A Glorious Combination

Rennard's Mixture

Renocal PILLS

...the RIGHT combination of the world's best products.

Day after day there's added proof that for certain results in far-advanced and very stubborn cases of irregularities, Rennard's Female Mixture and Renocal Pills No. 2 is the choice. When a woman turns to this combined treatment, she finds out what real results mean.

POWERFUL ● SAFE ● CERTAIN

Comprises 1 bottle of Rennard's Mixture and two bottles of Renocal Pills No. 2 for use in conjunction according to instructions.

Prices: Rennard's Mixture Rs. 35/-per bottle. Renocal Pills No. 2. Rs. 15/-per bottle.
Telegraphic Code: "COMBINED." **Telegraphic Address:** "CURE" Madras.

THE ANGLO FRENCH MEDICAL AGENCY (India) Ltd. Post Box No 148, Broadway, Madras.

TERMS.

FORWARDING. All orders are executed same day by V. P. Post, unless instructed to the contrary.

CHEQUES are accepted on all recognised banks, which should be crossed, and, made payable to The Anglo-French Medical Agency (India) Ltd.

Special European attention is paid to all orders, no matter how small. Prompt despatch and satisfaction is always assured.

POSTAGE AND PACKING is charged for all goods.

BREAKAGES. Goods broken or damaged are replaced free.

FULL PRIVACY can be had by remitting the value of order, plus postage, etc., in advance. Goods will then be sent under plain cover, without our name appearing on the parcel.

FREE MEDICAL ADVICE.

If you are suffering from any ailment, write to our Medical Adviser, with full particulars of your case, also state age, physical condition, and how long-standing.

Our Medical Adviser has had twenty-five years experience in the treatment of private and other ailments.

Sound advice will be sent in sealed plain envelope. State if prompt treatment by return post, under our bona-fide guarantee, is required or not. All letters are treated as **STRICTLY PRIVATE AND CONFIDENTIAL.**

BATTLE FOR EMERALDS

By P. W. Rainier.

Condensed from "Green Fire" (John Murray, London)

—: (0):—

I have probably mined more emeralds than any man living. Mix beryllium with aluminium in a certain way and you've got an emerald. A white one. Man can make a white emerald synthetically as easily as he makes a synthetic diamond, but only Nature knows how to add to the emerald that dash of chromium which turns it green. The more chromium in the mixture the darker the green colour and the more valuable the gem. A white emerald is worth nothing in dollars and cents; while the dark green bit of fire, which is a first-grade emerald, may be worth anything up to five thousand dollars a carat. One

ounce of the very best emerald material would be worth the greater part of a million dollars, but I don't believe there exists a one-ounce emerald of that total value because the larger gems usually have some flaws in them.

Having created one of the most concentrated forms of wealth known to Man, Nature took good care to hide her treasure from him. To make it still more secure she covered the region of the Colombian emerald deposits with a thick layer of forest, and Colombia produces most of the world's worthwhile emeralds. The Chibcha Indians of the

NOTICE.

Owing to the German occupation of France, our Head Office has been transferred to London.

Through special arrangements by the manufacturers, all French medicines for which we are Agents are now being manufactured by reputable British firms, who have purchased the manufacturing rights for England and the British Empire for the duration of the war.

high plateau of Colombia mined emeralds from Chivor before the Spanish Conquest. They used to acquire gold by trading for it with the Tolima Indians across the Magdalena River, giving emeralds and salt in exchange for the gold which they threw into the sacred lake as sacrifice to their Sun-God. Soon after the conquest the Spaniards were shown Chivor, and they began to develop the mine just before the middle of the sixteenth century. For a hundred years they continued to develop it, until the conquest of the Muzo Indians, in the Carare Valley across the eastern chain of the Andes, opened up a temporarily more attractive and virgin source of supply.

Chivor lay abandoned after the discovery of Muzo until the close of the nineteenth century, when a young English adventurer, Chris Dixon, made a fabulously rich strike in the Muzo region while he was operating the famous old mine for a British syndicate and so rejuvenated an industry that was tending to become impotent. Capital was forthcoming, and prospectors began to drift forestwards to investigate the legends of lost emerald mines or to hunt for new formations. Pacho Restrepo, the Antioquian, picked on the lost Chivor Mine as his quarry.

Pacho was a stout fellow. He needed to be if he were to rediscover Chivor. Its general location was known, but that might mean anywhere in an area of fifty miles square. Month after month. Years went by. Don Pacho's once substantial fortune began to become attenuated with the strain of maintaining, in such an uninhabited wilderness, the force of men required. Axemen for hacking trails and scores of pack Indians to bring in supplies. Meat was scarce and Don Pacho's men depended for their ration on what the forest provided. Squirrels darting along the fern-wreathed branches

of the huge yellow laurel or cedar trees, coneys in their holes in the rocky cliffs and the fat *buruga*, the South American version of the North American groundhog.

