of human wants and the ubiquitousness of the Economic Man. I tried to show that wants are illimitable only when you consider the race as a whole and that, so far as individuals are concerned, not only can wants be limited but also that they should be.

Prima facie, these two statements may seem somewhat contradictory. The economist is nothing if not consistent. He proceeds from the illimitability of wants to the insatiable nature of the average man, who is typical of the race, regards him as ever on the alert to push his self-interest as far as his own capacities will permit and makes of him the Economic Man round whom the world of his creation revolves unceasingly. But the two statements that I have made are not easily juxtaposed without contradiction. I grant, as indeed I have to, that human wants are illimitable. But I maintain that the individual can be a contented being so far as his material life goes and at the same time be an efficient instrument of social progress. The economist implies that, unless every individual acts as if there is no definite goal to his endeavours in material life, he will fail to make the best of himself and that society will depend for its progress on the half-hearted efforts of its constituent members. In so far as this line of thought appeals to reason, there is need to consider the apparent conflict between contented individuals and progressive society.

To my mind, this conflict is by no means a bogey. On the other hand, I often feel it is brought out more or less poignantly in the history of India. It may even be said to explain the paradox of "a country so richly endowed with natural resources", as Dr. Matthai said in his address at the convocation of the University of Allahabad "and having for its inhabitants a people in many respects so rarely gifted" remaining "one of the plague spots of the earth." For this paradox arises in the main from the failure through centuries to bring the shining idea of individual contentment into relation with the needs of social progress. The blame for the failure is not to be laid at the door of the ancient sages who saw the value of contentment and the scope and nature of social progress and devised a form of social organisation which, in the conditions of those times, left no room for such conflict. Ancient Hindu society was based on principles diametrically opposite to those of modern Europe. The latter looks to a feverishly restive, personally ambitious individual to supply the motive power of social progress. And what is more, it puts progress, however conceived, above social stability. Till to-day, it has regarded individual freedom of contract as more valuable than what has now come to be called social security. It is

only after Europe has been ravaged by two world wars that the least shred of doubt has arisen whether the insecurity of individual life, which comes of mere freedom of contract, has not a great deal to do with social instability and crises in civilisation. The dominant idea of Western social thought, namely, social progress through individual insecurity has only lately come to suffer an eclipse. Individual freedom of contract is giving place to security and the claims of social stability are being heeded too.

In India, quite opposite trends were set in motion even from the days of the dim past. It is doubtful if social progress as such was sought to be apprehended in those days. Progress as applied to men in the mass is an essentially modern idea. I shall have more to say of this at a later stage. Here it should suffice to point out that the ancients hardly cared to project present trends into the future, conjure a picture of social conditions to be and frame policies to modify that picture to their liking. What they cared for was the quality of the life that each generation lived, the extent to which each individual learned and practised the art of life. They recognised that a pencil drawing can be as good art as a painting in oil, if the artists are of sufficiently high calibre. What was needed was that social conditions must be such as to enable each to make the most of his life. And the responsibility of society to the individual was discharged, when society saw to it that no individual was at a loose end, that every man had a calling which was his birth right and that the reciprocal obligations of society and individual were smoothly discharged. In other words, they believed that the individual should value social security far more than freedom of contract and that society should rate its stability and the contentment of its constituent members higher than the possibilities which discontent and instability may open out. That is why ancient Hindu Sociology devised a unique form of social organisation, unique because it sterilised the social dialectic that springs from class divisions by balancing the advantages between caste and caste, provided security for the individual and released his mental energies for his own cultural and spiritual development rather than for the pursuit of his own selfish acquisitive instincts. In modern times, it has become the fashion to judge Hindu Sociology only by its emphasis on caste divisions, ignoring altogether the importance it attached to individual development signified by the term ashrama which was even more important than varna. The Hindu view of life is seen more in the term ashrama than in varna, if only because there is one ashrama which transcends all the distinctions of caste.

If Hindu Sociology has fallen into disrepute and has even acquired odium, its critics are not at fault. For, individual Hindus pay little or no heed to the injunctions about ashrama, while they are eager to cling to the privileges which varna confers on them. This, too, as I shall show presently, is more or less

AND BRANCHES

inevitable. For Hindu Sociology made no provision for social progress. Indeed, in ancient times, no concept of social progress could be formed except within the rigid limitations suggested by Malthusian Laws. To limit individual wants was to some extent at least to make a virtue of necessity. But that cannot detract from the credit that is due for accepting the limits not only with good cheer, but with positive enthusiasm. The ancient Hindus envisaged the cultural and spiritual development of each individual within their social fold on the basis of a sufficiency, as distinct from an increasing plenitude and variety of material wants. It is possible that the outlook on life which this ideology engendered made of the average Hindu so different from the Economic Man that Hindu Society became static, almost wooden.

But social progress, it must be remembered, is an essentially modern idea. It arises in the main from the spectacle of man's increasing mastery over the

forces of Nature. For it is this mastery that creates the confidence that man's struggle with Nature for a living need not take away all his energies and is not interminable. It opens out the prospect of all members of a community having equal access to the good things of life. So long as this mastery of Nature was imperfect, society and social life had to be organised on the basis of more or less glaring inequalities. No community could afford to have equal opportunities for all for education or equal access to the amenities and comforts of life. For the state of the productive technique could yield these values only in a small measure; and the process of selection of individuals for enjoying these values was different from country to country. In these conditions, inequality was inevitable and it seemed natural to the extent that it was inevitable. Men who were favoured by birth or other circumstances entered into the enjoyment of their privileges without the faintest notion that their ways of life could involve any injustice

to others. It did not enter men's minds that there could be a process by which the lowest classes of society could gradually rise in material well-being by the two-fold development of reduction of toil and increase in the values which would be made available for their enjoyment. That notion is the direct result of the conquest of Nature by science. It emerged as soon as the industrial revolution opened up the prospect of increasing production and decreasing costs. It was strengthened by the accumulation of such new forms of capital wealth as railroads, machinery, shipyards and new sources of power. For here was the guarantee for the first time that in the race between Man and Nature, Man was steadily gaining on Nature.

It is not an accident of history that the first legislative measures of the nature of social reform came in the wake of the Industrial Revolution. It is not an accident that in the closing years of the last century, men talked of progress more than at any earlier period in the history of man. For it was obvious to the meanest intelligence that the production of the comforts and necessities of life would be steadily increased, that the equipment necessary for this purpose could be added to from year to year and that, both as a condition precedent to it and as a result of it, the mental development of larger and larger numbers of men could be furthered. For the first time in history, it was possible to give some concreteness to the idea of progress. In fact, men erred widely on the side of concreteness; for, progress soon tended to be identified with increased production. Men began to measure progress in terms of arithmetical computation. Civilisation came to be graded according to the percentage of literacy, or the mileage of railroads or the national income per capita. Statistics became the sole judge of progress, even of cultural attainments.

I may appear to have strayed far from my subject. But it is necessary to bear in mind what I have said if we are not to mix up ideas which are distinct and make confusion worse confounded. The conflict between contented individuals and progressive society is not wholly real and by no means inevitable, if we remember that the tone and quality of individual and social life are something different from, though they are connected with the social progress which lends itself to statistical measurement. The individual has a problem to solve for himself, whatever the social conditions in which he finds himself. If these conditions are sound and healthy, the problem is to that extent easier of solution. If, on the other hand, they are such as to impose on him a number of handicaps, the problem is more difficult to solve. But the most ideal of social conditions cannot relieve the individual of the problem of having to find ways and means of living at peace with himself and the world around.

The superiority of ancient Hindu Sociology lies in getting a good grip on this fact and beating it into the consciousness of the individual. While it kept the social organisation free of the evils and injustices (and these, it must be remembered, are relative to the state of economic resources and productive technique) which

irritate and cramp individual personality, it enjoined on the individual the duty of achieving self-development through the stages signified by the ashramas. No other people on earth can claim to have incorporated the duty of individual development within the framework of the social system. That such a system fails to answer some of the tests of our time is another matter. But it is important that life in modern times is a ghastly failure by the standards of the ancient times. And what is more, while it is unjust to apply our standards to a distant age in the past, we cannot say the same thing of the application of their standards to our time.

The ultimate test of a social organisation is the quality of life led by its constituent members. It is quite possible for a community, which is progressive according to all statistical criteria of our time, to consist of individuals who are frantically engaged in the pursuit of wealth and are therefore a prey to all the passions which such pursuit engenders. The converse also may be true. It is possible, though less likely than the former, for a society with a decline in production, in literacy, in the mileage of its roads and railways to suffer no deterioration in the life of its citizens. There is danger in reposing too much faith in either of these two possibilities. The importance of social progress, such as can be reflected in concrete statistical data, is great; and it would be perverse to deny it. If the content of a good life is intangible, it does not mean that it needs no manner of material foundation. While individuals in small numbers can always find the means of breaking the tyranny of the environment, men in the mass can progress only with the help of an increase in consumable wealth and decrease in the physical toil and mental worry of ordinary economic life. The error of our time lies in thinking that no such improvement in the need for strain and the return therefrom can be achieved, unless the illimitability of human wants is fully translated into the life and mentality of each individual.

The truth is that it is only in a special sense that human wants are illimitable. It does not mean that the average individual can do with an endless list of requirements or that each one of the values he enjoys lends itself to endless variation. It is true that the primary necessities of life, food, clothing and shelter admit of more variation or variety than one would have thought possible a century ago. It is true also that in travel or recreation, the door has been opened for fresh additions and new changes. There can be no end to the trinkets and gadgets which the ordinary man or, even more, woman covets. But that is not what the illimitability of human wants can be said to signify, from the broad social point of view. It is not in the variety of safety razor blades or tinned foods or powder puff that the basic condition of progress lies. It lies on the other hand, in the technological basis of man's material life on this planet, which we know now, as no earlier generation knew, can never be said to have reached perfection. That technological basis comprises the source and generation of power, the ways by which raw material

is created and processed in production, so as to reduce not only human toil but also the fear of exhaustion of natural resources, and the intelligent utilisation of all the resulting wealth for adding to the comfort and dignity alike of the average man.

It is in this sphere that man must resolutely refuse contentment, as the quality of lower breeds. It is here that he can look to the very sun and stars as the storehouse of his comforts and luxuries. Coal as a source of power is not enough; electricity is good enough in

RUFFS AND CUFFS

THE weekly wash nowadays is not nearly so complicated a business as it was when men as well as women wore ruffs and cuffs, frills and flounces. Today the housewife has simpler clothes to tackle, but both the work of home laundering and the results she is able to achieve are helped by the skill of the research chemist and the products of the British chemical industry. Soap is, of course, her first requisite. If asked how soap does its work the technical man might reply "Soap has the property of detaching soiling matter from textile fabrics and maintaining it in suspension in the washing liquor, thus permitting its removal without redispersion on the fabric". In other words, soap loosens the dirt from clothes or curtains and enables them to be washed clean. To discover precisely how it does this, and consequently to make better and more efficient soaps, have meant a great deal of patient and complex research. Soap cannot work unless it lathers, and it will not lather easily in hard water. The harder the water the more soap will be used, so that in these days when strict economy is necessary, the careful housewife will add washing soda — sodium carbonate — to soften the water and save soap. In addition to the service he gives to the great soap-making industry, the chemist has provided a number of other aids to domestic washing — ultramarine or "blue", and chemicals such as hypochlorites, borates, perborates, percarbonates, silicates and various forms of phosphates. For the laundries, of course, there is a further range of chemical products. These may not be suitable for home use, but play a valuable part in helping the laundries to give efficient service in difficult conditions.

Starch is today required for food, for making surgical spirit and other uses of national importance. When Peace brings back the starch to our collars, it may be expected also to bring new and improved chemical aids alike for the laundry and the weekly wash.

its time; atomic power bids fair to be satisfactory; but who knows? What is true of the source of power is also true of the ways of its transmission and use. Who can say that the perfect machinery has been found or that the last word on it has been said? Who can say that for deriving the raw materials of industry, man must ever depend on the mysteries of the soil and the vagaries of the seasons? The quest for the new and the better must go on, and will. It is a sorry debasement of divine discontent to bring it down to the plane of little trinkets. Who gains if there are more brands of the same superfluous thing on the market? And who but a nit-wit can feel happier for possessing, or being able to possess, more and more of such superfluous things?

The illimitability of human wants must therefore be understood as signifying the limitless scope that there is for improvement in the technological basis of our economic life, and the limitless extent to which such improvement can add to its quality. We have only to look back on the principal developments of the last fifty or one hundred years to realise what this means. The improvement of transport on land, sea and air, the new inventions in communications such as the telegraph, wireless and television, the spread of electricity to home and factory—all these imply an improvement in the basis and quality of life which is far different from a vulgar addition to the number of consumable goods and services.

This improvement depends for its materialisation on great scientists and their collaborators and co-workers; and its prospects are not in the least improved by the average individual agreeing to be actuated by overwrought acquisitive instincts. The process by which the human race rises to higher and higher levels of material wellbeing has little or nothing to do with the insatiability of the individual. And what is more, that process will fail to lead to any improvement in human happiness, if, in spite of all that it achieves for them, men should continue to be brutish and short. There is no conflict between individual contentment and social progress. On the other hand, the former is a condition of the latter.

Chemicals and Explosives Industry
—Synthetic Fertilisers—Paints and Lacquers—Rat Control.

Canberra, December 13.

Although chemicals are essential to the conduct of modern war, not only in the obvious fields of explosives but also in the production of almost every material used directly or indirectly by fighting men, the Australian chemical industry at the outbreak of war was under-developed.

At the close of hostilities it was one of Australia's most highly organised secondary industries. Wartime discoveries and adaptations will be of great importance to Australia in many branches of industry in peacetime.

Production capacity was in some cases created by private enterprise on a purely commercial basis, and, in others, by the erection of government owned annexes under the management of commercial companies having the necessary experience. The production of the actual explosives was carried out mainly in government-owned and operated factories.

Among the more important chemical raw materials for explosives are glycerine, sulphuric acid, nitric acid (or ammonia, which can be readily converted into nitric acid), and cellulose (of which the main sources are either cotton or paper pulp).

At the outset Australia had ample capacity for sulphuric acid, although it was considered desirable to instal equipment enabling greater quantities of pyritic ore to be burnt in place of sulphur, which does not occur naturally in Australia, and is normally imported. Glycerine demands were met from local production by rationing non-essential use, although in this case also it was considered prudent to procure plant and take initial steps to enable increased capacity to be brought into operation if it proved necessary.

Australia was far from self-sufficient in supplies of nitric acid and ammonia even for peace-time needs.

The Australian position was safeguarded initially by the establishment of a substantial reserve of Chile nitrate. At the same time four synthetic ammonia units were installed at a cost of some £2,000,000 (Rs. 2,14,00,000).

Construction of plant to convert the output of these units into ammonia sulphate fertiliser has now been commenced. These may play an important part in food production in the immediate post-war years, as well as safeguarding Australia's future needs of explosives.

An annexe was also established for the production of cellulose suitable for manufacture of explosives from wood pulp.

Forgings to withstand very high pressures were successfully made in Australia for the first time, in connection with synthetic ammonia units.

The synthetic units are equipped to produce methanol, an important raw material for the plastics industry.

Plastics have played an important part in the war, being used for the manufacture of shell fuses, hand grenades and numerous other ordnance parts. Related synthetic resins were used for the bonding barges and the construction of the Mosquito bomber.

Before the war Australia had two small plants engaged on the manufacture of plastic powders, largely from imported raw materials. These plants have been greatly expanded and the range of products enlarged

during the war, and the main raw materials, phenol and formaldehyde, are now produced synthetically in Australia, the latter from methanol made in the synthetic ammonia units.

Mechanised war in difficult country naturally called for enormous quantities of paints, lacquers, etc., for the protection of equipment. It became necessary to divert more than half of the country's productive capacity of approximately 5,000,000 gallons a year to war purposes. The paint technologists were faced with a host of problems in developing new types of finishes to meet special service requirements and in finding substitutes for materials no longer available. For example, when Tung oil from China was unobtainable, plants for the production of dehydrated castor oil, which is a partial substitute, were erected.

An important group of synthetic lacquers known as the alkyds has found an enormously expanded application, and plant for the production of the basic raw material, phthalic anhydride, from naphthalene produced in Australian coke ovens, was installed.

Phthalic anhydride was also required for two important materials for the protection of troops in tropical areas against insect-carried diseases; dimethyl phthalate for protection against the material mosquito, and dibutyl phthalate for protection against the mite which carries scrub typhus. New plants, wholly designed and built in Australia for the manufacture of these products, have been installed and all the raw materials, butanol, methanol and phthalic anhydride, are locally produced.

These materials may, along with the insecticide DDT, another recent Australian manufacture, have an important post-war use in the pastoral industry. Similarly, a rat poison which is harmless to other animals, produced at the urgent request of the Army, will play an important role in post-war public health, and will probably save Australia many thousands of tons of sugar by controlling rats in the plantations.

Other new chemical manufactures include sodium bichromate for leather tanning; aniline, an important intermediate of the organic chemical industry, together with the derivative phenothiazine for the control of intestinal worms in sheep; trichlorethylene for degreasing of metal parts in course of manufacture; carbon tetrachloride, a fire extinguisher, stock medicine and useful non-inflammable solvent; and the important lacquer solvents butyl acetate, ethyl acetate and acetone, which were used in great quantities for aircraft during the war, and will be required by the motor industry in the post-war period. Acetone was also required for munitions, and commercial production was supplemented by a government annexe.

No account is included here of the great achievement in the production of drugs, but the industrial chemical industry contributed materially, with the rapid creation of productive capacity for raw materials called for by the scientists working in this field.

(From Our Correspondent)

New Delhi, Dec. 19.

Although it is now about a week since the text of the Washington Loan Agreement has been available, opinion does not appear to have crystallised yet. There is no indication so far of Government's attitude on—clause 10 of the Agreement which has a vital significance to the country. This is the provision under which His Majesty's Government have undertaken to make arrangements with the countries concerned for an early settlement covering the sterling balances accumulated by them. The statement made by the Chancellor of Exchequer pointing out the need for Sterling Area countries arriving at a realistic basis in view of the common cause and interests has ominous significance. A press report suggests that Government could easily scale down the accumulated sterling balances to the extent of about Rs. 400 crores without affecting the country's monetary stability.

