Economists: The New Look

ONE of the more noteworthy consequences of the procedure adopted for the preparation of the second Five-Year Plan has been the establishment of a Panel of Economists for consultation at all the vital stages of planning. The first Five-Year Plan was essentially the work of the administration, and the Planning Commission only helped to bring together and rationalise the outlay and targets determined by the State and Central Governments on the basis of what they regarded as feasible. They were only tentative calculations of what the economy could or could not afford to do. In the course of such planning however, the Government and the Commission received much unsought, and some anxiously sought, economic advice, of varying degrees of usefulness which threw some light on the general aspects of the Plan. The report of the IMF Mission was one of the more competent and timely assessments of the problem of planning; the general appreciation of the Report showed that economists do not always speak in many voices. The IMF Report had encouraged planning as much as it had warned against its possible

dangers. Much other less known advice had also been given by foreign economic experts, who, even if they had not always understood the peculiar ways of the Indian economy, were able to put forward points that deserved consideration. Midway through the second Plan, the authorities were thus becoming acutely conscious of the fact that planning was not possible purely at the official level and that a second expert opinion would always be a great help.

The decision to constitute a Panel of Economists might not have been due to the conviction that it had definite practical use in deciding policy. The planner or the politician who has to decide policy, and the civil servant who has to execute it feel more often confused by conflicting counsel. They have, however, recognised that the problems of long-term planning were such that they will not be solved satisfactorily without a good deal of economic reasoning and that ultimate decisions have to be made after seeing that reasoning at work. To some at least of the decisions taken purely on the basis of the politician's

intuition or the civil servant's pragmatism, without heeding 'expert' economic advice, the country may have reason to feel grateful. The policy of decontrol—which infused the elements of dynamism into the Indian economy in 1952—would rank as one such; expert advice could never have given an unambiguous lead in the matter so as to give strength to the politician's arm. The official attitude to deficit financing, which grew bolder as planning proceeded, cannot be attributed to encouragement from the economic experts who have remained undecided and apprehensive. These experiences might well have induced the thought that at least until our economy develops on lines which make economic doctrines derived from different economic climates applicable here, there would be little use in raising controversies by seeking expert economic advice. It would have been unfortunate if this had become the accepted opinion in political quarters.

The setting up of the Panel was therefore a significant step of real value. It has helped planning to be approached from a larger point of view than what the politician's regional or ideological preoccupations or the administrator's concern with finance and feasibility, would have permitted. For Indian economists, it was a real opportunity for a practical application of their method to the structure of the Indian economy—dealing quantitatively and qualitatively with the real causes of growth and stagnation. It was an excellent field for the exercise of combining theory with reality and should have turned the economists' attention to the development of a body of indigenous doctrine applicable to the domestic scene. Prof. Ganguli's recent address at the annual conference of economists at Poona seems to be an indication of this newly-awakened desire to open up new paths. Shorn of its abstruse phraseology, Prof. Ganguli's address involved a plea for an Indian school of thought, which would find exciting the pursuit of the problems involved in constructing a local economic model, tracing relationships and flows among regional and functional groups. The present state of economic studies at the university levels may not permit an adequate task force or competent direction for such research but to the extent to which it is practicable, Prof. Ganguli's advice deserves to be followed, making our economic knowledge closer to reality.

162/177
But on the actual details of planning, there has been little evidence of the impact of the available economic knowledge. The discussions in April following the presentation of the Plan-Frame showed that the contribution of the Panel of Economists towards a solution of the problems of resources or of the particular projects and targets was not significant. Nor did the opinion of experts give any conscious direction to the problems of social policy involved in planning; at best the economists have only echoed the various sentiments expressed in political terms. The most serious among the omissions, for example, was the failure to recognise that the investment and targets proposed in the Plan-frame had failed to take account of complementary investment in transport. It was an outstanding case of their remoteness from realities. Again, there was hardly any attempt to assess the capacity for development in the private sector or of its resources—which in subsequent discussions have turned out to be far greater than what the Plan-Frame had assumed. Nor was the Economists' Panel clear about the necessity for a system

of priorities in the context of scarce resources. The result now is that the shape of the Plan has been determined more by the competitive enthusiasm of the various Ministries to impress the public than by the subordination of proposals belonging to the second order of priorities. On questions of deficit financing, expert opinion has been equivocal. Considering that the scope for deficit financing has now been widened, and not narrowed, it is clear that not enough importance has been attached to the advice tendered.

At the same time, however, all these circumstances cannot be taken as indications of the total absence of competent advice whether of economists or of other men with ripe experience of public affairs. The truth, however, is that there have been far too many pulls within the party to be reckoned with and expert advice from outside, however competent, has stood in danger of being disregarded. The reduction of the second Five-Year Plan to about half its original size has been achieved—especially in the States sector—by readjustments at the political level rather than by any recognised system of national priorities. Whether it is a question of increasing employment opportunities or of determining the type of projects to be taken up, the criteria adopted have been fixed on the basis of the potential political appeal of such decisions than on other considerations of intrinsic soundness or internal consistency.

It would thus require a great deal of inter-pidity on the part of economists to pierce this wall between them and the policy-makers and it may be that they can derive moral and political support by making themselves fully heard and in convincing a wider public. There may be differences among, and inconsistencies as between economists themselves but unless economists try hard to put forward solutions which appear to them to be the best, irrespective of the principles of the least political resistance adopted by Ministers, this wider public recognition of the value of their judgment will not be forthcoming. It is through the possibility of public opinion becoming informed that official opinion, which now seems wholly impervious to the influence of experts, can, in time, become more reasonable in its attitude.

It may not be within the province of the economist to insist on decisions of a particular nature being taken or not taken. That burden must rest squarely on the Minister and his civil servants but that is no reason for the economist to accept helplessly all the evaluations of the politician and work only within that circumscribed framework. That way leads to futility and the economists have often failed to be true to their vocation because they have evaded their own responsibility to evaluate proposed decisions bearing on economic policy. The Panel for example, has now discovered that the emphasis on employment targets and hand industries can be overdone or that too much may be left uncertain in over-ambitious planning far in excess of known resources. If economists bear in mind Keynes' dictum that their science offers "a method rather than a doctrine, an apparatus of the mind, a technique of thinking", they cannot resist going wherever their technique takes them. Their is not a duty of finding doctrinal bases for decisions taken at other levels but of bringing an informed judgment to bear on policy. They can yet do it.

New Status for Bombay?

DURING the three months since the publication of the States Reorganisation Commission's Report, the problem of Bombay has defied all attempts to secure an agreed solution. Mr. Shankarrao Deo himself announced this week the failure to secure any agreement. As the leading figure in all the controversies over Bombay which started after the Report, Mr. Deo must feel chastened by the intractable nature of the problem on which he has taken an uncompromising stand. The Congress Working Committee's formula has gained in the event and it is a little surprising that Maharashtra leadership should, in the process, be ready to face the loss of its hold over Bombay in order to merge the reluctant Vidharba areas in the new Maharashtra. It is still debatable in the light of subsequent developments whether the S.R.C. formula was as objectionable as it first seemed. The failure of the Commission to sugarcoat the bitter pill which it had sought to administer to the people of Maharashtra partly contributed to the bitterness. Even second thoughts do not appear to have made Maharashtra leaders take to a composite Bombay State with enthusiasm. It is to be greatly deplored that prestige and the original opposition to the S.R.C. Report should thus have stood in the way.

The acceptance of a composite State on the lines of the S.R.C. Report—with perhaps some agreed formula for Vidharbha's accession if it could be secured—might have solved this tangled problem quite satisfactorily. It has become clear that neither the Maharashtra nor the Gujarathi leaders oppose a bilingual state as such on principle, because they have both been willing to accept a composite State in which their own numerical position is strong. The blame for not achieving a composite State thus lies with both groups. The difference, however, is that Vidharbha has proved a more serious problem for Maharashtra. Apart from the original opposition to join a separate Maharashtra, the Vidharbha leaders are reported to have expressed great reluctance to join a bilingual state for a second time, after their long experience in Madhya Pradesh. As their attitude coincided with the aversion of the Gujarathis to live with a Maharashtra majority, no solution became possible on the lines of a large composite State as desired. But it yet lay within the grasp of Maharashtra leadership to seize the S.R.C. formula as still the lesser of the two evils and the failure to do so underlines a weakness of leadership.

This failure has transferred the burden of decision to other shoulders, more capable perhaps, but less deserving of being taxed in this manner. The three-State formula has been the alternative though even this has been subjected to criticism. The proposal lately made for making Bombay City a Centrally administered area was an afterthought which can mitigate some of this criticism. The expensive paraphernalia of a State Government for a single city can be avoided through Central administration. Control by the Centre would make the two unilingual States which would in future depend on the resources of Bombay City to feel less apprehensive. The financial surplus of the City can be allocated more justly to the two States than if a full-fledged State Government were to come into existence. This new solution has naturally appealed strongly to all

concerned as superior to the Working Committee's suggestion for a separate City State.

It seems quite inappropriate to see additional virtues for such Central administration of Bombay City. The theory that Bombay would thereby acquire new stature as India's commercial capital belongs to the realm of romance and not of constitutional or economic practice. Bombay will in any case continue to have its commercial and industrial importance as before. If some offices are shifted there for convenience in dealing with the concerned interests, it would not greatly alter the political status of the City. Obviously, it is neither possible nor desirable to transfer powers of decisions on national policy concerning industry and trade to any authority specially situated in Bombay. Nor will the creation of a special Ministry for Bombay Affairs at the Centre as suggested, prove necessary for the simple reason that no such Minister or Ministry can function over the heads of others directly concerned with the particular subjects. The constitution of Bombay as a separate Centrally Administered area is, therefore, an essentially political formula which should satisfy the Gujarathis, on the one hand, and leave the Maharashtrais, on the other, with less apprehension.

In other words, the description of Bombay as a second or commercial capital is only understandable as a convenient slogan to cloak the fact that on this question all the parties have shown a failure to negotiate, compromise, or offer a constructive approach which could substantially meet the wishes of all groups. The tone of the S.R.C. Report might have queered the pitch to some extent but there was opportunity enough left to remedy it. As it is, the S.R.C. formula stands fully vindicated, notwithstanding the fact that it has not been incorporated into the decision now reached. The Bombay problem seemed at first the only major weakness of the S.R.C. report, because it gave inadequate consideration to the strongly held wishes of the people of this area. But now it is clearly proved that there was no option left to the S.R.C. but to impose the solution they did. Even if the three-State formula now adopted had emanated from the S.R.C. itself, the same objections might have been urged with the same intensity. There is some virtue now in the fact that this solution is to be accepted after the democratic process has been exhausted.

The solution for Bombay clears the path for the implementation of the Report since it is now settled that the problem of the Punjab is one of conciliating the Sikh community and of finding satisfactory safeguards. The procedure adopted for the public discussion of all the issues involved in reorganisation has been responsible for exposing the weaknesses and virtues of the S.R.C. proposals. It was a very wise decision to have thrown them open for changes through agreement. It made our democracy go visibly into action and the Commission's proposals as modified rest on the unimpeachable foundations of popular acceptance. It is easy to overlook this vital aspect of reorganisation, as those who initially called for the enforcement of the S.R.C. Report as an award did. When on some other occasions, one has reason to doubt the scope allowed for the free play of democratic forces, it would be pleasant to recollect this episode to fortify our belief that political power will not always be used to exhibit its full strength.

The Tea Slump

THE new year opens, so far as tea is concerned, on a chilly note. The prospects have not been cheerful for the last month or two but it would now appear that the threatened disorder is greater than was suspected. A combination of circumstances, not the least of which has been indiscriminate raising of costs by Government pressure, have contrived to produce a situation which, in the absence of Government pressure, might have been only a mild recession which the industry could have managed on its own. It is vital that the Government of India should devote serious attention to the present situation in this industry and hold, if necessary in animated suspension their proposals to inflict costs on the industry which at the present time it is unable to bear. It is true profits in tea were excessively high in 1954, and the industry should have some capacity to hold out against adverse conditions now. But the structure of costs after new legislation will not enable the industry to earn normal profits in a normal year. It is not disgorging past profits alone which should cause concern; it is the permanent crippling of the industry even to maintain itself or to expand at all as in the national interests, it should certainly be required to do.

The present position of the tea industry has become difficult for a combination of reasons the most important of which is the current fall in prices. Thus for export teas the average price in 1955 was Rs. 2/5/5 against Rs. 3/0/7 in 1954; for dusts Rs. 2/2/8 against Rs. 2/5/8 and for internal leaf Rs. 1/5/8 against Rs. 2/3/2. This fall in prices has been accompanied by very considerable wage increases, and by increases in taxation. In the Dooars and in Darjeeling there have been minimum increases of 3 annas a day in the labourers' wages; the Plantation Act leave with pay provisions represent a 5 per cent increase in the total wage bill for the year; there has been a 6½ per cent employer's contribution to the Provident Fund in Assam; the Assam Carriage Tax has been quadrupled, and is now one anna a lb. Attempts are being made to levy this tax on Bengal teas which pass through Dhubri, the natural port of the Eastern Dooars. There are proposals for the imposition of an octroi on teas coming into Calcutta for use for sale or blending, and the export duty is 6 annas on teas selling at Rs. 2/5/- compared with 10 annas at the same time last year on teas selling at 11 annas more.

In an effort to meet rising costs of production, and to take advantage of what was believed to be the world demand, there has been a rapid increase in crops all over the world, and though the Committee on Tea Auctions expressed the opinion that 550 million lbs. would be well within the powers of the North East India gardens within 5 years, about 20 million lbs. additional crop, bringing the potential total to about 530 million, has already been produced. Overseas buyers and the Calcutta warehouse position have not become adjusted to the reduction in the permissible quantity of export of unsold teas. The Committee recognised that its policy would involve certain risks. In Para 22 of the Report, there is the phrase "we do not claim that our recommendations completely eliminate all risks". In Para 33 there is the observation that there will be many dangers to producers if they are compelled to sell teas because warehouse space is inadequate. In Para 31, there is the reference to the need for a

planned expansion of warehousing, if efficient handling of larger quantities of sale teas is to be achieved. In Para 52 (viii), there is a recognition that the warehousing position in Calcutta is difficult, and requires immediate remedial action. There is also the apprehension that in this year, unless action is taken, the short fall of accommodation is likely to be as much as 2½ lakhs of chests.

This estimate was astonishingly accurate, since recently over a lakh of chests have been awaiting unloading on the river for want of warehouse space, the flats and steamers being thus held up to the grave dislocation of movements of stores and other essential commodities to the tea districts. The position indeed, would have been much worse so far as the warehousing is concerned, had shoals not formed in the Brahmaputra above Gauhati, where over a lakh of chests were held up just before Christmas. The Port Authorities are doing what they can, but tea is now being handled in 20 godowns, instead of the 6 which are normally used, with many difficulties so far as administration is concerned, and with naturally a good deal of inconvenience to the parties, and additional expense.

Over this rather gloomy picture of increased production, inadequate warehousing, increased taxation and wages and reduced prices, loom the two other imponderables of the cost of implementation of the Plantations Labour Act, and the payment of bonus to workers. Certain gardens in Darjeeling are already working only three days a week, and it is believed that many Cachar gardens will show a loss on 1955's working. The North East India Tea Regulation Committee has been summoned for the 10th of January, but it must be recognised that regulation in one area merely gives opportunities to other areas, as indeed happened in 1953 when South India and Ceylon were able to increase their production on account of North East India's short falls. There seems need for an International Agreement and for the materialisation of the oft discussed bulk contract with Russia. In the meanwhile, the growing congestion in Calcutta and the high rate of export duty based on the London ruling prices, are having their effects on the prices realised in Calcutta. It is also very disturbing to see that "other territories" are increasing their sales on the London Auctions, and appear to have made good the reduction in the quantity expected from India.

It is clear that in addition to suspending their campaign for inflicting welfare at any price on this industry the Government must take in hand at once the extension of warehousing facilities in Calcutta which alone can enable stocks in excess to be held in reserve to prevent prices from crashing. It is the presence of this facility in abundance in the Port of London which enables the London Auctions to command the best prices in the world. It is sincerely to be hoped that the Government of India will take prompt action so as to prevent the complaint from being made that, having decreed larger auctions in Calcutta, almost nothing to guarantee storage and regulation, which are essential conditions of larger auctions has been undertaken. The Government of India's interest is as great as that of growers' since a reduction in prices of export teas will be reflected in an equal loss of foreign exchange.

How strong must the foundation be for 43 lakh houses?

In the last few years, large segments of our population have moved into the cities. Here they live in unbelievably congested tenement houses, adding to the cities' already acute housing shortage. We need 43 lakh houses to ease the strain on our cities.

In 1947 our cement production was 1.45 million tons. Today, it is 4.34 million tons—almost three times the 1947 figure. 40,000 people are employed in 26 modern, efficiently run factories.

In our developing economy steel is

essential. That is why the Tata Iron & Steel Company has launched an expansion programme which will raise its capacity.

Ingot Production	
1955	1,050,000 tons
1959	2,000,000 tons

THE WEEK'S NOTES

FRANCE PREFERS A CUL-DE-SAC

THE FRENCH political situation is becoming "curiouser and curiouser". The elections have failed to solve the problem of who is to govern France in the next five years, and, what is worse, the resulting party position is such that it seems inevitable nobody will rule it either even in name. It is all disappointing and the stock market has reacted immediately with a sudden drop in prices. Of course, even the most optimistic had not hoped that the elections will give a clear-cut verdict, for that is not possible by the very nature of the electoral system. But it had been believed that the instability created by the 1952 elections will at least be reduced. Particularly, it had been hoped that M. Mendes-France's Republican Front will emerge as the biggest group in the National Assembly.

It is now clear that the groups belonging to the Republican Front and the Government's Centre-Right Front cannot form a Government by themselves. It is equally obvious that neither can co-operate with the anti-parliamentarian Communists and Poujadists, the two extremist parties. Unfortunately these two groups have made a good showing at the polls securing about two hundred seats between them. So it is now left to the two Fronts to reconcile themselves to a Government by compromise—if indeed the French logical mind can contemplate a compromise—which can undertake certain essential reforms, at home and abroad, and thereafter go to the country for a decisive verdict under a more rational electoral system. Such a course of action is definitely to be preferred to a series of compromise Governments which are unable to take any vital decisions. If the election campaign and platform speeches have left behind any bitterness, the only way is to forgive and forget. Otherwise the country will be condemned to an impasse, with neither of the groups which have faith in the parliamentary system, being able to form a Government.

All said, it is difficult not to sympathise with the French voter in the dilemma in which he found himself on the eve of the election. Because of the succession of Premiers and Cabinets and the astonishing behaviour of the Assembly on occasions, it is difficult to assign credit for achievements or to apportion blame for failures to anyone or to any group in particular. It was, therefore, no wonder if he decided to vote for his regular party or the sitting Deputy, thus giving a fresh lease of life to the status quo. If there is to be a clear verdict from the voter a clear choice must be presented to him, and reform of the electoral system would be the first step towards helping France to get a government in keeping with the Big Power status thrust on her.

HOPES FADE IN MALAYA

THE FAILURE of the talks between the Chief Ministers of Malaya and Singapore and the Malaya Communist leader, Chin Peng, has not come as a surprise. No one had expected the Communists to accept immediately the terms of the amnesty offered by Tengku Abdul Rehman's Government. Nor would the Malaya Chief Minister accede to their demands, for doing so would have credited the Communists with having been engaged in the last eight years in a justifiable and patriotic campaign. Since the official aim was mainly to explain the amnesty terms personally to the Communist leader and to impress him with the sincerity behind the offer, there need be no despondency that an opportunity for peace has been lost. Moreover, the usual Communist practice of insisting on all demands at the first meeting may give way to a more reasonable and accommodating attitude, if and when parleys are later resumed.

It is evident to the Communists themselves that they are expecting too much in demanding official re-

cognition of their party, waiving of the check-up of the loyalty of members of the party and withdrawal of foreign troops. And if Tengku Rahman succeeds in his mission to London for speedier self-government it will be difficult to insist that the last demand has any meaning. The second demand has ceased to have much force since the Malayan Chief Minister had agreed to drop the loyalty check-up in the case of Chinese wishing to return to China. Continued insistence on official recognition for the party and freedom from police check-ups for partymen will thereafter only show that the Communists are not keen on a peaceful settlement. Whatever popular support they now enjoy may register a further decline.

Of course, this will not bring to an end the armed conflict and the consequent disarrangement of the people's lives. If military action against the terrorists is to be continued, it will mean a heavy burden on the exchequer. A fifth of the budget cannot be devoted for ever to this apparently senseless activity when the country is in urgent need of economic improvement—senseless because it is difficult to round up or shoot down some three thousand determined men bent on their campaign of terrorism. The importance of preventing this issue from taking on a racial complexion makes it all the more perplexing and calls for statesmanship of the highest order.

THE AGE OF THE DIVIDED GOSPEL

THE SIMULTANEOUS plenary sessions of the two opposing wings of the Praja Socialist party raised the Socialist banner at Gaya and Hyderabad in order to make it the gospel of the age, but it is difficult to see much constructive thinking in their discussions. There were discordant voices even at Gaya where one expected a more homogeneous presentation of doctrine after the purge. On the other hand, Mr. Lohia while saying much on the lines expected of him seemed more reasonable and moderate than ever before. It cannot be that his 'splendid isolation' from the socialist leaders has given him a new perspective on leadership. Mr. Lohia cannot be unaware that in any trend towards moderation he will lose the *raison d'être* for his secession from the main body of the party. He has always preferred the wilderness and the futility of a doctrine assorted at random than organisational solidarity or a consistent ideology. But the old guard has been no more constructive. Mr. J. P. Narayan has reaffirmed his retirement from politics and Acharya Narendra Deva has been too ill to provide the leadership.

With such a disorganised party, there was hardly any point in talking high about the necessity to build up an opposition. Such statements sounded almost like saying that the lack of an opposition too was a failure of Congress rule and not a failure of the Socialist party to find content for its doctrines and leadership for its inspiration. The fact that the Socialist party has on most occasions agreed with the policies of the Government inside Parliament cannot be overlooked by the electorate. There was some emphasis on fundamental rights, but barring property rights, on the abridgment of which Socialists are one with the Congress, there was nothing distinctive in this homage to civil liberties. The Socialists have done nothing to dispel the impression that they have enfeebled themselves too much to hope for success at the next elections as a democratic opposition.

ECONOMIC RETHINKING

PROF. GANGULI'S presidential address at the 38th annual conference of economists has attempted to focus the searchlight on economic thinking in India and on the question of the discovery of appropriate operational concepts for studying economics in this country. The

The New FARGO trucks

give maximum performance

However rugged the road conditions, and however heavy the loads, the new Fargo trucks are built to withstand them. Several new improvements impart to these trucks a new dependability and quality of excellent performance.

- * Large, heavy-duty transmission
- * Sturdy clutch with positive engaging action
- * Powerful, "equal-pressure" hydraulic brakes
- * Slightly increased wheel-base lengths
- * Maximum power at practical operating speed

* Models available with varying wheelbases and greater load capacity.

THE PREMIER AUTOMOBILES LTD.

Call at your local Fargo dealer. Ask him to show you many other features to help you choose the right Fargo truck for your needs.

address bore the marks of wide scholarship in economic theory and though it often bordered on the recondite, and could have been intelligible only to the few specialists assembled, it had a definite theme to offer. It was a bold thing for Prof. Ganguli to say to his fellow experts that they needed "a lot of rethinking on our basic concepts and premises, our methods of analysis and our approach to the understanding of economic reality in India". Prof. Ganguli underlined what he called a methodological deficiency in the theory of economic growth because it has made use of "aggregative concepts which are atomistic in character". Discarding such concepts and the study of individual behaviour, he considered it necessary to consider group behaviour and the significant areas or sectors.

Whether or not Cairnes's great theory of non-competing groups is the best new basis for rethinking on our economics, Prof. Ganguli's insistence on the need for some such basis is a welcome sign of dissatisfaction with the complacency which now prevails among our economists. There are apparently non-competing groups to be found in India according to regions and as between the rural and urban sectors. The significance of these groups in investigations relating to the terms of rural-urban trade, the 'protection' of the rural sector against the urban, the consequences of unilateral transfer of funds, regionally or between the sectors, which affect moneyflows have all been emphasised by Prof. Ganguli and if his address stimulates research in our universities in other than the beaten tracks on commonplace themes, it would have contributed to the growth of this science which will play an increasingly important part in the future.

HISTORY FOR THE MILLIONS

THE PRIME MINISTER'S message to the Indian History Congress has drawn pointed attention to the necessity of simplification in history writing. This advice is a reflection of Mr. Nehru's innate aversion for pedantry or heavy scholarship in any field of knowledge and he has not hesitated to say on occasions how even a judge or a scientist should adapt himself to the democratic age. It is questionable, however, whether Mr. Nehru has propounded a sound principle and whether it can be expected of any historian to write for the millions in the way the millions can understand. The task of a historian is only to interpret history objectively; but it is true that unnecessarily abstruse language has often been used, resulting in confusion rather than illumination of historical trends. Even if this is avoided, no professional historian will be in a position to avoid talking over the head of the average reader as he cannot, without sacrifice of professional integrity, substitute himself for the columnist, the text-book writer or the author of historical romance, who alone can cater to the general reader's understanding.

Sardar Panikkar's presidential address to the Indian History Congress was, by contrast, a constructive approach to defining the Indian historian's task. Mr. Panikkar suggested that the historian should take, not a nation or dynasty but an entire civilisation for his canvas, and then proceeded to suggest that the evolution of the Indian people offers itself as a vast theme in the place of dynastic history which has been common all along. Mr. Panikkar also threw out other ideas, which he regarded as fruitful topics for enquiry, relating to the development of Hindu social institutions. He seemed on doubtful ground in characterising a whole period in Indian history between the 8th and 12th centuries as a period of widespread decadence which required special investigation. This however, is for the historians to fight out; meanwhile, we can endorse his appeal to Indian historians to avoid "the heresy of elevating regional glories, as a result of their specialisation with certain periods or certain areas".

A FAIR ACHIEVEMENT

THE INDIAN INDUSTRIES FAIR has come to an end and a legitimate sense of achievement has pervaded organisers and exhibitors alike. The Government of India has reason to feel satisfied that, without direct official participation in the organisation of the Fair, it could provide an example of India's conception of co-existence. Indian business men have been looking upon the Fair as an opportunity to impress the Indian people of the value of technological progress so as to make them conscious of the stagnation that is involved in the advocacy of old-fashioned devices like the ambar charkha. Normally a Trade Fair, as organised in the West, is not intended to be an occasion for the public gaze, even though it may have educative value. But there is no reason why the industrially backward countries, which have to generate popular enthusiasm for democratic planning for progress, should not stress a different aspect of such Fairs.

The international importance of New Delhi at this time made it a suitable site for the Fair, but that is no reason why this City should always be the venue. Bombay and Calcutta have better claims as the leading business centres and port centres where foreign exhibitors can bring their wares more easily and inspect Indian manufacturers at close quarters. In any case, Delhi will have to improve its amenities, like transport and sanitation, before it can take another such Fair in its stride. Future Fairs may not be as long-drawn-out as the Delhi Fair which has acquired special significance because it was held on the eve of the second Five-Year Plan. But there is no reason why the official atmosphere of the capital should be closely associated with an Industries Fair which, fortunately, has been organised and conducted by an agency of the private sector, though with active official assistance and encouragement. The organisers can well rest on their laurels now, before they go on to do better.

A Window on the World

TO SPITE OUR OWN FACES?

By

ODYSSEUS

IF IN THIS NEW YEAR, we follow the advice showered upon us by the good comrades Bulganin and Khrushchev, one of our main tasks will be to shake ourselves free from all Commonwealth ties.

Before launching out on this care-free path, a point to realise is that the effect of cutting adrift from the Commonwealth would be to propagate further the forces of nationalism in Asia and in the world.

The agitation for self-determination, as Professor C. E. Carrington observed in the April, 1955, issue of "International Affairs", is the strongest of political emotions, springing from the heart, and enlisting heroic endeavour and sacrifice. Yet nationalism, as an idea, has no logic to support it. Nobody had as yet been able to define what a "nation" is more closely than as a group of people who suppose themselves to be a nation, in which case "self-determination" tends to split bigger groups into ever smaller ones. You may have forgotten that at first the "India" which demanded self-determination was an area which stretched from beyond Karachi to beyond Rangoon; then in due course it was India, Burma, and Pakistan, and now we see the Maharattas, Sikhs, and other "nations", striving for their own "states", and East Bengal wanting to assert itself against Pakistan. From which it appears that, besides creating heroes, the emotion of self-determination creates chaos.

As against the nationalist trend towards a star-dust, milky way of nations around the globe, at least one big group, the Commonwealth, has realised that no small group can preserve its independence in this our One World which (in contrast to its vastness in nineteenth century conditions) twentieth century radio, communications, aeronautics, and nuclear physics have contracted to the size of Orissa. By sticking to their Sinn Fein ('Ourselves alone') slogan, and carving out the small enclave of the Free (sic) State, the Irish have confined themselves to a backwater out of the main stream of progress among those nations which have demonstrated their forward, radical thinking, their progressiveness, by rejecting nationalism in favour of the links and mutual concessions of the Commonwealth, an organisation whose logic lies in whittling away local sovereignties and broadening the area of international co-operation.

NATIONALISM AND CHAOS

If by proclaiming her adherence to the Commonwealth, India's leaders have shown their realistic appreciation of the value of international co-operation, it nevertheless remains true that the principle of nationalism continues to play a considerable part in Indian feelings. It is easy to see why. The world powers of the twentieth century chanced to achieve their greatness while passing through a nationalist phase in the nineteenth. India, and other parts of Asia, were stirred by the nationalistic example of the west, and deeply moved by the apparent triumph of the principle of nationalism, and all their thoughts and feelings are still coloured by their reaction to, and adoption of, western nationalism. So much so that Asia fails as yet to perceive that (1) the west is struggling to free itself from the international chaos that is the logical outcome

of nationalism, and (2) the Commonwealth is the only group that has succeeded in freeing itself to any appreciable extent.