It was a *buruga*, that found Chivor for Don Pacho. One of his Indians chased the sluggish animal into a hole and proceeded to dig it out. After a yard or so of digging the opening widened. The Indian entered and stood upright. Regular walls and arched roof the opening had. A tunnel. In the soft rock through which it had been driven were the pick-marks of long-dead Indian slaves—three centuries dead or more. The lost mine of Chivor had been found. Don Pacho spent the remainder of his fortune developing his find and was glad enough to unload it on an American syndicate.

Some years later I arrived from New York to take over the position of mine manager. Month by month we explored the veins which our excavations uncovered. At last the character of the rock changed. The silky texture left it. The bottom of the pit was now of a formation which fractured sharply into jagged edges, quite unlike the square-breaking strata which had produced emeralds. Once an emerald vein approached that jagged layer on which it lay the green streak ceased. The pit had "bottomed." We must now open a new pit and wait many months till it had reached the same stratum of formation that we had just finished exploiting. Each emerald pit sunk on Chivor was a gambler's throw.

The emerald vein is but a tiny crack in the rock, seldom wider than a finger's breadth. To find it is the difficulty. The mine area covered about two square miles, while even a fabulously rich spot would cover less than the area of a dining-room carpet. Now I was looking for some favourable indication to guide me in sinking a pit some distance from

the mine area in which our pits had been sunk hitherto. I was clambering down the precipitous sides of Chivor peak—hardly one square yard of that stark upthrusting peak failed to feel the impress of my foot during the years! ran the mine. With the geologist's pick from my belt I was chipping off pieces here and there along the face. It seemed to have crumbled unnaturally in places. I examined the nearest of these. The top of it was roughly circular. A tunnel filled with debris from the fallen roof. The others were tunnels too. I noticed scores of them. Placed so close together that the rock between them had barely sufficed to hold up the mountain above. The old Spaniards had mined this spot. Mined it intensively. I went at once for Marco, my Colombian foreman, and together we scrambled down to the scene of my find.

Many months later I sat on the edge of the new pit. The crisis was approaching. If I had guessed right all would be well. But if I had guessed wrong, I would have to do a lot of explaining in my annual report to the company and the Board in New York, with half a year wasted on unproductive work by three hundred men. . . . And then we found a cavity. Just an opening in the rock with one end of it opened to daylight by a stroke of a miner's bar. Lying flat I peered into it. A dust-filled hole. The dust was iron oxide, residue of the original nodule of iron ore. Not a hint of green about it, and yet I remembered that always the most prolific of my previous finds had lain loose in dusty-looking iron oxide. With the pick from my belt I enlarged the hole till I could insert my hand and forearm. My fingers raked the loosely lying iron particles inside . . . blindly because my forearm filled the hole to the exclusion of my vision. There were hard things lying loose in the soft dust. My fingers explored them. Hexagons.

Emeralds. They must be emeralds, although they had shown no glint of green when I had looked into the hole.

My finger-tips selected one and my fingers closed on it. Out into the sunlight I drew it. A good-sized hexagonal crystal that might be a valuable emerald or might be . . . flawed.

Still lying prone my hand went to my trouser pocket for my penknife. The movement of my body brought my gaze to bear over my shoulder. Work had apparently stopped all over the pit, I noticed, and hundreds of Indian miners were clustered behind me. Tense. Hundreds of eyes were fixed on that small hole and on the object which I had extracted from it.

"What a pity! Spoiled emerald." An old minor shook his head sadly.

The veteran's remark brought me sharply to a realization of the situation. The emerald obviously appeared to the miners worthless. What a chance to keep its value secret if I should really have my hand on a valuable pocket! True, I had already had at times valuable parcels of emeralds in the mine safe and as yet no one had tried to hold the mine up for them. But a really rich find might stimulate some of the more daring of the local bandit fraternity to take a chance and hold the mine up. If I could only conceal the value of the find . . . if value there were. Affecting a nonchalance I was far from feeling I tossed the hexagon to the old miner. "Bad luck," I agreed.

From hand to hand the miners passed it, clucking their tongues and shaking their heads. Then one took out his knife and made as though to scrape the paint-like covering from it.

"Stop that," I cried. "You'll break it. I want to put it in acid to clean the muck off it. Bits of it may be worth saving."

As I slipped the hexagon back into my pocket I caught sight of Marco's grim countenance above the heads of the crowd.

"Get me a sack and a shovel," I ordered. "We'll shovel up all that loose dust with the emeralds in it. I'll work over it in my office and see what we can save."

