OBJECTS

The main object of the Company is to acquire the business of public carriers and to undertake transport of passengers and goods and to execute Government transport contracts, carried on by Premnath Motors, the vendor firm of Calcutta. The vendor firm's assets, consisting of a fleet of 200 trucks, plant and machinery, furniture and fixtures, accessories, stores, tools, stationery, workshop equipment and office cars, have been acquired by the Company for a consideration of Rs. 14 lakhs, of which Rs. 9 lakhs will be in the form of allotment to Mr. Prem Nath, Proprietor of the vendor firm or his nominee of fully paid up ordinary shares and Rs. 5 lakhs to be paid in cash as and when the funds of the Company permit. The above price of Rs. 14 lakhs has been calculated as follows.

200 Motor Vehicles with permits spare parts & accessories at an average price of Rs. 6,500/- each	Rs. 13,00,000
Workshops, plant, tools, sheds, furniture, typewriters, stationery, motor cars, etc.	66,250
Goodwill	33,741
	Rs. 14,00,000

The Directors are of the opinion that the price of Rs. 6,500/- per truck including a complement of spares, accessories, and Government permits to ply the vehicles, is exceedingly favourable to the Company.

The audited Balance Sheet and Profit and Loss Account for the first year's trading of the vendor company are annexed to the Prospectus and Memorandum of Association, copies of which may be obtained on application to the Company's Bankers, Brokers or Solicitors. The Profit and Loss Account after full allowance for preliminary expenses and depreciation shows a nett profit of Rs. 2,63,666/7/2.

Mr. Prem Nath, the Proprietor of the vendor firm, has been successfully carrying on an extensive transport business from Calcutta and his

valuable experience and knowledge of the business has been secured to the Company by the appointment of Messrs. Prem Nath & Sons Ltd. as Managing Agents, of which company Mr. Prem Nath is the Governing Director. The vendor firm owns a large fleet of 200 motor vehicles and also has the use of several hundred other vehicles maintained on behalf of the Government for operating transport service in Bihar, Bengal and Assam, and holds several remunerative transport contracts from Government which will be assigned to the Company. The 200 motor vehicles as well as a large stock of spare parts, tools, plant and machinery have been formally transferred to the Company by the vendor firm as from 1st April, 1945. It was ascertained after due enquiry that, as on the date of this prospectus, out of the 200 vehicles mentioned above, about 80 p.c. were in a road-worthy condition. The balance were available in the workshops of the Company undergoing repairs, which are expected to be completed at an early date.

The Company simultaneously acquires from Messrs. Premnath Motors a number of well-equipped workshops for servicing the vehicles. The highly qualified and experienced technical staff of Messrs. Premnath Motors, Calcutta, have also been placed at the disposal of the Company.

By the time the present remunerative Government contracts taper off, the post-war plans for the development of roads and road transport will, it is expected, have been put into operation. As the public is aware, the ten years plan of road development, which has been provisionally accepted, contemplates an expenditure of about four hundred crores for the expansion and improvement of the country's highway system. The development of communications naturally fosters the development of road transport and the Company will, it is believed, have ample scope for profitable enterprise in the post-war period.

The Company by virtue of its position as a large road transport operator, will co-operate with the railways in working feeder lines and other road rail services. Negotiations are now in progress for organising transport services in important centres all over India and the Directors confidently anticipate that in view of the valuable services rendered by Mr. Prem Nath and on account of its large fleet of vehicles (one of the largest in India) the Company will be able to secure a fair share of the extensive new business which will be available in the post-war period.

PRELIMINARY EXPENSES

The preliminary expenses including registration fee and printing charges and other incidental expenses are estimated not to exceed Rs. 15,000/- exclusive of commission and brokerage payable on sale of shares.

MANAGING AGENTS

Messrs. Prem Nath & Sons Ltd. have been appointed Managing Agents of the Company and their remuneration as provided for in the Articles of Association and in the agreement dated 15th July, 1945, between the Company of the one part and Messrs. Prem Nath & Sons Ltd. of the other part is as follows.

(1) A fixed allowance of Rs. 2,000/- per mensem irrespective of profits or deficiency of profits with increments as the Board may determine from time to time.

(2) Ten per cent of the nett profits of the Company as defined in Section 87C (3) of the Indian Companies Act, 1913, but after deducting Excess Profits Tax or such other tax that may replace E.P.T. hereafter.

DIRECTORS' QUALIFICATION & REMUNERATION

The qualification of a Director shall be the holding of shares in the Company of the value of not less than Rs. 20,000/- carrying the right of voting either in his own name or in the name of the Company whose representative he may be nominated, and it shall be his duty to comply with the provisions of Section 85 of the Indian Companies Act, 1913.

Rayon in America:

With Japan involved in a gigantic war, the opportunity extended itself to the United States and the United Kingdom to develop the production of rayon, the most potential competitor to cotton and wool. The war gave a powerful fillip to the rayon industry because this fibre answered the special demands of the modern war for high tenacity yarn for tire cords required to stand the wear and tear of the military vehicles, tent clothing, parachute cloth and tarpaulins. That American production has increased by leaps and bounds is clear from the figures of rayon production. Under the pressure of military demands the U. S. rayon industry produced 479 million pounds worth of rayon in 1942. Next year the figure rose to 501 million and in 1944 came up to 710 million. The estimated production for the current year is placed at 800 million. Apart from the emergence of the military requirements, the stoppage of silk products from Japan was another incentive to the production of this valuable fibre. About twenty years ago hardly 1 per cent of the total textile production was claimed by rayon. But its growing popularity was so spectacular that even as early as 1927 silk felt the rigours of its competition and on the eve of this war the Australian wool producers were afraid of this upstart. For a long time cotton textiles were safe because of price advantages and also because cotton was mixed in rayon. But improvement in quality and lower prices came to strengthen rayons' advantage. Since synthetic garments are crease resistant and do not attract dirt they are becoming rapidly popular.

The companies engaged in the manufacture of rayon have made excellent profits and presumably have got their own postwar plans to fight the old enemies, cotton and wool. If the synthetic cords could hold their own against the cotton cords in the coming years, then rayon would have a respectable place in international markets. Technological improvements have been remarkable and hence the price factor may not deter the progress of rayon for long. In fact countries where facilities and natural advantages are absent for the cultivation of cotton, the attraction for rayon production is likely to be great. Experts are, however, of the opinion that in future the rayon will have its own place in the textile group and mixtures will reconcile rivaling interests. As for India, she imported not more than 75 tons of rayon per year before the war and though opinions have been freely expressed that facilities are available for its manufacture in this coun-

try, the capacity to hold our own and face foreign competition depends upon Government help and technological progress. However, progress abroad demands that our cotton growers and the mill owners should evolve their plans after due consideration of the role rayon is likely to play in post war markets.

Forest Research:

In advanced countries forests are considered as valuable factories and not as mere jungles where wild animals are privileged to roam at will. Forests are the source of a wide variety of important raw materials and hence careful planning and systematic research should be conducted to maximise their utility for society. In the United States the official policy seems to be to extend the forest area to fifty per cent of the land. In India owing to unplanned destruction in the past there is a serious deficiency in the area under forests and even the existing ones are not properly conserved and developed. Thanks to this war a postwar forest policy has been evolved and the record of the Forest Research Institute at Dehra Dun is most encouraging for purposes of the future. The Institute consisting of five branches, Sericulture, Entomology, Botany, Utilisation and Chemistry and Minor Forest Products, has done creditable work on all the sections and the results of its investigations are bound to be of immense use for the formation and utilisation of forests in future. Research carried on to improve the commercial value of bamboos, timber, rubber, grasses, resins and oils are believed to interest the growing industries in this country.

When, under the stress of war demands India supplied forest products like timber the immediate bother was regarding the protection against the insects and fungi. For many items, previously imported, substitutes had to be found out and quickly too. Care had to be taken to preserve the forests for postwar demands also. The life of the bamboo had to be prolonged and the problem of identifying specimens had to be tackled. Owing the scarcity of petrol civilian motor transport turned to producer gas vehicles and forest research had to devise methods for manufacturing high grade

(Continued on page 347)

FACT No. 10

INDIA'S cotton textile industry now produces at the rate of 4,800 million yards of cloth a year. Before the war the average production was 3,800 million yards.

One of a series of statements of fact for the information of the public.

ISSUED BY THE MILLOWNERS' ASSOCIATION BOMBAY

THE PREMNATH TRANSPORT COMPANY, LIMITED. Announcement—(Contd.)

The Directors shall be entitled to the following remuneration:—

- (a) Each Director shall be paid out of the funds of the Company a sum not exceeding Rs. 250/- as the Directors may determine from time to time for every meeting of the Board or sub-committee thereof attended by him.
- (b) Such travelling and other expenses for attending meetings of the Board or sub-committee or for other business of the Company as the Directors may determine.

INTEREST OF DIRECTORS

Mr. Prem Nath and Mr. S. D. Sharma, two of the Directors of the Company, are Directors and

Members of Messrs. Prem Nath & Sons Ltd., Managing Agents of the Company and are interested accordingly. No other Director is interested in any other way except as a Director.

MATERIAL CONTRACTS

An agreement dated 15th July, 1945, made between the Company of the one part and Messrs. Prem Nath & Sons Ltd. of the other part, whereby Messrs. Prem Nath & Sons Ltd. and their successors and assigns have been appointed Managing Agents of the Company for a period of 20 years from the date of incorporation of the Company.

Another agreement dated 15th July, 1945, entered into between the Company and Messrs. Prem Nath Motors by virtue of which Messrs. Prem Nath Motors have bound themselves to transfer the property to the Company with effect from 1.4.1945 for a consideration of Rs. 9 lakhs

in fully paid up shares of the Company and Rs. 5 lakhs in cash.

BROKERAGE, COMMISSION & PROMOTION

The Articles of Association provide for the payment of a commission not exceeding two per cent on the shares in each case subscribed or to be subscribed or the amount equivalent to such percentage. No promotion money will be paid to any one by the company.

APPLICATION FOR SHARES

Forms of application for shares are obtainable from the registered office of the Company, Scindia House, New Delhi, their bankers, brokers, or solicitors, or the Company's Calcutta Office at 9/A, Esplanade East.

The list will open on August the 27th and close on September the 12th, 1945.

Consent of the Central Government has been obtained to this issue under Defence of India Rule 94-A. It must be distinctly understood that in giving this consent the Government of India do not take any responsibility for the financial soundness of any scheme or for the correctness of any of the Statements made or opinions expressed with regard to them.

(Certificate for commencement of business, dated the 31st July, 1945, has been received).

A copy of this prospectus has been filed with the Registrar of Joint Stock Companies, Bengal.

MANAGING DIRECTOR:

N. C. GOENKA, Esqr., Darjeeling.

PROSPECTUS:

The Company has been incorporated for the purposes of carrying on banking business in all its branches with its head office at Darjeeling and with such branches or agencies within India or outside as may from time to time be determined by the Company according to the development of the business.

There is great need of a Bank like this in the district of Darjeeling and in its neighbourhood in order to serve various business concerns in and around the district and particularly the numerous tea and other trading and manufacturing concerns which have developed considerably in this area in course of the last few years. Various persons and firms have signified their readiness to actively support the Bank as soon as it commences business. It is expected that the Bank, when started, will gain immediate popularity and have the support of the leading business men and the investing public of the district of Darjeeling and its business will very soon expand so that it will become one of the leading banks of the Country. Mr. N. C. Goenka, the Managing Director, is interested in general business concerns including banking, and other Director is also connected with several business and trading concerns. It may be confidently expected that through their efforts the Company will soon be able to attract influential and substantial customers to the Bank.

Mr. N. C. Goenka, the Managing Director of the Bank had been successfully running for the last ten years a private Bank of his own with its headquarters at Darjeeling and Branches at Siliguri and Kurseong. He has agreed to wind up the affairs of this Bank and permitted us to take over its name. Most of the constituents of his Bank have already agreed to transfer their accounts and to do business with this Bank. The Bank will thus have the full advantage of the good-will and reputation of the old Goenka Commercial Bank without having to pay for the good-will of the same. The Bank will thus profit a great deal by the spirit which Mr. N. C. Goenka has shown by surrendering his own private banking interest to the new Bank without compensation.

DIRECTORS QUALIFICATION AND REMUNERATION

The qualification of a Director is the holding of 1,000 shares of Rs. 10 each.

The remuneration of a Director including the Managing Director as fee is Rs. 32 per mensem which may be increased or reduced by the Company in General Meeting. Besides the same reasonable travelling, boarding and other expenses incurred by a Director in consequence of his attendance at Board Meetings. Ordinary Meetings of the Company and otherwise in execution of his duties as a Director shall be paid to him.

QUALIFICATION AND REMUNERATION OF MEMBERS OF LOCAL BOARDS

The qualification of a member of a Local Board of Management will be the holding of 500 shares of Rs. 10 each and his remuneration will be a fee of Rs. 16 per mensem.

DIRECTORS AND MANAGING DIRECTOR

The first Board of Directors are as mentioned above, namely—(1) N. C. Goenka, Esqr., (2) Mr. G. Morgan, (3) Dr. R. C. Majumdar, (4) G. S. Lal, Esqr., (5) K. N. Goenka Esqr., and (6) R. N. Agarwalla, Esqr.

Mr. N. C. Goenka and Mr. R. N. Agarwalla are two of the promoters of the Company.

MANAGING DIRECTOR

Mr. N. C. Goenka shall be the first Managing Director of the Company and he shall hold the office of such Managing Director for a period of five years unless he shall voluntarily resign from such office before the expiration of the said period. The period of office of such Managing Director may be renewed or extended for a further period not exceeding five years at a time if and so often as the Directors think fit.

The said Mr. N. C. Goenka as the first Managing Director of the Company shall receive an allowance of Rs. 500 per mensem from the year the Company declares a dividend payable to the shareholders and he shall not be entitled to receive the remuneration unless and until the Company declares a dividend payable to the shareholders.

MINIMUM SUBSCRIPTION

The minimum subscription on which the Directors may proceed to allotment is Rupees Fifty thousand.

PROMOTION

No promotion money is being paid by the Company but a brokerage at 2½ per cent will be paid to brokers for effecting sales of shares and the brokerage will be payable on the allotment of Shares.

PRELIMINARY EXPENSES

The preliminary expenses of the Company shall not exceed the sum of Rs. 10,000.

MEMORANDUM AND ARTICLES OF ASSOCIATION

Copies of the Memorandum and Articles of Association of the Company may be inspected at the registered office of the Company. A copy of the Memorandum of Association is annexed hereto and forms part of this Prospectus.

APPLICATION FOR SHARES

Application for shares shall be made on the accompanying form and sent to the Managing Director at the registered office of the Company at Darjeeling or to Brokers or Bankers of the Company.

If no allotment is made, the deposit accompanying the application for shares will be returned in full. If the number of shares allotted is less than the number applied for the surplus deposit will be returned.

Copies of this Prospectus and forms of application for shares may be obtained from the Managing Director, the Bankers and the Brokers of the Company.

CLOTH FOR MOFUSSIL

FROM 15th APRIL TO 31st JULY, 1945

Despatches of non-standard cloth (acquired through Authorised Dealers in Calcutta) to the Mofussil started on the 15th April last. Since then, upto 31st July 1945, 45575 bales had been despatched. This is equivalent to 683,62,500 yards of cloth, valued at more than four and a half crores of rupees. Nearly half of this quantity of cloth was in Dhotties and Sarees.

The consolidated table below indicates the Districts and Subdivisions to which cloth was despatched and the quantities against each. This is exclusive of the Standard Cloth sent to the Mofussil during this period.

District. (Population in thousands.)	Subdivision. (Population in thousands.)	Dhotties and sarees.	Miscellaneous	Total for Sub- division	Total for Dist.

DEPARTMENT OF CIVIL SUPPLIES, BENGAL

Clive Street Gossip

I purposely kept out of the scope of my last week's gossip some of the crucial issues raised and discussed, though within limits, by Sir Chintaman Deshmukh in his speech at the annual general meeting of the Reserve Bank of India. My reasons for this step are, firstly, that they are extraneous to the main theme I was dealing with, and secondly, that these issues called for more lengthy treatment than I could afford for so many major topics in one and the same week. I am indeed, exceedingly glad that some of the views which have been urged in the columns of "Indian Finance" in regard to such questions as finding an early substitute for war expenditure and greater circumspection in our imports of capital and consumer's goods have now had the weighty support of the Governor of the Reserve Bank. By virtue of his position at the head of our central banking institution, Sir Chintaman is naturally concerned to get the country to think of our economic relations with the rest of the world as an inter-related whole, instead of viewing each problem as divorced from others.

The order in which these problems have to be considered is easily understood. There is, first, the framework of post-war international finance provided by the Brettonwoods Agreement and the two institutions which it will bring into being, namely, the International Monetary Fund and the International Bank. There was not a little in the proceedings at Brettonwoods about which India has cause to feel sore and bitter. Sir Chintaman himself refers to the fact that India's proposal to include the settlement of our problems of sterling balances within the scope of the I.M.F. was lost for want of a second vote. We have to reconcile ourselves to its being treated as a matter of bilateral negotiations between Britain and India. Personally, I believe that the U.S.A. is slowly realising its mistake in cold-shouldering the Indian proposal and is waking up to America's interest in securing the liquidity of India's foreign balances, at least to the extent they were realised in the first instance as dollars to India's credit, before inclusion in the dollar pool. But that, however, is not to be depended on. At the same time our attitude to the international organisations devised at Brettonwoods should not be determined solely by resentment at the treatment of the proposals of the Indian Delegation. Sir Chintaman should therefore receive general support when he says:

The obligations are, however, apparently narrower during the period of transitional arrangements; membership of the international monetary institutions, on the other hand, over and above assisting the attainment of common desirable objectives, offers a line of credit to cover temporary deficits in the current balance of payments during a critical period, and comparatively easier access to the facilities of long-term foreign investment, which might otherwise be unobtainable. It is obviously to the advantage of the country to place itself in a position to participate in the benefits to world trade and global economic development which are anticipated from the successful operation of these two institutions. If on the one hand, it is not to our interest to refuse to ratify the Brettonwoods agreement, on the other, it is

well in regard to our sterling balances "to take a realistic account of the possibilities, in order that our schemes may be more firmly based, if less ambitiously designed". The bearing which the position and prospects of our sterling balances have on our trade relations and our industrial plans for the future is not often clearly appreciated. The existence of a large volume of funds owed to us by Britain colours the thoughts and ideas of many who do not stop to think that their significance varies with the extent of their liquidity and ultimate realisability. We make our plans on the strength of these large amounts of our foreign exchange. We think of the acute shortage of consumer's goods within the country and the facility of payment for importing the machinery with which we can increase the production of such consumer's goods. Exhilarated by the thought of such large scale industrial development our industrialists go abroad, exhibit the utmost impatience in obtaining machinery and technical assistance and confirm foreign manufacturers and industrialists in their feeling that they have only to adopt certain poses and put on certain airs to drive the hardest bargain with this country. Naturally, the Industrial Mission fails, for the moment, in its efforts to procure the machinery or the technical assistance that is needed.

Meanwhile, foreign manufacturers, particularly in Britain, are able through the extreme regimentation and regulation of trade to plan for the import on a large scale of consumer's goods of various kinds. While machinery for the indigenous manufacture of these goods is denied to us, these same goods are to be imported into this country at prices which by no means represent a fair deal to this country. There is thus a two-fold problem which demands the immediate attention of the country as a whole and the business classes and the industrialists in particular. There is an import trade in consumer's goods the terms of which are extremely inequitable to us; and there is in the offing an import trade in producer's goods which might prove even more unfair in that effects of high prices for machinery will continue to be felt over a long period.

Sir Chintaman has done well to draw public attention to both these aspects. A fact of great relevance and importance in this context is that during all these six years India has provided the Allies with all the goods and services that were required of her, at prices which have been pronounced by the Parliamentary Select Committee on British expenditure to be quite reasonable in comparison with corresponding United Kingdom prices. The payments for these goods, however, are in the form of the sterling balances which are of worse than dubious value. At one time, it was suggested in Britain that there is a large element of profiteering in the sterling which India has acquired in Britain. This was, however, the position which was taken up after the old theory of our sterling balances originating in Britain's generosity in the allocation of military expenditure was recognised to be extremely untenable. Now that the equitability is no longer questioned, we are entitled to ask what the foreign nations, particularly Britain, are setting against our exports at such reasonable prices. The position is best stated in Sir Chintaman's words:

An outstanding factor in the immediate post-war economic situation will be the widely varying degrees of inflation in different countries resulting from the uneven incidence of the burden of war and the unequal efficiency of economic organisation to distribute this burden properly through taxation and loan policy. This state of affairs is reflected in the considerable disparities in national price levels as well as in the national prices of internationally traded goods. I refer in particular to the much higher prices of general consumption goods in the Indian market than in the countries of export, e.g., the United Kingdom. With the prices obtainable and obtained in the Indian market for a considerable range of goods, about two to three times higher than those determined on the basis of British costs plus reasonable profits, the question arises of the distribution of the profit or benefit of the considerable price difference as between the two countries.

There is thus a definite danger that, if we are not sufficiently vigilant, the terms of trade will be very seriously adverse to us. While we supplied our goods and services on terms which, even the buyers now agree were very reasonable, are we to get our imports "at the high prices dictated by existing conditions of inflation, acute scarcity and lack of alternative sources of supply"? The foreign manufacturer and exporter receive most of the advantage; and the primary aim of allowing the imports of consumer's goods, namely, combating inflation, will be defeated. And in regard to our future exports, too, Sir Chintaman warns us, "the supplies of food and essential raw materials for the rehabilitation of British economy in the early post-war years will continue to be procured through the practice of largescale buying which has been found to be of such use during the war."

In these circumstances, every step of ours in the matter of our foreign economic relations is fraught with grave consequences. A necessary preliminary to careful and wise regulation is the organisation of our trade in imports and exports in large units. If Britain seeks to retain the advantages of unified purchases, India also should take a similar step. Our bargaining power should be protected from the weakness caused by the activity of different and more or less

competitive agencies. Over the whole world, this tendency to enlarge and centralise the agencies of trade has gained in strength during the war. And since its benefits from the broad national point of view have been tasted, no nation is likely to forego them just because hostilities have caused.

Mere organisation will not, however, obviate the need for careful thinking out of the policy. There must be clear ideas about the quantities of consumer's goods which we can import, without detriment to consumer's needs on the one hand, and the interests of indigenous industry on the other. We have to be clear also how long we can afford to continue to import consumer's goods and at what rate, a decline in the volume and value of these imports should be encompassed. And then, there is the question of prices. Since there is bound to be a considerable difference between the prices which foreign manufacturers would demand and the prices at which they can be sold in India, the division of these profits among the various agencies involved is a matter of great importance. Personally, I contemplate a system of State monopoly of imports of these goods for a period or State partnership in the trade in these goods, so long as such imports are made in conditions of uneven and unadjusted price levels, so that the State can have a fair share of these abnormal profits. I would not trust to the E.P.T. for producing such a result.

Coming now to the question of capital goods, they are distinguishable into the goods which existing Indian industries need either for replacement or for expansion, and the goods which are required for the establishment of new industries. They are different in that neither Indian industrialists nor foreign manufacturers will regard them both in the same light. But Indian industrialists are, at the moment, more impatient about establishment of new industries than about expansion of old ones. They have not troubled to conceal their impatience. They have been most indiscreetly importunate in their entreaties for foreign assistance in expeditious supply of capital goods, in provision of technical personnel and even in assistance in management. The result is a high-and-mighty attitude which is not only unhelpful but humiliating as well. In the case of the British who are fattening on our sterling balances which are practically interest-free and who refuse to give a moment's thought to the return of these loans, it is just a case of adding insult to injury. We were harassed and humiliated, when we were debtors. We are harassed and humiliated even after India has become a creditor country. To all the humble prayers of the Indian industrialists, there is no answer except lofty indifference: "Our plants will be too busy to attend to your needs. We should like to know how you will arrange to pay for them (sterling balances are, contrary to your ideas, an utter irrelevance in this context). We are not sure we shall be able to spare our technicians at any time. In any case, there can be no question of that, unless we are to have at least 50 percent of the financial and other control of the industries you are proposing to establish". Needless to say, it is too much even for our industrialists. They are stupefied.

Olympus

(FROM OUR CORRESPONDENT)

New Delhi, Aug. 22.

While the biggest news of the week is that of the end of the war the week also records other happenings of interest. The recommendation of the Industrial Research Planning Committee that the Government of India should set up a Central Research Council with a National Research Council authorised to initiate immediately a five-year programme of development of scientific and industrial research will be welcomed. The report follows conventional lines and it may here be recalled that the London Chamber of Commerce propounded an ably thought out scheme of industrial research for adoption in England which doubtless has provided an example to other countries of how to proceed in the matter. The Industrial Research and Planning Committee has recommended a block grant of Rs. 6 crores towards capital and recurring expenditure for the setting up of the organisation in its first 5-year period. The impact of science upon industry has been negligible in India and if, as a result of the committee's recommendations, Indian industry takes a rank with those of the leading countries we should be less apprehensive of foreign dumping and competition.

The week has also been notable for the announcement of government's post war policy towards war industries. Government have given their assurance to producers and manufacturers, that, so long as the various controls remain in force, they will endeavour to give assistance for the production of civil supplies, in the same way as previously of war supplies, by provisioning and allotting essential materials. This will allay the fears entertained by a section of industry. The Government of India in the Education, Health and Lands Department states that, on account of its unassailable position in Indian Dietetics, a supply of pure ghee is an essential prerequisite for the well-being both of the Civil and Military population and in the same breath the Government of India in the Food Department constitutes an advisory committee to consider the extent of the further expansion that should take place

in the vegetable product industry. They have already decided to establish 27 factories with a total annual production of 1,05,000 tons

An excise duty is to be paid at the rate of Rs. 5/- a Cwt. The vegetable product industry already contributes Rs. 100 lakhs to the Central Budget by paying duties on about 10,000 tons of the synthetic ghee. Government have now ensured a Crore more of additional revenue and by the further expansion which the advisory committee has been asked to ascertain are seeking to enrich their coffers at the sacrifice of public health. Strangely enough, the Food Department in pious and partial atonement perhaps for the million and a half lives lost in Bengal has a scheme for the fortification of Indian foods and manufacture of vitamins. It sounds very impressive as did its exposition of protective foods and its talk of food technology and if phrases can satisfy hunger and provide nourishment we certainly have had a surfeit. Having decided that there should be an expansion in the vegetable product industry it now proposes to fortify vanaspathi with carotene of Vitamin A. Its scheme also embraces infusing the requisite amounts of vitamins A and D in Ghee, fortifying Atta with calcium and for this purpose we now hear the familiar tale that three officers of the Food Department will be sent abroad to acquire the necessary knowledge. It is not denied that what matters to the Indians is to find enough to fill their bellies. Admittedly, they do not think of the nature, the functions or of the value of food in terms of energy and national capacity to work. The Food Department has plans for better diets and an enquiry has been set on foot to ascertain details of the different kinds of foodstuffs. The average production per acre of vegetables and fruits, agencies for the distribution of better food to women and children, the possibility of extending school feeding schemes, the position regarding milk, vegetables and other protective foods are all laudable objects in which the Department can count upon the support of the public to the fullest extent.

It has just been announced that General elections for the Central and Provincial legislatures will take place as soon as possible. The already superannuated central legislature was given a further lease of life because of war conditions and the decision to constitute the legislature afresh will be welcomed by all classes of political thought. The holding of elections involves the abandonment of the Autumn session of the Central Legislature which, perhaps may not after all be felt as a very serious disadvantage.

The relaxation in capital issue control, forecast in this page about a month ago, has just been notified. Rule 94 A of the Defence of India Rules has been amended by a Gazette of India extra-ordinary, dated 20th August giving exemption in favour of any issue by a Company other than a Banking or Insurance concern for an amount which, taken with the amount of any other issue made by the same company within the preceding twelve months, makes a total not exceeding Rs. 1 lakh. This liberalisation in the control was overdue and it may be recalled that in England the exemption limit was raised more than two months ago from £50,000 to £100,000. Government's decision would be welcomed as making it easy for companies with small capital to come into existence without submitting themselves to the elaborate formalities imposed by capital issue control.

"HILL BIRD"

APPLICATIONS FOR TEXTILE MACHINERY

In order to permit equal consideration being given to all applications, persons interested in the expansion of existing Textile mills or in the erection of new mills should submit their applications, in the form prescribed by the Chief Controller of Imports for Registration of Post War imports of Capital Goods, to the Textile Commissioner not later than 30th September, 1945. Applications that have already been made to the Chief Controller of Imports or the Textile Commissioner will also be considered after 30th September, 1945 along with the applications that may be received by the Textile Commissioner up to that date. Persons who have already applied therefore need not apply again.

(From Our Correspondent)

Bombay, Aug. 21.

The end of the war has naturally led to a quickening of economic thought on the part of both the public and businessmen. After heaving the first sigh of relief, one's thoughts inevitably turn to the shape of things as they will come and as they will be shaped. The industrialists are asking whether they will get the plant and the machinery for expanding production. The consumer is asking whether he will get the goods he wants in a steady stream, while the public is wondering whether prices will ever slip back. There is an impressive consensus of opinion that controls should be relaxed at the earliest moment, and that de-control should start even from now. On every side, there is no mistaking the eagerness and the anxiety with which the immediate future is viewed. It is feared that a race between bulging pockets and soaring prices may yet make itself felt and ultimately may bring in its wake the two bogies of uncontrolled inflation and financial depression. This will become critical in the next few months and the outcome of it will depend upon the issue of the tussle between the insistence of authority to maintain war-time price controls and the clamour of the consumer public for a free market. On any showing, the need for price ceilings as a barrier against inflation can hardly be questioned. For there is an immense amount of money made during the war and if this is to press on the civilian commodities which are bound to continue to be in short supply, the effect on prices can very well be imagined. This is one side of the picture.

The other side is presented by the probable fate of the many industries which the war gave birth to and which now have a prior claim for assistance from the Government. The consequences of a large reduction in the expenditure are not entirely predictable, especially as regards the retardation it would cause in the economic tempo. And here there is naturally some concern over the fact that the Governments—Central and Provincial, have not yet got ready a programme designed to secure continuous employment and to keep public expenditure on a fairly high level so as to keep up economic activity. The war in the Far East has ended much sooner than any one dreamed and the planners have most probably been caught napping. But one had thought that the Planning Department of the Government of India had completed the spade work on the subject and had at least come to some tentative programme to be put into effect immediately after the war. It is now really that the planners and the people are put on their mettle—the former with regard to their new schemes for employment and the latter as regards the self-denying ordinances they are prepared to impose on themselves in order to conserve their savings until such time as goods are available in large quantities and at reasonable prices. It is greatly to be hoped that our economic statesmen will strain to possess the future. The old watchwords of Government policy, "decided only to be undecided, resolved to be irresolute, adamant for drift" (words applied by Mr. Churchill to describe the Baldwin regime in England) have no place in the fashioning of the brave new world.

At the meeting of the Maharashtra Chamber of Commerce, Mr. M. L. Dahanukar, attempted a comprehensive survey of the economic problems immediately confronting us. He urged the appointment of a full-time permanent tariff board with wide powers to initiate investigations in order to speed up the pace of industrialisation. He also entered a plea for constituting a Central rate fixing authority for the railways. The need for the latter has been acutely felt, but owing to the diverse nature of the managements of the railway uptill now, a uniform railway rates policy could not be evolved. Now that all the railways have become both State-owned and State-managed, there should be no difficulty in charging a single rate irrespective of regional considerations. Mr. Dahanukar suggested that the transport position would improve if motor trucks are used to supplement the efforts of the railways and if Indian shipping companies are enabled to replace the shipping tonnage lost by them during the war.

(Continued from page 339)

charcoal. With the loss of the rubber producing areas in the East Indies alternative sources of natural rubber had to be found. The Institute answered all this challenge with remarkable success. Collection of latex from a large number of possible species was organised and a special chemist was employed to carry out the analyses. The results indicate a bright future for the future of the rubber industry in India. The tea plantations were also served by the Forest Institute which gave valuable advice and help in the manufacture of plywood for making boxes for the export of tea. Investigations on the strength values of Indian spruce and Indian fir led to the acceptance of these species as suitable for aeroplane construction in the place of imported Sitkaspruce. The use of chir-tar has filled the gap created by disappearance of pine-tar and tamarind pectin was found to be excellent for sizing cotton and jute in the place of starch or gums. Since the scope for starting forest industries is rated high, every aid, financial or otherwise, should be given to the Forest Research Institute so that India's jungles can play a large part in the national economic progress.

(Continued from page 327).

on its holdings to the average consumer on whom alone the losses are best shifted. As a result of the support given by the Bull Syndicate in both the gold and silver markets at the lower levels there has been a recovery in the quotations to Rs. 65 and Rs. 113 from Rs. 63 and Rs. 108 earlier in the week. But from the late rally in prices it cannot be said that the downward movement has been halted. Whether the suspension of gold sales by the Reserve Bank is only temporary is not clear. It is generally expected that with the cessation of hostilities in the Far East and the reduction in allied war expenditure, gold sales may not be resumed. The absence of any official sales would help the bulls for some time; but the large hoarded stocks in upcountry centres, continuous selling and a small offtake argue against a stable recovery.

South India

(From Our Correspondent)

Madras, Aug. 22.

Sir Azizul Haque's visit to Madras was availed of by more than one business interest to make a representation of their difficulties. At the premises of the Southern India Chamber, the Commerce Member received deputations of the Provincial Handloom Weavers' Association and the Kumbakonam, Conjeevaram and Arni Handloom Silk Cloth Producers' Associations. Sir A. Haque told them that it was the disproportionately high price of handloom products that necessitated consideration of control. He agreed to examine the question how far the retrospective collection of the three per cent export duty on handloom cloth would entail genuine hardship. With the representatives of the Southern India Chamber of Commerce, the Commerce Member discussed many topics of immediate interest to the business community in Madras. He held that Government could not be blamed for not supplying the necessary quantities of imports as it had been found that the tonnage of imports licensed was always in arrears owing to want of shipping space or export license at the other end. There were also exchange difficulties. And these difficulties were not confined to our trade with any single country. The memorandum submitted by the Chamber urged the necessity of Mr. Jamnadas Mehta going to Burma immediately, of the speedy resumption of Indo-Burmese trade and of an assurance of full commercial rights for Indians in Burma. Sir A. Haque replied that these matters belonged more properly to the Commonwealth Department but that he would consider them in consultation with that Department. At a reception given in his honour by the South Indian Film Chamber, the Commerce Member said that he disliked the concentration of the industry in a few hands and felt sceptic about the removal of controls. He however promised consideration of their grievances.

The week saw a spate of speeches from Mr. C. Rajagopalachari mostly addressed to students. The propaganda for inter-communal marriages which he initiated at the Women's University seems to be gaining momentum, though C. R. continues to be the only spirit that fills the leadership, as well as the rank and file in this propaganda. His address to the Christian College students is notable for the daring novelty of the sentiments expressed. In all seriousness he pleaded that India should now take up the leadership of Asia not merely as a thing of honour but as a matter of duty. He held that India's moral level of civilisation was always higher than the physical and so she was entitled to lead Asia with all her resources material and spiritual. On the probable attitude of Labour to India, C. R. said that though he predicted a Labour victory in the elections he did not foresee thereby any radical change in British official policy towards India; he however held that Labour could not go back on its promises and the best thing for us to do was to reiterate our faith in Labour goodwill for us. It might be possible that the British government

would invent new excuses for holding up the grant of self-government but that was no reason why Indians themselves should lose heart and show a defeatist psychology. He also mentioned that now that office acceptance had become regular Congress programme, there was no more any difference between himself and the Congress. He put in an emphatic plea for the resumption of office by the Congress particularly in Madras, where the Government have collected and held over a lot of surplus funds for future use.

The news of the commutation of the death sentence on the two prisoners of the Kulasekharapatnam case has been received with profound relief all over this Presidency; the relief is all the more since it is part of a general all-India policy where the lives of several young Indians have been saved.

Some time back, the local tanners and shippers of hides submitted a representation to the British Ministry of Supply requesting them to raise the price of raw hides by seven annas in the pound. The British Ministry sent a reply rejecting the demand. A meeting of the local tanners and shippers considered this refusal, and decided to accept the present sliding scale system of bonus offered by the Ministry; they have however requested that this bonus should be

paid in the month of deliveries affected and not in the subsequent month as notified by the Ministry, and that the present scheme should be in force till December, 1945.

Branch in Orissa:—Sambalpur.

MORALE

THE LAST WORD IN DEFENCE

Defence of a country, particularly in modern warfare, largely depends on the excellent morale of the people, irrespective of whether they are directly engaged in war work or not. It is the unshaken morale of the people of Great Britain that helped in the magnificent defence against the terrible Air Bombardment by Germany and gave the Germans the first setback. It is the knowledge of every individual and the satisfaction that their country is well defended that creates such morale. In the defence against Air Raids Balloon Barrage plays an important part. So also the efficiency of the fire fighting services and the Rescue parties. All these need—and an essential need of course—suitable and strong ropes. Harlons play the leading role in these supplies. Whatever the kind of quality in ropes may be Harlons have the variety to choose from.

61, HARRISON ROAD, CALCUTTA.

A Resume of Commodity Markets

The feature of the week is the sharp decline in prices for both bullion and raw cotton. Heavy selling by bears and tired liquidation by bulls resulted in the break in bullion prices while the weakness of the raw cotton market was in sympathy with bullion. The jute market was inclined to be slightly steadier on reports that the standing crop had suffered considerable damage and that with the possibility of an increase in coal supplies to jute mills and the release of the requisitioned mills, there might be large-scale buying by Calcutta producers. The jute manufactures market was inclined to be a trifle easier as the bazar took a bearish view of the future and was prepared to discount rates for forward position but mills are not anxious to do business and are well sold for positions right up to June, 1946. In the piece-goods market firm conditions have been noticeable and it is stated that in the main producing centres ready-made cloth dealers have been very active and were buying up any quantities that were available.

The slightly better tone of the raw jute market in spite of the bearish and bullion markets was due to the expectation that before long mills would be obliged to buy on a large scale and that with the increase in exports, the position of the ryot would be considerably improved. New crop prices were 4 to 8 annas higher. The rise in prices, however, has not been maintained as it is felt that the position in the jute industry will improve only after some time and that without any appreciable increase in coal supplies it cannot possibly be expected that production will improve considerably. Also, the expectations that there will be a shortage of supplies of the principal raw material are not quite justifiable as the peak of production will come about only early next year and there will be enough jute to meet the demand until the 1946 crop arrives. If, as a result of these expectations, the jute Purchasing Panel is not able to enter the market the authorities will be more than grateful especially as it is feared that with the fall in the general level of prices, jute values too might be marked downward. If prices are maintained around present levels for the next two months, the problem of stabilising jute prices would have been satisfactorily solved.

The weakness of the fabrics market was due to the expectations of large production with an increase in the manufacturing capacity of the industry on account of the release of requisitioned mills and larger coal supplies. While market expectations in this regard might ultimately be realised, it is stated, however, that the release of the requisitioned mills will come about only after some months and that the position in regard to coal supplies, too, will improve only gradually. The reserved attitude of mills has prevented any large speculative selling. There are reports in the past two days that more orders might be placed by the Central Government but no confirmation of these reports is yet available.

There was a further decline in prices in the Bombay raw cotton market as the Bull Syndicate did not support the market and there was a continued decline in prices for bullion. Jharilla September has come down to Rs. 368 from Rs. 384 at the end of last week but on better Karachi advices there has been a rally towards the close and quotations are slightly better at Rs. 374. The All-India final forecast

figures for the cotton crop 1944-45 were published during the week. It is estimated that there will be a decrease of 30 per cent in the acreage and 33 per cent in yield.

At the meeting of the All-India Handloom Board held in Nagpur recently the question of placing the handloom industry on a sound footing on the lines of the recommendations made by the Additional Deputy Textile Commissioner was considered. The difficulty of the handloom industry in war time is mainly in getting the necessary supplies of yarn and dyestuffs for the production of handloom cloth. Nearly one-third of the total of Indian mills' yarn capacity is now utilised by the handloom weavers but still there are reports of hardship among the weaving classes in the various centres. There is, at the same time, the complaint that prices for handloom products are high and that in the interest of the handloom industry a fair level of prices, should be maintained to ensure the continued support of the consuming public. It is stated that the relatively higher prices for handloom production are due to the high ceilings for yarn, the presence of too many middlemen in the trade and the difficulties in marketing. The complaint that

yarn ceilings are rather high deserves to be enquired into as it is common knowledge that 70 to 80 per cent of the cost of production of handloom goods is on account of yarn and the wages of the weavers are only between 15 to 23 per cent. In recent years the Madras Presidency has been successful to a certain extent in bringing about the orderly marketing of handloom goods on a co-operative basis and efforts have been made to standardise the products and fix prices for the various varieties. If, as a result of the investigations by the Handloom Board, changes are made in the methods of production and facilities are provided for cheapening cost, the elimination of the middleman and regular supplies of yarn will go a long way towards strengthening the position of the largest cottage industry in India. The All-India Handloom Board has met for the first time after fifteen months of its formation. It is hoped that even now at least the claims of the handloom industry will receive due attention and that continuous employment would be guaranteed, on reasonable wages, to two and half million weavers and seven and a half million persons, including women and children.

(From Our Correspondent)

Calcutta, August 24.

Recent reports from the Mofussil regarding the progress and condition of the new crop tell of serious damage to the quality of the crop due to flooding. In the Brahmaputra basin there is flood over a wide area; harvesting has been delayed and with jute godowns under water business is suspended in many centres. On the whole the crop is a well grown one but adverse weather conditions during the last two months have destroyed prospects of a high yield of good quality fibre. Towards the end of May and during the first-half of June drought and low river levels delayed the cutting and retting of lowland and midland crops resulting in over-matured plants and adversely affecting quality of the fibre which shows signs of heavy roots and wiry crop-ends. In the latter part of July and during the first week of August river levels rose sharply and in some districts was 3 to 4 feet above the level recorded at the corresponding period last year, particularly at Serajgunge (Pabna Dist.), Bhairab, and the surrounding districts of Mymensingh. Flooding during that period was accompanied by almost incessant rain which has hindered harvesting and prevented cultivators drying jute that they had previously harvested. First imports, therefore have been mostly damp and this has held up business to some extent. It is thought that some of the jute that was being steeped before the river began to rise will be lost. According to most of the reports from up-country centres later imports may show an improvement in quality but generally speaking damage must be expected in many districts. Any sudden drop in river levels would undoubtedly produce large quantities of hard centred fibre. Prices for the fibre have eased slightly in most places but they are still above the parity of the prices obtainable in the Calcutta market.

A press communique issued by the Director of Agriculture, Bengal, gives notice that the consolidated final review of the Jute crop of season 1944 for the Provinces of Bengal, Behar, Orissa, Assam and the States of Cooch-Bihar and Tripura will be published in Calcutta on Saturday, the 1st September 1945. Printed copies of the review will be distributed at 12 noon on that date, from the Western Arcade of Writers Buildings.

Arrivals of jute in the first half of August are estimated at 1,87,000 bales which added to arrivals during July, viz. 4,56,000 bales, brings the total arrivals from 1st July to mid-August to 6,43,000 bales as compared with 7,31,000 bales for the corresponding period in 1944.

Jute imports into Calcutta and the Mills' Stations during July 1945 amounted to 22,33,040 maunds as against 23,52,861 maunds for the same month last season. Of the total weight of jute imported in July, 42.2% was transported by vessel, 56.6% by rail and only 1.2% by boat.

Despatches of jute manufactures from Mills during July amounted to 93,040 tons as against 89,533 tons in June. They were however slightly lower than despatches in July 1944 when they amounted to 96,109 tons. In July 1943 and July 1942 despatches from Mills were 84,281 tons and 83,957 tons respectively.

On the basis of the reported production of manufactured goods the consumption of raw jute in July was 4,57,000 bales compared with a consumption of 4,94,000 bales in

June this year. In July 1944 the consumption of raw jute by mills was 4,42,000 bales and in July 1943 and July 1942 the consumption was 4,29,000 bales and 5,75,000 bales respectively.

Since the official announcement last week of the Japanese surrender the manufactures markets have been unstable with the predominant outlook bearish. In the bazaar sellers are more prominent than buyers but mills appear to be awaiting developments and there is no selling pressure from that quarter. In any case most mills are well sold up to March next year, also in all positions up to June 1946 Mills have sold quite considerable quantities of goods. Bearish sentiment in the bazaar is founded in the belief that the end of the war means the withdrawal of controls and restrictions here and overseas and the immediate cancellation of Government orders still in hand. In the opinion of the "bears" more coal will be available to the industry because of the easing of the transport situation and the lowering of coal requirements for war needs. Thus it is argued that the production of jute goods will increase to a large extent while the release of mills which have been requisitioned by Government will further augment productive capacity. On the other hand the bazaar expects to find higher prices ruling for raw jute because larger supplies of coal and the re-opening of requisitioned mills will mean increase consumption of the fibre creating thereby a greater demand for it. It is not overlooked either that with the release of mills' godowns from Government control there will be available greater storing capacity which many people in the bazaar seem to think mills will be in a great hurry to fill with new purchases.

We are not in accord with all the views expressed above. We are inclined to the view that when orders for goods are no longer forthcoming through Government channels they will be replaced by orders emanating from normal trade sources. A study of the I.J.M.A. statistics as regards mills' production will reveal that goods manufactured on Govt. orders during the last twelve months was, on an average, around 11% only of the total weight of goods produced by mills. As we pointed out last week the gradual re-opening of Far Eastern markets such as the Dutch Indies, China and Siam can be awaited with confidence and in the realisation that, in time, orders from these markets will more than compensate the trade for any loss of Government contracts.

As far as de-requisitioning of mills' premises is concerned, this cannot be expected in the immediate future as the military authorities will need time to move out their equipment and stores. After that has been accomplished mills will have the by no means easy task of getting all their machinery back into place and re-establishing their normal organisation within the mills.

With regard to coal supplies, the number of wagons delivered daily at the I.J.M.A.'s Dump during the week-ended 18th inst. averaged 31. There has been a further improvement this week the daily average at time of writing standing at 62 wagons.

In the Pucca Bale market business was reported in Dundee Daisee 2.3 at Rs. 77 and Lightnings at Rs. 74. Dealers are free sellers for most descriptions at minimum rates. The export market has been idle.

EAST INDIA FUND

Receipts for week ending Aug. 9, 1945 - Rs. 5,331

Over Rs. 112 Crores were invested in less than eleven months in the First 3% Victory Loan (1957) withdrawn during February 1945.

The investment of so large a sum in so short a time was proof of the First Loan's soundness and the public's confidence in Government Loans. The 3% Second Victory Loan offers you the same excellent terms—half-yearly dividend less Income-Tax sent to your address, guaranteed repayment at par not earlier than 15th August 1959 and not later than 15th August 1961, no limit to the amount purchasable, security of your capital, ready salability in the market at any time, and refund of Income-Tax if you are not liable to it or liable at a lower rate. Investment in the 3% Victory Loan assists the war effort and helps to counter inflation. It keeps your savings safe from depreciation and gives you a handsome return year by year.

To buy this Loan, apply to your Bankers, or to the Reserve Bank of India at Bombay, Calcutta, Madras, Delhi, Cawnpore or to the Branches of the Imperial Bank of India in other places or to any Government Treasury

Price Re. 1

Stock Markets to-day and to-morrow:

LATE RALLY IN MARKETS

Very weak conditions were noticeable in both the Calcutta and Bombay markets early in the week and a sharp setback in prices was recorded in almost all the sections. The weakness of the bullion and raw cotton markets and the fears that prominent operators in the above-mentioned markets will try to depress prices for shares, led to some selling by investors and professionals. But there was no panic in the share markets at any stage, and it was all the time pointed out that once the unsettling in the bullion market was over the upward trend would be resumed. Doubts regarding the unsound technical position have been set at rest by the sharp rally in values on Friday. Nearly the whole of the losses in the early days of this week have been regained. The late rally in prices, while in part due to the slight recovery in the bullion market, has been brought about by the expectations of early tax relief. The British Chancellor of the Exchequer stated that in the Supplementary Budget, due to be presented to the House of Commons in September next, it would not be possible to give any large tax relief and extra-vagant hopes should not be entertained. But the prospect of even a small reduction in the tax burden in the United Kingdom so early (forecast in these columns last week) has given rise to similar expectations in this country also. The communique published by the Government on Friday morning seems to give the impression that the Finance Member might not possibly announce any relief in taxation before the next budget is introduced. If military expenditure shows a big decrease and there is an improvement in the budget position, the advantageous position will be utilised to advance the post-war scheme of industrial develop-

ment and the budget for 1946-47 framed in the light of conditions existing early next year.

From the foregoing discussion it would be reasonable to conclude that the Excess Profits Tax might not be levied next year and even if it were levied, would be in a considerably modified form. Of immediate significance to the market is the statement by the Excess Profits Tax Officer that the Government is seriously considering the proposal for the grant of additional depreciation allowance to the extent of 20 per cent on the basis of replacement in order to compensate to a certain extent the rise in replacement costs. It will be remembered that the Finance Bill, introduced in the Central Assembly early this year and which was thrown out, contained a provision in this regard. It is also stated that the refundable portion of the E.P.T. will be paid within one year with interest thereon and deposits made on E.P.T. will be refunded within three years.

If the rally in the stock markets on Friday is true to form, it can perhaps be said that the worst is over.

The accounts of the 'Bengal Coal Company Limited' for the year ended April, 1945, make very satisfactory showing. The net profit for the period constitutes, perhaps a record in the history of the Company. Raisings were higher at 8,10,616 tons against 7,23,283 tons and 7,62,537 tons in the preceding half-years. Despatches, which include purchased coal as usual, were very much higher at 13,55,160 tons against 11,90,749 tons in the previous half-year and 9,13,398 tons in the half-year ended April 1944. As a result of the increase in raisings above the target quota, a bonus of Rs. 25,041 was earned for the six months ended March 31, 1945. The net profit, before providing for taxation and depreciation, is Rs. 53,48,115 against Rs. 51,55,593 for the previous six months. There is only a small increase in taxation to Rs. 38.5 lakhs from Rs. 38 lakhs on the former occasion, while the amount set aside to depreciation is unchanged at Rs. 3 lakhs. The sum of Rs. 1 lakh was transferred to Reserve for amenities to miners and their families and another Rs. 1 lakh to Reserve for reduction in the Revaluation of Stores. The transfers to these funds on the previous occasion were Rs. 1 lakh and Rs. 2.25 lakhs respectively. The dividend is maintained at Rs. 10 per share but a bonus of Rs. 8 per share against Rs. 6 per share is to be paid. The amount carried forward is Rs. 2,78,115 against Rs. 2,78,875 brought in.

As a result of the reduction in the purchases by Government of the company's products for the fighting forces and the difficulty in respect of raw materials for civilian trade, the 'Britannia Biscuit Company Ltd.' has been able to report only a lower level of earnings for the year ended March, 1945. The accounts are published for the first time annually in pursuance of the resolution passed at the Half-yearly General Meeting last year. Sales in 1944-45 were only Rs. 1.21 crores against Rs. 1.36 crores for the 12 months ending March, 1944, but with the further increase in the cost of production, the net profit shows a more than proportionate decline to Rs. 15,48,748 from Rs. 24,65,910 for 1943-44. But for the smaller provision on account of taxation, it would not have been possible to maintain the distribution on ordinary shares at 10 per cent. The actual provision for taxation is Rs. 11,06,177 against Rs. 18,06,892. A sum of Rs. 1.7 lakhs against Rs. 2.65 lakhs has been transferred to General Reserve and Rs. 15,000 against Rs. 1.4 lakhs to other Funds. The amount carried forward is higher at Rs. 98,660 against Rs. 71,354 brought in.

The Bangalore Woollen, Cotton and Silk Mills Company Ltd., has been able to report very satisfactory results for the half-year ended June, 1945, in spite of the lower average selling price. The net profit, before providing for taxation and depreciation, is actually higher at Rs. 32,39,117 against Rs. 30,91,915 for the previous six months. With the levy of the Excess Profits Tax in the Mysore State as from July 1, 1944, it has been necessary to provide large sums for taxation. Besides the allocation of Rs. 24 lakhs against Rs. 13.89 lakhs for Income-tax (Continued on page 368).

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE (From Our Correspondent)

Calcutta, August 24.

Rather weak conditions were noticeable on the Calcutta Stock Exchange during the period under review which is short of one working day markets being closed on Thursday on account of "Rakhi-purnima." The weakness of the bullion market and the expectations that prices might be marked down slightly lower, before the upward trend is again resumed, were mainly responsible for the decline in prices. In Friday's session however, a better tendency is noticeable and a substantial recovery in prices has been recorded. Quotations at the time of writing are nearer the levels of last week and much higher than the lowest levels for the period. It is satisfactory to note that there has been no large selling by investors and that it is generally expected that prices might be stabilised around present levels once the difficulties in regard to the settlement of bullion are got over.

Gilt-edged securities also have been quiet in sympathy with the other sections. In spite of the cheap conditions in the money market 3½ percent Paper was quoting lower at Rs. 101-2 against Rs. 101-14 at the end of last week. Terminable loans also are easier, 3 percent 1949-52 being Rs. 101-9, 3 percent 1953-55 Rs. 101-2 and 3 percent 1957 Rs. 100-5, 3 percent 1970-75 changed hands at Rs. 97-1 and 2½ percent 1948-52 at Rs. 100-1.

Bank shares were a shade better with Reserve Bank quoting Rs. 137 United Commercial Rs. 26-4 premium, and Imperial Bank fully paid Rs. 2,200.

There is very little interest in the Cotton section with Cawnpore Textiles quoting Rs. 12-2, Dunbar Rs. 328, Basanti Rs. 13-13 ex-dividend and new Victoria Rs. 7-9.

Coal shares were very weak in the early part of the period under review, Burakurs being noted down to Rs. 42-4 from Rs. 44-2, Bengal to Rs. 754 from Rs. 767 and Bhagora to Rs. 23 from Rs. 23-8. South Karanpura shed 2 points to Rs. 34-13, and New Beerbhoom to Rs. 44-7. Bengal are now quoting Rs. 760, Burakur Rs. 43-12, S. Karanpura Rs. 35-4 and New Beerbhoom Rs. 46-8. East Indian were Rs. 44-12, Sendra Rs. 27-4 and Talcher Rs. 13.

Jute shares came in for selling with the easier tone of the hessian market and the reports that mills continue to experience difficulties in respect of coal supplies. The bigger denomination shares were 20 to 25 points lower but with the recovery in prices in to-day's session the losses are only 10 to 15 points on balance. Agarpara came down to Rs. 37-12 from Rs. 38-10 and are now quoting Rs. 38-4, Anglo-India to Rs. 513 from Rs. 530 to quote Rs. 520 and Barnagore to Rs. 270 from Rs. 280 to quote again at Rs. 274. Craig dropped by 2 points to Rs. 12 and Presidency by 1½ points to Rs. 13-6. Howrah suffered a setback to Rs. 91-5 from Rs. 94 and have rallied to Rs. 93. Kamarhatti rose from Rs. 782 to Rs. 790 and Nuddea to Rs. 139 from Rs. 136. Reliance were Rs. 83 against Rs. 81 earlier in the week.

Among Engineering shares, Indian Iron came in for heavy selling and the quotation was at one time as low as Rs. 39-2 against Rs. 40-8. At Rs. 40 the present quotation is nearer last week's level. Steel Corporation are now quoting Rs. 33-10 after

being as low as Rs. 32-12. Jessop were Rs. 25-4, Marshalls Rs. 6 and Braithwaite Rs. 14-2.

In the Sugar section, Ramnugger Cane & Sugar were weak at Rs. 21-4 and Carew at Rs. 29 representing a drop of over 1 point in the past two days. Cawnpore were Rs. 39-12, Balrampore Rs. 17-9 and Belsund Rs. 15-4.

Business in the Tea section has been restricted, sellers being unwilling to discount rates. Tezpur were Rs. 22-10 ex-dividend, Central Cachar Rs. 29 and Moheema Rs. 15.

In the Miscellaneous section, Burma shares were inclined to be steady earlier in the week with Burma Corp'n. being done up to Rs. 7. On profit-taking there was a decline to Rs. 6-8. Consolidated Tin were steady at Rs. 4-8 but B.B.P. and I.B.P. were lower at Rs. 6-1 and Rs. 121 respectively. B.I.C. were dealt in at Rs. 7-2, Alumin'um Corp'n at Rs. 5-4, Titagur paper at Rs. 34, Midnapore Zemindary at Rs. 185, Assam Saw at Rs. 5-11 and I.G.N. at Rs. 2-10.

PATHEMARA TEA CO., LTD.

The Ordinary General Meeting of the Shareholders will be held at the Registered Office of the Company, No. 14, Old Court House Street, Calcutta, on Friday the 7th day of September 1945, at 3 P.M. for the following purposes:—

- (1) To receive and pass the Directors' Report and the audited Accounts for the year ended 31st December, 1944.
- (2) To declare a dividend on the Preference Share Capital.

(Annual General Meeting on 31-1945 at 3 p.m. Books closed from 22nd to 31st August, 1945).

Audited accounts for the year ended 31st December, 1944.
They disclose a profit of Rs. 13,31,360-5-9 and on transfer of this sum to Profit and Loss Account, and after sundry adjustments, there is a balance at credit of that account amounting to Rs. 16,01,412-13-7, of which have been transferred Rs. 50,000 to Contingencies Reserve to meet expenditure on renewals and replacements of buildings, machinery, etc., that will be necessary after the conclusion of hostilities.

Dividends on the Preference shares were paid on 1st November and 1st May and interim dividends of 10 per cent on the Ordinary shares on 24th November and 21st February last, leaving Rs. 12,39,412-13-7 now to be dealt with. It is proposed to pay a final dividend of 55 per cent on the Ordinary shares, making 75 per cent for the year, and to carry forward Rs. 5,79,412-13-7.

Estimates for 1945 provided for a total crop of 64,550 maunds at a cost of Rs. 27,97,545, including inland freight and sale charges.

Mg. Agents.—M/s. Duncan Brothers & Co., Ltd. Authorised, Issued and Subscribed Capital—Rs. 24,00,000 in 12,000 Ord. shares and 12,000, 6 per cent Cum. Preference shares, both of Rs. 100 each, fully paid up.

(Annual General Meeting on 14-9-45 at 11 a.m. Books closed from 7th to 14-9-1945).

Audited accounts for the year ended 31st December, 1944.
After making provision for all charges, including Rs. 35 lacs for depreciation, Rs. 44 lacs for taxation Rs. 18,96,230 being the share of profit payable to The Indian Iron & Steel Co., Ltd., under the Supply Agreement and the annual charges for Debenture Interest and Preference Dividends, the net profit for the year amounted to Rs. 26,93,906. To this sum is added the credit balance of Rs. 1,78,266 brought forward from last year, making a total available for distribution of Rs. 28,72,172. From this amount available to the Ordinary Shareholders of Rs. 28,72,172; there has been paid the interim dividend of six

annas per share declared on 25th January, 1945, Rs. 11,06,238; and the further interim dividend of eight annas per share paid on or after 20th July, 1935, Rs. 14,74,985, leaving a balance of Rs. 2,90,949 to be carried forward.

Following the practice established in past years, instead of waiting for the simultaneous publications of the accounts in India and England with the resultant delay in the holding of the Annual General Meeting, to enable Shareholders to obtain their dividends as early as possible, the Directors have distributed what would have been their recommendation of a Final Dividend in the form of the above interim dividend of annas eight per share payable on and after 20th July, 1935.

During the year holders of £93,150 Guaranteed Convertible Mortgage Debentures exercised their option to convert into Ordinary Shares. By this conversion the Ordinary Share Capital was increased by 74,520 shares, making a total of 2,964,890 Ordinary Shares subscribed and the amount of the Guaranteed Convertible Mortgage Debentures was reduced from £511,400 to £418,250. With this conversion, the surplus on conversion reserve has been increased from Rs. 11,30,834 to Rs. 16,27,634.

The statutory restrictions prohibiting the publication figures remain but shareholders are advised that output tonnage continued satisfactory and that all departments were on full production throughout the year. All Buildings, Plant and Machinery have been maintained in good condition and the substantial additions shown in the Balance Sheet on capital expenditure reflect the extent to which the Corporation's extension programme is being pushed ahead. To help finance this capital extension programme, it has been necessary to draw against the cash credit facilities created for this purpose. The amount so drawn as shown in the Balance Sheet was Rs. 31,41,987.

The sale of the Corporation's products continued to come under The Iron and Steel (Control of Distribution) Order 1941.

Whilst certain difficulties were experienced with incoming supplies of Raw materials, particularly Coal and Dolomite, the position generally showed around improvement.

Labour continued to work satisfactorily but difficulties still exist in recruiting experienced workers. The general health of the operatives has been maintained and the station has been kept free from all epidemics.

Mg. Agents.—Messrs. Burn & Co.

Authorised Capital—Rs. 10,00,00,000. Issued Capital—Rs. 4,16,54,000. Subscribed—Rs. 4,16,44,300 in 119,954, 5 per cent Cum. Pref. shares of Rs. 100 each, and 2,964,890 Ord. shares of Rs. 10 each, both fully paid up.

(Annual General Meeting on 14-9-45 at 11 a.m. Books closed from 24th August to 7th September, 1945).

Audited accounts for the year ended 31st March, 1945.
After providing Rs. 95,575 for Depreciation and reserving Rs. 11,06,177 for Income-tax and Excess Profits Tax (excluding E.P.T. De-

posits), the Profit and Loss Account shows a nett profit for the year Rs. 3,46,997; this must be added the amount brought forward from the last Balance Sheet Rs. 71,354; less a half-yearly Dividend on Preference shares and Interim Dividend of 5 per cent on Ordinary Shares paid in February, 1945, Rs. 67,346; making a total of Rs. 3,51,005; with which it is proposed to deal as follows:—

To payment of Dividend on Preference Shares Rs. 618; to payment of a Final Dividend of 5 per cent on Ordinary Shares Rs. 66,727; to Reserve for Staff Insurance and Provident Fund Rs. 15,000; to Reserve Rs. 1,00,000; to Dividend Equalisation Reserve Rs. 70,000; and to carry forward the balance of Rs. 98,660.

Production was maintained at a high level at both Calcutta and Bombay factories throughout the year.

After paying 5 per cent Final Dividend, making 10 per cent for the year, the Directors have recommended placing the surplus profit to Dividend Equalisation Reserve—Rs. 70,000 and Reserve—Rs. 1,00,000 which will be needed for reequipping the Company's factories after the War and, in the marking 10 per cent for the year, the Director Deposit under Section 10, Indian Finance Act, 1942, for the year ended March, 1945, of approximately Rs. 2,50,000.

The improved war situation with the resultant decrease in the demand from Government for the products for the Fighting Forces, combined with the very limited supplies of raw materials released by the Authorities for the Civil trade makes any forecast of future results exceedingly difficult. The Directors see no reason, however, why the supply position of raw materials for General Trade purposes should not improve thereby absorbing more of the productive capacity and future prospects can be considered as satisfactory.

Secretary.—Mr. A. P. Chanda.

Authorised Capital—Rs. 20,00,000. Issued and Subscribed—Rs. 13,50,000 in 1,545, 8 per cent Cum. Pref. and 1,33,455 Ord. shares, both of Rs. 10 each, fully paid up.

Synopsis of balance sheet as at 31-3-1945.

HUKUMCHAND JUTE MILLS LTD.

Audited accounts for the year ended 31st March, 1945.

The Revenue Account after deduction of Interest, Commission, etc., shows a Profit of Rs. 18,13,912-11-2, out of which an Interim Dividend Rs. 1,40,000 on Preference shares at Rs. 3-8 per share, free of Income-tax, was declared payable by the Directors on the 20th December, 1944, leaving a balance of Rs. 16,73,912-11-2 which the Directors recommend should be dealt with as follows:—

To provide Depreciation Rs. 5,00,000; to provide Reserve for Taxation Rs. 9,50,000; to pay a final Dividend on Preference shares at Rs. 3-8 per share (making a total payment of Rs. 7 per cent per annum, for the year ended 31st March, 1945) Rs. 1,40,000; leaving a Credit balance of Rs. 83,912-11-2 to be adjusted against the debit balance of Rs. 8,17,663-2-5 brought forward from the previous year, leaving a net debit balance of Rs. 7,33,750-7-3 to be carried forward.

During the year the mill in common with all other mills in the Membership of the Indian Jute Mills Association was allowed to work 54 hours per week, but on account of acute coal shortage the mills had to be closed down for a total period of ten weeks in the course of the year. The production has also suffered considerably on account of "steam trouble" due to the bad quality of coal supplied. The results for the year were thus adversely affected.

To cope with the situation arising out of the shortage of coal supplies and of requisitioning on certain mills an "Industrial Pool" has been formed by the Association with

Face the Critic

It is the practice in this Country not to face critics straight. The Government of India never face their critics in the face but issue "Press Statements". And the lesser Gods follow suit. Small wonder the Imperial Bank of India has adopted the same method. Every one connected with banking and finance knows 'Indian Finance' and its age-old plea for 'Indianising' the staff of the Imperial Bank of India. And surely the Imperial Bank of India which knows 'Indian Finance' and through whose columns, the speeches of its Chairmen used to be published should have answered those criticisms straight.

Whatever the Chairman of the Imperial Bank might say, the fact remains that the case of the Indian officers is unanswerable and his defence is 'laboured'. Indians have not been promoted to high posts merely because of the Britons' anxiety to maintain his entrenched status.

Indian Reader.

Capital Control

I have read the 'Clive Street Gossip' in Indian Finance August 11 and 18 dealing with 'Capital Control.' The position in India is that we have both States and Provinces situated far away. And, even where near, the mysteries of one are not known in another. So many Companies spring day by day as if to satisfy the whim of promoters. And the unwary and 'uninitiated' investor like me is unable to judge which is sound and which is not. I, for one, having burnt my fingers more than once, have decided not to invest my small savings in shares at all.

Sometime ago I read in the columns of your paper that there was the danger of foreign capital entering the Indian States, shout however much the British Indian politicians against it. This is a danger against which we should be forewarned and forearmed.

In my opinion what is required is, with the formation of a National Government, the establishment of a National Investment Trust with an incorruptible and versatile Examiner of capital issues, who will examine all aspects of the question of Capital issue, whether the proposition is sound, whether it is necessary etc., The Examiner should encourage the indigenous as against foreign. Thus can the interest of the investor be safeguarded and the country's economy be put on a secure basis.

Ex-Share-Investor.

Coal Problem

The editorial note on "The Coal Problem" in your issue of 11th August enunciates the principle that coal should be mined "in accordance with the national need and conducted with the maximum efficiency".

When the national need is swollen by the unprecedented demands of war and maximum efficiency is impeded by a shortage of labour and the impossibility of obtaining sufficient Colliery stores and equipment, the pertinence of your dictum is entirely lost.

Besides ignoring these difficulties with which the industry is confronted, you speak of "sweated labour" and it conjures up visions of an industrial population whose power to bargain has been broken down, and is therefore wholly false.

Mining labour is predominantly agricultural, not entirely dependant on the winning of coal for their maintenance and consequently are careless of efficiency, attendance and the wages they earn. If the standard of living among miners is poor it is because they are generally aboriginal people, accustomed to living for the day and unable to understand the value of saving money—now that a miner can earn a week's food in three days he is disinclined to work five and a half days to improve his standard of living by increased purchasing power. Raising wages is not even able to stimulate attendance, much less output.

As to women working in mines, there has been much uninformed criticism. They are not compelled to work underground, but when they do so voluntarily it is for equal wages and, curiously enough, they prefer to work alongside their menfolk than alone on the surface. The ban was raised because the coal shortage is acute and has resulted in 20% more coal being mined than otherwise would have been the case. They suffered no hardships which would have justified the sacrifice of this additional output so necessary to the war effort. Now that hostilities have ceased however it is expected that more male labour will be available and women will be precluded from the mines at the very first opportunity which the coal industry will welcome.

Coal production universally has been a political issue for many years, but its

problems are understood by few. An article "Beyond the Shortage" published by you on 22nd July 1944 took cognizance of the struggle to exist the industry had in India in the past, brought about by uneconomic prices for coal, chiefly sold to the Railways.

The new Enquiry Committee will have an opportunity of examining the cause and effect and make recommendations which will be beneficial to the nation's most important mineral coal and thus assist the industry towards maximum efficiency.

R. Dutts n.

Amend Section 48 of the Insurance Act

Various suggestions have been made on the Cowasjee Jehangir Committee Report as a remedy for the evils reported by the said Committee.

Restriction on transfer of shares will only complicate matters but will not achieve the desired result.

All suggestions have been made with a view to protect the interests of the policyholders. If that is so, why the present meagre representation for the policyholders in the Board of Directors? Legislature has conceded the point that policyholders must have a representation in the Board. Then at least in fairness it must be in proportion to the Life Fund. In a majority of the Indian Companies, the share capital is not even 10% of the Life Fund. Then would it not be fair that shareholders' Directors should not exceed 25%?

The only remedy which will have the desired effect is to amend section 48 and give the policyholders at least 3/4 representation in the Board.

Fact Parade

Latest Food Index: Rise of Three Points

The Economic Adviser's All-India index of wholesale prices of food articles (Base: last week of August, 1939=100) worked out to 240.7 for the week ended August 11, 1945, as compared with 237.9 for the previous week.

Between the two weeks 'Cereals' and 'Pulses' remained stationary, while 'Other Food Articles' advanced by about 5 points due to increase in prices of Gur at Ahmednagar and Muzaffarnagar.

Textile Control Order

The Central Government have by a notification published in the Gazette of India dated the 11th August, 1945, promulgated the Textile Industry (Control of Production) Order, 1945. Among other things the Order restricts the production of yarn by a manufacturer to certain specified counts and provides that no manufacturer shall utilise less than 90 per month for the production of utility cloth such as dhoties, saris, longcloth, shirts, drills, twills, sheetings, etc. The use of folded yarn in the production of cloth is restricted under the Order, while the production of any cloth with a border exceeding 2 ins. in width is totally prohibited. The varieties to be manufactured by a producer are also restricted. Besides every manufacturer is required to submit to the Textile Commissioner returns in such form and at such times as he may specify.

The above press note is being issued by the Central Government in pursuance of sub-rule 1 of Rule 119 of the Defence of India Rules.

Starch Control Order

The Starch Control Order, 1943, has been repealed and substituted by the Starch Control Order, 1945, promulgated by the Central Government and published in the Gazette of India dated 4th August, 1945. The Order provides that no person shall manufacture starch from potatoes or from any food-grain other than Tapioca except under and in accordance with the terms of a licence granted by the Starch Controller. It further provides that no person can buy or sell starch except under a general permit or a special licence issued or granted by the Starch Controller.

2. The Textile Commissioner to the Government of India has been authorised in this behalf to perform all the functions of the Starch Controller, and all applications for licences should be addressed to him at his office at Shahibag House, Ballard Estate, Bombay.

3. The above press note is being issued by the Central Government in pursuance of sub-rule 1 of Rule 119 of the Defence of India Rules.

Final All-India Cotton Forecast

The final all-India cotton forecast for 1944-45 issued by the Department of Commercial Intelligence and Statistics shows the yield at 3,543,000 bales and the acreage at 14,903,000.

There is a decrease of 32 per cent. in yield and 30 per cent in area as compared with last year.

Most Expensive City in India

Lahore is the most expensive city in India. It was so before the war. It has remained so during the period of war.

These conclusions are arrived at by a detailed comparative study of the cost of living figures for different cities in India by the Punjab Board of Economic Inquiry.

Taking August, 1939 as the basic month, the average of the monthly index of 1944 for Bombay was 225, Madras 203, Nagpur 224, Cawnpore 316 and Lahore 357.

The Lahore index has been rising still further. In June, 1945, it rose to 380.

Third Bengal Wheat Forecast

The third forecast of the wheat crop of Bengal for 1944-45 reveals that the total area sown is 168,100 acres this year as against 183,100 and 192,200 acres in the corresponding and the final forecasts respectively last year. The average provincial outturn works out to 72 per cent of normal as against 79 and 80 per cent respectively in the corresponding and the final forecasts of last year. The gross yield of the crop for the province works out to 40,000 tons this year, as against 49,100 tons and 50,800 tons respectively in the corresponding and the final forecasts of last year.

U. P. Oilseeds for Bengal

The U. P. Government have decided to freeze mustard oilseeds in the province to be entrusted to the U. P. Oil Mills' Association which will be requested to sell the above seeds to Bengal and other provinces at controlled rates, it is reliably learnt.

Lower Sind Barrage Scheme

The Sind Government it is understood, has decided to depute to the United Kingdom and the United States, Mr. H. O. Mathrani, former Deputy Secretary, Sind Public Works Department, for the purchase of machinery needed for the immediate construction of the Lower Sind Barrage.

Mr. Mathrani is to leave for England early this month and will buy machinery costing Rs. 1,00,00,000.

Calcutta Milk Supply:

A central live-stock research and breeding station comprising an area of some 6,000 acres is to be established about 35 miles from Calcutta at Haringhata near Kancharapara. This is the first step towards the fulfilment of a long term policy for improvement of the milk supply.

Danger to Gold

Col. C. F. Stallard, South African Minister of mines, stated that the danger to gold came not from producing too much, but too little.

A few years ago there was a serious danger that there would be a concentrated effort to try to do without gold. Col. Stallard said. That danger was passed, but if gold reached an extravagant value there might be a renewed attempt to do without it.

The real problem of safety for the gold producer was to see that the country produced in increasing quantities to meet increasing quantities of currencies, he added.

Australian War-time Controls To Go

The War Cabinet is to revoke 37 controls imposed for war-time purposes and will ease certain manpower controls, announced Mr. Chifley the Australian Prime Minister.

The regulations being revoked affect transport, wheat, dairy produce and the flour industry.

The easing of manpower controls will enable industries such as mining, engineering, chemicals, oils, fertilizers, clothing, textiles and timber to obtain labour direct without permits.

Demobilisation Plans in Australia

The Federal War Cabinet discussed problems of peace instead of war for the first time in nearly six years, and

increased from 3,000 to 4,000 the number of men to be demobilized daily.

The Prime Minister, Mr. J. B. Chifley said that special steps would be taken to "cushion the shock of transferring industry from war to civilian production."

Mr. Chifley said that while the greater part of war production would be tapered off rapidly to increase labour and industrial capacity for peace-time jobs, the Government did not intend to have thousands fall into unemployment.

Full demobilization is expected to require at least one year, possibly two.

Canada to give financial help to Britain

The Financial News correspondent expects that the Canadian Parliament will be asked to provide financial assistance to Britain in addition to that given during the war. One proposal is that the interest-free loan made to Britain during the war of \$700,000,000, payable after the war to be extended for a substantial period with an additional sum to bring the total to \$1,000,000,000.

The Montreal Gazette reports that the USA will shortly make to Britain a large loan. The amount most frequently mentioned is no less than \$5,000,000,000.

Unemployment in America

Shortly, more than 15,000,000 people in the United States will lose their jobs. Many of them will be back at work within a fortnight on their post-war jobs, but perhaps as many as 7,000,000 will not.

This is because however fast Washington works, peacetime industry will not reach its peak until 1946.

Washington officials say this is the greatest task the United States has yet faced.

Big Crop Production in U. S.

The Department of Agriculture estimated that U. S. farmers this year will harvest the third largest general crop in the history of the country. A total of 1,46,283,000 bushels of wheat is expected. This compares with the 1942 total of 974,176,000 bushels and the 1943 total of 836,298,000 bushels.

Chinese Civil Aviation Plans

Chang Kaingau, Adviser to the Chinese Government on finance and economics and representative of the Provincial International Civil Aviation Organization, stated that part of China's post-war civil air plans would be air connexions with Japan.

The first services, he added, would be to countries bordering China, but Japan would be included in the post-war extension. China would give air transport priority over travel, and air lines would be Government-controlled, but they might allow some private local air lines.

Malaya Rubber

Air Marshal Sir Philip Joubert, Chief of Staff to Adm. Lord Louis Mountbatten, in South-East Asia, said in London recently that Britain would be getting rubber from Malaya very soon.

"When I last had information about rubber plantations in Malaya I heard that although part of the plantations had been cut down to be converted into food production areas, on the whole the plantations had not been seriously harmed," he added.

Free Education Scheme for Ceylon:

Ceylon will be the first Asiatic country to have free education for all from kinder-

garten to university and even beyond, from October, 1945. The entire scheme is expected to cost the State annually Rs. 4,48,00,000, mainly through Government schools, but assisted schools have been granted three years' time to decide whether they would come into the scheme and during this time they would continue to receive assistance from the State.

Irrigation of Bushland in S. Africa:

A plan to irrigate thousands of miles of bush and swamp land in the Kalahari Desert in British Bechuanaland, turning it into a vast area growing maize, rice, sugar and cotton, has been prepared by an expedition after months of arduous exploration of this unknown territory. The plan, which involves utilising the rivers Okavango and Chobe and stands to change the history of Africa, is to be forwarded to the South African and British Governments. Its adoption may also result in increased production of meat and the establishment of an inland waterway which would serve over 10,000 square miles of territory.

No Easing of Food Situation in Britain:

Even after the surrender of Japan, Britain's food situation is not going to be easier for some time to come. The Minister of Food said that after six years' of war rationing he was asking the nation to be patient. He did not see any hope of an increase in the rations. The Minister, however, announced an increase in the supply of fish and tomatoes.

World's Dwindling Diamond Stocks:

According to the Financial Editor of the "Manchester Guardian", the international diamond trade has clearly entered a new phase. Last year, the turnover of the International Syndicate fell from the 1943 peak amount of £20,500,000 to £17 million. The American Bureau of Mines' reports on the trade in gem stones sales may continue.

One factor which suggests that the world suggest that from now the decline in world turnover will continue to decline is that the stocks of the Syndicate and of producers apart from certain classes of gem diamonds have been almost exhausted. New production is still much smaller than last year's sales.

Vast Oil Survey in India and Burma:

Some of the main facts regarding oil exploration by geophysical methods, which took place in India before the war, have been released for the first time. It is known that in 1938 the Burmah Oil Co.

Ltd. embarked upon a large-scale survey employing the latest known methods in the world, and at the outbreak of war, they had as many as seventeen separate geophysical parties at work in India and Burma. The survey had covered 33,000 square miles, 22,000 observation stations had been set up from which gravity measurements were made and the cost so far has been Rs. 45 lakhs. As soon as conditions permit, the B.O.C. will start where they left it in 1940, and they will again employ the latest methods to try to find new oilfields. Amongst other companies, who engaged in oil exploration in India, is the Attock Oil Company.

Exploration is carried out either by geological methods which are applied when the appearance of rocks on the surface indicates the likelihood of oil, and this method of course has been in use continuously for very many years in India, or by geophysical methods, which involve the use of expensive and intricate machinery. One geophysical method is the measurement of minute variations of the earth's force of gravity and therefrom estimating the dispositions of the strata under the surface. The best gravimeters can register variations as small as one ten-millionth part. The B.O.C. in India used the gravity system as early as 1923, while this method was in its infancy and little used anywhere else in the world.

It is not often realised how expensive oil exploration is, and how often huge sums spent on surveys do not result in any oil being found. As an example of this is the Masimpur field in Assam, where over one and a quarter crores of rupees have been spent on exploration, without result.

TREASURY BILLS

Central Government:

Tenders for Rs. 2,00,00,000 of three months' Government of India Treasury Bills were opened on Tuesday, the 28th August, 1945. Total amount offered was Rs. 4,85,00,000. Tenders at Rs. 99-14-6 per cent were accepted in full and those at Rs. 99-14-3 per cent were allotted approximately 35 per cent. Lower tenders were rejected. Total amount accepted was Rs. 2,00,00,000, the average rate of accepted tenders being Re. 0-6-9 per cent per annum.

Tenders for Rs. 2,00,00,000 of three months' Government of India Treasury Bills will be received on Wednesday, the 5th September, 1945 at Bombay upto 11 a.m. (Standard Time) and upto the close of business on Tuesday, the 4th September, 1945 at other centres. Successful tenderers should make payment on Friday, the 7th September, 1945. Other conditions are as usual.

During the week ended the 24th August, 1945, Government of India Treasury Bills for Rs. 3,00,00,000 were sold in favour of the Issue Department of the Reserve Bank of India.

U. S. To Restore Free Enterprise

POWERS OF REGULATION RETAINED

END OF LEND-LEASE

Washington, Aug. 27.

During the fortnight since Japan surrendered, the Truman administration, in paving the way to the restoration of peace-time economy, has instituted policies whose bold conception and rapid implementation have literally amazed the nation. Immediately after receiving notification that Japan had surrendered, the Government entered upon large-scale cancellation of war contracts, abolished man-power controls, terminated prohibition against wage increases, relaxed many controls over transport and put a partial end to the multitude of wartime inconveniences such as rationing of food and gasoline. Soon, goods absent from the market since the United States entered the war will begin to appear in large quantities; prominent among these will be automobiles, washing machines and other electrical devices and clothing. The controls over raw materials and exports also are diminishing and soon will disappear. President Truman ordered the speedy restoration of the free enterprise system stating that the purpose is to mobilise fully "resources of Government, to promote swift and orderly transition to peacetime economy of free independent private enterprise with full employment and maximum production in industry and agriculture and to assure general stability of prices and costs and maintenance of purchasing power which are indispensable to the shift of business enterprise from wartime to peacetime production and of individuals from war-time to peacetime employment".

The administration demonstrated, however, that the Government will not relinquish any power needed to combat inflationary tendencies in the economy. The price and rationing controls will be retained and used to the extent necessary. The War Production Board will aid the expanded production of materials in short supply, limit manufacture of items for which there are insufficient materials, control speculative hoarding, grant priorities to prevent bottle-necks and take other actions that might be needed to stabilise economy.

In international economic relations the administration likewise acted swiftly by terminating lend-lease, to the considerable chagrin of Great Britain. Lord Keynes and Lord Halifax are expected to come here soon to discuss alternative methods of obtaining economic aid from the United States. The complaints which arose in Britain, when Lend-lease ended indicated that the country was highly un-familiar with, or ignored, the language of the Lend-lease Act which is entitled "an act for the defence of the United States". It was clear in the minds of United States' officials that the end of the war meant differently any particular official may have wished it, it was, of no consequence. For the Congress and the President had long ago made it plain that Lend-lease was a war-time measure and a war time measure alone. The Government stated that economic aid will henceforth be basis or through credits obtained from the Export Import Bank.

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

Neither the Indian money market nor the Indian financial authorities seem to have a correct appreciation of the trends and developments in the London money market since the advent of the Labour Cabinet. A measure of the striking change that has taken place in London is provided by the rise in the 2½ per cent Consols from £83½ at the beginning of this month to £88½—an astonishing rise, as our London Correspondent points out, for this usually very staid Government issue. That giltedged should be an exceptionally bullish feature, is an index of the City's confidence in Labour's financial policy. Yet, in the pre-election charges and counter-charges, the Conservatives sought to make out that the credit of Britain will collapse if Labour came to power. In other words, a sharp fall in giltedged securities was predicted. So was a debacle in India sterling stocks forecast by Mr. Winston Churchill, while he fought the Indian Constitution Bill in the mid-thirties. Mr. Churchill's jeremiads both with regard to Labour Government in Britain and Federation in India have been proved false. India has, in the last decade, demonstrated the highest credit-worthiness both at home and in London. And events in the London gilt-edged market at the threshold of the Labour Government's regime are also likely to prove Mr. Churchill a false and malicious prophet.

If the National, Conservative and Coalition Governments of the last fourteen years in Britain have professed and practised cheap money, the avowed and determined policy of the Labour Government is "cheaper and cheaper money". That this policy will be carried out in a practical and successful manner, may be taken as certain from the announcement that Lord Keynes will continue as Economic Adviser of the Treasury. Lord Keynes has been the prophet of cheap money in Britain even as—with apologies for our immodesty—"Indian Finance" has been the prophet of cheap money in India, and, in recent months, of cheaper and cheaper money. Every time Keynes came out with a forecast of cheap money, its uses and significance, the City circles in London as well as the financial editors received his views respectful scepticism. So has our lot been in India. The war borrowings of the British Treasury are the highest testimony to Keynes's insight, respectful judgment and leadership.

To revert to the Labour Government's monetary policy. Our London Correspondent, writing on August 10, gives prominence to the following report (though unconfirmed, as he says):

"On top of these startling developments has come an unconfirmed report that the new Labour Government intends to lower the Bank rate from 2 per cent to 1 per cent in order to cheapen money for big government loans for reconstruction. This has driven the old 2½ per cent Consols from £83½ at the beginning of the month to £87, an astonishing rise for this usually very staid Government issue.

"According to this report, the new Chancellor of the Exchequer, Dr. Dalton, is planning a huge loan at less than 2½ per cent interest rate; if true, this would make most of the British Government stocks look cheap even at current levels. A good many observers question this report, mainly on the ground that the new Government simply has not yet had time to draft such a plan even in the roughest form".

The "Economist" of August 13 also contains references to this report, as is shown in the following extract:

"Despite its preoccupation with the surrender negotiations, the City early this week was still actively debating the possibility of moves towards still cheaper money. The discussion opened last week with suggestions that the Labour Government might seek to place a large long-term housing loan at a very low rate, possibly 2 per cent. The City is by no means convinced, however, that steps will not be taken to lever down the structure of short-term money rates, either with or without a further reduction of Bank rate".

The "Economist" is inclined to believe that some reduction in short money rates is worth while. Since October 1939, British Treasury Bill rates have been 1 per cent, twice the prewar level. Labour M.P.'s have, from time to time, drawn pointed attention to this anomaly. It seems, therefore, likely that the British Treasury Bill rate may, in the near future, fall to ½ per cent. This means that the clearing bank's rate for call money loans to the money market will also be reduced from 1 per cent to ½ per cent. Another corollary is that deposit rates in the case of deposits outside London will also be reduced. The interest on current accounts may be reduced to ¼ per cent or even abolished; and the maximum interest on other deposits may be fixed at ½ per cent as against the present rate of 1 per cent. The "Economist" does not foresee any great harm from such a reduction in the deposit rates: "To some slight extent, they might lead to switches from bank deposits to savings bank accounts; but, given the limitation upon such holdings, the movement could hardly be large. In any case, the differential between the rate of interest paid on deposits and that paid on savings is already so wide that a further slight widening would be of little significance. Moreover, by far the greater part of interest-bearing deposits must be in the hands of business concerns. If allowances were cancelled or reduced, a part of these idle funds might flow into short-dated 'tap' securities; but, for the rest, the loss of interest would be a negligible influence upon business profits".

These developments in London must be properly appreciated by the authorities in India. If the old Consols have staged sensational rise of over five points, why should 3½ India Rupee Paper be in a state of mild depression? If the Bank of England is likely to reduce the official minimum to 1 per cent, why should the Reserve Bank of India hesitate to reduce the rate here at least to 2 per cent? If the next loan of the British Treasury is to be on a 2 per cent basis, why not pursue, with more vigour and more self-

Nationalisation of Reserve Bank

With the early nationalisation of the Bank of England a certainty, the question arises: what about the nationalisation of the Reserve Bank of India? This question is all the more pertinent as, from the very beginning of the discussions on the Reserve Bank proposal, public opinion in the country has been overwhelmingly in favour of a State Bank. A brief recital of the earlier history will provide the strongest argument in favour of such a change.

Until the middle of the 'twenties, the idea prevalent in most quarters was that such changes should be made in the Imperial Bank of India as would transform it into the Central Bank of this country. That is to say, there was, at that time, no idea of starting a separate institution to function as a Central Bank; the Imperial Bank was to be adapted to become the Central Bank. It was the Hilton-Young Currency Commission which put forward a definite plan for a separate institution to be known as the Reserve Bank of India and to discharge all central banking functions. The plan given by the Hilton-Young Currency Commission envisaged a shareholders' type of bank. The Government of India, acting on the recommendations of the Commission, introduced, in the Imperial Legislative Assembly, the Reserve Bank Bill in which the Bank was devised on the basis of private shareholding. The Reserve Bank Bill was referred to a Joint Select Committee; and this Committee decided in favour of a State Bank. The Bill proposed by the Committee had, thus, an important modification in clause 4 which changed the Bank from a shareholders' bank to a State Bank. Sir Basil Blackett, who was then Finance Member, was in a minority on this issue. But, in the course of the Assembly debate on the Joint Select Committee's Bill, he withdrew his opposition and allowed clause 4 to be passed. This meant that the State Bank plan was passed with the consent of both the Opposition and the Treasury benches.

In finally accepting the principle of a State Bank, Sir Basil, with characteristic gracefulness, acknowledged that he had "accepted in faith because I think even faith may be better than shareholdings in some circumstances." The Secretary of State, however, did not approve of Sir Basil's attitude and action in regard to clause 4; and he threw a bomb-shell by cabling to the Government of India to withdraw the Bill altogether for the time being. At the instance of the India Office, a new bill was later introduced. But, because of the attitude which Sir Basil was thus forced to take and because of the truculence of the Opposition incensed at that time by the Simon Commission affair, the new bill proved to be a still-born child. But the fact to note in connection with this controversy is that the Assembly, including the official and non-official members, agreed to the plan of a State Bank.

So far as the Reserve Bank issue was concerned, there was a quietus between 1927 and 1932. However, amongst the financial safeguards insisted upon by British interests in connection with the new constitution for India, the setting-up of a Reserve Bank held an important place. Accordingly, there was a London Committee in 1933 to study and report on Reserve Bank legislation. It was this Committee's report that was the basis of the bill that was introduced in the Central Legislative Assembly in 1933 and passed. It thus, happens that the Reserve Bank of India, as it now functions, is a shareholders' bank.

The Bank has been functioning for over a decade now; and it is possible to examine whether the claims put forward in favour of a shareholders' bank have been justified. The main argument advanced by the sponsors of the shareholders' plan is that the best and most satisfactory method of securing a directorate free from political influence was through an electorate of shareholders. In the Reserve Bank Supplement which we issued in October 1933, we carefully examined the question: "Are shareholders an electorate?" and gave the following answer:

"We ask in all seriousness whether the Government or any of their friends do seriously suggest that shareholders are any electorate at all, let alone their being an impartial and non-political electorate.

Taking ninety-nine cases out of a hundred, have shareholders, at any time, elected directors? Those who have experience of the working of companies in centres like Bombay, Calcutta, Madras and Ahmedabad would agree with us that to say that shareholders have not only the right to elect directors but actually elect directors is a hundred per cent lie. Directors are not elect-

ed in this way, in this country at any rate. **Directors Elect Themselves—and Their Successors. This is the Simple Truth.** And we challenge anyone to dispute it.

"What will happen is that men who know how to intrigue with shares will, in conjunction with the Government and the Governor of the Bank, be able to manipulate things as they like. But the politician is a stranger to this sort of game. The Clive Street and Hornby Road talent is more equal to these machinations."

The elections of the Reserve Bank Boards that have taken place in these ten years confirm our view that "Directors Elect Themselves—and Their Successors. This is the Simple Truth". As in the case of the elections of most joint stock companies in India at any rate, the elections for the local boards of the Reserve Bank are a sham and a farce—mere manoeuvres and manipulations. Not only has it been proved that directors elect themselves, but that the directors elect their successors. There is an arrangement between three members of the local board of Calcutta whereby one of them will be a director on the Central Board for five years, another for three years, and the third for two years. A similar rotation arrangement was in vogue among two members of the Bombay local board.

While it cannot be claimed that there has been any free choice of directors, the sponsors of the shareholders' plan of a Central Bank may well claim that the Central Board has been kept free of politicians. If it is the choice between politicians and businessmen, it seems to be taken for granted that the politician is an amateur and is unreliable and that the businessman is trustworthy and an expert. Speaking in the Assembly on February 8, 1928, Mr. Jamnadas Mehta said:

"I am sorry to remind the House that the inclusion of mere businessmen cannot bring the millenium. When the policy of the Bank is being framed behind closed doors and as these businessmen understand what that policy means in terms of cash, it is some of them—these independent businessmen—who will make an honest million out of their knowledge of the inner affairs and not the politician; the poor fellow would simply go there and honestly give his opinion. And yet it is these businessmen who are to be trusted exclusively with the Directorate."

Our own comment on this preference for businessmen as against the politicians appeared in the Reserve Bank Supplement of "Indian Finance," from which we extract the following passage:

"We need only remind the Government that leakage of information about the New Loan, or Budget 'kabbar,' or Silver Duty was due not to politicians but to the businessmen whose praise they are not weary of singing. If the shareholders' plan goes through, the politician is sure to be kept out. But the men who can exploit the Bank and the information available in Board meetings are sure to find their way to the citadel of power. The shareholders' plan will, thus, be responsible for handing the Bank over into the hands of just those people who require to be kept at arm's length.

"The resulting position will be, therefore, that vested interests—Government and the business magnates—will, for aye and ever, be enthroned in power on a shareholder plan."

Our apprehensions that vested interests will capture power have proved only too true. We may also examine the claim advanced in favour of businessmen that their judgment in business matters is more reliable and trustworthy. What is the record of solid achievement on the part of the able business leaders who have enjoyed a long spell of occupancy in the Central Board of the Reserve Bank? Is there one single matter of policy or operation with regard to which it could be claimed that this enlightened Board of the Reserve Bank were clearly responsible for it? On the other hand, the way in which the Board have acquiesced in the appointment of amateurs to the topmost positions in the Bank cannot be said to reflect any great judgment concerning the responsibility to be discharged by an institution occupying the key position in the financial affairs of the country.

From the way in which the personnel of the Reserve Bank have been selected during these ten years, there is nothing to suggest that the credit and currency administration through the Reserve Bank is anything different from the credit and currency administration through the old department of the Controller of the Currency.

As for most other matters, the Central Board are curiously told by the Governor (or the Deputy Governor who pre-

sides) that this, that or the other is beyond the purview of the members of the Board. On the one hand, there is very little power for the Central Board; on the other hand, even that little power is mostly exercised in conformity with official pattern.

If this is all the good that directors under the shareholders' plan can do, the sooner the Reserve Bank is nationalised, the better. The so-called independence of a Central Bank is a fad. So long as general monetary conditions are of a humdrum, routine character, this independence of the central banking institution may work all right. The moment the nation is faced with a grave situation or crisis, a revolution or a war, the Bank has perforce to depend entirely on the State. And the State is not able to divest itself of responsibility. If the State is responsible in an emergency, why should some outside agency be responsible in normal conditions?

If so conservative a nation as Britons can think of an altered status for the Bank of England, the last argument in favour of a shareholders' bank disappears. The Reserve Bank Supplement of October 1933 anticipated nationalisation of the Bank of England and remarked: "Those who seek to foist on India a shareholders' plan should realise that subsequent world developments might well prove that they have made India begin at the point where England ends." Let us hope that, simultaneously with the Bank of England making a new start, the Reserve Bank of India will also be enabled to have a similar new start.

Employment During the Transition

(Contributed)

The sudden cessation of hostilities in the Pacific has resulted in a vague fear of acute unemployment in the public mind and recent press comments on the prospects of cancellation of war contracts, decrease in Government expenditure which sustained a huge volume of economic activity in this country and the coming demobilisation of the military personnel, clearly shows how the people are agitated over the dangers of unplanned peace. The question is often put: "Are we ready to face this peace which has come upon us like a bolt from the blue?" The snail's pace at which this country's resources were mobilised for war and the half-hearted attempts and bungling which characterised several controls during the past few years, have caused serious doubt in the public mind if the Government can really avert the worst that may come out of the sudden transition from war to peace. Whether this pessimism is merely the effects of the sudden collapse of the Japs or whether it is based on facts and figures, it is true that certain events have happened in this country to create a lot of confusion in what may come in the months ahead. Let us examine the factors which go to intensify the pessimism and see if the picture is really so bleak as that.

It is alleged in several quarters that the Government of India have not finalised their post-war schemes, have not even co-ordinated the tentative plans submitted by expert bodies and are caught napping now that peace has come. The published blue books on the post-war schemes of the Central, Provincial and States Governments are based on the comfortable idea that the war in the East would pull on right into the middle of 1946 and the schemes could be initiated only from 1947. The provincial plans are not yet complete and the Indian States have not yet given their opinion regarding the post-war schemes. Even the preliminary arrangements for the initiation of the plans are incomplete. As regards the future of Indian industries very little promise of definite help has been forthcoming and Sir Ardesir Dalal, in his press statement issued from Delhi, made it clear that his mission to U. K. and U. S. A. has not resulted in any substantial achievement. Machinery will not be available for at least two or three years from the U. K., the bottleneck created by the scarcity of technicians would remain for some years, the scope for sending Indian students to foreign countries for technical training can only yield limited results and the Commercial Safeguards threaten to stay for long. Even granting that the U. K. and America may reconvert to peace time basis sooner than expected, the immediate prospect before Indian industries, for at least two years, is revealed to be quite discouraging. Nor do we know anything clear regarding the liquidation of India's sterling assets. The Hydari Mission has already led to striking imports and commercial circles are afraid that the flood of foreign consumer goods has already started flowing

into this country to destroy the chances of survival for some of our industries, old and new. Victory day has not been celebrated and already our capitalists have started their agitation for tax relief. The enormous expenditure on defence will, therefore, be drastically curtailed. During the six years of war, the Government spent on defence a total sum of Rs. 1,198 crores, excluding the contribution by the British Government to the tune of Rs. 1,374 crores. The cessation of a large part of the defence expenditure would no doubt check inflation on the one hand, but it will also contract industrial and business activities on the other. A large part of the civil expenditure of the Government has been in fact prompted by conditions created by the war and this should also dwindle substantially. The employment associated with the wartime expenditure will shortly cease to exist.

Now, let us see what demobilisation actually involves. The Indian Army has grown from 1,82,000, prewar, to its huge strength to-day, viz., over 2,000,000. In 1939 hardly 15,000 persons were employed in the Ordnance factories producing munitions but to-day they engage more than a lakh of workers. The Ordnance clothing factories are employing another lakh and the workers employed in the Harness and Saddlery factory have increased from 2,000 to 18,000. It is to be remembered also that the Ordnance factories induced an expansion in the labour force of the railways and the workshops throughout India. The railways alone, it is estimated, have employed about 20,000 men exclusively for war work. Apart from the labourers engaged in the numerous small scale and cottage industries thriving on war orders, the increase of labourers in organised industries during the war period must be in the neighbourhood of six lakhs. In some provinces the A.R.P., Civil Pioneer Force, Home Guards and Post Aid Information Service have been considerable and their liquidation involves sizeable unemployment.

The end of war means the closing down of war industries, discharge of the military personnel and contraction of Government departments and, unless suitable arrangements are made at an early date to re-employ the affected people, the misery in the land would indeed be acute. While thus the necessity for planned transition has come upon us it appears the Government are utterly unprepared for the immediate task ahead. Unless an all-round drive for economic development is initiated, unemployment and deflation seem to be around the corner. The political horizon is none too encouraging. The hopes of a National Government have receded with the inexplicable failure of the Wavell Plan and, unless something good comes out of the present Wavell Mission to Britain, the outlook is bound to be dark and dismal. This is the argument of the pessimists.

While the contention of the pessimists has considerable force it does not mean they have properly assessed the factors, pros and cons, affecting the economic future of this country. It is forgotten that the stoppage of the war expenditure by the Government can very well be followed by civilian expenditure for goods so scarce all these five years and more. If the prospects for certain war-born industries are discouraging, let us remember that with the restoration of foreign trade the plantation industries (in particular tea), jute, oilseeds and coal have got better days and cement and iron and steel will only have to answer the accumulated civilian demand of the past five years. The shortage of man power is felt in several industries and this situation can help retrenchment in Government departments. The release of raw materials will also facilitate new lines of manufacture. If a mere drift to peace is the aim of the Government then they deserve severe condemnation and the gloom which has now set in in many quarters may be justified. But hardly a month has passed since the Japs surrendered and it is yet too early to get a complete picture of what is in store for this country. No doubt Army but in view of the fact that about 80% of the Indian army consists of people who came from the villages, and are not well trained in mechanical jobs, a plan of agricultural development would suit them best. The bulk of the labour force which is threatened by the sudden cessation of the labour can be absorbed if the Government of India Road Plan, Irrigation Plan, Power Development Plan, and the Khareghat Plan for the development of Agriculture and Animal Husbandry are immediately put into effect. The agricultural plan, it has been claimed by Sir Pheroze Kharghat and also by Dr. Burns, need not wait on the import of heavy machinery and any planned drive to improve the productivity of Indian agriculture

(Continued on page 380)

OUR LONDON LETTER

Labour's Legislative Programme

No Nationalisation for Railways ?

New Cabinet & Civil Servants

LONDON, August 16.

The announcement in the King's speech that "my government" proposes to bring the Bank of England under "public ownership" is a political curiosity rather than an economic move likely to bring "New Jerusalem" appreciably nearer.

It means that a few thousand shareholders, including several universities at home and abroad, will be bought out and the ownership of the Bank's capital vested either in the British Treasury or possibly in a Government corporation specially created. Only a few scores of these shareholders ever attend the semi-final "Courts" and their influence on the Bank of England's policy has always been precisely nil. None of the big commercial banks is represented among the shareholders; indeed, none of the private banking firms are shareholders though their partners, when co-opted to the Board of Governors, contrive to pick up a small block of stock which qualifies them for appointment to the Board.

But in the beginning of 1930 the Treasury acquired virtually a complete control of the Bank's policy. On the whole, it was not a brilliant period; for the Treasury's policy tended to reflect the views of the Conservative Party's huge majority and that majority—as is now abundantly clear—was extremely short-sighted on more than one occasion. It is possible that a small Board of Governors on occasions took a more enlightened view than the Treasury was allowed to take.

At any rate, the proposed change of ownership has nothing to do with the policy which has yet to be determined.

What makes this political gesture a political curiosity is that it marks the successful culmination of the completely leaderless agitation which obsessed a small minority within the Labour Party for the past several decades. To this minority, the Bank of England was the symbol of all-powerful finance, the wickedest of all the bogeymen who stood between the common people and the "good life". All this began long before Lord Keynes had explored the subtle relationships between the central bank policy and unemployment; this demand for "nationalisation" of the Bank of England, re-appearing year after year at the Labour Party's annual conferences, was always amiably endorsed. Finally, the Party leaders got thoroughly bored with these "Bank of England cranks" and amended the party's bye-laws to provide that, when a resolution on a specific matter has been adopted by the annual conference, it cannot be brought up again for another 3 years, the so-called "three-year rule". But it has continued to appear for re-endorsement every three years and soon will pass into the realm of accomplished fact, no doubt to the joy of this small and still obscure minority.

Much more disconcerting to the City of London is the rather vaguely worded reference to the "machinery for effective planning of investment". This is taken to mean the establishment of a "National Investment Board" with powers similar to the war-time "Capital Issues Committee", power to approve or disapprove of all proposed stock and bond issues desired by private industry. The war-time restrictions on new issues have been endured grimly since the war was proving a very severe test of the nation's capacity to survive; but the suggestion that it will be perpetuated in peace is intensely disagreeable news to those finance houses which live by the flotation of stock and bond issues.

Can they do anything about it? It is not obvious that they can do anything.

The third proposal, that of nationalising colliery companies, is received with a general phlegm except within the coal industry itself. The Labour Government is pledged to carry this through and it has a huge majority behind it. It is thinkable that the House of Lords may, greatly daring, attempt to delay the Government Bill for a period of two years, which is the limit of its obstructive powers, but the Labour Government presumably would strike back and the House of Lords

is not in a strong position to fight. For example, the Government could announce that it would ask the King to create, say, 500 new peers which would be ample to swamp the 700 present members of the Upper Chamber. Or, it could dissolve the Parliament and go to the country on a single proposal, that the present hereditary House of Lords be abolished.

The omission of any reference to nationalising the railways has sent railway shares sharply up. It seems to be assumed that the King's speech contains the new Government's entire "five-year plan" and that the omission of railway nationalisation means that private ownership of railways is safe for at least five years, the life of this Parliament.

But that is a very large assumption. No Government is stopped from introducing legislation on any subject which it considers necessary, and with the big railway trade unions pressing firmly for nationalisation and with the immense problem of co-ordination of all forms of transport, railroads, road hauliers, canal ways, domestic air lines and coastwise shipping, confronting it inexorably, the Labour Government will be constrained to study this problem with considerable concentration.

The most interesting gossip during the past week, as reported in the "Tribune", is that leading civil servants employed in the Board of Trade held a gloomy meeting to discuss, it is alleged, what their attitude should be towards the new regime. They may well have held the meeting to discuss staff problems; for the department will be probably one of the most hard-worked during the slow guidance of exports into the most profitable channels. But it would be completely contrary to the Civil Service traditions for them to discuss Sir Stafford Cripps's probable policy in any mood, gloomy or otherwise.

Improbable though it is, it has revived discussion of the old question, whether the Labour Government can really count upon complete co-operation of those now in the upper levels of the Civil Service. There is complete agreement that a strong Labour Minister who knows his own mind and entertains a healthy suspicion of all his subordinates until they prove their zeal and fidelity, can win the co-operation even of the Civil Servants who have been convinced Conservatives all their lives. But the two Labour Governments of 1924 and 1929 certainly included ministers who were over-impressed by their well-bred staffs and made no headway with their programmes.

Dundee has now taken the first of a series of steps to escape from its past dependence upon jute. A new trading estate is rapidly nearing completion in Kingsway district with 100,000 square feet of factory space of which 50,000 has already been leased to Messrs. B. X. Plastics, Ltd., and the remaining 50,000 to Messrs. Expanded Rubber Co., Messrs. B. X. Plastics, Ltd. have already been promised an additional 50,000 square feet; when the new estates are completed it will provide employment for 6,000 persons. During the period between the two wars, the number of workers in the jute industry ranged between 30,000 to 40,000 of which the unemployed numbered from 10 per cent to 50 per cent, the last figure relating to the slump of 1930.

Incidentally, the United Kingdom's imports of jute manufactures, especially sacks and bags, fluctuated violently during the war. Imports of the latter in 1938 were 792,000 cwts.; in 1939, 2,929,000 cwts.; in 1940, 2,629,000 cwts.; in 1941, 569,000 cwts.; in 1942, 780,000 cwts.; in 1943, 713,000 cwts.; and in 1944, 993,000 cwts.

Imports of manufactures of miscellaneous textiles, mainly from jute, from British India during the war were, by value:—

1938	..	..	£3,282,000
1939	..	..	£5,796,000
1940	..	..	£14,637,000
1941	..	..	£4,074,000
1942	..	..	£5,523,000
1943	..	..	£4,137,000
1944	..	..	£9,788,000

The stock markets have moved into a phase of violent movements, which suggests that the dealers have rather lost confidence in their sources of information and their ability to forecast even the near future. The General Election had a shattering effect upon professional "morale", which was not improved by the disclosure of the existence of the atomic bomb, Russia's entry into the war against Japan and to-day, the reports of Japan's "conditional" surrender.

On the top of these startling developments has come an unconfirmed report that the new Labour Government intends to lower the Bank Rate from 2 per cent to 1 per cent in order to cheapen money for big government loans for reconstruction. This has driven the old 2½ per cent Consols from £83½ at the beginning of the month to £87, an astonishing rise for this usually very staid Government issue.

According to this report, the new Chancellor of the Exchequer, Dr. Dalton, is planning a huge loan at less than 2½ per cent interest rate; if true, this would make most of the British Government stocks look cheap even at current levels. A good many observers question this report, mainly on the ground that the new Government simply has not yet had time to draft such, plan even in the roughest form.

Mr. Reginald Cornwall, Chairman of Messrs. Mersey and Clyde Investment Trust, addressing the shareholders has interested markets with his analysis of the present situation. He says that he thinks investors should mentally be prepared to see the Labour Government in office for seven or eight years, which means they would have ample time in which to implement their plans for nationalisation of coal mines, railways, perhaps also iron and steel industry. He adds that a certain amount of inflation is more or less inevitable; that early ending of war with Japan would land the Government in problems of transition sooner than was planned for even six months ago; and, finally, that the outlook for investments in those industries not scheduled for nationalisation should not be greatly affected by the radical change in the Government, while pressure of cheap money should continue to force prices generally upward.

This analysis will probably be generally accepted, though it does not give even a passing glance to the problem of Britain's huge short-term debt and the difficulty of paying for those imports which are essential for the maintenance of the standard of living.

The announcement that Lord Keynes will continue as Economic Adviser of the Treasury is regarded as a bull point for Bretton Woods; it is taken for granted that he will press for the ratification of the Bretton Woods Pact in its present form, without necessarily precluding some amendments later when it has been in operation.

This General Election has knocked a lot of company directors out of the House of Commons. The membership of company directors in the ranks of Conservative M.P.s in the 1918 General Election totalled 179; in 1929, it had fallen to 96; in the General Election of 1931, it rose again to 143 and in 1935, it stood at 134. In the new House of Commons, Conservatives will include only 35 company directors. The House of Lords now includes more company directors than the House of Commons.

Within the Labour Party, a somewhat similar fate has befallen trade unionists who were elected to the Parliament. After the 1918 General Election, trade union officials represented 98 per cent of the Labour Party's membership in the House of Commons. In 1929, it fell to 40 per cent, rising to 60 per cent in 1931, and came to 50 per cent in 1935. In the New Parliament, trade unionists furnished only 19 per cent of Labour M.P.s. Actually, the structure of the Labour Party membership shifted overwhelmingly towards the middle classes. Trade unionists and members of "proletarian" origin now number 161, while the Party now includes 196, who are from professional classes. The latter are, broadly speaking, much further to the Left than the majority of elderly trade union officials who win safe seats into Parliament.

Mr. Attlee's new Cabinet has received with only moderate enthusiasm in the press. He has given the chief posts to older Labour leaders and rather neglected numerous men and women who now won their way into the House and whose drive and abilities are considered to be much greater than many of the old warhorses. At least, this is the most common complaint.

Certainly, the problems facing the new Government will demand the highest available talent if they are to be solved.

(Continued from page 378)

would satisfy the nationalist circles and also absorb the returning soldiers. While the prospects before our large-scale industries are not yet clear, and cannot be clarified unless the reconversion in U.S.A. and U.K. is achieved, the construction of roads, bridges, buildings and houses would offer ample scope for employment of labour. If the Sargent Scheme of Education is initiated an avenue would be opened for thousands of the educated unemployed.

The immediate task before the Government of India is clear. While the incomplete development plans are to be speeded up without delay they should keep up public expenditure by immediately launching such of those schemes as need not wait for foreign machinery or technical personnel. Contraction in Government departments may be necessitated by the end of hostilities and the clamour for tax relief, but in view of the socio-economic consequences of drastic and sudden retrenchment and demobilisation, the initiation of the post-war plans should be directly linked to demobilisation schemes, and the question of decontrol should be viewed from the point of view of the employment situation in this country. After all, the worst may not happen if some political settlement should come out of the renewed attempts on the part of the Viceroy. Europe and America may recoup sooner than we expected. In the meanwhile, the Government should afford all facilities for the revival of production for civilian demands and, if their industrial policy is clarified further assuring reasonable protection and aid for the Indian industries, the pangs of transition can be greatly minimised.

Editorial Notes

A Vital Need:

Among the innumerable handicaps which Indian journals have been suffering from during wartime, inadequacy of statistical material deserves prominent mention. With the advent of the war, Government stopped publication of much of the useful data they used to publish before. But the real gap was more than what was created by the suspension of official publications. During the war, the administrative machinery of Government expanded on all sides; new economic trends developed in different directions. It would be obviously impossible to assess the success of governmental controls or to estimate the full nature and scope of the deviations and changes in our economic life except on the basis of accurate and detailed data concerning them. The need for economy in paper, lack of suitable staff and the risks of giving out information which the enemy might make use of were some of the reasons behind the parsimonious policy Government followed in respect of statistical publications during the war. But though Government could not publish facts and figures, they should have at least collected for their own use a variety of data during these six years. The reasons that justified the withholding of information have disappeared with the war. Secrecy has no more strategic value, and the paper economy no longer exists, and the required staff also should henceforward be easier to secure. In countries like Britain, full publication of all official statistics has already been resumed and it is difficult to see why the India Government postpones it still. An immediate resumption of all the suspended publications with necessary additions thereto would not only provide Indian journals with the necessary means of constructive criticism on public affairs, but will serve to correct wherever necessary ill-informed or unfair public judgments on official policies. As an essential basis for discussion of post-war plans, the value of data concerning recent economic trends can scarcely be exaggerated.

Sir Ardeshir Explains

In an important Press Conference held at Delhi a few days ago Sir Ardeshir Dalal explained how his mission to U.K. and U.S.A. has ended in a failure. His objects in undertaking the extensive tours were mainly four, viz., (1) to enquire into the possibility of procuring capital goods from U.K. and U.S.A. to speed up India's industrial development; (2) to enquire into the availability of experts required for the industrial development of India; (3) to find out the extent of facilities available in those countries for students from India to secure technical knowledge and training and (4) to see if there could be any modification of the Commercial Safeguards. He has brought back the news that capital goods will not be available for about two years and the chances of importing technicians are not in any way bright. He was not able to secure any special priority for the supply of capital goods to India. British big business frankly told Sir Ardeshir that capital goods would be given only in consideration for a substantial share in control, management and profits. British vested interests are not prepared to countenance any radical change in the Commercial Safeguards at the present moment and the British Government would not even agree to impose some form of price control in order to enable Indian

industrialists to place orders for capital goods. Admission of Indian students to certain technical institutions could be secured, but what is needed is not mere book knowledge but workshop experience.

Reception to Sir Ardeshir's demands was in no way more encouraging in the U.S. In the case of America delivery of capital goods could be expected earlier though the prices would be higher. Materials worth 90 billion dollars are awaiting disposal in the U.S. and the Planning Member has requested the American Surplus Disposal Board to send catalogues, from time to time, of the goods to be disposed. How far India can take advantage of the disposed goods in U.S. has not yet been considered. As regards the dollar scarcity Sir Ardeshir hopes that the negotiations now going on between the U.K. and U.S.A. would result in easing the dollar situation. He sees a possibility of our industrialists getting credits from the Export Import Bank in the U.S.A. The immediate prospect of getting British and American help to sustain India's post-war plans is dark and the Planning Member's trip only underlines the fact that his Mission has been premature. Foreign Governments and business groups would learn to speak with greater consideration when a National Government is formed in India. That this vast sub-continent is a tremendous market and a great source of raw materials is a bargaining point which can be utilised only if a responsible Government is set up at the Centre. In one sense Sir Ardeshir's mission is not a failure because no one expected better results. Entreatings British and American business to give us capital goods has only painted India's inability in bold relief. It is to be hoped, however, that a second Wavell offer would usher in a new era of political freedom in this country when the tables will be turned and foreign manufacturers will complete among themselves in the Indian market as they did before the War.

Poor Man's Charity

At the third session of the U.N.R.R.A. Conference just concluded in London, the contributor countries are reported to have agreed to recommend to their Governments the doubling of their payments to the Associations' Funds. Sir Samuel Ranganathan spoke against the proposal and tried to impress the Conference that even the present payment is clearly beyond India's ability to pay; but his views seem to have been submerged in the final chorus of approval. It is likely that by the time the recommendation comes for ratification by the Indian legislature, constitutional changes will have already begun their course and the Government might not be in a hurry to push through the U.N.R.R.A. Resolution. At any rate there is every likelihood of a slip between the cup and the lip. Full reports of the Conference and the views expressed by Sir Girja Sankar are not yet available but it would not be surprising even if this loyal servant of the Empire felt called upon to put in a feeble plea on behalf of India instead of at all. Responsible public opinion in India would scarcely reconcile itself to any attempt to increase the quota, which even as it is, errs very much on the generous side. Apart from her inability to pay, India has other vital reasons to view U.N.R.R.A. activities with little enthusiasm. The Association has shown scant respect for Indian sentiment, in giving priority to Europe in the administration of relief, from whose scope India is also entirely excluded on purely technical grounds. The arguments for India's eligibility for relief have hitherto been cries in the wilderness. Representa-

Banking MULTIPLIES RICHES

Banks play an important part in conserving and multiplying the wealth and resources of a country. In India today there are 707 Joint Stock Banks, big and small, having a total paid-up capital of Rs. 2052 lakhs. Here are some comparative figures concerning Banking in India and the United Kingdom:-

India		United Kingdom	
Total Deposits - 1943	Rs. 71,480 lakhs	Population - 4.9 Crores	in Rs. 4,90,260 lakhs
Total Clearings - 1943	Rs. 4,22,892 "	Population - 4.9 Crores	in Rs. 4,90,260 lakhs
Deposits per Capita - 1943	Rs. 18 "	Population - 4.9 Crores	in Rs. 4,90,260 lakhs

To help individuals and firms, industry and agriculture to attain higher income levels, India needs to cultivate the banking habit, and improve and consolidate her banking position in order to provide a more adequate banking service.

APPLICATIONS FOR TEXTILE MACHINERY

In order to permit equal consideration being given to all applications, persons interested in the expansion of existing Textile mills or in the erection of new mills should submit their applications, in the form prescribed by the Chief Controller of Imports for Registration of Post War imports of Capital Goods, to the Textile Commissioner not later than 30th September, 1945. Applications that have already been made to the Chief Controller of Imports or the Textile Commissioner will also be considered after 30th September, 1945 along with the applications that may be received by the Textile Commissioner up to that date. Persons who have already applied therefore need not apply again.

tion of Indians in the U.N.R.R.A. staff is another sore point with us, and over this too, the Association hitherto has shown no willingness to consider legitimate claims. The very basis of contribution as a percentage of National Income is iniquitous and if at all there is to be any change in India's contribution it should be a cut and not an addition. The fate of the recommendation in the Indian Legislature can well be prophesied.

Planters' Problems:

Plantation industries did well last year, as compared with the previous one, particularly from the point of view of output which made an excellent showing. Mr. F. H. Farmer, President of the United Planters Association of South India, speaking at a conference at Coonoor, agreed that, though many difficulties of the industry still remain, the general outlook is bright and that the output of tea, coffee, rubber and cardamom has been satisfactorily maintained. There has also been an improvement in the food situation and the plantation labourer was able to work with greater satisfaction than during the years before 1944. Speaking on the postwar problems, Mr. Farmer emphasised that acute shortage of labour caused by the activities of recruiters of all kinds has been the chief headache of the industry and, unless indiscriminate recruitment is stopped, scarcity of labour is bound to affect production. Now that the war is over almost suddenly, the normal sources of labour supply for the plantation industries are not likely to be invaded by contractors holding out to labour the attraction of higher wages. The demand for plantation products is larger than the supply and this state of affairs will certainly continue in future. The markets for rubber and tea, for instance, are growing and export possibilities are considered to be very bright.

On the financial side, the plantation industry has shown reasonably good results during the war period in spite of fluctuations here and there. Production, too, has continued with a high degree of efficiency; but the effect of the price level and the various controls on the cost of living is a matter for consideration. The industry can thrive well and new plans can be put into execution only if there is a reasonable price stability all-round. Controls and marketing acts have increased in number and range; and the planters have to study them first before they can plan for extension. The proposal of the Madras Government to levy an agricultural income-tax on the plantation industry is viewed with disfavour on the ground that the finances of the Provincial Government are quite satisfactory for making a start in economic development. The extension of the Payments of Wages Act to agricultural labourers, is at present inadvisable says Mr. Farmer. The need for scientific research is appreciated on all hands and the future of Indian agriculture depends on systematic research; but the plantation industry should make its own arrangements for the financing of a scheme of scientific research. Investigations regarding manuring, test control, storage, etc., are a necessity to the plantation industry and if some form of voluntary cess on production is agreed upon, South Indian

planters can well hope to face the future and compete with well organised agricultural interests abroad.

Damodar Valley Project:

The river Damodar has an evil reputation as Bengal's river of sorrows. Year after year its floods have washed away hundreds of men, cattle and excellent crop causing untold suffering to people who live in the Burdwan District and its surrounding areas.

It is poor tribute to the authorities in India that while scientific development has made great strides in other countries, while similar rivers have been harnessed for the benefit of man and when the famous T.V.A. has been on the lips of every one, no attempt has been made so far to stop the ravages caused by this river. And it is certainly a matter of gratification that the three Governments concerned have come together to establish an Indian T. V. A. and make full use of the potentialities of the river which have so far been waste. The Tennessee Valley, 40,000 sq. miles in area, had been considered a 'depressed area' and the per capita income of the people living in the valley was as low as 100 dollars a year. In 1933 the T. V. A. was set up. Twenty multi-purpose dams were built for flood prevention, irrigation and soil conservation, navigation and power generation. As the report for 1943 reveals, in ten years' time 9000 million units of electricity were generated and 650 miles of the river had been rendered navigable. And agricultural and industrial development took place on a scale previously undreamt of.

On the same lines the Damodar Multi-purpose project will consist of a series of reservoirs, about seven, to be constructed for flood control, for supplying water for irrigation and for providing a system of hydro-electric and thermal power stations interconnected by transmission lines.

There are both immediate and far-reaching advantages in taking up the work on hand. The Damodar project would, if adequate engineering forces are brought to bear without delay, provide a very substantial volume of productive work for many thousands of people and go some way to offset the fall in employment consequent upon the reduction in war activity.

When completed the project would give the people of Bengal and Bihar a total controlled reservoir capacity of 4,70,00,000 acre feet. It would be possible to undertake the perennial irrigation of about 760,000 acres including the 186,000 acres at present partially irrigated. It will make available electrical energy to the tune of 300,000 KW. at a low cost in a region well suited to become the centre of a great industrial development.

In view of the multi-purpose nature of the project and since more than one Government is interested in it, the project should be constructed and operated under a single unified administration. The powers and duties of such an authority are to be carefully delineated by the three Governments.

A rough estimate of the capital expenditure involved gives a figure of Rs. 55 crores, but this is to be taken as an indication of the order of expenditure. And the project as a whole, is financially regarded as capable of paying its way and proving an economic success in addition to the indirect benefits accruing to the region.

The value of such a project for the economic regeneration of Bengal cannot be over-estimated. And this economic experiment, in which three provinces co-operate, should pave the way for co-operation in other spheres also.

Mineral Resources in Indian States

Recent geological and mining surveys conducted by various Indian States have revealed the existence of a variety of resources within their territories. The war has also given a fillip to industrial production in many States and among these, coal, iron ore, manganese and mica stand out prominently. Hyderabad produces 63,00,000 tons of coal. Bonai 11,20,120 tons, Rewa 3,41,870 tons. Bikanir 47,000 tons and Raigarh 3,900 tons annually. Many other States can show smaller quantities of annual output. In manganese, the States contributed 202,000 tons to an all-India production of 968,000 tons in 1938. Since then the output has considerably expanded and the present all-India figure should stand at about 2 million tons. Among the States, Keonjhar leads with 33,560 tons, Bonai has 28,096 tons, Sandur 10,000 tons and Balangir 1,200 tons. In Mysore, manganese mining started as early as 1906 and in 1937, her output was about 5,550 tons. It is estimated that the annual production of Keonjhar and Bonai could be raised to one million tons each, if the resources are worked to full capacity. Lately, rich deposits have been located in Indore and Hyderabad States. Keonjhar has an annual output of 473,000 tons. Mayurbhanj 40,000 tons of iron. Sandur 15,000 and Nilgiri 10,000 tons. Hyderabad and Indore have considerable deposits and in 1939 Mysore production stood at 46,373 tons. In gold, Mysore accounts for nearly the whole of Indian production. During the forty-five years from 1882 to 1927, she has produced 15½ million ounces valued at £87,000,000. Half of India chrome also comes from Mysore, her 1939 production standing at 30,708 tons. Travancore has valuable monazite deposits and in 1938 her production was over 250,000 tons. Hyderabad has diamond mines on the Kistna. Rich deposits of copper, mica and aluminium are also available in many States, though many of these sources are yet to be fully exploited. Mica is now extracted in large quantities from mines in Jalpur, Tonk, Kawardha, Hyderabad, Kishengash, Mewar and Talchar. Copper deposits occur in several States including Indore, Bikanir, Sikkim, Patiala, Gwalior, Alwar, and aluminium has been found in Bhopal, Bonai, Nandagaon, Surguja, Kolhapur and Gwalior.

Reconversion in the U.S.

The President acted swiftly to the sudden end of hostilities in the Pacific. Though the cessation of lend-lease supplies is the most sensational move on his part, his orders to speed up reconversion are vital and many-sided. Under the stress of war the U. S. industry produced goods at the rate of 40 billions per year and over sixty million persons were employed. American military personnel amounts to eleven million persons and the majority of them will be shortly demobilised. The President has expressed his decision to decontrol as swiftly as possible so as to restore free enterprise consistent with full employment, stabilisation of prices and maximum production. Powers under the 1942 Price Control Act would be retained so as to facilitate the maintenance of maximum production to meet domestic and foreign needs and to combat inflationary tendencies. The Director of Economic Stabilisation, the Secretary of Agriculture and the Federal Loan Administrator have been ordered to stabilise prices and prevent any factor which may prevent the full employment of productive resources. The War Production Board has the responsibility of expanding the production of materials in short supply, "to limit manufacture of production for

which materials or facilities are insufficient, to control accumulation of inventories so as to avoid speculative hoarding and unbalanced distribution which would curtail total production, to grant priority assistance to break bottle-necks which would impede reconversion process, to facilitate fulfilment of relief and other essential export programmes and to allocate scarce materials necessary for the production of low priced items essential to the continued success of the stabilisation programme." Controls over copper, steel and aluminium have been removed to facilitate production for civilian demands and the relaxation in rationing control has already started. Steps are being taken to reduce war work and restore production of low-priced articles for civilian use and though the expenditure of the Federal Government would be reduced drastically, arrangements are being made to cushion off the possible dislocations necessitated by rapid reconversion.

The magnitude of the reconversion problems before America can be best appreciated only if one remembers that the gross national income of the U.S. has increased from 80.6 in 1938 to 198.7 billion in 1944. The United States' production of goods and services today is twice the prewar level and and this increase in the productive capacity has not been created by mere substitution of war work for peacetime activities. The increase is due during the war period in that country. American population and labour force are increasing rapidly and, as the National Planning Association of Washington calculates, the U. S. will have to maintain the national income of 170 billion annually (at 1941 prices) if the programme of Full Employment is to meet with success. While Britain's bother is how to liquidate the debt and cut the coat according to the cloth, the American predicament seems to be, as Mr. Vinson puts it, "to learn to live 50 percent better than ever before." If unemployment is to be avoided the U.S. will have to launch a policy of extensive public works, export in substantial quantities and create conditions for bringing the consumers' demand to the level of productive capacity of the country. The London "Economist" doubts if the U.S. can readjust without causing unemployment but there is little doubt that President Truman is bent upon achieving full employment and quick reconversion.

The Jews in Palestine:

The World Zionist Conference which met in London repudiated the British White Paper of 1939, on Palestine and endorsed the demand of the Jewish Agency in London that the latter might be empowered to settle as many Jews in Palestine as would be economically necessary and feasible. The Conference reiterated the agelong demand for a Jewish State in Palestine, for reparations in kind from Germany and also for international help in the transfer of the first million Jews to Palestine. Commenting "London Times", whose opinion, however, need no longer be considered as a fore-vocal plea for partition, as the best and the least difficult of possible alternatives. Major Attlee's Government probably have not made up their mind on Palestine; nor of the intricate legacy which Britain's own diplomacy in the past has left behind. Ever since the conflict of Jewish and Arab interests in Palestine assumed prominence, British policy has been a

series of oscillations in favour of one or the other side, keeping both constantly suspicious and discontented. The balance swung in favour of the Jews when Balfour made a cautious and guarded promise of the establishment of a Jewish State. During the next twenty years the Arabs did everything in their power to resist a policy based on the Balfour Declaration and by 1939 internal chaos in Palestine had reached such a pitch that the British Government had virtually to cry aloud "No Jewish State". The White Paper that followed restricted the course and number of further Jewish immigration into Palestine. Hitler proved the greatest scourge for the Jews, and amidst their sufferings in Central Europe, the Jews had no time to think of Palestine during the war. There is an omnious similarity between the political problems of Palestine and India, though the Jews are already having more or less a separate State for themselves in the former. Britain will find Palestine a hard nut to crack and she should thank herself as much as anyone else for having made it so.

Hongkong:

With the end of the war in China, old feuds which were submerged in the world conflagration seem again to raise their heads. Though we give little credence to reports like the one that pictures a race between China and British forces for receiving Japanese surrender at Hongkong, we cannot believe that there exists the necessary measure of agreement in views between the British and the Chinese Governments in respect of the future of Hongkong. That China would lay undisputed claim to full sovereignty over Hongkong is undoubted. Britain has commercial advantages in holding to, and legal claims over Hongkong. According to the Treaty of Nanking of 1842, Hongkong was ceded in perpetuity to "Her Majesty the Queen of England her heirs and successors", though the British possession in Kowloon on the mainland was leased to Britain in 1898 only for 99 years. Curiously enough, the 1943 Sino-British agreement by which Britain agreed to forgo her extra-territorial rights in China did not cover Hongkong. Chiang Kai-shek at that time was necessarily in a much more yielding mood than he is likely to be after the war. Chinese claims in this respect have been strengthened by the Convention she signed with France on August 18, by which France has agreed to return the territory of Kwangchow, which she was having under a 99 years' lease since 1888. It would have been better if extra territorial rights were to be given up by all nations as a matter of principle rather than rights surrendered under mutual agreements between countries. At any rate, it could be hoped that Britain would no longer seek pretexts to perpetuate her hold over Hongkong and similar territories which have already become a moral anachronism.

Tackling Beggary:

In Madras, the local authorities have passed a measure making begging in specified areas and in trains penal. Curiously enough, fines amounting to as much as Rs.50 are proposed for offences against the measure. At first sight it might look absurd to try to realise fines from beggars but investigations carried into the finances of beggary have revealed that many beggars have been able to amass quite respectable sums. The Tata Graduate School of Social Work has carried out valu-

able research on this problem and the experience of private individuals can also provide interesting data. It would appear that though a large section of beggars is drawn from the physically crippled, the majority of those who start in the profession are healthy persons. Various devices are found to be employed to cheat the public and more often than not a beggar is a rogue in rags. Organisations have been discovered, employing a number of children and women who act as paid assistants to the chiefs. Sometimes normal and healthy children are maimed and blinded with a view to evoke pity. And in large cities it is usual for beggars to assist and spread immorality in more ways than one. But the greatest menace from the beggar class is to public health. Contagious diseases like leprosy are freely carried from place to place and transmitted to unsuspecting persons. Though data are not available to allocate the place the beggars have in spreading epidemics, the conclusion is irresistible that they have a conspicuous role in it. It is a pity that the problem is being allowed to gather force without the Government or local authorities bestowing even casual attention on it. While it is essentially a matter for Municipal authorities to tackle, an all-India approach will not only enable a pooling of information, but results in uniform and well co-ordinated policies being pursued. We commend the example of Madras and wish to see all other big cities and towns in India taking immediate steps in line. It would provide an interesting study to investigate how the ranks of beggary in different parts of India get swollen.

"Nominated Worker" Scheme

In India, the plans for absorbing military and quasi-military personnel into peacetime occupations are still in a nebulous stage. The end of the war was rather abrupt but even if it were otherwise, the Governments in India would still have to face the charge of going about it in a much more leisurely way than would be justifiable. The setting up of one or two employment exchanges and the circulation of forms calling for service details of those now employed in military and other temporary services seem to be all that is done as yet in this direction. The measures taken in Great Britain for the change-over of employment from war to peace time basis show greater alertness and foresight on the part of the authorities. Long before the Japanese surrender, Britain had set up a scheme of priorities for the industrial change over; and in the six groups of industries which supply the community with houses, housing materials, food, clothing, heat, light and power, essential services and printing, the ministry has provided facilities for the resettlement of munitions workers in their former occupations. Such resettlement is purely voluntary and forms part of the wider statutory scheme for the reabsorption of servicemen and women in the occupations they left to join the forces. While this scheme facilitates a smooth and gradual process of re-employment, special arrangements have been found necessary to ensure that in the process, the required workers are deposited back

in the right order, in right numbers, at the right time and place. "The Nominated Worker" scheme is the first of these special arrangements; through it, the employers in the six industry groups are enabled to get in touch with their former employees whom they require immediately and in accordance with their demands. The workers will be released, except in cases where the continuation in their present jobs is considered of exceptional importance.

(Continued from page 375)
assurance, the series of 2½ per cent loans in India? If it is "cheaper and cheaper money" in London, why not cheaper and cheaper and still cheaper money in India?

Extremely easy conditions prevail in the money market and call money is quoting nominally ½ per cent in Calcutta and ¼ per cent in Bombay. With the large payments by the Central Government and the open market operations of the Reserve Bank floating funds have increased considerably. There seems to be a greater disposition to place money on a short-term basis. At the auctions of treasury bills held this week the total amount of applications was very much higher at Rs. 4.85 crores against Rs. 3.34 crores last week. As bidding was keener there is a decline in the average discount rate to six annas and nine pies per cent from seven annas per cent. The offer for the next week has been maintained at Rs. 2 crores.

For last three years the Reserve Bank has been coming in the market every September to raise loans for the various provincial governments in order to effect part payment of the sums due to the Centre under the Niemeyer Award. It is now reported that three provincial governments will be shortly announcing the terms of new loans for Rs. 8.5 crores. The Madras Government will be asking for Rs. 3 crores, the Punjab Rs. 3 crores and the U. P. Rs. 2.5 crores. The loans will carry interest at 3 per cent. per annum and will be repayable at par in 1960. The issue prices have not been yet settled. On the last occasion the Madras loan was issued at par and the Punjab and U. P. loans at a discount of one and a half per cent.