I have never really seen eye to eye with my distinguished predecessor, Karl Marx, but there is one point on which I am coming to believe that he was right. His idea of the withering away of the super state is strikingly illustrated in the history of the Commonwealth. The Commonwealth originated in the exertions over a period of centuries of the inhabitants of Britain. By the middle of the nineteenth century, they were ruling a mighty empire from London. But with each passing decade more and more sovereignty (political control) was abandoned by London, until the Commonwealth ceased to be either an empire or a political unit. Those who are hostile to the Commonwealth have, in the past half century, often proclaimed that it is on its way to a total disintegration which by now should surely have been achieved. They think this because their study of what is now seen to be out of date political science taught them that where there was no political control, no unit could exist. In this, the contrast between the practice of the Soviet Union of (so called) autonomous republics and of the Commonwealth is illuminating. For whereas Moscow refuses to relax control of its constituent states, London has no control left to relax.

POLITICAL vs. ADMINISTRATIVE RELATIONS

The 1956 Commonwealth should suggest a new conception to students of political science, namely, that political relations tend to friction and division; administrative relations tend to co-operation and merging into larger groups.

It used to be argued that the Commonwealth was held together by the Crown and other historic loyalties. If this were true, India would no longer be a member, and in fact I doubt its truth in the case of Canada, Australia, and the rest also. What holds the Commonwealth together today are common interests, material or administrative. A study of economic statistics, of trade routes, and of the means of communication (shipping, cables, air, and radio routes) shows that the Commonwealth stands as a network of trading and communications centres and links. If any part were broken off, on the one hand, the whole would be materially weakened, and on the other, the power of the splinter to survive would be gravely threatened.

The proposition that the Commonwealth had broken, or would break up, because it was no longer a single strategic unit, controlled from one centre, is another hang-over from the old concept that unity can only exist with single political control. Against this, it is arguable that a Commonwealth whose members can freely subscribe to regional defence pacts is stronger than one which cannot and which insists on standing alone as one political whole. Australia and New Zealand are less likely to be victims of aggression because of the knowledge that the USA is behind them in case of need. The position of India and of Canada can be likened to those of

"bridges" that open up the possibility of wider Commonwealth co-operation with Asia and the USA and the dollar area.

Among the weaknesses of the UNO as a centre for international co-operation is that it is bound up with relations between political sovereignties and that it therefore serves as a world debating platform for the promulgation of rival policies, thereby raising problems of "face" and of prestige. Among the strengths of the Commonwealth are the informality, unobtrusiveness, and privacy of its meetings. Few people realise that the Commonwealth Relations Office acts as a great information exchange centre, where, as Professor Carrington points out, the High Commissioners regularly meet round a table with British Ministers of the Crown, where innumerable conferences are arranged at high and low levels, where confidential dispatches provide all Commonwealth members with information more copious and more private than that supplied to any foreign power, where co-operation is ten times easier than among suspicious nation-states holding each other at diplomatic arm's length. It is typical of the Commonwealth atmosphere that while India, Pakistan, and South Africa are, in the world of diplomacy, on poor terms, in all the other far more serviceable functions of social life they co-operate freely through Commonwealth channels. At conferences of Commonwealth premiers problems are discussed informally between friends, and not as at UNO where words are weighed and relations soured by suspicions, or preserved solely in a "deep freeze of protocol".

Some enterprising candidate for a Ph.D. should undertake a social investigation of the ramifications of trade within the sterling area, not a mere statistical analysis but an investigation of the types of goods that circulate in response to what social demands, by what routes, in whose ships, and how actual day to day payments are made. This would probably reveal an inter-weaving of commercial and financial links held together by long-standing, friendly agreements among

merchants, traders, and bankers, organised in the same way, maintaining the same standards of conduct and thoroughly understanding each other.

Among the institutions making for international co-operation from which we would cut ourselves off by quitting the Commonwealth are those of the type of the Commonwealth Parliamentary Association and of the Association of Commonwealth universities. Any attempt by London, or any other centre, to dominate the others, and any proposal for political integration or for central control would be shouted down. It is because everyone knows this that they can co-operate without reserve on the practical level. Common standards of parliamentary conduct and of educational ideals and methods are important factors in maintaining the Commonwealth network of daily, unobtrusive, uncontroversial, and routine international co-operation. The power of a common educational ideal, for example, has established throughout the Commonwealth the same sort of qualifications for a doctor, lawyer, architect, engineer, accountant, etc. It may be that if India succeeds in spreading her idea of a neutral sphere in Asia, it will be because she is drawing on the resources of the great pool of Commonwealth knowledge and culture, to which, of course, she is herself an important contributor. Professor Carrington defines this Commonwealth culture as that of a free society, a commercial society, and a society with a common practical, professional and technical knowledge.

Seeing that the Commonwealth has no central political binding force (like the Politbureau in the USSR), it might be supposed that members would quit at the drop of a hat. The opposite is more likely: the Commonwealth will hold together through its practical advantages. Out of its free association, ever stronger bonds of friendship may grow. I am not surprised that comrades Bulganin and Khrushchev are envious of India's Commonwealth membership. But why they should think that we will be in a hurry to cut off our Commonwealth nose to spite our own face is more difficult to understand.

PACKAGING HEADACHES FOR MANUFACTURERS

Production of
**Moisture-proof Transparent
Cellulose Film commences in India!**

The Travancore Rayons are pleased to announce that they are now in a position to supply manufacturers with moisture-proof transparent cellulose film, hitherto imported from abroad.

Attractive packaging plays an important part in the sale of a product. Cellulose film offers all the advantages of good display, combined with maximum protection against soiling or deterioration. Thus cellulose film has become the first choice of manufacturers with goods to sell.

Increasing use by Indian manufacturers

Moisture-proof transparent cellulose film is being put to increasing use by Indian manufacturers. This unique film 'seals-in' perishable goods against the weather, preserves their freshness. It also protects them against dirt and soiling.

The Travancore Rayons will manufacture a special "Heatsealing Moisture-proof" transparent cellulose film. This film can be sealed by the simple application of a warm iron along the seam. Goods packed in this film will not get stale.

The Travancore Rayons Ltd., would be pleased to answer queries on the advantages, uses and characteristics of the various types of transparent cellulose film manufactured by them, as also on all other aspects of packing involving the use of transparent cellulose film.

A DELHI DIARY

A HAPPY NEW YEAR!

EMERGING in mid-winter from my hibernation in the last month let me say, firstly—"A Happy New Year". The year opens with a goodly assortment of problems, notably the States Reorganization Commission's report with its special offshoot in Bombay, and minor disputes in the Punjab and elsewhere; the draft memorandum of the second Five-Year Plan has also emerged in the New Year; stray extracts from it have hit the headlines in the newspapers, from where they have struck hard at the stock exchanges. The talk of a ceiling on incomes (at a figure which distresses me exceedingly!) has disturbed me not a little and seems by figures to have had a similar effect on the stock exchanges. The net result is that the New Year, both politically and economically, opens under a cloud without its proverbial silver lining.

JAUNDICE AND THE PLAN

Two events in Delhi stand out in the last fortnight. Quite deliberately, I choose jaundice first, because it may possibly be the cause of all things—the *fons et origo* of the philosophers! Do not people talk about viewing things with a jaundiced eye? I think, for example, our planners have a jaundiced eye when they talk about new taxation. Whether 'ideological' jaundice is contracted from the water supply or not, it is not for me to say. The other kind (alas!) certainly is. I see that at the time of writing, several Central Health Experts have come to the conclusion that failure in the water supply, or rather its contamination, in the month of November, 1955, was the most probable cause of the severe epidemic of jaundice that we have had in the last three weeks. I might mention that this has nothing to do with the Jumna floods in October; therefore, no acts of God can be held responsible. This is entirely an act of man; may I say, however, that man—as in the Indian Penal Code—includes woman!

This contamination of the water of this city was the result of realignment of some pipes or parts thereof near the suction point adjoining the pumping station. I am told that a full enquiry is being undertaken; but will not somebody tell me why no care was taken to prevent fouling at the time of renovation, rationalisation or otherwise?

COMPENSATION, PLEASE!

May I raise the important issue of compensation? The public sector talks of compensation when it takes over units in the private sector and compensation, it is generally agreed, should be paid when damage is done. For this great muddle in the water supply of this great city, who will pay compensation to the victims? I suggest to all the lawyers of Delhi a fruitful source of revenue! Is there no obligation arising from the payment of taxes or water rates that residents of Delhi should be supplied with water free from contamination? If there is such a contract, its violation should entitle victims of the Municipal Committee's mismanagement to damage. I, therefore, boldly suggest that the 15,000 (or more) victims should consider whether or not they can recover from the municipal authorities (or the Government of India) some of the vast expenditure in time and money which has resulted from this case of negligence, which has been partly proved already, and may be fully proved in a short time.

So far as "The Eastern Economist" is concerned, may I put in a full account? Four members of "The Eastern Economist's" staff have been out of commercial use because of jaundice. The fact that the Annual Number was in the throes of preparation when this

occurred will, I hope, excuse the numerous errors in proof-reading and otherwise which have occurred. I consider that corporate bodies like "The Eastern Economist" who have also suffered should put in a claim for excessive strain and damage to their legendary reputations. I decree the penalty very moderately. I demand that every member of the Health Services responsible should be compelled to read every figure in "The Eastern Economist", Annual Number, 1955. I have no doubt this would be a severe trial; can anyone suggest something worse?

Passing now to the draft memorandum of the second Plan, which, alas, is still a secret document (although vast extracts of it have appeared in the press), I can only say parts of it seem to be as disturbing as the jaundice epidemic. From the little I have been able to deduce about the draft from the Press I would have said it was a most skilful general presentation which has been marred by wicked kite-flying on issues like the ceiling on incomes on which no adequate thought has as yet been bestowed. This happens to be, to my mind, one of New Delhi's serious disorders. Apparently the most radical recommendations can find their way innocently into print without the slightest regard for consequences. Everyone knows that a ceiling of incomes at Rs. 30,000 per year to which reference has been made will certainly not come even at the end of the Plan. Why then should the Draft refer to it so pointedly? I fear not a little of the errors made in this respect arise from the accident that members of the Planning Commission live so far from the market-place. There is thus a great increase in the volume of internal tension. Since the abatement of tensions is so important a part of the Prime Minister's philosophy, I am acutely distressed at the reckless manner in which he allows tensions to be created at home. I venture to assert we have two tensions at home for every one abatement of tension abroad. Please, may we be allowed more of the international kind? They are at least good for trade!

FESTINA LENTE.

Almost the only comforting new effect in the extracts on the draft memorandum appearing in the newspapers is the good news that prohibition is now proposed to be phased, that is to say, total prohibition will not come about in 1958 but will wend its way hopefully on for many years. It is better to travel hopefully than to arrive. Now the States are not to receive special directives but are likely to be advised to conserve their resources where possible. This is really to be a long and interesting journey. One needs to be grateful for small mercies in these hard days!

BURMA DAY

I would like, since this is an appropriate point of virtue, to refer to the celebration of Burma Day last Wednesday. There are many who are grateful to His Excellency the Burmese Ambassador for having departed so happily from the current diplomatic practice of observing Prohibition at national receptions. The introduction of 'dryness' does nothing to produce enthusiasm, local or national. There was no lack of enthusiasm last Wednesday and a vast gathering greatly appreciated the warm hospitality of the Union of Burma. I have no doubt that our friendship with the Union of Burma has been greatly augmented thereby. May I suggest this carries a moral which other Embassies in New Delhi as well as the Indian Union might well employ?

ARGUS.

Economic Report from the U.S.

OUTLOOK FOR 1956

(BY GUY SIMS FITCH)

WASHINGTON, Dec. 21.—American economists and business men now preparing their annual forecasts of what the future holds in store, have arrived at a virtually unanimous conclusion. They are looking forward to 1956 as another year of prosperity in the United States. And they see no early halt to the economic advance that has lasted for more than a year. What they see ahead is a year in which the gross national product—the total output of goods and services—will reach the \$400,000 million mark for the first time in history. This would be a gain of more than 3 per cent over 1955—sufficient to maintain a full-employment and full-production economy. It hardly can be expected that 1956 will equal the spectacular 8 per cent rise achieved in 1955, when the economy was making up for ground lost during the 1954 let down.

For one thing, further production gains may be limited by a lack of unused industrial facilities, as rising output bumps against capacity ceilings. In some industries, production facilities already had strained by the strength of current demand. For another, helping sustain the record consumer demand in 1955 was a record increase in credit. Many economists doubt that this credit expansion can continue for long at its 1955 pace, as more and more consumers repay outstanding debts. If it does not, sales of durable goods, notably automobiles and some household appliances, may be curtailed somewhat.

But even if activity in these fields should fall off, other factors will combine to keep economic levels high. A drop in automobile production, for instance, would free more steel for the railroads, which now have an order backlog of 140,000 freight cars. A drop in residential construction would provide more materials for the anticipated record pace of commercial building. Also, Governmental expenditures, which have been falling in the past two years, seem to have reached the end of their decline and may even increase slightly, by about \$3,000 million. Much of this increase will be reflected in a continuing rise in State and local spending for schools, hospitals, highways and other public works.

Consumer and business spending, however, will remain the most potent economic factor in 1956. With employment and incomes on the rise, American are expected to maintain their record expenditures for goods and services. And business spending on new plant and equipment, to keep pace with the rising demand will furnish an even stronger economic support than in the past. Latest surveys show that business men plan to step up their expenditures for this purpose by 13 per cent in the year ahead, to a peak of \$33,000 million.

With the economy running in high gear, industrial prices may show a slight rise in response to the continued pressure of demand. Experience of the past year has demonstrated, however, that dangerous inflationary forces can be kept under control by the Government's effective monetary policies, which have helped forestall a runaway boom. The flexibility of these Government policies constitutes another source of strength. Monetary restrictions, such as those on consumer and bank borrowings, can be eased—providing a climate for renewed expansion—if signs of a business letdown should appear. Furthermore, with the Federal budget close to balance, there is the possibility of a tax cut that would put even more spendable income in the hands of the American people.

After weighing these factors, and examining conditions in their own industries, business leaders in various fields have come up with the following predictions for 1956:

1. In transport, both railroad and trucking companies expect further increases in earnings and business volume. Railroad men, for instance, anticipate a 20 per cent gain in freight volume.

2. Total new construction is estimated at \$44,000 million, another new record and 5 per cent above the 1955 level. An anticipated minor drop in new housing starts to 1.2 million for the year may be more than offset by increases in all categories of non-residential construction.

3. The Iron and steel industry believes that steel production in the first half of 1956 may set a new half-year mark of more than 60 million short tons. Even if there is a letdown later in the year, total output will probably equal or exceed the 1955 record of 117 million tons.

4. The electronics industry expects its shipments to exceed 1955's by 7.5 per cent.

5. Retailers look for sales gains in 1956 ranging from 5 to 10 per cent. Furniture sales should equal the 1955 volume. Automobile sales also should remain high, although they may not match the record 1955 rate.

6. The agricultural situation will bear watching. Farm incomes fell 10 per cent in 1955, largely because of heavy out-pouring of crops. But many experts are hopeful that the continuing strong demand for food accompanying the high level of consumer income will lead to some improvement in the price of farm commodities.

All in all, 1956 shapes up as another good year for the American economy, with production, incomes and employment continuing to rise and private activity retaining the strength that has brought the United States to the peak of prosperity.

RECORDS & STATISTICS (QUARTERLY BULLETIN)

Editor: R. V. MURTHY, M.A.

"The Eastern Economist" Bulletin of Records and Statistics surveys economic trends in each quarter in India and abroad with the aid of graphs and all available statistics. One of its special features is the Investment Supplement.

WORLDGRAM

AGRICULTURE

Compost From Cane Trash: A manure of a very good quality can be prepared from cane trash. Sugar-cane trash on farms is, at present, mostly wasted by being used for burning purposes. For preparing manure from cane trash, dig a pit three feet in depth and of sufficient length and breadth to hold all the trash produced on the farm. Moisten the trash and spread it evenly in the pit in nine-inch layers alternating with two to three inches layers of a thick slurry of cowdung in water. Fill up the pit this way till the heap rises to 1½ feet above the ground level. Make the top dome-shaped. After a week, cover the heap with an inch or 1½ inches thick layer of loose earth. The manure will be ready for use in about six to eight months. Instead of cowdung, horsedung may be used. Old compost can also be used, in which case the layer of compost over the trash should be 4½ inches thick.

Chilli Thrips: Dusting the chilli crop with DDT or BHC has been found completely to control thrips on the crop. Thrips are a bad pest on chilli. They attack the crop both in the nursery and the field. When there is an attack, a serious malady, commonly known as leaf curl, occurs. As a result, thirty to fifty per cent of the crop, and sometimes more, is lost. Experiments conducted for a number of years show that applying 5 per cent BHC dust at 20 pounds per acre is effective in controlling the pest. Normally, one round of the treatment will be sufficient. The treatment costs about 5 rupees per acre, but the gain to farmers by way of additional yield may be valued at Rs. 100 to Rs. 200.

INDUSTRY

Lower U.S. Car Output in 1956 Forecast: Leaders in the U.S. motor industry are now openly predicting a decline in business next year. Previously they had indicated that output in 1956 would be about equal to that of 1955, which will fall just short of 8 million units. The President of General Motors forecasts that this year output of cars will be 7,060,000 vehicles or a 12 per cent decline from 1955. The President of American Motors Corporation forecasts a drop of 15 per cent in the industry's output with sales down by almost 9 per cent. He estimates output at 6.8 million cars. Sales are estimated at 6,650,000 compared with an estimated 7.3 million for last year.

Sharp Rise in World Steel Output: Steel production in the Western world made a "strong comeback" in 1955, regaining a three-to-one majority over the Communist countries, according to the magazine "Iron Age". Total world output was estimated at 293 million tons in the year against 254 million tons in 1954. The non-Communist nations of Europe, Asia and the United States increased their steel output by 22.5 per cent over 1954 production, while the Soviet Union and other Communist countries increased their production by only 10.5 per cent. The U.S.A. led the Western countries with an increase of 32 per cent. The U.S. production in 1955 was estimated at 116.5 million tons, a record compared with 88.3 million tons in 1954. The Soviet Union produced 49.6 million tons in 1955, compared with 45.2 million tons in 1954, an increase of 10 per cent.

Certification Mark for Magnesium Chloride: The Indian Standards Institution has granted a licence for the use of its Certification Mark to the Pioneer Magnesia Works, Ltd., Bombay, in respect of magnesium chloride produced by the firm. The Standard Mark on the drums of magnesium chloride will indicate that the product is

in conformity with the Indian standard specification for magnesium chloride, technical. The Standard Mark consists of the monogram of the Institution superscribed by the number designation IS: 254. Apart from the consumption of magnesium chloride by the textile and chemical industries in India, a large quantity is exported to European markets. This is the first licence granted by ISI for a chemical product; the previous six licences granted were for electrical goods. The Institution has at present under consideration several other applications for grant of licences in respect of other chemicals, metallurgical products and engineering and building materials.

Indian Electricity Output: During September, 1955, 707 electricity undertakings in India produced 717.6 million kilowatt hours of power, of which 587.1 million kWh were sold to ultimate consumers. As compared to August, power generation during the month increased by 11.3 million kWh. Two Diesel generating stations, one at Bhadrachalam in Andhra, and the other at Vita in Bombay, were the new additions made during the month. The corresponding figures of output and sale for September, are 645.3 million kWh and 523 million kWh, and for September, 1954, 209.1 million kWh and 175.9 million kWh, respectively.

TRADE

Export Policy for Iron and Manganese Ores from the Ports of Madras, Visakhapatnam, Masulipatam, Kakinada and Bombay: The Government of India has reviewed the export policy for iron and manganese ores from the ports of Madras, Visakhapatnam, Masulipatam, Kakinada and Bombay in the light of wagon availability and the performance of the shippers. Movement of ores from Bellary-Hospet (metre gauge) section for shipment through Madras port will continue to be regulated on quota basis. Movement of ores from Bellary-Hospet (metre gauge) to port of Madras, Secunderabad-Dronachallam (metre gauge) section of the Central Railway, broad-gauge lines on the Southern Railway leading to the ports of Madras and Andhra and also metre and broad gauge lines from Bellary-Hospet area to Bombay port will continue to be regulated by the issue of registration ships. But the procedure for registration ships has been modified. The details of the procedure for grant of quotas/registration slips are being notified by the port officers concerned.

Export Policy for Iron and Manganese Ores from Calcutta Port: The Government of India has reviewed the policy for export of iron and manganese ores from the port of Calcutta in the light of the availability of wagons. It has been decided to continue the licensing of exports of these ores during January-June 1956 on a quota basis through established shippers and mine-owners. The details of the procedure are being notified by the Port officer concerned.

Government's Import Policy: Liberalisation of the imports of machinery and industrial raw materials to sustain the tempo of industrialisation in the country is the main feature of the Government of India's import policy for the period January to June 1956. Part of the resources saved by the expected diminution of food imports will be diverted to larger imports of cotton, jute and petroleum products. On the basis of estimated increase in production, import quotas have been reduced for buttons, pruning knives, hardware, wire mesh and wire netting, textile preservatives, textile finishing oil, certain coal tar dyes, water meters, socks and stockings and several drugs, medicines, chemicals and fluorescent tubes.

Record Ceylon Trade Surplus: Ceylon had its highest ever favourable trade balance of Rs. 453 million for the 11 months ending November 30, 1955, according to official figures. This compares with Rs. 385.5 million in the corresponding period in 1954. Commercial circles confidently predict Ceylon's balance for 1956 will be over Rs. 500 million. In November, 1955, the favourable balance of trade amounted to Rs. 70 million. Exports were valued at Rs. 197 million, of which tea exports totalled Rs. 109 million for 35 million lbs and rubber Rs. 49.3 million for 30.4 million lbs. Tea exports to the U.K. in November 1955 totalled 11 million lbs. and were valued at Rs. 33.2 million.

Pakistan's Import Plans: Pakistan will import 211 articles during the January-June shipping period, according to the Ministry of Commerce. For 91 of these items licences will be issued to industrial consumers only. Licences will be valid for all countries except those issued for a single country under a trade-agreement, sub-authorisations will also be issued for items covered by American aid. Some of the more important items to be imported are iron and steel and other metals, silk and art silk yarn, cotton thread, fabrics, second-hand clothings, newsprint, drugs and medicines, glassware, manufacturing equipment, essential oil, including coconut, and a number of luxury items including cars.

Indo-Polish Trade Arrangement Extended: Pending negotiations for the conclusion of a fresh trade agreement between India and Poland, the current Trade Arrangement between the two countries has been extended as an ad interim measure up to March 31, 1956. The current Trade Agreement was signed on January 6, 1951, and was extended from time to time. It was last extended on March 3, 1955, and was valid up to December 31, 1955.

FINANCE

U.S. Fleet Finance: United Airlines has arranged to borrow \$120 million in new 25-year 4 per cent debentures and up to \$30 million of new bank credit to help pay for its \$175 million fleet of 30 Douglas DC-8 jets.

Working of the Cochin Port: The working of the Cochin Port in 1954-55 resulted in a surplus of Rs. 10.92 lakhs as against a surplus of Rs. 6.62 lakhs during the previous year. The net increase of Rs. 4.30 lakhs in the surplus over the previous year was made possible by an increase in revenue of Rs. 5.85 lakhs, set off by a small increase in expenditure of Rs. 1.55 lakhs. Gross revenue receipts of the Port Fund amounted to the record figure of Rs. 77.07 lakhs for 1954-55, as compared with Rs. 71.22 lakhs in 1953-54. As in the previous year, a special contribution of Rs. 5 lakhs was made to the Capital Account from the year's revenue, after making the usual contribution of Rs. 2 lakhs to the Revenue Reserve Fund and Rs. 3.97 lakhs to the "Accident" and "Renewals and Replacement" Funds.

Salt Cess: The Government of India announced on June 28, 1955 that small-scale manufacturers, whose individual holdings did not exceed ten acres, and who were organised as members of co-operative societies, even if the total area under salt production with each of such societies exceeded ten acres, would be exempted from the liability to pay the cess leviable under Section 3 of the Salt Cess Act, 1953. It is further announced that small-scale manufacturers, whose individual holdings exceed ten acres but not 100 acres and who are organised as members of co-operative societies, will henceforth, pay cess at the reduced rate of one anna per maund instead of two annas per maund.

and the village oil industry get grants of Rs. 25,425 and Rs. 14,000 respectively. A grant of Rs. 6,375 and a loan of Rs. 1,200 are provided for the village pottery industry. Madhya Bharat gets a grant of Rs. 34,200 for the development of the village oil industry. A loan of Rs. 4,000 and a grant of Rs. 4,885 have been given to the State for the development of the atta chakki industry. Madhya Pradesh has been sanctioned a grant of Rs. 9,750 and a loan of Rs. 5,000 for the development of the hand-made paper industry.

Liability to Indian Income-Tax of Foreign Exporters of Machinery: Doubts have been expressed in certain quarters about the liability to Indian income-tax of non-resident exporters of plant and machinery to India and of the resident importers thereof, who use the machinery for their business, in cases where the exporter does not recover the full value of the machinery before delivery and allows the importer to pay for it in instalments. Where the transaction between the exporter and importer is as between principal to principal, no tax liability attaches to the exporter. Where, therefore, the transaction of sale and the purchase of the plant and machinery is as between principal to principal and the exporter and the importer have no other business connection, the fact that the exporter allows the importer to pay for it in instalments will not by itself render the exporter liable to tax on the ground that the income is deemed to arise to him in India. The Indian importer will not in such a case be treated as an agent of the exporter for the purpose of assessment.

GENERAL

Peak Activity in Air Transport: World air transport traffic increased by one-fifth to reach a new peak during 1955 and shows signs of even more substantial growth in 1956. Nearly 70 million passengers have been carried by the world's airlines in 1955, against 59 million in 1954, while cargo and air-mail loads have increased in the same proportion. It is estimated that in 1956 the passenger figure may rise to 85 million and reach 100 million in 1957.

Half-yearly Report on Civil Aviation: A record number of passengers was flown by Indian air services during the first half of 1955, according to the half-yearly report on Civil Aviation in India. The total number of passengers on scheduled and non-scheduled services during the period was 2,98,173. The capacity ton miles operated by Air-India International on scheduled services rose from 12,225,192 in the previous half-year to 13,448,594 in the first half of 1955. On the Indian Airlines Corporation, the capacity ton miles on scheduled services rose from 20,859,559 to 21,279,774 in the corresponding periods. The overall load factor on the I.A.C.'s scheduled services rose from 20,859,559 to 21,279,774 in the corresponding periods. The overall load factor on the I.A.C.'s scheduled services rose from 70.3 per cent in the second half of 1954 to 71.3 per cent in the period under review. On the Air-India International's scheduled services, however, the overall load factor was reduced from 58.2 per cent to 56 per cent in the corresponding periods.

New Rail Survey on Eastern Railway Replacing Light Railway: Preliminary engineering and traffic surveys are to be carried out for a broad-gauge line of about 39 miles between Bukhtiarpur and Rajgir on the Eastern Railway. The survey has been ordered to examine the economics and traffic prospects of a broad-gauge line in place of the present narrow gauge line in the area served by the Bukhtiarpur-Bihar Light Railway.

NEWS IN BRIEF

INDIAN

The Central Government have extended the Bombay Prohibition Act, 1949, to the State of Kutch, according to a notification in the Gazette of India Extraordinary of December 29. This will empower the Chief Commissioner of Kutch to introduce prohibition in the State from a date to be notified by him in the 'State Gazette.'

The President, on the advice of the Prime Minister, has appointed Mr. Bali Ram Bhagat, M.P., to be a Deputy Minister. Mr. Bhagat will be attached to the Ministry of Finance.

The Victorian Branch of Save the Children Fund in Melbourne has sent a cheque for Rs. 528-3 to the Government of India. This amount will be given to a child orphaned as a result of the Portuguese firing in Goa during the Satyagraha movement.

The delegates to the ninth Congress of the International Society of Sugarcane Technologists who assembled in Bombay on January 4 and 5, 1956, would be having a three-week excursion tour of historically and culturally important places in India after the Congress.

The President gave his assent to the Bombay Highways Bill, 1955, on December, 1955. It provides inter alia, for control of road traffic not already controlled by State Legislation.

The Andhra Government is trying to improve all the 136 taluks in the State by providing them irrigation facilities so that the famine conditions which now and then occur in these parts may be eliminated once for all.

A turbine manufacturing factory is proposed to be set up at Naini, near Allahabad, in U.P. A team of foreign consulting engineers has arrived in Allahabad in this connection. They visited Naini and examined a site there suitable for setting up such a factory.

Mr. K. Gopalan, Secretary, Indian Central Coconut Committee, has been appointed as the marketing expert of the Food and Agriculture Organisation of the United Nations at Baghdad, Iraq.

The Punjab Government is understood to have requested the Union Government to allay the fears of the Ludhiana hosiery manufacturers over the reported intention of the Union Government to levy excise duty on hosiery goods.

The Government of Bihar, in pursuance of the Union Government scheme, has decided to purchase coarse rice of requisite specification at various godowns in the State at Rs. 11 per maund, inclusive of sales tax if any, if the market price of coarse rice goes down below Rs. 11 per maund.

A pilot scheme to collect data regarding the potentialities of the Ambar Charkha and to study weavers' reactions to yarn produced on it has been approved by the Government of India and is now being implemented. A sum of Rs. 29 lakhs has been sanctioned.

Mr. Jagjivan Ram, Union Minister for Communications laid on December 29, 1955, the foundation-stone of the building of an automatic telephone exchange in Patna. It is expected to be ready by the end of this year at a total cost of Rs. 16 lakhs.

FOREIGN

Snia Viscosa, the Italian rayon concern, has obtained a large contract to supply rayon to the Soviet Union.

Soviet Russia and People's China have signed a trade agreement for 1956, which provides for a further increase in the volume of goods exchanged between the two countries.

Japan's Minister of State, Mr. Matsutaro Shoriki, has been named head of a new atomic energy Committee, which will include Dr. Hideki Yukawa, the Japanese Nobel Prize Winner for physics.