Marco shouldered his way to me through the press. My back to the rest of them, I winked at him and saw his jaw set suddenly till little lumps of muscle jumped into sight along his lean jowl. Quick on the uptake as always, he knew my play now.

"Si, Senor," he agreed quite calmly, although his eyes danced. "Some of the bits may be worth saving. May the Virgin grant we get enough out of them to pay the cost of this great pit."

As soon as I could get clear I scrambled up the side of that emerald pit like a cat with a dog on its tail. I wanted to be alone with that little hexagon that was burning a hole in my pocket. Once out of sight of the miners I whipped out

my pocket-knife and began to scrape feverishly at the rusty covering. Hard it was. As though it had been melted on. It took me several minutes to work a small spot clear on one side. Frantically I began to scrape a corresponding little window on the opposite side and let the light shine through it to determine the colour.

At last I held it up. A green ray shone through the little object. *Dark green.* A hint of fire. I was holding a first-grade emerald, and there were dozens more emeralds in the hole. They would all be of the same colour—emeralds run like that. A fortune for the new York company and a big bonus for me! That one cavity would not be the end of it. I knew the habits of the pretty green gem by this time.

And so it proved. What a find that was! Before that series of pockets had been worked out the high-grade emeralds alone had filled the capacious mine safe and the less valuable gems been relegated to the accommodation of an old tin trunk. Yes, I had earned that bonus, I felt.

Horseplay

Aberdeen, Washington: Having shot an elk, Harry Long hiked several miles to camp and got a horse on which to carry the meat. While he was carving up his kill, preparatory to loading it, another hunter—this one slightly near-sighted—crept and shot the horse.

Automatic Postman

The "mailomat," a sort of automatic letter-box, has appeared in New York.

To post a letter the user drops coins into a slot, twists a dial to select the postage value, and puts the letter in.

The machine stamps and postmarks the letter.

* An article for those with a taste for science.

OXYGEN IN THE WAR

Condensed from *The Shell Magazine*, London.

It's curious to think that oxygen is a vital war weapon. But it's true. Without oxygen the whole of our national effort would collapse. Production would cease. The R.A.F. would be grounded. Submarines could not put to sea.

In the steel industry—basic industry of munitions—oxygen is all-important. We must have oxygen to cut tank plates and sprockets; to weld aircraft parts; to build and repair ships. A considerable proportion of our steel today is made from scrap—and to cut up scrap we need the oxygen torch. Oxygen itself does not burn, but other things will burn in oxygen. If a lighted match is held in a jet of oxygen, the oxygen will not catch fire, but the match burns more fiercely. So for cutting metal a flame made by acetylene, or coal gas or propane, is used and allowed to burn in a blast of pure oxygen. In this way a tremendous heat is generated—something over 3,000 degrees Centigrade—and at this temperature the metal burns away as though it were cut with a knife.

Oxygen is used in welding as well as for cutting. Mines, for example, are made in two halves which are welded together by oxyacetylene, the job being done in half the time taken by other methods. It is impossible to assess the value of the oxyacetylene blowpipe as an instrument

for reclamation and salvage, especially in effecting the maintenance and increased durability of many machinery parts which under present conditions cannot be renewed.

But this is only half the story. Flying these days is done at tremendous heights—far above the height of Everest. Crews need oxygen for breathing. And in case there is any trouble and they have to bale out, crews have small oxygen cylinders strapped to them for use on the way down. The Davis apparatus for escape from submarines is, in principle, a mask with an oxygen cylinder to give escaping crews air while they rise to the surface. Hospitals and field dressing stations could not do their job for half a day without oxygen; and if gas attacks are ever made on this country its value in reviving gassed patients cannot be overestimated.

Nearly the whole of the oxygen used in the industrial and medical fields is produced by what is known as the Liquid Air process, the purpose of which is to extract the oxygen from the other constituents of the atmosphere. The air we breathe is composed principally of nitrogen and oxygen. In the process of compression to the liquid state, air is purified and dried, and passed to a separator in which advantage is taken of the difference

between the boiling-points of the two principal constituents, oxygen and nitrogen, and the two gases by evaporation are collected separately from different points in the apparatus. Hence, after storage, oxygen in gaseous form is compressed into steel cylinders for distribution.

With a large intake of air and suitable means of compression, oxygen is also produced in liquid form. Large volumes of liquid oxygen are thus supplied into apparatus installed in a consumer's works, where the liquid is evaporated and conveyed in gaseous form through pipelines to the points of usage. This method is most economical where oxygen is consumed in considerable quantities, as in steel-rolling mills for the conditioning of steel ingots, and in constructional works for the cutting of armour plates and sheets to required shapes.