The slightly steadier tone of the gilt-edged market is perhaps due to the open market operations of the Reserve Bank, investments in the banking department showing an increase from Rs. 20.29 crores to Rs. 28.05 crores. But in view of the greater preference for provincial issues and the small amount required it should be said that there is no great need for preparing the market.

The returns of the Reserve Bank for the week ended August 24 reveal that for the third week in succession, notes in circulation have increased, the latest figure at Rs. 1,143.59 crores showing a rise of Rs. 4.7 crores over the previous week. Notes in the Banking department have naturally declined to Rs. 9.71 crores from Rs. 13.87 crores. Rupee coins have increased further to Rs. 16.72 crores from Rs. 16.17 crores and to that extent notes issued are higher.

In the Banking department Central Government balances are only slightly higher at Rs. 347.53 crores even though foreign balances have improved by 6.65 crores to Rs. 461.50 crores. While the sterling receipts on a fairly large scale in the last three weeks must be towards expenses

incurred earlier there is a feeling that further accretions to sterling balances might continue for sometime yet.

Bank balances are higher at Rs. 99.82 crores against Rs. 92.11 crores and other government accounts at Rs. 17.99 crores against Rs. 16.89 crores.

The statement of scheduled banks for the week ended August 17 shows an increase in both demand and time liabilities, the former being Rs. 4.32 crores higher at 634.48 crores and the latter Rs. 1.38 crores higher at Rs. 249.23 crores. There is a further drop in advances to Rs. 269.71 crores from Rs. 271.63 crores. Balances with the Reserve Bank were higher at Rs. 91.66 crores against Rs. 88.72 crores while cash on hand was not very much changed. As advances are nearly Rs. 2 crores lower and as the working capital has increased by nearly Rs. 6.6 crores a sum of Rs. 5 crores has been placed in investments. In view of the weakness of the gilt-edged market the disposition of funds by the scheduled banks is not clear.

The statement of the Imperial Bank for the same week shows an increase in deposits to Rs. 242.87 crores from Rs. 238.75 crores. Investments are lower at Rs. 143.96 crores perhaps due to maturing treasury bills while advances are Rs. 1.13 crores higher at Rs. 62.36 crores. Cash balances have risen for the third week in succession to Rs. 46.35 crores. The increase during the week is Rs. 3.5 crores.

(Continued from page 371)
Then the share value of such companies will find its natural value and the attraction to possess the shares with a view to control the companies will be lost. Will our Legislators examine this aspect dispassionately?

T. R. A. Pai

"Britain and Brettonwoods"

A careful reading of your able article on 'Britain and Brettonwoods' (Aug. 11, 1945) would convince any one that, as the war is won by the combination of the Big Powers, the peace also will be at their mercy,—only wide divergence of opinions amongst them may leave room for some others also to prosper for a while. With loud protestations of their anxiety to establish abiding peace in this earth America and Britain went to the Brettonwoods, but what has actually happened is that the bigger powers are trying to form an organisation suitable for their own postwar ambitions. America, being the supreme power in the world to-day with her atom bombs, can afford to speak of peace, harmony, freedom of commerce and multi-angular trade. Britain means to have the era of imperialistic exploitation prolonged and she has also managed to get all concessions necessary to rebuild her imperial system. She has been allowed to have bilateral agreements with many powers, to do anything she liked with regard to India and to expand her sterling area. Like a good brother the United States has kindly agreed not to interfere with the question of sterling balances and still Britain attacks the United States on the score that the dollar is scarce and that the U. S. alone can solve this problem. Between these two countries it is forgotten that there are also others who may count in international affairs, if not today, tomorrow. That Britain is given time enough to do her best to rearrange her imperial house in

order and also to insist that the question of war debts should be first solved before vital international reorganisation of the world monetary system is devised only goes to show how little the small states and dependant countries can expect of the so-called Big Powers.

Clive Street Gossip

To one who takes note of the vicissitudes of nations and is ready to imbibe the profundities which history has to teach, the phrase, "whirligig of time", has a world of meaning. The world war which has now ended is in itself an epitome of history. Within a short period of six or seven years, it has humbled many a powerful nation, given dignity to weak ones and made a plaything of the race as a whole. The Poles who made this war certain by refusing to allow Russian troops to march through their land to the succour of Czechoslovakia, saw their country overrun by more than one foreign army and had to accept freedom as a gift of the hated Reds. France saw the dining car of Compeigne commissioned again, but only to witness the roles of victor and vanquished reversed. In the defeat of Fascism, Democracy had to own an incalculable debt of gratitude to Communist dictatorship. One could multiply these instances. But of all the changes which the whirligig of time has wrought, none seems to me more striking than the plight and mood of Britain after the cessation of Lend-Lease supplies by the U.S.A.

In itself, the decision of President Truman to stop the supplies of goods to the Allies under the Lend-Lease Act has nothing surprising in it and should, strictly speaking, be taken with due composure by America's allies, despite the hardships that the decision may cause to them. For whatever its practical significance to the Allies and whatever the circumstances at the time of its inception and at the present moment when it has been decided to put an end to its operation, the law under which the U.S. President was making supplies to all the enemies of the Axis powers was a law which Congress enacted for the defence of the United States. And unless a new threat to the States can be contrived after the unconditional surrender of Germany and Japan, the President can find no means of defending or justifying the continuance of supplies under this Act. President Truman himself had specifically stated to Congress that Lend-Lease supplies would be stopped as soon as the last of the Axis powers surrendered. In the face of such a definite commitment, it was idle to expect Mr. Truman to desist from the action he has taken; and in spite of all that may be said about the need for prior consultation and negotiation, no one can pretend that the announcement was altogether a bolt from the blue.

But what matters now is not the merits of the question as President Truman, the American Administration and the Congress would regard them. More important than these are the repercussions of this decision on the countries which have been in receipt of lease-lend supplies, and the variety of moods which these repercussions have induced. While lease-lend supplies have been made with a prodigal hand to all countries, literally, from China to Peru, it is significant that Britain is almost alone not only in remonstrating against the stoppage, but also in stipulating terms and conditions for transitory arrangements. Prima facie, lease-lend is only an instance of that enlightened self-interest which, human nature being what it is, is hardly distinguishable from altruism. It may be that without this provision of supplies to her allies on such a large scale and with such disregard for return, the U.S.A. would

not have been able to defeat Germany and Japan and would have had ultimately to fall a prey to the aggressive plans of these two ruthlessly militarist nations. But that hardly means that even after the threat has been removed, America should continue to stint herself to keep other peoples in more or less luxurious comfort.

But Britain says, No! To regard lease-lend as mere munificence on the part of America is wrong. The theory is now developed that to supply these goods to Britain and other allies was what fell to America to do, as her just share of the common tasks. Indeed, Mr. Attlee stated clearly in the House of Commons that, if it had been assigned to Britain to produce an export surplus, which she would supply to her allies free of charge, "we would have been in an immeasurably more advantageous position to-day". One has only to compare the American scale of production with the British to realise what an empty boast it is. The scale on which goods were needed in this war was so big that only the U.S.A. could contemplate, without a shudder, the task of producing them all. Indeed, it is difficult to guess what Mr. Attlee exactly meant by the statement referred to above or what sort of enabling conditions he presupposed. Britain's difficulty has all along been that of finding the foreign exchange necessary to buy the foodstuffs and raw materials without which she cannot produce an export surplus of a single good or service of any value. Perhaps, Mr. Attlee presupposed the free supply of foodstuffs and raw materials, which would only mean that the source of goods essentially lend-lease in character would not be confined to the U.S.A. Even in such conditions, the problem of manpower for industry would be a serious hurdle to get over.

The truth is that no veracious appraisal of facts has been attempted. Both national vanity and national interest are deeply hurt by the action taken by President Truman. Nobody thought of the division of labour which Mr. Attlee now speaks of, when Lord Lothian raised the cry that Britain was on her last legs, so far as dollars were concerned, and must give up the fight with the Nazis unless America found her way to supply Britain with all the requisites of modern warfare without a thought for repayment. Neither at that time nor at any subsequent stage, could anybody have raised the question of division of labour. When

America's W.P.B. got into stride, ships, aircraft, tanks, trucks, jeeps, landing craft and armaments of all kinds were rolling out of the workshops at a rate at which even the imagination of other nations would have reeled. If payment had been insisted on for everything that, on the strictest view possible, America could not be held liable to supply free, not one

of the Allies would have got any material aid in fighting Hitler or Hirohito. There would be nothing derogatory in owning these facts.

But lease-lend goods were not confined to war material—they extended to a wide range of goods of normal civilian consumption, which, so long as the war lasted could be justified on the ground that the civilian population which was engaged in war work had to be maintained with the consumer goods which they could neither produce for themselves nor buy from abroad for lack of necessary export surplus. But after the war such supplies are naturally on a different footing. If no such goods had been included in the lease-lend supplies, their stoppage would involve no considerable hardship, since it would mean the stoppage of war material which is needed no longer. But lease-lend supplies have included a large volume of such goods.

It is interesting in this context to learn from President Truman's latest statement that out of the total financial cost of the U.S.A.'s contribution to the allied victory of 280,000 million dollars approximately 15 per cent or 42,021 million dollars represent the cost of munitions, industrial and agricultural supplies, shipping and other services furnished to the allies under lend-lease, the remainder of the 85 per cent being the U.S.A.'s total war cost spent on own direct war effort. Of the total amount of lend-lease aid, 42 per cent went to the U. K., Russia coming as a distant second with a 28 per cent share. The total reverse lease-lend aid received by the U.S.A. is estimated at 5,600 million dollars, the major share being furnished by Britain. What is important to our present purpose is that out of the 13,000 million dollars worth of lend-lease goods received by the U. K., a substantial percentage is represented by goods other than war material. In the later stages, American lend-lease shipments accounted for nearly 25 per cent of Britain's imports of meat and nearly 50 per cent of butter and eggs and three-quarters of her imports of tobacco. It has been pointed out in a despatch published by the 'Statesman' from its London Office that, of the present 1s. 2d. weekly meat ration, 2d. worth is lend-lease. Even before President Truman's announcement the 'Economist' observed in its issue of Aug. 18, "food is an important lend-lease item and in many cases is unobtainable from anywhere, but the United States", and that the increasing shortage of dollars would occasion "drastic reduction in some categories of imports". It would be seen from this that the sudden discontinuance of

lend-lease supplies would mean that the British people would have to cut their rations since the foodstuffs they require are unobtainable elsewhere and Britain will not have the means of paying for imported foodstuffs from the States.

It is hardly surprising in these circumstances that Britain raised such a hue and cry when President Truman decided to redeem his promise to the Congress. But the worst admirers of Britain cannot contend that she has behaved with reason or with dignity. Any one, who has followed the statements in the House of Commons and the comments in the British Press, can see easily that British interest and British pride have alike been affected. The prospect of having to cut the daily ration substantially goads the Government to make the most frantic effort to secure the resumption of supplies in some form or other. At the same time, national vanity does not permit the confession that Britain has subsisted in part on free supplies of goods from America and wants to continue to do so. Hence, the suggestion that lease-lend represented only a fair division of labour among the allies in respect of a common task, and that the principle of equality of sacrifice should be continued for some time more, till the allied nations have been able to adjust themselves to peacetime conditions. That, whatever obligations America may have had in accordance with the principle of equality of sacrifice, were more than discharged by the supply of lease-lend goods up to the end of the war can hardly be questioned. It would have been more dignified therefore, if the claim to further supplies were frankly based on dire need, rather than on principles which Britain can hardly claim to have honoured.

In putting forward a claim to the continuance of lend-lease in some form or another, Britain has endeavoured to alter the whole complexion of her relations with the U.S.A. From the manner in which this question is discussed, one would think that it was Britain that was obliging the U. S. all along by accepting lend-lease goods and that it was mighty ungrateful of the U. S. not to have recognised her obligation to Britain. Only on this basis could one understand the somewhat summary rejection of the U. S. offer of credits at the Export Import Bank for facilitating the continuance of lend-lease imports into Britain. The Halifax-Keynes mission is on its way to America to negotiate the terms. But Britain is apparently determined that she will have no addition to her commercial debts, however long may be the period of repayment. To the ordinary man, this means nothing more than an amalgam of coercion and beggary. But the British have to drape this appeal for free gifts. It has been said in explanation of this demand that Britain would rather suffer the necessary privations than be driven to dishonesty; for, according to the sublime ethics which Britain has followed in her relations with other countries, it is dishonest to incur a debt which she knows she cannot repay.

Those who have advanced this plea are probably ignorant of the existence of a country called India, with which, too, Britain has had commercial and financial relations over a long period. To their edification, it should be said that India was to all intents and purposes one of the allied nations, that she too contributed to the war and broke her back in the effort and that the effect of the various transactions is that to-day there are more

than Rs. 1,000 crores of India's funds in the hands of the British Government. It is pertinent to ask whether Britain incurred this debt with perfect confidence in her ability to repay. If it were, all that Britain's leaders and Britain's press have said on this question during the last two years is hardly consistent with a genuine intention to repay either now or at any stage of the growth of this debt. Perhaps, standards of commercial honesty have their application only to the dealings between one power and another.

It is not alone in the matter of Britain's ethical standards that India's sterling balances and the lend-lease problem are connected. President Truman has made it clear that any attempt to secure a return for lease-lend would lead to the same kind of economic crisis as occurred in the 'thirties and eventually to the third world war. If Britain is to get American imports without adding to long-term commercial debts, then it would be necessary to provide for a considerable increase in the total volume of international trade. And people in the U. S. are slowly beginning to realise their mistake in refusing support to the proposals of the Indian Delegation at the Brettonwoods Conference. They are beginning to recognise that without liquidity for her foreign balances India cannot buy in foreign markets and one of the greatest trading nations will be disabled for playing her part in the revival of international trade. But by far the most complicated problem in the international sphere is how to secure the expansion of international trade. All the nations of the world are clamouring for export trade in defiance of simple economics. While some of the more basic issues may be shirked, the scope of the discussions in America is bound to widen and include even the problem of our sterling balances. These possibilities, together with that of Britain asking for a part of our sterling balances being written off are hinted at in a statement made Mr. J. R. D. Tata and Mr. Shroff on their return to India. There is in this connection a big bunch of problems which I can examine only in later issues.

"EAVESDROPPER"

BOMBAY MARKETS

BULLION

Bombay, Aug. 30.

After the worst crisis in history and despite the large settlement, the Silver market regained steadiness. The bulls are in control again helped by the rise in Gold. Silver Ready sharply rose to Rs. 125 on Wednesday on upcountry demand but the close is steady today at Rs. 124. Owing to a declaration of emergency by the Bullion Exchange there is no forward trading. In Gold, the bulls have again full control and the price jumped up by Rs. 9 to Rs. 76 on bear covering and the lower Sterling-Dollar exchange. Profit-taking ensued and the closing price is steady at Rs. 74/14 on good demand.

The spectacular recovery raises the question whether the 7-day settlement system is not leading to lop-sided speculation by preventing the free interplay of technical factors as the prices never reflect the mean of the opposing forces.

There is a feeling in certain quarters that the time is come for resuming monthly settlement of transactions and that the weekly settlement has lost raison d'être since feeding on high backwardation charges and freed hereafter of shocks bulls alone dominate the market. They stress

the inescapable fact that in the absence of outside supply of gold that demand has to be satisfied entirely from the internal hoards which are always uncertain. Hence bears have no chance whatever.

This week's events amply demonstrate the correctness of this view and unless the Government is interested in the future of speculation, the present basis of trading ought to change.

"ALL FLESH IS GRASS"

THOUGH the green and fertile island of Britain produces the best grass in the world, grass is a crop which does not grow there in winter. Thanks largely to the chemist, the problem of winter feeding in Britain has been solved. There is a parallel to this in the dry months in India, and the methods adopted by the British chemist have a useful application in this country. A century of research is embodied in the simple tables which enable the British Farmer to give correctly balanced rations to each kind, class and age of beast. The chemist has shown how to use industrial by-products for stock feeding. It was on these largely imported foods that British farmers depended, before the war compelled them to support their stock on what they could grow — no mean problem when nearly half their grassland is ploughed to grow food for Man. But the emergency did not catch the chemist unprepared. Already in 1935 the co-operation of the British chemical and engineering industries had shown the world how the high food value of summer grass could be preserved for winter by drying it in a machine under control, instead of leaving it to dry into hay in the course of Nature. The British chemist proved how similar results could be achieved by ensiling grass with molasses. To many dairy farmers grass drying and silage have spelt salvation these past five years. The Chemist has also found a means of turning straw into a useful food for cattle and sheep. The process is simple. The straw is first steeped in a weak solution of caustic soda, and then washed. The pulp which results is then ready to feed. In India, paddy straw similarly treated yields a cattle feed of very considerably increased value. These achievements of the British chemist are today enabling British farmers to fatten beasts and to keep up the nation's milk supply in the hour of emergency. Many of them will remain as part of the new agricultural practice that will emerge from wartime conditions.

FACT No. 3

HOW well has India's cotton textile industry withstood the strains of war? Based on the present difficulty of obtaining adequate supplies of such essentials as dhoties, sarees, towels, shirts and sheets in retail shops, a superficial judgement would be that the industry has failed to stand the strain.

What are the facts? The facts are: That today, India's cotton textile industry employs three lakhs more men and women than before the war; that production is now at the rate of 4,800 million yards of cloth a year as compared with 3,800 million yards before the war; that including the contribution of the handloom industry the cloth available for civilian consumption in the country in the year 1943-44 amounted to 5,868 million yards, which represents about 94% of average peace-time available supplies.

These facts and figures are irrefutable proof that during this war India's cotton textile industry has indeed "delivered the goods." There is no failure at the production end, the reason for the present "famine" must be sought elsewhere.

One of a series of statements of fact for the information of the public.

ISSUED BY

THE MILLOWNERS' ASSOCIATION

BOMBAY

Gateway of India

(From Our Correspondent)

Bombay, August, 28th.

Raw Cotton is in queer straits. The unrestricted speculation has landed both the speculators and the commodity in great trouble. It was only a month ago that one thought that the trials and tribulations of cotton were over and that the end of the war would bring about conditions in which the cotton grower might feel happy about. Actually, what has happened amounts to a strong indictment against forward trading as a whole. The bull syndicate tried to bite off more than it could chew, with the result that the September Contract is dangerously near the floor level. There is a total lack of confidence in the Contract and absence of buyers has created a strange position in which September is quoted at a discount of Rs. 55/- from the January contract. The present rate is hovering around Rs. 355/- and the possibility of the floor level being touched is not entirely ruled out. The Government has already commenced its buying operations and the ad hoc Survey Committee is reported to have surveyed certain lots tendered for purchase. This is really a topsy-turvy state of affairs considering the fact that the final cotton forecast estimates a reduction in the crop both in respect of acreage and outturn to the extent of nearly 30 p.c. On every criterion, cotton prices should be ruling at much higher levels than prevails now and there should not have been any occasion, at any rate this year, for the Government to extend its support by direct purchases. The statistical position is as favourable as it could be, but such a statement, of course, ignores the fact that there are the accumulated carry-overs of the previous years in which cotton of unwanted varieties predominates. In this connection, it is perhaps worth mentioning that no two estimates of the precise stocks agree, which makes one really wonder why the authorities do not exercise their influence in collecting the correct statistics in the matter. As it is, the critic and the professional in the cotton trade are driven to accept the widely varying estimates provided by different brokers in the trade. Needless to say, the conclusions arrived at on the basis of the average of those figures cannot be claimed to be beyond reproach. Notwithstanding the element of inaccuracy inherent in the present arrangement, it can still be said that cotton ought to be faring much better than it is in fact. The hedge contract, if it is manipulated to the interests of unscrupulous speculators, can be anything but a price insurance for the cultivator.

One saw last week in the bullion market an even more astonishing lack of discipline either of the individual or of the professional variety in the happenings of the bullion market. While the trading in gold was free from any crisis, the operators in the silver section indulged in an orgy of reckless trading which created problems all round, particularly to the Board of the Bullion Exchange. Yesterday evening, there was no quotation for forward silver while ready silver was quoted about Rs. 119/-. The background to the absence of a quotation for forward silver may be briefly recounted. Exactly a week ago, the market was quoting at Rs. 124/- for near delivery. The bulls were not interested in carrying forward their position and it was rumoured that they would insist on

delivery of the metal from the bears. The latter continued the avalanche of short sales nevertheless, with the result that the backwardation widened to Rs. 10/-. On Tuesday, the new delivery was quoted at Rs. 115/-, which was the signal for utter confusion in the market and necessitated the intervention of the Board which had to suspend business. The bulls merrily pushed up the rate to Rs. 127/-, at which level the bull was Rs. 14/- against the seller, a record in the history of bullion transactions. The Board had accordingly to declare an emergency and to exercise the special powers vested in it, to effect a settlement. It decided to stop all transactions in the delivery contract and fix a minimum rate of Rs. 123-9 for the first settlement and Rs. 117/- for the second settlement. All outstanding business was ordered to be squared up at these rates and all deliveries of the metal were to be completed by Wednesday. The result of these enforcements was a slump in the spot rate to Rs. 114/- on Thursday. It was only with the greatest difficulty that the settlement could be effected. Since then the rate has improved to Rs. 119/- thanks to a slow revival of demand for ready and a falling off in the arrivals. On the other hand, gold firmed up to Rs. 67/10/- for the new delivery to Rs. 69/- for spot. On Saturday, the news of the cessation of lease-lend was accompanied by a report that the sterling-dollar rate at New York had sagged to 3.99 as against the official rate of 4.03. An idea of the volume of money which was involved in the markets during the course of transactions may be had from the fact that the amount of cheques cleared through the Clearing House in the week ended 24th August was Rs. 47.97 Crores as against Rs. 26.28 crores in the previous week.

Interesting figures relating to the payment of dearness allowances by the Ahmedabad Cotton Mill Industry were available in the proceedings before the Industrial Court. Mr. Nanda on behalf of the Labour Association contended that whereas mill profits were abnormal, the workers had gained nothing during the war years since the dearness allowance paid to them merely neutralised the rise in the cost of living. On behalf of millowners, it was submitted that the Court had no jurisdiction in the matter of determining dearness allowances on the ground that they were not in the nature of wages. Great emphasis was also laid on the fact that Ahmedabad employers had to pay more than Rs. 13/- crores during the last four years than Bombay on account of the higher rate of dearness allowances. The Government of Bombay, however, have taken the stand that dearness allowance was an industrial matter and that the reference to the Court was proper. Mr. Nanda stated that profits in Ahmedabad, as revealed by last year's balance sheets of 43 mills, were of the order of Rs. 13 crores and that the mills were capable of paying the workers as hitherto, after putting aside a sufficient margin for reserves and for dividends.

By all tokens the public, notwithstanding the end of war, will have to continue the austerity it had imposed on itself in the streets of the war.

In regard to consumer goods and other civil supplies, Mr. C. C. Desai, Controller-General of Civil Supplies, was inclined to take the view at the Rotary Club on Tuesday that control might be necessary for another three years. Mr. Desai rightly desisted from giving rosy hopes as regards improvement in supplies, having regard to the shipping difficulties and the paucity of supplies in foreign countries.

LEAD PIPES

for civilian use

GOVERNMENT have made arrangements for the release of lead pipes for civilian use through certain approved dealers in Calcutta, Bombay, Madras, Delhi and Lahore whose names can be obtained from Messrs. Waldie Industries Ltd., Calcutta. These dealers will sell lead pipes to bona fide consumers in quantities not exceeding 10 cwts. without a permit. For larger quantities a permit from the No. 1 Metals Controller, Calcutta, will be necessary. The prices fixed for lead pipes at different places are:—

Name of Place	Size of lead pipes	Dealers ex-godown prices	
		Per Ton	Per lb.
		Rs.	Rs.
Calcutta	3/8" to 1 1/2" Internal diameter	1056-14-5	0-7-7
"	2" to 6"	1051-3-2	0-7-6
Bombay	3/8" to 1 1/2"	1721-9-7	0-12-4
"	2" to 6"	1421-8-0	0-10-2
Madras	3/8" to 1 1/2"	1714-1-7	0-12-3
"	2" to 6"	1415-11-2	0-10-2
Delhi	3/8" to 1 1/2"	1671-8-0	0-11-11
"	2" to 6"	1383-4-10	0-9-11

"	2" to 6"	1415-14-5	0-10-2

Issued by the Department of Industries & Civil Supplies Government of India, New Delhi.

AAA 452

South India

(From Our Correspondent)

Madras, Aug. 27.

Sir A. Ramaswami Mudaliar's visit to Madras has served little to dispel doubts regarding the future of controls. Speaking at a reception given by the South India Hardware and Iron Merchants Association and the Madras Iron and Hardware and Machinery Merchants' Association, Sir Ramaswami said that the time has come for a thorough re-examination of the problem of controls, to what extent they should be continued and what aspects of control might be withdrawn. But beyond this unrevealing statement, the Supply Member said nothing to satisfy curious minds. He, however, promised that the Government would be able to make announcement shortly on the subject, and that such problems are now being tackled with a greater expeditiousness than before. A hint of Government intentions in this field might also be detected in his statement that they had to proceed cautiously in these things and any sudden removal of controls would jeopardise the interests of not only the common man but of the business community as well. Referring to some of the grievances put forth by the association, Sir Ramaswami felt that the scarcity of pipes might continue for sometime as pipes are even now needed for the use of troops in the Far East who have still a vital role to play as occupying and garrisoning forces. As for cement, he explained the acute shortage felt at present as due to the needs of aerodrome construction and that without enough cement, Government felt it was no use releasing more than the minimum requirements of steel; he held out the hope that within a short time the cement position would be normalised.

In his talk with the members of the Muslim Chamber of Commerce, Sir Mudaliar wanted the hides and leather merchants in Madras, to develop manufacture of finished goods rather than be content to remain exporters of raw materials. To Mr. Hameed Khan's charge that only a particular class of people had derived the benefit of industrialisation in this Province, for which certain officials of the Madras Government were responsible, the Commerce Member replied that permissions to start new industries were given only on considerations such as the possession of the requisite capacity, skill and technical personnel. So far as post-war planning was concerned, he gave the assurance that whoever was ready and could command all the facilities for starting an industry would be permitted to do so. He regretted that South Indian businessmen have yet to learn much from their North Indian brothers in point of economy in business. He wanted them to go to Northern India and other places and see for themselves how things were done economically.

The Southern India Chamber of Commerce at a meeting held on August 24, submitted a memorandum to Mr. H. Greenfield, Member, Central Board of Revenue, pointing out the difficulties they were facing through the export duty on betel nuts and tobacco. Mr. Greenfield stated that they could obtain certificates of payment of duty on application and that the Government had ordered the return of deposits collected on the export of betel-nuts to a State where the duty did not exist. The Government are also considering the question of having a lower rate of taxation on inferior quali-

ty of betel-nuts. He promised them that the Government are watching the statistical position in respect of the sales tax and the question would be reviewed, whenever necessary. As for the excise duty on tobacco, Mr. Greenfield told them that the allowance permitted for driage was based on statistical information collected for several years and the District Collectors were also empowered to deal with exceptional cases on their merits. The adoption of a uniform tare weight was found impossible under the existing circumstances. The Member gave the Chamber

his assurance that every thing possible would be done to prevent secret information about the value of their exports leaking to their rivals in business.

Replying to a representation by the Andhra Chamber of Commerce, requesting a revision of the duty on matches, Mr. Greenfield explained how it was wrong to correlate the price of matches with the duty levied and held that the increased consumption of matches induced by war conditions would fall again, thereby resulting in a proportionate decline in the amount of duty realised.

A Resume of Commodity Markets

The feature of the week is the sharp recovery in prices for bullion on the reports that there was a considerable drop in the sterling rate for forward position in New York following the cancellation of lease-lend facilities. The rise in prices is pronounced for gold in particular. The raw cotton market was very quiet and business could not be done for sometime on account of settlement difficulties. The quotations were dangerously near the official floors and it was feared that it would be necessary to support the market officially. The strength of the bullion markets has resulted in a slightly steadier tone in raw cotton but there is no appreciable improvement in prices. The raw jute market has been firmer on the improvement in the coal position while the jute manufactures market has not been very much affected by the reported improvement in mill production and the easier near position. In the piecegoods market there is good demand and the various provincial administrations have been obliged to put a check on the activities of traders dealing in ready-made garments. It was reported during the week that the U. P. Government has placed a ban on the movement of ready-made goods to outside areas.

The raw jute market has been steadier with mills taking slightly more interest. Mofussil advances also have been satisfactory. Supervised Jat Middles and Bottoms were done at Rs. 15-4 and Rs. 12-4 per maund with District Tossa selling at the same rates. In the pucca bales section there was not much of interest but it was said that the United Kingdom was anxious to take large quantities.

The improvement in coal arrivals noticeable last week seems to have been maintained and almost all the mills are reported to be working. After the severe stoppage of a fortnight back it cannot be said, however, whether the improvement will be sustained. But if the Industrial pool scheme is to be successful the lost loom hours should be made up. Otherwise, there would be a large deficit and there may be no inclination to continue the scheme after the end of this year. The industry has a feeling that it has not been accorded a fair treatment and that coal supplies have been so poor as to defeat the purpose for which the Industrial Pool scheme was started. In view of the large deficit at the Pool many of the mills have not been able to get full payment for their sales of loom rights and it has been necessary to show the amounts to be received from the Pool as 'contingent assets.'

The improvement in the coal situation during the past few days seems to have offset the bullish effect of the recent order for hessian bags and mills would appear to be sellers for near positions at maximum rates. The bazar, however, is prepared to offer a discount for positions early next year. Mills have not so far discounted rates.

There has been a sudden recovery in the bullion market and the improvement in the quotation for gold by nearly 8 points in less than 10 days has come as a surprise to the market. Only on Wednesday last week gold ready quoted Rs. 63-4 and forward Rs. 63 and silver ready nominally at Rs. 122 with forward around Rs. 114. The rise in prices in the past few days, it need not

be mentioned, has been due to the reports that the cancellation of lend-lease facilities would affect unfavourably Britain's position and that sterling would considerably weaken. The report on Friday last that the sterling-dollar rate had declined by 4 points led to large speculative buying and as budla charges were very heavy bears were forced to cover open positions. Fresh buying by the Bull Syndicate and the strength of stock markets pushed up prices and quotations are now around the highest levels for the week. On Wednesday gold ready quoted Rs. 76-4 and forward Rs. 75. Silver has not recorded any appreciable rise in prices, ready being quoted Rs. 123-8, but it was said that there was a considerable reduction in the discount for forward over ready and that the quotation is again around Rs. 122.

A certain section of the market seems to be of the opinion that the earlier fears of a sudden fall in prices were unjustified and that with exchange uncertainties and the difficulty in getting fresh supplies of the precious metals, bulls would continue to have their hold on the market and the ad-

justment in the rupee price for gold and silver towards the parity levels of New York and London would be only slow and there would be ample opportunities for a gradual liquidation of hoarded stocks. It has been pointed out on more than one occasion in these columns that so long as closed market conditions persist and there is speculative demand for the precious metals prices would be maintained at high levels especially as available stocks are already in strong hands, but that the tendency would be ultimately towards lower levels. The opportunity provided by the uncertainties regarding exchange rate cannot, however, be available for long and with the conclusion of a satisfactory arrangement in place of the lease-lend agreement sterling might again recover. The future trend of prices will thereafter mainly depend on the prospects of imports from countries within the sterling area.

The raw cotton market has been weak in the past few days and the quotation for old crop has dropped to very near the

(Continued on next page)

Man-Power and Output

The supply of labour is a problem—the proportion of skilled to unskilled workers is a problem—the ratio of output to man hours is a problem. All these and other allied matters are problems because the urgent need of every industrial plant in India is to speed victory by keeping production at a very high level, yet, at the same time, conserving manpower and materials.

Tremendous attention is, therefore, focussed on the efficiency of the individual worker and his ability to maintain a high standard of physical effort and concentration for long periods. Anything that promotes this is a very real boon to the factory manager. In a great many factories tea has been found of great value. It has been proved in practice that tea served to the worker on the job materially increases his power to maintain efficiency to the end of his shift.

To those interested in this subject, much valuable advice and assistance will be gladly given by the Indian Tea Market Expansion Board, 101, Clive Street, Calcutta.

Jute and Jute Manufactures

Special to "Indian Finance"

(From Our Correspondent)

CALCUTTA, Aug. 30

Little of fresh importance falls to be recorded in the jute markets this week. A somewhat steadier feeling was imparted to the manufactured goods market by the placing of a Government order for about 1½ crores of hessian bags, constructed from 10 oz/40" cloth, for delivery in December this year. This order arrived at a time when bazaar operators were active in depressing prices following the cancellation of Government order for canvas and on the strength of reports that larger deliveries of coal were being made to Mills. In any case the canvas orders were due for completion in September and therefore their cancellation by Government should not have been interpreted by the bazaar as a "bear" factor of much importance. As we pointed out a week or two ago, the fall in prices has proved to be only temporary and, at the time of writing, quotations for goods are very near the levels at which they stood before the fall. In fact in the case of some fabrics the recovery in rates has been complete. For the moment the bazaar seems to have reached the conclusion that the end of the war does not mean the immediate withdrawal of controls, restrictions and quotas followed in quick succession by a period of falling prices. Apparently the more sensible view has been adopted that it will take a considerable time for things to return to normal and that peace time trading conditions will not be with us for yet awhile.

Undoubtedly there is a pent-up demand for jute goods now but business sought by shippers and brokers is being restricted by reserve of Mills who, in most cases, are holding out for maximum rates being well sold up to March next year and in a position to await further developments. There is good enquiry too from the United Kingdom where Dundee spinners and Manufacturers are in the unhappy position of having plenty of orders and enquiry on hand but lack the labour force necessary to maintain output to cope with the demand for supplies of yarn and cloth. As a result many buyers are turning to Calcutta for their requirements but here again they are finding it difficult to secure delivery to suit their wishes. We hear that Dundee Mills have been sorely disappointed in their expectations of an increase to the number of workers available to them as a consequence of the closing down of several munitions factories in the city. Very few of the workers so released have presented themselves for employment in Dundee jute mills and we understand that the production of jute goods in Dundee is still only 50% of the pre-war figure.

In Calcutta the crucial factor responsible for low productions has been not so much a shortage of labour (although that sometimes has been a contributory cause of the limited output of goods) as a shortage of coal. But deliveries of coal have been increasing in the last few weeks and perhaps it is too much to hope that this improvement will be maintained. Four weeks ago the average daily arrivals recorded during the week was 18 wagons; in subsequent weeks the daily average was 31 and 54 (i.e. for last week) and for the first four days of this week the average number of wagons arriving daily stood at 81. This is very satisfactory but we do not say that Mills' worries in this respect are entirely at an end. However, the outlook is distinctly promising—better than it has been for a very long time. With the reduction of coal supplies needed for purely war purposes in the spheres of industry and shipping we can look forward to the day, in the not too distant future, when the jute industry will be assured of regular and adequate supplies of this most necessary commodity.

The Indian Jute Mills Association have issued the following statement of total

reported sales for the fortnight ended Saturday, the 18th August, 1945 :—

	This and next month yards	Forward yards
Hessian	21,88,050	5,31,03,224
8 oz. 40 ins. Hessian (included in above)	Nil	36,00,000
Twills	96,13,701	2,04,14,863
Plain	13,87,444	1,61,61,910

Mofussil advices continue to report restrictions on business in not a few centres due to flooding. Weather conditions, however, have improved and flood water is gradually subsiding. Imports are not yet on a large scale but complaints regarding moisture are general and some stations have reported higher prices.

In the Pucca Bale market business was reported done by local Mills in M. C.'s at Rs. 40 per bale and M. C.'s at Rs. 41 per bale. Small business was also done in Special L. T.'s at Rs. 84. Dealers are free sellers at minimum rates for all descriptions except special marks and Cuttings the latter being obtainable at Re. 1 under the maximum price. There was no business reported in the export market which remains dull and inactive.

Although most mills took only a meagre interest in offerings during the week a fair business was done with one group in old and new crop Bottoms at Rs. 12-4 for supervised Jat and Rs. 11-12 for supervised District marks. Also, Indian District Bottoms sold at Rs. 11-8. Small business was reported in Supervised Jat Middles and Bottoms at Rs. 15-4 and Rs. 12-4. European Bottoms were done at Rs. 12-12. Later in the week Supervised Jat Bottoms came to business at Rs. 12-8 for forward delivery. Indian District Tossa, in low assortment, was reported done at Rs. 16 and Rs. 13 for Middles and Bottoms. Although sellers are apparently "bullish" in the forward positions they are very anxious for business in the nearer positions, and at the moment prices are quietly steady on the basis of Rs. 15-4 and Rs. 12-4 for Supervised Jat marks but during the week quotations for European Jat moved up to Rs. 16 and Rs. 13 for Middles and Bottoms.

In the Manufactured Goods market demand for hessian has been good with maximum prices offered for all deliveries up to March, 1946 without buyers being able to get on to business due to the tightness of Mills' position. For deliveries after March next year bazaar quotations show a discount but Mills are unwilling to meet discounted prices at present. As stated above a Government order for 1½ Crores hessian bags was placed with mills during the week under review. No fresh business of importance was reported in the Heavy Goods section, business being chiefly confined to inter-bazaar transactions. On Wednesday quotations in the bazaar for Ready B. Twills were Rs. 66-8. September B. Twills were Rs. 66 and at Rs. 63-8 for Jam-March shipment. Most mills, however, are not accepting business at these prices.

(Continued from previous page)

floors fixed by the Central Government. It was expected that the cancellation of lease-lend would stimulate the cotton market as it was pointed out in some quarters that the reversion of the cotton trade to normal channels would mean less competition from American cotton and that it would be possible to export Indian cotton in large quantities. What exactly is the effect of the latest developments in the international situation on cotton prices is not known, though it is reported that the committee of the Liverpool Cotton Association met recently to consider the new situation. At the lower levels mills afforded the market some support and there was also some short covering. On

Tuesday, there was no business, due presumably to settlement difficulties, and the Board of the East India Cotton Association fixed rates for the adjustment of business.

The decline in Jharilla from Rs. 376 to Rs. 356 is reported to be due to the selling by tired bulls and the switching over to new crop. The present contract ends in September. It is thus interesting to note that against the decline in the quotation for Jharilla September by over 16 points new crop has improved by five points to Rs. 411-8 for January and Rs. 418-8 for March. The premium for new crop of over 50 points is mainly due to the switching operations referred above.

The statement during the week that imports of Burma rice cannot be expected for another year gives rise to the impression that the British Government is again anxious to get its requirements first in preference to the needs of this country. It is now stated that available supplies of Burma rice will be utilised for the liberated areas in SEAC and that before the next crop it will not be possible to export large quantities to India and other areas. It is rather surprising that these reports should have emanated from Rangoon Burma is not the only rice producing country in S. E. Asia. Both Siam and Indo-China are important producers of rice and the Netherlands East Indies also to a certain extent. It may perhaps be stated that China also has a claim for rice from these areas but with the inferior quality of rationed rice even at two and a half times the prewar rate and the need for increasing the individual ration the Central Government should exercise every influence to bring in additional quantities as early as possible. The British Military Administration will be controlling the entire production of rice in countries in South East Asia.

1½ YEARLY DIVIDENDS -delivered to your door-

Over Rs. 112 Crores were invested in less than eleven months in the First 3% Victory Loan (1957) withdrawn during February 1945.

The 3% Second Victory Loan (1959-61) is issued on attractive terms similar to the First, and is today's soundest investment for the big or small investor. There is no limit to the amount you are permitted to invest.

The Loan is backed by India's wealth, and Government has guaranteed to repay at par not earlier than 15th August 1959 and not later than 15th August 1961. If between now and then you wish to realise your capital, the Loan is readily salable in the market at all times.

Interest at 3% per annum less Income-Tax will be

paid half-yearly on 15th August and 15th February and the dividend warrant will be sent to your address. You can cash it just like a cheque, and you have the satisfaction of knowing that your investment is helping India's war effort, counteracting inflation, and earning for you a good return.

To buy this Loan, apply to your Bankers, or to the Reserve Bank of India at Bombay, Calcutta, Madras, Delhi, Cawnpore or to the Branches of the Imperial Bank of India in other places or to any Government Treasury.

Markets to-day and to-morrow:

MARKETS EASIER ON PROFIT-TAKING

At the end of last week there was a sharp rally on the expectations that there would be a substantial reduction in taxation next year and that the decline in earnings, if any, would be more than offset by the lower level of taxation. The improvement in prices continued till Wednesday this week as there was a sharp recovery in the bullion market and there was no reason to fear that the difficulties in regard to the settlement in the bullion market would have an unsettling effect on the stock markets as well. Reopening after the holiday in Friday's session the tone is rather quiet with a smaller amount of business passing. There is a disposition to take profits at the higher levels. The rise in prices in the bullion market was mainly due to the reports that there was a drop in the dollar-sterling rate following the announcement that Lend-Lease facilities have been cancelled. It is said that the denial of the facilities under Lend-Lease would weaken the position of Britain considerably and that a crisis may come about on this question. Later reports, however, suggest that a satisfactory arrangement between the two countries would be reached and that Britain will be enabled to put into effect her reconversion plans smoothly.

No major developments in the exchange market are therefore expected. If the dollar-sterling rate recovers again to its former level speculators in the bullion market would perhaps have no reason to push up prices further.

The depreciation in the value of sterling, and incidentally of the rupee, is also a bullish factor for the stock markets but operators in both Calcutta and Bombay do not seem to regard that there will be any appreciable depreciation in the value of sterling as against the dollar and that operators would have to look for developments like these to push up prices for stocks and shares. While it should be said that the strength of the bullion market has pushed up prices for stock exchange securities to a certain extent, the recovery in the past few days is due mainly to the expectations of tax relief and the anxiety of bears to cover their open positions. In-

vestors have not been very anxious to liquidate their holdings. It would appear that prices would fluctuate around present levels for some time. Unless the results of Wavell's second mission to London are known and definite policies in regard to post-war plans are announced, there may not be any important rise in prices.

The accounts of the Buckingham and Carnatic Company, Limited, for the half-year ended June, 1945, make rather satisfactory showing. The net profit shows only a small decline over the figures for the previous six months. The net earnings, before providing for taxation and depreciation, for the half-year is Rs. 1,12,06,431 against Rs. 1,15,23,235. The provision for taxation is slightly higher, even with a lower level of earnings, at Rs. 88 lakhs against Rs. 87.5 lakhs while the amount set aside to depreciation is Rs. 3,18,602 against Rs. 3,23,525. The sum placed to Reconstruction Reserve, being part of the estimated compulsory deposit, is Rs. 13.5 lakhs (Rs. 18 lakhs). The dividend on ordinary shares is maintained at Rs. 6.4 per share. The amount carried forward is higher at Rs. 1,01,853 against Rs. 81,589 brought in.

It is rather significant that in the case of both Buckingham and Carnatic and Bangalore Woollen and Cotton earnings have not been affected very much by the introduction of control in the industry and the reduction in ceiling prices. This is perhaps due to the reduction in Government orders and the increase in the supplies for civilian consumption. For, otherwise, the rise in earnings by 50 per cent over the figures for the half-year ended June, 1944, cannot be explained. In that half-year the net profit was only Rs. 76,53,404. The jump in earnings in the past two half-years, however, has not been of any advantage to shareholders as the dividend has been maintained for some time at 12½ per cent per annum and the directors have been more keen on strengthening the financial position of the company, which is already very sound.

A study of the balance-sheet reveals that out of the total sum of Rs. 4,34,57,003 net block amounts to only Rs. 47,88,879, stores Rs. 47,51,818 and stock Rs. 1,05,27,953. Investments are Rs. 85,65,255 besides E.P.T. deposits of Rs. 47,73,718. Cash balance is Rs. 38,93,254. Against liquid assets of Rs. 3,86,68,124 sundry liabilities including dividends and taxation are only Rs. 1,58,60,074. With the result, the break-up value of shares is very high at two and a half times the face value. Even the ordinary dividend forms a very small portion of total earnings after depreciation and taxation, and could be maintained for years to come without any difficulty. The directors may possibly contemplate the distribution of bonus shares at a later stage.

The balance-sheet of the Mysore Spinning and Manufacturing Company Limited, for the year ended February, 1945 shows an appreciable reduction in earnings owing to the lower prices for yarn and cloth and the entire stoppage of mills for nearly two months consequent on the break-down of the power generating plant at Sivasamudram on May 19, 1944. On July 1, the mills resumed partial working but with a reduced power supply. Though it was increased from time to time it was not until January, 16, 1945 that full power was made available. Having regard to the above factors, sales at Rs. 84.97 lakhs against Rs. 122.35 lakhs for the previous year should be regarded as satisfactory. The decline in the net profit, however, is more pronounced the figure before providing for taxation and depreciation, being Rs. 16,41,983 against Rs. 54,50,488. Provision for taxation is very much lower at Rs. 9.5 lakhs (Rs. 24 lakhs) while the amount set aside to depreciation is Rs. 2,05,245 against Rs. 3,03,768. The transfer to Reserve Fund is 4.5 lakhs against Rs. 20 lakhs. Other funds received Rs. 3 lakhs in addition on the former occasion. Surprisingly enough, the dividend to ordinary shareholders has been increased to 30 per cent. The final dividend of Rs. 4 per share and the bonus Rs. 5 per share makes with the interim dividend of Rs. 6 per share, already paid, Rs. 15 per share for the whole year against Rs. 14 per share for 1943-44.

The prospect of continuous working and a higher level of earnings for 1945-46 may perhaps have induced the directors to declare a higher ordinary dividend.

The financial position of the company is very sound. Reserves are nearly Rs. 47.5 lakhs against an ordinary capital of about Rs. 15 lakhs. The net block is only Rs. 9.47 lakhs out of total assets of Rs. 125.15 lakhs. Investments were Rs. 43.56 lakhs and cash Rs. 29.9 lakhs. Liquid assets amounting to Rs. 1.16 lakhs are very much more than sundry liabilities, including dividends, of Rs. 59.4 lakhs.

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, August 31.

Definitely steadier conditions have been noticeable on the Calcutta Stock Exchange in the past week. The sharp recovery in the bullion market and the expectations of substantial relief under taxation have been mainly responsible for the upward trend in prices. The reports regarding the weakness of the sterling-dollar rate have not been so helpful to the stock market as to the bullion market. Till Wednesday this week there was a continued rise in prices and with covering by bears the leading counters were two to three points higher. At the time of writing a slightly easier feeling is noticeable on profit-taking and the check in rises in the bullion market, but the undertone is very steady and quotations are only slightly below the lowest levels for the week. Markets were closed on Thursday on account of "Janmashami".

Coal shares have been very steady with Bhalgora sharply higher on special buying while Jute shares have not been very much in favour though it was reported during the week that the coal situation had considerably improved and that nearly all the mills were working. There was a general rise in prices in the Engineering section, a large business being recorded in Indian Standard Wagon.

Gilt-edged securities were better with 3½ per cent. Paper at Rs. 101.12. It appears that there was some buying by the Reserve Bank. There are reports that the provincial governments might be shortly coming on the market for loans aggregating Rs. 8.5 crores. 3 per cent. Paper was in favour with a jump to Rs. 95.14. Among terminable loans, 3 per cent. 1963-65 were Rs. 98.7, 2½ per cent. 1948-52 Rs. 100.2, 3 per cent. 1959-61 Rs. 99.13, and 3 per cent. 1957 Rs. 100.8. Easy conditions continued to prevail in the money market with a decline in the average discount rate to six annas and nine pies per cent per annum.

Cotton shares improved in sympathy with the Coal section but at the higher levels there was some profit-taking. Basanti Cotton were Rs. 13.5 ex-dividend while New Victoria after being higher at Rs. 8.2 closed at Rs. 7.15. Cawnpore Textiles were dealt in at Rs. 13 and Elgin at Rs. 66.8.

In the Coal section Bhalgora, Central India Coalfields and New Beerbhoom were in great favour. Bhalgora improved to Rs. 25.5 from Rs. 23.8 on special buying while Central Coalfields changed hands upto Rs. 14.4. New Beerbhoom were Rs. 48.6. Burrakur and South Karanpura were only slightly higher at Rs. 44.12 and Rs. 36.12 respectively. Equitable were Rs. 72.12 while Bengal were steady at Rs. 776. Hurriladh were firm at Rs. 42.14.

In the Jute section, a better feeling was noticeable with a rise in prices by five to ten points but in the last two days no large interest has been taken in this section. Howrah recovered to Rs. 94.10 from Rs. 93. Agarpara were one point higher at Rs. 39.4, Anglo-India five points higher at Rs. 535, Champdany at Rs. 282 and Ganges at Rs. 665. Nuddea improved from Rs. 139 to Rs. 142.8 while Rillance sharply recovered to Rs. 87 from Rs. 92.8 though closed easier at Rs. 85.8. Hukumchand were Rs. 47, Megna Rs. 154 and National Rs. 36.2. Craig were unchanged at Rs. 13 and Presidency at Rs. 14.4. One would have expected that Jute shares would be in better favour with the reports that more coal supplies would be available.

Engineering shares have been marked higher all round, Indian Malleable Castings being fully a point higher at Rs. 11.10.

Braithwaite recovered to Rs. 15 while Burn and Co. were wanted at Rs. 440. Indian Standard Wagon improved to Rs. 120 from Rs. 110 and a large amount of business was reported. Jessop were steady at Rs. 26.4 while Marshalls were a few annas higher at Rs. 6.11. Indian Irons were quoting Rs. 40.4 at the end of last week. They improved to Rs. 41.12 on Wednesday. The quotation is now Rs. 41.4. Steel Corporation also improved by one point to Rs. 34.15 though they are slightly easier at the present moment at Rs. 34.8.

Sugar shares continued steady with Cawnpore in particular interest. There was a rise in the quotation by three points to Rs. 43.8. Ramnugger were unchanged at Rs. 23.4. Carew were fluctuating around Rs. 30.4. Balmore Rs. 17.12 and Champaran Rs. 42.1.

Business in the Tea section has been rather restricted. Tezporé changing hands at Rs. 22.8 ex-dividend, New Samanbagh at Rs. 36.5 and Banarhat at Rs. 880.

In the Miscellaneous section Burma Corporation were not active being quoted Rs. 6.10 but consolidated. Tin were higher at Rs. 4.14, B.B.P. were uninteresting at Rs. 6.2 as also I.B.P. at Rs. 124. B.I.C. were a few annas higher at Rs. 7.12. Calcutta Electric were officially quoted for the first time during the week. There has been improvement in the quotation to Rs. 46.4 from Rs. 43.4. Aluminium Corporation have been rather sticky at Rs. 16.4 and Indian Cables at Rs. 31.7. Among Paper shares Titagur Paper were sharply higher at Rs. 33.2 from Rs. 30.12. India Paper Pulp were noted at Rs. 230 and Shree Gopal Rs. 18.2. Assam Saws were Rs. 6.6 and I.G.N. Rs. 219. Walford were very active at Rs. 7.3.

BOMBAY STOCK EXCHANGE

(FROM OUR CORRESPONDENT)

Bombay, August 30.

The current week is short of two working days, the Stock Exchange being closed on the first and the last day. In sharp contrast to the uneasy tone that prevailed during last week, when the big decline in the bullion market forced speculative selling, a brighter sentiment has been noticeable all round with the volume of business quite satisfactory. A general rise in prices in almost all sections has been recorded with the support by operators who now appear to place a constructive interpretation on the news in general. Another factor was the strength of the bullion market. On Wednesday, especially, considerable improvement was noticed when there was a wave of buying. The higher levels, however, attracted some profit-taking. The closing prices are the best seen since the past fortnight.

Government Securities were steadier under "special" support with 3½ per cent. Government Paper gaining more than 4 annas to Rs. 101.10. Fractional gains were recorded in 3 per cent. 1949-52 to Rs. 101.7 and 3 per cent. 1966-68 to Rs. 98.6.

Bank shares were somewhat easier under some pressure earlier in the week but moved up later on better sentiment and good support. Central Banks are now higher at Rs. 82.8 after being lower at Rs. 80.12 x.d., while in Imperial Bank Contributors there was a gain of more than 3 points to Rs. 563.12. Closing prices for Reserve Bank are Rs. 137.8 against Rs. 136.8. Bank of India at Rs. 187.8, were practically unchanged.

The lead in the Textile group was taken by Bombay Dyeing which improved from Rs. 1,958.12 on Monday to Rs. 1,970 on Wednesday. Century improved by about 10 points to close at Rs. 897.8 and Kohinoor with a rise of more than 20 points at Rs. 596. Central India were likewise quoted at Rs. 372.8 while moderate advances were made by Gokak to Rs. 293, Indian Bleach-

ing to Rs. 166 and Phoenix to Rs. 641.4. Vishnu alone were the exception to the general trend registering a small decline of 1½ points to Rs. 473.12.

Steel made headway throughout the week and heavy speculative buying pushed up the price of Tata Deferred from Rs. 2,183.12 on Monday to Rs. 2,256.4 towards the close, a gain of more than 70 points. The Ordinaries moved in sympathy, the closing quotation being Rs. 420.8 against Rs. 407.8 at the beginning of the week. Among other shares, Alcock improved to Rs. 407.8 from Rs. 406.4, and Premier Construction to Rs. 205 from Rs. 198. Indian Irons have also closed better at Rs. 41.6 from Rs. 40.8.

Among Miscellaneous items, Associated Cement and Scindia Steam Navigation were very active, the former gaining 3 points to close at Rs. 211 and the latter at Rs. 36.11. Bombay-Burma Old shares were in great request at Rs. 552.8 at the beginning of the week and the quotation improved to Rs. 557.8 on Tuesday and to Rs. 560 on Wednesday. Burma shares were not very much in favour and the closing rate for Burma Corporation is Rs. 6.9. Other shares in the Miscellaneous section were uninteresting.

(Annual General Meeting on 12-9-45 at 4-30 P.M. Books closed from 24-8 to 8-9-45 Dividend payable on or after 26-9-45 to registered shareholders as on 24-8-45).

Audited Statements of accounts for the year ended 28th February, 1945.

The result of the Company's operations during the year shows a profit of Rs. 16,61,718-5-0 which with Rs. 4,66,720-1-9 brought forward from the previous year's account makes a total of Rs. 21,28,438-6-9; from this sum the Directors have declared an ad-interim Dividend of Rs. 2 per share and Bonus of Rs. 4 per share on 29,802 shares Rs. 1,78,812; and have allocated to:—Provision for Taxation Rs. 9,50,000; Depreciation on Buildings Rs. 1,00,000; Depreciation on Machinery Rs. 1,00,000; Reserve Fund Rs. 4,50,000; leaving a balance of Rs. 3,49,626-6-9.

And the Directors propose to dispose of the same as under:—

Final dividend of Rs. 4 per share and a Bonus of Rs. 5 per share for the year on 29,802 shares of Rs. 50 each (making a total of Rs. 15 per share for the year or 30 per cent per annum) Rs. 2,68,218-0-0; Bonus to Company's staff at Bangalore Rs. 25,000-0-0; to carry to next year's account Rs. 56,408-6-9; total Rs. 3,49,626-6-9.

At an Extraordinary General Meeting of the shareholders held on the 21st February 1945, Resolutions were passed increasing the Authorised Capital of the Company to Rs. 50,00,000 by the creation of 30,000 Ordinary Shares of Rs. 50 each and 40,000 Preference Shares of Rs. 50 each. Out of the 40,000 Preference Shares the Directors were authorised to issue 14,901 ½ per cent. Cumulative Preference Shares to the shareholders by capitalising the sum of Rs. 7,45,050 being part of the undivided profits of the Company standing to the credit of the Reserve Fund. The Authorised Capital shown in the Balance Sheet circulated herewith is in accordance with the above Resolutions, but no reference has been made to the issue of 14,901 ½ per cent. Cumulative Preference Shares as these shares were issued and allotted by the Directors on 3rd March 1945, and the necessary adjustment will, therefore, appear in the Balance Sheet for the year ending 28th February 1946.

The successive reductions in prices of yarn and cloth following the Control measures adopted by the Central Government resulted in lower margins of profits than in previous years as was the case in almost all the Textile Mills. The other factor which was largely responsible for the fall in profits was the entire stoppage of the Mills for nearly two months consequent upon the breakdown of the power generating plant at Shivasamudram on the 19th May 1944. On the 1st July 1944 the Mills resumed partial working with a reduced power supply and though it was increased from time to time it was not until 1 the 16th January 1945 that full power was made available.

The Mill property and stocks are insured for the sum of Rs. 94,05,13 and the profits and Standing Charges for Rs. 45,00,000 for 24 months' benefit, that is Rs. 22,50,000 annually. In addition, the Company's Buildings, Machinery, Stock and Stores have been insured against War Risks as required by the Government of India Ordinances and the War Risks Insurance Emergency Act of the Government of Mysore.

Chairman:—V. N. CHANDVARKAR.

Authorised Capital Rs. 50,00,000. Issued and Subscribed Rs. 14,90,100, 29,802 Ordinary shares of Rs. 50 each, fully paid up.

Coal Problem

None except the interested can take objection to your dictum that coal should be mined in accordance with the national need and conducted with the maximum efficiency.

I am not surprised at the line of reasoning of Mr. Duttson. Suffice it for my purpose to point out the incorrectness of what he has said. He talks of national need being swollen. Very well, did he not read in the paper last year that coal was sent to Italy when the nation was crying hoarse for coal. Is sending coal abroad national need? Did Mr. Duttson raise his little finger against it and if so with what effect.

According to Mr. Duttson the impediments for working the coal industry to maximum efficiency are the shortage of labour and insufficient colliery stores.

Every one knows that the colliery industry is worked in the most primitive methods and we have to depend on outside imports for our stores. For such a state of affairs the industry has to thank itself.

He is sarcastic when dealing with the comments regarding mining labour. He seems to compare the aboriginal mine workers of India to Rip Van Winkle who will suffer for a penny rather than work for a pound. How far this remark about a class of people is justified I leave it to the readers to judge. His justification of employing women in mines will do credit to Amery himself.

An Educated Miner.

National Research Council.

The establishment of a National Research Council as you have written recently is absolutely necessary. As the 'scientist' says merit and merit alone should be the sole test in selecting men for Research posts in such an institute.

But the Institute cannot cater to the needs of all India. It will be only the top institution. India is a vast country. Scientific development is at a low level. An Institute in Delhi, another in Calcutta will not solve the problem. A net work of research institutes according to local needs should be started throughout the country. College and University laboratories should be expanded to carry on pure research work. The funds for these should be obtained from private philanthropy from business firms and the Government. The National Research Council should direct and co-ordinate the work of the various scientific institutes.

L. K. Sharma.

Capital Control

As a close reader of your valuable journal I take this opportunity of thanking you and offering you my bouquets on the lead that you have been giving on Post War Finance, Planning (Industrial and Agricultural Urban and Rural) handling of the capital issues. I am glad that you have given a lead for the continuance of the control of capital issues in post war planning. History should not repeat itself this time. If post war sufferings of the kind experienced after the world war No. 1 are to be avoided, healthy control is necessary. But the control should be by a national investment board as you have suggested.

There is a frenzy now for company promotions and company promoters are busy. New managing agency houses have

sprung up. It has become a fad with them to own as many companies as possible under their management. Every house desires to manage a bank, an insurance company, an investment trust, cement company, a colliery, a sugar factory a textile mill, a chemicals and Engineering company, some plantations and a lot of other minor industrial concerns.

Ofcourse our Industrial awakening is due entirely to their pioneering efforts and bold planning. But the time has come that they should change their methods to be in tune with the present ideas. Rationalisation is necessary. They should think in terms of the common man the labourer and the small investor. They should revise their ideas as regards returns and their incomes over their investments and services.

A bold lead to this end by you will be greatly appreciated. If the planting industry is to survive in postwar years there should be amalgamations. If transfers are necessary from one management to another it should be done and overhead charges minimised. So also in Textiles and other industries.

M. S. Ramaswamier,

The arguments of Eavesdropper in favour of Capital Control are doubtless sound. Might be, the present examiner of capital issues has been fair all along.

These are not enough to justify the continuance of capital control. I will welcome capital control if it will prevent foreign capital from entering India. If a body of men were chosen to advise the Examiner commanding the respect and trust of the public then there is a chance of the control being fairly administered. As long as the present unrepresentative

government lasts, there is every chance of favouritism playing a part. Let control of capital go along with other controls. A National Government can reimpose it if need be.

N. K. Shourie.

The Cloth Question

There seems to be a sudden silence on the cloth question after the cessation of the war. The end of the war could not remove all our trouble. Men are at present looking up to the return of Lord Wavell and the constitutional changes. It might take some time for the changes to come. Even if they come early a national government cannot by a miracle provide cloth for people overnight. It is, therefore, the duty of the present governments Central and Provincial to plan and solve this problem,

Trilok Nath Dube,

B.Sc.

India and U.S.A.

Some time ago you wrote a note condemning the destroying of hospital equipment and crockery in a U. S. Army Hospital on England. There was a spate of letters on the subject condemning such an act.

The U. S. Army in India has built a large number of army hospitals throughout the length and breadth of this country. The hospitals are all well provided. The Army cannot and is not likely to carry home all this. Nor should it destroy them or sell them in auction and convert them into money.

India wants hospitals very badly. Equipment even if hospitals are built, is very difficult to get. Americans are saying that they are all sympathy for Indians. Senator Celler recently asked Gandhiji how America could help India.

Let the American Army hand over these hospitals to responsible and selfless Indians who will run these as a trust. Indians would be benefited. America would have earned the thanks of India.

K. Chintamani

FACT No. 11

India's cotton textile industry now produces yarn at the rate of 1,600 million pounds a year. Before the war the average production was 1,100 million pounds a year.

One of a series of statements of fact for the information of the public.

ISSUED BY

THE MILLOWNERS' ASSOCIATION
 BOMBAY

Fact Parade

Mica Purchase Stopped:

The Joint Mica Mission, which has been purchasing mica in India for the war requirements of the United Nations since September, 1942, says that Mission procurement will cease three calendar months from Sept. 1, 1945. In conformity with the above arrangement, suppliers' final offers (which must cover only goods for ready delivery), must be received at the Mission's upcountry offices not later than Nov. 30.

Tata Airlines Get Two Transports:

Tata Airlines of Bombay gain two transport planes by the decision of the American Surplus Property Board—the organization which disposes of American material produced for war now available for peacetime use.

The Board announced the 16th allocation of surplus transport aircraft—mostly famous Douglas D.C.-3 (Douglas Dakotas) which have served as "jeeps of the air" throughout the war, plus Lockheed "Lodestars".

Education, Health and Lands Department Split into 3:

The Governor-General-in-Council has announced the creation, with effect from Sept. 1, 1945, of three separate departments, viz., Agriculture, Health and Education, in place of the existing Department of Education, Health and Lands, says a Gazette of India Extraordinary.

Paper Control Order:

Concessions under the Paper Control (Economy) Order are announced by the Government of India.

Manufacturers of drugs and medicines may print and distribute folders, instead of single leaflets, giving information as to the composition dosage, etc., of their products, provided the folder consists of not more than two sheets of paper 7½ inches by 5 inches, and provided the folders are distributed only to doctors. Enclosures giving dosage and other information may be packed with medicines, when necessary, but must not exceed a single sheet of paper 7½ inches by 5 inches.

The maximum permissible size of invitation cards, not in the form of folders, has been increased from 12 square inches to 4½ inches by 3½ inches.

Railway Demobilisation:

Authorities of both M.S.M. and S. I. Railways have given three months' notice to all their employees militarised under the Defence of India Corps of Railways, that disbandment of the units will take place on December 1. It is understood that arrangements are being made to withdraw military kit from all these personnel. From December 1 onwards these people will cease to draw the increased pay and ration allowance which was granted to them as members of the Defence of India Units.

Land Reclamation:

Sir Jogendra Singh, Member, Department of Education, Health and Lands, at a recent meeting of the Governing Body of the Imperial Council of Agricultural Research, appointed a sub-committee to investigate problems connected with control of Kans and the proposed schemes for its

eradication. Kans are a weedy, deep-rooted grass which undermine land and the crops grown on it. Thousands of acres of land in India have thus been rendered uncultivable. Large blocks of land in Bhopal, it is learnt, have gone out of cultivation due to Kans. The Bhopal Government have now decided to send Sir Colin Garbett, Revenue Minister, Bhopal State, to U. K. for purchasing suitable machinery necessary for the complete eradication of Kans in the State.

Machinery for Thungabhadra Project:

In order to buy necessary machinery for the Thungabhadra and other projects which the Nizam's Government have undertaken in co-operation with the Governments of Madras and Mysore, Khaja Azeemuddin, Superintending Engineer of the Thungabhadra Project in Hyderabad State, left for the United Kingdom and the United States recently.

Calcutta Food Prices:

The average increase in food prices in Calcutta is 343 per cent over the 1941 level and nearly 100 per cent above the 1944 level, according to a study. "The family man in the city is hit hard. He has now to pay nearly four times as much for his daily food requirements as he did in 1941."

Heavy Death Duty in Britain:

Britain's heavy death duties, ranging up to 65 per cent, forced the young Earl of Plymouth yesterday to offer for sale the 400-year old, Worcestershire estate given to his family by King Henry VIII.

U.S.A.A.F. will be Reduced to 600,000 Men:

The U. S. Army Air Force will be reduced to 800,000 men or fewer with some

8,000 planes of all types by next July, a USAAF spokesman told a Press conference.

The present strength of the USAAF is 2,150,000 men with 65,000 planes.

Australian Wool Agreement:

Mr. Joseph B. Chieffy, Australian Prime Minister, tabling the new wool agreement in the House of Representatives today said that as regards the cost of operating joint organization. Australia's initial capital investment would be £(A) 40,000,000 and would be provided over a four-year period. The principal object of the plan was to protect growers against serious price falls and prevent undue fluctuations.

The Australian Government was assuming half-ownership of Australian-grown wool owned by Britain.

Legislation would be introduced to ratify the agreement.

Wartime Controls Lifted:

Lifting of 25 wartime controls restricting a wide variety of activities, such as manufacture of toys, baby carriages, types of glassware, pastrycooks' goods, dry cleaning and advertising, was announced by the Minister for Post-War Reconstruction.

He said that between 30 and 40 more controls, which it was hoped to revoke, were now being considered. Further relaxations are expected to relate to cork, corsets, and plastic material, linseed oil for manufacture of paints. The regulation designed to rationalise banking by closing unnecessary branches has been lifted. Christmas, New Year and Easter advertising is now permitted. In fact, the extent to which the Australian wartime economy was mobilised is only fully realised as abandoned controls are announced.

RAPIER WATER PUMPS

An ideal pump for A. R. P. duties in Factory, Office or Bungalow. Made in 1½", 2" 3" and 4" sizes for outputs from 720 to 37,500 gallons per hour.

BOOK REVIEW

A TREATISE ON INDIAN INCOME-TAX LAW.

(By R. C. Doodhmal, F.I.S.A., G.D.A., R.A., 'Empire Terrace' Lamington Road, Bombay 7, Third Edition. Rs. 6.)

If Income-Tax is a highly technical and involved subject the complexity of the income tax legislation and administration have only increased during the past three years when vital changes had to be made to readjust the national fiscal system to the exigencies created by the war finance. The Indian Income-Tax (Amendment) Act of 1944 and the Indian Income-Tax (Amendment) Ordinance of 1945 have brought in changes in the calculation as well as the payment of taxes and individual tax payers and the commercial communities have not a little difficulty in familiarising themselves with the new situation. Mr. Doodhmal's latest edition of his valuable book on the Indian Income Tax serves a widespread demand for a clear and precise explanation of the recent changes like the system of Advance Payment of Tax, (what is popularly known as the Pay-As-You-Earn Method) and the Earned Income Allowance. The text of the Indian Income Tax Act of 1922 is appended with all the amendments brought up to date. The publication is indeed a valuable addition to the literature on the subject, particularly because the treatment has been devised from the point of view of the examinee and the assessee.

LABOUR & FACTORY LEGISLATION IN INDIA.

(By H. M. Trivedi. Published by N. M. Tripathi & Co., Ltd., Bombay. Pp. 1303. Price Rs. 15.)

For the first time, all the existing labour and factory legislation in India, including wartime measures has been brought within the scope of a single comprehensive volume. The various Acts with the rules and notifications issued under them are given in the Book in full detail. An elaborate index running to nearly fifty pages should be considered not the least useful part of the book. In the introduction, Mr. Trivedi gives an impressive summary of labour legislation in India, a lucid discussion of the Beveridge Plan and indicates the lines on which social legislation in India should develop in the future. As a reference volume the book is indispensable to all who are in any way connected with Indian labour and its problems.

POVERTY AND SOCIAL CHANGE.

(By Tarlok Singh. Longmans, Green & Co., Ltd. Pp. 200. Price Rs. 3-8.)

The author is an I.C.S. officer and has served as a district official in the Punjab for over six years and thus had opportunities to study rural problems first hand. He has also conducted economic surveys in different districts in the Punjab. His book has a single purpose, "to examine the conditions upon which we may hope to free our masses from their poverty". After a random discussion of existing agricultural conditions in India, Mr. Singh suggests his recipe which is nothing else than collective farming and joint management of village economy. The most valuable suggestion he has made is the method of paying the owners and cultivators, combining two principles, one an ownership dividend and the other wages for labour. It will put agriculture on a more efficient basis within the village, and because it

will need only a smaller number of hands than are now available, the surplus labour will be induced to seek employment in urban areas. The security of ownership for all is, at the same time, assured by the system of ownership dividend, under collective management. The transition to the new economy is to be achieved through stages and after careful experimentation in selected areas. Inasmuch as the author has expanded the thesis of collective farming which hitherto has been nothing more than a phrase, the Book provides a new source of interest in discussions on Indian agricultural economics and a practical guidance to those who seek to put novel plans into action.

EQUAL ACCESS TO RAW MATERIALS.

By V. M. Bhatta. Published by Indian Council of World Affairs. Pp. 32. As. 8.

Mr. Bhatta gives a brief historical review of recent national and international attempts to control and regulate the supply of raw materials. The war time measures come prominently into the picture. After indicating the relevant provisions in the Atlantic Charter and the effects of lend-lease and other wartime obligations on the post-war raw material position, the author lays down a few general principles as a basis for future international control of the production and distribution of raw materials.

DUNLOP

In world-wide demand

To provide the tyre user with a better and better product, Dunlop are constantly seeking better methods and better materials. That is why Dunlop tyres are in world-wide demand.

The benefit of Dunlop technical improvements and inventions for war purposes will benefit both user and dealer in the days of peace.

TREASURY BILLS

Central Government:

Tenders for Rs. 2,00,00,000 of three months' Government of India Treasury Bills were opened on Wednesday, the 5th September, 1945. Total amount offered was Rs. 5,17,75,000. Tenders at Rs. 99-14-9 per cent were accepted in full and those at Rs. 99-14-6 per cent were allotted approximately 93 per cent. Lower tenders were rejected. Total amount accepted was Rs. 2,00,00,000, the average rate of accepted tenders being Rs. 0-5-11 per cent per annum.

Tenders for Rs. 2,00,00,000 of three months' Government of India Treasury Bills will be received on Wednesday, the 12th September, 1945 at Bombay upto 11 a.m. (Standard Time) and upto the close of business on Tuesday, the 11th September, 1945 at other centres. Successful tenderers should make payment on Friday, the 14th September, 1945. Other conditions are as usual.

During the week ended the 31st Aug., 1945 Government of India Treasury bills for Rs. 2,18,00,000 were sold in favour of the Issue Department of the Reserve Bank of India.

WORLD OF INDIAN FINANCE

Calcutta, Thursday Evening.

Extremely easy conditions continue to prevail in the money market with call money quoting $\frac{1}{4}$ per cent in Calcutta and $\frac{1}{4}$ per cent in Bombay. As pointed out last week, with the uncertainty regarding the immediate outlook and the anxiety to keep as liquid a position as possible, banks have been more eager to place funds in treasury bills. At the auctions held this week there was keen competition and applications amounted to the large sum of Rs. 5.18 crores against Rs. 4.85 crores. Bidding was very keen and there was a substantial decline in the average discount rate to 5 annas 11 pies from 6 annas 9 pies per cent per annum last week. Tenders at Rs. 99-14-9 were accepted in full and those at Rs. 99-14-6 were allotted 93 per cent. Last week tenders at Rs. 99-14-6 were accepted in full and those at Rs. 99-14-3 were allotted approximately 35 per cent. The offer for next week has been maintained at Rs. 2 crores.

The feature of the week is the announcement of the terms of the Provincial Government loans aggregating Rs. 8.5 crores. As anticipated last week, the Punjab Government is asking for Rs. 3 crores, Madras Rs. 3 crores and the U. P. Rs. 2.5 crores. All the loans carry interest at the rate of 3 per cent per annum and are issued at a discount of 8 annas per cent. They are repayable at par in September, 1960. The open market operations carried out by the Reserve Bank sometime back have resulted in a considerable toning up of the gilt-edged market and it was stated during the week that investors were anxious to buy loans which have maturity dates earlier than 1960. Thus, 3 per cent 1957 and 3 per cent 1959-61 were in better demand and enquiries extended to long-dated issues also, like 3 per cent 1963-65 and 3 per cent 1966-68.

With the Second Victory Loan still on tap at par, it need not be emphasised that the Provincial loans, now offered for public subscription, have greater attraction for investors. As the amounts involved are very small the success of the loans is assured. The authorities, however, have been careful enough on this occasion to keep the loans open for three working days beginning from September 12 to 14.

The developments in the gilt-edged market in recent months have been of considerable advantage to borrowers. The reduction in the borrowing rate of the Central Government for short-dated loans to $2\frac{1}{2}$ per cent and the progressive increase in the duration of medium and long-dated loans have also resulted in a stiffening in the terms offered to investors by Provincial Governments. Since 1942, every year Provincial Governments have been raising loans. The first issue on behalf of four Provincial Governments was in the form of 3 per cent 1955 loans, in 1943 3 per cent 1956 loans, in 1944, 3 per cent 1958 loans and in 1945 3 per cent 1960 loans. It will thus be seen that the maturity dates have been extended. There is similar progression in regard to the issue prices. In 1942 four Provincial Governments, namely, Bombay, Madras, Punjab and the C. P. raised loans aggregating Rs. 7.75 crores. The issue price of the Bombay loan was at Rs. $1\frac{1}{4}$ discount, the Punjab Rs. 3 discount, Madras Rs. $2\frac{1}{4}$ discount and C. P. Rs. 3 discount. In 1943, the same four Provincial Governments again asked for loans aggregating Rs. 7.75 crores. The issue price of the Bombay loan was at par, the Punjab Rs. 1 discount, Madras Rs. $\frac{1}{4}$ discount and C. P.

Rs. 1 discount. In 1943, six Provincial Government asked for loans, namely, the U. P. Punjab, Bombay, Sind, Madras and the C. P., for amounts aggregating Rs. 13.28 crores. The issue price of the Bombay, Madras and the C. P. loans was at par while the remaining loans were offered at Rs. $1\frac{1}{4}$ discount. It will, therefore, be seen that the offer of the new loan at $\frac{1}{4}$ per cent discount is a considerable improvement over the previous issues. The experience of last year, however, was not quite satisfactory as public response was poor and the underwriters were called upon to take up a portion of the issue. Under the present conditions, however, last year's experience may not be repeated.

The returns of the Reserve Bank for the week ended August 31, show a decrease in notes in circulation to Rs. 1,139.45 crores from Rs. 1,143.59 crores in the previous week. As rupee coin also continued to return from circulation, the latest figure at Rs. 17.44 crores showing an increase of Rs. 73 lakhs, notes held in the banking department have risen to Rs. 14.57 crores from Rs. 9.71 crores.

In the banking department, there is a jump in Central Government balances to Rs. 363.53 crores from Rs. 347.53 crores while the rise in Government balances is due to the larger sterling receipts the cash position of the Central Government was perhaps strengthened by payments from other deposit accounts. Otherwise, the drop in Other deposits by Rs. 11.4 crores to Rs. 13.23 crores cannot be satisfactorily explained. Disbursements appear to be on a fairly large scale. Bank balances with the Reserve Bank registered an improvement to Rs. 105.19 crores from Rs. 99.82 crores. Foreign balances were Rs. 11.8 crores higher at Rs. 472.76 crores. The improvement in the gilt-edged market perhaps helped the Reserve Bank to liquidate some portion of its investments. Holdings in the banking department show a decrease of over Rs. 3 crores to Rs. 24.93 crores.

The affluent conditions in the money market are also borne out by the scheduled bank's statement for the week ended August 24, 1945. Both Demand and Time liabilities have registered increases, demand liabilities being Rs. 640.6 crores against Rs. 634.38 crores and Time liabilities Rs. 251.26 crores against Rs. 249.24 crores. There is a jump in both cash on hand and balances with the Reserve Bank. Cash on hand being Rs. 36.49 crores against Rs. 31.46 crores and balances with the Reserve Bank Rs. 100.15 crores against Rs. 99.66 crores. There is also a small increase in advances to Rs. 270.77 crores from Rs. 269.71 crores as well as in Bills discounted to Rs. 13.5 crores from Rs. 13.13 crores.

It is interesting to note that against the increase in the working capital by Rs. 8.24 crores, cash balances are as much as Rs. 13.52 crores higher even though advances and bills discounted have improved by Rs. 1.43 crores. The larger cash balances are obviously due to purchases of gilt-edged securities by the Reserve Bank, the sum involved being over Rs. 6 $\frac{1}{2}$ crores.

As we go to press, a news agency report furnishes the information that the Anglo-American financial talks will be on Monday and will comprise the following topics:—

- Financial assistance for Great Britain.
- A Lend-Lease settlement.
- Commercial problems such as cartels, sterling bloc pool and the Empire trade preferences.
- Surplus property disposal.

APPLICATIONS

FOR TEXTILE MACHINERY

In order to permit equal consideration being given to all applications, persons interested in the expansion of existing Textile mills or in the erection of new mills should submit their applications, in the form prescribed by the Chief Controller of Imports for Registration of Post War imports of Capital Goods, to the Textile Commissioner not later than 30th September, 1945. Applications that have already been made to the Chief Controller of Imports or the Textile Commissioner will also be considered after 30th September, 1945 along with the applications that may be received by the Textile Commissioner up to that date. Persons who have already applied therefore need not apply again.

Nip it in the Bud

Two weeks have apparently sufficed to lend colour or substance to the bogey of the post-war slump. While there are no significant developments in the business world, apart from the American decision to discontinue supplies under the Lease-Lend Act and its immediate and direct consequences of a psychological kind, the outlook of employment in India may be said to have changed definitely for the worse. Here again the position of salaried black-coated workers is worse than that of the wage earning classes. The first effect of the onset of peace is that the authorities concerned begin to give effect without any loss of time to the provision in war contracts for termination within a given number of months after the declaration of peace. Notices are therefore issued, on the strength of this clause, intimating the firms concerned of the termination of such contracts in accordance with prior understanding. In as much as these cancellations are spread over various spheres of productive activity, firms are obliged to take on hand the question of reduction of staff in accordance with the prospective decline in the volume of work. The order of priorities in which superfluous staff is to be discharged is always well-understood. Very little time is taken in the process of communicating the depressive influences to the whole of the employment market.

It may seem unduly alarmistic to trace the possible growth of such influences in the immediate future. For our part, we devoted ourselves long before the actual end of the war to the cause of fighting the post-war slump. We had endeavoured at every stage to combat the tendency to exaggerate the forces and factors that, as a rule, make for the onset of a slump in the years following a great war. We had emphasised the differences between the conditions obtaining to-day and the conditions which after the war of 1914-18 subjected world economy to the disastrous jolts of boom and slump. If therefore, we now attempt to appraise the Government and the public of the incipient forces of a slump, it is solely with a view to ensure proper correctives being afforded in time to such a trend and to urge that post-war reconstruction should not be prejudiced by inadvertent handling of the situation at the present stage.

It will not, we trust, be gainsaid that in matters of boom and slump the prevalent mood or psychological state is in fact far more important than even the grosser objective factors. For the latter has always been found to be less intractable than the former. And if it is true that the Government of the world are determined that this time the productive activity of the nations during the war is not to be followed by a slump, then it is far wiser to arrest these forces now than allow them to gain in strength and to get out of hand.

India's national economy during wartime has had features materially different from those of the economic life and organisation of other countries during the same period. In Britain, as Mr. Attlee has been at pains to point out, industry is suffering from shortage of manpower and the immediate problem is one of speeding up demobilisation sufficiently to enable industries to meet their requirements of skilled working. In the U.S.A., too, the foremost aim of the plans that have been formed for reconversion is to ensure maximum production in industry and full employment. In India full employment, as it is understood in the West, has been, is, and will remain for a long-time to come mere aspirations or at best a more or less distant goal. In the best of times, the country's population could be divided into three groups, of which the first had full employment and adequate returns, the second, partial employment and meagre incomes, and the third, lacking income and employment alike. Needless to say, the second group was far more numerous than the first and the third more than the other two put together. What war expenditure in India did was practically to extinguish the third group, increase vastly the employment of the second and raise the money incomes of all the classes. Neither the employment found for them nor the wages and salaries that were provided can be said to be productive, in the ordinary peacetime sense of the word, since neither the direct nor the indirect employment caused by the war added to the country's real wealth. By means of the various controls in regard to consumer goods, the all round increase in money incomes enabled the people, who found new or additional employment, to maintain a comfortable living compared to what they had been used to in the past, consumer goods being made available to them practically by a cut in the consumption of the higher classes. In other words, while new incomes were being freely provided

for all, a distribution of consumer's goods among the population was being effected which had no relation to the distribution of purchasing power in the country.

It is against this background of economic conditions that the trends and possibilities of the next few months have to be considered. For if a big cut in wartime employment should be allowed to be effected, then its immediate effect would be a fall in the purchasing power of these classes. No effect is likely to be felt on industrial production since, for one thing, it has been all along short of capacity, for another, the gap between production and effective demand will persist for some time to come, and thirdly the discharged men themselves are likely to have put by sufficient savings to avoid a sudden relapse into the penury of the past. There is, danger, therefore, of a complacent assumption on the part of the authorities that no harm is being done by action being taken according to the prima facie requirements of the onset of peace.

But the problem of post-war reconstruction, considered in close relation to the conditions that prevailed during the war, is to turn the unproductive employment of the war years into productive, and to take steps to remove the scarcities and disagreeable compulsions of the war period. So far as the transformation of unproductive into productive activity is concerned, the task in India is not, as it is in America, to secure a mere reconversion. What is required is an increase in the volume of productive activity over the pre-war levels. For the increase in the expansion of existing industries we have unfortunately to wait on the convenience and good graces of foreign nations. But to the extent that those who have been provided employment during wartime can be turned into schemes of economic development within the country, there is only a time lag that has to be tackled. The question to be considered therefore is, whether during the period that intervenes between the end of the war and the inauguration of such schemes we should allow the disturbing effect of disemployment to proceed apace.

In answering this question there are clearly three points to be considered. Firstly, the number and scope of such schemes and the volume of employment which they can provide; secondly the time that may be required to get them ready for execution, and thirdly the cost of the measures that may be adopted during this interval to avoid a decline in the volume of employment. As regards the first question, while it cannot be pretended that the progress of planning in India has been quite satisfactory, it cannot be denied that a great deal of useful work has been done in regard to what may be said to constitute the sounder and stronger foundations of an adequate economic structure. Schemes have been evolved for the development of agriculture, which constitutes by far the bigger half of our national economy. Projects for improving irrigation, for combating soil erosion and for improving the fertility of the soil have reached an advanced stage. Given the eagerness to put them into effect without any further delay, the officials and Committees concerned can get them into proper shape in a few months. The same thing may also be said of schemes of road development. A necessary complement of these schemes would be a set of measures, if not a wholly integral scheme, for the promotion of building activity throughout the country. These schemes should suffice to cushion the impact of peace on the national economy; and considering the manner and extent to which the people's hopes in regard to post-war economy have been raised by the assiduous efforts of the Government, the authorities must be said to owe a clear and elementary duty not to disappoint such hopes now that the war is actually over. If the study of the problems we have referred to had been neglected in the past or if sufficient progress had not been made in the drawing up of concrete schemes in this regard, then it is understandable that the Government should be allowed to take their own time in evolving such schemes. But since these plans are read and since the prevention of a decline of employment has been accepted all over the world as an elementary function of the Government, the public have a right to demand that no time shall be lost in introducing these measures and, what is more, in adopting certain emergent measures to prevent the deterioration of the national economic life during the short time between the end of the war and the inauguration of planning.

For our part, we consider the avoidance of a post-war slump is of such paramount importance that we would go to the length of suggesting that Government should use their influence to persuade employers not to precipitate disemployment and, if necessary, even to prevent it by special laws.

Such an action would, however, be indefensible, unless the Government are in a position to state specifically that plans of economic development, which will create adequate work for firms at least on the same scale as during wartime, will be introduced within the next few months and that, in the interests of all, employers should stay their hands in the matter of reducing the volume of employment. On the basis that such schemes will be introduced within the next few months and that the employees, who may be deemed superfluous now will not be so for any length of time, the cost involved will be inconsiderable, whether from the point of view of the employers concerned, or from that of society at large. For, the stage, in which the cost of additional staff falls on the national exchequer rather than on the particular employers concerned, has by no means been left behind and may well be deemed to continue for some time to come. In these conditions, disemployment is rather a provision for a distant future than an immediate necessity. And we have no doubt that if the Government will take the initiative in this matter, they can succeed in nipping the slump mentality in the bud.

The Damodar Valley Project

Among the many gifts of Nature which, through man's sins of omission and commission have become a not unmixed good, the Damodar River occupies a prominent place. The evil, of course, is more spectacular. Even within living memory, there have been three catastrophic floods in the Damodar, the first in 1913, the second in 1919 and the third as recently as 1943. Besides causing enormous destruction to life and property, these sudden visitations used to leave behind them a trail of misery and the general dislocation of life for millions of people which it took several decades to repair, if repair was at all possible. There have been sporadic, we are tempted to say, half-hearted attempts on the part of the Government to investigate the causes of the Damodar floods and to seek remedies. But the fact that the last of the floods occurred as late as 1943 shows that the authorities have at no stage shown sufficient enthusiasm and that there probably was the restraining hand of some vested interests. The stray investigations that the authorities conducted bore little fruit and the usual differences of opinion among experts provided the welcome pretext for inaction.

Lately, interest in the Damodar Valley has revived. The 1943 floods which occurred in the middle of the war should have partially accounted for this. When planning has become the order of the day, such a serious weakness in the life of a whole area could not be ignored. The Central Technical Power Board, who had been entrusted with the task of drawing up a scheme, has submitted its preliminary report. The report recommends a series of reservoirs providing flood control, supply of water for irrigation, and a system of hydro-electric and thermal power stations inter-connected by transmission lines. The general plan of development comprises the building of a system of eight dams and a barrage with a controlled reservoir capacity of 4,700,000 acre feet. It is expected that 65,000 continuous kilowatts of primary hydro-electric power would be made available, besides an additional amount of intermittent or seasonal power up to a further 65,000 kilowatts. Provision of public water supply to the towns and villages in the vicinity, both for domestic and industrial purposes, is also found to be possible. According to the memorandum the project as a whole will be financially a success, even if the large variety of indirect benefits accruing to the community were left out of account. The administration of this multi-purpose project, the memorandum recommends, should be vested in a single unified authority constituted on the lines of the well-known Tennessee Valley Authority. The proceedings of the conference which met in Calcutta last month revealed that the Government of the Centre, Bengal and Bihar are agreed on the main recommendations of the Technical Power Board and are convinced of the urgency of putting them into effect.

It is fortunate that the Technical Power Board has drawn its inspiration from the Tennessee Valley Authority. The achievements of the T.V.A. have, however, been the result of combined working of a number of factors, state funds and state activities, private funds and private efforts, local communities, schools, co-operatives and clubs, all having conspicuous roles and the T.V.A. has touched all forms of human concerns that can at all be maintained or advanced through any type of col-

lective effort. The miraculous changes it has brought about in the social and economic conditions of a region which till 1933 was a famine-stricken, flood-menaced waste, afford the best testimony to the work of the T.V.A. Many new enterprises have sprung up, failing industries have revived, electricity has come to be used in a variety of ways from the factory to the kitchen, traffic in the river, road and railway has increased, the peasants' income and their bank balances have gone up, the land itself gives more, low-income diseases like tuberculosis are showing progressive decline, public health and educational services abound and above all a new joy and a new vision have come to the whole community. It has been said, "No other river works so hard for the people." The river did always work hard for the people; what is new is that the people have agreed to work with it.

It is of course possible to copy the laws and regulations of the T.V.A. or adapt its administrative machinery to suit conditions here. The successful working of such gigantic socio-economic schemes calls for a rare spirit of co-operation, single-mindedness, breadth of vision and far-sightedness among the representatives of the administration and the public. No less necessary is the up-to-date knowledge, and the skill which the experts should be able to summon to their aid. Nor should it be forgotten that it is not a fixed ideal in terms of results that has got to be striven for in such schemes, but a rising level of collective aspirations adjusted according to the achievements of the past.

The economic development of the Damodar Valley is proposed to be taken up as an independent project, and though the Technical Power Board visualises another model of the T.V.A. to spring up in course of time, the authorities themselves seem to be much less modest, judged by the actual arrangements they are making in furtherance of the scheme on hand. The least that should be done is to plan for the whole of the economic unit covered by the Damodar Basin, even if the development of social services and some aspects of industrialisation might be put off to a later stage. The recognition of the principle of economic regionalism in future planning is not only a matter of practical convenience but is an economic necessity, in so far as serious deficiencies in the economic development of the past have to be corrected. It will be seen that in the past, the opportunities afforded by natural environment in the different regional units of India have not been taken full advantage of; and to that extent, our economy both on the production and distribution side leaves vast scope for development. The optimum utilisation of the forces of nature and a more rational concentration of industry and agriculture within the same regional units as the Damodar Basin are sure to be productive of greater social good and probably larger material gains than a course of economic development left almost entirely to the vagaries of private business.

Our advocacy for regionalism does not imply any argument for regional self-sufficiency. Many areas which for all practical purposes should be considered distinct economic units might be far from self-sufficient as far as their natural resources go. Even if self-sufficiency is possible and desirable for strategic or other reasons, there is no use making a fetish of it. The maximum economic development of every regional unit is advocated because without it the Central Plan will itself suffer. The main virtue of regional planning lies in the correlation it implies between all the branches of local planning and the Central Plan.

Some weeks ago, we referred to a scheme which His Exalted Highness the Nizam's Government have in view, of developing the Godavary Valley. It is now virtually a bleak land, yielding little, but found to possess immense potential resources. The Nizam's Government propose to develop it on an all-round scale on the T.V.A. model, giving equal prominence to agriculture and industry, creating new towns and new communications. The Tungabhadra Project also holds promise of great possibilities. There are many more such undeveloped and under-developed river basins whose potentialities lie wholly or partially concealed. At present these regions are either an utter waste or a source of liability to the country. It is possible that every one of these regions could be converted into a rich agricultural and industrial centre. The Damodar Valley project should be regarded only as the first step in a general programme of national reconstruction on a regional basis and the Central Government should in conjunction with the Provincial Governments take steps to explore possibilities of discovering more of such schemes wherever possibilities are

Marketing of Agricultural Produce—V

(Contributed)

In this article, I propose to deal with the methods of sale in the Regulated markets. It will be recalled that the most effective means the legislatures could think of to safeguard the ryots' interests was to bring all transactions under the direct supervision of the market committee or its staff; where this is not possible, every precaution is taken to prevent unfair practices; and the utmost vigilance is insisted on, on the part of the committee staff over transactions that take place outside their immediate supervision. Direct supervision of transactions is sought to be enforced through the provision of market yards by the committee, where the sellers bring their produce for sale. The committee exercises its control over transactions in the licensed premises of dealers, through the enforcement of the Market Rules, insistence on periodical, invariably daily, submission of returns and surprise inspection of records, and weights and measures by the committee staff. It is the endeavour of almost all the Market committees I visited to attract the maximum quantities of produce to the market yards; but as long as there are practical difficulties (to which I shall refer later) in the way of legislation making sales in the market yard compulsory, sales in the licensed premises of merchants and manufacturers will have to continue. In several markets, particularly cotton markets, the terms of the sale are settled in the market yard, and only the weighing of the produce and the payment of price take place at the premises of the purchaser. Thus, as far as the place of sale is concerned, three different practices are permitted and are in vogue, sales in the market yards, sales in the licensed premises, and sales spread over both, in the sense of sales partly in one and partly in the other.

Coming to particular markets, in Cuddalore (Madras Province) the market committee has taken over the entire responsibility of disposing the produce on behalf of the seller. There is provision in the Byelaws for a certain percentage of brokerage and commission which the brokers and commission agents may receive from the seller. But sales in the market yard are effected without the assistance of either brokers or commission agents. In Cuddalore (old town) the market yard is situated in the centre of the town and has besides three or four office rooms, an extensive hall for keeping the bags and weighment, and a cement paved yard for drying the kernels. The market yard is open for business between 8 a.m. and 6 p.m. on all days during the trade season, i.e., from July to March, except on days notified by the committee as holidays. For the rest of the year, the yard remains open from 8 a.m. to 11 a.m. and from 2 to 5 p.m. The carts laden with the groundnut kernels begin to arrive from early morning. As soon as a cart arrives, it is unloaded, seived, bagged again in gunnies belonging to the committee. This is for the sake of uniformity in arrangement. Then they are arranged in lots in the order in which the bags arrive. The name of the bags and the number of bags are entered in the Chitta Book and the Chitta number is marked on the respective bags also for identification. A large number of carts arrive by ten o'clock and merchants also assemble by that time. The merchants or their agents first inspect the bags with a view to assess quality, then each buyer is given a bidding slip where he enters the number of the lot or bag and his bid. As only one bid is permitted and it is a secret bid, the buyer usually puts the highest price he is prepared to pay. Within about half an hour, all the bidding slips are returned to the Superintendent and before 12, the names of the highest bidders of each are announced. The bidding slips are open for inspection by the traders. On lean days, when arrivals are not many the agents of the traders come to the market yard, take a bidding slip and a few kernels for sample (these are returned) and return the slips completed, before eleven. After the results are announced, weighing takes place and on the weighing slip, the quality, the lot number, the weight, the rate and the price are entered and the seller's signature or thumb impression taken. One copy of the slip is handed over to the seller, while another is retained by the market committee. This slip provides a complete record of all transactions in the market yard. After the slip is signed, the seller goes to the buyer's premises and gets payment. Usually two bids take place, one by 10 o'clock and the other by 2 in the afternoon. But on particularly heavy days, another bid might be called. Sometimes, as when a seller wishes to dispose of his produce urgently, the Superintendent may call for an immediate bid for his lot alone. In the Cuddalore market yards, not only does the buyer pay nothing for the services of the committee

staff in the disposal of his produce, but his carts carrying the produce are exempt from the Municipal cess. The committee however charges 8 pies per bag as handling charges from the buyer.

There are at present six market yards within the jurisdiction of the Cuddalore Groundnut market committee and the figures of arrivals in the market yards ever since they started functioning show a progressive increase in the percentage of sales in the yards to the total sales in the respective market centres. In 1944 more than 75 per cent of the sales in the Vridhachalam Centre were done through the market yard and more than 90 per cent of the sellers have been cultivators of groundnuts.

The procedure in the cotton markets is somewhat different. For example, the practice obtaining in Khamgaon, one of the leading Regulated Markets in Cotton in Berar, is as follows. The Market opens early in the morning when buyers and adatyas assemble at one common place in the market yard. The rates for the day are opened by a panel of three representatives from buyers, three from commission agents and one from the market committee. Closetted in a room, they consider their buying limits and then declare the rates. The rates thus fixed for the day are posted on a board at a conspicuous place. Generally prices are based on the whole unit, consisting of an average quality and a premium or "on" is paid to superior quality Kapas. As soon as the cotton carts arrive, the cartmen look for their adatyas, who on payment of the market cess (one anna per cart, only on payment of which the cart is allowed to pass out of the market yard) obtain tickets from the committee and get the receipts passed for the same. The receipt bears the name of the adatyas who acts for the cartman. The adatyas then take the buyers to his clients' carts and show them the sample from each cart. After seeing the sample, the rate for each cart is agreed on and the buyer signs an agreement in the prescribed form in favour of the adatyas who represents the cartman one copy of the agreement has to be handed over to the market committee office and the other remains with the buyer. The Revised Cotton market Rules allow no secret signs. The price is settled in the open market by private negotiation and recorded there and then. But in spite of the prohibition, secret bidding is the usual method and it is also found to be advantageous in that it fetches the best price for the seller and saves a lot of time. When the transactions are over, a bell is rung and the carts are allowed to pass through the gates to the respective ginning factories for weighing. The tickets (gate passes) sold to the cartmen are collected at the gate by the committee peons as each cart leaves the premises. Some times the rates agreed to are reduced at the time of weighing, but this is done only in case where the cotton on unloading from the cart is found to be of inferior quality or damaged by moisture or dirt. If the cartman is not willing to concede the reduction, he has always the option to cancel the sale and take his produce back to the market yard for resale the next day—a right which is seldom exercised in view of the practical inconveniences involved in holding over the produce, for another day, as also the uncertainty of price movements.

Wherever cotton is sold by private negotiation, more or less the same method prevails. There are however local variations in the routine of sales. In Amraoti, the biggest Kapas market in the world, and managed by a committee of the Municipality, the daily routine of transactions closely resembles that of Khamgaon. But the following differences will be of interest. The carts with Kapas and lint enter through the main gate and the commission agents take them to their allotted places. If a cartman does not want to sell through a commission agent, he stands apart from the rest. By the time the traders and commission agents assemble at about 6 a.m. the Broach and Omra rates and the Liverpool and New York futures are published in prominent places. The buyers open the rates for the day and they inform the committee of the prices arrived at. These prices are immediately published on the Notice Board. Then the transactions begin. The buyer goes to every cart, examines the stuff, and quotes under cover, the seller's adatyas acting as his intermediary. Any price which he considers fair will be communicated secretly by the Adatyas to the cartman, who accepts it, if it is within the limits allowed by his principal. If the price is agreed, on the adatyas proclaims it openly; and then the agreement is drawn up and signed. The produce is weighed in the premises of the buyer. In case of disagreement over deductions, the seller has the option to appeal to the market com-

mittee to intervene or postpone the sale. There are fairly elaborate provisions in respect of the payment of price also. As soon as the Kapas is weighed, the weighman gets the weights entered in the prescribed form in the weighment book and sends a copy of the same to the Amraoti Market committee. Then the Adata gets a consolidated Bill from the buyer. The adata draws the amount and pays the cartman or his master and the amount is entered in a prescribed form maintained in triplicate, one copy to be given to the cartman, one to the Committee and the third to be retained by the Adata. If any cartman finds the days' prices too low, he takes a token and takes his produce out for storing or ginning as the case might be.

In Akola, the tokens issued to cartmen are of tin on which paper labels bearing the date are pasted and these labels become useless for the next day. In the Dhulia market in Bombay tickets issued as tokens are punched to prevent their being used another day. In the Bijapur market, the produce is not brought to the market yard at all; the Superintendent goes from godown to godown and auctions it.

In the Hyderabad State, two peculiar practices are found to have been evolved in the marketing of cotton in some of the Regulated markets. In Latur, the buying merchants already give invitations to some of the Adatayas, to sell them all the produce that comes to the respective Adatayas at the high-

est price offered in the day. The auctions for the day will cover only produce which comes to the uninvited "Adatayas." Another interesting practice also obtains in some markets like Latur, Nanded and Raichur, the Adatayas are divided into groups and each group is allowed to monopolise the transactions of one day in each week. For example in Nanded, the 48 Adatayas are divided into six groups (Friday is a holiday). The arrangement is found to be helpful to the extent it limits competition among the adatayas to a narrow range. Under this arrangement, the highest bidder of the day is also obliged to purchase the whole commodity arriving during the day, unless the seller wishes to sell it to some one else.

The sale of food grains is usually by auction, in heaps. In Nizamabad (Hyderabad State) the auction begins from one corner of the Gunj and proceeds shop by shop till it completes the round. Under this system of auctioning lot by lot, of each commodity, those whose produce is sold late in the day frequently get a lower price, as competition is less keen with the decline in the number of buyers. To meet this, or rather to spread the disadvantage in fair proportion among all the sellers, the auctions begin from different corners of the market yard in different days; even this device is only helpful to the Adatayas who own or have rented the premises in the yard and not to the seller because it is not every day the same seller goes to a particular Adataya.

IN your body the potato is transformed into energy. As energy it streams through the limbs to give them action, surges in the mind to stimulate thought. It is the body's fuel.

Yet potatoes cost so little and are so easy to grow. They can be grown in the hills or in the plains. The yield is an average of 120 maunds per acre.

The demand for potatoes is ever present, and their cultivation will bring to the grower an assured income. But the problem of their distribution must be faced. For increased production is not profitable unless there are MORE AND BETTER ROADS to carry the produce from the farms to the markets.

Editorial Notes

Tax-Detection Department

The United States Treasury Department is appointing 10,000 T-men, agents and special agents to track down tax cheats throughout the country. It is realised that tax-dodging is prevalent more among business interests than among professional men—more among the higher grades of income than among the medium groups. For this reason, the qualifications required for selection as agents or special agents lay stress on accounting or investigational experience. It follows that, in the case of India, the most efficient way of organising a Tax-detection department is to entrust the new work to the Indian Audit Service. This Service has a brilliant record for integrity, independence, incorruptibility and highest competency. The Auditor-General can, surely, get together at least a dozen senior men utilising, if necessary, some of the officers who retired recently but are still fit for active work) and allocate them to those centres which are known to provide the largest scope for tax-evasion. These officers must, in double-quick time, appoint the required number of men as agents and special agents; and they should be able to do so, as a large number of men versed in accounts must figure among the personnel shortly to be demobilised. The staff working in Military Accounts, Factory Accounts, etc., must be given suitable inducements to join the Tax-detection department.

It is not by the increase in the number of Income-tax Officers, but by the creation of a new service manned by officers and assistants trained in accounting and investigational work, that worth-while results both with regard to disgorging by past tax-dodgers and preventing future tax-evasion can be achieved. This will become clear from a study of the duties which are to be discharged by the T-men, agents and special agents proposed to be appointed by the U. S. Treasury.

Special agents will handle investigative duties of a general or routine nature, report facts found and, in some instances, make proper recommendations for action and will assist agents of higher grade in all types of investigations. In the higher grades, special agents will independently conduct investigations involving income and other tax frauds and will assist in obtaining facts and, if necessary, secure evidence for use in court. To qualify for these positions, applicants must have had responsible accounting or investigational experience which included assembling of pertinent data and the presentation and analysis thereof in written reports. Salaries range from \$3,163 to \$3,828 per year, including overtime.

Agents will conduct field audits of tax-payers' accounting books and other records for the purpose of determining correct income and profits tax liability. Audits conducted will include trust, corporation, partnership and individual returns and may cover such books and records as ledgers, journals, cash books, vouchers, bank account, correspondence, minutes of meetings of board of directors and stockholders, brokerage and checking accounts, trust instruments, wills, schedules of amortisation, etc., to determine tax liability. They will also hold informal conferences with tax-payers or their representatives to clarify doubtful items and will file detailed reports of finding supported by exhibits and reference to authority noted. They will perform estate and gift tax examinations and co-operate with Special Agents of the Intelligence Unit in fraud investigations, assuming complete responsibility for the audit features of the case. Salaries for agents range from \$3,163 to \$5,228 per year including overtime.

Machines for Lighter Industries:

The news that the British industrial structure is not really so bad as generally believed to be would come as an encouragement for many industries which are eagerly looking forward to imports of machinery from the United Kingdom. In an interview a spokesman of the Board of Overseas Trade has stated that Britain is now in a position to cope with overseas orders and that she has at this moment machinery and machine tools for the lighter industries. Reconversion in the U. K. seems to have emphasised the needs of the export industries in particular, because Britain should not lose time in recapturing her overseas markets if she intends to play a vital part in international commerce in the years to come. Since the signing of the Peace the flow of technicians to the British export industries has been much larger and speedier than before. Orders are of course attended to in rotation but the switch over to the export industries is being done with extra vigour. It is also reported that the British Government have left it to the businessmen to comply with overseas orders as convenient to themselves. At the same time steps are being taken to increase shipping space to allow expansion in export trade.

Though most of the Indian requirements of machinery consist of textile machinery, the scope for medium industries in India is rated vast. In view of the sudden end of the war the urgency of demobilisation is keenly felt and industrial expansion is therefore of paramount importance. Heavy machinery could not be procured at present owing to the inability of our industrialists to list their demands and the uncertainty of the price of the machinery to be purchased, but if chances offer themselves to speed up the small scale and lighter industries, they should not be slipped. In fact the key and the heavy industries take time to set up and possibly the medium industries can more easily lend themselves to regional development so badly needed now to implement the schemes under the demobilisation plans of the provinces. Many of the industries which prospered during the war years are in fact medium in type and they can now profit by the British offer. Developments in Britain suggest that very shortly, at this end in India, the Government of India also will move to relax the controls so as to help some of the small industries in procuring machinery from the United Kingdom.

General Manager.

THE INDIAN BANK, LIMITED

SEVENTY-SIXTH REPORT.

1. The Directors have the pleasure to submit an *ad interim* statement of Assets and Liabilities and of Profit and Loss Account of the Bank for the half-year ended 30th June, 1945. The Auditors' Report is also annexed.

2. Figures in the statement: The Net profit for half-year amounted to .. Rs. 8,51,626 1 9 A. P.

Brought forward from last year .. Rs. 52,524 6 9 A. P.
Total .. Rs. 9,04,150 8 6 A. P.

This sum the Directors propose to appropriate as under:—
To pay an *ad interim* dividend at the rate of 10 per cent per annum and a bonus of 2 per cent per annum (free of Income-tax) for

AUDITORS' REPORT

We have examined the above Balance Sheet and Profit and Loss Account with the Books of the Head Office and the certified Returns from the Branches and Sub-Offices, verified Cash at Madras and Securities of the Head Office and have obtained all the information and explanations we have required. We report that the above Balance Sheet and Profit and Loss Account are, in our opinion, drawn up in conformity with the law. The assets and liabilities of the Penang Branch are not included in the above Balance Sheet. Subject to the foregoing the above Balance Sheet exhibits a true and correct view of the Bank's affairs according to the best of our information and the explanations given to us and as shown by the Books of the Bank and in our opinion, Books of Account have been kept by the Bank are required by Section 130, Indian Companies Act, 1913.

Madras, 21st August, 1945.

DIRECTOR'S REPORT

the half-year ending 30th June, 1945, amounting to about .. Rs. 2,01,776 8 3 A. P.
To place to Reserve Fund raising it to Rs. 35 lakhs Rs. 1,37,500 0 0 A. P.
To carry forward to current half-year Rs. 5,64,874 0 3 A. P.
Total Rs. 9,04,150 8 6 A. P.

3. The Bank rate remained unchanged at 3 per cent in the half-year under report.

4. During the half-year a branch of the Bank at Palghat was opened.

5. As can be seen from the Balance Sheet, the Bank's business during the half-year showed satisfactory progress and the result of its working has been very good. We are glad to mention that the Bank's profit for the half-year is the highest earned by the Bank till now.

The Disposals Problem

The principles governing the disposal of the accumulated war stores in this country are vital because they can directly affect the prospects of Indian industries in several ways. But the disposal problem has to be tackled by two authorities, viz., by the owner of the stores and the Government of India who are responsible for any untoward effects of unplanned disposal. Information is now available that the U. S. Government have clarified the principles governing their attitude towards the disposal of their stores abroad. The U. S. Government propose to proceed like this. An inventory of what they consider as surplus material will be prepared. Then the first priority for purchasing the material goes to the U. S. Government agencies working in any country. Then non-profit religious and charitable organisations will be given a chance of refusal. Next in order comes the U. S. manufacturer of any surplus goods because, it is considered, that in order to avoid the contingency of the disposed goods competing against his own products, he should be given an opportunity to repurchase the stores. After these priorities come foreign governments. Even for these Governments there are rules. Their relief and rehabilitation purposes would be given first preference. Then comes the chance of the Government of the country where the surplus stores are located. After this is assigned, the priority for other purchasers is to be determined by the Surplus Property Field Commissioner.

The U. S. priority scheme regulating the disposal of their stores, it is evident, gives several countries preference over the vital industrial needs of India. The Government of India or any individual in this country is assigned only the seventh place in the U. S. schedule. The American mission headed by Mr. Walter Schleiter will arrive in India to discuss the value and volume of the American stores waiting for disposal in India. The Supply Member stated at Madras that 90 percent of the surplus war materials in India belong to the U. S. Government and assured that the Government of India would act as "an agency" and not "an agent" of the U. S. Government. It appears that the U. S. Mission will most probably ask the Government of India to dispose of all the stores accumulated in this country. Surplus stores contain valuable equipment necessary for Indian industries. We hope that the Government of India would bear in mind the requirements of national industries and resist the role of selling what the foreign countries do not want and what would only dislocate Indian economy, if disposed of in the free market under the present conditions.

Sugar Industry in Bengal:

Wartime scarcity has had a striking effect on the ambitions of the different provinces and States in regard to post-war development and the scarcity of sugar experienced in Bengal has encouraged local ambitions for a strong sugar industry. Bengal's annual consumption is 200,000 tons, while her mills produce only 11,986 tons at present. Even though full capacity is placed at 70,000 tons, scope for greater production of cane and sugar does exist and should be exploited to the full. The Bengal Sugar Mills Association puts forward a few suggestions for expansion and stabilisation of Bengal's Sugar industry. Among the short term measures advocated emphasis is laid on the fixation of minimum prices for cane, gur control and the distribution of gur within the factory zones. They recommend a rate of Re. 1.2-0

per maund ex-factory, Re. 1/- if delivered at the rail head and 14 annas if delivered at ghat by boat. Crushing of cane before December, it is submitted, should be prohibited because premature crushing reduces the yield. If the Association's short-term schemes are to be supported, the present price of sugar should be raised. The cost of production of sugar in Bengal, according to the Association's calculation, is such that the difference between the cost of production of sugar in this province and that in other provinces must be met either by a special levy on sugar consumption in Bengal, or by a contribution from the Central Excise, (!) or from the Provincial exchequer. Among the long term measures suggested are the establishment of a research station to find out the number of varieties possible in Bengal and close co-operation between the factories and the farmer on the principle of co-operative farming. As sugar prices are intimately related to gur prices and those of other major crops, some effective regulation of the sugar cane crop in the province cannot be avoided if adequate supplies are to be guaranteed for the mills. The movement of cane depends very much on road development and in this province any comprehensive scheme for boat building and water transport will shower direct blessings on the growing sugar mills.

While the suggestions of the Association are welcome as earnest attempts at increasing the local production of sugar the uncertainty of the price levels and other forces governing trade, transport and development in other provinces in the years to come suggest that the scheme put forward by the Association, particularly in the matter of minimum price for cane, may have to be reconsidered when the period of transition comes to an end.

Future of Indian Roads:

Though our roads contributed in no small degree to the successful conclusion of the war, yet had we roads comparable with those in America and Germany the war effort would have been assisted beyond computation. The disasters in Malaya, Burma and Libya were among other causes, due to the absence of means to concentrate the available men and material at the right moment at the right place. China would not have been isolated if road and rail links between India and Burma had been forged as a precaution against interruption of sea communications.

We are at the threshold of a new era. The peace is yet to be won. It can be won by post war reconstruction involving the gigantic task of building up India's social services, agriculture and industries. Equally important is the task of rehabilitating the men from the fighting forces and the change over from war economy to peace time pursuits.

The role that roads have to play in this work of reconstruction is important indeed. The country can no more be reconstructed successfully on the basis of present transport facilities than a tall building could be constructed without means of access from the ground floor to every room in the house. A country may have a good system of railways, a net-work of modern air communications, efficient shipping facilities and good canals and rivers, but unless roads connect these with the heart of the country only the surface of rural development will be scratched. A good system of roads is absolutely essential for India's development and this must include not only fine broad National Highways and first class Inter Provincial main roads, but an adequate system of rural roads and feeder roads.

It is said that there is not sufficient money to make the roads that are required but there is most certainly the potential manpower to do all that is required. It is satisfactory to read of the plans made by Government and other authorities amongst these the Bombay Plan has created world wide interest. The Government contemplates an addition of 66% to India's road mileage in the next 15 years or so. The work of translating paper plans into actuality is not easy. To achieve this and safeguard road interests the very best brains should be brought together in a Road Board on the model of the Railway Board.

The common objection to a Board is that the Provinces do not like interference from the Centre. But a powerful and independent Road Board should be able to sort out the present difficulties between the Centre and the Provinces.

Modern road making is a matter of very rapid growth and deserves the most careful study by the engineers' and the economic forefront must well be kept in mind. A factor which is very important is that the authorities, in choosing contractors for road work should as Mr. Kynnersley pointed out at the Annual meeting of the Indian Roads Development Association, select men with training, experience, financial resources, and mechanical equipment to guarantee that work is to be done according to specifications.

Indo-U. S. Trade Prospects:

The United Press of America reports that the U. S. officials revealed figures to show that if a trade treaty between India and the United States is negotiated tariff concessions would be given to Indian products to increase their scope in the American market. The actual concession that may be expected is not indicated but it is made clear that, though the United States Congress has empowered the Executive to lower tariff duties to the extent of 50 per cent such a big cut is considered impossible at present. Though some of the most important items of India's exports enter the U. S. market duty-free 15 items are enumerated by the U. S. officials as capable of further favours in case a trade treaty is concluded between the two countries. They include jute, mica, shellac, hides and skins, tea, crude rubber, raw cotton, plant seeds, castor beans, burlap, wool and manganese ore.

A trade agreement with the United States would be welcome if only because India requires machinery from America and should also be interested in maintaining the huge wartime expansion in Indo-U. S. trade but it should be clearly understood that most of India's exports are either monopolies in the international markets or vital raw materials as much needed by the purchaser as their disposal is desired by the seller. If the Government of India is more responsive to the industrial ambitions of this country, mica, for instance, need not come in for foreigners' favour but actually there would be a scramble among the manufacturing nations to get this vital mineral from this country. Concessions are real, and would be appreciated as such, only if they are given in the teeth of competition. And, fortunately, most of India's exports are not of that variety. Raw cotton, no doubt, may gain much if it gets a substantial market in the U. S. It should be appreciated, further, that the question of a direct trade treaty with the U. S. is related to the question of imperial preference, an issue not yet settled to either American or Indian satisfaction. The war has increased the dependence of this

PROVINCIAL GOVERNMENT LOANS

3 Per Cent Loans 1960

Government of Madras - Rs. 300 lakhs

Government of the Punjab - „ 300 „

Government of the United Provinces „ 250 „

Issue: Price for each loan Rs. 99-8-0 per cent.

Each loan will bear interest from the 14th September, 1945.

Open from the 12th September, 1945, but will be closed without notice as soon as subscriptions approximate to the amounts of each issue and in any case not later than the 14th September, 1945.

Subscriptions will be in the form of cash/cheque.

Applications for all three loans will be received at the offices of the Reserve Bank of India, Bombay, Calcutta, Delhi and Madras from 10 a.m. Standard Time.

Applications for any particular loan will also be received at branches of the Imperial Bank of India, situated within the Province issuing that loan.

In the event of any one or more of the loans being over-subscribed, proportionate allotment will be made to the subscribers.

N.B.—Applicants tendering their applications at the offices of the Reserve Bank of India, Bombay, Calcutta, Delhi and Madras will, in the event of oversubscription, be given the option of transferring their cash refunds to any of the other loans which may not be fully subscribed, provided they complete and tender along with their loan applications, the SPECIAL OPTION FORM, copies of which are obtainable on application from the above mentioned offices of the Reserve Bank of India.

Copies of the Notifications and Application Forms may be obtained at any Receiving Office along with a copy of the Press Communique giving the financial position of the Provincial Government(s).

country on U. S. in several respects and hence she will have to increase the exports of plant and machinery are to be imported without difficulty and in adequate quantities. But if the question of imperial preference is settled in the negotiations between the U. K. and U. S. following the cessation of the Lend-Lease, then the position would be clearer to outline the broad lines along which negotiations with America can profitably proceed. There is no doubt that Indian businessmen welcome any arrangement for increasing the value and volume of trade with the United States but there should be no mistake about the nature of concessions given to India's exports.

Mr. Snyder and U. S. Reconversion:

The goal of the peacetime production of the United States has been fixed as 'maximum possible production' by Mr. Snyder, Director of the Office of War Mobilisation and Reconversion. In his first report he has outlined the aims of the reconversion policy though no promise of achievement at a particular time is indicated. The Director plans in terms of a target of \$200 billion worth of peacetime production at 1944 prices, or \$1,700 million worth at 1941 prices. According to the London 'Economist' the six major aspects of the U. S. reconversion programme as emphasised by Mr. Snyder are the following.

(1) Military contracts not required for developmental, experimental or maintenance purposes will be cancelled immediately. The procurement of weapons has already been curtailed from \$2,400 million a month to \$435 million. Of this 435 million will be for food and will be released for civilian consumption as soon as the tempo of demobilisation allows. The Navy has already cancelled ship-building contracts totalling 1,500 million and in the near future another 9,000 million worth of contracts are to be withdrawn. It has been made clear that no munitions contract can be kept going merely to give employment to labour. (2) The present demobilisation rate of 170,000 a month will be geared up to 500,000 a month within a short time. Within one year about 5 million men be demobilised and the Navy is expected to release 1,500,000 to 2,000,000 men in the course of one year or sixteen months. (3) It is stated that temporary unemployment would be there. War labour force, it is estimated, included about 7 million men who would not have been employed but for the war and Mr. Snyder frankly admits that there will be about 8 million persons temporarily unemployed by the next spring. All manpower controls will be removed and arrangements will be made to resettle them as soon as possible. (4) As regards price and wage controls, it is stated that rent, wage and price stabilisation will be continued as long as the threat of inflation exists. Relaxations will, of course, be made to reduce hardship and aid production. (5) Production and distribution Controls would remain only in so

far as they aid in easing bottlenecks, preventing inventory hoarding and assuring stability of prices. (6) Legislative programme covers increased unemployment compensation benefits, increase in the minimum wages, a new tax program to stimulate production, appropriations for the planning and execution of public works and adequate appropriations for the United States Employment Service.

The official statement of the reconversion policy is not directly linked to the question of full employment but it fixes the tempo of American reconversion as desired by President Truman in the Executive Order of the 18th August.

National Insurance:

As one of the well-established and older insurance companies the National Insurance Company has naturally been able to take advantage of any improvement in the conditions for concluding new business. As a matter of fact, in recent years the problem of handling the increase in the volume of new business has been so difficult that the management have been obliged to be selective in their policies and have not been anxious to report a sensational rise in the amount of new business written. As the Chairman very appropriately remarked at the annual general meeting of the shareholders held in July, the maintenance of business in the books and the prevention of lapses is entirely vital to the company's economy. A life insurance takes "time to digest its new business and can suffer from over-eating."

In 1943 business expanded by over 100 per cent and again in 1944 by over 65 per cent. The increase in the amount of business is still in evidence and the higher rates of premium which came into force since the beginning of 1944, do not seem to have any deterring influence. During 1944, 22,342 new policies in Life Insurance and Capital Obligation Fund were received for sums aggregating to Rs. 5.55 crores and for annuities of Rs. 1,405 per annum. Of this number, 18,012 proposals were accepted and resulted in new policies including three annuities of Rs. 1,311 per annum. The total sum assured is Rs. 4.25 crores including three annuities of Rs. 1,311 per annum. The total sum assured is Rs. 4.75 crores including the sums re-assured of which the sum assured under Capital Obligation Fund is Rs. 1,800. The net annual premium income attached to the new business for the year after deducting the sums re-assured is slightly over Rs. 24 lakhs. The total interest income on the company's investment was Rs. 14.15 lakhs. The renewal expense ratio for the year was 11.67 per cent after allowing 7½ per cent on single premium in consideration for annuities granted and 90 per cent of the first year's premium.

The mortality experience of the company was again satisfactory, claims on account of death being Rs. 13,95,806 and on account of maturities Rs. 22,31,180. The Life Insurance Fund amounted to Rs. 4.5 crores and showed an increase of Rs. 30.35 lakhs over the previous year. The Capital Obligation Fund stood at Rs. 8.41 lakhs.

The position of the balance-sheet is very sound, investments of the company showing a substantial appreciation in market value over book value. The lower interest income on investment is perhaps due to the larger holdings in Government of India securities. The figure at the end of 1944 was considerably higher at Rs. 2.17 crores against Rs. 1.5 crores at the end of 1943. Provincial Government Securities were lower at Rs. 37.79 lakhs

against Rs. 47.64 lakhs. There is no change in the holdings of Municipal Debentures but investments in ordinary and preference shares are appreciably higher. At the end of 1944 the market value of investments showed an excess over book value by nearly 25 lakhs.

(Continued on page 422)

So far as India is concerned, the first as well as the third is of special interest. For the past few days, there have been recurrent reports and speculations in Indian market circles about the depreciation of sterling in terms of the dollar. While it cannot be gainsaid that the dollar is the strongest currency in the world and sterling is, to put it mildly, far from strong, there can be no question of any depreciation in sterling until and unless America finally decides to withhold such credit arrangements as are necessary to help Britain to tide over the next few years. With reference to such financial assistance there has at no time been any suggestion that America is reluctant or unwilling. It may be safe to conclude that the result of Lord Keynes' talks in Washington will be the achievement of financial aid given by America in adequate amount and for timely use. From this point of view there is no case for depreciation of sterling.

On the other hand, America may go so far as to insist that there should be no devaluation of sterling. Neither American Treasury authorities nor the business interests look with favour upon any depreciation in sterling. Among the purposes which the U.S.A. will seek to carry through during the present talks, the most important ones are connected with the sterling bloc and Imperial preference. On both these matters the United States may take an aggressive attitude and insist upon winding up the sterling bloc as we have known it for the past few years. America has come to realise that the blocked sterling balances are no longer a bilateral issue between Britain on the one hand and her creditors on the other. If America is to play her full part in international trade she can do so only when a solution for the blocked sterling balances are found in a way which proves favourable to the creditors. There is thus a ray of hope that, while at Brettonwoods the United States representatives were indifferent to the bleatings of the Indian delegates, the United States treasury officials will now show a lively interest in the forthcoming talks with Lord Keynes.

The speculation about the future of the sterling-dollar rate has inspired and induced speculation about the future of the rupee-sterling rate. Strange to say, the speculators are now prone to take the view that the rupee may be appreciated in terms of sterling. It is true that, in relation to foreign debt position, the rupee is now in a much stronger position to-day than it was before the war. But we must remember that the reconstruction plans due to be executed in the next few years will require such colossal imports, that for a number of years, India is bound to have adverse balances of trade. With adverse trade balances in near and continuous prospect, it is unthinkable that the rupee will be appreciated in terms of sterling. Present conditions are a flux; prospects in the near and distant future depend upon a number of factors with regard to many of which the control is in the hands of foreign countries. Such unsettlement as the present and such uncertainty as the future do not provide a setting for the correct assessment of a proper exchange rate. It will be sheer foolhardiness as well as folly to interfere with the external value of the rupee in present circumstances.

Clive Street Gossip

Round the future of Lease-Lend, there is a whole bunch of knotty problems which, if Anglo-British statesmanship is of the right order, it will tackle together without trying to effect an arbitrary isolation. Neither side to the negotiations in America will at first, readily agree that the problems are so inter-related. To the U.S.A. lease-lend was a pure and simple war measure. When the full might of the Nazis and the real plight of the British were realised in the States, Congress agreed to make an appropriation in astronomical figures and to vest the discretion in regard to the choice of the beneficiaries entirely in the President. But the Legislature was not without misgivings about the manner of expenditure of this amount. Year after year the Act had to be renewed. And President Truman himself gave the assurance that, as soon as the last of the Axis powers surrendered, the operation of the Lend-Lease Act would be stopped. If other nations are seriously affected by such action a new problem may be deemed to have arisen which will, of course, be considered on its merits. But continuance of Lend-Lease as such is out of the question. The British view, too, is no less narrow. It is different from the American in the insistence that so far as inter-allied obligations of an economic kind are concerned they cannot be said to have ended either with the acceptance of the Potsdam declaration or with the ceremony on board the "Missouri." Active hostilities on the field of battle may have ceased. But their effects on the finances and the economic life of the allied nations continue till long after the war; and though all the economic consequences of the war on each country may not be said to be the legitimate concern of the Allies, there is a common obligation to help those who have been hit particularly hard on to their feet. Help during the period of recuperation is as binding an obligation as help during the war.

But neither view will seem to be quite tenable. And what is more, while the American view lends itself to great clarity in practical application, there is no similar clear-out character about the British view. Granted that to leave Britain's national economy in its present mangled state without any help in the arduous tasks of recovery would be as indefensible as to leave the wounded soldiers of an ally on the battlefield on the receipt of the cease fire order, how long or to what extent is help in recovery a legitimate obligation of the ally who happens to be better placed? British politicians will probably have little hesitation in saying that till she has completed the repair of the ravages of war on her economic position this obligation must be deemed to continue. But that is hardly the kind of definite answer that one expects or that alone can be useful in this context. Where the ravages of war are limited to the destruction of concrete forms of wealth such as houses or plant and machinery, it might be possible to make fairly accurate estimates of the outlay needed, the extent of domestic resources that will be available and the scale of assistance that may be expected from abroad.

But the structure of British economy is not such that the damage that it has sustained on account of the war can be so computed. It is true that the damage to housing in Britain, both during the Blitz of 1941 and during the time of the Rocket Bombs was extremely heavy. But this is perhaps the least part of the damage sustained. For the war has twisted and distorted the national economy out of all recognition and beyond all repair. Normally Britain is a large scale importer of food stuffs and raw materials which she pays off through her exports and her income from foreign investments. Now her foreign investments are a fraction of their pre-war figure. Her export trade will depend firstly on the perfecting of her equipment in machinery, secondly on her ability to get the raw materials that she requires and lastly, on the conditions in her principal export markets of which her own competitive capacity is not the least important. As for foodstuffs it should be remembered that under pressure of war conditions, when the foreign sources of supply were inaccessible or were unreliable owing to shipping shortage and the submarine menace, Britain turned to the indigenous production of foodstuffs. She was so unexpectedly successful that Britain produced nearly 60 per cent of her total requirements and the present Labour Cabinet stated categorically in the King's speech that, the policy of developing the domestic production of foodstuffs was not to be abandoned. By producing the greater part of her needs of foodstuffs, Britain disables foreign countries to that extent for buying her own exports. The loss of foreign investments deprives her of the means of paying for whatever import surplus she may have to sustain in the altered conditions. Above all, Britain's competitive capacity and the willingness of her foreign markets to continue to import their requirements are equally doubtful factors in the post-war period.

In this position, who can attempt to define the extent of help which America as a loyal ally is bound to extend to Britain after the cessation of the hostilities? Britain, like businessmen who find themselves in a difficult predicament, is ready to assume that if the present crisis is tided over, she will be able to re-establish herself in her old position in world trade.

and to refuse to lend such help in the crisis is reprehensible from every point of view. If the crucial factors in Britain's economic life in the pre-war period are her large scale investments and her competitive capacity and if both these factors have been considerably weakened by the war, then what kind or magnitude of American help can restore the position in these two essential respects? Competitive capacity can perhaps be deemed capable of restoration. But the thing can hardly be said of foreign investment, when particularly large scale foreign debts have taken the place of such investment. Considering the position of British national economy both by itself and in its relation to the rest of world economy, it would seem that the fundamental reconstruction of Britain's economic life, which was somehow shirked or dodged during the inter-war period by means of Imperial preference in the fiscal sphere and by the sterling area in the sphere of currency and exchange, has at last become inescapable. In such fundamental reconstruction the limits of requisite American help may perhaps be defined.

But if the obligation to effect such a reconstruction should, for any reason, be repudiated and Britain should try to bring back an age that is dead and gone, she can only postpone the evil day of a collapse and do infinite harm to herself, to America and the rest of the world in the process.

It will be seen that the fundamental reconstruction that I have spoken of in the last paragraph involves, if it is not to result in unmerited hardships for Britain, a reconsideration of the whole question of geographical redistribution of productive activity. Now, it is important to note in this context that just as Britain shirked this problem during the inter-war period, the advanced industrial nations have likewise shied at it. When Japan entered the world's markets as far and out the cheapest producer of manufactured articles, she was condemned as guilty of dumping and what time they closed their domestic markets to the Japanese goods, they shouted themselves the cause of freedom of trade. Strictly speaking, the time is come when the whole world should be regarded as one economic unit and distribution of production effected according to a working compromise between the rival principles of economic self-sufficiency and international division of labour. But mankind is still probably a long way from that idea.

The U.S.A., at any rate, views the whole problem according to the requirements of a number of different standpoints. She has in the first place a vague sense of loyalty to the ideals of international free trade, which, to some extent, she values in itself and to some extent in a naive, untested belief that it is in America's interest. But there is indeed no such thing as an America's interest except a fair degree of freedom from disturbing booms and slumps. To the economy of the States, neither foreign sources of supply nor markets for export are of any vital importance. It is not as if America cannot maintain her standard of living without a large export trade, though it is true that with the present economic organisation, exports have a bearing on full employment. But American policy is, nevertheless, inspired by the desire for avenues for investment, outlets for export surplus and all the elaborate devices by which a country like Britain maintained her exploitation of the weaker nations and peoples of the world.

The result is that the U.S.A. will seek to obtain support for this policy as a quid pro quo for the continuance of lease-lend in a modified form. It has been indicated already in various press reports that the American Government will insist on the abolition of Imperial preference by Britain and the provision of free fields for American investment. So far as one can see, it would be almost impossible for Britain to secure the resumption of supplies except by substantial concessions on the points mentioned above. If it is remembered that these two points are vital to any attempt to regain her pre-war position, the net gain of any deal that may be put through in America would be inconsiderable.

But Britain seems determined that she will not allow her return to the pre-war position to be prejudiced by concessions to American demands on the question of lend-lease. Mr. Amery has declared in a

recent contribution to the press that any arrangement with the U.S.A. must be only of the temporary kind and that Britain should not surrender her right to defend her home markets.

It is more than doubtful if the U.S.A. will agree to make available to Britain the help she has so far had, except on terms which will further American plans regarding the regulation of international finance and international trade during the post-war period. This is unsettling enough. But in Britain, there is a new mood of scepticism about the value of the Brettonwoods agreement. In any case, if America should be insistent on the abandonment of imperial preference and on conditions of greater freedom for international trade and investment, then the scope of the discussions will be bound to be wholly unrestricted. An attempt will have to be made to foresee, in so far as may be possible, the volume, nature and direction of foreign trade of every important country in the world at every stage of the proposed changes, the size of the balance of payments and the manner in which it will be settled. Then, India's sterling balances and Britain's invisible exports, American foreign investments and the return thereon, the impact on world economy of new industries in undeveloped countries—all these will have to be examined. If conditions of national development and international helpfulness should be better than they have been in the past, if the right of backward nations to develop themselves should be deemed to be more sacred than the claim of older nations to hold to their illicit gains of the past, then the resulting picture of world economy and international trade may not be to the liking of some at least of the older industrial nations. It would be wishful thinking on the part of countries like India to believe that the future will develop on the lines indicated in the foregoing. But it would be hardly anything different for the older industrial nations to suppose that they can hold up natural trends for ever and re-establish an old order, which never was an order and which to-day is indubitably dying.

Some adjustment of the forces making for a new order and the factors that are eager to perpetuate the old is inevitable, particularly as a nation like the U.S.A. which is neither an undeveloped country as India is, nor an old industrial nation like Britain, has its interest in strengthening the forces making for change. That is why amidst all the confusion of the present there are also reports of America intending to use her influence in favour of a settlement of Britain's foreign indebtedness, inclusive of India's sterling balances. Once America begins to think about this problem, it is inevitable that she should explore the possibilities of scaling down the debts owed by Britain to countries like India. It is too much to expect the U.S.A. to appreciate fully and accurately all the privations, sufferings and sacrifices on our part which have gone to the building up of our sterling balances. She is more likely to think in the light of her own sacrifices and suggest the writing off of a part of these debts.

Such a proposition, while it is not worth a moment's consideration in the

Questions & Answers...

Destination?

India Coffee House, Albert Hall, College Square.

Reason?

In its new address, the India Coffee House is better, brighter and bigger than ever.

Surely, not so central as in Central Avenue?

You wouldn't say so if you visited the new place. It is, so to say, in the heart of Calcutta. Centre of whatever is lively and vivacious. Easily accessible.

But, I suppose, there is not that variety of visitors?

People will travel far to get the admittedly and inevitably good coffee that you can, every time and at all times, get at the India Coffee House. The old patrons are all still there—and will ever be there—and many, many new patrons. Remember, it is a bigger, better, brighter place.

East and West Insurance

The assumption of the office of Chairmanship of the East and West Insurance by Dr. Rm. Allagappa Chettiar augurs well for the company as well as the insurance world. While the activities of interested men to gain control of insurance companies by the purchase of large blocks of shares has come in for considerable criticism and has been the subject of investigation by the Cowasji Jehangir Committee the assumption of the chairmanship of two insurance companies recently by Dr. Allagappa Chettiar is perhaps a good feature out of the evil. If the sentiments expressed by Dr. Chettiar are translated into deeds the insurance companies under his charge will have every reason to be grateful.