Mr. Spencer, Minister of Economic Affairs of the Federation of Malaya, is flying to London on January 7 to act as an additional adviser to the Federation delegation on constitutional talks which open at the Colonial Office on January 18.

The United States Government is to ask Congress to allocate \$25,000,000 more towards medical research funds during the 1956-57 financial year for a total of \$122,800,000 as against \$97,800,000 during the present year.

The Pakistan Government has been informed by the U.S. International Co-operation Administration that procurement authorisation for an initial allotment of over \$17,000,000 from the United States aid for 1956 has been issued.

East German engineers have helped to build a large sugar factory at Paotou in Mongolia which will produce 1,000 tons of sugar daily.

Phillips Chemical Company, a subsidiary of Philipps Petroleum, will further expand the capacities of its synthetic rubber facilities near Borger, Texas. Synthetic rubber capacity will be increased by 30,000 long tons annually.

In the first ten months of 1955, Austrian imports rose by 45.9 per cent compared with the corresponding period of 1954, but exports by only 14 per cent.

The U.N. Korean Reconstruction Agency has made five grants, totalling \$15,600, to voluntary agencies. The projects they will aid include a rural training centre for homeless girls, a children's hospital ward, a home for babies, a home for elderly people, and self-help training projects for young people.

Three new cable car lines have been put into service in Austria. The new line at Hallstatt will enable visitors to view the salt mines that have been in continuous operation there for 3,000 years.

Pakistan International Airlines has announced reduction with immediate effect in round-trip fares on Karachi-Bombay Conair Service and Karachi-Delhi Sector.

Special Articles

DECENTRALISM AND THE KARVE REPORT

By

RAJ KRISHNA

(Lecturer in Economics, Delhi College, Delhi, and Honorary Planning Adviser, All-India Handicrafts Board, New Delhi.)

[These views are not those of "The Eastern Economist." The article is published here because of the request of some readers to have the other side of the picture presented.—Ed.]

THE current controversy about the Ambar Charkha should not be permitted to prevent a fair examination of the general policy of industrial decentralism recommended by the Karve Committee. So far the advocacy of decentralism has been primarily non-official, although official utterances have always abounded in expressions of general sympathy for it. The importance of the Karve Report lies in the fact that it is the first official report in which the policy recommended is avowedly "related to the concept of a decentralised economy in the future."

Decentralisation, moreover, is not treated by the Committee merely as a plea for a wider geographical dispersal of mass production units or for having small units as auxiliaries of large units, but as a radical philosophy of economic organisation which makes it necessary to "keep centralised, large scale activity at a minimum" and to choose and employ only such techniques as are "appropriate to a decentralised pattern".

Technical improvement should not "mean adding to the capacity of large-scale machine industry because such machine production is usually not on a decentralised basis." Effort has to be made "to adjust existing improved techniques for particular production activities which are ordinarily centralised in modern economies to a decentralised mode of operation or to invent or discover decentralised substitutes for them".

The importance of developing a new, decentralist technology can hardly be exaggerated, and the Committee have been wise in stressing it. For the whole future of decentralism depends on the adoption of an improved small-scale technology. Centralist opinion all too often associates small-scale production with static, primitive techniques and regards technical improvement as synonymous with the wholesale adoption of mass production techniques developed in the West in the last two centuries. The possibility of an improved small-scale technology is overlooked. It is forgotten that the development of mass production technology in the West was the result of peculiar historical circumstances, particularly the relative abundance of capital and shortage of labour, the patronage of technological research mainly by mass production interests, and the atmosphere of laissez-faire in which the employment effects and the serious social and psychological consequences of urbanisation and over-mechanised mass production could be ignored. In fundamentally different conditions such as obtain in India it should be possible to develop a different technology, if deliberate and concentrated effort is made to this end. There is nothing inherent in scientific method as such which should make it invent and improve mass production techniques only. It can equally invent and improve small-scale techniques if commissioned to do so.

As the Report on the Marketing of Handicrafts says: "No given technology is the best, economically and sociologically, for all societies. And, therefore,

every society must evolve a technology suitable to its own economic and social circumstances and aspirations. In the context of our circumstances and aspirations, the equipment used should have very low capital cost; it should be capable of being employed by and in small individual and co-operative units and it should increase efficiency and reduce costs without causing much labour displacement."

These, then, are the social criteria which the new technology should satisfy. As the Karve Committee have emphasised, the avoidance of technological unemployment is imperative in the conditions prevailing in India today. This necessity is one factor which must determine the rate and kind of technological change which is permissible. But equally important are the other sociological considerations. Unlike Western countries we should try to regulate technological change so that vital human values are not sacrificed at the altar of mechanical efficiency. We need a technology that truly serves man instead of dehumanizing and enslaving him, a technology that does not tear him away from a healthy natural and social milieu, does not distort and poison human relations by crowding together too many men divided up as owner-managers and wage-workers, does not thwart and atrophy his creativity and aesthetic sensibility and does not destroy his psycho-physical wholeness and dignity.

The Karve Committee have evinced a rare awareness of some of these deeper implications of techno-economic development in framing their recommendations. They recommend the decentralised pattern of development because it would cause "comparatively little disturbance to the locational and social set-up" of the communities of village artisans. Craftsmen "would not be reduced to the ranks of casual labour, being replaced by the factory wage labour, in urban concentrations." The one lesson that emerges from the findings of modern industrial psychology and sociology is that it is neither necessary nor desirable that large masses of people should be uprooted from their homes and hearths, from their natural surroundings and integrated village communities and turned into propertyless wage-workers working almost mechanically and joylessly in a few big factories in overcrowded cities. The human suffering occasioned by the uprooting and migration of millions of men, which industrialisation on the traditional 19th century Western pattern necessarily involves, is comparable to that caused by the migration of refugees after partition. A welfare state—unlike the laissez faire governments of the 19th century—cannot overlook it. On the contrary it must plan economic development on a pattern which averts it. Such a pattern has to be decentralistic so that instead of men being moved out of the villages into industrial cities, cheap electricity and small machines and improved processes are moved into the villages; and the villages are thus revitalized into balanced and prosperous agro-industrial communities without damaging their socio-cultural integration and harmony.

The decentralist pattern of economic development is moreover the one that is most conducive to the

growth of healthy human relationships and an effective democracy. As the Karve Committee says: "The principle of self-employment is at least as important to a successful democracy as that of self-government." This principle can find embodiment only in producer co-operatives employing low-cost decentralist technology. Highly capital-intensive mass production must result in the exploitation or domination of the propertyless wage-workers by plutocrats or bureaucrats. Unless in the major part of the industrial field workers themselves own their means of production in small co-operative groups, democracy must remain nominal irrespective of whether the organization of the economy is capitalistic or socialistic. As Huxley wrote in "Science, Liberty and Peace," "The centralizing of industrial capacity in big mass-producing factories has resulted in the reduction of ever-increasing numbers of individuals to complete dependence upon a few private capitalists and their managers, or upon the one public capitalist, the state, represented by politicians and working through civil servants. So far as liberty

is concerned, there is little to choose between the two types of boss." We can dispense with "bosses" only when we dispense with mass production (except in a few fields where it is absolutely unavoidable). Economic decentralism is the sine qua non of real political democracy.

It would be a pity if in the heat of minor controversies the perspective of a decentralist industrial policy presented by the Karve Committee is lost sight of, and the crucial decisions of our planners continue to be governed by a centralist vision. For then India would merely relay the socio-economic history of Western countries like Britain, Germany, Russia and the United States—a history of growing economic prosperity with growing centralism, social disruption, and psychological imbalance. She would have failed to present to the world a new, an alternative pattern of economic development which does not maximise economic values at the expense of other non-economic human values.

DEVELOPMENT OF POLISH AGRICULTURE

(Contributed)

THE fundamental land reform carried out after the war eliminated the land hunger among the peasants and created completely new conditions for the development of agriculture. According to the measure adopted by the Polish Committee of National Liberation on September 6, 1944, all the farms with more than 50 ha. of land in use became state property, without any compensation, to be distributed among the small holders and middle peasants and also in order to set up independent farms for landless peasants, farm labourers and small leaseholders. The land reform supplied the peasants with 6,070,100 ha. of land. Of all the farms existing at present, 33.4 per cent belong to peasants who receive their land completely or partly as a result of the land reform. All debts owed by the peasant farms to the banks and users were written off.

Part of the land was used to set up state farms as model and experimental farms. Owing to their adoption of advanced techniques and the up-to-date achievements of science, they act as a model for the small holders' farms. Only such big farms can make full use of mechanisation, and the largest types of tractors and combines in order to produce selected grain, to cultivate seed grass and industrial plants and to breed pedigreed livestock.

The following table illustrates the changes (in terms of percentages) which have taken place in the composition of the rural population:

	1931	1950
1. Total rural population	100	100
2. Landlords	0.2	..
3. Agricultural workers on private farms	11.9	1.9
4. Peasants working individually	67.6	66.3
of which those with land up to 2 ha.	14.4	7.6
From 2 to 5 ha.	26.5	20.4
" 5 to 10 "	18.9	26.8
" 10 to 14 "	4.8	7.5
Above 14	3.0	4.0
5. Peasants—members of co-operative farms	..	1.5
6. Workers on state farms	..	3.4
7. Others	20.3	26.9

The land reform and planned economy created favourable conditions for the development of agriculture, eliminating a number of difficulties weighing heavily on individual peasant farms. The peasant is no longer threatened by the disaster of crises, price fluctuations and poor sales organisation. In the past the peasant used to throw big amounts of grain on the market immediately after the harvest. This caused a rapid and considerable drop in prices.

The low income derived from agriculture hampered investments, purchase of machinery and implements as well as the construction of buildings. The entire structure of production was lop-sided. The peasants produced above all grain constituting more than half of the total value of all the crops, animal production was relatively weak in development. This was due greatly to the primitive farming economy. Interesting is the fact that despite the predominance of grain production, it was barely sufficient to satisfy the requirements of the home market.

In the new situation, these conditions underwent a radical change. The enormous development of industrialisation in 1931—60.6 per cent of the total employed people worked in agriculture, as against 45.75 per cent in 1950—created an exceptionally absorptive labour market enabling people who could not find full time employment in the countryside to procure jobs in the towns. This led to truly revolutionary changes in the countryside. The flow of people from the villages took on dimensions heretofore unknown. The expansion of towns and the upsurge in industry opened up vast new sales markets for agriculture. The term overproduction has ceased to exist.

The farmers were granted far-reaching assistance by the state in the form of credits, fodder seed, pedigreed stock, machinery, and so on.

The State, of course, did not succeed in removing all the difficulties that hinder the full development of agriculture. The degree of backwardness was too great to eliminate with one stroke. In addition, Polish people had the gigantic task of husbanding the regained territories, an undertaking unprecedented in history. Therefore one cannot deny the fact that there are still great difficulties to be overcome in the sphere of agricultural production and that its rate of development was not as rapid and steady as that of industry, particularly heavy industry.

The utilisation of artificial fertilisers per one hectare of land under cultivation has increased as follows:

1928		12.6 Kilograms
1929		13 "
1930		7.1 "
1945-46		13 "
1950-51		24.5 "
1951-52		28 "

In other words, the amount in 1951-52 was twice that of 1928. There has also been a marked improvement in supplying farms with selected seed grains. Medical aid and prophylactic measures have been expanded in the veterinary services.

The training of technical personnel for agriculture and raising of the level of qualification of farmers has been organised and broadened. Whereas before the war there were about 30 agricultural schools (two and four-year courses) with about 2,000 students, today there are 175 such schools attended by over 20,000 students. The latest farming methods are being popularised in the countryside through a broad programme of lectures, excursions and exhibitions.

The mechanisation of agriculture realised after the war constitute a great achievement especially if one takes into consideration the backwardness in that respect before 1939. The number of tractors increased by 43 per cent by 1953 as compared with 1950. In 1950, there were barely 84 combines used in Polish agriculture, at present this number has grown to 1,000. In the past four years the number of sheaf binders in the State Machine centres multiplied fivefold. During 1949-53 melioration embraced 220,000 ha. of meadows, and the condition of 400,000 ha. of meadows was improved, resulting in an increase in the hay crop by 13 per cent or 800,000 tons.

Small peasant farms cannot constitute the foundation of agriculture. Despite improved conditions in the development of the peasant economy, fundamentally it is not capable of carrying out the tasks which are faced by agriculture in an industrialised country. In such a country the percentage of the agrarian population should not surpass 20 per cent. Small farms are not capable of either becoming properly mechanised or benefiting from scientific achievements. It makes no sense to have backward methods of production in the villages while industry has the most up-to-date techniques. A backward, primitive agriculture cannot adequately supply the quantity and quality of products which the growing urban areas of the country require and nor can it satisfy the increasing needs of industry in regard to agricultural raw materials. The process of modernising agriculture cannot be left to spontaneity; such a process would last too long and be too haphazard. The only way of solving this very basic question is, on the one hand, to leave a certain number of large farms as property of the state to be used as model and experimental farms, and on the other hand, to create the co-operative form of farming that would make it possible to step up the use of modern machinery and scientific methods of agriculture.

In order to fulfil the above goals part of the land was left as state farms. The area of land under cultivation on the state farms was.

1928		12.6 Kilograms
1929		13 "
1930		7.1 "
1945-46		13 "
1950-51		24.5 "
1951-52		28 "

The year 1949 saw the beginnings of co-operative farms in the villages, uniting middle and small-holding peasants. On the whole, co-operative farms yield bigger crops than individual peasant farms, as the following yields of cereals—in quintals—from one hectare of arable land show:

	1950	1952
1. Co-operative farms	.. 14.5	15.1
2. Peasant farms	.. 12.4	12.6

The contracting system is of great help to agriculture. It is based on the state making an agreement with the farmers regarding their delivery of specific products, assuring them of attractive price. The system of contracting applies in particular to industrial crops like sugar beets, chicory, flax and hemp, oleaginous plants, tobacco, vegetables and live-stock. The system of contracting enables the farmer to raise his level of production and to utilise all potentialities. Contracting includes individual farms as well as co-operatives. After having fulfilled their obligations to the state in regard to the prescribed quotas of certain products, the farmers have complete freedom to dispose of their produce.

Four different types of co-operative farms exist in Poland. The joining of a co-operative and the type of co-operative established are entirely voluntary. The simplest form is the "Co-operative for land cultivation", which unites the peasants only for such operations on the land as spring and autumn ploughing or ploughing and sowing. In the "Agricultural Co-operative Society" they combine all their land for the period they belong to the co-operative. Farming is done collectively though the member retains title to his own land and has a right to hand it down to his heirs. A garden plot of about one hectare is allowed for personal use. Higher forms of co-operative farms are the agricultural producers' co-operatives, and the Agricultural Co-operative Union. Here the members bring to the Co-operative all their land, the arable and the fallow, with the exception of the garden plot. Besides this, they transfer to a joint pool all farm property—horses, carts, machines, mowers, reapers, ploughs, harrows as also live-stock, with some exceptions. A certain number of cattle can be raised by the member on his plot. Large buildings not needed by the members also can be turned over to the co-operative farm. A monetary remuneration for the contribution is given to the member in case he wishes to leave the co-operative. As a rule, the payment is made either in kind or in cash.

Thus, the co-operative farms differ by the degree of joint ownership of the means of production and rights to benefit from the income of the co-operatives. Details concerning the income are thoroughly regulated by the statutes of the co-operative farms. In the higher types of co-operative farms not less than 70 per cent of the income is divided among the members, depending on the amount of land, property and work contributed.

The Business World

RATIONALE OF NEW ISSUES

By

CROESUS

THE terms of offer of the new equity issues that are being made by private companies which are converting themselves into public limited companies, especially the foreign ones, have come in for strong criticism at the hands of some students of the capital market. Whenever a new issue is made, especially by foreign companies which seek to throw their shares open to the Indian public, the premium that the Controller of Capital Issues seems prepared to allow, according to these students, is hopelessly inadequate. For, it is argued, that, if, in the case of a well-known company, shares are issued at a nominal premium, these are liable to be cornered by speculators who would sell them to genuine investors at a later date and pocket in the process a handsome profit for which they have no moral right, because they have not exerted in the least to earn it. Secondly, it has been contended, companies desirous of raising new capital would stand to benefit more if they are allowed to do so by issuing new shares at a higher premium than the authorities would seem to be prepared to allow at present. This would be helpful to the companies concerned to finance their expansion programmes.

But, as against this, there is a school which holds that, if these companies, which are in a position to attract new capital, because of their reputation, long-standing and association with reputed firms abroad, are allowed to take away all the available capital in the market, very little would be left for other companies, which are smaller in size and, perhaps, not equally well-known, to get capital for purposes of their expansion when they enter the market. But this is met by those who would like new issues, especially by foreign companies, to be made at higher premiums by saying that, if this is all the intention, Government might very well ask the companies concerned to issue fewer shares so that the total amount that they absorb from the capital market might not be more than what

they would take by keeping the premium at a lower level as at present. There is yet another objection that is suggested in certain quarters to the issue of shares at a heavy premium. This school argues that, if shares are offered at heavy premiums, investors of moderate means would be hard put to it to go in for such shares. But the answer of those in favour of heavy premiums to this argument is that it is perhaps much better that investors should go in for original shares even if at a heavier premium rather than purchase them in the market later from speculators who buy these shares at a nominal premium and sell them to investors eventually and make an unconscionable profit in the process.

In the context of this discussion it would be worth while asking the authorities the precise reasons which prompt them to insist on private limited companies converting themselves into public limited companies, especially foreign ones, issuing new shares at only nominal premium. Perhaps their answer might be that they would thereby be enabling more Indians to acquire interest in foreign established concerns and that, if the shares issued by foreign established concerns were issued at a very heavy premium, many Indians might not find it possible to go in for them. But this explanation does not carry conviction, inasmuch as the class of people who invest their money in equities are after all a limited circle who go in for these investments mainly on considerations of return. As for institutional investors, the extent of the premium to be paid cannot be very much a deterrent factor, because they do not suffer from lack of funds to the same extent as do individuals. Unless, therefore, there is some other strong reason which the authorities have in arriving at the decisions they have so far taken, and which they do not want to disclose, it seems desirable that the whole question of the terms on which new shares are allowed to be issued should be reconsidered.

OUTLOOK FOR SHIPPING

THE outlook for Indian shipping during the next five years, as it has emerged from recent official pronouncements, has depressed legitimate aspirations of a bold programme of expansion. In fact, even the so-called ambitious programme prepared by the Study Group, appointed by the Consultative Committee of Shipowners, pitched the target for the expansion of Indian-owned tonnage at the moderate figure of 1,000,000 GRT, or half of what was suggested as the minimum by the Shipping Policy Sub-Committee for achievement in 1954. On the assumption that the target of 600,000 GRT prescribed for the current Plan would be fulfilled according to schedule, the Study Group's Plan of an additional 430,000 GRT in the second Plan was expected to advance the Indian tonnage to 1 million GRT. With an actual shortfall of 120,000 GRT at the present time, the assumption of reaching 600,000 GRT three months hence cannot be sustained. The modest addition of 430,000 GRT during the next five years has been pruned by the Planning Commission to 300,000 GRT. This drastic reduction coupled with the shortfall in the present Plan, is a clear pointer that the modest ambition of Indian shipping to acquire 50 per cent share in the adjacent trade and 20 per cent share in the distant trade five years from now, must be

deferred for some more period. It is problematic whether any extra allocations of outlay for shipping will be made at a subsequent stage in addition to the contemplated investment of Rs. 60 crores in the next Plan.

Of much greater importance in the immediate context than the projected modest growth of the size of Indian tonnage is the obstinate problem of labour relations which has assumed grave dimensions in the shipping industry. Sir A. Ramaswami Mudaliar, in his presidential address at the last annual general meeting of the shareholders of the India Steamship Company, has uttered a frank but timely warning that all plans for the development of shipping will prove worth little in execution unless employer-employee relations are put on a healthier basis, ensuring a real sense of responsibility. The scant regard shown by labour to its obligations arising out of settlement of trade disputes at various levels clearly indicates the type of influence which sways it in its attitudes. The most urgent need of the time, therefore, is to encourage and develop a correct and responsible pattern of leadership. The crisis of port delays which gripped the industry last year was the result of a combination of factors, but it can hardly be disputed that a major

factor was the policy adopted by a weighty section of trade union leadership to encourage go-slow to spread employment over a large number of workers. In this particular year, it was not labour at the Indian ports alone which involved shipping companies in considerable hardships and loss. But the striking deterioration in the turn-round of ships and its effect on their financial operations underline the urgent necessity of taking appropriate measures for rectifying the situation.

The results of the working of Indian shipping companies published in recent weeks demonstrate the counterbalancing effect of higher operating costs in offsetting the larger gross earnings registered last year with favourable volumes of cargo. While it would be certainly unrealistic to ignore the impact of other causes on the inflated costs, the liability which the labour component bears has now been realised and this realisation is implicit in the appointment of the Vasisht Committee to investigate the whole problem of port labour to suggest specific remedies to restore healthy conditions on a normal basis. Virtually all the recommendations of this Committee have been endorsed by the Government and it is only logical to expect that at least the major ones among them must be implemented without hesitation or avoidable delay. Dock labour has posed a problem of control everywhere, but precisely because it touches a strategic and vulnerable point in the economy it needs firm handling once fair and equitable terms of employment are offered. The establish-

ment of statutory seamen's employment offices in Bombay and Calcutta, providing insurance against the traditional malpractices in recruitment, and the projected creation of the National Welfare Board for Seamen, constitute convincing proofs of guaranteeing equitable treatment to labour. But any outlay involved in rationalised conditions of employment ought to be reflected in higher productivity. The Committee's recommendation to resolve recurring deadlocks at the ports by investing Chairmen of Dock Labour Boards with emergency powers deserves early implementation and the experiment of conferring such authority on the Chairman of the Calcutta Port Trust argues for the course suggested. The Committee has come out with a forthright solution for the difficult issue of labour costs and urged the introduction of piece-rates for stevedore labour and as a corollary to port labour as well. On these two vital issues of reform, action should not now be delayed in view of the absence of any divergence of opinion particularly at the official level.

A more optimistic prospect for Indian shipping requires a revision of the policy for the coastal trade, where pressure of cargo has created problems of shortage of Indian-owned tonnage, a vindication of the claim of Indian companies for membership of conference lines and a greater share in the transport of cargo on government account. But any dynamic policy for shipping ought to be first realistic and realism is surely needed with a sense of urgency in relations with labour.

BUSINESS NOTES

A PANICKY DECISION

AS WAS expected. Sir Purshotamdas Thakurdas, President of the East India Cotton Association, Bombay, (EICA) dwelt mainly on recent Government action asking the Association to suspend hedge trading for a period of seven days and the implications thereof. Since Sir Purshotamdas made the speech, Government have extended the period of suspension by a further seven days, and it is not clear to anybody, including perhaps even the Government officials concerned, as to what is going to happen next. Meanwhile, the EICA President has pointed out in very clear terms that the Government action was thoroughly unwarranted.

In the course of his address, Sir Purshotamdas pointed out that it is an exaggeration to say that prices rose during the last five weeks by Rs. 140, as Government have alleged, and that prices have been artificially rigged up to the present level due to heavy speculation and option dealings. In the considered opinion of this veteran spokesman of Indian Cotton Trade, Government "appear to ignore the realities behind the present price level, namely, (1) high price realised for cloth by the Indian mills, (2) change in the structure of contract from 25-11/32" to 13/16", (3) amendment of by-law 55 which lays down rather rigidly the manner of fixing tendering differences, (4) damage to the quality of the crop—particularly of the Jarilla cotton which forms the basis of the Contract—and (5) reduction in the size of the crop."

Obviously Government, it would seem, did not take all these factors into consideration and were merely guided by one imaginary factor, namely, undue speculation. It is significant that Sir Purshotamdas did not deny option dealings; at the same time, pointed out that, in the circumstances that prevailed, it was possible to exaggerate the influence of this factor and also that it was difficult for any one, including the EICA Board, to stop option deals altogether in the absence of a method of securing reliable proof of such business. The authorities, however, seem to believe that the Board can stop dealings in option, but the very fact that such transactions have continued, despite the knowledge that options are illegal and also despite the warning of the EICA authorities from time to time, should be an eye-opener to them.

It is difficult, as the EICA chief remarked, to understand the anxiety of the Government to intervene when the price of the Indian Cotton Contract was still over Rs. 100 below the ceiling price fixed by Government themselves. There was no need for them to apprehend—granting that there was excessive speculation and option dealings—that the cotton price would pierce the ceiling. For there are definite provisions in the by-laws of the EICA as Sir Purshotamdas reminded the authorities, which make possibilities of the Contract reaching even a level near the ceiling a most difficult event. Thus, the by-laws provide that, when the price of ICC reaches the marginal line, i.e., when it falls either below Rs. 25, above the floor price (Rs. 540) or rises above Rs. 25, below the ceiling price (Rs. 815), members are required to deposit with the Clearing House on their outstanding sales or purchases an amount calculated at Rs. 70 per candy. This amount, it should be noted, has to remain with the Association without interest until the last day of the delivery period of the Contract. The EICA authorities were, therefore, well within their rules and also fully justified in refusing to get panicky as Government did and to take action with a view to preventing prices from rising above Rs. 700 as Government wanted.

There is yet another point which exposes the undue alarm raised by the Government in regard to this matter:

It relates to the level of prices in the spot cotton market. As Sir Purshotamdas stated, when the spot price of the basic cotton is over Rs. 800, i.e., Rs. 65 above the ruling rate of the Contract, and prices in the primary markets also are ruling still higher, it cannot certainly be contended that the ICC, at Rs. 737, is ruling so high as to go out of hands, as Government thought. Even with regard to Government's facts, the EICC Chief quoted figures which go to show that Government's action in the matter ill fits with actual facts and figures.

Finally, there are two specific counts on which Government's decision in regard to this matter must be considered as untenable. In the first place, after having fixed a ceiling of Rs. 840, it was unwise on the part of the authorities to have intervened and suspended trading when the ICC touched only Rs. 737, i.e. Rs. 103 below the ceiling. This only means that Government have one official level for outward purposes which may be described as, say, a "notional ceiling," and another which, to all intents and purposes is the "effective ceiling." Secondly, Government action in this particular instance carries with it the risk of setting a bad precedent of interference in the normal working of the market which is likely to lead to uncertainties in the trade and to impair public confidence in the working of the forward market.

A PROGRESSIVE IMPORT POLICY

THE IMPORT policy for January-June 1956 which was announced last week-end accords with the expectations of trade and industry. If it cannot claim any striking departure from the policy in force in the recent past, its emphasis on industrial imports cannot be missed. The current import period's budget provides for Rs. 360 crores—an excess of Rs. 40 crores above the provision for the first half of 1955—while a saving of Rs. 35 crores is available in food imports. The bulk of this volume of foreign exchange, of the order of Rs. 75 crores will be available mainly for imports of plant and machinery, whose share in total imports has been steadily rising in the last two years. Imports of raw materials required mostly by industry are likewise rising and the new policy takes cognizance of their higher claim. Small-scale industries which are now facing up to a new situation of greater responsibility have been amply safeguarded and, in proved cases where their output justifies such a course, restrictions have been imposed on corresponding imports. Imported materials or equipment required by them are allotted higher quotas.

A word of appreciation is certainly due to the licensing policy which has provided for greater accommodation to industry, large as well as small-scale, without making drastic inroads on the requirements of consumer or non-essential goods. For the present no austerity in the standards of their consumption is contemplated. The hard currency position poses no difficulties and it is because of this aspect that certain licences for soft currency imports will be validated for hard currency areas. The extent to which this facility will be used depends upon the price factor. The extension of the basic period to include the year 1954-55 in respect of 135 items is recognized as a further measure of liberalisation. The one plank of import policy which has invited critical attention is the extension of the system of bulk import and distribution through nominated channels to three new items, caustic soda, sodium carbonate and raw rubber.

BANK EMPLOYEES' AGITATION

THERE CANNOT be an iota of doubt that the recent agitation started by a large section of bank employees in

Now!

The McGraw-Hill AMERICAN LETTER

Presents a New Indian Airmail Edition!

Now, you can have the new Indian Edition of the McGraw-Hill AMERICAN LETTER—one of the world's foremost business news services—airmailed to you from New York every second Friday.

Every fortnight it can tell you of new opportunities for selling your products in world markets—of new sources of supply for the commodities you buy abroad—of credit and monetary trends that can affect your business, and you. Also, in every issue you will find brief descriptions of new product and special reports issued by U.S. financial and industrial organizations—reprints of which are available free to subscribers.

Subscription price is only Rs. 156/12/0 per year. For further information, or to have a staff representative call, write to:

McGraw-Hill PUBLISHING COMPANY,

Colaba, Bombay-5.

the form of token strikes and demonstrations against the implementation of certain provisions of the Industrial Disputes (Banking Companies) Decision Act, 1955, is illegal. But apart from its patent illegality, the action in which bank employees have taken the licence to indulge shows complete lack of any sense of responsibility. The history of this unfortunate and long-drawn-out dispute does not need to be recalled, but it needs to be emphasized that no industrial dispute has received such sympathetic, patient and most careful consideration since independence as this dispute.

The agitation becomes still more indefensible in the context of the liberal attitude adopted by the Indian Banks Association and the Exchange Banks' Association, in full concurrence with the State Bank of India, in giving liberal and modified application to the provisions of the Act affecting employees' emoluments. Briefly the modification are that certain concessions will be allowed to employees in the matter of deductions, on account of previous payments of dearness allowance and increments, from the temporary adjustable allowance; arrears of emoluments will be paid in one lump sum instead of in three instalments and no recovery will be made of excess payments made by way of dearness allowance during the period July to November 1955. This gesture of goodwill has been inspired by a desire to show accommodation for co-operation and it deserves to be reciprocated without any mental reservations.

It is to be trusted that even at this stage, when the agitation has been allowed to take an ugly form in certain areas, employees from the remaining areas will desist from taking part in it and will pay heed to the Prime Minister's appeal in this behalf even if rather belatedly. As he has forcefully pointed out, the most disturbing aspect of the action of bank employees in this situation is that it strikes at the root of the system of adjudication in industrial disputes. It rests wholly in their hands to avoid totally unwarranted consequences which are likely to cause hardship.