For consumption in smaller volumes, oxygen is distributed in steel cylinders, as already mentioned. Cylinders are used in many sizes, varying in capacity from 2,000 cubic feet down to 10 cubic feet or less. The sizes most used in industry are of 100, 150 or 200 cubic feet. The manufacturers of steel cylinders are required to comply with rigid specifications in regard to the composition of the steel from which the cylinders are manufactured, and in regard to the test pressure which they will withstand before being approved for conveyance of compressed gases. The conditions are similarly strict in the handling and conveyance of the cylinders when filled with gas, and, of course, the valves and fittings have to be made to fine limits.

As already mentioned, the presence of oxygen renders other substances more readily combustible, and this is particularly the case where oil or grease is present. Consequently, precautions have to be taken to avoid the presence of

grease or oil on or about the valves and fittings of oxygen cylinders, and the same care has to be exercised by operators using oxyacetylene blowpipes, to see that escaping oxygen does not come in contact with greasy clothing.

The recognized uses of oxygen on a large or small scale are too numerous to mention. Workshops are laid out so that many operators may have a supply of oxygen ready on tap like water or compressed air, served by pipelines from a central source. The pressure is controlled independently by each worker. In this way numerous oxyacetylene blowpipes are used in the mass production of air-craft components. Machines are made for cutting steel plates to shapes required in the construction of railway locomotives, armoured cars and tanks, and for hull and deck plates in ship construction.

For maintenance or emergency repairs oxygen and the oxyacetylene blowpipe are required at the base workshops by the armies in the field and on board every capital ship. For similar purposes, oxygen is used in the maintenance of machinery employed in mining, excavating, roadmaking, haulage and agriculture. Such maintenance prolongs the life of agricultural implements and tractors, and thus enables the factories to produce munitions of war in place of new machines for the arts of peace. In salvage, oxygen is required for cutting open the steel plates of sunken ships on the sea-bed.

Oxygen, left alone with steel, will produce rust and corrosion, but, handled with the craftsman's skill, will enable the steel to be conditioned in the ingot form, shaped after rolling into sheets and fabricated in a thousand-and-one reproductions. Oxygen itself in truly an important munition of war.

* During 1938-40 the author and her husband were exploring unmapped parts of the Foxe Basin and often enjoyed—

BED & BREAKFAST IN BAFFIN LAND

By Mrs. Tom Manning

Condensed from "Igloo for the Night" (Hodder & Stoughton, London)

—: (0): —

Arrival at a Husky camp is always rather exciting, but after our long trip in the cold with slim rations, I confess that the thought of warmth and rest and guidance appealed to me tremendously. The doors began to fly open, men rushed out in their shirt sleeves, and women and children swarmed about. A dozen hands seized the komatik [sledge] to help guide it in and, being left to myself, I made the scramble across the rough ice alone, bringing up the rear. What a handshaking! New arrivals always shake hands. A pleasant woman stepped forward and, with a gracious wave of her hand, invited me to enter the house. Guests are always entertained in the best dwelling. There are two reasons, I suppose; the chief man has the honour of entertaining and, if there is any remuneration, he is the one to receive it.

I followed my guide, and after going through two porches found myself, much to my astonishment, in a frame house. Friendly hands helped me out of my outside clothing, and I was shown a seat.

The place was clean and tidy; so were the people. On either side of the sleeping place was a framed picture in colour of the Royal Family, and the walls at the back were covered with pictures of a religious character. Much of the rest of the wall space was papered with clean newsprint. Thomas was soon in and, before we knew it, our kit, grub box and so forth were in, too. Our clothing was beaten and whisked away, to be returned in the morning beautifully dry and ready to put on. Thomas asked if he could get a little dog feed, and they replied that the dogs had already been fed. We were given dry things for our feet, and settled in comfortable places. I was a little amused to see that it was Thomas's feet which got attention first, and it was he who got a new pair of dry stockings. After his wants had been attended to, they turned to me.

Tea was soon on, and our hostess brought out sugar—a treat for Thomas as we had had none for weeks. Magazines, some of which were only a year old, were then brought out for us to read. Soon,

most of the people of the camp came in. When all the seats were occupied, the late-comers stood. Children popped in and out; some of the older men had a game of cards. I don't know when I've been so hot. Streams of sweat trickled gently down inside my fur clothing, and when later I came to take it off preparatory to going to bed, it was stuck fast to me. The men sat around in cotton shirts. There were two seal oil lamps burning brightly, two lanterns were lit, and both our primus stove and theirs had been used to make soup and tea. Evidently our host was a man of substance.

When we were all settled, Thomas got out his maps, and the men all gathered about. We were at Iggarakshuk on the east side of Gordon Bay, he told us.