The fact of India being a creditor nation, which has been vaunted often and frequently in the last two or three years is, it would appear, of the 'paper prosperity' kind.

The impression however that these balances would be immobilised is not warranted as it is proposed that a portion of the balances together with current earnings will be available for expenditure anywhere. What part this—portion will represent in relation to the total indebtedness is the material point and one which cannot be answered for some time to come. The agreement however savours of one where a subsequent mortgagee gets a prior title to repayment of the loan he has advanced in preference to other creditors before him.

No one can say that this country has not borne its share of the war costs and seek to burden it further. Nor can it be argued that the sterling balances should be scaled down because the credits acquired by making supplies were made at inflated price levels; a Parliamentary committee has already expressed its conviction that no unfair advantage has been taken by this country.

It is not Britain alone that has emerged with a millstone of debt round its neck at the end of the war. The Indian Public Debt too has increased from Rs. 1,158 crores in the last prewar year and by next March it is expected to amount to Rs. 2,159 crores. Most of this additional debt is unproductive, whose servicing will cut into annual revenues quite substantially.

The question of the nationalisation of Insurance industry has been brought to the fore by the Superintendent of Insurance who has discussed it in his report and voted against it. His arguments are of course forceful, that insurance is an institution which in the hands of a private agency would steadily foster a progressive thrift and savings movement as against a government department which would be inelastic and static and that as applied in India, the results of nationalisation would be deplorable.

No one can be more fully aware of the abuses which have crept into the insurance industry than the Superintendent of Insurance. That such abuses were prevalent to a degree which could not be tolerated with equanimity in the interests

of the policy-holders was evident from the appointment of a Committee by Government early this year. Nationalisation is the only alternative if private insurers will not realise their responsibilities. The Superintendent of Insurance would appear to ignore current trends of thought and policy towards nationalisation of industries in which the public have a vital stake. But the Superintendent of Insurance is of course right in deprecating hasty action in a matter of this importance.

A conference, sponsored by the Food Department, of representatives of dehydrated vegetable industries was held here last week. There are eighteen such factories with a total output of about 3,350 tons of dehydrated vegetables. These factories, set up to meet primarily a war demand, now find themselves in a quandary with the cessation of Army requirements. The Food Department would appear to be prepared to afford the factories technical advice and assistance in obtaining controlled materials and plants, but with little civilian demand, prospects before the industry are decidedly not encouraging. The only argument in favour of the industry is that in periods of seasonal gluts, dehydration enables conservation of food liable to waste. But dehydration is not a new discovery. The process, on a domestic scale, has long been practised in vegetarian households and dehydration by natural drying of such vegetables as brinjals, bitter gourd, ash pumpkin, country peas etc. has long been quite a common feature. Why a factory is necessary for the purpose where conditions cannot generally be as clean as in individual households passes one's comprehension. Educate the public by all means to adopt the practice more widely and the Food Department's object will be as effectively secured.

HILL-BIRD.

(Continued from page 1092)

The place of cement in any plan for the improvement of the standard of living in India is so obvious that it hardly needs anything more than a mention of it to press the point home. In a country almost notorious for its miserable hovels, there can be no real overproduction of cement. But the cement industry, which is almost unique in India for its development of unified control of production and marketing, has during the war years been catering to the war demand, almost exclusively, leaving civilian needs in a famished condition. The arrears of normal demand and the special demands that an era of planned development may set up together add up to an impressive total. In recognition of this, the Government of India have planned for an addition of 3 million tons to the existing productive capacity of the industry. The distribution of this additional capacity has been

something of a problem considering the variety of claimants that may come forward. It is understood that the Government have apportioned 1.75 out of the 3 million tons to the A.C.C. and the Dalmias. A factory in Jamnagar has also been awarded productive capacity to the extent of 100,000 tons. There is thus 1.15 million tons yet to be distributed; and the governing principle of the distribution must be to secure the widest dispersion of the production of cement. While there can be no doubt that cement production must be as widely distributed as possible, it would be invidious not to allow an increase in the productive capacity of existing concerns like Andhra Cement, Assam Bengal Cement and Sone Valley Portland which are outside the A.C.C.-Dalmia combine. Those states which are ready with schemes for the development of the cement industry in their territories must be deemed to have as strong a claim as Jamnagar.

to deal with British India through the residents. So any attempt to distribute rice properly can be successful only if it comes from the Government of India. For it alone can overcome provincial and British Indian-Cum-Indian India, redtapism.

But the much advertised news that Burma rice has begun to come in this country will apparently help, to ease the food situation. And a Government which can be disturbed from slumber only by a famine will again go to sleep. The Food Department must be alone to discover the rice resources of the country first before 'taking the rice bowl' again to other resources.

believed by experts that wool can maintain its place against rival products.

It is held that judged by the trends of the past, wool can hold its head against its rivals and synthetic substitutes. The future of synthetics itself lies in blends with the natural fibres like cotton, wool and silk. The development of new woollen fabrics and the possibilities of reducing costs of production add to the competitive strength of wool. While India can profit by a trade with Australia in wool, she can also seek adjustments and improvements in the production of raw wool on the lessons of the large scale experiments in Australia.

Egyptian Cotton:

Egypt wants early restoration of free exports of her quality cotton but as yet developments are damping the cherished hope of her cotton interests. The decision of Britain not to revive the Liverpool futures market has chilled the enthusiasm of the Alexandria futures exchange and the prospects of continued controlled economy in Europe holds out no attraction. The world requirements of Egyptian cotton for 1945-46 are estimated at about 3.9 million kantars of which Britain would take 1.2 million ktrs., the Egyptian mills 0.7 million ktrs., India 0.4 million ktrs., the United States 0.37 million ktrs., France 0.36 million ktrs., Mideast 0.3 million ktrs., and the balance by the other European countries. The stock available during the current season is 10.4 million ktrs. and the new crop is estimated to bring in another 5.3 million ktrs. Apart from this, about 1.3 million ktrs. belonging to the British Buying Mission are still awaiting shipment. Egypt's immediate task is, therefore, fast developing as a disposal problem and not one of preparing for the rapidly developing export trade in the staple. Britain's reconversion difficulties and the scarcity of manpower for the early revival of her cotton textile industry are positively discouraging. The step taken by the Egyptian Government in putting up the price of the new crop has, instead of helping in toning up the market, reduced export prospects. The slight improvement in shipping position observed during the recent months is considered too meagre to afford the psychological stimulus badly needed by the cotton exchange. Satisfaction is derived from the fact that enquiries are encouraging from France and Belgium. In order to conserve dollar and with a view to aiding her own export drive in the Middle East France desires to purchase more of the Egyptian cotton. Russia's known intentions of cultivating the Middle East markets are interpreted as a definite bullish factor but the prospects of the spinners in the individual European countries buying directly from Egypt still remain remote.

The Moscow Talks

The Conference of the Big Three at Moscow has begun under the shadow of events which appear to be no more conducive to an agreement than those amidst which the Foreign Ministers' Conference met at London. The exclusion of China and France is obviously a courteous concession to Russia, though the latter has been given an assurance that subjects of special concern to her of which Allied control of Germany is admittedly the

most vital, would not be discussed. No such assurance seems to have been given to China and if China were also to be excluded from the scope of the discussions, and the problems of South Eastern Europe postponed (which show an alarming tendency to settle themselves without the aid of joint decisions) the question of atomic energy becomes the inevitable but none the less difficult residue, among the major issues that press for immediate settlement. But a mutually helpful approach to even this issue is possible only if political developments in which the three powers are either involved or interested are an aid to cordiality. It is here that it becomes difficult to strike a note of clear hope. The definition of the role of American troops in China and the U.S. assurance of non-interference in Chinese internal politics should smoothen the way for understanding but the reports of a Presidential directive to General Marshall to support all efforts to wipe out communist influence from China again tend to turn the scales. The all but formal separation of Azerbaijan from Persia and the infiltration of democrats into Teheran are events that could not but sap cordiality at Moscow. Nor have recent newspaper comments on Britain's colonial policy indicative of a desire on Russia's part to ignore vital differences in ideology. But none of these factors could influence the discussions or prevent understanding if the Big powers keep the fundamental issue before them—that world peace is impossible without unreserved mutual confidence at least among the most powerful nations and that every failure of efforts towards agreement leaves more strengthened the impediments on its way.

Exploitation of India's Minerals:

In an interview to the Press at Bhopal Dr. Fox has stated that there is ample scope for mineral development in this country and that the work of developing

should be entrusted to private enterprise under Government control. India has the world's largest resources of iron ore, both quantitatively and qualitatively. Yet India's annual production of steel is only 1 million tons—less than the production of Belgium whose iron ores are only a fraction of India's. India's coal resources are sufficient to warrant an ultimate annual production of 10 million tons of steel. Dr. Fox also pointed out that, even without making fresh demands on our coal, mere conservation of the existing coking coal will enable a production of 5 million tons of steel. As regards non-ferrous metals, though this country possesses large supplies of copper, lead and zinc, big financial risks have to be undertaken if they are to be successfully tapped. Foreign countries have taken financial risks to develop the minerals and India cannot afford to take a conservative view in this respect. More attention should be given to the tapping of the known resources of non-ferrous metals instead of prospecting for new sources. India has millions of tons of bauxite but there is only one single plant producing aluminium. Though sulphur is not found in adequate quantities, millions of tons of gypsum are found for the manufacture of sulphuric acid. Phosphatic rocks are there for the manufacture of fertilisers though improved methods of extraction will be necessary. Oil is found only in Baluchistan and Sind but uranium is found in Bihar. While vast resources of coal are an advantage it should be noted that coking coal resources are limited. They should be carefully conserved and reserved as far as possible only for iron smelting purposes.

Dr. Fox has also emphasised that the aim in exploitation of minerals should be as far as possible to turn out the processed product. The part that research can play in this cannot be overemphasised and research stations should be opened in different parts of India with full Government support.

A Resume of Commodity Markets

A generally steadier feeling has been noticeable in the commodity markets in the past week. The raw jute manufactures markets have been better with the greater mill buying and the increased offtake of jute goods in November. The production figures for the same month were also considered satisfactory. The raw cotton market has been steady and a slight improvement in prices has been recorded on firmer Karachi advices and good buying by mills in the spot market. The bullion market has recovered on bull support at the lower levels and with the control of bull operators over the market a decline in prices can be only gradual. In the piecegoods markets steady conditions prevail. It is rather surprising to note that side by side with the reports regarding an accumulation of stocks there are large complaints regarding the efforts of the authorities to thrust unwanted cloth on consumers.

The better tone of the raw jute market is due to the encouraging production figures for the month of November and the larger buying of loose jute by mills. The increased offtake and the more regular coal supplies have encouraged the hope that there might be an increase in the consumption of jute in the coming months and that there might even be a rise in prices as the season progresses. The November production figures of over 97,000 tons indicate a consumption of 54 lakhs bales. If the enquiry in the jute manufactures markets in the past few days is an indication of the future demand for jute manufactures it can be expected that mill buying will be henceforth brisk.

The favourable developments during the week, however, have not resulted in any increase in prices for loose jute as dealers have been very anxious to dispose of their holdings and have taken up all orders at the minimum rates. In the pucca bales section, too, prices are barely at the minima. If the present rate of buying is kept up there might be possibly an improvement in prices after sometime.

The raw cotton market has been definitely steadier in the past week and the losses recorded after the announcement of the conclusion of the Anglo-U.S. financial agreement have been completely recovered. As pointed out last week, the market has now come round to the view that Britain would be loth to increase her takings of American cotton and fritter away her dollar resources under the loan and that, as far as possible, exports of cotton from the sterling area would be encouraged. It would be reasonable, therefore, to expect that consumption of cotton by Lancashire mills would increase. As the Government of India are also reported to be taking the necessary steps to remove the misapprehensions in the United States regarding the stock position of short-staple cotton it can be expected that the outlook for the cotton export trade would improve. Mill consumption of Indian cotton has been on the upgrade recently and manufacturers have been anxious to take up government stocks of better styles. As the months ago by, the sound statistical position of the staple fibre will make itself felt. Against the revised forecast figures of 4.1 million bales it is expected that total consumption will be over 5 million bales. Jharilla January quoted Rs. 423-12 against Rs. 419-4, March Rs. 436-4 against Rs. 430-4 and May Rs. 445 against Rs. 439-4.

Mill consumption of Indian cotton during September, 1945 was 367,017 bales against 341,030 tons in the corresponding period of 1944. To this total, British Indian and Indian States contributed 307,982 bales and 59,035 bales respectively.

In view of the improved railway transport position, the Central Government in accordance with the recommendation of the Cotton Movement Committee 'C' of the Textile Control Board have amended General Permit No. 1 issued under the Cotton Movements Control Order, 1942 in a manner which permits (a) cotton to be consigned to merchants where previously only mills were eligible as consignees; (b) back-railing from Bombay, Karachi and Cawnpore; (c) Movement in either direction between the west zone and the north zone provided that each movement is either entirely over the metre gauge or entirely over the broad gauge and also movements in either direction between the north zone and the northern free area, the north zone and the central free area and west zone and the central free area and the south zone and the central free area.

The amendment does not, however, change the position in regard to the insistence on movement of cotton by sea 'viz' Karachi between the northern free area and the west zone, south and south-west of the railway line joining Kharagodha, Virangam, Ahmedabad, Anand, Timba Road, Godhra, Ratlam, Fatehabad, Chandrawatiganj and Khandwa nor in regard to the license from the Government of Bombay necessary for the movement and transport of non-tenderable and short-staple cotton into Bombay.

The relaxation in the restrictions regarding movement would, it was expected, have an unfavourable effect on prices but there has been no change in the sentiment.

The bullion market was inclined to be easier earlier in the week but the fresh buying at the lower levels and the anxiety of bears to cover their positions with every decline has caused a rally in prices. The quotations, however, are lower on balance. Bulls seem to be confident that it will be a long way before imports come in. In fact it is being pointed out that dollars would not be wasted on the purchase of bullion and that the Anglo-U.S. financial agreement cannot be regarded as a breish factor for the bullion markets. It is rather surprising to note how this view got round. If exchange control were lifted arbitrage operations will be resumed and this would mean that prices will get automatically adjusted to international parity prices. Also, it is a rather curious suggestion that the United States alone is the only supplier of gold. There is at present no restriction on the sale of gold by Australia and it is not sure whether South Africa will continue to sell the whole of her output of gold to the United Kingdom. In any case, when the production of gold is increased and when there is a relaxation of exchange control enthusiasm might fade out. That is a long way yet according to the bulls and they would try to capitalise the situation as far as possible. It would not be, therefore, justifiable to expect any big decline in prices, though the downward trend will assert itself as the months go by.

Jute and Jute Manufactures

Special to "Indian Finance"

(From Our Correspondent)

Calcutta, Dec. 20.

Not for many moons have the Calcutta Jute Mills so nearly approached their target production figure of 100,000 tons per month as they did last month when 97,809 tons of goods were produced. We have to go back to May 1944 for a comparable figure, 97,336 tons, and to March 1944 for a better one when the hundred thousand ton mark was just exceeded. It is to be hoped that the nightmare of short coal supplies has permanently vanished though the days when coal-consuming mills reckoned to hold well on to six months supply in their compounds can scarcely be expected to recur yet awhile. Nor need there be any anxiety on the score of overproduction even if last month's figure is kept up. It is calculated that potential world consumption would not be satisfied with much less than 115,000 tons of jute goods per month. Fortunately perhaps, import restrictions still prevailing in certain markets and unsettled political conditions in others, limit absorptive capacity for the present to a total which is just about the extreme maximum that Calcutta Mills can, in existing circumstances, attain.

To turn to an examination of the returns, the advance of 8211 tons of production over the October figure represents an improvement of over 9 per cent. Of the total quantity produced 13,959 tons, or 14.2 per cent was on Government account as compared with the previous month's proportion of 17 per cent. This reflects the reduction and cancellation of Government orders consequent on the cessation of hostilities. Of Hessian produced, 1528 lakhs yards or 39,783 tons was on commercial account and 84 lakhs yards or 2407 tons on Military account, making the total outturn of Hessian goods 1612 lakhs yards or 42,190 tons. Of Sacking goods, 993 lakhs yards or 40,702 tons was on commercial account and 275 lakhs yards or 11,397 tons on military account, making the total yardage of Sackings 1268 lakhs or 52,099 tons. Adding the production for the previous four months of the current season gives a gross total of 434,465 tons for the five months July/Novr. or an average of 86,893 tons per month.

Taking into account the reduction in stocks of goods at the end of November shows up Despatches of goods in a favourable light at 106,508 tons for the month. This brings the average despatch figure for the five months to 85,316 tons and reduces the shortfall in despatches as compared with production over the five months to 7885 tons, which may soon be eliminated if the better shipping facilities now prevailing are maintained.

In terms of Jute, the November production represents a consumption of 5,40,884 bales, bringing the total consumption by mills, based on the production figures for the five months July to November, to over 24 lakhs of bales.

Arrivals of Jute into Calcutta and Mill stations during November are returned at 39,66,378 maunds which is nearly four lakhs of maunds better than the previous month and no less than 11½ lakhs of maunds over the corresponding month last year. Arrivals by flat were 2½ lakhs of maunds ahead of October, Rail arrivals were almost level, while imports by country boat were up by almost double, probably due to the import

of Daisee jute. Total arrivals up to the end of November now amount to over 156 lakhs of maunds, more than 20 lakhs of maunds greater than in the corresponding period last year. This is proof enough that there is no substance whatever in the complaints which have been ventilated in certain sections of the Press, and to Government, that Mills have been deliberately refraining from purchasing jute to the detriment of the cultivator's welfare. It may have been that some bull speculators who are not recognised dealers in the trade, and who have no established marks of repute, were left holding stocks which they had bought in the expectation of a rise in the market, and found difficulty in liquidating when all grades of packing, good, bad and indifferent, were on offer at the same flat minimum prices. Naturally enough, purchases were confined to known marks of repute and the speculative element will probably find that they will yet have to make their stocks over to recognised dealers before they can realise on them.