HINDUSTHAN CO-OPERATIVE'S NEW PEAK

AN OUTSTANDING feature of the working of the Hindusthan Co-operative Insurance Society during the calendar year 1954 was the fresh peak which it achieved in new business of the order of Rs. 30.44 crores. It represents a remarkable excess over the previous year's all-time high of Rs. 18.89 crores. A significant factor which should enter into the assessment of this achievement is the fact that Hindusthan Co-operative was among the few insurers which refused to enter the mad race for rate-cutting. Consequently, its record level of 1954 shows genuine new business written and not an inflated volume due essentially to conversion operations. The life insurance fund at the end of 1954 stood at Rs. 25.19 crores—an increase of Rs. 2.73 crores above 1953. The renewal expense ratio showed an improvement from 14.56 per cent to 14.36 per cent in a difficult period for the industry. The investment portfolio shows investment in government and approved securities at a ratio of 69.90 per cent. Unrestricted investments are carefully spread over the conventional heads.

Dr. N. N. Law's presidential speech at the last annual general meeting of the company makes an interesting point about the ground prepared, after a period of costly and intensive salesmanship, for the spread of the insurance habit in the non-urban areas. The recession in agricultural prices during this particular year presented certain handicaps for the business to which should be added the deterioration in the over-all unemployment situation. These particular handicaps apart, it is encouraging to know that insurance is taking root where it is badly needed but was not assiduously sown. On a long-range view, insurance like all other industries and businesses has reason to feel confident about its future in a planned expansion of the economy. So, the demoralising effect of oft-repeated threats of nationalisation cannot be ignored and the insurance

industry is surely entitled to an unequivocal statement of policy from the Government disclaiming a course which is sure to result in a set-back to progress.

THE NATIONAL CARBON CO. (INDIA) LTD.

THE NATIONAL CARBON COMPANY (INDIA) LTD., which was converted into a public company on 23rd December, 1955, has come out with an offer of new issue of shares. The objects of this issue are to throw open the door for participation of Indian capital and to provide additional capital for expanding the company's business. The authorised share capital of the company is Rs. 2,50,00,000 divided into 25,00,000 shares of Rs. 10 each, while the issued, subscribed and paid-up capital is Rs. 1,60,00,000 divided into 16,00,000 ordinary shares of Rs. 10 each. There are no debentures or loan capital in any other form.

The present issue consists of 4,00,000 ordinary shares of Rs. 10 each fully paid at Rs. 19 As. 8 per share payable in full on application. An offer for sale in respect of 4,00,000 ordinary shares of the company of Rs. 10 each at Rs. 19 As. 8 per share was made by the company's principal shareholder, Union Carbide and Carbon Corporation, on the day of the issue of the prospectus. An important condition governing applications for shares is that they must be for 50 shares, or for multiples of 50 shares, on the official form. Production of high quality alloy zinc strip, flashlight cases as well as chemicals and plastic raw materials are included in the expansion projects. The outlook for the company's business and all other essential particulars, including financial features are set out with clarity in the prospectus of the company, which appears elsewhere in this issue.

EXCISE DUTY ON RAYON

THE REVISED scales of excise duty on the art silk industry have been severely criticised by Mr. D. N. Shroff, Chairman of the Silk and Art Silk Mills' Association, Bombay. The new scales of duty are on a loom shift basis, viz., Rs. 22-8 per loom per month for the first shift, Rs. 15 for the second shift and Rs. 11-4 for the third shift. Till December 31, 1955, a compounded levy at the rate of Rs. 22-8 per loom per month with the exemption of the first 24 looms of all units, was in force. It may be remembered that, when the excise duty on art silk fabrics was first introduced last time, the Association had protested to the Government and the duty was later reduced from 1½ annas to ½ anna per square yard and a cess of 3 pies making a total duty of 9 pies per square yard.

It is feared that the new impost will induce several units to reduce to one shift and thus adversely affect production. Besides, the revised rates would give rise to a curious situation in which art silk units having only 24 looms would not pay any duty, while those having even 25 looms would have to pay a heavy duty. This virtually amounts to penalising those who are trying to run more shifts and increase output, in that the units having a few looms more than the stipulated 24 face unfair competition from mills having 24 looms or less.

It is estimated that the total incidence of the impost on member-mills of the Silk and Art Silk Mills' Association (with 80 per cent of the total active loomage of the industry) would be about Rs. 54 lakhs, which represents an increase of as much as 76 per cent over the amount paid in 1955! The rayon industry's profits have been comparatively low, and whereas it made a loss of 1.42 per cent on the capital employed in 1953, profits in 1954 were only 1.16 per cent. It is felt that the working of the industry in 1955 cannot be much better, as prices of art silk have moved down by five to ten per cent against an increase of seven to eight per cent in the prices of art yarn. In the present circumstances, it is unlikely that the production target of 350 million yards can be attained against the present output of 240 million yards.

COMPANY AFFAIRS

THE DELHI CLOTH AND GENERAL MILLS CO., LTD. DELHI

The Profit and Loss Account of the Company for the year ending June 30, 1955, shows that the profits for the year after providing for taxation, depreciation, etc., amount to Rs. 76,41,278, which, with the balance of Rs. 1,69,241 brought forward from the preceding year makes a total of Rs. 78,10,519. It is proposed that a sum of Rs. 10,00,000 be transferred to Debenture Redemption Fund, leaving a balance of Rs. 68,10,519. It is recommended that this sum of Rs. 68,10,519 be disposed of as under:

Dividend on Ordinary shares of the face value of Rs. 25 each @ Rs. 2-4 per share, free of Income-tax	Rs. 30,45,260
Proportionate Dividend on Ordinary Shares of the face value of Rs. 2-8 each, free of Income-tax	9,050
Dividend on 1st and 2nd Cumulative Preference Shares of the face value of Rs. 25 each at 4½ per cent free of Income-tax	90,000
Dividend on 3rd Cumulative Preference Shares of the face value of Rs. 25 each @ 4 per cent free of Income-tax	76,450
Dividend provision on 4th Cumulative Preference Shares of the face value of Rs. 25 each (Rs. 10 paid) @ 5 per cent free of Income-tax	7,000
Reserve for Renewals	35,00,000
Balance to be carried forward	82,759

The proposals for augmenting the resources of the Company to meet capital expenditure, approved in the last meeting, have been given effect to as under:

- The Debentures for Rs. 1 crore bearing interest @ 5½ per cent, repayable between 1962/66 were issued.
- The balance of uncalled capital of Rs. 15 per share on 1,50,000, Third Cumulative Preference Shares, the rate of Dividend on which has been increased from 2½ per cent to 4 per cent as from 1-7-1954, was called up.
- 1,20,000 Fourth Cumulative Preference Shares bearing dividend at 5 per cent were issued during the year. These shares have been fully subscribed and allotted, except a small number of shares which are reserved for allotment to Pakistan Nationals who have applied for them and in respect whereof application has been made to the Reserve Bank of India for permission to allot the shares.

In the Swatantra Bharat Mills, unfortunately, there was labour unrest, and there was no working for over a month. The working of Daurala and Mawana Sugar Factories was quite satisfactory. Efforts are being made to improve and modernise both the factories. The crushing capacity of Mawana has been increased from 1,000 to 1,400 tons of cane per day. The working of the Distillery was quite satisfactory, but the position of Confectionery continued to be unsatisfactory. Chemi-

cal Works continue to work satisfactorily. The capacity of the Caustic Soda Plant is being increased from 11 tons per day and it is now proposed to increase the Sulphuric Acid Plant capacity from 20 to 50 tons per day. The work of Vanaspati has been very erratic. Very often the prices of Vanaspati are much below the cost of production, and it has unfortunately no relation with the prices of raw material. Sometimes there is a small margin. The Tent Factory's working was normal. The Garment Factory has been shifted to the Industrial Area and Modern machinery has been installed. The working, however, is still unsatisfactory. The Hissar Textile Mills started production from October 24, 1955. For the present, it has only Spinning Plant. Efforts are, however, being made to start weaving, provided sanction of the Government is available. The Silk Plant has been installed in the Industrial Area, Delhi, and will go into production shortly.

THE PREMIER AUTOMOBILES LTD.

The working of the Premier Automobiles Ltd., during the year ended June 30, 1955, has resulted in a profit of Rs. 27,31,274 after providing Rs. 30,00,000 for depreciation. After deducting last year's debit balance of Rs. 13,44,485 and providing Rs. 8,00,072 for deferred taxation and sundry expenses, there is a credit balance of Rs. 5,86,717 which Directors recommend to be carried forward.

It may be recalled that the manufacture of engine and transmission for Chrysler group vehicles was started last year itself. This year the Company has taken on manufacture of transmission, chassis frames and cross members. Production of engine for heavier petrol trucks and cars has been progressing satisfactorily so that these engines are no longer imported from the U.S.A. During the short period of 12 months, thus, it is noteworthy that much progress in the manufacture of components as per programme has been made, and further manufacture of additional components has also been taken in hand.

Since Fiat 1,100 cars have gained considerable popularity, orders for machinery and equipment required for the manufacture of Fiat engines are being placed and their manufacture is expected to begin in 1956. For buying additional machinery for the manufacture of Fiat cars, negotiations are in progress with the Industrial Finance Corporation of India for a further loan of Rs. 50,00,000 against the security of issue of debentures and mortgage of the fixed assets of the Company.

During the year under review the Chairman of the Company and the General Manager visited the U.S.A. for negotiating an agreement with Messrs. Rockwell Spring and Axle Co. for the manufacture of tinker axles in India for motor vehicles. Consequently manufacture of these axles too will start next year.

The summarised balance-sheet of the Company for 1954-55 is given below. (All figures are in lakhs of rupees).

Capital and Liabilities					Property and Assets				
Capital	Borrowings and Deposits	Reserves	Other Liabilities	Profit and Loss A/c	Total	Fixed Capital	Stores and Stocks	Debt, Advances Etc.	Other Balances
217.02	249.96	135.74	482.31	5.87	690.90	287.33	292.85	109.82	0.88

COMMODITY NEWS AND NOTES

REVIEW OF INTERNATIONAL SUGAR PACT

The International Sugar Council which concluded its meetings in London last month has decided to ask the United Nations to call a conference in 1956 to review the existing International Sugar Agreement. It is understood that one object of the review is to permit examination of the possibility of extending the membership of the pact. The Sugar Council also considered an estimate of free market sugar requirements for next year. The estimate, prepared by the Council's Statistical Committee, puts free-market requirements at 4,520,000 metric tons. Ceylon is shown as requiring 140,000 metric tons and Pakistan 125,000 metric tons. Besides estimating requirements, the International Sugar Council gave an estimate of the amount of sugar likely to be available from non-participating countries. The Council decided on a 10 per cent cut in basic export tonnages and fixed initial export quotas for next year at a total of 3,996 metric tons.

INCREASE IN WORLD OIL PRODUCTION

World oil production reached a new high level of 785 million metric tons (including national gasoline) in 1955. This represented an increase of 76 million tons, or over ten per cent on last year's output of 709 million tons. The U.S.A. remained by far the largest producer, with an estimated 357 million tons, (338 million in 1954) and second was again Venezuela—the world's leading oil exporter—with production estimated at 111 million tons, against 99 million tons last year. Third came the Soviet Union according to official Russian estimates. Russia produced 70 million tons this year against 54 million in 1954—an increase of over 20 per cent, attributed to rapid developments in the Volga-Ural region. Middle East Countries together supplied about 162 million tons. Within this area, the leading producers were Kuwait, with 55 million, Saudi Arabia with just under 47 million, Iraq with nearly 34 million and Iran with 16 million. Canada led Commonwealth producers with 17 million tons. Next came British Borneo, with nearly 5½ million and Trinidad with 3½ million.

REDUCTION IN TEA EXPORT DUTY

The Government of India have issued a notification fixing the price of tea, for the purpose of determining the export duty, at Rs. 3-1-5 per lb. as against Rs. 3-4-5 per lb. in force from December 1, 1955. The export duty at this price will be annas 6 per lb. as against annas eight in force hitherto.

COMPULSORY GRADING OF LEMON GRASS OIL

A new scheme for compulsory grading and marking of lemon grass oil, according to Agmark grades, will come into operation with the New Year. The specifications notified in the provisions of the Agricultural Produce (Grading and Marking) Act, 1937, have been evolved in Consultation with the Indian Standards Institution for trade interests in India and abroad. Exports of lemon grass oil will henceforward be allowed from India only under the Agmark grading certificate issued by the Essential Oils Grading Laboratory. A laboratory for testing samples of lemon grass oil and other essential oils for grading has been set up and has started functioning in the Wharf area of Cochin Port. The specific mention in the grading certificate of the percentage of citral, which is an essential constituent of the oil, will ensure better prices for the superior grade of lemon grass oil.

COTTON FUTURES BAN

The Government of India last week directed the East India Cotton Association, Bombay, to suspend its business in Indian Cotton Contracts for a further period of seven days, ending on January 6, according to a Press Note of the Ministry of Commerce and Industry.

An earlier notification, issued on December 23, asking the Association to suspend business expired on 30th December. The Press note said the Government had under consideration measures to be taken to arrest the deterioration in the Cotton Market. In the meantime, it had decided to direct the Association to suspend its business for a further period of seven days.

FINAL POTATO ESTIMATE

The All-India Final estimate of potatoes for 1954-55 puts the area and production at 665,900 acres and 1,762,000 tons, as against the partially revised estimate of 635,000 acres and 1,924,000 tons for 1953-54. This shows an increase of 4.7 per cent in area and a decrease of 8.4 per cent in production over 1953-54. The increase in area has been shared by all the States except Madras, Mysore and Himachal Pradesh and has been attributed to favourable climatic conditions at the sowing time. Despite increase in area, production has recorded considerable decline. The decline in production has been mostly accounted for by decreases recorded in Bihar and West Bengal due to unfavourable weather conditions during the growing period of the crops.

U.S. COTTON STANDARDS

The U.S. Agriculture Department announced recently that it was proposing "slight changes" in the official cotton standards for the length of staple of upland United States Cotton. The primary purpose of the proposed amendment of regulations governing official Cotton standards for length of staple is to delete the staple length designations "below 1" and "1" and make the shortest staple length designations for normal cotton "below 13/16", according to an announcement of the Department. It is also proposed to change the official staple for upland cotton in the lengths of 1-9/32", 1-11/32" and 1½" from physical to descriptive standards. The production of upland cotton in these lengths in 1954 was insignificant. Physical standards for the lengths 1-5/16" and 1½" and descriptive standards longer than 1½" will be adequate for classification.

PRODUCTION OF TEA

The following statement would show the tea crops of major producing areas:

Month	1955	1954
	(In million lbs.)	
North India November	62.2	52.0
South India October	14.2	13.1
Pakistan October	8.2	7.9
Ceylon October	34.0	24.9
Indonesia September	7.3	9.2
North India April-November	518	502
South India January-October	110	108
Pakistan April-October	41	46
Ceylon January-October	319	301
Indonesia January-September	71	76

RUBBER OUTPUT IN MALAYA

Due to heavy rains, particularly in South Johor, rubber production in the Federation of Malaya in November, 1955, was 51,917 tons, a drop of 5 per cent, on October. Despite this fall, production during the first eleven months of this year is running at 8 per cent higher than the corresponding period of last year. From January to November 571,318 tons were produced as compared with 528,514 tons over 11 months of 1954, and 583,036 tons for the whole of that year. As a result of the incentive of a higher price this is biggest output since 1950. November's crop was the seventh lowest month this year with estates dropping 1.7 per cent to 30,174 tons and small holders falling 8.8 per cent to 21,743 tons.

RESERVE BANK OF INDIA

Applications are invited for the following posts in the various

Departments of the Reserve Bank of India:

A Posts and Scales of Pay:

- 1) Research Officer, Department of Research and Statistics.)
Rs. 375-55-815 E.B. 55-925-60-1045.
- 2) Assistant Accountant, Department of Banking Development.)
Rs. 250-25-450 E.B. 25-650.
- 3) Rural Credit Officers, Agricultural Credit Department.)
Rs. 175-12½-300 E.B. 20-440.
- 4) Probationary Assistants, Department of Banking Development/Agricultural Credit Department.)
Rs. 175-12½-300 E.B. 20-440.
- 5) Economic Assistants.)

Note: Candidates possessing exceptionally good qualifications and experience may be given a higher starting salary in the prescribed scales.

B Additions to pay:

- (1) Local Pay: 10 per cent of pay with a minimum of Rs. 10 per mensem rounded up to next higher complete rupee to the staff working at Bombay, Calcutta, Madras, Delhi, Kanpur and Ahmedabad.
- (2) House Rent Allowance: Research Officer, As-) 15 per cent of pay with a minimum of Rs. 60 and a Rural Credit Officers) maximum of Rs. 300 per mensem.

Probationary Assistants) 10 per cent of pay with a maximum of Rs. 50 per mensem.

Economic Assistants 10 per cent of pay with a maximum of Rs. 20 per mensem for pay up to Rs. 400 per mensem and thereafter at Rs. 25 per mensem for pay up to Rs. 500 while stationed in Bombay or Calcutta.

- (3) Dearness Allowance: At prescribed rates. Research Officer, As-) The present rate is 16-2/3 per cent of pay with a Rural Credit Officers.) maximum of Rs. 125 p.m.

Probationary Assistants Rs. 65 per mensem for pay (including local pay) up to Rs. 300 per mensem.

Economic Assistants Rs. 50 per mensem for pay (including local pay) up to Rs. 200 per mensem.

(The rate of Dearness Allowance is subject to revision from time to time).

C Age limit as on 1st January, 1956:

Research Officer, As-) Candidates should not be over 30 years of age.
Assistant Accountant,)
Rural Credit Officers.)

Probationary Assistants Candidates should not ordinarily be over 24 years of age except in regard to the posts of Probationary Assistants in Legal Division where the age limit would be extended up to 30 years.

Economic Assistants Candidates should not ordinarily be over 24 years of age.

The maximum age limit may be extended but not beyond 30 years, in the case of

- (i) candidates with approved war service,
- (ii) ex-employees of Banking Institutions whose services have had to be terminated for reasons of economy or as consequence of the closure of unremunerative branches or as a result of the Banks going into liquidation,
- (iii) personnel retrenched from Government offices after at least one year's service, applying through the Employment Exchange and
- (iv) candidates belonging to the Scheduled Castes or Scheduled Tribes.

D Qualifications:

- 1) Research Officer, Department of Research and Statistics.

First or high second class Master's degree in Economics of an Indian University, or first or high second class degree in Economics of a foreign University, or a Doctorate degree in Economics of an Indian or Foreign University and specialisation and research in Agricultural Economics.

- 2) Assistant Accountant, Department of Banking Development.

Applicants should possess a first or high second class M.A. in Economics or M. Com. degree of a recognised University. In addition, the candidate should

possess adequate experience of one or more aspects of Industrial Finance or, be a Chartered or Incorporated Accountant with experience of accountancy and audit in a firm of standing and repute.

3) Rural Credit Officers, Agricultural Credit Department.

Applicants should possess very high academic qualifications of Indian or Foreign Universities, (preferably post-graduate) in Economics, Sociology or other Social Sciences, and possess degrees which are either first class or high second class. Special study or knowledge of rural economics or rural sociology will be an additional qualification; so also will be the experience gained in a responsible position in a Co-operative Department or in a Co-operative Institution.

4 Probationary Assistants, Agricultural Credit Department and Department of Banking Development.

Applicants should possess a first or high second class Master's degree of an Indian or Foreign University in Economics, Sociology or other Social Sciences or in Commerce. Special study or knowledge of rural economics or rural sociology will be an additional qualification; so also will be the experience gained in a responsible position in a Co-operative Department or in a Co-operative Institution. Proficiency in drafting notes, memoranda, reports etc. is expected.

5) Probationary Assistants, Legal Division.

Applicants should be advocates or Solicitors and should possess in addition to high academic qualifications in Law, practical experience of work in an advocate's or Solicitor's office or have practised independently, for at least 5 years. Preference will be given to candidates having M.L. or LL.M. or other equivalent qualifications and special knowledge of banking and company law and to candidates who have passed the advocates' (O.S.) examination held by the Bombay High Court or the Solicitors' examination held by the Calcutta High Court or by the Bombay Incorporated Law Society.

6) Economic Assistants:

Applicants should possess a high second class Master's degree or a first class Bachelor's degree in Economics or Commerce of Indian or Foreign University and have practical experience in the Co-operative Department of any State in India or abroad or in a Co-operative Institution of standing. Specialised study in Rural Sociology will be an additional qualification. Graduates who have passed out of any of the Training centres organised by the Central Committee for Co-operative Training or those run by State Governments may also apply.

The Board will insist on a very high standard of suitability in making selections for the above posts and only candidates who possess good academic qualifications and adequate experience of the type specified are advised to apply.

Candidates who wish to apply for more than one category of posts must submit separate applications accompanied by separate application fees.

The selected candidates for the posts of Research Officer, Assistant Accountant, Rural Credit Officers and Probationary Assistants will ordinarily be on probation for a period of 3 years which may be reduced or extended at the Bank's discretion. Candidates selected for the

posts of Economic Assistants will be on probation for a period of one year. Candidates selected for the posts in Department of Research and Statistics, Department of Banking Development and Legal Division will ordinarily be stationed in Bombay but those selected for the posts in the Agricultural Credit Department must be prepared to serve in any office of the Bank in India and to undertake tours when required.

Applications should be in a special form to be obtained from any office of the Reserve Bank. All the applications should be accompanied by copies of two testimonials (originals should not be sent; the Bank does NOT accept responsibility for returning the originals if sent through oversight) and forwarded to the Secretary, Central Recruitment Board, Reserve Bank of India, Central Office, Post Box No. 406, Bombay No. 1, so as to reach him on or before 31st January, 1956. Candidates already in service must submit their applications through their employers. Candidates belonging to Scheduled Castes or Scheduled Tribes should mention this fact prominently on their applications.

Applicants for all the above posts except Economic Assistants must remit application fees of Rs. 7-8 per application by Postal Order, Cheque or Bank Draft on a Scheduled Bank payable at Bombay along with the application. Candidates for the posts of Economic Assistants must remit an application fee of Rs. 2 in a similar manner. The application fee is in no case refundable. Bonafide refugee candidates who are not in employment applying through any of the Government Employment Exchanges are exempted from payment of application fees while in the case of Scheduled Castes/Scheduled Tribes candidates the fee will be reduced to 1th.

Appointments will be subject to candidates being found medically fit for service in the Bank. If any candidate desires to have his application acknowledged he should enclose a stamped self-addressed envelope or a post-card. Apart from those who may be specially called, interviews will not be granted to candidates nor will the Bank enter into any correspondence with them.

Canvassing in any form will be regarded a disqualification.

Company Meeting

INDIA STEAMSHIP COMPANY, LIMITED

SIR A. RAMASWAMI MUDALIAR ON FLEET EXPANSION PROGRAMME

Addressing the annual general meeting of the shareholders of India Steamship Co., Ltd. held in Calcutta on December 20, 1955, the Chairman of the Company, Sir A. Ramaswami Mudaliar, K.C.S.I., D.C.L. (Oxon), said:—

Gentlemen,

The Audited Accounts and Directors' Report for the period ending March 31, 1955, has been in your possession for some time. With your permission I shall take them as read.

TRADING EXPERIENCE

The Directors' Report shows that the freight earned during the year is Rs. 4,01,00,132-3-4 about Rs. 41 lakhs more than the freight of the previous year, but this is counter-balanced by increased port charges, stevedoring charges, transshipment charges and other expenditure. The time taken in the turn-round of ships materially affected the profit which the Company could have made. During the year the average time taken for a round voyage was 16 days more than in the previous year, the economic consequences of which do not require detailed explanation.

Despite these adverse factors your Company made a profit of about Rs. 24 lakhs before providing for depreciation. The year under review has been an even more anxious and disturbing year than the last and it required all the care and ingenuity of the various departments of the Company and of our Agents abroad to obtain this result.

DELAY IN PORTS

I referred in my last Speech to the serious delays that occurred in some of the Indian Ports owing to resort to a 'go-slow' movement by a section of the Dock workers. The situation deteriorated further during the year, Calcutta being the worst affected and Bombay being not far behind. While the position in India was creating anxiety, a disastrous strike took place in London and in some of the other main British Ports like Liverpool, lasting over six weeks which further accentuated the situation. The Indian situation was to some extent due either to the desire of some of the leaders of labour unions to find employment for as much pool labour at a port as possible by spreading out their work or to shortage of labour. The British situation on the other hand had no justification either because wages and conditions of service were not satisfactory or because of want of employment. It was purely a result of a dispute between rival unions for which neither stevedores nor Shipowners were responsible nor had they any means of controlling or settling the disputes. The British Shipping Journal-Fairplay,

remarked in its issue of November 10, 1955, "an important factor if not the cardinal factor influencing the present crisis in a long series of post-war economic ups and downs is the number of dock strikes—the worst of which occurred a year ago—that has marred the national scene.... The Position generally with the rival Dock Union is that certain of the extremist members would repeatedly paralyse the nation's ports if they could. To make the public fully aware of the true extent of such irresponsible action employers generally should not hesitate to present the hard facts and thus reveal trouble-making elements in their true colours".

These comments could be applied in exactly the same words to the situation in India.

REMEDIAL MEASURES

The Dock Labour situation towards the end of the year under review became so serious that a proposal to levy a surcharge in the ports of Bombay and Calcutta was put forward by the Conference Lines. The Government of India, had, however, realised the situation, a little earlier and had appointed a Committee called the Vasist Committee to examine the whole question and propose remedies to restore normal conditions at Indian Ports. I was invited by the Government to be a member of this Committee and, therefore, had opportunities of studying the situation in all its aspects. The Vasist Committee submitted its report to the Government and I understand practically all the recommendations of this Committee have been accepted. The most important of these recommendations are that special powers should be given to the Chairmen of the Dock Labour Boards on the lines of the emergency powers that have recently been given to the Chairman of the Calcutta Port Trust. The second recommendation which is even more important is that the piece-rate system should be introduced in connection with work of stevedore labour and consequentially of port labour also. These two reforms have now been realised by those responsible at the highest level, the Transport Minister and the Labour Minister, to be essential and I trust that they will be put into effect before the end of the year. I should like to take this opportunity of complimenting the Chairman of the Dock Labour Enquiry Committee—Mr. S. S. Vasist, for the thoroughness with which he conducted the enquiry, for his patience and sense of fairness. It will now be for the Chairmen of the Dock Labour Boards to carry out their responsibilities firmly, fairly and equitably without being thwarted in their work either by the

intransigence of certain sections of labour or by any unreasonable attitude which stevedores may take in connection with reasonable amenities required by labour.

LABOUR AND EMPLOYERS

In the memoranda and in the evidence before the Vasisst Committee Shipowners have abundantly emphasised that they are willing to co-operate with the authorities in satisfying any legitimate and reasonable requests which labour may put forward. They have pointed out that ultimately the financial burden will fall on Shipowners. The loss that they sustain by the slow-turn-round of ships due to 'go-slow' movements or strikes often unauthorised or by mere absenteeism at some ports is out of all proportion. While they are, therefore, willing to meet the reasonable suggestions made on behalf of labour they must have some certainty that the response must be adequately forthcoming and that there must be a realisation that the interest of the country will suffer if work at ports is seriously affected. The second Five-Year Plan that the Government is contemplating, the expansion of Indian Shipping tonnage which Government is anxious to promote and the public eager to see, the industrialisation of the country which is the basis for that larger employment which is envisaged will all prove illusory, unless better relations prevail between the employer and the employees. It must be frankly stated that while the employer feels that he is bound to carry out the suggestions of Government or of labour tribunals or of conciliators, there is no such feeling amongst certain sections of labour that these decisions should be loyally accepted and carried out. The right kind of leadership, of labour is the most urgent need of the hour and I trust that with a Minister of Labour so well aware of labour conditions, it will be possible to instal such right leadership everywhere.

PROSPECTS

I referred last year to the fact that two ships had been ordered and would shortly be on the India-U.K. Continent Trade. One of the ships was delivered in January this year and the other in February and both the ships are plying on the regular Conference routes. Two more ships of the same class are under construction and it is expected that one of them will be delivered in February 1956 and the other by May or June. These four ships of 10,000 tons dead-weight with a proved trial speed of over 20 knots will add considerably to the shipping resources of your Company and I trust will improve the freight results substantially. In spite of the adverse affects on trading results due to factors to which I have referred above, the financial position of the Company remains healthy. Your Directors are, therefore, contemplating the further addition of ships to your fleet at the rate of at least one ship every year during the next five years, so that by 1960 if not earlier, we may reach the goal of 18 ships. I trust that we shall be able to maintain this programme and to make your Company a pre-eminent Indian Shipping Company in the overseas trade. The substantial assistance which the Government of India is giving by way of loan has been of considerable help both in planning this programme and in realising it by stages. The Directors have kept the financial commitments closely under review and are optimistic enough to feel that these commitments can be met without undue difficulty.

CONFERENCE MEMBERSHIP

I need not refer to the hardy annual which has formed a feature of my annual speeches—membership of your Line in various Conferences from ports on the route between India, the U.K. and the Continent. We have attempted time and again to get a reasonable settlement of this question but so far we have failed to

get any results from several of these Conferences. I feel that the time has now come when with due regard to our convenience and interest we must make our entry into these routes, irrespective of whether members of such Conferences desire it or not.

FIVE-YEAR PLAN

In the second Five-Year Plan provision will be made for the expansion of Indian shipping. This will mean not simply the mere increase of tonnage on existing routes but the successful operation on different routes across the wide seas which Indian shipping has not so far been able to do. While trade from India is world wide and products from India reach the far corners of the earth and while similarly India imports from different regions her requirements, Indian Tonnage at present is confined only to certain routes; a vast area for shipping enterprise by Indian ships is thus left uncovered. It is only natural that both the general public, the Indian commercial community and the Government should find ways and means by which some of the routes can be covered by Indian Shipping. There are Conferences in which Indian Shipping is not represented and as a consequence the Indian point of view goes unnoticed. I trust that the second Five-Year Plan will make adequate provisions to bring about a better balanced position for Indian Shipping in the world picture of shipping. The various Indian Shipping companies have put forward proposals for expansion of their tonnage and while I am glad to note that even the reduced figure that is reported to be available under the second Five-Year Plan will meet all the suggestions of the existing Indian shipping companies, I trust that the target will be so revised as to make it possible for greater effort being made in this direction.