"How many sleeps in to Dorset?" Thomas asked.

"None," they said. With the aid of an alarm clock, we were shown that if one got up at half-past five in the morning, one could be at Dorset between five and six in the evening. Our host, whose name was Pootooguk (Big Toe) said he was going in the next day, and would help us in.

"Me too," said the son Solomonie, showing off a little English.

"Do you speak English?" Thomas asked hopefully.

"No," said he, shaking his head and smiling.

It is a deplorable fact that no attempt has been made to teach the Eskimos of the Eastern Arctic to speak English. It is inevitable that more and more whites will go there, and almost equally inevitable that these whites will be English-speaking. It is to the credit of a missionary, Mr. Peck, that the Eskimos have a form of writing, a syllabet, by means of which they now correspond with each other. Previously they had no written language. This syllabet has spread all over the country, and the natives take great delight in writing letters to their friends. The only book that has ever been translated into it is the Bible. Even if they were taught only the Roman alphabet they might make use of the numerous books which have been translated into the Greenlandic by the Danes. Perhaps it is feared they might learn too much and be able to meet the whites on their own ground, for the Eskimos are far from being unintelligent.

Neither has anyone taught the Eskimos the barest rudiments of arithmetic. The old rule of the number of fingers and toes is all that they, except for a very few, can understand. After twenty (usually less) all numbers are "amecshoot" [many]. While this system of counting fingers and toes was proportionate to their requirements before foxes became so important in the Eskimo system of

economy, and before they wished to exchange these for flour, sugar, tobacco, duffle, and a myriad other things obtainable at the trading posts, it is now quite inadequate.

Pootooguk's family consisted of his wife, his son Solomonie with his wife and small son, and other sons and daughters. When bedtime came, we were given Solomonie's bed place. Thomas demurred, but Pootooguk insisted that his guests be given the best place. Compare this treatment with that which the Eskimos receive at a "white" house. Most houses belonging to whites have a special porch built for the natives. The Eskimos are rarely allowed to enter even the kitchen, let alone the living-room. I can hear many people who have lived in the north say: "I certainly don't want Huskies running over my house." Nor would I. There is no need for them to do so. Once it is explained how white people act, and that that is how they are expected to act when they come in a white man's house, they will learn. They learn white habits all too quickly sometimes.

A Husky family can get to bed and to sleep faster than any people I have ever seen. One minute they are up, the next in bed and, after a gentle rustle, almost as if one turned a switch, the regular deep breathing and snoring—they nearly all seem to be vociferous snorers—begin. I may add that they are awake and up at about the same rate. How we envied the

deep sleep of our hosts! I think I had two hours' sleep, and I am sure Thomas had little more.

Pootooguk was up bright and early in the morning and had the primus going before we could get dressed. After a quick breakfast we got off, leaving a few things to show our appreciation of the kindness shown us. But Pootooguk's kindness did not stop with our departure. He had about eighteen fresh dogs to our nine tired ones, and when we could not keep up in spite of the fact that he had taken most of our load, Solomonie came back with two for us. It got dark and we were not sure of the way; they waited for us. When we actually got into Dorset Harbour they went and told Mr. Russell at the Hudson Bay post that we had arrived. Never in my life have I met finer courtesy or more helpful consideration.

From Dorset the next lap of our journey was across Foxe Peninsula to Cape Dorchester on its north-west extremity. Some Eskimos had a camp there. I was probably the first white woman with whom they had come into close contact, & they decided to make the best of their opportunities. One old woman took me in hand. Thomas had not yet entered the snowhouse where we were received, and the ladies had full sway and leave to gossip. The grandmother poked me, put her finger through the slit in the front of my caribou jacket, withdrawing it hurriedly when it touched bare skin; she

examined the cut of my hair, asked if I had made the clothing I wore, and all the while accompanied her actions by "Ah"s and "Oh"s and "Ee"s, and bursts of hysterical laughter. When she had made a thorough examination she accepted a cigarette and smoked peacefully. Her eyes never lost sight of my cigarette case thereafter. She possessed an astonishing number of pipes, and she brought in a new one every time she came, just as a woman Outside might put on a different dress to show off her wardrobe. She spoke to me in Eskimo, and I replied in English: neither understood the other, but it was all very friendly. The climax came when I took out my sewing to repair some mitts and put the thimble on the usual finger. The resulting awkwardness, as she thought, was too much, and she took my work, put the thimble on the forefinger where, according to her, it belonged, and finished the work herself.