There has been a falling off in arrivals of jute in the first half of December, the estimated figure being only 3,53,000 bales as compared with 3,31,000 bales in the same period last year and 4,36,000 bales in the first half of November. A lot of jute has however been sold for shipment after the turn of the year and arrivals in January will most probably show a substantial revival. Up to the middle of December, total arrivals for the season amount to 35,23,000 bales against 30,90,000 bales in the corresponding period last year.

The U. S. Commercial Company have intimated that they are determined to clear up the back-lag of Hessian shipments due up to the end of 1945, and to this end it is understood that something like eleven ships will be put on the berth between now and the first week in January to lift the goods. Anything not shipped by this opportunity is liable to be cancelled. There is no doubt that certain Bazar dealers have been playing fast and loose with their commitments for the U.S.A., taking advantage of the difficulties in which mills found themselves recently owing to lack of coal. Vast quantities of goods for the States were sold bear, to be covered up as and when it best suited the dealer without any regard to contract due dates. If the dealer could cover at a comfortable profit, the goods might be shipped in proper time. If he could not so cover, or thought he could do better by waiting, he simply pleaded non-delivery by the mill on account of coal shortage. And of course in many cases goods were not called for on due date on account of lack of shipping space. The situation is changed now. A sufficiency of freight is available. In fact it is reported that space was going begging last month and ships had to sail without a full cargo because goods were not forth coming. The U.S.C.C. is determined to put an end to this situation and there has been quite a rush for cover in the Bazar for December Hessians, now also tending to extend into the January position. Special arrangements have been made with the Customs and Export Authorities for the coming holiday period so that shippers may have no valid excuse for not getting their shipping documents through. Shipments of raw Jute will be handled in the same way. Only on Christmas and New Year Day will the Custom House be entirely closed.

In the Export Jute market there is nothing to report. Small business has been going on in private marks, mainly in Tossa grades, but the position remains that open

business is impossible with controlled sterling and rupee rates so close together. Some business is reported with Mills in Lightnings and Dundee Daisee at minimum prices, these still leaving the Baler a comfortable margin of profit at current bazar rates.

There has been quite a considerable turn-over in the Loose Jute market during the week and there has been ample opportunity for any reputable holder of stocks to ease his position. The buying has been selective, all the available European packing being first taken up at minimum rates, followed by Supervised and a certain amount of Indian marks. Both the purchasing and the selling has been well spread and the position is much more liquid than it was a fortnight ago. Perhaps "liquid" is an unfortunate description, for there is far too great a prevalence of liquid in the form of water in much of the jute coming into the market both here and upcountry. With imports in mofussil stations restricted, the extensive purchases here have firmed up prices all round so that, particularly in District stations, it is no longer possible to land jute in Calcutta at minimum rates. At the close the tone is fully steady with no European jute offering and better quality scarce, except in Tossa, where sellers still offer a good percentage of Middles.

In the Fabrics section, as indicated above, there has been considerable demand for December Hessians for cover so that the quotation for ready 10 ounce has advanced a full rupee since we last reported. It now stands at Rs. 28/-. Forward positions have improved to a less extent, Jan/March having been done at from Rs. 25/12 up to Rs. 26/4, Jan/June at Rs. 25/8 and April/June at Rs. 25/4. Business in Heavy Goods has been rather of a retail description but there is evidence of more interest from consuming markets. Ready "B" Twills have declined eight annas to Rs. 62/4 but there has been some buying of forward, Feb/March being quoted done at Rs. 59/ with April/June up to Rs. 58/- at the close.

when swords are beaten into plough-shares ...when Tanks become Tractors

THE heavy rumble and clatter of caterpillar-tracks echo across the land but not to the roar of deadly guns. . . . Across India's wide acres we see a great awakening. Gone are the days of the wooden plough, the spade and the sickle with which our cultivators obtained from the good earth too little with too great a labour. In their place great steel ploughs, harvesters, binders and tractors make their toil easier and force richer yield from the soil.

This is a picture of tomorrow as seen today. Not merely the lakhs of the rich, but the crores of the small men's savings will be needed to convert this vista of the future into reality. Understand clearly that India cannot be turned into a great and prosperous nation without a large outlay of capital. Indian Agriculture and Industry will need your money in the post-war years. Prepare now to buy for yourself a share in the coming prosperity.

**PLAN TODAY FOR TOMORROW
SAVE ALL YOU CAN**

But remember to invest your savings where they will be safe, and waiting for you when you need them.

AAA 154

Vol. XXXVI. No. 25

SATURDAY DECEMBER 22, 1945

Price Re. 1

Stock Markets to-day and to-morrow:

BOOM CONDITIONS PERSIST

The approach of the long Xmas and New Year holidays has not had any discouraging effect on both operators and investors and the Calcutta Stock market has forged ahead without any pause. The western centre also has been active but the improvement in values there is not so pronounced as in Calcutta. The table given below will give an idea of the rise in prices that has taken place in the past two weeks. Indian Irons have improved from Rs. 42 to Rs. 54 in less than a fortnight, Steel Corporations to Rs. 47 from Rs. 38/4 and Howrahs to Rs. 124 from Rs. 113. During this week, Indian Irons have registered a rise of six points, Steel Corporations five points and Howrahs six points. Even after such a jump in values there is no suggestion of a setback and prominent operators seem to be talking of further higher levels.

It was stated earlier that the Bombay market has not followed closely Calcutta and that Tata Ordinaries are only 15 points higher at Rs. 478 and Deferreds 100 points at Rs. 2,650. If there were a proportionate rise, Tata Ordinaries should be now quoting well above Rs. 500 and the Deferreds Rs. 3,000. But there is hesitation in the Bombay market as present prices are at a record high level and there is no tendency to push up values further.

It is said that the accounts of the Indian Iron and Steel Company for the year ended March, 1945 have been well received by the market and that the extensions to plant and the prosperity of Steel Corporation will enable the payment of better dividends. Also, there is a large hidden reserve in Indian Iron's holdings of Steel Corporation shares. But if it can be said that Indian Irons are a good buy with a return of less than 3 per cent there is no reason why Tata Steels should be rated on the same basis especially as large tax-refunds would be received and

the new lines of production and new interests will increase the earnings capacity of the company. The ways of stock market operators are inexplicable.

It has been said that activity in the jute section would result in an increase in business in other sections as well. It will be noticed that, barring Indian Irons and Steel Corporations, the rise in prices is biggest in jute shares and all the bigger denomination shares are higher by more than a hundred points. The jump in this section is said to be due to the expectation of bonus issues by important companies and the hopes that there would be a large increase in exports with the easier shipping position. It is true there has been an increase in the offtake of jute goods recently and that, if the present prices are available, it would be possible to report higher earnings. But to suggest that many companies would make bonus issues and there will be a big increase in dividends is perhaps a little far fetched.

The reports of two important companies whose shares have been in the lime-light for sometime past have been published

The directors state in the report that owing to inadequate power facilities it has been necessary to close down the Sirga seam workings temporarily and the entire output is being obtained from the Argada Seam quarry. In this quarry, assistance is being provided by the Director of Open Cut Mining in the shape of mechanical equipment for the removal of the overburden. There is no indication of the reserves of cheap coal.

(Continued on page 1123)

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

Calcutta, Dec. 21.

The Calcutta Stock Exchange has continued merrily on the upward trend and a further substantial rise in prices has been recorded. The bout of profit-taking, noticeable earlier in the week, has proved only temporary. Fresh investment buying and the activity of professionals have resulted in a general rise in prices. Even the approach of the long holidays has not had any effect on the markets.

There is no special reason for the further rise in values. Operators and investors seem to be convinced that the immediate outlook is satisfactory and that with the reports regarding the possibility of bonus issues by several companies there is scope for a further improvement. Indian Irons have led the market with a rise to Rs. 54 while Howrahs were several points higher at Rs. 124-8. Coal shares also joined in the upward movement and there was a spectacular rise in New Beerbhooms to Rs. 55 from only Rs. 48-12 last week. Cotton shares were slightly firmer. The general undertone of the markets is steady. Even with the substantial improvement in values in the past few weeks prominent operators are speaking of a further improvement in values.

In the gilt-edged securities section, there was not much activity and 3½ per cent. Paper was unchanged at Rs. 103-8. 3 per cent. paper also quoted Rs. 97-4. There was more business in 3 per cent. 1951-54 at Rs. 101-8. In the Western centre considerable activity was noted in 3 per cent. 1959-61 loan, the lists for which loan were closed on Saturday last. There has been no business in provincial loans. With a slight tightening in money conditions the response at the auctions of treasury bills was rather poor. The average discount has improved further to seven annas per cent even though the applications were very much smaller and the amount of accepted tenders was only Rs. 92 lakhs against the offer of Rs. 4 crores.

No important change in bank shares is to be recorded. Calcutta National being Rs. 16-8, Nath Bank Rs. 34 cum-rights and Reserve Bank Rs. 156. U.C.B. were unchanged at Rs. 41 premium.

In the Coal section, there has been greater activity with the rise in Burrakur to Rs. 48 from Rs. 46-10 last week. There is a spectacular rise in New Beerbhoom to Rs. 55 from Rs. 48-12. Bengal have steadily improved to Rs. 862 from Rs. 827 while Equitable were Rs. 79 against Rs. 76-10. There was not much activity in South Karanpura though in sympathy with other shares these were later better at Rs. 43-6 against Rs. 42-8.

Bhalgora were steady at Rs. 34-8 while there was a further rise in Kuardi to Rs. 39 from Rs. 35. Western Bengal were better at Rs. 15-14.

Jute shares have continued to be the chief centre of attraction and a further general rise has been recorded. The features of this section are provided by Howrah, Reliance, Barnagore, Bally, National and Megna. All these are substantially higher. Howrah has improved to Rs. 124-8 from Rs. 118-8. Kamarhatty were Rs. 988 against Rs. 950 and Anglo-India Rs. 655 against Rs. 602. There was influential buying of National and the quotation has improved by four points to Rs. 44-8. Alliance were Rs. 880 against Rs. 836. Barnagore Rs. 455 against Rs. 370 and Bally

Rs. 570 against Rs. 495. Fort Gloster are nearly 100 points higher at Rs. 1,210 while Ganges were Rs. 740 ex. div. against Rs. 720 and India Rs. 942 against Rs. 905. On persistent rumours regarding the possibility of a bonus issue, Megna were in great favour and were done up to Rs. 247 from Rs. 206. Reliance were Rs. 9 points higher at Rs. 108.

Engineering shares also were very active under the lead of Indian Irons. There was a rise of nearly 5 points to Rs. 54 during the week, the quotation is only slightly lower at Rs. 53-8 at the time of writing. Steel Corporation are 3½ points higher at Rs. 46-8, the highest level for the week being Rs. 47. There was a jump in Indian Standard Wagon by 50 points to Rs. 174. Jessop improved by 1½ points to Rs. 32-8 while there was a large turnover in Marshalls on the reports that the Company would be shortly receiving plentiful supply of engineering machinery. Kumardhubi Engineering were 1 point higher at Rs. 30-4 and National Iron 8 annas higher at Rs. 13.

The expectations of better working results in the current season and the favourable report of Carew & Co. for the year ended June, 1945 have resulted in a general improvement in prices. Balrampore are nearly 2 points higher at Rs. 19 while there is a jump in Carew to Rs. 38 from Rs. 35-4. Cawnpore were Rs. 45 against Rs. 43-8 and Darbhanga Rs. 29-7 against Rs. 28-12. Ramnugger Cane were very active being done up to Rs. 27-10.

Tea shares have been eagerly bought by investors with the conclusion of a fresh contract with the British Ministry of Food for the purchase of the entire export surplus of 1946. The popular shares are several points higher, Bishnauth improving to Rs. 53-6 from Rs. 46, East India to Rs. 31 from Rs. 27-8, Hatikhira to Rs. 32-14 from Rs. 31-12 and Tezporo to Rs. 30-8 from Rs. 27-8. There is a big jump in Hantapara to Rs. 915 from Rs. 860.

In the miscellaneous section, Burma shares have been better, with Burma Cor-

porations at Rs. 8-8. Consolidated Tin were sharply higher at Rs. 5-10 against Rs. 4-8 while BBP were Rs. 6-7 against Rs. 5-12. Among other mining issues, Indian Copper improved to Rs. 5-1 on large buying while Karanpura Development were as high as Rs. 61 against Rs. 56-12.

B. I. C. were 8 annas higher at Rs. 9-4. Calcutta Trams were unchanged at Rs. 55-8. There was some buying of C.E.S.C. and the quotation improved to Rs. 42-12 from Rs. 40-4. On good enquiry Bararee Coke are higher by more than a point at Rs. 40-14. National Tobaccos were very firm at Rs. 39-12 and Rohtas Industries at Rs. 18-6. There was a sudden rise in Tita-gur Paper to Rs. 44 from Rs. 37-12 last week. About 20,000 shares were purchased by a single investor between Rs. 41 and Rs. 44. India Paper Pulp has improved in sympathy to Rs. 280 from Rs. 255. I. G. N. have been in good enquiry throughout the week.

NOTICE

To The Members of

The New Samanbagh Tea Co., Ltd.

			24,04,636
		Total Liquid Assets	13,49,891

THE BONUS BOGEY

By "Bear-Bull"

Calcutta, Dec. 21.

The tone of the markets promised to be irregular earlier in the week when in Monday's session large profit-taking was noticed and in its upward movement Indian Irons came down to Rs. 49/8 from Rs. 52. It appeared that outside investors would interfere effectively and that strong realising operations would discourage sentiment. Bulls are, however, undaunted and have been buying up huge blocks of shares regardless of intrinsic worth. As a result, forced covering alone has taken up prices. What is exactly the reason for the upward swing in prices is still not clear but prominent operators are apparently determined to have their own way and the unholy combination of powerful buyers will have the effect of destroying the good work achieved by the stock exchange in recent years. It is true that the old factors of a possible reduction in the bank rate, relief under E.P.T. and continued expansion of currency are favourable from the market point of view and that with the difficulty in regard to investment, it would not be justifiable to expect a return of more than 3½ per cent. tax-free. But if this is any criterion Howrah yields very much less than 3½ per cent. Indian Irons less than 3 per cent. and other prominent shares 2½ per cent.

There is a cry of bonus issues being made by every company. It is not understandable why on earth each and every company should issue bonus shares. It is alright to say that bonus issues will result in an improvement in values but it is forgotten that without any prospect of an increase in the capacity for earnings or definite extensions to plant there cannot be any increase in dividend distributions and that an increase in capital would automatically mean a reduction in dividends.

When jute mills can produce 120,000 tons of goods per month without any increase in the number of working hours, if coal supplies were fully available, it is not clear why there should be talk of an increase in the capacity of mills. It is true Auckland has ordered for new equipment but it does not follow that every other company will follow suit and that the new machinery will repay itself automatically. In my opinion, the issue of bonus shares can arise only when there is a prospect of an increase in earnings and when large additions to plant are proposed. It may be also possible in cases where the shareholders have undergone large sacrifice in earlier years or there is a large block and the distribution of dividends in war years have not been very liberal and there has been a large accumulation of funds. Also, in the case of industries for which the Government have fixed up definite targets and the leading companies have been asked to submit proposals for extensions there is reason to expect that additional capital would be issued and the increase in working capacity would result in an increase in earnings ultimately. Thus, there is some justification for expecting new issues on bonus terms to shareholders in the case of the iron and steel and cement industries. The A.C.C. has already made a new issue while Dalmia Cement is rumoured to be having proposals under consideration. The Assam Bengal Cement. It is reliably understood will be making a new issue while the Sone Valley Portland

Cement Company has already made an issue at Rs. 5 premium. At the last annual general meeting of the shareholders of the Tata Iron and Steel Company, the Chairman said that vast sums would be required for capital extensions and that the shareholders might be asked to give more money. But any new issue would be preceded by the conversion of the deferred shares into ordinary shares. When there is a definite promise of a new issue it is surprising that there has been no big rise in the quotations for Tata ordinaries and deferreds (of course, by Calcutta standards) and that even now the yield should be considered satisfactory at nearly 4½ per cent.

When I was talking to one of the prominent operators the other day I asked him whether he attached any meaning to the present abrupt rise in prices and whether the improvement could be sustained. The Budget, which is such a powerful bullish factor, is still a long way off. The present boom began in the first week of November and we have still two months to go. The Calcutta market is moving rather independently while in the Bombay market even the present prices are regarded as a little too high and it is said that there would be no justification for pushing up prices without further favourable developments.

Beyond the assurance of a high level of activity and a relief in taxation one cannot possibly expect that there would be further developments which would be favourable to bull operators. It is true that the visions of a world of plenty and the aims to promote international trade will give scope for all to give their best but whether the aims will be translated into concrete achievements and whether vested interests will not assert themselves remains to be seen.

I am not suggesting for a moment that optimism regarding the future outlook is not justified but one should be sober in

his ideas and not be carried away by each and every rumour.

In the present market, professionals are very active and shares are changing by the thousands every day. The small investor has no place in the market and many a broker might not care to entertain his investor's business when there are big speculators and his brokerage is easily made. Denied the scope for speculative activity in other markets there is a concentration of good, bad and indifferent operators on the floor of the Calcutta Stock Exchange. In spite of so much being written about the activities of the Katni market it is still kicking and alive and the position in that market on any particular day seems to be influencing the course of prices for the leaders on the main stock exchange.

The speculative activities of moneyed men and the cornering operations of powerful aspirants for control in industry have been not a little responsible for the present inflation in values. If the function of the stock exchange, as the nerve centre for investments, is to be kept alive it is important that activity should be on correct lines and madness, such as in evidence in the bullion market, should not be allowed to develop. The Committee of the Stock Exchange is not quite effective in its intervention and there has been even a charge at times that bulls have been definitely encouraged.

It was reported sometime back that the Central Government was conducting an enquiry into the functioning of stock exchanges. It is its duty to see that rules and regulations are properly enforced and that undesirable tendencies are not allowed to develop. A major crash in the stock markets might upset the capital market and the Government and new industries might well experience difficulties in getting their requirements of capital for the post-war planning schemes.