Presiding over the Annual General Meeting of the shareholders of the East and West Insurance Company the Chairman had very interesting remarks to make regarding the progress in the recent years. While he was critical of the increase of the expense ratio in the life department he expressed satisfaction of the progress achieved and the larger increase in the amount of new business written. The working of the Fire and Marine Departments were not quite satisfactory but a better account is promised. Most important is the reference in regard to the elimination of the unsatisfactory features in the balance-sheet and the promise to liquidate unprofitable investments and utilise funds in a more remunerative manner.

Indian Globe Insurance

The results of working for the year 1944 of the Indian Globe Insurance company are satisfactory. The total premium portfolio has increased to Rs. 31 lakhs and funds including special and other reserves stand at a figure of 30.37 lakhs. With a capital of Rs. 7 lakhs the company is in a position to safeguard adequately the interest of the policyholders. The compensation in connection with the Bombay explosions amounted to the rather large sum of about Rs. 16.71 lakhs.

The Chairman's remarks regarding the provision of Re-insurance facilities deserve attention as at the present moment a considerable portion of the premium income is lost to foreign companies. If as a result of the co-operation between various Indian companies a Central Re-insurance Board could be formed it will be possible for many companies to get a

greater hold on general insurance business which is still predominated by foreign companies.

A correction

In the Prospectus advertisement of the Premnath Transport Company limited appearing on page 338 of "Indian Finance" dated August 25, 1945 the name of the Solicitors was wrongly shown as Messrs. Dutt and Sons. It should read Messrs. Dutt and Sen.

Comilla Union Bank

The leading Bengali Bank, the Comilla Union Bank Ltd., has gained both in strength and popularity in recent years. The latest balance-sheet reveals an increase in the total of working capital to nearly Rs. 11½ crores. The increase in total deposits from Rs. 6.79 crores in 1943 to Rs. 9.72 crores at the end of 1944 provides ample testimony to the growing popularity of the bank while the great demand for the shares is indicative of the confidence that the public have of the management. On account of great demand for the bank shares and also in order to be in keeping with the rapid increase in the volume of deposits an issue of 'B' class shares of Rs. 25 each for Rs. 25 lakhs was made in November last at a premium and was oversubscribed within a very short time. A further issue was made in March this year at the same premium. The second lot of shares for Rs. 25 lakhs was also oversubscribed within a week from the date of offer to the public. The paid-up capital, including calls paid in advance, shows an increase of Rs. 21 lakhs, to Rs. 52.91 lakhs in one year. The entire issue of Rs. 1 crore have now been fully subscribed. The authorised capital was increased from Rs. 1 crore to Rs. 2 crores.

The entire premium income on the sale of shares after deducting expenses relating to the issue has been carried to the General Reserve and Reserve for contingencies. Total reserves were thus Rs. 25.14 lakhs against Rs. 13.07 lakhs.

It has been possible to find satisfactory use for the increased working capital total advances showing a substantial increase to Rs. 4.4 crores from Rs. 2.58 crores. Investments also were higher by Rs. 80 lakhs at Rs. 3.55 crores, the increase being mostly in Government securities. Holdings in Government securities, out of the total investments of Rs. 3.56 crores, were Rs. 3.11 crores. The market value of these investments was in excess

of the book value by nearly Rs. 2 lakhs. Cash balances were Rs. 2.89 crores against Rs. 2.16 crores. Bill business also has increased the total of bills purchased and discounted being Rs. 33.03 lakhs against Rs. 22.23 lakhs in 1943-44.

The working of the year after writing off doubtful debts, discloses a net profit of Rs. 9.41 lakhs. After transferring Rs. 1.2 lakhs to General Reserve and Reserve for Contingencies and providing Rs. 4.8 lakhs for taxation (Rs. 50,000), the dividend has been maintained at 10 per cent subject to tax on the increased capital.

During the year a branch office was opened at Darbhanga and Bombay. The Bombay branch was opened just before the close of the accounting period. Both these offices are doing well and promise further good progress in the near future.

Indian Bank

The leading bank in the South, the Indian Bank has grown very much in stature in recent years. With increasing public confidence in the affairs of the Bank deposits have increased considerably. The first half of this year's working has yielded very satisfactory results and the net profits constitute a record in the history of the Bank. Effective utilisation of available funds has been mainly responsible for the improved earnings in spite of higher working expenses.

Total deposits at the end of June 1945 were Rs. 12.88 crores against Rs. 10.52 crores at the end of 1944 and Rs. 9.50 crores on June 30, 1944. The rate of increase has, therefore, been more pronounced and such as to justify the decision of the directors to raise additional capital and make further calls in respect of the unpaid portion on the existing shares. Advances were very much higher at Rs. 6.94 crores against Rs. 5.26 crores while Cash balances show only a moderate increase to Rs. 2.50 crores from Rs. 2.33 crores. Investments have declined to Rs. 4.84 crores from Rs. 5.75 crores. Unlike earlier occasions the management has been less anxious to take advances against investments and lend money on a profitable basis. The reduction in the amount under the head "due to bankers secured by part of investments per contra" to Rs. 45 lakhs from Rs. 1.69 crores is significant and perhaps explains the decline in the investment portfolio.

The net profit for the half-year, as mentioned above, is a record for the bank.

Our Australian Letter**AUSTRALIA IN TRANSITION.**

**Intelligent Use of Controls to Avoid
Unemployment and Overcome Civilian
Shortages in Immediate Post-War Period.**

Canberra, Aug. 21.

Australian finance and industry have been entirely reorientated as a result of the sudden ending of the Pacific war, to which Australia's economy was heavily committed.

Within a few days of the Japanese surrender, the Federal Government moved swiftly. It announced considerable relaxations of controls imposed for war purposes, and also its policy on the termination of war contracts.

The Government did not, however, suddenly just "lift the lid". Its moves appear to have been calculated to avoid mass unemployment and heavy compensation as far as possible, and to stimulate the building industry.

Large structural projects in hand for the Royal Navy and the Australian Services have been stopped, and large numbers of men will be released from the Allied Works Council, the chief Australian war construction authority.

At the same time manpower controls have been so altered that it is evident that the Government considers the construction work released should be used to overcome the housing shortage—which has been widely stated to be Australia's No. 1 domestic problem—and other pressing shortages such as clothing, food transport and health services.

What the Government did immediately was to list industries in which employers were forthwith permitted to seek and engage labour without first having to get Government permission.

It has also been announced that very soon another list of industries will be informed that they are no longer "protected" under the manpower regulations. In industries on the second list employees will then be free to leave, and employers will be free to fire but not to hire. Some of the industries on this list such as munitions and aircraft manufacture, will inevitably experience a mass exodus of labour. It appears to be the Government's intention that the flow of labour should as far as possible be to the industries in its first list that are now free of the need to get permission to hire.

All powers of direction to jobs held over employees by the Government during the war have been revoked entirely. The Government, however, apparently hopes that it can influence labour to take up the work that is nationally most important during the difficult transition to a peacetime economy, rather than have luxury trade immediately bidding for employees while returning Servicemen are without homes, and while clothing and food are short.

Tapering Off War Work.

The Federal Cabinet, at its sittings in Pacific Peace Week, decided to follow a tapering-off policy of all war production and war contracts in a way designed to prevent mass unemployment and avoid heavy compensation payments. Prime Minister Chifley said that this policy, in conjunction with the use of other controls, and the spreading out of the period of demobilisation, would prevent any unemployment crisis and would ensure smooth expansion of civil production.

The cost of continuing war production would be offset by the saving of heavy compensation for which the Commonwealth would become liable if there were sudden cancellation of contracts. Contracts would continue for the minimum production, and minimum time necessary to permit smooth reconversion and smooth transfer of labour.

Bans on starting new industries without official permission have been lifted. Establishment of new businesses is now a matter of individual decision.

Control of capital issues has been greatly eased, but in such a way that new capital will go to work to overcome shortages of essential civilian requirements.

Banking Legislation Operates.

As part of its post-war economic policy the Federal Government on August 21 brought into operation its recent banking legislation, the Banking Act and the Commonwealth Bank Act.

A number of provisions involving staff arrangements will not operate immediately.

The legislation, among other things, gives the Commonwealth Bank and the Federal Government greater powers over monetary and banking policy. It is the expressed intention of the Government that this policy should be directed towards the economic welfare of the nation, and should mesh with other policies to produce full employment and a rising standard of living.

Stock Exchange Reaction.

Shares in Eastern tin mining companies have been in active demand at higher prices on Australian Stock Exchanges as a result of the end of hostilities in the Pacific. There is a belief among some investors that properties and dredges may be found in fair condition.

There is not likely to be any immediate lifting of controls over Stock Exchange trading. Although the requirement that shares must be held for a specified period after purchase before re-sale may be removed soon, relaxation of the system of ceiling prices on ordinary shares does not appear likely for some time.

Resume of Commodity Markets

There is nothing of importance in the commodity markets in the past week. After the hectic rise in prices a few days back both gold and silver are fluctuating in narrow limits and there seems to be a tendency to await further developments. In the raw cotton market prices have been quoted at last week's levels and further decline has been averted by the intervention of the Government and the buying of Sind N. T. and other qualities. The raw jute market has been slightly steadier as coal arrivals proved satisfactory and there are reports that more orders might be received. The jute manufactures market was firm in spite of reports regarding an increase in production. Mills are in large arrears of deliveries, and are not prepared to discount rates.

The continued strength of the jute manufactures market even on reports of an increase in coal supplies and the possibility of an early release of the requisitioned mills, is perhaps a sign that jute might not meet the same fate as raw cotton and that even in the busy season the Jute Purchasing Panel may not be obliged to extend support to the market. Nothing has happened to change the outlook for raw jute but there is a feeling that with the prospect of an increased production of jute manufactures being freely absorbed at maximum rates mills might not grudge to pay the present prices for raw jute, and as the season goes by even an increase in prices will be acceded. Of course, on the assumption that present conditions in the jute manufactures market continue to be in evidence for some months. It is reported that mills are well sold up to March 1946 and that on expectations of further orders there will be need for buying large quantities. If the godown position improves mills might possibly take advantage of the present conditions to purchase adequate quantities against their sales of fabrics. There are reports that further orders for sacking will be received in connection with the requirements of Indo-China and other Far Eastern countries.

There has been interrupted trading in the Bombay raw cotton market in the past few days as markets were closed earlier in the period on account of "Coconut Day" and also to observe Subhas Bose day. In the last two days there has been no trading on account of the Parsi New Year. During the short period markets remained open, quietly steady conditions were noticeable with no important fluctuations in prices. The Central Government, in accordance with the assurances given to the cotton growers, entered the market when prices were at low levels. Initial purchases were made in Sind N. T. and other descriptions also for old crop. The official buying prevented a further decline in prices. Jharilla September was at one time quoted at Rs. 347, that is Rs. 3 below the Floor.

The further drop in prices for Jharilla September did not have any adverse effect on forward positions and the premium for March actually continued to improve. The spread between old and new crop was thus Rs. 60. It is stated that the recent drop in prices has been rather exaggerated, especially for old crop, and that if the expectations of better prices for new crop are justified, there is no reason why the discount for old crop should be as much as Rs. 50 to 60. The correction of the technical position and the larger buying by mills will itself result in better prices

for cotton. The tone is quiet even for forward positions towards close.

The Central Government has promulgated the Foreign Cotton Control Order, 1945 which consolidates and re-enacts the provisions of the order of the same name issued in 1944, says a Press note issued by the Textile Commissioner, Government of India.

This new order requires every person carrying on any undertaking involving the import, purchase, sale or consumption of any foreign cotton, to submit to the Textile Commissioner, Bombay, by the 15th of every month a return in a specified form and prohibits the sale or disposal, or the purchase or acquisition of any foreign cotton mentioned in the schedule to the said order except in accordance with a licence or directions given by the Textile Commissioner.

The order empowers the Textile Commissioner to require any person to sell to any other persons specified quantities of foreign cotton of the description mentioned in the schedule. It also empowers him to direct any person who has communicated his requirements to the Deputy Chief Controller of imports, Bombay, to purchase from any other person any quantities of foreign cotton of the description mentioned in the schedule not exceeding the requirements communicated.

The Foreign Cotton Control order of 1944 is repealed, though anything done under it is to be deemed to have been done under the corresponding provision of the new order.

There is nothing of importance in the bullion market in the past week. After the sharp rise in prices sometime back bears are inclined to await further developments. The outcome of lend-lease negotiations between the U. S. and Britain will have considerable bearing on the future course of prices. Profit-taking and some selling resulted in a setback for gold ready to Rs. 72/4 and silver to Rs. 123/4. Bears have a feeling that the present method of weekly settlement operates in favour of bulls especially as the major portion of stocks is controlled by them. The Bullion Exchange Board as well as the Merchants decided on Saturday last to delete the clause regarding fixed maximum penalty for sellers who are unable to give delivery of the metals at the delivery period. Henceforth purchasers have the right to buy undelivered quantities of metals in the open market at the risk of the sellers. This does not improve the position in any way as in the weekly settlement sellers unable to give delivery will have either to square up transactions by purchasing in the market or agree to pay the penalty demanded by bulls. There are no definite reports regarding the possibility of resumption of official sales by the Reserve Bank above Rs. 75. Unless a satisfactory settlement between the United States and Britain on the lend-lease question is reached and there is a flood of selling orders from the mofussil, it may not be possible for bears to push down appreciably for some time.

Jute and Jute Manufactures

Special to "Indian Finance"

(From Our Correspondent)

Calcutta, September 6.

The Final Review of the Jute Crop for the season 1944-45 was issued on the first day of this month by the Department of Agriculture, Bengal. The finally revised area sown with jute in the Provinces of Bengal, Bihar, Orissa, Assam and the states of Cooch Behar and Tripura was 2,103,955 acres, representing an increase of 44,400 acres over the final Forecast of 1944-45. It is now estimated that the crop produced 62,03,205 bales of jute; an increase of 7,10,000 bales as compared with the Final Forecast figures of 1944-45.

The increase of 44,000 acres is entirely attributed to Assam there being no differences recorded between the Revised and Final Forecasts of the acreage under jute in the other Provinces and in the States. As regards the yield in bales produced the Final Forecast estimated the yield in Bengal at 48,94,940 bales whereas the Revised figure is given as 55,31,450 bales; an addition of 636,510 bales. According to the Revised yield for Assam, this is now placed at 3,24,000 bales; an addition of 73,700 bales as compared with the Final Forecast. Taking into account a small decrease of 210 bales recorded against Cooch Behar, we have, as stated above, a net increase of 7,10,000 bales as between the Final Forecast and Final Review of 1944-45. Bengal with 16,94,355 acres under jute in 1944-45, produced an estimated total yield of 55,31,450 bales and the average yield per acre was 3.26 bales. Thus the outturn last season showed a very appreciable increase over that of season 1943-44. In the latter season, in Bengal, the average yield per acre was 2.82 bales derived from a crop of 60,65,435 bales over an area of 21,46,255 acres. Taking into account all the Provinces and States concerned the average yield per acre last season was 2.95 bales as against 2.65 bales in season 1943-44.

The statistical position as regards supply and Distribution is given as follows:—

Carry Over on 30th June, 1944—

	Bales.
Growers ..	4,66,339
Mofussil dealers ..	8,16,300
Balers and dealers in Calcutta ..	6,42,769
I. J. M. A. Mills ..	23,41,631
Other Mills ..	82,653
Total Carry over ..	43,49,692
Add 1944 Crop ..	62,03,205
Total supply for season 1944-45 ..	1,05,52,897
Consumption 1944-45—	
I. J. M. A. Mills ..	55,99,199
Outside Mills ..	2,15,130
Domestic Consumption ..	6,00,000
Exports ..	10,39,270
	74,53,599
Estimated carry over ..	30,99,298
Estimated carry over on 30th June, 1945:	
Growers ..	1,50,235
Mofussil dealers ..	4,75,000

Balers and Dealers in Calcutta ..	5,74,856
I. J. M. A. Mills' Stocks ..	27,11,645
Other Mills (incomplete) ..	1,14,562
Total ..	40,26,298

It has been notified by the Director of Agriculture, Bengal, that the district figures for the Final Jute Forecast of 1945 will be published in groups of some districts at 4 p.m. on the 18th, 19th, 20th and 21st September, and at 12 noon on the 22nd idem in the Western Arcade of Writers' Buildings, Calcutta.

The consolidated final printed forecast of the jute crop for the four provinces of Bengal, Bihar, Orissa and Assam and the States of Tripura and Cooch-Bihar for 1945 will be published at 12 noon at the same place on Friday, the 28th September, 1945.

The recent improvement in coal supplies to the industry was maintained last week when an average of 63 wagons were delivered daily at the Indian Jute Mills' Association dump. Up to the middle of this week the daily average has been 92 wagons. This is satisfactory as far as it goes, but stocks of coal remain very low and the precarious position created by the extremely poor supplies made to mills three or four weeks ago is to some extent still in evidence. Several steam driven mills were closed for a short-time at the beginning of the week in spite of the sustained improvement manifest over the past two and a half weeks.

The Pucca Bale market has been very dull throughout the week. The only business reported was a small lot of L. T's that sold at Rs. 85. Dealers are free sellers at minimum rates for all descriptions except special marks and Cuttings, the latter being on offer at one rupee below maximum price. The export market is idle.

Mills have taken only a meagre interest in Loose Jute offerings and prices are unchanged on the basis of Rs. 15-4 and Rs. 12-4 for supervised jat marks. Sellers are keen for business for near delivery to clear present imports and to maintain some turnover in up-country agencies where more plentiful supplies of the new crop are now becoming available. Reports that mills had sold a considerable quantity of heavy goods in the past few days fostered the hope that jute would be bought against the new contracts but so far sellers' expectations in this direction have not been fulfilled. Small business was done in supervised jat at Rs. 15-4 and Rs. 12-4 for Middles and Bottoms and in European Bottoms alone at Rs. 13. Indian Jat Tossa Middles came to business at Rs. 16 with Indian Jat Tossa Special Bottoms at Rs. 14-12.

In the Manufactured Goods markets hesitations are very steady and maximum prices are being quoted for all deliveries this year.

Stock Markets to-day and to-morrow:

TATA IRON AND STEEL 1944-45 ACCOUNTS

Irregular conditions have been noticeable in the stock markets in both Calcutta and Bombay in the past week. The uncertain tone of the bullion market and the continued weakness of the raw cotton market have had a restraining influence in the Western centre though it should be said that the publication of the very satisfactory report by the Tata Iron and Steel Company Ltd., for the year ended March, 1945 has had an encouraging effect. In Calcutta, September is usually a month of quiet trading. With the anxiety to await further developments there has been very little of outside buying and most of the business passing is on account of professional operators.

The reports in the daily press that the United States might ask for multi-lateral clearing of sterling balances and that all the creditors of Britain should be treated in the same way as the United States as also speculation regarding the sterling-rupee rate has created some confusion in the minds of operators. It is feared in certain quarters that the experiment of the last war might be repeated. With the proposals for international monetary agreements and the changed conditions in this postwar period, no major development can happen in the exchange market without full consideration of the pros and cons of the problems at issue. Any rumours, therefore, of a revision of the rupee-exchange rate can have no basis on fact. In view of the major questions at issue and the need for a proper understanding between the important powers it can be expected that there will be no surprising developments.

The quieter tone of the markets will continue to be in evidence till such time as it is possible to take a definite view. If the dividend announcement of the Indian Iron and Steel Company and Burrakur Coal prove to be satisfactory from the market point of view, there may not be any wide fluctuation in prices.

The accounts of Tata Iron and Steel Company Limited, for the year ended March, 1945 make very satisfactory reading. In spite of a reduction in output, on account of the difficulties of coal supplies and the inferior quality of coking coal, earnings for the year are higher. The fears of the market that dividends would be affected by a lower level of production and an increase in working expenses have therefore been completely set at rest. The lower level of production was offset by larger despatches from stock which, in accordance with the company's practice, was valued on a conservative basis.

Sales figures would have been even higher but for the extension of price control to sales of steel for commercial purposes and the reduction in output referred to above. The net profit, before providing for taxation and depreciation, is Rs. 7,95,71,814 against Rs. 7,60,61,407. Sales were Rs. 55 lakhs higher at Rs. 20.96 crores. The increase in the sales of the company's products was offset to a certain extent by the decrease in sales of miscellaneous goods and stores.

Provision for taxation is unchanged at Rs. 3.99 crores while the amount set aside for depreciation is slightly higher at Rs. 1.25 crores against Rs. 1.2 crores. The amount transferred to Reserve Fund is very much higher at Rs. 85 lakhs against Rs. 57 lakhs. As was anticipated in these columns a few weeks back the dividends both on ordinary and deferred shares have been maintained at Rs. 23 per share and Rs. 129-8-9 respectively. The amount carried forward is Rs. 11,00,179 against Rs. 8,57,545 brought in.

The directors point out in their report that the acute shortage of coal and the deterioration in the quality available for coking have resulted in an increase in the cost of production and that a vigorous fuel economy had to be adopted in the plant to minimise as far as possible the adverse effects of these factors on costs and output. In order to offset the increase in the cost of production, prices under the main war supply contract to Government were increased in the first quarter of 1944-45. Price control was extended to steel supplies for commercial purposes on July 1, 1944. Since then, under this arrangement, actual increase in the cost of production, including overheads, over the costs and overheads of the first period are payable by Government in respect of each half-yearly period. As the revision of prices under the main war supply contracts resulted in an increase in the average selling price, the profit on sales of goods released

from stock was satisfactory and it was possible to report an increase in earnings even with higher working expenses.

With the need for providing the entire share capital amounting to Rs. 75 lakhs of West Bokaro Limited, which was registered on March 27, 1945 as a subsidiary of the Steel Company, and part of the capital proposed by the Tata Locomotive and Engineering Company Ltd., and the postwar development programme, the need for raising additional finance in the near future is again emphasised by the directors in their report. How it is proposed to raise this additional finance is not clear. But one may expect that the Chairman would ask for the conversion of the deferred shares into ordinary shares at the annual general meeting and propose additional issue of shares on bonus terms to shareholders. In which case, it need not be pointed out that with the satisfactory yield even at the present levels, on both ordinary and deferred shares, the prospect of a new issue on bonus terms should push up prices further.

Tata Iron is one of the few companies that have derived the maximum benefit from the conditions in the war period. With a substantial increase in earnings, it has been possible to extend the company's activities. Large additions to plant have been made in the past six years. Production of new lines have also been undertaken.

A study of the balance-sheets for the year ended March, 1945 and March, 1940 reveals some interesting changes. The position of the company has improved financially to a great extent while the gross block is considerably higher.

There is no change in the amount of capital at Rs. 10.47 crores but reserves constitute the huge total of Rs. 4.9 crores at the end of March 1945 against Rs. 1.36 crores at the end of March 1940. The gross

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, Sept. 6.

With the anxiety to await the negotiations between United States and Britain for the conclusion of a fresh agreement for the supply of goods in place of lend-lease and with the rumours regarding the possibility of a change in the exchange rate, rather irregular conditions have been noticeable on the Calcutta Stock Exchange in the past week. It is generally admitted that no important developments will happen in the international situation as to have an upsetting influence on Stock Exchange values. But in view of the need for clarification of the outlook and the tendency to await the dividend announcements of important companies like Burrakur and Indian Iron, not much business has been passing and prices have been fluctuating in narrow limits. At the lower levels there is resistance to selling pressure and the undertone can be said to be quietly steady.

The pledged securities section was slightly steadier with the continuance of easy money conditions and the enquiry for medium dated loans, 3½ per cent. Paper quoted Rs. 101-13-6. Among termable loans, 3 per cent. 1957 was noted at Rs. 100-7, 3 per cent. 1963-65 at Rs. 98-8 and 3 per cent. 1970-75 Rs. 97-2.

Coal shares have not lost much ground on balance the report earlier in the week that prices for selected grade coal might

be reduced led to some selling, but it was later argued that the decrease in the cost of production would more than offset the reduction in the selling price. Burrakurs came down to Rs. 43 from Rs. 44-8 at the time of last writing. They are now quoting Rs. 43-12. S. Karanpura were lower at Rs. 33-10 but have since recovered to Rs. 36-14. There has been good buying of these two scrips by prominent operators at lower levels. Bengal has been fluctuating around Rs. 775 while Bokaro and Ramgur were 1 point higher at Rs. 52-12. Central India Coalfields shed 8 annas to Rs. 13-8 but are again at Rs. 13-14. Hurriladih and New Beerbhoom were 1 point lower at Rs. 42-4 and Rs. 47-4 respectively while Talcher were neglected at Rs. 12-14. Equitable were steady at Rs. 72-12.

Jute shares were inclined to be easier in the period on reports that larger coal supplies and an increase in production may have a depressing effect on jute manufactures, and that mills might not be able to make large profits if jute prices improved. Howrahs came down to Rs. 91-12 from Rs. 93-7 last week and have since recovered to Rs. 92-12. Anglo-India declined from Rs. 530 to Rs. 520 to quote again at Rs. 526; Chitavalsah were quieter at Rs. 39-4; Craig at Rs. 12-12 and National at Rs. 35-8. Nuddea were lower at Rs. 137 but improved later to Rs. 140. New India changed hands at Rs. 769, Kamarhatty at Rs. 786 and Kanknarrah at Rs. 668.

In the Engineering section there is considerable speculation regarding the final dividend of Indian Irons for the year ended March 1945. In view of the higher interim dividend of 10 annas paid earlier this year, a lower final dividend is ex-

pected but it is said that total distribution will be maintained at Rs. 1-12 per share the same as for 1943-44 but selling by prominent operators in Wednesday's session has led to the feeling that the total distribution might be slightly lower. The quotation is around Rs. 40-12. Steel Corporations are also lower in sympathy with Indian Irons at Rs. 33-15, Braithwaite were Rs. 14-12, Burn and Co., Rs. 435 and Marshalls Rs. 6-8. Jessop

NEED FOR UNITY AND CO-ORDINATED ACTIVITY

CHAIRMAN ON POST-WAR PROSPECTS FOR INDIAN INSURANCE

The 14th annual general meeting of the Company was held at its head office in Bombay on 27th August 1945. Speaking on the occasion the Chairman, Mr. Vithaldas Kanji, said:

"This year we are meeting under more cheerful circumstances as the War has ended and the great strain of the War burden will now be lifted and Humanity will be freed from the daily uncertainties of destruction of human lives and property. On the Home Front the atmosphere is hopeful and with the advent of the Labour Government in England, there are better prospects of our complicated Political question being solved bringing the advent of a National Government nearer.

The unprecedented inflation of Indian currency resulting in exaggerated increase in the commodity prices has greatly increased the Insurance Portfolios, which has attracted into the markets many new concerns and I shall take this opportunity of welcoming new friends in the Insurance field. At this juncture, I would also like to draw attention of the Insurance people that the inflated portfolios are likely to shrink considerably reducing the business available in the market; but the expenses of management will not and cannot be reduced in the same proportion as the shrinkage of business which may create a situation leading to unhealthy competition for grabbing whatever business that may be available. This competition would result in considerably increasing our cost of acquisition and we should prepare against this contingency by arriving at some arrangement through which unnecessary competition can be avoided and the cost of business kept within economic bounds; this will necessitate an increasing co-operative attitude on the part of all Insurance Managements at present in the Market and unless we can stand together, I am afraid the prospects for Indian Insurance may not be as bright as they should be in spite of the expected industrialisation during the post-war period.

The total compensation paid to the company's policy holders in full satisfaction as a result of the unfortunate explosion which took place in Bombay on 14th April 1944, amounted to Rs. 16,71,259.

Sound and Strong Position.

Referring to our Revenue Accounts, I hope you will have observed that our total premium Portfolio has increased to 31 lacs and our Funds including special and other Reserve stand at a figure of Rs. 17,37,174. These funds along with our Capital of Rs. 7 lacs give an adequate stability and a sound foundation for the interest of all Policy holders as well as a good future for the Shareholders.

You will also have observed that the expense ratio has slightly increased during the year under report. This increase is mainly due to the increase in dearness and war allowances and the introduction of the Provident Fund this year. However, this matter is engaging the urgent attention of your Directors and a strict watch is being kept over the movement of the expense ratio about which you need have no anxiety. Your Managing Director Mr. Vijay Singh Govindji was fortunate enough to obtain a priority of passage and has already reached U. K. and it is hoped that he will be able to secure better reciprocal reinsurance arrangements which will save very large portions of our gross premium which is being given away by way of reinsurances.

The decreasing yield of interest on Life Insurance Fund has become a problem facing not only the Indian Insurance Companies but also the profession of Life Insurance in general. I am afraid the investment value of Life Insurance is gradual-

ly disappearing and it is high time that large portion of Life Insurance premium should be viewed as a protection against death risk only, some such change in the general outlook can help the Life Insurance to develop. This problem needs very serious attention of all concerned including the Policy holders; and I hope the Directors interested in Life Insurance Companies in India will examine this problem with greater care. This year is our valuation year, and I am glad to inform you that our interest yield has been 4.66 per cent. and still we have reduced our basis of interest from 3 3/4 to 3½ per cent giving a greater strength to our Life Fund and in spite of these stricter basis, your Actuary has reported a small surplus. For the purpose of this valuation the appreciation of securities has not been taken into consideration which remains a secret Revenue adding to the strength of the Life Fund and I have every hope that we will be able to still strengthen the basis of the Life Fund.

Need for Control of Expenses.

During the current year Government proposed to move certain amendments controlling the commission of Agents and Chief Agents as well as the expenses of management. In this connection, Gentlemen, I may state that there is some difference of opinion among the Insurance concerns. Here I would like to draw your attention to the very helpful observations made by Mr. J. C. Setalvad, the President of the Indian Insurance Companies' Association, in his presidential speech at the 17th Annual Meeting of that Association and I entirely endorse the views enunciated by him. Some of our new comer friends are looking with apprehension at these proposals, but I feel that looking a little ahead and in the general interest of all concerned such a control of expenses is essential and unavoidable. The absence of any control on the Chief Agency terms has proved a loop hole through which the cancer of competition is raising its head and I feel that a statutory provision for the maximum cost of acquisition and the cost of Management should be welcomed in view of the national character of our concerns and I hope that all the Insurance interests will consider these proposals seriously and give their unreserved support to the proposed move.

Central Reinsurance Board.

While referring to the Government proposals which are aimed at helping Indian Insurance industry in general, I would also like to mention here that in some of the Western countries their Governments have provided reinsurance facilities for the National companies and there is no reason why the Government of India should not examine the possibilities of providing such facilities to Indian Insurance Companies which will enable them to secure substantial premium income from the foreign countries as well as to retain a large part of their own premium income which pours out of India to foreign countries by way of reinsurance premium as an invisible import. I would even suggest the creation of a Central Reinsurance Board and I feel that if such a facility is extended to the Indian Insurance Companies it will not only make them independent of the foreign companies on whom they have to depend for reinsurance but it will also eliminate the present difficulties which our Indian Insurance Companies are having with the Exchange Banks. The statistics have proved that the Indian Insurance business is not a burden if properly handled and not only will it be a great source of income to the Central Government but it will also be a powerful instrument to help the Indian Insurance and I hope that the authorities concerned will look into the matter and do the needful.

From year to year I have been referring to the lack of co-operation of the Exchange Banks from which the Indian Insurance Companies suffer. The Indian Insurance Companies have stood the test of time and faced the strains of two World Wars and I feel that the Banks should adopt a more helpful attitude towards Indian Insurance Companies.

Co-operate and Enter Foreign Markets.

One more point to which I would like to draw the attention of the Management of Indian Insurance Companies, is the necessity of increasing co-operation amongst themselves. In view of the possibility of many Continental and Foreign Insurers entering the Indian Market, I feel it is time that the Indian Insurance Companies also enter into Foreign fields, the Middle East, the Far East, China and other countries which are at present still greatly under-developed as far as Insurance business is concerned and if such markets are collectively operated by group of Indian Insurers, we may be able to secure better fields for expansion. These and many other Post-War problems which are now facing and are demanding our immediate attention not only of the Management of Indian Insurance Companies but also their Directors and I feel that the Advisory Committee of the Directors of the Indian Insurance Companies' Association should meet oftener and consider all such problems in that perspective and infuse greater spirit of co-operation and unity amongst the Indian Insurance Companies.

The relations between the Industrial development of the country and the Insurance services are very close ones and in the post war world the Industrial development of the country is bound to progress rapidly and we all must be ready to assume the responsibilities that may arise out of such industrialisation so that there should be no need for indigenous industries to look to foreign concerns for their requirements. If we want an all round development of Indian Insurance it will be necessary for us to look much ahead and plan things from now onwards, and I hope that the Indian Insurance Companies and other Directors will take up this matter as one demanding very urgent priority.

He next took the opportunity of thanking the Officers and Staff of the Company for their strenuous work and well wishers, Agents and Patrons of the Company whose valued co-operation had helped the company to show better results.

THE SALEM-ERODE ELECTRICITY DISTRIBUTION CO., LTD.

A dividend at the rate of 3½ per cent, free of Income-tax, for the year ended 31st March, 1945 has been declared payable at once.

STILL FIGHTING

Thousands of our Service Men are sick and wounded — the last battles have piled up more casualties.

Hunger and disease have stalked among those men from Japanese Prison Camps, who will need much more than physical freedom to heal the years of suffering they have borne.

The Indian Red Cross, still fighting for their recovery from wounds and disease, is ready to care for all our returning men. Some will be on their way to hospitals and Convalescent Depots, where the Indian Red Cross will provide them with extra comforts during their stay.

The Indian Red Cross will be at ports to receive those who are on the first stages of their homeward journey, with kit bags containing clothing, toilet articles and cigarettes.

EAST & WEST INSURANCE CO.

Dr. Rm. Alagappa Chettiar on Need for Reorganisation

PROGRESS MAINTAINED IN LIFE DEPARTMENT

Dr. Rm. Alagappa Chettiar said: At the outset please permit me to welcome you all to this General Body Meeting and express to you how grateful I am to Providence that it has fallen to my lot to assume the Chairmanship of this Company in the eventful years to come. As you are all probably aware, I became Chairman of this Company barely a month ago and it is now too early for me to take upon myself the role of a real Chairman, who can with authority acquaint you with the real position of the Company in all its varied aspects. Hence I crave your pardon for not dwelling at length but only speak in a very general way about the year under report.

GENEROUS ASSURANCE

But this much I can assure you with confidence, that in my anxiety and eagerness to protect the interests of innumerable policyholders and the rights of the shareholders, I shall not take any but the first place among that band of workers who are serving your company. Consequent upon such an attitude, to be the first to serve those who have put their trust in this company, I hereby solemnly undertake that I shall take the last place in the queue among those who want to make money out of your Company. It has been truly said that "He that wants to be the first, shall be the last." I give you my assurance, here and now, that before the interests of the policyholders and the shareholders are substantially set right, I shall not take any remuneration for the services I render to your company. It shall be a labour of love and one may say it is too good to be true, but, Gentlemen, believe me when I say that "facts are stranger than fiction."

PEACE—A RELIEF

Before proceeding further, I should refer to a most momentous turn in the course of human affairs that has taken us all by agreeable surprise—surprise because of the suddenness of the turn—if not one of immense relief. I refer to the sudden end of the Second World War. We all know now the War, with its repercussions on every walk of life, was effecting the economic order of the country and, with it, inevitably the conduct of Insurance business of every kind. I do not wish to go into the question of how exactly our business will be affected now by the cessation of the War. Suffice it to say that there is no particular reason to look forward to the future of Insurance with anything like pessimism. So far as Life Insurance is concerned, the years of peace now before us will be on the whole conducive to a general improvement in the vitality of our assured population, thanks to the disappearance, in due course, of the various rigorous forms of control that we had to labour under during the stress of the war period.

LOOKING AHEAD

Some might argue that the tempo of our new business production will diminish but I am not prepared to take sides in a controversy of that kind. I am prepared, as I am sure all of you will be, to wait and see with a quiet optimism, because I am sure that if we did our part truly and well, the results shall not be disappointing. The inevitable industrialisation of the country and the resultant increasing purchasing power of the common man that is bound to come in the years of peace now to follow, be the pace of it quick or slow, must have favourable reactions on our business activity in general and in all its branches.

The report of the Directors and the Balance Sheet have now been with you for some time and I hope that it will be your pleasure that it may be taken as read. As you will know, the period under report falls entirely before the date of my taking over charge. However that may be, I

would invite your attention to some of the salient points, in a general way.

LIFE DEPARTMENT UP

In the Life Department, which by the way is the only portfolio in which we were transacting business until a couple of years ago, our new business production has been registering what may be termed a high increase during the year 1943 and 1944. Against a completed business of Rs. 57,88,950 in 1943, the Company has completed a business of over a crore in 1944. The figures for 1945 so far are ahead of the corresponding figures for 1944 by over five lakhs. The average sum assured under each new policy effected has also been steadily rising for the past several years and in 1944 stands at the high figure of Rs. 2,535.

SACRIFICIAL BASIS

This is highly satisfactory so far as it goes, but I shall be failing in my duty if I did not draw your attention to the fact that this forging ahead has been achieved at a considerable increase in our cost of procurement. On an analysis of the expenses, I find that the bulk of the rise in the expense ratio is due, not so much to the increase in the actual cost of procuring the business, as to the over-riding expenses connected with the management of the Company. From what I have told you already, this extra cost at the top will be almost brought to nil until the position of your Company really registers a satisfactory improvement. A portion of this higher cost in expense ratio is also due to the sudden increase in business in the year 1944, the benefits of which accrue to the Company only during the current year. You would agree with me that to reject business simply on the score that your target figure for the year has been already reached, would break the heart of any enthusiastic steward of a business concern.

COST OF CONQUEST

I assure you that your Directors will take every effort to think, plan and act in a systematic and thoroughly scientific way which will bring the expense ratio back to its normal level of 19.3 per cent in 1943 or even materially lower. Big business is no doubt good, but everything has its price; and we who have passed through these years of war-time administration know only too well that there is a ceiling fixed for everything and even more so for the good things in life. Nothing is worth conquering at all costs. It may be that in the realm of moral affairs certain things are priceless but we as businessmen, must fully realise that every commodity and business has got its price listed by experts.

WANTED: A RIGID CEILING

While on this subject, I would make an earnest appeal to the Managements of all Insurance Companies to sit together and devise ways and means by which the tightening of the rules and regulations which will fix a ceiling (I hope it will not be an obliging ceiling with of convenient elasticity) which will definitely fix the agents and chief agents' remuneration, etc. beyond all manner of doubt and evasion. If necessary, the help of the Government can also be sought by way of securing such a legislation.

LEGISLATION NEEDED

In fact the Bill before the Central Assembly contains a clause regarding the limitation of expenses of Insurance Offices and, as a corollary to that, I say that there should be a statutory ceiling imposed for the Agents' and Chief Agents' remuneration. However much one might wish that the ideal of low costs should be evolved by voluntary effort, it is my considered view that so long as the rate of progress towards the realisation of that

ideal is not satisfactory, we should not grudge to submit ourselves to a measure or measures which are designed to help to place our Insurance Industry on a firm and stable footing. Succeeding generations will be grateful for such a wholesome restriction in the interests of a large class of Policyholders. I therefore welcome the principle of legislative interference in this regard.

As for the company's progress, we can congratulate ourselves in our Life record but on our voyages on the high seas, I mean the Marine (countrycraft) business, our experience has been rather sad. We have had perhaps our own toll of risks not by submarines as suffered by our great Allies, but by our local and indigenous monsoon. Our experience with Fire has just started, and though we have not been burnt before we can afford to say we are twice shy. Anyway the interests of the company will be kept foremost and any decision which is required to protect the Company will be taken by your Board regardless of any false sense of prestige.

A QUESTION FOR EXPERTS

I shall be failing in my duty if I do not refer to some of the criticisms that have been levelled against our Company regarding some of its investments. Though this does not refer to the period of the account under consideration, still it is my duty to inform you that certain investments exist which are not of a remunerative character and which show a real loss. I take the view that there is no good done to anybody by a public discussion of such a delicate matter affecting the fortunes of the company. I do not mean in the least to belittle the seriousness of the issue, but all that I am anxious to say is: "Let us not make the solution more difficult by unfettered criticism, which will definitely do us harm and not solve our troubles, while a solution is undoubtedly the desire of one and all of you assembled here." Hence I should like to pass this subject in silence, and request you to allow the Directors to ponder over the question deeply and take expert advice from the Superintendent of Insurance and such other authorities as are competent to give advice, in tackling such a problem. Every remark hastily uttered will put the solution farther and farther away and not bring it any nearer. So I request you all to bear with us patiently and allow us time to solve the problem in the best possible manner.

LIMITS OF THE LAW

I referred in a previous paragraph inviting legislation in a certain respect. I must at the same time utter a note of extreme dissatisfaction at the way in which a section of the public is anxious to have legislation restricting around the present small field of freedom of Directors with regard to investments, registration of shares and so on. It is good to be ruled but it is not safe to submit to be out in a cage. No doubt, instances can be pointed out of some indiscreet management, but that is no excuse for tying down hand and foot, all and sundry. A Management cannot surrender its fundamental rights, and the remedy must not be worse than the disease. While I welcome all wholesome legislation to secure and protect the interests of the policyholders and keep the public trust and sacred, I do at the same time wish to say that the methods adopted in bringing about enviable position must not be such as to degrade those in management to mere automatons.

TO-MORROW'S DAWN

The day of nationalisation is not far far off, and there will be time enough for all sections of the business population to surrender their rights in favour of the State. To enable the country's purchasing power to be mobilised and be made available for the best advantage of the nation, the vast funds of Insurance companies accumulated, as in a big reservoir, must be allowed to flow so as to feed and irrigate the industries of the country, and here India needs to learn a lesson from countries like Canada and Great Britain. With a good portion statutorily locked up in Government securities, the balance must be allowed to earn a reasonable rate of interest by invest-

ments in industrial undertakings, so that the overall yield of the Life Fund might be about four per cent. I had the good fortune the other day to meet S. R. M. Visweswaraya, the veteran thinker and the entrepreneur of Indian Industry. He was of opinion that the Insurance Act should be so amended as to make it possible that a good portion of the Insurance funds is made available to the Post-War Industrial schemes of our great country. I am sure everybody will agree with his most valuable counsel. Indeed the history of Insurance, if it is to be truly national, must reflect the History of the nation itself. Our Insurance industry has now a chance to make history and place India on the Industrial map of the world.

PLEA FOR UNITY

Before I conclude, let me repeat the valuable advice given by Sir Mathuradas Vasanji in his address to the Indian Globe, the other day: "Divided though we in India are! and however diverse our opinions may be as far as our internal problems are concerned, if we are to preserve and uphold our prestige as a Nation, we should present a united composite whole to the world in our external affairs."

Let me take this opportunity to thank the Policyholders and our patrons for having given us their valuable support and also particularly to the staff, agents and field workers their most loyal and unstinted co-operation.

Gentlemen, I must thank you for having listened to me with such patience. Your company has celebrated its Silver Jubilee, but I am just an infant on the threshold of insurance. I appeal to you to give me and my other colleagues on the board all your help and sympathy during the difficult year to come and I can assure you in turn that we shall not swerve from the path of righteousness, be it long or tedious. The shortcuts to fortune shall not tempt us, and we shall come to you again about this time next year and render you a faithful account of our labours.

(Continued from page 433)

were easier at Rs. 25-15 and Indian Malleable Castings at Rs. 11-12.

In the sugar section, Cawnpore were 1 point lower at Rs. 42-8, while Carew and Co., fluctuated around Rs. 30 on reports of a dividend of Rs. 1-4 per share for the year ended June 1945. Balmampur were Rs. 17, Belsund Rs. 16 and Ramnugger Cane and Sugar Rs. 32-10.

There was slightly more interest in the Tea section and quotations were higher by a few annas. East India were done up to Rs. 21-12, Hattikhra Rs. 29-2, Tezpur Rs. 22 and Telojan Rs. 24.

In the Miscellaneous section, Calcutta Trams were higher at Rs. 55 cum-dividend while Calcutta Electric fluctuated in wide limits. After being lower at Rs. 44-8 the quotation is now Rs. 45-8. Burma shares were uninteresting with Burma Corporation at Rs. 6-8, Consolidated Tin Rs. 4-12 and B. B. P. at Rs. 5-15. Titagur Paper continued steady at Rs. 33 and Assam Saw at Rs. 6-5. Midnapore Zemindary were steady at Rs. 191. The dividend has been maintained only at 10 per cent for the year ended April, 1945. I. G. N. were steady at Rs. 219, National Tobaccos Rs. 31-8 and Alkal and Chemical Rs. 29-12. Dalmia Cement were listless at Rs. 16-12 while Reliance Firebrick were considerably lower at Rs. 20-15. Indian Copper were quiet at Rs. 3-4.

THE MYSORE SPINNING AND MANUFACTURING CO., LTD.

Notice to 4½% Cumulative Preference Shareholders of the Company.

NOTICE is hereby given that a General Meeting of the Preference Shareholders of The Mysore Spinning and Manufacturing Co., Ltd., will be held at the Registered Office of the Company at Temple Bar Building, 70, Forbes Street, Fort, Bombay, on Friday, the 19th October, 1945, at 4-30 p.m. (S.T.) for the purpose of considering and, if thought fit, passing a resolution to confirm the Agreement, dated, the Thirtieth day of August, 1945 made between the Company of the one part and Mr. Purushottam Jaitha on behalf of the Preference Shareholders of the Company of the other part whereby it was agreed that the requisite steps might be taken to delete the word 'Ordinary' from Article 57 of the Articles of Association of the Company. A copy of the aforesaid agreement is set forth in the notices being posted to the shareholders.

The Transfer Books of the Company will be closed from Friday, the 14th September, 1945 to Wednesday, the 19th September, 1945, both days inclusive.

(Annual General Meeting on 20-9-1945 at 3 p.m. Books closed from 7th to 21st September, 1945).

Audited accounts for the year ended 31st March, 1945.

	Rs.	A. P.
Depreciation on Buildings ..	3,26,000	0 0
Depreciation on Plant and Machinery including Dyeing, Bleaching and Sprinklers ..	5,31,000	0 0
Depreciation on Dead Stock ..	12,000	0 0
Depreciation on Sholapur City Electrification Scheme ..	31,000	0 0
Provision for Taxation for 1944-45 including Compulsory deposit ..	17,00,000	0 0
Machinery Renewal Fund ..	5,00,000	0 0
Total ..	31,00,000	0 0

Leaving a balance of Rs. 5,83,153-10-11.

From this the Directors recommend:—

(a) Dividend for 12 months ended 31st March, 1945, at Rs. 250 per whole share, and Rs. 125 per half-share, free of income-tax ..	4,00,000	0 0
(b) Dividend at 3 per cent on the redeemable Cumulative First Preference shares Rs. 50 per share paid up (Tax free) ..	48,000	0 0
Balance to be carried forward ..	1,35,153	10 11
Total ..	5,83,153	10 11

The Directors considered the question of Splitting of the Ordinary Shares and formulated a scheme which appeared to them to be the only practical solution and empowered the Chairman to elicit the views of the prominent shareholders on the same informally. As it was found by the Chairman at these informal discussions with the shareholders that they hold conflicting and contradictory opinions in regard to this scheme, and in the absence of any practical alternative suggestion forthcoming from them, as would meet with the wishes of most of the members of the Company, both Ordinary and Preference, the Directors have considered it desirable to postpone the matter.

DEPARTMENT OF SUPPLY

Office of the Controller of Supplies (Disposals),
2, Fairlie Place, Calcutta.

PUBLIC NOTICE.

The Controller of Supplies (Disposals) wishes to inform the public that copies of all tenders for the sale of Military Salvage and Scrap as well as Surplus Stores will be on view on the Notice Board of his Office at 2, Fairlie Place, Calcutta. The public who are interested in purchasing such stores may see the Notice Board regularly and obtain copies of the tender forms in which they are interested direct from the Office.

Chairman.—C. H. Bhabha.
Authorised Capital—Rs. 48,00,000. Issued and Subscribed—Rs. 32,00,000 in 1,590 Ordinary shares of Rs. 1,000, 20 half-ordinary shares of Rs. 500 each and 32,000, 3 per cent Redeemable Cumulative Preference shares of Rs. 100 each of which Rs. 50 have been called and paid up.

Synopsis of balance sheet as at 31-3-1945.

*After transferring Rs. 2,25,000 from Reserves.

**After transferring Rs. 2,25,000 from Reserves.

(Annual General Meeting on 21-9-1945 at 12 noon. Books closed from 10th to 21st September, 1945).

Audited accounts for the year ended 13th April, 1945.

Rent and Miscellaneous collections in both Divisions were very good considering that crops generally were only fair due to drought conditions, and that prices of all crops were generally lower than last year. Chaitali receipts were also good seeing that these crops were again poor.

The Bengal Agricultural Income-tax Act was passed during the year and full provision has been made in these accounts. Assessment in respect of income for the first taxable year has not, however, yet been made.

After making sundry adjustments, transferring Rs. 5,75,095-7-4 to Premium Lease Reserve Account and Rs. 2,50,000 from Reserve, there remains a balance at the credit of Profit and Loss Account of Rs. 10,96,382-0-2 which includes Rs. 1,09,869-7-9 brought forward from last year. From this the Directors recommend:—

..	7,52,000	0	0
Bonus of Rs. 2 per Share on the Ordinary Shares	1,88,000	0	0
Balance to be carried forward	1,03,810	0	2
Mg. Agents.—M/s. Andrew Yule & Co., Ltd. Authorised Capital—Rs. 1,25,00,000. Issued and Subscribed—Rs. 1,02,76,200 in 94,000 Ordinary and 8,762, 6 per cent Cumulative Preference shares, both of Rs. 100 each fully paid up.

SAMLA COLLIERIES, LIMITED.

NOTICE is hereby given that an Extra-Ordinary General Meeting of the Shareholders of the abovenamed Company will be held at the Registered Office of the Company, No. 12, Mission Row, Calcutta, on Friday, the 28th September, 1945, at 3-10 o'clock in the afternoon for the purpose of considering and if thought fit, passing the following resolutions with or without modification:

- (1) "That the resignation of Messrs. Martin & Co., from the Managing Agency of the Company be and the same is hereby accepted with immediate effect."
- (2) "That Messrs. Jaipuria Brothers, Ltd., be appointed as Managing Agents of the Company with immediate effect for a period of 20 years on and from the 28th September, 1945, upon the terms and conditions contained in the draft Managing Agency Agreement submitted to this meeting and which has, for the purpose of identification, been signed by Mr. Mungtaram Jaipuria and Mr. Shivaram Poddar, Directors of the Company.

By Order of the Board,

MARTIN & CO.,

Managing Agents.

Calcutta:

Dated, the 6th September, 1945.

SAMLA COLLIERIES, LIMITED

NOTICE is hereby given that an Ordinary General Meeting of the abovenamed Company, will be held at the Registered Office, No. 12, Mission Row, Calcutta, on Friday, the 28th September, 1945, at 3 p.m. for the purpose of passing the accounts of the Company for the half-year ended 30th June, 1944.

By Order of the Board,

MARTIN & CO.,

Managing Agents.

Dated, Calcutta, 6th Sept., 1945.

Note.—The above meeting is necessitated by reason that at the 33rd Half-yearly General Meeting of the Shareholders held on the 25th April, 1945, the accounts were received, but not adopted and a committee of inspection was appointed to enquire and investigate. The Committee have now reported that after investigation they are satisfied with the correctness of the accounts to June 30, 1944, and recommend that the accounts be now passed by the Shareholders.

SAMLA COLLIERIES, LIMITED NOTICE

is hereby given that the Thirty-fourth Half-yearly Ordinary General Meeting of the abovenamed Company will be held at the Registered Office, No. 12, Mission Row, Calcutta, on Friday, the 28th day of September, 1945, at 3-5 p.m. for the purpose of receiving and considering the Directors' Report, the Statement of Accounts and Balance Sheet for the half-year ended 31st December, 1944, and to transact any other ordinary business of the Company.

The Share Transfer Books of the Company will be closed from the 19th to 28th September, 1945, both days inclusive.

By Order of the Board,

MARTIN & CO.,

Managing Agents.

Calcutta:

The 6th September, 1945.

(Continued from page 433)

blocc has increased from Rs. 27.94 crores to Rs. 34.21 crores and the Depreciation Fund to Rs. 18.86 crores from Rs. 12.78 crores. Stores are higher at Rs. 3.25 crores against Rs. 1.38 crores while stock-in-trade was lower at Rs. 1.89 crores against Rs. 2.28 crores. Outstandings are very much higher at Rs. 4.57 crores against Rs. 1.39 crores while investments were as much as Rs. 3.15 crores against Rs. 1.91 crores. E.P.T. deposits were Rs. 1.18 crores while cash balances were Rs. 3.16 crores against Rs. 1.32 crores.

In 1940 liquid assets of Rs. 8.29 crores compared with sundry liabilities, including dividends, of Rs. 8.63 crores while in 1945 liquid assets of Rs. 17.2 crores compare with sundry liabilities, including dividends, of Rs. 30.76 crores. It will thus be seen that in spite of the large additions to block the substantial provision for depreciation has not interfered with the free balances of the company.

Midnapore Zemindary Company Limited has been able to report an increase in earnings for three years in succession though with the levy of the Bengal Agricultural Income-tax it has not been possible to pay any large dividend. The net profit, before providing for taxation and depreciation, for the year ended April 1945 is Rs. 11,64,926 against Rs. 9,64,458 for the previous accounting period. Provision for taxation is Rs. 4,25,000 against Rs. 2,50,000 while the amount set aside to depreciation is Rs. 3,413 against Rs. 2,313. There is a transfer of Rs. 2.5 lakhs from reserves against Rs. 2.25 lakhs on the former occasion. The dividend has been maintained at Rs. 8 per share and the bonus at Rs. 2 per share. A sum of Rs. 5,75,075 has been transferred to the Premium Lease Reserve Account from the General Reserve.

Rent and miscellaneous collections were very good considering that crops had been only fair due to drought conditions and that prices for all crops were generally lower than the previous year. Chaltall receipts were also good seeing that these crops were again poor.

More effective utilisation of the loom hours of the Hastings Mill Limited, in the half-year ended March, 1945 has resulted

GOVERNMENT OF THE UNITED PROVINCES FINANCE (S) DEPARTMENT

Dated Lucknow, September 5, 1945

PRESS NOTE

UNITED PROVINCES THREE PER CENT GOVERNMENT LOAN, 1960

Of the 4 per cent consolidated debt due from the United Provinces Government to the Government of India, Rs. 2½ crores was repaid on April 3, 1945, from the United Provinces Government's own free balances. Another 2½ crores will be repaid in the current year by flotation of a Provincial Loan for this amount. The main terms are that the issue price will be Rs. 99-8-0 for every Rs. 100 of the loan applied for. The loan will have a currency of 15 years from September 14, 1945, and will be repaid at par on September 14, 1960 and will bear interest at the rate of 3 per cent per annum from September 14, 1945, payable half-yearly on March 14 and September 14, and will be subject to income-tax and surcharges. Subscriptions will be received from 10 a.m. (Indian Standard Time) on September 12, 1945, until subscriptions approximate to the amount of issue or until the close of business on September 14, 1945, whichever is earlier. Interest from the date of application to September 13, 1945, inclusive will be paid at the time of issue of securities to subscribers tendering applications for the loan on September 12 and September 13, 1945. Subscriptions will be received at the branches of the Imperial Bank of India in the United Provinces, at treasury pay offices of the Imperial Bank of India at Azamgarh, Partabgarh, Gonda, Bahraich and Roorkee, the Government treasuries located at the headquarters of the districts in the United Provinces where there is no branch or treasury pay office of the Imperial Bank of India, and at the offices of the Reserve Bank of India at Bombay, Calcutta, Delhi and Madras.

Full details of the terms of the loan are contained in the Finance Department's notification No. S-3340/X-64, dated September 5, 1945, a copy of which, with the application form for the loan, is obtainable at the receiving offices detailed above.

2. A summary of the financial position of the Government of the United Provinces is as follows:—

Revenue Surpluses.—During recent years revenue surpluses have been 228 lakhs

in an increase in the net profit, before providing for taxation and depreciation, to Rs. 7,92,336 against Rs. 4,97,780 for the previous six months and Rs. 2,85,884 for the corresponding period last year. The amount set aside to depreciation is Rs. 89,327 against Rs. 1,07,342. The provision for taxation is Rs. 5 lakhs (Rs. 2.5 lakhs). After paying arrears of dividend on preference shares for the seven months ended September, 1944 and the dividend for the last accounting period, the amount carried forward is Rs. 46,908 against Rs. 56,400 brought in. A sum of Rs. 50,000 (nil) has been transferred to Mills Renovation Reserve.

As the directors indicate in the report sanction has been given for a payment of Rs. 7,17,225 on account, pending the final examination of the claim for the period ended September 1944, it can be expected that an ordinary dividend would be paid out of the earnings for the current half-year.

in 1942-43, 498 lakhs in 1943-44, 539 lakhs in 1944-45 and 387 lakhs (estimated) in 1945-46.

Balances in the Reserve Funds.—These surpluses have been conserved and put into various reserve funds. By the end of 1944-45, the total credit at each fund stood at 100 lakhs in the United Provinces Road Fund, 66 lakhs in the Hospitals Fund, 150 lakhs in the Supply Scheme Stabilization Fund, 58 lakhs in the Famine Relief Fund, 306 lakhs in the Revenue Reserve Fund and 83 lakhs in the Depreciation Reserve Fund—Irrigation. Some of these are invested in Government of India securities. The total balances in Reserve Funds amount to 1,263 lakhs, of which as much as 972 lakhs are expected to be available for post-war schemes.

Debt Position.—On March 31, 1945, the permanent debt of the Province amounted to 2,966 lakhs consisting of 2,021 lakhs representing the consolidated debt due to the Central Government plus 736 lakhs representing the amount of public loans floated by this Government from time to time plus 209 lakhs as United Provinces Encumbered Estates Act Bonds. Sinking funds for all the public loans have been formed and they are invested in Government of India securities.

Assets of the Government.—Against the outstanding debt of 2,966 lakhs, there are assets in the form of the Ganges, Jumna and Sarda Canals and various other small canals, state tube-wells, and the Hydro-electric Grid, in which over Rs. 30 crores have been invested. Another asset is the balances due to the United Provinces Government on account of loans and advances amounting to 434 lakhs.

Provincial Balances at the Close of 1944-45.—The United Provinces Government had a free balance of 686 lakhs at the end of 1944-45, of which 669 lakhs was at credit with the Reserve Bank of India and the balance of 17 lakhs was in treasuries and sub-treasuries. Besides this, the Government held treasury bills of 425 lakhs. In addition, stocks of foodgrains to the value of 400 lakhs were held by the United Provinces Government.

EAST INDIAN RAILWAY

TENDER NOTICE

Annual Contract Item Costing Over Rs. 8,000. Class I Contract.

Sealed tenders are invited for the following and will be received in the General Manager's Office, E. I. Railway, 105, Clive Street Calcutta on 26-9-45 at 12 noon.

Tender form with full particulars can be had from the Controller Stores' Office, E. I. Railway, Calcutta on payment of Rs. 2 per copy to the Treasurer, E. I. Railway, Calcutta and on production of his receipt when applying for the same.

Firms outside Calcutta, may, however, remit the amount to the Controller of Stores, direct by money order.

No refund is permissible after payment. Sealed tenders delivered by hand should be presented for registration in the General Manager's Office and then put into the tender box outside Dy. General Manager's (Works) room by the tenderer or his representative.

BOUQUETS & BRICKBATS

(From our Readers)

Tax-detection Department

Corruption in this country has almost become, sad to say, an institution. The policeman for not taking notice of breach of law, the income tax official to assess the income low, the P.W.D. official to pass bills for payment without scrutiny, the Railway official for arranging priority, for charging less and why, in every walk of life, from the peon to take in the card of a visitor to the highest official for giving jobs, for granting licence, I can't catalogue, everything is translated into Rupees, annas and ples.

If one applies the tests which Stevensen had in his "Lay Morals" possibly all of us are thieves. But without going so far, if we judge men by ordinary canons of justice, still we find a good number of men who should be brought to book, going scot-free by some means or other.

The staff that had been employed during the war for detecting corruption is obviously inadequate. What cases have been unearthed so far, seems to me to be those which cannot be kept from the public eye.

To raise the tone of our public life, we want a fully organised Tax detection Department which will bring to justice all offenders, high or low, white or black, and get them exemplary punishment.

V. L. Purohit.

Capital Control

The news Agency reports that Capital Control is to continue for some time more—a thing which readers of "Indian Finance" will remember, has been advocated by that paper consistently. The statistics which the report gives will clearly show that the charge of favouritism levelled against the Examiner of Capital Issues is not quite justified.

The necessity of Control in the period immediately following the war cannot be over-emphasised as Black money and newly gotten wealth will result in a number of mushroom Companies. When Capital control is abolished in its present form it is imperative to have a National Investment Board which will among other things do the work which the present Examiner is doing.

B. N. Law.

The Disposals Problem

The problem of disposing of war stores, now that the war is over, is important as any hasty and ill-conceived step is likely to lead to irreparable disturbance in the nation's economy.

The newspapers say that the U. S. has sent a mission to dispose of its stocks. The supply member of the Government of India is reported to have said that 90 per cent of the surplus war materials belong to the U. S. and the Government of India's share in their disposal will be one of 'agency' and not an 'agent.' Laymen are unable to understand the meaning of these enigmatic phrases. What the public want to know is this. How much of surplus materials is available? What part of it will be useful to India's industries? What part belongs to the Government of India and what part to the U. S. Government? What are the principles, in concrete terms, which will govern the Government of India in disposing them of?

Will the Government of India issue a statement covering all these points?

N. C. Bhattacharya

A Vital Need

You have drawn attention to the need for the resumption of several publications by Government. Not journalists alone, but scholars and businessmen have experienced great difficulty because of the absence of data.

But quantity, while necessary, is alone not enough. The care with which data has been collected in the past has not been commendable. It is said that the Bengal famine, among other causes has been due to miscalculation based on the inaccurate statistics of food grains.

It is, therefore, to be expected that the Government of India and the Provincial Governments will prepare a 'Doomsday Book' containing all relevant and useful information.

A. N. Mehta.

Shareholders Beware

Even though I am very late in writing to you in support of the plea that Mr. J. J. Kapadia, Secretary of the Bombay Shareholders' Association has so ably made, I feel it is my duty to say that it deserves serious consideration at the hands of people interested in the industrial future of the country. It is forgotten that the companies are using the shareholders' money and the very name of 'Mill Owners' Association' is an indication of the trend. The facts referred to by him about the European Managing Agents' Houses in Calcutta are applicable with equal force, to conditions prevailing where their counter-parts are having a place in the industrial organization of the country.

Sometimes the situation is even worse. The post-war days will be the days of Trade Unionism, if one may say so, and the scattered and weak shareholders will be well advised to muster strong in a Shareholders' Association so that their rights may not be by-passed by the organised and powerful and not always scrupulous Managing Agents. I pass on a bouquet to Mr. J. J. Kapadia for so ably drawing the attention of the public through your columns.

REPAYMENT OF GOVT. OF INDIA

5% INCOME-TAX FREE LOAN, 1945-55

The outstanding balance of the 5% Income-tax Free Loan, 1945-55 will be repaid on the 15th October, 1945 and no interest will accrue thereon from the 15th October, 1945. At places where the 15th October is a public holiday under Section 25 of the Negotiable Instruments Act, 1881, the discharge value will be paid on the next preceding working day. To facilitate discharge of the loan on the due date, holders may tender their securities at the Public Debt Office, Treasury or the branch of the Imperial Bank of India at which they are enfaced or registered for payment of interest, on and after the 15th September, 1945. Full details of the procedure for obtaining discharge value can be obtained on application to any Public Debt Office, branch of the Imperial Bank of India or Treasury.

Fact Parade

5 p.c. 1945 Loan to be Repaid in October:

The outstanding balance of 5 p.c. income tax free loan of 1945 will be repaid in October 15 next and no interest will accrue thereon from that date.

War Risks Insurance Scheme:

With the termination of the War Risks (Factories) Insurance Scheme with effect from September 1, 1945, inland vessels which were insurable under that scheme are no more insurable with effect from the aforesaid date, says a Press Communique.

All policies of insurance against war risks issued in respect of inland vessels have therefore terminated and have ceased to have effect from September 1, 1945, under Section 3 of the War Risks (Factories) Insurance (Termination) Ordinance 1945.

Agricultural Income-tax Bill Deferred:

The Government of Madras, it is officially stated, have deferred "until the political situation has become clearer" the further progress in regard to the Bill for the levy of a tax on agricultural income in the Province, which was published in March last for eliciting public opinion.

The present Government's intention is not to give up the Bill but leave it to the new Government to view the whole subject afresh and take a decision on the action to be taken.

Indore's Budget:

Introducing the budget for Indore State for the year 1945-46 in the State Legislative Council, the Accountant-General of Indore stated that during 1943-44 there was a surplus of about Rs. 92 lakhs against an estimated surplus of Rs. 4 lakhs. Dealing with the budget estimates for 1945-46, he said that the revenue was estimated at Rs. 263 lakhs against Rs. 332 lakhs of his year and expenditure at Rs. 252 lakhs against Rs. 327 lakhs of this year, giving an anticipated surplus of about Rs. 11 lakhs.

To meet the increased demand for electric energy, provision of Rs. 8½ lakhs was made for the purchase of new electric plant.

Plans to Introduce Tractor Cultivation:

Co-operative or collective farming is to be introduced in the Nizam's Dominions, it is understood. For this purpose, Government propose to divide agricultural lands into plots of hundred acres each and band together cultivators to work on these plots under the supervision of the Agricultural Department. It is learnt that Government have placed orders for thirty tractors, which will take the place of the plough and bullocks. Five of these tractors, each of which costs Rs. 25,000, are expected to arrive in Hyderabad at the end of this year and the remainder in 1946.

A beginning is to be made with tractor ploughing in Karnatak regions and Government plan to introduce it throughout the Dominions later.

Chinese Emergency Loan:

The Chinese Government will make an emergency loan of five billion Chinese dollars (Rs. 87,50,000) through four Government banks to relieve industries in the interior from the difficult situation caused by falling price levels.

The loan will be for a term of 18 months.

Earnings of British Factoryhands

The average weekly earnings of British factory workers rose by 76 per cent. during the war according to figures published in the Ministry of Labour Gazette. The sur-

vey estimated Britain's clothing, textile and shoe industries need more than half a million additional employees to bring them up to strength.

What Hitler Cost German People:

Hitler received more than 26 million reichsmark in 1942 only, the year for which the German budget figures are available, it has been disclosed by the Finance Branch of the United States forces in Europe today.

The 26 millions are made up as follows. Hitler's salary. 56,400 reichsmark; 1,000,000 reichsmark as President of the Reich plus 24,000,000 as Chancellor "for such purposes as he saw fit".

As is known, German budgets have not been published throughout the reign of Hitler and the public was therefore in the dark how much the Führer cost them in cash.

£300,000 For MacArthur's Memoirs:

Gen. MacArthur is receiving fantastic offers from the American press, radio, and film producers. The total value of the offers thus received is more than £300,000. All interests ask for the exclusive rights to his memoirs.

British Banks' Post-war Balances:

The Financial News suggested that the British Treasury should immediately order the banks "to open separate accounts for post-war balances" of sterling, so that sterling debts accumulated in rebuilding the nation's foreign trade would have first call for payment over the huge balances piled up in the period before the peace.

Unemployment Committee for Ceylon:

The Ceylon Board of Ministers has, it is understood, decided to appoint a committee to tackle post-war unemployment. It shall be the committee's job to find work for those thrown out of work by the cessation of hostilities.

The committee has been asked to suggest avenues of employment not only for those in active service at present but also for the large number of civilians employed in various war organizations.

Rise in U. S. Standard of Living:

During the war, while the British standard of living dropped by 17 per cent. the American rose by 19 per cent. owing to an increase of total productive capacity from 100,000,000,000 dollars to 200,000,000,000 dollars.

U. S. Commercial Policy Towards Japan:

A Commerce Department official predicted that U. S. businessmen will be allowed to visit Japan two months after the occupation army is established there. He said that U. S. commercial policy toward Japan will be patterned after the Policy in the Philippines which twelve businessmen are currently allowed to visit every month.

\$640,000,000 U. S. Goods for France:

The United States' agreement with France for the supply of goods on long-term loan totals \$640,000,000 (about £160,000,000). Negotiations are well advanced for two further loans which are expected to cover somewhat larger amounts than those already contracted.

France has also arranged long-term credit, with Canada for \$350,000,000 (about £87,000,000), but the credit is subject to approval of the Canadian Parliament.

Under this credit, France will purchase mainly wheat, agricultural machinery and ships.

United Nations' Food Conference:

Invitations have been sent out to 44 Governments to attend the first conference of the United Nations Food and Agricultural Organization to be held in Canada on October 16.

As soon as the conference meets the present interim Commission will be dissolved and the Food and Agricultural Organ-

ization is to come into existence. In addition to setting up a permanent organization consisting of an executive committee on which the world's leading food and agricultural experts will serve, the Canadian conference will also consider what general problems are most urgent.

Primarily, the organization will concentrate on the collection and spreading of information and the encouragement of advances in agriculture in all countries.

The exact site of the Canadian conference is not yet decided, but it will be announced shortly.

RUFFS AND CUFFS

THE weekly wash nowadays is not nearly so complicated a business as it was when men as well as women wore ruffs and cuffs, frills and flounces. Today the housewife has simpler clothes to tackle, but both the work of home laundering and the results she is able to achieve are helped by the skill of the research chemist and the products of the British chemical industry. Soap is, of course, her first requisite. If asked how soap does its work the technical man might reply "Soap has the property of detaching soiling matter from textile fabrics and maintaining it in suspension in the washing liquor, thus permitting its removal without redispersion on the fabric". In other words, soap loosens the dirt from clothes or curtains and enables them to be washed clean. To discover precisely how it does this, and consequently to make better and more efficient soaps, have meant a great deal of patient and complex research. Soap cannot work unless it lathers, and it will not lather easily in hard water. The harder the water the more soap will be used, so that in these days when strict economy is necessary, the careful housewife will add washing soda — sodium carbonate — to soften the water and save soap. In addition to the service he gives to the great soap-making industry, the chemist has provided a number of other aids to domestic washing — ultramarine or "blue", and chemicals such as hypochlorites, borates, perborates, percarbonates, silicates and various forms of phosphates. For the laundries, of course, there is a further range of chemical products. These may not be suitable for home use, but play a valuable part in helping the laundries to give efficient service in difficult conditions.

Starch is today required for food, for making surgical spirit and other uses of national importance. When Peace brings back the starch to our collars, it may be expected also to bring new and improved chemical aids alike for the laundry and the weekly wash.

TREASURY BILLS

Central Government:

Tenders for Rs. 2,00,00,000 of three months' Government of India Treasury Bills were opened on Wednesday, the 12th Sept., 1945. Total amount offered was Rs. 2,83,25,000. Tenders at Rs. 99-14-9 per cent were accepted in full and those at Rs. 99-14-6 per cent were allotted approximately 68 per cent. Total amount accepted was Rs. 2,00,00,000, the average rate of accepted tenders being Re. 0-5-11 per cent per annum.

Tenders for Rs. 2,00,00,000 of three months' Government of India Treasury Bills will be received on Tuesday, the 18th Sept., 1945 at Bombay upto 11 a.m. (Standard Time) and upto the close of business on Monday, the 17th September, 1945 at other centres. Successful tenderers should make payment on Friday, the 21st September, 1945. Other conditions are as usual.

During the week ended the 7th September, 1945, Government of India Treasury Bills for Rs. 4,21,50,000 were sold in favour of the Issue Department of the Reserve Bank of India.

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

Cheap conditions continue to prevail in the money market and call money is quoting $\frac{1}{2}$ per cent in Calcutta and $\frac{1}{4}$ per cent in Bombay. There has been a rather sharp reduction in advances of Scheduled banks and it would appear that lenders are very anxious to oblige borrowers if they could get reliable ones. One would have expected at the auctions of treasury bills held this week that the average discount rate would record a further decline, especially as banks were bothered with surplus funds and cash balances were at a very high level. Applications, however, were sharply lower at Rs. 2.83 crores against Rs. 5.18 crores last week and the average discount rate remained unchanged at annas 5 and pies 11 per cent per annum. The offer for next week has again been maintained at Rs. 2 crores. The poorer response this week is perhaps due to the announcement regarding Provincial loans and the anxiety of scheduled banks to place funds in these loans. Even so, one would have expected that the special bidder would have come into the market and effected a further reduction in the discount rate.

The returns of the Reserve Bank for the week ended September 7, serve as a reminder that it is yet too early to expect that there will be no further additions to the note issue, not to speak of the earlier expectations that the deflationary movement would start and that notes in circulation would continue to decline. The latest return relating to the issue department shows that there has been further expansion of currency against sterling securities for as much as Rs. 8 crores. Notes issued were Rs. 1,161.28 crores against Rs. 1,154.02 crores. The improvement in notes in circulation is even more pronounced, the figure at Rs. 1,151.77 crores showing a rise of over Rs. 12 crores.

Notes held in the banking department were lower at Rs. 9.51 crores against Rs. 14.57 crores. Rupee coin were lower at Rs. 16.70 crores against Rs. 17.44 crores. The expansion of currency is probably due to the needs of the Central Government in connection with month-early disbursements. There is a big drop in Central Government balances to Rs. 352.26 crores from Rs. 365.53 crores. Other Government accounts were slightly higher at Rs. 18.45 crores against Rs. 18.14 crores while bank balances with the Reserve Bank were nearly Rs. 9 crores higher at Rs. 114.13 crores. Other deposits were further lower at Rs. 12.86 crores. Foreign balances were Rs. 471.94 crores against Rs. 472.78 crores but if the transfer to the Issue Department of Rs. 8 crores is taken into consideration, there has been a net receipt of Rs. 7.17 crores during the week. Investments show a rise of Rs. 40 lakhs to Rs. 25.23 crores.

The statement of the Imperial Bank for the same period shows a small increase in deposits to Rs. 242.77 crores from Rs. 242.44 crores. Investments are not very much changed at Rs. 143.67 crores but there is a big drop in advances to Rs. 54.86 crores from Rs. 59.81 crores. Cash balances have jumped further to Rs. 54.21 crores from Rs. 48.66 crores. It is not clear why the Imperial Bank is building up such large cash balances and has not shown any anxiety to place its funds either in treasury bills or in gilt-

edged securities. Open market operations, should therefore have been mostly by the Reserve Bank and no support seems to have been given by the Imperial Bank. Investments at Rs. 143.67 crores show a decline of nearly Rs. 4 crores in one month. Whether this decrease in investments was due to maturing treasury bills cannot be said as after August 10, treasury bills maturities were only Rs. 2 crores and almost like sales have been made every week.

The statement of Scheduled Banks for the week ended August 31, 1945 emphasises the prevalence of easy conditions in the money market. Demand liabilities were Rs. 643.56 crores against Rs. 640.60 crores and Time liabilities Rs. 251.80 crores against Rs. 251.26 crores. Cash on hand is lower at Rs. 34.46 crores against Rs. 36.50 crores while balances with the Reserve Bank were Rs. 103.9 crores against Rs. 100.15 crores. There is a rather big drop in Advances to Rs. 263.68 crores from Rs. 270.77 crores. Bills discounted were slightly higher at Rs. 13.57 crores. With the increase in the working capital by Rs. 3.53 crores and the decrease in advances by Rs. 7.03 crores, cash balances should have appreciated by over Rs. 10 $\frac{1}{2}$ crores. But actually there is an increase of only Rs. 1.71 crores.

It has been announced that the outstanding amount of 5 per cent 1945 income-tax free bonds will be repaid on the due date namely, October 15, 1945 and no interest will accrue thereon from that date. It will be remembered that when the 3 per cent 1970-75 First Development Loan was floated, the holders were not satisfied with the conversion terms offered, and that the total of both cash and conversion subscriptions amounted to only Rs. 27 crores out of the total amount of Rs. 40 crores asked for. It was not stated at that time as to how much was received in cash and how much in conversion; as it was said that large parcels of these loans were held by institutions like the Imperial Bank, the actual amount to be paid may not be more than Rs. 15 crores. The problem of re-investment of this large sum will be rather difficult for the holders and if it again should find its way into gilt-edged securities or equities prices would be marked generally higher. Even if investors elect to place sums on a fixed basis with scheduled banks, banks in their turn will have to place them mainly in gilt-edged. Which means, that the Government would after all be achieving their object and the money paid out would be shortly received back by the Government in the form of subscriptions to the Defence Loans.

FACT No. 4

INDIA'S cotton textile industry now produces per year nearly 14% of the estimated world production of cloth, over 13% of the estimated world production of yarn. Today the industry employs 3 lakhs more men and women than prewar. In 1943-44, cloth available for civilian consumption in India was about 94% of peace-time supply.

The mills which make the cloth then are not responsible for the present shortage in the retail market. No, indeed! The facts and figures given here demonstrate that India is one of the major textile-producing countries of the world, that a 6% reduction in normal peacetime consumption should be sufficient to equate demand with supply.

Who then is responsible? The movement of cloth and yarn after exit from the mills is entirely controlled by Government. Therefore, if you are unable to obtain necessary cloth or yarn you should approach the Textile Controller of your province. The mills are making enough cloth for essential civil needs.

One of a series of statements of fact for the information of the public:—

ISSUED BY

THE MILLOWNERS' ASSOCIATION

BOMBAY

The Outlook of Sterling

The future of sterling, which is one of the nodal points from which one has to map out the course of international finance in the next few years, has again forced itself to the fore. It is only too well known that at the end of a world war, Britain should find herself obliged to reconsider her currency and exchange, eliminate, in so far as may be possible, the abnormal features of the war period, and adjust policies and methods with an eye to her immediate as well as permanent interests and the stability of the system. It is well known, too, that a world war exhausts Britain more than any other nation and that its effects on her position in international trade and finance are such that it is by no means a simple problem to effect the adjustments called for by war finance without jeopardising some of her very vital interests in the immediate future. But it would normally be deemed too soon after the cessation of hostilities for the uncertainties and instabilities of international finance to make themselves felt. If the onset of weakness in sterling is now more than a fortnight old and almost coincided with the surrender of Japan, it must be attributed to the seriously unsettling effect of President Truman's decision to end the supply of goods to the Allied nations under the American Lend-Lease Act. The announcement of the President was followed soon after by a decline of 4 points in forward sterling in New York: and though there was a slight rally immediately afterwards to suggest that the drop was of psychological significance, the intrinsic position of Britain's national currency hardly leaves room for the expectation that its external value will be steadily maintained at the controlled rates of the war period. There is no gainsaying that the even tenor of Britain's economic life is being maintained on the strength of lend-lease supplies, and that if such supplies were to be discontinued in toto, the equilibrium of sterling exchange would be gravely upset. Even were lend-lease supplies converted to a quasi-commercial basis, the change cannot but have an adverse effect on sterling, however liberal America may be in regard to the terms of repayment or the volume of credit afforded. It is to be expected, therefore, that so long as the results of the Halifax-Keynes Mission are not definitely known and assessed, the prevailing pessimism should manifest itself in the weakness of forward sterling in New York.

But will the upshot of the Halifax-Keynes Mission make a difference? How far would America go in the matter of giving the aid which Britain wants? Will America agree to only such measures as will be of help to Britain and will not recoil on herself in some other way? It is necessary to ask the latter question as, after all, Britain and the U.S.A. are to some extent trade rivals and the one cannot help the other without damaging its own interests. Besides, in the case of Britain, her national currency is a unit of considerable international importance. While in one view the stability of sterling is important for the stability of international finance, America has also to bear in mind that Britain may seek to secure the best of both worlds, getting help on the one hand from the U.S.A. on the strength, so to say, of her weakness, and on the other, conserving to herself all the advantages which her control of the sterling area and the resources of the countries comprised in it gives to her.

There is thus need for America to distinguish between sterling as the national currency of Britain and sterling as the exchange unit of a large international currency bloc. Likewise, the future of the sterling area is dependent upon the future of sterling and vice versa. Whether the various countries whose currencies are linked to sterling will agree to continue in the pre-war position will depend a great deal on the capacity of sterling to maintain itself and the level at which it will be maintained. And the outlook of sterling will be conditioned by the extent and degree of adherence to it on the part of the countries which are now members of the sterling area. The U.S.A. too, for her part, will have to clarify to herself her interest in the stability of sterling and the extent to which the solidarity of the sterling bloc can be encouraged without danger to her own interests. And it is in the light of all these forces and factors that Britain herself has to decide her course of action.

The interdependence of the various factors makes argument in a circle inevitable, unless one can set the various factors in a certain order of importance. If we look at the problem from this angle, we shall recognise that at the present juncture, the initiative lies entirely with the American Administration. It took a definite step when it declared that the Lend-Lease Act would no longer be operative. But

this declaration has been followed up by President Truman's message in which he states definitely that any attempt to secure repayment of lend-lease would prove disastrous to world economy in the first instance, and ultimately world peace. He has also made it clear that as the flow of goods from the U.S. to allied countries cannot be stopped abruptly, the basis of these transactions must be changed to a commercial one. America has indicated the terms on which goods can be had from her by the allied nations. These statements, however, have not sufficed to clear the outlook, since Britain has shown herself distinctly averse to any course of action which would involve additions to her commercial debts. What arguments or pressure Lord Halifax and Lord Keynes can bring to bear on the authorities in U.S.A. to make them accede to these demands, it is difficult to say.

But the probabilities are that America will be governed largely by the requirements of her own foreign trade and of stability in international finance, though she will by no means be indifferent to the more emergent needs of Britain. So far as one can judge in the present inchoate stage, the U.S.A. will not give in to the British demand for continued supply of goods without additions to commercial obligations, but will attempt to be as liberal as possible in the matter of the volume of credits and the terms of repayment. The main objective in the provision of credits would be to minimise and postpone to as distant a day as possible, the downward pressure on sterling which is bound to develop if Britain were obliged to find foreign currency for everything that she has to import. The avoidance of any considerable depreciation of sterling is after all an American interest. While thus the U.S.A. would go a long way to help Britain and ward off a serious slump in sterling, she will also have to ensure that her foreign trade is not adversely affected by what she may do to Britain. Such precautions were taken in the case of lend-lease supplies when the stipulation was made that Britain should not utilise them for exports or have an export trade in goods which she indents from the U.S.A. under lend-lease. In this case, America could justly ask for a cessation of foreign lending by Britain. But what she will ask, however, is that, in as much as Britain will be getting all the help she wants from the U.S.A. she has no need and even less justification to tie up the dollar balances of the countries of the sterling group. She will ask, too, that the position should be tidied up in respect of Britain's foreign indebtedness. It is reported in some quarters that America will ask for a scaling down of some of Britain's obligations. That this is an unnecessary indignity, especially where repayment is not contemplated, hardly needs saying. But America would be within her rights if she wants to be satisfied that the sacrifices she makes will be put to legitimate use by Britain and will achieve their main purpose of ensuring the stability of sterling and to that extent of international finance in general, as also the development of America's foreign trade. America can refuse to be content with a mere postponement of the evil day of disastrous slump in sterling.

Judging by the general basic cordiality of Anglo-American relations, it is quite reasonable to expect good results from the talks that are now going on in Washington. It is unlikely that America will either consent to devaluation of sterling or refuse the help that is necessary for its maintenance. For the U.S.A. has to reckon with the fact that costs in the States are distinctly higher than in Britain and that it would be extremely risky to have the handicap of lower sterling added to it. She would also require that, while the sterling area may continue in existence, the Empire Dollar Pool should be split up so as to enable the individual members to utilise their dollar resources for imports from the U.S.A. On the question of Britain's indebtedness, it is doubtful whether America will be insistent on the acceptance of her views and whether she will be successful if she should choose to be so. The separation of the dollar balances of the Empire countries, if it should come about, would in itself constitute a partial solution of the problem of Britain's war debts.

On the basis detailed above, it is reasonable to presume that American influence will be exerted in favour of steadyding the position as it obtains now. If the cloud of a heavy adverse balance is lifted off the future of sterling, then there would be no reason to apprehend a serious or immediate break. And it seems probable that more will be done than cushioning the effects of peace on Britain's national currency. By all tokens, the U.S.A. is prepared to play as big a role in post-war reconstruction as in the conduct of the war. The scale of foreign lending which the U.S.A. is prepared to truly American. And if at the same time the Empire countries are provided with dollar balances for a start, the outbreak of

international trade must be deemed bright, in so far as the financial prospects can brighten it. The difficulties of maintaining production to levels of equality with existing demand are no doubt there; and it will be some time before they will be surmounted. But the task of saving the exchanges from the unsettling effects of peace will be lightened considerably by the measures which America is now said to contemplate.

The toughest part of the problem on hand is in regard to the future of the rupee rate. The future of India's national currency considered by itself offers no problems of a specially complicated nature. For, if anything, the war has removed what complexity there was in the past by enabling India to pay off her foreign debts and even make provision for her liabilities in a comparatively distant future. Her normal trade balance is in her favour; and if there may be need to increase her imports of machinery, there will also be the facility of cutting her imports of consumer's goods. And back of all this there are the colossal sterling assets. The uncertainty arises firstly from the doubt in regard to the realisability of these sterling assets and secondly, from the ease with which our currency and exchange can be manipulated by the British Government, if India should fail to inaugurate a National Government in a short time. If the experience of the last post-war period suggests strongly the repetition of high exchange rates, reverse councils and the frittering of our foreign assets, the present position of Britain provides an even stronger incentive than was present a quarter of a century ago. The strictly economic factors and forces that are relevant to the question of the future of the rupee are quite clear and leave no room for doubt. Any case for raising the external value of the rupee must reckon with the low internal purchasing power in the first instance, the frozen character of our foreign balances and the uncertain nature and volume of our trade balances. But as a practical question, it obviously depends far more on the political constitution than on the financial and economic outlook of this country. If at least a small fraction of our politicians in every party would give a little thought to the dangers to which India would expose herself by continuing the present deadlock, the deadlock would soon be a thing of the past.

A Mineral Development Policy

Any comprehensive plan for the economic development of India must be based on a well-thought-out scheme for the proper exploitation and utilisation of the mineral wealth of the country. The importance of the mineral raw materials is well indicated by the fact that nearly 50% of the imported goods are manufactured out of mineral raw materials and all the key industries of a nation, electrical, mechanical or chemical, have to depend upon the mineral raw materials for steady progress. The mineral resources of a country are the basis of a wide variety of capital goods, consumer goods and machine tools. Unless a rational policy governs the extraction, exploitation and use of the metals and the minerals, serious gaps may be caused in the national economy and no sustained effort can be made for the increase in the standard of living of the masses, let alone assuring reasonable employment for the unemployed.

There are many special reasons why India should not lose any more time in evolving a comprehensive policy for the mineral wealth of the country. Firstly, it is necessary to correct, on the eve of the transition to a new set of conditions likely to prevail in the near future in the national and international spheres, the haphazard growth of the mining industry in India. Owing to historical reasons mining is concentrated only in a few areas and, minerals being a wasting asset, these sources may be exhausted sooner or later and the country will have to depend on foreign countries for their supply. The need for State intervention also arises out of the fact that there is wastage going on in mica and coal, to mention only the more noted examples. Vast tracts in Bihar, Central India, Assam, Eastern Ghats and the Eastern States Agency have not been surveyed yet; and unless India's resources are fully known, it will not be possible to decide how far this country has to depend on foreign sources, how far we can allow exports of our minerals and how the conservation of vital raw materials can and must be secured. At present, owing to inadequate knowledge of the hidden wealth of India, we are depending upon foreign countries for several vital minerals. The glass industry, for instance, is excessively tied down to the imports of foreign materials and it has been

recently pointed out that sufficient quantities can be found in this country to keep this industry on a stable level. The case of abrasives is another instance to emphasise the argument. Wartime prospecting has happily revealed that the scope for mineral development in this country is indeed vast. Experts have pointed out that possibilities are great with regard to barium, aluminium ore, graphite, gypsum, iron ore, talc, and tungsten. It is reported that we can successfully take up the manufacture of finished materials such as silica, garnets, corundum, lime, magnesia, etc. It is further known that India has large deposits of bauxite ore and that the manufacture of bichromite, titanium oxide and vanadium oxide could be successfully undertaken. As the manganese ore available in this country is of high quality the manufacture of dry batteries, ferro-manganese, manganese steels and other alloys can be taken in hand. The paint manufacturers are sure that, since raw materials are available in plenty, the scope for their industry is wide. The non-ferrous industries are now carrying on a brisk campaign of educating the public on the bright opportunities before this country to develop mineral industries and opine that the supreme need of the hour is a correct mineral policy suited to national requirements of post-war development.

Looking at the need for a rational mineral development policy from the standpoint of international co-operation it is clear that this country should get ready with her own plan of conserving and using the mineral resources for the maximum possible use. There is a widespread suspicion in the industrial circles that Clause 4 of the Atlantic Charter may not be applied in the true interests of this country. The official statements of the U. S. Government regarding the use of the atomic energy and the recent report that the U. S. Disposal Programme aims at securing the rare metals and minerals of the world in exchange for the U. S. surplus stores to be disposed reveal clearly that unless India is ready with her determined policy regarding the use of her minerals foreigners will succeed in draining away this much-needed wealth. Clause 4 of the Atlantic Charter stipulates the ready availability of minerals and raw materials to all countries in the world. The sentiment expressed is, as usual, fine but in actual practice the abiding interest of the Indian industrialisation may be sacrificed in the name of international co-operation. The Government of India should not, therefore, be caught napping but should be prepared to outline how far and in what lines they can co-operate in the plan of giving equal access to the sources of minerals for all the countries of the world. The non-ferrous metal industries of India have grown well during the war and have done yeoman service for speeding up the war effort. They have to be protected from unfair foreign competition and regular supplies of certain raw materials required by them have to be secured from abroad. These objectives cannot be secured unless the Government of India evolve a rational mineral policy for this country.

The Six Point Plan for a new mineral policy outlined by Professor D. N. Wadia, Mineralogical Adviser in the Planning Department is therefore most welcome. In order to derive the maximum benefit from our mineral resources for this country and for the world he has recommended the following measures:—(1) Attainment of mineral and metal self-sufficiency, as far as possible; (2) stoppage of exports of key minerals such as manganese, chromite, ilmenite, sillimanite, phosphates and refractory minerals; (3) local manufacture of metals and products, now imported from abroad, from Indian raw materials, e.g., aluminium, alloy steels and allied alloy glassware, etc.; (4) revision of mineral taxation, royalty and lease laws; (5) framing of a new mineral export and import tariff; and (6) a progressive change-over to state ownership, where economically feasible, of the coal, petroleum and base metal mines. He has rightly deplored the present-day policy of extracting key minerals mainly for export and the wastage is indeed too serious to be countenanced any longer. During the past forty years nearly 40 million tons of high grade manganese ore have been exported and at poor prices. The coal resources are running short and unless careful husbanding of the resources is achieved crisis will be up in the course of a decade or two. Mr. Wadia voices forth the demand of the nation when he says that India's raw minerals must be locally treated before export. While certain minerals have to be regulated in exports the key minerals should not be exported at all without compensatory return or barter of equally important minerals and metals in which this country is deficient. In order to regulate the import and export of the valuable minerals the tariff schedule also will have to be changed. The creation of a Minerals Board to examine the

existing tariff and suggest modifications has also been advocated.

The tendency of placing mineral resources on a provincial basis is quite unsuited to the planned development of industries in all parts of this country. Whether the scope for nationalisation of the key minerals is attractive or not, Central control cannot be postponed any longer if post-war plans are to be initiated with success. When the new sources of minerals are well exploited it will be found that the mineral industry is a good source of revenue for the State. At present the revenue from mineral taxation is meagre compared to the revenue derived from Agriculture. We would suggest a suitable revision of the minerals taxation in all the provinces with a view to increasing the yield for financing the development of the mineral industry.

There is another aspect of the question that needs to be emphasised. India is a land of continental distances and the sources of mineral raw materials are widely scattered throughout the length and breadth of the country. Unless the transport charges are favourable the chances of quick and profitable exploitation of minerals and development of key industries are remote. If the manufacture of the majority of the finished goods which require the minerals are to be encouraged it is absolutely necessary to revise the railway rates. Minerals are heavy and bulky, yet, their supply being so vital for the steady growth of industries in all provinces and States, the internal transport costs should be kept within reasonable limits. Now that the Indian Railways are entirely Government-owned it should be easy to evolve a favourable rate policy to support the new mineral policy advocated by Mr. Wadia.

Marketing of Agricultural Produce—VI

(Contributed)

The main purpose of the supervision and control exercised by the Market committees over the market area is, as pointed out in the last article, the protection of the seller's interest. This week I shall deal with the various services which the Market committees are rendering the ryot in other directions. Among these, the provision of market intelligence should be considered most important. Prompt information about the rates prevailing in the neighbouring markets and the exporting centres enable the seller as well as the committee Staff to assess the reasonableness of the prices offered by the merchants. The merchants themselves are assisted in arriving at a rate which would give them a fair margin of profit. The bigger trading houses in the ports will be sending daily instructions by wire of the ruling rates to their mofussil representatives to guide the limits of purchase, but this information they keep to themselves, and it is seldom available either to other merchants or the sellers. Neither is it within the financial competence of an individual local merchant or producer to arrange for such a service for himself. In this respect, the market committees have filled a vital gap.

In the supply of market information, the Tiruppur Cotton market committee is showing great zeal. The committee is publishing a daily Market Report consisting of the following items of information (1) Daily prices of cotton ruling in the markets of New York, Bombay and Tiruppur. (2) Particulars of daily transactions in the Tiruppur market; (3) Figures of stocks at the end of every week, and arrivals and despatches during the week. There are now about 125 subscribers to the Report in and outside the market. The committee is getting daily by "Express Telegram" the opening rate in Bombay Four telegrams, three express and one ordinary are received daily from Bombay. Two issues of the daily market Report, one in the morning and the other in the evening are cyclostyled and circulated by the cycle-peon employed by the committee. In 1940 the committee was registered as a News Agency and the telegrams from Bombay enjoy the usual press concession rates.

In Adoni and Nandyal, the two other regulated markets in cotton in Madras Province, the committees receive daily market Rates from Bombay and give it the widest publicity among the merchants and sellers. In the Nandyal market as the market yard is yet to be established, the day's rates have to be sent to many places; the local merchants also co-operate with the committee in distributing the informa-

tion as quickly as possible. In the supply of market information, the main consideration is the importance of the market in relation to the commodities it deals in and the industrial areas catered by it. The producers should also be sufficiently educated to understand the value of market news and to take advantage of it. In several markets in Hyderabad, the authorities tried to distribute information among the ryots in the villages by means of leaflets, etc., but as it was found to produce only a very indifferent response, it had to be given up. In Hyderabad, the markets situated on the frontiers, such as Jalna, Raichur, Latur and Warangal enjoy a relatively greater prominence. In all these markets, the latest quotations from Bombay in, cotton (wheat, groundnut, jowar and tobacco also) are supplied either by wire or through Radio. In the grain markets, outside rates are not so keenly looked for, especially if there is no considerable export to distant centres. In all the markets in Bombay and the larger markets in the Central Provinces, the latest Bombay and New York quotations for cotton are published before the day's sales begin.

In the enforcement of correct weights and measures, the committees are rendering an equally important service. In Bombay, the stamping and checking of weights and measures is a responsibility of Government Inspectors, under the provisions of the Bombay Weights and Measures Act, and as their powers extend to the whole of the Province, the regulated markets also fall within their jurisdiction. Section 12 of the Bombay Agricultural Produce Markets Act provides for the settlement of any differences that may arise between the Inspector and any other person in respect of "the meaning and construction of any rule or regulation or as to the methods of verifying, adjusting or stamping any weight or measure or weighing or measuring instrument." The market Committee is to decide such disputes and an appeal from its decision lies to the appropriate officer under Government. Most of the bigger markets in Bombay and C.P. have provided weighbridges; and as I have already mentioned in my previous article, the weightman slip signed by the licensed weighman is the best guarantee against fraud. In other provinces, the committee staff regularly check weights and measures; and complaints about the use of false weights or of fraud or manipulation in weighing are few and far between. Dry measures are even now permitted in British India; in Hyderabad these were abolished by a proclamation on July 7, 1942 and the diversity in the units of price quotation was also ended; the palla of 120 seers is the only unit of quotation allowed since then. The Government is also trying to popularise officially manufactured weights.

The Disputes Sub-Committee is another genuine source of relief to the ryot. The very existence of such a committee and the awareness that any unfair or unreasonable demand will be made the subject of public discussion and an open verdict provides a potent psychological check on unscrupulous dealers. It is noteworthy that disputes in the regulated markets are very infrequent and in case of disputes arising it is seldom that the parties refuse to abide by the decisions of the Superintendent or the disputes sub-committee—cases of appeals being taken from the Committees' decisions are extremely rare. Some markets do not report even a single case of differences between the producer and dealer, for a whole year.

Prohibition of unauthorised deductions and discounts from the price of produce is a point I have already dealt with. It has not of course been possible to do away with brokers and commission agents altogether, but when the market committees have fixed the rates of fees these functionaries could charge, they also see that they do some real service to the producer. The Bijapur committee has a provision in its bye-laws which makes the adaty responsible for the insurance under fair terms of all cotton that comes to him for sale, whether it is sold on the day of its arrival or stored in godown for a longer period, without exception. Each committee has its own rates for market charges; the variations between one market and another in this respect could be explained by the element of deference to tradition, which enters as one of the considerations in fixing these rates. But everywhere there has been a drastic reduction from rates obtained previously. The Nanded market committee (Hyderabad State) also maintains a Gorakshan and a Hospital from out of the funds collected from the dealers for these specific purposes. The institutions are very popular, the hospital treats from 15,000 to 20,000 patients a year and the Gorakshan is maintaining about a hundred cows, and stud bulls, under up-to-date hygienic conditions.

OUR LONDON LETTER:

Militant Backbenchers in Labour**Government "Appeasement" Frowned on****Markets Stagnant, not Depressed**

LONDON, Sept. 1.

The most remarkable thing about the new Labour Government is the evidence that the Labour politicians who compose its Front Bench are on trial. The jury is their own followers, who display plenty of loyalty, but are ominously silent when the Party leaders, conditioned by five years in the Coalition Government into an amiable mood towards Mr. Churchill and his decimated Conservatives, shows a tendency to indulge in political "appeasement". The speeches of Messrs. Attlee, Bevin and Dalton all furnished striking illustrations of the new critical attitude of Labour M.Ps. towards their own leadership.

For example, Mr. Attlee's maiden speech as Prime Minister began with a handsome tribute to the war leader, Mr. Churchill. The Conservative weekly "Spectator" comments, "It was noticeable that virtually all applause came from Conservative benches and next to none from the Prime Minister's supporters. What this vast Labour majority will do with itself before it finishes is a matter for singularly interesting speculation".

It certainly is. In fact, it is not a day too early to realise that over a larger part of the next five years' significant British politics—with emphasis upon "significant"—will be strains and tensions within the Labour Party and not as heretofore, the only partially sincere shadow-boxing between the Labour and Conservative politicians.

For this is the youngest Parliament in many years and, at least on the Labour side, much the ablest. Virtually all the maiden speeches of the newly elected Labour M.Ps. had freshness and vigour and intellectual content. Some newspapers are already talking about a "split" in the Labour Party; but that over-simplifies the prevailing situation. It is much less a question of "split" between the Right and Left wings of the Party, for that has existed for many years, as it is the groping efforts of the rank and file to hammer out a Labour Government and Labour policy which mirrors their views. A political commentator recently opined that the Labour back bench is so talented that it could furnish "three Front Benches" if the present one proves to be unsatisfactory. That may be an exaggeration but most Lobby correspondents would probably agree that any given Labour Minister who proves unsatisfactory could easily be replaced.

Mr. Bevin, for example, has obviously greatly disturbed the rank and file by his adoption of "continuity of foreign policy" and, specifically, by his Churchillian attitude towards Greece and Spain. The rank and file is apparently somewhat disconcerted to learn that Mr. Bevin, during the years he was in the Coalition Government, had been deeply interested in foreign affairs and in closest friendly contact with Mr. Eden by whom he had been taught the fundamentals of foreign policy as envisaged by the Conservative Foreign Secretary. Except for the "Daily Herald", whose views are mainly influenced by the directors drawn from the Trade Union Congress, the labour press are not at all pleased with Mr. Bevin's speech.

The third minister to surprise, and perhaps disconcert, the able fledgelings on the Labour back benches was Dr. Dalton, whose explanation of the Government plans for "control of investments" proved much more conciliatory towards the City of London than many members had expected. Dr. Dalton took pains to explain that the plans in the main were designed merely to establish priorities in the post-war rush for new capital—he mentioned coal, iron and steel and housing as fields where fresh capital would be wanted—but the chief surprise of his remarks came in an announcement that the Government have no intention of interfering with those industries and concerns which are using their own cash reserves.

This statement, issued in that flat and unqualified form startled those members of the rank and file who are familiar with economic issues—their number is greater than in the old days. Largely as a result of war production, many industrial concerns have very large reserves. Apparently, they will be allowed to commandeer as much of the country's limited supplies of capital goods and labour as they see fit, so long as they pay for it from their cash reserves; at this stage, the Government does not even plan to offer them guidance, though with the urgent necessity of increasing exports, it has heretofore been taken for granted that the Government would canalise the country's efforts in the direction of increased capacity for exports. Dr. Dalton's announcement caused a buzz of discussion, but no open comment. The Conservative weekly "Spectator" comments somewhat dryly that probably Dr. Dalton had not yet had time to think his way through the whole problem.

It is probably incorrect to say—as the Left press has been rather inclined to say—that the new Labour Party back benches are further to the Left than the Labour Ministers. There is really very little evidence of that. What is true, however, is that these back benches are terrifically allergic to the Conservative Party and Conservative politicians. They would not, apparently, object to the new Government moving slowly and cautiously so as to educate and carry the new Labour voters with them step by step, but anything savouring of "appeasement" of the powerful forces aligned against the

Our American Letter**U.S. AID FOR CHINA****Large-Scale Private Trade Expected**

Chinese industrial representatives are expected to come to the United States soon to pick up where Indian industrialists left off in efforts to obtain U.S. capital and consumer goods.

A number of observers think Chinese missions here will accomplish much more in actual business transactions than has been achieved or will result from recent visits of Indian government and industrial men to this country. This is not a reflection on the work of the Indians, but business observers think Chinese buyers here can accomplish more than Indian buyers for the following suggested reasons:

1. China is regarded here as the country worst ravaged by Axis aggression. From this standpoint, official and private sympathies appear to favour China even above Russia and England for priorities on purchase of equipment needed to restore national economies.

2. Despite Kuomintang-Communist fights, China is regarded by many American investment interests as more "politically stable" than India—hence they are apt to be more co-operative toward the Chinese if future trade relations involve private credits.

3. Greater American familiarity with the Chinese trade, and the expected lack of restrictive factors involved in trade with India such as blocked exchange.

4. Chinese missions here may have an advantage in "timing" over Indian missions who visited this country while war production was still in full swing.

The Chinese Government is expected to handle most of the purchases of U.S. equipment and goods during the first few months—perhaps through extension of lend-lease arrangements which were under negotiation during the months preceding Japan's sudden collapse. It was believed Chinese and American officials then were arranging shipment of up to \$600 millions worth of American goods as soon as contact could be established through allied seizure of a major Chinese port. This reported "deal" might be revised to meet the changed conditions and be used to handle initial shipment of post-war goods.

But private business interests are already looking forward to resumption of trade with China on a large-scale as soon as governmental handling of trade diminishes. The China-America Council of Commerce and Industry reports a Chinese industrial mission will arrive by October under leadership of P. N. Woo, chairman of the board of the National Federation of Industries, representing some 600 Chinese industries.

The China-America Council has already spent several months arranging for such a mission, and a large number of its members have reported they are ready to act to re-establish trade as soon as conditions permit.

Chinese purchasing missions to this country are apt to regard the U.S. as their primary source of supply, according to interested business circles here, whereas some Indian groups have naturally looked to Britain first as primary source of supply and turned to the United States only when it was necessary. American firms do not make this observation in any sense of criticism—they regard this situation as a natural outgrowth of India's long political-economic association with the United Kingdom. But they believe this situation will give Chinese missions here a psychological advantage that the Indians have not had.

Chinese buyers may also get a "running start" because of the estimated \$300 millions in frozen funds held in this country by the Chinese Government and nationals. The U.S. Government has reportedly paid hundreds of millions of dollars to China in payment for goods, services and facilities furnished to U.S. military forces. China is also expected to receive a good-sized loan from the U.S. Export-Import Bank. Recent legislation authorised this bank to make foreign loans

totalling up to \$3,000 millions, and some observers guess China might receive one-tenth of that total.

Members of the China-America Council predict China's first needs from America will include large amounts of drugs, medicine and foods—a large part of which may originally be handled through UNRRA—capital goods such as transportation and mining equipment, flour milling machinery, equipment for repairing ports and harbours, textile machinery and trucks. They predict electrical equipment, machine tools, and equipment for coastal and river shipping will be among the items next in demand for China's rehabilitation.

An 18-month survey of production plans in America's twenty leading industries causes the Committee for Economic Development to predict substantially full employment within one year as business and industry reconvert to peace production and take up the slack of temporary unemployment.

The survey indicated American manufacturers plan to produce 41.6 more goods in their first full post-war year than they did in 1939, and that their products will be worth \$80,515 millions compared with actual production of \$56,843 millions in 1939. Production of durable goods is expected to increase by 50.3 per cent, and of non-durable goods 35.7. The greatest anticipated increase is in automobiles, trucks and tractors, where a 75.8 per cent. growth is expected. Production of other transportation equipment is expected to increase 74.3 per cent over the 1939 figure.

A danger to fulfilment of the above projected increases in production is seen by a New York Times financial writer, unless the administration's reconversion policies are immediately revised. The writer is particularly concerned over the Government's decision to continue and perhaps intensify its price-control programme, but to authorise wage increases in all cases where price ceilings will theoretically not be affected. "The only result of such a policy", he writes, "will be to put marginal concerns out of business, to delay and reduce production and to create unemployment."

(Continued from previous page)

Party would cause upheaval. They seem to crave toughness in their leadership.

Just how much toughness there is on the Government Front Bench is, then, a political issue of high importance.

Mr. Shinwell, the new Minister of Fuel and Power, in his first speech since he became Minister, remarked that the Labour Government would "not haggle" over the price it paid in buying out the colliery companies. This made very favourable impression upon the City of London and prices of colliery shares have shown a distinct upward trend. Furthermore, one local association of colliery companies, Lancashire and Cheshire, has come out with a statement pledging its full co-operation to the new Government in effecting transition from private ownership to government ownership. But this coal field is among the weaker brethren with less of its output handled mechanically than the average countryside. In haulage, for example, one man in Lancashire field hauls only 3.33 tons per day compared with the average for the country of 4.90 tons and a high of 8.24 tons in Derbyshire.

The "Financial News" commentator, discussing this rather hush-hush movement into colliery shares, says that it is based on the belief that the Labour Government in its first flush of its nationalisation programme, will be more liberally inclined than it may be in a later stage. This belief may possibly have sound basis. The Labour politicians may be strongly tempted to push nationalisation of the coal industry through at top speed in order to prove that they are capable of getting results. But anything looking like excessive generosity to a section of the British business community, which has been a headache to the country for many years, would almost certainly provoke revolt from those somewhat militant backbenchers. In addition to whatever sum that may be needed to buy out private owners, the Government will be obliged to raise from the new capital market something like £150,000,000 to £200,000,000 for modernisation of the coal mines.

Broadly, the markets have gone stagnant rather than depressed. Price fluctuations have lost their former violence and now move within a narrow range.

Editorial Notes

Post-war Unemployment

The need for planned development of Indian industries and agriculture is now appreciated by many who find that the abrupt end of war has left this country unprepared in many respects. While re-conversion has become a pressing problem the necessary prerequisites for its success, viz., ready made schemes for giving the demobilised and others affected by the cessation of war effort profitable employment are absent. Mr. Sanyal, Secretary of the Appointments Board of the Calcutta University estimates that about 27 lakhs of people would be affected by the sudden end of the war. An industrial plan is urgent, as industries alone can solve the problem of unemployment, but owing to several reasons the Government of India could neither evolve an industrial plan nor procure machinery or technical personnel from abroad. Mr. Sanyal therefore urges the Government to go ahead with those development schemes which do not require imports of machinery and technicians. He suggests that the Road Development Plan should be completed in ten years instead of in twenty years as proposed. Since most of the demobilised soldiers have come from the villages and are not, even today, specially trained for technical jobs the initiation of schemes under the Khareghat Plan for Indian agriculture and animal husbandry would give considerable relief in the immediate future. Another avenue of employment is to have a nation wide housing drive on the model of the programme adopted in Britain. If building activities are given fillip the prospects of employment need not be discouraging. As for the educated unemployed, whose ranks are swelling every year owing to the great output of our universities and schools, an early launching of the important schemes under the Sargeant Plan would be very valuable.

Already, owing to hurried cancellation of the war contracts, thousands have been affected and the news of workers being discharged from the factories and workshops are streaming in from several parts of this country. No doubt even in advanced countries like the United States temporary unemployment could not be avoided by the transition arrangements, but in India, owing to extreme poverty of the people and lopsided development of the national economy, the need for avoiding acute unemployment should be recognised as paramount. Something must take the place of the huge expenditure on defence and a policy of public works is considered essential. It is to be hoped that the authorities would realise the urgency of attending to the problem of unemployment in the near future, implement the postwar schemes without delay and adopt a policy of de-control to aid industrial expansion in this country.

Cottage Industries in Indian States

While fostering the growth of large scale industries rulers of Indian States have not been unmindful of the need for the development of Cottage industries. Cottage industries provide means of subsistence for many thousands of the population.

Foreign competition and mass machine production have always worked against cottage industries. To give cottage industries a chance of existence Indian States have organised Department of Industries.

Handloom weaving is one of the most flourishing cottage industries in Indian States. Hyderabad has a Central Techni-

cal Institute where weavers, dyers and others are trained in up-to-date methods. Mysore has been devoting special attention to this industry which has about 30,000 fly-shuttle looms and produces goods worth Rs. 1 crore. New designs are furnished to weavers from time to time and loans are advanced to them for purchasing improved looms. Bikaner has specialised in the manufacture of cotton Khes textiles and printed bed-sheets.

The arts and crafts of Kashmir have excited the wonder and admiration of the world. The State technical Schools devote much attention to wood carving work suited to modern needs such as screens drawing room sets and smoking cabinets and the craft has obtained technical perfection. Due to the abundance of raw wool in Indian States several woollen industries have sprung up. The carpet industry in Kashmir, which dates as far back as 1423, is making rapid progress and Kashmir products have an enviable place among the hand woven carpets of the world. The Bikaner wool is more highly valued in U. K. than Australian wool. In Hyderabad, a Government Carpet Factory was set up at Warangal to revive this industry. In some of the States, sericulture has come to occupy an important place in the rural industries. The sericulture industry of Mysore, the largest and the most important Cottage industry in the State, is providing employment to a sixth of the population. Experimental and demonstration silk farms have been established in all silk areas. In order to give impetus to the sericulture industry the Kashmir Government have sanctioned the extension of mulberry plantation at an annual cost of Rs. 17.25 lakhs. A nursery for the supply of eggs of improved variety Eri-silk worms is being maintained in Cochin State. Owing to the rise in prices of paper due to the war the idea of reviving indigenous paper industry was taken up in Indian States. Attempts were made to improve the quality of paper. Kashmir patronised the hand made paper industry by purchasing a large quantity for use in Government offices. Mayurbhanj embarked on a programme for the development of hand-made paper. If the progress made is kept up the States will have a balanced industrial economy with both large and small scale industries.

Agriculture in Australia

How inspite of shortage of labour, of materials and the occurrence of a sixteen months' drought, Australia was able to adjust her food production to the expanding needs of the war, is an achievement which provides valuable lessons for India. Before the war 500,000 persons were engaged in Australian rural production. Within a year after the Japanese declaration of war, this figure had dwindled to 382,000, the rest having joined the forces. The gap had to be filled up by women and girls who took the place of their husbands and brothers on farms and cattle stations. The Women's Land Army trained City girls to do work on Farms. Many women took to work on canneries and though unaccustomed to it till then made quite a success of it. The war demand on Australian food production was much larger than her peace time requirements because in addition to her internal demands and to feeding Australian, British, United States and other Allied servicemen in the South West Pacific, she had also to send food to Britain, Egypt, India, Ceylon, Burma, Haifa, Madagascar, Mauritius and liberated Europe. The most effective device made use of to meet this demand particularly to clear the bottleneck of transport, was

dehydration. Dehydration on a national scale began in Australia only since 1943, when 5,670,000 pounds of vegetables were dried from fresh vegetables weighing about 300,000 tons and worth about Rs. 91 lakhs. The Commonwealth programme for the current year provides for the production of dried vegetables worth Rs. 4½ crores. The largescale application of machinery to agriculture did the rest. The pre-war vegetables and potato acreage has been doubled, through mechanisation. Before the war pea and bean crops were harvested by hand. The most arduous part of this job which was a slow and tedious one before, is now being done by machinery. Potatoes are dug by machinery on many farms. The co-operation of every section of the community in production, the increasing use of farm machinery and the largescale employment of de-hydration gave Australia enough food during the war for her domestic needs and external commitments and assured for her postwar years a sure foundation for her rural economy.

Disposals in the Mid-east

The problem of disposing the fixed assets constructed by the British forces in the Mideast during the war (e.g. railways aerodromes, and buildings) is being attended to with speed and thoroughness. A Central Disposals Executive operating from Cairo controls the local boards entrusted with the task of disposing of the surplus transport and other stores. The policy governing the disposal programme pays attention to national need of Egypt and the essential industries are given first choice. Though there is no intention of disposing of the stores at nominal prices as was done after the last war, care will be taken to avoid any inflationary tendency. All the property is being surveyed and the cost of each asset is calculated separately. The valuation is at present kept a secret. The work done by contract on buildings alone is estimated to have cost £150 million. To facilitate orderly sale of the assets it has been decided that sales over £5000 have to be referred to the executive of the disposals department, sales over £10,000 to the Resident Minister's office and sales over £25,000 to the War Office.

The railway from Kena to Safaga on the Red sea has been sold out but various other lines, small branches and sidings remain. There are also jetties, aerodromes, hospitals, barracks and schools to be disposed of, besides the oil pipe lines from Cairo to Suez and storage works. The big installations at Suez and in the Western Desert for pumping water will indeed be an excellent acquisition for the Egyptian Government. The well equipped motor repair shops at Mex near Alexandria may be purchased by the Egyptian Government in view of their value for the rising industries in that country. Reinstatement is a problem immediately linked to the satisfactory and profitable disposal of valuable assets. For instance an aerodrome costing £750,000 may have been built on a piece of land worth only £10,000. Bringing back the land to its original condition, it is estimated, would cost as much as it cost to build the aerodrome and, therefore it is more advisable to purchase the land outright and to dispose of the aerodrome and its equipment at the most opportune moment. It has also been made clear that the existing trade channels would be used for the disposal and in view of the fact that Egypt is now on the threshold of active industrialisation the Egyptian Government would seize the opportunity for acquiring valuable assets which will aid in increasing national pro-

duction and in assuring profitable employment for hundreds of skilled and unskilled workers.

"The Economist" and Dollar Scarcity:

Big Business in Britain has not taken kindly to the Bretton-woods proposals and a campaign is going on in the British press for amending them to suit the convenience of Britain's export trade. The London "Economist" has started marshalling facts and arguments to show how England has to readjust her house in order and prepare for a fifty percent

increase in exports, if the standard of living of the nation is to be maintained. It is felt that an answer is necessary to the activities of a powerful section of American big business which sharply criticised the way in which Britain is regimenting the sterling area for her own purposes. The "Economist" has taken up the question of the world-wide scarcity of the dollar and links it with the Bretton-woods proposals. It is argued that as a result of a tremendous wartime expansion in America's productive capacity, the world will be faced with a severe shortage of dollar. The U. S. Government is now com-

mitted to Full Employment policy and to achieve this an annual export surplus of 3 billion is proposed to be maintained. If the tariff levels are lowered, it may aid American exports, but some damage to her own industries is also entailed. The Reciprocal Trade Agreements Programme of Mr. Cordell Hull is as much an emphasis on the U. S. exports as on the imports into the States. It is recalled that even before the war there was an annual shortage of dollars to the tune of one-third of a billion and, in view of the tremendous increase in U. S. productive capacity, the postwar scramble of the nations of the world for the U. S. dollar is bound to be much worse than ever before. America proposes to tackle the problem of dollar scarcity without injuring her own ambitions by instituting a policy of granting liberal foreign loans. While American loans would be happily welcomed in all the war-worn areas, their utility will change when the transition period is over. Further, a country cannot for long play the creditor and at the same time avoid an import surplus. The present policy in America seems to be to lend and at the same time maintain an export surplus, all to back up her Full Employment policy. This obviously would destroy the chances of international economic equilibrium when the transition years are left behind. Britain further fears that the full employment policy in U. S. would release American export forces calculated to damage her prospects in the international markets. The "Economist" goes so far as to say that "the old protectionist instincts are now most powerfully reinforced by the new doctrine of Full Employment" in the U. S.

While there is a great force in the Economist contention that the U.S. should initiate a policy which should help to remove the scarcity of the dollar—by gearing up imports, lowering tariffs, and increasing internal consumption—it is conveniently forgotten that British policy of Full Employment, export drive and freeing of sterling assets are no more international in outlook than the U. S. attempt to maintain the level of wartime employment. That dollar scarcity should be tackled if Brettonwoods should succeed may appeal to many, but Britain which is determined to block the war time balances of most of her allies can spare America her precepts in economic internationalism. The chances of dollars being in comparative plenty will be furthered if Britain will let her creditors come into the world markets as buyers. But against that course, Britain has sternly set her face.

Prospects for Indian Rubber:

If peace has brought back the scare of competition from synthetic rubber the immediate problem before the Indian rubber industry is to get prepared for a new set of circumstances that would arise in view of the rapid reclamation of the Malayan estates. Synthetic products have no doubt made the best of the wartime advantages but the cost of production seems still in favour of the natural produce and, in the case of rubber, experts are agreed that, in view of the special qualities of natural rubber and the peculiar advantages and the disadvantages of the synthetic rubber, the two are likely to exist side by side in an expanding market. The real difficulty for the Indian planters would probably lie in readjusting the prices so as to keep parity with the world prices. Mr. Lefevre, Chairman of the Rubber Section of the U.P.A.S.I., speaking at the recent annual meeting, said that "Postwar internal trading in rubber should be developed on the basis of Indian manufacturers remaining in the market for the maximum possible consumption of Indian rubber." The fact that India is both a producer and consumer of rubber should be taken advantage of for national economic development. Since the fall of Singapore the South Indian rubber companies enjoyed good dividends, from 8.5% in 1939 to 13.5% in 1941 and 24% in 1944. This trend will surely be reversed when the Malayan competitor enters the field again. The urgency of readjusting the price structure is underlined by the rapid move of events and the government of India also can help in this matter. While the Government of India follow the example of the Ceylon Government in the matter of grading and price differentials they do not follow them in the matter of price offered to the grower. They are offering to the rubber grower a price which is below the rate offered by the Ministry of Supply to the Ceylon rubber grower. They must pay the U. K. Ministry's buying price to the Indian rubber grower. Besides if the Government of India abandon the system of fixing prices "until further notice" and adopt a system of fixing the prices for a period, it would help the rubber industry to budget its finances over an annual period without worrying about a possibility of changes in the prices in the middle of the year.

At present many of the rubber companies are composite in type dealing in cardamom, tea, cashew nuts, besides rubber. While this composite type of companies may have certain advantages for the com-

... and the bushman's fury spread in resonance through tropical thickets, picked up in relays wherever his command prevailed. A crude way for a Chief to call his men to action!

The exigencies of modern life demand swifter and more efficient means of communication between the farthest corners of the globe. The telephone & telegraph unimpeded by mountain or sea, depend on an adequate supply of high-efficiency cables to carry messages.

Laid out along the most modern lines, our works are equipped with the latest type of machinery for the production of ultra modern cables. A highly skilled technical staff exercise rigid control at every stage of production ensuring strict conformity to any specification—i.e. or international. Right now we can only state for electrolytic H.D. Bare Copper Wires.

A closer system of tele-communication will be an essential factor in the industrial development of India. To this end we are equipped to supply the Nation's demand for cables of various types.

panies the possibility of accounting being quite unsatisfactory is there. The days of getting aids from the Government for keeping up the price cannot last long and every attempt should be made by the rubber interests to reduce the cost of production without undue lowering of the labour cost. Amalgamation of small units into big units and improvement in accounting methods would go a long way in the reorganisation of the rubber companies during and after the transition. Surely the best way of qualifying for maximum help from Government is first to reorganize and rationalise for purposes of free competition.

Belgian Social Security Scheme:

Over 12,00,000 wage earners and salaried employees in Belgium whose engagements were regulated by contract have been immediately affected by what might be considered a bold venture in the field of social legislation. This Belgian Government scheme, which later on will be extended to many other classes of workers, came into operation on 1st January 1945. Before the war, a large measure of social legislation did exist in Belgium but its practical efficacy suffered very much from the fact that many of its provisions were of an optional character. The new provisions inspired by the Atlantic Charter enlarge the scope of the social legislation that already existed, supplementing some of its provisions and introducing innovations in others. The general aim of the new scheme is to release all working men and women as completely as possible from want. For this purpose, old age pensions have been increased and a new minimum level fixed. A system of compulsory sickness and invalidity insurance has been set up based on the large national federations of mutual benefit societies and on regional offices administered by joint committees of employers and wage earners. An autonomous National Fund is entrusted with the task of administering the whole scheme. Under the new Legislative Order, the collection of contributions and the payment of benefits under the Insurance schemes will be very much simplified; because a single contribution will cover all insurances for both workers and employers. The contribution will be made up of 8 per cent of the employees' wages and an employers' contribution of 15½ per cent, the corresponding figure in the case of a salaried servant, being 8½ per cent and 15½ per cent of his salary bill. This total contribution of 23½ per cent of wages and salaries after deducting a sum for administrative expenses, will be allotted in a certain proportion to the several branches of the security scheme—old age pensions, Sickness and invalidity insurance, unemployment insurance, family allowances and paid holidays.

U. S. to Train Chinese Technicians:

As one of the foundations for expanding Sino-American post-war trade, the United States Government have decided to train Chinese students in America in a variety of skilled professions; according to reports, over seven hundred students have already reached America and an equal number or more are expected to join in the course in the next few months. The candidates are selected after a rigid examination by the Chinese Government and most of them are graduates of Chinese Universities with several years' practical experience in their

respective fields. After their selection, the candidates will be screened for adaptability by both the Chinese and the American Governments. Incoming trainees will stay in Washington for a few weeks to get themselves acquainted with American customs and in order that the authorities may ascertain their knowledge of English. During training, the United States Government Inspectors will be watching their progress. After a year's training the students will come back to China and work in a suitable position in any of the postwar reconstruction schemes. These students will receive on-the-job instruction while in America and their projects will vary from rail-road surveying, construction and operation to delicate chemical laboratory experiments. Of the 1400 and odd students who will be receiving instruction this year, 1200 will be financed by lend-lease, 110 by the office of Defence Transportation and the remaining, about 150, by the Chinese Government. The scheme is admittedly one designed to strengthen the economic bonds between China and United States. While for America there is much to gain by offsetting the growing Soviet influence, for China every help is welcome whatever the motives behind it.

(Continued from page 459)

It is reported that the lists for the provincial loans had to be kept open for full three days and that the response was not quite enthusiastic. It is not clear whether the amounts were fully subscribed. From enquiries made it would appear that subscriptions in Calcutta were mainly on account of private investors. In view of the extremely easy money conditions and the large balances with banks the lack of response for the provincial loans must be again traced to the underwriting arrangement. The underwriters who, in most cases, are some of the prominent banks would have subscribed to the loans if they had not any other interest. Under the present arrangement it would appear as though the underwriters would wish for the failure of the loans for if they were called upon to take up the balance not subscribed for by the public there is a clear gain of eight annas per cent and after some time it would be possible to unload holdings at a profit.

We have on more than one occasion pointed out that the underwriting arrangement should be discontinued. The poor reception to the loans even under favourable conditions emphasises this view.

« COAL PROBLEMS »

4

EQUIPMENT

SUPPORTING the miner who blasts or hews the coal from its matrix is a succession of machines and tools which are essential for his work—drills, tubs, haulage lines, ventilators, elevators, coal crushers, conveyor belts, and all the pit-head plant.

Modern methods of mining mean more machines. If they were at hand, increased coal

output would be assured, but because the resources of Allied factories were concentrated on putting weapons into the hands of our soldiers the coal industry has had to go short of the tools for the job.

As soon as replacements are available for worn-out colliery equipment the Industry will be better able to satisfy the growing demands of the country.

THIS IS NOT A PROSPECTUS BUT AN ANNOUNCEMENT

(A copy of this prospectus has been filed with the Registrar of Joint Stock Companies, Indore, and a copy duly certified under Sec. 277(A) of the Indian Companies Act 1936 has been delivered to the Registrar of Joint Companies, Bengal).

"Consent of the Central Government has been obtained to this issue of capital subject to the condition (i) that all money payable to the company in respect of this issue by persons in British India or by persons outside British India to whom the provisions of the Defence of India Act apply are received only in British India and are deposited in a bank in British India and (ii) that so much of the capital as cannot in that Government's judgment be properly expended until some uncertain future date is invested and kept invested in prescribed securities which will not be released until the Central Government (in consultation with the Crown Representative), is satisfied that the time has come to make corresponding payments for purposes which are consistent with the enforcement of any measures of control or restriction that may be in operation at the time when such release is applied for. It must be distinctly understood that in giving this consent the Government of India do not take any responsibility for the financial soundness of any schemes or for the correctness of any of the statements made or opinions expressed with regard to them.

THE MALWA VANASPATI & CHEMICAL CO., LTD.

(Registered under the Indore Companies Act No. VII of 1940.)

AUTHORISED CAPITAL - - - **Rs. 60,00,000/- (sixty lacs)**

Divided into 6,00,000 Ordinary shares of Rs. 10/- each.

PRESENT ISSUE - - - **Rs. 40,00,000/- (forty lacs)**

Divided into 4,00,000 shares of Rs. 10/- each.

The Subscription list will open on Monday, the 3rd of September 1945 and will be closed as soon as the present issue of the capital is fully subscribed.

Out of the above the Indore State has agreed to take ordinary shares of the aggregate value of Rs. 4,00,000/- (four lacs).

The Company's Managing Agents, Messrs. Mohatta Bros. Indore, its directors and their friends and relatives have already been allotted ordinary shares of the aggregate value of Rs. 10,00,000/-. The balance of 2,60,000 shares of the aggregate nominal value of Rs. 26,00,000/- are now offered to the public at par for subscription. Shares of the aggregate value of Rs. 7,50,000/- have been reserved for subscription to the public of the Indore State and they will be allotted to them provided applications to that extent are received within twenty days from the date of issue of the Prospectus.

The amount payable in respect of the shares are as follows:—
Rs. 2-8 per share payable with the application and Rs. 2-8 per share on allotment and the balance of Rs. 5 per share will be liable to be called up in such call or calls and at such intervals as the Board of Directors may in their absolute discretion determine. It is not intended to call up the said balance of Rs. 5 per share in the immediate future.

BANKERS.

THE IMPERIAL BANK OF INDIA, Indore.

THE PUNJAB NATIONAL BANK LTD., Bombay.

THE HINDUSTAN COMMERCIAL BANK LTD., Bombay.

REGISTERED OFFICE:

12, JUNA TOOKHANA MAIN ROAD, INDORE.

OBJECTS:

The objects of the Company are generally those that set forth in the Memorandum of Association of the Company, and in particular for production, manufacture and sale of vegetable products or Vanaspati. Vanaspati is a pure wholesome article of food, the nutritive value of which is almost at par with natural ghee and it is for this reason that it is largely and increasingly in demand in India and has become a popular healthy substitute for natural ghee which now-a-days is scarcely available in pure form. The Company also intends to take up the manufacture and production of soaps of different varieties, glycerine, stearic and other fatty acids, oxygen of high purity and other fine and heavy chemicals and similar other articles whose process of production is allied to that used in the various departments of the Vanaspati Factory.

SPECIAL FACILITIES

The promoters are grateful to H. H. the Maharaja Holker of Indore and the Commerce and Industries Department of his Government for the material assistance rendered during the preliminary stages and for their promise to safeguard the interest of the Factory within reasonable limits. In this connection, it may be mentioned that besides subscribing for shares the Government of the Holker State has given the Company sole monopoly for the manufacture of Vanaspati in the State for a period of eight years. The Company has also received other special facilities and advantages beneficial to the objects of the Company.

SPECIAL ADVANTAGE

The Company has been able to secure the valuable services of Mr. William M. J. Wiedner, M.Sc., (Eng.) A.M.A.C.E., who will be the Company's chief consulting and operating Engineer for erecting and running the Factory. He has expert knowledge and considerable experience in this line having held eminent positions in many big industrial concerns, including manufacturing of vegetable food products both in India and outside.

BROKERAGE

Brokerage at the rate of Re. 0-2-0 per share will be paid to persons through whom applications for 100 or more shares will be received.

PROMOTERS AND PRELIMINARY EXPENSES

The Managing Agents, Messrs. Mohatta Bros., have negotiated all matters relating to the prospecting, formation and promotion of the Company and have appointed technical and other staff. They are entitled to and will be reimbursed for such preliminary expenses which are estimated not to exceed Rs. 60,000 exclusive of brokerage.

MANAGEMENT

Subject to the direction and control of the Board of Directors the business of the Company shall be carried on by Messrs. Mohatta Bros. who have been appointed to be the first Managing Agents of the Company for a period of 20 years from the incorporation of the Company on a commission of 12½ per cent of annual net profits of the Company to be calculated in accordance with the provisions of Sec. 87C(3) of the Act besides an office allowance of Rs. 2,500 per mensem from the date of incorporation of the Company. The Managing Agents shall be entitled to charge and be repaid the salaries, wages, fees and commission if any payable to all persons employed solely in the Company's business whether employed in the Head Office of the Company or elsewhere if paid by them and all other expenses incurred by them on behalf of the Company.

APPLICATION FOR SHARE

Application for shares should be made on the forms accompanying this Prospectus and sent to the Company's Bankers or to the Company with remittance of the amount payable on application. Where no allotment is made the deposit will be returned in full and where the number of shares allotted is less than the number of shares applied for the balance of the deposit will be applied towards the amount payable on allotment.

A copy of the Company's Memorandum of Association is annexed to this Prospectus and forms a part of it.

Copies of the Prospectus and forms of application for shares can be had from the Managing Agents or from the Company's Bankers at the following address:—

1. Messrs. Mohatta Bros, Indore.
2. The Imperial Bank of India, Indore.
3. The Punjab National Bank Ltd. and all its Branches, in India.

BUSINESS EFFICIENCY

Business efficiency depends to a large extent on the state of your health. You can't afford to get ill NOW. The rains are still here and call for extra precautions. ALWAYS START YOUR FAN AT LOWEST SPEED

Today fans are scarce as the entire output of established brands are requisitioned for the essential services. You should therefore treat your present fan with care.

Damage to fans are frequently caused by starting it at top-speed. This occurs when you do not use the graduated switch of the regulator. Every time the fan starts with a jerk, the bearings get loosened and in a few weeks the motor is damaged. Irritating noise will develop, the mechanism will wear-out and heavy current consumption will result.

"Orient" fans are specially built to give noiseless and uninterrupted service for years. The regulator supplied with each "Orient" fan offers positive selection of four speeds.

Preparations are being made to meet the demands for "Orient" fans in full immediately after the war.

Call in a Mechanic:
• when noise develops
• for regular oiling and cleaning
• to inspect the wiring and switches.

Clive Street Gossip

There are occasions in the life of individuals as well as nations, when one feels overpowered by a most disconcerting sense of all things being at sixes and sevens. Hamlet declared time to be out of joint and cursed the fate that set him to put it right. India, which has not a little that is Hamlet-like in her national mentality might say the same thing if she could be articulate in a similar fashion. That India has been set by fate to put anything right that does not directly concern her may perhaps be questionable. But there is no doubt that from the Indian standpoint, time is out of joint. There was a time when Congress leaders used to ask in that oratorical manner which they had made their own, "What is fifty years in the life of a nation"? Not much, I agreed. But that is only normally. When the whole world is placid and there is hardly a ripple on the surface of international affairs, fifty years would matter little, indeed. National organisations could meet, discuss and disperse in unvaried routine without the nation being a whit better or worse for it all. But there are other times when a few weeks matter far more than decades, when history can march past you in such haste that it is the trailing cloud of dust that makes you aware of what has happened.

We live in such times. In fact, such times started six years ago. You may even date it from Munich, when the sharp turns of fortune for the nations of the world really began. What has not happened during these six, seven years, except, of course, the dawn of political good sense in India and Britain? Great nations have been made to kiss the dust and grovel, now before a conqueror, now before a liberating army. The majority of peoples have swung wildly from the extremes of depression to those of wild exultation. A re-shuffling of friends and foes among the nations, such as no one could have dreamt of, has come to pass without much of a hitch. Empires have gone to pieces and are sought to be put together again like the pieces of a jig-saw puzzle. More is feared of the fallen foe than one would think is justified at first sight. The victorious Allies have started to count the costs of winning the war and balance them against the costs of keeping the peace. The endless succession of international conferences has started. The military administration of the conquered countries is having its first taste of intractable practical problems. The endless succession of international conferences, Dumbarton Oaks and San Francisco, Teheran and Yalta, Bretton Woods, the Five Power Foreign Ministers' conference in London, the Halifax-Keynes Mission in Washington—all these give a rough idea of how much there is in the world to-day which is stranger to the magic of laissez-faire.