Two small children, a boy and a girl, performed a dance vaguely reminiscent of the Highlands. I suppose some Scottish whaler long ago had shown the Eskimos a dance of his country, and what I witnessed was the mutilated survival. The Eskimos are a happy people and have always loved to sing and dance. The form of their dances is governed not by pattern or precedent, but by the impulse of the moment, and the song which accompanies them is often improvised by the dancer himself. Like many other primitive tribes, the only musical instrument indigenous to the Eskimo is the drum. In the coastal districts of Hudson Bay this has been outmoded and replaced by the gramophone and

accordion. From the former as well as from the radios at the posts, more modern dance tunes have been learned.

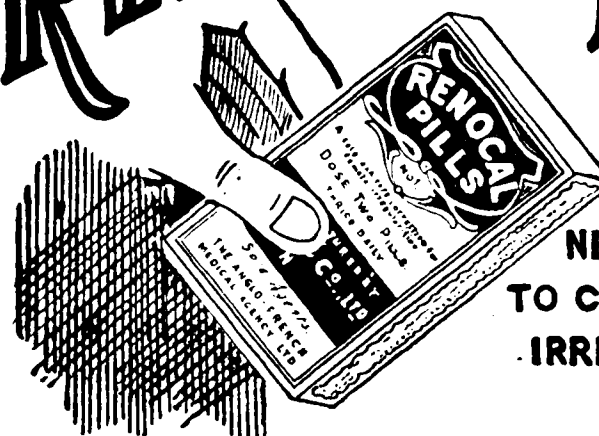

On the second day after our arrival the Eskimos fetched some dog feed for us from their caches, and the next morning, January 20, we were ready to leave. The camp turned out to see us off. My old friend came along and took my arm—whether to support me or herself I do not know. At any rate, it was I who slipped. As the sleigh started, all the women, after a moment's hesitation, jumped on. We were heavily loaded to start with, and some men and boys had already settled themselves on top of the load. When those great, fat women—at least half a dozen of them—jumped on it was more than the komatik could stand. The runners turned over like the weak ankles of a novice skating. While the repair work was going on the young women and children had a delightful time skipping, using our whip as a rope; and the old lady chatted amiably with me, at the same time pointing out her children and grandchildren with the utmost satisfaction.

At long last we got off, and the human load dropped behind until all that was left were a nice-looking boy of fifteen or sixteen in a clean, new duffle dicky, and his younger brother. When we had gone perhaps three-quarters of a mile, the elder boy, raising his arms and pointing, said, "Mauna" [this way] We stopped, and the two put out their hands, first to my husband and then to me, the younger shyly but with tremendous importance. They said good-bye, and, walking backwards, waved and shouted to us until we were out of earshot.

"THE CHOICE OF THE EXPERT"

RENOCAL PILLS

THE WISE WOMAN'S
FRIEND-IN-NEED

NEVER FAILS
TO CORRECT ALL
IRREGULARITIES

GUARANTEES SUCCESS-NOT FAILURE

Renocal Pills is the ideal corrective for female irregularities. Their wonderful smooth action assures that quick "relief" so much desired. No other pills or tablets are just as good.

Wise women always prefer Renocal Pills to others, be they ever so cheap. WHY? because they know that Renocal Pills unlike others, never fails—but does the needful in that marvellous smooth easy way, for which they are justly famous.

Be confident of the result by always taking Renocal Pills—and avoid Monetary Loss, and Days of Worry. Renocal Pills has stood the test of time and can be relied upon with full confidence.

TESTIMONIALS

Mrs. ——— writes:—

"Thanks for the bottle of Pills sent. It has done the needful....."

Mrs. ——— writes:— "Your Renocal Pills are wonderful. I am alright, though I have only finished half bottle....."

Mr. ——— writes:—"I am glad to say the Pills have done the necessary, so kindly cancel my order for the Mixture. Thanking you very much for your kind attention and the efficacious Pills sent....."

RENOCAL PILLS. (Two Strengths.)

No. 1. For early cases.

Price Rs. 10-0 per bottle.

Tele: Code "Refto"

No. 2. For obstinate cases.

Price Rs. 15-0 per bottle.