ANNOUNCEMENT

THE EASTERN SHARE EXCHANGE LIMITED

5/1, ROYAL EXCHANGE PLACE, CALCUTTA

Phone No. CAL. 818

BOARD OF DIRECTORS:

1. Mr. Chandprasad More—Chairman.

(Annual General Meeting on 15-1-1946 at 11 a.m. Books closed from 8th January to 15th January, 1946).

Audited accounts for the year ended 31st March, 1945.

The Gross Profit for the year under review amounted to Rs. 1,16,80,069.

After providing for Debenture Interest, Debenture, Sinking Fund, Depreciation, Labour Benefit Schemes, Taxation and other appropriations and adding Rs. 2,71,267 brought forward from the previous year, there is available a sum of Rs. 41,04,466; from this sum there has to be deducted the First Interim Dividend of Rs. 10 per share declared in April last and amounting to Rs. 15,95,373; and the Second Interim Dividend of Rs. 14 per share declared in September, 1945, amounting to Rs. 22,33,521; leaving a balance of Rs. 2,75,572, which amount the Directors recommend to be carried forward.

Following the practice of previous years, to enable Shareholders to obtain their Dividends as early as possible instead of waiting for the Annual General Meeting, the Directors have distributed what would have been their recommendation of a Final Dividend, in the form of the above Second Interim Dividend, as Rs. 14 per share.

Works and Production.—Now that hostilities are over it is possible to give information of the Works activities. Pig Iron and Coke produced during the year was 4,35,464 tons and 5,24,423 tons respectively. These figures are below capacity production and were occasioned to a large extent by restricted supply of Coal delivered to the Works. The Coal position caused considerable anxiety as apart from shortage of supplies there was a deterioration in the quality.

The Foundries at Kulti were actively engaged throughout the year, the total output of Castings being 53,604 tons, of which 21,812 tons were in Cast Iron Pipes.

From the Collieries, gross raisings totalled 3,51,133 tons of which 1,87,881 tons came from Noonodhi Jitpur, 1,09,212 tons from Ramnagore and 54,040 tons from Chasallah Collieries.

By-Products from the Coke Plants at Hirapur & Kulti were as follows:—
 Coal Tar ... 16,737 tons
 Sulphuric Acid ... 8,013 "
 Sulphate of Ammonia 5,380 "
 Naphthalene ... 92 "

All plant and Machinery and Buildings at the Works, Ore Mines and Collieries were maintained in good order.

Considerable Capital Extensions are in process of completion, the principal being the installation of a new Spun Pipe Plant. This Plant when installed will enable pipes to be centrifugally cast instead of Vertically Cast. One of the advantages of Spun Cast Pipes will be that longer and lighter lengths standing up to higher pressure can be supplied than is possible by present methods. Work is also proceeding on a link up Railway track between Kulti and the Hirapur Works. With the installation by the Steel Corporation of Bengal of a Duplex Plant at Napuria, the Corporation's off take of Hot Metal will be greatly increased, and when one of the Hirapur Furnaces are down for periodical

relining, the capacity of the remaining Hirapur Furnace will not be capable of fully supplying the Corporation's requirements of Hot Metal. With the completion of this linking track deficiencies of supply from Hirapur will be met from the Kulti Furnaces.

The Directors have also under consideration the installation of a new set of Coke Oven batteries and the mechanisation of Kulti Foundries. It is not expected, however, that these two latter extensions can be completed before the expiry of two to three years.

Sales.—Excluding the Iron used in the Company's own Foundries, Sales of Iron were:—

	Export	Local
Steel Corporation of Bengal	1,05,128 tons	1,79,864 "
	1,78,920 "	

In addition to the Sales of Pig

(Annual General Meeting held on 21st December, 1945).

Audited accounts for the year ended 30th June, 1945.

The Calcutta Factory had another satisfactory year.

Soda Ash was first produced at the Khewra Factory on the 15th August, 1944, but production was interrupted on a number of occasions owing to shortage of labour, and to various teething troubles such as are normally to be expected in starting up an Ammonia Soda Plant. From the beginning of March to the beginning of August, 1945, when the plant was closed down for its annual overhaul, regular production was maintained apart from three short stoppages. Production was again commenced in the middle of September and has been maintained satisfactorily up to date. The quality of the Soda Ash has shown improvement

during the year. Operating costs have been heavy during the initial year of production, but the Directors nevertheless consider that the Company's results justify the payment of a small dividend on the Ordinary Shares.

After provision has been made for Depreciation the Accounts disclose a nett profit for the year of Rs. 1,88,317; to which has to be added the balance of Profits from the previous year Rs. 3,29,719; Total Rs. 5,18,036; against this the Directors have declared and paid Preference Dividend, free of British India income-tax for the year to 30th June, 1945, Rs. 1,55,000; leaving an available balance of Rs. 3,63,036.

The Directors recommend payment of a dividend on the Ordinary shares of 24 per cent, free of British Indian Income-tax in respect of the year ended on 30th June, 1945. This dividend will absorb Rs. 1,55,000, leaving a balance of Rs. 2,08,036 to be carried forward.

Secretaries.—For Imperial Chemical Industries (India), Ltd.

Authorised Capital—Rs. 5,00,00,000. Issued and Subscribed—Rs. 93,00,000 in 6,20,000 Ord. of Rs. 10 each and 31,000 5 per cent Cum. Pref. of Rs. 100 each, both fully paid up.

(Half-yearly General Meeting on 22-12-1945 at 11-10 a.m. Books closed from 8th December to 22nd December, 1945).

Audited accounts for the half-year ended 30th September, 1945.

They show a profit of Rs. 6,14,746-7-7. After providing Rs. 4,05,308-0-0 for taxation (including Excess Profits Tax), Rs. 40,108-0-0 for depreciation and placing Rs. 40,000-0-0 to War Contingency Reserve, there is an available balance at credit of Profit and Loss Account of Rs. 1,42,192-4-6 which includes Rs. 12,861-12-11 brought forward from last half-year.

The Directors propose to dispose of this as follows:—

In paying a Dividend on the preference Shares at the rate of Rs. 7 per cent per annum, without any deduction for income-tax, paid by the Company, Rs. 52,500-0-0; in paying a Dividend on the Ordinary Shares of Rs. 4 per share, without any deduction for income-tax, paid by the Company, Rs. 80,000; and in carrying forward Rs. 9,692-4-6; Total Rs. 1,42,192-4-6.

Coal supplies during the half-year were inadequate and the mill worked only intermittently. Out of the total of 1,364 permissible working hours, only 460 could be utilised, and results for the six months were seriously affected.

Mg. Agents.—Messrs. Bird & Co.

(Half-yearly General Meeting on 22-12-1945 at 11-5 a.m. Books closed from 8th December to 22nd December, 1945).

Audited accounts for the half-year ended 30th September, 1945.

They show a profit of Rs. 1,85,516-10-8. After providing Rs. 25,000-0-0 for taxation and Rs. 1,08,002-0-0 for depreciation, there is an available balance at credit of Profit and Loss Account of Rs. 73,827-9-2 which includes Rs. 20,000 transferred from Reserve Account and Rs. 1,312-14-6 brought forward from last half-year.

The Directors propose to dispose of this as follows:—

In paying a Dividend on the Preference Shares at the rate of Rs. 7 per cent per annum, without any deduction for income-tax, paid by the Company, Rs. 26,250; in paying a Dividend on Redeemable Preference Shares at the rate of Rs. 4 per cent per annum, without any deduction for income-tax, paid by the Company for the period from 28th July to 30th September, 1945, Rs. 7,968-12-0; in paying a Dividend on the Ordinary Shares of Rs. 2 per share, without any deduction for income-tax paid by the Company, Rs. 29,974; and in carrying forward Rs. 9,634-13-2; Total Rs. 73,827-9-2.

Coal supplies during the half-year were inadequate and the mill worked only intermittently. Out of the total of 1,364 permissible working hours only 252 could be utilised, and results for the six months were seriously affected.

As shareholders are aware, fresh capital was required for the purchase of modern mill machinery, orders for which have already been placed. The directors decided to issue Redeemable Preference Shares of Rs. 100 each for Rs. 10 lacs at 2 per cent premium ranking for dividend at 4 per cent per annum without deduction for income-tax paid by the Company from the 28th day of July, 1945. The proceeds of this issue have been invested in accordance with directions from Government of India pursuant to the Control of Capital Ordinance and will remain so invested until required by the Company for payment to machinery manufacturers.

Shareholders will recollect that in 1942, the Company issued Bonus Ordinary Shares in the proportion of one Bonus Ordinary Share for every two Ordinary Shares held. Fractional certificates, each representing half a share, were also issued to shareholders en-

titled thereto. These fractional certificates entitled the bearer of every two of them to apply to the Company for an allotment of one further Bonus Ordinary Share and shareholders could either acquire a further fractional certificate and apply for an allotment of a share or they could sell their fractional certificates. Up to date 26 fractional certificates are still outstanding and the Managing Agents have informed the Directors that they are prepared to purchase the fractional certificates on the basis of the current market rate for the shares. Shareholders still in possession of fractional certificates may accordingly get in touch with the Managing Agents for the purpose if they so desire.

(Half-yearly General Meeting on 22-12-1945 at 11-35 a.m. Books closed from 8th December to 22nd December, 1945).

Audited accounts for the half-year ended 30th September, 1945.

They show a profit of Rs. 3,71,661-10-1. After providing Rs. 2,53,928 for taxation (including Excess Profits Tax), Rs. 29,840 for depreciation, there is an available balance at credit of Profit and Loss Account of Rs. 97,657-3-7, which includes Rs. 9,763-9-6 brought forward from last half-year.

The Directors propose to dispose of this as follows:—

In paying a Dividend on the Preference Shares at the rate of Rs. 7 per cent per annum, without any deduction for income-tax, paid by the Company, Rs. 52,500; in paying a Dividend on the Ordinary Shares of Rs. 6 per share, without any deduction for income-tax paid by the Company, Rs. 44,987-10-0; and in carrying forward Rs. 169-9-7; Total Rs. 97,657-3-7.

In accordance with arrangements, Dalhousie Mill absorbed all the working hours of the mill that were permissible under the working time agreement of the Indian Jute Mills Association except for a short period during August, when Dalhousie Mill was closed due to coal shortage. It is hoped that the hours thus lost will be made up at a later date.

The financial arrangements, already reported, between the Company and The Dalhousie Jute Co. Ltd., for the distribution of profits have continued during this half-year.

As shareholders are aware, fresh capital was required for the purchase of modern mill machinery, orders for which have al-

ready been placed. The Directors decided to issue a Debenture Loan of Rs. 20 lacs at 2 per cent premium bearing interest at 4 per cent per annum, from the 1st of July, 1945, which loan was fully subscribed. The proceeds of this issue have been invested in accordance with directions from Government of India pursuant to the Control of Capital Ordinance and will remain so invested until required by the Company for payment to machinery manufacturers.

Shareholders will recollect that in 1942, the Company issued Bonus Ordinary Shares in the proportion of one Bonus Ordinary Share for every two Ordinary Shares held. Fractional certificates, each representing half a share, were also issued

PAYMENT OF DIVIDENDS

By Companies under the management of
ANDREW YULE & COMPANY, LTD.

All dividends proposed ON AND AFTER 1st JANUARY, 1946 by the undernoted Companies will be declared payable to registered shareholders or their mandatees only, and IT WILL NOT BE NECESSARY FOR SHAREHOLDERS TO APPLY FOR THEIR DIVIDENDS.

(Application should however CONTINUE to be made as hitherto for any dividends declared BEFORE THE END OF 1945.)

It is accordingly recommended that—

- (1) All persons holding shares on blank transfer should forthwith register their shares in their own names.
- (2) All shareholders desiring dividends to be paid to banks or other mandatees, should register mandates with the respective Companies forthwith, on Mandate forms which will be supplied on application to the Managing Agents.
- (3) Intimation of any change of address should be notified immediately to the Company.

Sudarsan Oil Mills

With the South Indian Peninsula a prominent producer of oil seeds, it is but natural that a larger number of factories producing vegetable ghee and other products are proposed to be started in the area which grow in large measure oil seeds. The Sudarsan Oil Mills Limited (announcement published elsewhere in this issue) is one of the 27 vanaspati manufacturing factories permitted to be started by the Government of India having a total annual production of over 1 lakh tons. The Government of India, in consultation with the Government of Madras, have permitted 7 factories to be started in the province with an annual production of about 21,000 tons. Sudarsan Oil Mills is proposing to acquire a

Star:—(13th) 17,

fer to General Reserves is Rs. 1 lakh, De-benture Redemption Fund Rs. 1 lakh and Dividend Equalisation Fund Rs. 1 lakh. The Ordinary dividend has been increased to Re. 1-8 per share from Re. 1 per share formerly. The amount carried forward is very much higher at Rs. 53.866 against Rs. 12.775 brought in.

Both Sugar factories worked at a loss. Rosa Sugar Factory crushed 1,446,000 mds. of cane, some 150,000 mds. less than the previous season. Much of the Cane handled was stale due to holds up of Rail-borne supplies added to which a succession of minor breakdowns in the Power

House of the Company supplying Electric current to Rosa made it both impossible to crush to capacity or maintain reasonable efficiency. The position was further aggravated by a shortage of fuel. The outlook for the current season is, however, more hopeful.

The sudden rise in New Beerbhoom to Rs. 55 from Rs. 48 is stated to be due to the reports that the company has sold coal-bearing lands for Rs. 13 lakhs. As Bokaro and Ramgur have improved from Rs. 38 to Rs. 64 on similar reports it is said that New Beerbhoom should be quoted likewise. The company is reported to be doing well and a dividend

of 20 per cent per annum was paid in respect of the working for the half-year ended April, 1945.

Bararee Coke have attracted the attention of investors during the current week and the shares have appreciated in value by three points to Rs. 41-4. The company has a good financial position. Good dividends have been paid over a period. On the basis of the last dividend of 15 per cent, the return is 4.0 per cent tax-free. The share is worth the attention of the discerning investor especially as there has been no large appreciation in the quotation so far.

Watch-dog

BOUQUETS & BRICKBATS

(From our Readers)

End Emigration:

Ending emigration is not a bold and useful policy. I am afraid it is not also practicable. The Englishmen emigrated and have done well. The Germans demanded rights for their emigrants. The whole of history is the movement of people from one country to another. And imagine for a moment the position of the world if people did not go from one place to another! The world would not have been developed at all. America would have remained an uncivilised country with Red Indians alone. In India we would not have had Railways, Telephones and indeed all the modern amenities if the Englishmen had not come here—at least so the Englishmen say! So it is both unhistorical and impractical to stop emigration. In India there is overpopulation. The standard of living is low. If all Indians who are abroad are to be got here we will have another famine. Let the adventurous go forth into the wide world. But if foreign Governments do not treat our men well, it is for our Government to take up the cause of our nationals. If the Government is inefficient the people have to depend on their own resources. Why should Indians, say in South Africa, not organise themselves and stand on their own against the Europeans who have also emigrated into that country?

AN EMIGRANT.

Sales Tax For Bombay:

As you have indicated in your note on the subject the Bombay Government should not proceed with the proposed Sales Tax. It is no doubt true that the Bombay Government wants to augment its resources to meet its increased and increasing expenditure in connection with the post war plans.

But considering the fact that the post war plans have not been formulated in any great measure and involve no great expenditure where is the necessity for this tax? More over, the elections are to be held soon. And responsible Government will come into existence. It is but proper that a tax of this far reaching character should be levied by a popular Government. The present Government should, therefore, be well advised in postponing this measure, as the Madras Government has done with the Agricultural Income-tax.

K. R. JOSHI.

Rice Bowl:

In a graphic way have you described your tour of some of the Eastern States and you have done a real service to the public and Government and to the States by drawing the attention of the Government to the existence of surplus rice in the States while the Government of India's official flies hither and thither like a crow in search of food.

It is true we got some shiploads of rice from Burma and other places. But the newspaper tells us that the whole SEAC area is not having enough rice. Indeed this question is receiving the attention at high 'Cabinet-Level.' We do not even take our bowl and knock at places which can give us some food. And this is done without knowing what our own resources are! Is it not time that accurate statistics are collected regarding the food position and food distribution planned effectively?

Indian Silk Industry:

I was interested to read your editorial note in your issue of December 1, 1945, as well as the informative letter, on the subject from Mr. Ian A. Clark, published in your issue of December 8.

The special advantages of the Indian Silk Industry which you have pointed out, the necessity of giving part-time jobs to our agriculturists and their families, the quick returns of the profit which the industry offers, all this should induce the Governments—Central and Provincial—which are said to be planning for raising the standard of living of the common man and ensuring freedom from want, to take effective steps to help the industry.

By common consent the Japanese silk Industry is the ablest. Training men abroad is the fashion of the day. Will it not be useful to send some sericulturists to Japan to study the Industry there. The Press reports that a textile delegation with an Indian is visiting Japan. Will the Government give their attention to the question of sending sericultural experts?

C. R.

Rubber Prices:

From your editorial article on 'Rubber Prices', it appears that the Rubber Planters are threatened with immediate ruin and that the industry itself will perish, if the present price is reduced. And too many plausible arguments are advanced to defend the Planters' opposition to a reduction in price. If rubber prices had gone up only 66 per cent during the war, while cost of living of the labourer had risen to 200 to 300 per cent, either the labourers should have been having a raw deal or the planters losing heavily. I do not know what really happened; but the planters seem to have grown only fatter. It is a pity you overlooked the fact that the 1937 price for rubber itself was not a competitive price. Rubber was an internationally controlled commodity; and the control was always in favour of the big producers, who were suffering too much under a protected economy and cannot face any decline in price!

INDIAN FINANCE

Fact Parade

U. S. Gold Reserves:

The Federal Reserve System disclosed that the United States gold reserves have risen by 16 million dollars. This is the first advance in three months.

The increase reflected purchases of American goods by a foreign country by means of earmarked gold. The country's identity, however, is not disclosed.

Meanwhile the United States inventory showed that gold in the reserves is worth 20,045 million dollars.

Canadian Loan to Britain

Canadian trade circles believe that Canada will provide Britain with a \$1,000,000,000 loan on terms similar to the Anglo-American Loan Agreement.