And all that is only about one half of the world. The other half, perhaps better in some respects and distinctly worse in many others, is yet to be taken up by international conferences of the kind referred to in the previous paragraph. Doubtless, there will soon be conferences to decide questions affecting the Far East or the international conferences that are already in existence will turn to a consideration of these problems.

There is far too much in the world to-day which waits on the specific orders of this administration or that. Whether it is the future of commodity control in a particular country or the resumption of say, Dutch rule in the Netherlands Indies, there has to be a definite process of decision and orders before things can be on the move.

But at the same time there is a great deal that does not wait on constituted authority. The whole of the East has learned that the long era of Western domination is not interminable and that it is far more unstable than was thought to be and that international problems have entered a phase in which they can no longer be thought of in terms of the old spheres of influence. This recognition is not as keen in the West as it naturally is in the East. Western Imperialist nations are more struck by the ease with which their sway was re-established than by the lightning swiftness with which it was overthrown by Japanese arms. They, therefore, think of perpetuating that sway and, what goes with it, the economic exploitation of the backward peoples of the earth. To look only at the present juncture of world politics is not, however, the best way of securing a comprehensive understanding of it. For if we fix our gaze at the position that obtains immediately on the end of the war, only the Anglo-American domination will attract one's attention. Russia's position of vantage on all sides of her vast territories is remembered only with an effort of memory and of understanding. Even more difficult will it be to remember that China is no longer a satellite or a protegee of the Western democracies, who should be content to dance to their tunes. Her treaty of friendship with Russia and close co-operation in the security of her harbours assure her of a virtually independent position. At the same time, long association with the U.S.A. in a common war with Japan entitles her to the continuance of the help which was made available to her during the war. Even the smaller principalities and dependencies of Western powers in the East have now, by reason of a quick change of overlords, to figure as independent entities on the agenda of international conferences.

Among the great powers themselves, there has been such a shift of political and economic importance that pre-war

GAYA BRANCH OPENS SHORTLY

ideas of their relative significance are more and more inapplicable to new conditions. The end of lend lease gave a glimpse of the catastrophic consequences which it may have on some nations, particularly Britain. And only recently Prof. Laski referred to Britain as a second rate power without the least suggestion of saying anything new. General Smuts said the same thing of France nearly a year ago. And General De Gaulle's recent appeal to Britain to form, along with France, a West European block which will work out imperialist policies in com-

mon in the Middle East is a clear sign that political leadership has passed out of Western Europe.

It is against this background that the work before the international conferences of the postwar period has to be considered. The Council of Foreign Ministers of the Big Five has just begun. It was created by the Big Three Conference at Potsdam where only major questions of immediate importance to the victorious allies were considered. Minor problems

like that of the peace settlement with Italy and other associates of Germany are the concern of the Council of Foreign Ministers. It is strange in one view and, in another, extremely significant of the spirit of the times, that even before the conference has begun China has made clear her intention to broach some matters of special interest to her. China wants a bigger standing army to begin with and naturally bigger loans from America to enable its maintenance, technical assistance and, last but not least, air bases in India. It is not known yet what

are the reactions of the powers concerned. A demand for a loan is not likely to upset the U.S.A. when demands for free gifts on a larger scale and with a threatening air of authority are, of late, a common experience for her. But Britain will view a demand for air bases in India with a sense of ruffled dignity.

But there is an internal situation which, from whatever angle you may regard it, does not allow a termination of the international co-operation that obtained during the war. Though neither Germany nor Japan could escape complete surrender, both the nations seem to have enough fire in them to keep alive in the minds of the Allies the fear of another conflagration. The need to devise and maintain a system of defence against the revival of German or Japanese or other militarism does not cease with the occupation of enemy territory by the forces of the Allies. Not only will Japan and Germany refuse to acquiesce for long in defeat, but modern science is so developed that it might even be possible to invent more and more of lethal weapons without having to depend on vast equipment. If China wants a large standing army and a number of facilities for doing so, it is not so easy for her more powerful allies to disoblige her. In one case at least, the hand of equal friendship seems to have been stretched and taken with equal alacrity and cordiality.

The signs, then, are that China, which has been so long bracketed with U.S.A. and Russia and Britain out of mere courtesy will hereafter be a great power on her own right. France will be forced by the course of events to accept the status of a second rate power, while Britain will have to choose between acceptance of American help with all that it entails and a gradual diminution of her economic strength and political power.

There will, doubtless, be a stage in which Britain will be able to do more than keep up appearances. With lend-lease revived, with the Dominions closing in in defence of the mother country and Indian political and economic thralldom continued by sundry devices, the status of Britain as a Great Power will no doubt be maintained for some years to come. But there is no mistaking the course of events, if British policy is not based on a frank recognition of the natural trends and the wisdom of offsetting them, instead of trying to combat them. One has only to remember the events of the inter-war period to realise the character of natural trends and the folly of trying to combat them. When the war of 1914-18 came to an end, nearly every one in Britain—the exceptions were all too few—was thinking in terms of the pre-war position, the commercial and financial hegemony of London in international trade and finance, the large volume of Britain's famous export trades, the colossal import surplus, which no other nation in the world could have afforded, and the sterling worth of sterling. It is not this type of thinking that lay behind the return to the gold standard at the old parity, the confident demand for the resumption of free trade and the international gold standard, the wistful longing for the rise of British exports to the

old levels. But the world had changed far more than the Britisher was prepared to think. Britain was distinctly less fitted for competition in neutral markets and her rivals had advantages which she could not secure for herself except by sacrificing the very standards of living which were the goal of her efforts. The result was that, throughout the inter-war period, her exports trade showed a virtually persistent decline. The return to the gold standard, though for a time it seemed to add to Britain's prestige, became before long a millstone round her neck and the gold standard had ultimately to be abandoned under sheer pressure of circumstance.

It is possible that, while Britain may learn by the experiences of the post-war period, so far as her economic life and policies are concerned, she might show in the political sphere the same lack of realism which vitiated her economic policies in the last post-war period. I believe in the possibility of an adjustment of her economic policy to the altered situation, firstly, because the facts of the new situation are more ar-

resting than ever before, and secondly, her policies will have to be determined in the setting of the demands which the U.S.A. will be making on her from time to time in this regard. We have already had an inkling of these demands in the report that the abolition of Britain's imperial preference is regarded in America as a legitimate return, though only in an infinitesimally small part, of the aid which the U. S. is giving to Britain. It is seen also in the demand that Britain shall not appropriate to herself the dollar balances of other countries and thus choke up the channels of America's foreign trade. It is in consideration of these changes that the Labour Cabinet has declared itself in favour of continuing the wartime policy of developing the internal production of foodstuffs. That is indubitably a sign of the realism which was absent a decade ago.

But in politics it is far different. For one thing, sentiment and considerations of prestige have a far larger place in the political, than in the economic, life. The demands of foreign nations, how-

PLEASE APPLY TO THE HEAD OFFICE

ever coercive they may be in fact, are almost always couched in the language of courtly persuasion. And with the Empire still functioning organically, it is easy to push the less flattering features into the background. Nevertheless, the realities of life begin to make themselves felt. The American proposal for handing over the West Indies islands as air bases to America takes the form of a stentorian demand in the more outspoken sections of American opinion. Likewise, China is not likely, especially after her very favourable treaty with Soviet Russia, to be apologetic over Hongkong. Large schemes of re-organisation of the colonial areas of South Eastern Asia, if they find favour with the U.S.A. may be pushed through without much respect for the susceptibilities of the imperial nations who were so incapable of defending their possessions against the Japs.

As against these trends in international politics, what can we expect in international economic relations? There is in this probably less strain on one's faculty of imagination. For the salient features of international action are

already visible. There are in the first place, the Brettonwoods agreement and the changes which American opinion has, of late, learned to ask for in regard to the settlement of abnormal war balances. The general process of adjustment of war-time abnormalities, whether in currency or exchange, must follow the pattern set by Brettonwoods. But as during the last post-war period, so during this, the life blood of world economy and international trade will have to be supplied by American treasure and American goods. Last time America financed reparations and war debts with her lendings and had the dubious satisfaction of seeing her own funds do a bit of globe-trotting and return home in attenuated form. Now she may be more enlightened by virtue of bitter experience and attempt at a stable reconstruction of the economic system of foreign countries through a revised edition of the Lend-Lease Act. There can be no doubt that as peace grows older, she will increase the scope and intensity of her efforts, though naturally the efforts will not be as altruistic as impractical idealists would like it to be. America may help to rear new nations which may share the burden of a next war, should it come, more equitably.

Now, in all these revolutionary changes, where does India stand? Time was, as I said at the start, when fifty years was as nothing in the life of a nation. To-day we can wake up to find a Great Power in a next door neighbour, grown to gigantic proportions, like Jack's beanstalk overnight. We may wake up to find the whole face of international trade changed beyond recognition, because of changes in relative costs and competitive capacity. We may find peoples, who were insignificant yesterday strutting the stage of international conferences, where we can barely peep in as the liveried lackeys of Britain. Our sense of time, our awareness of ourselves and the world around, our keenness for ends and our perception of means have all got to change, if we are not to sink deeper into the mire of insignificance than we have so far done. But of such change, there is, alas! still no sign.

AUTHORISED CAPITAL - - - Rs. 50,00,000
ISSUED CAPITAL - - - Rs. 20,00,000

(Divided into 2,00,000 Shares of Rs. 10 each.)

Out of this proposed issue, the Signatories to the Memorandum, the Managing Agents and their friends have applied for 40,000 shares and these have been allotted in full. THE GOVERNMENT OF MADRAS ARE TAKING UP 20,000 SHARES AND THESE ALSO WILL BE ALLOTTED IN FULL. Of the balance of 140,000 shares, 40,000 shares have been underwritten jointly by Messrs V. S. Krishnaswamy & Co., and the Hindustan Corporation, Stock and Share Brokers, Madras, 100,000 shares by the Oriental Industrial Investment Corporation Ltd., Bombay, and these are for public subscription, payable as under:—

ON APPLICATION RS. 5 PER SHARE
ON ALLOTMENT RS. 5 PER SHARE

The balance of the Authorised Capital may be issued either as Ordinary shares or Preference Shares or both, as may be decided in future.

DIRECTORS

THE HON'BLE SIR SHANTIDAS ASKURAN (Member of the Council of State) (Chairman); Banker & Mill Owner, Mahendra Bhuvan, Nepean Sea Road, Bombay.

Director of

The Kohinoor Mills, Ltd., Bombay.
The New Great Spinning & Weaving Co., Ltd., Bombay.

MANAGING AGENTS

A. V. Thomas & Co. (India), Ltd., No. 3, Sunkurama Chetty St., G. T., Madras.

REGISTERED OFFICE

No. 3, Sunkurama Chetty Street, G. T., Madras

OBJECTS

The Company has been formed for the purposes more fully set out in the Memorandum of Association and in particular to carry on the manufacture, assembling and trade in Electronic and Electrical goods of all kinds, especially Radios, Refrigerators and fractional horse-power Electric Motors. The market for Electrical goods of all types has expanded rapidly in South India in recent years, mostly as a result of the Electrical development schemes of the Government of Madras. It can be confidently expected that in the coming years this demand will further expand at very favourable prices.

MADRAS GOVERNMENT

The Directors have pleasure in stating that the Government of Madras have shown great interest in this new industry and have demonstrated this interest in a practical manner. In G. O. Ms. No. 2786 DATED THE 17TH JULY, 1945, THE GOVERNMENT OF MADRAS HAVE BEEN PLEASED TO SANCTION THE SUBSCRIPTION BY THEM OF 20,000 SHARES IN THE CAPITAL OF THIS COMPANY.

The Government of Madras will also nominate one of its officers to the Board of Directors of the Company with a view to ensure continuous co-operation of the Government in the running of the new industry.

ADVANTAGEOUS POSITION

The Directors have succeeded in getting the co-operation of the biggest firm of manufacturers of radio components in the United Kingdom. They have agreed to give the Company the necessary technical advice and assistance. At their instance the Managing Agents, on behalf of the Company have placed orders with them for the first consignment of components, deliveries of which are to commence from November, 1945. THUS, THE COMPANY WILL BE IN A POSITION TO COMMENCE PRODUCTION AT A VERY EARLY DATE AND THEREBY TAKE FULL ADVANTAGE OF THE PRESENT FAVOURABLE MARKET CONDITIONS. THIS WILL GIVE THE COMPANY THE ADVANTAGE OF A START IN THE PRODUCTION AND MARKETING OF ITS GOODS AND THUS LAY A SOUND FOUNDATION.

Further the Radio component manufacturers referred to above on a request to design the different sets required by the Company have written as follows:—

"IT HAS TAKEN US MANY MONTHS OF HARD WORK TO PREPARE THIS CHASSIS (5-TUBE A.C.-D.C. MODEL) AND WE ARE INDEBTED TO A VERY FINE BODY OF BRILLIANT ENGINEERS AND TO THE ASSISTANCE OF AN ENGINEER WHO HAD STUDIED THE RECEPTION CONDITIONS IN INDIA. FOR THIS EXCELLENT PIECE OF WORK, WE BELIEVE THIS TO BE THE FIRST BRITISH RADIO RECEIVING MODEL DESIGNED SPECIALLY FOR THE INDIAN MARKET AND WE ARE MORE THAN CONVINCED THAT IT WILL SURPASS

RADIO AND ELECTRICALS, LIMITED, ANNOUNCEMENT—Contd.

ANY EXISTING MODEL OF ITS KIND IN RECEPTION, PERFORMANCE, ETC."

The Company hopes to place on the market a large number of the above sets by March, 1946. One of the prototypes assembled here by us has given us most encouraging results. The test report given by the Radio Engineer to the Government of Madras runs as follows:—

"WITH REFERENCE TO YOUR LETTER DATED 1-6-1945, I ENCLOSE HERewith A DETAILED REPORT, TEST DATA AND CIRCUIT PERFORMANCE OF THE 5-VALVE (SUPERHET) A.C. MAINS SET. IN GENERAL, I FIND THE SENSITIVITY AND SELECTIVITY OF THIS SET COMPARE FAVOURABLY WITH THAT OF ANY FOREIGN MAKE. THE OUTPUT OF THE SET IS QUITE AMPLE FOR USE AS A DOMESTIC SET. THE DESIGN IS SIMPLE AND CAN OPERATE FROM 230V SINGLE PHASE A.C. MAINS."

IT WILL BE NOTICED THAT THE COMPANY WILL BE ABLE TO COMMENCE PRODUCTION ON A PROFITABLE AND COMMERCIAL SCALE, WITHOUT WASTING TIME AND CAPITAL IN PASSING THROUGH AN EXPERIMENTAL STAGE. Further, the sets produced will be as good if not better than any imported set, because the circuit designs are especially made to suit Indian conditions and the component parts are from

the best available sources, and at a lower price, owing to the saving in duty, freight and labour charges.

THE ACTIVITIES OF THE COMPANY WILL NOT BE CONFINED SOLELY TO THE ASSEMBLING AND MANUFACTURE OF RADIOS. NEGOTIATIONS ARE UNDER WAY WITH ONE OF THE LEADING MANUFACTURERS ABROAD WHO SPECIALISE IN THE MANUFACTURE OF REFRIGERATING AND AIR CONDITIONING PLANTS. WHEN THE PRESENT NEGOTIATIONS ARE COMPLETE THE COMPANY WILL BE IN A POSITION TO MANUFACTURE REFRIGERATORS AND AIR CONDITIONING PLANTS.

FUTURE OF INDUSTRY

A careful examination of all relevant circumstances indicates a very bright future for this industry. To-day in India there are less than ten broadcasting stations. We are reliably informed that in the near future the Government of India's programme of expansion will lead to an increase of this number to at least 25 spread out all over the country. There will be a tremendous increase in the programmes of Indian music, Indian plays and talks in Indian languages. This in turn will greatly increase the number of Radio listeners. This potential demand can be fully exploited by the Company's

four-tube A.C. and A.C.-D.C. models, modifications of which, with limited wave bands giving a range of all Indian and nearby stations could eventually be sold at a price within the reach of every middle-class family. Hitherto, such an amenity has been entirely beyond their means when one considers that the cheapest imported set cost in the neighbourhood of Rs. 300 and the average about Rs. 500. In short, the possibilities of expansion in this industry can truly be described as unlimited and considering the fair margin of profit which is possible even on the 4-tube A.C. and A.C.-D.C. Models, the Directors feel they are justified in anticipating a very bright future for the Company.

BROKERAGE

A brokerage of two annas per share will be paid by the Under-writers on shares allotted in respect of applications received by them bearing the stamp of a Banker or a Recognised Broker. Copies of the prospectus and forms of application can be obtained from the Registered Office of the Company, from the Company's Brokers and from the Underwriters, Messrs. V. S. Krishnaswamy & Co. The Hindustan Corporation and The Oriental Industrial Investment Corporation, Ltd, Aga Khan Building, Dalal Street, Fort, Bombay, and also from the Company's Bankers.

BANANAS FOR HEALTH & ENERGY

ALL day long the bananas bask in the sun and gather in the properties necessary to give you health and energy. Bananas are a rich food. They are filled with minerals, proteins and fats. They are most helpful as a substitute nourishment for those people who cannot afford milk, butter, cheese or eggs.

Bananas require little care, but they need plenty of sunshine. They grow in a well-irrigated heavy manured soil. About 735 plants can be grown in one acre. This includes offshoots, for each banana tree sprouts at least two per annum. They are available all the year round and thus a good and steady income can be assured to the cultivator of a planned orchard.

But bananas rot quickly, and over-ripe bananas are harmful to health. ROADS are urgently needed, for only they can provide the rapid transport that is required if the fruit is to reach your table in good condition.

GOOD ROADS ARE AVENUES TO PROSPERITY

Gateway of India

(From Our Correspondent)

Bombay, September 11.

At the conference of provincial textile commissioners held in the city last Thursday and Friday, it was decided to revise the quotas of cloth from October 1st. The supply position has improved to the extent of 900 million yards as a result of a saving of 600 million yards in the requirements of the Defence Services and of 200 million yards from the export quota. There has also been an increase in the output of the mills by about 5 per cent thanks to the utility cloth scheme. Sir Akbar Hydari who presided over the conference must have been amused by the clamant demands of the Punjab and the Bombay representatives for a further increase in their present quota based on 18 yards per capita, while Madras, always the Cinderella in these matters, has so long had to be content with just 10 yards per head of the population. But Mr. S. Venkateswaran, the Madras Textile Commissioner, was not to be balked this time, and he succeeded in obtaining an increase in the quota from 10 to 12 yards per capita. The U.P.'s quota was also increased from 10 to 13½ yards. The necessary transport arrangements to move goods to these provinces as early as possible, particularly before Diwali, are being made. It is intended that the scheme of quotas should be revised every quarter. There is no change as regards prices, but the hope is held out that the Industry Committee will be considering the question towards the end of the year in the light of the lower prices prevailing for yarn and mill stores. The break in cotton prices may also be instrumental in bringing about lower ceiling prices for cloth.

The award given by the Industrial Court in the dispute between the Textile Labour Association and the Ahmedabad Millowners' Association is that the mills should continue to pay dearness allowance on the scale and in the manner fixed by the Court month by month for a period of one year from 8th August 1945. At the end of that period, either party is entitled to ask for a revision.

The dearness allowance decided by the Court is Rs. 4 for a rise of 11 points in the cost of living index over the datum index number of 73 for August 1939. The allowance calculated at this rate will rise or fall as the Ahmedabad cost of living index number rises or falls. Thus, the allowance payable for August works out to Rs. 43-4-3, being calculated on the index number for June. Similarly the allowance for September payable in October will be calculated on the index number for July under the above formula, namely 4-11 (x-73) where x is the index number for July. It should be noted that workers and employees drawing a pay of more than Rs. 75 per month and below Rs. 200 will only get 66 2/3 per cent of the dearness allowance paid to other workers. The recent award does not apply to the workers in the above categories, as it is based on the decision of the Court in 1940. The Millowners' Association Ahmedabad has accordingly instructed the member mills.

It can now be revealed without fear of harm to the parties concerned that some-time back when bullion prices crashed,

there was a run on some of the banks of Bombay. The scare was started by unscrupulous rumour-mongers, but the banks concerned showed themselves fully equal to the crisis. As happens on such occasions, the banks continued to pay clients even beyond the usual banking hours. This has now brought forth from the Reserve Bank authorities a gentle admonition deprecating the practice. The circular sent out by the Reserve Bank points out that the time has come for educating the public about its responsibilities and to make it realise that it should not expect to get its balances in current account paid after the banking hours and that it should abide by the terms of the contract as far as fixed deposits are concerned. The view is advanced that banks are not justified in going out of their way to oblige depositors who may develop an attack of jitters. The circular also emphasises the legal aspect under which it may well be that outside banking hours might become irregular in the eyes of the law, and bring in their wake trouble to the bank concerned.

An interesting debate on the housing problem in the city was staged by the Bombay Municipality, arising from a resolution moved by Mr. S. K. Patil for the construction of about 60,000 single and double room tenements. Mr. A. P. Sabwala moved an amendment that the Government be requested to show their bona fides by floating a loan without interest to help the Municipality in the matter. It was pointed out in the course of the debate that the cost of erecting 60,000 tenements would amount to Rs. 19 crores. In his reply, the Commissioner stated that the Government had already been approached to hand over the temporary structures put up for military use to the Municipality to help it to tide over the housing shortage. The housing plan put before the Corporation is criticised in some quarters on the ground that it is unsound. It is said that to encourage private landlords to put up the blocks will not help in proper building development. The question really boils down to whether the development of building homes for lower classes should be financed by a suitable agency with the requisite resource or whether it should be left to private owners to act as they wish. The latter course might well result in overcrowding and in unsatisfactory choice of sites actuated solely by motives of profit. The Congress party apparently is not prepared to wait for the government to take action on the recommendations which the Greater Bombay Committee will submit at the end of the year. It probably feels that to get a move

on is better than talking of fine principles such as officialdom is often prone to. The Congress scheme has as its nucleus the building of 300 tenements provided by the Municipality for the people who were affected by the dock explosions in April last, when the government did nothing to help the sufferers by way of releasing building materials. The Relief Committee had collected about Rs. 17 lakhs and as all of this has not been spent, the suggestion has been made that this should be the core for the building finance.

It is sometimes very difficult to square the professions of governments with their deeds. It was only recently that the Bombay Governor expressed his desire to see the end of the Section 93 regime; and in fact, provincial elections are not far off. Yet it is stated that the Government of Bombay have decided to introduce the sales tax in the province, for which the necessary legislation will be enacted by the Governor himself. There is an indecent hurry about the matter which can well bear greater consideration for a number of reasons. In the first place, this new taxation could well have waited until a popular ministry took office, especially as there is no budget exigency which calls for an impost of this character. After all, it was only recently that the Central Government mooted the suggestion that sales taxes might be administered Centrally. Like the Madras Government, the Government of Bombay also appear to have told the Centre to keep off the grass in this respect. The provinces claim that the weight of advantage is in favour of the tax being administered by provincial governments who are the best judges of questions that may arise in the course of the levy of the tax. The excuse has been put out that, by the time the new tax begins to operate (April, 1) war time imposts would have been abolished or reduced. One cannot quite see the justification for these assumptions when in fact news reports from Delhi almost daily remind the population that taxes may not be reduced that controls will have to continue and so on. The incidence of the sales tax may be light, but that is beside the point. The issue raises a question of principle as to why a decision of this sort is being taken by those who cannot claim to speak for the people. There is also the larger issue of whether there is need for new taxation when in fact provincial revenues are already so inflated without corresponding benefits to the people. Of what use is it to go on accumulating surpluses, when individual budgets are entirely out of gear and the country is being taxed to the hilt?

(From Our Correspondent)

Madras, Sept. 11.

Sir J. C. Ghosh, Director of the Indian Institute of Science, Bangalore presided over the Mysore Education League's conference. He said that education was the most important agent for the uplift of any people—education which would enable them to fight with success 'poverty and disease, prejudices and passions'. The people of India, he said, were all humble folk who had to go a long way to reach the level already obtaining in modern nations. 'This fact' he added, 'should have a chastening influence on our dealings with our countrymen who happen to be less fortunate than ourselves or belong to a different religious persuasion.' He compared the Mysorean with the Australian and said that in Australia, which had a population of seven millions, more than four millions lived in towns, not more than 30 per cent produced all the food requirements of the country, their expectation of life was 60, the literacy percentage was 95 and the country was far more industrialised than India. While in Mysore state, which had almost the same population the expectation of life was 35 years, the percentage of literacy 15 and more than 70 per cent of its people depended for their scanty livelihood on the exploitation of animal and vegetable resources. The test of progress should, therefore, be whether the Indian was as well-educated, clever, resourceful, disciplined and patriotic as an Australian. Regarding educational ideals, the speaker commended the example of England where an attempt was made "to produce young men of sturdy commonsense and disciplined will, who possess a sound general education, who believe in physical vigour and delight in hard manual work." He concluded by saying that the lot of the teachers was bad indeed and hoped that the new democratic administration in the land would awaken us to a sense of social justice to the members of the noblest profession.

The Government of Madras, it is understood, have expressed themselves wholly against a proposal mooted by the Government of India recently to centralise the Sales Tax, which is now an entirely provincial source of taxation. Madras was the first among five Provinces to levy a tax on sales of goods and its income from this source, about a couple of crores of rupees at the commencement, has now reached a total of nearly six crores.

The Second Madras Provincial Chemists' and Druggists' Conference was inaugurated in Madras by Mr. N. S. Arunachalam I.C.S. Deputy Commissioner of Civil Supplies. Madras. Mr. Arunachalam said that the Drug Control Order in Madras, far from being a halter round the neck of the drug trade, had worked successfully, thanks to the hearty co-operation received from the drug trade. Referring to the recent reduction in the prices of drugs, he said, that while no doubt improved supplies of drugs were partly responsible for the downward trend of prices, it was the licensing provision of the drug control and the distribution of supplies through normal trade channels that were largely responsible for the ready response of the price level to the inflow of drugs. In the absence of the control, the drugs might have found their way into the hands of those who were not interested in making them available immediately to the public. Referring to the future of drug control, he said that the present Drug Control provided for only drug

price and trade control, but had nothing to do with the purity and reliability of the drugs manufactured and marketed. Since drugs were articles of human consumption to eradicate diseases, and, as such, absolute correspondence to the required standard was indispensable, and as many drug manufacturing concerns had sprung up in India during the war time, it was essential that the Government should have a complete check over the manufacturers in order to see that spurious ones did not find their way into the market. He advised chemists to give more importance to dispensing fresh medicines than to selling patent medicines, which could be likened to canned fruit. Mr. C. Rajagopalchari who addressed the conference said that Government imported the various drugs and medicines, fixed their prices and controlled the method of distribution. The druggists and chemists now were practically acting as agents of the Government. He felt that in peace time, Government-controlled shops should sell the drugs and medicines like cod liver oil, glucose, etc. at cheap rates to the people.

Acute shortage of sugar is being felt in Hyderabad owing to unfavourable seasonal

conditions during the last crushing season. The Sugar Controller for India, who was requested to help the State with supplies of sugar from outside, reported that as against an All-India production of 1,230,000 tons in 1943-44 the production during the last season was only 970,000 tons. This deficit compelled the authorities to make a reduction in quotas assigned to various Provinces and States "which placed them actually in a much less enviable position than that of Hyderabad." As soon as shortage was anticipated the Government cut down quotas to all towns and other places in the Dominions. Sugar ration in Hyderabad was reduced from 12 to 8 oz. per head and the quantity given to establishments was halved. Representation was also made to the Food Member to the Government of India who promised to consider it sympathetically. To meet the situation which is causing anxiety, the Government has arranged to import large quantities of gur into the Dominions, to be distributed through rationing shops. They have also decided to curtail the issue of white sugar to manufacturing establishments and replace it partly by issuing red sugar.

EDUCATION for NATIONAL POWER

What is the value of complete adult literacy without Village Libraries? On the road to knowledge which is power, students of all ages need text-books, exercise-books, rough paper for calculations, graph paper for mathematics.

Books for the fully educated are increasingly published in India — ranging from technical subjects such as medicine to cultural — thus raising a new field of authorship.

Titaghur make paper for all those purposes, from ordinary white printing for text-books to fine papers which will take offset printing in colours, or imitation art for half-tone reproduction. The printer and the publisher between them know best which Titaghur paper serves their purpose most economically.

OTHER TITAGHUR PRODUCTS

Papers and Boards for writing and typing. Ledgers or Letters, Duplicating, Binding, Packing, and Labelling.

Notepaper and Envelopes. Shorthand Notebooks.

A Resume of Commodity Markets

The feature of the week is the slight rise in prices for cotton for forward positions on the hopes that there will be a greater offtake of Indian cotton by Britain and that the efforts at increasing the output of Chinese and Japanese textile industries would result in a considerable increase in exports from this country. The ready position, however, is weak and quotations are not very much changed on balance. The raw jute market has continued quietly steady. There has been no improvement in prices in spite of the strength of both the hessian and heavy goods sections. Forward trading in the bullion market was resumed as from Wednesday this week. Owing to the cautious attitude of bears, prices have fluctuated in narrow limits. In the piecegoods section business has been restricted as it is reported that at the next meeting of the Textile Control Board the question of further downward revision of ceiling prices will be considered.

In spite of the reports that the jute industry has received further large orders through normal trade channels, there has been no improvement in prices in the raw jute market and business on account of mills continues to be on a small scale. Sellers, as in the previous weeks, are still anxious to do business for near positions on reports of arrivals in the mofussil centres, and have been keen to take up whatever orders that are given at the present rates. For deliveries after November, however, sellers seem to be reserved.

In the loose jute section, Supervised Jat Middles and Bottoms were done at Rs. 15/4 and Rs. 12/4 per maund with European Packing at Rs. 16 and Rs. 13 per maund. There was little of export business.

In the jute manufactures market the reports that further large orders, particularly for heavy goods, have been received by the industry, were perhaps responsible for the continued strength of markets. The bazar has not been very keen to depress prices. Mills are very reserved and are confident that even if there was an increase in production with the larger coal supplies and easier labour position, it would be possible to market all the output. Quotations as such are at maximum rates and no discount is offered for any positions by the bazar for positions earlier than March 1946. In the heavy goods section, especially, the improvement in prices for forward positions is rather pronounced. B. Twills for October-December shipment improved to Rs. 66 from Rs. 64 with not many sellers offering.

The local stock figures for the month of August show that there is a slight increase in hessian stocks as well as in sacking. It is not clear whether the increase in local stocks was due to the larger output last month. Hessian stocks, on civil account, were 11.52 crores yards against 11.03 crores yards and, on military account, 13.85 crores yards against 13.89 crores yards. While the figure, on military account, expressed in yardage shows a slight decrease there is an increase in weight to 33,397 tons from 32,805 tons. Production, on military account, was possibly in heavier fabrics. Sacking, on civil account, were 20.14 crores yards against 21.12 crores yards while, on military account, were considerably higher at 4.71 crores yards against 3.03 crores yards. Total stocks were 24.84 crores yards against 24.14 crores yards. Other manufactures were, 3,749 tons.

The cotton market has been very irregular with mills extending very poor support to the ready market. As scrutiny

by the Government is rather strict and the quality of cotton tendered is much below specification, only 10 percent has passed muster. As bulls are not prepared to weigh-up cotton against September contract, some difficulty in regard to settlement is anticipated. The quotation for September contract is fluctuating in very narrow limits and is precariously above floor levels. For Jharilla January and March, however, greater interest has been shown as there were reports that there might be a substantial increase in exports as the months go by and the outlook for Indian cotton is not as bleak as was made out to be a few weeks back.

A conference of representatives of Provincial Governments and States convened by the Textile Commissioner was held last week and it agreed to certain modifications in quotas of cloth to Provinces and States and that the revised arrangement be put into effect as from October 1, 1945. It was also agreed that these arrangements would come into effect after three months. It is now understood that the revised quotas make no difference to the population in Bombay and the Punjab as the supply to these two Provinces were on a high level, and the per capita consumption of 18 yards was considered rather generous. In the case of other provinces, the increase in the quota varied from 25 to 30 percent, the U. P. being allotted a quota of 13½ yards per head against 10 yards previously and Bengal 12 yards per head against 10 yards.

The prospect of increased supplies as from the beginning of next month is perhaps the most satisfactory development relating to textile control since its inception. While it was stated that the per capita consumption of Bengal, the U. P. Orissa and Assam was fixed on the basis

of prewar consumption, there was considerable discontent among the population in these areas, especially as it was said that out of the allotment, the large population from other areas and the presence of military personnel accounted for a considerable portion.

The upward revision in the quotas to the various provinces has been made possible by the reduction in exports and the smaller demand on account of the Defence Services. It is also stated that the Utility Cloth Scheme has resulted in an output by 7 percent. The total additional quantity available for civil consumption is estimated at 900 million yards. If at the meeting of the Textile Control Board in October the question of revision of ceiling prices is also favourably considered, it can be said that the cloth position would improve considerably and that there will not be the cry of shortage as at present.

It is confidently expected in certain quarters that the ceiling prices will be revised downward as from the beginning of November as costs of production are reported to have declined considerably, and prices for raw cotton also has depreciated considerably in recent weeks.

There is nothing of importance in the bullion market during the week, business being restricted on account of the strike and holidays. Forward trading has been resumed as from Wednesday this week. There is no important change in rates. Bears would appear to await further developments.

India's summer lac crop in 1945 was 664,000 maunds as compared to 783,000 maunds in 1944, registering a decrease of 119,000 maunds. There was, however, a small increase in the finally estimated production over the revised estimate owing to

favourable climatic condition during May and June. There was a substantial increase in the case of Baisaki production of Bengal. The crop in the Central Provinces and Berar and Central India also thrived satisfactorily and resulted in a small increase in the estimated production.

The Jethwi crop obtained by infecting Kusum host-trees with the last Kusmi-

Rural Economy in Seraikella:

"Eavesdropper" writes from Seraikella:

"Of the thirty shops in this street ten are occupied by silversmiths. Is making of silver-trinkets a special craft here?"—I asked the Tika Raja, who conducted and enlightened my tour of economic survey of this important State in the eastern region. "There is an interesting story behind this", replied the Tika Raja. "A few years ago, all these shops were specialising in making ornaments in copper and bronze. They have now changed to silver ware. The people who used to wear copper and bronze jewellery are now demanding silver jewels. There is a very big demand for these silver articles." The change in taste is a measure of the economic change among the masses of the population. "There is no poverty among the people in this State", explained an officer, whose readiness and shrewdness to give straightaway every manner of information I sought, amazed me. And he added: "Agricultural indebtedness as such is non-existent here".

In my enquiries regarding rural conditions, nowhere have I heard such positive and definite assurance. On going deeper into this question, I found that not only is poverty unknown in the State, but the average economic standard of the masses is much higher than in most parts I have visited and investigated. The rural population do not have to stint in food. There is hardly any landless labourer. Every family has at least as much as land as will yield adequate foodstuffs for its needs. Nobody sells any part of the rice he produces, unless it is surplus to his requirements. All other expenses are found by the sale of other produce such as vegetables or ghee or straw. If neces-

sary, the men leave their homes during the off-cultivation months and seek work in collieries. Also, over ten thousand subjects of Seraikella are employed as labourers in Tatanagar, which is next door to the State. The inflow of income on account of the savings of these labourers is quite considerable. The per capita income in India has been estimated at Rs. 5 to Rs. 6 per mensem. The per capita income in Seraikella is at least double, taking only the rural population.

An ordinary adult-man or woman—consumes three-fourths seer of rice per day. The rice statistics and reserves of rice are made on an allowance of five maunds of rice per year for every head of the population. The diet of the agriculturists in the poorer tracts consists of three chataks of rice with a little salt and one chilli. The Seraikella farmer has a better—balanced diet—he grows plenty of vegetables and maintains a cow or two. If he was buying his rice and vegetables and milk, the cost of food would work out to at least Rs. 10 per month for each member of the family. The habits of the people are simple and clean. The thirty thousand Santhols, who live in the State, have kept in tact their traditions and ways of living; and a Santhol village is tidy, and presents a spectacle of people minding their business with zest and intelligence.

This is a part of India which has not benefited directly from the war. No great military projects have been executed within its borders; so, no unusual disbursements have occurred here. At the same time, the agriculturists have benefited from the higher level of prices for agricultural produce. Seraikella has been spared the inflation experienced in those areas like Assam where large sums have been spent on account of war preparations; on the contrary, it has shared fully in the general war-induced prosperity.

What I have seen and learnt in my rural survey here goes to confirm the view (I expressed over a year ago), that India's agricultural indebtedness, once regarded as incurable, has, over the major portion of India, disappeared more or less completely.

Sixthly, remove all possible wartime Government controls in order to speed and encourage reconversion and expansion in shortages of materials and inflation; and

Seventhly, keep only those controls which are necessary to help reconversion and expansion by preventing bottlenecks in shortages of materials and inflation; and

Eighthly, preventing rapid decrease of wage income on purchasing power.

By Special Cable.

U. S. Gives Private Enterprise a Chance

PUBLIC WORKS AN EMERGENT MEASURE.

Truman Returns to Partisan Policies

Washington, Sept. 11.

President Truman's 16,000-word message to Congress last week was taken in most quarters here to denote a decision by the President to pursue the same social and economic objectives which characterised Mr. Roosevelt's New Deal in the 1930's. The address signalled a return to partisan policies; for there was much in it which provided the opposition Republican Party with material for attack, especially in as much as preparations are already being made for the 1946 Congressional elections. President Truman seemed to have taken his place with those who favour a strong centralised government and sufficient controls to enforce, at least during the transition period, policies designed to achieve certain social and economic aims. The President, however, gave every indication that private enterprise would be encouraged to accomplish full employment and high production with the minimum interference from the Government. There seemed in the President's messages, as well as from other indications in Washington last week, that there is diminished emphasis on public works as a prime factor in reconversion. It seems now that public works will be utilised more as emergency measures in the event of private business not meeting employment goals.

It was chiefly in the field of social legislation that President Truman's message followed the patterns cut by Mr. Roosevelt. He advocated immediately enactment of large unemployment benefits for workers displaced from war jobs and temporarily unable to find new employment while the industry reconverts. This is a controversial issue involving rights of States to provide unemployment aid and the question of whether payments to the jobless on the scale President Truman advocated would not make unemployment attractive. As long range measures, President Truman proposed full employment legislation, expanded, liberalised social security system, national housing and slum clearance programme, programmes for development of natural resources and carrying out of public works, assistance to agriculture and small business, a permanent fair employment practices Act barring discrimination of employment on account of race and religion, and Government assistance and direction for scientific research. The President stated that these policies are already in effect:

Firstly, demobilise as soon as possible armed forces no longer needed;

Secondly, cancel and settle war contracts as quickly as possible;

Thirdly, clear war plants so as to permit contractors to proceed with peacetime production;

Fourthly, hold the line on prices and rents until fair competition can operate to prevent inflation and undue hardship on consumers;

Fifthly, hold wages in line where their increase would cause inflationary price rises;

Jute and Jute Manufactures

Special to "Indian Finance"
(From Our Correspondent)

Calcutta, Sept. 13.

Mills' stocks of manufactured goods at the end of August showed an appreciable increase since the end of July according to the statement issued last week by the Indian Jute Mills Association. The weight of goods in stock rose to 181,623 tons during August as compared with 167,700 tons recorded at the end of July, an increase of 13,923 tons or 8.3%. This is almost entirely accounted for by the fact that sacking bags and cloth lying with Mills on Military account rose from 12,902 tons at the end of July to 29,480 tons at the end of August. Hessian goods in stock on Military account are also higher but only by 574 tons. It would appear that the shipping arrangements made for Government jute goods have been thrown out of gear by the advent of V.-J. day at a time earlier than was generally expected and there can be no doubt that demands for shipping space have increased enormously from many directions, at least for the time being, since the end of the war with Japan.

Returning to our analysis of the stock figures we find that Commercial Hessians are up by about 50 lakhs yards or 1,110 tons which, with the addition of 574 tons to the stocks held on Military account, gives a total increase of about 45 lakhs yards or 1,684 tons.

Commercial Sacking stocks dropped by 4,061 tons at the end of August; these stocks stand at 2,013 lakhs yards or 83,303 tons as compared with 2,112 lakhs yards or 87,364 tons at the end of July.

The following is the summary of total reported stocks of manufactured goods as at 31st August 1945 and at 31st July 1945. It should be noted that August figures include returns of Gagalbhai in addition to those of member mills but contain an estimate of the stocks of Calcutta Jute, Kedarnath, Katihar and Maheswari Devi. Against these are shown the actual stocks of member mills and of Gagalbhai for the month of July 1945:—

N.B.—August stock figures include returns of Gagalbhai in addition to those of member mills, but contain an estimate of the stocks of Calcutta Jute, Kedarnath, Katihar and Maheswari Devi. Against these are shown the actual stocks of member mills and of Gagalbhai, for the month of July, 1945.

The estimated jute arrivals for August 1945 amounted to 4,56,000 bales as against 5,39,000 bales for the same month last year. This brings the estimated arrivals since the beginning of July 1945 to a total of 9,12,000 bales as against a total of 10,12,000 bales estimated to have arrived during July-August 1944.

A welcome relief from the heavy financial impositions on industry incurred by the payments of premia under the War Risks Insurance Schemes is afforded by the announcement of the termination of these schemes in a Press Communique dated 30th August issued by the Department of Commerce of the Government of India. The Communique states that in view of the cessation of hostilities with Japan, the Government of India have decided to terminate the War Risks (Factories) Insurance scheme with effect from 1st September 1945 and the War Risks (Goods) Insurance Scheme from 1st October 1945. An Ordinance repealing the relevant provisions of the War Risks (Factories) Insurance Ordinance is being issued. A similar Ordinance repealing the relevant provisions of the War Risks (Goods) Insurance Ordinance will be issued shortly.

In respect of policies of insurance already taken out under the War Risks (Factories) Insurance Scheme, the instalments of premium which would have fallen due on 1-12-45 will not be recovered.

Termination of the above schemes will not, however, absolve defaulters, who have so far failed to insure their insurable properties as required by the respective Ordinances, of their liabilities to the punishments provided therefor under the Ordinances.

Deliveries of Coal to the Indian Jute Mills Associations' dump during the

week-ended Saturday, 8th instant, averaged 65 wagons daily. At time of writing the average daily arrivals for the current week is 68 wagons. For the last four weeks the supply of coal to the jute industry has shown a sustained improvement thereby enabling small stocks to be built up at the foster mills and providing sufficient fuel to re-start most, if not all, of the steam driven units. The position, however, is far from secure and it will take many more weeks, at the present rate of delivery, before mills feel that the solution to this vexed problem of coal shortage is at last on the way.

The Pucca Bale market has been idle throughout the week except for small business in Dundee Tossa 2/3 and Dundee Tossa 4s done for export at minimum prices. Dealers are free sellers at minimum rates for all descriptions except special marks and cuttings, the latter being on offer at one rupee below maximum prices.

Weak conditions prevail in the Loose Jute market with sellers very anxious for business. Large quantities of jute are on offer at minimum prices but mills continue to sit out and business done has been very small. Uncertainty regarding future supplies of coal, lack of adequate storing accommodation and expectations of a big crop of jute all combine to persuade mills to restrict their purchases of raw material at present. At the end of last week European Middles and Bottoms were done at Rs. 15-8 and Rs. 12-8 and European Bottoms alone at Rs. 12-12 and later at Rs. 12-8. Early this week European Middles alone came to business at Rs. 15-4 for Jat and Rs. 15 for District. Supervised Jat Bottoms alone were sold at Rs. 12-4. There was also small business done in Indian District Tossa Middles at Rs. 15- and in Indian District Tossa Middles and Bottoms at Rs. 15-4 and Rs. 12-4.

In the Manufactured Goods market prices for both Hessian and Sacking eased in the forward position towards the end of the week under review. Demand for jute goods, except for Ready delivery, appears to have slackened for the moment and no fresh business of importance has been reported. Business during the week has been chiefly confined to inter-bazaar transactions.

Quotations as on Thursday, 13th inst., were as follows:—

when swords are beaten into plough-shares ...when Tanks become Tractors

THE heavy rumble and clatter of caterpillar-tracks echo across the land but not to the roar of deadly guns. . . . Across India's wide acres we see a great awakening. Gone are the days of the wooden plough, the spade and the sickle with which our cultivators obtained from the good earth too little with too great a labour. In their place great steel ploughs, harvesters, binders and tractors make their toil easier and force richer yield from the soil.

This is a picture of tomorrow as seen today. Not merely the lakhs of the rich, but the crores of the small men's savings will be needed to convert this vista of the future into reality. Understand clearly that India cannot be turned into a great and prosperous nation without a large outlay of capital. Indian Agriculture and Industry will need your money in the post-war years. Prepare now to buy for yourself a share in the coming prosperity.

**PLAN TODAY FOR TOMORROW
SAVE ALL YOU CAN**

But remember to invest your savings where they will be safe, and waiting for you when you need them.

National Savings Certificates, Government Loans, Post Office Savings Bank Accounts, Insurance, Co-operative Societies and Savings Bank Accounts are both safe and profitable. Do not risk your money by buying land, buildings, commodities, manufactured goods or jewellery. They are bad value for money these days and likely to depreciate.

SAVE SAFELY FOR THE FUTURE.

SATURDAY SEPTEMBER 15, 1945

Price Re. 1

Stock Markets to-day and to-morrow:

MARKETS QUIETLY STEADY

Rather steady conditions were noticeable in the stock markets both in Calcutta and Bombay, though business passing has been restricted and not much of outside interest has been shown. The Bombay market was closed till Wednesday this week on account of a Hindu festival but on reopening after the long holidays quite steady conditions were noticeable in Thursday's session and Steels and Textiles were in favour. The Calcutta market also improved in the latter half of the week on expectations that satisfactory dividends would be paid by prominent companies and the conviction of big industrialists that there is good scope for important industrial producers and that prospects for Indian industries will continue to be satisfactory for some years. But as in Bombay there is a tendency to take profits at the higher levels and there is not much improvement in prices on balance.

There will be no important fluctuation in prices pending a satisfactory settlement of the outstanding problems. Rumours are still afloat that there is a possibility of a change in the rupee-sterling rate (this question is discussed editorially in detail in the main issue). In some quarters it is seriously suggested that the rupee might appreciate in value against sterling. The publication of the report in Friday morning's press that the devaluation of sterling is likely has increased speculation in this respect. But having regard to the various questions at issue and the difficulties that may arise as a result of devaluation in sterling, it is reasonable to expect that there will be no major developments in the exchange market and that the talks that are now going on between the United States and Britain will ultimately prove to be satisfactory

for everyone concerned. As was remarked on an earlier occasion, the resumption of trading after the Puja holidays might be marked by active conditions.

The small rise in speculative counters in mid-week due to the expectations of a dividend of Re. 1 per share by the Burrakur Coal Company Ltd., for the half-year ended June, 1945 and a satisfactory dividend by the Equitable Coal Company Ltd., for the same accounting period. Market opinion seems to be divided about the final dividend of Indian Iron & Steel. In view of the rather optimistic references made at the last annual general meeting and the satisfactory experience of other steel producers it would be rather surprising if the final dividend turned out to be less than Rs. 1/2 per share and the total distribution for the year less than Rs. 1/12 per share.

The results of the Bengal Coal Company Limited, for the half-year ended June, 1945 have been already discussed in these columns. It was said that trading results for the last half-year were satisfactory and that the increase in the bonus distribution was very well deserved. Speaking at the half-yearly general meeting the Chairman had very interesting remarks to make regarding the future of the Coal industry. The statement by the Chairman of the biggest coal company in India is always awaited with interest.

The delay in the arrival of mining machinery prevented any large increase in raisings and such improvement in the cutting of coal as could be reported in the six months ended April 1945 was due only to the employment of more men and women. The wagon position is still curtailing despatches but the seasonal shortage was not so acute early this year and it is expected that with the reduction in military traffic and the increase in the output of freight cars within the country, the coal industry will not have any great reasons for complaint in this regard.

The satisfactory reference to the working of control and the emphasis on the need for the continuance of such control is perhaps an indication of the co-operation that exists between the industry and the Government authorities, the lack of which was deplored by another Chairman on an earlier occasion.

From a perusal of the speech published elsewhere in this issue, one would get the impression that the Chairman is confident of the future of the industry and

that, as is rightly pointed out by him, every effort would be made by the companies concerned to improve the position of the collieries as far as possible.

With plentiful labour and the installation of mining machinery, it can be expected that earnings of coal companies will improve further and that with the substantial benefits in respect of taxation and target bonuses, the bigger collieries would be able to pay satisfactory dividends.

As a result of the difficulties in regard to the supply of coal, raw materials and wagons the Orient Paper Mills Limited, has reported a considerable decline in earnings for the half-year ended March, 1945. The directors report that the mills had to remain closed on several occasions. This experience, however, would seem to be different from the major producers like Titagur Paper Mills and Bengal Paper. Sales were Rs. 45.22 lakhs against Rs. 52.51 lakhs in the previous half-year. Working expenses were at a high level in spite of the lower level of sales, materials and stores used being Rs. 24.03 lakhs against Rs. 25.27 lakhs in the previous half-year and manufacturing and other expenses Rs. 6.17 lakhs against Rs. 5.26 lakhs. In the previous half-year there was a decline in the closing stock to Rs. 3.53 lakhs from Rs. 4.18 lakhs at the beginning of the period while the closing stock on March 31, 1945 was higher at Rs. 4.45 lakhs against Rs. 3.53 lakhs.

The net profit, before providing for taxation and depreciation, is considerably lower at Rs. 6,62,456 against Rs. 11,08,539 for the previous six months. The amount set aside to depreciation is

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

CALCUTTA, Sept. 14.

Quietly steady conditions have prevailed on the Calcutta Stock Exchange in the past week and business passing has been on a fair scale. Earlier in the week there was no disposition on the part of operators to increase commitments as with the Bombay market closed it was not possible to take any definite view regarding the immediate outlook. There is also a disposition to await the outcome of the talks that are now going on between Lord Keynes and Mr. Crowley regarding the arrangements in place of lend-lease. In the last two days slightly steadier conditions have been noticeable with the expectations of a higher dividend for Burrakur Coal Company and Equitable. There is also considerable speculation regarding the final dividend of Indian Iron & Steel Co., for the year ended March, 1945. The general undertone is steady.

In spite of the reports that Provincial loans have not met with satisfactory response, the gilt-edged securities section has been steady with 3 per cent 1957 at Rs. 100/7, 3 per cent 1966-68 at Rs. 98/10 and 3 per cent 1970-75 Rs. 97/5. 3½ per cent paper was better at Rs. 101/14 while there was greater enquiry for 3 per cent paper at Rs. 97. Among Provincial loans, 4 per cent Punjab 1948 loan changed hands at Rs. 104/3.

Easy conditions continue to prevail in the money market though at the auctions of treasury bills held this week not much of interest was shown and the average discount rate was unchanged at five annas and eleven pies per cent per annum.

Among bank shares, quotations have been fluctuating around narrow limits for the more important shares. *United Commercial Bank* were Rs. 26 premium. *Hindustan Commercial* changed hands at Rs. 52, *Reserve Bank* at Rs. 135 and *Hindustan Mercantile* at Rs. 45. There was considerable activity in *Nath Bank*. The quotation improved to Rs. 39/6 at one time. Selling and profit taking at the higher levels, however, resulted in a setback to Rs. 36/6 cum rights.

In the cotton section, *Dunbar* were better at Rs. 372 and *Kesoram* at Rs. 19. *New Victoria* were unchanged at Rs. 8 while *Basanti* were Rs. 13/4 and *Mahalaxmi* Rs. 34/8. *Elgin* and *Cawnpore Textiles* fluctuated around the last levels.

In the Coal section, the satisfactory remarks made by the Chairman of the Bengal Coal Company and the expectations that the Burrakur Coal Co. will be able to pay higher dividends for the last accounting period led to some speculative buying of the popular countries. *Bengal* remained steady at Rs. 363 but *Bhagora* improved to Rs. 24/10 and *Burmakur* to Rs. 44/8. Quotations are slightly easier now, *Burrakur* being Rs. 44/4, *Central India* were firm at Rs. 13/4, *Deoli* quoted Rs. 16 and *East India* Rs. 45/12, *New Beerbhoom* were uninteresting at Rs. 47/12 while *South Karanpura* improved on special buying to Rs. 37/3. *West Bengal* were steady at Rs. 15, *Ranee-gunge* Rs. 64/8 and *Sendra* Rs. 28.

Not much interest was shown in the jute section and quotations are not very much changed on balance. *Howrah* were quoted around Rs. 93, *Anglo-India* were fairly steady at Rs. 525, and *Champdany* at Rs. 279. *Craig* were neglected at Rs. 13 while *Kanknarrah*

were 5 points higher at Rs. 791 and *Kamar-hatty* at Rs. 671. *Megna* were better at Rs. 157 against Rs. 153 while *Nuddea* were easier at Rs. 138/12. *Orient* improved to Rs. 317 while *Reliance* were more than a point lower at Rs. 83/12.

In the Engineering section, both Indian Irons and Steel Corporations fluctuated in narrow limits. The market expects that there will be no important change in the final dividend due to be announced shortly. It is generally agreed that the total distribution for the year will be the same as last year. Bear operators, however, would seem to be keen on pushing down prices. After improving to Rs. 41/6 from Rs. 40/12 last week the quotation is now around Rs. 41. *Steel Corpn.* are a few annas higher at Rs. 34/4, *Indian Standard Wagon* were uninteresting at Rs. 114, *Jessop* at Rs. 26/1 and *Marshall's* at Rs. 6/6. *Kumardhubi Eng.* were quiet at Rs. 10/12.

In the Sugar section, *Carew & Co.*, registered a rise to Rs. 31/4 from Rs. 29/8 last week on reports that a dividend of Rs. 1/4 per share for the year ended June 1945 would be paid. Other shares also were marked higher in sympathy. *Balrampur* were Rs. 17/12 against Rs. 16/12, *Belsund* Rs. 16/5 against Rs. 16 and *Champaram* Rs. 42/2 against Rs. 41/9. *Ramnugger Cane & Sugar* were uninteresting at Rs. 42/6.

There was slightly more interest in the tea section but no important change in the quotations were recorded. *Central Cachar* were put through at Rs. 126, *East India* Rs. 21/15, *Rajnagar* Rs. 19/5 and *Tezpur* Rs. 21/10.

In the Miscellaneous section, *Burma* shares were completely neglected. *Burma Corpn.* being unchanged at Rs. 6/8 and *B.B.P.* at Rs. 5/15. *B.I.C.* were sticky at Rs. 7/6. There was a rise in *Calcutta Electric* to Rs. 47 on reports that the Provincial Government had come to an agreement with the Electric Supply Corporation with regard to the purchase of the latter undertaking at an early date. In the absence of any specific data relating to the agreement, the market is not inclined to push up prices further. In sympathy with the strength of *Calcutta Electric Supply* there was a rise in *Calcutta Trams* to Rs.

STRUCTURAL STEEL

MECHANICAL PLANT

ROPEWAYS

STEEL CASTINGS

Surplus capacity now available for civilian orders

KUMARDHUBI Engineering Works Ltd.

KUMARDHUBI Dist. MANBHUM

MANAGING AGENTS BIRD & CO. CALCUTTA

56 cum-dividend but the quotation is now Rs. 55/8. As it was reported that the Madras Electric Supply Corporation is also to be taken over by Madras Corporation and the necessary two year's notice has been given, there was some buying of Madras Electric and the quotation is now around Rs. 31/12 against only Rs. 25 some time back. *Karanpura Development* were very strong at Rs. 42. The quotation was only Rs. 38 last week. *Bararee Coke* were Rs. 36, *Indian National Airways* Rs. 26 and *Rohtas Industries* ordy. Rs. 15/4. Among paper shares, *Titagur Paper* continued steady at Rs. 23/10. *I.G.N.* improved to Rs. 230 on the declaration of a centenary bonus of 2 per cent per annum. *Midnapore Zemindary* were steady at Rs. 192 and *Assam Saw* Rs. 6/4. *Alkali & Chemical* were unchanged at Rs. 29/4 and *Assam Bengal* at Rs. 20. A good amount of business was reported in Straits Dollar Rubber shares. The statement by the military authorities that most of the rubber plantations had not suffered any considerable damage, and that it was only a question of finding the necessary labour have led to the expectations that it would be possible to resume rubber production at an early date and that the more important rubber producing companies in Malaya would benefit considerably.

THE UNITED INDUSTRIAL BANK LIMITED.

NOTICE is hereby given that the Fifth Ordinary General Meeting of the Shareholders of the UNITED INDUSTRIAL BANK, LTD., will be held at the Registered Office of the Bank, 7, Wellesley Place, Calcutta, on the 1st day of October, 1945, at 11 a.m. to transact the following business:—

- (i) To receive and adopt the Report of the Directors and the Audited Accounts for the year ended 31st March, 1945.
- (ii) To elect Directors.
- (iii) To elect Auditors and fix their remuneration.
- (iv) To transact any other competent business that may be brought forward.

By Order of the Board,
A. CHATTERJEE,
General Manager.

Calcutta,
The 10th Sept., 1945.

N.B.—The transfer Books of the Bank will be closed from the 22nd day of September, 1945 to the 1st day of October, 1945, both days inclusive.

DEPARTMENT OF SUPPLY

Office of the Controller of Supplies (Disposals),
2, Fairlie Place, Calcutta.

PUBLIC NOTICE.

The Controller of Supplies (Disposals) wishes to inform the public that copies of all tenders for the sale of Military Salvage and Scrap as well as Surplus Stores will be on view on the Notice Board of his Office at 2, Fairlie Place, Calcutta. The public who are interested in purchasing such stores may see the Notice Board regularly and obtain copies of the tender forms in which they are interested direct from the Office.

BENGAL COAL COMPANY LIMITED

DELAY IN ARRIVAL OF MINING MACHINERY

CHAIRMAN'S REMARKS ON TAXATION POLICY & BONUS PAYMENT

Addressing the Half Yearly General Meeting of the Shareholders of the Bengal Coal Co., Ltd., held in Calcutta, on the 6th September, 1945, Mr. H. D. Cumberbatch, the chairman, said:—

"I presume as usual, we may take the Report and Accounts as read, but before putting the formal resolution I propose, with your permission, to refer to a few general matters connected with the welfare of your Company.

Let us first give thanks for the gallantry and sacrifice displayed amongst the Allied Nations in the destruction of the greatest array of forces of evil that the world has ever seen, and let us pray that such forces will for ever be kept in a state of complete impotence.

Wagon Supply

As you will all no doubt remember, it is seldom a speech is made from this chair without a reference to this subject, and this is not going to be an exception. Although we were promised six months ago that 40,000 extra wagons under Lease-Lend arrangements would be imported before the end of 1945, I understand that few of these wagons will be received. I am however advised that a substantial programme of wagon construction within this country is already well under way and it remains to be seen how this will affect the shortfall in imports already mentioned. In any case I am happy to say that the seasonal shortage of wagons for the coal industry during the first half of this year was of a lesser duration and not so acute as it has been for a good many years past. This improvement must in some measure have been the result of further increased efficiency in the use and distribution of wagons available for coal traffic, and I sincerely trust it will be maintained.

Later on I will give you details of the new machinery and plant ordered by your Company but I would at this stage advise you that none had been installed in time to have any effect on production to the end of April. Thus, with all our old troubles still with us, and our efforts to ameliorate conditions not yet having taken effect, I consider it most noteworthy that nearly 1,00,000 tons more coal have been produced this half year than last half year.

In spite of this increased output, which is largely due to a greater number of miners at our collieries, more could have been raised but for the drop in the output per man. The main cause of this is that a miner today can earn the same money as previously for less work and unfortunately is doing less work and raisings suffers. It is thus obviously an urgent necessity that every effort be made in the vast task of educating labour to the virtues of thrift.

Apart from this important question of miners savings, there is also the crying need for provision of consumer goods. They are not only urgently needed by the miners but might give them that added incentive to work and provide themselves with money for the purchasing of necessities for themselves and families. Pressure has been brought on Government, who have appreciated the urgency and necessity for the provision of such consumer goods not only of course to the coal industry but to others as well, and Sir Akbar Hydari himself went on a mission earlier this year to the U. K. with a view to helping in this direction. No doubt it is early yet to expect results from this mission but it is comforting to know that it has received the serious attention of Government at this high level. So far as your Company is concerned, you may rest assured that the fullest advantage will be taken of every opportunity to bring home to the miner the incentive to work by the provision of these consumer goods."

The Chairman then referred in some detail to the accounts for the half-year and in referring to taxation, said:

"Whilst on the subject of taxation, I must refer to the very unfair method adopted by the Bengal Government in levying Road Cess which they base on profits before allowing E. P. T., whereas E. P. T. is levied on profits before the Road Cess is charged. This is double taxation in its most flagrant and inexcusable form and we have protested to Government but unfortunately as yet in vain. In our opinion, the Road Cess should, of course, be based on despatches of coal as it is elsewhere."

Future Plans

"As to the future. We must gird up our loins afresh to tackle new peacetime problems which will arise under conditions which are today very difficult to foresee. It would be idle to attempt to prophesy when the whole world is in such a state of flux, as to what the future holds. May I however mention just one problem.

"The control of prices and distribution by Government which has had the fullest support of the larger producers, and not necessarily to their advantage, has undoubtedly been of benefit to the whole country, and in my opinion, and so far as one can see today which is but a short way ahead, control of distribution and prices by Government must be maintained. Nevertheless, it should be one of the primary matters both for Government and the Industry to consider as to how and when the present very tight control of distribution should be loosened so as to allow the trade to flow through its normal channels.

Coal mining is pre-eminently an industry in which forward planning is necessary and I would advise you in short, to some extent, of your Company's planning. Unlike most we have heard of recently, this one is a 6-year plan and is both short and long term."

After referring in some detail to the short term and long term developments included in the plan, the Chairman proceeded:

"Some may consider it unfortunate that such an ambitious programme should be carried out during a period when costs of materials have never been higher. It is a fact that the programme will cost three times—probably more than three times—what it would have cost in the years preceding 1939. Government, I am glad to say, have appreciated this point when calling on private enterprise to take all steps at their command to meet the emergency of war requirements and the future industrial demand for coal and you will be aware that they have met the industry by means of allowing all capital expenditure incurred during a specific period to be written down to 25 per cent of its original cost in the first two years after it becomes productive—provided the capital expenditure is incurred for purposes which Government is satisfied are directly connected with increased production of coal. This is particularly opposite measure by Government to meet the circumstances because, on the basis that cost of machinery, materials and constructional labour are now three times what they were pre-war, it will result in capital expenditure being written down in two years to a level approximating pre-war costs. Further I am glad to be able to report that Government have already accented practically the whole of this planned expenditure as qualifying for this special depreciation so that if our trading conditions remain similar to those of today and our plan is carried through completely by the Spring of 1950.

that is within the period allowed by Government, we shall within two years of completing each part of it have written down three-quarters of its cost in our books out of revenue. I stress the last words because there is a tendency in certain quarters to believe that the special depreciation will be used only to reduce profits in their taxable aspect and that the consequent reduction in tax liability will mean larger sums being available for distribution. This is not so. I must make it quite clear that the policy of your Board in this matter will be whenever possible, to take in the Company's books the full amount of the special depreciation allowed.

It will not be out of place also to mention that the same policy will be followed in dealing with any bonus earned on the Government Target Scheme. Such bonuses are paid by Government to compensate the industry for accelerated exhaustion of its wasting assets during a period of high taxation. It is the intention of your Board first to be satisfied that depreciation of your Land and Mining Rights and Development are fully served by appropriation of target bonuses before any amount so received is used as distributable profit.

That, gentlemen, is our plan and our policy for financing it. Detailed planning on such an extensive scale is no light task and I cannot leave this subject without paying a tribute to our Chief Mining Engineer, Mr. Barraclough, for the vision and expert knowledge with which he has tackled it and to the technical staff of his office for the very hard work and long hours its preparation has involved. I would also pay tribute to them for their hard and efficient work in the production of coal.

I have now to welcome to your Board a new member, Mr. Gokulchand Bangur, whose wide experience of Calcutta business will surely be of great value to your Company.

Before concluding I would mention the resignation in March last of Sir Kenneth Mealing from the chairmanship of the Company after holding office for four years, and am confident you would wish to record your appreciation of the service he has rendered to the Company during this period."

J. K. COMMERCIAL CORPORATION, LIMITED.

NOTICE is hereby given that the Second Ordinary General Meeting of the Shareholders of J. K. COMMERCIAL CORPORATION, LTD., will be held on Thursday, the 20th September, 1945, at 4 p.m., at the Registered Office of the Company, at Kamla Tower, Cawnpore to transact the following business:—

- (1) To receive and adopt the Directors' Report and the Audited Accounts of the Company for the year ended 30th June, 1945.
- (2) To declare a dividend.
- (3) To elect Directors in place of Lala Parshottamdas Singhania and Mr. P. D. Chanda Rana, who retire in pursuance of Article 98 of the Articles of Association of the Company but, being eligible, offer themselves for re-election.
- (4) To appoint Auditors and fix their remuneration.
- (5) To transact any other competent business that may be brought forward.

The Share Transfer Books and the Register of Members of the Company will be closed from the 6th September, 1945, to the 20th September, 1945, both days inclusive.

By Order of the Board,
(Sd.) R. K. GUPTA,
Secretary.

Kamla Tower:
Cawnpore, 28th August, 1945.

Annual General Meeting on 20-9-1945 at 4-30 p.m. at Bombay. Transfer books closed from 25th August to 22nd September, 1945. Dividend payable on and after 1st October, 1945 to shareholders as on the Company's register on 20th September, 1945.

Audited Accounts for the year ended 31st March, 1945.

The disposable profits for the year are as under—

Net profits after providing for incometax, super-tax and excess profits tax and after setting aside a sum of Rs. 1,25,00,000 for depreciation Rs. 3,21,71,814; Add—Amount brought forward from last year's account Rs. 8,57,545; Add—Income-tax deducted from dividends on Preference Shares (1943-44), Rs. 15,90,087; the amount available is thus Rs. 3,46,19,446; out of which the Directors have transferred to the Reserve Fund Rs. 85,00,000, inclusive of approximate amount required for compulsory E. P. T. deposit, leaving a balance of Rs. 2,61,19,446.

The Directors have determined to dispose of this amount as follows:—

A. To Shareholders: (1) A dividend of Rs. 9 per share on First Preference Shares Rs. 4,50,000; (2) A dividend of Rs. 7-8-0 per share on Second Preference Shares Rs. 52,03,642; (3) A dividend of Rs. 23 per share on Ordinary Shares Rs. 80,50,000; (4) A dividend of Rs. 129-8-9 per share on Deferred Shares Rs. 63,15,625. B. To Employees: Bonus under the Profit sharing Scheme Rs. 50,00,000. C. Carry forward Rs. 11,00,179; total Rs. 2,61,19,446.

(Dividends on First and Second Preference Shares will be subject to deduction of Income-tax).

The Works profits for the year under review after making provision for Depreciation, Taxes and Reserve Fund inclusive of E. P. T. Deposit, allow for the payment of the same profit-sharing bonus and dividends as in 1944.

FINANCE.

The deposits made with Government under Section 10 of the Indian Finance Act, 1942, amount to Rs. 117.99 lakhs. This amount will be further increased by a sum of about Rs. 52.44 lakhs, for which the necessary appropriation to reserve has been made this year.

The sales receipts during the current year were affected by the reduction in output and the extension of price control to steel supplied for commercial purposes. This, however, was offset by larger despatches from stock, which, in accordance with the Company's practice, was valued on a conservative basis.

The need for raising additional finance in the near future foreshadowed in last year's report still exists. The principal commitments of the Company are the provision of the entire share capital, amounting to Rupees Seventy-five lakhs, of West Bokaro Limited, which was registered on 27th March, 1945, as a subsidiary of the Steel Company, and a part of the capital of the proposed Tata Locomotive and Engineering Company, Limited. The post-war development programme will also require substantial additional funds.

COAL.

The grave shortage of coal and the deterioration in the quality available for coking were the main factors responsible for the reduction in the output of finished steel and the increase in the cost of production during

the year. Vigorous measures of fuel economy were adopted in the plant in order to minimise, as far as possible, the adverse effects of these factors on costs and output. Although the seriousness of the coal situation was repeatedly brought to the notice of the authorities concerned, it unfortunately still continues to give cause for anxiety.

PRICE CONTROL.

To offset the increase in the cost of production, prices under the main war supply contract with Government were increased in the first quarter of 1944-45. Price control was extended to steel supplied for commercial purposes on 1st July, 1944. Since then, under this arrangement, actual increases in the cost of production, including overheads, over the cost and overheads of the first period, are payable by Government in respect of each half-yearly period.

OPERATIONS.

Vigorous measures had to be adopted during the year to counteract the deterioration in the quality of the coal.

As in the previous year, almost the whole of the Company's operations were directed towards meeting requirements in connection with the war, the Railways and urgent civil purposes.

The Steel Melting Shop No. 3 was employed mainly for producing quality steel.

Special quality sheets, such as alloy steel sheets and high silicon sheets and lighter gauge sheets, were rolled successfully at the Sheet Mills.

One hundred new four-wheeler wagons were fabricated in the Structural Shop.

A complete structural galvanizing outfit was installed for the execution of work for the Posts and Telegraph Department.

At the Wheel, Tyre and Axle Plant, five new boring mills and a new slicing lathe were installed.

Four coke breeze fired boilers were installed and started as a measure of fuel economy. A fifth coke breeze fired boiler is now ready for operation.

The second 27,500 K.W. Generator Set was installed in Power House No. 3.

The Research and Development work done by the Metallurgical, Chemical, Refractories, Energy and Economy and Electrical Departments continued to yield good results.

The output of tools from the Agricola Department was lower than in the previous year. The fall in output was accompanied by a decline in the demand for tools required by the Army.

COLLIERIES.

Despatches from the Collieries were lower than in the previous year, owing mainly to a smaller allotment of wagons. There was also a further decline during the year in the labour available in the Collieries.

TOWN.

Owing to the scarcity of building materials, no new quarters were built during the year. A programme of house construction for 1945-46 has been sanctioned by the Board, and it is expected that the housing situation will gradually improve.

The Sewage Disposal Plant at Bara was brought into operation in April 1944.

The Dimna-Nalla Dam has been completed and is expected to provide an uninterrupted supply of water to the town.

MEDICAL.

The health of the town remained generally satisfactory during the year.

The total number of pupils on the rolls rose to 12,700 from 9,800 in the previous year, due to release of school buildings by the Army and to the disbandment of A.R.P. services. Better arrangements were made for medical inspection and treatment of school children. A scheme of supply of sprouted gram and shark liver oil to undernourished children was introduced.

JAMSHEDPUR TECHNICAL INSTITUTE.

The Graduate Apprenticeship course was started in place of the previously existing 'A' and 'B' class Apprenticeship courses, and the Trade Apprenticeship course in place of the 'C' class Apprenticeship.

The total number of 'A' and 'B' class and Graduate Apprentices trained in the Institute upto the end of the year was 298. Thirteen Graduate Apprentices were admitted to the Institute during the year. The total number of students undergoing apprenticeship was 29 at the end of the year. The total number of 'C' class and Trade Apprentices on the roll on 31st March, 1945, was 157 and 58 respectively.

LABOUR.

All employees of the Company will receive two-and-a-half months' pay as bonus under the profit-sharing scheme. This will involve an expenditure of about Rs. 51.66 lakhs.

The general labour situation was satisfactory throughout the year. With the improved position of contractors' labour, the labour camp was dismantled at the end of the year.

The Government Auctioning Scheme introduced on the 26th July, 1944, continued to work satisfactorily during the year.

The A.R.P. Organisation was disbanded from 1st February, 1945, excepting the Fire Brigade Section.

During the year under report, several administrative changes were made at Jamshedpur and Calcutta. The posts of General Manager and Deputy General Manager at Jamshedpur were abolished and in their place the post of works Manager was created.

(Annual General Meeting on 28-9-1945. Books closed from 12th to 28th September, 1945). Audited accounts for the year ended 31st December, 1944.

After debiting interest and commission, providing for reserve for taxation, setting aside depreciation and making sundry adjustments, the combined Revenue and Profit and Loss Accounts show a profit of Rs. 9,74,748-15-10, which includes the revenue results of the Company's Jaipur Branch and Bhatinda Depot not transferred to British India. This amount, together with the balance carried forward from the previous half-year, shows a profit of Rs. 22,35,762-4-0.

The Directors recommend to pay a Dividend on 1,50,000 Ordinary Shares at Rs. 2 per share (less super-tax at As. 1 per rupee payable on amounts distributed as dividend) Rs. 3,00,000; and to carry forward Rs. 19,35,762-4-0.

In pursuance of the Resolution passed by the Shareholders at their Extraordinary General Meeting held on the 25th November, 1944, in respect of the audit of the Company's Accounts once at least in every year and the adoption of the modified Articles of Association in the same Meeting, the Directors decided that the Accounts of the Company be closed and audited once in every year as at 31st December instead of twice in every year, with effect from 1st January, 1944. The Accounts for the half-year ended 30th June, 1944 was, therefore, not audited, published or circulated.

Div. % Pref.	2½	2½	2½

Audited accounts for the half-year ended 31st March, 1945.

After payment of interest, debenture interest, Managing Agents' remuneration, etc., commission, Directors' remuneration, etc., setting aside depreciation on Block, providing for taxation and taking into account the balance of the previous half-year, the combined Revenue and Profit and Loss Account shows a net surplus of Rs. 3,66,487-8-8, which the Directors propose to dispose of as above:—

Dividend at 5½ per cent per annum, 750 of income-tax Rs. 55,000; Dividend on 2,09,750 Ordinary Shares of Rs. 10 each fully paid up at As. 12 per share, free of income-tax Rs. 1,57,312-8-0; Balance to be carried forward Rs. 1,54,175-0-8; Total Rs. 3,66,487-8-8.

During the period under review, considerable difficulties continued to be experienced with regard to supplies of coal, raw materials and wagons, and other difficulties were met with, due to which the mills had to

remain closed on some occasions. This and the reduction in the prices of paper by the Government of India adversely affected the profits of the Company.

Mg. Agents.—Messrs. Birla Brothers, Ltd. Authorised Capital—Rs. 1,00,00,000. Issued and Subscribed—Rs. 40,97,500 in 2,09,750 Ordinary shares of Rs. 10 each and 20,000, 5½ per cent Cum. Preference shares of Rs. 100 each, both fully paid up.

Synopsis of balance sheet as at 31-3-1945

HASTINGS MILL, LIMITED.

Audited accounts for the half-year ending 31st March, 1945.

After transferring Rs. 50,000 to Mill Renovation Reserve providing for Depreciation and Taxation, making sundry adjustments, and bringing forward the balance from the last account, there is a balance at the credit of Profit and Loss Account of Rs. 2,09,407-12-6. From this the Directors have declared dividends as follows:—

Dividend on Preference Shares for 7 months ended 30th September, 1944 at Rs. 3-8-0 per share, Rs. 87,500; for 6 months ended 31st March, 1945 at Rs. 3 per share, Rs. 75,000; thus absorbing Rs. 1,62,500 and leaving Rs. 46,907-12-6 to be carried forward.

The weekly hours of working under the Indian Jute Mills Association Working Time Agreement remained unchanged throughout the half-year at 54 hours per week with all looms operating. The Wellington Mill of the Champdany Jute Co., Ltd., has continued to make up the production of 800 of the looms and payment has been received from them for loom-hours worked on the company's behalf, at the rate fixed by the Committee of the Indian Jute Mills Association under the Industrial Pool Agreement, which rate remained unchanged at As. 12 per loom-hour throughout the period. In addition to this the loom-hours for the balance of 278 looms, are being made up as from 2nd July, 1945 by Messrs. MacLeod & Co., Ltd., in the Mills within their Managing Agency, and there again, the arrangement is that the company be paid in the same way as under the arrangement operating with the Wellington Mill. The loom-hours which have not been made good during the period have been made the subject of a claim to Government for compensation at the Industrial Pool Rate. This claim has not been included in these accounts. The other part of the Company's claim against Government, consisting of recovery of out of pocket expenses for goods supplied, and services rendered to the requisitioning authorities, has, however, been included in the attached Profit and Loss Account.

As regards the claim for the period ended 30th Sept., 1944, the Co. have made continuous efforts to have it considered, and are now pleased to report that sanction has been given for a payment of Rs. 7,17,225 on account, pending the final examination of the claim.

Mg. Agents.—M/s. Andrew Yule & Co., Ltd.

Authorised Capital—Rs. 1,00,00,000. Issued and Subscribed—Rs. 45,00,000 in 20,000 Ordy. and 25,000, 6 per cent Cum. Pref. shares both of Rs. 100 each, fully paid up.

changed at Rs. 2 lakhs. The provision taxation is appreciably lower at 2.5 lakhs (Rs. 6 lakhs). The distribution to ordinary shareholders, however, has not been affected as it has been maintained at 12 annas per share. The amount carried forward is almost unchanged at Rs. 1,54,175 against Rs. 1,54,034 brought in. No sum has been transferred to General Reserve against Rs. 2 lakhs formerly.

Radio and Electricals, Limited, the announcement is published elsewhere in this issue, is the second flotation of its kind in recent months. The directorate consists of prominent businessmen and Mr. A. V. Thomas is to be congratulated on his successful negotiation with the Madras Government for taking interest in the new venture. The authorised capital of the company is Rs. 50 lakhs of which Rs. 20 lakhs in shares of Rs. 10 each are offered for public subscription. The Government of Madras have agreed to take up 20,000 shares while the managing agents and their friends are subscribing for 40,000 shares. The balance of 1,40,000 shares is issued to the public and is completely underwritten by three firms.

It is stated that the company has already concluded arrangements with the biggest firm of manufacturers of radio components in the United Kingdom to supply the necessary component parts, technical advice and assistance. The company proposes to manufacture cheap radio sets, refrigerators and other electronic and electrical goods. As deliveries of component parts are expected to commence from November, 1945 the company will be in a position to start business in right earnest. The Managing Agents are A. V. Thomas & Co., (India) Ltd., who have good experience of Indian business.

Malwa Vanaspati & Chemical Company Limited, also is started under influential auspices. In this case, the Indore State is taking an interest. The company proposes to take up the manufacture of Vanaspati and production of soaps of different varieties and other by products in the State of Indore. It has been granted a monopoly for the manufacture of Vanaspati in the State for a period of eight years. The company is also said to have received other special facilities and advantages beneficial to the objects concerned. An order has already been placed with a renowned firm of manufacturers in the United Kingdom for a plant for the manufacture of 25 tons of high quality vegetable products and chemicals per day.

The authorised capital is Rs. 60 lakhs of which Rs. 40 lakhs is issued. The whole capital is in ordinary shares of Rs. 10 each. The Indore State has agreed to take up ordinary shares of the aggregate value of Rs. 4 lakhs while the managing agents Messrs. Mohatta Bros. and their friends have agreed to take up Rs. 10 lakhs worth of shares. The balance of 2,60,000 shares is offered for public subscription. Of this number 75,000 shares have been reserved for subscription by Indore State subjects and they will be allotted to them provided applications to that extent are received within 20 days from the date of issue of the Prospectus.

THEIR NEEDS
never ignored

As in every necessity of life, in clothing too, the peasant class is nowadays badly affected. The question of paying any price is an impossibility with them. They don't want to put up a show; what they need is durability and cheapness. Apart from the varieties of finer clothing we, also manufacture clothing of medium but durable texture which are available at a considerably cheaper price.

Our specialities:—
DOUSCHETE CHEQUER, Mock Coating, Thana Coating, Printed Mock Coating, Thana Chequer, Border Sarees, etc.

(From our Readers)

Tax-detection Department

Your suggestion for a Tax-Detection Department on the U. S. model is perfectly sound on paper. It looks as though such a Department is almost a necessity in a country like ours where corruption among officials and profiteering and tax dodging among businessmen are rampant.

But in practice will a new Department be able to set right these deep rooted ills? Will it be able to achieve what has not been done by the existing Revenue, Sales Tax and Income-tax Departments and the Accountant Generals? What is the guarantee that men of this department will be above corruption? I am afraid this will be one more department adding to the red-tape and delay of the Government of India. What, I feel, will really do the job, you have in view, is a thorough reorganisation of departments removing men who are corrupt and punishing in an exemplary manner whoever is involved in corruption and tax dodging.

A. V. Lal.

Nationalise the Reserve Bank:

After reading your article 'Nationalisation of the Bank of England' I was wondering why the Reserve Bank of India should not be nationalised. I was, therefore, glad to see your reasoned plea for the nationalisation of the Reserve Bank.

As it stands at present the Directors of the Reserve Bank can do very little except, perhaps, get a few jobs for some. As you have rightly put, "On the one hand there is very little power for the Central Board, on the other hand, even that little power is mostly exercised in conformity with official pattern." The Central Board, in short, consists of a set of powerless 'Yes' men. Of what earthly use is it having such a board?

There is also no possibility of a strong board coming into existence. For, the Directors elect not only themselves but also their successors. The sooner this drama is stopped the better. And this can be done only if the Reserve Bank is nationalised.

R. S. Joshi.

Well Done:

You have given in your Fact Parade 'Indian Finance' September 15, 1945), the news that the Madras Government have decided to leave a decision on the Agricultural Income-tax Bill to be taken by the new Government. Readers of 'Indian Finance' will remember that you suggested that a tax of this nature should be levied only by a popular Government. You rightly pointed out that the budget is surplus, and there is no need for taxation. Moreover there can be no taxation without representation. The present Advisory Government therefore, is not justified in levying the tax. The present Government, it is gratifying to think, has done well in leaving this tax to be levied by a future popular Government.

A. R. Subramaniam.

Capital Control:

I find you are advocating 'Capital Control' and also that the Government of India also intend continuing it for some time.

Conditions in the post-war period are completely different from conditions that prevailed in the war-time. For the efficient prosecution of the war many controls were necessary and the public bore them all with a patient shrug.

Why should there be controls now? When our experience with the administration of controls has been none too pleasant, I see no justification for their continuance. If, in the case of Capital Control, the Examiner of Capital Issues had examined the soundness and otherwise of each proposal, then in the interest of the share-holders, there might be justification for continuing it. But that is not done. I, therefore, think these controls stand in the way of the full development of the country. It is best if they are removed.

A. Trivedi.

A Reader Chides:

I am one of the subscribers of your highly valued weekly 'Indian Finance', which I have always considered an all-India Journal. There was a time when the main weekly issue published letters sent by your foreign contributors and the Investor's Supplement regularly gave not only full information regarding joint stock companies and transactions during the week etc., but reviewed the Bombay and Madras Stock Exchange also. Then war economy necessitated reduction in the matter published, and then the Analyst's note took the place of the Bombay and Madras Stock Exchange Reviews. Recently on the complaint of one the readers you have been pleased to restore the weekly transactions to their place, but the Madras and Bombay market reviews or the Analyst's Note are conspicuous by their

absence, though they are not likely to monopolise much space. I hope my complaint will receive due consideration. In conclusion, I must also state that I much appreciate the new feature of your journal. Bouquets and Brickbats (though the latter are so soft as flowers) and Fact Parade.

G. M. Kalwani.

Machines for Lighter Industries:

In your editorial note on 'Machines for lighter industries' you have, in my opinion, vaxed eloquent over the prospects of India getting the benefit of early reconversion achieved in Britain. While I agree with you that we cannot be waiting for the key industries to be first developed in our endeavour to foster the medium industries which have prospered during the war, I am very doubtful if the British would give us high priority in the matter of procuring these machines for lighter industries supposed to be available in plenty in Britain. The United States undoubtedly has large excess capacity for capital goods but, owing to their peculiar advantages, they may prefer to take the lion's share in regard to the supply of machine tools and vital machinery for the bigger industries leaving some room for the poor partner, U. K. All the countries in the Far East, in the Middle East, and also in Europe would require lighter machinery and we will not be in the wrong if we assume that white countries and the free countries would be given priority before India. Further, our Industrialists' Mission which has now returned sadder and wiser has not laid emphasis on the prospects of our getting machinery from Britain for our medium industries. As for the Government of India abolishing the controls at this end to facilitate the speedy import of machinery, those who are in the know of things seem to feel that super-priority would be given to consumer goods so that India can for long remain valuable for the British industries and commerce.

T. R. Panday.

FACT No. 12

INDIA'S Cotton Textile Industry today produces 4,800 million yards of cloth as against a pre-war average of 3,800 million yards per year. If the production of the handloom industry is also included, and if proper adjustments are made for exports, supplies against war requirements, etc. the net available supply in the year 1943-44 was 5,868 million yards as against an average of 6,260 million yards pre-war, i.e. a reduction of only 6%.

One of a series of statements of fact for the information of the public.

GENERAL DETAILS

The Company has been formed for the purposes set out in the Memorandum of Association and in particular for working coal mines and dealing in coal.

Mr. S. K. Bajpai, one of the Promoters and Directors of the Company, has entered into an agreement with Messrs. Agabeg Brothers Ltd., for the purchase of Jogta Colliery together with all its plants, machineries, buildings, furniture, implements, stores, stocks and all other assets free from all encumbrances, for Rs. 20,00,000 and has already paid to them Rs. 1,00,000 as earnest money. Mr. Bajpai has agreed to transfer to the Company all the benefits under the said agreement for sale without any profits and only on receipt of the sums actually spent by him in connection with the said agreement including the earnest money. The entire price is to be paid in cash to Messrs. Agabeg Brothers Ltd.

The Jogta Colliery is situated at the Sijua Railway Station, E. I. Railway about seven miles from Dhanbad on the Dhanbad-Sijua, D. B. Road.

The total area of the mine is about 532 bighas, containing the seams Nos. 15, 14, 13 and 12 outcropping, and also all seams below No. 12. Coal of all the seams now being worked are placed as Selected Grade "A" and "B" by the Indian Coal Grading Board. This is good coking coal with metallurgical quality and fit for manufacture of all kinds of valuable By-products. There is an assisted Railway Siding of all Wagons space right through the loading wharves of all the seams.

Seams Nos. 10 and 9 have not at all been worked yet and Seam No. 11 has been leased out to Messrs. Khatau Mavil Sethia for 25 years from 1937 with option on the lessors to terminate after first 25 years. Seams No. 15, 14, 13 and 12 are being worked by 6 inclines, all of which are well equipped with steam haulage engines, pumps, tram lines and all other up to date machineries with electric power. Moreover Quarry work for No. 15 seam coal has already been started and it is expected that raising of coal of this seam will be greatly increased on the removal of the remaining overburden in about three months.

The available tonnage of coal reserve has been estimated at 1,31,00,000 tons.

There are good accommodation at the Col-

liery consisting of Directors' Bungalow, Manager's Bungalow, Offices, Staff Quarters, Contractors' Quarters, Godowns Workshops Dispensary, Electric Sub-Station, Garrages and Out houses with electricity and water laid on. Moreover there are numerous well-equipped sanitary Dhowrahs in which miners and loaders and other labourers employed in the Colliery have been living since a long time.

The Colliery's present raising is about 8-9,000 tons per month; but, with the serious efforts of the new management and the working of the Quarry the output is expected to go up by at least 2-3,000 tons per month without any additional expenditure. And when work is started on Nos. 10 and 9 seams the output will easily reach 18,000 tons per month.

The Colliery does not pay any Royalty. It is held under a perpetual lease at the annual rent of Rs. 3,774-6-0 as, only for underground as well as for surface rights. Considering all the above circumstances it is expected that the Company shall begin to pay good dividends shortly after taking over the working.

The Managing Agents are appointed for a fixed term of 20 years from the date of the Company's incorporation on the following remuneration:

- (i) Rs. 2,500 per month plus all actual expenses for office establishment and
- (ii) 10 p.c. of the nett profits.

The qualification of the Directors, except the Ex-officio Directors is the holding of 500 Ordinary Shares. And the Directors are entitled to Rs. 50/- for each Meeting attended by them. Besides 1-4 p.c. of the nett profits is also to be divided amongst the Directors equally.

Mr. S. K. Bajpai, one of the Directors is also a Director of Messrs. Bajpai Trust Ltd., the Managing Agents and S. M. Basu, another Director is a partner of Messrs. Charu Chandra Bosu, the Company's Solicitors.

The Directors have decided to pay Brokerage at 1 p.c. on Preference Shares and 2 1/2 p.c. on Ordinary Shares to all recognised Brokers and Bankers on allotments in respect to applications secured by them. The Preliminary expenses are not expected to exceed Rs. 50,000 excluding Brokerage and Advertisement.

Applications for shares may be had on application at the offices of the Company, its Brokers and Bankers and their branches and application money has to be paid in cash or by Cheque on a Calcutta Bank; Cheques on outside banks should include Collection Charges.

The subscription list will remain open up to the 27th September, 1945. But it may be closed as soon as the issue is fully subscribed or earlier if the Directors so desire.

Fact Parade

Maritime Board to be set up:

The Government of India, it is learnt, have decided to constitute an Indian Maritime Board with representatives of the Government, ship-owners and seamen. The Board is being set up to act as a suitable permanent machinery for advising the Government on maritime labour problems, and for directly dealing with matters concerning the ship-owners and seamen.

Import of Agricultural Machinery:

Mr. D. R. Sethi, Agricultural Production Adviser to the Government of India, is to visit the U.K., USA, and Canada for about four months to study the availability for agricultural machinery and implements in these countries and expedite their supply to further India's "grow more food" campaign.

Mr. Sethi will advise the Indian Supply Mission in Washington all matters connected with agricultural machinery and tractors ordered from America for speeding up agricultural production in India.

India's Post-war Coinage:

Mr. G. C. Mitter, Chief Assayer, HM's Mint Bombay, is shortly proceeding on a deputation to Britain and the USA in connexion with the technical problems of the post-war Indian coinage programme of the Government of India.

"Victory Bonus" to Mill Workers:

"Victory Bonus" equivalent to one-twelfth of their total earnings, exclusive of dearness allowance, in the year from September 1, 1944, to August 31, 1945, will be paid to all workers in cotton mills in Bombay. A decision to this effect was reached at an urgent general meeting of the Bombay Mill-Owners' Association. It was agreed that the payment of bonus should be subject to the usual conditions.

Fisheries Plan for Karachi:

Karachi will have an up-to-date fishing landing harbour and a wholesale fish auction market close to it when the Government of Sind give practical effect to a scheme outlined by its fishing expert, Dr. M. Ramaswami Naidu.

Mysore Electricity Scheme:

The first stage of Mysore Jog power scheme is expected to be completed by the middle of 1947, though some power may be released by about June next year. The generating capacity of the plant at the end of the first stage will be 48,000 K.W. But provision has been made for installing additional generators and Penstock lines with a view to increasing the capacity to 120,000 K.W.

The probable cost of this expansion is Rs. 5 crores which is to be spent over a period of about five years. The total capital investment in the State's electrical undertakings will thus have risen to about sixteen crores.

Electric Trains between Mysore and Bangalore:

A grand scheme costing several crores for the laying out of an electric train service between Mysore and Bangalore (80 miles) is under consideration by the Government of Mysore.

It is learnt that the major reason underlying the above scheme is to obviate the present acute coal shortage and utilise Mysore's abundant electric energy, for the industrial and economic progress of the State.

Duduma Electric Scheme Dispute:

Sir B. N. Rau, former judge of Calcutta High Court, has been appointed special officer to advise the Governor-General of India on the determination of boundaries between Orissa and Madras at Duduma, where a hydro-electric scheme is being planned.

Pamphlet on "Grow More Food":

The Madras Government have accorded sanction to the printing and free distribution of a revised pamphlet entitled "Grow More Food", corrected upto July last in English and in the principal languages of the Province, viz., Tamil, Telugu, Kanada and Malayalam. They have requested all they have requested all officers concerned to take an active personal interest and do all they can to ensure that the pamphlet reaches people who will read and make use of it and that no copies are wasted.

Census of Looms in Madras:

In view of the widespread complaint of inadequate supply of yarn, the Provincial Textile Control Department is organising a detailed census of looms, all over the province, this month, with a view to finding out the number of active looms. According to the Fact Finding Committee, which reported a few years ago, there were less than three lakhs of active looms. The present experience of the Department in the matter of yarn distribution appears to have confirmed the impression that this figure is very much an under-estimate.

Expansion of Indian Trade in Colonies:

It is understood that with the end of the war the Government of India are actively considering a plan for the expansion of Indian trade in the colonies and it is likely that the representatives from India will be sent out to Australia, Canada and other colonies to watch the interests of the Commerce Department. In this connection the name of Mr. N. R. Pillai I.C.S. is being mentioned as India's trade representative in Australia.

YES SIR.. MAKE A POINT TO TRY IT!

Binnie's GOLD STAMP Rum! It's full-flavoured and positively precious. You ought to try it now. Don't wait. If you have always been used to drinking the best (like in the old days!) you'll find Binnie's GOLD STAMP Rum has what it takes! Get it now. Distilled by experts in the modern and hygienic plant of the Jagatjit Distilling & Allied Industries, Limited. Managing Agents: L. P. Jaiswal & Sons, Limited, Hamira, Kapurthala State.

Calcutta, Friday Evening.

Cheap conditions continue to prevail in the money market and call rates are unchanged at $\frac{1}{4}$ per cent. in Calcutta and $\frac{1}{4}$ per cent. in Bombay. Somehow even with the large amount of surplus funds with banks no large interest has been taken by big institutions either in treasury bills or gilt-edged securities. The Imperial Bank also has not been a keen bidder at the treasury bills auctions. The lack of response at the auctions this week and the failure of the provincial loans is not quite understandable. Only after September, weekly maturities are on a smaller scale. At the present moment the Central Government is not asking for amounts in excess of maturities. The slight increase in the average discount rate must be, therefore, due to the fact that the underwriters to the provincial loans were asked to take up a certain portion of the issues not taken up by the public.

Last week we remarked that in the absence of any large private interest in gilt-edged securities it could not be expected that the underwriters would oblige the governments concerned by sending in subscriptions as well. The prospect of getting the loans cheaper is certainly welcomed under present circumstances as it will be easy to dispose of the entire holdings in a short period at a profit. Even if the sales were effected at the present Bombay quotation for the shares of Rs. 99-4 the underwriters could make a profit.

Not one issue was completely subscribed, it being reported that the shortfall in the case of Madras was 56 per cent. U. P. 53 per cent and the Punjab 23 per cent. The poorer response for the Madras Loan is surprising as last year with the issue price higher and under less favourable conditions the underwriters took only about 15 per cent.

It has been suggested that the yield on analogous loans is higher. It can only be said that the inducement in the case of the provincial issue is not appreciable. The 3 per cent. 1959/61 Second Victory Loan is on tap at par though the market quotation for the loan is Rs. 99-11. 3 per cent. 1963/65 is quoting Rs. 99-4 and 3 per cent. 1957 is Rs. 100-7. The yield on the 3 per cent. 1960 provincial loans is therefore slightly higher than analogous Central Government issues. In view of the fact that the sums were required for productive expenditure in the case of the Punjab and Madras and the U. P. was repaying a portion of the dues to the Central Government under the Niemeyer Award the blame is mainly on the underwriting arrangement. Also the gilt-edged market was stagnant and banks were not quite keen on placing their funds in Government loans.

At the auctions of treasury bills held this week applications were higher at Rs. 4.47 crores against Rs. 2.83 crores last week but bidding was less keen and the average discount rate has increased

to six annas per cent. per annum from five annas and eleven pies per cent. per annum. The offer for the next week has been maintained at Rs. 2 crores.

The Assam Government is asking for Rs. 1.5 crores treasury bills next week.

The returns of the Reserve Bank for the week ended September 7 show no important change in notes issued or notes in circulation. Notes issued on September 7 were Rs. 1,161.40 crores against Rs. 1,161.28 crores. Notes in circulation also did not show any appreciable change. There was a slight increase in the amount of rupee coin to Rs. 16.82 crores from Rs. 16.70 crores. There is no change either in rupee or sterling securities.

In the Banking department, Central Government balances were slightly higher at Rs. 354.80 crores against Rs. 352.26 crores while other government accounts also improved to Rs. 20.84 crores from Rs. 18.45 crores. Bank balances showed a slight increase to Rs. 114.87 crores from Rs. 114.13 crores. Other deposits were Rs. 2.8 crores higher at Rs. 15.67 crores. Sterling balances have continued to increase, the latest figure at Rs. 480.07 crores showing an increase of Rs. 8.13 crores. Investments have declined to Rs. 24.71 crores from Rs. 25.32 crores.

The statement of the Imperial Bank for the same week shows an increase in deposits to Rs. 245.46 crores from Rs. 242.76 crores. There is a rise under investments after several weeks to Rs. 145.08 crores from Rs. 143.66 crores. Advances are lower at Rs. 53.41 crores against Rs. 54.86 crores. There is a further rise in cash balances to Rs. 56.91 crores from Rs. 54.21 crores.

The scheduled banks are in affluence and the decline in demand liabilities in the statement for the week ended September 7 must be regarded as temporary. Demand liabilities were Rs. 639.66 crores against Rs. 643.55 crores and time liabilities Rs. 252.62 crores against Rs. 251.80 crores. There was a slight decline in cash on hand but balances with the Reserve Bank have jumped to Rs. 114.42 crores from Rs. 103.89 crores. For the second week in succession advances have declined to Rs. 256.12 crores from Rs. 263.68 crores. Like the Imperial Bank every scheduled bank would appear to be building up large cash balances. It is not understandable why in the face of declining advances greater interest has not been taken in the gilt-edged market. Latterly, there has been a rise in the quotation for $3\frac{1}{4}$ per cent. to Rs. 102-1 but it is reported that only a very small business has been done in dated loans. With the need for repayment of the outstanding amount of 5 per cent. 1945/55 loan the authorities might possibly issue fresh loans. There seems to be greater enquiry for long-dated issues and the Reserve Bank was able to increase its tap rate for 3 per cent. 1970-75 to Rs. 97-4 from Rs. 97-2.

Lessons of the Industrial Mission

The report of the Indian Industrial Mission, which has been released during the week, is a document which is deserving of the careful attention of the country as a whole and our industrialists in particular. For the report contains points of importance both for public policy and for the plans of individual industrialists. The public, too, can gain an idea of the nature of the relations that may be expected to subsist in the future between India and advanced industrial nations like U. S. A. and Britain. The report of the Mission confirms the impression that of late anti-Indian propagandists have been extremely busy prejudicing the public both in Britain and U. S. A. in all matters of vital importance to this country. It is only too well known that on the question of sterling balances, the public has been led in an insidious manner to believe that all the foreign balances that India has accumulated during the war period are the result of unscrupulous profiteering on the one hand, and imprudent generosity on the other, and that, in considering the question of repayment of these sterling debts, regard should be had for the manner in which they were incurred. Likewise, in respect of India's economic development also, ideas which are certain to prejudice the prospect of foreign assistance, particularly from the U. S. A., have been carefully sowed in the minds of the foreign public. Quite apart, therefore, from its main objectives the mission felt called upon to combat these evils in so far as it may be possible. The experiences of this mission in this regard are a permanent warning to India not to neglect the harm that certain foreign interests are always anxious to do to this country. The Commission observe: "We felt, however, the need for the establishment of a permanent organisation charged with the dissemination of appropriate and true facts about our country and with countering the misleading propaganda carried on in that country in the past, mainly at India's expense and to her detriment."

In regard to the attitude of British and American industries to India's economic development, it would appear that the authors of the report have not been as outspoken as some sections of the public would like them to be; for there is nothing in the press reports to hand to contradict the earlier reports of the general failure of the Mission and the indifference, not to say hostility, which they encountered during their tour. It would have been more helpful if the Mission had endeavoured to explain how far the present attitude of foreign industrialists is due in the first place to the sinister propaganda of the past, and secondly to a general lack of clarity in their understanding of the issues involved and their significance to themselves and to India. Anxiety to avoid apparent discourtesies has led the Mission to express themselves in conventional or diplomatic language. An instance in point is the observation that, "in Britain we were struck by the fact that the inevitability of India's political and economic independence in the near future and her rapid industrialisation thereafter was widely recognised and that there appeared to be a desire on the part of many industrialists and businessmen to adapt themselves to the new conditions."

It is only by a careful examination of the causes of the present attitude of American and British industrialists to India that factors, which are transient or are due to factors which we can neutralize by our efforts, can be separated from the causes which are either permanent or are such as cannot be helped by us. Only by such a careful appraisal of the situation can the country know where it stands so far as foreign assistance of any kind is concerned. Our plans for the future could be formulated only in the light of such understanding. As it is, the few points which will be useful for our future plans and on which we can rely with some confidence are firstly, that for the next two years there is little or no prospect of India being able to obtain machinery for the equipment of her new industries or for the expansion of existing ones, secondly, that advantage can be taken, though only with great effort and caution, of the disposal of wartime plants and war surpluses for adding to our equipment, and that thirdly, it is for the public to agitate effectively to secure the liquidity of at least a part of our sterling balances. Doubtless, all these three points are of great importance. To formulate plans for the next two years without taking into account the fact that plant and machinery will not be available for the next two years will be only to invite disappointment and run the risk of the public being overtaken by a dangerous sense of disillusionment. It is also necessary to realise that the time has come when the problem of our sterling balances

should be a matter for public agitation, instead of mere technical discussion on the expert level, and that the public should learn to take interest, the same as it did in the case of the Reverse Councils and the 18d. ratio of the olden times.

It is nothing surprising that the Mission gained the impression that American industry is in many respects well ahead of the British industry in efficiency and the equipment used and that the causes of this are to be found in the differences between the positions of the two countries in relation to the war and the Allied war effort. Even without the special features of the war period, American industry is in an incomparably better position to make its mechanical equipment and business methods more up-to-date than those of the older industrial country. But what is more important for a foreign customer is that American costs are higher, consequent on the higher standards of living in that country. But this disadvantage is offset by the fact that, while American manufacturers are prepared to quote definite prices, British manufacturers have to hedge in their quotations with provisos of various kinds. The necessity of the latter to take account of the many uncertainties under which they will have to labour in the years to come can be readily appreciated. But to a country like India, which has reached an extremely critical stage in her political and economic evolution, differences in prices such as may be caused by the higher wage levels of America relatively to Britain's would make a somewhat minor difference in its schemes of long-term development. In the light of the report now published, it would seem that the best course for India is to take immediate steps to secure as much of suitable machinery and other materials from the war surpluses as possible and to make her plans on the basis that certainty of supplies is to be preferred by far to lower or competitive prices. The Mission's recommendations to establish an organisation in both countries, which would manage efficiently and wisely the procurement of suitable machinery from the various disposals boards, should be acted on without any loss of time. That great care and discretion would be necessary in selecting the machinery need hardly be said. The ability and integrity of the personnel call for the greatest care.

As we have said already, it appears to us that it would be unwise on the part of this country to attach undue importance to competitive prices. In considering whether we should prefer to wait for British manufacturers to supply our needs, it is necessary not to overlook the importance of the time factor. As things are, the Mission expects that for the next two years neither country will be able to meet India's demands. But the chances are that, by reason of its larger equipment and its having suffered less damage, America will be able to supply our demands sooner than Britain. The advantage of lower prices also lies on the side of the U.S.A. Above all, orders placed with America are a surer basis for our economic plans for the future. In these circumstances, India would be both wise and just to secure her requirements from the States, without prejudice to the basic principle that, if the political relationship between India and Britain enters a new phase of stable cordiality, preference must be shown to British goods.

The course of action suggested in the foregoing serves to enhance the importance of the problem of our sterling balances. It need hardly be said that, without the conversion of a considerable part of our sterling balances into dollars, India will not be able to buy in the American market. It would be unwise to rely on current favourable balances of trade with the U.S.A.; as new factors are daily entering into the situation, such as the possible purchase of American war surpluses in this country by either the Government of India or private businessmen. The idea that India may postpone the settlement of this problem indefinitely or that she can manage her foreign payments without calling upon Britain to pay is more or less wholly erroneous, and there can be no settlement of this problem even on a temporary basis unless public interest is aroused. Strangely enough, the Indian public has a way of letting its enthusiasm for particular causes cool down after a time. It is time that the public realised that not less important than the forthcoming elections and the work of the Constituent Assembly is the realisation of the foreign balances which the country has built up at the cost of immense sacrifice and suffering.

GROWTH BY SECTIONS

As India's post-war plans are implemented, large new structures will spring up in her towns and villages—factories, offices, hospitals, schools. No large building with a wide roof-span can be built without steel.

Five Year Programme for Industrial Research

The quest for more knowledge and the application of the valuable lessons learnt for the benefit of the people cannot afford to be relaxed in the modern world. Under competitive conditions of national and international economics the urgency to keep pace with the progress achieved in the competing country is always there and, even if the whole world becomes one single socialist block with no bickerings and suspicions, the need for research for increasing the efficiency of agricultural and industrial activities will remain. If the economic history of the leading countries of the world is examined it is easy to find that the influence of technological progress on the scale of production, on the price structure of commodities, on the regional location of industries and even on politics can be seen to be very great. Unless a country keeps up its progress on the side of research and quick commercialisation of the discoveries, it loses on the industrial and marketing spheres sooner or later. If eternal vigilance is the price of commercial and therefore of military power, then the need for an organised attempt to carry on research activities is paramount. The

The Committee has also outlined a five-year programme to be initiated immediately. The programme consists of (a) the building and equipment of national Chemical and Physical laboratories at a cost of Rs. 40 lakhs each; (b) the establishment of nine specialised institutes—for food technology, metallurgy, fuel research, glass and silicate research, oils and paints, buildings and roads, leather and tanning, industrial fermentation and electro-chemical research—at a total cost of Rs. 20 lakhs; (c) giving grants-in-aid to universities. It is proposed that a sum of Rs. 2 crores in five years should be made available for this purpose provided the university can get an equal sum from the provincial government concerned; (d) training 700 research workers within five years by means of home and foreign scholarships at a cost of Rs. 50 lakhs. In order to carry out this five-year programme, the Committee recommends that the Government of India should make a grant of Rs. 6 crores to the Research Council within five years. As for the recurring expenditure, and financing the growing activities in future years, the Committee recommends that the Government and Industry must pay for this on an equal basis and suggests that, when the first five-year period is over, during which time the laboratories would have been established, the Central Government should make an annual grant of Rs. 1 crore. Industry for its part will contribute by means of a cess on industrial production. A cess of about one-sixteenth percent is suggested and therefore cannot be oppressive. It has also been laid down that as industrial production increases and the cess brings in more revenue, the Government should correspondingly increase their contribution.

Another welcome suggestion of the Committee is contribution to research associations or universities for research should be exempted from income tax. At present in the case of individual manufacturing concerns capital expenditure for research plants and research departments is treated as ordinary items of expenditure and current expenditure on research is allowed as a permissible item of revenue expenditure when actually incurred. In order to encourage the industrialists to divert a greater part of their resources on industrial research the Committee recommends that the Income Tax law should be amended so as to permit of research expenditure on laboratories, buildings and plants over a period of five years or over the life of the assets and contribution to research associations as deductions in computing profits.

The industries should not be let off with the idea that their job is only to receive blessings of greater facilities for what will lead to greater profits and dividends. They owe it to the Government and the general public to rationalise themselves and show they have done their best to incorporate the scientific discoveries in the process of manufacture. They should prove their efficiency whenever they approach the authorities for tariff protection or subsidy from state revenues. In order to make the industries research-minded the Shanmukham Committee has also laid down that, when tariff protection is to be given to any industry, the existence of research facilities in that industry must be thoroughly examined by the Tariff Board. This provision is necessary to safeguard the interests of the consumers and to compel the industries to be constantly working for technological advancement.

Towards Rating Reform

(We publish below the text of a letter received from the General Secretary, Indian Railway Conference Association on the question of reform of railway rates. The two articles referred to appeared in "Indian Finance" on August 25 and July 28).—Ed. "I. F."

Sir,

I have read with much interest Professor Natesan's article "Towards Rating Reform" which appeared in your issue of the 28th July, 1945 and while in no way questioning the apparent sincerity of his criticisms of the existing rating arrangements on Indian Railways, there are certain inaccuracies in his statements which, in fairness to all concerned, call for correction.

2. Leaving aside the many minor objections to the present rating system to which reference has been made in Professor Natesan's article, his main grounds for complaint can broadly be reduced to:

- (1) the complexity and inadequacy of the present rating arrangements;
- (2) the rising level of freight charges, and
- (3) the lack of contact between the I.R.C.A. and the trading public.

3. With the first of these complaints the Railways themselves have much sympathy and no one is more conscious of the defects and deficiencies of the existing rating system than the Rates Officers who daily labour within its frame-work; but it would have been impossible to take any comprehensive action to effect radical changes under pre-war conditions, with-

out the risk of causing serious commercial disturbance throughout the country. This is a matter, quite obviously, which calls for extreme caution and in a Press Note issued by the I.R.C.A. in January of this year, which presumably has not come to the attention of Professor Natesan, this particular point was dealt with in the following paragraphs:—

"While conscious of all these defects, however, the railways under peace-time conditions found themselves in a difficult position in that any attempt at altering the existing rating system while trade was being freely undertaken would, more probably than not, have been attended by a disastrous dislocation of the trading arrangements under which millions of tons of goods were being moved throughout the length and breadth of the country. The quarter of a century previous to the outbreak of the present war had clearly not allowed railways any good and proper opportunity for making those changes in the rating system which they were fully aware were called for and eminently desirable.

Under war-time conditions, conditions which presumably will continue to obtain in the immediate post-war period, the risk of any serious dislocation to traffic is considerably reduced because the movement of consumable and industrial goods is almost entirely controlled and the time is now more favourable for making all the necessary alterations in the rating system.

It is to this end that the Indian Railway Conference Association have more recently been working, and proposals are now under consideration which, when applied, will involve radical alterations in the basic rating structure. Concurrently, steps will be taken to eliminate unhealthy inter-railway competition; to rationalise rating by the prohibition of indiscriminate non-standard rates and create by agreement between all railways through the Indian Railway Conference Association, a working system which will permit of rates being adjusted and quoted for Trade, Industry and Agriculture as expeditiously as the commercial needs of the occasion may require.

One important change which is contemplated is the introduction for all varieties of traffic of telescopic class rates on the basis of continuous mileage, by which means traffic will have the benefit of these tapering scales of rates on the total distance from the booking to the destination station irrespective of railway boundaries. It is clear that such a principle is preferable to the present unsatisfactory system under which horizontal class rates increase the charge to be paid by the Trader directly in ratio to distance. The new scales of rates provide for a lowering of the charge per mile over long distances and should be of considerable benefit to trade generally.

It is also the intention to introduce up-to-date Rates Registers at all railway stations in India from which, with the help of the station staff, Traders can without difficulty and at once obtain the current charges for all movements of traffic to and from any particular station. It is obvious that this system will not only eliminate delay in Traders obtaining correct rates, but as the result of the elimination of by far the greater number of present day errors in freight charges consequent upon the necessity for station staff to make complicated rates calculations will also give Traders almost complete assurance that once a charge has been entered on a Railway Receipt it will be the final one. Undercharges and overcharges which have been a bone of contention between railways and their constituents in the past will disappear, and the finality of the rate will undoubtedly be of considerable benefit to Traders in the conduct of normal business."

4. No excuse is made for this lengthy quotation from a Press Note issued by the Indian Railway Conference Association several months ago because, apart from the fact that it contains the answers to some of Professor Natesan's complaints, it is also an authoritative statement indicating the awareness of the Railways of the defects and deficiencies of the present Rating System and the need for improvement in order to fit their commercial organisation to post-war trading conditions. The changes indicated are now under close examination and it is hoped to put them into effect before very long.

5. Professor Natesan's next complaint is in respect of the general level of charges which he states has been raised by a substantial margin by the withdrawal of concessions and slight increases and he points out that according to the Railway Board's annual statistics the average rate per maund per mile on the Class I Railways, between 1938-39 and 1943-44 has

increased from 5.84 pies to 6.87 pies. It is not desired to take undue advantage of the error into which Professor Natesan has fallen in accepting the average rate per maund per mile on Class I Railways, in 1943-44, as 6.87 pies and asking for a return to the pre-war level of 5.84 pies, but it surely is indicative of the lack of appreciation accorded to the Railways' contribution to the country's economy, when a correspondent of such eminence apparently accepts as correct an average charge which is just over twenty-seven times greater than that actually prevailing. The rate of 6.87 pies to which Professor Natesan has drawn attention is not the average charge per maund per mile. It is, in fact, the average charge per ton per mile and the average charge per maund per mile in 1943-44 was only 0.252 pie, approximately, as pointed out earlier, one twenty-seventh of the rate upon which Professor Natesan has based his comments.

6. But this apart, let us consider the actual rise in the average rate that has occurred between 1938-39 and 1943-44 which is from 0.215 pie to 0.252 pie per maund per mile, an increase of 0.037 pie and, let us be frank about this, this small increase has occurred in spite of the fact that the average length of haul has risen from 190 to 221 miles, a development which should normally tend to produce a lowering of the per maund per mile rate. But—and this is the important point—the period which Professor Natesan has chosen to base his demonstration on, that the general level of charges is rising, was not normal. It was probably, from any point of view, the most abnormal period in the history of this country and at times like that a departure from classical economies is something which must be expected.

7. The actual increase that occurred over the period in question, viz., between 1938-39 and 1943-44 was 0.037 pie per maund per mile which, linked to the average length of haul during the latter year, i.e., 221 miles, gives an average increase per maund of 8.2 pies. The major portion of this increase, i.e., about 5 pies per maund is directly attributable to the freight surcharge of 12½ %, the only real increase effected by the Railways throughout the period of six years of war. This surcharge was levied to meet the rising costs of operation, but it is indicative of the Railways' policy that it was not applied to food grains. The balance of the increase in the average rate per maund may be attributed to:—

- (1) while it is factually correct that the average rate per maund per mile has risen from 0.215 to 0.252 pie per maund per mile, much of this rise is attributable to the fact that in the exigencies of war there was a considerable falling off in the volume of low grade low-paying traffic with an increase of high grade higher-rated traffic such as explosive and other dangerous goods, petrol, etc., this change in the characteristic of the traffic has inevitably produced a higher freight return per maund per mile. In other words, it is the revenue per maund per mile—and not the charge per maund per mile—which has risen by virtue of the fact that there has been an increase in the volume of high-rated traffic.

- (2) a considerable volume of traffic, under Governmental control as part of the scheme for the organised distribution of essential commodities, moved from sources of production to the centres of consumption, primarily in accordance with considerations of availability and convenience of supply and the channels of distribution, in many areas, did not accord with those of the ordinary trade. Consequently movements occurred into areas where no necessity existed for lowering the ordinary charges applicable; a course still more unnecessary in view of the high level of prices, in comparison with which the incidence of railway freight was almost totally negligible; and

- (3) in some (but not all) cases low "special" rates, introduced in pre-war days and owing their level to competitive conditions that no longer applied, were lifted with the sole object of forcing such traffic to seek other means of transport and the fact that movements continued to occur by rail even at the higher levels of rates accentuated the importance of the cost of transportation as compared with the importance of securing it—particularly by rail.

8. It is a well-known fact that from about 1941 onwards the cost of transportation was no longer a factor of importance to the trade. The security of transport was the only consideration; the cost of it no longer mattered. Values had soared so high that the trade were booking by passenger trains and paying the considerably higher freight charges for this service, commodities which in the past had never moved except by goods train. Even by goods train dispatches were being made by considerably more expensive routes than the cheapest route, merely to secure transport and it was being amply demonstrated, throughout this period, that the capacity of goods to pay for transportation far exceeded the existing level of railway charges. In addition, road and sea competition had virtually ceased, factors which normally tend to depress the level of railway rates and the absence of which could reasonably have been accepted as grounds for a general uplifting of the level of charges. Yet, in spite of all this, the only real increase effected by the railways was the surcharge of 12½ % on the total freight payable by general merchandise and a small increase in the rates for coal.

9. In the extraordinary conditions that obtained during the past six years, so small a rise in the general level of charges, viz., 18% gives no ground for apprehension for the future. The Railways are fully alive to the necessity, when normal times return, of attuning the level of their charges to the commercial needs of the country but so long as the railway industry is to be operated on commercial principles, which it must be if a great asset is not to be converted into a national liability, the advantages accruing from the level of rates must be mutual to the producers and the users of railway transport. An indiscriminate lowering of rates would, in the long run, be to the disadvantage of the country as a whole and to the majority of its people.

10. And finally, Professor Natesan's complaint regarding the lack of contact between the Indian Railway Conference Association and the Trade and what he calls "the most urgent need to bridge the gap that now exists between the railways and the trading public..." Some of the points he makes in support of this assertion are:—

- (1) The public in India are treated with scant courtesy;
- (2) The proceedings of the Indian Railway Conference Association are not open to the public;
- (3) The deliberations and reports of the Association are not known to any one outside the Association; and
- (4) There is no independent agency in this country corresponding to the British Rates Tribunal or the Inter-State Commerce Commission to deal with questions of the reasonableness of classification which, Professor Natesan adds, the Indian Railway Rates Advisory Committee is debarred from considering.

11. Regarding the first point, it is clear that it has no general application but is related to the context of the whole paragraph in which it appears and is intended to convey the grievance that the Trade is not consulted by the railways in matters relating to classification of commodities. If this is so, then obviously Professor Natesan has been wrongly informed as all proposals in connection with the classification of commodities are, before consideration by the Commercial Committee of the I. R. C. A., circulated to all Chambers of Commerce in the membership of the Associated Chambers of Commerce of India and to the member-bodies affiliated to the Federation of Indian Chambers of Commerce, numbering in all about ninety-two. The views of all these bodies are solicited on the proposals under consideration—which may be the classification of a new commodity or the alteration of the classification of a commodity already classified—and such as are received are given the closest consideration before any decisions are reached. When the classification has finally been decided and has received the approval of the Railway Board, all these Commercial bodies are advised of the decisions arrived at. It is not, therefore, correct to say that the results of the Association's deliberations in respect of these matters are known to no one outside the Association.

12. As regards the proceedings of the Indian Railway Conference Association not being open to the public, this is
(Continued on next page)

OUR LONDON LETTER:

Progress of Demobilisation

City's Views on New Arrangements with U.S.

LONDON, September, 8.

A gale of criticism is blowing over the new Government's alleged slowness in demobilising key men for the industry. And key women. Everywhere, so the complaint runs, production for export is being held up because essential workers are still detained in forces.

According to some critics, the Labour Government is too timid in its approach to the brass hats of the armed forces. Instead of making up its mind how many men and women, in round numbers, could be usefully retained in the forces for postwar work, the Cabinet has asked the heads of Army, Navy and Air Force to review the situation and report how many, in their judgment, they need. This, say critics, is precisely the wrong way to go about it since the decision, in the last analysis, is more political than strictly military.

At any rate, the current rate of demobilisation is only 45,000 per week compared with an average of 25,000 daily in March, 1919. By November 1919, the number of men, who have been demobilised totalled 3,600,000 out of the total armed forces at the end of war of 4,400,000.

Contrary to widespread impression, these men and women were not thrown on the street unemployed during demobilisation at the end of last war. They were drawn instantly into employment. During April, 1920, unemployment was no higher than had been in April, 1918. The trade union rate of unemployment in January 1919, was only 2.4 per cent of membership; in December that year it touched 3.2 per cent, but did not again exceed 3 per cent until October 1920, virtually two years after Armistice. The slump which hit the country in 1921 was the aftermath of preposterous war finance and inflation and had nothing to do with the brisk rate of demobilisation.

This briefly, is the case made against ultra-conservative rate at which the present Government proposed to demobilise the impatient, more or less idle men and women in the forces. While it is true that the "Bevin scheme" for demobilisation is the heritage from the Coalition Government the rate at which that scheme is being worked is due to the decision of the present War Cabinet and is not implicit in the scheme itself.

It is possible that the Labour Government dislike articles now appearing in the Conservative press which seem designed to force the Government's hand and bring about greater haste, but there is little likelihood that the campaign is ceasing so long as newspapers receive reports from leading industries countrywide that they are being ham-strung by the slowness in releasing men and women for whose recall they have duly filled out all the necessary forms.

Against this hostile argument that the Labour Government is over-impressed by the brass hats of the Army, Navy and Air Force can be posed the suggestion that while a few industries may have sufficient materials on hand to start production as soon as key men are released, it may be true that the Government's own information is that, in general, the industry is not yet ready for full production, that is, there is still shortage of raw materials, and that to precipitate releases of man-power would simply create great unemployment and needless confusion.

But if this is the Government's case, it has not yet made the point with convincing force and clarity.

The relations with the United States over Lend-Lease remain unsettled. The financial opinion seems absolutely set against the American proposal to extend credits to Britain repayable in 30 years and carrying an interest charge of 2½ per cent per annum. Incidentally, that 2½ per cent is ¼th below the rate at which the United States Government is able to

borrow for corresponding period so that U. S. is borrowing at one rate and lending the money at lower rate.

The prevailing view in the City of London is that Britain's external debt should not be increased until the Allies have reached some agreement regarding the future of Britain's huge external war debt of £3,500 million.

The theory which has been occasionally advanced is that this external debt should be regarded as part of Allied war costs, incurred partly when Britain alone was doing all the fighting, partly when she was the spearhead for Allied attack upon Axis and partly when she, in a sense, was acting as common purchasing agent for the whole Allied war effort.

This has been suggested from time to time but never officially taken up, and if it forms part of the Labour Government's case in Washington, it seems obvious that the foundation for it should have been laid one or two years ago. At that time it would seemingly have had an all round sympathetic reception whereas it now wears, perhaps, the air of eleventh-hour improvisation.

Thus, it may turn out that the Labour Government has no option except to take extended credits from the United States and struggle thereafter to reduce its imports as much as possible. Certainly it seems to have inherited from the Coalition Government a situation which has been worsened by drift.

Apart from these two issues, the new Government is beginning to wear comfortable air. The Parliament is not in session but there are less rumblings from backbenchers than there was during the opening session.

But there are plenty of possibilities of internal friction when the Parliament resumes. It is reported that Messrs. Attlee and Bevin have been both receiving resolutions from trade unions and other bodies strongly protesting against Mr. Bevin's speech on foreign affairs and the disclosure that he is carrying on the Eden policy especially as regards Greece which is now becoming a symbol to the Left.

It is difficult to believe that the British public really is much concerned over foreign affairs but it is a different position with politically active rank and file of the Labour Party. They have frequently been aroused to protest not only over the Government policy but also over the attitude of their bureaucracy.

All important sections of the market have now moved out of area of somewhat violent movements. But this is because very modest speculative demand finds market very bare of stock. Industrial shares creep very slowly upward, mainly on talk of inflation but there is plenty of selling despite this talk. Not much underlying trend has yet emerged and it would take very little to start another reverse.

(Continued from previous page)

quite true and it is not clear what advantage is to be gained by arranging otherwise. Most of the work of the Conference is of a technical character relating to engineering, mechanical, transportation, commercial and staff matters and is done by Committees which meet at various times of the year and in is that the deliberations of the Commercial Committee should be made public but this would be wholly impracticable and any real advantage to the public. The views of Chambers of Commerce throughout the country are enough before any new any party with reasonable grounds for complaint against a decision by the I. R. C. A. has open to him several means for which he is most closely concerned; he can address the Chamber of Commerce to which he may belong; he can address the Railway Board by whom all decisions on classification must be confirmed before becoming effective, and finally, contrary to Professor Natesan's information on this point, he can apply to this Committee has not the legal status of the British Railways Rates Tribunal, which can enforce its decisions but nevertheless it is not wholly unimportant as Professor Natesan's attitude suggests.

Editorial Notes

The Famine Commission Report

The final report of the Famine Enquiry Commission, just published, gives an exhaustive review of the conditions that governed food supply during the war, Government measures to deal with the crises that developed and the success which attended these measures. The Commission affirms that though within the last 100 years Governments in India have accepted the duty to prevent widespread death from famine, the further obligation of taking every possible step not only to prevent starvation but to improve nutrition and create a healthy and vigorous population has not yet been fully recognised and accepted. Reviewing the food policy of the Government during the war, the Commission holds that the results of the 'grow more food' campaign during 1942 have not been spectacular, as the main requisites for a large increase in production such as an improved water supply, and an increase in the production of manures and fertilisers, were absent. The Commission recommends the continuance of the 'grow more food' campaign with undiminished vigour. The main recommendations of the Commission for an efficient food policy during the transition period immediately following the war, are the institution of an All-India Food Council on the lines of the present Food Conference, the retention of the basic plan, trade operating under a licence, procurement schemes based on purchases from the local trade and rationing in the larger cities. The Commission takes the view that though the general level of prices of food grains in India are high compared with the world price level, a reduction from the present level is not to be attempted so long as supply of consumer goods does not become more plentiful and cheaper and imports of rice are not once again available. A gradual and regulated process of change during the transition is advocated and the Commission visualises price control at least for wheat and rice as a permanent feature. Dealing with the larger problems of Indian rural economy the Report advocates State propaganda in favour of birth control mechanisation of agriculture and the introduction of large scale farming under the joint efforts of multipurpose co-operative Societies and the Government agency.

The Future of Country Craft:

A cruel destiny seems to hover about the Indian country-craft business. Before the war it has been foremost among the chronically depressed businesses in India. Amidst the many official preferences and concessions enjoyed by the steamship and Railway companies, who also resorted to rate cutting, when in extremes of competition, the country craft in India could hardly keep its head up. The submarine menace during the first three years of the war put them off work. Scorched earth in Bengal came as another disastrous blow. Since 1943, when the Indian coast became less unsafe, these small vessels were requisitioned for military purposes, but in 1944 the Government of India introduced what was known as the "Route scheme" for the control of country craft sailing on the West Coast. In the East Coast their sailings were inconsiderable. Finding the control involved in the 'Route Scheme' irksome and causing hardships, the owners agitated for the withdrawal of the scheme. But when the Government did withdraw it with effect from 1st September, the owners are finding themselves in an entirely changed situation. The war has ended and instead of a competitive demand for their services, they are now faced with a demand that stipulates its own conditions. Within a week of the Government announcement withdrawing the Route Scheme the freight rates of the country craft slumped by fifty per cent. But even with this heavy reduction in the rates, the shippers are not willing to use their services; they insist on still further reductions; and the competition that has taken an acute form among the country craft owners strengthens the position of the shippers. As things are at present, the business cannot look forward to a promising future, unless the Government step in and extend a helping hand. With so many small ports on the coast, where big ships cannot anchor and load, the country boats can play a useful part in coastal trade provided the Government give them adequate concessions and privileges. Their lower freight rates compared to the railway is always an advantage they can rely on. But this alone will not outweigh the handicaps of a competition with better organised and powerful rivals.

Housing Industrial Workers

The Bombay Congress Municipal Party has put before the Corporation a scheme for housing industrial workers. According to the scheme, private landlords are to be encouraged to put up 50,000 to 60,000 one and two-roomed tenements. In the Madras Corporation also, proposals for providing similar tenements are under discussion. In fact, every industrial town in India will have to tackle this question, sooner or later. Housing conditions for mill labourers have never been satisfactory and in many cities they have been intolerable. The war has only made the position much more acute. For example, in Bombay 240,000 single room tenements, where even before the war about eight lakhs of people lived, now accommodate twelve lakhs of people and in a number of these rooms each having an area of not more than 100 to 180 square feet, as many as ten and twelve persons live. There is hardly any open space between one tenement and another sanitary arrangements are conspicuous by their absence; inadequate lighting, washing and drainage facilities for these tenement-dwellers are not confined to Bombay. The effect of congestion under such surroundings on the hygiene, morality and the

general efficiency of the worker can well be imagined. The need to improve conditions is long overdue. But in seeking improvements, a well co-ordinated, humane and practical programme should be followed. The failure of the Bombay Government's Development Dept. chawls to attract occupants should be a pointer in this respect. These chawls were dark one room tenements, with a sparse water supply and no transport facilities, and offered for a rent too high for the workers and it was but natural that they did not care to utilise them. Single-room tenements, except for bachelors, are hardly consistent with up-to-date notions of minimum standards of life. A family must have at least two rooms. Nor are barrack-like structures appealing either from a hygienic or an aesthetic point of view. In big cities, space is a vital problem, it can only be met by expansion into the suburbs. As for finances, this should be a charge on the Government, Municipalities and the employers. The extent or proportion of responsibility each of these will have to shoulder will admittedly depend on the circumstances obtaining in particular industrial areas. It will have also to be admitted that the ownership of the tenements should be with either the individual concerns concerned or a public body.

National Planning Committee:

The news that the activities of the National Planning Committee will shortly be revived will surely be welcomed throughout the country. Though the idea of planning originated in Soviet Russia the credit of having instituted a representative body to work out a plan for India goes to the National planning Committee with Jawaharlal Nehru as Chairman. While doing brisk work, collecting facts and figures for evolving correct scheme for the economic development of this country, political factors interfered and disrupted its personnel and prevented its further progress. The arrest of members of the Congress Working Committee in 1942, and the developments arising out of the war situation since then, compelled a suspension of the work of the committee for the past three momentous years. But the cry for planned development has not in any way subsided and, in fact, the public have now become plan-minded owing to the interest shown by the Big Business, the labour and the Government of India. The Publication of the Bombay plan and other plans have stimulated healthy controversy in the press and the platform and the people are, therefore, more convinced today than ever before regard-

ing the urgency of economic planning. The Central, Provincial and the State Governments have appointed planning committees and have collected valuable data and evolved schemes. Criticisms and counter criticisms have been levelled for and against the Plans placed before the country and the Planning Committee, now that it has started work again, can make use of the ground covered and the discussion gone through. That the Central Government is not competent to plan for the country is a widely held opinion and the lesson learnt by the Industrialists' Mission in the U.S. and U.K. is that only a truly national government can plan and execute the schemes satisfactorily. The National Planning Committee, in whom the country has full confidence, should now take up the work in right earnest and in view of the great changes that happened since the Committee met last, it is necessary to review the situation from the national and international points of view and issue new directives for its various sub-committees. The Committee which met at Bombay on the 17th did well in resolving that a factual statement taking stock of the situation should be prepared and it also proposes to draw "a list of priorities with the resources which may be available to us that may be taken up immediately with a view to meeting the problems of varying urgency that are likely to confront the country in the immediate future".

The work left unfinished by the Planning Committee has been almost completed and what is now needed is a final co-ordination of the scheme conceived on territorial or sectional lines. As regards the achievement of the schemes evolved, a truly representative Government is the first requisite. Already enough progress has been achieved on the path of economic planning. The next step can be taken only with a favourable change in the complexion of the Government of India.

Technical Education in Indian India:

The establishment of large scale industries, the expansion of cottage industries and general rise in trade and commercial activities have accelerated the pace of vocational training in many States. The educational system has been revised in many Indian States like Hyderabad, Baroda, Gwalior, Indore and others to provide a strong bias for industrial training. The Lady Reading Training High School for girls at Indore teaches tailoring, carpentry, cane work and weaving. In Kotah State, agriculture, manual training and metal work classes have been opened at

the Herbert College. In Udaipur State tailoring, carpet weaving, knitting and sewing have been introduced in Girls' Schools.

Industrial schools exclusively devoted to the teaching of arts and crafts have been established in many Indian States. In the last six years in Hyderabad, 18 industrial schools for boys and 6 for girls have been set up. These teach tailoring, wood carving, dressmaking and crochet work. Mysore has 15 industrial schools and 11 commercial schools. Travancore has numerous industrial and commercial schools. Weaving is taught in the majority of these the other subjects taught being carpentry, smithy, mat making, drawing and painting. Besides, there are 12 schools for girls where training is given in weaving embroidery and lace-work. Kashmir has schools giving instruction in carpentry, painting and drawing. Cochin maintains 5 fishery schools. The Purnachandra Industrial Institute in Mayurbhanj State trains students in weaving, dyeing, calico printing and carpentry. The Wilson industrial school in Charkhari State gives training in the manufacture of durries, carpets, blankets, in knitting weaving and shoe making.

In order to meet the increasing demand of mechanical and heavy industries for technically trained labour and staff technical institutions have been set up in many Indian States. Hyderabad has a full-fledged department for vocational education with a recurring grant of Rs. 1,72,000. Mysore has an occupational Institute where besides Engineering, courses in Cinematography, Ceramics, Mining are offered. Baroda has a Central Technical Institute teaching Engineering, Chemical technology Architecture and other subjects. The Governments of Bikaner and Rewa have earmarked considerable sums for training candidates abroad.

Road Transport in Madras:

Reference was made in these columns sometime back to a scheme under which the Government of Madras proposed to regulate road transport within the Province. Detailed proposals in furtherance of the policy are embodied in a communique now published. These proposals which are of a tentative character concern the formation of a Highways Department, the transfer from the local bodies to the Government of about 13700 miles of important roads in District Board areas and the necessary financial adjustments between the local bodies and the Government. Already about 2600 miles of roads of military importance have been transferred from the local bodies to the Public Works Department. The roads that would be changing over to the P. W. D. consist of all roads now classified as trunk roads, all other roads which under the Post-War plan will be classified as National or Provincial Highways and other category to be called the Major District roads, consisting of inter-district roads and those which connect important agricultural areas with markets and industrial centres, consuming areas or important railway stations, the remaining Roads will be left for management by District Board. The Scheme provides for the transfer of heavy tools and plant required for maintenance, and repair as

Letter to the Editor

SIR,

I have recently read with a great deal of interest the article appearing in the September 7th, 1945, issue of *Indian Finance*, entitled "The Disposal Problem". While in complete agreement with the basic premise that the disposition of United States-owned surplus property should not be done in such a manner as to affect adversely the Indian economy, I am constrained to clarify several of the points raised in the article.