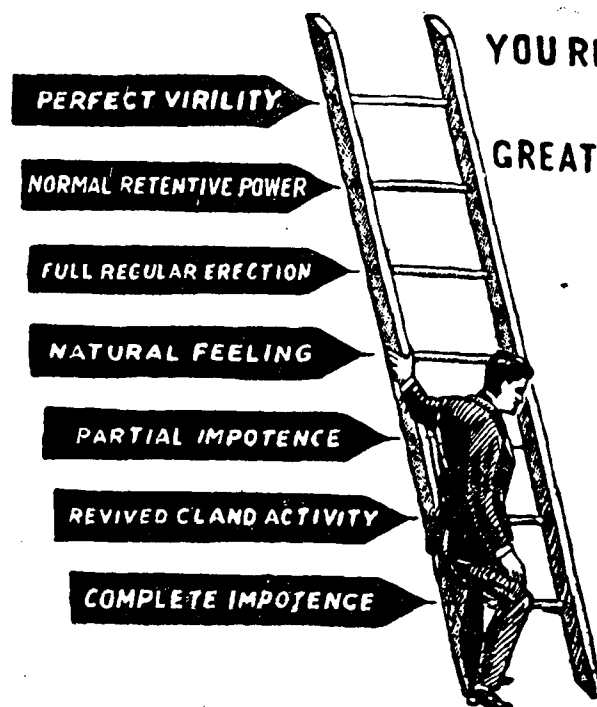

Tele: Code "Rexin"

Note:—It is advisable to give particulars, time over-due, age and physical condition to ensure receiving the right treatment, which will be supplied under our guarantee of success.

**EVERY REMEDY STOCKED BY US IS 100% GENUINE—
NOT WORTHLESS 'QUACKS'**

"THE CHOICE OF THE EXPERT"

STEP by STEP

YOU RISE TO NEW
AND
GREATER VIRILITY

Where do YOU
stand on the Ladder?

Whether you stand
half way up or right at
the bottom, **Endophon**
will cure you completely
and permanently.

What Endophon IS

Endophon is a genuine gland preparation,
containing the vital gland extracts in a
fresh, fully active form, sealed in
Capsules.

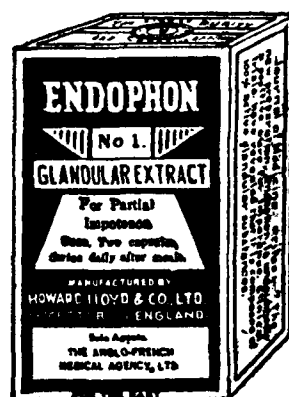

What ENDOPHON Does

If completely Impotent, **Endophon** will
gradually impart to your weak, enfeebled
glands those Very Substances that they
lack, and revive them into New Activity
giving Partial Erection in two weeks.

STEP by STEP, slowly but surely
Perfect Virility is obtained.

ENDOPHON gradually strengthens the whole sexual system and restores Perfect Sex Health
and increases Virility. Premature Ejaculation and Feeble Partial Erection is replaced with
Normal Retentive Power and Full, Regular Erection, and Complete Impotence is replaced
with Natural "Feeling" and Full Ability.

Thus, **STEP by STEP**, permanent and perfect virility is the final result.

SOLD IN FOUR KINDS

Endophon No. 1 for Partial Impotence (Premature Ejaculation).

Endophon No. 2 for Partial Impotence (Feeble Erection) and for
Complete Impotence and Sterility.

Endophon No. 3 & 4 for Female Impotence, ie, No. 3 for Premature
Orgasm and No. 4 for Frigidity, Complete Loss of Sexual Feeling,
Barrenness, etc.

Price: 1 bot, Rs. 8-12. 3 bots. Rs. 25-0. 6 bots. Rs. 48-0.

"THE CHOICE OF THE EXPERT"

READ WHAT CURED PATIENTS SAY.

Mr.—(Nagpur) ".....Endophon is all that you claim it to be. I have taken the full course and am
now O. K. You have my permission to print this in a confidential manner, as I would like those who are in the
same predicament as I was to benefit by using a really fine remedy....."

Mr.—(Assam) "...I have finished the course of Endophon No 2 and with much gratitude I inform
you that it has cured me completely....."

Mr.—(Calcutta) "...When I first started taking Endophon No 2, it did not do me any good. I had taken
it for two weeks and was disheartened. I thought of the old adage: 'A fool is born every minute' but my friend
who recommended Endophon to me said that Rome was not built in a day, and I decided to complete the course.

I am now happy to tell you that it has cured me thoroughly. I am a wise man, indeed, to have taken
your genuine remedy, Endophon....."

Endophon is not similar to Dr. M. Stopes
Prescriptions for Impotence, but entirely
different, and now recognised by

- (1). *Gazette Medical of France.*
- (2). *Institute of Scientific Research and
Development. (Berlin).*
- (3). *Journal of Medicine. Paris.*

as the most efficacious remedy for the cure of
Impotence, of functional origin. Moreover, it is
now manufactured in **CAPSULE FORM**—the
best method to preserve full curative efficacy.

CAUTION.

Because of the success
of **Endophon**, many imita-
tions are now been adver-
tised, under various trade
names.

Avoid them all. **Endo-
phon** has stood the *test of
time*, and is guaranteed to
cure permanently.

Endophon is warranted
free from all substances
against the Hindu or Muslim
religion.