They pointed out, that if Canada extends the credit in two or more loan agreements, the initial credit probably would fall below the \$1,000,000,000 figure.

These circles said that such a loan will not solve Canada's Empire trade problems, which are more complicated than India's or any other commonwealth country, because although Canada is within the Empire and entitled to Imperial Preference she does not belong to the Sterling Bloc.

It is understood that a Canadian Mission will visit London to study the needs for Canadian goods as the basis for determining the size of the contemplated loan.

U. S. Defence Reserves

The Senate passed a Bill providing tariff and duty-free entry into America of strategic materials desired by the U. S. Government from abroad to replenish defence reserves.

Devaluation of Franc

British Treasury officials expect an almost immediate devaluation of the French franc probably to 480 francs per sterling. The present rate of 200 francs has long been unrealistic.

The immediate cause for the action is not Bretton Woods (under which France could claim an extension of time) but the fact that the present rate is a handicap.

U. S. Australian Trade

Acting American Trade Minister in Australia, Mr. Minster's explanation regarding United States intention to scale down tariffs aroused enthusiastic support. Mr. Minster said that the general intention was the promotion of mutually advantageous trade relations by reciprocal concessions.

Australian public opinion is that Australia would be prepared to make considerable concessions to America and other countries in return for similar concessions which will secure additional markets for Australian products.

It is believed that the essential monetary exchange will be examined and a bold immigration policy will be encouraged to secure full advantages for any reciprocal concessions and Government will be requested to assist business experts to travel abroad to enable them to explore best possibilities to secure export markets.

Egypt Ratifies Bretton Woods Plan

The Egyptian Chamber of Deputies has ratified the Bretton Woods Monetary Agreement.

Speaking in a debate, Makram Pasha, the Finance Minister, told the Chamber that an agreement had been reached for the extension until March 31, 1946 of arrangements due to expire at the end of this month for the supply of hard currencies to Egypt. This agreement would shortly be submitted to the Chamber.

Soviet Coal Production Plan:

The Soviet Union plans to make Madaglyasin, in Southern Russia, the greatest coal producing area in Europe, surpassing the Ruhr, in 10 to 15 years' time.

At present production is reported to be about half the pre-war figure, but the great devastation carried out by the Germans is being restored so rapidly that the pre-war output is expected to be equalled by 1927.

Radio-Active Ore on Rand

The possibility that the main Witwatersrand may be a future source of atomic energy is causing much excitement among Johannesburg mining experts, reveals the Sunday Express City correspondent. Cables from South Africa show that photographs have disclosed very clear emanations from radio-active Rand ore.

It appears that methods of recovering radium and uranium from unmined ore reserves and also from huge mine dumps are already being studied, but the mining companies have put down a dense screen of secrecy over the work which is going on.

New Diamond Deposits Found in Brazil

Diamond deposits claimed to be the richest ever discovered in Brazil back-lands in Sao channel, a tributary of the River Paranaiba, Senor Lauro Melo, member of the Diamond Mine Union announced.

In the past fortnight diamonds valued at 500,000 dollars have been found.

HARNESSING THE WATERS

To create new sources of electric power and perennial irrigation India must plan to store the monsoon and the melting snows. To reinforce dams, to construct sluice valves and pipe lines, power houses and pylons, steel is essential.

The Fatigue Factor

The ideal length of a working shift for various types of work has been, and still is, a matter of considerable thought and research. The International Labour Office at Geneva has in particular paid a great deal of attention to the subject. Many factors have to be considered in addition to that of the nature of the work concerned. Type of workers, factory conditions, physical strain, mental strain, rest pauses and many others. Of recent years it has been particularly noted that even during a shift well within the physical powers of the workers output frequently falls during the middle portion. Formerly this fall off was termed the 'fatigue factor', but modern industrialists now know that it is not due to loss of physical energy but to falling concentration.

One of the most valuable means of combating falling concentration is tea. Hot tea served to the worker on the job is eliminating the 'fatigue factor' completely in many thousands of factories throughout the world. To those interested in this subject much valuable advice and assistance will be gladly given by the Indian Tea Market Expansion Board, 101, Clive Street, Calcutta.

1945—Retrospect

Looking back in retrospect, it is somewhat difficult either to clarify one's feelings towards the old year or appraise its principal events. Relief that it brought about the end of a war, which at times threatened to be unending or to end disastrously, is offset to some extent by the continuance of fighting in more than one area and of most of the privations of war time. The convalescence of the post-war period is in many ways more trying than the hardships of the war period; and it is natural, though perhaps not as justifiable, that the old year should leave the world in a spirit of sullen grousing rather than gratitude that the long war was at last brought to an end. If it is borne in mind that the war with Japan ended only in the middle of August, disappointment at the pace of progress since then will be tempered by the recognition that the old year included too few months of actual peace to show any recognisable improvement. That German collapse was much quicker than we dared to expect at the close of 1944 and that the Japanese war was ended almost abruptly are indeed something to be thankful for. If 1944 ended with a significant setback to the hopes which sprang up in the autumn of the year, 1945 lost no time in reviving them. Arno and Ardennes were soon forgotten in the intrepid march of the Red Army from Warsaw; and when the race for Berlin started, it was certain that only a miracle could enable Germany to recover. The uniqueness of the second world war was manifest when the end of the war in Europe failed to afford to the peoples of the world the relief which they had been waiting for for six long years. Though it was certain that Japan would never be equal to Britain and the U.S.A. after Germany had been disposed of, there was no warrant for thinking that the time factor could be altered very considerably. The atom bomb annihilated time and the world was soon out of the war. In this respect 1945 exceeded our most sanguine expectations of the earlier years of the war period. But in other respects, disappointment is a function of the hopes that were entertained rather than an index of the possibility that it held.

Strictly speaking, the problems of the post-war period are so vast and complicated that four or five months are too short a period for appraisal of the progress achieved. In fact, it is even now too soon to think in terms of specific problems. There is hardly a task of social or human importance which can be accomplished to any considerable extent within a period of months. The occupation of the territories of the defeated enemy countries and the disarming of their armed forces are the only tasks which can be performed with speed and completeness. Considering the room which the occupation of Germany affords for differences of opinion or conflict of interest among the Allies, it must be conceded that the technical problems of occupation have been solved with impressive expedition. In fact, the report that the American Army proposes to hand over the civil administration to the Germans as from the new year is a measure of the progress that has been achieved. In the case of Japan, General MacArthur has exercised an undivided dictatorship over fallen Japan; and the thoroughness of his methods has rubbed off the rough edges of the occupation problem in the Far East.

But in the popular mind, the post-war problem is the problem of building up a stable world economy and a stable world peace. Both, no doubt, require a long period for their accomplishment. But in the case of world economy, the task of repairing the ravages of war and providing relief where it is urgently needed is separate from the larger problem of reconstructing national economies on a new basis so as to reduce the elements of conflict, and maximize the possibilities of mutual helpfulness in the attainment of higher and higher levels of prosperity. In the case of world peace, every step taken by the Governments of the world from the day of the issue of the cease fire order has an unmistakable significance for the comparatively distant ideal of world peace and world prosperity are closely inter-linked and each can hinder or help the other cause.

It must be said of 1945 that, while its close has afforded great hope of healthy progress in the economic sphere, the political developments make but a mixed bag. There is still no reason to think that the victors in this war have learned to steer clear of the Scylla of a vindictive peace and the Charybdis of leaving the fallen foes free to prepare for a more favourable time for a renewed appeal to arms. Even less room is there for the belief that they have learned to assess the relation of the large groups of neutrals and involuntary belli-

gerents to the development of a major world conflict. The recognition that war is both contagious and infectious and that peace will continue to elude mankind if the nations are not mutually helpful in eliminating conflict from every sphere of national and international life is still conspicuous by its absence. For, on no other basis can we understand the growth of civil strife in China, the mischievous interference of foreigners in the disputes between subject peoples and their rulers and the fomentation of trouble by the Great Powers in the territories of the other nations. China, Indonesia, Persia and the Middle East have all got smouldering embers of war; which may well prove to be the sparks thrown out by the second world war to light up the third. If the lessons of the first two world wars had been grasped, these troubles would have been quelled long ago; and it would be possible for the peace-loving public all over the world to feel confident that we have seen the last of the Great World wars of our time. But as it is, none of the great powers has learned to see its immediate self-interest in proper perspective. Nervous of her imperialist interests, Britain feels called upon to preserve Java for the Netherlands and Indo-China for the French. Russia is unwilling to run the risk of neglecting strategic positions near her borders, while the U. S. summons little courage to stand up to these manifestations of power politics, which is clearly out of date.

Though these are depressing developments, it would be wrong to exaggerate their importance. To expect statecraft to change overnight is to miss the nature of the problem of world peace, which depends for its progress on the resolution of major conflicts among the Great Powers. The future may perhaps prove that the process, by which the Big Three have learned by frequent discussions to discuss common problems and proceed further on the basis of tentative agreements, is far more important than the disturbances which are occurring in Java or Persia. The progress achieved in the Moscow Conference of a week ago in the face of the failure of the Council of Five in London raises the hope that, despite occasional setbacks, the Great Powers may yet succeed in pulling together to bring the United Nations Organisation into being and to give it a fair start on the difficult road to success. At the moment of writing nothing is known about the upshot of the discussions on the atom bomb. But it is by no means unlikely that the "friendly spirit" of discussions on questions other than the procedure for the peace treaties, which the Moscow Conference refers to in the 'communiqué' issued at the suggestion of Mr. Brynes as a "Christmas message of hope to the world," actually prevailed at the Conference in Moscow. After all, the process of eliminating conflict from the relations of the Great Powers is by no means a simple one; and the sentimentality of the common man is not quite a valid standard of judging questions of high policy.

While thus 1945 has nursed the hopes of world peace without being too kindly to it, it has been distinctly less niggardly in inducing hopes of world prosperity. As has been said already, its performance has been little to speak of. Over large areas of the world, hunger and cold are even more severe than during wartime. Rationing and controls press as hard on life as during the war even in countries which, one would think, are more favourably placed. The task of reconverting national economies from wartime to peacetime basis has made little headway in any country, except perhaps Russia, where a new five year plan is said to have made considerable progress already. In so far as war-time controls are expected to merge into the controls of post-war planning, the days of plenty even for the well-to-do are still far away.

Nevertheless, 1945 has held out impressive promise, the more impressive because of the fear of utter disorganisation which it raised at one stage. Even before the war was over, attempts had been made through international conferences to provide for the better regulation of international financial relations during the post-war period. But the work done at Brettonwoods was worth little by itself, if only because it shirked one of the most vital problems of post-war international finance, namely, the problem of wartime balances, held in London. But even that little work was threatened with futility when the American Government declared immediately on the conclusion of hostilities with Japan the cessation of supplies of American goods to the Allies under the lend-lease act. Lend-lease supplies had been during the war years the main prop of more than one national economy and in the case of Britain she had come to depend on the U. S. for a large part of her supplies of the necessities of life which she was not in a position to pay for through ordinary commercial channels. The provision of a substitute for lend-lease thus

came to have paramount importance. But the conclusion of an agreement about the loan, which the U. S. was not only willing but eager to offer, was no easy matter, since, on the one side, Britain considered herself to be entitled to the continuance of lend-lease supplies and the U. S., on the other side, regarded British help for multilateral trade as a reasonable quid pro quo for the large long-term loan she was offering. The protracted nature of the Anglo-American negotiations with their frequent threats of complete breakdown was an ominous cloud which darkened the outlook of world economy towards the close of the year.

That this cloud has lifted is perhaps the best thing that could be said of the year now drawing to its close. It is not realised as widely as it should be that the value of the Anglo-American financial agreement is by no means confined to the principal negotiators. The fact that the loan enables Britain to play the same part in world trade as before the war, despite the change in her material position, is sufficient of itself to invest the agreement with international importance. But the more important aspects of it are firstly, that it is the starting point of the American policy of granting large loans to other allies as well, and providing the nations with a plenitude of dollars and bringing about the conditions in which multilateral trade can grow of its own accord. Secondly, it has made up for an important and even fatal omission of Brettonwoods by imposing on Britain the obligations to settle with her creditors and provide for the convertibility of sterling balances which are not written off by agreement with the countries concerned. Thirdly, it has at one stroke done away with the most important of the trade barriers at the present moment, namely, the Empire dollar pool and imperial preference. And lastly, it has removed the last vestige of objection to the ratification of the Brettonwoods agreement and enabled the International Monetary Fund and the International Bank to come into being. Judging by the foundations thus raised, it is reasonable to look for impressive progress in building work during the New Year.

A New Irrigation Policy

The Famine Commission laid proper emphasis on the vital role irrigation schemes will have to play in future planning of agricultural production. The Bengal Post-war Planning Committee have given priority to irrigation projects estimated to cost over Rs. 37 crores. The subject received conspicuous mention in the recent speeches of His Excellency the Governor of Bengal. The discussions at the Central Board of Irrigation which met at New Delhi in the closing week of November also showed that the Government are keen on starting work on some of the projects in view with the least delay. Not only are the Government enthusiastic in this direction and have given priority to Irrigation Schemes, but they have taken an entirely new approach to the whole problem.

Hitherto it has been the practice to construct dams and reservoirs with a single purpose, either irrigation or generation of electric power. The conception of a general plan of river development has not guided policy in the past. This has naturally resulted in lopsided progress. Addressing the Central Board of Irrigation at its inaugural meeting Mr. F. H. Hutchinson, President of the Central Board says "I view with great alarm some of the projects which are under consideration at the present time for the construction of isolated works on our rivers," and to illustrate the unwisdom of pursuing such a policy he quoted the President of the Tennessee Valley Authority "Not far from where I write are other rivers developed by private interests or public agencies. They will serve to illustrate the contrast. On these rivers it is the common practice to build a single dam without first having fixed upon a general plan that will ultimately ensure the full use of the whole river as a unit. There are dams built for the single purpose of power development. Such individual dams in order to yield an immediate return in power impair or destroy the rivers' full development of power at other sites, for they were not designed or built or operated to control floods and do not provide a continuous navigable channel. They now stand as massive barriers against the erection of multi-purpose structures."

Probably for the first time a clear indication of the need for a new irrigation policy in India was given by Dr. Ambedkar when he spoke at the Calcutta Conference on the Damodar valley scheme. "So far there has been an absence of positive all India policy for the development of water ways. Secondly there has not been enough realisation that our policy for water ways must be multi-purpose so as to include provision for irrigation, electrification and navigation" and we may add flood control.

It is true that as Lord Wavell pointed out in his opening address to the Central Board of Irrigation, the irrigated areas in India which is about 70 million acres is more than three times that of the United States, the next most irrigated country in the world and more than the combined acreage of the next ten countries with most irrigation—The United States, Russia, Mexico, Japan, Egypt, Italy, Spain France Chile and Java; but the comparison is by no means a reliable index of the extent of exploitation of available potentialities or the quantum of human welfare resulting therefrom. The neglect of public health problems particularly has neutralised in a considerable measure the attractiveness of newly irrigated lands in different areas; malaria has scared cultivators from rich virgin soil. There are now experts on hydro-electric works on the Central Irrigation Board and His Excellency the Viceroy has suggested the addition of a malaria expert. The failure to develop adequate transport facilities has been another handicap.

The Tennessee Valley Authority provides perennial irrigation affords protection against floods and provides cheap electric power. It is universally accepted to be one of the most successful multi-purpose river development schemes. The authorities in India have therefore accepted the T.V.A. as a model, for schemes to be worked out in the future.

The T.V.A. provides a model not only for co-ordinated plan but an independent centralised administrative control of the whole scheme. This aspect deserves special mention, because most of the schemes now contemplated could be finalised only on the basis of agreement between more than one Government. The Damodar Valley scheme for example involves the Bihar and the Bengal Government, with the Central Government also coming in to contribute to its financing. To instance but one among projects that have been held up through lack of agreement among authorities in the different jurisdictions concerned, the Tungbhadra project took over thirty years of intermittent multilateral negotiations between the Madras, Mysore, Bombay and Hyderabad Governments, before it could reach the final stage of settlement. Irrigation under the Government of India Act of 1935 is a provincial subject and as irrigational projects are being planned on the basis of regionalisation, decisions could be taken only if all the Provinces involved agree. As multi-purpose projects are bound to have vital repercussions on existing industries as also on industrial development of the future Governments might have to face pressure of business interests. All these factors make for delay which could be avoided only if the Central Government are prepared to exercise a measure of compulsion on the lines of the later stages of food control. Quick decisions are imperative also in view of the role irrigation projects could fulfil in the sphere of employment.

Under the Government of India Act of 1935, the Central Government can intervene only in case of disputes between the Provincial authorities, in matters concerning irrigation. The Central Government could not take any part at the collaborative stage. But the creation of the Central Technical Board, the Waterways Commission and the Navigation Commission are steps which imply a recognition of the need for the Central Government assuming larger responsibilities in this direction. The dependence of the Provinces on the Centre for finances provides another justification for a larger measure of central control and co-ordination. The Damodar Flood Inquiry Committee suggested a way out of the constitutional difficulty. The Committee recommended the transfer of flood control, soil conservation, forests and rivers to the central sphere. But the problem itself would not arise, if the respective governments show a willingness to arrive at a mutually satisfactory settlement, at the right time. Possibly, there would be a change of government at the centre and in the Provinces, before the plans are finalised, when the whole constitutional aspect might change. But that is looking into a rather problematical future. Even as things stand to-day, the governments should have no reason to relax the enthusiasm they have been showing of late on the question of river development.