The mission of the Army-Navy Liquidation Commission is to dispose of U. S. owned surplus property and to assure that the American tax-payer receives a fair return. A "fair return" in my opinion means a price that is fair not only to the seller, but also to the buyer. In this connection I should like to emphasise that no attempt will be made to profit from local or unusual conditions resulting from India's magnificent contribution to the war effort.

I find, however, the interpretation in your article of the established priority system misleading in several respects. For example, the article stated "The Government of India or any individual in this country is assigned only the seventh place in the U. S. schedule". Actually, aside from the mandatory priority for the benefit of the U. S. Government agencies, we contemplate at present only four other classifications:

- (1) Non-profit institutions such as charitable, missionary and educational institutions.
- (2) American manufacturers and distributors on goods bearing their trade names.
- (3) Foreign Governments, which, of course, includes the Government of India, for relief, reconversion or rehabilitation.
- (4) Normal trade channels.

An analysis of the foregoing priorities and their relationship to the Indian economy will reveal that the Government of India and its peoples will benefit to an inestimable extent by receiving the bulk of the American equipment and supplies under extremely favourable conditions. Also it would appear most unlikely that requirements under (1) and (2) above would be very large.

At the present time negotiations are being conducted with the Government of India with a view towards effecting a fair and reasonable basis for the disposition of U. S. owned surplus property in India.

Although I am under no compulsion to limit sales of such property to the geographical bounds of India, I sincerely believe that it is to our mutual advantage to make every effort to do so.

Yours etc.,
WALTER B. SCHLEITER,
Field Commissioner,
Office of the Army-Navy
Liquidation Commission,

New Delhi.

Clube Street Gossip

The statements of Mr. Attlee and Lord Wavell of Wednesday last have, if nothing else, the merit of clarifying the whole position and telling India where she stands, for the present. We have been told in clear terms that no change can be made in the internal Government of the country till the general elections are over, that the national constitution will be entirely what our Constituent Assembly will make it and that the relations between India and Britain will be the subject of a treaty between H.M.G. and the Constituent Assembly to be. There are ways and ways of looking at this statement. The standpoint from which it can be criticised can be varied. But the fact that stands out is that we know where we stand for the present. The Labour Government may not be better disposed towards India than its predecessor. It may have other cards up its sleeve. The proposed treaty may prove the rock on which many of our hopes may be shattered. But all that will not alter the fact that the problems which might distract us and lead to a frittering of our energies have now been taken off the table and Indian nationalism has been told in so many words to go to the people and put it right with them before the British Government are asked to do this or that.

It is this fact that the country as a whole and the Congress in particular should get a good grip on. It is human nature to be escapist in its natural inclinations, particularly when the problem on hand is vast, complicated and beset with many intractable difficulties. Indian nationalism, we must confess, has been prone to such escapism. It has been inclined to shirk, to a large extent, both the alternative ways of achieving Swaraj—one is the acquisition of sufficient force to compel the British Government to grant the demands of the Congress, no matter what other parties may be up to, and the other is cutting the ground from under the British in all the pleas that they have adopted for delaying or obstructing the grant of self-government to India. The first course was attempted indecisively and half-heartedly with the "quit India" resolution and the August disturbances. Since then, the Congress has been sitting on its oars, expecting the currents to take it to the other bank. It was believed that somehow the British Government would find the political deadlock too sharp a thorn on its side, that it would stand in need of the advantages of a political settlement in this country and that, in trying to secure such advantages for itself, it will have to disown its implicit or explicit alliances with the other Indian parties and stand by the Congress. Whether this line of thought was partially proved true or whether the British Government took advantage of this mentality to stage the Simla Conference in order to exonerate itself of blame, it is not perhaps easy to say. But there can be no doubt that by far the most powerful factor behind the Simla Conference is the sanguine expectancy of the Congress.

While the hopefulness of the pre-Conference days is not surprising, considering particularly the inevitability of the reaction from the August resolution, the wistful looks which the country as a

whole cast on the new Labour Cabinet are somewhat pathetic. It was hoped that the Labour Ministry would soon decide to reverse the policy pursued by its predecessors, restore popular Government in the Section 93 Provinces and generally exert pressure in favour of the establishment of a National Government at the Centre. While such a course of action would no doubt be very proper in the case of the Labour Cabinet, such expectations cannot be entertained without wishful oversight of many relevant considerations and factors. What warrant have we for assuming that the motives which prompted the Conservatives to delay and to thwart India's freedom are altogether absent from the minds of the Labour Ministers? Even if they were absent, was the way clear for them to act as they liked? If Mr. Churchill and Mr. Amery could stiffen the opposition of Mr. Jinnah and the League, can Mr. Attlee and Lord Pethick-Lawrence overbear it with impunity, even if they wanted to?

These questions were hardly posed and no attempt was made to answer them without predilection. The general mood of hopefulness was increased by the manner in which the Simla Conference came to an end. Reports and rumours, truths and half-truths, the latter particularly, when they are attractively draped and coloured by various plausibilities, tended to create the impression that Lord Wavell had set his mind on the establishment of a National Government, that he was even prepared to bring pressure to bear on the Muslim League and that at the last moment Mr. Amery forced him to ring the curtain down on the Conference. With such stories in its mind, the public could not help feeling that change of Cabinet in Britain would mean an early change of policy in regard to India. The first shock came when the Provincial assemblies began to be dissolved one by one. This meant that the Government did not contemplate a return to Provincial autonomy. But the news that the Ministry had summoned Lord Wavell to London for personal consultations rekindled the dying hope. But as usual, the country has been prepared by carefully contrived leakages of information for what was to follow. And now Mr. Attlee and Lord Wavell have confirmed the correctness of the earlier reports.

GAYA BRANCH OPENED ON 7th SEPTEMBER, 1945

I should be glad, indeed, to see the Congress return to power in the Provinces in which it formerly held sway. And no one can gainsay that it is entitled to resume office, since this right is conceded to popular parties in the Provincial legislatures by the Government of India Act. In fact, it is strange that neither Lord Wavell nor Mr. Attlee has a word of explanation to offer for their banging the door on the Congress by dissolving the Provincial Legislatures. Neither in itself nor by its consequences can it be dismissed as a matter of no moment. For the dissolution of the Legislatures and the postponement of all change in the government of the country till after the elections means that not only the Government of India Act of 1935 but the reforms of Montagu-Chelmsford and Minto-Morley are annulled and the Government of India reverts to the days of the Regulating Act. How long this condition is to continue, no one can say for certain. For political reform in India has a way of delaying and defeating itself, for which parallels are not easy to find. The Simon Commission, which was appointed in 1928 accomplished practically nothing and only led to the Round Table Conference of which we had not one or two, but three. Then there were innumerable committees and sub-committees and the Government of India Act was ultimately passed in 1935. It was introduced in the following year, but only in part. The second part was never introduced and the first part was rendered nugatory when the war was yet young. Now the position has been reached when India is ruled by a bureaucracy whose powers and appetite for power have increased vastly during the last few years. What guarantee is there that a similar dilatoriness will not be witnessed in the case of the reforms that are now proposed? What defence can there be for exposing India to that danger when, without prejudice to any of the issues that are to be considered, the Provinces may be ruled by popular ministries? But the British Government thinks nothing of condemning India to this fate. There is, therefore, ground for serious grouse in this regard.

But, as I said, I am not really sorry that the Government have chosen to disappoint the public in this as in so many other respects. For, the return of the Congress to power in the provinces cannot in the long view have much value. In the first place, it smacks too much of a favour done to the people by the Government. Secondly, it has the deceptive look of a partial solution of our problem of winning Swaraj. Thirdly, a series of rebuffs for the nation may have the effect of teaching it a new sense of self-respect and self-reliance. Piecemeal reforms not only fail to provide adequate satisfaction but they will be woefully inadequate for the solution of the ponderous problems which the country has to solve within the next few years. It is a long time since both the Congress and the Government gave up the idea of instalmental reforms, the Congress because it could not be content with anything less than complete independence and the Government, because it found a change of tactics was necessary and that it paid better to appear ready to give all and give nothing than to give away a considerable share of power. The new

policy has worked well ever since the Simon Commission was sent out to India; and if to-day the British Government feel compelled to take their stand on the Cripps offer and call upon India to take what is offered by satisfying the condition of an agreed constitution, it is the surest proof that it is meaningless to pine for piecemeal reforms.

It is in this new view that I welcome the terms of the statements made by Lord Wavell and Mr. Attlee. Both seem to me to be forbiddingly frigid. In Lord Wavell's speech, there is nothing of the warmth which characterised his broadcast before the Simla Conference and Mr. Attlee spoke as if he did not mind if Indians saw no difference between Mr. Churchill and himself. That is an advantage or at least can be turned into one. Freedom from sentimentality is no matter for regret, especially when it carries with it the possibility of insincerity.

What matters now is the progressive programme that the Government has laid down for itself and for India. Of policy, there is no question. The Cripps offer stands. Any agreed constitution, once it

is got ready, will be passed into law by the British Parliament. India will then have freedom to decide whether she will remain within the commonwealth or go out of it. The issues that are outstanding between Britain and India will form the subject of a treaty between His Majesty's Government and the Constituent Assembly. It is the constitution then that is the more important part of the work ahead. But for this purpose, the Government propose to hold the general election as soon as possible. Fresh electoral rolls are out of the question, since their preparation would take a long time and the whole work will have to be postponed by two years if we are to wait for them. But, as Lord Wavell has been careful to point out, they will be made up-to-date as far as possible. As soon as the elections are over, the Viceroy hopes, popular parties which command a majority in the provincial legislatures will form ministries in the Provinces. In the Centre too, Lord Wavell has promised to set up a National Government representative of all parties, so that the work of the Constituent Assembly will be carried on under the aegis of a popular government.

The method of forming the Constituent Assembly will be the same as that indicated in the Cripps offer. But the Viceroy has also indicated that agreed changes can be effected thereon. It is too soon to speculate on the nature of such changes. Whatever such changes may be and whether or not there will be such changes, the worth of the Constituent Assembly will depend largely on the success of our efforts to educate the public in the course of the electioneering campaign. If the elections should be conducted on humdrum lines of exploiting the popularity of individual leaders, then the whole electorate will be divided according to the old communal or other party affiliations. The Assemblies will be likewise divided in sharply opposed camps; and all the old conflicts will be reflected with fatal faithfulness in the Constituent Assembly. It would be misreading both the situation in the country and the mind of the British Government if the wisest and the most strenuous efforts are not made to educate the public on the unique importance of the forthcoming elections. The voters are apt to regard the coming elections as no different from any previous elections and to be ready to be led to the polling booths in line with the old differences. That way, we all know, lies disaster. What is needed is the devising of special measures to bring home to the people the far-reaching significance of their votes. The most literate and the dullest of voters must be enabled to appreciate the dangers of dividing the country into two halves. The Muslim voter in Bengal or the Punjab must be taught to envisage the consequences of constituting into separate States territories which have no coal or iron, which have no sufficient revenue for ordinary public administration. They must be made to understand that, if they care for an improvement in their standards of living, they must throw in their lot with the rest of India.

It is this kind of highly educative electioneering that is needed, the kind of electioneering that will teach the people that, if there is a communal fight to be put up, it must be put up in other ways and on other planes of action than the Constituent Assembly.

I believe that the broadcast of the Viceroy and the Premier will have the effect of forcing the Congress to concentrate its efforts on such an imaginative propaganda instead of the soapbox oratory which might otherwise be indulged in.

To organise public opinion on these lines is to ensure, Swaraj, no matter how numerous or huge the obstacles in our path may be. And if such organised public expresses itself at the polls, then the whole world will have to recognise that Indian Swaraj can no longer be thwarted. Organised strength is always a great help to waverers in making up their minds. Lord Wavell is sure to find the Princes more helpful after such an election that Lord Linlithgow ever found them in his time.

The last hurdle is, however, the worst. Mr. Attlee has pointed out that His Majesty's Government are already giving their attention to the question of the treaty between India and Britain and that such a treaty will be concluded with the Constituent Assembly. I am quite at a loss to understand why the Constituent Assembly should be asked to act in this

matter. The fact that in the case of India, the Constitution is to be passed into law by the British Parliament cannot alter the character of the Assembly as a body entrusted with framing a Constitution which will be subsequently ratified. I cannot help suspecting that the British Government still aims at making the terms of this treaty part of the Constitution to be, which would indeed be highly unsatisfactory.

Since that stage is far off and since hopes of immediate change have been ruled out, it is of the highest importance that the best minds should throw themselves without delay into the task of instructing the electorate on the issues before the country and ensuring that only the constructive-minded succeed in gaining the support of the voters.

"EAVESDROPPER".

Even as during the war years the Dunlop organisation was devoted to the task of speeding Victory : so will that same organisation devote its full energies to speed the task of reconstruction and the betterment of mankind."

OUR AUSTRALIAN LETTER:

INDUSTRIAL PROFITS IN 1944-45

Canberra, Sept. 1945.

Profits of Australian companies for 1944-45, most of which have been presented recently, generally show a slight increase on the satisfactory 1943-44 level. In most cases, 1943-44 dividends are being repeated.

Over the whole field net profits are higher and dividends more stable than before the war. This is due to a wide variety of causes, including war contracts, greater public purchasing power, savings imposed by Government or voluntary action, and absence of competition from imported goods over a wide range.

In addresses company chairmen at annual meetings so far held have usually strongly insisted that taxation should be reduced. A number have agreed that certain Government controls should continue for some time into the peace to permit an orderly expansion of business.

Recent active trading in Asiatic tin companies' shares on Australian Stock Exchange has now brought the most prominent of them to the ceiling prices fixed by the formula drawn up by the Federal Treasury and the exchanges. "Ceilings" for these tin shares will be adjusted upward in the September revision of prices.

Broken Hill Proprietary Co., Ltd., and its subsidiaries comprising almost the entire Australian iron and steel producing industry have announced a consolidated net profit for their last financial year of £1,030,266. This is a decrease of £162,285.

Depreciation at £2,538,289 showed an increase of £84,232. Taxation at £1,226,602 was £306,880 lighter.

Mort's Dock and Engineering Co., Ltd., Sydney, Australian shipbuilding and general engineering firm, has agreed to make most of the mechanical equipment sold in Australia by the General Electric Co., Ltd., of England. In return, directors of Mort's Dock have agreed that General Electric should acquire for cash 10 per cent of Mort's Dock share capital. Shareholders will be asked to consent.

The whole of Mort's Dock authorised capital of £650,000 has been issued and Federal Treasury permission for the necessary increase and issue has been given.

The agreement will result in Mort's Dock having a close association with the largest electrical company in England and gaining a large increase in turnover in the postwar period. Capital of General Electric is £7,798, 372.

This arrangement may be a pointer to an industrial trend in Australia after the war. British firms which formerly exported goods to Australia, may make arrangements with Australian firms to make the goods to be marketed in Australia. This is possible because of the tremendously increased technical and industrial capacity of Australian plants resulting from the war. Before the war many British and American firms established branch plants in Australia and this "export of industry" is likely to continue over a wider range of manufactures in the postwar years.

The helpless destitute mother, who has despaired of ever being able to rear her baby to healthy manhood; the child who has never known what it is to have a cup of milk — these unfortunate souls are among "the ordinary people of the Province" on whose behalf H. E. the Governor of Bengal appeals to you for help.

From nearly two thousand Centres in Bengal the Indian Red Cross provides daily milk to mothers and children. It is to expand this service that much of the 35% "Civil Relief" allocation will be made from the 1945 Funds.

Here are crates of powdered milk, supplied by the Indian Red Cross, being loaded on to river steamers. Destined for interior districts of Bengal, this precious cargo is your answer to the needs of your people. YOUR money provided this milk and more of your money will make regular supplies possible.

Please help the Indian Red Cross in its immense task by sending contributions to the Hon. Treasurer, Indian Red Cross Appeal (Bengal), Government House, Calcutta.

(From Our Correspondent)

BOMBAY, Sept. 18.

Although the flop of provincial loans has now tended to become a hardy annual, rather more than usual interest attaches to the flotations this year. It appears that the shortfall in the three loans was to the following extent. Madras 56 per cent, U. P. 53 per cent, Punjab 23 per cent. The fate of the Madras loan, in particular, was entirely unexpected, as the credit of the province had been rated high in market circles. The underwriters have, of course, taken up the balance not covered by public subscription. Already, the new provincial loans are quoted at Rs. 99-4. The truth is that, even at that discount, the underwriters can get a small margin of profit, because their effective purchase price must have been Rs. 99 or perhaps even less. The fact that there are buyers at Rs. 99-4 shows that it is not the apathy of the investing public but something else that is really responsible for the way in which the loans were coldshouldered. There are quite a few who believe that the system of underwriting itself militates against the success of these flotations. For, the very people who would perhaps have subscribed for the loans are the underwriters who are confident of their underwriting commission and of the certainty of being able to dispose of the loans slowly with a small profit also. This view is strengthened by the experience of the loan issues in the last few years when, though underwriters had to take up fat lots of the loans, they were able to sell them in the market later. That it should be so difficult to obtain a sum of Rs. 8½ crores at a good issue price for provinces whose credit is perhaps not second even to the Centre is not an altogether happy commentary on the way these loans are planned. The gilt-edged market was easier yesterday on account of the depressing news, 3½% Paper being lower at Rs. 101-11.

A mixed reception is accorded in commercial circles to the decision of the Government of India to despatch 10 million yards of cloth to Malaya. It is, of course, true that this supply is to come out of the export quota of 600 million yards now being steadily reduced. The Straits Settlements and Malaya used to take Rs. 90 lakhs worth of textiles in the pre-war period and therefore a slow resumption of the trade with that colony is, no doubt, desirable. But charity begins at home. The internal supply in India is not such that even this small export could be afforded. For, though there has been an improvement as noted last week in this column, the shortage is still very serious. Apart from the existing civil population, who have to subsist on a fraction of the cloth supplies they were receiving in pre-war days, there are the clothing needs of the home bound demobilised soldiers to be looked after. Prima facie, it would appear that, until a great degree of improvement is secured in India, exports must remain a secondary obligation no matter what the urgency may be. Meantime, it is reported that more quantities of cloth are being turned over to civilian consumption, while minor steps of rationalisation are also being continued to increase the total supplies in terms of yardage.

Sir M. Visveswarayya, presiding over the quarterly committee meeting of the All

India Manufacturer's Organisation has suggested the appointment of a Committee, drawn up of members of industrial and commercial organisations and presided over by a judge, to enquire into the operations of government's policies in regard to imports and controls of civil supplies. He was apparently prompted to make this suggestion in view of the complaints voiced by the public from time to time, but it may be said that, after recent price reductions and the greater flow of imports, these complaints have tended to become fewer. The Committee of the A.I.M.O. adopted a resolution urging the removal of the controls on imports and distribution of machine tools, metals, chemicals and engineering stores. It has also urged the abolition of the Supply Department. But the most useful suggestion related to the constitution of a separate Industries Department of the Government of India, with a special construction branch to speed up industrialisation. It is understood that at Delhi there is a small tussle going on between the Supply Department chiefs and those of the present Industries and Civil Supplies Department as to who should be in charge of the industrialisation programmes. The outcome of this fight will presumably be decided by the character of the personalities at the top, and their influence in the counsels of the Viceroy. In the meanwhile, one also hears the report, to which a fair degree of credence might be given, that the provincial governments are eager to have the entire job of post-war planning all to themselves without any interference from the Centre. Indeed, it is not only in this respect that a centrifugal tendency

has been noticeable; in the matter of the sales tax also, the provinces are showing themselves extremely self-willed and often self-opinionated. In matters of planning, it is a commonplace that, whatever might be the desire of the provinces to preserve their individual identities and aspirations, a great degree of cohesion with the Centre is desirable. How far Sir Ardeshir Dalal succeeds in this direction is a matter for conjecture. At the moment, the signs and symptoms are hardly encouraging.

After the long hiatus brought about by the hard tricks of fate, the National Planning Committee, whose work was so rudely interrupted years ago, is resuming the broken threads of its mission. Pandit Nehru presided over a meeting of the Committee this week, when it was decided to prepare a factual statement of the changes that have taken place in the country and outside. The necessary directives to the various sub-Committees have been issued accordingly. A list of priorities that should engage the immediate attention of the planners has been drawn up, and will be dealt with in detail at a meeting of the special Sub-Committee, consisting of Dr. John Matthai, Mr. A. D. Shroff, Mr. Manu Subedar and Mr. K. T. Shah, coming off on November, 6th. Mr. J. R. D. Tata and Dr. Matthai were present at yesterday's meeting by special invitation. Pandit Nehru, in a brief introduction, referred to the fluid character of the political situation which in a large measure affects the feasibility of any plan, and also emphasised the terrible

AGENCIES AT ALL IMPORTANT CENTRES OF INDIA

THE LAKSHMI INSURANCE COMPANY, LIMITED

Head Office: LAKSHMI BUILDING, LAHORE

Report of the Directors for the period from 1st January, 1944 to 31st December, 1944

The Directors have great pleasure in submitting to the Shareholders their report along with the Audited Balance Sheet and Revenue Account for the year ended 31st December, 1944.

New Business.—During the year 11,731 proposals for assurance of Rs. 3,09,22,223 were received. Of these and others awaiting completion at the end of 1943, 9,817 resulted into policies for Rs. 2,60,20,948. The rest of the proposals were either rejected, withdrawn, postponed or were awaiting completion. Two Annuity contracts, for consideration of Rs. 60,454-6 were also issued during the year. The total number of policies in force were 57,718 assuring Rs. 12,39,62,387.

Income.—The total income for the year amounted to Rs. 68,06,100-2-4 of which the premiums received amounted to Rs. 57,91,779-5-1 as against Rs. 48,46,331-0-3 in the last year. The amount of Rs. 75,895-13-9 on account of dividend accrued, but not payable in respect of cumulative Preference shares held in the various companies has been taken into account in the year under review as in the opinion of the Directors there is no risk involved in doing so.

Life Assurance Fund.—The outgo amounted to Rs. 32,79,909-7-9 leaving a balance of Rs. 35,26,190-10-7 which has been carried to the life assurance fund making it to Rs. 2,70,00,355-15-8. The total assets amounted to Rs. 2,96,75,455-12-7.

Claims.—It is gratifying to note that the Company continues to maintain its old tradition of the prompt settlement of its claims. Claims by death including bonus amounted to Rs. 7,68,708-2-0. Assurances matured including bonus, but excluding re-insurances amounted to Rs. 7,64,300-6-0.

Expense Ratio.—The management expenses amounted to Rs. 16,70,522-2-5. The renewal expense ratio for the year under review calculated according to the rules in vogue works out at 13.45 per cent which is lower by 2.07 per cent than that of the

previous year. This would demonstrate the strict control exercised over the expenses.

Reserves (a) Investment Reserve.—The Investment Reserve at the end of the year stood at Rs. 2,91,474-9-6 as against Rs. 53,181-11-10 of the last year. The increase represents the net gain on the sale of some of the securities.

(b) Building Depreciation Reserve.—A sum of Rs. 42,786-14-6 has further been added to this Reserve and it now stands at Rs. 2,71,336-4-8.

(c) Furniture and Fittings Depreciation Reserves.—This stands at Rs. 69,609-2-4 to which no addition has been made during the year. In the opinion of the Directors it is not necessary to provide any more amount on this account this year as the realisable value of these assets is much more than their book value.

Directors.—L. Baij Nath Syal, who has been a Director since 12th July, 1939, retired this year on account of ill-health. The Company regrets that he has had to sever his connections on account of his health and records its appreciation of his valuable services so long as he was a Director. In his place L. Puran Chand Sawhney was appointed. Dewan Harbhagwan Nanda, L. Kanhaya Lal Shah Sawhney, and L. Puran Chand Sawhney retire this year. They are eligible and offer themselves for re-election.

Auditors.—Messrs. B. M. Chatrath & Co., and Messrs. Aiyar & Co., also retire and offer themselves for re-election.

General.—The Staff at the Head Office and the Branches and the entire field organisation have worked very satisfactorily during the year of the report, for which they are entitled to our sincere thanks.

Lakshmi Building,
Lahore, the 27th June, 1945.

By Order of the Board,

ISHER DAS,
Chairman.

Airway Port

(From Our Correspondent).

Karachi, Sept. 17.

The last of the batch of Indian industrial delegates who had been abroad returned to Karachi during last week. It consisted of Mr. G. D. Birla, Mr. N. R. Sarkar and Dr. P. S. Lokanathan. None of them spoke about the actual achievements of the Mission which will be made known only when it submits its report. In the course of a talk with pressmen, Mr. Birla said that theirs was an exploratory trip and they were afforded all facilities to visit factories, centres of production etc., both in the United Kingdom and the United States. Neither of these countries would be in a position to supply the requirements of India in the matter of heavy industries, as they were just now switching over to peace time production and there was already demand from several countries in Europe for capital goods. So far as consumer goods were concerned Britain would not be in a position to send much to India since her demand at home was itself very heavy. But in this respect, United States was in a much better position, but unless the dollar position was improved India would not be in a position to import much from the United States.

So far as the starting of heavy industries in India itself was concerned, Mr. Birla insisted on complete Indian control of such industries, though they were not averse to seeking assistance of foreign experts. We should not even accede to the position of foreign partnership in Indian industry. He added: "We can however give some royalty as the Russians were doing for getting technical assistance. We must pay the price for technical knowledge which other countries have built up in years".

Questioned about the problem of commercial safeguards, Mr. Birla said that it could not be solved unless we had a National Government. He was very bitter about the opposition they had to face in the matter of ordering for textile machinery in Great Britain. He accused the India government of writing to British industrialists not even to quote preliminary estimates for textile machinery.

Dr. P. S. Lokanathan who acted as Secretary of the Delegation said that there had been insufficient appreciation in Britain of the economic problems of India. An attempt was being made in interested quarters, namely, British banking and financial circles not only to underestimate India's war effort but also to accuse India of charging inflationary prices for goods sent by us. Journals like the "Financial Times" and the "Economist" had said that if real value was charged for goods supplied by India, the present debt would be half and even less.

The Delegation, Dr. Lokanathan added was impressed by the need for strengthening the organisation of Trade Commissioners in the U. S. A. and Great Britain. He also stressed the need to have trade commissioners in all important countries abroad, equipped with adequate technical staff.

Cargo-boat owners at Karachi are deeply concerned about the future of their industry, now that the war is over. The decision of the Government of India to terminate the route scheme has resulted in a slump in country craft cargo rates. They would have dropped fifty per cent or over, were it not for the concerted action taken by country-craft owners not to enter into competition. Some time back, it was feared that a large number of country-craft would have to lie idle for want of traffic in Karachi. But can-

cellation of some steamers intended for coastal traffic proved a boon for the owners. This, and the decision not to undercut each other has brought down the country-craft cargo rates by about one quarter or one third in the city. Karachi had a considerable country-craft trade in pre-war years and the war doubled the usual trade. With the cessation of hostilities and the release of steamers for coastal traffic, our existing country-craft trade would shrink to its pre-war level.

As a result of the Textile Conference at Bombay, Sind has been allotted 50 per cent increase in the quota of cloth, making the supply 18 yards per capita, from October 1, this year. However, the increase will not be available till the end of December, 1945. Government are of the view that the controlled distribution of cloth is still necessary, but the method of procurement is going to be revised in such a way that procurement will be easy and also obviate any leakages. Sind has been allotted an increased quota of 533 bales of yarn to enable development of fishing industries activities.

In view of the improved supply position articles like slate pencils, toilet goods, boot polishes, pens, razors blades, electric fans, typewriter ribbons, photographic goods wireless receiving sets and parts, and sports goods except tennis and ping pong balls would be eliminated from consumer goods control order, revealed Mr. L. N. Suri, Asst. Director General of Civil Supplies, on his return from Bombay where he had proceeded to attend a meeting of the regional officers of Civil Supplies. Mr. Suri added that the decision of the Government of India on the above matter was soon expected. As a result of it, importers would be free to sell these goods without any restriction by the control authorities.

Lakshmi Insurance

Having regard to the progress made by the other Life offices new business written by the Lakshmi Insurance Company in 1944 is not striking. Nevertheless, the Company has been able to report good progress and the balance sheet present a neat position as ever before.

11,731 policies were received during the year for assurance of Rs. 3.09 crores of which 9,817 resulted into policies for sums aggregating Rs. 2.6 crores. Two annuity contracts for consideration of Rs. 60,454 were also issued during the year. The total number of policies in force was 57,718 assuring Rs. 12.40 crores.

The total income for the year was to Rs. 68.06 lakhs of which the premiums received amounted to Rs. 57.92 lakhs

against Rs. 48.46 lakhs in 1943. After providing for the outgo of Rs. 32.80 there was a balance of Rs. 35.26 lakhs which was added to the Life Fund. The total of the Life Fund was Rs. 2.70 crores.

The claims experience was satisfactory, claims by death amounting to Rs. 7.69 lakhs and on account of maturities Rs. 7.64 lakhs. As there was no large increase in new business it has been possible to effect a reduction in the expense ratio. The renewals expense ratio was 13.45 per cent representing a decline of 2.07 per cent. over the previous year.

Of the total investments of Rs. 2.01 crores in gilt-edged securities and shares, Rs. 72.87 lakhs was in Central Government securities and Rs. 30.87 lakhs in provincial loans. The holdings of Mysore State securities was rather large at Rs. 22.10 lakhs. The profit on sale of investments during the year has been added to the Investment Depreciation Reserve. Policy holders loans were Rs. 22.05 lakhs and loans mortgages Rs. 8.13 lakhs. House property was valued in the books at Rs. 15.46 lakhs while cash balances were Rs. 15.46 lakhs. There is no mention in the balance-sheet regarding the rate of interest earned on investments.

A Resume of Commodity Markets

The reports that there might be an increase in the foreign price for silver have resulted in an increase in prices for both silver and gold on bear covering and fresh buying and closing prices at the highest levels for the week. The raw jute market has continued week with the publication of the final forecast figures for the 1945/46 crop. The publication of the production figures of jute manufactures for the last month showing a large reduction in output has also had a slightly discouraging effect. The weakness of the jute manufactures market, however, would suggest that the producers are not very much worried about the coal shortage as arrivals have been satisfactory in recent weeks and it is expected that production would improve at an early date. The raw cotton market has been steadier with the strength of the bullion market. Mill buying has been satisfactory. The quotations for new crop are fully steady. The piecegoods markets have been rather quiet there being a decline in the amount of business in the Bombay and Ahmedabad markets. It is stated that the expectations regarding a reduction in the ceiling prices have kept off buyers but with the busy season resumption of buying on a large scale is anticipated before long.

In the raw jute market rather quiet conditions have been noticeable. Business has been restricted as there is a tendency to await further developments and the final forecast figures for twelve districts have been above expectations. It was expected that there would be considerable damage to the crop with the recent floods in Eastern Bengal. Two instalments of final forecast figures published during the week show a slight increase in the yield. It may be said however, that the increase is on account of Assam and the figures for districts in Bengal yet to be published might possibly show a decline. The yield on account of twelve districts is 18,55,090 bales against 17,55,925 bales for 1944/45. Assam alone accounts for an increase in the yield by 196,000 tons. The total yield for 1945/46 is estimated at 520,000 bales against 324,000 bales for the previous year.

While it has been reported that the coal arrivals in the past few weeks have been quite satisfactory it is not clear why mills are rather lethargic in their purchases. Is it because trade circles still expect that there would be a surplus of jute and that with the possibility of selling with the approach of the Puja holidays there is no need for laying in additional stocks? Or is it due to the tendency to await a sustained improvement in coal supplies? Last month's production figures have not made quite satisfactory showing.

The easier tone of the jute manufactures market is perhaps due to the uncertainty regarding the outlook for positions early next year. The weakness of the raw jute market also has pushed down prices. Mills, however, have not been keen to do business and have not offered any reduction in rates.

The raw cotton market has been fluctuating in narrow limits though in the latter half of the week a slightly better tendency has been noticeable. The strength of the bullion market has pushed up prices. The reports that there has been an increase in mill production by seven per cent have been received enthusiastically by the market. While mills have been giving more support to the readymarket there are sellers at the higher levels and it is felt that pending a large increase in exports there cannot be any appreciable change in prices.

The report that Malaya would be receiving Indian cloth to the extent of 10 million

yards has come in for criticism as it is feared that any increase in exports would aggravate the cloth situation within the country and that the Indian consumer would be asked to undergo further hardship. It is, therefore, satisfactory to note that the exports of cloth from this country to Malaya will not affect the position in this Country as these exports will form part of the total quota which was reduced from 600 million yards to 400 million yards some time back. It was only recently pointed out that with the increase in production under the Utility Cloth scheme, the reduction in the requirements of the Defence services and the lower level of exports the total quantity for civil consumption would increase by 900 million yards in 1946. If the adjustments in exports were made within the allotted quota of 400 million yards per annum there cannot be possibly be any reason for complaint. Only it should be made sure that there is no forcible change in the direction of trade and indirectly an attempt is made to loosen our hold in the newly captured markets in the Middle East. Burma and Malaya can be best served by Indian producers in the absence of Japanese competition if the experience gained in other markets is not sacrificed for the capture of new ones.

The bullion market has firmed up in the last two days on the reports that there might possibly be a large rise in the foreign price for silver. At the present moment the U. S. Treasury's purchase price for newly-mined silver is 71.11 cents and for foreign silver 45 cents per fine ounce. It is stated that there has been a large increase in the domestic consumption of the white metal and that in order to attract foreign silver it would be necessary to raise the price. The rise in the foreign price for silver might be to the extent of five to ten cents. This news has naturally had an encouraging effect on the Bombay market and there was a rise in the quotation for silver ready to Rs. 128/6 from Rs. 124/4. There was a rise in gold also to Rs. 73/11 for new delivery from Rs. 72/2 earlier in the week. With the feeling that there might not possibly be any change in the dollar-sterling rate markets were rather uninteresting early in the week. It was even feared that bulls might again lose their grip over the market and that prices might record a decline. The latest developments, have, therefore, helped bulls to a great extent.

New Bank of India

The balance-sheet of the New Bank of India for the year ended June 1945 reveals all round progress. Deposits increased from Rs. 4.7 crores to Rs. 5.44 crores and the total working capital to Rs. 6.24 crores from Rs. 4.57 crores. The increase in working capital, besides deposits, is due to the issue of new capital at a premium to existing shareholders.

It is satisfactory to note that the increase in deposits is mostly on account of time liabilities. Time liabilities at the end of June, 1944 were Rs. 2.61 crores. They in-

creased to Rs. 3.44 crores on June 30, 1945. Demand liabilities during the same period increased from Rs. 1.11 crores to Rs. 1.51 crores. There is a satisfactory increase in loans to Rs. 2.47 crores from Rs. 1.89 crores though full use could not be found for the available funds. Investments in government securities are therefore, considerably higher at Rs. 2.45 crores against Rs. 1.39 crores. Cash on hand was Rs. 91.01 lakhs against Rs. 71.70 lakhs. Investments in preference shares were Rs. 19.92 lakhs against Rs. 8.13 lakhs. The market value of these investments was in excess of the book value by Rs. 3.93 lakhs.

The net profit for the year was Rs. 3,33,547 against Rs. 1,71,441 for 1943-44. After providing Rs. 1.4 lakhs for taxation against Rs. 60,000 formerly and transferring to General Reserve Rs. 50,000 (same) the dividend has been maintained at six per cent per annum on the increased capital.

During the year new capital for Rs. 30 lakhs was issued at a premium of Rs. 2/8 share. This increased capital was taken up by existing shareholders and the premium of Rs. 3 lakhs has been added to reserves.

(Continued from page 521)

handicap of lack of reliable data and statistics in this country. Economists know that only too well to their cost. The material collected by the various panels of the Government of India is very inaccessible and Pandit Nehru mentioned the report of the Grady Committee, as an instance. He hoped that there is no attempt to suppress the publication of all the available data. I might mention here in passing that the exposition of the Bombay Plan in terms of what can be easily understood by the mass of people has been completed by Mr. M. R. Masani. The publication will be made available to the public in a few days.

The members of the Shipping Advisory Panel of the Government of India, of which Sir B. Rama Rao is the Chairman, are visiting the shipbuilding yard at Vizag this week to consider the establishment of a shipbuilding industry. Mr. M. A. Master and the D. G. of Shipping Repairs are also on the panel, besides other public men. Meanwhile, plans for the construction of a 8,000-ton ship by the Scindia Steam Navigation Company are in an advanced stage. The necessary machinery is awaiting shipment to India from the U.S.A. It is expected that it will be received shortly and that Scindias would be enabled to lay the keel before the turn of the year. The vessel will be the first of its kind to be built in India. The early completion of the ship, which will cost about Rs. 32 lakhs, will depend entirely on the availability of materials and on the facilities which the Government of India will grant to the Company.

PLANNING—ORDER OF THE DAY
BANK OF CALCUTTA
LIMITED

(CLEARING THROUGH IMPERIAL BANK OF INDIA)

PLANS FOR INDUSTRIES TO DEVELOP AND TRADERS TO GROW

Dr. M. M. CHATTERJEE, Managing Director.

Jute and Jute Manufactures

Special to "Indian Finance"
(From Our Correspondent)

Calcutta, September 20.

Mills' production statistics for August, 1945 record a fall in output for the second month in succession. In June, the production of manufactured goods totalled 88,300 tons, in July and August, the figures were 81,561 tons and 79,324 tons respectively. We find the August figures is the lowest monthly production since December, 1944, if we exclude February, which was a short month made shorter by holidays. Decreased production in July (a drop of 7.6 per cent) was due to the fact that deliveries of coal to mills during that month were about the worst ever; indeed at one period the position became so acute even electrified mills were shortly expecting to close down because the power stations serving them were running short of fuel. In the last few weeks we have seen some improvement in supply although last week there was again a slight reduction in the number of wagons arriving at the Indian Jute Mills Association's dump when the average for the week was 57 wagons daily. But it is apparent from the latest production figures that Mills are still severely affected by a shortage of coal, although, in drawing comparison with production in July, some consideration should perhaps be given to the fact that Ramzan was being observed during three weeks of August which might account for some proportion of the decrease as one normally expects to find a falling off in efficiency as the period of the fast progresses.

The August issue of the Indian Central Jute Committee's "Bulletin" gives an account of how the chronic coal shortage has affected the Jute Mills. The "Bulletin" states:—

"It is not generally appreciated how severely the Indian Jute Mill Industry has been affected by shortage of coal supplies. Difficulties have been experienced since 1943 but the main period of shortage has been since the beginning of 1944. Estimating the industry's coal requirements on the most conservative basis after every possible measure of fuel conservation has been taken by all means ranging from structural alteration in boiler plants to the use of alternative fuels such as wood and coal, during the period from February, 1944, till the end of July, 1945, there has been a shortfall on deliveries of approximately 43 per cent in all. Moreover, the greater part of such coal as was received was of a quality greatly inferior to that which mills normally burn so that the extent of the decrease is in fact considerably greater than the actual figures shown.

"The effects of this shortage upon the industry have been severe. Many mills have been forced to close down for extended periods and production has been maintained only by a system of concentrating manufacture and by a policy of collective coal distribution by the Association from a special Association dump to which all supplies are consigned. The shortage has also meant much unemployment amongst jute mill workers, but the effects of this have been ameliorated by the gratuitous payment of a maintenance allowance to workers, who could not be given work because of coal shortage. The grave developments which such a situation would have had on the labour situation in the area have thereby been averted, but only at enormous financial loss which has been shared by co-operative action amongst mills. The coal shortage has during the last months assumed the proportions of a crisis

and though every effort is being made by the Association to overcome it, there is little prospect of early relief".

As we write several of the steam-driven mills are closed for want of fuel.

The following is a summary of the total production of goods manufactured on Civil and Military accounts during August, 1945, as issued by the I.J.M.A., including returns of mills in the membership of the Association and that of Gagalbhai Mill:—

TO CIVIL AND MILITARY ACCOUNTS.			
<i>Hessian:</i>		Yards	Tons
Civil	...	11,72,84,306	30,608
Military	...	86 23,823	2,965
Total	...	12,59,08,129	33,573
<i>Sacking:</i>			
Civil	...	7,37,58,219	30,689
Military	...	2,89,19,448	12,307
Total	...	10,26,77,667	42,996
<i>Other Manufactures:</i>			
Civil	...	...	2,627
Military	...	...	128
Total	...	...	2,755
Grand Total	...	...	79,324

Production in August was lower by 2.237 tons or 2.7 per cent compared with production in July. Of the total weight of goods produced, 15,400 tons or 19.4 per cent was on Military account as against 14,942 tons or 18.3 per cent in the previous month. Goods produced on Civil account amounted to 63,924 tons as against 66,619 tons in July, a decrease of 2.695 tons or 4 per cent.

The estimated jute arrivals for the first half of September amount to 3,54,000 bales. In September last year the arrivals for the first half of the month were estimated at 2,53,000 bales. The total estimated arrivals from July, 1945 to end-September, 1945 amount to 12,71,000 bales as against 12,65,000 bales for the same period in 1944.

In the Pucca Bale Market business was reported in Firsts, Lightnings and other grades at minimum rates for export to Belgium Ports. Apart from this, dull conditions have prevailed throughout the week with dealers free sellers at minimum prices for all descriptions, including Cuttings.

Loose Jute sellers have had another poor week; buyers being most difficult to find. Offerings of jute at minimum rates have attracted only meagre interest and business has been again on a small scale. It is reported that towards the end of this week European packers were offering at Rs. 15 and Rs. 12 for Middles and Bottoms without getting on to business. At the end of last week business was done in Supervised jat 30/70 assortment, at Rs. 15-4 and Rs. 12-4 for Middles and Bottoms. Small business was also done in Indian District Tossa Middles at Rs. 15. This week European Middles alone sold at Rs. 15-2 and Supervised Jat Bottoms alone at Rs. 12-2. Earlier in the week Rs. 15-4 and Rs. 12-4 was paid for Middles at Bottoms, in 50/50 assortment for a special mark of Supervised Jat. A small quantity of Supervised Jat Middles and Bottoms was done at Rs. 15 and Rs. 12.

The Manufactured Goods market has been quiet with business chiefly confined to inter-

bazaar transactions. Rates which had improved towards the end of last week on news of the likelihood of the closing down of some of the steam-driven mills due to shortage of coal, sagged towards the middle of the week, but rallied again on reports (so far unconfirmed) that good orders for heavy goods had been placed with mills. The tone at the close of the week is firm. No fresh business of importance was reported in the Hessian market.

Quotations for manufactured goods as on Thursday, 20th September, 1945, were as under:—

	Sept.	Oct.-	Jan.-	April-
	Rs. a.	Dec.	March.	June.
8 oz./40 ins. hessian	22 2	22 2	22 0	21 8
10 oz./40 ins. hessian	28 0	28 0	27 8	26 10
Plan C's	66 0	65 12	64 4	62 4
"B" Twills	66 12	65 6	63 4	61 8
Liverpools	72 4	72 0	71 4	69 8

FINAL FORECAST OF THE JUTE CROP '45

backed by
INDIA'S WEALTH

Over Rs. 112 Crores were invested in less than eleven months in the First 3% Victory Loan (1957) withdrawn during February 1945.

The investment of so large a sum in so short a time was proof of the First Loan's soundness and the public's confidence in Government Loans. The 3% Second Victory Loan offers you the same excellent terms—half-yearly dividend less Income-Tax sent to your address, guaranteed repayment at par not earlier than 15th August 1959 and not later than 15th August 1961, no limit to the amount purchasable, security of your capital, ready salability in the market at any time, and refund of Income-Tax if you are not liable to it or liable at a lower rate. Investment in the 3% Victory Loan assists the war effort and helps to counter inflation. It keeps your savings safe from depreciation and gives you a handsome return year by year.

To buy this Loan, apply to your Bankers, or to the Reserve Bank of India at Bombay, Calcutta, Madras, Delhi, Cawnpore or to the Branches of the Imperial Bank of India in other places or to any Government Treasury

It happened at Runnymede, in England—a memorable event. A group of iron clad barons armed with a lengthy document, faced King John demanding his assent to their proposals. After due amendments, the Articles of the Barons engrossed on parchment, became famous as the 'Magna Carta'. It was the first written exposition of feudal law, looked upon with great veneration as the Charter of individual freedom.

There are yet many unknown charters of liberty to be drawn up and recorded. The medium both of negotiation and record will be paper.

Stock Markets to-day and to-morrow:

BRIGHT OUTLOOK FOR STEEL CORPORATION

A definitely steadier feeling is noticeable in the stock markets both in Calcutta and Bombay though business passing has not been very large. The sharp rise in prices for bullion following the reports of the possibility of an increase in the U. S. Treasury's purchase price for foreign silver and the encouraging speech by the Chairman of the Steel Corporation Bengal, were encouraging factors. It would appear that the Bombay market has been very much impressed by the figures of the Tata Iron and Steel Company for the last year.

While in Bombay, Textiles and Steels have been in favour, in Calcutta Coal and Engineering Shares were steadier, coals particularly. The report that the Equitable Coal Company will be paying a dividend of two rupees per share and the persistent rumours that Burrakur Coal would pay one rupee per share have encouraged buying. The balance-sheets of the Macneill group of companies are not yet available.

From the behaviour of the markets before the Puja Holidays it will be clear that the general sentiment in the market is inclined to be bullish and the resumption of business after the holidays might be active. The developments in the bullion market in the past few weeks had a disturbing effect on the stock market but now that bulls have successfully staged a recovery and developments in the international situation have been in their favour the merits of stock exchange securities would be better appreciated.

The optimistic remarks of the Chairman at the Annual General Meeting of shareholders of the Steel Corporation of Bengal confirm the view I have taken regarding a bright future for the ordinary shares of this Corporation. Now that censorship in regard to the activities of the Corporation has been removed the Chairman was able to give a glowing account of the achieve-

ments of the Company in the war period. The erection of the works was completed at a very opportune moment and it was possible for the Corporation to play a very important part in the country's war effort.

The following extract from the Chairman's speech will give an idea of the progress made in the past few years:—

"... We produced steel for the first time on November 10, 1939, and long before we got out of our teething troubles, the war situation had taken a serious turn and we were asked by the Government to produce other types and qualities of steel than those we would normally have made. It meant extensions to existing plant in some cases as well as completely new plant in others. Hardly had we completed these extensions and were getting a reasonable production then conditions changed further and again more pressure was put on us for the production not only of more steel but also of different qualities. To put it in another way, we were asked to trot before we knew how to walk and before we could trot decently, we were called upon to gallop. We hope to start our galloping exercise some time early next year. Had all the plant that was required arrived in time, we should have commenced work on the Duplex plant, i.e., the name of the latest addition, during the last quarter of this year. When the extensions now in course of completion come into operation we may expect our production of steel to be more than doubled as compared with the original lay-out. I do not suggest that this is even our final target as the design and lay-out of the plant permits of still further extensions when the necessity arises."

The Managing Agents deserve a word of praise for the successful conduct of the affairs of the Corporation. The initial production was aimed at 200,000 tons per annum. From early next year the output will be above 400,000 tons per annum. With the vast extensions to plant and the increase in the earning capacity of the Corporation there has been no increase in the issued capital, the additional funds needed being borrowed on a cheap basis from the Imperial Bank. With a doubling in output it would be reasonable to expect a doubling in earnings as well. With a lower level of taxation in future years there is thus scope for a large increase in the ordinary dividend though in the early stages the Directors would like to conserve the resources of the Company and provide substantial sums for depreciation. In view of the fact that the equity value behind the shares has considerably

increased and higher dividends can be expected in the future the shares should appreciate in value steadily. The brighter prospects would appear to have been discounted to a certain extent but the relatively lower yield is more due to the expectations that tax relief will be more beneficial to the Corporation.

The prospects for rubber shares were discussed in these columns on an earlier occasion. It was said that with the recapture of Malaya and other rubber producing areas the importance of Indian rubber output might be minimised but that with the depleted stocks and the large increase in demand there would be need for the output of all countries. The conclusion of hostilities in the Far East has naturally been followed by a sudden rise in prices for the Straits Dollar shares. The expectations that it would be possible to resume operations early have been responsible for the jump in prices.

The Madras market has been unfavourably affected but so far there has been no slump.

The ordinary dividend of the Midland Rubber and Produce Company Limited for the year ended March, 1945, has been increased to 12½ per cent. from 10 per cent., for 1943-44 but it would appear that the higher dividend is due more to the profits on sale of the Company's properties than to an increase in the revenues of the Company. The Directors actually point out in the report that both the rubber and tea crops were short of the estimates and that working expenses were higher.

The net profit, including Rs. 3,17,388 being the profit on sale of the Currimony Estate together with a portion of the Balamore Estate in South Travancore, was Rs. 9,29,463. The sum of Rs. 65,869 was provided for taxation and Rs. 57,042 for depreciation. The sum of Rs. 1,71,623 has

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, September 21.

After earlier quietness rather steady conditions have been noticeable on the Calcutta Stock Exchange in the past week. Business passing has not been on a large scale, but the general undertone of the markets is very steady. The strength of the bullion markets and the favourable advices from the Bombay stock market have had a slightly stimulating effect. The rumours that the Indian Iron and Steel Company would not effect any decrease in the dividend and the payment of a dividend of two rupees per share by Equitable have also had a steadying effect. The Jute section, however, has been very restricted.

In the gilt-edged securities section business was on a small scale and the report that the response for the provincial loans was rather poor had a discouraging effect. In the last two days a steadier feeling has been noticeable and 3½ per cent Paper is quoted higher at Rs. 102-1. Among terminable loans, 2½ per cent 1948-52 were Rs. 100-3-6, 3 per cent 1951-54 Rs. 101-7 and 3 per cent 1957 Rs. 100-6. It is interesting to note that 2½ per cent 1950 is quoted at a slight premium, 3 per cent 1963-65 were Rs. 99-4 and 3 per cent 1966-68 Rs. 98-9-6. Easy conditions continue to prevail in the money market though there has been a token increase in the average discount rate to six annas per cent.

Bank shares have been uninteresting with Imperial Bank contributors at Rs. 558 and fully paid at Rs. 2,185. Reserve Bank were steady at Rs. 135 12; Nath Bank were quiet at Rs. 35-12, Hindustan Mercantile Bank at Rs. 47-8 and Bank of Behar at Rs. 77.

Cotton shares were uninteresting. Cawnpore Textiles were actually lower at Rs. 12-8, Mahabuzmi Cotton at Rs. 34-10 and Dumbur at Rs. 362. Bourreah were steady at Rs. 696.

The reports that the Macneil group of coal companies would make favourable showing and that with the easier labour position coal raisings would improve were responsible for the better tone of the Coal section. Amalgamated were one point higher at Rs. 55-8 but there was a setback to Rs. 54-8. Bengal were not very much in favour at Rs. 755 but Bokaro and Ramgur improved to 53-2, Burrakur on the rumours of a higher dividend improved to Rs. 44-12 while South Karanpura were very steady at Rs. 37-4. Equitable on the announcement of a dividend of two rupees per share improved to Rs. 73. New Beerbhoom were steady at Rs. 47-12, Central India at Rs. 13-4 and Western Bengal at Rs. 15-4. New Manbhoom were active being done upto Rs. 110-8.

Jute shares were neglected. The easier tone of the jute manufactures market and the lower level of production in the last month restricted business, but coal arrivals were reported to be satisfactory. Howrah were fluctuating around Rs. 92-8 while Anglo-India were sticky at Rs. 524. Kamarhatty were Rs. 780, Kankarrah Rs. 667, National Rs. 35 and Orient Rs. 322. Megna were steady at Rs. 155 and Nuddea at Rs. 138. Chitralisah were higher by one point at Rs. 40-4.

In the Engineering section, both Indian Iron and Steel Corporations were fluctuating around Rs. 41 and Rs. 34-2 respectively. The encouraging speech by the Chairman of the Steel Corporation of Bengal had a favourable effect on prices and the quotation at one

time improved to Rs. 34-12. There was a recession, however, to Rs. 34-5. With the latest rumours that there may not be any reduction in the final dividend of Indian Iron and Steel Company closing quotations are at the highest levels for the week at Rs. 41-10. Steel Corporations also have improved in sympathy to Rs. 34-10. Other shares were unchanged, Braithwaite being dealt in at Rs. 14-2, Kumardhubi Engineering at Rs. 10-12 and Jessop at Rs. 26. Texmaco were Rs. 15-12 and United Iron and Engineering Rs. 10-12.

There was little interest in Sugar and Tea shares. Carew were quoted for the most part of the week at Rs. 30-8, Cawnpore Rs. 42-8, and Balrampur Rs. 17-4. Ramnugger were lower at Rs. 21-8.

Tea shares were unchanged with Hattikhira at Rs. 29-2, East India at Rs. 22-2, and Sapoi at Rs. 25-8 ex-dividend.

In the Miscellaneous section, Burma shares were easier with Consolidated Tin a few annas lower at Rs. 4-6. B. I. C. were unchanged at Rs. 7-6 while C. T. C. were quieter for a time at Rs. 53-12. They have recovered to Rs. 55. Calcutta Electric were not very much in favour being quoted around Rs. 46-2. Walford Transport encountered some selling and there was a drop to Rs. 7-4. The quotation is now Rs. 7-10. Last week the price was Rs. 8-10. Paper shares were quiet with Titagur Paper Rs. 32-5. Midnapore Zemindary were unchanged at Rs. 192. I. G. N. have been fluctuating rather widely. After being lower at Rs. 222, they are now Rs. 225.

BOMBAY STOCK EXCHANGE

(FROM OUR CORRESPONDENT)

Bombay, September 20.

The Bombay Stock Exchange opened the week with a subdued tone in the absence of any fresh stimulants and the earlier steadiness was not maintained. On Friday last, in fact, there was general selling pressure and Steels and Textiles were depressed. On Monday, the session opened with a steady note, but later eased with operators awaiting developments, particularly in connection with the discussions that are now being held regarding the future supplies to Britain from

America. The latter half of the week, however, was marked by considerable activity all round with Steels and Textiles leading on persistent support and absence of sellers. The encouraging behaviour of the Bullion market latterly strongly influenced operators.

In the Textile group, Bombay Dyeing experienced violent fluctuations during the week. A quotation as low as Rs. 1,925 was noted on Monday against the opening for the week of Rs. 1,965. But at the lower levels strong support came from professional operators, who bought in large parcels of this scrip. The price thereupon began to move up in sympathy with other sections and the close for the week is steady at Rs. 1,962-8. Almost all other cotton shares maintained an upward trend from Tuesday, notable among them being Central India at Rs. 385-8 against Rs. 375, Ahmedabad Advance at Rs. 403-8 against Rs. 400, Gokak at Rs. 398 against Rs. 392 and Phoenix at Rs. 660 against Rs. 641-4. Simplex recorded a gain of over 12 points to Rs. 297 while Stadeshi were outstanding with a rise to Rs. 570 from Rs. 547-8. A resolution transferring the managing agency of the Svadeshi Mills Co., Ltd., from Tata Sons, Ltd. to Tata Industries, Ltd., was passed at the extraordinary general meeting of the Company on Monday last. Presiding over the meeting, Sir Sorabji Saklatvala stated that the agreement would be for 20 years with effect from October 1 and the managing agents' commission would be charged at the rate of 10 per cent on the net profits after deducting depreciation. Century remained for most part of the week at Rs. 895 while Indian Bleaching shed a few points to close at Rs. 163. The shareholders of the Sholapur Mills have petitioned the Governor of Bombay to look into the affairs of the mills as they are afraid that there is gross mismanagement and negligence by the managing agents. Sholapur closed for the week unchanged at Rs. 7,000.

Tata deferreds opened at Rs. 2,286 and declined to Rs. 2,265 early in the week, due to selling pressure. A sharp recovery followed on Tuesday, the quotation registering a rise to Rs. 2,315. A further rise to Rs. 2,343 was recorded on Thursday on the expectations that the Chairman would have something important to say at the shareholders' meeting on that day. The ordinaries, likewise, have improved to Rs. 438-8, an improvement of over 12 points at the beginning of the week. Premier Construction were pegged at Rs. 210 while Alcock has been the exception being quoted lower by about 3 points at Rs. 407-8. Indian Iron were uninteresting at around Rs. 41-2 till late in the week, but the close has been higher at Rs. 41-9 on higher Calcutta advices.

Among Electric shares, there was practically no fluctuations in the rates. Andhra Valley were Rs. 1,822-8, Tata Power were 20 points higher at Rs. 1,875 and Tata Hydro Rs. 204-8 against Rs. 202-8. B. E. S. T. remained stationary around Rs. 148.

Burma shares, in the Miscellaneous section, evinced little interest with Burma Corporation gaining a few annas to close at Rs. 6-15 from Rs. 6-9. There was good enquiry for Associated Cement which closed at Rs. 218, while Belapur Sugar continued to make good headway. There was a gain of over 15 points, the close being very firm at Rs. 225. Bombay-Burma old shares were quoted lower at Rs. 563 against Rs. 566. The new shares also moved in sympathy to Rs. 195 from Rs. 198-12.

ATL TEA COMPANY (1945) LTD.

Audited accounts for the period ended 31st December, 1944.

The Season's working shows a profit of Rs. 35,643-4-5 to which is added the Credit Balance of Rs. 3,636-6-8 brought forward from the previous year, resulting a balance of Rs. 39,279-11-1, which the Directors propose to deal with as follows:—

To pay a dividend at Rs. 6 per share, free of Income-tax, Rs. 16,875; Debenture Premium Redemption Reserve Rs. 1,500; Provision for Taxation Rs. 3,000; to provide for Depreciation Rs. 15,111-5-6; to carry forward Rs. 39,279-11-1; Total Rs. 39,279-11-1.

Crop.—The total crop for the season 1944, was 2,944 maunds 66 lbs. at the average price realised at Rs. 11-7 per lb.

The decline in the profit is mainly due to the fall in crop and imposition of Excise Duty and the market prices being much less compared to previous year and rice and cloth subsidy to the labourers.

Manufacture.—A good standard of manufacture was maintained.

Cultivation.—The area under tea 701 acres against the total area 1,399 acres. The five years development programme chalked out in the beginning of 1943 is well maintained. The principal items are—application of chemical and cattle manures, new plantation and infillings and treatment of bushes. Special attention being given to improve the garden for future betterment.

Condition of Properties.—The garden and the machinery plants have been kept in good working order. One 10 Venetian Tea Dryer has been added to cope with the increased crop in near future.

Directors.—In terms of clause 90 of the Memorandum and Articles of Association, the Director, Mr. C. C. Pyne retires, but being eligible offers himself for re-election.

Note on the Prospect of 1945.—Estimated Crop:—3,500 maunds.

Tea manufactured up to July 1945:—1,577 maunds against 1,100 maunds for the same period in the last year.

Contract entered with Food Ministry for the year:—

Green Tea	75,200 lbs.	Balck Tea	1,20,000 lbs.
against no Contract in the last year.			
Rain fall 84 inches against last year 70 ins.			
Prospect good Weather normal.			
<i>Mg. Agents.</i> —Messrs. Goenka & Co.			
Authorised Capital—Rs. 7,50,000. Issued and Subscribed—Rs. 4,50,000 in Ordinary shares Rs. 10 each, fully paid up.			
Synopsis of balance sheet as at 31-12-1944.

Total	9,71,896	Total	9,71,896
		Liq. Assets	2,83,492

DHUNSERI TEA CO., LTD.

Audited accounts for the year ended 31st December, 1944.

They show, after charging Manager's and Staff's Commission, a profit on the year's working of Rs. 53,096-5-7, to which falls to be added the balance brought forward from last year of Rs. 45,466-9-2; giving a balance to be carried forward of Rs. 88,562-14-9.

This balance has since been reduced to Rs. 48,732-12-9 by the payment of arrears of preference dividends up to 30th September, 1939, which was sanctioned by the Extraordinary General Meeting held on 16th February, 1940.

No appropriation has been made in the accounts for the Company's liability to taxation as the existing balance under Taxation Reserve deemed to be sufficient to cover the liability on the profits for 1944.

Despite an improvement in the crop and in the prices realised as compared with 1934, the results are again disappointing owing primarily to the heavy outlay on food-stuffs for labourers and on tea chests. Apart from this, the Company's overdraft with the Secretaries and Agents on 31st July, 1945, stood at Rs. 2,42,000 (approximately). The directors are, therefore, unable to recommend the payment of a further portion of the arrears of preference dividends. The matter will, however, be reviewed, when the Company's cash position shows an improvement.

Debentures.—The 137 debentures, which were outstanding at the end of 1944, stood in the names of two deceased holders. Of these debentures, 100 debentures have since been redeemed, and the liability on the remaining 37 debentures will be extinguished as soon as the necessary formalities are completed.

Crop.—The crop harvested amounted to 5,06 maunds as compared with 4,706 maunds in 1943.

Expenditure.—Apart from the heavy outlay on foodstuffs for labourers and on tea chests, increased expenditure was incurred under Medical Services, Labour Recruiting, Manufacturing and Sale Expenses, etc. The increases were partly offset by reductions in interest charges and in the expenditure under Cultivation and War Risks Insurance.

Prices.—Of the total crop 328,150 lbs. were delivered to the Ministry of Food under contract, and the average price for all tea sold was 14.07 annas per lb. against 12.55 annas in 1943.

Planted Area.—The area under tea at 31st December, 1944, remained at 589.78 acres.

Labour. As at 31st December, 1944, there were 719 labourers or 1.22 per acre under tea as against 838 or 1.42 per acre at the same date in 1943, excluding villagers.

Secretary & Agents.—M/s. James Finlay & Co., Ltd.
Authorised Capital—Rs. 6,20,000. Issued—Rs. 3,73,315. Subscribed—Rs. 3,54,275 in 39,930, 7 per cent Cum. Preference shares of Rs. 3 each, and 2,34,485 Ordinary shares of Rs. 5 each, both fully paid up.

Liabilities.	Rs.	Assets.	Rs.
Capital P'up	3,54,275	Fixed Assets	6,67,699
6 p. c. Debs.	...	Stores	56,623
Outst'dgs	13,700	Stocks	4,558
Reserves	2,71,696	Outst'dgs	2,30,542

Total	9,79,028	Total	9,79,028
		Liq. Assets	3,11,325

HOOGRAJULI (ASSAM) TEA CO., LTD.

Audited accounts for the year ended 31st December, 1944.

The season's working resulted in a profit of Rs. 48,567-2-5, after providing for depreciation and making sundry adjustments. After bringing in the balance from last year, providing for taxation charging Managing Agents' Commission and transferring Rs. 15,000 to Building Reserve, there remains a balance of Rs. 46,216-4-3 at the credit of the Profit and Loss Account. From this the Directors recommend payment of a dividend of Re. 1-4 per share, absorbing Rs. 25,000 leaving a balance of Rs. 21,216-4-3 to be carried forward.

The transfer of Rs. 15,000 to Building Reserve has been made in view of extensive renovations and additions which are necessary at the factory.

A total crop of 4,096 maunds was secured of which 2,951 maunds have been sold for Export at an average price of Rs. 14-10 per lb. and 1,145 maunds have been sold for International consumption at an average price of Rs. 11-5 per lb. There was again a heavy loss on sale of rice and other food-stuffs to the labour force at concession rates.

Unfavourable climate conditions during May and June coupled with the shortage of labour later in the season militated against the production of a larger crop. Rainfall for the year amounted to 84.81 inches compared with an average of 77.32 inches for the previous ten years.

Estimates for the current season have been framed for a crop of 4,500 maunds to cost Rs. 2,08,416.

Mg. Agents.—M/s. Andrew Yule & Co., Ltd. Authorised, Issued and Subscribed Capital—Rs. 2,00,000 in 20,000 shares of Rs. 10 each, fully paid up.

Company Meeting

STEEL CORPORATION OF BENGAL LIMITED

IMPORTANT ROLE IN WAR EFFORT — EXTENSION TO PLANT RESULT IN DOUBLING OF CAPACITY

SIR BIREN MOOKERJEE'S ADDRESS

Presiding at the Seventh Annual General Meeting of the Shareholders of the Steel Corporation of Bengal, Limited, held on Friday, the 14th September, 1945, Sir Biren Mookerjee, the Chairman, said:—

Gentlemen,

Now that the Government has withdrawn the censorship ordinance, I am free to disclose to you what your Works have produced from its commencement as well as the nature of extensions to plant that have been put in.

You may remember we produced steel for the first time on the 10th November 1939 and long before we got out of our teething troubles, the war situation had taken a serious turn and we were asked by the Government to produce other types and qualities of steel than those we would normally have made. It meant extensions to existing plant in some cases as well as completely new plant in others. Hardly had we completed these extensions and were getting a reasonable production than conditions changed further and again more pressure was put on us for the production not only of more steel but also of different qualities. To put it in another way, we were asked to trot before we knew how to walk and before we could trot decently, we were called upon to gallop. Well, Gentlemen, we hope to start our galloping exercise sometime early next year. Had all the plant that was required arrived in time, we should have commenced work on the Duplex plant, i.e., the name of the latest addition, during the last quarter of this year. When the extensions now in course of completion come into operation we may expect our production of steel to be more than doubled as compared with the original lay-out. I do not suggest that this is even our final target as the design and lay-out of the plant permits of still further extensions when the necessity arises.

It will be remembered that when the Works commenced operations in 1939, India had not embarked on any large scale war production programme, and the Company's first products were absorbed in the civil market. The middle of 1940, however, saw a rapid change in the position and an increasing volume of orders for steel for war purposes which took priority over all other work. The follow-

ing year saw the introduction of Statutory Control over the distribution of steel and during the four years 1941 to 1944, approximately 450,000 tons which is equal to 70 per cent of the total output has gone into a wide variety of direct war uses. The balance 30 per cent of our production has been used for essential civil purposes, such as, the maintenance of railways, wagon building programmes, maintenance of industries, and generally for purposes which are essential or of great importance to the life of the community on a war time footing. Since the commencement of the Company more than 700,000 tons of steel have been produced.

In addition to the extensive range of mild steel structural sections, bars, black and galvanized sheets, the Works have delivered large tonnages of Shell Steel, Spring Steel and High Carbon Tool Steel. Heavy Rails have been supplied to the Indian Railways as well as to the Army for strategic lines. Light Rails have been supplied in large quantities for military use. Steel sections, bars and sheets have been used in the fabrication of innumerable military structures, bridge building, floating docks, mine sweeping trawlers and landing craft. Sheets have been rolled for use in the manufacture of land mines and Aircraft Jet-tison Tanks.—In fact I am glad to say that SCOB steel took its place at El Alamein as it did in the defence of India when the Japanese threatened invasion through the plains of Imphal. It may be mentioned that the Works are equipped to roll and finish Heavy Rails in lengths more than double those so far produced in this country. Whereas Heavy Rails are usually supplied in maximum lengths of 42 ft., it is hoped to supply to the Railways in the near future rails in 90 ft. lengths. It may also interest the shareholders to know that in the early days of the war, the Works rolled and delivered some beams 96 ft. long, which were required for a special purpose.

With the advent of peace, the Works will be able to use the accumulated experience of the war years in the production of steel for civil use.

Although it is hoped that the various Government controls will be completely relaxed in the near future, it is generally agreed that their immediate withdrawal would result in chaos. The difficulties we have had to face through the shortage of coal supplies and inadequate transport facilities have still to be overcome, and it is very necessary that the Industry should continue to receive assistance from Government in this respect until conditions return to normal.

India's steel producing capacity has been almost doubled during the war and in the year 1946 there should be sufficient steel to meet everyone's needs, but at the moment it is a case of first things first. Hundreds of factories, which during the war have been expanded to produce the Army's requirements, must now be given every assistance in changing over to peace time production. Their claim for steel for the manufacture of consumer goods, agricultural implements, steelwork for industrial development, shipbuilding and bridge building must be satisfied. If labour is to continue to be employed to the fullest extent. Some measure of control over the distribution of steel is, therefore, necessary in the immediate future.

Before I end, it is necessary to add a word of caution. During times of war prices of all materials rise, but in peace the opposite happens and you must anticipate a fall in our rates at some not too distant date to come into line with world prices, although we would normally expect the reductions in our selling rates to be off-set to a large extent by reductions in

the cost of raw materials, railway freight, etc.

In my statement attached to the Report and Accounts for the year under review which you have all had, I have endeavoured to bring to your notice some of the salient points which may be of interest to you. I have already mentioned therein our thanks which must go to all members of our staff and works for their loyal service during these difficult years. Before I propose the adoption of the Directors' Report and the audited accounts for the year ended 31st December, 1944, I shall be glad to answer any questions you may care to put to me.

THE EMPIRE JUTE COMPANY, LIMITED

The Sixty-sixth Ordinary General Meeting of the Shareholders of The Empire Jute Company, Limited, will be held at McLeod House, No. 28, Dalhousie Square, Calcutta, the Registered Office of the Company, on Tuesday, the 9th October, 1945, at 11-45 a.m. for the following purposes:—

- (1) To receive the Directors' and the Managing Agents' Report and the Auditors' Report and to pass the Accounts for the half-year ended 30th June, 1945.
- (2) To declare Dividends.
- (3) To elect a Director. In accordance with the provisions of the Company's Articles of Association, No. 111 Mr. Chhotaylal Kanoria, retires and, being eligible, offers himself for re-election.
- (4) In accordance with Section 86E of the Indian Companies Act to consent to Mr. Chhotaylal Kanoria, who is a partner of the Firm of Messrs. Lachminarain Kanoria & Co., Brokers of the Company and also a Director of the Company, holding an office of profit under the Company.
- (5) To transact any other business that may be brought before the Meeting.

The Share Transfer Books of the Company will be closed from 25th September to 9th October, 1945, both days inclusive. To facilitate the issue of the Dividend Warrants, the Shareholders are requested to insert the distinctive numbers and the nature of the shares held by them in their applications.

By Order of the Board,

Tax-detection Department

I welcome your suggestion for a Tax-Detection Department. The report on the Bengal Famine has shown to what an enormous and horrible extent profiteers have benefited. If this profiteering had been prevented, might be, many more could have got food, and deaths might have been averted. Profiteering in Bengal has been most conspicuous in rice.

In other Provinces profiteering was not less serious. The existing checking departments, due either to inadequacy of staff or inefficiency have not detected all cases. Two courses are open to stop this rot. Government officials and businessmen must have the civic conscience not to practise and tolerate corruption. But to expect all men to be moral is beyond the realm of practical politics. Human nature being what it is, it is susceptible to corruption, it succumbs to temptation. And Government can stop this by having a body of men specially qualified with a high sense of duty, excellent character and integrity, who will book any one found corrupt.

I, therefore, think a new Department is necessary and will do some useful work. If the new Department does not justify its existence it can be scrapped.

Rajeswar Basu

Rural Economy in Seraikella

Eavesdropper's account of the condition of the rural folk appears to me to be too rosy to be true. I think he is exaggerating. 'Agricultural indebtedness as such is non-existent here!' What, has a miracle been worked there? I am an agriculturist in another province. The high prices of which so much is talked, have not helped in liquidating all my debt. Only a part of it has been reduced.

Another statement which amazes me is "There is hardly any landless labour." Could a labourer have put by so much from his wages as to buy land enough to maintain him? Further I should take what he says with a pinch of salt because he saw things through official spectacles.

Since I have not seen Seraikella myself and since Eavesdropper has seen it, I admit, for the sake of argument, that conditions are good there. But how can he generalise?

"What I have seen and learnt in my rural survey here goes to confirm the views (I expressed over a year ago) that India's agricultural indebtedness once regarded as incurable has, over the major portion of India, disappeared more or less completely." Is Seraikella representative of the whole of India, I wonder.

R. N. Patel

The Famine Commission Report

The final report of the Famine Commission will soon find its way to the pigeon holes in the Secretariat. This is one of the several famines, India had the privilege to witness during the British rule. And this report is the latest addition to the existing stock. To silence the voluble politicians a commission was appointed and it has worked with as much noise as it can make. And at last the inevitable report. And the shouting of the people has stopped. The horrors of the famine are forgotten. And things will go the same old way. It was said by Government spokesmen that Post-war schemes meant and must continue to mean Post-war schemes and could not be carried out during the war. And when the

war has stopped we are still in the realm of reports and schemes. If another famine is not to occur we want both short-range and long-range plans of Agricultural developments. Procurement and distribution of food grains, control of prices and effective rationing must be undertaken. Mr. Kirby was right when he said we should have rationing for some more years.

And the long-range plan should include planning our agriculture in relation to the nutritional needs of the people and with an eye on the resources of the country. More land, Mr. Parr I.A.S. pointed out sometime ago in the 'Indian Farming,' could be irrigated by undertaking huge irrigation works and at a cost smaller than what is spent on revenue remission, relief, etc., not to speak of war expenditure. Fertilisers should be manufactured in India and neither imported from abroad nor manufactured here by foreign Companies. The introduction of large scale farming, improved implements and affording better marketing facilities, if Government would undertake all this, there is a chance of preventing another famine.

P. K. Mahanty.

National Planning Committee

It is in the fitness of things that the National Planning Committee is beginning its work again after a lapse of years. It has been admitted on all hands that the committee has done very useful work by collecting accurate facts and figures. And any plan based on authoritative facts and figures will be realistic and better suited to the needs of the country.

But, however thorough and good a plan might be, it is not worth its drawing, unless put into effect with a sincerity of purpose. Therefore you have done well to point out the lesson learnt by the Industrialists' Mission, namely, in the U. K. and U. S. A. only a national Government could plan and carry out the plan effectively. In India also the experience is not different. Prohibition was

introduced and was made a success by the responsible Congress Governments while it failed under advisory regime. It is, therefore, necessary that a National Government should be formed to carry out the plans of the National Planning Committee and lead the country from the present poverty to prosperity.

H. N. Sapre

To cut costs and increase PRODUCTION

MANUFACTURERS! Think of the Post-war competition now. Remember your very existence after the war will depend upon your being able to offer quality goods at competitive prices. So reorganize—make your production more efficient, more economical. Use tools that will save time, save material—save costs—use BATU TOOLS.

BATU TOOLS, for their extreme durability and high resistance, help to cut costs, increase production, maintain quality and provide trouble-free factory operations. Besides, their accuracy ensures better output—minimum spoilage.

REGISTERED BATU TRADE MARK

Reamers, Milling Cutters, Taps, Little Giant Dies, Circular Dies, Sifting Saws, End Mills, Etc., Etc.

AGENCIES IN ALL IMPORTANT CITIES OF INDIA

IT'S A FACT—

that more than 90% of India's teeming millions never save a rupee of their earnings. Money borrowed at fantastic interest cripples them financially for life. An account with the Palai Central Bank safeguards you from debt and worry—it puts success within your grasp.

Palai Central Bank Ltd.

(Incorporated in Travancore with Liability of Members Limited)

(INDIA) LIMITED

CALCUTTA

Fact Parade

Geological Survey of India to expand.

The Government of India, it is understood, have drawn up a scheme to expand the Geological Survey of India to help exploration of the country's mineral and water resources and assist post-war economic development. The preparation of a geological map which will provide the basis for all other geological work is envisaged in the scheme. Importance is given to mineral development and economic geology.

As a first step, the existing mapping circles will be increased, and two new circles for mineral development and engineering geology will be added with expert staff, both Indian and foreign.

The advice of the Survey will be made available to provincial Governments, Indian States, commercial bodies and the public.

Prize for Coinage Design:

A prize of Rs. 2,000 will be given to the artist whose coinage designs are considered best and accepted by the Finance Department. This is in connection with the recoinage programme of the Government of India in the post-war period and relates to the decimal system of coinage now under consideration.

Eradicating Plant-pest in Bengal

A two-crore scheme for eradicating the water-hyacinth pest from Bengal has been formulated by the Government of Bengal.

The scheme, when carried out, is expected to save crops worth about ten crores of rupees, which are being damaged every year by this pest.

Dairy Research Scheme:

The Government of India is deputing its Director of Dairy Research, Dr. K. C. Sen, to visit the U. K. and the U.S.A. to study the latest developments in dairying and dairy research including the organisation of dairy farms, with a view to employing them in the reconstruction of the Imperial Dairy Research Institute.

Restoration of movables in Burma:

Burma evacuees, compelled by the circumstances of evacuation to leave their valuables behind, will be able to recover their rightful property without the long drawn-out legal battles at one time thought unavoidable, according to the terms of a recently enacted law by the Burma Government.

Called the Custodian of Movable Property Act (1945), the new law covers movable property such as motor cars, jewellery, furniture and similar articles only and is not concerned with landed property.

Under the Act, property looted or abandoned in Burma through conditions arising out of the war will be handed over to people who establish *prima facie* claims to it.

But for the War.....

Statistical experts have worked out that if all the money spent since 1934 on armaments and war was distributed to every man, woman and child of the 2,000,000,000 people of the world, each would receive £125.

Re-opening of Banks in Singapore:

A group of banking representatives have reached Singapore to arrange the re-opening of banks. They include a number of British bank officials.

The banks represented are the Hong Kong and Shanghai Bank, the Chartered Bank of India, the Mercantile Bank of India, the National City Bank and the Overseas Chinese Bank.

New Chinese Currency:

The Supreme National Defence Council is considering the issuing of new Chinese currency to replace the present "Fapil" or Chinese national dollar, according to reports in the Chinese Press.

The new currency is said to be called "Sun" and to have an exchange value of 25 U.S. cents.

Australia to take 70,000 Immigrants Yearly:

Mr. Arthur Calwell, the Australian Minister of Immigration and Information, said in the Commonwealth Parliament: "The Government aimed at a target of 70,000 immigrants yearly—the target representing an increase of two per cent. in Australia's present population."

Canadian Flour for India:

Two British freighters "Samsurb" and "Trevinder" sailed from Montreal for Kaarchi with over 15,000 tons of Canadian flour. The cargoes were purchased in Canada by the India Supply Mission, and the shipments are the largest to leave Canada for India.

Grains for Europe:

Five million bushels of grain may be shipped from Vancouver direct to Europe during winter.

French Govt.'s Subsidy to keep down Prices:

The French Government through the Ministry of Agriculture has announced that a sum equivalent to £110,000,000 will be spent on the subsidising of various essential food-

stuffs in an effort to keep down food prices. The subsidies will continue 'until the return of the normal economic situation'.

Piano Typewriter:

The U. S. Patents Department recently granted patents for an unusual new kind of typewriter which is 'played' like a piano.

Two key-boards, each consisting of nine keys, are operated simultaneously, one by the left hand and the other by the right. The combination of the keys of the two key-boards permits the printing of 81 characters and eliminates the usual shift-key for capital letters.

It is claimed that this new-type typewriter reduces by more than 50 per cent the number of keys required by standard machine now in general use, and thus enables the typist to attain greater speed.

U. N. R. R. A. in need of \$1,900,000,000:

Mr. Herbert Lehman, head of UNRRA, today appeared before the Senate Foreign Relations Committee to testify that his organization would require \$1,900,000,000 to continue an adequate programme in Europe and Asia. Mr. Lehman stated that, in addition to operations in Europe, UNRRA had now planned to expand the programme to China and expected to go into Indo-China, Formosa and Korea.

Eight tons New Money for Singapore:

Eight tons of money have arrived in Singapore to replace currency issued by the Japanese, stated Major-General Ralph Hone, Chief Civil Affairs Officer, Malaya.

Ending inflation in Holland:

All Dutch bank notes now in circulation have become invalid and all bank-accounts have been blocked from September 26 in a drastic monetary reform aimed at ending inflation and combating black market operators it was officially announced at Amsterdam.

KEYNES-CROWLEY TALKS

EFFORTS AT SOLUTION OF BRITAIN'S DIFFICULTIES

WASHINGTON, Sept. 25. Lord Keynes and Lord Halifax have been in this capital during the last fortnight and are now conferring with American officials concerning the solution of the problems of Britain's perplexing financial difficulties. The Britishers have done an admirable job of spreading their case before the populace of this country and even seem to have convinced many that the United States' necessity for extending aid surmounts the British necessity for obtaining it. But if any concrete proposals have been made by either negotiator, it is a deep dark secret. Apparently neither side is willing to take the initiative in this matter, each waiting for the other to speak out. In press conferences, radio, addresses and through other media the British have taken the line that successful outcome of the conferences here is vital, not only for the trade of the countries directly involved but for the whole world.

The issue as they state it is whether there will be resurgence of autarchy or expansion of multilateral trading. If Britain does not obtain the aid she needs here she must continue the wartime restrictive trade mechanisms and in doing so she will carry the sterling area with her. According to her view here, the contribution of winning the war, wartime division of labour between America and Britain and her liquidation of external assets place her in the most difficult position whereas the United States in virtually reverse circumstances have expanded exports, set up a huge trading mechanism and have not depleted her resources anywhere near the extent that Britain has.

All this may be factual representation but there is widespread demand for the most detailed proof and explanation in the Congress which, it is assumed, will have to approve the arrangements worked out here between Lord Keynes and Lord Halifax and the American executive officials. The Congress has shown some indisposition to accept the British contention that American financial aid would not be utilised in the furtherance of Labour's programme. So far as Britain is concerned aid will be used to facilitate imports from the United States during the period when markets are being regained. But many Congressmen question that the internal plans of the Labour will require not more than what Britain is able to provide from her own resources.

One of the most important matters now under discussion is the reduction of sterling balances in which India is most vitally concerned. The United States takes the view that she should not be asked to do more than the members of Britain's own family and it is more important that the orderly scaling down debt is essential to the resumption of normal trade.

Britain, of course, is clear on the point that the Dominions and India must be

brought into direct negotiations before the sterling problem can be settled but meantime they do not feel such negotiations should be begun until there is an indication of what aid will be available here. This could turn into a vicious circle because while the executive officials are willing to reach an agreement on loan or credit—which it will be is not yet determined—they cannot speak for the Congress. A large element in the Congress which is diffident about extensive aid to Britain might alter their position if they are assured that some such aid would be translated into Dollar credits which could be used for purchases here by, for example, India. These sources hope that India likewise will consider favourably the reduction in the sterling balances on condition that she can in turn obtain Dollar credits.

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

Reference was made last week to the possibility of an increase in the price for foreign silver by the United States. The announcement was made early this week that the Office of Price Administration's price for foreign silver was to be increased from 45 cents to 71.11 cents per fine ounce, the same as for newly-mined domestic silver. The earlier reports have thus been confirmed. It is said that the United States is anxious to add to its stocks of silver as large quantities have been utilised by the war industries; and it is expected that, in the reconversion to peacetime basis, electrical industries will consume yet more silver.

It will thus appear from what has been said recently that the use of silver as an industrial metal has increased considerably; and that, with the United States as a competitive buyer in the world's markets, prices for silver will be maintained at high levels. On the basis of the increased price for foreign silver, the parity price in rupees is Rs. 100 per 100 tolas, so that the artificiality of the rupee price even at the recently inflated levels is not so pronounced. As large stocks are held in strong hands and as it is pointed out that the Central Government might find it difficult to return the stocks of lend-leased silver, there is expectation that prices will be maintained at high levels, especially as there is agitation in the U.S.A. that the price for domestic newly-mined silver

As we go to press, it is announced that the Government of India have decided to create a further issue of 3 per cent. 1963/65 for Rs. 25 crores. The securities will be available for sale on Government account by the Reserve Bank of India.

It was remarked in these columns last week that with the easier conditions in the money market and the need for repayment of the outstanding amount of 5 per cent. 1945/55 loan there might be a new loan or reissue of existing loans.

should be increased to one dollar and twenty-nine cents per fine ounce, the monetary value of the metal.

With the improvement in silver prices, gold prices have moved higher. It has been suggested that the increase in silver price has been made because it is a commodity and that the action of the United States cannot be possibly criticised as unilateral and as disturbing the general tenour of markets. Even though gold in most of the countries has ceased to have any meaning in relation to the currencies the dollar price for gold is still fixed and any upward change in the value of the dollar price of gold would amount to devaluation of dollar in terms of other currencies. When the United States is objecting to depreciation in the value of other currencies as the Champion of the Brettonwoods plan, it can hardly be expected that anything would be done that would start the competitive devaluation of principal currencies such as that occurred in the early 'thirties. That means that silver will appreciate in value against gold.

While the recent developments have been very favourable to the bulls in the Bombay market and have enabled them to be in control of the markets in the principal centres of the country, they may seek to over-emphasise the developments

in the transition stage. It is well known that the production of both gold and silver has suffered greatly in recent years and that it has been necessary to draw on stocks. Gold mining was definitely discouraged in order to provide man power for other industries. In Australia and the United States, particularly, there was a sharp decline in output.

With the return of normal conditions, it is reasonable to expect that production of silver will increase, and that, as the white metal occurs almost in every form of mining, increase in gold production or of the base metals will, with the intensified production at the silver mines, afford an output which may be sufficient for all needs. The action of the United States, without consultation with other important producers, is not therefore quite understandable.

But for the emphasis on the shortage of silver and the increased uses for the metal, it would perhaps not be correct to attach any great meaning to the latest move of the United States Treasury. If circumstances have changed it will not be irrelevant to cite here the rather uncertain policy of the United States in the immediate pre-war years. Thus, in July 1939, the domestic price for newly-mined silver was increased from 64.64 cents to 71.11 cents, the present level. Only in the previous month, there was a successive reduction in the foreign price for silver from 43 cents to 35 cents. This is the third occasion on which there has been an increase in the foreign price of silver after 1939. The first rise was by 1 cent in November 1942 when as a result of the agreement with the Mexican Government there was a rise in the market quotation to above the official price and it was found necessary to make a small adjustment. In August, 1942, the price was increased to 45 cents in order to enable Mexico to increase the production of silver. And now to 71.11 cents. So long as the foreign price for silver was below the domestic price, the shilly-shally policy of the U. S. Treasury with silver prices did not matter. But now a stage has been reached where if the demand of the Silver Bloc for an increase in the price for domestic silver to one dollar and twenty-nine cents is conceded, it may bring about unexpected developments in the world markets and put other countries in great difficulties.

Cheap conditions have continued to prevail in the money market and call rates are nominally unchanged at 1/4 per cent. in Calcutta and 1/4 per cent. in Bombay. It would appear that the less keen bidding at the auctions last week was only due to the subscriptions to the provincial loans. With the further decline in advances and the larger working capital with banks there has

CALCUTTA

naturally been keener bidding this week. Without any large increase in the amount of applications, Rs. 4.79 crores against Rs. 4.47 crores, there were more tenders at lower rates and the average discount rate was sharply lower at five annas and five ples per cent against six annas per cent. The offer for the next week has been maintained at Rs. 2 crores in spite of the smaller amount of maturities for some-time. The results of the Assam Government offer of treasuries for Rs. 1.5 crores are not known.

The return of the Reserve Bank for the week ended September 21 shows a decline in the amount of notes in circulation, the subscriptions to the provincial loans and increased tax receipts being, perhaps, responsible for the decline in bank balances with the Reserve Bank and the larger cash balances of the Central Government. Notes issued are slightly higher as a result of the increase in the amount of rupee coin to Rs. 17.51 crores from Rs. 16.82 crores. Notes held in the Banking Department have increased to Rs. 18.35 crores from Rs. 10.19 crores.

In the Banking department, there is a jump in Central Government balances to Rs. 379.45 crores from Rs. 354.80 crores. Other Government accounts show a rise to Rs. 23.16 crores from Rs. 20.84 crores. Bank balances with the Reserve Bank have declined to Rs. 105.98 crores from Rs. 114.87 crores. Other deposits are lower at Rs. 9.91 crores against Rs. 15.66 crores. While the increase in Central Government and other government accounts must be due to larger tax payments and the subscriptions to the provincial loans the increase in foreign balances by Rs. 11.24 crores to Rs. 491.33 crores has also contributed to the rise.

The larger tax payments have not had any disturbing effect and it would appear that there has been a revival of interest in the gilt-edged market. Surplus funds have increased to a great extent in recent weeks and banks were undecided regarding their disposal. They seem to be now convinced that surplus funds can be usefully disposed of in government securities and that with the prospect of the repayment of the outstanding amount of 5 per cent tax-free bonds there is no likelihood of a stringency in funds. If the seasonal rise in advances comes about, as on the last occasion, it will be only towards the end of November. It has been possible for the Reserve Bank to liquidate a portion of the investments and there is a decline in the amount of holdings to Rs. 20.29 crores from 24.71 crores.

The statement of the Imperial Bank for the same week discloses a slight decline in deposits to Rs. 243.13 crores from Rs. 245.46 crores. Investments were slightly higher at Rs. 145.75 crores against Rs. 145.08 crores. As advances improved by Rs. 1.11 crores to Rs. 54.52 crores there is a decline in cash balances to Rs. 52.92 crores from Rs. 56.92 crores.

The statement of the Scheduled banks for the week ended September, 14, shows an increase in demand liabilities to Rs. 644.71 crores from Rs. 639.66 crores. Time liabilities also have improved to Rs. 253.26 crores from Rs. 252.52 crores. Cash in hand is higher at Rs. 34.35 crores against Rs. 33 crores but balances with the Reserve Bank are slightly lower at Rs. 113.97 crores against Rs. 114.42 crores. Advances are further lower at Rs. 252.80 crores against Rs. 256.1 crores.

The Exchange market is unchanged with rates at controlled levels.

The Indian Capital Market—I

New Role for Treasury Bills—and New Target

On the eve of the execution of reconstruction plans it is necessary to have as clear a picture as possible of the structure of the Indian capital market, and its present capacity as well as of the capacity to which, through correct policy and appropriate operations, it can be raised. In broad terms, the Indian capital market may be distinguished under three heads: (1) the short loan market; (2) the gilt-edged market; and (3) the market for industrial capital. We do not suggest that there is as clean a demarcation of these markets as in well organised financial centres like London. Nor do we suggest that the Indian capital market is suitably served by the institutions and machinery that are necessary for its smooth functioning in the three spheres we have outlined. We must, therefore, stress, at the very outset, that active and constructive steps must be taken to get the capital market functioning on these lines, and to endow it with the facilities and institutions that will help smooth functioning.

The importance of correct planning in this regard is emphasised by the apprehensions in certain quarters that, to the extent that the Governments will be raising large loans for reconstruction purposes in the coming years, the capital available for private enterprises will be seriously curtailed. These apprehensions arise from a lack of clear appreciation of the relations that subsist between the market for government securities and the market for equity shares. As we will show later in this article, the gilt-edged market and the industrial capital market have more or less different entities; and the increased activity of the one is not at the cost of the other. On the contrary, a more lively gilt-edged market aids and abets a more lively market for industrial stocks. By the same token, the short loan market has an entity clearly distinguishable from the general market for government securities. Future official policy and planning must be designed to help these three markets to develop simultaneously to their full stature.

Let us first deal with the short loan market. The essential ingredients of a short loan market in London or New York are an active turnover in treasury bills and discounting and re-discounting of trade bills. We have a total lack of these attributes in the Indian short loan market, the main feature of which is now the vogue of call loans. Even call loans as such do not account for large activity as the official quotations of ½ per cent in Calcutta and ¼ per cent in Bombay have been more or less nominal for a long period except for short intervals of demand for money due to special causes. Call loans as we know now are less an inter-bank business than advances made to brokers at rates slightly above call money rates but on the basis of repayment on call.

This means that the first objective to be achieved is the creation of a treasury bill market. For nearly three decades, with large gaps in between, treasury bills have been an important feature in Government's ways and means planning. In pre-war years, the maximum capacity of the Indian treasury bill market could have been estimated at Rs. 50 crores. In some years, even a floating debt of Rs. 50 crores had proved to be beyond the capacity of the Indian market; and, in the early stages of treasury bills sales, quite a considerable proportion was accounted for by funds brought down from London on the basis of sale of ready sterling and purchase of three months forward T.T. In recent years, however, there has hardly been any foreign money invested in rupee treasury bills. This is mainly due to the treasury bill rate in India being often less than half of the rate for British treasury bills. It may, therefore, be said that the Indian treasury bill market has, for more than a decade, been completely depending upon domestic resources.

Depending upon such domestic resources, the capacity of the market at the beginning of the war was Rs. 40 crores. During the war period, however, there has been striking expansion—a measure of expansion which could not have been dreamt as possible by the most optimistic financial prophet in pre-war days. Our floating debt—that is, treasury bills in the hands of the public—had, many times, crossed the Rs. 120 crores mark.

That peak was left behind quite many months ago. Treasury bills now in the hands of the public are in the neighbourhood of Rs. 20 crores. This reduction in the floating debt is by no means to be construed as an indication that there has been a drying-up in the capacity of the treasury bill market. It will be more correct to say that Rs. 100 crores of the floating debt has been converted into funded debt. This

development is a correct and healthy process in the consolidation of the consequences arising from the repatriation of sterling debt.

These past developments and this present position furnish the strongest arguments for a planned expansion of the treasury bill market. It may be taken as certain that, even as it had been possible in the past to maintain a floating debt of Rs. 120 crores, so in the future increase of weekly sales can be effected, with a fair amount of smoothness, so as to bring up treasury bill outstandings to Rs. 120 crores again. That is to say, the expansion of the floating debt is in itself an operation and a technique for which our financial authorities have the requisite skill. Our suggestion is that the future expansion as outlined by us must be made the occasion for investing the treasury bill market in India with those features and facilities that characterise a well-functioning bill market like that of London. While the Government have been selling treasury bills for years, there has so far been no treasury bill market in this country. The time is opportune for the creation of a treasury bill market as the first stage in the creation of a bill market.

The first reform to be effected from this point of view is that treasury bills must be understood, appreciated and utilised as one of the most essential money market instruments. As at present, treasury bills are mainly regarded as a short-term investment. In a properly functioning money market, treasury bills are rated as cash earning interest all the time. Treasury bills must be removed from the purview of the investment market to the purview of the money market. To have such a change effected, it is necessary to bring about conditions in which treasury bills will be discounted and re-discounted with the utmost ease and without any stigma. Until such a stage of activity in treasury bills becomes the norm, special inducements must be offered so as to enable bankers to look upon treasury bills not as a short-term investment but as a money market instrument.

We suggest that the Reserve Bank must be ready and willing, at all times, to re-discount treasury bills at 1/8 per cent or ¼ per cent lower than the average discount rate in the auction of the week. Bankers will thus know that treasury bills can be converted into cash at any moment; that, meantime, they are earning interest; and that, further, there is a small profit if the bank is obliged to re-discount. Banks and investment institutions must be made treasury bill-minded; and we consider that the facility proposed by us is worth the serious consideration of our financial authorities.

Assuming that the Government will take some steps or other to offer inducements with regard to treasury bills, a definite plan must be outlined for the immediate future. The target of the floating debt to be aimed at is Rs. 150 crores to be increased by Rs. 50 crores after each year. It may be necessary—we may go so far as to say that it is necessary to make the yield on treasury bills more attractive. A return of ¾ per cent may be considered suitable in relation to the target of a floating debt of Rs. 150 crores.

It may appear strange to our readers that "Indian Finance," which has staunchly and even stubbornly stood for lower borrowing rates, is advocating an increase in the treasury bill discount. But the significance of this suggestion will become clear on an appreciation of the entire picture of the Indian capital market, which we hope to outline in this series. In the next issue, we shall deal with the structure and capacity of the Indian gilt-edged market.

Road and Rail

The co-ordination of road and rail transport, of which much was heard and little done in the pre-war years, has again come to the fore.

Inaugurating a session of the Council of Indian Roads Congress, Sir Arthur Griffin, the Member for War Transport, gave out the news that the Government of India have sent to Provincial Governments proposals for a national highways system. Sir Arthur had also a few pointed observations to make regarding the relations between road and rail and the need for both interests to make sacrifices in the cause of a better system of transport. In transport, as in other spheres of modern life, this tendency to acquire as broad an outlook as possible and to take in one's purview as many relevant considerations as possible is happily becoming more and more pronounced. Men no longer have much faith in the automatic co-ordination which competition was supposed to effect. For, that co-ordination is dependable only to the extent that the factors and forces are sensitive to changes in conditions.

In India, the presence of the Railways as a mammoth State concern—one, which is the largest single commercial enterprise in the world complicates the whole question of relative costs of rival systems of transport. If buses are able to compete with the Railways both in point of rates and in quality of service, one cannot rush to the conclusion that the best course for the country to adopt will be to allow the Railways to go to the wall. The rates which buses quote to their customers may not have taken in all the elements involved in the cost of the service. They may not have contributed to the laying down and the maintenance of roads. And it is by no means certain that the import of automobiles is on the same footing as the import of locomotives.

At the same time, the repercussions of road competition on the railways have to be carefully thought out. The railways are not only an embodiment of social wealth, but they are also a means of equitable and, so far as they go, adequate taxation. The consequences of the Railways' failure to yield a just return to the tax-payer in the shape of contribution to the Central Exchequer have also to be carefully appraised. These questions came to head in the early 'thirties, when the general economic depression coincided with the expansion of road transport facilities through the institution of bus services all over the country.

At that time, the public was hardly inclined to look at the question in the proper light. There was first the impression that the inefficiency, which the monopolistic position of the railways naturally bred, had at last come home to roost. The Railways were identified with a foreign government and the bus with the poor Indian. The usual sentiment which favours the poor individual as against the powerful corporation was also on the side of the buses. But it need hardly be said that, if there is to be wise discussion of a complicated economic problem, crude sentiments and prejudices should be carefully rooted out. The Railways are the property of the nation; and, if buses are to displace them, then the advantages must include adequate compensation for the loss of capital involved.

Happily, that phase of the problem, in which it was to an appreciable extent a clear-cut choice between the two has been left behind. In the process of leaving behind that phase, the war has played a big part. For a period of six years, the Railways have been, on paper at least, a highly paying proposition. Thanks to inflation and war expenditure, the Railway contribution to general revenues has been of the order of Rs. 40 crores.

This change has, however, only a psychological value. For, the intrinsic earning capacity cannot be said to have improved with the outbreak of the war. For the surpluses of the Railway budget are the creation of the printing press. When war expenditure declines and the note circulation falls low, the value of the Railways as a national investment will be seen in its true light. While this reasoning may or may not be disproved by subsequent developments, the war has helped the solution of the problem by bringing to the forefront the question of economic planning.

The future of our transport agencies has no longer to be considered in relation to the meagre volume of traffic that was offering in the past. And, what is more, post-war planning has familiarised us with the idea of co-ordination. When we speak of transport, we think of all forms of transport and of the means of relating them properly to make a co-ordinated whole. Postwar plans so far as transport is concerned, must be laid down in terms of adequacy and appropriateness of the means of transport. In conditions of increasing traffic and clearly demarcated spheres, the old idea of competition and survival of the one at the expense of the other will be seen to be anachronism and an absurdity.

The Nations' Food

The final report of the Famine Enquiry Commission is published at a time, when public interest in most of the questions the Commission was called upon to deal with, has considerably ebbed. The Commission's report is valuable more for the observations and views it contains in the scope and methods of Indian agricultural economy in the future.

The Commission unhesitatingly affirms that though within the last one hundred years Governments in India have accepted the duty to prevent widespread death due to famine, they have yet to recognise fully and accept the further obligation to take every possible step not only to prevent starvation but to improve nutrition and create a healthy and vigorous population. In plainer language, our Governments have yet to realise many of their elementary responsibilities. The

Commission strongly feels that this should no longer be so. The recommendations of the Commission aim at putting Government policy on a higher level of obligations to the people.

The Commission prefaces its recommendations for the better administration of food policy in the future with a review of the general economic conditions in rural areas in India, the internal food crisis during the war, Government measures to tackle it and the success that attended these measures. It is pointed out that because the main requisites for a large increase in agricultural production such as an improved water supply and the use of manures and fertilisers were absent, the "grow more food" campaign during the two years from 1942 to 1944 could not produce spectacular results. The Commission, however, feels that the "grow more food" campaign should be continued with undiminished vigour in the future. There is hardly any praise for the handling of storage problems by the food administrations in India during the war. "Even in normal times a considerable quantity of food grains was lost through deterioration and the ravages of insects and rodent pests, while being stored preparatory to sale. There is however, little doubt that during the present time when large quantities are handled by official agents largely unfamiliar with the merchandising of grain, losses have occurred on a much larger scale." The Commission's emphasis on the need for adequate grain-storage accommodation and its recommendation to entrust large-scale storage problems to fully qualified technical staff form a valuable guidance in this respect. The difference of view between one government and another on questions such as rationing and fixing up of prices have been found to have interfered in no small measure with the success of the Central Food Policy, particularly the promptness and efficacy of distribution schemes. The Commission also draws attention to the many pitfalls which characterised the earlier stages of food control.

The recommendations of the Commission fall into two main groups, proposals for food administration during the period of transition following the end of war and those that are intended to put Indian agricultural economy on a more scientific and progressive basis. The transition period is envisaged as commencing with the arrival of the first shipment of rice from Burma in appreciable quantity; its duration will depend on how far the imports of rice from Burma gain pace, how long transport conditions in India take to return to normal, how speedily the world shortage of food and shipping is bridged up and what length of time it takes for demobilisation to be completed. In the Commission's opinion, this period may last until 1951-52. During this time the price level would be gradually brought down; but so long as the supply of consumer goods does not become more plentiful and cheaper and imports are not once again available, it is held that the present policy to hold prices at about their existing levels is the correct course to follow. The regulation of prices particularly for wheat and rice, the two crops which together takes nearly half the food acreage in India is recommended as a permanent feature and the transitional arrangements should be designed with this end in view. During the transitional period the wide price disparities which still prevail within the different parts of India should be gradually eliminated with the aid of the present basic plan, trading under licence, procurement schemes based on purchases from the local trade and rationing in large cities. For the proper co-ordination of food administration at the Centre as well as the Provinces and States the Commission recommends the establishment of an All-India Food Council, adapting the machinery of the All-India Food Conferences.

Though there will be general agreement on the suggestions for the temporary retention and gradual relaxation of controls, neither the merits of the question nor our experience of controls during war time enable us to subscribe to the Commission's view that price control should be made a permanent feature. The maintenance of agricultural prices at a level fair both to the producer and the consumer is undoubtedly a factor of fundamental importance in post-war agricultural economy. But the method of achieving it should be different. Even on the elementary question of what ought to be a fair price and how long a particular price will continue to be fair, there are bound to be reasonable differences of opinion. In the circumstances obtaining in India with innumerable local disparities in costs of production and several other disparate factors entering into the consumers' price, it would be difficult to fix prices and still more difficult to enforce them. It would be far better to create the conditions conducive to the full development of the economic resources of the country and then to leave prices to find their levels. Control of prices is doubtless necessary in times of crisis like a famine. To visualise it as a necessity of normal economic life is to take an

unduly pessimistic view both of our economic prospects and of human nature in this country.

The Commission has several useful suggestions to make for improving the general welfare of the agriculturists. A check on the growth of population is considered essential for any improvement in this direction, and family limitation is held out as the most effective means of reducing numbers. As it is felt that the time is not yet ripe for the Government to adopt any deliberate policy with the objective of encouraging birth-control among the masses the suggestion is offered that the Government might undertake propaganda for family limitation through such agencies as health and medical services. In India as in most other countries the stress of population is felt most acutely in the lower grades of society who owing to their poverty and lack of education are also least responsive to the influence of propaganda. Priority should be given to education and until education permeates the masses to the extent sufficient to enable them to recognise the economic benefits of smaller families, propaganda on the lines suggested in the Report, is not likely to produce any considerable effect. Another way out offered to relieve congestion in numbers is the migration of Indians in large bodies to other parts of the Commonwealth as also inter-territorial migration within India. Provincial parochialism, not to speak of many other factors is a serious hindrance to a fairer distribution of population within the country while racial exclusiveness of which instances are only too many and too frequent, does not persuade us to view migration to other parts of the Commonwealth as a policy consistent with national dignity. Nor do we think that the Dominions and colonies controlled by British settlers would be willing to accept Indian immigrants. The Commission's hope that Indians would be able to migrate as colonists entitled to the full rights of citizenship to sparsely-populated areas in the British Commonwealth is one that receives little encouragement from inter-racial relationships in the past.

The Commission's observations on the nutrition problem are useful in that they reveal the immense distance the country has yet to cover in her economic development before the masses would attain anything like a balanced and adequate diet.

An important suggestion made in respect of future agricultural development is that small and medium farmers should organise themselves into multi-purpose co-operative societies and unions and improvements carried out by the joined efforts of such organisations and the Government agencies. We are sceptic about the practical value of this suggestion howsoever theoretically sound it might appear. The record of even single purpose co-operative institutions is none too enviable. It will certainly take considerable time before the people acquire the tradition of joint effort and develop enough social sense to make such experiments successful.

Railways and Traders

A Rejoinder to the General Secretary, I.R.C.A.

By Prof. L. A. NATESAN

On so technical a subject as railway rates, which touch the economic life of the country at innumerable points, the public may draw conclusions on insufficient information. Nothing can be more welcome than the readiness of officials concerned to come forward with correct facts. For they are, after all, in possession of available data and in the position to keep the public correctly informed and to remove any factual misconception on the subject of discussion. It is in this light that the letter of Mr. H. F. Simpson, General Secretary, that the I. R. C. A. published in the last week's issue of the "Indian Finance" contributes to the current discussions on the subject of railway rates. The letter draws attention to certain inaccuracies in the statements made in the article by the present writer under the title "Towards Rating Reform". It also raises by implication certain important questions of policy.

First as to the inaccuracies. The charge of complexity and inadequacy of the present rating arrangements is accepted by Mr. Simpson. Railways and rates officers, he adds, are conscious of it. The reason why these defects could not be dealt with before the war is stated to be that "it would have been impossible to take any comprehensive action to effect radical changes under pre-war conditions, without the risk of causing serious commercial disturbance throughout the country." The press note of the I. R. C. A. issued in January, from which Mr. Simpson makes a lengthy quotation, defends the dilatoriness for decades on the ground that "any attempt at altering

the existing rating system while trade was being freely undertaken would, more probably than not, have been attended by a disastrous dislocation of the trading arrangements under which millions of tons of goods were being moved throughout the length and breadth of the country." The business community may surely be credited with sufficient sense of self-interest not to demand what would spell their own ruin: they are likely to ask only for such adjustments and modifications in the rating system as would promote their own interests and the role of rail transport as the true handmaid of trade and industry. But the procrastination in the past does not mean that the hope of deliverance is still only a hope. The press note indeed assures us that it is at hand. The revolution in the rating arrangements is to be consummated in the near future. The time is ripe, for, as the press note explains, "under war-time conditions, conditions which presumably will continue to obtain in the immediate post-war period, the risk of any serious dislocation to traffic is considerably reduced because the movement of consumable and industrial goods is almost entirely controlled and the time is now more favourable for making all the necessary alterations in the rating system." If the "necessary alterations" in the press note means what it says, it should amount to "a disastrous dislocation" of the pre-war trading arrangements. No section of trade and industry seems prepared as yet for so drastic a change in their trading arrangements. The location of industries and their market areas are not for one thing adjusted for so revolutionary a change; they are all waiting to take up the threads of business from where they left off prior to the war period restrictions. Even a serious departure therefrom is enough to cause gravest apprehensions in the minds of the business community all over India. The traders would like to have a say in the matter, though not in the manner contemplated by Mr. Simpson. Of this more anon.

Turning to the increase in the level of the average rate, the fact of the increase stands. It is not affected by the typographical error in referring to the ton mile as the maund mile rate. Mr. Simpson admits both the increase and the extent of the increase. The main point of the comment in the article is the upward trend of the average rate which has advanced by 18 per cent. The extraordinary conditions during war-time hinted in the article and analysed at length by Mr. Simpson explain in part how the increase has come about; they cannot be assumed to justify it. The fact that trade has had to acquiesce in the higher charges is no argument for its retention. The shortage of transport, curtailment of shipping and road services, abnormal demands on rail capacity and priority controls introduced a situation where the trader had no alternative but to accept the position as presented by railways. The business community did not express a preference for the more expensive routes; they were driven to them by the incapacity of railways to provide anything better.

It is surprising to find that the General Secretary of the I. R. C. A. makes light of "so small a rise" as 18 per cent. In other countries in the world even a quarter of this figure would not be deemed small! An increase of rates averaging 44 per cent attempted for a short period in the United States in 1942-43 was suspended ever since by the Interstate Commerce Commission. Indian Railways are not ploughing a lonely furrow. Railways in the allied countries have had to deal with problems of no less magnitude. It is interesting to compare the average ton mile rates in the United States and Canada which, as shown in the figures quoted below, indicate a pronounced decrease.

	(Cents per ton per mile)	
	Canada	U.S.A.
1943	0.833	0.933
1942	0.896	0.932
1941	0.843	0.935
1940	0.882	0.945
1939	0.909	0.973

These figures, it is hoped, may persuade Mr. Simpson to believe that a departure from classical economics, as he understands it, is not even in war-time a case of "must be expected". There are, of course, limitations to the value of the average rate but a more satisfactory unit expressing more accurately the effect of changes in rates, if it can be found, would be welcome. But all this is moving away from the argument of the earlier article: that the discrepancy in the rate level and the price level before the war called for a lowering of the former and that the need to correct this in view of the prospective recession of price levels will prove more urgent. This obviously means, when normal conditions are restored, something more than merely getting back to the 1939 rate level. This certainly cannot be taken to imply an "indiscriminate" lowering of rates. Nor does it mean anything contrary to commercial principles of operation which are what the public would like railways to keep in mind, not once in a while but throughout in their administrative methods and their transactions with their patrons.

Turning now to the procedure in regard to questions affecting classification, so clearly outlined by Mr. Simpson, public criticism is not met by a mere postal solicitation of the views of Chambers of Commerce. Traders in India are entitled to demand the facilities enjoyed by their confreres in other countries. The I. R. C. A. and by implication the Railway Board, stick to a practice long discarded in other countries. Both in Great Britain and the United States, keeping the proceedings of the Classification authorities open to public is not considered "wholly impractical and . . . without any real advantage to the public". Thus, for instance, the new Classification under the Railways Act, 1921, in Great Britain, was the outcome of the labours of a representative Rates Committee, railways and traders. The objections raised by traders to the proposals of railways were discussed and settled at open hearings. The position is summed up in the classic statement of the American Interstate Commerce Commission in 1912.

"Classification is a public function. Public business cannot be conducted in a private way. Hearings of Classification Committees should be made public after due notice to interested parties."

It is the absence of these facilities to the business community in India that constitutes a major source of complaint. Hence the reference made in the earlier article to "the deliberations and reports of the Association" and not to the "results of the Association's deliberations", as seems to be understood in the letter. The statement is correct.

The General Secretary of the I. R. C. A. may feel satisfied with the existing opportunities for the trade to represent its grievances, namely, to address the railway with which he is most concerned, the Railway Board and finally the Railway Rates Advisory Committee. But the business community are not, and for adequate reasons. On crucial matters decision is inordinately delayed, if not evaded altogether. Thus the clarification of the anomalous practice of the terminals has been due for years and the question has come up more than once before the Railway Rates Advisory Committee. Even the decision on the report of the Committee on the last case in 1941, which must have cost the party thousands of rupees is still awaited. The question of the risk rates is yet another instance of the same type. Regarding the control of the Rates Committee over classification matters, despite Mr. Simpson's assurance the position is far from clear. There has as yet been no amplification of the terms of references as approved by Government in 1939.

So much for the "inaccuracies" in the statements made in the article. But the General Secretary's letter raises certain questions of policy as well which may be referred to here. One relates to the adequacy of the present machinery to handle the problems of classification and rates matters. That the existing organization is far from satisfactory is clear. The need for a thoroughgoing overhaul is underlined by the frank admission in the press note that "the quarter of a century previous to the outbreak of the present war had clearly not allowed railways any good and proper opportunity for making those changes in the rating system which they were fully aware were called for and eminently desirable." And this in a period so pregnant with important developments towards a rationalisation of the rates systems in other countries! The principal reason for this sterility of reform and pottering attempts in the past is to be found in the policy of leaving the entire initiative to the railways and insulating the trade altogether from any means of forcing the pace of improvement. The railways are likely to be more conservative and the urge for reform usually originates with the business community whose activity determines both the volume and character of traffic and the type of transportation needed. The British Railway Rates Tribunal, the American Interstate Commerce Commission and the Canadian Transport Commissioners take up in these countries the demands of the trade to bring about a prompt adaptation of railway procedure to the dynamics of business. In these countries railways are not likely to be allowed to get away with a plea of "lack of good and proper opportunity" for over a quarter century. The cart in this country is placed unfortunately at the wrong end of the horse. There can be no question as to the urgency and importance of transforming the Rates Committee into a Tribunal. There has been too much of "imperium in imperio" in the present organization.

The conduct of classification proceedings in an atmosphere of fuliginous obscurity raises other issues besides the objectionable secrecy. It has crippled the development of practice on sound lines. At present the trader can only complain after the mischance is done. When major changes as in the present instance are contemplated, open hearings with the trade in case of objections are imperative in public interest. Points of disagreement may be left to be decided by the Rates Committee. The Committee which has come to appreciate the interests of railways and traders alike may well be asked to examine the proposals now under consideration. Even with the inferior

Our American Letter

From War to Peacetime Conversion

Producers eager for Export Markets!

Accompanying this nation's physical reconversion to peacetime production is a remarkable mental reconversion to consciousness of foreign trade's place in the U. S. economy.

A visitor who, two months ago, would have had difficulty in getting American production and men even to discuss the export business might well be amazed by the situation today.

This does not mean all U.S. producers who were going all-out for war and the domestic market have suddenly become eager to fight for export trade. The primary concern of perhaps a majority of manufacturers is still to fill the huge consumer gap created when they could not make goods for the American citizenry.

But with the war's sudden end there has been an only slightly less sudden tendency to begin looking beyond tomorrow, and beyond next year. With termination of lend-lease, there developed quickly an inarticulate desire by American business and financial men to see Great Britain "helped back on her feet" for the good of international trade.

"We're really being selfish about it," one industrial spokesman told this correspondent with a smile. "One-third of our pre-war trade was with the United Kingdom. We have plenty of business for the next couple of years—may be longer—right here at home. But before long we're going to need that export trade again, and badly. Obviously, we'll never get it from an impoverished U.K."

"The way I see it, it will take a couple of years for Britain to get back anywhere near where she stood before the war, even with our help. And by then we may need Britain as badly as she needs us now."

Not since long before Pearl Harbor has discussion of foreign trade occupied so much space in the public prints—in the ordinary news columns as well as the financial journals.

The humblest people have heard of Henry Wallace's goal of "sixty million jobs" in peacetime America. And most of them have heard that the goal cannot be achieved without substantial American exports—with correspondingly heavy purchase of goods from other countries.

With growing demand here for greater foreign trade, there is corresponding pressure from industry for removal of government controls hampering private commerce abroad. Washington's actions thus far indicate these controls will be lifted gradually—probably not as fast as exporters desire.

Winthrop Aldrich returned from Europe this month with a description of "tremendous opportunities" for American business if commerce restrictions are lifted as soon as possible. Aldrich is president of the International Chamber of Commerce and board chairman of Chase National Bank. He added: "All Europe needs credit to take our exports. Stopping of lend-lease requires other arrangements to be made as promptly as possible. Government loans, and to a lesser degree private loans, will be necessary."

A Wall Street Journal survey of leading foreign trade houses in New York listed these principal impediments to quick revival of private foreign trade:

1. Government price ceilings that fail to reflect costs of exports to this country. Some importers complained, for example, that British cutlery, china and earthenware cannot be bought to sell at present American ceiling prices—and therefore is not being bought.

2. Unrealistic foreign exchange rates that overvalue other nations' currencies. For example, importers cited the official rate of the franc at fifty to the dollar whereas "a sensible price tag would be about two hundred to the dollar. The official rate puts a price on most French goods that is too high for the American market."

3. The British Empire dollar pool. "Foreign traders save their harshest criticism for this. . . India, for example, has a large export balance in her trade with the United States. We

(Continued on next page)

status of the Committee this step would help to bring the present practice into better conformity with sound public policy. But the public would expect that, if this were done, the recommendations of the Committee do not share the fate of its earlier proposals on the amendment of the Indian Railways Act.

Our London Letter

Hidden Reserves of British Companies

Earning Capacity not Blitzed

Campaign for Lifting "Statistical Black-out"

LONDON, Sept. 15

It is barely possible that the American industrialists who think that they can push their British rivals out of the markets may get a painful surprise; they may discover that the British companies are considerably tougher, financially, than they had imagined.

For, there is a growing realisation that British companies have made very great profits out of the war of which a very large part they have successfully concealed. These hidden reserves would be extremely useful in the post-war struggle for markets.

Dr. J.J. Barna, statistician, writing in the "Banker" for last May reached what the editor of the "Financial News" called "rather breath-taking conclusion" that in 1938 less than 40 per cent of the total of undistributed profits was disclosed to the shareholders and the public. He thinks that production has fallen slightly during the war but still lies between 35 and 40 per cent. That is, for every £1 of undistributed profits which appears on the books, there are around 30 shillings which have been salted away out of sight. This excludes recent reserves created out of capital appreciation of various assets or the writing down of capital below market value, in other words, those profits which are not liable for taxation.

Such hidden reserves are sometimes colloquially described as a "cushion of fat" but that metaphor fails to suggest their muscular toughness; they enable the company to take losses stubbornly until it has convinced its rivals that competition does not pay.

Another calculation by Dr. Barna forecasts the post-war profits on a big scale. Taking those companies which in 1938 showed earnings on all their capital amounting to £650,000,000, he estimates that in post-war year which was marked by the 10 per cent unemployment their earnings should be in the neighbourhood of £1,150,000,000 and in the year which saw full employment, earnings would be around £1,455,000,000. Taking only the ordinary capital of those companies, the earnings which stood in 1938 at £490,000,000, should double in the post-war year which had 10 per cent unemployment (he forecasts £990,000,000) while in the year of full employment he thinks the total would be £1,285,000,000 which would be an increase of 162 per cent.

In short, the British business has not had its earning capacity blitzed and its financial equipment for post-war scramble for markets is not at all bad.

Sir Stafford Cripps's energetic efforts to pull Lancashire textile industry together for post-war struggle is encountering resistance. He has set up what he calls a "working group" to canvas briskly the innumerable reports, official, semi-official and trade, which have been made during the war years on "future of Lancashire textile trades". He wants this "working group" to draft a brief programme which he can implement without further ado. But Lancashire complains that although this programme primarily involves management rather than the labour, he has given trade unions 4 representatives, out of the total of 12, which managements, as such, have only 3, spinning and weaving each has only 1, and there are 4 who, from Lancashire viewpoint, are "outsiders".

But Sir Stafford has launched his scheme with a great publicity and may well be reluctant to amend it, especially as he seems to lay stress upon the advantage of bringing fresh minds to the study of the various difficulties which confront the industry.

The Government are not getting a good press on demobilisation, even from the Left. It is probable that since Bevin's original scheme is not working well, it will be amended so as to increase the flow of men and women, now idle in armed forces, to the industry, now hungry for man-power.

Regarding plans for export, the Conservative newspapers follow two mutually exclusive lines. The same newspaper will carry an article severely criticising the "bureaucratic red tape" which, it alleges, is preventing British exports from going overseas while another column will carry an article proclaiming that orders are pouring in and that various firms and industries are already in full sweep.

The most curious complaint of all comes from firms who alleged that their factories have been used by the Military of

Supply as warehouses. They now need their factories in order to get started on supplying either home or foreign markets with peace-time goods, but they can get no reply from the Ministry when they beg to have these surplus war stocks removed. Some firms allege that they have even found empty quarters near by to which goods could be removed and have offered to pay for expenses in removing them, and still they get no reply! There is no way of judging how wide-spread is this complaint.

Some firms are now securing pleasant publicity on their success in changing over from war production to peace production without losing a day, or no more than a week. This can only be managed when their peace-time machinery is ready and there is no expensive re-tooling to be done.

The financial editors have started their own campaign, they want wartime statistical "black-out" to be quickly and completely lifted. They want all official statistics which appeared in the pre-war days to re-appear without further delay. Not only that, they want more statistics, especially production statistics.

Certainly much more can be done than was done in the pre-war days. The British firms are now thoroughly "conditioned" to filling forms for information of Government departments and if the new Labour Government moves promptly, it should be possible to gather, classify and publish much more data than in the period between the two Wars. Furthermore, there must be immense amount of trade information, gathered for war purposes, which could be usefully published.

It has now been discovered that the Labour Government may find it a slower business to nationalise the Bank of England than perhaps the cabinet realised. Back in the first Labour Government of 1924, Mr. Maxton attempted to introduce a bill for nationalising the Bank of England. Mr. Ramsay MacDonald was not prepared to push Maxton's bill against the inevitable uproar in the City of London; in fact, Mr. MacDonald was greatly annoyed. Fortunately for him, the Speaker of the House of Commons discovered that such a bill came under the classification known as "hybrid bills" which are partly of public concern and partly of private interest, that is, affecting a private interest. The procedure for "hybrid bills" is elaborate, requiring public hearings etcetera, and Maxton's bill was forthwith dropped.

(Continued from previous page)

have needed Indian goods in wartime, and now the war is over India would like to buy industrial and road-building machinery and U.S. machine tools. But all Indian accruals of dollars have to be delivered to the British treasury at the official dollar-pound rate. The British are willing to dole out \$20 million a year to India for purchases in the United States. Indian exporters can't touch most of their pounds sterling at all. \$4.4 billion in sterling credits is frozen pending some

4. Concentration of buying by foreign countries in governmental purchasing corporations. This "Amtorging" as traders have christened it from the Soviet agency which monopolises Soviet foreign trade, now involves 77 purchasing commissions representing various governments in the United States. Others are being formed despite the end of the war. The system excludes exporters from commerce they regard as rightfully theirs, and U.S. manufacturers prefer having their own agents.

5. The "invisible tariff" resulting from extra expenses due to customs delay. "Decision as to whether specific or ad valorem duties apply—and what ad valorem duties—often take as long as two years. Ad valorem duties are based not only on what an article actually costs, but on what it is sold for in the country of origin. The highest rate of exchange, if there is more than one, is always used."

Reginald G. Bailey, wool trade adviser to the British Board of Trade, told a New York meeting of the American Trade Association that the British woolen industry would not reach its prewar level of production until possibly early 1947, present output, he said, is below the peak production of war years, when Britain was turning out 50 per cent of its normal volume. Continued shortage of labor is the primary factor holding production back, he reported.

Chairman John W. Thomas of Firestone Tire and Rubber Co. urges creation of a large government-owned stockpile of natural rubber, plus continuance of a broad research program in the synthetic rubber field.

As a preparedness measure, Thomas said, the U. S. should start immediately to build a reserve adequate to meet emergency military and civilian needs for 15 months. He added: "As a further factor of safety, each manufacturer should be pledged to maintain in this country a working minimum inventory of natural rubber. This minimum should perhaps be a 60-day average of requirements. . . ."

*An everyday occurrence
- Yet always a Miracle*

THE egg in early philosophy was the symbol of Life. Within the shell is a spark of life around which Nature has gathered together all the foods necessary to give it strength and shape. The egg therefore as food is rich and complete. In India we should eat more eggs to remedy the lack of protein in rice, wherever it is a staple food.

To farmers, eggs should mean a sure income as throughout the year there is a regular supply and a constant demand for them. An average hen gives about 40 to 50 eggs per annum with very little expense on feeding and housing.

But eggs are fragile and extremely difficult to handle. Nowadays breakages, together with stale eggs in the hot weather, amount to 25%. To avoid this enormous waste, eggs must be brought safely and speedily to the consumer. SMOOTH, ALL-WEATHER ROADS are the ideal medium of transport.

GOOD ROADS ARE AVENUES TO PROSPERITY

Editorial Notes

Reconstruction Plan for Bengal.

The last of the provincial plans is now before the public. The publication of the development schemes for Bengal has been delayed owing to the unsettled economic and political factors peculiar to this province. The assurance of the help from the Central Government having come, the local Government have hurried up the task of giving the finishing touch to the schemes and a tentative plan for the reconstruction of Bengal, as the first instalment of a 20-year plan, is now outlined. The Plan is not a blue book as the Government does not commit itself to the proposed schemes and it is made clear that the schemes put forward may undergo vital changes after subsequent examination. It only aims at reducing to concrete terms some of the most urgent needs of this province and suggests the best means of answering them.

The planning of the Plan runs on familiar lines of classification into Special Priority Schemes, All-Province Schemes, Particular-Area Schemes and Concentrated-Area Schemes. The proposals which number 199 are well arranged according to the periods when they would be taken up for action, though individual priorities amongst the schemes scheduled for a particular period are not clarified. The Plan is estimated to cost Rs. 145 crores. Among the arresting features of the Plan are the orderly liquidation of the Permanent Settlement, the execution of the Damodar Valley Project and the More Reservoir Project, reclamation of 2 lakhs acres of land, construction of 3400 miles of roads, implementing those parts of the Sargeant Report relevant to the rapid advance of literacy in the Province and the proposal to link post-war reconstruction with the recommendations of the Rowlands Committee. It is an excellent augury for the Province that for the first time the authorities are thinking not in terms of budgetary considerations but of the minimum requirements of the masses. A detailed examination of the Plan will be attempted in the subsequent issue.

Economics of Separation

The three members of the Pakistan Committee of the All-India Non-Party Leaders conference have differed on the economic justification of separation. Sir Mody and Dr. Mathai hold that from a purely budgetary point of view Pakistan whether formed province-wise or district-wise is feasible; that on the pre-war basis of food production, industrial employment and trade, the standard of living in Pakistan, formed province-wise would compare favourably with the rest of India, though the prospects in this respect are not so rosy in the district-wise Pakistan. They are of opinion that adequate defence and a rise in the standard of living for Pakistan could not be achieved without a large measure of co-operation between the two States. The majority view is thus more adverse to separation than favourable. Mr. N. R. Sarkar who has produced a dissentient report takes the more extreme view of uncompromising disapproval. He maintains that the industrial possibilities of Pakistan are too meagre. On the basis of district-wise division, Hindusthan will have 90 per

cent of the coal production of India 92 per cent of iron besides valuable reserves of the more important ferro-alloy metals, minerals, gold, bauxite and copper. Pakistan will have a small amount of coal and iron, few ferro-alloys and little bauxite. Of the two distinct oil bearing areas in India, the more important one which falls in Assam will be outside Pakistan whether it is formed district-wise or province-wise. The other on the West comprising the Punjab, Baluchistan, North-West Frontier Province and Sind would fall entirely within Pakistan. But the production in this area will only be a much smaller percentage of the production available for Hindusthan. The Modi-Mathai Report, on the other hand, while recognising the deficiencies in raw materials like iron, manganese and other minerals in the Pakistan area sees large possibilities for development of hydro-electric power which will offset these deficiencies. As far as agricultural production is concerned, Sind and the Punjab are already surplus provinces and the tea estates of Assam will obviously go to Pakistan. The two reports seem to emphasise mutually exclusive points. The meagreness of statistical data available for a thorough survey of economic possibilities in the two States is also an acknowledged handicap. The value of the reports suffers also from the fact that Pakistan itself continues to be a vague and controversial conception. The reports are however useful in that they provide some data for judging the economic merits of political separation.

A Minerals Board

If the post-war plans are to succeed they must be based on a comprehensive survey of our national resources and a scheme for their rapid exploitation. The chief bottleneck which threatens to cause undue delay in the initiation of the plans is the lack of trained personnel and steps have to be taken to tackle this problem if the schemes are to be properly phased. The most neglected defect in the Indian national economy is the woeful lack of balance between agriculture and industry, and since minerals are the basis of a large number of industries producing capital goods, machine tools and consumers goods, arrangements have to be made for the maximum utilisation of our own resources. Hardly half a million square miles of Indian soil has been explored by the Geological Survey and the usual reason for the slow progress is lack of funds and trained staff. Speaking at the recent meeting of the Geological, Mining and Metallurgical Society of India, Sir Cyril Fox reiterated the scheme for the formation of an Economic Minerals Bureau. The idea of the Minerals Bureau is dealt with under five heads. Firstly, an Office has to be established to supply accurate facts and figures relating to the Indian mineral and metallurgical industries. Secondly, an Agency is required for registering and recommending geologists, mining engineers and metallurgists to private firms and the Indian States for carrying out explorations, surveys, etc. Thirdly, a Laboratory is required for making chemical analysis and physical tests quickly and at a low cost. Fourthly, a Bureau is to be set up for the collection of information and data relating to geological discoveries and the mining and metallurgical industries throughout the world. Fifthly, a Council or a Board should be

constituted to control the four sections enumerated above. The funds required, it is estimated, will not exceed Rs. 2 lakhs of capital expenditure to begin with and the annual running expenses will be about half a lakh.

If the six-point minerals policy advocated by Professor Wadia is to be implemented without delay the need for establishing a Minerals Board will be felt paramount. Wartime prospects have revealed that the scope for mineral industries in this country would indeed be vast if the work of the Geological Survey is hurried up and suitable action taken upon its findings. At present several of India's mineral raw materials are exported unprocessed and if the country is to enjoy the economic and non-economic benefits of processing them before they are exported, the services of a body like the Minerals Bureau will be indispensable. The ferrous and non-ferrous industries in India have progressed very well during the war and if they are to consolidate their recent gains they should have the aid of an expert body like the proposed Bureau. The role of a geologist in speeding up industrial progress is considered vital in advanced countries and in an undeveloped country like India his importance cannot be less. It is, therefore, up to the industrialists to give all financial and other help to set up the Bureau. The Bureau may require financial help only in the beginning stages and as time passes on it will surely be a paying proposition. Mr. B. M. Birla's appeal for effective co-operation in the formation of an Economic Minerals Bureau is therefore timely and bound to evoke response.

Target for Textiles

The acute cloth famine that is now raging throughout the country has brought to the fore-front the question of adequate production for the clothing needs of India's millions. Though the present scarcity of cloth is attributed partly to defective transport system and partly to exports to foreign countries allowed by the Government, the necessity for working out an optimum production of clothes to meet the full needs of this country has to be faced. The Bombay Millowners' Association continues to publish facts to show that the mill production is adequate to satisfy the demands in the country and whatever difficulties that may be experienced in several provinces should be attributed to administrative inefficiency. Rationing of cloth is spreading fast and since controls are being relaxed one by one, some hard thinking on the target for textile production will be fruitful.

It may be recalled that the National Planning Committee fixed 30 yards as the minimum per capita consumption to be worked for and the Bombay Plan has accepted this figure. It will involve, therefore, a production of 12 thousand million yards of cloth for the whole nation. Recently the Government of India came forward with their own ideas of the optimum production of cloth necessary. They have fixed a target of 7,200 million yards per annum for the mills, that is, an increase of 50% over the present production. It is also laid down that the drive for more cloth should start from 1946 and the target fixed would be hit within five years from then. The scope for handloom is calculated at about 2,000 million yards per annum and, allowing for imports also, the per capita

cloth consumption on the basis of the Government proposal work out to 21 yards. This evidently falls short of the figure fixed by the Bombay Plan. The view is widely held that though this figure falls short of the demands of the National Planning Committee it would be advisable to accept this as a good beginning.

The question of fixing a target bristles with many difficulties. Experience of acute shortage of cloth in several provinces has resulted in a strong regional clamour for more textile mills to be spread over the different parts of this country. The Indian States have also outlined ambitious programmes for starting more mills within their own borders. The handloom workers, who are lakhs in number, are agitating for an organised rehabilitation programme and the All-India Handloom Board recently formed is expected to evolve a plan for the nation-wide resuscitation of handloom industry. This involves that a great share of cloth-production in India has to be allotted to the handlooms. Revival of the handloom industry is directly linked to agricultural prosperity, and particularly during the initial years of post-war planning, great scope shall be left open for the handloom workers to achieve. How the cloth requirements of this country should be allocated between the mills and the handlooms has not yet been settled. As regards imports we are not yet aware of the development plans of the textile industries abroad but we know that competition is bound to be severe, if not in the immediate future years after sometime. The emergence of rayon and of the textile mixtures, will be a new

competitive factor in the international market. As regards exports though many are basking under the comfortable impression that the gap in international markets left open by the Japanese defeat will be available for India to exploit, he would be an incurable optimist who thinks that Britain would be willing to share this prosperity with India. Further, the post-war schemes in India are not yet finalised and it is too early to say how far the standard of living of the masses would improve during the coming quinquennium. The target of textile production has therefore to be fixed at a figure which is agreeable to the mills and handlooms and which leaves also due scope for exports and imports. The urge to fix a high target for textile production may be based on the belief that there would be a worldwide scarcity of cloth for some years to come and that the Indian market is fast expanding, but one should also remember that if the target is fixed very high, the Indian Mills, overworked during wartime may not be able to achieve it during the period fixed. This situation itself may yield a pretext for British interests to penetrate our market successfully. The Bombay Millowners Association takes the view that a cautious policy may be followed at present. Under the present unsettled conditions it would appear that it is wiser to go step by step instead of outlining ambitious programmes which may not be translated into practice during the years to come.

Wireless Apparatus in India

Though the growth of the radio industry in India may be dated from 1926, rapid progress was noticeable only from 1933 and may be said to have followed developments in Europe. During the period 1926 to 1933 about 35,000 to 40,000 receiving sets were assembled in this country and since the establishment of the All-India Radio in 1936 the progress along assembling and manufacture of parts was accelerated. Before this war Indian radio industry consisted more in making component parts like power transformers, coils, condensers, trimmer and padders while a large number of super-heterodyne sets were assembled with imported tubes, loud speakers and electrolytic condensers. With the outbreak of the war, imports of the valuable parts dwindled and more attention was spent on the manufacture of the basic parts and components. The investigations of the Radio Research Committee of the Board of Scientific and Industrial Research have since 1943 shown that facilities for the manufacture of all the parts and components excepting tubes (valves) exist in this country.