FLAG DISCRIMINATION

I have repeatedly referred to the charge of 'flag-discrimination' which shipping companies with strong vested interests, which have come into existence owing to the practice of extreme forms of flag discrimination, undiluted and uncontrolled, in the past, are now making in an attitude of self righteousness and accusing Governments anxious to promote the nascent shipping industry of their countries. At the last session of the International Chamber of Commerce held at Tokyo in May of this year, this question was again raised and my esteemed colleague Sir Bijoy Prasad Singh Roy made a very carefully reasoned and firm speech on what really constitutes flag discrimination. He pointed out that India in any case was scrupulously abiding by all the well-known rules against flag discrimination and that nations which are accusing India were not equally as scrupulous. In spite of this the vested interests have seen to it that such unreal allegations continue to be made. I feel that it is high time that we ignore these statements and I would suggest that the Indian delegates even if they attend such Conference, do not take part in these futile and meaningless debates and discussions.

TRIBUTE

I would like to emphasise the tribute that has been paid by your Directors to the Minister, Shri Lal Bahadur Shastri, the Deputy Minister, the Secretary and the officers of the Secretariat for the sustained interest that has been shown in the development and expansion of Indian Shipping. I would also like to thank the Minister of Labour who has courageously pointed out the path of duty to labour in general and to Dock Labour in particular and I trust that in implementing various suggestions and recommendations the same courage and firmness will continue to be evinced so that National interest may be safeguarded and the Nations' progress assured. The Director-General of Shipping and the Deputy Director-General and other

officers have shown keen solicitude towards Indian shipping and have by their advice and encouragement greatly assisted your Company.

I would like to take this opportunity of thanking the shippers for patronising our vessels both here and overseas. I have already mentioned the very difficult and anxious time that we have had and the frustrations that we have suffered in keeping the regularity of our shipping service and the promptitude of despatch of our vessels and I would like to express my thanks to the shippers who have generally realised our difficulties and have shown forbearance.

Lastly, I would like to emphasise again the fact

that your Company has been well served by all its officers both ashore and afloat. Some of these officers have had extremely difficult and anxious times and have had very onerous responsibilities thrown on them owing to the irregularity in voyages occasioned by the factors already referred to.

On behalf of the Directors I wish to convey our thanks to the Executive and Supervisory staff and to all the employees of the Company both ashore and afloat for their good and enthusiastic work.

I shall be glad to answer any question which the Shareholders may wish to ask regarding the accounts.

Company Meeting

The Delhi Cloth & General Mills Co., Ltd. Delhi

Sir Shri Ram's Speech

Speaking to the share-holders of the Delhi Cloth and General Mills Co., Ltd., at their Annual General Meeting held on 29-12-1955. Sir Shri Ram, Chairman of the Company stated that the profits for the year 1954-55 were comparable to some of the best years in the financial history of the Company. In keeping with their progressive policies the Company had carried out large programmes of modernisation and expansion, such as the new Textile Mill at Hissar, already gone into production, the Silk Mill, which would soon start working, and expansion of Caustic Soda and Sulphuric Acid Plants. Proceedings he said:

The foremost among important events during the year was the publication of the tentative frame work of the second Plan which will come into operation in a few months from now. The discussions have not yet reached a stage of finality but the broad contours of a Plan bigger and bolder than the first Five-Year Plan are fairly clear, and this is as it should be. It is proposed to step up the tempo of economic development in such a manner that the national income in 1960-61, the last year of the second Plan, will be 25 per cent higher than it is in the current year, which is the last year of the first Plan period.

The Plan Frame, as you all know, is an extensive document dealing with numerous industries. But speaking to the share-holders of the Delhi Cloth and General Mills, I will confine my remarks to the industries in which we are directly interested.

I am happy to note that in the case of sugar the target has been kept quite high, and fortunately unlike Textiles, no curbs on output or expansion are proposed for the benefit of the Khandsari Cottage Industry.

In the case of Chemicals and Vanaspati, likewise, adequate scope is being afforded for growth and progress.

I am, however, sorry to say that in the matter of cotton textiles, there are very strong differences of opinion not only as regards the targets of the second Five-Year Plan but also regarding the means of production. In offering my views on cotton textiles, I am deeply conscious of the urge to solve the problem of unemployment, which is regarded as the main inspiration for these suggestions.

There is a set of people—politicians and others who strongly believe that the requirements of cloth will increase be only 28 per cent, and they calculate it on the basis of 18 yards, per person as against the 15 yards consumed at present. There are others who equally strongly and honestly believe that the consumption of cloth, which is the next most important item of consumption next of cereals, could not be less than 22 yards per person. Personally I believe that definitely 18 yards is too low a figure. I place below the percentage of increase in production which Government themselves have set as the target for a few other commodities of common use:

Sugar	..	50%
Vanaspati	..	33%
Paper	..	43%
Bicycles	..	100%
Soap	..	43%

While there cannot, of course, be a uniform increase for all industries, the percentage of increase provided for textiles, which, on the basis of 18 yards per capita consumption, comes to only 28 per cent, contrasts with the higher percentages listed above, for items most of which are less important than cloth or cereals.

Even if 22 yards is considered to be a very generous figure—and I am confident that with the increasing purchasing power which Planned development should put into the hands of people, it is not a generous figure at all—even then at least 20 yards will not be too high a figure and will certainly be required.

The next and more important difference between the two schools of thought is with regard to the means

of increased production. There is a school who honestly and strongly believe that all the extra cloth required could be produced by hand-loom workers. On the other hand, there are others who equally and strongly believe that even if 18 yards be the target, leave alone 20 yards 22 yards per capita, the hand-loom workers will not be able to produce the required quantity.

I believe that neither those who believe that hand-loom could produce, nor those who believe that hand-loom could not produce as could be absolutely certain in their belief and definitely say that they are right. I, therefore, humbly suggest that a complete ban should not be placed on the increase in production of cloth by big scale industry. If at any time it is found that the hand-loom are producing what is required by the country in enough quantities the restriction can be brought on the mill industry at that stage. Even in the Five-Year Plan, there could be no absolute rigidity, and as our Prime Minister has rightly expressed more than once, our approach has to be dynamic, changes may have to be made from time to time even after the Five-Year Plan has been accepted. And, in any case, we will have many more Five-Year Plans—all with the object of raising the standard of living—which will mean that not merely 18 yards, or 20 yards, or even 22 yards, but perhaps we would like our people to use 30 yards per capita or even more. This mid course will, on the one hand, not stand in the way of all the help and subsidy that is proposed to be given to the cottage industry, and on the other hand, avoid the grave risk of heavy shortages, leading to controls and black-marketing.

There is a feeling among certain people that in case of shortages, whether of yarn or of cloth, certain mills, which are not running 2nd or 3rd shift, could be asked to do so and thus save the situation.

May I, with whatever experience I have had during the last 50 years, say that there is a very big number of mills where the machinery is in such a bad state of repair, and so old and inefficient, that it would not be possible to increase the shifts, except, perhaps, in a mill or two here and there. In fact, if these had been in a position to run extra shifts, they certainly could have done so even now when the margin of profit is certainly above the average.

There is a still more controversial and serious matter where there are even stronger differences than in the matter of cloth, and that is about increasing the spinning capacity of the mills or depending upon the Ambar Charkha. I am giving a few figures as regards the extra labour cost in the case of Ambar Charkha, and this has been taken from a recent number of the A.-I.C.C. Economic Review:

I No. of man-hours required to produce 100 lbs. of 20s yarn		
On Amber Charkha	By Mills	
2,000 man-hours	35.84 man-hours	
II Ratio of man-hours required for a given output: 1 : 55.56		
III Cost of Production per pound of 20s yarn		
	Mill	Ambar Charkha
1. Raw Material	224 pies	224 pies
2. Wage Cost	30 pies	480 pies
3. Stores, Power and Light, Depreciation and Overheads	35 pies	17.5 pies
Cost per pound	289 pies	721.5 pies

It is all too easy, in considering a matter of this kind, to make little of the problem of quality and cost of production, and I am, therefore, taking the liberty of

quoting two paragraphs on this point from the University Education Commission's Report:

"For Government to try to manufacture and to distribute this vast variety of goods (i.e. consumer goods in general) on a non-competitive basis would result in a lack of technical progress. Such goods as a rule can best be supplied by the free play of private enterprise and initiative, with the public in effect voting on the need and worth of each article by buying or not buying."

"When the manufacture of a new product is considered, there is a final test of its practical worth which is equal to the decision of the public to buy or not to buy. If a new article is faulty or its cost too great, there is no greater incentive to its improvement than the desire of the manufacturer to make it acceptable to the buying public. To that end he will carry on research and try to improve this product, and to lower cost and prices."

Apart from these general effects, it has also to be remembered that these inevitable increases in prices, arising from higher cost production, must affect seriously many whose incomes will not and cannot expand in proportion to the rise in prices.

Even, however, if all the claims made for the Ambar Charkha are proved to be correct, to be able to produce so many 'charkhas'—25 lakhs or so—to induce so many people to take it up and organise the whole thing, will probably be not achieved, in spite of all the good wishes of its protagonists, even in the whole period of the second Five-Year Plan.

While in the case of shortage of cloth, it will be the consumer alone and not the mills that will suffer, in the case of shortage of yarn even those hand-loom weavers whom it is intended to help, will suffer. And if my fear of the Ambar Charkha not being able to produce sufficient quantity of yarn in time comes true, then even those who believe that the hand-loom could produce all the cloth required, will find that, on the one hand, the increase in the mill production was banned, on the other, the hand-loom people, without the yarn, will not be able to produce, and there will be heavy shortage of cloth as a whole in the country with most deplorable results.

There is one other point, which I must mention, that the Finance Minister believes that deficit financing to the extent of 1,200 crores of rupees will be necessary to carry out the Plan. In the past, there has been deficit financing, but of a much smaller magnitude, and this has gone on without producing any evil effects, for the very simple reason that agricultural and industrial production had increased, if anything, at a faster rate, and it was due to this increase in agricultural and industrial production that there was no inflation.

With deficit financing of much bigger dimensions, it is absolutely necessary that we should not only not do anything by which production may be restricted but take all such steps as may be possible to increase production, so that inflation may be avoided.

There is yet another matter which is equally important and that is of earning extra foreign exchange to the tune of 800 crores of rupees. The commodities, which can earn exchange, are well-known. I do not think that the production or export of tea can be increased by a stroke of the pen. It will mainly be jute goods, cotton textiles, engineering goods and certain raw materials that will earn, and I am almost certain that the export of cotton textiles could certainly increase by something like 50 per cent given certain conditions. I may as well say that exports can only

be possible on commodity for which there is a good home market.

I would, therefore, again in all earnestness appeal to all those concerned that the increase in spindles and looms should not be completely banned but permitted in restricted numbers, and at any time, when it is found, even after a year, two years, or three years, that Ambar Charkha and the handlooms have come up to the expectations and demands, immediate steps could then be taken to stop further expansion of spindles and/or looms. What with the difficulties of Planning, Finance, obtainment of machines and so on, the possible increase in spindles and looms by the mill industry even without a ban during the waiting period could only be limited and hardly such as to impair the prospects of expansion in other sectors. What I fervently urge is that the matter should be approached with an open mind by all concerned and not in a dogmatic spirit.

We industrialists are a much-maligned lot as some debates in Parliament during this year have shown. But I do wish to point out that most of us, at any rate, are not lesser patriots. Indian industrial enterprise has served the country well. Its achievements during the first Plan period are a testimony won in spite of numerous handicaps. And I am confident that given reasonable opportunity and a co-operative administrative

environment, it can deliver the goods in the second Plan. Let us have the tools, and we will do the job.

The need for greater participation on the part of labour in the management of industrial enterprises has been in the air for some time now. I think, in terms of providing a wide range of opportunities for participation in management functions, production committees and works committees are likely to be more useful for a long time to come. Due to many reasons works and production committees have not yet been made a success. As employers, we share a part of the blame, as much as the employees must. But I am confident that given the goodwill and co-operation, our works and production committees can be transformed from mere grievance platforms into vital, living institutions which can provide a multipoint contact, at an easily assimilable level, for a large number of the workers. To my mind, this constitutes a more desirable channel, from the point of view of its value as education in management, into which the urge for greater participation in management can at this stage be most usefully directed.

Before I conclude, ladies and gentlemen, I have great pleasure in putting on record my appreciation of the efforts of all my colleagues, big and small, and I convey to them our thanks for the same."

Company Meeting

Address by DR. NARENDRA NATH LAW, M.A., P.R.S., Ph.D., CHAIRMAN OF THE BOARD OF DIRECTORS,

Hindusthan Co-operative Insurance Society, Ltd.

At the 48th Ordinary Annual General Meeting held
on 21st December, 1955

Before passing on to the details of the Society's working in 1954, I would like to say a few words about the economic and financial background against which we have had to work and are also working now. By the end of 1954, the fourth year of the first Five-Year Plan, the effects of the increased expenditure on private and public sectors were becoming somewhat noticeable. It was a matter for satisfaction indeed that both industrial and agricultural production continued to rise—the extent of the increase being about 40 per cent in the industrial sphere and 20 per cent in the agricultural sphere. An atmosphere of general well-being was at last being created. We profited by the same as reflected in our increased new business figures. And, indeed, we would have done better but for two rather adverse factors. The recession in agricultural prices hit the farmers hard and, as such, this class, which is now fast becoming insurance-minded, could not be tapped as effectively as otherwise would have been possible. Secondly, the unemployment position continued to be as bad as ever and, as a matter of fact, it is likely to be worse at the end of the first Plan period as has been admitted even by Sri C. D. Deshmukh, our Finance Minister, in a recent assessment of the achievements of the first Five-Year Plan. This coupled with the continuing high cost of living considerably crippled what otherwise promised to be a rapidly expanding field for catering by the life insurers.

Though the general economic background was thus not as satisfactory as we had expected the same to be, the prospects for future growth of the business would appear to be quite reassuring in view of the targets of achievements set before the country under the second Five-Year Plan. Under quite adverse working conditions in the past, Indian insurance was eminently successful in bringing the message of life insurance to the nooks and corners of our vast country. Carrying the benefits to the interiors, where means of conveyance, road facilities and other amenities were much too meagre, Indian insurers had naturally to incur rather high organisation expenses. The time is now coming when we shall be able to reap the benefits of our past endeavours, and it would indeed be a pity if the insurance business were prevented from doing so at this juncture because of Government policy. I can say without hesitation that the rumour of nationalizing the insurance industry, which is spreading far and wide, is acting as a damper to private enterprise. While State ownership of industries may be one of the fundamentals of a welfare State, I must say that insurance, which has just emerged out of its swaddling-clothes, is least fitted for nationalization in this country. The prompt and efficient service that is essential for the development of insurance business cannot be expected from State-controlled organizations in the same measure as private insurers offer under competitive conditions to

their prospective policyholders. It is truly said that State enterprise sells security but cannot sell security and service together. Nationalization of the insurance industry will on the one hand fail to serve any national interest and on the other it will prove to be a positive hindrance to the promotion and expansion of the industry in India. Government should, therefore, consider the issue with a more objective outlook and leave the industry to grow to its full stature by healthy competition as a private enterprise under which it has made such a remarkable progress so far.

NEW BUSINESS: I am extremely happy to be able to say that during 1954 the Society has written a completed new business to the tune of Rs. 30.44 crores as against Rs. 18.89 crores in 1953, which marked a record increase of over Rs. 11.55 crores over the corresponding figure of the previous year. An increase of business of this magnitude is without a precedent in the annals of the Society and we can justly feel very proud of it. The results are all the more gratifying in view of the fact that we did not participate in the rate-cutting war which was indulged in by some insurers at the beginning of the last year, and that our line of action was just as upheld by the decision of the Executive Committee of the Life Insurance Council, which forced these companies to withdraw those rates and introduce more sound and rational rates.

TOTAL INCOME: The total premium income during the year under review in respect of the life insurance business amounted to Rs. 4,87,85,598 which shows an increase of Rs. 53,54,873 over 1953 figure. Income from interest, dividend and rents, including profits on sale of landed properties, amounted to Rs. 78,35,279. The rate of interest, dividends and rents, etc., during the year worked out at 3.32 per cent after deduction of income-tax at source as against 3.69 per cent of the previous year. The difference is mainly due to the fact that while in 1953 we received the refund of income-tax for 3 years up to 1952, we received nothing in 1954 on this account. If the income-tax refund for 1953 were available in 1954, the net rate of interest for the year of account would have worked out at 3.54 per cent.

LIFE FUND AND INVESTMENT: The Life Assurance fund at the end of the year amounted to Rs. 25,19,15,721 recording an increase of Rs. 2,72,70,891 over that of 1953. The major heads of investment of the fund were:

	Rs	a. p.
I. Government & Approved Securities	13,95,70,310-0-0	
II. Debentures, Stock & Shares	3,22,75,958-0-0	
III. Loans to Policyholders	2,05,53,209-0-0	
IV. Mortgages	2,81,33,358-0-0	
V. Land & House	2,67,11,083-0-0	

Government and Approved Securities represent 59.90 per cent of the total adjusted liabilities.

CLAIMS: During the year under review claims on maturity, inclusive of bonus, amounted to Rs. 87,05,917, and by death, inclusive of bonus, to Rs. 35,63,361 as against Rs. 71,13,328 and Rs. 31,88,843 respectively in 1953. The percentage of death claim to the total premium income worked out at 7.53 per cent as against 7.34 per cent of 1953.

EXPENSES: The renewal expense ratio in respect of the Society's business in India, calculated on the basis of Rule 17D of Insurance Rules worked out at 14.38 per cent as against 14.58 per cent of the year pre-

vious. The renewal expense ratio has thus been steadily coming down since the past two years. To break the stalemate in new business, which had set in the Society's business till about the middle of 1953, we had naturally to expand our organization and, as is well known, the benefits of such expansion take a little time to fructify in insurance. Further, owing to the reduction of premium rates which was quite substantial under certain tables, the yield of new premium income was proportionately lower. Judged in the light of these handicaps, the expense position may be considered as quite satisfactory and this also bears sufficient testimony to the efficient management of the Society's affairs.

SHAREHOLDERS' POSITION: The position of our Shareholders' Account is satisfactory and this year also the Dividend at a rate of 12½ per cent free of income-tax is being recommended for payment to the holders of all shares of the Society as on 31-12-1954.

CONCLUSION: Before I conclude, I must extend, on behalf of the Board, our very sincere thanks to our numerous policyholders and patrons for the generous support they have been lending the Society and, I hope, they would continue to extend their valued patronage in the years to come. I would also like to express our appreciation of the valuable services rendered by the Chief Officer, other Officers, Members of the Staff at the Head Office and Branches and Representatives of the Society.

**India's
Tea-
India's
Wealth**

EMPLOYMENT:
The tea gardens of India alone employ well over one million workers—thus our Tea Industry is the largest single employer of labour in India. Besides, with the tea trade it provides additional employment for a very large number of persons.

Company Meeting

THE MYSORE KIRLOSKAR LTD., HARIHAR.

14th ANNUAL GENERAL MEETING

The position of the order book in respect of orders on hand has been quite satisfactory. But this itself has posed a question before the Company, almost a challenge, to see if it can gear up its production to its maximum capacity. I am glad that the Management of the Company has been fully alive to this new situation", declared Shri K. Narayanaswamy, I.A.S., Chairman of the Company, in the 14th Annual General Meeting of the Shareholders.

The Chairman assured the shareholders that they could expect continued prosperity for their Company for the next few years also.

After referring to the additions to building and machinery etc. during the year he pointed out that the position of the Company had shown substantial improvement over the previous year and congratulated the Management, the members of the Staff and the

workmen and all others who shared in the efforts.

He also thanked the authorities of the Bombay Stock Exchange for admitting the fully paid ordinary shares of the Company to cash dealings in the Bombay Stock Exchange.

After referring to the difficulties in securing the raw materials like Pig Iron & Hard Coke in adequate quantities and the transport bottlenecks, he turned to the Labour situation and appealed to the workers that they should never forget that in its ultimate analysis it is the productivity of labour which would determine the wage level and they should not in their own interest do anything which would affect production adversely. He assured the workmen on behalf of the Management that the Company would continue to give the same kind and sympathetic consideration to the needs of the workmen as hitherto.

THE RAMAYANA OF TULSIDAS IN ENGLISH VERSE

LATEST "HINDUSTAN TIMES" PUBLICATION

The famous Hindi epic regarded by many as "the greatest book in all devotional literature" is for the first time now available in English verse.

The translator, the Rev. A. G. Atkins, completed the book after ten years of devoted work. He has tried "to keep and express in English in the fine rhythm and music of the original in simple lucid language, and with as much of the vivacity, wittiness and picturesqueness that Tulsidas has put into his work." He has also followed in some measure Tulsidas's metrical variations such as *chhand*, *chaupai*, *doha* and *soratha*.

In a foreword Mr C. Rajagopalachari says: "Mr Atkins' monumental work and his Introduction are a revelation of hope for those who desire to see all the great religions of mankind come together. His service is not only to English-speaking people but also to that very large number of Hindus in India who do not speak the Hindi language and to whom English has become a very familiar medium."

The book is of special value to libraries, scholars and devotees of Tulsidas.

It has been issued in the following four editions:

- I. Original text of Tulsidas with translation in English verse; three volumes; 1468 pages; price Rs. 50 net.
- II. Translation in English verse; without Hindi text, two volume; 898 pages; price Rs. 40 net.
- III. Special tissue paper edition of I, one volume, price Rs. 100 net.
- IV. Special tissue paper edition of II, one volume, price Rs. 100 net.

POSTAGE EXTRA

The Manager,

**THE HINDUSTAN TIMES,
NEW DELHI.**

The consent of the Government of India has been obtained to this Issue by an order a complete copy of which is available for public inspection at the Head Office of the Company. It must be distinctly understood that in giving this consent the Government of India do not take any responsibility for the financial soundness of any schemes or for the correctness of any of the statements made or opinions expressed with regard to them.

A licence (No. L 20555) has been obtained from the Central Government for effecting a substantial expansion to this industrial undertaking of which a copy is open to public inspection at Head Office of the Company. It must be distinctly understood that in granting this Licence the Government of India do not take any responsibility for the financial soundness of this undertaking or for the correctness of the statements made or opinions expressed in regard to it.

A copy of this Prospectus has been delivered to the Registrar of Joint Stock Companies, West Bengal for registration.

Application will be made to the Calcutta Stock Exchange for permission to deal in and for official quotation of the ordinary shares of the Company.

The subscription list will open on the eleventh day of January, 1956 and will close on the eighteenth day of January, 1956, or earlier, or later, at the discretion of the Directors.

NATIONAL CARBON COMPANY (INDIA) LIMITED.

(Incorporated on 20th June, 1934 under the Indian Companies Act, 1913.)

SHARE CAPITAL

Authorised

Rs. 2,50,00,000 divided into 25,00,000 Shares of Rs. 10 each.

Issued, Subscribed and Paid-up

Rs. 1,60,00,000 divided into 16,00,000 Ordinary Shares of Rs. 10 each.

LOAN CAPITAL

The Company has no debentures or other loan capital outstanding.

ISSUE

4,00,000 Ordinary Shares of Rs. 10 each fully paid at Rs. 19 As. 8 per Share payable in full on application.

The Company is advised that the Ordinary Shares now being offered for subscription are "Approved Investments" within Section 27A of the Insurance Act, 1938.

The shares now being issued will rank for any dividend declared in respect of the financial year commencing on 26th December, 1955, and all succeeding years and in all other respects pari passu with the ordinary shares of the Company already issued.

A second interim dividend, which in effect was a final dividend, of Rs. 20,00,000 free of income-tax amounting to Re. 1 As. 4 on each share of the issued share Capital of the Company, was declared and paid on December 1955, for the financial year ending December 25, 1955.

This dividend makes a total amount of Rs. 40,24,814 paid in respect of dividends for the Company's 1955 financial year, which is equivalent to over 20 per cent or more than Rs. 2 per share on a capital of Rs. 2,00,00,000 fully paid.

Applications must be for a minimum of 50 shares or for multiples of 50 shares.

PARTICULARS

HISTORY AND BUSINESS:

The Company was incorporated in Bengal as a Private Company in 1934. It acquired in June 1934 and has since carried on the business in India of the Ever-Ready Company (Great Britain), Limited, including the sole right to use in India the world famous "EVER-READY" Trade Mark as well as other well-known Trade Marks including "MINI-MAX", "LAYERBILT", "MASTER-LITE", "AIR CELL", etc.

The Company's predecessors commenced manufacturing dry cells and batteries for flashlights and radios in 1926 when the first plant was set up. From the beginning the manufacture of dry cells and batteries progressively passed from a purely assembly process of imported parts to a position where a majority of those parts are now produced by the Company in India.

Throughout its history the Company has shown a consistent and healthy growth. In 1935 the installed capacity of the production plant was approximately 15,00,000 cells per annum, with an area of 25,000 square feet being used for manufacturing and storage purposes. A new plant at Cossipore commenced operations in 1940 by which time production had doubled. In 1952 the Company increased its productive capacity by the installation of a modern factory in Madras; this installation, while showing a considerable saving in freight on finished batteries, also forms part of an overall plan of decentralization thus avoiding the possibility of complete disruption of the Company's business by civil disorder or natural calamity. Today the Company has a capacity of almost ten times that of 1935 and utilizes over 300,000 square feet of space for the manufacture of components and finished batteries.

In 1937 the Company's Sales Offices and Warehouses were located in Calcutta, Bombay and Madras. Today they are spread over Calcutta, Bombay, Madras, Delhi, Cochin, Vijayawada, Allahabad, Gondia, thus shortening the Company's lines of contact with its customers and thereby improving its service to them.

In keeping with its declared policy of manufacturing as many as possible of the component parts required in its operations, the Company installed in 1949 a manganese ore crushing and grinding mill with auxiliary air classifying and filter unit. The installation of this unit, the first of its kind in India, has enabled the Company to use basic raw materials direct from the mine in bulk for further processing in India thus eliminating costly packing and handling charges.

Ever watchful of its manufacturing costs, the Company has followed a steady plan of mechanization of its manufacturing processes. Soon after the end of the second World War a plan was adopted for the complete automation of its zinc can manufacturing department. The automation of this department, while reducing the labour component to approximately 10 per cent of its former strength, was so carefully integrated with the Company's other expansion plans that no lay-off of the labour force was necessary.

The dry cell for many of its components relies on small punched and formed metal and paper parts.

Prior to 1948 practically all of these were imported. Today in its well-equipped punch press shop a large volume of components is produced annually. This department has recently been supplemented with machinery for the production of multiple connection sockets for radio batteries, etc. For the maintenance and manufacture of the special high precision dies required in the punch press shop, the Company has set up a die department as a special adjunct to its machine shop. All the activities of this machine shop, in which is installed the most modern equipment, are supervised by experts with long experience in die making and machine shop operation.

The Company, in its efforts to keep up a high standard of quality, has always maintained laboratories for examination of raw materials, finished products and for research. In 1940 it installed the first air-conditioned constant temperature and humidity laboratory for dry cell testing in India and most of the specification data evolved from information collected in this laboratory and from the Company's overseas associates was made available to the INDIAN STANDARDS INSTITUTE for developing its dry cell and battery specifications. In 1950 this laboratory was considerably enlarged and fitted with complex and automatic testing equipment with accommodation for testing over 5,000 cells simultaneously.

In 1953 the Company introduced into India for the first time the large scale manufacture of a special design of flat cell which is assembled into batteries known by the trade mark "MINI-MAX". Because of its shape this cell lends itself readily to the requirements of the radio battery and hearing-aid trade and since its inception the business has grown to a point where it is a very important part of the Company's operations.

During the time the Company has done business in India it has always cultivated good relations with its employees and has been in the forefront of industry in India with a provident fund and credit society as well as many auxiliary activities such as sports, clubs, libraries, canteens, etc. The Company has maintained a policy of including Indian nationals within its management group as well as providing practical training with its overseas associates to Indian supervisory and technical staff.

The Company was converted into a Public Company on 23rd December, 1955.

OBJECTS OF ISSUE:

The objects of the present issue are to afford an opportunity for the participation of Indian capital, and to provide additional capital for the expansion of the Company's business. The Directors are satisfied that all the capital intended to be raised by means of subscriptions received in response to this Prospectus can be usefully employed.

Financial Information.

Auditors' Report:

The following is a copy of the report of the Company's Auditors, Messrs. Ford, Rhodes, Parks & Co. The Directors, Stephen House, Messrs. National Carbon Company Dalhousie Square, Calcutta-1. (India) Limited, 2nd December, 1955. 18A, Brabourne Road, CALCUTTA-1. Gentlemen,

We have examined the Accounts of National Carbon Company (India) Limited as audited by us for the two years and nine months ended 25th September, 1955, and report as follows:

I. PROFITS:

The Profits of the Company arrived at on the basis set out below were as follows:-

	Year Ended 25th December, 1953.	Year Ended 25th December, 1954.	Nine Months Ended 25th September, 1955.
	Rs.	Rs.	Rs.
Sales	3,88,75,052	3,70,00,797	3,30,98,331
Cost of Materials	2,06,21,848	1,75,83,524	1,78,81,264
Salaries & Wages	52,04,779	55,09,486	41,64,898
Expenses	44,52,967	47,92,171	39,85,177
Depreciation	5,50,788	7,15,585	5,69,056
	3,08,30,382	2,86,00,766	2,66,00,395
Net Profit before Taxation	80,44,670	84,00,031	64,97,936
	3,88,75,052	3,70,00,797	3,30,98,331
Net Profit before Taxation	80,44,670	84,00,031	64,97,936
Provision for Taxation	33,46,889	34,98,831	27,34,512
Net Profit after Taxation	46,97,781	49,01,170	37,63,424
Amount Capitalized, Bonus Shares issued			18,75,930

Excise Duty was imposed on 1st March, 1955 on Batteries manufactured in India. Cost of Materials for nine months ended 25th September, 1955 includes such Excise Duty amounting to Rs. 19,67,513.