Editorial Notes

Salutary Tips:

In his presidential address at the Annual meeting of the Employers' Federation of India, Sir Homi Modi made a rambling review of the problems that have to be faced in the immediate years ahead and gave a few useful tips to those on whom lies the major responsibility for their solution. Sir Modi does not agree with Sir Ardeshir Dalal that an increase in note circulation implies a corresponding increase in purchasing power nor does he believe that the various steps contemplated by the Government to stimulate public and private spending would be adequate to the needs of the situation. Many would share his conviction that there are too many committees and individuals engaged in planning and that it is time that more active and practical steps were taken to achieve that development of agriculture and industry which is the common objective of all. As a first step towards this, he wants a radical simplification in Governmental methods. Recalling Lord Curzon's famous dictum that "departmentalisation is not a moral that 'departmentalisation is not a moral', Sir obliquely, it is an intellectual hiatus", Sir Modi hopes that Sir Richard Tottenham, who has been appointed to review the secretarial machine and procedure would be able to satisfy expectations. Pointing to the inability of India to buy equipment on a large scale from the United States and other countries with hard currencies as a factor working against rapid industrialisation in India, he endorses the Industrial Delegation's suggestion to set up some organisation which would locate and report on the equipment available in the United States and facilitate the procurement, from the various Disposal boards of types of machine suitable for use in India. Such an investigation would not only provide precise and definite information but obviate the necessity of different bodies visiting foreign countries with no co-ordination of their labours. Sir Modi feels that the principles on which war taxation had been based should be radically revised and the whole taxation policy of the government immediately overhauled as a part of the much needed drive for any appreciable advance on the prewar standard of living. His views on the controversial subject of the place of free enterprise in planned economy, are indicated by his extolling the achievement of countries like United States, who are still in the capitalistic framework,

as against the economic blessings that Soviet-Russia has been able to secure to her citizens. While industrial legislation has to be appreciated when it comes in moderate and timely doses Sir Modi warns that too fast a pace would be advantageous neither to the producing interests nor to the consumer.

Chain of National Laboratories:

The projected chain of national laboratories has been explained by Sir Ardeshir Dalal, the Planning Member, when he laid the foundation stone of the Central Glass and Ceramic Research Institute at Jadavpur. Planning of the National Chemical Laboratory and the National Physical Laboratory is under working and it is expected that construction will start from early next year. About 400 acres have been acquired near Poona for the construction of the National Chemical Laboratory. Land has been secured for building the Physical Laboratory which is to be located at Delhi. The Council of Scientific and Industrial Research would shortly select suitable scientific staff for the Chemical and Physical Laboratories and it is also contemplated that a few men would be sent abroad for training in latest developments. The proposed National Metallurgical Laboratory will be situated at Jamshedpur and Dhanbad is considered the best place for the Fuel Research Station. Sir Ardeshir also stated that besides the five Laboratories the Council is also scheming for research institutes in Food Technology, and Road and Building Research. A start will be made in co-operation with the Civil Engineering College at Roorkee. As regards the financing of the project of a chain of useful Laboratories and Institutes, the Member pointed out that though the Government of India had promised one crore of rupees for the five Laboratories and some industrialists have given substantial contributions, much larger co-operation from all industrialists should be forthcoming.

Glass technology has advanced by leaps and bounds during the past five years. Glass is now an important material for building constructions and glass fabrics have found extensive uses in making covers for aeroplane hangers where they have been found to be proof against fire, fungus, and mildew, rot and vermin. Textile materials are also made of glass and glass-silk satins and brocades have been woven on looms and are found heat-resistant and fire-proof and are also capable of being "dyed" in a variety of attractive colours. India should not lag behind in the technological advance in glass manufacture and as Dr. S. S. Bhatnagar pointed out, the Council is doing its best to procure the latest and most up-to-date machinery and equipment for the Glass Laboratory. The Council has already deputed some one abroad for acquiring the latest knowledge in the design of furnaces and the Secretary of the Planning Committee will shortly go abroad to find out the latest advances in the scientific technique and the latest developments in apparatus and tools. Since the Chief bottleneck in the organisation of research is known to be want of technicians, the emphasis laid on training abroad will help in the effective organisation of research in India at an early date.

Reconstruction Of Bombay Docks:

Since the tragic explosion in the Bom-
bay docks last year the Port Trust au-
thorities have been planning to recons-
truct the docks along modern and up-to-
date lines capable of accommodating big
ships and with arrangements to
tackle the problem of the tidal
waves. The reconstruction plan
for the Bombay docks have now
come to a final shape and Sir Rama Rau,
Chairman of the Bombay Port Trust, has
outlined some of the important aspects
of the scheme. It is stated that the work
of reconstruction will be spread over 8½
years and the estimated cost comes to
about Rs. 2½ crores. The Princes' and
Victoria Docks will be thoroughly moder-
nised. The single gate entrances to the
Docks could be operated only for a limited
period each day owing to the tidal
waves and the movement of ships into
and from the Docks was also considerably
restricted. A scheme has now been out-
lined to provide for increased depth of
water in these Docks so as to make accom-
modation of ships of 27½ feet draught
with a tonnage of 8,000 to 10,000 such as
the Liberty, Fort and medium sized em-
pire classes of steamers inside the docks.
The ferry wharf passenger traffic is pro-
posed to be transferred from the north-
ern section of the Alaxandria Docks wall
to the Princes dock wall. On the eastern
side of the dam, opposite the Alaxandria
dock wall, oil berths will be constructed
at a cost of Rs. 26 lakhs. Schemes for
the construction of modern transit sheds
and warehouses in the older docks with
up-to-date mechanical equipment for the
rapid handling of the cargo are also
drawn up. Due attention has been given
to the housing of labour and a scheme
for the construction of suitable houses for
additional Port Trust labour at a cost of
Rs. 28 lakhs has also been prepared.

Steel Industry In Australia And Britain

Vigorous measures have to be taken to
increase the production of pig iron and
steel in this country if the development
plans hatched by the Government of
India and the States have to be achieved
in time. But there is another pressing
reason why all-out help must be given
for the Indian Iron and Steel Industry
to expand as much as possible, and that
is the rapid growth of the steel indus-
tries in U.K., U.S.A., Australia and South
Africa. In those countries ambitious
plans are drawn up to speed up produc-
tion of steel and it is quite possible that
unless India also does her part in increas-
ing her own output of steel she will have
to feel the brunt of the competition from
foreign steel very acutely. It is now
known that during the war years Britain
produced 12.7 million tons of steel per
year. This compares well with the
figures for the period 1935-38 which
stood at 11.3 million tons. Imports of
steel into the U.K. rose to 3.7 million
tons in 1941 but for the first half of this
year the imports dwindled to 190,000 tons
The magnitude of the British achievement
can be fully gauged if one remembers
that this increase in British steel produc-
tion has been achieved during the critical
years when the richer imported ores
could not be had, when transport was
quite unreliable and the scarcity of cok-
ing coal was severely felt. The British
steel industry had already evolved its
own post-war production plan and it was
made known last July that the steel ingot-

production of the U.K. would be increased by 20 per cent in the near future. A five-year plan has been adopted at a cost of £120,000,000 for the modernisation and expansion of the British textile industry. 19 new blasting furnaces and many new smelting shops will be constructed. The existence of a Socialist Government, it is also known, is not to affect the Plan since the British Government do not contemplate the immediate nationalisation of the Steel Industry: even if they did, it will not interfere with the work of hitting the production target fixed.

The progress of the Australian steel industry is indeed remarkable. No greater proof is necessary than the fact that the Morris Company units have been started in Australia. Speaking on the special facilities available in Australia for the iron and steel industry Lord Nuffield is reported to have stated, "If we don't get in there in a big way others will get in first". He announced that 68 British factories would be sent to Australia to be welded and assembled at cheaper costs and to receive the finishing touches. The fact is that Australia is excellently placed in the matter of its iron ore in comparison with other countries. Australian output of iron and steel is very good and the costs are also known to be lower compared to the U.K. The position with regard to limestone and coal, is also quite satisfactory. The report that Australia has planned a big scheme for expanding its Iron and Steel Industry should, therefore, be carefully noted in this country.

South Africa has also progressed during the past six years and has been careful enough to prepare for the competition that lies ahead. Special attention has been paid to the key industries in this Dominion and a Ten-Year Plan for the production of steel aggregating about 1,300,000 tons by 1955 is said to be ready.

In India the Government are planning to increase the present pig iron production in this country to about 2½ million tons in a year. This target is not too ambitious for the immediate years to come because, on the one hand, we have enough number of development work to do, and on other, progress abroad is so rapid that we should also try to move fast.

Industrial Development in Australia:

Australia is busy making preparations for a higher tempo of industrial activity and the slight falling off in her export trade since the end of war will be more than compensated when the transitions arrangements are over. As regards the wheat industry attempts are being made to retain the advantages of wartime controls, though it is felt very difficult to persuade the people to submit to controls in peace time. Australian wheat-growers favour a sound and comprehensive stabilisation scheme and an inter-departmental committee has been appointed by the Australian Minister for Commerce and Agriculture to devise a plan for the stability of the wheat industry. Planning for the Australian food industry has three main objectives, viz., to fill their own larder, to send more foodstuffs for Britain and to be able to export more to the other units of the British Empire. As a result of the lessening of the requirements

by the American and Australian forces in the Pacific area, Australia is now in a position to export more to Britain and other countries. Air transport has been developed particularly to suit the needs of the food industry.

Recent despatches from Australia show that the future of the gold mining industry is considered bright in that country. The industry which was progressing well before the war was partly suspended from 1940. Even in 1940 the gold mining companies had declared dividends to the extent of £3,175,000 and this year it is reported that about 23 companies have already declared dividends. Western Australia produced 472,580 ounces in 1944 as compared with 1,172,950 ounces in 1938. Schemes for the reorganisation of the industry are well under way and steps have been taken to obtain key men to reequip the industry for post war purposes. Public opinion holds that the industry will revive within a very short time and will prove a major factor in Australian economy giving employment to labour and earning foreign exchange.

There is a project for increasing the oil refineries in Australia from two to five. The new company, Bitumen Oil Refinery of Australia, Ltd., purposes to operate refineries at Sydney and Melbourne and the California Texas Oil Company has agreed to provide equipment and send experts to Australia to instal the plant and train local personnel.

Possibilities of rayon manufacture have also been explored and the British rayon firm, Courtaulds, proposes to spend about £5 million on a factory near Newcastle. Plans are also evolved for the export of drugs and expanding the cotton textile industry. In order to cope with the possible demands from the new industries the Victoria Railways have programmed development schemes costing £15 million and the national gauge unification scheme is proposed to be achieved according to schedule.

Turko-Soviet Tension:

With the death of Kemal Ataturk, the cordiality which characterised relations between Turkey and the Soviet began gradually to wane. Political ideologies drifted farther apart. The neutrality which Turkey carefully and cleverly managed to maintain during the war not only proved costly to the Allies, but created another sore point with Russia. But during the war, the point of difference between Russia and Turkey, had to be submerged in the larger issues of the war and even diplomatic pressure could be carried only up to a point. Since the war, the question of control over Dardanelles and the revision of the frontiers, the two main points of dispute, have revived. Russia demanded a share in the control of Dardanelles as it is the only access she has to warm waters. Recent news despatches indicate that the claim to revision of frontiers is also being pressed on Turkey; it is said that Russia has claimed the return of the Provinces of Kars and Ardahan on the Russo-Turkish frontier on the ground that they are Armenian in composition. An Istanbul despatch says that the Armenian National Council of Alexandria has asked for the restoration to Soviet Armenia of Armenian Provinces forcibly annexed by Turkey in contravention of the Sevres Treaty which recognises these provinces as the property of the Armenian people. Though official confirmation is lacking for these reports, it can no longer be doubtful that the relations between Turkey and Russia have already reached a stage when they could not be permitted to stabilise and become a threat to peace. Already Turkish-statesmen have begun to talk of war in defence of their national rights. That neither Britain nor the United States view with sympathy the Russian claims should be obvious. The expansion of Russian influence in Central and South-East Europe has till now been tolerated, only because the Anglo-Saxon

powers are keen on maintaining peace at any cost. But the emotional strain involved in such a policy is a factor to be considered. That Britain is also generally inclined to defend the rights of the Moslem countries in the Middle East, though it is a trying job for her. The inclusion of Turkey in the international diplomatic menu will certainly make it still more sour."

Progress Of Indian Insurance:

The progress of Indian insurance companies in recent years, both of life and non-life business, has been spectacular. New business in regard to life policies at the present moment is mostly on account of Indian life offices and foreign companies no longer enjoy the dominant position of a few years back. The Indian Insurance Companies Act strengthened the position of Indian companies to a certain extent as with the rigorous measures under the new Act many foreign companies did not choose to continue their business in this country. In respect of non-life business foreign companies have still the bulk shares but it is satisfactory

to note that there too satisfactory progress has been reported.

The year 1944 was another year of satisfactory working for the Indian life offices. With the maintenance of the level of incomes at a fairly high level it was possible to report a further large increase in the amount of new business. Only with the increase in working expenses and the expansion in the volume of new business there has been an increase in the expense ratio. Premium rates had to be revised in many cases as the cost of procurement was high and the interest income showed a tendency to decline.

New life insurance business effected in India by Indian insurers during 1944, amounted to about 4,32,000 policies insuring a sum of Rs. 95.20 crores and yielding annual premium income of Rs. 5.12 crores, showing an increase over the previous year of about 1,49,000 in the number of policies, Rs. 32.26 crores in the sum insured and Rs. 1.64 crores in the premium income. The corresponding figure for Non-Indian insurers were about 19,000 policies insuring a sum of Rs. 11 crores and yielding a premium income of Rs. 0.62 crore, showing an increase over the previous year of about 6,000 in the number of policies, Rs. 1.82 crores in sum insured and Rs. 0.13 crores in the yearly premium. The net amount of life insurance business effected by Indian offices and in force at the end of the year amounted to about 19.4 lakhs policies insuring a sum of Rs. 366.15 crores and having a premium income of Rs. 18.10 crores, recording an increase over the previous year, of about 3.12 lakhs policies, Rs. 72.07 crores in the sums insured and Rs. 3.26 crores in the premium income. The corresponding figures for non-Indian insurers were about 1.87 lakhs policies insuring a sum of Rs. 76.98 crores and having a premium income of Rs. 4.33 crores.

The net amount of life insurance business effected outside India by Indian companies during the year and the amount remaining in force at the end of that year was about 9,200 policies insuring a sum of Rs. 3.06 crores and about 69,000 policies insuring a sum of Rs. 3.06 crores and about 69,000 policies insuring a sum of Rs. 18.73 crores respectively.

The total revenue income for the year of Indian and non-Indian companies in respect of their life business in India was Rs. 22.99 crores and Rs. 6.13 crores respectively. The total outgo including amounts disbursed as claims, surrenders, etc., was Rs. 13.08 crores and Rs. 4.42 crores respectively, the balance of Rs. 9.91 crores and Rs. 1.71 crores representing the increase in the life funds of Indian and non-Indian insurers respectively.

From under Rs. 5 crores sometime back the life offices are thus adding to their assets every year by over Rs. 10 crores. This sum will tend to increase as the years go by.

The recommendations of the Superintendent of Insurance regarding a reduction in the tax burden on insurance companies in order to offset the loss in interest in

come will be welcomed by the life offices. He has also supported the request made by insurers transacting life business for a further reduction in the ceiling rate of tax applicable to them.

It is gratifying to note that Mr. L. S. Vaidyanathan, Actuary of the 'Oriental', ever since he came on deputation as Superintendent of Insurance since 1943, has given an orientation to the Insurance year book, the annual Govt. publication, by dealing in his reports important aspects affecting insurance business instead of allowing it to continue as a mere compilation of statistics. For the third time, in the Insurance year book, 1945, he has set out the problems that confront the insurers such as low interest yield, threat of nationalisation, high expenses, etc., and has also suggested measures to overcome them. Conceding that cheap money policy is perhaps a necessity in the larger interest of the nations, he has recommended a lower limit to the ceiling tax applicable to insurance companies so that the insurers can get a decent net yield on their investment and can also keep down the cost of insurance. We endorse this recommendation and trust that it will meet with favourable consideration at the hands of the Govt. At the same time, the Superintendent of Insurance is not slow in drawing the attention of the insurance companies to the necessity of utmost economy in the management of the business so as not only to offset the low yield but also to prove that nationalisation is not necessary, at least, on the score of preventing waste. Another suggestion of his, namely writing insurance business without medical examination, subject to some necessary conditions so as to avoid certain expenses also requires consideration and adoption by insurance companies especially as it comes from one who is associated with a large insurance company for a long time and has considerable experience in the acceptance of risks.

The advice of the Superintendent of Insurance given in an earlier issue to insurers to recalculate their premium rates on a lower rate of interest on account of the falling yield has, it appears, been well received and acted upon by many insurers. With adequate premiums and economy in the management, the insurers in India have a bright future and as Mr. L. S. Vaidyanathan points out in his report the peak of new business now attained will be maintained and even passed ultimately had its full effect on the national economy.

The problems of agents, who form an important part of the insurance structure, have been dealt with for the first time in the year book. After analysing the average income of an agent which works out to mere Rs. 30 per annum, the Superintendent of Insurance rightly points out that this is due to the indiscriminate appointment of casual agents—that is agents, mainly working part time, who do not take to this line seriously. Such appointments are not only not conducive to the procurement of sound and lasting business but also lowers the prestige of the profession. Such casual agents neither have the necessary training nor the time to offer efficient advice and service to the policyholders. The Superintendent of Insurance after drawing attention to the conditions that obtained in U.S. America before a trained agency staff was created, suggests that in India also a beginning must be made to start an institute to train agents. It is, however, now in the hands of the Insurance Companies to combine and act so that both the companies and the policyholders may be benefited by the efficient service that trained agents can offer.