The present position regarding the radio industry in India is as follows: There are about 18 Indian concerns which are in a position to manufacture radio parts and the accessories excepting the valves. There are some electric lamp manufacturers ready to take up the manufacture of valves. Three new concerns—one in Madras, another in Bombay and the third in Bangalore,—it is reported, will shortly begin manufacturing sets and parts. The Calcutta University and the Bangalore Institute of Science have developed, and manufactured on a small scale, radio components like carbon condensers, microphones and vibrators. The total capital invested in the radio industry is estimated at about Rs. 5 crores. About 50,000 radio sets are

Agencies.—Messrs. Karam Chand Thapar & Brothers, Ltd., Messrs. Bhadani Bros., Messrs. Ramdas Mahadeo Prasad.

required every year for the rapidly increasing listeners in India. A large number of parts and components are needed for servicing the two lakhs of broadcast receivers and communication receivers and transmitters. In 1944 there were about 2 lakhs receiving sets in India and the National Planning Committee suggested in 1939 that there should be at least 2 sets for thousand people. At the present rate of increase of 50,000 sets per year the target can be achieved only in 12 years. In view of the tremendous increase in the use of sets and the promised rise in the standard of living of the people this target figure can and should be doubled.

In a lengthy article on "Manufacture of wireless apparatus in India" (vide Journal of Scientific and Industrial Research, Aug. 1945) Mr. S. P. Chakravarthi of the Institute of Science, Bangalore, suggests that the price of a set should be brought down to one-third of the price of the imported set before the war. The rapidly widening Indian market can best be served if the price of a set is brought to Rs. 75. The menace of competition is there but the Government of India should come forward to protect this industry for some years to come. Neighbouring countries like Burma, Malay States, Ceylon, China, Persia and Afghanistan may be lucrative markets for Indian products if well developed. Mr. Chakravarthi outlines a ten-year plan for the development of radio industry in India and aims at setting up 8 factories for the manufacture of parts and components and 2 factories for assembly and control. Facilities should be given for them to produce about 10,000 cheap radio sets of super-heterodyne and straight types per year. The valve being the only item which has not received due attention and machinery should be imported from the U.S. or U.K. for encouraging its manufacture on right lines.

Plan for Baroda

The post-war reconstruction plan outlined for Baroda runs on familiar lines and places special emphasis on transport, agriculture and irrigation. The communications scheme for the State involves a capital expenditure of Rs. 2.86 crores of rupees for roads and Rs. 2 crores for railways. It is proposed to have 1,246 miles of new roads for the first five-year period. When the proposed mileage is completed the State would have 76 miles of National Highways, 97 miles of State Highways, 516 miles of district roads and 557 miles of village roads. The programme for railway expenditure is quite modest and involves only 157 miles of additional mileage. In respect of agriculture due attention is paid to rural reconstruction and livestock improvement. 4,000 new agricultural wells are proposed to be constructed and provision is made for the conservation of soil from erosion. Schemes for contour bunding, particularly in the dry areas, have received good priority and are estimated to cost Rs. 58 lakhs. Rural reconstruction centres will be established in 12 centres to cover about 600 villages. The irrigation schemes cover the Sabarmati Project costing Rs. 1.93 crores and controlling 36 thousand acres and the Sankhri River Project costing Rs. 1.35 crores and controlling 28 thousand acres.

Ship building is the cherished ambition of the State and it is proposed to create

a two-unit ship building yard at Port Okha capable of constructing four ships (8,000 tons each) every year. This is estimated to cost Rs. 54 lakhs. A new Arts and Science college in Mehsana district and a medical and engineering college in the capital, sixty new secondary schools and an energetic drive in compulsory education are among the chief features of the educational programme.

The Five Year Plan in Baroda also includes extensive electric supply and telephone schemes, fisheries schemes and provision for labour welfare and housing. Co-operative societies, particularly the multi-purpose societies, would be strengthened and provision is made for the resettlement of the demobilised soldiers. If the schemes proposed by the Government of Baroda are translated into practice according to schedule, there is no doubt that the State would have served the supreme object of economic planning, namely, increasing the standard of living of the masses as justified by the state's resources.

Hyderabad Budget

The Budget figures for the Hyderabad State for the year 1945-46 indicate that the abnormal conditions which prevailed during the war period have already begun to recede for the new year. H. E. H. The Nizam's Government have estimated for a revenue of Rupees 1582.43 lakhs which shows a drop of 198.51 lakhs from the revised estimates for the current year. This drop is accounted for mainly by a fall in revenue under customs, excise, forests and railways and the withdrawal of excess profit tax. Customs revenue is estimated Rs. 46 lakhs less than the current year's revised estimates. Similarly Excise is estimated to yield 105 lakhs less. A reduction of Rs. 51.79 lakhs is anticipated from the income from railways. The withdrawal of excess profit tax brings down the total revenue by 30 lakhs. Expenditure is estimated to stand at Rs. 1720.40 lakhs of which Rs. 1549.19 lakhs is charged to revenue and Rs. 179.30 lakhs charged to funds and reserves. The net revenue surplus is estimated at Rs. 33.33 lakhs which shows a decline from the revised estimates of revenue su-

plus for the current year by Rs. 363.80 lakhs. The expenditure of nation building departments will be Rs. 611.69 lakhs which is 38.64 p.c. of the total revenues. These figures show an increase of about 10 p.c. from the proportion for the current year. The most conspicuous heads sharing in the increased expenditure are education, veterinary, medical and public health, buildings and communications and famine relief. Among the important items of capital expenditure in the coming year, the Tungabhadra Project absorbs Rs. 50 lakhs, the acquisition of Latur Extension from the Barsi Light Railway Company takes Rs. 26.25 lakhs, Osmania University buildings covers Rs. 26.79 lakhs, military Buildings Rs. 35.31 lakhs and construction of roads Rs. 18.30 lakhs. The Budget Memorandum refers to many industrial and commercial schemes like the proposal for the Deccan Airways Limited and the Godavari Multipore Project. The various post-war schemes are estimated to cost about Rs. 250 crores in the course of next ten years. This year's provision on this account is limited by the availability of machinery and the incomplete stage of

many of the schemes. The end of the E. P. T. and the Government's decision to continue the dearness allowance to government servants are two of the features which would give the budget a favourable reception within the State.

Industrial Production Figures

In the last quarter of 1943, industrial production in both the United States and Canada reached its peak. The general index for the period showed 128% above the average 1939 level. Transportation equipment industry including aircraft, locomotive and ship-building stood 666% over the 1939 level. This was the most spectacular expansion registered during the period. Subsequently however it declined by over 20%. Figures show that there has been a general decline in the industrial reduction in both countries since the beginning of 1944. The food industry rose to a point 48% over the 1939 level in March, 1945, after which it began to fall. Mineral production rose by 30 to 36% above the 1939 average. In Canada expansion was rather more rapid. The general index of industrial production reached its peak level in 1943 subsequently declining by 11% by April, 1945. During the period of rise, iron and steel reached 526% in October, 1943 though by April, 1945 it slid back by 18%. Mining stood at 155% above pre-war level in October, 1941 since then it lost nearly two-thirds of the war-time rise. The expansion in Canada's wood and paper industry was much more modest reaching 57% in 1941 and virtually coming back to 1939 level in the beginning of 1943. Since 1943 the trend was again reversed. In the indices for Mexico and Chile, a rise was observed since 1941, textiles showing greatest advance in both countries. In Sweden, industrial production fell by 19% during 1940 and 1941 and could gain only up to 9% of that level by the beginning of 1945. The Russo-Finnish War of 1939 to 1940 and its recurrence in 1941 affected the export industries of Finland which slumped heavily during the period and after a temporary revival in 1943 to 1944 dropped further reaching 33% of the pre-war average.

A New Fodder Crop

A bean, misnamed cowpea, which is a valuable fertiliser and fodder crop is being grown extensively by tobacco farmers as a side line in North Queensland in Australia. It is estimated that the crop is returning them from £70 to £100 per acre. It is a wet-weather crop and the heaviest yields are obtained from sowings during the first month of heavy monsoon rains which in Australia is between mid-December and mid-January. If planted early when the rains are very high, the plants may measure 12 feet across with runners half that length. The bean pods become ripe for picking in about 15 weeks from the time of planting. The average yield per acre is about 600 lbs., under favourable conditions, the yield may go up to 1800 lbs. In Australia a bushel of 60 lbs. sells for £2-7-6. A heavy crop yields from five to eight tons of chaff an acre which sells at £10 a ton. This serves as an excellent green fertiliser for sugarcane crop. The protein contents in the Cowpeas is 2 per cent lower than lucerne. These are very hardy plants and their high nitrogen producing value makes them the ideal rotational crop

with hungry plants such as peanuts and maize. The possibilities of developing cultivation of cowpea in India are worth investigating, in view of the exceptionally encouraging results obtaining in Australia.

Beet Sugar Cultivation in Peshawar

Sugar beet is an important sugar crop of the temperate zones. The Peshawar Valley has a climate suitable for raising a profitable sugar beet crop. This has been proved by tests carried out in Peshawar by Dr. Leather and Mr. Robertson Brown. As agricultural officer Robertson Brown reported, "A total yield of 15 tons sugar cane and 10 tons of sugar beet from half an acre of land within a period of 16 month is probably unique in the production of sugar."

The alluvial soil of the tract has proved quite suitable for sugar beet cultivation but the best performance of beet has been observed on friable red loam. Very light soils are not suitable for obtaining high tonnage of crop. On the other hand very heavy (Clayey) soils do not conduce to good development of roots. The most favourable period of sowing sugar beet seed appears to be about the end of September or early October.

Raising of beet seed is a special art. Under the climatic conditions the seed setting is very poor and it is therefore, exclusively imported from abroad and should be obtained fresh prior to sowing. When received it should be kept in dry containers and should not be allowed to come in contact with moisture. The seed is steeped in water for 12 hours. To have uniform spacing of beets it is advisable to use a dibbler. When the seed gives a germination of over 80 per cent the quantity required for full germination is about 8 lbs. per acre. The seed germinates within five to seven days of sowing. Thinning of the crop should be taken up a few days after the completion of germination. The singling is done by uprooting the unwanted plants one by one rather carefully. Although it is a costly process, any amount of care and therefore high cost is small for the purpose.

About eight to ten cartloads of well rotted compost is the minimum that should be applied as basal dressing to the soil. The quantity may profitably be increased to its double. Very rich artificials, if available, may be top dressed soon after germination, but not later than two months of it. Late manuring affects

maturity of roots. Dressing of about 40 lbs. of nitrogen in the form of ammonium sulphate helps the beet to develop good size.

A week after sowing, irrigation is necessary to ensure that all seeds have germinated properly. In cold season irrigation may be given at intervals of 15 days. The interval increases when rains intervene. The interval shortens as the days warm up. Precaution against over irrigation is very essential as the crop would otherwise become very leafy and root development will suffer. Well developed beets have a length of 1 to 1½ ft. and diameter from 9 in. to 12 in. The digging of roots requires considerable labour and care.

The sugar factories working with sugar cane as raw materials are usually idle during some months when part of the machinery of these factories would be switched on to work with sugar beet. Information obtained from America indicates that the extra cost of combining the sugar beet machinery along with a 400 tons sugar cane plant will be about Rs. 4 lacs in normal times. In the Peshawar valley frosts place a limitation on high recoveries of sugar from sugar cane and as such a combined working of the factory with both sugar cane and sugar beet as raw materials as in Louisiana, as Messrs. Shah and Raheja point out in Indian Farming (Feb. '45), should prove profitable to any concern.

Legal Notes

MANAGING AGENTS AND DIRECTORS.

Recent Decision of Calcutta High Court.

(By our Legal Correspondent)

Ram Krishna Das Dhanuka and others (Defendants, Appellants) Vs. Dr. Satya Charan Law and others (Plaintiffs Respondents).—Derbyshire, C. J. and Gentle, J.

The recent decision of the Calcutta High Court in this case raises very important questions of commercial law.

The Plaintiffs were two namely, (1) Dr. Satya Charan Law, a Director and a Shareholder in the Lothian Jute Mills, Co. Ltd., suing on behalf of himself and all other Shareholders in the Company and (2) The Lothian Jute Mills, Co. Ltd.

Messrs. Andrew Yule & Co., are the Managing agents of the Company.

The suit was inter alia for a declaration that certain resolutions (increasing the number of Directors and appointing some of the Defendants as new Directors; and removing Messrs. Andrew Yule & Co., from the office of managing agents) passed at an Extraordinary General meeting of the Lothian Jute Mills Co. Ltd., are void and inoperative; for an injunction restraining the new Directors from acting as Directors and an injunction restraining the Defendants, their servants and agents from interfering and inter-mingling with the management of the company. The suit was decided by McNair J. and the appeal preferred by the Defendants was dismissed by the court of appeal.

The following questions came up for decision:—

- (1) Can a majority of share-holders change the managing agency irrespective of the terms of any managing agency agreement?
- (2) Can a minority of share-holders maintain an action for injunction restraining the majority from giving effect to a resolution dismissing the managing agents?
- (3) Can share-holders increase the number of Directors by an ordinary Resolution?

The Calcutta High Court has decided that managing agents cannot be dismissed or removed when they are appointed for a special term by and under the Articles. This has given a rude shock to the commercial world in Calcutta. It was the general impression that the amendments introduced by Sir N. N. Sircar in the Indian Companies Act were meant to restrict the managing agents' privilege of regulating the terms of their appointment according to their sweet will. Prior to the amendment, in some cases peculiar terms were introduced in the Articles whereby the removal of the managing agents became impossible. Section 87B of the Indian Companies Act, it was supposed, negative all such terms and conditions in the Articles or in the Managing Agency agreement. The Calcutta High Court, however, has decided to the contrary in this case.

Since the decision in *Bainbridge Vs. Smith* reported in 41 Ch. D. 462, the impression has gained ground that English Courts of Equity would never grant specific performance of a contract of agency or service. That principle has been incorporated in the Specific Relief Act. Courts in India refuse to grant an injunction restraining a master from dismissing his agent. The Judgment in the present case has, in effect, decided to the contrary.

On the third point mentioned above, their Lordship have held that a special resolution is essential for increasing the number of Directors. Thus a majority of the Shareholders cannot increase the minimum number of Directors, even if there is an Article providing for an increase by a general meeting.

Their Lordship have dismissed the appeal to the Judicial Committee of the Privy Council. The commercial world will watch with interest the ultimate decision of the highest court and it is understood that the Appellants propose to prefer an appeal before the tribunal of the Empire.—By arrangement with the Registered Accountant.

Clive Street Gossip

I spent the last week at New Delhi; and I could not help gathering the impression that the immediate prospect for reconstruction plans is far from encouraging. In the first place, the war has come to an unexpectedly abrupt end. The authorities in charge of the various plans had gone about their business in the belief that there would be a rather considerable interval of time, during which, in the first stage, report for each section could be got ready; in the second stage, concrete schemes based on the report could be formulated; in the third stage, the sectional schemes could be examined from the point of view of their mutual implications; and, in the fourth stage, priorities could be settled with regard to each scheme as well as with regard to the schemes taken together as part of an All-India plan. There was, in addition, the procedure of consultations and discussions with the Provinces and with the States. The programme and procedure thus pursued might have led to concrete results only if the period between the initiation of the discussions on planning and the end of the war was sufficiently prolonged to permit the leisureliness that is inseparable from red-tapism. When the German forces sued for an armistice, the Allies realised that they were not yet ready for this event. The result was that the stages subsequent to the surrender of Germany have disclosed as much lack of understanding and of orderliness on the side of the victorious Allies as on the side of the vanquished Nazis. At that time, "Indian Finance" took care to point out that the war in the Far East might also end precipitately; and that post-war plans must provide for the contingency of an unexpectedly early dawn of peace. In relation to the reconstruction plans that have been under the consideration of the Government of India for some time, there is every reason to think that no preparation for such a contingency had been made.

So far as India is concerned, she was neither prepared nor ready for the transition. What we witness in this country is not the shock and confusion of which I have spoken, but a kind of paralysis, a lack of appreciation of the crucial issues involved in urgent and imperative action. It may now be expected that war expenditure, and particularly the colossal disbursements of Allied Governments through the agency of the Indian Government, must rapidly decline. It is these disbursements which were mainly responsible for various economic improvements in the country such as the disappearance of unemployment which we once had thought to be chronic, and the marvellous reduction in agricultural indebtedness which also we once thought to be chronic. It is of the utmost importance that these two gains of the war, namely, full employment and more prosperous conditions for the agricultural classes, must be retained at all costs in the coming years. The simple way for retaining most of the gains is the mounting up of reconstruction expenditure pari passu with the decline in war disbursements. The finance for reconstruction planning is no longer a serious problem. Sir Archibald Rowlands is ready and willing to find the resources necessary for the immediate launching of plans. And the question is: Are there any plans in such a state of readiness that they can immediately be put into effect? My talks in New Delhi do not lead me to give much of a favourable answer to these poses. It is this question which will be fully discussed in the meeting of the General Policy Committee which has been called for October 8 by Sir Ardeshir Dalal.

The second reason which made me pessimistic about the immediate prospect of planning is the sense of demoralisation that prevails at the highest levels of the Indian Government. Here are a dozen members of the Viceroy's Executive Council who have been told, in the plainest terms and without any ambiguity, that they do not have any following in the country; that they do not represent any large interests of the population; that they do not count at all with the general public; that it is necessary and desirable that they should be replaced as soon as possible. In other words, these worthy members of the Viceroy's

The war officially came to an end two months ago. We are to-day in what is generally described as the stage of transition from war to peace. In the very nature of the case, the transitional period has to be as brief as possible. In America, they had been planning, long ahead, for this transition. But, even the Americans found that the transition arrived far too soon for their plans. While the authorities in the United States had a correct measure of the problems that had to be dealt with as relevant to the transitional period, the transition as such came on them with startling suddenness. The initial reaction was one of shock (however pleasant) and confusion. But the American authorities did not take long to recover from the shock for the simple reason that they had, well in advance, visualised the tasks that must be tackled during the transition. In simple terms, the United States was prepared for this transition, but was not ready. She was forearmed though not exactly forewarned. All the same, the initial confusion has now disappeared, and America is busy solving the transitional problems with energy and characteristic thoroughness.

GAYA BRANCH OPENED ON 7th SEPTEMBER, 1945

Cabinet have been given their dismissal orders; and it is only a question of weeks or months when the orders are to be put into effect. It is certainly a matter for surprise that men in such high positions are still clinging to their jobs under such humiliating conditions. In relation to personal aspects, their continuance in office is a question of self-respect. But there is a wider aspect of this question: and that aspect affects the country at large. India is now faced with enormous and complicated problems that must be tackled now and here if the transition from war to peace is to be carried out smoothly. For the tackling of such problems, we require a steadfast and determined policy and energetic and thorough-going measures. For such a policy and for such operations, the present Councillors, who are counting the tenure of their jobs in terms of days, cannot possibly make valuable contribution. Not only is the political future of this country in a state of suspense, thanks to the Wavell offer and the subsequent developments, but the government itself at the top level is in a state of suspense. I cannot help feeling that there is, to say, a kind of vacuum of Government at the Centre—and a kind of vacuum of Government in most of the Provinces. While the strongest direction and most energetic drive are required from the top, we are now faced with what may be called Government in vacuo.

The third reason that stresses pessimism about the future of planning is that the Secretariat machinery and personnel are not attuned to the tone and tempo of planning. The tradition of the Secretariat is routine. The outlook is matter of fact. And the invariable procedure is typified by the red-tape file. In keeping things going, in maintaining routine at a given level of efficiency, in meticulous noting, the Secretariat in New Delhi is not inefficient as compared with any Secretariat in the world. But Delhi as the capital of India is different, for example, from London as the capital of Britain. Our New Delhi officials live in a world of their own making. They are out of touch with reality. They have no contact with life as the ordinary people live it. The very atmosphere in which they live and the very methods of work they pursue are calculated to cripple initiative, to throw cold water on vision, and to make out courage as foolhardiness. Planning cannot be achieved by matter-of-fact people wedded to routine as the be-all and end-all of official life. Planning requires active thinking, bold designing and determined execution. Like Diogenes, you may search the whole Secretariat in broad daylight with a lamp in hand, and not find one official who has punch and drive, vim and vitality. If I am asked to say what is the first essential for the inauguration of planning in India, I should give the highest priority to the conducting of a class for Secretariat officials so as to produce a new body of men who have vision and punch. The simple fact of the matter is that there is no punch or drive anywhere to be found in any Secretariat, Central or Provincial. Even as, for the successful execution of planning in various stages and under various conditions, a new cadre styled the Indian Planning Service (analogous to the Indian Civil Service) must be created, so for direction and guidance from the top, some of the

senior officials must be encouraged and taught to develop a new attitude of fervour in planning and a demoniac determination in execution. I am, I must own, more convinced than ever that the real bottleneck is going to be personnel.

Through impressive publicity in the press, a new business house celebrated its debut this week. Mahindra and Mohammed form a combination which has, in popular language, the highest credentials and references. The two Mahindra

brothers have had the most romantic careers in business. Mr. J. C. Mahindra reached the climax of his business life in the Sales Managership of Tata Iron & Steel Company. He also functioned as Steel Controller. The younger brother, Mr. K. C. Mahindra retired as Junior partner of Martin & Company and made his mark as the Head of the Indian Purchasing Mission in America. The Mahindras have the benefit of the most influential and powerful business and social contacts in India, in Britain and in America. Their hands are to be streng-

TYRE RATIONING CONDITIONS NOW EASIER

With the cessation of hostilities, Government controls on all kinds of tyres have been greatly relaxed. For the benefit of tyre users generally, we give below a summary of the present position.

NEW TYRES You still cannot buy a new cover or tube unless you have a permit but it is no longer necessary to establish "essentiality" in order to obtain a permit. The greatly increased tyre supplies now being released for civil use should enable any vehicle owner who is in need of tyres to obtain them without difficulty.

USED TYRES Covers or tubes which have run more than a thousand miles are now de-controlled and may be bought and sold freely without a permit. Moreover, it is necessary to surrender your old cover or tube when you buy a new one.

RETREADED TYRES It is no longer necessary to secure a permit in order to buy retreaded tyres or to have your own tyres retreaded.

In brief except for the formality of obtaining a permit, every motor vehicle owner should now be able to obtain tyres without the slightest difficulty.

DUNLOP

THE MOST FAMOUS TYRE

TRADE MARK IN THE WORLD

DUNLOP RUBBER CO., (INDIA) LIMITED

CALCUTTA BOMBAY KARACHI LAHORE DELHI MADRAS

DK.273:

thened by the association of Mr. Mohammed with the firm. Mr. Mohammed represents the interest which Mr. Ghulam Mohammed has in the business. Mr. Ghulam Mohammed himself may not be able to join, as he has not yet finally decided about the invitation to join Tata Sons. The relations between the Mahindras and Ghulam Mohammed have been so intimate that, if the latter is not in the firm by name, he will be in it in full spirit. Mr. Ghulam Mohammed has had as romantic a career in official life as the Mahindras in business. The combination must make a profound appeal to the Indian public; for, it stands for very much more than business: the partners have ideas and vision which extend far beyond self-interest. The projects, with which Mahindra and Mohammed will enter the Indian industrial field, will reveal the extent to which the Mahindras have utilised their knowledge of India and their influence in America to promote a scheme that brings the benefit of American industrial technique directly to the Indian masses.

"EAVESDROPPER".

Malayan Rubber

"All rubber machinery in Malaya has been laid waste and every European residence has been looted of furniture and domestic fittings" writes the Kuala Lumpur Correspondent of the 'London Daily Sketch'. It is said that thousands of rubber trees worth millions of dollars, have been ruthlessly cut down and that vast tracts of young rubber saplings have been uprooted and turned into Japanese "Victory Gardens." The large tracts of rubber inland are badly overgrown with weeds. Since machinery for the production of rubber is not available, production of rubber according to the Correspondent will take many months more to reach normal. Conditions of estates in Dutch East Indies are not likely to be different.

This latest report is very different from those received at the time of the surrender of the Japanese, when one report said that the "resumption of exports of rubber from Malaya would take place very shortly and there were stocks of natural rubber aggregating as much as 100,000 tons in Malaya as the Japanese could not transport them owing to scarcity of ships."

It is probable that the later report is true and if so, it will take many, many months before these countries resume exports of rubber. Till then Ceylon and Indian rubber will be in good demand and fetch remunerative prices.

But there is another point. The difficulty in importing rubber from the Far East should not mean the continuance of restrictions in the use of rubber products. For with the end of the war the rubber requirements of the army will be less. It should be possible for civilians to get more tyres etc. Already the Government have withdrawn certain restrictions on the sale and acquisition of used tyres and tubes. With more stocks civilians may expect gradual removal of restrictions on rubber products.

Progress of Planning in Egypt.

While some delay in outlining post-war plans could be excused so long as the war was on, no such justification exists now that the hostilities have ceased all of a sudden. It is now a race among the nations to reconvert their national eco-

nomies to peacetime basis so that they can face international competition successfully. Since the process of reconversion itself involves unemployment during a period of high prices the need for ini-

tiating public works is felt in all countries. Egypt, which has evolved a post-war plan at an estimated cost of £115 million, has now understood the urgency of taking immediate action on schemes

"ORANGES AND LEMONS...."

... say the bells of St. Clements. So runs the nursery rhyme.

The church is the ancient one of St. Clement Danes in London's Strand — one of the 182 London churches destroyed or damaged by enemy action. Its bells now ring no more, and oranges and lemons are rare indeed. In 1753 James Lind, a Scottish naval doctor, first showed how scurvy could be prevented by lime juice. Since then science has proved that the health-giving properties of the citrus fruits derive from their richness in Vitamin C. Which is why oranges are specially needed for little children. No crop is more dependent on the chemist for its cultivation, transportation overseas and final distribution. The citrus trees need bud-grafting waxes and chemical fertilisers. They must be protected from frost by blankets of smoke and oil and from pests by a barrage of sprays and dusts. The scale insect, worst of all citrus pests, is destroyed by covering the trees with tents which are then filled with hydrogen cyanide gas. But for this routine treatment many first-class groves would have had to be abandoned. Chemical means are necessary to prepare the fruit for market. Oranges may be dipped in borax or other antiseptic to prevent mould, washed in dilute caustic soda and sprayed with water-wax emulsion before being wrapped in special sulphite papers or transparent cellulose wrappings. Fruit may be harvested green and allowed to ripen on voyage or treated with ethylene gas to help it change colour. Finally, wastage is reduced by keeping the fruit in cold storage or in an atmosphere of carbon dioxide gas. The work of the research chemist and the products of

IMPERIAL CHEMICAL INDUSTRIES (INDIA) LTD.

the British chemical industry can ensure that oranges and lemons, limes and grape fruit are firmer in body, better in flavour and more attractive to the eye than Nature unaided could achieve.

PROSPECTUS

(A copy of this Prospectus has been filed with the Registrar of Joint Stock Companies, Bengal).

(Consent of the Central Government has been obtained to the issue of capital, by an order of which a complete copy is open to public inspection at the Head Office of the Company. It must be distinctly understood that in giving this consent the Government of India do not take any responsibility for the financial soundness of any schemes or for the correctness of any of the statements made or opinion expressed with regard to them.)

The application will be duly made to the Calcutta Stock Exchange Association Ltd., and Bombay Native Share and Stock Brokers Association for the quotation of the shares of the Company.

BHARAT VEGETABLE PRODUCTS LTD.

(Incorporated under the Indian Companies Act, 1913).

AUTHORISED AND ISSUED CAPITAL

- Rs. 22,50,000

Divided into 75,000 Preference Shares of Rs. 100/- each and 1,50,000 Ordinary

Shares of Rs. 10/- each payable 50% on application, 50% on allotment.

The holders of Preference Shares shall be entitled to be paid out of the profits which the Directors shall determine to distribute by way of dividend a fixed cumulative preferential dividend at the rate of 5% per annum free of income tax and to a right on a winding up to be paid all arrears of preferential dividend, whether earned or declared or not, down to the commencement of the winding up, and also to be repaid the amount of capital paid up or credited as paid up on the preference shares held by them respectively in priority to any payment in respect of the ordinary shares, but shall not be entitled to any other rights in the profits or assets of the company. The Preference shares will not carry any vote.

PRESENT ISSUE.

The Directors, the Managing Agents and their friends have agreed to take up all the 7,500 Preference shares and 75,000 Ordinary shares. The remaining 75,000 Ordinary shares are now offered to the public at par. The public of Orissa will be given preference at the time of allotment to other applicants.

OBJECT AND PROSPECTS

The Company has been formed generally for the purpose set out in its Memorandum of Association a copy together with the names and addresses of its subscribers thereof is attached herewith and particularly with the objects of manufacturing vegetable ghee, vegetable oils, Toilet and washing soap and other allied products.

The importance and utility of Vegetable Ghee in the diet of the people are now well recognised both by the people and the Government. There is now a very great demand for this product and their present production in India is quite insufficient to meet the growing demand for the same.

The Government's plan for increasing the immediate production of vegetable ghee as published in the "The Financial News" of Bombay in its issue of the 14th April, 1945, is set out below:—

"To overcome the existing shortage and to correct the deficiency of fat in the general diet, the Food Department of the Government of India has undertaken planned development of the Vanaspathi Industry, says a press note. The plan envisages an immediate development doubling the existing capacity, and a post-war development to be considered by a committee, which is being appointed. The principle underlying the plan is regionalisation, consistent with the availability of groundnuts on one hand and accessibility of markets on the other. The pending applications are being examined in consultation with Provincial Government. The Government have received several requests for assistance in erection of factories equipped with locally manufactured plant. IT IS CONVINCED THAT INDISCRIMINATE ERECTION OF FACTORIES WILL BE CONTRARY TO PUBLIC INTEREST. IT IS THEREFORE NECESSARY THAT, BEFORE INTIMATING ERECTION OR EXTENSION OF FACTORIES, PRIOR APPROVAL OF THE FOOD DEPARTMENT SHOULD BE OBTAINED."

There is no factory for the production of vegetable ghee in Orissa though there is very great demand for this product. There is an abundance of groundnut (the principal raw material) in the Province and the neighbouring areas. The Orissa Government have therefore keenly felt the absence of a factory for the production of vegetable ghee in their province. The views of the Orissa Government regarding this industry are set out in their recent publication "An Industrial Survey

of Orissa" extracts form which are set out below:—

"Fats and oils constitute an essential element of food. The diet in Orissa is generally deficient in oils and fats as their normal consumption is less than 0.5 oz. per head in place of the minimum requirement of 1.5 ozs. for balanced diet. The high price and scarcity of genuine ghee have created a great demand for the vegetable product. There is at present a move to instal a plant for manufacturing vegetable ghee in the province. Groundnut and coconut oil are the chief raw materials used in making vegetable ghee. Coconut is grown mostly in the Puri District but it is not used for oil pressing. Some of the coconuts are consumed locally, and the rest are exported. They could be made available to the vegetable ghee factory when it starts working. Groundnut is generally grown in the district of Ganjam, and the total area under cultivation in 1942-43 is said to be 13,000 acres. The setting up of a vegetable ghee plant will, by creating a great demand give an impetus for the cultivation of groundnut in the Province. Groundnut can be grown in waste lands which are not ordinarily suitable for growing paddy and other crops so by growing groundnuts, such lands will be put to good use. The oil cake obtained as by product will meet part of the great demand for manures and will help to produce more crops in Orissa. When oil is turned into vegetable ghee the oil waste that is obtained is usually turned into soap. So the factory will help to produce more soap in the province."

(The move to instal a plant for manufacturing Vegetable Ghee referred to above is regarding this installation.)

The application of Messrs. Madanlal Sohanlal, the promoters of this Company for the erection of a plant in Orissa to manufacture vegetable ghee was therefore strongly recommended by the Orissa Government.

The Central Government in its Food Department accepting recommendation of the Orissa Government have sanctioned the immediate installation of the plant for the production of vegetable ghee of 25 to 30 tons daily capacity. Steps have been taken to construct necessary buildings and also for the immediate erection of the plant. It is expected that the machinery will be arriving in India very shortly and that the factory will start working immediately thereafter. The Company has decided to erect the plant at Barampur in the Ganjam district. The site is very suitable on account of the availability of abundant raw materials, facility of transport both by Road, Rail and sea and cheap labour and good climate.

Ganjam District is on the border of the Madras Presidency and produces the largest quantity of groundnut in Orissa. The adjoining village and other areas in the Madras Presidency are also well-known for the production of groundnut. The location of the Factory is therefore ideal in every respect.

Having regard to all the circumstances the Company is expected to declare a fair Dividend shortly after its Factory starts working.

already evolved. With a view to facilitating rapid and satisfactory reconversion the Egyptian Government have voted for a grant of £E25,000,000 for financing the urgent measures of the Five-Year Plan made up as follows:—Roads, £E3 million; Cairo Drainage, £E2 million; Government share in capital Industrial Bank, £E3 million; Purchase of British and U. S. military workshops in Egypt, £E 1 million; Schools and Hospitals, £E4 million; Irrigation and Drainage, £E 5 million; Drinking water, £E3½ million and Material for Egyptian State Railway, £E4 million.

The Special Ministerial Committee set up last march to study and report on the most practical and efficient means of implementing the plan has proposed two loans for £E 7 million for financing the Assuan dam hydro-electric scheme and

the electrification of the Mataria and Helwan Lines. About £E 5.5 million may be taken from the profits made out of the wartime sale of cotton by the Anglo-Egyptian Cotton Purchasing Commission. The report on the Five-Year Plan lays much emphasis on introducing system of compulsory insurance against sickness, disablement, old age and death. Proposals for the commercial and industrial development of the country are estimated to cost £E3.52 million. The Reserve fund is heavily tied down with previous obligations and therefore can spare only £E 27 million for the Plan. Though prompt action has been taken to implement the urgent schemes the success of the Egyptian Five-Year plan is linked with the satisfactory solution of the Sterling problem and the extent of aid coming from the U. K.

BHARAT VEGETABLE PRODUCTS LTD., PROSPECTUS—(Contd.)

MINIMUM SUBSCRIPTION

The minimum subscription on which the Directors will proceed to allotment of shares will be of the nominal value of Rs. 15,00,000/-

PRELIMINARY EXPENSES

The preliminary expenses of the Company are expected not to exceed Rs. 25,000/-

DIRECTORS' QUALIFICATION AND REMUNERATION

The qualification of a Director other than an ex-officio Director shall be the holding of shares of the face value of Rs. 10,000/- in the Company. The remuneration of the Directors shall be a sum not exceeding Rs. 100/- per meeting of the Directors as from time to time may be determined by the Directors. A Director residing out of place at which any meeting of Directors is held may also be paid travelling and other expenses for attending such meeting. A Director rendering any extra service to the Company may be paid extra remuneration.

INTEREST OF DIRECTORS

1. Madanlal Jajodia, 2. Sohanlal Jajodia, 3. Bhagwandas Bajoria, 4. Rai B. Jamunadas Choudhury, four of the Directors are also the Members of Orissa Trading Company, the Managing Agents of the Company and as such are interested in the remuneration payable to the Managing Agents. Mr. P. D. Himatsingka is a partner of the firm of Messrs. P. D. Himatsingka & Co., Solicitors of the Company, and as such he is interested in the remuneration payable to the Solicitors of the Company.

MANAGING AGENTS AND THEIR REMUNERATION

Messrs. The Orissa Trading Co. have been appointed Managing Agents of the Company for a period of 20 years from the date of incorporation of the Company and their remuneration as provided in the Articles of Association are:—

- (a) An office allowance of 1000/- per month.
- (b) A commission of 10 p.c. on the net yearly profits of the Company within the meaning of Section 87C of the Indian Companies Act.

The above remuneration is exclusive of all costs, rent charges and expenses that may be incurred by the Managing Agents for or on behalf of the Company.

CONTRACTS

An agreement will be entered into between the Company on the one part and Messrs. The Orissa Trading Company on the other part for the appointment of the said Orissa Trading Company as the Managing Agents of the Company for the period and upon the terms and conditions mentioned in the Articles of Association of the Company.

INSPECTION

The draft of the Managing Agency Agreement and prints of the Memorandum and Articles of Association of the Company may be inspected at the registered office of the Company during office hours.

APPLICATION FOR SHARES

Application for shares should be made on the form accompanying the prospectus and sent either to the Registered office of the

Company or to the Company's Bankers and their Branches.

If no allotment is made the deposit will be returned in full and where the number of shares allotted is less than the number applied for, the excess will be utilised for payment of the allotment money and the balance, if any, will be refunded.

Application for less than 100 Ordinary and 10 Preference shares will not be entertained.

Prospectus and application forms are obtainable from the Company and the Company's Bankers, and their branches.

BROKERAGE.

Brokerage at the rate of As. 4 per Ordinary share will be paid for shares applied

for and allotted by the Company only to bona fide brokers.

Dated this twenty-seventh day of August, 1945.

(From Our Correspondent)

BOMBAY, Sept. 25

The textile panel of the Post-war Planning Committee is expected to release shortly its plan for expansion of the textile industry. Some features of the plan have already received advance publicity and have, in fact, been already commented upon in textile circles. The target fixed by the panel appears to be 7,200 million yards of cloth, in addition to manufacturing enough yarn to hold the handloom industry to turn out 2,000 million yards of cloth. In other words, the aim is that the country should produce about 9,200 million yards as against the present production of 6,000 million and pre-war production of even less. To achieve this target, the Committee is said to have recommended that 40,000 looms and about 3 million spindles should be made available in the next five years for erecting new mills, 2,00,000 looms and 10 million spindles are to be supplied in the next decade to the existing mills. About one million spindles are stated to have been already earmarked to establish new mills in deficit zones. Opinion in the industry is inclined to be highly sceptical of the economic desirability of the expansion proposed. Apart from the fact that the plan does not take into account the current terrible shortage of textile machinery (the Indian Industrial Mission stated that it would be at least two years before the U.K. or U.S. can supply textile machinery), the main objection is that such expansion may prove to be an ill wind that blows nobody any good. It is pointed out that in a couple of years textile productive capacity in the world will be much higher and that the current shortage of textiles may soon be a thing of the past. Moreover, India cannot perhaps wholly do without importing cloth in return for our exports of raw cotton. With the export prospects none too favourable and with an internal purchasing power of uncertain proportions in the next few years, to embark on a mammoth expansion would very probably be to create just the conditions for a slump in the industry in a very few years. The Bombay Mill-owners' Association has rightly pleaded for a cautious approach to the question and pressed the need for increasing productivity in stages depending upon the shape of the post-war economy. Moreover, the emphasis on new mills is entirely misplaced, and it would amount to nothing less than a breach of faith on the part of the government to divert available machinery to new mills instead of to the existing mills, who have borne out their equipment in the cause of the war effort without so much as a consideration from the income-tax authorities for the greatly enhanced depreciation of their equipment. At least two-thirds of the new machinery should be made available to the old mills, which simply cannot get on without the aid of such renovation in what promises to develop into a highly competitive world very soon.

The Committee of the Indian Merchants' Chamber has expressed itself strongly in reply to the questionnaire issued by the Director of Research, Government of India regarding the regulation of dealings in stocks and shares in future. It rebuts the charge that speculation has contributed to the inflationary tendencies. The remedy, according to it, lies in allowing forward trading with a system of margin followed by the New York Stock Exchange. It

suggests that the stamp duty should be reduced in the case of shares transferred to the name of a jobber, in order to eliminate blank transfers and is, of course, entirely opposed to Rule 94-C of the Defence of India Rules, on the question budla. The Committee advocates Central legislation to regulate stock exchange trading; that would not only check staggering but the listing requirements would make it obligatory on the management of companies to offer a reasonable proportion of new shares to the public. It also advocates the public announcement of dividends immediately after the directors take a decision in the matter, so that the delay, which often creeps in now-a-days in the interval between the management's decision and the public announcement, may not be exploited. The Committee also urges that the management of investment trusts should have no direct or indirect interests in the firm of brokers through whom transactions of shares are put through in the case of new companies floated by them.

At the annual general meeting of the shareholders of Tata Iron & Steel Co. Ltd., Mr. J. R. D. Tata was mainly concerned to stress, firstly, the part played by the Company in the war effort and the progress on the technical side achieved in the war years; and secondly, to bring shareholders to an awareness of the part to be played by them in the future. About 3 million tons of steel had been supplied for war purposes, and Mr. Tata underlined the fact that these supplies had been made at prices appreciably lower than the steel prices in the U.K. & U.S.A. Mr. Tata might have added, though he did not, that it is disgusting to find this plain truth forgotten or twisted by Britishers whenever the question of sterling balances is raised. In financial terms, the TISCO's contribution to the war effort amounts to Rs. 20 crores, of which Rs. 18 crores were paid in taxes. The boot is on the other leg in fact, and it is doubtful whether government dis-

charged their part of the responsibility satisfactorily, to judge from the "confusion and misdirected effort in the policy in regard to coal in recent years." The coal muddle has actually stifled with progress of the company.

It is axiomatic that the long-term prospects of the industry are linked up with the trend of economic development but for the time being, the pent up civilian demand plus demand for reconstruction purposes may keep the industry engaged fully for some time. Mr. Tata tried to impress upon the shareholders the fact that, if steel production in the country is to be doubled in the next five years as it would have to be, the Company would need finance on a large scale. Government are awaiting the report of the Steel Panel presided over by Sir Padamji Ginhwala, which is expected to fix a high target of steel production in the next quinquennium. In order to be able to play its part, Mr. Tata said the TISCO would need an investment of about Rs. 20 crores in the next ten years. Some shareholders tried to elicit from Mr. Tata as to how the management proposed to raise the necessary finances, but Mr. Tata was naturally as tight as an oyster on the point. But the answer is to be found in his statement that the proposal for conversion of Deferred shares into Ordinaries has not been abandoned by the directors. Whether the original proposal will be modified is not certain, but it seems clear that if the Deferred shareholders continue to be obstreperous and put may be undue emphasis on the sanctity of contract, the management would be obliged force majeure to find the finance in other ways. The Tata Locomotive and Engineering Co. is an instance. It is hoped that the great opportunities ahead of the Company will be properly appreciated by the Deferred shareholders and that expansion plans could be financed in the normal way if the conversion scheme fructifies.

South India

Madras, September 25.

The Government of India's shipping, aircraft and transport policies came in for criticism in the address delivered by Mr. M. A. Master, President of Indian Merchants' Chamber at the Southern Indian Chamber of Commerce. Before the war, Mr. Master said, India had about 1,46,000 gross tonnage of shipping as compared with 18 million tons owned by Britain. More than half of Indian shipping had been lost during the war. In requisitioning ships the Government made an invidious distinction between Indian companies and foreign companies. While 83 per cent of Scindia's ships was requisitioned, the percentage of shipping, owned by foreign lines, requisitioned was small. Since 1941 Indian industrialists made herculean efforts to start a shipping industry in Vizagapatam. But the Government put any number of impediments. By the end of 1942, the plant and machinery which had been transferred to Bombay in July of that year owing to the exigencies of the war were ordered back to Vizagapatam. They wanted to build ships of 8000 tons and asked for necessary materials. 2600 tons of steel which arrived were frozen for war purposes. Indian efforts showed that they were not wanting in initiative. When representation was made to the Government to include in the industrialists' delegation which went to the U.K. and the U.S.A., a nominee of shipping interests the Government did not pay any heed to it. The Government of India, Mr. Master pointed out, did not give any assurance of help to the Indian aircraft industry. Conference after conference had been held in Canada, Britain and the U.S.A. for organising the air services. But so far there has been no mention of organising the Indian aircraft industry. Referring to the transport policy of the Government, Mr. Master said that the Transport Advisory Council had definitely advised the Member for Transport that the railways should not be given control over road traffic but to no purpose. The Council also was emphatic on the point that all roads should be laid from Indian materials. But large quantities of asphalt had been ordered from abroad in preference to Indian cement.

The need for short range and long range plans to meet the inadequacy of seats in Colleges was stressed by the Vice-Chancellor in his address to the Academic Council of the Madras University. He said that the immediate need being so dominant, certain other aspects of the question do not receive due consideration. He sounded a note of warning that the multiplication of the existing types of arts and science colleges may lead to grave problems in the near future. In five years' time, there would be a large number of graduates possessing almost similar qualifications striving to get a place in the services or in other posts requiring the same type of learning with the inevitable result that once more the problem of educated unemployment will be acute and that following the inevitable law of supply and demand the alumni of the University would be forced to accept posts on the ridiculously low salaries which were offered to them in the pre-war period. It was, therefore, his idea that higher education after the school leaving period should be not only through existing types of colleges but through technical and technological colleges and institutes of polytechnics. The opening of technical

schools, revision of the methods of recruitment to clerical posts of Government and their adequate training, the development of polytechnic, technical and technological institutions, a close liaison between industry and commerce with the universities and other centres of higher education, these and other suggestions, he said, required urgent consideration and action. These proposals could be implemented to the extent necessary within the next few years. It was, therefore, necessary to think of linking up the short range and long range plans so that there may be an easy transition from one to the other.

To facilitate a change over from one type of higher education to another from arts and science colleges to polytechnics and other institutions it was obvious that sufficient resources should be available and it was from this point of view that one had to look to the state for the starting of colleges which might later be converted into institutions of another type.

There is no immediate prospect of restoring the trains which have been withdrawn but it is hoped that by November some partial restoration may be possible, says a communique issued by the M.S.M. Railway. Altogether 48 engines or 16 per cent of the total stock of the Railway company and 71 carriages have been sent away or converted into ambulance coaches and so far none have been returned to the railway. The Railway hopes that in the coming months some of the engines will be returned.

The first Andhra Industrial Conference organised by the Andhra Manufacturers' Association was held at Bezwada.

Dr. Chen Han-Seng, Member of the International Committee of the Chinese Industrial Co-operatives in declaring open the Conference referred to the factors that hampered the industrial development of India and said that modern industrialisation and a feudal agrarian system were incompatible with each other. The agricultural rent in the Zemindari areas was

approximately 60 to 75 per cent of the gross income. This exorbitant and un-economic rent seriously hindered industrial investment and at the same time sapped the purchasing power of three-fourths of the population. He added that it would take time and require the untiring efforts of the people themselves to shake off these age-long shackles of old countries like India and China. Dr. Chen emphasised that a dependable home market was the unvarying basic condition for the existence of national industry. The expansion of Indian industry in the past six years, he said, had been limited to iron and steel, textiles, sugar, paper and the newly developed cement industry, and added that this expansion was not due to increased home consumption but rather to military needs and demands for export. Dr. Chen stated that what we needed now was an economic policy which aimed at promoting the people's productive and purchasing power.

Mr. G. L. Mehta who presided said that, the answer to the fissiparous and disintegrating tendencies of sectional interests, territorial and communal, was in a comprehensive plan for economic re-administration. Mr. Mehta said that we had such an enormous leeway to make up that it was more than ever necessary to develop our productive resources with all the aid which science and organisation could give us. The war had many lessons to teach us, but none so important as the economic unity of the country whose several parts were closely interdependent. The necessity for a common economic policy should be recognised and its importance had been evident in matters like food and cloth. But he added that such a common economic policy was in no way incompatible with regional planning and decentralisation of industries. He observed that electrification and a better system of transport would offer a much wider field of choice so far as location of industries was concerned. Concluding, he said that the question of industrial development of Andhra Desa had to be considered in the larger background of Indian industrial development.

A Resume of Commodity Markets

The feature of the week is the sharp rise in prices for bullion, particularly silver. The rise in silver prices is the direct effect of the U. S. Treasury's action to increase the price for foreign silver. The jump in silver has resulted in a rise in the gold market as well. The raw jute market has been quiet throughout the week with sellers pressing for business while there is nothing of importance in the raw cotton market. The jute manufactures market has remained unchanged. Mills are more anxious to do business for forward positions but in view of the lower rates offered have not been very keen to accept contracts. The piecegoods markets have continued firm with the busy season drawing near. Business would perhaps be on a larger scale but for the rumours regarding the possibility of a reduction in ceiling prices shortly.

The expectations of a large crop and the small buying by jute mills have been responsible for the weakness of the raw jute market. All the instalments relating to district crop forecast figures have been published. It is expected that the total crop for Bengal will be about 63 lakhs bales against 55 lakhs bales. The crop for all the areas is estimated at 71 lakhs bales against 62 lakhs bales last season. Even on the basis of 4½ lakhs bales monthly, mill consumption cannot be expected to be more than 55 lakhs per annum and exports are not expected to be more than 15 lakhs bales. So that even with the Government's estimates it is believed there will be no shortage of supplies.

There is a feeling that like last year's estimates the yield from the current season's crop also might be underestimated. The average yield works out on the basis of the latest estimates at 3.12 bales per acre against the revised estimates for last year on the basis of 3.26 bales. As it is generally agreed that the standing crop has fully matured and that there might be an increase in the yield, and latest reports suggest that there might not be any appreciable damage on account of the floods, the yield, like last year, might be in excess of official estimates. There is, however, an adjustment in the case of Assam which takes up the yield by nearly 2 lakhs bales on a smaller acreage than in the previous year.

Mofussil markets are reported to be easier with heavier arrivals. Lack of mill interest in the market is reported to have complicated matters so that with the Puja festivities drawing near black market transactions (in reverse) might be recorded. The poorer mill buying is stated to be due to the fears regarding the possibility of strikes. But with the settlement of the Tramway dispute and the easier coal position mills should buy on a larger scale.

The raw cotton market has been uninteresting and quotations have been fluctuating in narrow limits. Earlier in the week mills bought in the ready market on an average of 5,000 bales daily. Interest has been smaller in the latter half of the week and prices have not recorded any appreciable decline only with the strength of the bullion market. Karachi advices have not been quite encouraging. But for the reports that ceiling prices for cloth and yarn might be reduced, as a result of the deliberations of the Industry Committee, mills probably would buy more cotton.

Bulls are eagerly awaiting the resumption of trading in the Liverpool Cotton Association. They also expect that with a relaxation of shipping restrictions exports might record a rise.

The piecegoods market has been steady though there is some anxiety to await the decisions of the Textile Control Board at its meeting to be held shortly. It is expected that there would be a reduction in ceiling prices both for yarn and cloth but Madras mills are stated to be opposed to the idea of any early reduction in ceiling prices.

It is rather surprising that Lancashire should be worried over the resumption of exports from Japan and the competition from low cost producers like India and Brazil. That Japan should not be allowed again an opportunity to compete in the world's markets on unfair terms is generally recognised but that is no excuse for perpetuating scarcity and not making proper use of the world's available sources of production. To suggest that there should be allied control over the production of the defeated powers and that

advantage should be taken of the higher world market prices at the present and the profit pocketed by the victorious powers is rather funny as the reparations which are meant to be recovered from Japan and other countries will be derived instead from the consumers. There can, however, be no objection to any profit realised on a fair level of prices.

Quite a sensation in the bullion markets has been caused by the decision of the United States Treasury to raise the purchase price for foreign silver by 26 to 71 cents. Till recently the quotation was 44½ cents, per fine ounce in New York. The action of the United States Treasury has come as a surprise to the market for it was never expected that after the

Jute and Jute Manufactures

Special to "Indian Finance"

(From Our Correspondent)

Calcutta, Sept. 27.

The raw jute and jute fabrics markets having apparently reached stagnation point; there remains little of fresh importance to comment upon this week. The prevailing feeling in all sections of the market is one of uncertainty. Here in Calcutta the perennial coal shortage is not the least of the problems confronting mills. There is uncertainty, too, regarding the question of when the de-requisitioning of Mills' godowns and premises is to be effected although it is expected that some, if not all, of the premises occupied by units of the American Forces will be vacated before the end of the year. It is not known either whether there will be any radical change in the near future of the working hours of Mills within the membership of the Association.

There has been a definite falling off in the demand for jute goods during the last few weeks but it is likely that the present lull will not be unduly prolonged. Markets in Far Eastern countries have not yet had sufficient time to recover since the end of the war and the only item of importance from that quarter so far has been the purchase, about a month ago, by the French Commission of 70,000 bales of Sacking goods for despatch to Saigon. It has been suggested that even in Burma the position is such that it may take another six months before trading conditions can be expected to return to something approaching normality.

In Continental markets not much is known about actual conditions affecting trade in countries like Germany and countries previously occupied by her, but before normal trade relations can be resumed in the various Continental centres we shall presumably require to know what trade credits intending purchasers possess before business relations are resumed with them.

Reports from Australia indicate that bumper crops are expected this year after several seasons of severe drought but it is also known that big stocks of jute bags have been built up in that country and at the moment it is doubtful if the gathering in of even an exceptionally heavy crop will result in a substantial increase in the demand for containers.

The American market for jute goods has also been affected by several factors that tend to restrict business. There is a serious shortage of bags in America (a shortage to which we refer later on in the article) but the trade there has its own peculiar difficulties to overcome. The transition period from the administration of price controls to a return to normal peace time trading conditions is bound to be one of uncertainty with its consequent restrictive effect on business. Disquieting reports of strikes and threats to strike are other factors militating against the speedy resumption of business on a pre-war basis. And of course the problem of shipping has also to be considered. Confronted with these difficulties and in the knowledge that in any case prices for jute goods in Calcutta have a fixed ceiling, American buyers are probably quite prepared to wait for further developments in the expectation of finding a cheaper market for gunnies in Calcutta later on.

That the supply of bags in the United States is inadequate to satisfy present requirements is evident from the recently issued appeal by the War Food Administration to farmers requesting them to conserve bags to the greatest possible extent and to return them promptly. Officials of the War Food Administration state the victory in Europe has intensified the bag shortage due to relief feeding requirements involving the movements of food through territories previously occupied by the enemy.

According to reports, arrivals of jute goods into the United States have largely increased during the past few months. This has been responsible for an increase in the quotas allocated to civilian consumption. For the third quarter of 1945 the allotment of burlaps to the bag industry is 200 million yards. Although this is a substantial increase on the allotment for the same period in 1944 it is believed to be far short of the estimated total requirements of bag manufacturers. Included in the third quarter allotment for 1945 is 254 million yards of cotton bagging which with the addition of the 200 million yards of burlap mentioned above provide a 12½% increase on the third quarter allotments of bagging material in 1944. In spite of this increase it is said by bag manufacturers that they are still 16 million yards short of their requirements.

Burlap allocations for the first nine months of 1945 now aggregate approximately 286,500 bales or 573 million yards—an increase of 13% over the total allocations for the corresponding nine months of 1944. The latest statistical reports issued on this subject by the United States Government show that the consumption of burlap in the United States of America in the year 1944 is estimated at 600 million yards; an increase of 75% over the quantity consumed in 1943.

The price control authorities in the United States have enacted regulations clarifying certain control measures including the setting of uniform maximum prices for the sale of raw jute and cuttings imported from India.

Jute Imports into Calcutta and the Mills' stations during August amounted to 22,09,447 maunds bringing the imports for the first two months of the current season to a total of 44,93,533 maunds. Of the latter figure 26,21,818 maunds or 58.3% were imported by rail; 18,29,029 maunds or 40.7% by Vessel and 42,686 maunds or 1% by Boat. The total imports for the same period last season, i.e., for July and August 1944, amounted to 49,99,533 maunds.

The Indian Jute Mills Association have issued a corrigendum to their Memo. No. 8 of 1945 relating to monthly stocks of manufactured goods in which they state that the stocks of sacking bags and cloth held on Government account as at 31st August 1945 which appeared in Memo. No. 8 as 29,480 tons should be read as 19,480 tons. The total stock figure as at 31st August should consequently be altered from 181,623 tons to 171,623 tons.

Arrivals of coal at the Indian Jute Mills Association's dump during the week-ended Saturday, 22nd inst., averaged 59 wagons per diem. Up to mid-

week this week the daily average was 73 wagons. Recently we have commented favourably on the increased quantities of fuel now being made available to the industry but as it turns out this increase in quantity has been offset to a very great extent by the inferior quality of the coal received by the Mills. Much of it is incombustible rubble that resembles the real thing only in its colour.

The Pucca Bale market has been dull and almost inactive. Except for a small quantity of M.Cs. and N.Cs. sold to mills at minimum rates there is nothing of interest to report.

In the Loose Jute market a weak tone persists with Mills taking practically no interest in offerings. Some business was reported in small lots of European jute at minimum rates and in Indian District Tossa, also at minimum rates.

The Manufactured Goods market was quiet with the minimum of business passing. It was reported that Mills sold 11 Porter hessian at maximum price for Nov./March shipment. Hessian is quoted at maximum prices up to the end of this year with a small discount offered against all descriptions in the Jan./March positions. Heavy Goods were dull and business was chiefly confined to inter-bazar transactions. B Twills are quoted at Rs. 65-12 (i.e., maximum) for September and at Rs. 65-2 for Oct./Decr. delivery. Unconfirmed reports state that an order was placed with Mills for 30 lakhs Atta bags for military requirements.

TREASURY BILLS**Central Government:**

Tenders for Rs. 2,00,00,000 of three months' Government of India Treasury Bills were opened on Sept. 25, 1945. Total amount offered was Rs. 4,79,25,000. Tenders at Rs. 99-14-9% were accepted in full and those at Rs. 99-14-6% were allotted approximately 25%. Total amount accepted was Rs. 2,00,00,000, the average rate of accepted tenders being Rs. 0-5-5 (annas five and pies five only) per cent per annum.

Tenders for Rs. 2,00,00,000 of three months' Government of India Treasury Bills will be received on Oct. 2, 1945 at Bombay up to 11 a.m. and up to the close of business on Oct. 1, 1945, at other controls.

During the week ended Sept. 21, 1945, Government of India Treasury Bills for Rs. 6,28,25,000 were sold in favour of the Issue Department of the Reserve Bank of India.

(Continued from page 576)

largescale supplies to allied countries on a lease-lend basis the U. S. Treasury would do anything that would make it difficult for the countries who have taken lend-lease silver to return the stocks within the stipulated time. The increase in the price for foreign silver has been effected, it is said, in order to attract the silver produced in

PROPERTIES FOR SALE**SULPHUR OPERATIONS IN KOH-I-SULTAN, BALUCHISTAN.**

The properties attached to the Central Government's Sulphur Operations, Koh-i-Sultan Railway Station Nokkundi, (Baluchistan) and stocks of sulphur ore lying at Nokkundi railhead are offered for sale. Purchaser has right to work the sulphur mines or dismantle the properties and to dispose of the stocks of sulphur ore as he thinks fit. Government, however, reserve the right to sell not more than 1,500 tons of high grade ore now lying at rail head by the end of the year 1945. Working the mines will be in accordance with the Central Government Mining Rules. Detailed prospectus and plans are available for perusal with the Director, Geological Survey of India, 27, Chowringhee, Calcutta, the Officer-in-Charge, Sulphur Operations, Hut No. 254, Residency Compound, Quetta (Baluchistan), and the Assistant Secretary to the Government of India, Department of Labour, New Delhi, up to the 29th October 1945. Tenders are invited, and should reach Rai Bahadur A. C. Das, Deputy Secretary to the Government of India, Department of Labour, New Delhi, on or before the 30th October 1945. Tenders should be sealed and superscribed "Tender for Koh-i-Sultan Sulphur Operations."

the Latin American and other countries to the United States as it was found that Canada and others paid a higher price. As a result of the latest increase there is no difference in the price for U. S. Treasury silver domestic newly mined-silver and foreign silver, the price paid for the three categories being 71.11 cents. The New York quotation has increased to 70 5/8 cents. The London price has advanced to 44d from 25 1/2d. There is a jump in the Indian market to Rs. 136 3/4 for ready from Rs. 123 only a few days back.

The London price for silver on the basis of the New York price is only about 42 1/2d. It is not clear why the London quotation is higher at 44d. Is it due to the depreciation in the value of sterling?

There is a regular squeeze in the Bombay market and all available supplies have been cornered. Calcutta operators seem to have taken a rather bullish view of the immediate outlook. As the offtake also has increased bulls are in a favourable position and bears have been obliged to cover their positions.

NOW IN PRODUCTION

ALUMINIUM COMPOUNDS FOR USE IN INDUSTRY

ALUMINIUM HYDRATE
(Iron-free) for manufacturing heavy chemicals.

APPLICATIONS FOR MEMBERSHIP

A notice defining the conditions for membership of the Bengal Textiles Association, formed recently under the Bengal Textiles Association Ordinance, 1945, has been issued by the Chairman to the Wholesale dealers in Cotton Textiles in Calcutta. Copies of the notice together with the form of application for membership have been furnished to the various Chambers of Commerce.

Intending applicants may obtain the application forms from the Chambers of Commerce, or from the Manager of the Bengal Textiles Association, P.34, Mission Row, Calcutta.

Applications for membership should reach the Manager on or before the 29th September, 1945.

BENGAL TEXTILE ASSOCIATION

Excuse me -
Inner Cleanliness
keeps the
skin clear

Powders and face creams will help you to look lovely, but the secret of a really beautiful skin is to be clean inside. Until you realise this you are wasting half the money you spend on beautifying yourself. So let Andrews give you deep-down tonic Inner Cleanliness. That is the first step to a lovely clear skin. A glass taken regularly—whenver you feel you need it—cleanses, cools, refreshes and invigorates. This is how Andrews does its health-giving work:

FIRST - Andrews refreshes and cleanses the mouth and tongue.

NEXT - Andrews settles the stomach and corrects acidity.

THEN - Andrews tones up the liver and checks biliousness.

FINALLY - To complete your Inner Cleanliness, Andrews gently clears the bowels. It sweeps away trouble-making poisons, corrects Constipation, purifies the blood and clears the skin.

For Inner Cleanliness
be regular with your

1/2 YEARLY DIVIDENDS -delivered to your door

Over Rs. 112 Crores were invested in less than eleven months in the First 3% Victory Loan (1957) withdrawn during February 1945.

The 3% Second Victory Loan (1959-61) is issued on attractive terms similar to the First, and is today's soundest investment for the big or small investor. There is no limit to the amount you are permitted to invest.

The Loan is backed by India's wealth, and Government has guaranteed to repay at par not earlier than 15th August 1959 and not later than 15th August 1961. If between now and then you wish to realise your capital, the Loan is readily salable in the market at all times.

Interest at 3% per annum less Income-Tax will be

paid half-yearly on 15th August and 15th February and the dividend warrant will be sent to your address. You can cash it just like a cheque, and you have the satisfaction of knowing that your investment is counteracting inflation, and earning for you a good return.

To buy this Loan, apply to your Bankers, or to the Reserve Bank of India at Bombay, Calcutta, Madras, Delhi, Cawnpore or to the Branches of the Imperial Bank of India in other places or to any Government Treasury.

THE auctioneer's monotonous yet practised voice drones on. With consummate skill he plays upon human weakness, extolling his wares, calling for a bid, sometimes here, sometimes there, and up and up goes the price. When the hammer falls at last, the hopeful bargain-hunter pauses and thinks for a moment... Have I paid more than I should have? He has at least paid more than he wanted to! Do you ask yourself the same question whenever you make a purchase? Perhaps you do not realise that in these days every time you buy something you are participating in an auction. It is common knowledge that goods are in short supply and that buyers are many. Maybe for each article there are dozens, perhaps hundreds of buyers, all anxious to secure it. The sellers know it and take advantage of it in the same way as the auctioneer. Do not buy at inflated prices.

**PLAN TODAY FOR TOMORROW
SAVE ALL YOU CAN**

But remember to invest your savings where they will be safe, and waiting for you when you need them.

Avoid buying land, buildings, commodities, manufactured goods or jewellery. Their prices are very high and likely to depreciate as time goes by. Today's best investments are Insurance, Co-operative Societies, Savings Bank Accounts, Post Office Savings Bank Accounts and best of all National Savings Certificates and Government Loans. SAVE SAFELY FOR THE FUTURE.

SATURDAY SEPTEMBER 29, 1945

Price Re. 1

Stock Markets to-day and to-morrow:

LOWER INDIAN IRON FINAL DIVIDEND FOR 1944-45

Stock markets in both Calcutta and Bombay have been quite steady in the past week and a generally firmer tone has been noticeable throughout the period. The rather encouraging statement by the Chairman of the Tata Iron and Steel Company Limited at the Annual General Meeting last week and the buoyant tone of the bullion markets kept professionals active. The slow rise in prices attracted outside interest and but for the disappointment over the final dividend of the Indian Iron and Steel Company Limited, the finish for the week would have been firm.

It was announced on Friday afternoon that the final dividend of the Indian Iron & Steel Co., Limited for the year ended March, 1945 was to be fourteen annas per share against market expectations of one rupee and two annas per share. The total distribution for the year is thus, including the interim dividend of ten annas per share already paid, one rupee and eight annas per share against one rupee and twelve annas per share for 1943-44. After the satisfactory performance of Steel Corporation and Tata Iron, it was generally expected that the distribution by the Indian Iron and Steel Company would be maintained at the previous year's level. The announcement of a lower dividend, therefore, came as a disappointment to the market. Even early this week there were rumours that a higher dividend might be paid and the quotation improved to Rs. 42 from Rs. 40-14. It is rather strange that while the market was keenly speculating about the size of the dividend a certain section of the market should have been in possession of the information earlier. There was heavy selling by some prominent operators on Wednesday and the quotation came down to Rs. 41-4. That the market was not inclined to believe the reports about a lower dividend will be evident from the fact that the

quotation even on Friday morning was around Rs. 41-8 and only with the actual announcement there was heavy selling and the quotation has slipped back to Rs. 40-4.

It is not clear whether the reduction in the dividend is due to a lower level of earnings. But if the rumours that the reduction is due only to the need for additional finance for effecting extensions to plant are true a statement to the effect would have been re-assuring to the market. As it is, the accounts are due to be published only several weeks later.

The general tone of the markets is quietly steady. But for the weakness of Indian Irons the close for the week would have been firm. The drop in Indian Irons by nearly two points has resulted in a slight drop in prices for other counters as well.

Mr. J. R. D. Tata, speaking at the Annual Meeting of the shareholders of the Tata Iron and Steel Company, spoke rather enthusiastically regarding the future of the Company. As was pointed in these columns he suggested that the conversion of deferred shares into ordinary shares was necessary before any scheme for additional finance could be considered. He had no definite proposals regarding the issue of additional capital on bonus terms but it would appear that at a later stage some proposals might be made and the shareholders would be rewarded handsomely for their patience.

With the exception of Chitavalsah Jute Company Ltd., all the jute companies in the McLeod group have done fairly well in the half-year ended June, 1945. The results of Presidency and Empire in particular are satisfactory. The working of Presidency Jute Mills on the basis of a "Foster" unit resulted in an increase in earnings. Nellmarla Jute Mills Company was able to work 60 hours throughout the half-year as a result of loom purchases from mills under the same managing agency. The higher level of earnings for some of the mills, however, has not resulted in any increase in the distribution to shareholders and the dividends on ordinary shares have been maintained at previous levels in all cases. "Kelvin" paid Rs. 15 per ordinary share, Presidency 2 annas per share, Chitavalsah 8 annas per share and Nellmarla 12 annas per share.

The net profit, before providing for taxation and depreciation, of the "Empire Jute Mills Company Limited," is Rs. 8,77,419 against Rs. 7,59,257 for the previous six

months. The provision for taxation and compulsory deposit accounted for nearly the increase in earnings. The provision on account of taxation was Rs. 6.11 lakhs against Rs. 5.2 lakhs and for E.P.T. deposit Rs. 1.45 lakhs against Rs. 1.2 lakhs. The amount set aside to depreciation is unchanged at Rs. 50,000. After all the allocations, the ordinary dividend has been maintained, as stated above, at annas 8 per share. The amount carried forward is Rs. 11,037 against Rs. 9,618 brought in. The working of the mill at 60 hours per week throughout the half-year, with the purchase of loom hours from the Soorah Jute Mills, has been responsible for the improvement in earnings for the last accounting period. As the mills are electrically driven there was no serious difficulty on account of shortage of coal. If Labour were not in short supply it would have perhaps have been possible to report even better results.

The earnings of "Nellmarla Jute Mills Company Limited," for the same half-year have been very nearly maintained at the level of the previous working period. The net profit, before providing for taxation and depreciation, is Rs. 5,96,662 against Rs. 6,13,042. The provision for taxation is slightly lower at Rs. 4,15,200 against Rs. 4,36,000 while the provision for compulsory E. P. T. deposit is higher at Rs. 85,600 against Rs. 80,000. The amount set aside to depreciation is lower at Rs. 25,000 against Rs. 48,000. The ordinary dividend has been maintained at 12 annas per share. The amount carried forward is Rs. 10,563 against Rs. 10,950 brought in. "Chitavalsah Jute Mills," however, has not done quite well and there was a decline in the net profit, before providing for taxation and depreciation, to Rs. 6,57,522 from Rs. 9,24,600.

As provision for taxation was appreciably lower at Rs. 4.27 lakhs against Rs. 6.25 lakhs.

VITAL TRANSPORT

India must plan to develop her transport system if she is to fulfil the growing needs of industry and agriculture. For the quicker transport of both the implements of production and the products, India will require more lorries for her roads, and more railway lines, wagons, locomotives—all made of steel.

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, September, 28

The Calcutta Stock Exchange has been definitely steadier in the past week though business has been rather restricted and interest is mainly professional. With the rumours earlier in the week that Indian Irons might pay a higher dividend, there was a rise in the quotation for both Indian Irons and Steel Corporations. As it was also expected that coal companies might pay handsome dividends there was a rise in prices for prominent coal shares too. In mid-week, jute shares improved in sympathy with the general rise in the markets. In the last two days, Indian Irons have been rather quiet on selling by prominent operators on the rumours regarding a lower final dividend. Apart from the drop in the quotation in Indian Irons and Steel Corporations, the general undertone of the market should be regarded as steady. With the continued strength of the bullion market no important fluctuation in prices is expected before the Puja holidays.

The gilt-edged securities section has been steadier with a larger amount of business passing. 3½ per cent Paper quoted Rs. 102-4-6. There was some demand for terminable loans, 3 percent 1951-54 quoting Rs. 101-7, 3 percent 1957 Rs. 100-6, 3 percent 1949-52 Rs. 101-7 and 3½ percent 1947-50 Rs. 103-3. The long-dated issues were better with 3 percent 1970-75 at Rs. 97-4-6, 3 percent 1963-65 at Rs. 99-7 and 3 percent 1966-68 at Rs. 98-10. Cheap conditions have continued to prevail in the money market and the average discount rate has declined to 5 annas. 5 pias percent per annum from 6 annas percent last week.

There is no important change in Bank shares, Imperial Bank contributories being Rs. 562 and fully paid Rs. 2,200. Reserve Bank were uninteresting at Rs. 135-8 and United Commercial Bank at Rs. 26-8 premium. Nath Bank quoted Rs. 35-14.

In the Coal section, business has been large as usual. South Karanpura provided the feature of the week with a rise to Rs. 39-4 on special buying. The quotation at the end of last week was 36-14. At the higher levels, however, there was profit taking and the price is now Rs. 38-10. Burrakur improved to Rs. 45-7 on reports of a larger dividend and in sympathy with the rise in South Karanpura. But there has been a slight setback to Rs. 45-1 and operators are not inclined to push up prices pending definite news of earnings for the last half year. Bengal were unchanged at Rs. 755 for the most part of the week while Equitable were very firm at Rs. 74-4. Ghosick and Muslia were well held at Rs. 18-12 on the satisfactory showing of the accounts for the six months ended March 1945. Raneeunge quoted Rs. 64-8 and West Bengal Rs. 15-4. Central India were uninteresting at Rs. 13-4 while Central Kurkend were several points lower at Rs. 49. Bhalgora have been bought up to Rs. 25-10 from Rs. 24-12 last week. New Beerbhoom were unchanged at Rs. 40. New Manbhoom is paying a dividend of 30 percent, the same as for the previous accounting period. It is reported that the Company will be issuing bonus shares free to shareholders in the proportion of one share for every share held.

There was not much activity in the Jute section earlier in the week but on reports that further orders would be received by the Government prices firmed up and leading counters were one to two points higher. Howrah quoted Rs. 95, against Rs. 92-8 at the end of last week; Anglo-India Rs. 527-8 against Rs. 523; Champdany Rs. 280 against Rs. 271; Kamarhatti Rs. 802 against Rs. 783,

Kankarrah Rs. 690 against Rs. 667; and Megna Rs. 160 against Rs. 157. National were 10 annas higher at Rs. 35-10; Kinnison 24 points higher at Rs. 491, Nuddea 3 points higher at Rs. 142 and Orient 10 points higher at Rs. 357. Craig were unchanged at Rs. 13-4 while Presidency were better at Rs. 14-3.

In the Engineering section, as stated above, Indian Irons improved to Rs. 42-2 earlier in the week on speculative buying and reports of a higher dividend but have since come down to Rs. 41-4 on heavy selling. Steel Corporation also improved to Rs. 34-14 from Rs. 34-4 to quote again at Rs. 34-8. Braithwaite suddenly improved to Rs. 15-8 from Rs. 14-4, Texmaco were steady at Rs. 16-4 and Steel Products Rs. 8-9. Indian Standard Wagon were unchanged at Rs. 115 and Burn and Co., Rs. 435.

The expectations of larger cane supplies in the next season and reports that sugar mills have not done so badly in the last season as was feared, have led to general buying in the sugar section and nearly every share is higher. Carew and Co., were very strong at Rs. 31-14 while New Savan improved by one point to Rs. 24-9. There are reports that the Company might pay a higher dividend for the year ended 1945. Champa-run were very strong at Rs. 43-6 against Rs. 42-8 last week and Cawnpore Rs. 43-8 against Rs. 42-2. Ramnuggur Cane and Sugar were unchanged at Rs. 21-12; Samastipur, were a shade better at Rs. 21-14 while there was not much change in U. P. Sugar at Rs. 31.

Interest in the tea section is not appreciable though price changes have been in favour of sellers. Bishnauth were quoted at Rs. 46, Sapoi Rs. 25 ex-dividend, Hattikhira Rs. 29-4, Rydak Rs. 148 and Saruagon Rs. 46-12.

In the Miscellaneous section, Burma shares have been rather quiet with Burma Corp. at Rs. 6-4 and Consolidated Tin at Rs. 4-7. Calcutta Electric were stricky at Rs. 45-8 while C. T. C. after being lower at Rs. 52-14 ex-dividend have since recovered to Rs. 53-8. Karanpura Development have been very strong at Rs. 45 on reports that the company has done well in the past few months and that the company might possibly pay a large dividend. Frank Ross improved to Rs. 14 from Rs. 12-8 while Assam Bengal were unchanged at Rs. 19-14 and Dalmia Cement Rs. 16-12 cum-dividend. Indian Cables were very steady at Rs. 31-12.

Among paper shares, Titaghur were unchanged at Rs. 32-10, India Paper Pulp at Rs. 22-8 and Sri Gopal at Rs. 18-8. Midna-

pore Zemindary were Rs. 176-8 ex-dividend and I. G. N. Rs. 222. Assam Saw improved to Rs. 6-12 but the close has been easier at Rs. 6-8.

BOMBAY STOCK EXCHANGE

(From Our Correspondent)

Bombay, September 27.

With effect from Monday new trading hours have been adopted by the Stock Exchange authorities whereby there will be two sessions daily, the first from 12 noon to 2-30 p.m. and the second from 3 to 6 p.m. The important event of the week in the Annual General Meeting of the shareholders of the Tata Iron & Steel Co., Ltd. The Chairman had some encouraging, from the market point-of-view, remarks to say. Considerable expansion has been foreshadowed and orders for additional equipment have been placed and finalised. The Chairman also estimated that about Rs. 20 crores would have to be invested in the next ten years for the above purpose. The hopes that the question of any new schemes regarding the conversion of the Deferred shares into Ordinary shares will turn out at the meeting have not materialised, but the Board, according to the chairman, have not abandoned the original proposals.

(Continued on page 585)

THE INDIAN IRON & STEEL CO., LTD.

NOTICE.

Following the practice of previous years, to enable shareholders to obtain payment of their dividends as soon as possible, instead of waiting for the Annual General Meeting the Directors have sanctioned the payment by way of an interim dividend of Fourteen Annas per share on the Ordinary shares of the Company, ranking for dividend for the year ended 31st March, 1945, which shareholders must understand will be the final dividend for the year. The Transfer Books of the Company will be closed from 26th October, 1945, to 9th November, 1945, both days inclusive. Payment will be made on and after 22nd November, 1945, to those members or their mandatees whose names appear in the registers on the 25th October, 1945.

By Order of the Board,

BURN & CO.,

Managing Agents.

Calcutta, 28th Sept., 1945.

NOTICE.

NOTICE is hereby given that Government of India being the proprietors of Indian Patents Nos. :-

1. 29439—Dilution of raw rubber natural or synthetic by means of products obtained from vegetable fatty oils.
2. 29228—A process of obtaining gum like substances similar to gum tragacanth or carob seed gum from seeds of plants belonging to the family of Leguminosae.
3. 29620—Improvement in or relating to the sizing of cotton yarn with tamarind seed kernels.
4. 29870—Improvement in or relating to the concentration of rubber latex.

are desirous of exploiting these inventions in British India either on outright sale or grant, licenses for the working thereof. Full particulars may be had on application to the "President, Forest Research Institute and Colleges, P.O. New Forest, Dehra Dun."

FACT No. 5

TODAY as always India's cotton textile industry is pledged to serve India's public to the limit of its resources.

And the resources of the industry are not negligible; nearly 14% of the estimated world production of cloth is made each year in India. 407 mills contribute to this gargantuan total. Over ten million spindles. Over 200 thousand looms. Eight lakhs of workers are employed each day; three lakhs more than in the days of peace. In 1943-44, there was available for civilian consumption, 5,868 million yards of cloth in India, which is only 6% less than the pre-war average available supply.

So, you see, India's cotton textile industry remains faithful to its pledge to serve India's public to the utmost. The responsibility for the present cloth shortage does not lie at the door of the producers; through this war they have assuredly "delivered the goods."

Approach the Textile Controller of your province if you cannot obtain necessary cloth or yarn. Movement of cloth and yarn is entirely controlled by Government.

One of a series of statements of fact for the
information of the public.

ISSUED BY

THE MILLOWNERS' ASSOCIATION
BOMBAY

(Continued from page 583)

Another news welcome to investors is the announcement by the chairman at the annual general meeting of the Tata Hydro-Electric Power Supply Co., that the ban on the publication of the accounts of Tata Hydro-Electric Companies has been removed by the Government of India.

In the last two days, there was a disposition to take profits. There was also some selling pressure. Although the closing levels are lower than the highest levels for the week, they are higher on balance.

A firm tone was noticeable in the Gilt-edged securities market throughout the week.

Textiles had a good start and gained considerable ground on all round support. On Thursday, however, there was heavy selling

pressure, when the speculative counters sagged. There were violent fluctuations in *Bombay Dyeings* which after improving to as high as Rs. 2,015 fell back to Rs. 1,985 x.d. The quotation at the beginning of the week was Rs. 1,957-8. There was an improvement of about 25 points in the prices for *Sholapur Mills* to Rs. 7,225 on Wednesday. *Central India Spinning* in spite of the lower final dividend, announced during the week, improved to Rs. 405 from Rs. 385-8 to close at Rs. 404. A final dividend of Rs. 9 per ordinary share has been recommended by the Directors which with the interim dividend of Rs. 6 per share makes up the total distribution to Rs. 15 per share against Rs. 20 per share for the year ended June, 1943. *Stade shi* closed at Rs. 572, nearly 3 points lower while *Century* recorded a rise by 2 points

to Rs. 897/8. Other shares in this section were uninteresting.

Tata Deferreds were outstanding with a rise of over 35 points in the Engineering section. Good demand sent up the price to Rs. 2,358/12 on Monday from Rs. 2,342/8. The rise was thereafter continuous till Wednesday when realisation at the higher levels brought down the quotation by about 15 points on Thursday, the close being Rs. 2,378/12. The Ordinaries, likewise, gained by a few points but the close is slightly lower at Rs. 441. There was some selling in *Indian Irons* which were offered at Rs. 41/6 though the opening quotation was 8 annas higher. *Alcock* dropped to Rs. 403/12 from Rs. 408/12 while *Premier Construction* were throughout steady around Rs. 211.

SHOLAPOOR SPINNING & WEAVING COMPANY LIMITED

EARNINGS AFFECTED BY LOWER CEILING PRICES & SHORTAGE OF COAL

CHAIRMAN ON THE PROSPECTS FOR THE INDUSTRY

Addressing the Shareholders at the Seventieth Annual General Meeting of the Sholapoor Spg. and Wvg. Co., Ltd., held on 20th September, 1945, the Chairman, Mr. Bhabha said:—

Gentlemen:

Before coming to the object of this meeting I deem it proper that we should congratulate ourselves on the cessation of the World's greatest devastating war and should thank God that in his infinite mercy he has spared humanity from further death and destruction. Let us hope and pray that the statesmen of the World will succeed in devising a scheme whereby fuller and closer contact and understanding are established between different nations ultimately leading to a real and lasting peace.

The Report of the Directors to the Shareholders and the Profit & Loss Account and the Balance-sheet of the Company for the year ended 31st March 1945 have been in your hands for sometime past and with your permission I shall take them as read.

You will find that during the year under review the Company has made a net profit of Rs. 32,99,777/- without deduction of provision for taxes and depreciations on building, plant and machinery.

As compared to the last year's profit figure, undoubtedly, this year's figure represents a drastic fall. This in itself, let me assure you, does not and need not connote a reduced ability of the Company. Many reasons and forces work to which this result is attributable. In order to remove misapprehension and misunderstanding it is not out of place here to explain at some length a few of such factors that have operated to bring this result. You may all be aware of the systematic reduction in ceiling prices during the year under review. The total average reduction in cloth prices during this period came to about 5 annas per lb. But, besides this sort of a general factor, special circumstances were at work in the case of this Company. Owing to shortage of coal, operation had to be suspended for about 28 days during the year. The coal supply too was of an inferior quality resulting in loss of efficiency and preventing full operation of all the machines more so due to the antiquated nature of our boilers, in addition this, irregular supply of labour not to mention the difficulty of stores contributed towards the downward curve of the profits of the Company.

While on this topic I feel I must mention a few words about the comparisons between profits of various concerns that are at times sought to be made. Comparisons, as is commonly known are odious. Hardly ever do two mills work under similar conditions. The type of machinery, the Labour efficiency in a particular area, the types of goods manufactured contribute among other factors to the results of the unit. In the case of this Company let me stress that roughly 70 per cent of the machines are half a century old. The feeble additions and alterations made since the year 1930 were governed primarily by financial consideration and no suitable changes and additions were effected to ensure the maximum efficiency. Apart from this the mode of the valuation of stocks also affects the results and has to be carefully observed when making comparisons.

Suggestions have been made from certain quarters, and surprisingly enough from a few Preference Shareholders themselves, that the Preference Shares of the Company should be redeemed. Let me assure you that the Directors are fully aware that these shares are redeemable shares and are meant to be redeemed. At the same time let me frankly point out that, as must be evident from the accounts before you, the present cash position of the Company hardly warrants or makes feasible such a step. May I also tell you with the same frankness that the question of redemption can only be thought of after taking into full consideration

the financial needs both present and future of the Company. In this connection I may remind you that these Preference Shares were primarily issued for repayment of debentures and as you must have already noticed this purpose has been duly achieved not only from the funds forthcoming from these Preference Shares, but also with the assistance of the working funds available with the Company. The uncalled liability on these Preference Shares cannot be extinguished as is sometimes suggested. This has to be so kept intact for the purpose of drawing upon these sources when definite orders for machinery, which as is pointed out previously, is so badly needed by the Company, can be placed with the manufacturers. To enable you to get a clear idea of the absolutely imperative need of new machinery I can do no better than quote an extract from the speech of one of my predecessors at the Annual General Meeting of the Company held on 5th October, 1936. He has stressed the highly inefficient nature of the old machinery that the Company possessed and said—

"The Company must therefore be prepared to order new and up-to-date machinery of the value of Rs. 8 to Rs. 10 lacs. Unless the question is taken up in right earnest the prospects of the concern do not seem bright. The present profits are likely to diminish and eventually disappear. Your Directors have been giving anxious consideration to this question. But the problem was how to secure funds for this purpose".

Let me, Gentlemen, impress upon you that this problem confronting the Board is more acute to-day than characterised by our Company's Chairman 9 years ago. Besides it should not be forgotten that in institution of this size and capacity must have large amounts for working capital and during the past two decades you will find on investigation that the finance averaged no less than a quarter of a crore of rupees and had to be borrowed from Banks. Bearing in mind all these various factors your Directors cannot at this juncture think it advisable to consider any proposal for either extinguishing the uncalled liability on the Preference shares or of repaying them. I regret to have impress all this at some length in view of certain misunderstanding that are sought to be created by hasty and all ill-considered suggestions.

The dividend we are paying this year amounts to 25 per cent on the capital outlay as against 40 per cent declared last year. It has been deemed necessary to reduce the dividend level this year with a view to harnessing the resources of the Company for our future needs. Even some of the leading institutions both in Bombay and outside have thought it fit to make reduction in their dividends for 1944, ranging anywhere between 25 per cent and 50 per cent as compared with dividends paid by them in 1943. Gentlemen, I therefore hope you will not grudge this reduction considering that our Company enjoys the enviable position of continuously and without a break paying dividends through years of prosperity as well as adversity for over six decades. Let us hope that our mills will maintain the same earning ability for at least an equal length of time to come.

But while cherishing the best of hopes for the future of the industry, I feel, a note of caution needs to be sounded. There is hardly any room for self-complacency. Against the background of certain factors a policy of extreme caution alone can meet successfully the future problem of the industry. For the next couple of years the world's shortage of cloth will provide remunerative margins for the industry in the country, but, I feel, I must emphasise with all the force at my command that, after this short period of say, two or three years we shall have to face the keenest competition

from the reorganised industries of belligerent countries equipped with the latest efficiency devices. We shall also have to face competition internally with newly established mills. New labour problems are also sure to crop up and we shall be called upon to tackle them. Above all our replacements and renovations will be at a cost of nearly 2½ times the pre-war level. All these possibilities coupled with possibility of the continuance of the questionable taxation policy of the Government must make us cautious while forecasting the future. One thing is certain that if the industry is to live it must refrain from ordering or accepting reconditioned machinery for renovation and replacement purposes. Such machinery is likely to prove more a liability than an asset to the mills concerned.

It may be pointed out that certain benefits accrue to us under the excess Profits Tax Act. There is a compulsory deposit of Rs. 14,22,831 which will be repayable to us with interest 2 years after the end of war. Besides this, there would also accrue to us by way of refund of tax a sum approximating Rs. 5,77,898 on which income-tax will have to be paid at the then prevailing rate. But it must not be overlooked, that the provisions for depreciation at present allowed have been on the basis of the written down value of the plant and machinery for purposes of taxation and not on the replacement cost which is very considerably increased now, and that the proportion of refund of E.P.T. and compulsory deposit may have to be inadequate to meet our requirements in respect of replacements which might cost at least a crore of rupees at increased prices. I therefore feel that I must join the chorus of eminent industrialists in demanding an immediate revision of the taxation policy if the rapid development of the industry to the fullest extent possible is to be promoted.

With a view to checking the black market and stepping up production the Government have promulgated an order. This order came into the force on 1st June, 1945. Pursuant to this order mills will be required to devote 90 per cent of their loom capacity to manufacture what is known as 'Utility Cloth'. This term includes Dhooties, Sarees, Long cloth, Shirts, Suits, Sheetings, Mulls, Voils, etc. The principle underlying this scheme appears to be sound, but I am afraid in actual practice the scheme will not meet with complete success thought it may not go the way of 'Standard Cloth'. The tastes of the consumers cannot be changed overnight. Already I have a report that some of the consumers, who have seen samples of dhooties, sarees and shirts manufactured under the scheme have been displeased on account of their unattractive appearance and coarseness. Psychologically, people who are accustomed to buy particular type of cloth will prefer going without making any purchases of this variety or will just buy grudgingly their absolute minimum requirements. It is, therefore, doubtful whether this variety of cloth will find a ready market. Moreover, I feel that the problem of distribution has not been properly thrashed out by the Government.

EAST INDIAN RAILWAY

Annual Contract Item Costing Over Rs. 8,00,000/- Class I Contract.

Sealed tenders are invited for the following and will be received in the General Manager's office, East Indian Railway, 105, Clive Street, Calcutta on 22nd October 1945 at 12 noon.

Tender No. SP3E/185/Gb8 for supply of Bedstead Iron with spring mattress and mosquito pole complete 6'-6" X 3'-0" ordinary.

Tender forms with full particulars can be had from the office of the Controller of Stores, East Indian Railway, Calcutta on payment of Rs. 2/- per copy to the Treasurer, East Indian Railway, Calcutta and on production of his receipt, when applying for same.

Firms outside Calcutta, may however, remit the amount to the Controller of Stores, direct by money order. No refund is permissible after payment.

Tenders delivered by hand should be presented to the General Manager's office for registration and then put into the tender box outside the Dy. General Manager (Works) room by the tenderer or his representative.

*After transferring Rs. 25,000 from Dividend Equalisation Reserve.

Audited accounts for the half-year ended 31st May, 1945.

After making sundry adjustments the results for the half-year show a profit of Rs. 77,883-6-4. After adjusting the provision made for taxation and bringing forward the balance from last account and providing for Insurance Fund and Managing Agents' Commission there is a balance at the credit of Profit and Loss Account of Rs. 1,12,036-3-7. From this the directors recommend payment as follows:—

Dividends on Preference Shares at Rs. 3-8 per share, Rs. 35,000; and on Ordinary Shares at Rs. 6 per share, Rs. 54,000; thus absorbing Rs. 89,000 and leaving Rs. 23,036-3-7 to be carried forward.

The weekly hours of working under the Indian Jute Mills Association Working Time Agreement remained unchanged throughout the half-year at 54 hours per week with all looms operating. Out of a total of 1,369 working hours for the half-year the mill only worked 206 hours, however, and remained closed during the remaining 1,163 hours.

Credit in full has been taken in these accounts for sums recoverable from the Pool on account of Khoraki paid and loss incurred on supplies of subsidised foodstuffs to the labour during the closed periods. In view of the position of the Pool Fund, however, the credit taken in the accounts for loom hour payments has been limited to 50 per cent of the full amount due under this head from 1st July, 1944 to 31st May, 1945, less the amount taken into last half-year's accounts. Such loom hours as are paid for in full by the Industrial Pool will be cancelled under the Working Time Agreement. But apart from hours lost since the introduction of the Industrial Pool, the Company is entitled to make up a total of 998 hours which were lost before the Industrial Pool became effective on 1st July, 1944.

Audited accounts for the half-year ended 31st May, 1945.

After making sundry adjustments, the results for the half-year show a profit of Rs. 2,18,541-10-0. After bringing forward the balance from the last account and providing for Insurance Fund, Managing Agents' Commission and Taxation, there is a balance at the credit of the Profit and Loss Account of Rs. 1,86,647-10-1. From this the directors recommend payment as follows:—

Dividends on Preference shares at Rs. 3 per share, Rs. 15,000; and on Ordinary shares, at Rs. 7-8 per share, Rs. 1,05,000; thus absorbing Rs. 1,20,000 and leaving Rs. 66,647-10-1 to be carried forward.

The weekly hours of working under the Indian Jute Mills Association Working Time Agreement remained unchanged throughout the half-year at 54 hours per week with all looms operating. Out of a total of 1,364 working hours for the half-year the mill only worked 206 hours, however, and remained closed during the remaining 1,158 hours.

Credit in full has been taken in these accounts for sums recoverable from the Pool on account of Khoraki paid and loss incurred on supplies of subsidised foodstuffs to the labour during the closed periods. In view of the position of the Pool Fund, however, the credit taken in the accounts for loom hour payments has been limited to 50 per cent of the full amount due under this head from 1st July, 1944 to 31st May, 1945, less the amount taken into last half-year's accounts. Such loom hours as are paid for in full by the Industrial Pool will be cancelled under the Working Time Agreement. But apart from hours lost since the introduction of the Industrial Pool, the Company is entitled to make up a total of 750 hours which were lost before the Industrial Pool became effective on 1st July, 1944.

LOTHIAN JUTE MILLS COMPANY, LIMITED

Audited accounts for the half-year ended 31st May, 1945.

After providing Rs. 20,000 for depreciation and making sundry adjustments the results for the half-year show a profit of Rs. 5,21,007-10-3. After bringing forward the balance from the last account and providing for Managing Agents' Commission and Insurance Fund and after transferring Rs. 30,000 to Mill Renovation Reserve and providing Rs. 3,50,000 for Taxation there is a balance at the credit of Profit and Loss Account of Rs. 1,33,727-8-9 from which the directors recommend payment as follows:—

Dividends on Preference shares at Rs. 3-8 per share, Rs. 35,000; and on Ordinary shares at Rs. 5 per share, Rs. 50,000; thus absorbing Rs. 85,000 and leaving Rs. 48,727-8-9 to be carried forward.

The weekly hours of working under the Indian Jute Mills Association Working Time Agreement remained unchanged throughout the half-year at 54 hours per week with all looms operating. During the period to the 1st February, when the new arrangement as described in the last report became effective, the working of the Orient Jute Mills Company's extra 43 looms enabled the mill to make up 32 of the hours previously lost leaving a balance of 896 hours still to be made up under the Working Time Agree-

ment. This balance include 44 hours which were lost during the half-year owing to shortage of coal.

Mg. Agents.—M/s. Andrew Yule & Co., Ltd.

Authorised, Issued and Subscribed Capital—Rs. 20,00,000 in 10,000 Ordinary and 10,000, 7 per cent Cumulative Preference shares, both of Rs. 100 each, fully paid up.

ORIENT JUTE MILLS COMPANY, LIMITED

Audited accounts for the half-year ended 31st May, 1945.

After making sundry adjustments, and providing Rs. 40,000 for Depreciation the results for the half-year show a profit of Rs. 9,93,020. After bringing forward the balance from the last account and providing for Insurance Fund, Managing Agents' Commission and transferring Rs. 40,000 to mill renovation Reserve and providing Rs. 7,25,000 for Taxation, there is a balance at the credit of Profit and Loss Account of Rs. 2,11,088 from which the directors recommend payment of a Dividend on Ordinary shares at Rs. 6 per share absorbing Rs. 1,49,460 and leaving Rs. 61,628 to be carried forward.

The weekly hours of working under the Indian Jute Mills Association Working Time Agreement remained unchanged throughout the half-year at 54 hours per week with all looms operating. During the period to the 1st February, when the new arrangement as described in the last report became effective, the working of the extra 43 looms for 54 hours per week enabled the mill to make up 64 of the hours previously lost, leaving a balance of 915 hours still to be made up under the Working Time Agreement. This balance includes 44 hours which were lost during the half-year owing to shortage of coal.

GHUSICK AND MUSLIA COLLIERIES, LIMITED

Audited accounts for the half-year ended 31st March, 1945.

The raisings during this half-year has exceeded the target figure for these Collieries. Application has been made for the bonus receivable but as the amount has not been finally settled with the Central Government no Credit has been taken in these accounts for the same.

Development.—The directors have sanctioned a scheme for the development of the

bottom section of the Nega Seam which is virgin at Kalipahari Colliery. They have also sanctioned a scheme for the development of old quarry Zones in the neighbourhood of the Collieries. Works has already been started and the expenditure to date has been debited for the present to a Development Suspense Account in the Balance Sheet.

Accounts.—After providing for Rs. 7,500 for Depreciation and Rs. 90,333-12-0 for taxation including Excess Profits Tax and transferring Rs. 22,500 to General Reserve the amount standing at credit of Profit and Loss Account is Rs. 86,350-10-11 including Rs. 61,676-3-4 brought forward from the previous half-year which the Directors recommend be disposed of as follows:—

Payment of Dividend at the rate of As. 4-6 per share being equivalent of 18½ per cent per annum, free of Income-tax, Rs. 36,562-8-0; carry forward to next half-year Rs. 49,788-2-11; total Rs. 86,350-10-11.

Mg. Agents.—Messrs. Martin & Co.

Authorised, Issued and Subscribed Capital—Rs. 3,90,000 in 1,30,000 shares of Rs. 3 each, fully paid up.

SMITH STANISTREET & CO., LTD.

Audited Accounts for the year ended 30th June, 1945.

After providing for depreciation, taxation and all other charges, the Profit and Loss Account shows a credit balance of Rs. 98,481-10-4 which sum, it is recommended, should be dealt with as follows:—

Dividend for the year to 30th June, 1945, on the Preference Shares, at the rate of 10 p.c. per annum free of Income Tax Rs. 50,000-0-0; Dividend for the year to 30th June, 1945, on the Ordinary Shares at Four Annas per Share, free of Income Tax, Rs. 25,000-0-0; carry forward to next account Rs. 23,481-10-4; total Rs. 98,481-10-4.

Authorised, Issued and Subscribed Capital Rs. 5,25,000 in 10,000, 10 per cent Preference shares (Cumulative as to 7 per cent and non-cumulative as to the remaining 3 per cent) of Rs. 50 each and 1,00,000 Ordinary shares of Rs. 4 each, all fully paid up.

Synopsis of balance sheet as at 30-6-1945.

INDIAN COLLECTIVE FARMS, LTD.

Audited accounts for the period ended March 31, 1945.

The Company was registered on August 22, 1944. Preliminaries like the issue of prospectus, offer of shares to public and allotment of shares, etc., were completed by the middle of November, 1944.

The results now disclosed, therefore, pertain to the working of seven and a quarter months.

After providing Rs. 4,628-14-3 for depreciation and after writing off Preliminary Expenses by Rs. 4,161-15-2 and Commission on shares by Rs. 5,548/- the amount carried to the balance sheet is Rs. 1,49,082-5-0.

The Directors recommend that Rs. 40,000/- be taken to Reserve for taxes and that a dividend at the rate of six per cent per annum, free of taxes be paid on Preference Shares and a dividend of As. 8 per share free of taxes be paid on Ordinary Shares, which works out to slightly under 11 per cent per annum.

The results as depicted in the accounts, though satisfactory, are below the original estimates of the Directors, inasmuch as an area of 105 acres turned out to be a total failure owing to bad seeds supplied by the Government. Moreover, inspite of the best efforts of the management, adequate agricultural machines or implements were not available in time as was expected. It is hoped that, in the current year, results will be more satisfactory.

The contract with the Eastern Command for cold weather vegetables was completed as stipulated; and summer vegetables, too, have been delivered according to contract. The Company is now delivering vegetables due for monsoon months and has on hand all the arrangements for growing and supplying next cold weather vegetables.

The Directors have great pleasure in announcing that the Managing Director, who flew to England recently has successfully negotiated a contract with the British Ministry of Food in connection with which the Farm will have to grow and supply, during the coming winter of 1945-46, apparently for civil consumption, the huge quantity of 50,00,000 lbs. of canned tomatoes, samples of which have been appreciated by the authorities of the British Food Ministry. The M.n'stry would have liked to place an order for double the present quantity, but the Company did not venture to commit themselves to that extent owing to the short time at the disposal.

This contract is the first of its kind to be entrusted to an Indian canner. The British Food Ministry has also expressed its desire to continue its orders in the event of the first contract being fulfilled successfully.

The contract with the British Ministry of Food will require substantial funds as a large Canning Factory and residential buildings for nearly 400 factory personnel will have to be built before the end of this year. Irrigation arrangements for the tomato plantation thus required and extra machinery will also involve expenses. The present paid-up Capital of the Company stands at Rs. 21,00,000/- (divided into 10,000 Preference Shares of 100/- each and 1,10,000 Ordinary Shares of Rs. 10/- each). The Government

of India had given its consent to issue Rs. 25,00,000/- worth of shares under Rule 94A of the Defence of India Rules. Of this, Rs. 4,00,000, divided into 40,000 Ordinary shares of Rs. 10 remain unsubscribed this sum did not appear necessary when the subscription list was closed and the Directors had no desire at that time to over-capitalise the Company. In view of the recent developments, as stated above, they now propose to offer these 40,000 Ordinary Shares in the first instance to the existing shareholders; and such portion as is not subscribed for by them will be offered to the public. The Board is also considering the question of getting these shares underwritten.

Managing Director.—Mr. R. Datta

Authorised and Issued Capital—Rs. 25,00,000. **Subscribed**—Rs. 21,00,000 in 3,475, 6 per cent Preference shares of Rs. 100 each, and 84,620 Ordinary shares of Rs. 10 each, both fully paid up.

Synopsis of balance sheet as at 31-3-1945.

RAJGARH TEA CO., LTD.

Audited accounts for the year ended 31st December, 1944.

The Season's work resulted in a profit of Rs. 46,640-9-2, after providing for depreciation. After bringing in the balance from last year, providing for taxation, charging Managing Agents' commission and transferring Rs. 10,000 to General Reserve, there remains a balance of Rs. 40,343-11-5 at credit of Profit and Loss Account. From this the Directors recommend payment of a dividend of Re. 1-4 per share absorbing Rs. 25,000 leaving a balance of Rs. 15,343-11-5 to be carried forward.

A total crop of 3,191 maunds was secured of which 2,331 maunds were sold for Export at an average price of As. 15-3 per lb. and 860 maunds were sold for Internal consumption at an average price of As. 11-10 per lb. The reduction in crop was due to the great shortage of labour and there was again a heavy loss on sale of rice and other foodstuffs to the labour force at concession rates.

Estimates for the Current Season have been framed for a crop of 3,500 maunds to cost Rs. 1,81,949.

Mg. Agents.—M/s. Andrew Yule & Co., Ltd. **Authorised, Issued and Subscribed Capital**—Rs. 2,00,000 in 20,000 shares of Rs. 10 each, fully paid up.

Synopsis of balance sheet as at 31-12-1944.

MUTTRA ELECTRIC SUPPLY COMPANY, LIMITED

NOTICE

is hereby given that the Thirty-seventh Ordinary General Meeting of the above-named Company will be held at the Registered Office, No. 12, Mission Row, Calcutta, on Thursday, the 18th October, 1945, at 11-0 a.m. for the purpose of receiving and considering the Directors' Report, the Statement of Accounts and Balance Sheet for the half-year ended 31st March, 1945, and to transact any other ordinary business of the Company.

The Share Transfer Books of the Company will be closed from the 12th to the 18th October, 1945, both days inclusive.

By Order of the Board,
MARTIN & CO.,
Managing Agents.

Dated, Calcutta,
The 29th September, 1945.

JUBBULPORE ELECTRIC SUPPLY COMPANY, LIMITED

NOTICE

is hereby given that the Thirty-seventh Ordinary General Meeting of the above-named Company will be held at the Registered Office, No. 12, Mission Row, Calcutta, on Thursday, the 18th October, 1945, at 11-5 a.m. for the purpose of receiving and considering the Directors' Report, the Statement of Accounts and Balance Sheet for the half-year ended 31st March, 1945, and to transact any other ordinary business of the Company.

The Share Transfer Books of the Company will be closed from the 12th to the 18th October, 1945, both days inclusive.

By Order of the Board,
MARTIN & CO.,
Managing Agents.

Dated, Calcutta,
The 29th September, 1945.

(Continued from page 581)

lakhs and E. P. T. deposit was only Rs. 80,000 (Rs. 1.35 lakhs) it was possible to maintain the distribution on ordinary shares at 8 annas per share. After providing for depreciation Rs. 85,000 (Rs. 1 lakh) the amount carried forward is slightly lower at Rs. 20,574 against Rs. 27,802 brought in.

The decline in earnings appears to be mainly due to the increase in working expenses. Sales at 57.29 lakhs were very much the same as the figure for the previous half-year of Rs. 57.34 lakhs. There is an increase of nearly Rs. 1 lakh under manufacturing expenses while salaries and wages are higher by about Rs. 50,000. As stocks show a reduction from Rs. 10.86 lakhs to Rs. 9 lakhs the output at the mills was possibly at a slightly lower level. So that working expenses seem to have appreciated rather abruptly.

In the case of Nellimaria sales were higher at Rs. 39.26 lakhs against Rs. 36.49 lakhs and stocks reveal a small decline to Rs. 6.91 lakhs from Rs. 7.63 lakhs. Manufacturing expenses showed a rise of nearly Rs. 2 lakhs as also salaries and wages by Rs. 37,000. But having regard to the increase in the value of sales by about 12 per cent it would appear that working expenses for this unit under the same managing agency were kept in check and were relatively lower.

The net profit, before providing for taxation and depreciation, for the Presidency Jute Mills for the same accounting period was Rs. 2,31,602 against Rs. 68,702.

The increase in earnings over the previous half-year was, as stated above, due to the mills working on double-shift basis. Earnings for the current half-year might make better showing as arrangements in regard to double-shift working are complete and the full complement of 400 looms are now working. The provision for taxation is Rs. 10,000 (nil) while the amount set aside to depreciation is Rs. 95,000 (Rs. 90,000). The Directors have thought it prudent to transfer Rs. 58,374 to General Reserve so that the dividend has been maintained only at 2 annas per share. The amount carried forward is slightly higher at Rs. 45,766 against Rs. 40,028 brought in.

The development of the several industrial undertakings of which Tata Sons Ltd. are the Managing Agents, and the promotion of similar undertakings in the future have made and make it increasingly necessary for Messrs Tata Sons Limited, to broaden the basis of management of such undertakings by associating with the Managing Agency Company persons of high administrative ability or experts in their particular lines. These objects can only be achieved by the promotion of a separate company owned by Tata Sons Ltd., which would attract to its Board persons fulfilling qualifications mentioned above. A separate Managing Agency company would promote efficiency and would be the means of extending greater services and facilities to the principal companies by the Managing Agents than at present.

For these and similar reasons Tata Sons Ltd. have promoted the new company—Tata Industries Limited—of which they own the whole of the share capital. By the new Managing Agency Agreement (which the members are requested to approve) Tata Industries Limited are to be appointed Managing Agents for the unexpired residue of the period provided by the existing Managing Agency Agreement in favour of Tata Sons Ltd. Tata Sons Ltd. have agreed to become a party to the new Managing Agency Agreement and to

guarantee the performance by the Managing Agents of its terms and conditions. They will also retain a direct interest in the commission paid to the new Managing Agents, because they have an arrangement with them whereby the new Managing Agents will pay them a four annas share in the commission. The result is that in their capacity as guarantors, sole shareholders and co-sharers. Tata Sons Ltd., will retain a predominating and guiding interest in the Agency and will be fully responsible to the Company for the due conduct of the business of the Company.

The Board recommend the members to approve and sanction the transfer of the Managing Agency to Tata Industries Limited and the execution of the new Managing Agency Agreement. This contract will be on the same lines as the existing Managing Agency Agreement, except that Tata Sons Ltd., will be a party to the agreement for the reasons stated above.

Under clause 1 of the new agreement Tata Industries Limited are appointed Managing Agents from the 1st day of November 1945 for the remainder of the period of the existing Managing Agency Agreement. That period, however, consists of a fixed period expiring on the due date plus a further indefinite period until the Mg. Agents resign or are removed from office by a Special Resolution of the Company. As the Indian Companies Act (as amended in 1936) restricted the period of existing Managing Agency Agreements to a maximum of 20 years from the 15th day of January 1937 the existing Managing Agency Agreement with Tata Sons Ltd. must expire at the latest on the 14th day of January 1957. Therefore a suitable provision has been inserted in this clause

INDIA COLLECTIVE FARMS, LTD.

Notice is hereby given that the First Annual General Meeting of the above-named Company will be held at its registered office at 15, Clive Street, Calcutta, on 6th October, 1945 at 11 a.m. to transact the following business:—

- (1) To receive, consider and adopt the Directors' report and the audited Balance Sheet and Revenue account of the Company for the year ended 31st March, 1945.
- (2) To elect Directors.
- (3) To appoint auditors and fix their remuneration.
- (4) To declare dividend as recommended by the Directors.
- (5) To ratify the modifications of the vendor's agreement as effected by the Directors.
- (6) To consider the sub-joined resolution and, if thought fit to pass the same with or without any modification, as a special resolution. "Resolved that in regulation 86 of the Articles of Association of the Company the word 'Ordinary' wherever it occurs be deleted."

Note.—This amendment is proposed to be made to bring the regulation of the Company in line with the modern practice of making no discrimination between the holder of Preference Shares and of Ordinary Shares.

Share transfer books of the Company will remain closed from 1st to 8th October, 1945, both days inclusive.

By order of the Board,
Sd. R. DATTA,
Managing Director.

providing that in any event the period of office of the Managing Agents shall terminate on the 14th day of January 1957. Under clause 12 (1) of the new agreement Tata Sons Ltd. guarantee the observance and performance of the Agreement by the Managing Agents.

(2) Prohibits the revocation of the guarantee during the continuance of the Agreement.

(3) States that the existence of the guarantee will not prevent the Company from enforcing or having recourse to all or any other remedies which the Company may have against the Managing Agents in the event of any breach of the terms of the Agreement.

Clause 13 of the New Agreement provides for arbitration both in respect of disputes between the Company on the one hand and the Managing Agents on the other as also between the Company on the one hand and Tata Sons Ltd. on the other. Clause 12 in the existing Agreement provides for similar arbitration between the Company and the Managing Agents.

The Companies affected are:

- (1) Tata Oil Mills Company Limited;
- (2) Svadeshi Mills Limited;
- (3) Tata Mills Limited; and
- (4) Ahmedabad Advance Co., Ltd.

WATCH-DOG.

A happy combination

A horse that wins a classic event proves his speed and stamina beyond dispute. In other words strength and endurance are the two qualities which men need most for success in life. Ladcovine happily combines the properties that give both strength and stamina.

PROGRESS OF PLANNING:

Let me congratulate you on your balanced, strongly worded, bold and useful gossip appearing in "Indian Finance" dated September 29, 1945.

Many people who have never had much faith that the Government of India, as at present constituted, can do any good are not disappointed at the state of things. When Government spokesmen said that post-war schemes mean and must continue to mean post-war schemes, one should have understood that it was just a convenient way of putting off indefinitely any scheme of reconstruction.

That is precisely, as you have pointed out, what has happened. There are, as far as we could see, no plans which could be put into effect immediately. The period of transition from war to peace is one of confusion. And purposely, it seems, the Government have directed the attention of the people to the elections.

Though completely true, few could have written so frankly about the Viceroy's Council Members. They are mere ornaments representing none but themselves. It is good they go in time and in grace.

Personnel, it is true, is the real bottleneck. The routine and redtape of the Secretariat will only hinder the progress of planning. For putting plans into effect one should combine thoroughness, quickness, and vision. I would suggest that the new recruits to the I.C.S. be not trained in the routine way but given a training suitable to our changed needs.

A. L. Trivedi.

THE FAMINE COMMISSION REPORT:

The war is just over, though unexpectedly. We are on the threshold of a new era. Though unfortunately we did not begin to plan early enough, yet we are plan-minded. And for making people plan-minded "Indian Finance", more than any paper, deserves credit. Our plan should be both industrial and agricultural. A comprehensive survey of the potentialities and needs of the country has to be undertaken before any plan is formulated.

This survey, on the agricultural side, has been done though in an inadequate measure, by the Report of the Famine Commission. Though one may not think that the Report gives constructive suggestions for averting future famines, the report has discussed at full length the Indian food problem and that is saying a great deal. What are the food requirements of the country, is the first question to be answered before any large-scale agricultural reform is effected. Thus, I think, the Famine Commission Report has done a service if the Government would care to profit by it.

M. R. GHOSH.

SHAREHOLDERS BEWARE:

We refer to your Issue dated 15-9-45 wherein in Bouquets and Brickbats' caption under the heading of 'Shareholders beware' reference has been made to Mr. J. J. Kapadia, Secretary of the Bombay Shareholders Association. We feel interested about the Bombay Shareholders Association and would be glad to know more in detail of them and their activities. We request you to enlighten us about it.

Further we inform you that we feel the necessity of a similar Association at Calcutta as the interest of Shareholders may not be ignored at any time. We suggest you to express your view on the

point through your much esteemed Financial Journal of India.

RAMPRASAD BRIJLAL

RURAL ECONOMY IN SERAIKELLA:

The account which Eavesdropper gives after surveying Rural Seraikella is interesting and valuable. So much is talked about the effects of the war on the rural population in different parts by people sitting at Olympian heights that one is at a loss to understand what the losses and gains of the war on Indian agriculture are.

The prices of agricultural commodities have been high. Cattle and poultry had been in great demand by the army, vegetables and fruits were sold at very good prices.

But who are the people who benefited by these? Did the big landlords alone benefit by it? Or did the small landholders who are said to be born and brought up in debt also benefit by these? How far have they succeeded in paying off their old debt? These questions can be answered only by conducting such surveys as Eavesdropper has conducted in Seraikella. The readers expect many such surveys.

B. K. SHARMA.

TAX DETECTION DEPARTMENT:

I read with interest the arguments for and against a Tax Detection Department.

With the inauguration of new reconstruction schemes many new departments might have to be created. Many existing departments should be given new work. With Government spending large amounts of money the chances of officials making money are great.

One way in which the tone of the whole administration could be raised is by having selfless Ministers in the Central Government. The Congress Government in the Provinces had such men. They boldly booked the officials who were corrupt. Thus to stop corruption one has to be above it.

Another is to have a department which will keep watch and ward over the whole administration, the income and expenditure etc.

**THE CONCRETE ASSOCIATION OF INDIA, THE TECHNICAL ORGANIZATION OF****THE CEMENT MARKETING CO. OF INDIA LTD.**DISTRIBUTORS: **ACC & DALMI** CEMENTS**Fact
Parade****New Species of Mica discovered:**

The discovery of a new species of mica is announced in a paper just published by the Indian Academy of Sciences. It has been given the name of Mahadevite in honour of the discoverer, Prof. C. Mahadevan of Andhra University.

The physical properties and chemical composition of this mica have been found to be quite different from those of the well-known species.

Plans for development of deep sea fishing:

Deep sea fishing was one of the subjects considered by the conference of fisheries officers of Madras and Ceylon, held in Madras on Sept. 28 and 29.

Departmental exploitation of in-shore and off-shore fisheries and marketing, including delivery of fish to bungalows by motor vans conducted by Ceylon Government, were explained by the Ceylonese representative.

Art in Industry Exhibition:

The fifth All-India Art in Industry Exhibition will be held in Cawnpore on October 13.

British Chemical Plant Expert in Delhi:

Mr. Norman Neville, Director of the British Chemical Plant Manufacturers' Association and Food Machinery Industrial and Export Group, has arrived in India for a two months' stay to investigate India's long-term requirements for chemical plant and food machinery. He is now in Delhi.

Sone Valley Project:

The Sone valley project, on which the U.P. Government are at present engaged, will, it is believed, be the largest hydro-electric scheme in India. The biggest catchment area of the Sone lies in Surguja and Rewa States. The engineers and surveyors of the Irrigation Department, U.P., recently visited the Surguja State and fixed 20 river and rain-gauge stations to obtain statistics. The Surguja Durbar are assisting the U.P. Irrigation Department in collecting the required quota, states the Publicity Officer, Eastern States Agency.

Gift of Diamonds to Sir C. V. Raman:

The De Beers Consolidated Diamond Mines Company at Kimberley have presented Sir C. V. Raman with 16 selected African diamonds in their natural state for purposes of his scientific investigations. When these are completed, the diamonds will be deposited as a permanent exhibit in the Science Museum, which is being established in Bangalore under the auspices of the Indian Academy of Sciences.

Reconstruction work in France:

France hopes to rebuild next year 10 to 20% of the houses destroyed during the war, the Reconstruction Minister, M. Raoul Dautry, announced.

Other targets for the coming year include reconstruction of 20,000 to 40,000 damaged industrial buildings.

Even this "starting up" period would require 500,000 French workmen and 1,000,000 foreigners, mostly Germans, and equipment and coal from Germany or the U.S.A.

Britain Avoiding use of Panama Canal:

To avoid using the Panama Canal, dues for which have to be paid in dollars, the British Ministry of War Transport issued instructions altering the routes of ships sailing from New Zealand and Australia to Britain.

Ships from New Zealand to Britain will, in future, normally travel via Cape Horn, although in certain cases they may be routed via Suez.

In the case of ships from Australia, coal-burners will sail via the Cape of Good Hope and oil burners via the Suez.

Coal shortage in Shanghai:

The Chinese are negotiating with the American authorities in Chungking for a loan of five 10,000-ton ships to transport coal from Indo-China and Northern China to Shanghai, where there is at present only enough coal to last another fortnight, General Tang Enpo, Commander-in-Chief of the Shanghai-Nanking area disclosed.

At a special summoned conference of heads of key Chinese civil and military organisations, General Tang Enpo said that

all hope of averting a crisis rested on the negotiations.

Grants to Research:

The construction of a Technological Block of the Glass and Ceramic Research Institute in Calcutta at an estimated cost of Rs. 2,21,000, a block grant of Rs. 60,000 per annum to the Madras University for meeting the cost of a Leather Research and Technological Institute and a grant of Rs. 75,000 per annum to the Tata Institute of Fundamental Research, Bombay for work on astrophysics and experimental physics and cosmic ray research, were approved at a meeting of the Governing Body of the Council of Scientific and Industrial Research held in New Delhi on Sept. 21, under the chairmanship of Sir Ardeshir Dalal.

Women workers in Mines:

It is understood that the Government of India intends to re-impose the ban on employment of female workers underground. The ban is not likely to come into force before February next.

Please return empty bottles, caps and cases to our selling agents, who will pay you Rs. 2-12 per dozen bottles with caps, and Re. 1 per case with lids.

(Continued from page 595)

There are now certain pre-audit departments, where money once obtained is spent according to the wish of the department. There should be both pre and post audit for every item of expenditure. The system of giving contracts requires also examination. A contractor should have the necessary finance, the technical knowledge and not least important, the reputation as an honest man, to be included in the list of approved contractors kept by Government. These are some suggestions to root out corruption.

C. V. MISRA

NATIONAL PLANNING COMMITTEE.

Whatever be the results of elections, it is reasonable to assume that popular Governments will come into existence in the Centre and in the provinces. How will they begin their work? Will it not be too late for them to begin planning schemes?

The present Central Government has been waiting for the war to end. And when the war did end, it has no plans to put into effect. This experience has a lesson.

The National Planning Committee, which has already done useful work should work hard and chalk out plans which can be put into effect as soon as popular governments are formed. There is no time to lose.

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

Cheap conditions continue to prevail in the money market and call rates are nominally 1 per cent. in Calcutta and 1 per cent. in Bombay but it would appear that banks are not free lenders as they expect that, with the approach of the Puja holidays, there might be some withdrawals and are building up a suitable cash position. At the auctions of treasury bills held this week, there was a larger amount of applications, the total being very much higher at Rs. 6.22 crores against Rs. 4.79 crores. But bidding was less keen and the average discount rate records a token increase to 5 annas 6 pies per cent. per annum from 5 annas 5 pies per cent. last week.

The reason for the poorer response was perhaps also due to the smaller amount of maturities. Against sales of Rs. 2 crores, maturing treasury bills were only Rs. 86 lakhs. In the next three weeks maturing treasury bills are Rs. 41.5 lakhs, Rs. 58.47 lakhs, Rs. 25 lakhs and Rs. 15 crores. As the Provincial Governments also have been asking for short-term accommodation, it is very unlikely that the average discount rate will go down further.

Week ending	Applications	Tenders at Rs. %	Allotment %	Tenders at Rs. %	Allotment %	Amount accepted (Rs. crores.)	Rate Rs. As. P.
2-10-45	6.22	99-14-9	full	99-14-6	20%	2.00	0 5 6
25-9-45	4.79	99-14-9	full	99-14-6	20%	2.00	0 5 5
18-9-45	4.47	99-14-9	full	99-14-6	41	2.00	0 6 0
12-9-45	2.83	99-14-9	full	99-14-6	68	2.00	0 5 1/2
5-9-45	5.18	99-14-9	full	99-14-6	93	2.00	0 5 11
20-8-45	4.85	99-14-6	full	99-14-3	35	2.00	0 6 9
21-8-45	3.34	99-14-6	full	99-14-3	63	2.00	0 7 0

The returns of the Reserve Bank for the week ended September 28 do not show any important change, there being a further drop in notes in circulation to Rs. 1,141.84 crores from Rs. 1,143.84 crores. Notes issued were higher at Rs. 1,162.74 crores with the return of rupee coin from circulation. Notes held in the banking department were Rs. 20.9 crores against Rs. 18.35 crores. Rupee coin have improved consistently in the past four weeks, the latest figure at Rs. 18.15 crores shows a rise of Rs. 64 lakhs over the previous week.

In the banking department there is a further rise in Central Government balances to Rs. 383.44 crores from Rs. 379.46 crores while Other Government accounts are slightly lower at Rs. 23.16 crores against Rs. 23.42 crores. Bank deposits have risen further to Rs. 111.13 crores from Rs. 105.98 crores. The increase in Central Government balances is due to the receipt of sterling for Rs. 7.13 crores during the week. There is a slight increase in investments to Rs. 20.84 crores from Rs. 20.30 crores.

The statement of the Imperial Bank of India for the same week shows a slight decrease in deposits to Rs. 242.76 crores from Rs. 243.14 crores but the demand for funds has been on a very small scale. Total advances were over Rs. 4 crores lower at Rs. 250.51 crores Investments also have dropped by Rs. 18 lakhs to Rs. 34.16 crores there being a jump in cash balances to Rs. 56.29 crores from Rs. 52.93 crores.

The statement of scheduled banks for the week ended September 21 shows a slight increase in Demand liabilities to Rs. 645.56 crores from Rs. 644.71 crores and Time liabilities to Rs. 254.22 crores from Rs. 253.26 crores. Cash on hand has dropped by Rs. 18 lakhs to Rs. 34.16 crores as also balances with the Reserve Bank by Rs. 7.86 crores to Rs. 106.11 crores.

THIS IS NOT A PROSPECTUS BUT AN ANNOUNCEMENT.

Consent of the Central Government has been obtained to the issue under the Defence of India Rules 94A. It must be distinctly understood that in giving consent the Government of India do not take any responsibility for the correctness of any of the statements made or opinions expressed with regard to them.

A copy of the Prospectus has been filed with the Assistant Registrar of Joint Stock Companies, Chittoor.

The subscription list will open on 12th October 1945 and close at the discretion of the Directors, but not earlier than 19th October, 1945.

Application will be made to the Madras Stock Exchange Association Ltd., for listing the Company's shares.

PROSPECTUS OF THE VEGETOLS LIMITED

(Incorporated under the Indian Companies Act, 1913)

Authorised Capital - Rs. 12,00,000

Issued Capital - Rs. 12,00,000

Divided into:

1,000 6 per cent Tax-free cumulative participating preference shares of Rs. 100 each.

4,000 6 per cent Tax-free cumulative participating preference shares of Rs. 50 each; and

90,000 Ordinary shares of Rs. 10 each.

Payable as follows:—

Rs. 50 per share on application and Rs. 50 per share on allotment on preference shares of the face value of Rs. 100 each and Rs. 25 per share on application and Rs. 25 per share on allotment on preference shares of the face value of Rs. 50 each.

On Ordinary shares: Rs. 2-8-0 on application, Rs. 2-8-0 on allotment, and the balance in two equal instalments of Rs. 2-8-0 per share on calls at the discretion of the Directors.

The Preference shares confer on the holder the right as and from the date of allotment to a participating cumulative preferential dividend at the rate of 6 per cent per annum, free of tax in British India, on the capital from the time being paid up thereon, and to a dividend of 7 per cent per annum in the event of 10 per cent or over being declared on ordinary shares and to an additional 1 per cent dividend for every additional 10 per cent on ordinary shares, subject to a maximum of 9 per cent per annum, and also to a right in the event of winding up to payment of capital and arrears of dividend in priority to the ordinary shares.

Of the above issued Capital, the Directors and their friends have agreed to take up 39,900 ordinary shares and 510 preference shares of the aggregate value of Rs. 4,50,000 and the balance 50,100 ordinary shares and 4,490 preference shares of the aggregate value of Rs. 7,50,000 are now offered to the public at par for subscription

DIRECTORS:

1. OBJECTS

The objects of the company are those that are set out in the Memorandum of Association and in particular for production and manufacture of Vegetable products or Vanaspathi. Vanaspathi is a rich wholesome article of food and healthy substitute for butter and ghee. At present, Vanaspathi manufacturing companies are very few and are unable to cope with the growing demands for vegetable products. In recognition of the importance of this industry, the Government of India are making efforts to promote and hasten the progress of the Industry in the country.

2. SPECIAL FEATURES.

The proposed factory will be in Chittoor Town, the heart of groundnut producing area with a railway station close-by and good road communications. The plant has been designed on most up-to-date lines and will be supplied by a well-known firm in London. Then complete plant will be ready within 24 working weeks. The manufacturing capacity of the plant will be 15/10 tons per day and provision has been made to extend production to 25 tons at an early date.

3. BROKERAGE:

Brokerage not exceeding 2½ per cent will be paid to recognised brokers through whom the applications will be received.

4. MANAGEMENT

Messrs. Khalsar & Company are appointed as the Managing Agents for a period of twenty years from the incorporation of the Company. They will be paid an office allowance of Rs. 500 per month from the date of incorporation which will be raised to Rs. 1,500 per month from the date from which the factory commences work plus a commission at the rate of 10 per cent per annum on the nett profits of the company so long as the dividend on ordinary shares is 9 per cent or below. The commission will be raised to 15 per cent if the dividend on ordinary shares exceeds 9 per cent. The nett profits of the company will be calculated in accordance with the provisions of Section 87 C(3) of the Indian Companies Act, 1913.

The remuneration of the Managing Agents excludes salaries wages, etc. payable to all persons employed in the Company's business and all other expenses incurred by them on behalf of the Company.

5. APPLICATION FOR SHARES

Applications should be made on the form which may be obtained at the registered office of the company or from Messrs. G. S. REDDI & Co., Stock and Share Brokers, 10, Armenian Street, Madras or from the Imperial Bank of India and their Branches.

Copies of the prospectus and the company's memorandum of association can be had from the Managing Agents or from the Company's Bankers and Brokers.

The Indian Capital Market—II*

In this second article in the series on the Indian Capital Market, we shall deal with the gilt-edged section. The financial and other policies connected with the war have wrought three important changes in the Indian gilt-edged market: (1) The annual capacity of this market to absorb new loan issues of the Government is now many times the prewar capacity; (2) The total of government securities outstanding in the hands of the public is now three times the prewar figure; and (3) The prewar process of declining borrowing rate has continued, and it was found possible for the Government of India to issue a 2½ percent loan recently. These are all healthy developments; and, although some of them are not peculiar to this war, World War II is totally different from its predecessors with regard to the record low rates at which defence loans could be raised. From the point of view of the colossal sums that have to be raised for reconstruction purposes, it is of the utmost importance to ensure that the gilt-edged market in the coming years continues to function in as healthy a fashion as during the war years.

The first and most important question that arises in this connection is with regard to the capacity of the Indian gilt-edged market to provide adequate response to the reconstruction loan issues. In simple terms, will it be possible for the governments to raise all the reconstruction capital in the Indian market as successfully as they have been able to raise all the War Loans? Especially during the second half of the war years, the rupee loans placed on the market every year have shown striking expansion. In broad terms, it may be said that as much as Rs. 250 crores per year have been flowing into the coffers of the Treasury through the various defence loans issued from time to time. It may be taken as certain that the minimum required for the successful accomplishment of reconstruction plans is Rs. 250 crores of new loans every year.

In certain quarters, there is definite scepticism with regard to the continued ability of the Indian gilt-edged market to put up Rs. 250 crores annually. We have always had with us our Jeremiahs with regard to the future of gilt-edged values. Not infrequently, the ranks of these Jeremiahs have been strengthened by our Finance Members and some of the highest authorities shaping India's financial destiny. Sir Jeremy Raisman was the first Finance Member who maintained a robust confidence in the credit of the Indian Government and demonstrated that confidence repeatedly in his new loan issues. Even during his regime, the gloomy prophets managed to gain their point occasionally. One such occasion was the disastrous fall that was allowed to occur in gilt-edged values after the declaration of war. "Indian Finance" has stood for the definite conviction that the financial and budgetary position of India is in no way inferior to that of any other country; that the Indian capital market has adequate resources to put up all the money that may be required by the Government; that the rating of the credit of India must be as high as that of any other country; that India should be able to borrow on the cheapest terms possible; and that the correct gilt-edged outlook is one of thorough self-confidence. The history of the gilt-edged market in the last decade and a half clearly proves that the confidence of "Indian Finance" in India's credit is overwhelmingly vindicated.

These friends of ours who predicted a collapse of gilt-edged values as inevitable in war years have forgotten their discomfiture and are now advancing the view that, whereas it was possible through rigid controls to support and maintain gilt-edged prices during the war, the relaxation or abandonment of such controls in the peace years is bound to result in considerable setback in the prices of government securities. The argument which they plausibly put forward in support of their view is that the large-scale subscriptions to defence loans were mainly due to unprecedented inflation of currency; and that, once deflation starts in right earnest, response to new loans will be greatly reduced. This argument deserves to be carefully studied.

It is true that there has been an enormous expansion of currency; but it is necessary to ascertain what part this expansion of currency has played in public subscriptions to new loans. Active note circulation in India has increased from Rs. 180 crores on the eve of the war to Rs. 1,140 crores at the end of last month. It is a truism that, in providing supplies to large numbers of military personnel in advanced theatres of war, the authorities looking after supplies have to keep in their hands considerable amounts of currency. Such theatres of war are far removed from places where it will be possible to secure from banks currency as and when required. In other words, cash in the till has to be plentiful from the point of view of keeping the Army in the war theatres adequately

supplied. The extra currency thus required for Army requirements may be put at Rs. 100 crores. It will thus be appreciated that, so far as increased currency circulation to this extent of Rs. 100 crores is concerned, it has nothing to do with public response to new loans.

At the same time, large parcels of currency have been immobilised for reasons connected with tax-evasion. It is a notorious fact that important business communities in this country have practised tax-dodging on an extensive and colossal scale; and that the savings accruing from such tax-evasion have, necessarily, to be kept in the form of currency notes or rupee coin or valuables like bullion. Such immobilised currency may be described as black currency. The lowest estimate of such black currency is Rs. 500 crores. This colossal fund of black money may be available fitfully for black market operations, but is as good as useless from the point of view of deposits of banks or new loans of governments.

It will thus be seen that, of the present active note circulation of Rs. 1,140 crores, Rs. 600 crores is immobilised so far as subscriptions to new loans are concerned. The effective active circulation is, therefore, barely half of the published figure. Thus viewed, the argument that links increased subscriptions of new loans with colossal inflation of currency loses much of its force.

The fact of the matter is that the spacious ocean of new loan totals is made up not by the drop by drop of thousands of individual subscribers, but by the forty or fifty hydra-headed streams of applications from banks. If, for verification of this argument, the subscription list of any individual loan issue in recent years be analysed, it will be found that between 80 and 90 per cent of the total subscriptions have come from banks and investment institutions.

If this be true, it follows that the main criterion in regard to the future capacity of the Indian gilt-edged market is linked up with the future growth of deposits of banks. Let us, therefore, proceed to examine the present and prospective position of bank deposits. Thanks to higher wages and salaries, better margins of profit and increased productivity on the one hand, and lesser opportunities to spend money on consumer goods on the other hand, the savings accumulated by various classes of the population during the war years have been far larger than in prewar years. One of the natural results of these vastly increased savings is the unprecedented expansion in the deposits of banks.

Total bank deposits (Demand and Time) have increased from Rs. 236.6 crores on September 1, 1939 to Rs. 899.77 crores on September 21, 1945. As deposits increase, the banker has to plan the distribution of the additional funds under various categories. He retains a portion in the form of cash; he invests another portion in treasury bills; he utilises a bigger portion for investment in government securities; and he makes advances for trading purposes as and when he gets the opportunity. The readiest and largest investment with each increase in deposits is in government securities. Our contention, therefore, is that the most direct and most substantial cause of increased subscriptions for new loans is the substantial increase in the deposits of banks. We are thus led to the questions: Will there be any fall in deposits in the peace years? Generally speaking, what view is to be taken of the future of deposits of banks?

Those who are inclined to be pessimistic by nature take the view that, with the increased availability of consumer goods, the tendency of the public will be to utilise part of the past savings for purchases of goods which they had missed so long. In line with this reasoning, the conclusion drawn by this school of thought is that there will be some reduction in the deposits of banks in the coming months. It is equally important to remember that it is not only savings that swell the deposits of banks, it is trade advances that create deposits. The latter fact is hardly appreciated in this country. Assuming that the Government are earnest in fulfilling promises of postwar reconstruction schemes, we shall be safe in stating that, pari passu with the decline in war expenditure, reconstruction expenditure will mount up. War expenditure has been mainly destructive. Reconstruction expenditure will be fruitful. Given disbursements on the same scale as heretofore, economic activity at a high level can be surely predicted. Increased economic activity means that various kinds of businesses will require finance. Banks will thus be able to make trade loans and advances on a bigger scale than during the war years. The parties to whom these advances are made will, in their turn, make disbursements by way of payment for supplies or wages for workmen. These disbursements will come back to the banks in the form of deposits. It is in this sense that advances create deposits. We have no doubt in our mind that, provided the reconstruction policy of the govern-

*The first article in the series appeared in the issue dated September 29, 1945.

ments is sincere and effective, the upward trend of bank deposits will be fully maintained in the after-the-war years. If deposits continue to rise, the inevitable consequence is that banks will continue to invest in government securities.