Now manufactured by **Howard Lloyd & Co; Ltd. Leicester, England**, by special
methods, and correctly balanced, **Endophon** is of inestimable value in Sexual
Weakness. Only 100 % fresh Gland Extracts are used, which directly after
manufacture, are sealed in tasteless gelatine capsules.

These capsules are the only effective means for preserving the efficacy of the
Gland Extracts. There is no deterioration.

Latest Testimonial.

Mr.—(writes). ".....I
have read about Endophon and
would like to give it a trial.
Please, therefore, send me six
bottles of Endophon No. 1. If it
does me good, I shall complete
the course. I've had this trouble
for five years for being such a
fool when I was young, which I
bitterly regret....."

Later.....

".....Endophon has made me
a new man, I feel twenty years
younger....."

We have such faith in the Curative Efficacy of **Endo-
phon**, that we guarantee it to cure you permanently.

A complete course of **Endophon No. 1.** for Partial
Impotence (Premature Ejaculation) is four months and **Endo-
phon No. 2** for Partial Impotence (Feeble Erection) is four
months, each comprising 20 bottles, and the cost of each
course, if ordered in one lot is Rs. 150/- only. A reduction of
Rs. 10/- is obtained.

A complete course of **Endophon No. 2.** (for complete
Impotence and Sterility) is six months, comprising 30 bottles,
and the cost is Rs. 225/- only.

The complete course of **Endophon No. 3 and No. 4**
for Female Impotence is four and six months, costing
Rs. 150/- and Rs. 225/- respectively.

Order to-day a complete course and obtain a permanent cure.

CAMILLE

PREVENTATIVES.

[Snow White]

[Snow White]

Beautifully Soft and Skin-Like—Unnoticed in use.

Preventatives
De Luxe

As Thin as Tissue
Yet Strong as Silk

"CAMILLE" Silk Finish Preventatives are of the highest standard of quality. They are famous for their wonderful skin-like texture, extraordinary strength, and fine elasticity. They are practically transparent, and so marvellously thin that they are not felt when used.

"Camille" is made by an exclusive process and reaches a degree of fineness hitherto unattainable. They cling like softest silk and are absolutely flawless.

We guarantee, once "Camille" are used, no other kind will be wanted, for no other make could give that complete satisfaction found in "Camille" (with teat-end or plain).

Finer Than Gossamer—Softer Than Thistledown

AMERICAN TIPS.

Skin-Like
Texture

The American Tip has been specially made to suit the requirements of those who desire natural union, with full protection. It is quite different to the ordinary preventative, as it covers only the G. P. (tip of the private)

These American Tips are much superior to any other kind, as being very thin and smaller in size, they fit the G. P. like a Glove, and make sexual relationship perfectly natural.

Four Points Worth Your Consideration.

- (1) They are WASHABLE and can be used again and again.
- (2) They will not split in use nor slip off during the withdrawal.
- (3) They do not perish quickly, and can be kept for months.
- (4) Fits with comfort and security, as they are made to normal size.

A Sure Method of Birth Control.

THE CHOICE OF THE EXPERTS
Root out Syphilis Permanently
with the Infallible Oral Remedy—NEO SADALAN!

No by-effects.

Cures thoroughly
and permanently.

Neo Sadalan is a genuine specific for all forms of Syphilis and other chronic blood diseases, such as...

The active principles of Neo Sadalan are absorbed into the blood stream in small proportions and gradually destroys the spirochaete (Syphilis virus in the blood).

Neo Sadalan is very powerful and penetrates the minutest capillaries in the blood, eradicating every trace of the disease.

Neo Sadalan is the new oral preparation for Syphilis and other chronic blood diseases. Clinical tests have established its therapeutic efficacy.

The Most Energetic Treatment for Syphilis
and other chronic blood diseases.

Powerful—Penetrating—Permanent

Prices:—1 bot. Rs. 8-12-0. 3 bots. Rs. 25. 6 bots. Rs. 48.

Tel. Code. 3 bots. "Sadon" 6 bots. "Sadaf"

Neo Sadalan is scientifically and scrupulously prepared to the new and improved formula of Dr. Pierre De Sadalan, of Paris, the eminent French Scientist.

It is the result of many years of careful research and experiment and contains the essential elements that is a killer to the spirochaete (Syphilis virus) in the blood.

In all cases of Syphilis, including hereditary Syphilis in children, Wassermann's test turns negative after treatment with Neo Sadalan.

NEO SADALAN No. 2.

A very effective remedy for all cases of Leprosy, made to Dr. Pierre De Sadalan's formula. It contains the vital ingredients scientifically proved to be deadly to the Leprosy germ in the blood. In Capsule form.