Soviet Five-Year Plan :

Reports are streaming in that Soviet Russia is silently preparing for a gigantic effort at changing the economic life of the different parts of her far-flung territories. War with Germany has taught the Soviet planners new and valuable lessons and the recent developments of the Caucasus will be retained as a permanent feature of the post-war plan. The absence of full understanding with the other big powers, the power politics in the Middle East and the confused position in the Far East have all contributed to a careful scheming of a new five-year plan in Soviet Russia and utmost secrecy is kept regarding the statistical details of the schemes drawn. The damage caused by the Nazi hordes is indeed great and special priority is given to housing conditions for the workers. The new Five-Year plan for the complete restoration and development of the U.S.S.R. economy during the years 1946-50 which will go into operation in the near future, calls for 5 million new houses to replace those destroyed during the war and to relieve the congestion in several localities. Restoration of the heavy industries is given due importance and development in the Donbas and the Urals is to be intensified. A new hydro-electric station estimated to be twenty times more powerful than the famous Dneiper station is proposed. The Molotov Autoplane at Gorky has fixed a target of 1,000 motor cars and lorries per day. 2,000 army aircraft will be converted to civilian use in the near future and the passenger and freight traffic on civil airlines will be posted to at least five times its pre-war figure. The Soviet Government's anxiety to have free access to all the seas of the world is well known and plans are ready for operating the Soviet shipping lines in the Baltic, the Barents, the White Caspian, and the Black Seas. The ports in the Far East will shortly be restored and ship-building activity will be speeded up to

cope with the pressing demands. The Railway Plan appears quite ambitious and schemes for covering all places, for strategic and other purposes, are outlined. About 3 million railway workers will be employed to construct lines to Siberia, the Far East, the Urals and the Central Asia. Schemes are also evolved for providing hospitals for the countryside and in the Ukraine alone provision is made for installing 60,000 beds in country hospitals. A strong drive against malaria and tuberculosis is also envisaged.

Further Increase In Note Issue:

The returns of the Reserve Bank for the week ended December 21, 1945, show that there has been further expansion in currency by Rs. 10 crores against sterling securities. Total notes issued were Rs. 1,214.32 crores against Rs. 1,204.56 crores and notes in circulation Rs. 1,202.34 crores against Rs. 1,197.08 crores. There was an increase in notes held in the banking department to Rs. 11.98 crores from Rs. 7.49 crores. Sterling securities were higher by Rs. 10 crores at Rs. 1,097.33 crores. Rupees coin were slightly lower at Rs. 14.73 crores against Rs. 14.98 crores.

In the Banking department there was a jump in Central Government balances to Rs. 476.50 crores from Rs. 458.54 crores. Other government deposits recorded a rise of a little over Rs. 1 crore to Rs. 20.07 crores. There was a rather sharp decline in bank deposits to Rs. 67.56 crores from Rs. 74.34 crores. Even after the transfer of Rs. 10 crores to the issue department there is a rise in foreign balances to Rs. 561.70 crores from Rs. 555.48 crores. Investments are further higher at Rs. 22.56 crores against Rs. 21.27 crores.

The Central Government was again unable to get its requirements of treasury bills in full and applications amounted to only Rs. 1.33 crores against the offer of Rs. 4 crores. All tenders at Rs. 99-14-3 and were accepted in full. The average discount rate was unchanged at seven annas per cent. The offer for the next week has been maintained at Rs. 4 crores.

Clive Street Gossip

In my gossip of the last two weeks I was concerned to show that some of the basic notions of economic thought in the West are intrinsically unsound, incongruous with our national culture and unacceptable for the purposes of planned economic development. Of these notions, I took up for special scrutiny the idea of the illimitability of human wants and showed that it would be untrue and invalid from the individual as well as the social standpoint if it were not understood in a special sense, but taken to mean that man's economic salvation lies in a stubborn refusal to accept any limits to his wants. There is no place in any rational view of human happiness for discontent with one's lot in material life; and if there is any conflict between the contentment of individuals and the progress of the community, it is resolved by the recognition that progress lies not in ceaseless addition to individual requirements, but the steady and rapid increase in the quality of social life through the improvement of its technological basis. Though this idea was explained at length in last week's gossip, it may not be without advantage to clarify further its real content. It is too often forgotten that the end of economics is to end itself, not to perpetuate, increase and magnify its problems. Man is not a food-hunting animal with a voracious, insatiable appetite for more things and more and more of each thing. Homo sapiens is sapient and looks for the means of being sapient and the scope for sapience. He does not want eternally to prowl around like hungry wolves, knowing neither rest nor satiety. The superiority of man over animal will remain an unctuous untruth, if the economic problem in the sense of a scramble for scarce things is to be with him for ever.

In that sense and to that extent, the end of economics is to end itself. The satisfaction of material needs should not take up all the time and energy of the human individual. Social life should be so organised and resources so mobilised and utilised that the economic problem will not weigh down the individual like a deadweight. This contentment of the individual, it is important, however, to remember, is capable of achievement both on the basis of a primitive economic system where each individual catered to most, if not all, of his needs and in a modern economic organisation with its elaborate and minute division of labour and its impressive array of consumable goods and services. The difference lies in the fact that the primitive system permitted the exaltation of contentment and a life of the mind only to a favoured few, while the modern system can bring it to the door of all members of society. What makes possible a life of the mind and all the refinements it yields is not complete freedom from work, which is of dubious value and benefit, but the small place which economic activity has in the life of the individual and the extent to which he is free to turn his attention and energies to the realisation of higher values. The difference between a primitive and a modern economy from the stand-point of the individual lies in the scale on which each system facilitates contentment and

a life of the mind. But the gains of science will have been thrown away, if men should continue to insist on the realisation of unknown wants and allow economics for ever to fill the whole canvas of life. It is the idea of an endless list of wants that lies behind the opposition to reduction of working hours, unemployment relief and all the measures of relief to the working classes which the productive technique of our time makes possible. Too few of us are able to realise that the test of progress lies in saving the average man from the cramping effects of his economic life. If the physical and mental strain involved in making a living and the time taken thereby should continue to hold man in bondage to his material needs, regardless of the progress of technique or the increase in the resources of the community or the race as a whole, then the prospects of cultural and spiritual development for the average man can hardly be said to have improved.

In the past, the higher classes achieved for themselves, through slavery and other methods of exploiting the masses of varying degrees of injustice and justification, a certain measure of freedom from toil. But this freedom was not always conducive to a higher culture. Exploitation militates against cultural progress both in its supposed beneficiaries and its recognised victims. But in economic conditions in which sufficiency for all was more or less impossible, the inequality which exploitation brought about enabled a number of individuals among the favoured classes to live a life of the mind and attain cultural and spiritual values. Whether or not such attainment was possible without such exploitation and inequality is more or less a speculative question. Ideally, it is no doubt possible. But historically, it obtained only in those communities which sought progress through a class division of labour, accepted social inequalities without serious qualms of conscience and provided the social background against which the cultural development of a few could stand out. There is no doubt that, if similar cultural attainments are to be made possible for the mass of mankind, the working classes should also have a similar relief from the pressure of arduous toil for long hours and freedom from the cares and worries of getting and keeping a job.

K. N. DALAL, (Managing Director.)

Relief from excessive strain in work is dependent on the progress of productive technique, while freedom from the worry of getting and keeping a job is a function of the wisdom and justice of the social organisation. But unless both are afforded in a reasonable measure to the average man as distinct from a handful of men who are members of the higher classes, there can be no pretensions to the reality of social progress.

The important point is the relation which relief in mental and physical strain bears firstly, to the illimitability of human wants and secondly, to what I have called the improvement in the quality of life as distinct from an increase in the quantity and variety of consumable goods and services. The fact, that human wants can be limited, and, at some stages and in some contexts, should be limited, should not blind us to the value of unlimited wants as a spur to social progress in general, and economic progress in particular. It may be difficult to trace the links between the two. But the faculties of invention and commercial and business enterprise are not distinguishable till the later stages of modern scientific development. Neither would have progressed much in the past, if human wants were supposed to be limited to the known. The proneness of the modern world to regard the new as in many ways the better accounts not a little for that ceaseless search for novelty which leads directly or ultimately to better conditions of life for all. Progress is a strange uncharted sea; and the spirit of adventure is often more valuable than the capacity for calculated direction.

But all this is valid only up to a point. The individual faculties whose development under a vague impulse of personal advantage serves the cause of social progress become distinguishable into recognisably separate qualities. Invention and organisation, improvement of technique and the wresting of new secrets from Nature, the production of new articles for individual consumption and the development of new bases of organisation and working—it would be unwise and even dangerous to confuse the abilities or values presented here as pairs. Discoveries of fundamental research are not to be confused with new inventions and new inventions with improvements of mechanical and other devices which were so to say in the womb of past developments and are bound to come about sooner or later. Likewise, an addition to the articles on display at shop windows is far different from a process of production which effects new economies in the matter of raw material or labour or replacement or a healthy reduction of the drudgery in home or factory. In the past these distinctions did not exist in economic life. Scientific discoveries and new inventions, new inventions and mere improvements in design and working were all thrown together, because their importance and significance were relative to the state of scientific knowledge, productive technique and the wealth of the community. Even the laboratory and the workshop were one up to a late stage; and it is natural that all the faculties which are conducive to progress should be thought of together as requiring the same kind of social conditions and individual incentive

for their adequate development. This attitude is even more inevitable in regard to new products which are not easily divided on the basis of fundamental and superficial values. The value of a new product depends not on the gratification which it yields to the first batch of men and women who obtain possession of it but to its potentiality for improving the quality of social life, when it is produced in sufficient quantities. An illustration will perhaps make the point clearer. Take the case of a new mode of tailoring and the case of a refrigerator. In both cases, the gratification of the men and women who obtain the refrigerator and the new kind of costume is the same—for the gratification is due to their vanity being tickled by the possession of something which many others still lack. But the differences are more important. When the use of the new costume spreads, its value to the individual declines in so far as it rests on the novelty of its fashion. The refrigerator on the other hand takes its place as part of the valuable equipment of the home and adds to the comfort and economy of the family and the household. It is capable, too, of enabling large scale social economies and improvements in the solution of the community's food problem.

It will be clear from this analysis that indiscriminate pursuit of novelty, though it may have been inevitable or useful in the past, is no longer conducive to progress to the same extent and that the stage has been reached when more importance should be attached to basic, than to superficial, changes. For it is possible, as it was not before, to turn our attention to the quality of life as distinct from the quantum of things. It is possible to envisage economic conditions in which the physical strain of toil and the mental worry of getting and keeping a job can be reduced, so that the average man will be as free to seek his cultural and spiritual development as the most

favoured classes of the past. Such conditions will be impossible of attainment, if economic ideology were to be overshadowed to the same extent as before by the obsessions of scarcity and scramble, by wistful expectations of progress through search for unknown wants. Economic progress can no longer consist in mere additions to things. It will consist rather in those developments which will make the life of the masses as defined as that of the savant and sages of old. We may dream of sources of energy which hold no threat of exhaustion. We may think of ways of tilling the soil that are above the vagaries of weather and climate. We may hope to evolve forms of economic organisation which will stimulate the zest for work while ridding it of its blighting effects. Freedom from work and from the necessity of working for a living is of dubious value or benefit. What is required is that work should take its proper place in an integral individual and social life, so that economics in the sense of a degrading scramble for scarce necessities and comforts will have been ended both for the classes and the masses. The end of economics is to end itself.

New Ships for Australian Trade—Government Loan Finance—Control of Property Prices—Decontrol—Shortage of Textiles—Life Assurance Assets—Distribution of Trade—Banking Assets—Interest Rate Lowered.

CANBERRA, December 20.

Six new ships for the Australian trade have been ordered by the Blue Star Line and the Holland-Australia Line. The former has been advised that two new vessels of 13,000 tons will be delivered early in 1947. They will have luxury passenger accommodation, and will be used exclusively on the Australian run. The latter expects delivery of two fast motor ships next year, and two more in 1947. This company is also negotiating for the purchase or chartering of other vessels for the Australian run. Shaw, Savill Co. and the Aberdeen and Commonwealth Steamship Line state that oversea shipping services on a pre-war scale cannot be resumed for 12 months. Opportunities for tourist travel will be delayed, for at least a year.

All Commonwealth loans launched since the Labour Party took office had been subscribed by sources tapped by earlier Governments, stated the Australian Prime Minister, Mr. Chifley. Certain of the resources which previous Governments had used had not been available after Labour took office. Central Bank credit had not been used nor had subscriptions by the trading banks been accepted. Contributions had been accepted from the Commonwealth Savings Bank and the three State Savings Banks. This had been a normal form of investment for savings banks.

Replying to the deputation representing the Real Estate Institutes of the various States which last month suggested that a 15 per cent increase in property values for selling purposes should be permitted, the Prime Minister and Treasurer, Mr. Chifley, stated that the Federal Government would prevent any inflationary increase in land values. In any inflationary suggestion, he stated that pre-rejecting the suggestion, he stated that as day-day construction costs were high, but as the changeover from war to peace-time activities became more pronounced, materials would become more plentiful and building costs would recede.

The Minister for Commerce and Agriculture, Mr. Scully, announced that the Order controlling the manufacture and distribution of agricultural machinery was revoked as of November 23. This Order was made on June 19, 1943, because there was at the time a serious shortage of tractors and agricultural machinery. Mr. Scully stated that during recent months production of agricultural machinery had greatly increased, and with the end of the war the continuation of control was no longer necessary. An exception was made in the case of new wheel and crawler tractors, which were in particularly short supply. Because of the cessation of Lend-Lease it was necessary to maintain control over their distribution for the time being.

A further instance of "de control" was modification of price control over fruit and vegetables forecast by the Minister for Trade and Customs, Senator Keane. He said that de-consideration was being given to the "de control" of growers' prices, while retaining control over distributors' prices. But he added that there would be no hesitation in reintroducing complete control if prices rose to unreasonable limits.

The Minister for Supply and Shipping, Senator Ashley, stated that the Federal Government would lift all restrictions on the

purchase of motor tyres and tubes early next year, the supply of rubber having greatly improved since the end of the Pacific War.

According to the Minister for Trade and Customs, Senator Keane, Australian imports of cotton and rayon textiles will drop heavily to next year. He was explaining the need to continue rationing for certain piece goods and clothing. He stated that before the war and Japan had provided about a third of the world's cotton textiles. Millions in the Far East would now have to be supplied by other textile manufacturing countries. Total textile manufacturing goods from Australia's ports of cotton piece goods from Australia's chief supplier, the United Kingdom, had dropped from a pre-war figure of more than 1,900,000,000 square yards a year, to a yearly average of 500,000,000 square yards over the past three years. Despite this, however, the volume of exports to Australia had been reasonably comparable with pre-war years. The present import rate from the United Kingdom was about 100,000,000 yards a year, but in 1946 we must be prepared to withstand a drop of 30,000,000 to 40,000,000 yards. The Indian supply position was also doubtful. About 40,000,000 square yards of cotton textiles should be received from India in 1945, but in 1946 not more than 30,000,000 yards could be expected. Australia had obtained considerable supplies from the United States during the last two years, but prospects of importing further quantities in 1946 were poor. It was unlikely that there would be any considerable quantity of cloth available for export from the U.S.A. even if dollar exchange were provided by Australia to cover its purchase. Rayon supplies were also important for Australia. Here again a contraction of imports had to be faced. Next year Australia was likely to get about 25,000,000 square yards from the United Kingdom, compared with the average of 35,000,000 square yards over the past three years. Total annual imports of rayons before the war had been about 70,000,000 square yards.

Assets of Australian life assurance offices totalled £394,631,652 in 1944 compared with £372,240,398 in 1943 and £300,475,660 in 1939. Figures taken out by the Australian Insurance and Banking Record show that of the past year's assets, £269,487,604 represents holdings in Government and municipal securities. In 1943 the total £240,363,928 and in 1939, £163,263,696. Loans on mortgage aggregated £68,632,559, compared with £72,255,966 in 1943 and £73,309,471 in 1939. Loans on policies at £24,232,232 were £3,246,740 lower than in 1943, but compared with 1939, they were £8,483,724 down. Funds totalled £304,153,586 compared with £287,905,556 in 1943 and £236,285,887 in 1939.

The Acting Commonwealth Statistician issued figures showing that 70 per cent of Australia's total exports for the first quarter of the 1945-46 financial year went to British Commonwealth countries. The totals were still influenced heavily by Government transactions, especially imports from the United States. Civil imports for the quarter were less than half the total in value. Civil exports represented 80 per cent of the total. The following figures were given:—

	Exports	Imports
	£A1,000	£A1,000
U. K. ...	1,114	19,114
Canada ...	1,246	1,957
Ceylon ...	1,156	1,185
India ...	2,099	2,629
New Zealand ...	2,099	1,227

South Africa	336	104
Other British Countries	8,139	1,717
Total British	26,889	27,933
Iran	...	2,689
Egypt	934	...
U.S.A.	7,333	22,786
Other Foreign Countries	3,372	2,092
Total Foreign	11,639	27,657

Official figures of Australian savings bank deposits at October 31, gave the total at £599,631,000. Deposits in October 1941, totalled £244,011,000. By March 1942, they had increased to £259,712,000 and by October 1944 to £364,174,000.

Weekly average banking assets in Australia—the 14 trading banks, the Commonwealth Bank, the Rural Bank of N.S.W. and the State Saving Bank of South Australia—for the month ended October 29, totalled £769,685,000 or £10,788,000 more than the previous month. Average liabilities for the period totalled £676,926,000, compared with £669,089,000 for September. Average of deposits for the 17 banks was £650,091,000, compared with £643,951,000 for September, while the average totals for advances were £240,351,000 and £238,997,000 respectively. Debits to customers' accounts in the 17 banks totalled £617,743,000 against £487,118,000 for the previous month.

The Governor of the Commonwealth Bank, Mr. H. T. Armitage, announced that from December 1, the maximum rate for new loans by building societies and co-operative societies would be reduced by one quarter per cent to five per cent, except where lower rates had been charged. New fixed deposit rates were one per cent for 12 months; one and a half per cent for 24 months; up to £10,000, and one per cent on amounts in excess of £10,000. No change would be made in the maximum rates for three months, one half per cent, or for six months three-quarters per cent. The present rate of two per cent on the first £500 of savings bank deposits would remain unaltered, but would be reduced by one quarter per cent to one per cent on any balance up to £1,000, after which, as had been the practice for some time, no interest would be paid. The interest reduction represented a new departure in Australian practice, and was designed to ensure that large sums would not remain unnecessarily on fixed deposits, when they could, with advantage, be invested in Government loans.

Note.—Unless otherwise indicated, sums of money are in Australian currency.

£1 Australian equals Rs. 10.71.

Gateway of India

Bombay, 26th December, 1945.