II. DIVIDENDS:

The Dividends paid (free of income-tax) in respect of each of the two years and nine months to 25th September, 1955 were as follows:-

	1953	1954	1955	Interim Dividend (before increase in Capital.)
	30%	40%	20%	

III. NET ASSETS:

The Net Assets of the Company as at 25th September, 1955 based on the Audited Balance Sheet at that date were as follows:-

Goodwill (At Cost) 30,00,243

	Book Value at 25th September, 1955.	Depreciation to 25th September, 1955.	Net.
	Rs.	Rs.	Rs.

Fixed Capital Expenditure			
Land and Buildings	15,56,847	3,23,275	12,35,572
Plant & Machinery	70,28,203	28,15,445	42,17,758
Other Assets	17,85,359	8,84,576	9,00,783
	1,03,72,490	40,23,296	63,49,113

Current Assets:

Stocks and Stores at Cost	1,54,72,221
Sundry Debtors	23,08,745
Due by Associated Companies	5,87,794
Cash and Bank Balances	15,40,767
Other Current Assets	11,17,387
	2,10,26,914

Less Current Liabilities and Provisions

Due to Associated Companies	11,63,372
Sundry Creditors	13,61,524
Bank Overdraft	33,46,485
Provision for:	
Taxation	17,52,916
Expenses	3,43,335
Net Current Assets:	79,67,632
	1,30,59,282

Net Assets as at 25th September, 1955 2,24,08,638

A revaluation of the Company's Fixed Assets carried out on the instructions of the Board showed that the cost of replacement would amount to Rs. 79,80,869 compared with the corresponding book value at 26th December, 1952 of Rs. 64,65,164. By a resolution of the Board dated 9th August, 1952 it was decided to incorporate this increased valuation in the books of the Company, the excess of Rs. 15,15,505 being carried to a Capital Reserve Account.

IV. SHARE CAPITAL

The Share Capital of the Company was increased during the third quarter of 1955 by the issue of 4,00,000 Ordinary Shares of Rs. 10/- each, by way of fully paid Bonus Share. The issued Share Capital on 25th September, 1955 was:-

16,00,000 Ordinary Shares of Rs. 10/- each, fully paid Rs. 1,60,00,000.

V. ACCOUNTS:

No Audited Accounts have been made up in respect of any period since 25th September, 1955.

Yours faithfully,

FORD, RHODES, PARKS & CO.,

Chartered Accountants

NEW PROJECTS:

The Company is presently constructing a zinc rolling mill for the production of high quality zinc alloy strip which ultimately will eliminate the need to import zinc strip for the dry battery trade thus taking a further step in its programme of self-sufficiency. It is expected that this zinc mill will be operating during the first half of 1956. Of the total amount of capital intended to be raised by means of the proposed issue, it is estimated that Rs. 55 lacs will be required for the purpose of equipping and establishing this zinc rolling mill.

The major part of the Company's business up to the present has been concerned with manufacture and sale of dry cells and batteries and it relies on the importation and indigenous manufacture of appliances, radio sets, flashlights, torches, etc., which operate with, or are powered by dry batteries to maintain the demand for its battery products.

The supply of flashlights and torches, the major stimulants to dry battery sales, is almost wholly dependent on importation from abroad, and of course, on the foreign exchange that may be available to cover the

necessary import licences. The Company has, therefore, formulated plans for and is proceeding with the establishment of a fully equipped factory for the manufacture of flashlight cases and it is expected to commence production during 1957. It will be equipped with the latest machinery and will use of the newest techniques known for the production of high quality, economically priced flashlight cases. When completed the factory will be the most modern of its kind in Asia.

With the output from this factory the Company can expect to benefit not only from the extra volume of business from the new product itself but also from a large increase in the sale of flashlight cells which will be required to power the flashlight cases produced and also for the replacement cells.

In addition to its manufacturing activities, the Company has imported for a number of years many of the various chemicals, plastic raw material, and industrial products produced by its associates in the U.S.A. and elsewhere. These associates are recognized as leaders in the field of chemicals and plastic both from the quality and quantity view point. The sales volume of these products has grown to a point where the Company deems it proper to consider their manufacture in India and recent surveys on the market have indicated that certain of these chemicals and plastics can now be manufactured economically in India because of the existence of regular supplies of the raw materials required. Plans for a modern chemical plant are now nearing completion and it is hoped to go into production in 1958. It is intended that products from this plant should consist of Polyethylene, Ethylene dichloride, a chemical in great demand as a fumigant for foodgrains, and some industrial solvents. It is anticipated that the sale of these products will add considerably to the Company's earnings.

PROSPECTS:

The present total sales density of dry cells in India is equivalent to 0.40 cells per capita per annum which compares adversely with adjacent Asian countries where densities run over 1.00 cells per capita per annum. With the application of the present Five-Year Plan which envisages an all round improvement in the standard of living, there is no reason to believe that the Indian consumption of dry cells will not rise to match or go beyond this figure. Were the consumption of dry cells to increase to one cell per capita, it is not unreasonable to assume that a very substantial portion of this increase would be secured by the Company.

There is also another good reason for optimism which arises from the rapid increase in the demand for batteries for radio sets which has increased approximately four times in the last five years. This growth in demand for radio batteries is due in a major degree to the over-widening network of broadcasting stations presently erected and planned for the future by Government.

There is also another good reason for optimism which arises from the rapid increase in the demand for batteries for radio sets which has increased approximately four times in the last five years. This growth in demand for radio batteries is due in a major degree to the over-widening network of broadcasting stations presently erected and planned for the future by Government.

STATUTORY AND GENERAL INFORMATION

MISCELLANEOUS:

(a) **Revaluation:** The assets of the Company were revalued as at 26th December, 1952 and particulars of such revaluation are given below:

Original Value	Value on Revaluation	Surplus
Rs. 64,65,164	Rs. 79,80,889	Rs. 15,15,505

A reserve was created out of the total surplus arising on the aforesaid revaluation.

(b) Bonus Issues:

(i) The sum of Rs. 43,38,890 being a part of the balance standing to the credit of Profit and Loss Account as at 25th December, 1951, was capitalised and utilised for the purpose of paying up in full 4,33,889 shares of Rs. 10 each in the capital of the Company and these shares were allotted and issued on 23rd December, 1952 as fully paid up to Union Carbide and Carbon Corporation, a company incorporated in the United States of America.

(ii) The sum of Rs. 18,75,930 being a part of the balance standing to the credit of Profit and Loss Account as at the 25th December, 1954, was capitalised and utilised for the purpose of paying up in full 1,87,593 shares of Rs. 10 each in the capital of the Company and these

shares were allotted and issued on 24th September, 1955, as fully paid up to the said Union Carbide and Carbon Corporation.

(c) Cash Issue:

400,000 new shares of Rs. 10 each were allotted and issued to the said Union Carbide and Carbon Corporation at par on 2nd July, 1955 for cash.

(d) Minimum Subscription:

The minimum amount which in the opinion of the Directors is required to be provided in respect of each of the matters mentioned in Section 101(2) of the INDIAN COMPANIES ACT, 1913 is Rs. 30 lacs made up as follows:

(i) Cash Purchase Price of plant and machinery Rs. 33 lacs. (ii) Estimate expenses of this issue, Rs. 2,00,000. (iii) Repayment of monies borrowed in respect of the foregoing matters, Nil. (iv) Working Capital Rs. 4,00,000.

(e) Underwriting:

The shares now being issued have not been underwritten but the Company will pay brokerage as indicated below.

(f) Redeemable Preference Shares:

The Company has not issued and it does not at present intend to issue any redeemable Preference Shares.

(g) New Issues and Offer for Sale:

Save as mentioned above no shares or debentures have been issued or agreed to be issued within the two years preceding the date hereof. An offer for sale in respect of 4,00,000 shares of the Company of Rs. 10 each at Rs. 18 as 8 per share was issued by Union Carbide and Carbon Corporation, the principal shareholder in the Company on the same date as that upon which this Prospectus was issued.

(h) Payment of Commission:

No sums have been paid within the two years preceding the date hereof or are payable as commission for subscribing or agreeing to subscribe or procuring or agreeing to procure subscriptions for any share, in or debentures of the Company or as discount in respect of shares issued.

(i) Payment to Promoter:

No sum have been paid within the two years preceding the date hereof or is intended to be paid to any promoter.

(j) Licence:

The licence referred to at the commencement of this Prospectus has been granted in respect of the Zinc Mill Project. No licences are necessary for the flashlight case project, the manufacture of polyethylene and the manufacture of industrial solvents, for which projects, Government approval has been given.

DIRECTORS:

The Articles of the Company provide that the number of Directors shall not be less than three nor (unless otherwise determined by the Company in General Meeting and, if required by law, sanctioned by the Central Government) more than ten.

Unless otherwise determined by the Company in General Meeting a Director does not require any share qualification.

The Articles provide that each Director shall be paid out of his funds of the Company the remuneration for his services the sum of Rs. 500 for each meeting of the Directors attended by him or such other sum as may be determined by the Company in General Meeting and also that the Directors shall be entitled to be paid all travelling, hotel and other expenses, properly incurred in connection with the business of the Company.

The Articles also provide that the Directors may appoint a Managing Director, Joint Managing Director or Manager of the Company of such terms as to remuneration as the Directors shall deem fit.

A Director who is absent from or who is about to leave the District in which the Directors' Meetings are ordinarily held for a period of three months or more may appoint, with the consent of the Board of Directors, any person to be an alternate Director during his absence.

No sums have been or will be paid to any Director in cash or shares or otherwise to induce him to become a Director.

POWERS OF DIRECTORS

The Articles provide that the Company shall be managed by the Directors who may exercise all such powers of the Company as are not, by law or by the Articles, required to be exercised by the Company in General Meeting. The powers of the Directors are, however, subject to any regulations, not being inconsistent with the Articles or the law which may be made by the Company in General Meeting.

INTEREST OF DIRECTORS

Mr. J. R. Galloway is the Managing Director of the Company and receives remuneration for his services as such. Mr. Galloway is also a Director of Alipore Estates Ltd., of which this Company is a shareholder.

Mr. J. E. Potts, Mr. F. J. Drane, Mr. T. G. Lewis and Dr. D. P. Antia are employed by the Company, and receive remuneration accordingly.

Mr. R. V. Farrell and Mr. J. K. Grassle are shareholders each holding less than 1/100th of 1% of the issued capital of Union Carbide and Carbon Corporation the principal shareholders of this Company.

Mr. D. P. Dunderdale is a partner in the firm of Messrs. Sunderson & Morgans, Solicitors to the Company.

Save as above, no Director has any financial or other interest in any of the property proposed to be acquired by the Company.

INDEMNITY

Every Director, Managing Agent, Manager, or Officer of the Company or any person (whether an officer of the Company or not) employed by the Company as Auditor shall be indemnified out of the funds of the Company against all liability incurred by him as such Director, Managing Agent, Manager, Officer or Auditor in defending any proceedings, whether civil or criminal, in which judgment is given in his favour, or in which he is acquitted, or in connection with any application in which relief is granted to him by the Court.

MANAGEMENT:

The Management of the Company is vested in and exercised by the Directors. The Company has no Managing Agents.

BORROWING POWERS:

The Articles provide that the Directors may from time to time raise or borrow for the purposes of the Company and secure the payment of any sums of money not exceeding the aggregate of its paid up capital and free reserves for the time being.

VOTING POWERS:

Subject to any special conditions or restrictions as to voting upon which any shares may be issued or may for the time being be held, on a show of hands every member present in person and entitled to vote shall have one vote for every share held by him in respect of each share of which he is the holder. There are no special conditions or restrictions attaching to the present ordinary share capital of the Company.

RESTRICTIONS ON RIGHT TO TRANSFER AND

VOTE:

The Directors may decline to register a transfer of any partly paid shares to a person of whom they do not approve and may also decline to register a transfer of partly paid shares on which the Company has a lien.

No member shall, unless the Directors otherwise determine, be entitled to vote at any General Meeting, either personally or by proxy, or to exercise any privileges as a member unless all calls or other sums presently payable by him in respect of shares in the Company have been paid.

CONTRACTS:

No property has been purchased or acquired or is proposed to be purchased or acquired, which is to be paid for wholly or partly out of the proceeds of this issue, save under Contract No. 4 below and also save as to part of the property purchased or to be purchased under Contracts included in item No. 9 below.

The following contracts, not being contracts entered into in the ordinary course of business, which are or may be material have been entered into by the Company during the two years preceding the date hereof:—

(1) With Puri Brothers, Contractors, New Delhi, dated 29th July, 1954, for purchase of land and construction of a bungalow at New Delhi. (2) With N. N. Majumdar, dated 1st July 1955, for lease of a flat in Calcutta. (3) With Property Development Trust Ltd., dated 1st July, 1955, for lease of a flat in Calcutta. (4) With Mackintosh Burn Ltd., dated 5th March, 1955, for construction work in connection with the Zinc Mill at a cost of Rs. 5,80,671. (5) With Calcutta Electric

Supply Corporation Ltd., dated 3rd November, 1955, for extension of electric cables to the Zinc Mill site. (6) With General Electric Co., of India Ltd., dated 15th November, 1955, for electrical installation at the Zinc Mill. (7) With Commissioners for the Port of Calcutta, dated the 18th July, 1955, being a lease for 30 years with options of renewal of 10 years each, of the Zinc Mill site at Transport Depot Road, Calcutta. (8) With Mr. J. R. Galloway, dated December 19th, 1955, appointing him Managing Director of the Company. (9) With various parties and of various dates between the 1st January, 1956 and 15th December, 1955 and represented by 28 Purchase Orders for the supply of materials and equipment for the Company's present and planned projects. These contracts are for various amounts from Rs. 1/- to Rs. 16,60,000/- and the total amount of the material and equipment covered thereby comes to Rs. 40,00,000/- of which approximately Rs. 27,00,000/- will be provided by the proceeds of this issue.

DOCUMENTS:

Copies of the Memorandum and Articles of Association of the Company, the Consent Order of the Controller of Capital Issues, the Licence from the Central Government referred to at the beginning of this Prospectus, the Contracts referred to above and/or copies thereof and the original of the abovementioned Auditors' Report as set out herein can be inspected at any time while the subscription list is open during the usual business hours at the Registered Office of the Company.

A Copy of the Company's Memorandum of Association is printed in this Prospectus and forms part of it.

APPLICATION AND ALLOTMENT:

Applications for shares which must be for 50 shares, or multiples of 50 shares, must be made on the accompanying official form and will be refused, if not so made. The application form, together with a remittance for the full amount payable on application, must be sent to the Managing Broker, or Sub-brokers or a branch of the State Bank of India, in India, the remittance being made by cheque or draft which, if it is desired to avoid payment of bank charges, must be drawn either upon the branch of the State Bank of India to which the application form and cheque or draft are being sent, or upon a Bank situated in a town in which there is a branch of the State Bank of India. If drawn on a bank elsewhere the appropriate bank charges must be included in the remittance, otherwise the application will be refused.

Cheques or drafts should be made payable to the "State Bank of India Account National Carbon Company (India) Ltd. New Issue" and should for the applicant's protection be crossed "A/c Payee Only". A separate cheque or drafts must accompany each application form.

Allotment will be notified by the despatch of an Allotment Letter but the Company reserves the full uncontrolled right of accepting or rejecting any application in whole or in part. Where an application is rejected or not accepted in full the whole or any balance of the application money received will be refunded to the applicant, in which event bank's commission, if any, will be payable by the applicant.

Share Certificates will be available for issue in exchange for Letters of Allotment on and after March 31, 1956, and each applicant who is allotted more than 100 shares will receive Share Certificates in lots of 100 shares, and such smaller denominations as may be required to complete the total number of shares allotted except when the applicants request Share Certificates in larger denominations.

BROKERAGE:

Brokerage at the rate of 4 annas per ordinary share will be paid by the Company on allotments made in respect of applications bearing the stamp of a recognised stockbroker.

Copies of this Prospectus and forms of application may be obtained from the Managing Brokers and sub-brokers at the addresses given above and from the Bankers named above, at any of their branches in India.

Dated at Calcutta, December 27th, 1955.

KANKNARRAH COMPANY, LIMITED.

NOTICE is hereby given that an Extraordinary General Meeting of the members of the abovenamed Company will be held at the Registered Office, 4, Clive Row, Calcutta, on Friday the Twenty-seventh day of January, 1956, at 12-25 o'clock in the afternoon to consider and, if thought fit, to pass, with or without modification, the following Resolutions which will be proposed as Special Resolutions, namely:

1. That the Articles of Association of the Company be altered in manner following:

The following new Article 6A shall be added after Article 6:

"A. Subject to the provisions of these Articles, the Company shall have power to issue Preference Shares, carrying a right to redemption out of profits or out of the proceeds of a fresh issue of shares made for the purposes of such redemption or out of the sale proceeds of any property of the Company, or liable to be so redeemed at the option of the Company, and the Directors may, subject to the provisions of Section 105 of the Act, exercise such power in any manner they may think fit."

That the authorized Capital of the Company be increased from Rs. 70,00,000 to Rs. 95,60,000 by the creation of 25,000 Redeemable Cumulative Preference Shares of Rs. 100 each and that such Redeemable Cumulative Preference Shares shall confer on the holders thereof the rights and privileges set out in the Articles of Association of the Company.

That the Articles of Association of the Company be altered in manner following:

The first paragraph of Article 6, commencing with the words "The Capital of the Company" and ending with the words "... rights and privileges" shall be deleted and the following substituted therefor:—

"6. The capital of the Company is Rs. 95,60,000 divided into 30,000 Ordinary Shares of Rs. 100 each, 50,000 "B" Ordinary Shares of Rs. 100 each, 10,000 Preference Shares of Rs. 100 each and 15,600 Redeemable Preference Shares of Rs. 100 each with the following rights and privileges:—

(b) After Article 6(b) the following new sub-clause (c) shall be added:

"(c) The said Redeemable Preference Shares confer on the holders thereof the right to receive a fixed cumulative preferential dividend at the rate of 8 per cent per annum without deduction of Income-tax on the capital for the time being paid up thereon and the right in a winding up to payment off of capital and arrears of dividend whether declared or not up to the commencement of the winding up pari passu with the 10,000 Preference Shares of the Company and in priority to the Ordinary and "B" Ordinary Shares, but shall not confer any further right to participate in the profits or assets of the Company. The said Redeem-

able Preference Shares confer on the holders thereof no right to vote at General Meetings of the Company except:

(i) on any resolution placed before the Company at a General Meeting at the date of which the dividend due or any part thereof remains unpaid in respect of an aggregate period of not less than two years preceding the date of commencement of such meeting and for this purpose the dividend shall be deemed to be due half-yearly on the 31st day of March and the 30th day of September in each year in respect of the half-yearly periods ending on the preceding 31st day of December and 30th day of June respectively, whether or not such dividend has been declared by the Company; or

(ii) on any resolution placed before the Company which directly affects the rights attached to the Redeemable Preference Shares and for this purpose any resolution for winding up the Company or for the repayment or reduction of its share capital shall be deemed directly to affect the rights attached to such shares.

Where the holder of any Redeemable Preference Share has a right to vote on any resolution in accordance with the provisions of this Article his voting right on a poll as the holder of such share shall, subject to any statutory provision for the time being applicable, be in the same proportion as the capital paid up on the Redeemable Preference Share bears to the total paid up equity share capital, as defined in Section 85(2) of the Companies Act, 1955, of the Company for the time being.

The Company shall have the option to redeem the whole or any part of the said Redeemable Preference Shares at any time or times after the 30th day of June 1970 at a premium of five rupees per share on giving not less than three calendar months' previous notice in writing and such notice shall be sent by registered post or otherwise served as hereinafter provided specifying the date of redemption and in the case of partial redemption the number of shares to be redeemed, and the date of the drawing hereinafter referred to. The particular Redeemable Preference Shares to be redeemed shall be determined by means of a drawing all such drawings shall be conducted by the Directors in the presence of a Notary Public and also such of the holders of the said Redeemable Preference Shares who care to attend."

By Order of the Board,

JARDINE HENDERSON, LIMITED.

D. FORDWOOD,

Secretary,
Managing Agents.

4, Clive Row,

**I never realised
flying overnight
saves so much money!**

Time really is money to me. I can't afford to waste valuable working hours. That's why I chose IAC's night service. But I never realised how many other expenses it would save

Travel to and from the airport costs nothing! An IAC luxury coach takes you both ways — so comfortable, quick and convenient

Airport staff take charge of your luggage, put it on the plane, load it on the coach when you arrive — there's nothing to pay

During the journey you are IAC's guest. And what a fine breakfast they give you at the airport — no extra charge, of course

After breakfast, you step straight into your connecting plane. No overnight stops — so you spend nothing on accommodation!

Now fly overnight by luxurious 4-engined Skymasters

New luxurious Skymaster services connect Bombay, Delhi, Madras, Nagpur and Calcutta. Carefully scheduled to connect with 34 early morning flights from the 5 great cities. Skymaster service cuts out irritating overnight stops, saves all unnecessary expense on the way!

Indo-American Relations: Second Thoughts

PERHAPS one should expect little in order to be gloriously surprised. Recent clashes of opinion, both at Government and non-official levels, between India and the United States had led to what, in stock exchange language, might be called a bearish outlook on expectations on Indo-American relations. Certainly the recent correspondence on the Dulles-Cunha statement and the Prime Minister's tactless reference at Agra to Russian overtures on Kashmir and Goa

did not give ground for hope that there was likely to be any silver lining to a darkening cloud. Here, as on the eve of the Geneva Conference, commentators have reckoned without a somewhat strange even feminine, characteristic of President Eisenhower. The State of the Union message this year was one of those fortuitous utterances by which the President has tended from time to time to mark himself off from his Government. Not, indeed, that the State of the

Union message or the statement made through the Secretary of State on January 11 on the need of American opinion "to wake up to the necessity of countering the efforts of the Soviet Union to penetrate South and West Asia" are different radically from official utterances on the same theme. The difference is in the tone. India resents John Foster Dulles; India cannot, and does not, resent Dwight D. Eisenhower.

It is, perhaps, in this division between the two men, both of whom in a sense represent American foreign policy to the Indian mind, that there is to be found one great hope in the improvement of Indo-American relations. Unlike his stolid and unimaginative Secretary of State, the American President has the capacity to feel far outside the State Department and even touch by intangible bonds the warm heart of the American people. The State of the Union message to Congress, which contains a specific reference to East Asia, bears the stamp of the growth of the strength of critics of the State Department's India policy. It is fair to say that there are critics in the United States as great as in this country. That is the strength of the United States, but it is, or at least should be, a solid opportunity for Indian diplomacy. If indeed it is true that Indian policy is based on a determination to be friends with all countries--and however mistaken the manifestations of some of our policy, that is the truth--we cannot afford to neglect the strong current of public opinion which is reflected in the President's Address to Congress and his statement of January 11.

It might now be taken for granted that a determined effort is being made by a minority of intelligent and farsighted public men in the United States to improve the current of Indo-American relations which has taken a serious blow as a result of mistakes on both sides. One important feature of this awakening in the United States is the evolution of a plan of aid or loan finance which will carry us through major difficulties in the second Five-Year Plan. If the order of such finance were two hundred million dollars per year, it might be said that the United States would of itself have solved our major foreign exchange problem in the next five years. Even if the figure is not of this order, it is now fairly clear that the contribution would be large enough to make a substantial difference to the second Five-Year Plan. It is true the restoration of the cut of ten million dollars for this year announced by the American Ambassador, Mr. Sherman Cooper, before he left this week for Washington, was only a token gesture. But all enquiries show that it was a herald of much more understanding of Indian economic progress than has appeared in recent years. The economic tide has turned; the political tide is about to turn.

How should a country, bent, as is our own, on the development of friendly relations with all countries, react to the new turn in certain sections of American opinion? Obviously there has been developed in the last four or five weeks a new set of channels of communication which are sympathetic to, even if they fail to agree on, the principles of Indian foreign policy. It is obviously the duty of the External Affairs Ministry, if it really means what it says, to give encouragement and understanding to our friends in the United States who are trying under very difficult circumstances to right a record which has been

heavily smudged by many verbal and written mis-statements of Indian foreign policy as well as by unwise pronouncements for which both Governments must take their own responsibility.

The suggestion that the state of Indo-American relations is entirely the responsibility of the United States and is in no way either the responsibility or the obligation of the Indian Union is unworthy of a great nation which can have no room for arrogance of this kind. If, as has been argued in the Annual Number of *The Eastern Economist*, we have failed as badly in the United States as the United States has failed in India, surely this is the time in which some major correctives can be applied.

Consider, for example, the strange incident reported this week from Orissa. Speaking at Cuttack on January 9, Mr. Nityanand Kanungo, Minister for Industry, seems to have said: "India has rejected an offer of 10,000 tons of wheat from the U.S.A. for the flood victims of Orissa because the American agencies wanted to supervise its distribution". The very next day this was denied altogether in New Delhi. It transpired that the United States Government had made offers of 10,000 tons of wheat and 10,000 tons of rice for distribution in the flood-affected areas and both have been accepted. How comes it, first, that a Member of the Government--fortunately not of Cabinet rank--should not know the facts on these transactions and secondly, that, not knowing the facts he could allow himself the wildest misrepresentation of policy? Under ordinary circumstances, misrepresentations of this kind would be serious. With Indo-American relations in their present state, it is nearly criminal. Almost the only good thing that has resulted from this incident is that the Indian Government and the Indian Press have been quick to nail a lie to the mast.

The Indian Press can, perhaps, do more in this direction than it has done all along. It has relied too often on initiative coming from the External Affairs Ministry, whenever it is a question of redressing the balance in India's foreign policy in favour of the West, while being quicker than, and even ahead of, the Government in being critical of Western policies and methods. Generally, however, there has been no strong or one-sided bias towards either of the two blocs since there is little criticism of the Government's leanings either way in its foreign policy. If the Indian Press can by itself take the lead more often in correcting the excess of prejudices against Western policies, instead of appearing to wait for the cue from one of the Prime Minister's speeches, outside observers may have a better appreciation of the state of Indian opinion than they have had hitherto. By and large, Indian newspapers have not been uncritical in their acceptance of Soviet professions of friendship or the dramatic offers of economic aid. But it is still true that newspaper opinion is largely influenced by the political overtones of India's relations with the West and these, unhappily, have been lately coloured by the problems of colonialism. Until India's interests are assessed more in terms of economic advantage, this corrective may be slow in coming.

All that need here be said is that the opportunity for the initiation of friendly moves with the United States is clearer today than it was two, three or four weeks ago. This looks like the time for action. Has the External Affairs Ministry given any thought to the form that it should take?

Levellers at Work

THE Draft Memorandum of the second Five-Year Plan captured the headlines last week because of two important proposals made therein regarding the goal of the socialistic pattern of society. The first is a suggestion for an annual tax on the total wealth of individuals; the second is a suggestion for the fixation of ceilings on personal incomes, of Rs. 20,000 per annum on salaries and Rs. 30,000 a year on all incomes, both net of tax. A third and more well-known recommendation relates to ceilings on agricultural holdings; the difference in this last case is that it is an integral part of a positive redistributive scheme of providing land for the landless. The taxation of wealth and ceilings on income have been urged not so much for the resources that they can transfer as for creating the psychological climate of equality and for the prevention of conspicuous consumption which is said to militate against it. These proposals have caused some jitters already in areas where they can do no good.

As demands at political levels, by groups strongly influenced by doctrinaire socialism, these are quite understandable, if not quite agreeable or logical. They cannot be seriously put forward as purporting to be proposals made in furtherance of the objectives of the Plan. The acceptance of the socialistic pattern of society did not by itself cast an obligation on the Planning Commission to work out, *suo motu*, certain policies which even whole-hogging socialism has not accepted. Is the Planning Commission drawing up a meaningful plan of development, consistently with the social, political and economic objectives and policies broadly accepted by the country through its Constitution and Government or seeking to lay down the outlines of a political manifesto for the party professing the socialistic pattern?

The Planning Commission's role in such matters would require to be re-defined because the "suggestions" are not just innocuous exercises in raising issues. A body of the standing of the Commission should have been in a position to make an expert appraisal of these proposals in terms of their practicability and their consistency with other objectives. The annual tax on total wealth, for example, has been considered already by the Taxation Enquiry Commission, which also had before it the practice in other countries like Japan and the Netherlands. The Commission ruled it out on the ground that the property valuations needed for such a tax would place upon the revenue administration a burden which would be disproportionate to the results in terms of yields. Nothing has been found since to deny or doubt this conclusion.

The question of ceilings on salaries and incomes, which presumably was intended as the counterpart of the ceilings on land-holdings, stands on a different footing from the tax on wealth. It has been put forward plainly for the purpose of levelling down, in spite of its proved demerit as a hindrance to economic development. There is no need to deny that the world today has moved far in the direction of accepting that glaring inequalities in income distribution cannot provide the impulse to economic growth, because they cannot provide the climate for a growing volume of production and consumption of material goods which determine the rate of that growth. Nor can it be overlooked that there has been a com-

plete recognition, even by avowedly socialistic opinion, that incentives for work and savings for investment can be found only within the framework of a reasonable system of inequalities. What is 'reasonable' may vary with time and place and no conclusive tests of reasonableness can be discovered. But there can be no doubt that the actual ceilings proposed by the Planning Commission have not been arrived at after due consideration or with a full sense of responsibility. India is not by any means attempting a unique and unprecedented objective by riding two horses simultaneously and seeking economic development with equality. The experience gained elsewhere in such attempts is highly relevant in considering this question and there seems to have been no attempt to profit by such experience.

The most extreme example is that of the Soviet Union, where there is now less equality than any of the welfare states of the West, perhaps less even than some of the purely capitalist States. There was a candid recognition in Stalin's "Problems of Leninism" that at least until a very high level of productivity was reached, distribution would not be in accordance with needs but in accordance with the work performed for society. The ideal of equality in rewards was thus foregone, even in the totalitarian context where the risk of destruction of the voluntary savings of the community could be taken deliberately so long as the public sector could, by severe commodity taxation, create its own savings for investment at a high rate. The maximum rate of personal income tax in the Soviet Union is only 13 per cent of income on workers and salaried officials, 55 per cent on artists and professionals with private practice, and only 65 per cent even on the non-co-operative groups. India, with a large agricultural sector outside the tax net, cannot claim similar competence to substitute in the public sector all the savings of the community. But even if it can, the conditions which compelled even Communism to accept inequalities to provide a system of incentives, cannot become inapplicable here.