To sum up. We believe that the Government of India, the Provincial Governments as well as some of the progressive Indian States are bound to go ahead with thorough-going schemes of reconstruction planning. These should account for considerable disbursements of money both on account of the Governments and of other interests. These disbursements will keep up the purchasing power of the population and extend and accelerate economic activity. Increased economic activity connected with reconstruction projects must provide ample opportunity for banks to make trade advances on vastly greater scale. These trade advances will create more deposits for banks. Banks, in their turn, will invest in government securities a portion of the new deposits.

To the question we raised at the beginning of this article as to the future capacity of the Indian gilt-edged market, our answer is that, given the right economic policy and the right financial technique, the Indian gilt-edged market may be trusted to provide all the capital necessary for reconstruction plans. The capacity of this market will not be less than Rs. 250 crores per year. In fact, allowing for the accelerated progress of bank deposits on account of greater opportunities for trade advances, we are inclined to assess the future capacity of the Indian gilt-edged market at Rs. 300 crores per annum.

There are other aspects of the Indian gilt-edged market which we have to defer to a subsequent issue.

Five-year Reconstruction Plan for Bengal

Details of the post-war development plan for Bengal are now available for the public. The Bengal government have now announced the first instalment of a 20-year development plan envisaged for raising the standard of living of the people and laying the foundations of abiding agricultural prosperity. There has been a severe criticism regarding the delay in the publication of the Post-war Development Plan in this Province but those who know the difficulties of the local Government will appreciate very well that planning is not after all merely a departmental job and, unless many of the important prerequisites of the plan are within reach, the authorities cannot finalise their schemes even if they have done with the spade work. Owing to the floods, cyclones, famine and its aftermath and enemy bombing, the social structure and the finances of this province have been badly shaken and the Province has been plunged in debt. Heavy expropriation of land has happened and even to-day the people of Bengal have not yet fully recovered from the after-effect of the extraordinary events which happened for the past two years and more. A plan can be evolved only with reference to the capital expenditure necessary for it and as regards the financing of the plan the local Government could not come to any decision until they were aware of the degree of help that could be expected from the Centre. Now that the Government of India have given them an assurance of a grant to the tune of about Rs. 69 crores for the first quinquennium after the initiation of the Post-War Development, the local Government could hurry up and finalise their departmental schemes.

The plan that is now placed before the public consists of about 199 schemes and covers all branches of nation-building activity such as agriculture, land reclamation, health service, transport, education, etc. It is not a blue print since the Government have not committed themselves to the schemes put forward and, in fact, both the objectives as well as the schemes may change on further examination of the schemes proposed. The plan follows the familiar lines of classification of schemes into: (1) Special Priority Schemes for meeting the extension of Post-war demands for trained personnel, (2) All-Provinces Schemes to cater to the basic needs of all parts of the province for intensive development, (3) Particular-Area Schemes to be introduced in some chosen places and (4) Concentrated Areas Schemes for an all-round development of a few selected areas. The proposals which number 199 are also well arranged into four categories according to the periods when they would be taken up for action, though individual priorities amongst the schemes scheduled for a particular period are not as yet clarified. The above classifications are intended to give a clear picture of the tempo of development envisaged in different parts of Bengal regarding the different schemes proposed. Provision is made for the training of staff and preparatory work essential to putting the plan into execution. The sudden

collapse of the Japanese evidently has not been thought of and hence it is laid down that the first post-war quinquennium should commence from April 1, 1947. Now that events have moved fast it would appear that the initiation of plans should begin long before the specified date.

The capital expenditure involved during the first five-year period will be about Rs. 159 crores excluding the expenditure on National Highways and the allotment for the different heads are as follows:

	(In lakhs of Rs.)
Agriculture	17.45
Animal Husbandry	4.25
Agricultural marketing	92
Communications, roads and transport	45.25
Irrigation & drainage	37.19
Abolition of Permanent Settlement (acquisition in the Sundarbans in the first 5 years)	12.00
Forests	2.43
Co-operative schemes	2.58
Fisheries	1.53
Industries & Labour welfare	5.31
Rehousing; pilot scheme for Calcutta bustees	50
Public health & Medical relief	13.59
Education	8.00
Strengthening of General Administration	7.57

The notable feature of the plan is the provision for liquidating the Permanent Settlement system of land tenures. It should be recalled here that the Flood Commission gave consideration to this aspect of Bengal's economy and recommended in 1940 the gradual abolition of this system in the course of about 30 years. It is generally agreed on all hands that any programme of rural economic development will encounter special difficulties in the Permanently Settled areas and unless the Government gets full control over the rural economy and assumes direct contact with the cultivators, a powerful filip cannot be given for agricultural resuscitation. Advanced opinion has always held that the zemindary system which developed under peculiar circumstances in the last century is out of date, socially injurious, financially unsuited to the growing demands of the State and politically dangerous since it breeds social discontent which may at any time explode into an unhealthy movement. Exaction in the Permanently Settled Areas are merely historical abuses which, it is felt, should be corrected without further delay. The zemindars have, in the past denied irrigation facilities to the cultivators and encouraged sub-infeudation. The system of Permanent Settlement has also encouraged excessive fragmentation of holdings and stifles the spirit of enterprise and initiation among the rural classes. While one school of opinion feels that if Bengal should prosper on the agricultural side and if the wide gap between the upper classes and the mass is to be filled satisfactorily, the Permanent Settlement must be abolished at the earliest possible convenience. But there are also others, as for instance, the majority of the Famine Commission appointed last year to go into the Bengal famine, who hold the view that an early abolition of the zemindary system has serious financial repercussions and, in view of the devastating effects on the middle classes, political opposition may arise if a drastic change in the tenures is attempted at present. Possibilities of reforming and controlling the Permanent Settlement should therefore be explored. Besides, there are well informed people who doubt if the abolition of the zamindari would help the ryots since what is achieved by the liquidation of the Permanent Settlement is only the elimination of the middlemen but not a direct economic service for the underdogs. The Final Report of the Famine Enquiry Commission which has recently been published, pleads for a further study of the working of the zemindary system in provinces other than Bengal in order to learn valuable lessons from the growing defects of the Permanent Settlement. The matter is so serious that only a national Government should tackle it. So the Government of Bengal have already accepted the recommendations of the Flood Commission and the present plan incorporating earlier decision will surely provoke opposition from several quarters.

Another factor which is depressing the prospects of Bengal's agriculture is the periodic floods which devastate the countryside and the five-year Plan now proposed includes three interesting schemes to subjugate the river Damodar which has the evil reputation of being called the River of sorrows. The three schemes are (1) the Damodar flood control project, (2) the construction of a barrage across the river Damodar above Burdwan and two Canals one on either side of

(Continued on page 604)

Soil-Stabilisation

By S. N. DUTT, A.M.I.C.E., M.I.E. (Ind.)

Soil-stabilisation is the process of hardening the ordinary soil to make it strong to bear weight. From this it is necessary to make it impervious to water both from below, above and sides of the mass of the material in order to maintain the hardness. The cause of failure of most of the mofussil roads is the damage caused by seepage, percolation, and capillary action of water. Different soils require different treatment and different percentages of cement and water. The control of moisture cement content in the mix is a determining factor for success.

Soil is stabilised by mixing the proper quality of soil with the cement which varies from 8 to 15 per cent by volume of the cement compacted mixture depending on the nature of the soil. Soil having a high colloidal or cement requires more cement. Where the proportion of clay is high, sand and/or gravel may be mixed in certain proportions in order to reduce the proportion of cement, and to reduce the clay content per unit volume.

Chemical and mechanical properties should be considered to decide soil and aggregate mixture.

Soil-stabilisation when properly carried out produces a material which is not brittle and is not liable to crack like a purely concrete surface. It possesses the quality of small yield under heavy traffic and traffic under hard and narrow wheels and thus damage is minimised.

The writer of these Notes has devised a method to seal out water from under the base of the Stabilised Soil, (and if necessary from the sides) and to give the Stabilised Soil a dry base to rest on. This is done by providing—

- An Anti-Seepage Base. This is made on the prepared formation or Sub-grade.
- A Plycrete Sealing Coat laid on the Anti-Seepage Base.

The provision of (i) and (ii) seals out the water and ensures the success of Soil Stabilisation. (i) and (ii) may be used independently instead of in combination as conditions may require. Details are covered by Patent Rights.

The depth of the compacted road may be 4" to 8" depending on the duty to be performed. Footpaths need not be more than 3" thick. Such a road with 6" depth of compacted soil when properly constructed will take 400 to 500 vehicles in 24 hours.

One would not imagine that the crushing strength of stabilised soil could be as high as 124 tons per sq. ft. or nearly a ton per sq. inch. Some tests carried out at the Government

The following comparison is made between a 6" Cinder Concrete Road and a 6" Soil-Stabilised Road (as constructed by PLYCRETE LTD.) one mile in length by 10 ft. wide.

MATERIALS REQUIRED.					
FOR SOIL-STABILISED ROAD.				FOR 1:2:4 CEMENT CONCRETE ROAD.	
	Quantity	Number of		Quantity	Number of
	Cft.	Tons.	lorry loads.	Cft.	Tons.
1. Cement	...	200	80	...	254
2. Sand at 100 lbs. = 1 cft.	200	9	4	16,000	720
3. Stone chips 25 cft. = 1 ton	2,000	80	32	...	...
4. Bitumen at 225 gallons = 1 ton	2,400	11	..	2,640	12
5. Sodium Silicate	...	1	5	26,000	650
6. Cinder	...	...	...	...	...
Total	...	...	121	...	655
					534 lorry load = 1,335 tons.

NOTE:

1. SAND generally had to be carried from a distance. The difference in the quantity is 15,800 cft. Leakage and wastage in transport and handling is considerable, and this will not be less than 10 per cent. Hence 1,600 cft. additional quantity had to be carried which is equivalent to an additional 72 lorry loads. But carried which is screened before transporting by lorry. But during road transit much of it got powdered. This was not less than 20 per cent to 30 per cent. Cinder had to be screened again on the site of the work. Thus a minimum of 20 per cent additional quantity of cinder had to be carried, namely 5,200 cft. which is 130 lorry loads.

2. Hence the excess materials required for one mile 10 feet wide Cinder Concrete Road was about 534 + 72 + 130 = 736 lorry loads equal to 1,840 tons which is equivalent to 92 Broad Gauge wagon loads or nearly 2 train loads.

Assume that progress is required at the rate of 1/4 mile a day and that cinder and sand have to be carried from a distance of 10 miles away. For this distance a lorry will perform 3 trips a day (lorry of 2 1/2 ton capacity). Therefore the additional lorry loads required per day for the additional materials will be 368. For this a minimum of 123 lorries per day would be required. Allowing 25 per cent for breakdown and servicing an establishment

Test House, Alipore, with samples of Stabilised Soil cut out from actual work done by us have actually given this result. Military roads constructed by us with a thickness of 6" Stabilised Soil in a certain area near Calcutta and used by heavy American lorries have proved very satisfactory in service. One would be justified in assuming that such a Stabilised Soil Road will comfortably carry a moving load of 10 tons per sq. ft. with ample margin and factor for safety.

The top of the Stabilised Soil should be sealed in a satisfactory manner to prevent water percolating down and to act as a wearing surface. This may be done with—

- A layer of Bitumen with 3/4" to 1" hard stone metals, or with
- A skin of 3/4" to 1" thick 1:2:4 cement concrete laid and compacted before the Stabilised Soil has finally set.

The intimate mixing of the soil and cement is very necessary to ensure success. We have found in our experience that mixing in a concrete mixer or even mixing by hand with care produces a better and more intimate mix than one can obtain by using disc harrows and graders. Compaction of this material will be better done with sheep's foot and pneumatic tyred rollers than with ordinary hand rollers. The compaction may be done in two layers but in that case the time interval should be the minimum, i.e. the second layer must follow immediately behind the first layer to avoid a plane of cleavage. In fact, to ensure proper compaction when the thickness is more than 6" compaction in two layers is desirable.

The very large quantities of stone, sand and bricks necessary for the soling and topping of an Aerodrome Runway and Taxi Tracks as also of roads, godown floors, dumping areas, platforms etc. are difficult and expensive to obtain both in time and money. The Railway and Motor Transport required to handle these large quantities of materials becomes under the present conditions unobtainable. SOIL-STABILISATION is the answer. Nearly 90 per cent of Road and Railway Transport is eliminated. A full sized Runway may be constructed in 4 week's time, commencing from the Subgrade up. Such constructions cost only about half as any other method.

Ground and Subsoil water travels up through bricks and khoa when laid and used in Roads and Runways and Floors. Brick and khoa absorb water by capillary and seepage. Such Roads and Floors therefore fail.

The attached Statement gives a comparison and comparative cost of 6" Cinder Concrete Road and 6" Stabilised Road constructed at the same time in a Military Area for use of Military lorries during the season 1943-44.

(as constructed by PLYCRETE LTD.) one mile in length by 10 ft. wide.

of 154 lorries would be obviated, if the method of Soil-Stabilisation is used. The capital cost, maintenance cost, cost of petrol and of consumable stores have not been considered.

If Rail transport be used, then a full train load per day will be required for the additional quantities of materials. This will be obviated by the use of the Soil-Stabilisation method of construction.

COST

Soil-stabilisation road as done by Plycrete Ltd. about Rs. 60 per 100 sq. ft. or Rs. 31,700 for a mile.

Cement cinder road as done by other Contractors, about Rs. 125 per 100 sq. ft. or Rs. 66,000 for a mile.

SUMMARY

At the rate of 1/4 mile a day of 10 ft. Road, Plycrete Ltd. besides halving the cost and effecting a considerable saving obviates one necessity of an establishment of about 154 lorries and overcomes the difficulty of obtaining cinder or other aggregates.

An immediate start and any required rate of progress is possible.

Special Article

Political Vs. Commercial Loan Terms

By PAUL EINZIG

(By Air Mail)

LONDON, Sept., 25.

There is room for two opinions whether it would be to the advantage of Great Britain to solve her post-war difficulties without any external financial assistance. However this may be, the Government is evidently anxious to obtain American financial assistance. The United States Government, on their part, are equally anxious to grant such assistance, apart from other reasons, in order to maintain American exports to Great Britain and the sterling area. The reason why in spite of this fundamental agreement on the main issue it is difficult to come to terms lies in the difference of opinion about the nature of the assistance to be granted. At the one extreme there is the suggestion, voiced in un-official British and American quarters long before the Washington negotiations, that the United States should grant Great Britain an outright gift of between \$3,000,000,000 and \$5,000,000,000. At the other extreme a very substantial section of American opinion insists that American assistance must in no circumstances result in any additional burden to the American taxpayer. The adoption of this formula would mean that the British Government would have to raise a loan in New York on such terms as its credit there is assessed; or at any rate that the United States Government would lend it the money on such terms as it has to pay to the American investor for a loan of corresponding magnitude and maturity.

This solution is opposed by the British Government which, in fact, rejected out of hand the American proposal that goods ordered under Lend-Lease should be financed by a 2-3/8 per cent 30-year loan from the Import-Export Bank, on the ground that Great Britain is determined not to contract any liability unless she can see her way of meeting it. The object of the Washington discussions conducted at the time of writing is to find a formula under which assistance could be obtained without contracting any such liability. Whether the British Government would consider a loan with a nominal interest rate, or even an interest-free loan, acceptable from this point of view, or whether it would insist on a grant in aid (possibly in the form of a retrospective application of Lend-Lease for the Cash-and-Carry period) is not evident from any statement published up to the time of writing. What is quite clear is that London wants the assistance on "political" as distinct from "commercial" terms.

In this respect, too, there seems to be agreement of principle with the United States Government. The latter seems to be fully prepared to grant assistance on non-commercial terms, to the full limit to which Congress is prepared to go in that direction in spite of its effect on the burden of the American taxpayer. Its attitude is explained in part on the ground of "enlightened self-interest." Official circles in Washington are aware that the general political and economic advantages arising to the United States by a recovery of Great Britain as a result of assistance on non-commercial terms would heavily outweigh the costs of the transaction to the American taxpayer. But the main reason why the United States Government is prepared to forgo the benefits of commercial terms is that it wants to secure instead some very important political concessions, highly advantageous from the point of view of American foreign trade and monetary policy. To put it bluntly, in return for forgiving Great Britain some \$200,000,000 per annum (the approximate cost of the interest and sinking fund payment of a loan of \$4,000,000,000 repayable over 50 years, if issued on commercial terms) the United States would obtain the termination of the Ottawa Agreement and of the Sterling Area system, and the acceptance by Great Britain of the Bretton Woods plan.

The above formula may admittedly over-simplify a highly complicated matter. It does not allow, for instance, for the willingness of the United States to reduce her tariff wall in return for the termination of Imperial Preference. But it stands to reason that, when it comes to the discussion of details, the terms insisted upon by the American negotiations will be such as to secure a net increase of the American export surplus on balance. For the Americans, export trade is still first and foremost an employment-creating device. From this angle, there would be no point in securing an increase of American exports to the British Empire to replace British exports, if the additional American employment thus created were to be cancelled out by a corresponding increase of British

exports to the United States. It is thus substantially correct to sum up the situation by saying that, in return for forgiving the whole or part of the cost of a commercial loan, the United States is determined to secure an increase of the American export surplus at the expense of British exports. The latter would be kept down, if the British Government should accept American assistance on political terms, partly by terminating Ottawa and the Sterling Area, and partly by making a devaluation of sterling more difficult through the application of the Bretton Woods plan.

From a British point of view, the choice of political instead of commercial loan terms would mean that, in return for saving something like \$200,000,000 per annum (or much less if the loan is granted on semi-commercial terms) political concessions would be made which would cost, in the long run, many times the amount thus saved, in the form of loss of markets in the Sterling Area, the acceptance of unnecessary imports, and the diversion of purchases from the Sterling Area to the United States. The argument that this country could not afford to borrow on commercial terms is, therefore, entirely false, for borrowing on political terms would reduce the country's capacity to pay to a much larger degree than would the cost of a commercial loan.

If this country must secure eternal financial assistance (which, as pointed out at the beginning of the article, is open to argument) then it is far cheaper in the long run to borrow on commercial terms which would leave unimpaired Great Britain's capacity to safeguard her trade balance and thus secure the dollars required for the service of the loan.

Those who hold the opposite view adopt an attitude similar to that of the Austro-Hungarian Ambassador of Constantinople at the beginning of this century, who recommended to his Government that, in order to save the cost of hiring boats to convey personnel of the Embassy across the Bosphorus, the Austro-Hungarian warship stationed there should be used for that purpose. "And who pays for the coal?" was the comment scribbled on the margin of his report by Emperor Francis Joseph. The Ambassador was only concerned with his direct and obvious expenditure. It was outside the range of his vision that his proposed petty economy would have meant a less obvious but none the less real and much more considerable increase of expenditure in another direction. It is to be hoped that H. M. Government will not take a similarly narrow view, and instead of following the illusion of saving dollars on its public debt at the cost of deteriorating the trade balance, it bears in mind the country's total capacity of making external payments.

(Continued from page 602)

the river to irrigate the districts of Howrah, Hooghly and Burdwan and (3) the construction of the Moore reservoir. All things taken together form one multi-purpose project for flood prevention, irrigation, soil conservation, navigation and power generation. When these major irrigation schemes are completed the peasantry and livestock will have greater security of life and the province as a whole will gain in irrigation and electric generation for industrial purposes.

Among the other schemes which deserve mention are the road plan aiming at the construction of 3,400 miles of new roads, reclamation of two lakhs acres of waste land under the supervision of a provincial Land Utilisation Board, schemes for the re-settlement of 10,000 ex-soldiers and laskars on 190 blocks comprising of two lakhs acres of waste land, eradication and prevention of the growth of water hyacinth. Targets are also fixed for animal husbandry, veterinary service, waterways development, irrigation and drainage, medical and health and co-operative societies. Large-scale industries have been omitted from the purview of the plan because it is for industries covered by the five-year plan are salt, silk and the fishing industries. Town planning and rehousing are not taken in detail but Rs. 50 lakhs have been allotted for financing a pilot scheme for rehousing Calcutta's bustees in order to gain experience and information for a large-scale planning afterwards. The plan for educational development aims at primary education on the lines of the Sargent Report. For successful initiation the plan requires adequately trained personnel and provision has also been made for a "prodigious" expansion of the machinery of the Government. It is also made clear that the Five-year Plan will be put into effect bearing in mind the recommendations of the Rowlands Committee. The requirements of this province are indeed many and the schemes evolved can by no means be characterised as too ambitious. How far the provincial authorities will be able to gear up taxation and arrange for financing the successful initiation of the plans remains to be seen.

Editorial Notes

Industrialisation in States:

In his address to the Committee of States' ministers at their recent meeting at New Delhi, Sir Manubhai Mehta has raised one or two important issues which have an immediate bearing on the economic development of the States. Sir Manubhai on the one side complains that the Political and Finance Department have been putting impediments on the way of particular States, and on the other mentions certain demands from the Government of India in respect of the taxation policy of the States. As instances of obstruction from the Central Government he mentions the latter's refusing permission for collecting capital for a starch factory in Gwalior, and on another occasion, for locating a sugar factory in the State, which the management wanted to shift from Sind on account of the Hur menace. Possibly other States also may have similar complaints to make against the Central Government. It is no use discussing the pros and cons of these cases. What has got to be recognised is the utter lack of co-ordination implied in the occurrence of such conflicts. Curiously enough, even when the need for absolute co-ordination on an all-India basis is recognised on all hands the States seem to be preparing their post war plans, more or less on independent basis; how far the Central Governments' general directions on planning are adhered to in these different plans will be known only when the final comparing of notes takes place. On the issue of lower taxation in States, as providing an incentive to the inflow of capital, the example of Mysore quoted by Sir Manubhai cannot be held to be conclusive. The natural resources of a region is always the predominant factor which determines industrial possibilities. But it cannot be denied that under competitive conditions, capital flows where it sees prospects of the largest return. When capital was not adequate to meet the needs of the whole country, and when the Indian States lacked the industrial sense, differences in taxation levels were relatively less important. But in the postwar period, when there will be keen competition in industrialisation, between different regions, and capital will be abundant, taxation levels in the States will be found to be an advantage. The demands of the Central Government that the States should fall in line with British India in this respect will have to be met, though in the pace of adjustment, differences in local conditions will have to be taken into account.

Sterling Balances:

The A.I.C.C. has through one of its Resolutions given formal expression to the national demand for an early settlement of the credit balances due to India kept in London in sterling. The resolution answers the plausible contention raised by British interests that the balances are heavily inflated. The redemption of India's sterling obligations and accumulation of balances thereafter have arisen out of the supply of goods and services provided by India for Britain's war effort. These goods and services were obtained by Britain at controlled prices, a fact admitted by the British Parliamentary Committee which investigated the subject. It can even be said that in view of the conditions of living the masses in India had to put up with during war, the exodus of vast quantities of materials represent a sacrifice of which their money value can scarcely be considered an equivalent. There has as yet been no official pronouncement on Britain's intentions with regard to sterling Balances. But the absence of any such declaration only aggravates a situation already become highly disquieting by the entanglement of the whole issue with that of American credits for Britain. In her own interest, America might insist on Britain's liquidation of portions of the sterling balances. It is expected that the sterling balances might thus become useful for India to build up dollar credit to purchase American machinery. To the extent it becomes useful in this way India has no room for complaint. But it shifts the whole issue to a relatively irrelevant plane. If leaves the fate of the sterling Balances to the exigencies of Anglo-American financial bargaining. Even if it may introduce factors helpful to India, a fair settlement is possible only if the issue is settled independently between the debtor and the creditor country.

Agricultural Statistics:

In spite of a few erratic attempts in the past to establish an efficient machinery for the collection of agricultural statistics the actual progress achieved is very little. Data available regarding the actual conditions in Indian agriculture in 1942 and 1943 were unreliable and misleading and this was not a little responsible for the official bungling on the eve of the Bengal famine. The latest Famine Enquiry Commission, as several commissions did before, pleads for an improvement in the enumeration of agricultural data and the machinery to be employed for the purpose. The Final Report reveals that the statistical machinery is particularly unsatisfactory in the permanently settled areas. In Bengal, Bihar and Orissa the estimates of acreage under cultivation are very defective, the data regarding the jute cultivation being held as an exception. The Commission prefers the plot-to-plot enumeration system to the random sample survey method. But if this is to yield best results adequate staff should be provided and the area to be covered should not be unduly large. Plot-to-plot enumeration system may be costly but unless it is properly conducted the whole attempt may prove futile. It is also made clear that the area to be covered should under no circumstances be increased just for the purpose of economy.

As the Commission points out, "Under the present system the yield per acre in a particular area is determined by multi-

plying the normal yield per acre by the condition factor in the crop in the year in question." The errors likely to occur in this method are not negligible and should be avoided if a correct food policy is to be evolved. The Commission also favours the extension of the system of random sample survey now conducted by the Indian Statistical Institute and the Imperial Council of Agricultural Research in all the provinces so that valuable lessons can be learnt regarding the use of this method in future. A plea is also entered for classifying the edible oils under the head 'food crops' in the Government of India statistical publications.

The suggestions of the Commission are valuable and it is gratifying to note that the provincial governments are keenly aware of the urgency for collecting full data regarding the agricultural conditions. Scheme 28 of the Bengal five year plan aims at the "collection of crop statistics and data about the economic condition of the agriculturists and the economics of agriculture generally, including study of the cost of cultivation and the preparation and maintenance of a cost of living index." The Irrigation Adviser to the Government of India recently administered a warning that unless a proper food policy is evolved another famine will be in the offing. It is to be hoped that the enormous importance of setting up a statistical machinery will be realised by the authorities in their attempts to improve the administrative system.

Employment Exchanges:

The Central Government have invited the opinion of all Provincial Governments on a proposal to use the employment machinery for making recruitment to government posts. The Exchanges who will have full information regarding demobilised service personnel, will also have prompt information regarding vacancies in Government service. And the Exchanges will be submitting from time to time a list of qualified men from their Registers to the appointing authorities concerned. The Exchanges will receive copies of all advertisements from Provincial Governments and Public Service Commissions and they will bring the vacancies to the notice of the qualified candidates and also give them necessary directions in respect of application and interview. The Exchanges in short will be more or less a liaison between the appointing authorities and the candidates among exservice men. If the government intention is only to prefer as far as pos-

sible ex-servicemen for jobs, the elaborate procedure does not seem necessary. The employment Exchanges have a full list of Exservice personnel with complete details of each person's qualification and experience. Names from the list of persons with special qualification might be placed with the Provincial Governments and Public Service Commissions and such lists could be kept up-to-date by deleting from time to time the names of those absorbed. From this list the appointing authority can draw its recruits; the Government can spare themselves the cost and labour involved in advertisements and the non-service candidates will be saved the expenses and trouble of interviews and the disappointment that would invariably follow. Only when suitable candidates are not available from among the exservice men the Government need advertise the jobs on hand. There may be theoretical objections to the procedure. But it has the merit of simplicity over and above the advantages already mentioned. Between the Employment Exchanges and the Public Service Commissions, the prospects of non-service candidates are bound to be less than otherwise. Under these circumstances the usefulness of open advertisements for all jobs also becomes limited.

Development of Poultry Industry:

The food position in India gives rise to grave concern as the general standard of nutrition is low and a rapidly growing population throws an ever-increasing strain on the food resources of the country. A proper food policy should aim at supplying a balanced diet to people. The production of cereals which is the staple article of diet must be increased by placing more land under cultivation, by increasing irrigation facilities sowing of improved varieties of seeds etc. But cereals cannot supply the proteins, minerals, and vitamins essential for a normal and healthy growth. Human diet can be improved by increasing the quantity of milk. But this will take some time. Several difficulties have to be overcome. Alternatively and quickly eggs can make good the protein deficiencies of cereals. They are also good sources of minerals and are particularly rich in iron but somewhat low in calcium. They also contain vitamins especially vitamin A.

Prior to the outbreak of the war India produced sufficient eggs for its own requirements and even exported to Burma and Ceylon. But the annual average per

capita consumption of eggs was only eight whereas the average consumption in Canada and the United States was almost an egg a day for every member of the population. The poor rice diet can be fairly well balanced by the addition of an egg per day plus the necessary quantity of pulses to bring up the protein to optimum level. Therefore every effort should be made to raise the egg production many times over. Though we have inexact information in regard to the trend of the poultry population it would appear that in many areas, at least, there has been a very considerable decrease due to the selling of stocks to meet unprecedented demands of the Army. Fortunately, poultry stocks can be increased very rapidly.

It may be argued that as fowls consume cereals which can be used as human food any effort to increase poultry production must necessarily draw upon reserves necessary for feeding the people. But in India, unlike European countries, poultry used to be kept almost entirely in small units under village conditions and they consumed little or no grain except that obtained by foraging themselves. Village management is admittedly very primitive; for, the birds are hardly housed and fed and losses from disease are very high. But even in its present form the village effort is profitable as the cost of production is insignificant.

The average egg output per bird for the whole country is very low. This is generally attributed to the poor quality of desi-stock. But even improved breeds under ordinary village conditions will not do very much better than ordinary village birds. However, the introduction of pure birds or their crosses creates more interest among the village poultry keepers and does result in material improvement in body and egg size. The keeping of duck and geese has received even less attention than the keeping of poultry. There is abundant food on which the birds can be maintained. There is considerable scope for improvement in the quality of Indian duck.

Very heavy losses are experienced throughout the country from diseases such as Ranikhet, fowl pox and tick fever. Vaccine centres should be established in different parts of the country and the poultry farmer should be able to use vaccines and protect his flock against them. The expansion of the poultry industry is very seriously retarded by poor marketing facilities. Losses due to transit are always high. During the hot weather heavy mortality occurs in poultry despatched from one place to another.

Losses in eggs due to staling and embryo development are also exceptionally high. Much improvement is necessary in collection transport and conditions of holding eggs.

The prospect for commercial poultry is, as the Indian Farming (Sep. 45) points out, at present very satisfactory but expansion is retarded by high cost of equipment. With the growing knowledge about the value of poultry and eggs and the increase in the purchasing power of the people the prospects for a poultry market are bright.

Agriculture in the U.S.S.R.:

Prior to the Revolution the three systems of farming practised in the U.S.S.R. included the large estates, small peasant farms, and peasant land farmed by the peasants under the village council. Some of the large estates were run on good modern lines, some were put in the hands of managers whose business it was to extract all they could for the owner and others were moderately well managed. The peasant farms were small holdings owned by individual farmers which had resulted from the various agrarian reforms. The peasant land under the commune belonged to the body of peasants but not to any individual; it was parcelled out into many strips which were periodically distributed by the commune among the peasants in accordance with the size of the family. Each man got his share of good and bad soil. At the time of the Revolution it was estimated that about 45 per cent of the cultivated land was in the hands of the peasants. All three systems were disliked by the Bolsheviks, the first two because they involved private ownership of land, and the third because of its grave inefficiency and the utter impossibility of introducing modern improvements. The Bolsheviks also disliked the peasant mentality so utterly different from that of the factory worker. The peasant was used to working alone or in small groups and always felt that he owned the land he liked. The factory worker accustomed to work in masses for an employer had before the Revolution no sense of proprietorship.

After some experiments, state farms were set up which acceded well with Bolshevik theory. The peasants were employees of the State receiving a weekly wage living in great blocks of dwellings in a central area developed like towns. The whole organisation resembled that of a factory, and it was expected that the

Application will be made in due course to the NATIVE SHARE & STOCK BROKERS' ASSOCIATION, BOMBAY, and THE MADRAS STOCK EXCHANGE ASSOCIATION, LIMITED, MADRAS, for listing the Company's Shares.

A copy of this Prospectus has been filed with the Registrar of Joint Stock Companies, Travancore, Trivandrum as required under Section 121(2) of the Travancore Companies Act and a copy of the Prospectus so filed has been lodged with the Assistant Registrar of Joint Stock Companies, Madras.

Consent of the Travancore Government has been obtained to this issue under the Defence of Travancore Rule 94; B and consent and recognition of the Central Government has been obtained to this issue under Defence of India Rule 94A by an order of which a complete copy is open to public inspection at the Registered Office of the Company. It must be distinctly understood that in giving their consent and recognition the Government of Travancore and the Government of India respectively do not take any responsibility for the financial soundness of any scheme or for the correctness of any statements made or opinions expressed with regard to them.

The Subscription list will open at 11 a.m. on Monday, 8th October, 1945, and will close as soon as approximately subscriptions for the amount herein invited are received; but, in any case not later than 3 p.m. on Friday, 12th October, 1945.

PROSPECTUS OF THE TRAVANCORE BANK, LTD.

Date of
Incorporation } 27-1-1921
12-9-1945

(Incorporated in Travancore under the Travancore Companies Act IX of 1914).
(The Liability of the members is limited.)

Registered
Number } 5 of 1121

Authorised Capital - Rs. 2,00,00,000
Divided into 8,00,000 shares of Rs. 25 each

Present Issue - Rs. 1,00,00,000
Divided into 4,00,000 shares of Rs. 25 each

Payable as follows:—

ON APPLICATION - Rs. 15 ON ALLOTMENT - Rs. 10
The shares becoming fully paid up on allotment.

Out of the above Issue, the Government of Travancore have subscribed for 1,20,000 shares and the other signatories to the Memorandum of Association have subscribed for 6,600 shares making in all Rs. 31,65,000. The Directors have subscribed for 4,000 shares. These will be allotted in full. Subscriptions are therefore invited only for the balance of Rs. 67,35,000 divided into 2,69,400 shares of Rs. 25 each.

Minimum Subscription.—The minimum subscription on which the Directors will proceed to allotment is Rs. 50,00,000, i.e., 2 lakhs shares of Rs. 25 each which sum is considered adequate by the Directors to carry out the objects of the Company.

The above amount includes (i) Estimated Preliminary expenses Rs. 25,000 (ii) Brokerage and commission Rs. 1,34,700, (iii) Working capital Rs. 48,40,300.

Preliminary Expenses.—The preliminary expenses excluding brokerage and commission, are estimated not to exceed Rs. 25,000 (Rupees Twenty-five thousand) and these will be borne by the Company.

Qualification and Remuneration of Directors.—The qualification of a Director excluding the first Directors and the nominated Directors shall be the holding in his own name Shares of the face value of not less than Rs. 10,000. Each Director shall be paid out of the funds of the Company a sum not exceeding Rs. 150 for every meeting of the Board of Directors or Committee of Directors attended by him as may be determined by the Board. This remuneration will be independent of any remuneration which any director whether as being Chairman or member of any Executive or other Committee or local Board or otherwise may receive.

The Directors may out of the funds of the Company allow and pay to any Directors who shall travel for the purpose of attending a meeting of the board or committee of Directors such sum as they consider reasonable and fair compensation for his travelling and hotel and other expenses. This allowance may be in addition to the fee for attending such meeting or in substitution thereof as the board may from time to time determine.

If any Director being willing shall be called upon to perform extra services or to make any special exertions in going or residing away from the place of his residence for the time being for any of the purposes of the Company or gives special attention to the business of the Company as a member of a committee of Directors the Directors may remunerate the Director so doing by payment of such sum as may be determined by the Board provided, however, he shall not without the consent of the Company in general meeting, be appointed to any salaried office of the Company.

Management.—The Management of the Company is vested in the Board of Directors

under the Articles of Association. As the members of the Board are resident in different parts of India, it was considered desirable to appoint one of their number, viz., Mr. S. Parthasarathy, to be a Director-in-charge so that day-to-day affairs and questions of urgency may be dealt with expeditiously. Mr. S. Parthasarathy was accordingly appointed Director-in-charge on an honorarium of Rs. 15,000 per year.

Government Director.—Under Article 75 of the Articles of Association, the Government of Travancore are entitled to nominate one person to the Board of Directors and have accordingly nominated Mr. S. Narayana Iyer, the Financial Secretary to the Travancore Government to the Board.

Nature and Extent of Directors Interest.—Mr. S. Parthasarathy, who has been appointed Director-in-charge is interested in the remuneration that may be payable to him. Mr. S. Narayana Iyer is interested as the nominee of the Travancore Government. No other Director is interested in the promotion of the company except to the extent of his holding shares in the company and to the extent of the remuneration which he is entitled to under the Articles of Association.

Brokerage and Underwriting Commission.—The articles provide that an underwriting commission of not more than 3 per cent shall be paid on the nominal amount of the shares underwritten. Brokerage at the rate of annas two per share will be paid and borne by the underwriters on all shares allotted against applications bearing the rubber stamp of recognised Brokers and Bankers. Shares of the face value of Rs. 67,35,000 which is now offered to the Public have been underwritten at a commission of 2 per cent of the nominal value of the shares. The Directors are satisfied that the resources of the underwriters are sufficient to discharge their underwriting obligations.

Agreements.—The following agreements have been entered into by the Company: Underwriting agreements with Messrs. Swastik & Co., Trivandrum, Mr. P. R. Subramanyam, Messrs. Manamohandas Nemidas & Co., and Messrs. Lalbhai Hiranand of Bombay, all dated 17th September, 1945.

There is no other agreement.

Voting Rights.—On a show of hands every member present in person shall have one vote and on a poll every member present

in person or by proxy shall have one vote for every share held by him.

Share Certificate.—The Share Certificate will be ready for delivery within three months from the date of allotment.

Transfer of Shares.—The Directors shall have under the Articles of Association the right at their absolute discretion to reject any application for transfer of shares to any person of whom, they do not approve and they may also decline to register any transfer of shares on which the company has a lien.

Inspection.—The following documents are available for inspection at the Registered Office of the Company and at the office of Issue in British India at 120, Armenian Street, Madras, during the usual working hours so long as the subscription list is open:

1. Memorandum and Articles of Association;
2. Four agreements, dated 17th September, 1945, with the underwriters;
3. Travancore Companies Act; and
4. Correspondence with the Government of Travancore.

Application for Shares.—Application for shares may be made on the form annexed to this Prospectus. The form of application

duly completed along with the application money of Rs. 15 per share may be lodged with any of the offices of the Bankers, viz., The Imperial Bank of India, Bombay, Madras and Trivandrum; The Bank of India, Ltd., Bombay, Madras and Calcutta; The Indian Bank, Ltd., Madras and Branches and The Bank of Mysore, Ltd., Madras, Bangalore and the Registered Office of the Company in Travancore; the Issue Office at 120, Armenian Street, Madras or at the offices of the underwriters. Cheques on stations other than Trivandrum, Madras, Bombay, Calcutta and Bangalore will have to include collection charges.

As far as possible preferential allotment will be made to applications received from the subjects of Travancore State.

If the number of shares allotted is less than the number applied for, the balance of application money, if any, will be utilised towards the amount due on allotment and balance, if any, will be refunded to the applicant.

The Directors reserve to themselves the right to reject any application without assigning any reasons therefor.

General.—Copies of the Prospectus, and forms of application can be had at any of the following offices:

The Company's Registered Office, Trivandrum;

The Company's Issue Office, Madras.

The offices of the Company's underwriters

peasants would develop the factory workers' outlook and became one with them. The peasants never liked them. And in 1938 only 10 per cent of the cultivated land was state farms. After several experiments the ardel organisation was adopted. In this the workers feed and house themselves but the produce belongs to them. And after all outgoings have been met the balance is distributed according to the work done. After suitable modification this was accepted and in 1939 a very large part of the cultivated land of the U.S.S.R. was farmed in this way.

The farms were called "collectives". All the cultivated land in the village, whatever its previous ownership, was thrown into one big farm, might be 1,000 to 4,000 acres or more, but usually of manageable size. The poor peasants were given preference. The plan of production was sent from Headquarters and the workers elected a Committee to carry it out. The chairman was a party man and thus the party retained its hold. The workers' share of the produce varied with the yields. The Government's share has varied. But there were so many charges, hire on the machine tractors had to be paid, seeds had to be paid for. Insurance, administration, sick and needy people capital development and other farm overheads had to be provided for. Thus the workers' share might be 40 per cent or less.

The constitution of 1939 gave the collective farms the use of their land forever and gave each member the use of his cottage, its garden and a holding varying from $\frac{1}{2}$ acre to $2\frac{1}{2}$ acres on which he could keep animals. The peasants began to spend too much time on their private property and they were obliged to put in a minimum of 100 days per annum on the farm. The number has been since increased. There is little doubt, as Sir John Russell observes in the Tropical Agriculture, that when peace returns this modified system will be able to provide the U.S.S.R. with the food needed for a rising standard of life. But the peasants are still not employees and peasant-mindedness continues and they are not one class with factory workers. But the U.S.S.R. has brushed aside so many theoretical difficulties that this also will go.

Militant Zionism:

The stage seems to be set for an explosion in Palestine. The Jews have encouraged themselves to land in large numbers, disregarding political agreements. The Arabs threaten fight. Britain has already moved her battalions to the scene. The British declaration following the recent Zionist Conference seems to have infuriated the Jews and they have resorted to the desperate step of directly challenging Britain. The small concessions which Britain has offered beyond the terms of the White Paper have failed to satisfy the Jews. Evidently they stick fast to Dr. Weizman's claim for the immediate grant of 100,000 certificates as the first step based on the recognition of the Jewish right to free immigration and settlement in Palestine and the adoption of a practical programme, political and economic, designed to achieve the speediest possible transformation of Palestine into a Jewish State. It is obvious that any attempt to translate the Zionist ideal contained in

this declaration would infuriate the Arabs and start a conflagration. That is what it threatens to do, just now. Till now the decisive voice in Palestine politics more or less rested with Britain. But since the war, Britain is trying to share her responsibilities with America. The Atlee-Truman exchange of views marks a new phase, and probably creates a new problem in so far as America and Britain appear to hold mutually irreconcilable views. The wisest course would be to put the question before an international body. Under any scheme, Palestine cannot accommodate the whole of the Jewish population who seek a home. Though many of the European countries have admitted Jewish refugees during the war, the number so absorbed is negligible. Unless the nations of the world agree to take in the surplus Jewish population on an agreed quota, the question is not likely to be settled on a satisfactory and peaceful basis.

Coal Production in Europe:

The destruction of coal mining facilities in many parts of Europe, the frantic exploitation of available resources by the belligerent powers during the war, serious labour shortages and transport dislocations have combined to produce a serious shrinkage in the coal production in Europe. Germany has been one of the worst sufferers. The present monthly output of Western Germany is only 1,932,000 tons which is only one sixth of the prewar level. In the Ruhr area which has suffered the greatest destruction, not only has there been a heavy exodus of labourers, but the efficiency of those still available has been seriously impaired by lack of food as also the absence of many mechanical facilities for production. France which before the war produced nearly 45 million tons a year may not be able to produce more than 35 million tons this year. In Holland, production is expected to stand not higher than about 14 per cent of the pre-war level though in Belgium it may go up to 50 per cent. Poland may show a brighter record and the fact that she has entered into obligations with other countries undertaking export of coal shows that her coal mines have not

suffered much owing to the war. In Britain the fall in output which began before the war was aggravated by her inability to improve methods of production and her labour shortage. Individual coal fields like those in South Derby Shire and Leicestershire registered big leaps in production during the war years besides raising manshift output, but her overall production was lower than in 1937. From 290 million in 1913 Britain's production slumped to 232 millions in 1938, in 1944 her production stood near about 193 million tons, employing 710,000 men. The nationalisation of the industry might bring production back to the prewar level. The total deficiency in Europe is estimated to stand about 60 million tons.

Under the present conditions, it is doubtful how far Britain can relieve the coal deficiency in Europe.

EAST INDIA FUND

This Fund will be closed on October 31st, 1945. Up to September 27th 1945 the total receipts by the Fund were Rs. 1,22,29,041 and the total disbursements were 1,22,15,104 made up as follows: Payments for aircraft Rs. 1,03,73,333; Allocated to Charities Rs. 17,83,908; Expenses Rs. 40,142.

The Committee thanks sincerely all those who have given such generous support to the Fund.

OUR AUSTRALIAN LETTER:

LABOUR IN WARTIME.

Canberra, Sept. 1945.

Australia's system of regulating legally wages and industrial conditions through its Arbitration Courts stood up reasonably well to the unforeseen and imperative demands made upon it by the war.

The war proved that there were a number of weaknesses, but it also proved the inherent strength of the system. The compromises that had to be made, and the new formulae that had to be devised to meet special circumstances, provided many lessons that will be of value after the war in streamlining the arbitration machinery.

In the six years between the lifting of the 1930-33 depression and the outbreak of war, major activities of the unions were directed towards restoring the margins that had been lost during the depression, and securing a general reduction of working hours from 44 to 40 a week.

These objectives generally had been accomplished by the time the war began, and preparations had been made to secure for the wage earner a proportion of the returning prosperity by giving him a percentage loading on the basic wage, and to press for a further reduction of the standard working week towards the 30 hour week objective.

War immediately changed all that. It automatically clothed the Federal Court under the national war-time defence powers with plenary powers over wages and industrial conditions. Industrial disputes and threatened disputes. It dictated a necessity for maximum production from a reduced manpower pool, thus setting aside for the duration all possibility of any further reduction in working hours.

The requirements of the armed forces immediately made a drain upon both skilled and unskilled labour in all industries, and necessitated the fixing priorities, including the total reservation from military service of many classes of labour that were essential to the production of munitions and other war time supplies.

The war also revealed a heavy shortage of some necessary classes of skilled labour, and of the number of semi-skilled and process workers required to mount a full production effort.

This impelled the "upgrading" of many classes of workers, and the dilution of certain skilled trades, particularly engineering, with specially trained operatives for whom there was neither time nor opportunity for ordinary trade apprenticeship.

In many sections of industry, particularly wharf labouring and transport, the war called for long stretches of high pressure work wholly unprovided for by peace-time industrial awards, except under overtime provisions that in certain cases could become almost prohibitive.

In too many cases arbitration processes were found to be too cumbersome for reaching urgent decisions to which short cuts were required.

On the other hand, it was found in the majority of cases that where short cuts to decisions were made by direct negotiation between the Government and the unions concerned, the court machinery was adaptable for their legal registration, and for the policing of the decisions.

The net result was a compromise by which urgent decisions were reached on the war-time urgency of facts rather than law. Having been reached, they were then given the force of law, and the interests of all parties were protected.

Under its special wartime powers, the Federal Government passed a National Security Act at the beginning of the war. The Section of that Act bearing upon industrial relationships charged the Court with the war-time responsibility of preserving peace in industry. The Court was freed from the limitations of its jurisdiction. Employers and employees organisations were directed to give the Court advance warning of possible or impending disputes, and the Court was given power to intervene in any industrial position on its own motion, and to make any order or award it considered desirable.

These powers provided the opportunity to test the efficacy of arbitration machinery in overcoming the various human factors such as living conditions, food prices, boredom, fatigue and personal economic outlook that enter so largely into industrial relationships.

Its real test came when the Pacific war began in December 1941, and the pressure upon manpower for the simultaneous expansion of the armed forces and the production effort was intensified.

In February 1942 economic organisation regulations were issued which pegged all wages at the rates operating on February

10, 1942, and prohibited an employer from offering or a worker from accepting a premium to change jobs.

The Court was still left with the authority to vary the basic wage in accordance with the cost of living, which up to that period had been advancing rapidly.

The sudden and arbitrary pegging of the marginal levels, naturally created a lag between wages and food prices, and crucially tested the attitude of the Australian worker to war-time sacrifices.

Events proved that the Australian worker would make the sacrifices.

In the first year in which wages were pegged and the movement of workers restricted, there was a decline of 60 per cent. in mandays lost, compared with the preceding year, or 75 per cent. over the first full year.

There were however sections of industry with which the Court, even with its enlarged and flexible powers, could not properly cope.

Outstanding among these were the shipping, stevedoring and coal mining industry.

The background of each of these in Australia as elsewhere is one of constant

Stop S-L-O-W-L-Y

The entire production of reputed brands of electric fans is at present requisitioned for the essential services. You should therefore treat your existing fan with care.

Stopping the fan suddenly by means of switching off electricity is a common source of damage and breakdown. The correct method is to move the switch of the regulator gradually to the "OFF" point and then to switch away the current.

"Orient" fans are specially built to give noiseless and uninterrupted service for years. The regulator supplied with each "Orient" fan offers positive selection of four speeds.

Preparations are being made to meet the demands for "Orient" fans in full immediately after the war.

Call in a Mechanic:

- * when noise develops
- * for regular oiling and cleaning
- * to inspect the wiring and switches.

industrial struggle, arising largely from the onerous nature of the work and the objections of the unions to many phases of ownership policy.

Before the war, the Court had never been able to exert properly its authority over the shipping, stevedoring and coal mining industries. In war time it was less able to do so, and special commissions with representation from employers and employees were set up, and given powers over the specific industry which were virtually as wide as the powers which the Court has over industry as a whole.

The machinery of the Court was also found to be inadequate to cope with all the industrial problems involved in the dilution of labour in the engineering trades.

Another special war-time problem found to be too perplexing for the ordinary processes of legal arbitration was the employment of women on jobs that were previously held by men. So many people were involved that special machinery was evolved.

After laying down the principle of equal pay for equal work in relation to the degree of efficiency attained, the Government by special legislation vested in a newly created Women's Employment Board power to determine the wages, hours and all the other working conditions of women brought into industry to replace men. The margin of discretion given to the Board was that women should be paid not less than 60 per cent, and not more than 100 per cent of the adult male rate.

In two ways there was a temporary abrogation of long-established industrial practices.

One was the control of manpower vested in a Manpower Authority, which was outside the control and the jurisdiction of the Court. The second was that rationalisation of industry was carried out independently of the court. The purpose of rationalisation was to prevent duplication of services; and so conserve manpower, raw materials, plant and factory space.

In these two cases award provisions, contrary to the war time requirements were simply set aside, or allowed to lie dormant with union consent.

BOMBAY MARKETS

(From Our Correspondent).

SILVER.

Bombay, October 4. The silver market was overhought last Saturday on expectations of the removal of the peg on the Sterling-Dollar rate but on Monday disillusionment found bulls unloading freely. The Forward price declined to Rs. 130.8 on Tuesday, when other factors also intervened like large arrivals from up-country and railway breaches caused railing difficulties. Support at the lower levels and the deadlock of the Foreign Ministers Conference brought about small speculative purchases, the price recovering to Rs. 135 without Spot commanding premium over Forward. The market is struggling under the strain of a heavy stock of 4,500 bars.

GOLD.

Bombay, October 4. The Gold market, likewise, experienced a decline earlier when the market was overbought on expectations of the revision of the Sterling-Dollar exchange and of an increase in the gold price following developments in Silver. From Rs. 76.4 on Saturday, the Forward price slumped to Rs. 73.12 on Tuesday. When the rumours were proved unfounded arrivals increased and demand declined. The price has recovered to Rs. 75, but the undertone is easy owing to the large stocks totalling 2,50,000 tolas and demand tapering off.

Clive Street Gossip

With peace a few months old, it is time the use of the term, 'post-war,' was definitely discontinued. So long as the war was on, it was meant to refer to an uncertain date in the future. All officials, committees and other agencies engaged in postwar problems were secure in the knowledge that their day of reckoning was in the distant horizon. That security must now end. Governments and peoples must wake up to the feeling that what they called the post-war period is now on us and that, if problems must be shelved, they must find other reasons for doing so. These thoughts occurred to me when I was last in Delhi, where the air was thick with talks of retrenchment and liquidation of whole departments and the time schedule for the accomplishment of these unpleasant tasks. The thought of tens of thousands being sent back to wear their shoes out in search of new employment which will not be there depressed me beyond words. And I asked myself whether the Heavens will fall, if disemployment were less precipitate and more additions were made to our unproductive debt. That, I agree, is a trifle unorthodox. But that brings out the importance of early decisions being taken by the Government of India in regard to what has been known till now as post-war development. These decisions are important not only for keeping large numbers of individuals cheerful, but also for the job that lies ahead of the Government of India, viz., the preparation of the next budget. Other governments have woken up to the task of revising their budgetary plans and programmes. Dr. Dalton has declared that he will not wait for the end of the financial year to effect such revision. There is to be an interim budget in Britain. In Australia, the E.P.T., it is said, is to yield place to a new levy which is to be called a Social Security tax. If other countries feel the need and are active in satisfying it, there are stronger reasons in India for doing likewise. Normally, the new budget will not be taken up till a later stage. But there are a number of problems which have to be decided before the budget as such can be taken up for consideration.

In normal times, the preparation of the budget was a more or less routine affair, though intensive and extensive knowledge of an expert kind was doubtless needed in the officers who were entrusted with the work. To estimate the revenue and expenditure of the year ahead on the basis of the conditions that may be expected to prevail in the year to come was difficult enough in all conscience. The changes that were contemplated either on the side of taxation or on the side of expenditure also served to complicate the task. But budget-making in the earlier days was simplicity itself compared to the multiplicity of uncertainties in the face of which estimates in these days have to be prepared. Fundamentally, the old idea of public finance was one of reacting to current trends. The Exchequer was largely a passive factory, taking in more revenue when conditions were favourable and being content with less when natural factors tended to reduce the yield of revenue at the ruling rates of taxation.

The limits within which the Chancellor of the Exchequer made himself an active agent refusing to bow to natural trends were extremely narrow. A slump in revenue at the prevailing rates was sought to be made up to some extent by increase in the rates or by new levies. This was rather with a view to avoid the necessity of making changes on the expenditure side than with a view to overpower natural forces. In finance, as in other spheres of Governmental or social action, the idea of society becoming a master of its destinies was extremely slow in its emergence. Even if in other spheres the idea made headway, the notion that in finance Government should not react to current trends but rather act on them was fought shy of for a much longer period.

The present is the appropriate moment for the public to urge that in India, too, the time is come when the Government of India should realise that new ideas of budget-making should be allowed to prevail from now and that they should lose no time in making those decisions of policy without which budget-making will perforce have to be of a routine, rather than an adequately enlightened character. In fact, that would seem to be somewhat of an understatement; for even routine budget-making, as it was understood and practised in the past, has in the present conditions become an impossibility. A budget officer of the type appointed to the task in the olden days would in present conditions find an utter lack of the essential bases of calculation. He would be obliged to go to his chief for decisions on a number of issues and his chief in his turn would feel the need to consult his colleagues at the head of the other departments of Government. In these conditions, we cannot impress too strongly on the Finance Member the need to formulate all the basic issues, ensure their full discussion in the Council and provide the wise decisions on the basis of which the plans for the next financial year should be made.

Before examining the nature of these issues in the special conditions now prevailing in India, it is well to note that over the whole world the old notion of a budget which adjusts itself to natural trends instead of trying to master them has been thrown overboard. It is perhaps

TYRE RATIONING CONDITIONS NOW EASIER

With the cessation of hostilities, Government controls on all kinds of tyres have been greatly relaxed. For the benefit of tyre users generally, we give below a summary of the present position.

NEW TYRES You still cannot buy a new cover or tube unless you have a permit but it is no longer necessary to establish "essentiality" in order to obtain a permit. The greatly increased tyre supplies now being released for civil use should enable any vehicle owner who is in need of tyres to obtain them without difficulty.

USED TYRES Covers or tubes which have run more than a thousand miles are now de-controlled and may be bought and sold freely without a permit. Moreover, it is not now necessary to surrender your old cover or tube when you buy a new one.

RETREADED TYRES It is no longer necessary to secure a permit in order to buy retreaded tyres or to have your own tyres retreaded.

In brief except for the formality of obtaining a permit, every motor vehicle owner should now be able to obtain tyres without the slightest difficulty.

difficult to give an exact date to this momentous change. Generally speaking, the great depression may be said to have caused the upsurge of all new economic ideas. Not the least of these revolutionary ideas was that the unit of time for purposes of financial policy should no longer be the astronomical year, but the time taken by a normal trade cycle. The central idea was that budgets should be balanced not from year to year but over a period covering a major boom and a major depression, the trends and effects of the one being made to offset those of the other. But even this idea has no permanence, despite its attractively revolutionary character and its apparent economic soundness. For, the cyclical budget, it should be remembered, is a preventive of the trade cycle on which it is based. If the budget for trade cycles tends to prevent the occurrence of boom and depression, it should also tend to destroy the time unit in relation to which alone it has been conceived.

It will be seen, therefore, that those who accept the idea of a cyclical budget must agree to being led farther to the idea of progress without hardly a setback. There is indeed nothing surprising in this suggestion of logical reasoning. For in this reasoning, the character of the national budget has changed from that of passive account-keeping for one department of social life into a powerful agent and engine of social progress. If the budget can stay the onset of a depression and keep a boom within safe limits, if it can find revenue in unfavourable times for expenditure on useful objects, then there is hardly anything which the budget cannot do to ensure a healthy rate of social progress. Though this line of thought is yet to be put to the acid test of practice and experience, it has come to be widely accepted. And in all democratic countries, Governments have an obligation to try out its validity.

The landscape of public finance as it has been left by the world war has imparted an element of expediency to the trying out of new ideas. For, since the financing of war on this occasion has been radically different and since it has involved numerous measures of control

not only in financial but also in economic matters, an easy and automatic relapse into pre-war conditions has become more or less out of the question. The familiar features of economic life after the end of a great war are no longer accepted as inevitable. Drop in public expenditure, deflation of currency, increase in unemployment and general dislocation of all markets are not accepted as unavoidable or necessary. Public opinion is insistent that Government should steer clear of these dangers. If Governments are to live up to the expectations of the people then they have to take full control of the situation, make every decision with proper regard to its repercussions in other spheres and ensure literally circumspect action in every matter.

In India, this need is even greater than in other countries. For by means of large-scale war expenditure on the one hand and measures of economic control on the other they have succeeded in providing employment, purchasing power and the requisites of a comparatively good standard of living to millions of people who had formerly known nothing of these. At the same time they had been taught to believe with increasing intensity as the war grew older that these advantages will not pass off with the war. Apart from the fact that the Government recognise the fulfilment of the expectation as a binding moral obligation, the social and political consequences of disappointment will prove to be very grave indeed.

The present moment stands midway between the end of the war and the time

of the next budget. And no one will deny that fulfilment or otherwise of these hopes depends largely on what the budget is going to be and how it is being conceived now and will be developed in the next few months. Whether one approaches the problem of the budget from the side of these tasks or from the side of the purely departmental task of framing estimates, the importance of making decisions on a number of questions of fundamental policy will be readily recognised. In what remains of the space available for this article we must be content with listing these problems. What is the extent of the decline in war expenditure and to what extent should it be replaced by development expenditure? What are the concrete plans on which the requisite amount of developmental expenditure should be spent? What is the scheme of taxation which will provide the revenue needed during the year and which will fit in with our long term plans of public finance? And last but not the least, what is the currency policy which will keep the sources of taxation fertile to the extent needed and at the same time provide a reasonable solution of the problem of adjustment of inflation and regulation of the price level? We are aware that not all will agree with the order in which the above questions have been framed. But whatever the order, these questions cry aloud for speedy and definite answers; and on these answers depend the nature and complexion of the next budget. We trust that Sir Archibald Rowlands will not allow it to be tackled in a routine or a rough-and-ready manner.

PLANNING—ORDER OF THE DAY BANK OF CALCUTTA LIMITED

(CLEARING THROUGH IMPERIAL BANK OF INDIA)

PLANS FOR INDUSTRIES TO DEVELOP AND
TRADERS TO GROW

Dr. M. M. CHATTERJEE, Managing Director.

Banking MULTIPLIES RICHES

Banks play an important part in conserving and multiplying the wealth and resources of a country. In India today there are 707 Joint Stock Banks, big and small, having a total paid-up capital of Rs. 2082 lakhs. Here are some comparative figures concerning Banking in India and the United Kingdom:—

	India	United Kingdom
Population - 40 Crores	Population - 4.8 Crores	
Total Deposits - 1943	Rs. 71,460 lakhs	in Rs. 4,90,280 lakhs
Total Clearings - 1943	" 4,22,892 "	in " 76,14,280 "
Deposits per Capita - 1943	" 18 "	in " 1,089 "

To help individuals and firms, industry and agriculture to attain higher income levels, India needs to cultivate the banking habit, and improve and consolidate her banking position in order to provide a more adequate banking service.

Gateway of India

(From Our Correspondent)

BOMBAY, 2 1945

At the meeting of the Export Advisory Council last Friday, the Commerce Member stated that elaborate plans are being worked out for the development of the export trade. Apart from setting up a network of offices of trade commissioners in countries abroad to collect information about the needs of overseas markets, Sir M. Azizul Haque gave out the interesting information that the government propose to send delegations of shippers and businessmen also to these countries. The basic problem of our export trade at the moment is to determine what quantum of exports is to be permitted, and the relation that such exports should bear to the internal needs of the country. The present is a transition period and it is premature to say at this stage precisely how much surplus of any commodity or manufacture is available for export. The government, it seems, are actively reviewing the position and drawing up a suitable plan. The existence of world shortages naturally whets the appetite of the exporter and provides a strong incentive to capture export markets to the utmost. Yet, while the need for placing our foreign trade on a sound footing by the development of exports cannot be denied, it would hardly be fair at this stage to aggravate the distress of the consumers in this country by allowing exports on a large scale. The difficulty of drawing the line in a matter like this became evident when the Council discussed exports of cloth. The Council also considered questions relating to the export restrictions of canals exports and also the procedure to be followed. No definite conclusions were arrived at, pending the preparation of a detailed plan by the government, and it decided to meet again in November to review the position.

It should be mentioned here that Sir Chunilal B. Mehta has prepared a memorandum suggesting a line of approach to the question. He urges that efforts should be made towards, firstly, consolidation of the Russian market for Indian tea; secondly, restoration of the European markets for Indian groundnuts; thirdly, raising the exports of Indian cotton to pre-war level; fourthly, exploration of the possibilities of exporting more hides and skins to American markets. Sir Chunilal is of opinion that this country has a prescriptive right to retain its export trade in piecegoods with the countries of the Middle East and near East. Some members also raised the issue that the present system of issuing licenses to established shippers should be discontinued, and that the practice of other governments buying through their sole agents in this country should be deprecated—that in other words, the Indian shipper should not be discriminated against. The Commerce Member would not commit himself but promised to relax the various forms of export controls gradually.

After a fortnight of booming conditions, markets in the city are easy on heavy liquidation. The bullion market which led the rise is conspicuous for lack of demand and heavy arrivals. The bulls last week exploited the rumours of prospective sterling devaluation and the change in American silver buying price for all they were worth. The bulls, however, have realised that Indian prices of silver and gold are untenable and have been unloading freely. The forward prices of gold

and silver was standing at Rs. 74-10 and Rs. 133-7 as compared with Rs. 80 and Rs. 138 exactly a week ago. The share market in particular has experienced a sharp deflation in values. Dyeings are lower by about 50 points. Dyeings were pushed up on rumours of issue of bonus preference shares, while the boom started on the rumour that the E.P.T. is about to be withdrawn. In cotton, the September Contract was rung out last week almost ignominiously at the floor price of Rs. 350. The volume of tenders in the September Contract as compared with July was a mere fraction. I.C.C. January was quoted at Rs. 410 yesterday and the premium commanded by the more distant positions is small. Mills are still after old crop varieties which are cheap. Cotton is unlikely to move up, so long as the outlook for exports remains so uncertain. The American policy towards the Japanese textile industry is not clear, and whether demand for Indian cotton emerges or not depends entirely upon the American authorities. The apprehension prevails in some cotton circles that the U.S.A. may take advantage of its authority over Japan at the moment to compel Japanese mills to consume American cotton and to produce the quality of cloth needed by the cloth-starved countries of Europe. If this happens, it would be a bad blow to Indian cotton, considering that Japan was our best customer in pre-war days. Any recovery in the cotton market thus entirely hinges on developments in this regard. Even the heavy damage to the crop caused by the recent storms in Broach, Baorda and Surat has failed to give a fillip to trading. There is inadequate apprehension in this country of the real significance of American intentions and actions. Reuter reported sometime back that American banks are prepared to lend at or slightly below government purchase prices and that, strengthened by credits from the Export-Import Bank, American exporters are trying their best to unload cotton on world markets. Developments like these are not calculated to enhance the prospects for Indian cotton.

The end of the war has brought to the fore the question of maintaining the tariff structure on the part of the insurance companies doing marine and other general insurance business in India. At an infor-

mal meeting of the Indian Insurance Companies' Association convened to consider the question, Mr. J. C. Setalvad emphasised the desirability of maintaining the discipline in regard to tariff observed during the war period. It appears that companies, especially new ones in the field, are willing to pay excessively high rates of commission (even 55%). Setalvad deplored this tendency in view of the harm it would inflict on the insurance market in general, particularly at a time when the premium of various companies is likely to fall, coupled with possibly a rising tendency in respect of claims. Mr. Setalvad cited as a warning the experience of the years between 1930 and 1938 when companies had been hit hard by the increase in the rates of brokerage from 7½% to 45% and pointed out that the situation after 1938 has been better only on account of a favourable claims experience. All insurers are agreed that Indian companies have done well after the introduction of the present tariffs and that progress in future depends upon sticking to them. Unfortunately, new companies in the field somehow deem it prudent to acquire business by paying uneconomic commissions. That sharpens the regret that the enforcement of a limit for overall costs of insurance companies by statute has not been possible this year. However, a small Committee on behalf of the Indian companies is examining the question and will be submitting a report shortly for consideration of directors of companies.

Mr. M. K. Vellodi, I.C.S., Textile Commissioner may be shortly taking up the post of Deputy High Commissioner for India in London.

The riot situation has not improved and cases of stabbing and assault are mounting up. Transport services in particular localities have had to be suspended. The authorities have called in British troops. Meanwhile, relief work to the victims is being organised by Congress workers as well as Muslim Majlis and the Arya Samaj. The Corporation adjourned on Monday owing to the worsening of the situation. The BEST employees could be persuaded to run the transport services only with the aid of police protection on board the vehicles. A great degree of alarm prevails. The rounding up of miscreants continues.

Airway Port

(From Our Correspondent.)

Karachi, Sept. 28.

The stage is set in Sind for the general elections. When provincial autonomy was introduced, political life was in its infancy in the newly separated province of Sind and there was no emergence of clear cut parties. Each candidate stood on his own merit, with the exception of the Congress party which was able to capture eight seats. Because of the lack of party cohesion and the interplay of individualistic tendencies, Sind careered erratically and not a single Ministry was safe. Personalities rather than principles dominated the Assembly scene. Though at the moment, a sort of Muslim League Ministry functions, there is a lot of inter-party feud. The Mirs, the Syeds, and the Baluchis are split among themselves. Mr. Jinnah stayed at Karachi for more than a week with a view to bring about unity in Muslim ranks and bring all elements under the League banner. His mission however failed and we will witness the spectacle of Leaguer opposing Leaguer in several constituencies in Sind.

At first, it was the intention of the Congress party to contest all the Hindu seats. They had to reckon with the Hindu Independent party which is powerfully represented in the present Assembly. The Hindu Ministers belong to this party. But realising the strength of the Congress party, some of the topnotchers of the Hindu Independent party expressed their intention to enter the Congress fold and sought Congress tickets. This move did not make much headway locally and the matter was referred to the Congress President and the Congress Parliamentary Board. Maulana Azad agreed to some of the members of the Hindu Independent party joining the Congress and the two Hindu Ministers have been offered Congress tickets. The Congress party is sure to capture more than fifteen seats and in case of Nationalist Muslims getting a few seats, the prospects of a full-blooded Muslim League Ministry in this province for which Mr. Jinnah has been striving are not very bright.

The Buyers and Shippers' Chamber of Karachi, in the course of a representation to the Government of India have urged the nationalisation of the mineral resources of India. As a first step in the direction, they want the Assam Oil Company and the Attock Oil Company to be taken over by the Government and run in the interests of the Indian people. The Chamber points out that though fourteen industries have been listed for nationalisation, it is regretted that this important item has been totally omitted from State ownership. Very large petroleum deposits have been found near Rawalpindi and the Punjab government have granted a prospecting license to a non-Indian concern. Apart from this oil field, the non-Indian companies have secured licenses for the purpose of carrying out preliminary scientific investigation over virtually all the areas in India.

The Sind government have made a further representation to the Government of India, pleading that the increased quota of cloth of 18 yards per head is insufficient for the province and that it should be increased to 24 yards per capita per annum. In this connection, various mercantile bodies in Sind have also made representation to the Sind government urging the increase of the quota. The Sind government have passed copies of the resolution passed by the mercantile bodies to the Central government, with strong

recommendations. The merchants had also demanded extra quota for firms run in Indian style.

A meeting of the Port Advisory Committee was held recently under the Chairmanship of the Collector of Customs where representatives of four mercantile bodies and some European and Indian importers were also present. After discussion, the Committee recommended to the Government of India that as the war had ended, the export of seeds and dry fruits, etc., should be allowed with European countries, barring former enemy countries. It was also suggested that there should be unrestricted export of raw wool to all the countries in the world. The Committee also discussed the difficulties experienced by local merchants regarding the method of exports.

The Department of Industries, Sind, has engaged a fibre expert to teach any person interested in the manufacture of ropes, baskets and brushes. He can be sent to any village or town where more than a dozen are interested in these crafts. The most common and cheap fibres in Sind are munj, peeco palm leaf and punn. Munj is used only for twine and rope making. Peace and palm leaf are used for mat, basket and broom making. Sunn hemp is

cultivated in a very small quantity and used for making twine and rope by the Haris. Besides, coarse rope from khip are produced in small quantities. Ak fibre is rather costly to produce and not readily available to hereditary craftsmen.

Lala Jagannath Tandon, Vice-President of the Karachi Indian Merchants' Association has returned to Karachi after meeting Sir Lakshminpathi Mistra, Chief Commissioner for Railways at New Delhi, in connection with the proposed Sind-Gujarat railway project. Lala Jagannath was deputed by the Indian Merchants' Association, to place the view point of the Indian mercantile community in Karachi before the Chief Commissioner for expediting the project. In a written note submitted to Sir Lakshminpathi, Lala Jagannath points out that in the last fifteen years, the outturn of wheat has nearly doubled in Sind and that of cotton more than doubled. It will be larger still when the proposed two barrages across Sind are completed, and a direct line of communication between Sind, Gujarat and Kathiawar, which are the principal centres of outlet of Sind's produce would be desirable. The considerable volume of traffic between Sind and Gujarat would ensure profitable working for the projected railway.

Company Meeting.

TATA HYDRO-ELECTRIC GROUP

USEFUL SERVICE TO BOMBAY PROVINCE

CHAIRMAN'S ADDRESS TO SHAREHOLDERS

"Had it not been for the Tata Hydro-Electric System, the textile mills and other industries of Bombay would have suffered severe losses in production and profits," observed Mr. J. R. D. Tata, the Chairman of the Tata Hydro-Electric Companies in the course of his speech at the Annual General Meetings of the Companies. Several million tons of coal and fuel oil would have been needed to supply the power requirements of Bombay, during the past six years and the magnitude of the service thus rendered to the country by your Companies will readily be appreciated by anybody with knowledge of the coal situation and what the imposition of this extra burden would have meant upon India's already overstrained coal productive resources and transportation facilities. I think you will agree that this is an achievement in which we can justly take pride."

Mr. Tata proceeded to explain that on account of war time restrictions they had till now been unable to inform shareholders and, what was also most important, the general public, of the service that the Tata Hydro-Electric System had continued to render throughout the past six difficult war years to the community in general and to industrial and other customers in particular. The same high standard of service in providing their customers with an efficient and reliable supply of electric power had been consistently maintained and their customers had been able to obtain that service at the same low cost prevailing before the war even though the cost of running the business had considerably increased and despite the upward trend in the prices of commodities and other services and in living costs.

Post-war Aims:

Turning to the post-war period, Mr. Tata said: "Your Directors have under consideration plans for the sound expansion of the facilities of the Tata Hydro-Electric System to insure that your Companies continue as in the past to play their full part in the economic development of the areas served by providing an abundant and reliable supply of electric power for industrial and other purposes at reasonable rates.

"It is understood that the Government of Bombay have in view the creation of a 'Grid System' in the province similar to that in Great Britain with the stated objects of (1) rationalising the generation of electricity by generating at a few 'selected stations' having natural advantages, (2) making available large amounts of electricity at low rates, and (3) bringing energy within reach of a progressively increasing urban and rural population. No definite scheme has yet been framed and, at this stage, it is not necessary for me to do anything more than emphasise that the Tata Hydro-Electric System is already adequately serving the territory in which it operates at reasonable rates and actually forms a 'grid' itself."

Mr. Tata then proceeded to say: "We have continued to assist our industrial

and other customers beyond the usual boundaries of supplying electric power and, in return, they have done their utmost to co-operate with your Companies. In this connection, I would mention in particular the arrangement with the Mill-owners and Labour whereby they agreed, at great inconvenience to themselves, to the staggering of the weekly mill holidays so that only six-seventh of the textile mills are normally working at one time. This has reduced the demand imposed upon the Power Stations, improved the efficiency of our operations and thereby assisted the Hydro-Electric Companies to supply addi-

Monal electric power requirements for essential purposes."

The Monsoon:

Referring to the financial position, Mr. Tata observed: "I must inform you that despite a satisfactory increase in gross revenue the net profit is less than last year due to the fact that it was necessary to supplement hydro-electric generation with substantial purchases of auxiliary power from the Chola Steam Power Station. On account of the irregular character of the 1944 Monsoon and deficiency of the rainfall, the Hydro Companies' lakes were not filled to full capacity at the end of the monsoon and consequently such auxiliary power purchases were essential in order to safeguard our water storage reserves and at the same time fully meet the demands for power.

"This year's rainfall over the catchment areas which supply our storage reservoirs has been above normal and all three reservoirs are now almost full to capacity."

FLIP FLOP

... went the punkha. The air was slightly stirred unless the source of power slept.

The modern method of keeping cool is to use electricity — it never drops off to sleep. Besides it provides an uninterrupted source of power for lighting, heating and even cooking, let alone factories and workshops.

Laid out along the most modern lines our works are equipped with the latest type of machinery for the production of ultra modern cables. A highly skilled technical staff exercise rigid control at every stage of production ensuring strict conformity to any specification — I.S.D. or International. Right now we can only quote for Electrolytic H.D. Bare Copper Wires.

To enable every individual to share the benefits of electricity would mean carrying it to the farthest corners of the land. Our job is to keep on producing cables of various types to carry the power across the country. We shall not be satisfied until the cable drum is a common sight in every village throughout the land.

A Resume of Commodity Markets

Rather uninteresting conditions have been noticeable in all the commodity markets. The raw jute market has been weak with the approach of the Puja holidays and there has been an anxiety to liquidate stocks. The jute manufactures market too has turned easier with the persistent weakness of raw jute and the hopes that the de-requisitioning of mills might result in such an increase in production that, with the possibility of a decrease in working costs, a substantial decline in prices for jute manufactures might take place. That is the reason why beyond December prices are quoting below maximum rates. The raw cotton market has been uninteresting as there has been a tendency to take profits at the higher levels. In the bullion market the bullish fervour has subsided and quotations are substantially lower.

The weakness of the raw jute market, as pointed out last week, has been mainly due to the fears that the official forecast figures might be under-estimated and that, even with the possibility of de-requisitioning of mills, there may not be any net increase in production. The lost loom hours of requisitioned mills are being worked by the "Foster" units as far as possible and any stepping up in production that may come about will be only when total supplies of coal increase and the problem in respect of labour also proves to be less difficult. What exactly will be the developments in this regard in the next few days cannot be anticipated. That is perhaps the reason why there is no attempt on the part of jute dealers to use this news as bullish from their point of view. Arrivals in upcountry centres have been rather large and in the absence of any increase in buying by mills, dealers are not in a position to continue purchases. Unless offtake by mills increase, it cannot, therefore, be expected that prices will remain above the minima. Even now it is reported that a small discount is offered for ready purchases and that the position might even grow worse later on.

In the jute manufactures market mills are awaiting developments. As they are well sold for positions earlier than January there is no anxiety to discount rates but there seems to be a fear that larger coal supplies and the de-requisitioning of mills might result in an increase in production. It is yet too early to take any definite view in this regard. Prices for both hessian and sacking are lower than last levels. Even with the placing of orders for sacking bags a substantial discount is offered for October-December and January-March shipments. 9 porters are quoting Rs. 27-4 for March shipment.

Definitely easier conditions have been noticeable in the bullion market in the past week. Prior to Monday bulls spread the rumour that the unpegging of the sterling-dollar rate by the Bank of England might result in a depreciation in the value of sterling and there might be a rise in both gold and silver prices. But the official statement that the unpegging of the sterling-dollar on the first of this month was merely a technical formality and did not in any way indicate any change in policy in regard to the sterling-dollar rate brought about selling and bulls were keen to cash their profits at the higher levels. Realisations and an increase in arrivals from upcountry centres brought down prices, Gold ready

coming down to Rs. 74-6 from Rs. 80-4 earlier in the week and silver to Rs. 133-12 from Rs. 138. Reports that there may not be any change in the dollar price for gold and that the increase in the price for foreign silver made by the U.S.A. will be only temporary, have induced a note of caution in markets. But for the genuine investment buying at the lower levels, the drop in prices would probably have been more pronounced. The statement that Australian

mines are no longer under an obligation to sell their output to the Allied Purchasing Commission and that under the new arrangement they are at liberty to sell where they choose, is an indication that it would be possible to bring in imports of silver from producing countries in the sterling area if the restrictions are withdrawn. Bull chokseys might, therefore, think twice before pushing up prices any further.

Inches from Eternity!

There is no room for excuses in executing war transport jobs. Over plains and hills, even mountain tracks — where a miscalculation of inches would send a vehicle hurtling into eternity — our transport fleets travel and arrive at their destination within stipulated time. We have gathered our experience in a hard school, it has taught us many lessons. We know now that it is not enough to have a large fleet of vehicles and a set of carefully trained drivers. In addition efficiency depends on first class maintenance and careful planning. Our experience in handling transport plus the largest fleet of transport vehicles in India enable us to undertake any transport job anywhere in this country with complete confidence. Whatever may be your requirements — goods or passenger — we are in a position to handle the job for you. We invite your enquiries.

PREMNATH TRANSPORT CO. LTD.
Leaders in Indian Road Transport
P.N.M.

MAHINDRA & MOHAMMED

A significant combination, which represents what might well be termed a co-operative effort to secure for India that industrial development so indispensable to the full realisation of her future dreams.

You have heard of plans, many plans, in this connection. Now comes a positive, concrete and co-ordinated scheme to develop India's resources and raise the standard of living of the masses.

Devised by an Indian businessman after a careful three-year study of American war-time achievements, it has secured the support and ready assistance of a group of businessmen with long experience and a firm faith in their country's destiny.

★

In their anxiety to further the industrial and agricultural development of this country, the founders of this co-operative organisation believe that they must have the support of those who will benefit most—the general public—and to secure that support it is essential that their aims and objects should be generally acceptable.

Here, then, are the principles which will guide their future activities—

Firstly, encouragement of private enterprise and the initiative of the individual.

Secondly, belief in the ability of corporate institutions to oppose anti-social trends, such as monopolies and cartels.

Thirdly, recognition of the fact that the labourer is worthy of his hire and that in co-operative working lies the dignity of human toil.

Fourthly, confidence in the ultimate success of their ventures and in the capacity and aptitude of the people to give effect to them.

Fifthly, acceptance of the fact that ability is the sole test of merit and advancement and that neither colour, creed nor caste should stand in the way of harmonious working.

★

What you will have asked yourself, do MAHINDRA & MOHAMMED propose to do, whom do they represent, and what has all this business moralising got to do with me?

Well, MAHINDRA & MOHAMMED are concerned with what might be termed basic engineering—providing the tools with which to finish the job of India's industrial and agricultural rehabilitation.

That rehabilitation, of course, has a great deal to do with you—for it holds out the promise of a better land for you to live in and a healthier and happier life for you to enjoy.

As to the moralising, it is intended to place on record that MAHINDRA & MOHAMMED, though a business firm, are imbued with a national purpose and a new outlook.

Whom do they represent? As the name implies, this is a joint venture of Hindus and Muslims. The Chairman is Mr. K. C. Mahindra, who has just returned after three years abroad as Head of the Government of India Supply Mission in America.

Jute and Jute Manufactures

Special to "Indian Finance"

(From Our Correspondent)

Calcutta, 4th October, 1945.

The consolidated statement on the Final Jute Forecast was issued at the end of last week. The position now is that the forecasted crop in Bengal amounts to 63,03,550 bales and the area sown 20,17,710 acres giving a yield of 3.12 bales per acre. Last year's crop in Bengal according to the Final Forecast for that year was estimated, at 55,31,450 bales covering an area of 16,94,355 acres and giving a yield of 3.26 bales per acre. Considering the well grown nature of this season's crop we did not expect to find that the yield per acre would produce a lower figure than the yield of the 1944 crop. In trade circles it was anticipated that the yield this year would be as high as last, if not slightly higher. The area licensed in Bengal this year was 25,46,925 acres out of a total of 27 lakhs acres which was the quota fixed by the Government and representing 50 per cent of the recorded acreage of jute lands. Of these 25,46,925 licensed acres it was found on checking that 20,17,710 acres or 79% have been sown with jute.

The figures for Assam show a reduced acreage compared with last year, but a much higher yield per acre. The acreage given is 1,81,100 acres as against 1,93,300 acres in 1944. The crop this year is estimated at 5,20,700 bales representing an increase of 1,96,700 bales on an area reduced by 12,200 acres. The difference in the estimated yield per acre is remarkable; the 1944 crop being credited with 1.67 bales per acre while the current season's crop is expected to yield 2.87 bales per acre. The Departmental Final Forecast in this connection states that the average outturn per acre has been estimated to be 87 per cent of the normal against 51 per cent (revised on the basis of actual area) of last year. On the basis of the normal yield of 3.3 bales of 400 lbs. each per acre the total production of the Province is 5,20,700 bales against 3,24,000 bales (revised on the basis of actual area) of last year or an increase of 38 per cent.

In Bihar the estimated area is slightly less than last year and the yield is also lower at 1.47 bales per acre as against 1.5 bales per acre last year.

It is reported from New Delhi that a fresh Order has been issued to control

articles of essential stores for the jute industry.

The Jute Industry Essential Stores Control Order issued in 1943 has been repealed, provided that anything done under any of the provisions of that Order will be deemed to have been done under the corresponding provisions of the new Order.

Briefly, the Order requires that articles of essential stores for the jute industry should not be sold or acquired except under the terms of a license granted by the Controller of Supplies (Bengal Circle), Calcutta.

The Indian Jute Mills Association issued the following statement of total reported sales for the week ended Saturday, 22nd September, 1945.

	This and next month.	Forward.
	yards.	yards.
Hessian	40,93,206	1,24,04,478
40 in. 8 oz. Hessian (included in above)	Nil.	50,000
Twills	10,54,134	9,53,000
Plains	18,34,130	81,99,385

The number of wagons delivered to the Indian Jute Mill Association's Coal dump during last week averaged 77 daily, thereby maintaining the improvement in quantity which has been apparent in recent weeks but the quality is still poor in some cases. The average number of wagons delivered daily at the Dump during the period 1st September, 1943 to 29th September, 1945, now stands at 51 wagons.

All sections of the Jute market have passed another dull week. Moderate buying of loose jute by one group of mills failed to stimulate the market and prices have remained at the minima with sellers pressing for business without meeting further response from mills. Present conditions in the loose jute market can best be described as depressed with many holders forced to bring their businesses in the mofussil to a standstill through lack of space to deal with imports. Until fresh buying by Mills enable jute sellers to make substantial clearances in up-country centres the present stalemate must continue to become increasingly acute. Unfortunately, at the moment there are no indications of an early improvement as the gunny market, too, is unsettled due to a falling off in demand from abroad for both hessian and heavy goods, especially the latter. The whole position is such that it is not easy to take a view of the immediate future of the markets with any degree of confidence but it is expected that the present dull period will not be unduly prolonged as it is generally acknowledged that there will be a world-wide demand for jute goods when conditions in foreign markets became more settled.

The same reasons which have kept Mills out of the jute market for some weeks still prevail. Single shift steam Mills are mostly idle and coal supplies are not all they might be. Mills are finding difficulty in selling their goods for the forward positions as reliable buyers, even at discounted prices, are not to be found. Adequate godown accommodation is still lacking and in the past two months this has been aggravated by increasing stocks of manufactured goods. Better supplies of coal and more shipping for manufactured goods would be the answer to some of the problems confronting the trade just now.

In the Pucca Bale Market small business was done in Firsts, Lightnings and Dundee Dalsee 2/3 at minimum rates. The export market was idle.

In the Loose Jute market moderate

business was done in European, and Supervised marks at minimum rates for Middles and Bottoms. Bottoms alone also came to business at Rs. 12 per maund. In some cases the business was for December/January and in others for October/December shipment.

No business of importance was reported in the Manufactured Goods market. Mills sold some hessian at maximum prices and there has been a little enquiry for special fabrics. Heavy Goods have been a dull market with a minimum of business which has been chiefly confined to inter-bazaar transactions. Quotations for forward goods are at a substantial discount.

(Continued from page 619)

Exports of rice from Bengal have been stopped and it is stated that if the rice position in 1946 should be found unsatisfactory, efforts will be made to bring this commodity from the Arakan. It is reported that large stocks are available in the Arakan area and representations are being made from His Majesty's Government to bring in Burmese rice into this country at an early date. It will be remembered that sometime back a spokesman of the British Ministry of Food said that it will not be possible to expect supplies of Burmese rice for a long time as it was intended to conserve quantities of rice available in Burma, Siam and Indo-China for feeding the areas under the South-East Asia Command. That the Indian Government should keep quiet after the specific recommendation by the Famine Enquiry Commission is unthinkable. Proper representations should be made to allow this country also to get its share of the surplus stocks of Burmese rice.

The seeds markets have not been very active as no purchases of groundnuts have been made in the past fortnight by the British Ministry of Food. Steady conditions, however, prevail as in certain parts of India stocks are reported to be in short supply and crushers are experiencing difficulties in regard to their requirements. At the meeting of the Export Advisory Council recently, it appears the question of reviving the export trade with Continental markets was considered and some decisions were taken. In pre-war years European countries consumed large quantities of Indian oil-seeds particularly groundnuts.

With the end of hostilities, it is understood that the desirability of liberalising the control on exports of hides and skins is being urged by the commercial community.

There is at present a virtual prohibition on the exports of heavier raw hides. Only such quantities of light weight cow hides are permitted to be exported as are surplus to internal requirements.

India is one of the important producers of hides and skins. In normal times, there had been some surplus of these products for export. During the war, however, the export of heavier hides had to be stopped in order to enable them to be utilised for war effort.

Under the existing regulations, export of only light weight cow hides is permissible to the U. K. and the U. S. A. provided the hides intended for export have been first offered and rejected by Indian tanners. In this way, priority is given to internal requirements.

A limited quantity of light cow hides is also permitted to be exported to Turkey, which was one of the outlets for the exportable surplus of Indian raw hides in normal times.

The whole question is understood to be under examination in the Commerce Department in the light of the changed circumstances as a result of the termination of the war.

an attitude, the story of the United States seeking to do two good turns simultaneously does not seem plausible.

It is a fact, never-the-less, that, both in lay circles and in well-informed circles the belief persists that America is pressing Britain to wipe off a portion of the debts she owes to India and other countries Mr. A. D. Shroff is reported to have said that "India would prefer to continue to retain the present negative position rather than accept the proposal for scaling down her sterling balances". Sir Chuni Lal B. Mehta refers to this question and says that "American proposal for scaling down the sterling balances reflects the attitude of a lender who does not want his borrower to be already indebted."

The reports from Washington (suggesting that America desires to scale down the sterling debts) are due, we think, to the incompetency of news agency reporters to interpret financial developments correctly. We derive this impression from Washington message dated October 1. This cable refers to the Commercial Policy Committee investigating "plans for scaling down the sterling bloc and diminishing trade barriers by both sides, which, it is hoped, will become an integral part of a financial agreement to aid Britain over the re-conversion period." The words to be carefully noted in the above quotation are: "Scaling down the sterling bloc". Scaling down the sterling bloc is surely not the same as scaling down the sterling debt. What is exactly meant by "scaling down the sterling bloc"? The same Washington message refers to the "demand that the blocked sterling balances be substantially reduced to open the key markets for American exporters". What America proposes may be thus summed up:

(1) The United States will give a loan of 4,000 million dollars to Britain.

(2) Britain will have to use a portion of these dollars to reduce the sterling debts she owes other countries.

(3) That is to say, if Britain now owes India £1,000 million, she will have to give dollars for, say, £100 million to India, so that the sterling debt left owing to India is only £900 million.

(4) The sterling bloc is thus scaled down.

(5) But the dollars to the credit of Britain's creditors will be correspondingly increased.

(6) These creditor countries can use these dollars to buy American goods.

If the Washington reports mean this—we do not see how they can mean anything else—there is no cause for India to protest against the attitude of the United States. The fact of the matter is that the United States is fighting India's battle. While India failed at Brettonwoods in her rightful demand for dollars, America's enlightened self-interest will achieve victory for India's cause in the talks now taking place in Washington.

The interpretation we have put forward may seem to run counter to the opinion expressed and emphasised in every comment, here and elsewhere. But, as we have already remarked, there has been little appreciation of America's enlightened self-interest in this matter, and of the ethical standpoints of the other countries involved in this discussion.

Even the "Economist", which has been so far positively unfriendly and even bigotted, is obliged to admit that there are real differences in circumstances. "Though the war has made the countries of the Middle East and India large creditors on international account, they are all poor countries, and it might be argued that the principle of equality of sacrifice has already been satisfied by the inflation and the scarcities that have accompanied the large-scale British purchases. Moreover, there is a great difference between a debt in dollars and a debt in sterling. There is no hope of paying off the sterling debts, over a period of years, by assisting the creditor countries with long-term plans of capital developments".

It will be fully worth while to arrange for an authoritative version of the real points made out in America's case vis-a-vis Britain and of the issues raised in this regard with regard to Britain's position vis-a-vis her creditors other than the United States.

We must say that the news agency reports as at hand now are misleading, contradictory in parts, and totally unintelligible.

The exchange market is steady with no change in rates.

Stock Markets to-day and to-morrow:

MACNEILL COAL GROUP RESULTS

Stock markets, both in Calcutta and Bombay, have been quite steady during the past week though Bombay has latterly shown a quieter tendency with the weakness of both the Bullion and the Cotton markets. The Calcutta market was inclined to be slightly easier on Tuesday this week but buying in the last two days has pushed up prices. The satisfactory showing of the Equitable report and the confirmation of the rumours regarding the Burrakur dividend of Rs. 1 had an encouraging effect and the close on Thursday for the Puja holidays was quite steady.

Following the disappointing dividend announcement of Indian Iron on Friday last week, it was feared that markets would remain depressed. From the behaviour of the various sections in the past few days, however, it would be clear that the disappointment has been got over. Even Indian Irons have recovered some of the losses, the quotation now being Rs. 41 against the lowest level of Rs. 40/4 earlier in the period under review.

All the companies of the Macneill Coal group have increased the dividend distributions to ordinary shareholders. With the exception of the Equitable Coal Company Ltd., there is no important change in earnings for the half-year ended June 1945 over the figures of the previous working period. In fact, it would appear that working expenses have gone up appreciably and even an increase in raisings has not been of any advantage to the companies. The higher dividend payments were possible only with the smaller allocations to funds and the provision for taxation. That the directors have decided to effect a general increase in dividends for the

second half-year in succession, even with lower profits, is perhaps an indication of the confidence with which they view the future outlook. In the report to the shareholders of the Equitable Coal Company the directors have, however, again uttered a word of caution against exaggerated expectations and have emphasised that any increase in earnings would have to be utilised towards special depreciation granted by the Central Government for writing down the value of new plant installed for increasing output of coal. The Equitable Coal Company has maintained its dividend at Rs. 1/8 per share but the bonus is higher at 8 annas per share against 4 annas previously while West Jamuria is making a similar distribution against Rs. 1/12 per share previously. Hurriladih is paying Rs. 1/4 per share against Rs. 1 per share, Dhemo Main 8 annas against 6 annas and Mundulpoor 6 annas against 4 annas.

From the table given below it will be seen that all the companies excepting the Equitable Coal Company have earned a lower level of profit for the half-year ended June, 1945 as compared with the previous half-year. With the exception of Dhemo Main raisings have been maintained at the level of the previous half-year. Having regard to the reduction in raisings the net profit of Dhemo Main should be considered satisfactory. With an increase in both raisings and despatches the drop in earnings of Hurriladih is not quite understandable. The poor showing of Mundulpoor also cannot be explained. The net profit, raisings, and despatches for the last three half-years are given below:—

	Half-year ended		
	30.6.1945	31.12.1944	30.6.1944
Net Profit	Rs.	Rs.	Rs.
Dhemo Main	4,09,088	4,12,099	4,10,051
Equitable	36,66,663	31,75,808	27,64,870
Hurriladih	3,03,927	4,18,155	4,35,368
Mundulpoor	1,31,480	2,31,430	1,60,784
West Jamuria	7,50,801	7,54,441	6,56,373
	52,61,959	49,91,933	44,27,446
Raisings	Tons	Tons	Tons
Dhemo Main	94,216	1,01,321	1,12,683
Equitable	7,86,311	6,78,875	7,08,794
Hurriladih	1,25,478	1,13,206	1,39,255
Mundulpoor	54,771	53,184	56,987
West Jamuria	1,13,635	1,11,389	1,28,317
	11,74,411	10,57,975	11,45,016

Despatches	Tons	Tons	Tons
Dhemo Main	95,915	1,01,552	1,14,321
Equitable	7,72,796	6,81,412	7,07,030
Hurriladih	1,22,542	1,15,545	1,37,708
Mundulpoor	54,451	54,485	55,902
West Jamuria	1,13,171	1,15,780	1,27,113
	11,58,875	10,68,774	11,42,074

The record of Equitable Coal in the past few half-years is rather impressive and the large expenditure on development work has been very beneficial. There has been an increase in both raisings and despatches in the last three half-years. Raisings for the last accounting period constitute a record in the history of the company and exceed the previous high figure, which was reached in the first half of 1938, by 76,555 tons. This highly satisfactory result has earned for the company, as the directors point out, Rs. 5,61,755 under the Government Target Bonus scheme.

The net profit, before providing for taxation and depreciation, for the half year is Rs. 36,66,663 against Rs. 31,75,808 for the previous six months. The provision for taxation is higher at Rs. 21.53 lakhs against Rs. 18.27 lakhs while the amount set aside to depreciation is considerably higher at Rs. 3,56,811 against Rs. 1,89,450. The amount transferred to E.P.T. Compulsory Deposit Fund is Rs. 1,59,000 against Rs. 3.78 lakhs. General Development Reserve receives Rs. 1 lakh against the allocation to General Reserve of Rs. 1 lakh while the Replacement Reserve gets an allocation of Rs. 1.5 lakhs (Rs. 1 lakh) and the Reserve for reduction in Valuation of Stores Rs. 1.5 lakhs (nil). The dividend has been maintained at Rs. 1/8 per share while the bonus has been increased to eight

(Continued on Page 629)

FACT No. 1

THE age of miracles is past. If today India's cotton textile industry was not producing an adequate yardage of cloth, then, however great our need of dhoties, sarees, towels, sheets, shirts and other essentials, our demand must go unmet.

Is it a fact that India's cotton textile industry is not producing cloth in adequate quantity?

No. The fact is that the Industry produced on an average, before the war, 3,800 million yards annually as against 4,800 million yards now. If the production of the cotton handloom industry is also included, and if allowances are made for the cloth sent out of the country and supplied against defence requirements, there was available in the year 1943-44 5,868 million yards, as against the prewar average of 6,260 million yards, a reduction of only 6% from peace-time supplies.

These figures convincingly prove that the responsibility for the current shortage assuredly does not lie at the door of the Indian cotton textile industry. The industry has adequately met the wartime challenge to produce enough for the Services and civilians alike.

One of a series of statements of fact for the information of the public.

Week in the Exchanges

CALCUTTA STOCK EXCHANGE (From Our Correspondent)

Calcutta, October 5.

The Calcutta Stock Exchange continued steady in spite of the disappointment over Indian Iron & Steel Company's final dividend for the year ended March, 1945 and the approach of the long Puja holidays. Last Friday bears tried to depress prices, when it was known that there was to be a decrease in the total distribution of Indian Irons for the year 1944-45 by 4 annas per share. But when markets reopened after the week-end, a firmer tendency was noticeable on Monday though business was restricted. On Tuesday an indifferent tone was noticeable. But on Wednesday and Thursday the undertone was quite steady and the close on Thursday was satisfactory and leaders finished around the highest levels for the week and were not very much lower on balance. The general opinion seems to be that the reopening of the holidays will be satisfactory, and that it would be advantageous for investors to keep on to their holdings. Coal shares as usual, provided the feature of the week especially as it was reported that market expectations of a dividend for Burrakur of Re. 1 per share for the first half of the year would be confirmed. Jute shares continued steady in spite of the weaker tone of the jute manufactures market while in the engineering section both Indian Irons and Steel Corporations recovered some of their losses. Sugar shares were steady while in the miscellaneous section there were no important features.

Business in the gilt-edged securities section has been restricted but the general tone has remained steady with $\frac{3}{4}$ per cent **Paper being quoted slightly higher** at Rs. 102-7. 3 per cent 1957 were Rs. 100-6, 3 per cent 1959-61 Rs. 99-12 and 3 per cent 1966-68 Rs. 99-8. It is reported that so far no sales have been effected against the re-issue of 3 per cent 1963-65 for Rs. 25 crores, announcement of which was made earlier this week. Easy conditions continue to prevail in the money market though the average discount rate has recorded a slight increase to 5 annas 6 pies per cent per annum against 5 annas 5 pies. The only transaction recorded in provincial loans was in 4 per cent Punjab 1948 at Rs. 104-4.

Among Bank shares, there is no important change in quotations **Imperial Bank** fully paid being Rs. 2,210, and **Contributories Rs. 562. Reserve Bank** were a shade better at Rs. 137 while **Hindustan Mercantile** were Rs. 47. **Nath Bank** were unchanged at Rs. 35-12 and **Calcutta National** at Rs. 16.

Cotton shares were unchanged with **Cawnpore Textiles** at Rs. 12-12, **Kesoram** at Rs. 19-4 and **New Victoria** at Rs. 7-14. **Elgin** were Rs. 96-8 and **Dunbar** Rs. 362.

In the Coal section **Burrakur** were easier at Rs. 44-6 earlier in the week but as it was said later that the dividend would be Re. 1 the close was very steady at Rs. 45-10. **Amalgamated** also were higher at Rs. 55-8 with **Bhalgora** well held at Rs. 25-12. **Bokaro & Ramgur** have risen to Rs. 55-4 from Rs. 53-8 in anticipation of an encouraging report for the last half-year while **Equitable** were higher at Rs. 75-2, on the optimistic report of the directors, to the shareholders. **New Beerbhoom** were unchanged at Rs. 47-12 and **Raneegunge** at 64-12. **South Karanpura** were steadier at Rs. 39-8 and **West Bengal** at Rs. 15-8.

Jute shares have been marked higher in spite of the weakness of the jute manufactures market as it was pointed out that with increasing coal supplies and a rather low level of prices for raw jute, jute mills would

be able to make good profits. The bigger denomination shares are higher by 5 to 10 points. **Anglo-India** were Rs. 534 against **Rs. 537, Belvedere** Rs. 630 against Rs. 624 **Champany** Rs. 280 against Rs. 273-8 and **Kinnison** Rs. 495 against Rs. 489. There was a jump in **Dalhousie** on special buying to Rs. 441 from Rs. 419. **Empire** also came in for special attention and were done up to Rs. 59-4. **Howrah** were very steady throughout at Rs. 95-8 while **Kamarhatti** were 4 points higher at Rs. 808 and **Kankarah** at Rs. 700. **Reliance** were very strong at Rs. 86.

In the engineering section **Indian Iron** recovered to Rs. 40-15 from Rs. 40-4 on Friday last and operators seem to be of the opinion that the reduction in the dividend might have been due to the decision of the directors to conserve the resources of the company for effecting extensions to plant. **Steel Corporation** have improved to Rs. 34-12 from Rs. 34-2 while **Braithwaite** were unchanged at Rs. 15-12. **Jessop & Co.**, were very firm at Rs. 27-8 while **Kumardhubi Engr.** were a shade better at Rs. 11.

Sugar shares were firmer with a jump in **New Savan** to Rs. 28-4 from Rs. 24-8 last week on reports of a higher dividend for the year ended May 1945. **Champany** also improved to Rs. 44-1 from Rs. 43-4 while **Cawnpore** were unchanged at Rs. 43-8. **Ram-nugger Cane & Sugar** were slightly better at Rs. 22-12 while **Samastipore** improved by one point to Rs. 22-12. **Carew & Co.**, remained steady throughout the week at Rs. 32.

In the miscellaneous section, **Burma Corp.** improved to Rs. 6-13 from Rs. 6-6 last week, **Karanpura Development** were higher by one point at Rs. 45-8 **Calcutta Electric** declined to Rs. 44-8 but on renewed buying they have again risen to Rs. 45-2. **Indian Aluminium** have been officially recorded at Rs. 255 B.I.C. were unchanged at Rs. 7-9 and **Indian National Airways** at Rs. 25-6. **Walford Transport**, however, were steady at Rs. 8-3, and **Titagur paper** at Rs. 32-14. **Midnapore Zamindary** were Rs. 178 and **I.G.N.** Rs. 218 ex-dividend. **Assam Bengal Cement** were Rs. 20 and **Dalmia Cement** Rs. 13-9 ex-rights.

BOMBAY STOCK EXCHANGE (FROM OUR CORRESPONDENT)

Bombay, October 4.

During the early part of the week under review, there was hesitant sentiment following the easiness of the Calcutta markets. There was hardly any important movement in the prices of most of the active counters. The depressed state of affairs continued till Wednesday and partially on Thursday when, however, brisk activity developed on influential support. Some lost ground was re-

covered especially in Steels and Textiles towards the close.

Government Securities practically remained steady throughout the week with little (Continued from Page 632)

WALFORD TRANSPORT LIMITED

(Consent of the Central Government has been obtained to this issue under Defence of India Rule 94-A by an order of which a complete copy is open to public inspection at the head office of the Company. It must be distinctly understood that in giving this consent the Government of India do not take any responsibility for the financial soundness of any schemes or for the correctness of any of the statements made or opinions expressed with regard to them.)

Notice is hereby given that an Extraordinary General Meeting of the above-named Company will be held at the Registered Office of the Company, 71, Park Street, Calcutta, on Monday, the twenty-ninth day of October, 1945, at 2-30 o'clock in the afternoon to consider and, if thought fit to pass with or without modification, the following resolution:—

That it is desirable to raise further capital and accordingly it is decided that—

(a) 1,05,100 new Ordinary Shares of Re. 1 each in the authorised capital of the Company shall be offered in the first instance for subscription at a premium of Rs. 2 per share to the Shareholders of the Company, whose names appear on the Share Register of the Company on the nineteenth day of October, 1945, in the proportion of one new Ordinary Share for every four existing Shares, whether Ordinary and/or Preferred Ordinary held by them respectively, fractional cases being disregarded in all cases.
(b) the new Ordinary Shares which Shareholders are entitled to take up shall be offered in accordance herewith to each Shareholder entitled whose name appears on the Share Register of the Company on the said nineteenth day of October, 1945, by notice specifying the number of new Ordinary Shares to which he is entitled and limiting the time within which the offer, if not accepted, will be deemed to be declined and containing such terms as to payment or otherwise as the Directors may determine.
(c) the balance, if any, of such new Ordinary Shares not taken up in response to such offer shall be offered for subscription by the Directors at the same premium as is stated herein to such persons or to the public and on such terms and conditions as they think fit not being inconsistent with the statements contained in the Company's Circular Letter of the First day of October, 1945.

By Order of the Board,
V. M. NAIR,
Managing Director.
Calcutta,
Dated the 1st October, 1945.

629

(Continued from Page 625)

Consent of the Central Government has been obtained to this issue under Defence of India Rule 94A by an order of which a complete copy is open to public inspection at the Head Office of the Company. It must be distinctly understood that in giving this consent, the Government of India do not take any responsibility for the financial soundness of any schemes or for the correctness of any statement made or opinion expressed with regard to them.

THE BRITANNIA ENGINEERING COMPANY, LIMITED.

NOTICE is hereby given that an Extraordinary General Meeting of the above-named Company will be held at the Registered Office of the Company, McLeod House, 28, Dalhousie Square, Calcutta, on Friday, the 2nd day of November, 1945, at 12 noon, to consider and, if thought fit, to pass with or without modification, the following resolutions:—

(1) That the authorised share Capital of the Company be increased from Rs. 7,50,000 to Rs. 10,00,000 by the creation of 25,000 new Ordinary Shares of Rs. 10 each ranking for dividend and in all other respects pari passu with the existing Ordinary Shares in the Company.
(2) (As a Special Resolution)—That the Articles of Association of the Company be altered as follows:—
Article 4 shall be deleted and the following new Article substituted therefor—

4. The Capital of the Company is Rs. 10,00,000 divided into 1,00,000 Ordinary Shares of Rs. 10 each.
(3) That it is desirable to raise further capital and accordingly it is decided that—
(a) 25,000 new Ordinary Shares of Rs. 10 each in the authorised capital of the Company shall be offered in the first instance for subscription at a premium of Rs. 5 per share to the Shareholders of the Company, whose names appear on the Share Register of the Company on the 2nd day of November, 1945, in the proportion of one new Ordinary Share for every three existing Ordinary Shares held by them respectively, fractional cases being dealt with as the Directors think fit.
(b) the new Ordinary Shares which Shareholders are entitled to take up shall be offered in accordance herewith to each Shareholder entitled whose name appears on the Share Register of the Company on the said 2nd day of November, 1945, by notice specifying the number of new Ordinary Shares to which he is entitled and limiting the time within which the offer, if not accepted, will be deemed to be declined and containing such terms as to payment or otherwise as the Directors may determine;
(c) the balance, if any, of the new Ordinary Shares not taken up in response to such offer shall be offered for subscription by the Directors at the same premium as is stated herein to such persons on such terms and conditions as they think fit not being inconsistent with the statements contained in the Company's Circular Letter of the 3rd day of October, 1945.

As indicated above Resolution No. 2 will be proposed as a Special Resolution.
By Order of the Board,
MCLEOD & CO., LTD.,
Managing Agents.
Calcutta, dated the 3rd October, 1945.

annas per share from four annas per share. The amount carried forward is slightly lower at Rs. 1,13,505 against Rs. 1,25,404 brought in.

The block has been reduced drastically in recent years and the net block of Rs. 13.06 lakhs should be worth very much more than the book value. Nevertheless, the directors utter a word of caution in respect of the dividend distributions in future. While the policy of the Government in regard to prices, wages and distribution would determine the rate of earnings the directors emphasise that with the large additions to plant there will be need for heavy depreciation and full provision would have to be made under the special allowances.

It is stated that the Company has on order essential plant and machinery to the value of some Rs. 40 lakhs all of which is expected to be installed by the middle of 1947. There is an item in the balance-sheet as plant and machinery unissued for as much as Rs. 27.49 lakhs which is an indication that a good portion of the machinery has been received on site. The expenditure referred to will qualify for special depreciation which will be admissible for two years from the date of bringing of the plant and machinery into use. The Board have decided that in the accounts for the periods concerned depreciation will be provided to the full extent of the special depreciation allowed in the taxation assessments of the Company.

In view of the strong financial position of the Company and the possibility of an increase in raisings with the installation of mining equipment the directors would seem to be unduly conservative especially as they have been liberal in regard to the dividend distribution of other companies. It is not surprising that the market has favourably received the report.

The net profit before providing for taxation of the West Jamuria Coal Company for the half-year is Rs. 7,50,801 against Rs. 7,54,441 for the previous six months. Provision for taxation is higher at Rs. 8,17,000 (Rs. 5,86,000) while the amount set aside for depreciation is Rs. 4,192 against Rs. 4,848. There is no transfer to reserves (Rs. 54,000). After making the distribution referred to above, the amount carried forward is Rs. 27,332 against Rs. 27,713 brought in. There is a slight increase in raisings but despatches were lower at 1,31,171 tons against 1,15,780 tons.

The Hurriladih Coal Company for the same half-year has earned a net profit of only Rs. 3,03,927 against Rs. 4,18,155. As provision for taxation is appreciably lower at Rs. 1,58 lakhs against Rs. 2,53 lakhs and provision for E.P.T. deposits was Rs. 25,000 (Rs. 60,000) it was possible to effect an increase in dividend after setting aside Rs. 25,463 (same) to depreciation. The amount carried forward is slightly lower at Rs. 12,692 against Rs. 17,228 after paying a dividend of Rs. 1/4 against Rs. 1 per share. As there was an increase in both raisings and despatches, the decline in earnings by over Rs. 1 lakhs is not quite understandable.

Britannia Engineering Company Limited is issuing new shares on bonus terms to the shareholders as on November 2, 1945. The authorised capital is to be increased from Rs. 7.5 lakhs to Rs. 10 lakhs by the creation of 25,000 new ordinary shares of Rs. 10 each ranking for dividend and in all other respects pari passu with the existing ordinary shares in the Company. The newly created shares are to be offered in the first instance for subscription at a premium of Rs. 5 per share to the existing shareholders in the proportion of one new share for every three shares held. The Company has fared

very well in recent years and has paid a dividend of 7½ per cent in respect of 1941, 1942 and 1943. But for the heavy incidence of taxation, a higher dividend could have been paid. The accounts for the year ended December 1944 are due to be published shortly. As considerable extensions to plant have been made, earnings can be expected to be maintained at a high level for some time to come. The issue of new shares might not, therefore, affect the dividend distribution.

Allahabad Bank is also issuing shares on bonus terms to shareholders. The authorised capital is to be increased from Rs. 60 lakhs to Rs. 1 crore by the creation of 40,000 ordinary shares of Rs. 100 each. Of these newly created shares, 20,000 shares are to be offered at a premium of Rs. 150 per share to both the existing preference and ordinary shareholders in proportion to their holdings.

With the electric supply companies again free to publish information relating to their activities Mr. J. R. D. Tata, Chairman of the Tata Hydro-Electric group of companies, had very interesting remarks to make about the role of the companies in the war period. Apart from the fact that the Tata Hydro-electric group has served to emphasise the importance of hydro-electric energy for India, which is not endowed with large reserves of coal, in the war years but for the Tata Hydro-electric Companies several cotton mills would have closed down and production of much-needed cloth would have been adversely affected.

The earnings for the last accounting period were slightly lower as the reservoirs were not quite full owing to insufficient rain and it was necessary to buy power in bulk from the Chola Power Steam Power station. As the reservoirs are full now the prospects for the current year are considered satisfactory.

The Travancore Bank Ltd., the prospectus of which is published elsewhere in this issue, has been started with a view to aid in the industrial expansion of the Travancore State. Many large industries have in recent times sprung up in that State and many are under way or under active consideration. The policy of industrial expansion undertaken by the State will undoubtedly call for an increase in banking facilities. The need was felt for a bank with ample resources and capable of commanding the confidence of the public to align itself with the scheme of industrial expansion. Accordingly, the Government of His Highness the Maharajah of Travancore have agreed to take an interest in the capital to the extent of 30 per cent of the issued capital and have also agreed to appoint the bank as bankers to the State. One of the directors who is a Government servant is nominated by the State.

The authorised capital is Rs. 2 crores in eight lakhs shares of Rs. 25 each while the issued capital is Rs. 1 crore in four lakhs shares of Rs. 25 each. Of the above issue, the Government of Travancore have subscribed for 1,20,000 shares and the signatories to the Memorandum of Association have agreed to take up 6,600 shares. The directors have subscribed for 4,000 shares so that the balance of only Rs. 67.4 lakhs in 269,600 shares is offered for public subscription.

The activities of the Bank will not be mainly confined to the State as the financial operations of the trade and industry cannot be circumscribed and must necessarily extend to the rest of India. It is, therefore, proposed that the bank should have its office in all the principal cities in India. The Board of Directors have been constituted with this end in view. The whole of the issue is underwritten.

COMPANY REPORTS

CHITAVALSAR JUTE MILLS CO., LIMITED

(Half-yearly General Meeting on 9-10-1945 at noon. Books closed from 25th September to 9th October, 1945).

Audited Accounts for the half-year ended 30th June, 1945.

Including balance brought forward from last half-year and after providing for Interest, Debenture Interest, Commissions, and Taxation, shows a credit balance of Rs. 2,61,629-15-4, which sum, the Directors recommend, should be dealt with as follows:—

Pay a dividend on the Rs. 5,00,000 Ordinary Shares at the rate of 5 per cent. per annum or As. 2 per share for the half-year Rs. 62,500; write off to Depreciation Rs. 95,000 0 0; transfer to Reserve Account Rs. 58,373 12 0; carried forward to Profit and Loss Account Rs. 45,756 3 4; total Rs. 2,61,629 15 4.

Jute Stocks are shown at or under cost price. Stocks of Gunnies, none of which are unsold, have been calculated at contract sale price.

In the last report submitted, reference was made to the introduction of double shift working, to the fact that the mills had been placed under the "Foster" category, and also to the labour shortage which had rendered it impossible to keep the total complement of 400 looms in commission. In the early months of the year, a fairly steady improvement materialised in labour supply, but from March, the position deteriorated and by the end of May only about half the total loom complement was in commission, on double shift of 108 hours per week. Effective as from the beginning of June, therefore, single shift working on a 66 hours per week basis, was adopted. This policy was justified in that by the end of June, 387 looms were in commission, and it may be mentioned that the full complement of 400 looms is now working. The general shortage of labour and the inefficiency of those offering themselves for employment affected trading results adversely although efficiency is now improving.

Working time still to be recovered as at the close of the period under review is as under:—

	Loom hours.
Lost up to and including 30th June, 1944, and recoverable under the Working Time Agreement	143383.5
Lost and recoverable under the Industrial Pool	41570.25
Total	184953.75

(Half-yearly General Meeting on 30th October, 1945 at 11-40 a.m. Books closed from 19th to 30th October, 1945).

Audited accounts for the half-year ended 31st May, 1945.

After making sundry adjustments, the results for the half-year show a profit of Rs. 7,56,893-11-10. After providing Rs. 5,30,000 for Taxation and transferring Rs. 4,876 to Insurance Fund, Rs. 25,000 to Mills Renovation Reserve and Rs. 50,000 to Dividend Equalisation Reserve and after bringing forward the balance from the last Account there is a balance at the credit of Profit and Loss Account of Rs. 1,32,784-9-5 from which the directors recommend payment as follows:—

Dividends on Preference Shares at Rs. 3-8 per share, Rs. 31,500; and on Ordinary Shares at Rs. 5 per share Rs. 60,000; thus absorbing Rs. 91,500 and leaving Rs. 41,284-9-5 to be carried forward.

The weekly hours of working under the Indian Jute Mills Association Working Time Agreement remained unchanged throughout the half-year at 54 hours per week with all looms operating. A new arrangement, effective from 1st May, 1945, has been entered into with the Cheviot Mills Co., Ltd. whereby the Company will purchase the loom hours to which their Company is entitled under the Indian Jute Mills Working Time Agreement, at the loom hour purchase rate fixed from time to time by the General Committee of the Association for the Mill Industrial Pool. This arrangement will continue so long as the Cheviot Mills Company, Limited, is able to utilise the Company's loom hours by working their mill 108 hours per week or until terminated by the giving of one month's notice by the Directors of either Company. The arrangement also includes the sale by the Company of the Stocks of Jute as at 30th April, 1945, and of such mill Stores as the Cheviot Mill requires, at market rates and the transfer to the Cheviot Mills, at market rates, of the Company's outstanding contracts as at 30th April, 1945, for the sale of Jute goods.

During the period to the 1st May, the working of the Cheviot Mills' extra 32 looms enabled the mill to make up 72 of the hours previously lost, leaving a balance of 939 hours still to be made up under the Working Time Agreement.

(Continued from Page 626)

variation in prices. 3½ per cent Paper continued to quote Rs. 102.4.

Bank shares also attracted little attention till mid-week, but latterly there was some moderate demand for Imperial Bank Contributions which improved from Rs. 557.8 on Wednesday to Rs. 565 on Thursday. The Fully paid were pegged around Rs. 2,220. Central Bank closed at Rs. 85.4 against Rs. 85.12 at the end of last week. Reserve Bank were slightly higher at Rs. 140.

Textiles showed considerable declines on Monday and Wednesday on liquidation influenced by the weakness of other markets. Only towards the close was there a partial recovery. Bombay Dyeing after being lower at Rs. 1,945-12 closed better at Rs. 1,980. They were quoted Rs. 1,988-12 earlier in the

week. Century were the exception to have recorded a gain of about 15 points, the closing quotation being Rs. 910 against Rs. 897.8. Kohinoor lost by about 11 points on balance to close at Rs. 609. Simplex, likewise, shed 6 points at Rs. 298, while Spadeshi was weak at Rs. 560 against Rs. 572. Other shares were uninteresting.

In the Engineering section, Tata Deferreds staged a setback on Monday, when there was a drop of nearly 24 points. The quotation was Rs. 2,228-12 x.d. against Rs. 2,382.8 c.d. Thereafter, there was a gradual improvement and despite small fluctuations, the price at the time of closing was Rs. 2,235, a gain of 7 points over the lowest level for the week. The ordinaries were lower by 8 points at Rs. 415 while Alcock remained unchanged at Rs. 407.8. Premier Construc-

tion also closed easier at Rs. 205 against Rs. 211. Indian Iron closed better at Rs. 40.11 after being lower at Rs. 40.4 following the disappointing final dividend.

Shares in the Tata group of Hydro-electric companies were also affected by the general decline in prices and despite the statement of the Chairman of the group about the important role played during war period, there was a drop of 8 points in Andhra Valley to Rs. 1,822.8 from Rs. 1,830. Tata Power, however, recovered to Rs. 1,897.8 after being lower by 5 points. Tata-Hydro fractionally improved to Rs. 204.

The Miscellaneous section, exhibited weakness due to selling pressure. Belapur closed barely steady at Rs. 223 while Bombay Burmah old shares suffered a decline of 10 points at Rs. 552.8.

facts about the 3% SECOND VICTORY LOAN 1959-61

The First 3% Victory Loan (1957) was withdrawn in February 1945, after more than Rs. 112 Crores had been invested in less than eleven months.

The 3% Second Victory Loan (1959-61), issued on similar excellent terms, is now available until further notice.

THE LOAN can be bought through your Bankers, who will arrange everything, or you can apply to the Reserve Bank of India at Bombay, Calcutta, Madras, Delhi, Cawnpore or to Branches of the Imperial Bank of India at other places or to any Government Treasury.

DIVIDENDS at the rate of 3% per annum less Income-Tax will be sent to your address twice a year on the 15th August and 15th February.

NO LIMIT is set to the amount you can invest in this Loan.

SAFETY of capital is assured. The Loan is redeemable at par not earlier than 15th August 1959 and not later than 15th August 1961.

REALISATION of your investment is possible at any time, since the Loan is readily salable in the market. Apply now!

REFUNDS of Income-Tax will be obtainable by holders of the Loan who are not liable to Income-Tax or who are liable to Income-Tax at a lower rate.

(From our Readers)

The Nations' Food:

The article with the above heading appearing in Indian Finance dated September 29, 1945 is not very helpful. It either baldly summarises parts of the Famine Commission Report or points out only the unhelpfulness of some of the recommendations of the Commission. And what purpose does such an article serve?

What I expected from an article with such ambitious title is this. How to distribute food evenly not only within a nation but between nations—mark the plural heading. That is the thing to be done immediately to avoid famine in the wake of war.

And in the long run how to make countries grow enough food for themselves? And there is absolutely no suggestion on this all-important point in your long article. Conditions in India being what they are, there is no chance of making this country self-sufficient in the matter of food unless two corns are grown where one grows at present. To say this can be achieved only when the people are educated, when transport is better, when marketing facilities are available etc., etc., is to wait till Doomsday. The Agricultural development of this country has to be tackled on different fronts at the same time. Instead of saying this you have gone on discussing the pros and cons of birth-control, migration, unipurpose versus multipurpose co-operative societies and what not.

N. K. Tandon

Famine Commission Report:

Whether the Final Report of the Famine Commission makes any useful suggestions or no, one thing it does, viz., to discuss at length the problem of India's food requirements. Even this is valuable provided good use is made of the report. We are said to plan the industrial and agricultural development of the country and agriculture cannot be planned unless we know the food requirements of the people and the food available. The members of the Commission were distinguished men in different fields. And this invests the report with an amount of authority. The Government, therefore, should keep this report as the basis of their agricultural policy, and not confine it to the Secretariat shelves after expressing their appreciation of the services of the members.

R. N. Singh.

Economics of Separation:

Even though Pakistan is still a vague expression, the definition of which the author himself is still studying, yet the Muslim league shouts for it as if it is something defined, tangible and real. But there are many who think that the League is having the Pakistan cry only as a bargaining point and nothing more.

Whatever it is, all except the orthodox Muslim Leaguers have clearly and in unmistakable words said that Pakistan is neither desirable nor practicable for the Muslims themselves. This opinion has been endorsed by three disinterested, distinguished men of this country as Members of the Pakistan Committee of the Non-party Leaders' Conference. Though for different reasons, all three are unanimous that Pakistan is not a practical proposition.

This authoritative opinion supported by facts will, let us hope, convince the Muslims that what some shout for is a myth.

A Nationalist Muslim

Agricultural Statistics:

While endorsing your plea for the collection of 'accurate agricultural statistics' I am at a loss to understand if it requires so much goading and scholastic persuasion to impress on Government the elementary duty of collection of statistics. With an air of satisfaction and approval you remark "it is gratifying to note that Provincial Governments are keenly aware of the urgency for collecting full data regarding agricultural conditions"—an awareness dawning on British administration in India in the year of grace 1945 and which dawned in England on William the Conqueror and impelled him to draw the Doomsday book.

Of course, I am aware that our Governments have published periodically statistics on all subjects, from kings to cabbages. And the value of these has been painfully clear from the Bengal famine—half knowledge is a dangerous thing.

But your note lacks the constructive suggestion—how to collect correct statistics. So far, collection of statistics had been to some extent at the mercy of village officials who neither appreciated their value nor were equipped for collecting them.

Even officials who appreciated the value of statistics had neither the time nor energy to verify the accuracy of statistics.

Statistics should be collected on an all-India basis beginning from the village, acreage of land that is cultivable and cultivated, crops, food and commercial, cattle wealth, vegetables grown, in fact every detail that is necessary for agricultural and food planning should be collected with qualified staff with an eye for accuracy.

A. N. Chatterji.

Employment Exchanges:

The cry that the war has ended abruptly, unexpectedly and without 'giving one or three months notice on either side' is being repeated by all interested people. Is it not a matter for gratification that the war has ended, when it did? One should wish that the war should have ended earlier.

Government spokesmen say that the war has ended so unexpectedly and so quickly that post-war plans could not be made, forgetting that one who is serious must be prepared for all contingencies—even the early cessation of hostilities.

Demobilisation in India, as all other post war plans, is in an unplanned stage. How are the men to be provided?

The Government have decided to set up Employment Exchanges the procedure in which you have described elaborately in your note, appearing in 'Indian Finance' October 6, 1945. But you have not said one fundamental thing, that it is no use having Exchanges when there is not employment in the country. The Post-war plans which were thought as plans which would give employment to demobilised personnel are still paper plans. The chances of rapid industrialisation are remote because we are not expected to get Capital Goods in the near future while consumers' goods will begin to flow into this country.

Surely the Government cannot think that

these Exchanges themselves will provide employment for these men. We should not miss the purpose for which these Exchanges are intended and think on the setting up and procedure of the Exchanges.

A. K. Mehta.

Road and Rail:

You have hit the nail on the head when you remarked in your article on 'Road Rail' (Indian Finance September 29, 1945) "When we speak of transport, we think of all forms of transport and of the means of relating them properly to make a co-ordinated whole." What is often thought in this country is that either the Rail or the bus should survive—a view that deserves strong disapproval.

India is a land of distances. It is essentially an agricultural country. Its prosperity depends in no small extent on a net work of Railways. And where Railways cannot be laid buses, lorries and carts must come to the help of the people.

The sympathy for the buses on the ground of favouring the poor individual against a powerful Corporation can no longer be there. For one thing the Railways are the property of the nation. Any income they make goes to the national exchequer. For another, the buses are not so innocent. Those who know the tyranny of buses in the villages where no other form of conveyance is available can have no sympathy for the buses.

What we require is—and you have pointed it well—that in conditions of increasing traffic and clearly demarcated spheres the old idea of survival of the one at the expense of the other is an anachronism and should go.

Let us help you in your FUTURE PLANS

Since 1927 the Concrete Association of India has assisted the cement user in getting the best out of cement. In addition to actual practical assistance given during construction work we have published from time to time over 50 brochures on different branches of concrete engineering.

Before you decide on your future construction schemes it will pay you to take advantage of this service. For a complete list of pamphlets (including some in the Vernacular) and for any other assistance required, write us at Victoria House, Calcutta.

The Concrete Association of India,
Victoria House, Calcutta. IP. 5

Dear Sirs,

Please send me a complete price list of your brochures in English and the Vernacular.

Yours faithfully,

Fact Parade

All India Food Index:

The Economic Adviser's all India index of wholesale price of food articles (Base: last week of August 1939 100) worked out to 237.2 for the week ended September 22, 1945 as compared with 237.9 for the previous week.

Between the two weeks, Cereals remained stationary, while 'Pulses' advanced by about 3 points and other food articles declined by about 2 points.

Australian Budget:

Australia has made a 12½ per cent. cut in income-tax. The Commonwealth's first post-war budget totals £340,000,000 and loans £152,000,000. A new feature is a graduated social service tax rising to 18d. in the £.

Textile Industry for South Africa:

Ambitious plans for the establishment of a South African textile industry involving the immediate expenditure of a million sterling were announced by one of Australia's leading textile industrialists Mr. Noel P. Hunt. He was enthusiastic about South African possibilities, particularly because of the low level of income tax. He said it was possible that an additional ten million sterling would be spent in the next ten years.

Plans for nine mills, five of which will be now, have been ordered in Britain Mr. Hunt said. All operations, he announced, would be by subsidies from the parent Australian firm of Noel P. Hunt Proprietary. Other Australian interests are considering South African development connected with the leather industry and women's underwear.

Ry. Engines driven by Atomic Power:

The construction of an atomic power-driven experimental locomotive is scheduled to begin soon at Belleville, Mr. Ralph Lucas, Chief Engineer of the United States Industrial Development Company, said.

The Engineer explained that the locomotive, which was designed for the New York Central Railroad, would be fitted with a mercury and steel turbine employing a formula for the disintegration of mercury and steel atoms.

Mr. Lucas said: "The formula produced controllable disintegration of the atom and that one tea cup full of mercury atoms exploded would run a locomotive pulling 120 freight cars of 45 round trips between New York and San Francisco."

Radio-active Mineral deposits in U. S.:

President Truman has issued an executive order declaring there must be no sale or other disposal of any public lands in the United States or Alaska, containing radio-active mineral deposits.

The measure was taken to strengthen Governmental control over any substances which were usable for the production of atomic energy.

The Bureau of Mines said that there are known deposits of Uranium in the States of Colorado and Utah.

Major-General Groves, the organising genius behind the production of the atomic bomb, said at a Press conference: "It will be a long time before atomic energy can be harnessed for civilian use."

Bees that do not Sting:

Canadian honey producers say they have a strain of bees that will not sting.

Russian Rust preventive:

The Russians have a new rust preventive known as 'unikol'.

Soviet grant for Scientific research:

The Soviet Government has appropriated more than a thousand million roubles for the construction of new buildings for scientific research institutes, laboratories and scientific stations of the Academy of Science of USSR.

Machinery for Tungabhadra Project:

A proposal is under consideration of the Government of Madras to depute Dewan Bahadur N. Govindaraja Iyengar, Chief Engineer for Irrigation, to England and America in connection with the purchase of plant and machinery for the Tungabhadra Project.

Mr. Govindaraja Iyengar will be requested also to study the Tennessee Valley Project in America and the construction of giant dams there is connection with the proposed Godavari Rama Pada Sagar Scheme.

U. S. War Time Abolished:

President Truman has signed a law abolishing war time. The United States returns to Standard Time, which is one hour earlier.

Tyres From Rayon:

Good-year Tyre and Rubber Company claims to have perfected a tyre made of rayon instead of cotton-cords thereby increasing mileage.

U.S. National Income:

An 8,000,000,000 dollar decline in the national income of the United States will be recorded in the second half of 1945 with the cessation of war-spending, the Secretary of Commerce, Mr. Henry Wallace, estimated.

Mr. Wallace used the statement as another plea for full employment and the attainment of his goal of 60,000,000 jobs. He asserted "While the immediate curtailment of purchasing power will not be serious, prompt reconversion of business and vigorous Government action is needed to prevent mounting deflation and unemployment."

U. S. Silver Price:

Economists said the other day that once the United States ceased to maintain its artificial silver price levels, they might fluctuate considerably, because nobody

knew the amount in circulation. These experts said that it was feared that the United States silver bloc in the Senate might seek to raise the United States price to 1 dollar 29 cents per ounce.

Economic Reconstruction of China:

President Truman is sending his personal representative, Mr. Edwin A. Locke, to China to discuss with Generalissimo Chiang Kai-shek and leading Chinese officials ways in which the industrial experience of the U.S.A. can best aid the peacetime economic reconstruction and development of China, it is announced.

Mr. Locke will give special attention to the immediate situation confronting China as a result of her acquisition of larger industries in Manchuria and other liberated provinces, the statement said.

Drop In German Coal Output:

Wage-hour disputes, 30 per cent. absenteeism and disinclination of miners to return from the army are the factors mainly responsible for a drop in German coal output far below the 10,000,000 tons expected this year. The Saar region is now producing 15,000 tons daily compared with 2,000 tons last April, but the Saar-Ruhr situations, are critical, owing to employment of only 40 per cent. of the normal. Many special inducements are being offered to German miners in a desperate effort to produce the more urgently-needed coal.

TREASURY BILLS

Central Government:

Tenders for Rs. 2,00,00,000 of three months' Government of India Treasury Bills were opened on Tuesday, the 9th October, 1945. Total amount offered was Rs. 6,01,50,000. Tenders at Rs. 99-14-9 per cent were accepted in full and those at Rs. 99-14-6 per cent were allotted approximately 9 per cent. Total amount accepted was Rs. 2,00,00,000, the average rate of accepted tenders being Re. 0-5-2 per cent per annum.

Tenders for Rs. 2,00,00,000 of three months' Government of India Treasury Bills will be received at all centres on Wednesday, the 17th October, 1945 upto 11 a.m. (Standard Time). Successful tenderers should make payment on Friday, the 19th October, 1945. Other conditions are as usual.

During the week ended the 5th October, 1945, Government of India Treasury Bills for Rs. 4,41,75,000 were sold in favour of the Issue Department of the Reserve Bank of India.

Bengal Government:

Tenders for Rs. 2,50,00,000 of three months' Bengal Government Treasury Bills were opened on Wednesday, the 10th October 1945. Total amount offered was Rs. 5,40,00,000. Tenders at Rs. 99-14-3 were allotted approximately 53 per cent. Total amount accepted was Rs. 2,50,00,000, the average rate of accepted tenders being Re. 0-7-0 per cent per annum.

GOVERNMENT OF INDIA DEPARTMENT OF SUPPLY.

TENDER NOTICE.

The Controller of Supplies (Disposals), 2, Fairlie Place, Calcutta, invites offers for the purchase and removal of a large quantity of hessian parachutes and pack parachutes lying with various Jute Mills in and around Calcutta area. Tenderers should be responsible for taking delivery ex. site. The rate of parachutes and packs should be quoted per number. Tender forms showing the exact locations numbers of parachutes and packs and embodying the special and General conditions of sale as well, may be obtained from this office on request. Tenderers may inspect either the stocks at sites on presentation of tenders form to stockholders obtainable from this office or representative sample available here on any working day during office hours and are at liberty to tender either for the total number available or for any portion thereof. The Controller of Supplies (Disposals) reserves the right to accept any portion of the offer unless a stipulation is made to the contrary in the tender. Tenderers should be submitted in sealed covers superscribed "Tender No. CDD/TXT/429/SR-1641 and should reach the Controller of Supplies (Disposals) by 4 P.M. on 30th October, 1945. Tender should accompany a deposit at call receipt for Rs. 1000/- as earnest money paid into the Reserve Bank of India. Imperial Bank or Govt. Treasury. in favour of the Controller of Supplies (Disposals) and should remain open for acceptance for 30 days from the due date.

FOR THE VEGETARIAN AND NON-VEGETARIAN

THE majority of the peoples of India are vegetarians. Vegetarians lack the body-building protein that non-vegetarians get from meat and fish. It is not easy for them to balance their diet, and here the pea comes to their aid.

This is so because the pea in relation to most foods contains little water. It is crammed with protein and carbohydrate, with a sufficiency of fat. Because it is such a pleasant and nourishing food the pea is widely eaten by non-vegetarians too. Peas are very easy to grow. The soil can range from light sandy loam to heavy clays, but water-logging must be avoided. The yield is about 120 maunds per acre.

In the interest of the nation's health, this food should be extensively cultivated. But it cannot benefit the producer nor reach the consumer unless GOOD ROADS are built to bring it in to Market.