Latterly, there have been efforts in some provinces to float companies with impressive amounts of capital for the manufacture of textile machinery and parts. The general reaction to such efforts was mainly one of surprise at such casual ventures in a field in which concerted action is necessary. It was therefore with feelings of real relief that millowners welcomed the preliminary discussions with Sir Ardeshir Dalal which took place on Monday last. The initiative of government in bringing the millowners together and work for a co-ordinated plan for the setting up of the industry is welcomed. After all, both the welfare of the textile industry and the future of industrial advance depend upon this country putting forth its best efforts to manufacture as much of the mill equipment as would be economically feasible for it. Sir Ardeshir made it clear that the government did not want to interfere with private plans of individual industrialists but that they were prepared to extend their co-operation in setting up an organisation on co-operative lines for the manufacture of textile machinery. The millowners have been asked to suggest the lines on which they desire official help. The conference agreed to appoint a committee to draft the constitution of a Committee which would examine the question and appraise government of the views of the industry as regards State participation. The probability of government taking a share in the capital of the proposed manufacturing organisation is not ruled out. The Committee has been promised the full co-operation of the government in regard to collection of data and obtaining technical advice so as to enable it to formulate practicable, worthwhile proposals. Millowners' associations all over the country will shortly nominate their representatives to serve on the Committee. Later, another conference may be convened to consider the question more deeply. It is perhaps regrettable that every forward move is preceded by these committees which necessarily entails delay in the execution of plans; but at least on a question of such great importance as the making of machinery for India's biggest national industry, there will be few who will demur to these necessary though tortuous preliminaries.

The strikers have been quite peaceful and no disturbances have been reported. There is no doubt that the calling off of the strike by the workers of the B. E. S. T. Company has been an important factor in the maintenance of a peaceful atmosphere. The appointment of Mr. Justice Chagla as adjudicator in the dispute has been accepted without reservation by both the Company and the B. E. S. T. Workers' Union. It is to be feared that this country is in for a period of serious industrial unrest with all that it implies both to the costs structure of industry and expansion of production.

It is therefore natural for Sir H. P. Mody to dwell on the problem of unemployment, present and prospective, in his presidential address at the annual general meeting of the Employers' Federation of India. Sir Homi traversed the full gamut of economic and financial problems in his interesting address. But more than the unity of his theme, it was his candour in differing from Sir Ardeshir's views on planning that arrested one's attention. While making a forceful plea for the immediate

reorientation of the taxation policy—a subject on which there is a good deal of public clamour—Sir Homi confessed to a feeling that the unemployment situation was more depressing than the Planning Member thought. The plans to stimulate public and private spending to counter unemployment might not be adequate, he said, though they were in right direction. Sir Homi also gave expression to the view which has struck many among the public, that there were too many committees and conferences were about. Indeed, we in India have always been prone to dally over preliminaries and to delay the actual plunge. Sir Homi has been re-elected president.

The loss to the Indian banking world by the death of Mr. Wajahat Hussain, the late Deputy Governor of the Reserve Bank is not half as serious as the loss to the Indian co-operative movement. With characteristic modesty, Mr. Hussain diverted his interests to this sphere and the excellent notes and material which formed the basis of the 14th Registrars of Co-operative Societies Conference were prepared under his guidance. As Mr. R. G. Saraiya has observed in the course of a well assessed tribute, "He was closely associated with the work of the Co-operative Planning Committee of the Government of India. As

chairman of that Committee, I must pay a tribute to the great and devoted help he gave to the Committee, both in the preparation of the material before it and during his deliberations. Mr. Wajahat Hussain was a man of profound sympathies and of deep love from the farmers of India."

Questions & Answers...

Destination?
India Coffee House, Albert Hall, College Square.

Reason?
In its new address, the India Coffee House is better, brighter and bigger than ever.

Surely, not so central as in Central Avenue?
You wouldn't say so if you visited the new place. It is, so to say, in the heart of Calcutta. Centre of whatever is lively and vivacious. Easily accessible.

But, I suppose, there is not that variety of viands?
People will travel far to get the admittedly and inevitably good coffee that you can, every time and at all times, get at the India Coffee House. The old patrons are all still there—and will ever be there—and many, many new patrons. Remember, it is a bigger, better, brighter place.

INDIA COFFEE HOUSE
ALBERT HALL, COLLEGE SQUARE

Airway Port

(From Our Correspondent).

Karachi, Dec. 21.

Sind's prosperity spell goes on unimpeded. I understand that next year's budget for this province will show a surplus of Rs. 30 lakhs. This surplus is the result, it is understood, of bumper land revenue, including Rs. 110 lakhs realised from the sale of Barrage lands. The Government of Sind had set aside a fund of Rs. 135 lakhs for various items of post-war development and reconstruction programme in Sind, but as a result of enhanced additional expenditure incurred during the year, the Government had to fall back upon this fund and withdrew substantial amounts from it so that the fund in consequence been reduced from Rs. 135 lakhs to Rs. 35 lakhs.

The budget for the next financial year, beginning with April 1946, includes several new items such as Rs. 14 lakhs for buildings, Rs. 20 lakhs for roads and the like.

The Government of Sind have an ambitious and comprehensive programme of road and buildings construction which is estimated to cost Rs. 140 lakhs, twenty-five per cent of which, it is expected will be contributed by the Central Government. Many schemes for improving and extending educational facilities are also to be undertaken during the budget year. These schemes include two more middle schools for girls, to the extent of Rs. 50,000 annually, grants to District Local Board Schools to be increased by Rs. 50,000 annually and rupees one lakh to be spent on starting a secondary teachers' training college.

Mr. M. R. Ahuja, Indian Government Trade Commissioner in Canada had a busy time at Karachi during his recent visit to this place. The Committee of the Indian Merchants' Association met him and the Vice-President, Mr. Shivji Velji Kothari referred to the various restrictions and controls imposed during the war, which had not yet been completely withdrawn, and the continuance of which very much hindered the export of Indian produce to foreign countries.

In his reply, Mr. Ahuja said that the Government had already begun to decontrol or relax control wherever possible. The only consideration was the availability of goods. He said that Canada was a large importer and consumer of goods, particularly of different kinds of nuts. It is up to the Indian producer, not only to retain this market but to extend it, he added.

He further said that the Canadian Government had fixed the ceiling price of articles on the 1941 basis and on account of this it is possible that some of the exportable articles to Canada might not be imported there. But he assured the merchants that in really deserving cases, he would be glad to negotiate with the Canadian Government for better prices or to get a subsidy. He appealed to the Indian manufacturers to send him their samples for his show rooms at Toronto.

Sind is at present facing an acute wheat shortage. Though the wheat crop in the province has been abundant, the Sind Government exported a lot of it to outside provinces and we here have hence to face shortage. Protests have been voiced from several mofussil stations to stop export. Even mill atta is not available for the poorer people. Authorities on their part complain of hoarding.

Sind is also faced in the long run with coal shortage. Until the last war, one-third of the existing forests were utilised and exploited annually for purposes of wood fuel, charcoal and timber. An equal number of trees replanted every year. During the war period, the Forest Department overcut to the extent of forty per cent of the capital, in consequence of which, our annual output has been greatly decreased. The Forest Department is not in a position to collect as much "babul" or "khandi" seed as necessary to reboise the area cut under emergency conditions. Conditions of drought prevail in the province as a result of which the soil loses its fecundity and fertility.

Dr. V. K. Rao, Economic Adviser to the Government of India in the Food Department and a member of the Indian Delegation to the World Food Conference passed through Karachi en route to Delhi. He said that the conference did not discuss in detail such economic aspects of the food problem as the price levels of the various kinds of food grains. But these questions were considered in a general way and it was felt that the prices should be stabilised at such levels as would ensure a fair return to the producers. The Conference did not discuss as such the question of the parity of foodgrain prices all over the world. But it did discuss, he stated, the problem of surplus stocks of foodgrains and methods of disposal. He had pressed the view at the conference that such surpluses should not be destroyed or dumped into other countries to depress prices there, as in the past. They should be utilised rather in raising the nutritional level of the populace of such poorly fed countries such as China and India. The idea underlying this suggestion found much favour at the conference.

While in England, Dr. Rao met the Minister of Food and acquainted him with the food position in India, particularly in regard to wheat and rice. He also discussed with the Food Minister the question of the deficiency in India in the matter of foodgrains if the country was to have a balanced nutritive diet and to make that deficiency good through imports. Dr. Rao said that the Minister and all those whom he met were very sympathetic towards India. So far as the question of the import of food grains to India was concerned, the matter

did not rest with the Food Minister in England. That would be handled by the World Food Board at Washington which is the deciding body as to what countries are to get certain amounts of food grains and from where.

"It is now high time that we start giving instruction in aviation also in Hindustani and thereby, popularise a branch of activities which would appeal to thousands more of our countrymen," remarked Mr. Shivji V. Kothari, presiding over the annual general meeting of the Karachi Aero Club. He stated that hundreds of good men had been rejected for nothing more serious than their inability to speak any other language than the language of their own country. He revealed in the course of his speech that the Government of India had an ambitious plan to establish twenty Flying Clubs at various places in the country in the next five years in the place of the present seven and increase their number to fifty at some future date.

Turnover in January contract in cotton is turning out on reduced scale and speculators are focussing their attention on the March contract. It is expected that up-country tenders will be few as Punjab basis are higher than Karachi. But in view of the attractive premiums it looks that a good many lots out of the local stocks might be tendered. Spot business has slackened.

The air ports of entry and exit, Karachi, Bombay and Calcutta along with their sea ports are expected to have commercial museums organised by the Government of India to display to those who arrive and depart the products, samples and exhibits produced in the country.

Special to "Indian Finance"
(From Our Correspondent)

CALCUTTA, Dec. 27

The prevalence of excessive moisture in most of the jute recently arriving into Calcutta and Mill stations and the consequent numerous arbitration claims on this account, will no doubt revive the demand for the establishment of the scientific oven-test for moisture. This question was discussed at considerable length some years ago, but no concrete progress could then be made on account of the impossibility of procuring the necessary equipment in war time. Presumably such equipment will again become available in the near future. It is by no means complicated, accurate weighing apparatus being the primary requirement. The rough and ready method of judging moisture by hand, which method obtains even in arbitration cases, cannot be considered satisfactory. Not only does the result depend on the idiosyncrasies of individual arbitrators, but also on variable factors such as atmosphere, temperature, time of day etc. all of which are liable to affect the "feel" of damp jute. Whereas the oven test, if properly applied, provides a mechanically and scientifically accurate assessment of the moisture content of the fibre which cannot be called in question. This system is already in vogue, and has been for a considerable time, in one group of mills and it is a notable fact that sellers, for the most part, accept these tests as fair and equitable and seldom contest them. Sellers' belief in the honesty of these tests is to some extent founded on the fact that this particular group works on the principle of "correct invoice weight" to the letter. That means that every parcel is tested and if any parcel shows a moisture content less than the standard allowed, credit is given to the seller for the excess invoice weight. It was on this point that considerable controversy arose when the matter was previously discussed. It was maintained that to test each and every delivery was impracticable and consequently only such parcels as showed moisture by the "hand" test would be oven-tested. Practicability of the scheme is proved by the fact that the group mentioned above does test every delivery. And it is only fair that the scheme should work both ways. It does so in the cotton and other fibre industries, and apart from the aspect of ethical propriety, the universal introduction of the Oven-test would certainly command much greater confidence from the selling end of the business if the principle of give and take, and not only take, were to be the basis of the system.

With the first half of the current week closed on account of holidays, there is little on which to comment so far as markets are concerned. And it is doubtful if any activity will be discernable before the turn of the year. All over the world practically, people in all walks of life have been celebrating their first "peace" Christmas for six years. It is to be hoped that, before another Christmas comes round, the evidence of real peace will be more marked in many troubled spots than it is today. Till then we cannot expect trade to move freely through its normal channels.

There is nothing to report in the Export Jute market. Minimum prices still obtain for practically all grades with a baling profit thereat.

After the considerable turnover in Loose Jute reported last week, mills have apparently satisfied their immediate requirements and there has been very little in the way of fresh business reported. The tone is steady however, and while some jute is still on offer at minimum rates, replacement upcountry is now only possible at above the parity of Calcutta minima, and any considerable recrudescence of demand would almost certainly result in an advance in rates.

In the Fabrics section there is little evidence of any accumulation of enquiry over the holidays and demand is very light. Hessians show no appreciable change from a week ago—perhaps two annas one way or the other. In Heavy Goods, ready "B" Twills are quoted four annas easier at Rs. 62/- while the forward positions are quoted four to eight annas higher. But there is little wherewith to test the market.

Stock Markets to-day and to-morrow:

FIRM CLOSE FOR THE YEAR

The year 1945 is noteworthy for the many important developments that took place both on the war and peace fronts and in the political and economic spheres. The rapid changes in the war situation earlier in the year and the speculation regarding the outlook for markets after the cessation of hostilities naturally led to violent price fluctuations. But on balance prices have closed higher and my expectation that, war or no war, Indian industries will continue to thrive and that with large-scale industrial development in the post-war years and the efforts of the Government to improve the general standard of living the investor in stock exchange securities had nothing to worry from the cessation of hostilities, has come true. Especially, as the volume of surplus funds has increased considerably and there has been a reduction in the general yield basis.

In the first three months of the year there were no important developments. With the prospects of Allied victory certain values were maintained at high levels. It was only in the last week of April that, with the sudden developments in the war situation in the West, there was a drop in prices all round. The decline in prices, however, proved to be only temporary as by the time the unconditional surrender of Germany was announced there was a rally. But in the months between May and July, 1945 no decisive trend was noticeable. As a matter of fact, the tone of the markets was easier as it became clear by June that the Japanese war also might not be prolonged.

The rally in mid-May was based on expectations that the war in the East would be prolonged and that as India was playing an important part in the war against Japan there would be no appreciable reduction in the war effort. In the first week of August, prior to the Japanese unconditional surrender, there was heavy selling and prices were marked down as a

precautionary measure. The most unexpected development of the year was the sudden rise in prices soon after the cessation of hostilities in the East was announced. It was believed that the large scale post-war planning, the demands for reconstruction purposes and the acute shortage of many commodities would keep the industries fully occupied for sometime and that the cessation of war did not mean the end of the period of high profits and that even, if there were a slight decrease in earnings it would be more than offset by the reduction in the tax burden.

The rise in the latter half of August was not sustained and in September there were no important features. One important point, however, needs mention in this connection. Investors and operators were agreed that there was no fear of a setback in prices with the onset of peace and that the earlier expectations were falsified by subsequent developments.

The reopening after the Puja holidays was not so firm as was expected but after the Divali holidays there has been a regular boom in prices and at the close of the year values are in many cases at the highest levels for the war period. The boom in prices in November and December came about with the continued expansion of currency, the expectations of tax relief and a reduction in the bank rate. The optimistic announcements by leaders of industry that the outlook for Indian industries was satisfactory and that planned industrial development would make appreciable headway were also helpful.

It should be said that the rise in prices, in the month of December especially, has been to a certain extent overdone and that the prospects ahead have been completely discounted. For this reason, the first few months of the New Year may not be marked by any important developments. Until the Central Budget is out of the way bull operators might try to push up prices but after February, in the absence of any fresh developments, stock markets might remain tame. The New Year thus opens under happy circumstances. If as a result of the changes in the political situation and the progress in industrial development there is a change in the general atmosphere and there is a boom in new capital issues stock markets might continue strong.

The extent of price fluctuations in 1945 for the four principal counters, Indian Irons Steel Corporations and Howrahs and Burrakurs will be noticeable from the following data.

Indian Irons quoted Rs. 42-10 on January 4, 1945. On the same date, Steel Corporations were Rs. 35-4, Burrakurs Rs. 46-4, and Howrahs Rs. 87-7.

On May 11, 1945, Indian Irons were Rs. 39-11, Steel Corporations Rs. 33-3, Burrakurs Rs. 39-10 and Howrahs Rs. 95-5.

On August 10, 1945, Indian Irons were Rs. 40-9, Steel Corporations Rs. 33, Burrakurs Rs. 44-4 and Howrahs Rs. 94-7.

On November 1945, Indian Irons were Rs. 41-14, Steel Corporations Rs. 35-6, Burrakurs Rs. 44-5 and Howrahs Rs. 98-7.

On the last working day of the year, December 22, Indian Irons were Rs. 53-4, Steel Corporations Rs. 46, Burrakurs Rs. 48-8 and Howrahs Rs. 123-2.

During the past week both the Calcutta and Bombay Stock markets have remained closed on account of the holidays. In unofficial transactions, however, there has been considerable activity, in Calcutta especially. Indian Irons improved to Rs. 57-10 from Rs. 53-4 at the end of last week, Burrakurs to Rs. 50-4 from Rs. 48-8, Steel Corporations to Rs. 49-12 from Rs. 46 and Howrahs to Rs. 125-8 from Rs. 123. At the higher levels there was heavy selling resulting in a violent setback in Indian Irons to Rs. 51-14, Steel Corporations to Rs. 44-12, Howrahs to Rs. 117 and Burrakurs to Rs. 46-8. Evidently, with professional gambling in a closed market there has been a violent fluctuation in prices and the fact that bulls will not easily give way will be evident from the subsequent recovery. At the time of writing on Friday, Indian Irons are quoting Rs. 55-8, Steel Corporations Rs. 48, Burrakurs Rs. 48 and Howrahs Rs. 121-8. There was heavy buying of South Karanpura from special quarters and the quotation jumped to Rs. 47-4.

AGENCY IN ALL IMPORTANT TRADE CENTRES

In the good old days before the
invention of atomic bombs &
high explosives, boiling pitch was
a favourite weapon of defence.
Today pitch blended into Tarm
tic is an effective weapon against
leaking roofs and damp floors.

ONCE AN
EXOTIC VISITOR ...

the Mexican "guayaba"
is now firmly established in
India. Its pleasant flavour is well-
known to us all, either as a fruit or in the
form of the popular guava jam, jelly or cheese.

There is scope for more extensive cultivation of the guava, for
which India's growing jam industry should offer a certain market,
with a good return for the initial capital outlay.

The fruit may be grown in any soil from light loam to clay. As many
as one hundred and fifty trees may be planted in a single acre
and in one season a single tree may produce a thousand fruit.

But the grower must rely on good smooth ROADS to speed
this perishable crop to market. The essential link
between the farmer and the city is the ROAD.

GOOD ROADS ARE AVENUES TO PROSPERITY