Obviously considerations which apply to absentee landlordism or to the functionless rentier in imposing agricultural ceilings, cannot apply to the industrial and business sectors where the exercise of initiative is continuous, and depends only on the opportunities available for rewards. Nor can a ceiling on all private incomes be regarded merely as a counterpart of the ceiling on salaries considered desirable for the official sector. The official with his security of tenure, public status, and a highly circumscribed area of responsibility is quite different from the entrepreneur or industrial executive and manager who has to show skill, initiative, a willingness to undertake high responsibility and qualities of risk-bearing. The two cannot be placed on a par, nor, if placed, enforced uniformly effectively. Such ceilings can neither provide for the occupational differentials nor for the mobility needed to attract numbers to skilled or unattractive occupations. It is not anybody's case that all these purposes can be achieved through a totalitarian mobilisation or disposition of personnel, or that our goal is an all-embracing public sector which has little use for incentives of any kind. In the circumstances, these suggestions which may be good ballot-box socialism, appear to be highly unworthy of emanating from the Planning Commission.

The Revised Railway Plan

THE revised version of the plan for the development of railways can hardly fail to raise genuine doubts about the capacity of transport to meet other components of the second Plan. When the Railway Ministry submitted its plan a few weeks ago to the Planning Commission, some measure of pruning was considered inevitable in the interest of adjustment of competing claims for limited resources, particularly because the railways themselves are unable to contribute anything more than twenty per cent of the estimated outlay out of their own funds. But it was certainly not anticipated that their demand would be subjected to a drastic cut. The total investment in railway expansion which was placed at the conservative figure of Rs. 1,480 crores by the Ministry has now been slashed to Rs. 1,125 crores. The significant fact about this reduction of Rs. 355 crores is that it cuts into vital parts of the plan.

It is disconcerting that the pruning operation should have been carried into strategic items of the development programme. Rolling stock, line capacity works, track renewal and, next in the order of priority, construction of new lines are the major sufferers. The magnitude of overaged stock, still continued in service, was a compelling reason for maintaining the original allocation undisturbed and the progressive pressure of traffic during the next Plan period clearly dictated the urgency of augmenting the capacity of the track. All these priorities are implicit in the estimate of the increase especially in freight traffic. This increase has been assumed to be of the order of 51 per cent from 120 million tons to 181 million tons. The assumption takes into account the spectacular rise in three basic industries—coal, steel and cement—and rests on the anticipation of an increase of 5 per cent per year in the general category of freight. The anticipation about the probable volume of general freight is surely open to question; it is obviously an underestimate in the light of the stress that has been put on the development of industry in both sectors. In broad terms, the specific requirements of coal, steel and cement industries are believed to create between them an extra volume of 43 million tons, leaving a margin of 18 million tons for increase in all other traffic.

The net effect of the application of the axe to development expenditure on basic items is greatly to reduce the carrying capacity of the railways in both the sectors—freight as well as passenger. A reduction of 50 per cent has now been made in the provision for additional volume of passenger train miles, involving probably a larger measure of overcrowding. This need not be grudged and it is easy to reconcile with the revised allocation as a surcharge on austerity in travel. But any inroads in the supply of transport for freight must cause concern, as likely to upset the higher goals of production. The Planning Commission's revised proposals cannot fail to cause serious concern, even if the Railway Ministry's assessment of their direct impact on freight traffic is accepted as a correct approximation. The attenuated capacity of the railways will just be adequate to take an additional load of 40 million tons. At this level, it is bound to create a critical situation since the three top priority industries will not only absorb the entire additional capacity but hold a surplus without

transport provision. If the rest of the claims on the freight sector must be met in some rational proportion, a disturbing re-alignment in priorities for allocation of wagon space will be imperative from time to time, but not without a difficult effort to maintain the targets assigned to the whole range of projects in the Plan.

The task imposed on the railways is impossible and a fresh scrutiny of the Planning Commission's provisional allocations is obviously necessary. The rolling stock position has throughout remained vulnerable in view of which an economy of Rs. 80 crores, bringing down investment for it to Rs. 380 crores, seems quite misplaced. It pushes the proportion of stock to be replaced during the second Plan period below the volume of stock which will have to be retained on the track in spite of its overaged conditions at the end of March 1961. The size of such stock between the ages of 40 and 45 years is presumed to be about 1,800 locomotives and 28,000 goods wagons—an abnormal proportion when it is recalled that bulk of it relates to the broad-gauge. Reduction of expenditure on line capacity works to Rs. 165 crores has entailed a shortfall of 33 per cent in doubling of lines to merely 1,600 miles and likewise conversion of gauge at strategic sectors of traffic will have to be decreased to 260 miles—38 per cent below the Ministry's estimate. Track renewal at the diminished rate of 1,600 miles a year will be inadequate to eliminate the existing restrictions on speeds of trains and offset attempts to step up wagon turn-round. A conspicuous casualty of the modified outlays is the bold programme of construction of new lines. The altered provision of Rs. 63 crores in place of the Ministry's claim for Rs. 200 crores has forced the choice of restricting new construction from 3,000 miles to 850 miles—a marginal addition intended to meet the operational requirements of the railways and to create extra capacity for coal and steel projects.

The reduced outlay takes into account the urgency of the claims for four new workshops, rehabilitation of existing ones, remodelling of marshalling yards, bridge improvement and new construction as well as modernisation of signalling and tele-communications aids. Reservation of a separate amount of Rs. 50 crores for stores suspense provides a stronger safeguard against breakdown in projects for want of equipment. The overall programme of development is conducive to a vigorous effort for higher operational efficiency and there appears to be no reason why the Railway Ministry should not aim at a higher goal of improved efficiency than 10 per cent which it aims to achieve. Economies are still possible in certain directions—electrification Rs. 80 crores which includes extensions in areas where the traffic saturation point has not been reached and staff amenities which get an allotment of Rs. 50 crores or 150 per cent more than in the current Plan. Even so, the shortfalls in transport capacity will have to be overcome by seizing possible opportunities likely to arise from a greater availability of resources in successive phases of the Plan. The country and particularly the private sector in Indian industry will certainly stand behind the Railway Board in demanding a higher initial allocation. If this demand fails, everyone knows it will be, not the Railways, but the private sector which will go to the wall.

it's a **GREAT** job...

keeping thousands of workers fit and happy

Over 8,000 people are on the payroll of the Assam Oil Company—a great community, drillers and doctors, truckdrivers and typists, whose lives are centred round the winning, refining and distributing of oil. Helping to keep contented minds in healthy bodies—both in their leisure and their working hours—is indeed a formidable task.

Taking physical well-being first, Digboi Hospital is one of the most modern and best equipped in India. There are maternity centres and clinics readily accessible and a fully staffed Welfare Office. Malaria, which at one time affected three out of five workers, has been virtually stamped out.

More than 4,300 children attend the company's nine schools, which have a high record of Matriculation successes. Social clubs, sports clubs and playing fields cater for every kind of sport. Vegetable and flower shows, arts and crafts, stage plays, concerts—every form of hobby and recreation is encouraged.

In these ways the Assam Oil Company is glad to acknowledge the loyal service of its family of workers, engaged as they all are in a great national effort to satisfy India's oil needs from her own resources.

THE WEEK'S NOTES

BAGHDAD PACT IN TROUBLED WATERS

IN TRYING to persuade Jordan to join the Baghdad Pact, Britain has landed herself in what may turn into a diplomatic impasse. Events of the last few days indicate clearly that the people of that Arab country are determined not to allow their country to enter the Middle East Defence Organisation if they can help it. There have been widespread demonstrations in Aman, the capital, Arab Jerusalem and other towns, and the offices of the U.S. Point Four administration, the U.N. Relief and Rehabilitation Administration and the British Middle East Bank have fallen victims to the popular anger. The Government has imposed curfew in all the affected towns and is trying to deal with the problem as best it can.

Trouble started when the dissolution of the Assembly by the King was held to be unconstitutional by the Constitution Council. It had been hoped that the dissolution would give an opportunity to the people to express their views on whether or not Jordan should join MEDO. When that opportunity was taken away, the people voiced their protest in the only other way left to them. The Cabinet, formed only three weeks ago, since its predecessor found itself unable to put over the Baghdad Pact to the people, has had to resign and a new Government has been formed. It is doubtful whether this cabinet will be acceptable to both the people and Britain. In any case, the draft of the twenty-year Anglo-Jordan treaty providing for Jordan's entry into the Middle Eastern defence system seems to have been consigned to the pigeon-holes of history.

It is understandable that Britain should have wanted one of her own proteges, for whose Arab Legion (officered by many Britains) she is giving an annual subsidy of \$21 million, in the MEDO, for that would have given her greater voice in that organisation. But Jordan's proximity to Israel should have warned her that pressure tactics may fail. Israel's Arab neighbours, and particularly their people, judge the West by their attitude to their quarrel with the Jews, and since Britain and the U.S. cannot take a stand which would satisfy the Arabs, they should have held their hand. (It is worth noting that it is only those Middle East States—Turkey, Iran and Iraq—which have no common frontier with Israel that have joined the MEDO). Britain's anxiety has only provided a handle to the extreme nationalists to demand the complete removal of all British influence from Jordan. Whether the Government of that country will succeed in "educating" the people appears doubtful and uncertainty hangs over the Western position in that part of the Arab world.

PAKISTAN'S UNCHANGING CONSTITUTION

THERE ARE few surprises in the draft Constitution of Pakistan which has at long last been published. The "Islamic Republic of Pakistan" will be a federation with a strong Centre. East and West Pakistan will be equally represented in the National Assembly. Only Muslims can be chosen as President and Vice-President; the former will be elected by an electoral college consisting of members of the National Assembly and the Provincial Assemblies each of which will have 300 members, and the latter by the National Assembly. The Cabinet will be answerable to the Assembly. For twenty years to come, English will continue to be the official language, Urdu and Bengali replacing it thereafter. Pakistan, like India, will continue to be a member of the Commonwealth even after becoming a republic. A notable provision—and surprising for a country which proposes that "no law shall be enacted

which is repugnant to the injunctions of Islam as laid down in the Holy Quran and Sunnah"—is the reservation of ten seats in the National Assembly for women for ten years to come.

A constitution is as good or as bad as those who work it make it, and so, it is difficult to say whether the Pakistan Constitution is good or bad at this juncture. If the people of Pakistan want to have an Islamic Constitution, the consequences will be clear. Technically, it condemns non-Muslims to an inferior status; they will not be equal before the law. By accepting the out-of-date theocratic concept—which is being abandoned even by the older Muslim countries—Pakistan will be positively complicating her minority problem, and indirectly, her relations with India. There was a faint hope for a time that Islamic fanaticism will fade out and that Pakistan's leadership will grow wise enough to see the virtues of a secular State, even though in practice, Islamic influences dominate the country. Pakistan's leadership has failed to persuade the people to agree to a secular democracy and there is some irony in the specific provision made to the effect that the President and Vice-President should be Muslims, since no non-Muslim can hope to get elected without Muslim votes in his favour. The absence of any mention of safeguards for minorities is a surprising omission. For that matter there is no mention of any fundamental rights as we know them. The Constitution has also handed on the task of deciding whether there should be a joint electorate or separate electorates to the National Assembly to be elected under the new Constitution. Why a decision on this point has not yet been taken when the minorities, for whose protection separate electorates are meant, do not want them will perhaps never be explained.

UNEASY PEACE IN THAILAND

THAILAND'S process of "democratisation" looks like coming to an unceremonious and abrupt end. With the permitting of public criticism of the Government and the passage of the Political Parties Bill, there appeared every likelihood of the country settling down to peaceful progress towards an elected form of government. But last week the Prime Minister, Marshal Pibul Songgram, made an announcement which has cast some doubts on this prospect. It had for some time been known that there was a rift between General Sarit Thanarat, Deputy Defence Minister and Army Commander-in-Chief, and General Phao Sriyanond, Deputy Interior Minister and boss of the police force. Ever since the latter was shorn of some of his minor but influential posts, while he was on a visit to the U.S. last August, reportedly as a result of the machinations of the former, there has been an uneasy truce between the two Generals. The police chief, it appears, then submitted to the indignity as a means of gaining time and he must be thinking that the opportune moment to retaliate is at hand.

The Prime Minister's surprising open avowal of conflict between two of his nominal subordinates has been variously interpreted as giving public notice to them to keep the peace and as trying to create public opinion against a resort to force. Whether he succeeds in achieving either object or not, it is quite possible that this one-time strong man has lost none of his fineness and may be quietly preparing for a showdown, if one there has to be. At worst he may carry out his earlier threat to resign in order to expel from the Government "black sheep" who are refusing to quit of their own accord. It would be a pity if Thailand should continue to follow the example of some of the Latin American States and make soldier-politicians promote coups d'etat.

VISITORS FROM THE WEST

LAST WEEK the capital was host to the Foreign Minister of Italy, Signor Martino. The visit of this statesman was memorable for more than one reason, though his was mainly a goodwill tour. As a member of the North Atlantic Treaty Organisation, Italy is in the Western alliance. But the communique issued at the end of the Nehru-Martino talks, expressing the desire of the two countries to work in close co-operation for the preservation of peace, indicates that Italy, like India, is primarily interested in maintaining peace in the world. Apart from co-operation in this task, there are many fields in which Indo-Italian co-operation can be fruitful. Already the trade arrangements between the two countries have been extended when Dr. Mattarella, the Foreign Trade Minister, was here recently. With the second Five-Year Plan on the anvil, this country is interested in getting technical assistance from all possible sources, and Italy can offer such help in many lines, particularly in the light engineering and fertilizer industries. It is to be hoped that economic co-operation between the two countries, which started with small-scale assistance at Sindri, will grow and expand into many fields.

The scope for collaboration in industrial techniques is wider with West Germany, and the visit this week of the Vice-Chancellor (Deputy Prime Minister) of that country, Dr. Bluecher, is expected to strengthen the bonds which have been forged in the last few years. West Germany's industrial recovery is almost complete and in 1955 she displaced Britain from the third place in the world as steel producer. With employment and production at peak levels, she is in need of markets for many of her products, and India can be one of her best customers. West Germany is already in the field of Indian industrial development with assistance for steel, coke oven and chemical plants. India's imports from West Germany have grown from Rs. 2.3 crores worth in 1949-50 to Rs. 39.0 crores in 1954-55; exports to that country have also increased—through not to the same extent—from Rs. 2.6 crores to Rs. 14.6 crores. It is to be hoped that whatever commercial and economic arrangements may be concluded between the two countries will provide not merely for greater trade but also for greater exports from this country.

WANTED: A NEW SCHEME OF EXAMINATIONS

ONE OF the important points which requires early attention in the process of reorganisation of the educational system is the devising of a proper scheme of examinations. In our schools and colleges, not a little of the deterioration in standards becoming more and more pronounced of late is due to the way examinations are organised. Along with fall in standards, surprisingly enough an increasing number of failures are becoming the order of the day. A Mysore University Council Committee, which tried to probe into the latter question, has come to the conclusion that the general overcrowding in colleges, arising from the insistence of employers—and Government in particular as the biggest employer—on certain degrees and diplomas as minimum qualification for entry into service, is the root cause of this. Obviously, overcrowding in colleges will continue so long as the insistence on degrees as passports to employment continues, and so the first step is to revise our present ideas of what qualifications are to be demanded of candidates for recruitment at the various levels.

But, if the quality of those who have the benefit of university education is to be ensured, this will not be enough. A radical change is needed in the nature of the tests which undergraduates, and everyone who wants to qualify at an examination, have to pass. At present, unfortunately, even university question papers follow a set pattern, with the result that it is often

possible with some luck to predict fairly accurately what questions will be asked at each examination. In these circumstances students are encouraged to concentrate on a few "probable" questions just before the examination rather than to study the subject in the way they should. Since, moreover, most of them are interested only in getting a degree, the choice of the subject of the course is often governed by whether it is "easy" or "hard". In this atmosphere the teachers develop a habit of lecturing by rote, and the few students who are really interested in the subject are left to fend for themselves. The way out is difficult and has to start at the point of recruitment for employment, so that only those interested in studying particular branches of the sciences or the arts, and qualified by temperament and ability to do so, will and need go up for higher education. This, however, would not affect the snobbish value of degrees for some time to come. There has been a misuse of the scientific courses because they have excluded a study of the languages and literature which involve more efforts on the part of the student. Some improvement can be effected if the science courses are made tougher; the mediocre students can profit more by the study of the humanities.

A LANDMARK IN INDUSTRIAL RELATIONS

THE AGREEMENT signed between the Tata Iron and Steel Company and its Workers' Union may well be the herald of a new era of industrial peace and progress. One of the major obstacles to rationalisation and consequent reduction in production costs has been the workers' opposition to any move in that direction arising from a fear that it would involve the throwing out of employment of a number of them. TISCO has secured the consent of the workers to the introduction of new and improved techniques of production and to the fixation by it of the normal complement of men required for each section and department by giving the assurance that no existing employee will be thrown out of work or suffer any reduction in emoluments as a consequence. This guarantee has been possible because, when the present expansion programme is completed, even more workers than are now employed are likely to be needed.

The company and the men have agreed to negotiate revised wage rates after the completion of the plant expansion programme and the work of job evaluation, thus ensuring to the workers a higher reward for higher productivity and a share in the increased earnings of the company. The wages of Jamshedpur town employees will cease to be on a par with those of the works employees after the new wage agreement is negotiated, though their wages will also go up. The agreement also provides for an immediate increase in the wages of lower-paid employees and clerical staff and larger gratuity benefits for those drawing Rs. 500 or less as basic pay or wages.

Much more important than the securing of the workers' acquiescence in a programme of rationalisation is the agreement between the company and the union to discuss and devise at an early date ways and means of progressively associating employees in industry at various levels and by gradual stages. It is significant that the country's biggest industrial venture has expressed the view that such association is desirable and would help in promoting increased productivity, in giving employees a better understanding of their role and importance in the working of the industry and in satisfying the urge for self-expression. With a fine record of labour-management relations, TISCO can have every hope that the participation of labour in management—for long a dream and an ideal—will contribute to the greater prosperity of the industry as a whole. It is, of course, necessary to add that this venture can be a success only where, as in this case, the workers do not look to third parties for inspiration and sustenance.

Always in the Forefront

In the forward march of Life Insurance in India, the HINDUSTHAN is, as it has always been in the forefront giving protection and security to millions of our people against possible hazards of life. The 48th Annual Report for 1954 once again reflects the soundness, integrity and strength which always have been so characteristic of the Society.

STATE BANK OF INDIA

Successors to the Imperial Bank

The need of the day

Our country's economy is expanding rapidly and with the Second Five Year Plan in sight it will gather further momentum. The need for a strong and efficient banking system has never been greater than today as the nation's savings require to be pooled and managed in a resourceful, confident and prudent manner.

The State Bank fulfils these expectations. It has started upon a programme of opening 400 additional branches throughout the country within the next five years.

The State Bank of India offers to serve you efficiently in many ways. It takes care of your savings and valuables, lends moneys against goods, produce and other approved securities and assists you by accepting appointment as executor and/or trustee of your will or trust. Its wide and varied services are at your disposal. Why not talk things over with your nearest bank agent, or write for information?

The State Bank's branch at Delhi, one of more than four hundred offices waiting to serve you throughout India

Largest of the Indian Joint Stock Banks

A Window on the World

WHITHER BRITAIN IN 1956?

By

ODYSSEUS

ALL OF US who belong to the sterling area have a vested interest in Britain's economic future (India at least to the extent of some 647 crores of rupees as a minimum to start with). It is therefore worth while to glance through the penetrating analysis of Britain's economy, and the hopeful forecast of her prospects in 1956, given in the December issue of the Review of the District Bank of Manchester by Roy Harrod, one of Oxford's leading economists.

What strikes Mr. Harrod as unhealthy in Britain's economy is not, as so many other commentators would have us believe, the spiral of wages and inflationary costs, but the marked lengthening of delivery dates that began when Britain entered in 1954 into a boom in industrial investment. Characteristic of this boom were the figures for new factory buildings started, which in 1954-55 were 62 per cent higher than in 1953-54 and 59 per cent higher than the average for 1949-53. This huge increase explains the troubles that followed. You cannot suddenly superimpose such a burden on productive capacity and expect no inflation.

The inflation was not due to consumption because the figures (at constant prices) show consumption to have risen by an average of 1.3 per cent in 1948-52, 3.8 per cent in 1953, 4.4 per cent in 1954, but thereafter there has been a marked slowdown to 2.7 per cent, which seems a reasonable rate that could be expected as normal.

Governmental expenditure on goods and services did not rise in 1954, but the volume of exports rose by 7.3 per cent after having been roughly stationary for three years. Obviously this increase in the foreign consumption of British goods had more influence on Britain's manufacturing capacity than the increase in her domestic consumption.

The building spurt did not arise essentially from the immediate pressure of increased consumers' demand but, in Mr. Harrod's view, from a mood for expansion that swept through the minds of producers. For five years they had struggled through all the perplexities of the post-war period; then came the special problems that sprang from the Korean outbreak and from rearmament; in 1952, a policy of restraint led to a minor recession. But in the mean time, the Conservatives were removing controls and a return to economic enterprise (in the real sense of the word "enterprise") became once more a real and enticing possibility. The world of producers and risk takers began to think that a Socialist government with plans hostile to free enterprise was not after all inevitable at the next general election. Thus it was natural that it should have occurred to many entrepreneurs at once—unfortunately to too many—that the time was ripe for expansion or modernisation.

In 1954, expansion on plant and machinery rose (1948 prices) from £596 to £614 millions and total gross fixed capital formation rose from £1,741 to £1,826 millions. Mr. Harrod argues that these figures suggest not abnormal but healthy expansion and tries to clear up the confusion that has arisen on this point. It has been supposed that those economists who have advocated that the boom should be curbed think that

the amount of investment was too great. This is a misconception. What has been too great has been the volume of orders on investment account.

It is in the difference between (a) achieved investment and (b) orders on investment account that Mr. Harrod sees the basic cause of Britain's troubles, notably the lengthening of delivery dates which creates waste and confusion in Britain's domestic production, loses good will in foreign markets, and decreases incentives to try to increase foreign markets. It should therefore be the first aim of Britain's economic policy to induce a severe reduction in orders on investment accounts.

This does not mean cutting investment down at all. On the contrary, it can mean increasing investment, because if delays are removed, production goes ahead more efficiently.

NO SPECULATIVE BOOM

There are two types of boom. There is that in which all prices soar and all sorts of unsound financial pyramiding occurs. To prick such a bubble the bank rate should be raised. If one rise does not do this, the bank rate should be stepped up until it does, when prices will collapse and unsound positions be rapidly liquidated.

But there has not been any dangerous rise in British prices and no abnormal number of unsound financial positions are noted. It may well be that most of the 1954-55 plans for expansion were sound. Britain's boom arises from too many people trying simultaneously to do too many things, each item of which may be separately justifiable. There is no bubble to be pricked. Mr. Harrod urges that all that is required is a continuous credit squeeze to prevent new plans from being launched and new orders placed until order books are shortened. He does not suggest that the building of uncompleted factories should be interrupted. Short of that, those factories started in 1954 must presumably continue to generate inflation until well into 1956. Those economists who have called for a still higher bank rate are probably thinking in terms of a bubble boom that needs to be pricked. Britain's current boom can, however, only be lessened slowly. By deciding to embark on so many projects in 1954, Britain condemned herself to a weak external balance for a couple of years. To the extent that projects are good, they will have been worth the loss of some gold. Instead of an unproductive stock of gold, Britain will have increased productive capacity.

If this diagnosis, that Britain's inflation is not due to a rise in consumption or in wage rates but to expansion in development investment is accurate, then it is important that this should be understood by Britain's overseas customers, for if they attribute the inflation to a wages and costs spiral they will tend to sell sterling.

Looking ahead to 1956, Mr. Harrod lists three problems: (1) control of the boom in industrial investment; (2) the trend of wages, and (3) the trend of sterling.

GROUND S FOR SOBER OPTIMISM

He does not doubt that the boom will work itself out. He rejects the widely held pessimistic view that Britain's current creeping inflation has come to stay permanently. How soon the boom will be controlled depends on how early in 1954 the squeeze policy actually began to check plans for expansion. It may have taken effect sooner than is yet apparent.

Mr. Harrod agrees that if year after year wage increases are granted which exceed the rise in productivity, then the currency will be debased, but he says that because wage demands came fast and furious in 1954-55, they need not necessarily be expected to do so every year, and he reminds us that the increases in 1952-53 were moderate. Moreover, even failure to hold the wage line in 1956 would not be entirely disastrous; Mr. Harrod points out that substantial wage rises are being given both in the USA and in Germany. When the British industrial booms end, it will be easier to hold the line. There is no reason to despair; there is much knowledge and common sense among British trades union leaders who know that increases cannot be repeated indefinitely without lowering the workers' living standard.

Mr. Harrod urges that irrespective of the date when sterling is to be made convertible, a date which may depend on the course of events, it is vital to decide now whether to rely on changes in bank rate or in the exchange rate to correct short term maladjustments, for these weapons are mutually exclusive. When the exchange rate is flexible, the bank rate ceases to in-

fluence short term capital movements. Experience in 1955 suggests that the path to convertibility will be eased if the bank rate is used rather than the exchange rate. The external effect in the rise in the bank rate in February, 1955, was good, and the Bank of England has a long experience from gold standard days of the successful use of the bank rate.

The case against the use of the bank rate is that situations may arise in which an adverse balance of payments demands a rise in bank rate while the domestic economy requires plentiful credit. It was from this possibility that the suggestion for flexible exchanges was originally made. But recent events suggest that what affects the balance of payments is the actual rate of interest obtainable in the market, say, on Treasury bills. On the other hand, not one factor alone but a whole group is available to influence the internal situation towards expansion or towards contraction; requests to the banks as to how advances should be granted, directions to local authorities about their finance, etc. These techniques are new but they will be fully worked out in time. Mr. Harrod urges that the British Chancellor should decide on the alternatives of the bank rate or exchange flexibility at once, because it was postponement of this decision last spring which was the real cause for the need of an autumn budget; further postponement could have far more serious consequences for the whole sterling area.

To sum up, Mr. Harrod refutes the pessimistic view of Britain's 1956 prospects and puts the weight of his great authority behind a soberly optimistic forecast.

A DELHI DIARY

A POLITICAL BOOMERANG

JAUNDICE has been front-page news throughout the week. Thinking, in obvious error, that attack was a good form of defence, the Union Health Minister, Rajkumari Amrit Kaur, called a Press Conference on Tuesday at which she explained how "lack of co-operation" of the Delhi public made an improvement of public health in Delhi virtually impossible. Here, if anywhere, was a boomerang which recoiled at once upon its originator. I do not remember, in a long course of Press Conferences in New Delhi, one as heated as this. There was no gallantry shown; nor was the Press inclined to accept Delhi's misfortunes as Rajkumari Amrit Kaur suggested as a "natural disaster". To the argument that if the river had unfortunately not changed its course the water would not have been contaminated, the view is advanced that if the Health Ministry and the Joint Delhi Water and Sewage Board had not muddled their part in the transaction, Providence, however wilful, would not have succeeded in visiting Delhi with dire punishment for its sins. This argument on an act of God is certainly very misleading. Are we to assume that where "natural disasters" occur, human ingenuity and foresight have no function to perform? Again, are we to assume that the intervention of the Diwali holidays which prevented laboratory tests made it impossible for the Government of India to perform its other emergency functions? I leave alone the minor point that the jaundice virus cannot be detected in laboratory tests; nobody has yet discovered why that particular red herring about the Diwali holidays was ever introduced!

A MINISTER'S RESPONSIBILITY

There is no doubt whatever that the Health Ministry has come out of this whole transaction with its copy-book very badly blotted. Whether in point of fact the Ministry of Health is responsible for the actions of the Municipal Committee or that strange body called the Joint Delhi Water and Sewage Board is not a relevant political issue. Politics, like the law, is an ass. It is neither rational nor just. In the last analysis the Parliament of India is responsible for what the Constituent Assembly on the morning of August 15, 1947, described as "the governance of India." Parliament is, therefore, responsible to the people for any major failure of public duty, and it must hold the concerned Minister responsible. The Delhi Municipal Committee is not responsible to Parliament nor is the Joint Delhi Water and Sewage Board; they are responsible only to the Health Ministry. It is, therefore, no argument to suggest, as indeed is being suggested now that the Ministry of Health's responsibility should not be enforced by Parliament. Before the Parliament of the Indian Union, subsidiary Government departments have no status; the Ministry of Health must take full responsibility for the disaster that has overtaken Delhi.

THE DOCTRINE OF ATONEMENT

It is hard on Rajkumari Amrit Kaur that she should have to take responsibility for the misdeeds of others. But that happens to be the political apparatus which is adopted in Parliamentary democracies. It is quite certain that had a similar event occurred in the United Kingdom, for example, the concerned Minister would have been subjected to a searching enquiry in Parliament and may have been forced to resign. I do not suggest for one minute that Rajkumari should be compelled to resign, though atonement for someone else's sins is not for her an article of a foreign faith. She is one of our most competent and painstaking Ministers. I do assert, however, that there is a political problem here which has not received proper consideration.

The political problem is nothing more nor less than the virtual impossibility of bringing home to the public

sector in India the most glaring failures in its responsibility. It is all very well to say that a "high-powered" Committee has been appointed to probe into the facts. It is almost certain that this will lead to a dismissal or punishment of some subordinate officers responsible for an egregious mistake. It is, however, the whole principle of Parliamentary Government which is at stake; responsibility does not rest with any officials in a political sense; they are servants of their political chiefs. There must be some means by which the political displeasure of Parliament is made effective against a political chief. The resignation of a Minister may look a wholly unjust way of enforcing this kind of displeasure. But that is, in point of fact, the way that Parliamentary Government works in the United Kingdom and in some other Commonwealth countries. If we are working a Parliamentary democracy, we cannot ignore Parliamentary conventions.