GOOD ROADS ARE AVENUES TO PROSPERITY

Fighting the Slump

Sir Ardeshir Dalal's speech at the meeting of the General Policy Committee raises the hope that the Government will not lose much time in inaugurating measures which will check the deterioration in the economic life of the country and at the same time lay the foundations of more ambitious development in the future. That hope is not, however, easily sustained. For, taking the whole of the present political and economic conditions of the country into consideration, the major uncertainties that we are confronted with are sufficient to ruin the chances of effective action being taken. It is unnecessary to go in detail into the political situation. Suffice it that the last chance of Indian political parties acquiring a realistic outlook on our national problem, through direct acquaintance with the pressing issues in the economic sphere, has been dispelled by the dissolution of the legislatures and the postponement of all and every kind of change in the governance of the country to till after the elections. If there were a Ministry in every province, no matter what is its political complexion, it would have had direct first-hand knowledge of the effects of peace on our precarious economic life. The Ministers and, through them, the parties to which they belong would have known the scale and significance of the dis-employment which the onset of peace will bring about, the imperative need to maintain employment and productive activity and the basic political and economic conditions in which these tasks could be essayed. Such knowledge might have helped to reduce the intransigence of political parties and bring them together round a common political constitution and a common programme of economic development.

But unfortunately, the British Government, probably under the advice of interested parties, decided to close the question by dissolving the legislatures and to hold the general elections at an early date so as to get the Constituent Assembly to apply itself to its task without avoidable loss of time. Political parties in India have a strong tradition of indifference to economic problems. They have been denied the opportunity of acquiring first-hand knowledge of the problems which we have to solve without any manner of delay. They have also to prepare for fighting the forthcoming elections. In these circumstances, preoccupation with political problems, and partisan politics at that, is more or less inevitable. But the few months that lie ahead are precisely the period in which anti-slump measures can be taken with any hope of success. Since there is no responsible government in the Provinces and since the Viceroy's Executive Council as such has been somewhat dispirited, owing to the frequent attempts to find a better substitute for it, the responsibility for the measures, which the present situation in the economic sphere calls for, may be said to devolve on the Planning Member and the Finance Member as their own special, personal responsibility.

It must be said to the credit of Sir Ardeshir Dalal that he has always recognised that as Member for Planning, he has a position in the Cabinet different in many ways from that of his colleagues. It is extremely important in this context that Sir Ardeshir's name figured prominently in almost every list of Executive Councillors that was prepared in connection with the Simla Conference. This indication of the probable continuance of his responsibility for planning must spur him, if nothing else, to discharge it as well as circumstances permit even during the present stage. As for the Finance Member, the nature of his tasks never allows the adoption of a short term view. His responsibilities are enhanced, and not reduced, by the imminence of radical constitutional changes.

Normally, one would have to wait till the budget to know in what spirit and to what extent these responsibilities are being borne by the Planning Member and the Finance Member. The plea put forward in the "Clive Street Gossip" of our last issue that, as this is not the time for adherence to routine, the Central Government should try to decide a number of crucial questions of policy and even prepare an interim budget such as Dr. Dalton has promised in Britain, is worthy of the most careful consideration. For we have need to stop the rot in employment that must set in with the end of the war and lay the foundations of the economic planning to come. The relation between the two tasks is not an arbitrary creation. For unless we stay the rot, the tasks of economic planning will have been immensely complicated; and the work of the future will be more of an uphill nature than it would be otherwise. For the fact remains that, in spite of all the hardships and sufferings of the war period and the fundamentally unreal character of war prosperity, the country has come by the invaluable advantages wide diffusion of purchasing power, accumulation of savings, eagerness for economic betterment and popular interest in economic

planning. These are great advantages for securing economic development and progress. But, just as they were borne on the crest of inflated war expenditure, they are liable to be washed away by the ebb tide of public finance in peace time. And if there are difficulties like the difficulty of acquiring producers' goods from abroad or of securing a return to the incentives of normal private enterprise, they can only reinforce, far from weakening, the case for early anti-slump measures that will shade off into preparation for planning proper.

Sir Ardeshir's speech at the General Policy Committee is notable for his keen grasp of these facts and his readiness to give them full importance. Sir Ardeshir points to "the factors in the economic situation to-day which suggest that there will be spontaneous activity in the country to counteract what might have been the effects of a sudden increase of unemployment." The increase in bank deposits, the deposits under E.P.T., the payments that are to be made under deferred pay and the accumulations in national savings certificates, all these point to a reserve of purchasing power which should prove a powerful stimulus to productive activity in the country. New income, too, in the case of those who will not be hit by dis-employment, is not likely to fall, since the unsatisfied demand for consumer's goods may be depended on to keep up the prices of commodities. On the strength of this, Sir Ardeshir ventures to suggest that "a consideration of all these factors leads to the conclusion that, provided Government and the people pull together and certain conditions are satisfied, there is no reason why economic activity in the country should not be sufficient to avoid a serious drop in expenditure, though its direction and purpose will naturally be different."

However, the satisfaction of certain conditions essential for increased productive activity is the crux of the matter. Here, these conditions must fall into two groups, the conditions, the satisfaction of which depends predominantly upon conditions elsewhere and those which rest predominantly on ourselves. To the latter category belong such measures as the revival of building activity, the inauguration of new schemes for the improvement of agriculture and the beginning of a plan of road development. Sir Ardeshir appears to attach great importance to building activity; many will heave a sigh of relief at this. For new building in India has practically ceased for the last six years. Consequent on the demand for our limited supplies of building materials set up by the Government on war account, civilian needs have been completely starved. The consequences of this on housing in rural and urban areas can be easily imagined. In the rural areas the structures are of such poor quality that a postponement of repairs for six long years may well create the need for entirely new buildings. In the cities, the concentration of population was vastly accentuated by wartime employment and housing conditions for the average man have become wellnigh intolerable. There can be no doubt that, if proper facilities are afforded, building revival in India may hardly have any limits set to it.

Building activity will however need to be balanced with the increased production of consumer's and other forms of capital goods. For our part, we have always emphasised the distinction between planning schemes and schemes which are strictly speaking, preliminaries to planning. It is heartening to hear the measures of the latter category mentioned among those which the Government will adopt to combat the post-war decline in employment.

But any far reaching plan for increasing the production of consumer's goods must necessarily depend on the availability of the necessary machinery. From this point of view, the results of the Industrial Mission which recently toured through foreign countries must be pronounced extremely disheartening. But we must distinguish between the machinery and other imports necessary for the anti-slump measures and the preliminaries of planning and the imports which will be necessary in the more ambitious and later stages of development. The Government of India should be able to secure the former, so that what is immediately necessary will not be prejudiced. We may trust for the other kind to a speedier recovery of world economy than we now dare to expect. In may be said therefore that our dependence on foreign sources for machinery is of a qualified kind and that at any rate it cannot be deemed to constitute a fair defence of unconcern about post-war unemployment.

Plans for the transition period are therefore quite feasible. Sir Ardeshir has emphasised that five year plans have been prepared by every Province in India, that large schemes of a quasi-regional kind have been got ready, that provision has been made for technical training and that projects are being prepared both by the Central and the Provincial Governments for irrigation, for anti-erosion and similar objects. It

is believed that nearly all these schemes will fit into planning proper; but where this is not feasible, the value of a scheme for providing relief of unemployment in the present juncture will be deemed a sufficient ground for proceeding with it. In fact, the Government of India have offered to reimburse the Provinces up to 25 per cent of the expenditure incurred by them on unproductive schemes undertaken urgently, but subject to a maximum of Rs. 50 crores. It is to be hoped that this plan of action will be followed with due disregard for political distractions.

Crop Insurance for India

Agriculture in India is smarting under numerous difficulties and the vagaries of the monsoon are by no means the least important. It has been observed for decades past, particularly since the beginnings of the commercialisation of Indian agriculture, that the uncertainty covering agricultural activities has been not a little responsible for the poverty of the rural masses and the stagnation in the agricultural output. The factory owner has more direct control over the affairs of the factory and production than the cultivator has in the field. Almost from the very beginning to the end of the agricultural season the role of the ryot is only passive, and agricultural operations depend very much upon the occurrence and even distribution of rainfall, upon the appearance or absence of heat-wave or cold-wave, upon pests and a host of other diseases to which the crops are exposed. In particular areas like Bengal floods are a frequent menace while in other areas soil erosion of a serious type is working against the hard labours of the agriculturists. If a picture is drawn regarding the helplessness of the Indian ryots in the different zones and climes of this vast sub-continent, it will be readily seen that, as in other progressive countries, a systematic attempt must be made to reduce the uncertainties to which the poor agriculturists are exposed. Already, the Indian ryot has got to face the evils of fragmentation, his own poverty and indebtedness, lack of marketing facilities, want of improved seeds and water supply and many other things besides. It is only because of this precariousness governing agriculture that cultivation has not become a business in this country but remains a way of life.

Talks of post-war planning in India and the working of the crop insurance scheme in the United States of America have induced many in this country to ask "why not try a similar scheme in India where agriculture has too long been the Cinderella of our economy?" It is pointed out, moreover, that crop insurance for the farmers should be considered something like a counterpart of the unemployment insurance scheme for the workers. If workers can be insured against accidents, sickness and unemployment, it should then be possible to protect crops from hazards and add security to rural life. It is not claimed that crop insurance by itself would answer all the needs of the Indian ryot; it is intended only as a device to supplement and not to supplant the various other means of helping the agriculturists, such as for instance encouraging rural industries, stabilising agricultural prices, etc. The Crop Insurance scheme can be introduced only under the direction of the State, covering area by area and crop by crop. The normal crop yields necessary for the agriculturists and the premium need not be fixed with reference to every individual farmer, but calculated for groups of similar tracts of land which in many cases will be not different from the administrative districts. The farm is required to deliver to the Government Insurance authorities a certain percentage of his surplus crop as a premium. The premium may be paid in kind or in cash based on the local market prices. The premium contributed in kind will be stored by the Government in warehouses to be constructed for the purpose. If this scheme works during periods of bumper crops, it is pointed out, the Government will redeliver to him enough of the crop during the years of crop failure. The Government may pay back either in kind or its equivalent in cash so as to give the farmer either the whole or a fixed percentage of his normal gains which may be fixed when the insurance scheme is to be launched.

If the scheme is accepted for trial, then it may be necessary to go into the details of the crop insurance scheme to be introduced in India. The American model is there and local changes can be made as and when necessary. Since experimental schemes have to be introduced and their results examined thoroughly before a scheme is applied for other areas, no ready-made scheme can be presented for all the tracts in India.

But the question arises whether a system of crop insurance can be initiated at all under the present circumstances in Indian agriculture. No doubt, America conducted an ex-

periment in crop insurance under the Federal Crop Insurance Act of 1938. But controversy exists regarding the extent of benefit the scheme has yielded to the agriculturists. The working of the American crop insurance scheme is as follows. The Federal Crop Insurance Corporation has been established as an agency under United States Department of Agriculture and this body is subject to the supervision of the Secretary of the Department. County committees are formed to take charge of local administration and the men on these committees are elected from among the farmers. The scheme covers either 75 per cent or 50 per cent of the normal yield and takes effect upon the seeding of the crop and the payment of the premium, and ends with the threshing out of the wheat, or on September 30 whichever occurs first. The two notable features of the United States Crop Insurance scheme are (1) it is voluntary and (2) the premiums are paid in kind. In spite of the fact that American agriculture has the maximum co-operation from the Government the scheme has not evoked much popularity. The Agricultural Appropriation Bill passed in July 1943 withdrew the grants for the scheme on the score that participation in the insurance scheme was below expectation and that the initial expenses involved were too heavy to justify its continuance. Recent reports indicate that a fresh attempt has been made to revive the Federal crop insurance scheme with suitable changes and American experience is inconclusive and inadequate for our purposes.

In India the difficulties of introducing a similar scheme are indeed many. We do not have here the minimum requisites for organising a workable crop insurance scheme. First and foremost, the statistical data available regarding agricultural conditions, cost of cultivation, farm prices, rotation of crops and the yield per acre, etc., are too meagre and unreliable even for a start. Unless an all-India statistical organisation is established and the methods of collecting and presenting agricultural data are thoroughly overhauled and modernised, it will not be possible to calculate the real benefits or the "normal" yields in any of the tracts in India. Secondly, if the scheme is to have a fair trial it should be preceded by an all-India drive for controlling pests, rats, terrific floods and soil erosion. An enlightened irrigation policy must be in action in every part of India. We should have an efficient meteorological service. A scheme for warehousing should be completed so that grains can be stored. Some form of crop planning has to be in existence if the erratic nature of cultivation is to be minimised. Though crop insurance scheme aims at minimising the vagaries of production in so far as they are the direct result of winds and clouds, pests and water, there is another factor of instability which has to be provided against and that is the fluctuation in price level. After all, the crop is grown only with reference to its market value and if the market prices are allowed to take their own course, a mere scheme for regulating the quantum of output may not yield the maximum benefit to the ryots. A programme of price stabilisation, therefore, would be an excellent side support for the crop insurance scheme. It is also felt doubtful whether in this country of illiterate cultivators, it is ever possible to calculate the normal yield figures or the cost of cultivation. At present, very little of the produce is left for the cultivator and under these conditions many feel sceptical about his willingness to co-operate in the insurance scheme. Then, again, there is the stupendous problem of agricultural indebtedness. As things stand, "the ryot is born in debt, lives in debt and dies in debt" and the yield from the land is already mortgaged and advanced to the moneylenders before it ever appears on the face of this earth. If agriculture is caught in the clutches of a few urban monied classes, is this the proper atmosphere where a crop insurance scheme can be successfully initiated? These are indeed formidable tasks which have to be tackled if the scheme is to yield the expected benefits.

There are some who hold that under Indian conditions what is required is not an all-risk scheme, but only a scheme to cover the monsoon vagaries. But obviously this view overlooks the fact that agricultural yield depends upon so many uncertain factors and the monsoon is only one of them and thus the very limited nature of this suggestion exposes its worthlessness.

It is true that at present the Provincial Governments and the State Governments are losing large amounts because of the risks involved in agriculture. Famine works are organised, Land Revenue remission granted, Takkavi loans given and Co-operative Societies formed, all with a view to minimising the risks involved in Indian agriculture. The expenditure involved, if calculated in precise figures, should indeed be heavy. Why not direct this money for introducing a crop insurance scheme? The benefits of insurance are, (Continued on next page)

Marketing of Agricultural Produce—VII

(Contributed)

The growth in the volume of business transacted within the Regulated Markets and the percentage of growers among those who bring the produce provide two tests by which the success of the Markets could be assessed. The volume of transactions could be accepted as a guidance in this respect, subject to two limiting factors. The expansion takes place only during the first few years, till the market reaches what might be termed the saturation point. Beyond this point, there will be no more expansion in the volume of business, unless the production in the area served by the market itself expands. Another serious limiting factor is the fluctuations in production of particular crops, especially cotton. Since 1942, there has been a general fall in the transactions in cotton in the Regulated Markets in Central Provinces and this is explained at least in part by the diversion of cultivation from cotton to cereals. The opening of new markets in certain centres also might result in diversion of business from existing markets, if the two fall within a short distance.

I am giving below figures for a few representative markets.

In the groundnut market of Cuddalore, nearly the whole of the District is the notified area and consequently all sales of groundnut within the District are 'regulated'; in such a market, the control of the market committee is stricter over transactions effected in the market yards than in those that take place in the market centre. The percentage of arrivals in the market yard in relation to the market centre will therefore give us a more reliable indication of the success and popularity of the Cuddalore market. There are six market yards in the Cuddalore Regulated Market, those at Cuddalore Old Town, Villupuram, Tindivanam, Tirukoilur, Ulumdurpet and Vridhachalam. In Cuddalore Old Town in 1940, the arrivals at the yard was only 4.8 per cent of the arrivals at the market centre. In 1944, the percentage rose to 34.6. In Villupuram the percentage rose from 4.0 in 1940 to 42.6 in 1944. In Tindivanam, the rise has been less marked the five years showing a rise from 10.7 per cent to 20 per cent. In Tirukoilur, the rise registered was from 7.7 in 1940 to 41.0 in 1944. In Ulumdurpet, it rose from 10.7 to 29.0 for the period. It has been the highest for Vridhachalam yard, where from 5.8 in 1940, the percentage of arrivals rose to 75.5 in 1944.

The figures for the arrivals of cotton in three markets are given below.

Year	Tiruppur Cotton (Bales of 1/8 candy)	Bailhongal kaps (Dokra)	Lint (Dokra)	Wardha kaps Carts	Lint Pressed Bales
1936	143,332	53,522	2236		
1937	156,148	44,400	2188		
1938	130,950	63,425	9507		
1939	80,794	60,652	6080	31,985	21,498
1940	125,104	72,880	9000	30,766	21,228
1941	176,128	72,441	4003	52,108	36,267
1942	229,510	43,700	3329	19,355	12,057
1943	155,710	69,545	3835	28,093	18,792
1944	150,400	50,000	2096	20,867	13,635

In the Nizam's Dominions, the policy is to start new markets every year. There were twenty-five markets in 1943 and during the year from June 1942 to May 1943 the following figures show the proportion of the quantities of important crops sold in the Regulated Markets, to the total production

of the State: Cotton 40 per cent; jowar 4 per cent; wheat 9 per cent; rice 7 per cent; groundnut pods 22 per cent; castor pods 23 per cent; linseed pods 26 per cent; til 24 per cent; and sugar 9 per cent.

In the following table I am giving an approximate percentage of producers, producer traders and traders who effect the sales in the Regulated Markets.

Name of Market	Produce Transacted	Producers (per cent.)	Producer Traders (per cent.)	Manufac- turers and Traders (per cent.)
1. Nanded	a. Kaps b. Grain c. Hand ginned cotton	75 75 25	25 25 75	
2. Raichur	Grain	60	30	10
3. Latur	Grain	40	50	10
4. Parbhani	a. Grain b. Cotton	50 75	30 20	20 5
5. Khamgaon	Cotton	90	10	Nil
6. Akola	Cotton	10	70	20
7. Wardha	Cotton	90	10	Nil
8. Tiruppur	Cotton	5	20	75
9. Wun	Cotton	90	10	Nil
10. Guntur	Tobacco	40	30	30
11. Adoni (Madras)	Cotton	70	10	20
12. Nandyal (Madras)	Cotton	70	25	5
13. Pandhakawada (C. P.)	Cotton	90	3	7
14. Bailhongal (Bombay)	All agr. produce	90	Nil	10
15. Bijapur (Bombay)	All agr. produce	95	5	Nil
16. Gadag (Bombay)	Cotton	75	20	5

* The previous article in this series appeared in our issue dated September 15.

(Continued from previous page)

no doubt, many-sided. It will ensure steady food supply in the country, encourage the land-owning classes to have more direct interest in cultivation, stabilise prices and reduce indebtedness which is usually caused by crop failures, and, above all, add to the Provincial Exchequer. Private insurance companies have not yet taken up the idea seriously because of the numerous insurmountable difficulties of creating the necessary pre-requisites for the successful initiation of the scheme. The Government of India have now proposed to conduct an enquiry for the stabilisation of agricultural prices. The Khareghat Memorandum proposes to increase agricultural outturn and suggests suitable measures. The Government of India have given an assurance of putting many of these schemes into effect. The problem of India's poverty will, it is hoped, be tackled by an energetic drive for increasing the standard of living of the masses and if the post-war plans at present hatched by the authorities are translated into action, then the atmosphere will be favourable for conducting experiments in crop insurance scheme suitable for Indian conditions. It is to be hoped that the authorities would examine and give the crop insurance scheme a chance to come to the aid of the rural classes.

SPECIAL ARTICLE:

THE FUTURE OF SILVER

SPECULATION ABOUT U. S. POLICY

By HAROLD GUARD

LONDON, Sept. 29

On the London Stock Exchange, the increase in the United States import price for silver during the past week encouraged a demand for the shares of "silver" producers which prompted the belief that the boom was quite artificial.

The United States increase to 71 cents was promptly followed by a raise in the London price to 44 pence per fine ounce which, allowing for little over one penny

per ounce for transport costs, is equivalent to the new United States price.

In the absence of any real silver market in London, speculative buying on the Stock Exchange immediately turned to issues of producing mines, regardless of the fact that in the case of producing mines silver is usually a by-product and is responsible for only a minor part of the revenue.

Outstanding example in the past week's trading was the sudden demand for Burma Corporation, despite the fact that the mine is dormant and is most unlikely to recommence working for a considerable time.

Towards the end of the week the indiscriminate, speculative buying showed signs of simmering down, with investors taking a more realistic view of the situation as voiced in London's more responsible financial journals which were almost unanimous in pointing out that the amount of silver held by the United States and

countries to which silver was made available under Lease Lend during the war is equal to about a dozen years' normal world output.

Britain's industrial consumption of silver, which was entirely for war purposes, is estimated around 16,000,000 ounces for last year. This was largely supplied by Lease-Lend silver, which, under special agreement, is ultimately to be repaid in kind. The amount so received is not disclosed in the official reports, but it is officially reported that the United States made available over 200,000,000 ounces of silver to foreign governments, including India, Australia and Ethiopia, the Netherlands Indies and Saudi Arabia.

Under the American currency legislation, some 3,000,000,000 ounces are held by the United States Treasury. This includes

OUR AMERICAN LETTER

POSSIBILITIES OF RAMIE FIBRE

IMPORTANT USE IN WARTIME

By J. SULLIVAN

New York Oct. 6

Plantings of ramie, which produces one of the world's strongest vegetable fibres, have increased in the United States and responsible quarters believe the industry for growing the plant may eventually become a permanent part in the South's economy.

The industry, when fully developed, promises to have profound effects on the South's Agriculture and industry, particularly as they relate to textiles, it was said.

Ramie is believed almost certain to have marked effects on competitive relationships among other fibres and no fibre can be sure that its market will not be invaded successfully by this versatile newcomer that has so many points of superiority.

The plant's effects, however, may not be apparent at once. As a matter of fact, it may well take 20 or 25 years before its full influence is felt.

Demand for ramie in the immediate future is expected to come almost entirely from naval and industrial users. Later on it may appear in the manufacture of automobile upholstery and in the making of speciality papers.

Only later will ramie invade the general textile and apparel markets, observers believe. Even then it will not at first appear in the form of all-ramie fabrics but rather in material in which it has been blended with cotton, wool, rayon, linen or other traditional fibres.

Trade experts believe that ramie in its first impact on the textile market may actually benefit rather than harm its competitors because through blending it will overcome some of the deficiencies of the older fabrics. Ramie would add lightness and minimize shrinkage when mixed with wool, it would add strength and lustre to cotton and it would offset the low wet strength of rayon.

One man commercially interested in ramie summed up its future with this statement:

"The trouble with ramie is that it's too good. We will have to mix it with cotton so that at least every other thread will wear out."

Many expect that the price of ramie will be high in the beginning of widespread commercial use, but believe that if the supply of ramie can be sufficiently increased, the low cost of producing this fibre may be expected to bring a decline in prices. When this happens it is expected that ramie will be able to outclass its rivals both in quality and price.

At the present time, more than 1,600 acres in the state of Florida have been planted with ramie and upwards of 10,000 additional acres have been set aside for the same purpose. Among the larger planters are the Florida Ramie Products Corporation, a recent purchaser of 5,000 acres of land from the state; Newport Industries, Inc., which, with the United States Sugar Corporation, owns a large acreage near Clewiston, Fla.; the Sea Island Cotton Mills of New York; and the state itself which has between 400 to 500 acres in ramie at a state prison farm.

Many people have asked why ramie, with all its potentialities, is not in widespread use now. According to well-informed textile

men, the answer lies in the difficulties intervening between the growing of the plant and the delivery of the fibre to the manufacturer.

There are three steps in preparing the fibre for manufacture and each step has its own problems. The steps are harvesting, decortication and degumming.

Harvesting at the present time is done mostly by hand because the lack of a suitable mechanical harvester. Some is done with a mower equipped with a short heavy sickle, but most authorities prefer the hand method to this. Another argument for hand harvesting is that ramie stalks, like other field crops, do NOT reach maximum growth at the same time, and if the field were harvested mechanically a great many stalks that would prove unusual or immature would be cut and hauled.

The second step, decortication, involves the separation from the rest of the stalk of the inner bark in which the fibres are held together by the gums and pectins. The greatest difficulty has been found at this point and the lack of a method for accomplishing this task without injuring the fibre has been the most important factor in retarding the birth of the ramie industry.

In the Orient, it was explained, decortication has been done entirely by hand, beating the stalks into ribbons and scraping them with bone and bamboo. Fibre produced under such conditions is enormously costly in terms of labour time and is feasible only where labour is very cheap.

The next step, degumming, also has presented difficulties. Some of the gums are usually removed in the process of decortication, but not all. If the residue of gum is allowed to remain on the ramie fibres, it rapidly hardens and the fibre becomes coarse and brittle. The long white silky fibres that are characteristic of ramie at its best are fibres that have been not only decorticated but also well degummed. The problem in this connection has been the development of a degumming process in which the fibres would not be injured by the chemicals used in the process. Neutral oxidizing solutions, acids such as hydrochloric and nitric acids, and strong bases made the fibre brittle, whereas weak bases do not remove all the gum although harmless to the fibre.

It has been found that air-dried ramie ribbons could be degummed in a dilute solution of sodium hydroxide if they were digested for three hours under a steam pressure of 100 pounds to the square inch. One processor has degummed freshly decorticated green ramie ribbons in one hour by cooking them in a soap solution at a temperature of 180 degrees Fahrenheit.

Trade experts disagree whether decorticated ramie should be degummed while it is still green or after it has been dried, but many lean to the former view. Not only does green degumming require less time, fewer chemicals, and generally milder and less injurious solutions than would be the case with dried ramie ribbons but green degumming, immediately following green decortication, results in a considerable saving in shipping weight and freight costs since degumming reduces the weight of decorticated fibre by 10 per cent.

The War Production Board has made an estimate on the cost of growing and processing ramie. This estimate is based on the assumption that the planting is favourably located, that root segments are planted at the rate of 5,000 to an acre, that the first two crops are mowed and rolled down to insure a better stand, that no replanting of roots is necessary, and that by decortivating the stalks green in the field most of the cost of fertilization after the first year would be avoided.

On the basis of such assumptions, the total labour and material costs are estimated at \$90.50 an acre for the first year. The sum includes the costs of plowing and harrowing; 5,500 root segments at \$10 a thousand; planting and covering the roots; an application of potash fertilizer; two cultivations; rolling down two crops; and harvesting and stripping one cutting.

For the following years, it is estimated, the Agricultural cost for labour and materials would fall to \$36 an acre. This amount would represent the costs of cultivating or plowing between rows; harvesting three cuttings and stripping the leaves and the tops from the stalks; and hauling the decorticated fibre. Assuming a yield of 1,200 pounds of fibre to the acre, the cost of growing ramie would thus amount to 3 cents for each pound of fibre.

On the assumption that one acre of ramie could be decorticated in one day with the labour of four men and with about five gallons of gasoline, the cost of decortivating one cutting would be \$14.25 or \$42.75 for the year. Decortication would thus cost 3.6 cents a pound.

Degumming is estimated to cost no more than 350 a ton of finished fibre or 2.5 cents a pound. Thus, the total cost of growing, decortivating and degumming a pound of grade A fibre for the manufacturer would be 9.1 cents a pound.

The estimate, it was explained, makes no allowance for the amortization of the investment made in the preparation and planting of the land during the first year, nor does it include depreciation for the decortivating machine and other equipment. Depreciation would in any case be difficult to approximate because no one can tell what such a machine will eventually sell for. It has been estimated that one portable decorticator could perhaps be manufactured and sold for some \$1,200.

Editorial Notes

Pandit Nehru and Planning:

The economic ideas for which Pandit Nehru has won fame or opposition are well incorporated in his outlines of economic development of India now placed before the public. Nehru has always been the supporter of the peasants against the zamindars and the workers against the capitalists but has never overlooked that all have a responsibility to cooperate for an orderly socio-economic progress in this subcontinent. His plan for the economic prosperity of India is bound to interest all sections of political opinion particularly in view of the coming elections. Pandit Nehru wants rapid development and shuns piecemeal or uncoordinated attack on India's central problem. Since distribution and ownership of the means of production are vital, his bias to socialism will be appreciated by many. He stands for the State ownership of the key industries and the mineral resources of the country. Other industries should be controlled by the Government. He lays particular emphasis upon the need for protecting the cottage industries against the bigger factory units. This emphasis on the cottage and small industries should not be interpreted as a concession to Gandhian philosophy. In fact, even the Bombay Planners have realised the importance of encouraging the cottage industries, particularly in the initial stages of the planning, because largescale industries take time to be established and the immediate need for increasing the purchasing power of the rural masses can be more easily met by cottage industries than by the large industries. In the long run many changes may come; more cottage run many changes may come; more cottage industries will spring up and some of the existing cottage industries may vanish. Some regulation will be necessary as years pass on and as the texture of national economic life changes. But at present the importance of giving aid to the rural industries for helping agricultural rehabilitation cannot be questioned.

Abolition of the Permanent Settlement in Bengal and the Zamindari is favoured and in this Pandit Nehru has taken the view of the Flood Commission and the Minority view of the Famine Commission. He is however agreeable for fair compensation. But it is one thing to favour abolition of the Permanent Settlement but quite another to fix a time limit for it. If it is laid down that the Zamindari should go in the course of, say fifty years then even his opponents may not take him seriously because many things will happen before then. As for the establishment of Co-operative farms much persuasion has to precede action and, if successfully introduced, it will no doubt bring a substantial portion of the waste land into cultivation.

Pandit Nehru's outlines do not evoke sharp criticism for want of details but they contain the germs for correcting the defects in the structure and working of the economic system in this country. It is a happy augury indeed that one who holds a preeminent position in the Congress has come out with his ideas in order to make amends for all the acts of commission and omission on the part of the Government of India which has landed this fertile country in the present mess.

Sale of British Ships:

Britain's transition plan appears to include a scheme to prevent India from making an early start in facing the problems of the future. The Indian industrialists who toured U. K. painted a gloomy picture of the prospects of getting capital goods and technical personnel from abroad. The British textile machinery manufacturers were instructed not to quote prices to private Indian businessmen. The dollar pool is another point of controversy between this country and Britain. Shipping space, it is often complained, is more easily available for imports of British goods into India than for exports of Indian articles for the neighbouring countries. Disabilities like these were borne all during the war years with the hope that at least when the hostilities ceased the British would see the justice of aiding this country in solving some of her acute transitional problems.

The recent statement of Mr. Vijay Singh Gobindji of the Ambica Steam Navigation Company, issued from London regarding the sale of British ships, shows that there has been no change in the British indifference to the urgent needs of Indian economy. It is stated that the British Government have refused to allow the British shipowners to sell ships to foreign countries including the Dominions, India and the Colonies. The reason given for this policy is that Britain is in dire need of ships and that her wartime losses at sea have not been made up by new construction. The British shipowners, it is reported, are willing to sell a few vessels and the prices quoted by them are substantially lower than the prices charged by the American, Canadian, Norwegian, Swedish and the Dutch lines. But they are unable to sell.

It is to be remembered that on the eve of the war India had barely 146,000 tons of shipping as compared with the 18 million tons of British shipping. Still without caring in the least for the minimum requirements of Indian trade and transport the Government suddenly requisitioned the Indian ships. Even this requisition policy was particularly drastic on the Indian interests as is clear from the fact that while 83% of Scindia's vessels was affected the percentage of ships owned by foreign lines and requisitioned was very much less. More than half of India's prewar tonnage was lost during the war and at present Indian shipping is only a small part of its prewar size.

Mr. M. A. Master, President of the Indian Merchants Chamber, Bombay, told the South Indian Chamber of Commerce, Madras, that since 1941 almost all attempts on the part of Indian industrialists to start shipbuilding industry at Vizagapatam have met with impediments and consistent official hostility. He revealed that at the end of 1942 the plant and machinery, which had been transferred to Bombay in July 1942 owing to the exigencies of war, were brought to Vizagapatam at the end of the year, but there have been many slips between the cup and the lip. Indian shipbuilding interests wanted to build ships of 8,000 tons and asked for the necessary materials. Actually, 2,600 tons of steel arrived but before they could be used they were frozen for war purposes. It is also known that even during those days when boilers and engines were lying in Glasgow for years past, the British Government would not spare them for Indian shipping. Obstacles were placed when Indian enterprise tried to bring in British technical personnel for building ships in India.

The ships urgently required for her coastal trade are only vessels between 1,000 to 3,000 tons which it should be easy for Britain to spare. Mr. Vijay Singh has negotiated for the purchase of one Norwegian vessel. There are non-British shipping interests willing to sell but Britain will neither sell ships nor will she release dollars for purchases outside the sterling area. Here is a dog-in-the-manger policy. The Sterling block is a stumbling block, and for all the brisk and sincere war effort of Indian shipping, this utter neglect on the part of Britain to come to the aid of India's coastal shipping is indeed a poor recompense.

States' Industrial Delegation:

The Committee of the Chamber of Princes has nominated a States' Industrial Delegation who will shortly be visiting the United Kingdom, the United States and possibly a few countries on the continent. Mr. S. B. Mallick, Prime Minister of Patiala, who heads the delegation has told a Press representative that the object of the delegation is to investigate the position in these countries with regard to the supply of capital goods and technical assistance for the industrialisation of the States. Mr. Mallick also adds, as if a sort of apology, that the Chamber of Princes felt that in addition to what the Industrialists' Mission had done, the States themselves wanted to investigate the position and make sure that their particular requirements were looked after, and that they were not going to get in competition with British India. Already two separate Missions have visited the United Kingdom and the United States, for a similar purpose; but neither Sir Ardeshtir Dalal nor the British Indian industrialists could do much even by way of exploring possibilities. The type of information and data secured by them could not be considered of any great use in the realisation of India's industrial plans. The emptiness of the results of these two missions was naively concealed in some sweet sentimental phrases; it was stated, for example, that Indo-American cordiality was considerably strengthened, that American business interests were able to acquire a keener understanding of India's needs and there was a growing volume of sympathy towards Indian economic aspirations. We are afraid that the States' Delegation could achieve nothing more solid or spectacular. Nor are we convinced of the practical wisdom of a piecemeal tackling of vital economic issues, as the multiplicity of delegations implies. It also shows a lamentable lack of coordination. There can be no doubt that even exploratory delegations when organised on an all India basis would

create a better impression and be productive of more substantial results than these divided attempts. We however wish that the States' Delegation are able to fare better than those who preceded them.

Control of Sugar Industry:

Planning always involves a careful balancing of the needs for regional industrial development and those of Central control. The degree of success in reconciling the ambitions of particular areas with the requirements of the country as a whole marks the actual achievement of the planned development. In India a stage has now been reached when the authorities have to develop ways and means for the regional location of industries in such a way as to subserve the national interest and at the same time protect the erstwhile well-established industrial units. War-time scarcity has given birth to the Provincial and State ambitions for speeding up industrial effort but no part has yet thought about the implications of its plans upon the fortunes of others. The cases of cotton and sugar mills are instances in point. While opportunities no doubt exist for the cultivation of sugarcane and the setting up of Sugar mills in new areas, any unplanned hurry along such lines will menace the fortunes of the existing sugar industries. The need for Central control is therefore as much urgent in fixing the target for the country as a whole as in protecting the interests of existing industries from undue disorganisation.

Explaining the case for Central control of sugar industry the Government of the United Provinces have submitted a memorandum to the Central Government. They have pointed out that the U. P. and Bihar have exceptional advantages in growing sugarcane, even as Bengal enjoys special facilities in the case of jute. The cost of production for maund of cane is Re. 0-3-0 in U. P., Re. 0-3-4 in Bihar, Re. 0-4-0 in Bengal, Re. 0-5-0 in Punjab, Re. 0-5-10 in Bombay and Re. 0-5-0 in Madras. At present the sugar mills of this country are concentrated in two Provinces of U. P. and Bihar, and it is estimated that these areas have capacities to serve the needs of India as a whole. The post-war plans of these two sugar-producing provinces cover ambitious tubewells and other irrigation schemes, and the recent technological improvements in the cultivation of sugarcane also promise substantial increase in the yield of sugarcane. Further, there exists in these provinces a suitable machinery for a proper correlation of the price of sugarcane with

that of sugar. Organisation for the regulation of cane prices, the allocation of cane areas for factories, etc., is also ready in U. P. and Bihar. But these two provinces have to depend upon the maintenance of exports of sugar to the neighbouring provinces. The economic conditions of the U. P. agriculturists are directly related to the fortunes of their sugarcane. If the regional ambitions of other provinces and States for the establishment of new sugar mills and extension of sugarcane areas are encouraged in a planless way, the U. P. agriculturists will suffer in consequence. The Memorandum also recalls that before the war while the other provinces were encouraging sugarcane cultivation and setting up of sugar mills, the U. P. instituted a self-control programme and decided not to encourage uneconomic units. If the old trend is to be renewed again, the prospects of U. P. sugar industry are indeed gloomy. The memorandum, therefore, pleads for a Central control (1) to allocate the production quotas to the various provinces and States on the basis of demand and their existing production capacities and (2) to create statutory marketing organisation under State control. The Central Government should ascertain the total demand for sugar in India and the plan of production on various States and provinces according to their production capacities. It is suggested that if the demand is in excess of the production capacity, the surplus should be distributed pro rata to all provinces and States. Such surplus quotas should be assessed for a reasonable number of years in order to help in the reorganisation of the industry in the areas concerned. In view of its enormous advantages the Indian Sugar Syndicate, it is suggested, can be the nucleus for an all-India marketing organisation to stabilise the price and ensure the distribution.

The Memorandum of the U. P. Government has a direct relation to the industrial schemes of other provinces and States, and, therefore, should be carefully studied by all those interested in a correct location of sugar mills in India. The Central Government on their part should examine the claims of U. P. and Bihar mills with a view to ensuring a happy and co-ordinated development of sugarcane cultivation and sugar production in all parts of this sub-continent.

Searching the Earth

The Government of India, it is understood, have drawn up a scheme for the expansion of the Geological Survey of India to help in the exploration of the country's buried wealth to assist the post-war economic development. A geological map of India is to be prepared which will provide the basis for all other geological work. Mineral development, engineering geology and economic geology will all be given due importance. The Survey's advice is to be available to Provincial Governments, Indian States, private companies and the public in a great measure. And for this purpose the strength of the expert staff is to be increased with both Indian and Foreign geologists.

At the same time the Geological Mining and Metallurgical Society of India has initiated a move for the starting of a Minerals' Bureau. The Bureau will supply accurate information relating to the mining, mineral and geological industries throughout the world. It will help in getting chemical analysis of mineral and

metallic substances done quickly, cheaply, and efficiently.

It is not really very encouraging that in spite of the fact that the Geological Survey has been in existence for nearly one hundred years that the whole of this country has not been fully searched for minerals. And the Department of Mining of the Government is less concerned with opening up new mineral deposits and show the way for the development of the mineral resources of the country than with administering mining rules and regulations.

India is on the threshold of an era of industrial development. It is imperative that we should have accurate data about the mineral wealth of the country. The policy so far pursued, namely, export of raw minerals, undeniably detrimental to the interests of the country, should no longer continue. But this can be ensured only with a National Government which will make proper use of the mineral wealth.

The Geological Survey doubtless has to be expanded but it is disappointing to find that it is to be expanded with "foreign experts". One hundred years is a sufficiently long time for a department to be Indianised. When by the natural efflux of time there are only a few non-Indian officers in the department, how can one justify the import of fresh experts from abroad at this stage? If it is

still said that there are not enough trained Indians the obvious step is to send young men abroad and get them trained in all branches of geology. An Economic Minerals' Bureau is a necessity and will prove useful but it should not be made to camouflage the disappointing results of Government's mineral policy.

The Re-Rolling Mills

The re-rolling mill industry is one of the many minor industries in India which had to record a very chequered progress. Almost at every stage in its growth the industry has been confronted with serious obstacles. For many years, the competition of the basic industry was a constant threat to its very existence and, but for the tariff protection afforded since 1934 the industry would not have survived at all. But as against such small concessions as the free imports of billets from foreign countries, the hostility of the steel industry continued to be a handicap. The re-rolling mills were treated as "parasites of the steel industry." The war gave them virtually a death blow. Nearly ninety per cent. of the mills had to be closed owing to stoppage of supply of coal and the withdrawal of transport facilities. The Government took the view that most of the mills were run on uneconomical lines. The Government however granted compensation to the mills on the basis of the average rated production of the mills to meet the

cost of maintenance, repairs and depreciation. But these small mercies could by no means compensate for the indefinite suspension of the industry. Luckily, the Japanese war ended sooner than expected, and the Government withdrew the compulsory closure order with effect from July 1, 1945; and the Government, it is understood, have also granted certain concessions. The Iron and Steel Controller has agreed to allot about 2,500 tons of coal per month; and the mills can also purchase scrap at controlled prices. There is the probability of the controls being removed in the immediate future. The re-rolling industry has all the advantages of small-scale industrial units, which in India should be considered a useful adjunct to the basic industries. Their present revival should be accompanied by efforts at greater economy and efficiency in organisation without which they can hardly hope for a secure future. Protection and concessions could not be expected to continue indefinitely and for a stable

future they should depend on their own strength and organisation as urged by Mr. S. K. Bhattar in his presidential speech at the Special General meeting of the Indian Re-rolling Mills Association held here a few days ago.

India's Export Trade:

In his opening speech at the meeting of the Export Advisory Council, held in Bombay, Sir Azizul Haque said "The pattern of our future trade is a matter for the most serious consideration for everyone, and Government are now actively engaged in reviewing the position. It is an undeniable fact that there are world shortages in many commodities. It is extremely difficult immediately to bring the total output to the required level. Although there is a natural desire to capture export markets to the maximum extent, the present internal needs of the country and availability of the products of

industries started during the war should be taken into account before framing a proper export policy." The statement is bound to create disappointment in all those who expect brisk and effective measures relating to the immediate postwar situation. Unfortunately the Government as well as Indian business men find themselves rather helpless in a highly tantalising position. The destruction of resources during the war, the exit of Japan and Germany from the field of international competition and the almost universal shortage of supplies provide an excellent scope for countries who could take the lead in the revival of production. Europe will be ready to take more than her prewar share of Indian exports such as tea, rubber and oil seeds. In South East Asia, the openings are still brighter. Before the war the Strait-Settlements alone imported about Rs. 325 lakhs worth of goods from India of which textiles accounted for Rs. 90 lakhs. Much of what the Netherlands used to import from Japan, India could supply. The similarity in standards of living and in matters of taste between the Indian masses and the people of these countries is a helpful factor in this respect. The India Government is contemplating appointment of Trade Commissioners in the Far Eastern Capitals. But these officers can only explore possibilities and supply information. Unless Indian production expands quickly and in sufficient diversity, these markets will be captured by countries like America and Australia, who start with better advantages than India. It is a tough problem for the Government of India to move apace with our competitors in the recapture and acquisition of export markets, while at the same time not neglecting the growing internal need for consumption goods. Time is of the essence of the situation. But in the context now obtaining, India is bound to lag behind and her only hope in the field lies in securing agreements with her potential rivals, by which they could agree to some kind of zoning of the Asiatic and European markets.

Electrical Development In Mysore:

A Five Year Scheme of electric power expansion estimated to cost Rs. 5 crores has been recommended by the Policy Committee of Industries and Commerce of the Mysore Economic Conference. The main proposals of the scheme are the installation of four 18,000 K.W. generating units with necessary transformers and switch gear at Jog. A transmission line is to be constructed from Bangalore, a distance of 160 miles. A duplicate transmission line is also to be constructed between Jog and Badrawati. Mandya and Chennapatnam, a distance of 126 miles, as also Devangere and Tumkur are also to be connected by lines. An annual recurring expenditure of Rs. 6 lakhs is likely to be involved for these schemes. When completed this power development scheme will not only encourage industrial development as manufacture of iron, steel, paper and textiles but by relieving the load on existing power stations help provide more water from Krishnarajasagar for agricultural development. Demobilised soldiers and qualified men will get opportunities of employment under the scheme.

Mysore already industrially forward is planning for better exploitation of natural wealth. For the development of engineering and chemical industries, cottage industries, and manufacture of rayon silk,

all of which depend to no small extent on the development of electricity, there are about 40 schemes. All these schemes will cost about Rs. 9 crores. For the manufacture of artificial silk there is a three-year scheme at a cost of Rs. 230 lakhs. Rs. 26 lakhs have been recommended for the development of cottage industries. The soap industry gets Rs. 20 lakhs and cement plant Rs. 25 lakhs. Impressive as the list is, when these plans are completed Mysore will occupy an important place not only among the states but also among Indian Provinces in the matter of industrial development.

Science And Reconstruction.

The period of reconstruction now beginning must necessarily present urgent and difficult problems. In the solution of these problems science should and will play a leading role. When the full story concerning scientific advances made during the war is told, it will be appreciated that man's conquest of nature has now reached a level at which the almost miraculous can be achieved. Even what has passed the censor is sufficiently arresting—coloured television, Radio location, jet propulsion of aircraft, extreme precision in the measurement of time, to name a few achievements.

That such a command of the animate and inanimate will render the task of reconstruction immeasurably easier is patent. What is apt to be overlooked is that the application of science on the vast scale that the situation demands, requires proportionately great numbers of scientific workers. Therefore, in any assessment of the part of science in reconstruction the problem of training scientists must receive due consideration. Certain points have to be noted in this connection. Owing to the war countless young men and women who would have completed a course in pure or applied science or in some technological profession have yet to begin their training. The distribution of scientists among the various branches of science has been directed according to army requirements. In the provision of adequate numbers of scientists, one of the key factors is the supply of teachers. Complementary to staff is equipment, for science cannot be divorced from the laboratory. Elaborate and permanent buildings may not be available immediately but satisfactory, temporary laboratory accommodation could be arranged in works and factories no longer used for the original purpose. There should no more be the direction to scientists. And the young scientist must be able to feel himself like the Poet, 'free as a bird to settle where I will'. For the history of science shows that social needs have always evoked adequate response from scientific workers, but the absence of compulsion has left room for unfettered pursuit of knowledge—a pursuit which in the past has produced greater results than research directed to specific ends. By removing restrictions on a scientist's choice of work, the state should not absolve itself from the duty of making financial contribution for the nurture of science. Reflecting upon the ways in which science is concerned with reconstruction, 'Endeavour' points out the growing urgency of how to bring men to the proper use of the power with which Science has endowed them. Scientists have discovered the path to the removal of much evil from the world and the addition of much good. It is for them to guide the steps of others along the same path.

BOOK REVIEWS

CROP ESTIMATION IN THE UNITED PROVINCES

(By Mr. J. K. Pande, Statistician and Under-Secretary, Department of Economics and Statistics, U.P. Superintendent, Printing and Stationery, Government of the U.P., Allahabad. Price Rs. 12. Forward by H. E. Sir Maurice Garner Hallett)

India is on the threshold of a sustained drive for an all-round economic progress. If the development plans are to succeed the first requisite is an efficient machinery for the collection and proper presentation of statistics. To-day the deficiency is particularly felt in the agricultural sector of the Indian economy. Crop estimates have been felt necessary for helping the agriculturist to plan his activities and under the pressure of the Grow More Food Campaign, the authorities have now understood the value of crop estimates in speeding up agricultural production. The crop forecasts now given are full of defects and very often prove useless for the cultivator. In the book under review the author gives a brief account of the past attempts at organising an efficient statistical service for the agriculturists and brings out the shortcomings of the present methods of computation. Valuable suggestions are given for improving the crop forecasts. This study will be of great use for those interested in organising an efficient economic intelligence for the improvement of Indian agriculture.

A GUIDE TO ENGINEERING INDUSTRIES IN INDIA.

(By Mr. K. R. Khosla, Printed by N. Ghosh at the Star Printing Works, 30, Shibnarain Das Lane, Calcutta. Price Rs. 2/-.)

With the return of Peace the time for the re-equipment of our industries has come near and every industry should list its demands and find out how far the engineering industries in this country can come to its aid. An attempt has been

made in the pamphlet under review to indicate the machinery required by the Sugar industry in India. Owing to rapid expansion the need for the new and up-to-date machinery is keenly felt amongst the sugar interests but as yet no appraisal of the capacity of our engineering industries to supply their demands has been made. The author has surveyed the processes involved in the working of the sugar mill and has indicated the role Indian engineering industries can play in equipping the sugar mills. The extent to which the dependence on imports will have to be suffered is also clarified. The publication will be useful to the technicians and capitalists directly interested in the reorganisation of Indian sugar industry.

UTILISATION OF INDIA'S MAN POWER

(By P. S. Naidu, M.A., published by Oriental Publishing Company, Bombay P.P. 74. Price Rs. 2.)

The author who is Reader in Education and Psychology in the University of Allahabad emphasises a factor vital to any economic organisation and one which has not received due attention at the hands of industrialists and administrators in India. This factor is the utilization of manpower according to the most up-to-date scientific principles established by contemporary psychology. The book is in other words an essay in human engineering, as the author himself puts it. It contains a general review of industrial conditions in a few representative countries like the U.S.S.R. and U.S.A. as far as they relate to the recognition of psychological motives in the mobilisation of human power. Both Russia and the Fascist countries have neglected it, as they were concerned more with output than with human considerations. Britain and America are lately showing greater appreciation of it. Among the many suggestions the author has to make, the most important is the creation of a Central Psychological Research Department to which should be entrusted a nation-wide survey of general intelligence and the specific capacities of individuals.

Nature

takes no chances !

The Lotus Arabicus is harmless as a young plant and cattle can graze on it safely. But when flowering time approaches, Nature provides it with a deadly weapon of defence against destructive elements. Its leaves then generate that most deadly poison—prussic acid which

effectively protects it from extermination. You too need take no chance with any of your property. The Indian Trade & General Insurance Co. Ltd. who make a special point of settling claims promptly, offer comprehensive cover against all types of risks at competitive rates.

OBJECTS & PROSPECTS.

The Company has for its main object the business of assembling and or manufacturing of cars, trucks, tractors, chassis, motors, cycles, aeroplanes, engines, turbines, tanks, ships, boats, tools, equipments, accessories, buses, lorries and other materials and products in India or elsewhere as permitted by the Memorandum of Association.

The development of Indian automotive Industry as that of other heavy industries needs emphasis to be laid not so much either upon the country's capital and labour resources or its internal demand, as upon the supply of capital goods from abroad to give it an initial stimulus. Foreign businessmen however have lately several times stressed the advantages, the need and their own willingness to co-operate with us technically and otherwise in developing this vital line.

The war has considerably stimulated industrial consciousness in India. With the cessation of hostilities, those forces of capital and skilled labour which are the fundamental pre-requisites for the building-up of heavy industries have partly been released for use otherwise than in wartime operations. A fuller co-operation from these two essential factors also is therefore expected by industrialists to be possible now and in the near future. Time is therefore considered most opportune now and in the near future for the expansion of those Indian businesses, particularly, which having hitherto worked in this line on a moderate scale have attained that degree of experience which it is considered equally essential for working this line on a larger scale.

This Company was incorporated in British India in 1927, to take over a long established assembling Factory for motor cars that was then the first of its kind in India and had been assembling Ford motor cars and trucks since as long back as 1924. The assembling of Ford motor cars and trucks was continued until 1934, when a fairly large sized assembling plant was opened at Port Okha to assemble Studebaker cars and trucks for the whole of India. This plant was sold in 1941, when shipments stopped on account of hostilities.

The Company now proposes to establish a large sized assembling plant for Cars and Trucks of such models which are most popular in the country and most suited to meet its demands. It may be made quite clear that our project for the present is only for assembling and not for manufacturing motor vehicles in India which involves not only huge capital, but also involves purchase of highly specialised capital goods and highly technical personnel, both of which are not easily obtainable at the present time.

The assembling project is quite a simple one in as much as neither capital goods nor highly technical personnel are required and as such the assembling plant can be established and operated without any handicaps and the Company feels that the assembling operations can be commenced as soon as foreign manufacturers can supply the component parts.

Site has been selected for the Plant at Kalol (Baroda State) near Ahmedabad and necessary sale deeds for its acquisition have been already completed.

Arrangements also have already been negotiated with foreign manufacturers for the supply of component parts on very favourable terms. Civilian production is understood now to have commenced both in U.K. and U.S.A. and it is therefore not unreasonable to expect that supplies for production and assembling of cars and trucks will be obtained without loss of time, enabling the Company to start operations at an early date.

The Company's considerable experience of automobile business and assembly operations itself promises reasonable success in this venture. Services of experienced personnel have also been acquired.

The Company has been paying a steady dividend of 5% on its share capital (tax-free) since the last four years.

MANAGING AGENCY AGREEMENT.

Messrs. Mehta & Co., Ahmedabad are the Managing Agents of the Company by the Managing Agency Agreement executed on the 14th August, 1928 (as altered on 18-9-31 in Company's General Meeting of the shareholders in respect of their remuneration) on the following terms and conditions amongst others:

- (1) The remuneration of the Managing Agents shall be:
 - (a) An allowance of Rs. 1,000 per month.
 - (b) A commission of 15% on the nett annual profits of the Company.
- (2) The Managing Agents have informed the Directors that they will not charge to the Company any commission if the dividend to its shareholders falls below 5%.

RIGHTS AND CONDITIONS OF ISSUE OF ORDINARY AND PREFERENCE SHARES.

The new Ordinary shares shall be considered part of the original ordinary capital and shall be subject to the Articles of Association of the Company with reference to the payment of calls and instalments, transfer of shares, forfeiture, lien, surrender, voting and otherwise for all purposes, but the said new shares will not be entitled to participate in the profits of the Company for the year 1945. Subject to the Articles of

THE MOTOR HOUSE (GUJARAT) LIMITED—Contd.

Association and the rights of Preference shareholders as set forth in Prospectus, the profits of the Company which it shall from time to time be determined to distribute in dividends, shall be divisible amongst the members in proportion to the capital paid-up on the shares held by them respectively.

EARLY EXPENDITURE.

The Government of India have permitted early expenditure upto Rs. 3,00,000 for purposes connected with the proposals set forth in the Company's application for consent to the issue of capital, as stated in the order passed by the Government of India.

BROKERAGE

Brokerage of 2% will be paid on allotment made in respect of applications through approved brokers.

SUBSCRIPTION LIST.

The Subscription List will open on 15th October, 1945 and close on 22nd October, 1945 or earlier at the discretion of the Directors.

APPLICATION

Applications should be submitted for five or multiples of five ordinary shares and addressed to the Registered Office of the Company, or to the Company's brokers and bankers and their branches.

25% of the amount of the shares applied for is payable with the application and 25% is payable on allotment. The balance 50% will be called for as and when desired by the Directors.

Application forms and full prospectus can be had from the Registered Office of the Company, or from the Company's bankers and their branches.

This Fund will be closed on October 31st, 1945. Upto September 27th 1945 the total receipts by the Fund were Rs. 1,22,29,041 and the total disbursements were Rs. 1,22,15,104 made up as follows: Payments for aircraft Rs. 1,03,73,333; Allocated to Charities Rs. 17,83,908; Expenses Rs. 40,142.

The Committee thanks sincerely all those who have given such generous support to the Fund.

Space Donated by Imperial Bank of India

Clive Street Gossip

The future of the Indian States was very much to the fore in the days of the Round Table Conference; and it naturally looms large in any serious discussion of the shape of things to come in India. But I doubt if anything can invest it with as much immediate importance as the sudden upsurge of interest in economic development and the imminence of economic planning. The war itself, in so far as it created a new urgency about our economic problems, brought the States nearer to British India and compelled the progressive abandonment of the old attitude of thinking of the States as separate entities as among themselves and in relation to the rest of India. There was first the administrative expediency of bringing the States within the scope of the controls. Then as economic planning became more important, other measures of co-ordination had also to be considered; once set to it, the political authority of the Government of India impelled them to go further on the same line, if only because the temptation to exercise de facto powers where the capacity for resistance is inconsiderable is too strong to be resisted. But the result of moves and measures taken under the spur of the moment without a background of principles carefully thought out and clearly laid down can hardly be satisfactory. The grievances that the Government of India have given rise to have been voiced lately by Sir Manubhai Mehta at a recent meeting of the Ministers of States at Delhi; and even those who have formed their ideas on the problem of the States merely in consideration of the abuses and malpractices in the disreputable of them will agree that Sir Manubhai did cite some glaring instances of injustice, that at any rate, not all the demands made by the Government of India on the States can be justified.

Even a hurried reading of Sir Manubhai's speech will show that not only are the Government of India unwilling to concede the political separateness of the States, but they are also unprepared to recognise the special needs of economic development of the territories ruled by the Indian Princes. Whether it is taxation or economic controls, the separateness of the States is regarded as a thing of the past. Such an attitude is, no doubt, in accordance with the ideas of most people in British India where public opinion has regarded the States as a dangerous anachronism and had always been ready to welcome any development that will tend to efface them altogether. The problem of the States has obviously both a political and economic aspect; and to some extent at least the two may be said to overlap. At the same time, they have got to be thought out separately and the claims of each duly conceded, so long as the States are separate entities. It is one thing to oppose the idea of economic policies being framed with political separateness as a major premise. It is quite another to advocate policies which simply ignore this separateness and are based on the convenient assumption that the political side of the problem has been solved with ideal perfection. If this is recognised, there will be more disposition than sed, there exists at present to examine the issues on hand with a reasonable freedom from preconceived notions.

Strictly speaking, the problem of the States even on the purely political plane calls for careful reconsideration. I am by no means inclined to offer any cut-and-dried solution. But it would be well not to ignore a few facts. Firstly, even the Congress has not always been of the same mind where the States are concerned. Opposition to the States and abolition of the Princely order, which at one time were measures of self-evident wisdom with leading Congressmen are no longer so. The Congress demand for democratic institutions and the impersonal rule of law in the States still continue, but there is a vague feeling that the States may be allowed to survive in a federal constitution for the whole of India. It is not improbable that the survival of the States into modern times, in conditions which may conceivably have brought about their end long ago, is meant to serve some cosmic purpose which can be but vaguely divined now. However, so long at least as the abolition of the States is not practically feasible, the obligations to think out their problems and show some spirit of accommodation cannot be repudiated. It is also possible that, when special steps have been taken to ensure the economic development of the States and the progressive well being of the people and administrative cooperation between British India and Indian India, the nominal political separateness of the two divisions will cease to be vexatious or as offensive as it is today. However, that belongs to a comparatively distant future, though it would be foolish to ignore altogether its implications for the present. What matters now is the fact that British India has no free hand in shaping the future of the States, that the Government of India is apt to show little deference to the States and that, from every point of view, it is of the utmost importance for us to take the States with us in all matters of economic development and in all questions of economic policy; and more than all, that, if we succeed in doing so, the problem of the States will be found before long to be less vexatious than it is today.

To this attitude, the States have indeed to make a notable contribution. Faced with the authority of the Government of India and the prospect of Swaraj, the Princes will be well advised to reflect on their past attitude to the cause of Indian freedom. Their role in the second and

third R. T. C., in delaying the Federation, and their hostile attitude to the Congress will prove to be a heavy handicap in the future, if ways of placating public opinion in British India are not found in time. It is time that the Princes recognised that in the increased well being and prosperity of their people there is a fair and fruitful meeting point for them and for British Indian opinion. There can be no doubt that, the moment the well being of the States subjects becomes indubitably the foremost aim of their rulers, the antipathies between the Princes and the Congress will become a thing of the past. The only way of making the most of this meeting ground is to give economic development the highest priority in public policy. Economic interests of contiguous areas, though at first sight they may seem conflicting, are in reality a cementing influence, that is, if they are intelligently pursued jointly and severally.

So far, judging from what has been published about the disputes between the States and the Government of India, the latter have used economic problems as points of friction and dispute rather than a new meeting point. This could hardly be otherwise, since the present mood of intervention in the internal policies of the States is not so much the result of anxiety for coordination of economic policies, as a mere extension of the item to increase the powers of the war period and the scope of the controls. It must be said, however, in fairness to the Government of India, that some of the present taxes had originated in the pre-war period and are not levied by mere itch to extend powers. Every one can recall the trouble that the Government of India had about internal customs taxes, the diversion of the import trade to ports in Western India and the difficulties in regard to new excises. In the wake of these came the special needs of the war period. Sir Jeremy Raisman's concern for anti-inflationary measures is quite understandable in the light of his utter inability to check inflation. It may be that he had somewhat exaggerated notions of the extent of the damage done to his anti-inflationary drive. But that he was sincere can hardly be doubted. Given his anxiety to make the anti-inflationary measures as water tight as possible, the insistence on E. P. T. and equal taxation in the States and British India is understandable. But this demand assumes a new complexion when it is detached from anti-inflationary measures and put on the ground of equal competitive conditions in the States and British India. The advent of planning as the established economic policy of the Government of India wor-

sens the position still further, since the whole claim of the States to independent consideration of their interests is thrown over board. Whether it is the control of all India industries, licensing of further factories, or control of capital issues, the Government of India comes to demand without any qualms the utter self effacement of the States.

It is this position that Sir Manubhai has complained against; and it is this position that British India must consider from the standpoint of our future political and economic development. There are two distinguishable groups of problems, those connected with public finance in general and taxation in particular and those that are connected with the economic control and regulation necessary for planned development. There is no doubt a link between the two, in as much as taxation and fiscal policy have not a little to do with the development of industry. But the impact of taxation on the position and prospects of industries cannot be allowed to detract from the importance of considering questions of public finance as such, without allowing one of the many considerations in this regard to become the almost sole deciding factor. From what Sir Manubhai has said, it is clear that the Government of India are uncompromisingly insistent on taxation in the States being raised to the same level in British India and, what is more, on this levelling up being accomplished in two or three steep steps. In making this demand, the Government of India have obstinately overlooked some very crucial considerations. They have overlooked the fact that this demand originated not in solicitude for British Indian industry, of which they have been notably innocent all these years, but in the anxiety that there should be no loophole in the anti-inflationary measures. It is true that even before the war, whenever new excises were imposed, the Government of India were anxious that the States also should impose similar taxation. But these are quite different from a general demand that taxation in the States should be equal to taxation in British India in order to ensure equal conditions of competition.

In the first place there is an exaggeration of the significance of taxation to differences of competitive capacity. Secondly, it is not easy by any means to determine what is the total burden of taxation which bears on industry either in the States or in British India. Such equality of tax burdens does not obtain even as amongst the various provinces of British India. The Government of India themselves would hardly be able at the present juncture to indicate in advance what their taxation policy will be in the years to come. So that the demand for equal taxation amounts to a demand that the States should follow the Government of India in every change that they may make. The whole principle that taxation in a State should be governed by the needs of the budget and the taxable capacity of the people will be thrown overboard. Likewise, the States will also be deprived of the freedom to develop their industries by a taxation policy suited to their special requirements. It is, indeed, strange that such an unreasonable position should be taken up without any thought for the violation of sound principles which it involves.

If it is true that differences of taxation have affected British Indian industry adversely or that it is dangerous to allow such differences to persist, then the relations between British India and the States should be considered as a whole and every step that will be taken in the future must be properly related to a carefully determined scheme. The acceptance of economic planning by the States and the Government of India alike provides the means of resolving all conflicts. If it is agreed that social service expenditure in the States should not lag behind that of British India and that the economic development of States' territory is as important and imperative as that of the rest of the country, the States will feel the need to raise larger revenue and at the same time be entitled to all the help and facilities for economic development which British India will have. As things are, the States not only lack confidence in the Government of India treating them fairly in respect of the needs of industrial and other development, but they also feel that the Government are exerting unfair pressure on them for yielding to demands of dubious fairness. If the States are to be deprived of the right to nurse their industries by the time honoured methods of protection, if they are to be saddled with the obligation to follow the Government of India in all matters of taxation and if, in all questions of economic control and regulation, they are to place themselves under the thumb of the Government of India, then the resulting position would be intolerable indeed.

It is one thing for a National Government to insist that India is one and undivided and that in all matters political and economic, the States have to line up with British India and will have equal treatment with the people of the latter. It is quite another for an unreformed Government to make miscellaneous demands, which are quite at variance with the political order they are sworn to defend, exert their 'de facto' powers to the detriment of the States and work for bringing the States under their own direct control. There is no doubt that in the years to come the States will have to shed all their angularities and State and British Indian administration will have to be dovetailed into one another. But that is far different from the steam roller that is now being attempted, not without success. The economic federation of India is not only an ideal but a practical necessity, which all alike should bow to. But that federation will by no means be prejudiced if the British Indian public denies support or sympathy to the present policies and methods of the Government of India.

"EAVESDROPPER"

Times Pictures

Times Pictures Limited has an authorised capital of Rs. 25 lakhs in 4,000 6½ per cent cumulative preference shares of Rs. 100 each and 20,000 deferred shares of Rs. 5 each. Only the preference and ordinary shares are issued. The managing agents, the directors and their friends have agreed to take up 500 preference and 45,000 ordinary shares and the balance is offered for public subscription.

The Company has been formed generally to carry on the business of cinematograph trade and industry, both silent and talkie.

and to manufacture and deal in educational films in commercial, agricultural pictures, etc. The company has already completed negotiations for the purchase of three films with the sole right of distribution in Bengal circles. With the concentration on

the distribution of films till such time the studios of the company come into being, it is expected that a profit will be earned even from the beginning. The Board of Directors consists of well-known Bengali businessmen.

TOOTH AND CLAW

HERE are a few of the vermin, red in tooth and claw — stoat, magpie, little owl, jay and crow—which, with the rest of their tribe, wreak havoc among poultry and game, and indirectly injure crops by killing the birds and animals which are the farmer's friends. The destruction of these pests is essential to efficient food production. Trapping and poisoning are the most effective methods, but vermin can also be shot. Poisons are obviously products of the chemical industry, but it may be less obvious that the sporting cartridge is the product of chemist as well as engineer and depends on chemicals for its action. Held in a chamber in the head is the cap, containing a minute quantity of a compound of mercury fulminate and other chemicals, so sensitive to shock that it must be mixed in a silk bag electrically agitated from a distance. This cap faces the point of a small brass anvil. Pressure of the trigger brings about a violent chemical reaction. The striker of the gun forces the cap against the anvil and causes a flash which sets off the charge of explosive, based on cotton fibre treated with nitric and sulphuric acids. With terrific force the gas produced drives the wad forward like a piston and propels the shot out of the gun barrel. This is a simple description of a highly complex article whose making involves a dozen or more raw materials, over 150 separate manufacturing operations and the use of not less than 140 steel gauges, accurate to the thousandth of an inch. No article in common use and costing so little is made with more scrupulous care — a fact which may well be borne in mind now that cartridges are in such short supply. Years of research and experience will ensure that British-made cartridges will be the best in the post-war world, as they were in the world which ended in 1939.

IMPERIAL CHEMICAL INDUSTRIES (INDIA) LTD.

Powders and face creams will help you to look lovely, but the secret of a really beautiful skin is to be clean inside. Until you realise this you are wasting half the money you spend on beautifying yourself. So let Andrews give you deep-down tonic Inner Cleanliness. That is the first step to a lovely clear skin. A glass taken regularly—whenever you feel you need it—cleanses, cools, refreshes and invigorates. This is how Andrews does its health-giving work:

FIRST - Andrews refreshes and cleanses the mouth and tongue.

NEXT - Andrews settles the stomach and corrects acidity.

THEN - Andrews tones up the liver and checks biliousness.

FINALLY - To complete your Inner Cleanliness, Andrews gently clears the bowels. It sweeps away trouble-making poisons, corrects Constipation, purifies the blood and clears the skin.

For Inner Cleanliness be regular with your

President Truman's Message to Congress

Setting up of Atomic Energy Commission

Washington, October 9.

President Truman sent to the Congress a special message on atomic energy last week in which he urged immediate establishment of an Atomic Energy Commission with complete authority over domestic research experimentation and operations in connection with the new discovery which he said, "began a new era in the history of civilisation". He revealed at the same time that he would initiate discussions with other nations looking to the formulation of international policy regarding the use of atomic bomb and "directing and encouraging the use of atomic energy and all future scientific information towards peaceful and humanitarian ends". He urged that the United States keep intact the strong scientific organisation which is the result of its enormous wartime investment in brain and plant for developing the atomic bomb. President Truman said that the society has never been confronted with power so potentially dangerous and at the same time so full of promise for peace of the world and thus could not afford to postpone decisions on either domestic or international level. The Commission, he advocated, would be authorised through the Congress "to control all sources of atomic energy and all activities connected with its development and use in the United States". If his proposals seemed drastic and far-reaching he could only say that "the discovery with which we are dealing involves forces of nature too dangerous to fit into any of our usual concepts. . . . We can no longer rely on the slow progress of time to develop the programme of control among nations".

The Labour vs. the Management conflict which was more or less adjourned during the war has broken out anew in the United States. Since the end of the war there has been spreading a strike-wave which has had as many as 1½ million workers off the jobs in coal, oil, automobile and other industries. The immediate issue is the labour's demand that it should receive the same income in the postwar period as it did during the war. To achieve this would require about 30 per cent increase in the wages. For the industry has now returned to the 40-hour week and labour no longer receives 50 per cent additional pay for overtime work which bolstered its income during the war. The industry opposes wage increases to the extent demanded by labour on the ground that war profits are needed for plant improvement and expansion and future profits cannot yet be estimated. Moreover, the management contends that a 30 per cent wage increase would cause a commensurate price increase with reduced consumption by the public. Beneath this immediate issue are a number of factors of deeper origin influencing the labour's action. Among these are its rise to position of great power during Roosevelt's incumbency, its expectation that Truman would be as favourable to it as Roosevelt and its restiveness during the war under "no-strike-pledge" which deprived it of its strongest weapon.

A Labour-Management conference is scheduled to convene here in November

5 and it is hoped that a formula for peaceful handling of disputes will result. It seems obvious that wartime pattern of Government plant-seizure whenever an impasse developed between labour and management cannot be continued in peacetime. Truman took that course last week when a dispute in oil industry failed of settlement by other means but it was made clear that this was not to be taken as post-war precedent.

Jupiter General Insurance

Speaking at the annual general meeting of the shareholders of the Jupiter General Insurance Company Dr. Alagappa Chettiar spoke rather enthusiastically about the progress of general business in the past year though he said that for a company of 25 years standing new business written in the Life department was rather meagre and that every effort should be made to improve the working of this department. With the inclusion of prominent businessmen in the Board of Directors and the energetic direction of the new Chairman it can be expected that the company will be able to report satisfactory results in the current working year. The figures for 1945 are more encouraging than the corresponding figures for 1944 in all the departments except Marine. That is due to the gradual elimination of the war risks and the corresponding reduction in the rates of premium. As there will be a further drop in the rates of premium and also a reduction in commodity prices the income of the Fire department too might be affected. But it is expected that with an increase in the volume of business and expansion of the activities of the company, the losses in respect of these two departments will be more than compensated. New business written in the Life department in 1944 was Rs. 1.25 crores and the average value of policy was Rs. 3,424. The life fund stood at Rs. 47 lakhs. Business in force was over Rs. 3½ crores.

Motor House (Guzrat)

The Motor House (Guzarat) Limited is issuing additional capital as with the plans for large-scale assembling of motor cars, there is need for more capital. It is stated that the company has already entered into an arrangement with foreign manufacturers for the supply of component parts on very favourable terms. The site has been selected already for the plant at Kalol in Baroda State, near Ahmedabad. The company proposes now to establish a large-sized assembling plant for cars and trucks of such models as are most popular in the country and most suited to its demands. The project for the present is only for assembling and not for manufacturing motor vehicles in India which involves a large capital outlay. The authorised capital is Rs. 24 lakhs in 60,000 ordinary shares of Rs. 30 each and 6,000 5 per cent cumulative tax free redeemable preference shares of Rs. 100 each. There is already a paid-up capital of Rs. 1,61,610 in 5,387 ordinary shares. As the issued capital is Rs. 12 lakhs, 24,613 ordinary shares and 3,000 cumulative preference shares are offered for subscription. The existing shareholders and their friends have agreed to take up 9,613 ordinary shares and 1,500 preference shares. The balance of 15,000 ordinary shares and 1,500 preference shares are offered for public subscription. Mr. M. B. Mehta who has considerable experience of the automobile industry is a partner of the firm of managing agents.

(Continued from page 643)

some 900,000,000 loaned to American war plants.

Thus, London's financial commentators contend, considering that the post-war demand for silver is not likely to exceed the wartime demand, any apparent shortage of silver is, and will be for many years, essentially artificial, particularly in view of the fact that the wartime world production of silver declined considerably. Complete figures for last year are not available but the United States production of 34,500,000 ounces was only half of the prewar figure and Mexico, the biggest single source of silver, produced 63,000,000 as compared with 88,000,000 ounces prewar.

There is no silver market in London at present. Neither imports nor exports are permitted on private account. The Government is the sole importer—though it is not known whether any imports have in fact taken place since supplies under Lease-Lend ceased—and release silver in small quantities to such private users as can demonstrate that their requirements are essential.

London observers see the American price rise as a common-sense means of relieving the American shortage of silver for industrial purposes only. To release any of the Treasury's vast stocks would have required additional supplies from abroad.

Whether sufficient external supplies will be attracted is uncertain because, as the current issue of the "Economist" points out, even at its new level the American price is still below the prices quoted in India and Alexandria.

Silver comment has since turned to Mexico which has been the United States chief external supply in the past. Last year, however, the Mexican authorities themselves retained a large proportion of Mexico's total production. Now, the increase in the American price may tempt them to release supplies and America may seek to absorb all available in order to prevent a flow of Mexican silver to the East.

Meanwhile, like Britain after the last war, Mexico may be obliged to reduce the silver content of its coinage which is now worth more as bullion than as coin.

It will be recalled that India took a similar step at the end of 1940—for reasons of economy because, at that stage, the bullion value of the rupee was not within sight of its monetary value.

It's a Fact—

that the most favourable opportunities in life are open to those who can afford to pay for specialised attention and training. Give your children the best education available by opening an account for them NOW with the Palai Central Bank.

Palai Central Bank Ltd.
(Incorporated in Travancore with Liability of Members Limited)
Palai. Travancore.

(Application has been made to the Calcutta Stock Exchange for inclusion of the Shares of the Company in their official quotation list)

THIS IS AN ANNOUNCEMENT ONLY AND NOT A PROSPECTUS.

"Consent of the Central Government has been obtained to the issue of capital subject to the condition that so much of the capital as cannot in the Government's judgment be properly expended until some uncertain future date is invested and kept, if any, Indian State interests are involved) is satisfied that the time has come to make corresponding payments for the purpose which are consistent with the enforcement of any measures of control or restriction that may be in operation at the time when such release is applied for. It must be distinctly understood that in giving this consent the Government of India do not take any responsibility for the financial soundness of any schemes or for the correctness of any of the statements made or opinions expressed with regard to them."

TIME PICTURES, LIMITED

(Incorporated under the Indian Companies Act 1913, as a Public Limited, Company)

AUTHORISED CAPITAL - Rs. 25,00,000

(Divided into 4,000 6½% Cumulative Preference Shares of Rs. 100/- each; 2,00,000 Ordinary Shares of Rs. 10/- each and 20,000 Deferred Shares of Rs. 5/- each.)

The Preference Shares carry the right to a fixed cumulative preferential dividend at 6½% per annum, free from Income Tax, on the capital for the time being paid up thereon and shall rank both as regards such dividends and as to repayment of capital of the Company, but shall not carry any further right to participate in the profits and assets of the Company.

ISSUED CAPITAL - Rs. 24,00,000

(The whole of Preference and Ordinary Shares only.)

Preference Shares are payable at: Rs. 25 with application, Rs. 25 on allotment and the balance as and when called by the Directors. Ordinary Shares are payable at: Re. 1 with application, Rs. 3 on allotment and the balance in one or more calls as may be decided by the Directors and in case of more than one call with an interval of one month between each call.

The Managing Agents, Directors and their friends have agreed to take up 500 Preference Shares and 45,000 Ordinary Shares of the aggregate nominal value of Rs. 5,00,000. The balance of the Preference and Ordinary Shares is now offered to the public for subscription.

AIMS & PROSPECTS

The Company has been formed generally for the objects specified in the Memorandum of Association and particularly to carry on the business of Cinematograph trade and industry both silent and talkie and specially to manufacture and deal in educational films, commercial agricultural pictures and publicity, news, sports propaganda pictures, and very high class dramas on social, historical and other backgrounds with a view to mould the character of the nation as well as to carry and undertake the business of producers, exhibitors and distributors of Cinema Films, both talkie and silent Photo Plates and accessories.

The rapid growth and expansion of film industry among the progressive countries of the World is a tale that need hardly be repeated to-day. It is a common-place of scientific educational technique that a picture in the film sense times more impressive and educative than mere language and images are carried through sound-symbols to their respective association-centres, and an ill-developed brain is likely to miss their import all at once except through long practice, whereas into action, direct and simultaneous, and sounds expressed brain of extra time and energy; that is why talkie films are gaining ground daily in human interests: socially, economically and financially.

The statistical position of films in our country is evidenced by only 50 Studios in operation, 150 film producing concerns, and only 1700 permanent Cinema theatres present an extremely gloomy spectacle, compared with that of other progressive nations of the world. Every right thinking Indian considers it an imperative necessity to flood the land with films, studies and Cinema houses the sole national meagre production of culture, democracy and wealth. The has been a stupendous hindrance to the growth of national sentiment and economy. In other countries the state identifies such institutions with that of the people, and naturally helps to build Service through films whereas India unfortunately lags far behind them in such reconstructive measures.

The Company has already completed negotiation for the purchase of three films with the sole right of distribution in the Bengal Circuit. To come to its all important financial aspect, it would be enough to quote the figures of Bombay Talkies Ltd., that with a paid up capital of only Rs. 6,00,000/- approximately, the Company yielded profits to the extent of nearly 1,50,000/- pictures paid as much as Rs. 20,00,000/- (single picture). The cessation of the grim global war the Indians was joined the foreign shores into the midst of those here, who are growing more and more film-minded and developing greater cultural consciousness daily. It is evident, there that Indian film industry will thrive expand enormously and is bound to yield fat dividends to those co-operating in share-investments.

The Company also desires to commence producing pictures as soon as permission is obtained from the Central Government or at the withdrawal of the control whichever is earlier. The Company also desires to possess its own show houses for exhibition of films and are already negotiating to that end.

South India

(From Our Correspondent)

Madras, Oct. 9.

The Mysore Economic Conference under the Chairmanship of Mr. Ramachandra Rao approved the five-year scheme of post-war electric power expansion in the State. The total cost of the schemes is estimated at Rs. 5 crores and an annual recurring expenditure of Rs. 6 lakhs would be incurred for the upkeep of plant. This development of electric power would stimulate the Iron and Steel industry and the manufacture of textiles. Further the scheme would solve the problem of unemployment for the ex-service men. Other schemes which have been formulated are the expansion of engineering and chemical industries, the development of cottage industries, and the improvement of the existing paper mills. Due attention is also being paid to the manufacture of rayon silk. The Managing Committee of the Mysore Chamber of Commerce have made some recommendations to increase the production of Iron and Steel. For the industrial and agricultural development of the country it is quite essential that the Iron and Steel industry should be managed by leading and capable industrialists and properly controlled by Government authorities. For specialisation in the manufacture of steels, the service of foreign technicians may become necessary. In addition the Committee have suggested the establishment of a Metal Research Institute in India.

Mr. Crombie, the Collector of Malabar, at a meeting of the Malabar District Food Council held in Calicut explained the stock position of rice, wheat and ragi. The rice position had very much improved and the present stocks are considered enough and more for over two months. Owing to the scarcity of labour, raising crops in the hilly areas is difficult. He remarked that in many parts of the district, agricultural money wages were poor when compared to the rise in prices. He also explained the measures taken to ensure a steady supply of paddy straw at a low price for cattle fodder. As regards the distribution of milk, the service rendered by the Society of Friends was appreciated. He revealed that the Government contemplate free supply of milk to school children.

The Government of Madras have issued a Press Note regarding the food situation in the Province. Special quotas were allotted to the North Arcot and South Canara Districts. The stock position of

millets and pulses was found to be satisfactory. Arrangements have been made to get supplies from the Punjab.

Presiding over the 12th anniversary celebrations of the Government Industries Department Workers' Union, Madras, Mr. V. V. Giri said that the real strength of the workers lay in their discipline and organisation. The Director of Industries opined that a new spirit lay dormant in the minds of the people which made them realise their rights and responsibilities. Madras originated a tripartite conference of workers, employers, and representatives of the Government to settle disputes. Mr. Giri said, that the employers must bear in mind that the workers played the most

prominent role in industry. Questions regarding provision of housing facilities, guaranteeing reasonable wages, and the right to form trade unions etc. should be taken into consideration, by the proper authorities. The Government should ease the position of the workers and help them in every way in their post war reconstruction plans.

The Government of Madras have created nine posts of Inspecting assistant Textile Commissioners in the Province with a view to ensuring equitable distribution of available cloth and yarn to consumers.

Certain useful tips to Indian producers and directors were given by Mr. S. Sundar. (Continued on page 662)

Rules of Business on application

TIME PICTURES, LIMITED, ANNOUNCEMENT—(Contd.)

The Company is fortunate in having a brilliant Directorate composed of well-known persons of the place, who have a long and varied experience of the Commercial World and possess a well informed outlook and knowledge of their particular undertaking and are quite confident of the great possibilities of their enterprise. Moreover the technical efficiency of the Company is bound to be strengthened many times more by the ungrudging support and assistance of such a powerful technical expert as Mr. Muralidhar Chatterjee, a well known film magnet of wide and long standing repute. The Partners of the Managing Agency film also are well-known business men of tested abilities with high rational ideals and aspirations. It is a fair conclusion, therefore, that such a Managing Agency backed and guided by such a brilliant Directorate shall in no time be in the assumed position to declare handsome dividends to its share holders.

PRELIMINARY EXPENSES

Preliminary expenses including registration fee and printing charges and other incidental expenses but exclusive of brokerage are estimated at Rs. 10,000/-.

DIRECTORS QUALIFICATION AND REMUNERATION

The qualification of a director, other than the ex-officio Directors shall be the holding of shares in his own name alone

and not jointly with any other persons the aggregate nominal value of Rs. 5,000/-.

The remuneration of every director shall be Rs. 25 for every meeting attended by him.

INSPECTION OF AGREEMENT

The draft agreement between the Company and the Managing Agents and other documents may be inspected at the Registered office of the Company during office hours.

MEMORANDUM & ARTICLES OF ASSOCIATION PROSPECTUS AND APPLICATION OF SHARES

Copies of Memorandum and Articles of Association can be obtained on payment of Re. 1/- each and copies of prospectus and application forms for shares are obtainable from the Registered Office of the Company or from the brokers and bankers mentioned above.

COMMISSION FOR SELLING SHARES

Commission for selling shares shall not exceed 5% on preference shares and 10% on ordinary shares.

A Resume of Commodity Markets

Apart from the slight improvement in cotton prices on reports that there was good enquiry from Britain, there is nothing of interest in the commodity markets in the past week. The raw jute market has been very quiet with mills taking only a small interest. The increase in local stock figures of jute manufactures has not been helpful to the market. It is not clear whether the higher level of local stocks was due to poorer demand from overseas. But it would appear that there has been a diversion of shipping for other purposes and that after a month or two, the offtake might increase again. The jute manufactures market also has been quieter with poor enquiry while the reports that there will be no change in the sterling-dollar rate and that the talks between the United States and Britain for the conclusion of a new arrangement for the supply of the much-needed goods for the U. K. might be successful, had a depressing effect on the bullion market. The piece-goods market remained uninteresting in spite of the busy season. There was not much trade buying as the reports that large supplies of British goods are expected and that the cloth position might get easier in a short period have resulted in a falling off in demand.

The raw jute market has got into a rut and it appears that it would be a long time before there will be a sustained improvement in prices. Mills are still keeping out of the market as they are inclined to await further developments. It is true that the reports regarding the possibility of an early de-requisitioning are very persistent, but the dealers in the raw jute market are not in a mood to attach great significance to these reports as they are afraid that there may not be any appreciable increase in production even with a larger number of looms available for working.

The fears of holders of raw jute would seem to be rather exaggerated as with the large arrears of production to be made up by the steam-driven units every effort would be made to make up the deficiency in the Industrial Pool. Which means, mills would consume more jute if godown space permitted of large-scale buying by mills. If it were reasonably assured that coal arrivals would be satisfactory and that production would be maintained at an average of 100,000 tons, mills could be asked to give support to the raw jute market.

There has been some criticism about the delay in buying by jute mills which has led to considerable distress selling in the raw jute market. In several cases a discount in cash has been offered over minimum rates.

In November every year the raw jute market is rather depressed. It will be remembered that even last year similar conditions prevailed and the Central Government feared that it would be necessary for them to interfere and effect purchases in the market in order to stabilise prices. Whether it is necessary for the authorities concerned to enter the market at the present moment to support prices cannot be said but with the more favourable conditions regarding working and with a satisfactory sold position up to March next year, mills should be able to purchase the necessary stocks of jute if it were found that their sales had not been covered fully with the stocks on hand. At the present moment, there is no hurry for mills to lay in additional stocks as there is little prospect of prices rising above the minimum level and there would naturally be a ten-

dency to save interest on capital which would otherwise be tied up in raw jute. In the mofussil, offtake has been rather poor and as the godowns are full, business is restricted. Arrivals continue to be on a large scale.

The jute manufactures market has been uninteresting and quotations are nominally quoted at maximum rates for positions up to December this year. For deliveries early next month a discount has been offered. Overseas enquiry has been poor.

The heavy goods section also is rather depressed. B. twills for January-March are

at a substantial discount over ready and October-December.

A fresh Jute (Price Control) Order, in supersession of the Jute (Price Control) Order, 1944 has been issued and anything done under the latter shall be deemed to have been done under the corresponding provisions of this Order.

The Order fixes maximum and minimum prices of raw jute and also maximum prices of manufactured jute goods when sold for export or by manufacturer or in wholesale or retail.

Jute and Jute Manufactures

Special to "Indian Finance"

(From Our Correspondent)

Calcutta, October 11.

The statement issued by the Indian Jute Mills Association of total stocks of Manufactured Goods at the end of September shows that the weight of goods in stock has risen from 171,979 tons at the end of August to 184,020 tons; an increase of 12,041 tons or nearly 7 per cent.

This is mainly accounted for by an increase of 10,346 tons in the stocks of Hessian Cloth and Bags held by the Mills on Civil account. There is also an appreciable increase in Sacking Bags and Cloth held on Government account, this figure having increased since the end of August by 3,266 tons. Commercial Sacking stocks record a small increase of 130 tons. The only item to show an overall decrease is the figure for Hessians held on Government account; this fell by 1,494 tons to 31,850 tons as against 33,344 tons at the end of August.

We have to go quite a long way back to find a stock figure higher than the tonnage recorded in the statement for September last. For the twelve months period September 1944 to August 1945, the monthly average weight of Manufactured Goods in stock was approximately 173,000 tons. Present stocks are higher than at any time since June 1944 (in which month the stock was 195,640 tons) and calculated on the basis of an average monthly production of 83,321 tons during the season 1944-45, represents about 2½ months' production.

The increase in Mills' stocks is due chiefly to lack of shipping; clearances of goods having been much restricted in recent weeks.

The latest memo of stocks of Manufactured Goods as issued by the Indian Jute Mills Association is reproduced below:—

Total Reported Stocks of Manufactured Goods Exclusive of Government Orders.

Description.	31-8-1945.	30-9-1945.
Hessian cloth and bags—

N.B.—September stock figure include returns of Gagalbhai in addition to those of member mills, but contain an estimate of the stocks of (Naskarpara, Kedarnath, Katihar and Maheswari Devi. Against these are shown the actual stocks of member mills (except for one mill for whom an estimate is given) and of Gagalbhai, for the month of August, 1945.

The following statement has been issued by the Indian Jute Mills Association of the total reported sales for the week-ended Saturday, the 29th September, 1945:

	This and next month	Forward
	Yards	Yards
Hessian	22,65,500	60,80,150
40 ins. 8 oz. Hessian (included in above)	10,00,000	Nil
Twills	20,50,993	22,42,779
Plains	11,74,940	38,60,800

A determined effort is apparently now being made to supply the jute industry with its full requirements of coal. For some weeks past there has been a sustained increase in the number of wagons arriving daily at the jute Mill's dump and last week a very satisfactory average of 103 wagons per diem was delivered. For the first two days of this week, the daily average was 85 wagons. It is also reported that the quality of the coal has improved.

The future of the Dundee Jute trade was the subject of several informative observations made by the President of the Dundee Chamber of Commerce at a recent meeting of the Chamber.

The President stated that the quarter just ended had enabled jute spinning firms to consider proposals for the re-opening of the jute mills closed by the Concentration Scheme. Under this arrangement it was to be hoped that a start would be made before their next quarterly meeting. Meantime this could not take place until sufficient work-people return from the services and munitions.

Plans were also under consideration for re-opening closed weaving factories, but the bottleneck in this case was the scarcity of yarn for weaving.

The victorious conclusion of the war in Europe had made everyone in the jute trade in Dundee examine the future position. Many of the mills and factories would need equipment and the mills were faced with the objectives of keeping costs low, paying adequate wages to their work-people, having sufficient margin left for depreciation of new and expensive machinery and possibly new buildings.

There is nothing of importance to report in the Pucca Bale market. Small lots of Dundee Daisee 2/3 and Tossa were done at minimum rates for export. Dealers are free sellers for all descriptions at minimum rates.

The Loose Jute market has been quiet, not to say depressed, but at time of writing there are indications that mills will be taking more interest in offerings in the very near

lots of Marwari marks and some European marks, both white and Tossa, all at minimum prices.

The market for Manufactured Goods opened quietly at the beginning of the week and subsequently hardened on reports of orders from North America and Canada for hessian having been placed by shippers for January/March delivery. The quantity of business placed has not been ascertained, but it is understood in some quarters to be in the region of one crore yards. There is also very good enquiry for hessian from Overseas sources and it is expected that fairly substantial business will soon result. Heavy Goods prices have moved up in sympathy with the steadiness of the hessian market but no business of importance has been reported.

(Continued from page 651)

The manufactured goods intended for export are required to be supplied in bales bound with iron hoops and all other consignments not intended for export are required to be supplied in bales bound with rope.

Any person exporting raw jute is required, at the time of presenting the relative shipping bill, to make a declaration before the Collector of Customs that the raw jute to be exported has been sold at the minimum(?) price.

The seller of manufactured goods is required to give a cash memo specifying price, quality and quantity of goods. He cannot as a condition of selling any type of manufactured goods, require the buyer to buy any other type of manufactured goods.

After being listless for one month the raw cotton market was inclined to be better this week on reports that Britain was interested in Indian cotton and that with the need for effecting large purchases within the British Empire greater purchases would be made in this country. If cotton producers paid more attention to quality and eliminated the mixing evil, it would be possible to effect larger exports. As Karachi advices also were higher quotations are four to five points higher on balance.

It is satisfactory to note that the short staple crop for this season will, prove to be better in quality and that the average prices realised may be higher. Samples of Sind N.T. received so far are above market expectations. The losses on account of floods in the cotton-growing areas in Kathiawar and adjoining districts might, therefore, be compensated to a certain extent.

The United States has come in for considerable criticism regarding its cotton policy. It was recently stated that efforts were being made by America to dispose of as much surplus cotton as possible through the UNRRA and that France, Belgium and other countries were receiving liberal supplies of cotton. It is also reported that shipping space was denied to Indian cotton and that the export trade in respect of this staple commodity was being stifled. Now comes the report that Japanese textile mills will work with American cotton and that Indian cotton might not get its fair share of pre-war exports. America, of course, will try to derive the maximum advantage while the U. S. Army continues to occupy Japan. But in view of the fact that India has contributed a large share towards the victory over Japan, her claims should be given due consideration and no undue advantage taken of America's supremacy in the Far East. Cotton mills in Japan have been primarily using Indian cotton

in pre-war years. It is rather strange that while every effort is being made by Lancashire to use as much of short-staple cotton as possible, Japanese textile mills, which were primarily designed to use Indian cotton, are being made to use American cotton. Even if a proportion of the exports to Japan in the pre-war years were got back, the Indian cotton grower would be affected beneficially.

The bullion market has been definitely quieter during the past week. Prices dropped several points earlier in the period. Reports of favourable Anglo-American talks and the larger arrivals from upcountry centres led to heavy selling but with investment buying at the lower levels, there has been a slight recovery. Sentiment in the market is rather bearish and it is expected that with the favourable reports regarding the progress of talks between U. S. and Britain prices for both gold and silver might be marked lower.

The All-India final wheat forecast, 1944-45 estimates an yield of 10,458,000 tons, which is an increase of seven per cent over the 1943-44 figure of 9,741,000 tons. The increase in area is five per cent, from 33,961,000 acres to 35,709,000 acres.

The area under sugarcane in 1945-46 is estimated at 3,920,000 acres by the first sugarcane forecast. This is a reduction of 1 per cent from the revised acreage of 1944-45 (3,961,000). The forecast relates to information generally upto the end of July, 1945. The present condition of the crop is reported to be good on the whole.

First All-India forecasts for 1945-46 for the groundnut and sesamum crops have also been issued. These forecasts relate generally to information up to the end of July or the beginning of August, 1945. The condition of both crops is reported to be fairly good on the whole.

Under groundnut a 12 per cent increase in acreage over the revised figure for 1944-45 is expected while under sesamum there is an acreage decrease of 13 per cent. The respective figures are: Groundnut acreage in 1945-46, 3,100,000. Revised figure for 1944-45, 2,865,000.

Sesamum: Acreage for 1945-46, 1,487,000. Revised figure for 1944-45, 1,714,000.

The first evidence of the trend of official foodgrain prices since the end of the war is given by the recent fixation

of rice prices in Sind for the Kharif season 1945-46. The Sind Government in consultation with the Central Food Department has reduced the wholesale price of Kangni rice from Rs. 9 to Rs. 8-12 a maund, and of paddy from Rs. 5-8 to Rs. 5-3 a maund.

This is not a statutory maximum price, but a fixed price for the whole season, and it is pointed out that this is in keeping with a policy of gradual reduction of foodgrain prices, while at the same time affording security to the producer against any sudden or steep fall of the market which may be expected as soon as rice imports from Burma begin to arrive.

Nearly 300,000 tons of wheat have arrived in India from overseas during the period May to September 1945, the quantity for the fortnight ended September 27 being over 43,000 tons.

(Continued from page 669)

rajan, one of the members of the Film Delegation who visited the United States recently, at a reception given to him by the South Indian Film Chamber. There was greater co-ordination between the departmental heads in America, their technique was superior in many respects and India could usefully copy some of these. He said that the average American had great sympathy for India and there was a great demand for Indian films. One of the suggestions he made was the opening of a Central Laboratory in South India where the various studios could get their release prints made while they could concentrate on rush work.

FACT No. 2

HERE and there, where the cause of the present cloth 'famine' is discussed, the point is often made that the situation would improve if India's handloom industry were supplied with adequate supplies of yarn with which to produce cloth to supplement the output of the mills.

Is it true that the handloom industry is not receiving adequate supplies of yarn? Indeed, no! More than 500 million pounds of yarn, representing about 31% of the total yarn output of the Indian Cotton Textile Industry, is now available to the handloom weavers and other users as against an average of 398 million pounds pre-war. The handloom industry can produce, with the yarn now available, about 2,500 million yards of cloth, which represents an increase of a little over 30% on its pre-war average production.

These facts and figures demonstrate that India's cotton textile industry now provides more yarn for the handloom industry than before the war.

One of a series of statements of fact for the information of the public.

Stock Markets to-day and to-morrow:

INDIAN ALUMINIUM ACCOUNTS: DETAILS OF C.E.S.C. DEAL

The Calcutta Stock Exchange has remained closed from Wednesday last on account of the Puja holidays. In unofficial transactions, it is stated that quietly steady conditions have been noticeable, and that quotations are around last levels with Indian Irons at Rs. 40-10 and Burra-kur at Rs. 44-12. In the absence of any important developments and with many brokers away from Calcutta, it is expected that no important fluctuations in prices will be recorded. In the Bombay market a quieter tendency was noticeable earlier in the week with the weakness of the bullion market but the later recovery in gold and silver and the spurt in prices for raw cotton have resulted in a rally in the stock market. Closing quotations are actually higher on balance.

The dividends of coal companies in the Bird and Heilgers group for the half-year ended June, 1945 have now been announced. As was stated last week, Burra-kur is making a total distribution of Re. 1 per share against 12 annas per share previously, the dividend being maintained at 8 annas per share with an increase in the bonus to 8 annas from 4 annas. Standard also has maintained its dividend at Re. 1 per share but there is to be a bonus of 4 annas in addition. Bhulanbararee is paying a dividend of 8 annas and a bonus of 4 annas while Borrea Coal Company is paying 8 annas, Sendra 4 annas and Churulia 6 annas. It would appear that the dividend for Sendra has come as a disappointment to the market as it was expected that with the company's participation in the activities of the Karanpura Mining Syndicate, a higher dividend would be paid.

With the speculation regarding early tax relief in the United Kingdom the latest reports are interesting. It is stated that the Purchase Tax on refrigerators, fittings and other equipment needed is

considerably reduced or even abolished.

This step is being considered as a means of stimulating the production of such articles and reduce building costs. It may be among the main concessions in the stop-gap budget which Mr. Hugh Dalton, Chancellor of the Exchequer, is to introduce at the end of this month.

Consideration is also being given to the possibility of restoring at least in part some of the cuts made in personal allowances to Income-tax payers. But these changes cannot come into operation until the next financial year, which begins in April. They will affect millions of workers who have been brought within the range of Income-tax during the war.

Much will depend on the outcome of the Washington discussions.

Since the Indian Aluminium Company, Limited was converted into a public company the balance-sheet for the year ended September, 1944, was awaited with interest. The accounts, however, relate to a period in which the new shareholders have no interest. It was only in April this year that the new issue of preference and ordinary shares was made and these shares do not rank for dividend in respect of the profits for the twelve months ended September, 1944. The bonus distribution of 3,500 ordinary shares fully paid up works out to less than 2.6 per cent. and as such the results might be viewed rather disappointing by the market.

A closer analysis of the accounts, however, gives a different impression. The company was started only in 1938 and commenced operations in 1941. Virgin aluminium was produced for the first time in India in March, 1943 by this company in the Reduction Works at Alupuram which has since been in continuous commercial production. Nearly the whole output of the rolling mills at Belur and the Reduction Works in Alupuram was absorbed by Government for essential war purposes. The progress made by the Company in the last four years will be evident from the following table:

Year ended Sept.	Sales Rs.	Net Profit before depreciation Rs.
1944	74,33,289	25,84,368
1943	66,77,730	20,55,438
1942	39,78,838	8,44,814
1941	64,620	16,896

It would appear from the above figures that the company has been making rapid

progress since it started production and that the difficulties of the early stages have been completely got over. The results for the last accounting period would have made better showing but for the limited supply of power from the Travancore State Hydro-electric scheme and the Reduction Works at Alupuram could not work to full capacity. The directors point out, however, that steady production of aluminium ingot was maintained and from a technical standpoint operations and the resulting product compare quite satisfactorily with standards obtained by other aluminium producers. Under wartime conditions, operations are limited by the amount of power available but the Directors have been advised that the supply of electric power should be increased early in 1946 with a corresponding increase in output.

Out of the net profit of Rs. 25,84,368 for the twelve months ended September, 1944 the sum of Rs. 7,02,030 has been set aside to depreciation against 4,34,355 previously. The provision for taxation is higher at Rs. 11,75,000 against Rs. 9,00,000. Of the balance amount Rs. 3.5 lakhs is to be utilised for distributing 3,500 ordinary shares as bonus shares to the shareholders pari passu in proportion to their present holdings and ranking equal in all respects with the present ordinary capital. At the time of the new issue of capital early this year the old shareholders waived their rights under Section 105c of the Indian Companies Act to the prior allotment of the issued shares with the exception of 3,500 ordinary shares. The new issue early this year consisted of 40,000 5 percent. cumulative redeemable preference shares of Rs. 100 each, taxable, and 20,000 ordinary shares of Rs. 100 each at par. The issue was heavily oversubscribed and only partial allotment was given to the applicants.

HARNESSING THE WATERS

To create new sources of electric power and perennial irrigation India must plan to store the monsoon and the melting snows. To reinforce dams, to construct sluice valves and pipe lines, power houses and pylons, steel is essential.

TATA STEEL

Issued by The Tata Iron & Steel Co., Ltd.
Head Sales Office: 102A, Clive Street, Calcutta

This is the second occasion on which the old shareholders are receiving bonus shares in lieu of dividend. In 1944, 11,500 ordinary shares were issued free to shareholders in proportion to their holdings and the sum of Rs. 10,81,929, being the profits to September 1943 were utilised for the issue of shares of the nominal value of Rs. 11.5 lakhs.

The balance-sheets of the Begg Sutherland group of sugar companies for the year ended June, 1945 have been published. As it was generally expected that there would be a shortage of cane supplies in the year 1944-45 to which season the accounts relate, the market has not expressed any surprise over the reduction in earnings for the twelve months ended June, 1945. With the exception of Champaran the other three companies are reducing the dividend distribution to shareholders. Samastipur Central is paying a dividend of 6 annas against 12 annas per share, Ryam Rs. 1 against Rs. 1-8 per share while Balrampur is passing the dividend. Champaran has been able to maintain its dividend at Rs. 2 per share. In the case of Balrampur, Ryam and Samastipur, with the large increase in working expenses the decrease in earnings is more than in proportion to the reduction in the quantity of cane crushed. Champaran was able to avoid a big decline in earnings as the percentage of recovery was higher.

The net profit, before providing for taxation and depreciation, for the year 1944-45 of the Champaran Sugar Company is Rs. 7,27,489 against Rs. 9,28,116 for the year 1943-44. The amount set aside to depreciation is Rs. 1 lakh (Rs. 1.5 lakhs) while the provision for taxation is very much lower at Rs. 1 lakh (Rs. 1.5 lakhs). After transferring Rs. 1 lakh (nil) to General Reserve the dividend has been maintained at Rs. 2 per share. The amount carried forward is slightly lower at Rs. 2,07,875 against Rs. 2,40,386 brought in.

The smaller provision for taxation is due to the tax refunds expected during the current year. The reference obviously is to the repayment of that portion of Excess Profits which is refundable to the company after the termination of hostilities, and for which no credit has been taken in the accounts.

The quantity of cane crushed in the Barrah factory was 12,74,883 mds. against 18,84,766 mds. in the previous year and in the Chanpatia factory 15,57,948 mds. against 20,56,716 mds. The percentage of recovery in the case of the former factory was 11.84 against 11.58 and in the case of the latter 10.55 against 11.03.

The Week in the Exchanges

BOMBAY STOCK EXCHANGE

(FROM OUR CORRESPONDENT)

Bombay, October 10.

The Stock Exchange during last week displayed a generally easier feeling and was remarkable for its lack of any influential support. The absence of any stimulating news was also another factor and with the weakness of the bullion market sellers predominated. Only on Wednesday, the closing day, there was a brighter sentiment resulting in all-round improvement in the prices. Textiles, especially, picked up to regain the lost ground while Steels also followed suit.

The Government Securities section, continued to attract much support, almost all loans registering small advances. 3½ per cent Paper is quoting around Rs. 102-4. Among short-dated issues, 2½ per cent 1948-52 were Rs. 100-4 and 3 per cent 1949-52 Rs. 101-10. 3½ per cent 1947-50 were unchanged at Rs. 103-3 while 5 per cent 1945-55 were recorded higher at Rs. 100-11.

Banks also moved up with the firm trend in gilt-edged securities, but during the latter part of the week were generally quiet, but steady. Central Banks were lower at Rs. 81-4 against Rs. 85-4 while Imperial Bank fully paid were steady around last levels. There was a small drop, in the quotation for the Contributories to Rs. 561-4 from Rs. 565. Bank of India went up actually by 3 points to close at Rs. 198. Reserve Bank were not very much changed at Rs. 139.

Textile mills registered their lowest levels for the week on Monday when there was considerable selling. Later the rally was brisk and on the closing day all shares were even higher on balance. Bombay Dyeing closed better at Rs. 1,975 against last week's closing of Rs. 1,980 after being as low as Rs. 1,952-8. Century recovered back to Rs. 910 from Rs. 900 while Svadeshi improved by 4 points to close at Rs. 564, the lowest level touched being Rs. 557. Sholapur remained unchanged at Rs. 7,225. Central India, closed better at Rs. 398. A final dividend of Rs. 9 per share making the total distribution for the year ended 30th June 1945 to Rs. 15 per share has been declared comparing with the total distribution of Rs. 20 in the previous year. Vishnu were steady throughout the week with the quotation at Rs. 500.

Steels, as mentioned earlier, after being hesitant, improved on speculative buying at the close. Reference in this connection should be made to the revealing remarks by Sir Jehangir Ghandy, General Manager Tatas when replying to an address of welcome presented to him and Sirdar Ajai Singh at a tea party given by the Gujarati Merchant Association last week. About the expansion programme by the Tata Irons, Sir Jehangir said that it was proposed to put up a tube plant in collaboration with Stewarts and Lloyds, a 28-inch billet mill and a skelp, hoop, strip and rod mill and also undertake the manufacture of electric steel sheets for stamping work and of tool and alloy steels. The Advisory Board appointed by the Government, he said, was expected to recommend the doubling of the country's steel capacity. If this recommendation were accepted, by the Government, the steel company would make every endeavour to bear its full share of the additional responsibility.

It is also to be noted that the plant to manufacture locomotives at Tatanagar has already started functioning. The Chief Engineer, Tata Locomotive works, said at a meeting that India would be self-sufficient in regard to locomotives in five or six years when three proposed plants were installed including the one at Tatanagar which is already functioning, another at Kanchrapara and the third in South India. He expected that the Indian Railways would require 235 locomotives every year and expressed the opinion that locally made locomotives would be cheaper than those imported.

Tata Deferreds closed about 20 points higher at Rs. 2,252/8 while the Ordinaries, likewise, were better at Rs. 417 against Rs. 412 last week. Alcock were improved on balance at Rs. 415 while Premier Construction quoted slightly lower at Rs. 203.

Among the Miscellaneous group, utility scrips attracted much attention with Bombay Suburban especially higher at Rs. 219/8 Burma shares were quiet. There was large buying in Associated Cements towards the close of the week the quoting improving to Rs. 222 from Rs. 219. Scindia Steam recovered part of the recent losses and closed at Rs. 37/7. Bombay Tram were a feature on investment buying recording gains upto 5 points, the close being Rs. 153/8. Andhra Valley Power also staged a small recovery to Rs. 1,829/8 x.d. while Tata Power improved on very good support to Rs. 1,910 from Rs. 1,897/8.

THE JUPITER GENERAL INSURANCE CO., LTD.

SATISFACTORY INCREASE IN GENERAL BUSINESS

ROLE OF INSURANCE COMPANIES IN INDUSTRIAL DEVELOPMENT

Dr. ALAGAPPA CHETTIAR'S REMARKS

Presiding over the 27th Annual General Meeting of the Shareholders of the Jupiter General Insurance Co., Ltd., on Saturday, the 29th September, 1945, in the Registered Office of the Company at Imperial Bank Buildings, Fort, Bombay, Dr. Alagappa Chettiar, M.A., D.Litt., LL.D., Barrister-at-Law, Chairman, said:

Gentlemen,

I consider it a marked privilege to be the Chairman of this Company of hallowed tradition and revered associations. Believe me when I say, that of the several distinctions I have been fortunate to receive from institutions and the public of late, I regard the Chairmanship of your company of rare value as it opens to me opportunities of serving a wider section of the public than

the one I have had the privilege to serve so far. There is a divinity which shapes our ends and I regard my association with the insurance world as one of God's will and, I look forward with your hearty co-operation and the goodwill of the public to a period of real service to our Company in particular, and Indian Insurance in general.

Gentlemen, copies of the Directors' report and accounts and balance sheet have been with you for sometime and I presume that you will permit them to be taken as read at this meeting. As the accounts give a fairly precise and clear picture of the company, I shall not take much of your time commenting on the figures but shall be very pleased to furnish any information desired by you concerning matters referred to in the reports and accounts.

	Net Premium	Percentage of Expenses to Premium Income.	Percentage of Claims to Premium Income.	Percentage of Reserves to Premium Income.	Carry forward to Profit & Loss A/c.	Fund.
	Rs.				Rs.	Rs.
Fire	23,57,791	52.59	43.80	58.00	59,964	13,67,320
Marine	6,42,214	21.89	48.66	159.00	3,05,023	10,21,121
General	3,77,364	35.81	35.02	69.00	28,827	2,60,382

It must be a matter of genuine pride to you, the shareholders of the Company, that our 'Jupiter' occupies the second place amongst the composite insurance companies in India. The following table will show you graphically the position of the various funds and also the percentage of claims, expenses and reserves in their relation to the respective premium incomes.

I am sure you will admit that it is very impressive reading but that does not mean, there is not still room for us to strengthen our funds and curtail expenses.

I may assure you that the Management will take every precaution and effort in the risks they underwrite and they will be influenced more with a view to classify and assess the risks rather than merely show a greater turnover.

There are many areas in India which have not yet been fully covered by us and there are also other areas which, though nominally, covered are not fully exploited. The management has now a programme of planned activity, and I hope that in the coming year we shall be able to develop our potentialities and make our organisation grow to its full stature.

I am glad to inform you that the figures for the year 1945 are more encouraging than the corresponding figures for the year 1944, in all the departments excepting Marine. That is due to the gradual elimination of the war risk and the corresponding reduction in the rates of premium. The reduction in the rates of premium and also a reduction in commodity prices and that must in turn bring down our premium income, in the Fire Department; but we hope to overcome and compensate the fall by writing new and business in the so far unexplored areas and by intensifying business in the existing fields.

The year under report in the Life Department discloses a completed business of about Rs. 1,25,00,000 and the average value of a policy remains around Rs. 3,424. Our Life Fund stands at Rs. 47,00,000. The total assurances in force is over three and three-fourth crores.

We should have thought that a company such as ours with its great organisation and well over a quarter of a century of existence must write a life business of at least twice the amount that we have written last year. Of course one has to note with regret that the Life Department has been the Cinderella of our various departments in the company. The present management has taken note of the vast scope available in this field and has resolved to go ahead and make a drive for a greater volume of business. It is needless

for me to add that the question of expense ratio will always take high priority in our plans and we will not be enchanted merely by big business. With the opening of Malaya and Burma I can tell you that there is great room for us to operate and the influence I have with our Indian friends and businessmen in Malaya and Burma will be a very good help to our new branches that are to be opened in those countries.

Surveying the field and the scope for activity that lies before the Life Department I feel that we have a very great future. It is the Life Department that is going to add up to our funds and compared to the other big companies in India we are fairly low in the list, in this particular branch of business and I hope that consistent with our eminence in the General Line, we will, ere long, move up in this list and occupy a position within the first five of the great Life Insurance Companies of India. That our people are both numerically and qualitatively very grossly under-insured is only too true and that gives us, a company like ours, great room for encouragement.

Our great leaders have all held and we agree with them that the basis of the prosperity of our country lies in a free Independent India. A completely national Government can do very much for the people in public health, commerce, agriculture and industry. The two requisites for Life Assurance are, Good Health and the capacity to pay premiums which means Purchasing Power. There, you will no doubt agree, can be assured to our community more by a truly national Government than by any other Government, however, well intentioned it may be. So it behoves us as shareholders of the Insurance enterprise, to think in terms of our own country and our own people.

The Bombay Plan when worked out by a Government, enthusiastic of the cause and sympathetic towards its people, will usher in its turn a fuller and greater India, an India in which every Indian will have assured to himself a square deal both during his years of active work and also after his retirement. Insurance will play its part in this great national awakening and I am looking forward to that period with all hope. I may assure you that in the great task that lies ahead, Jupiter shall render an account which shall be the pride of all and the envy of many.

I have always held that in a vast country like India, which is mainly agricultural less than a thousand towns, anything of importance cannot be truly great unless it and which has nearly a million villages and

develops itself thoroughly in the villages. We are all paying the price for the neglect of the village and our undue love for the towns. Life Assurance is hardly developed in the villages of our country which in the aggregate, forms the real and substantial India. Our insurance industry has not given thought sufficiently to these great possibilities of Life Insurance which undoubtedly exist in the villages. Of the two requirements which I have already referred to, i.e., good health and purchasing power, the villager undoubtedly has more good health than the average townsman and perhaps, less of the purchasing power. Indian insurance companies have not been able to take advantage of the potential resources of the villages because the companies have not cared to adopt the proper technique in reaching the villager. We have not developed a net-work of offices and connections to cover and serve the villages. It is a matter for earnest consideration on the part of Indian insurance companies whether and to what extent, by concerted action, they could extend their service to all the villages or at least as many of them as is possible. Good health as I said, the villager has in plenty and his purchasing power must be nursed and accumulated to buy an insurance of a type that will be a real benefit to him.

I will now take up another important aspect. This relates to the investment and utilisation of the vast funds inevitably accumulated by the insurance companies. Even the foreign companies operating in India, under the Insurance Act, have to invest their entire 100% of the Life Fund in the statutorily prescribed 'approved' securities. A moiety of these funds of the insurance companies must, as I have said on another occasion, be made available to build up our Indian industry. We must develop a sense of real service in effecting the lasting benefit to our country and to our people.

Several are the venues for such service if only Indian insurance companies, whether acting each for itself, or acting as a body in common interests, think out and plan. There is for instance, the problem of housing all over the country. The State is preoccupied in tackling problems considered by it more urgent and important than the housing problem of the people in our country. There are no organised building societies in our country on any large scale such as operate successfully in some other countries. Thus, we have a most urgent and important problem to be solved in the country's interests; and the most competent body to solve them satisfactorily and with profit to all is the Indian insurance companies. It will be universally agreed that the moneys invested by insurance companies in houses intended for the policyholders or the public and spread over different localities are not only a profitable investment but a perfectly safe one as well. In fact, no investor, individual or institution, can finance house property investment scheme so appropriately as insurance companies with their large and ever accumulating funds which are in the nature of long term deposits. What is wanted is clear thinking and careful planning with safety and security of shareholders and policyholders as the first consideration. Any student of the country's affairs will realise that this safety and security are never in conflict with the service of the country, both present and future. The Life funds of the companies invested in financing the housing scheme as already outlined and giving financial aid to industry on certain terms and conditions, will not only bring a better yield on its investment but also be truly national in its service. It may be feared that with 5 per cent compulsorily locked up in Government securities, not much may be left for investment in the service of the building up of our country. But the law of 55% is not, I am sure, "the law of Medes and Persians which altereth not." It is a law, which I am confident, the legislative authorities will be prepared to modify when they are satisfied about the bonafides of the insurance industry to benefit the country by properly framed schemes of public welfare which, at the same time, guarantee the safety and security of the policyholders' and shareholders' funds.

Insurance companies will have justified their claim to be truly national and Indian by this act of solving an essential national problem of vital interest to the common man and supporting the great fabric of industry of overwhelming value to the country as a whole. Indian insurance companies

which have satisfactorily solved many a knotty problem can certainly tackle right enough this comparatively simple problem if only they take concerted action and keep their good faith.

Indian Insurance Companies are now a tremendous assets and power in our country. Let us realise but let us not forget that the power is one derived from the public and that we shall not prove ourselves worthy of the great trust placed in our hands. It has been said by Lord Acton, "All power corrupts, and absolute power corrupts absolutely." Let the Indian Insurance industry rise up to the occasion and prove that power does not corrupt and that we need not be bound in shackles to keep pace and behave ourselves.

Gentlemen, before I conclude, I have to make a few observations which will be of great interest to you assembled here and the large body of our patrons and others who have connections with us. The affairs of your company have been investigated by me with the aid of experts and I give you the assurance, here and now, that all the investments of our company are safe and sound and the securities have been lodged with our Bankers, the Bank of India Ltd. There is one small item which we will have to sell out and even then the resultant loss will be well under a lakh and as against this we have appreciations in our investments which show a profit of more than ten lakhs.

The last great item of news which must be of supreme interest to you is the formation of our Board. The Report tells you the presence of our Policyholders' Directors, Sri Durzapradas Parasampuria and Sri Shantilal Popatlal. The shareholders' Directors are Mr. D. K. Sheshadri, the Hon'ble Sir Bejoy Prasad Singh Roy, K.C.I.E., and my humble self. I have been really fortunate in getting the co-operation of Mr. D. K. Sheshadri, a respected financier and relentless worker. He is the grandson of the late Sir K. K. Sheshadri, who is a household name in Mysore. The Hon'ble Sir Bejoy Prasad Singh Roy has already won many a laurel by his intellectual and political attainments in the great province of Bengal and his joining us will place in the map of Bengal. I now come to the new members who have agreed to join the Board, but who will actually be co-opted after their acquiring the qualification shares as prescribed in our Articles. Mr. Lala Yodh Raj, the Chairman and General Manager of the Punjab National Bank Limited and who, may I add, is the modern Pochkanwalla in the Indian Banking world, has also agreed to join our Board. So also have Seth Haridas Madhavdas, Seth Vithaldas Kanji and Mr. T. B. Kotak very kindly agreed to join our Board. The names of Seth Haridas Madhavdas and Seth Vithaldas Kanji are so outstanding that it will be presumptuous on my part to 'gild the lily or paint the flower'. Mr. T. B. Kotak comes from the great family of Kotaks, solid silent workers who have carved out for themselves a respectable and enviable place among the business houses of Bombay.

I welcome all our new Directors on your behalf and extend to them my cordial greetings. It has been my fortune to have been able to secure the services of these great veterans and I can say with confidence that you can see in the constitution of our Board the hand of God working mysteriously to honour the great Founder late Mr. Lalji Naranji of revered fame. I consider it my privilege to be the chairman of this Company with its galaxy of such great personages on the Board.

Before moving the adoption of the Report and Accounts I would take this opportunity of expressing our appreciation of the work of the members of our staff, both at Head Office and the Branches, and all our agents, brokers and patrons, both in India and abroad for the valued support and co-operation they have continued to give to the Company.

Now, gentlemen, I beg to move:—

That the Directors' Report, Audited Revenue Accounts, Profit and Loss Account and the Balance Sheet for the year ended 31st December, 1944, which have been circulated to the shareholders, be and are hereby approved and adopted.

THE BRITANNIA ENGINEERING CO., LIMITED

The Twenty-ninth Ordinary General Meeting of the Shareholders of The Britannia Engineering Company, Limited, will be held at McLeod House, No. 28, Dalhousie Square, Calcutta, the Registered Office of the Company, on Friday, 2nd November, 1945, at 11-45 a.m., for the following purposes:—

- (1) To receive the Directors' and Managing Agents' Report and pass the Accounts for the year ended 31st December, 1944.
- (2) To declare a Dividend.
- (3) To elect two Directors.
- (4) To elect Auditors and fix their remuneration.
- (5) To transact any other business that may be brought before the Meeting.

The Share Transfer Books of the Company will be closed from 19th October to 9th November, 1945, both days inclusive.

By Order of the Board,

McLEOD & CO., LTD.

Managing Agents.

28, Dalhousie Square,
Calcutta, 3rd October, 1945.

To all Shareholders of the Company and in particular to:—

Messrs. T. H. Laird, Wm. Duncan, A. B. Simpson, T. A. Cowley, H. E. Holmes, Geo. Young, T. E. Corrie, Dr. J. J. Moriarty, Lt. E. M. Carner, Mesdames M. C. Taylor, E. C. E. Cutbush, H. M. Woolner and J. N. Harper.

PROPERTIES FOR SALE SULPHUR OPERATIONS IN KOH-I-SULTAN, BALUCHISTAN.

The properties attached to the Central Government's Sulphur Operations, Koh-i-Sultan Railway Station Nokkundi, (Baluchistan) and stocks of sulphur ore lying at Nokkundi railhead are offered for sale. Purchaser has right to work the sulphur mines or dismantle the properties and to dispose of the stocks of sulphur ore as he thinks fit. Government, however, reserve the right to sell not more than 1,500 tons of high grade ore now lying at rail head by the end of the year 1945. Working the mines will be in accordance with the Central Government Mining Rules. Detailed prospectus and plans are available for perusal with the Director, Geological Survey of India, 27, Chowringhee, Calcutta, the Officer-in-Charge, Sulphur Operations, Hut No. 254, Residency Compound, Quetta (Baluchistan), and the Assistant Secretary to the Government of India, Department of Labour, New Delhi, up to the 29th October 1945.

Tenders are invited, and should reach Rai Bahadur A. C. Das, Deputy Secretary to the Government of India, Department of Labour, New Delhi, on or before the 30th October 1945. Tenders should be sealed and superscribed "Tender for Koh-i-Sultan Sulphur Operations."

NOTICE.

NOTICE is hereby given that Government of India being the proprietors of Indian Patents Nos.:—

1. 29439—Dilution of raw rubber natural or synthetic by means of products obtained from vegetable fatty oils.
2. 29228—A process of obtaining gum-like substances similar to gum tragacanth or carob seed gum from seeds of plants belonging to the family of Leguminosae.
3. 29620—Improvement in or relating to the sizing of cotton yarn with tamarind seed kernels.
4. 29870—Improvement in or relating to the concentration of rubber latex.

are desirous of exploiting these inventions in British India either on outright sale or grant licenses for the working thereof. Full particulars may be had on application to the "President, Forest Research Institute and Colleges, P.O. New Forest, Dehra Dun."

CALCUTTA STEAM NAVIGATION COMPANY, LIMITED.

Audited Accounts for the half-year ended 30th June, 1945.

After providing Rs. 21,941-0-0 for Depreciation, Rs. 2,12,000-0-0 for Taxes and Cesses, Rs. 20,000-0-0 for Excess Profits Tax Deposit Fund and transferring Rs. 45,000-0-0 to General Reserve and Rs. 30,000-0-0 to Replacements Reserve the Accounts show a sum of Rs. 94,543-10-2 at credit of Profit and Loss Account including Rs. 14,396-6-8 brought forward from last half-year. The Directors recommend that this should be allocated as follows:—

To payment of a Dividend at the rate of 10 per cent. per annum, for the half-year ended 30th June, 1945 Rs. 80,000-0-0; and leaving to carry forward Rs. 14,543-10-2.

General:—The general position of the Company continues to be satisfactory. The accounts for the half-year include a bonus from Government of Rs. 1,69,046-0-0 in respect of increased raisings for the target period October, 1944 to March, 1945.

Mg. Agents.—Messrs. Macneill & Co.

Authorised, Issued and Subscribed Capital—Rs. 16,00,000 in 1,60,000 shares of Rs. 10 each, fully paid up.

(Half-yearly General Meeting on 18-10-1945 at 3-30 p.m. Books closed from 28th September to 18th October, 1945).

Audited Accounts for the half-year ended 30th June, 1945.

After providing Rs. 3,56,811-4-0 for Depreciation, Rs. 21,53,000-0-0 for Taxes and Cesses, Rs. 1,59,000-0-0 for Excess Profits Tax Deposit Fund, Rs. 5,000-0-0 for Bad and Doubtful Debts and transferring Rs. 1,50,000-0-0 to Reserve for Reduction in Valuation of Stores, Rs. 1,00,000 to General Development Reserve and Rs. 1,50,000 to Replacement Reserve the Accounts show a sum of Rs. 7,18,257-0-10 at credit of Profit and Loss Account including Rs. 1,25,404-6-10 brought forward from last half-year. The Directors recommend that this should be allocated as follows:—

To payment of a Dividend on the Preference Capital at the rate of 6 per cent per annum, for the half-year ended 30th June, 1945, Rs. 12,000; to payment of a Dividend on the Ordinary Capital at the rate of 30 per cent per annum, for the half-year ended 30th June, 1945, Rs. 4,44,564; to payment of a Bonus of As. 8 per share Rs. 1,48,188; and leaving to carry forward Rs. 1,13,505-0-10; Total Rs. 7,18,257-0-10.

Collieries:—The Company's Collieries have been maintained in good order.

The installation of the railway siding at Bhutgoria has now been completed.

General:—The raisings for the half-year constitute a record for the Company and exceed the previous highest figure, which was reached in the first half of 1938, by 76,565 tons.

This highly satisfactory result has earned for the Company Rs. 5,61,755 under the Government Target Bonus Scheme.

The Directors have, in recent Reports, accompanied their favourable view of the Company's prospects with a brief note explaining that there was, nevertheless, need for caution. On this occasion it would seem more than ever necessary to sound a note of warning against exaggerated expectations.

The Company has on order essential plant and machinery to the value of some Rs. 40 lacs, all of which is expected to be installed by the middle of 1947. As shareholders are no doubt aware, Government will allow special depreciation on the cost of plant and machinery necessary for the maintenance or increase of coal production. The expenditure referred to will qualify for this special depreciation, which will be admissible for two years from the date of the bringing of the plant and machinery into use. The Board have decided that in the Accounts for the periods concerned depreciation will be provided to the full extent of the special depreciation allowed in the taxation assessments of the Company.

Moreover, a heavy and expensive replacement and development programme lies ahead if the Company is to maintain its present notable position in regard to the quality and output of its coal.

These are matters quite apart from the possible effect of Government decisions concerning prices, wages and conservation which was referred in the last Report, and from the question of the pace at which the change over from War to Peace may be expected to be carried out.

Mg. Agents.—Messrs. Macneill & Co.

Authorised Capital—Rs. 40,00,000. Issued and Subscribed—Rs. 33,63,760 in 2,96,376 Ord. shares of Rs. 10 each and 4,000, 6 per cent Cum. Pref. shares of Rs. 100 each, both fully paid up.

(Half-yearly General Meeting on 12-10-1945 at 11-30 a.m. Books closed from 4th October to 12th October, 1945).

Audited Accounts for the half-year ended 30th June, 1945.

The balance available for appropriation after the inclusion of the amount brought forward from the previous half-year is Rs. 26,741-5-7; and after deducting the Compulsory E. P. T. Deposit to be set aside to Buildings and Machinery Replacement Fund Rs. 8,000; there remains a balance of Rs. 18,741-5-7 out of which the directors, recommend the payment of the following Dividends, free of income-tax.

On the Preference Shares at the rate of 10 per cent per annum (being 8 per cent per annum, Preferential and 2 per cent per annum participating), absorbing Rs. 9,650; and on the Ordinary Shares at the rate of 10 per cent per annum, absorbing Rs. 6,920 leaving to be carried forward Rs. 2,171-5-7.

Output.—Raisings and despatches of all grades of Coal for the past three half-years compare as follows:—

Half-year ended.	Raisings.	Despatches.
30th June, 1945	29,868	29,730
31st December, 1944	29,283	26,164
30th June, 1944	35,981	36,835

Production has been badly handicapped for want of essential plant and equipment, orders for which were placed over a year ago, but delivery of which is still awaited.

The half-yearly Target figure of output for the Colliery under the Production Bonus Scheme has been fixed at 31,170 tons.

No bonus for the Target period ended 31st March, 1945, was earned but a bonus to the extent of Rs. 4,036-11-9 was claimed for the Target period ended 30th September, 1944, and as the claim has now been met in full this bonus has been taken to profit in the accounts under review.

Audited Accounts for the half-year ended 31st March, 1945.

Accounts.—The Revenue Account shows a profit of Rs. 2,81,927-13-5 as the result of the half-year's working and after deducting:—

Depreciation Rs. 17,121-2-3; Managing Agents' Allowance Rs. 3,000; Directors' Fees Rs. 600; Directors' Commission for the half-year ended 30th September, 1944 Rs. 3,600; Managing Agents' Commission Rs. 26,086-6; Manager's Commission Rs. 13,043-3; Fire Protection Expenditure Rs. 1,189-13-3; Loss on Howrah Depot Rs. 809-14; Reserve for Taxation Rs. 99,000; Total Rs. 1,64,450-6-6; and adding:—

Adjustment—Account half-year ended 30th September, 1944, Rs. 1,656-10-0; Amount brought forward from previous half-year Rs. 51,474-1-7; Total Rs. 53,130-11-7.

There is and available balance of Rs. 1,70,608-2-6 which it is proposed to deal with as follows:—

Pay a dividend at the rate of 60 per cent per annum, for the half-year ended 31st March, 1945, Rs. 90,000; Place to Dividend Equalisation Fund Rs. 30,000; Carry forward to next half-year Rs. 50,608-2-6; Total Rs. 1,70,608-2-6.

Development.—Output is being obtained to an increasing extent from gallery-driving in 11 and 12 seams, while in 13, 14 and 15 seams depillaring is being continued in conjunction with dry-stowing, the amount of output thus obtained being dependent on the quantity of stowing material which can be handled.

Prospects.—Prospects are dependent to a great extent on the labour available and every effort is being made in an endeavour to improve both attendances and output per head.

Bonus issue now proposed	3,50,000
Carry forward	2,09,217

Audited accounts for the year ended 30th September, 1944.

Accounts.—The Balance Sheet and Accounts are made up to a date prior to the entry of the new shareholders, and, as indicated in the Prospectus, the profits accrued to that date, 30th September, 1944, belong to the then existing shareholders. The Directors have carefully examined the position, and have made what in their opinion

and that of the Auditors is ample reserve to take care of taxation and of any foreseeable contingencies.

The delay in the preparation of these accounts is solely due to the fact that it has only recently been possible to arrive at an agreement with Government with regard to the prices to be paid by them for deliveries made during 1943 and 1944. These negotiations are continuing with respect to deliveries made during 1945, and the Directors hope for a favourable outcome at an early date.

Profit and Loss Account.—The balance available for distribution to the shareholders existing on 30th September, 1944, is Rs. 5,59,217-3-9. These shareholders waived their rights under Section 105C of the Indian Companies Act to the prior allotment of shares of the recent capital issue, with the exception of 3,500 Ordinary Shares. The Directors recommend that Bonus Ordinary Shares to the value of Rs. 3,50,000 be issued to these shareholders *pari passu* in proportion to their present holdings and ranking equal in all respects with the present ordinary capital. The Directors also recommend in accordance with a desire expressed by the shareholders existing on 30th September, 1944, that no further payment of cash dividend be made, and that the balance of Rs. 2,09,217-3-9 be carried to earned surplus.

During the period under review, the affairs of the Company have continued on a satisfactory basis, and its activities are dealt with in detail below:

Mining and Development.—The mineral bauxite, of which large deposits exist in India, is the basic raw material of the aluminium industry, and the Company holds mining leases covering high grade bauxite deposits in Bihar and Bombay Provinces. During the year under review, the Company has continued the very valuable prospecting and development work necessary for the future well-being of its interests, and mining has also been started on a limited scale on its properties at Lohardaga, Bihar Province. Steps are being taken to increase these mining activities concomitantly with the completion of the Company's Alumina Works.

Alumina Works.—The next stage in the aluminium industry is the production of alumina (aluminium oxide) from bauxite. For this purpose, a desirable site of some 160 acres has been acquired for the construction of an Alumina Works at Muri Junction, Bihar, which is strategically located with respect to bauxite deposits and coal supplies. Complete designs for these Works have been furnished by the Company's Technical Consultants, Messrs. Aluminium Laboratories Limited, who have also made the services of experienced construction and operation engineers available. Orders for plant and equipment have been placed, and in part received, and construction of the Works is now in progress.

Reduction Works.—The final stage in the production of aluminium is the electrolytic reduction of alumina, which is carried out at the Company's Reduction Works at Alupur, Always, Travancore State, where ram, Always, Travancore State, where hydro-electric power has been made available. The Company has been the first in India to produce aluminium, and during the year under report the Reduction Works have operated to the full capacity permitted by the present limited supply of power from the Travancore State Hydro-Electric Scheme. Steady production of aluminium ingot has been maintained, and from a technical standpoint operations and the resulting product compare quite satisfactorily with standards obtained by other aluminium producers. Under war-time conditions, operations are limited by the amount of power available, but the Directors are advised that the supply of electric power should be increased early in 1946 with a corresponding increase in output.

Rolling Mills.—Fabrication of aluminium ingot into sheet is necessary in order to put it into a saleable form in which it can be used by the manufacturer. The Company possesses the only complete and up-to-date Rolling Mills in India, capable of producing aluminium sheet in all commercial forms and sizes, and during the year under review the greater part of the output of these Rolling Mills, which have been operated to full capacity, was absorbed by Government for aircraft and other military requirements. The bulk of these requirements has been for flat sheet, which has left a certain amount of capacity available for the production of circles, and as far as possible this has been utilised so as to enable the Company to retain its valuable contacts with potential post-war customers.

Technical operation of the Works has been quite satisfactory. An extension to the Works has been completed and equipment is now being installed for the production of strong alloy sheet. Aluminium in strong alloy form is extensively used for aircraft, transportation and other industrial applications, and it is felt that this development should be of considerable advantage to the Company in the post-war period.

General Prospects.—During the period covered by this Report, practically the whole output, both of ingot and sheet, has been supplied for war purposes, under arrangements arrived at with Government. While these demands still continue on a lesser scale, a diversion of output may now be expected to the production of essential consumer goods. This is a matter which is at present under discussion with Government, but the Directors feel that arrangements will be arrived at whereby the Company will be able to dispose of the whole of its output in the civil market with a reasonable return, and at the same time be in a position to continue its expansion programme and to consolidate its position without fear of unfair foreign competition, thus implementing the undertaking given by the Government of India of post-war protection for the industry.

The Directors would point out that, as a result of these shareholders agreeing to the issue of Bonus Shares, and waiving payment of any cash dividend, a corresponding amount of capital will be retained by the Company for the purpose of expansion.

Mg. Agents.—Messrs. Kenneth Hall.

Authorised Capital—Rs. 2,00,00,000. Issued and Subscribed—Rs. 1,36,50,000 in 1,36,500 shares of Rs. 100 each, fully paid up.

Synopsis of balance sheet as at 30-9-1944.