Particularly now that the public sector is recklessly adding to its power and responsibilities, there should be a means of bringing home to its instruments penalties for failure. One should be able to censure a Minister without censuring the Government as a whole. If nothing should happen to political Ministers, except that they incur the Prime Minister's personal displeasure, Parliamentary displeasure against individual Ministries will never be established. I argue that when Parliament reopens, this will be a fit subject for an adjournment motion; I hope sincerely that it will not be ruled out on the frivolous ground that this is a State subject!

DR. FRANZ BLUECHER

I pass from domestic trouble to what is generally considered to be a welcome international event. This was the arrival on Tuesday of Dr. Franz Bluecher, Vice-Chancellor of West Germany. There has naturally been in New Delhi a great deal of speculation on the purpose of this "goodwill" mission, which is more distinguished than any that has come to Asia from West Germany. It is known that, apart from Dr. Bluecher's discussions with the Prime Minister, his eight advisers are having discussions with various economic Ministries on other subjects. The problem of technical assistance has already figured in these discussions. But technical assistance for what? We already have substantial arrangements with West Germany. On the Rourekela plant we have had nearly two years with Krupp-Demag; hundreds of Indian technicians have already been trained in Germany or here in association with this combine as well as with other firms. Unlike East Germany, which first made its impact on us through the Indian Industries Fair, our relations with West Germany are well established. Nevertheless the anticipation that Dr. Bluecher's visit will result in a widening of certain aspects of technical assistance seems not to be misplaced, at least on the argument which I find convincing, that there is no smoke without fire.

I leave to the economic prophets further analysis of the character of West German participation in our second Five-Year Plan. Let me refer to something far more cheerful. This was the reception given by Dr. Ernst Wilhelm Meyer, the German Ambassador in honour of Dr. Franz Bluecher on Wednesday evening. The residence of the Ambassador was gay, may I say, through instruments of gaiety not entirely connected with externals. There was much internal warmth displayed. I adhere to the views expressed last week. Long may Western forms of entertainment continue to endure or rather, if cocktails must absorb so much of Delhi's precious diplomatic time, please let them have some virility and virtue of their own!

ARGUS.

9 NON-STOP FLIGHTS EACH WEEK to KARACHI

from DELHI and BOMBAY

Four weekly flights from Delhi; five from Bombay. Superlative service aboard to make your journey most enjoyable.

Excellent bar service. Courteous cabin attendants. No extra fare. Enjoy your next trip to Karachi... fly with P.I.A. — for new standards in air travel.

Economic Report from the U. S.

FARM SURPLUSES PRESENT COUNTLESS PROBLEMS

(BY GUY SIMS FITCH)

WASHINGTON, Jan. 10.—Of all the economic problems facing the United States today, none is more pressing or complex than the agricultural situation. Governing the Administration's attitude is the awareness that any solution to the US farm problem inevitably involves the welfare of many other countries. For at its heart is the accumulation, over a period of years, of huge and all but unmanageable surpluses of wheat, corn, cotton, rice and other products. It is this surplus, then, that receives the most direct and most vigorous attack. This confronts the US with a moral as well as an economic problem. As the President points out in his message: "It is unthinkable to destroy food"—particularly when nutritional deficiencies still exist in many parts of the world. "Ultimately," Mr. Eisenhower says, "the stockpile must be used."

But to move them helter-skelter into domestic and world markets in quantities large enough to remedy present difficulties would threaten—perhaps shatter—international prices and trade. This would affect farmers everywhere, including those in the United States. The answer, then, as the President puts it, is to "stop encouraging the production of surpluses"—and to do it in such a way that future needs of a growing population at home and abroad will be adequately served.

The heart of the President's proposals is a "Soil Bank" plan, involving both short-term and long-term goals. To grant immediate relief to the American farmer, he recommends an "acreage reserve programme"—essentially a temporary deferred production plan. It would involve voluntary acreage restrictions on the part of American farmers, beyond limits already set and accepted, in return for Government payments in cash or surplus commodities. This is described as using the surplus to reduce the surplus. The second or long-range part of the Soil Bank plan is designed to foster sound and productive use of land that has been put to the plough but would have been better reserved for forage, trees, or water storage. The farmer would be asked to place in reserve those of his cultivated acres most in need of such conservation measures. The Government would pay a fair share of the costs of establishing this reserve—proposed to make up about 25 million acres in all—and would provide the co-operating farmer with certain annual payments for the length of time it may take to establish new and more constructive use of the land.

In the eyes of Administration officials, this two-pronged approach has a number of virtues. For the short run, it would help remove the crushing burden of surpluses, and at the same time provide an income to farmers—even during lean crop years—while the readjustments in stocks were being made. For the long run, it would bring agricultural production into better balance with normal peacetime markets and would lead to improved use of soil and water resources

for the benefit of future generations. In the process, it would help maintain the integrity of the traditional American family farm, now facing the pressures or rising costs on the one hand and falling agricultural prices on the other.

There will be renewed efforts, of course, to find both domestic and foreign markets for American farm commodities; in fact, a new Surplus Disposal Administrator is being appointed in the US Department of Agriculture for just this purpose. As one of his main tasks, he will try to regain for American farm products the share of international markets they have lost as world agriculture has recovered and expanded—often with US aid—since World War II. Not to be overlooked, however, is the President's expressed belief that his new programme "will ease apprehension among our friends abroad over our surplus disposal programme". For nowhere does the message he has sent to Congress call for the kind of unrestrained sales of US surpluses on world markets that critics in other lands have feared.

THE INDIAN OVERSEAS BANK LTD.
MADRAS

(Incorporated in India)

Through a network of branches in India, Burma, Ceylon, Malaya, Thailand & Hong Kong and our correspondents at all important commercial centres of the world, we are in a position to offer the most complete Banking Service to Businessmen and Manufacturers engaged in the export and import trades.

Service is our motto

General Manager: Mr. C. P. Doraikannu

WORLDGRAM

AGRICULTURE

Contribution of C.T.O. to Food Production: Over one million acres of 'Kans' infested land in Central India and about 41,000 and 48,000 acres of jungle land in Uttar Pradesh and Bhopal respectively have been reclaimed so far by the Central Tractor Organisation of the Government of India for agricultural purposes. Taking yield from fallow and prior cultivated but Kans infested lands on the basis of 8 and 2 maunds per acre respectively, the annual additional production per year from 1954-55 is estimated at about 2,00,000 tons of food-grains from the reclaimed lands. Having a strength of about 2,000 men, the C.T.O., operates today the largest fleet of heavy tractors in the world for agricultural purposes having 18 units, 3 divisions, 2 base camps and 270 heavy crawler tractors. The Central Tractor Organisation has also helped in the rehabilitation of more than 3,000 families of displaced persons from East Bengal, West Pakistan as well as political sufferers and ex-servicemen. They have been settled in the 'tarai' area of Uttar Pradesh where the malignant malarial and jungle land have been covered into prosperous agricultural farms and flourishing co-operative colonies.

Bombay Land Tenure Abolition Bill: The Bombay Land Tenures Abolition (Amendment) Bill, 1955, seeks to extend the time allowed to landowners in several cases to prefer claims for compensation and to allow the collectors to admit time-barred claims up to December 31, 1955, in certain circumstances. In the case of the Bombay Merged Territories and Areas (Jagirs Abolition) Act, 1953, the Jagirdars and others did not have enough time to prefer their claims for compensation in view of the fact that although the Act had come into force on August 1, 1954, its implementation had been delayed. The time allowed under certain Acts to tenure holders and others for the payment of the occupancy price for occupying occupancy rights in the lands held by them was also inadequate.

Jute Cultivation in U.P.: In order to provide impetus to the production of good quality jute in Uttar Pradesh and to create a healthy spirit of competition, the State Government has sanctioned Rs. 10,000 to be distributed as prize money among growers of fine quality fibre. Traders and manufacturers are also participating in the State-wide jute promotion drive. At a recent exhibition at Colonelgunj mandi, organized by the local Merchants Association, three cash prizes were awarded to producers of higher grade jute. Returns submitted by the Jute Grading party, now touring the State, reveal that the average quality of U.P. jute is improving. In Lakhimpur-Kheri, the party has so far graded 1,008 maunds of fibre. The percentage of grading outturn is in the order of 0.2 top, 36.2 middle, 42.7 bottom and 20.9 cross.

INDUSTRY

ISI Certification Mark for Magnesium Chloride: The Indian Standards Institution has granted a licence for the use of its Certification Mark to the Pioneer Magnesia Works Ltd., Bombay, in respect of magnesium chloride produced by the firm. The Standard Mark on the drums of magnesium chloride will indicate that the product is in conformity with the Indian Standard specification for magnesium chloride, technical. The Standard Mark consists of the monogram of the Institution superscribed by the number designation IS: 254. Apart from the consumption of magnesium chloride by the textile and chemical industries in India, a large quantity is exported to European markets. This is the first licence granted by ISI for a chemical product; the previous six licences, granted, were for electrical goods.

The Institution has at present under consideration several other applications for grant of licences in respect of other chemicals, metallurgical products and engineering and building materials.

Packing Charges for Cement: The Government of India had announced on March 27, 1954 that packing charges for cement would be fixed every quarter on the basis of the average of the maximum and minimum market price for packing material during each week of the immediately preceding nine months plus Rs. 1-4-0 per ton to cover incidental charges. On this basis, packing charges for the current quarter were fixed at Rs. 13-5-0 per ton. The packing charges for next quarter, commencing from January 1, 1956, work out to Rs. 13-7-0 per ton. The above packing charges are applicable to cement packed in new bags only. Packing charges for cement packed in old bags will be a matter for settlement between the buyer and the seller, subject to the maximum indicated above.

TRADE

U.S.A. Steel For India: The Government of India and the United States Government signed an agreement recently providing for the import into India one lakh tons of steel for the rehabilitation of India's railroads. With this agreement on steel the total amount of steel supplied by the U.S.A. to India under the Technical Co-operation Programme would come to over seven lakh tons. The new steel allotment will help in making up a deficiency of 249,000 tons required by the Railways during the fiscal year 1956; enable the Government of India to make necessary improvements in railway track facilities and obtain an increased supply of locomotives and wagons from Indian factories. The United States is also providing 100 locomotives and approximately 8,700 wagons to enable the railways to make up some of the balance of about 1,500 over-aged locomotives and 12,000 over-aged wagons which need replacement.

Indo-Hungarian Trade Agreement: The validity of the schedules attached to the Indo-Hungarian Trade Agreement is extended for a further period of one year. The Trade Agreement, which was signed on June 17, 1954, is valid up to December 31, 1957. It provides that the schedules of imports and exports attached to it would be revised every calendar year. Some of the important commodities in the list of exports from India to Hungary are: tobacco, tea, shellac, spices, wool, hides and skins, vegetable and essential oils. Some of the important commodities available for import into India from Hungary are: dyes, electrical equipment, textile machinery, tractors and agricultural machinery, laboratory equipment.

Indo-Iraq Trade Agreement Extended: Letters were exchanged at Baghdad recently for further extending the Trade Agreement between the Government of India and the Royal Iraqi Government. The Agreement which was due to expire on December 31, 1955, will now remain in force without any change for a further period of one year beginning January 1, 1956. The Agreement provides for the export and import of the following commodities in accordance with the import-export regulations in force from time to time:

Exports from Iraq to India: Animals, cotton, dates, foodgrains, gallnuts, hides and skins (light-weight).

Exports from India to Iraq: Food and agriculture products, timber and related products, textiles, fibres and bristles, rubber products, hides and skins and related products, ceramics, pottery, glassware and allied

industries, arts, handicrafts and jewellery, chemicals and related products, minerals and ores, machinery and metal products, iron and steel and their products, abrasives, belting, birds, films (exposed), linoleum, stones, precious and semi-precious.

*

Foreign Trade of India by Land During November 1955: According to the land-borne trade returns received in the Department of Commercial Intelligence and Statistics, the provisional figures of total value of foreign trade of India by land with Pakistan, Afghanistan, Iran and Burma during November 1955, are as follows:

Merchandise:			
Exports	..	Rs.	60 lakhs
Exports to Eastern Pakistan	..	"	23 "
Exports to Western Pakistan	..	"	22 "
Exports to other Countries	..	"	15 "
Merchandise:			
Re-exports	..		Nil
Merchandise:			
Imports	..	"	273 "
Imports from Western Pakistan	..	"	1 "
Imports from Eastern Pakistan	..	"	197 "
Imports from other Countries	..	"	75 "
TOTAL TRADE	..	Rs.	333 lakhs
TRADE IN TREASURE			Negligible

Balance of Trade:

The total value of exports fell short of imports by Rs. 213 lakhs.

*

Indo-Polish Trade Arrangement Extended: Pending negotiations for the conclusion of a fresh trade agreement between India and Poland, the current Trade Arrangement between the two countries has been extended as an ad interim measure up to March 31, 1956. Letters to this effect were exchanged at New Delhi between the representatives of the two countries. The current Trade Arrangement was signed on January 6, 1951 and was extended from time to time. It was last extended on March 31, 1955 and was valid up to December 31, 1955.

FINANCE

Central Aid For Silk Industry: Grants totalling over Rs. 9,08,000 have been sanctioned by the Government of India to six States, Mysore, West Bengal, Madras, Assam, Uttar Pradesh and Orissa, for the development of the silk industry. Mysore gets over Rs. 6,07,400. West Bengal has been given over Rs. 1,64,500 of which a sum of Rs. 93,447 is for implementing the scheme to expand the foreign race seed station at Kalimpong and Rs. 48,750 for the establishment of multivoltine disease-free egg station in Malda. Madras has been sanctioned over Rs. 84,000 of which a sum of Rs. 69,500 is for establishing a central hill rearing station at Coonoor. Assam has been sanctioned three grants amounting to over Rs. 49,000. Uttar Pradesh gets Rs. 2,500 for introducing improved rearing appliances in the State. Orissa has been given a grant for deputing officers to Assam for training in sericulture.

*

FOA Aid to Taiwan for Fertilizer Plant: Approval of the financing of the dollar costs, amounting to US \$13.2 million, involved in the construction of a US \$20 million chemical fertilizer plant in Taiwan has been announced by the Foreign Operations Administration. The Chinese Government in Taiwan will provide the equivalent of US \$6.8 million in local currency to pay for labour and materials. The new industry, consisting of an ammonia and a urea plant, will produce 85,800 metric tons of urea with a 44 per cent nitrogen content, the most concentrated form of nitrogen fertilizer known. The annual production of 85,800 metric tons of urea will equal over 180,000 tons of ammonium sulphate fertilizer in terms of nitrogen content, and would be worth between \$10 million and \$12 million at present world prices. This will be an important factor in main-

taining and improving farm production in Taiwan, where intensive cultivation is necessary and crops must be maintained by constant application of commercial fertilizers.

*

American 1955 Rail Revenues: American railroads earned an estimated \$10,100,000,000 in 1955, mostly by carrying freight, the Association of American Railroads reported recently. Total operating revenues are expected to be 7.7 per cent above those of last year. Freight-carrying revenues went up 9.5 per cent, to an estimated \$8,500,000,000. Passenger traffic continued the downward trend that has prevailed since 1952, and payments for the transportation of mail dropped off. The operating revenues derived from passenger operations in 1955 declined 4.2 per cent to 735 million, while mail revenues decreased by 8.1 per cent to 282 million. Total operation expenses of the railroads in 1955 amounted to \$7,600,000,000, an increase of 3.1 per cent. Taxes paid out by the railroads in 1955 will total \$1,100,000,000, an increase of 30 per cent over the tax bill in the previous year. Of the total sum, Federal income taxes account for 458 million dollars. Net income of the railroads, following deductions for taxes and other charges, was estimated at \$915,000,000. This was an increase of 34 per cent over last year's earnings. Indications are that the railroads in 1956 will spend more than one billion dollars on plant and equipment.

GENERAL

Second International Trade Fair in Japan: A second international trade fair will be held in Osaka, Japan, from 8th to 22nd April, 1956. The first one was held in April 1954. The displays, classified under twenty-one categories, include textiles, ferrous and non-ferrous materials and metal products, machine tools, machinery and equipment of all kinds, chemical products, etc. Total space of the fair ground is 1.2 million sq. ft, and there will be 1,500 indoor and outdoor booths, each 10ft X 10ft. Rental rates for each booth of 100 sq. ft. for indoor space are ¥72,000 or U.S. \$200 or £72. For outdoor space the rent per booth with roof is ¥36,000 or U.S. \$100 or £36; without roof, ¥25,000 or U.S. \$70 or £25.

*

Increase in Productivity of Indian Factory Workers during 1950-54: The productivity of factory workers in India showed a spectacular increase during 1950-54, according to the 'Indian Labour Gazette'. The period which synchronized with the first Five-Year Plan, saw the index of productivity rise by 43 per cent i.e. at an annual average rate of 8.6 per cent. The index of real earnings of workers during the same period registered an increase of only 14 per cent or an average annual rate of 2.8 per cent. During the period 1943-54 the rate of increase in real earnings of factory workers was on the whole, higher than that of productivity. While the index of real earnings during this period advanced geometrically at an average rate of 3.9 per cent per annum, the index of productivity was of the order of 2.7 per cent.

*

Development of Australian Tobacco Industry: Arrangements have been completed for a trust fund to finance additional research for the development of the Australian tobacco industry. Australian tobacco growers and manufacturers and the Federal Government will contribute to the fund, which will be directly administered by the Department of Commerce and Agriculture. The Government will contribute £A84,000 towards the capital costs of the scheme, while the growers and manufacturers will contribute a similar sum. Operating costs will be met partly from a levy on all Australian-grown tobacco sold and manufactured. The fund will finance tobacco research undertaken by the Commonwealth Scientific and Industrial Research Organisation, the State Department of Agriculture and other bodies.

NEWS IN BRIEF

INDIAN

The Government of India have appointed a six-member expert committee to consider the scope of an export credit guarantee scheme for the country in order to stimulate exports.

*

The Union Government have sanctioned a loan of Rs. 12.75 lakhs repayable in eight years, to the Malabar Steamship Co., Bombay for the purchase of a second hand ship for operation in coastal trade.

*

The biggest ever bonus settlement in India, which will benefit a million plantation workers in the country, was concluded in New Delhi last week at the Ministry of Commerce and Industry between representatives of industry and labour.

*

More than Rs. 100,000 worth of goods produced by Indian cottage industries have been sent to the Leipzig Fair beginning in Germany from January 28.

*

Negotiations are at present going on between the Governments of India and the U.K. for an agreement for avoiding double levy of estate duties on properties in India and Britain.

*

The Government of India have sanctioned a loan of Rs. 65 lakhs to Madhya Pradesh for implementation of urban water schemes and municipalities.

*

The National Newsprint Factory at Nepa Nagar, in Madhya Pradesh, will now begin producing 100 per cent Indian newsprint with the completion of the chemical mill, according to an official report.

*

The Geological Survey of India is conducting a survey on a 36-mile coal belt lying between Jangalgali and Kokakot in Jammy province.

*

Sindri has set up yet another record. On December 27, 1955, Sindri's production figure of Ammonium sulphate for the year reached 3,20,262 tons as compared with the target of 3,20,000 tons.

*

Life Insurance business in India touched a new high in 1954. As compared with 1953, the number of policies issued by Indian Companies increased by about 1,44,000, the sum assured by Rs. 75.14 crores and the premium income by Rs. 3.29 crores.

*

The earnings of Indian Railways from air-conditioned class from April 1 to October 31, 1955, were Rs. 35 lakhs as against Rs. 28 lakhs during the corresponding period of the previous year. During the current financial year 32 air-conditioned coaches have so far been put into service. In the previous year, the number was 21.

*

The Government of India have sanctioned during the current financial year Rs. 35,37,473 as grants to State Governments for the development of Libraries. India has about 32,000 libraries with a book strength of 71 lakhs.

*

32,016 students belonging to the Backward classes were awarded scholarships during 1955. The number of applications received for these scholarships was 58,381.

FOREIGN

Yugoslavia and Russia signed a one-year trade agreement at Belgrade recently, doubling their present level of trade to a total volume of \$70 million for 1956.

*

The Philippines will be the site of the American-backed atomic research and training centre proposed for the Colombo Plan area, it is learnt.

*

A new glass factory has started operating near Skoplje, Yugoslavia. Its present capacity is 42 tons daily in the department, where various kinds of glass wares are produced.

*

As a result of the Anglo-Swedish trade agreement for 1956, Sweden will be forced to buy more coal in the US. American coal prices in American ports are about four sevenths of Polish prices in Polish harbours.

*

An international industrial exhibition will be held in Rangoon at the end of 1956 and beginning of 1957. Twelve countries are expected to take part.

*

Sugar production in East Java, Indonesia, for the year 1955 is expected to increase 15 per cent over the 1954 output. The output in 1954 totalled 814,708 quintaa (1 quintaa = 100 kg.) while the 1955 figure is estimated to reach 996,000 quintaa.

*

The First National City Bank of New York announced the opening of a new overseas branch in Jeddah, Saudi Arabia. It is the only bank in Arabia and becomes the 66th of First National City's full-staffed overseas branches, offices and affiliates.

*

West Germany's investments in Canada amount to over \$21.7 million. German capital has been invested in more than 50 enterprises. The only other foreign country where German interests have more money at stake than they have in Canada is Brazil. The U.S. comes third in the list.

*

Indonesia has raised the export duty on rubber from 3 cents (rupiah) to 65.4 cents per kilo (equivalent to 2.22d. per lb.), with effect from 1st January, 1956.

*

The Federal Reserve Board announced recently that its 1956 survey of consumer spending and saving plans would begin in January 1956 in the twelve largest metropolitan areas and fifty-four small communities. The board seeks information on family incomes and financial status and consumer views on their own prospective financial situations.

*

Two more countries—Egypt and Ecuador have now completed action for joining the International Finance Corporation, the affiliate of the International Bank for Reconstruction and Development.

*

Large-scale production of plastic bodies for motor vehicles will shortly begin in Adelaide, South Australia. They will be made jointly by Lunn Laminates, one of the leading manufacturers in this field in the United States, and Freighters Ltd. of Melbourne, Victoria.

Special Articles

WAGES, PRODUCTIVITY AND INDUSTRIAL INCOME

(CONTRIBUTED)

DETAILED statistics of wages are hardly necessary to illustrate the recent increases in wages; the mounting wage bill is generally an accepted fact. And yet, the focal point of most of the labour unrest is wages. While the labour leader advocates rise in wages to improve the worker's standard of living, the industrialist pleads for reduction in labour cost to safeguard the competitive position of the industry. Which view is correct? An attempt has been made in this article to examine the question objectively. Reports on the annual census of manufacturing industries, issued by the Directorate of Industrial Statistics, Government of India, which contain massive industrial data, provide comprehensive factual and systematic basis for studying such problems. These Reports are available from 1946 to 1952; and this study relates to this period. The reference period is not long but significant enough for a country pledged to rapid industrial development.

The index number is a convenient device employed in the analysis of statistical series. We have accordingly worked out the general index of wages; and, in order to obtain the index of real earnings, the general index of wages is deflated with the all-India average consumer price index for working class. This is shown in the table below:

INDEX OF REAL EARNINGS

(Base Year 1946 = 100)

Year	General Index of Wages*	All-India average consumer price index number for working class adjusted with 1946 as the base year**	Index of Real Earnings
1947	114.1	113	101
1948	141.6	126	112
1949	157.2	130	121
1950	163.5	130	126
1951	181.5	136	133
1952	180.3	133	136

It will be seen from the above table that there has been steady rise in the index of real earnings, year by year, since 1946.

The importance of wages in the economics of industry may be indicated here by a brief analysis of the distribution of gross receipts. The gross income of the 29 industries amounted to Rs. 11,84 crores in 1952. Allowing for the cost of materials fuels etc. consumed and depreciation of the capital equipment in the manufacturing process, the value added by manufacture was estimated at Rs. 315 crores, i.e. 26.6 per cent of the gross income. The amount of salaries and wages paid in the same year was Rs. 200 crores, i.e., 17 per cent of the gross income or about 64 per cent of the value added by manufacture. The amount left for over-head

charges, taxes and profit was thus about Rs. 115 crores, i.e. 9.6 per cent of the gross receipts or 36 per cent of the value added by manufacture. (Information regarding over-head charges and net profits is not available). It will thus be seen that the important cost factor, after materials, in the manufacturing cycle, is labour.

While wages have risen, there is evidence of decline in labour productivity in recent years. This is revealed by the table below compiled from the census data.

INDEX OF LABOUR PRODUCTIVITY

(Base Year 1946 = 100)

Year	Index of productivity	All-India index of wholesale prices adjusted with 1946 as the base year	Index of productivity after deflation
1947	91.2	111.5	81.8
1948	131.0	137.5	95.2
1949	115.8	142.9	81.0
1950	134.9	150.2	89.8
1951	153.8	164.7	93.4
1952	136.2	145.1	93.9

Compared with 1946, the index of productivity shows a decline of 18 points in 1947. In 1948, it shows improvement of 13 points. In 1949, it again shows drop of 14 points. From 1950 and onwards there is steady improvement but the index in 1952 is still 6 point below the 1946 level. Complete census data for later years are not yet available. It is possible that there has been some further improvement in 1953 and 1954, because industrial production in 1954, it is estimated, was 8 per cent higher than in 1953 which was itself 5 per cent higher than in 1952.

The fact, however, remains that while wages have gone up, productivity has declined or lagged behind considerably. The concept of productivity needs a little bit of explaining here. Productivity is usually defined and measured as the ratio between the value of output of some product or class of products and the quantitative expenditure of particular types of resources used in the production of such items. The primary sense of productivity is the output (quantity or value) per head in a given period of time. In recent discussions of productivity it has also been used in the sense of intensity of labour efforts. The greatest interest has always been centred in the relationship between production and labour, the universal resource, and the term 'Productivity' is frequently used without qualification to refer this ratio. Rostas, has found in his studies that productivity generally increases with the size of the business unit. Investigations in U.S. industries also reveal that there is a clear-cut and perhaps even more obvious relation between increasing size of plant and increasing productivity than in Britain. Therefore, it should not be inferred from the indices given above that the fall in productivity is entirely or even mainly due to labour deficiencies. No doubt, there has been an appreciable fall in labour efficiency in recent years. But the fall in productivity can at best be ascribed only partly due to labour deficiencies. It must be remembered that productivity depends on several factors: adequate supplies of materials and power, sufficient and up-to-date capital equipment.

proper use of existing equipment and man-power and efficient management.

Moreover, labour cost should be viewed in relation to other elements of cost and/or total cost. Viewed in this perspective, the percentage of labour cost to total cost, during these years, has not varied to any appreciable extent. The following table shows wages as a percentage of total manufacturing cost in the 29 industries covered by the census.

WAGES AS PERCENTAGE OF TOTAL

MANUFACTURING COST

Year	Percentage
1946	17.9
1947	18.6
1948	18.0
1949	17.4
1950	15.8
1951	14.1
1952	16.1

The crux of the problem then is productivity and not labour cost. Indeed, as Percy Ford has said 'although wage rates have risen and weekly earnings increased, labour costs per unit of product may fall if the workers are stimulated to increase their output enough. Labour costs may rise without any increase of wage rates if for any reason their output falls or the management becomes less efficient in organising its labour. High wage rates and high earnings are not inconsistent with low labour costs per unit of output, if the workers are provided with elaborate machinery which enables them to turn out large number of standardised products at a great pace. There is still inadequate utilization of the installed capacity resulting in lower productivity and higher operational cost.

Unutilised capacity in our industries varies between 50 to 10 per cent of total installed capacity. In certain industries, such as power transformers, electric motors, sewing machines and cement etc. the utilization of installed capacity has been better as compared to previous years. Adequate supplies of raw materials and the continued improvement in Labour-management relations were the factors that contributed to the growth of output in these industries. India's industrial system is largely based on small-size units where economies of production are fewer and chances of waste greater. Of the 6,470 factories, according to the 1952 census of Indian manufactures, more than half have the average daily employment of less than 50 workers. Only 1 per cent of the factories have a daily employment of 5,000 and above. In the same way, the predominant form of industrial organization is individual proprietor and partnership firm and not the joint stock company. Fifty-eight per cent of the factories are owned by individual proprietors and partnership firms as against only 39 per cent by private and public limited companies.

Thus it is that real income from the industry in India has not shown improvement. Although, the value of gross output increased from Rs. 603 crores in 1946 to Rs. 1,184 crores in 1952, according to the census figures, the increase is more apparent than real. For one thing, the areas covered by the censuses have varied. For another, the number of factories to which figures relate was only 4,207 in 1946 as against 6,470 in 1952. Moreover, figures of gross output are not a satisfactory measure. We can take the value added by

manufacture which is regarded as a satisfactory measure of the income generated in the manufacturing sector of economy. It shows an increase of 49 per cent, being Rs. 315 crores in 1952 as against Rs. 211 crores in 1946. Even this comparison of the value added by manufacture in 1946 with that in 1952 would not be quite accurate without taking into account the changes in the areas covered by the census and the level of prices. To obviate these difficulties, we have expressed in the following table the value added by manufacture as (a) percentage of gross receipts and (b) percentage of total productive capital employed.

VALUE ADDED BY MANUFACTURE

Year	Value added by manufacture as percentage of gross output	Value added by manufacture as percentage of productive capital employed
1946	35	58
1947	33	60
1948	33	65.8
1949	27.9	53.5
1950	27.6	46.2
1951	26.6	48.7
1952	26.6	43.1

The above table shows that the ratio of value added to gross output—or to productive capital employed has been steadily declining from year to year in spite of the increase in the value of output. This is a disquieting feature which must be arrested by accelerating the rate of productivity.

Managements have a tendency to consider labour as responsible for decreases in productivity. The view is erroneous. Productivity does not measure the specific contribution of any single factor in production, be it labour, capital equipment, management or any other component in the whole process; instead it registers the combined results of all the distinct but interrelated influences that determine output per head. An outright reduction in wages is, therefore, neither indicated nor is a practical proposition. It is the prospect of raising the productivity at the existing wage level in the country which deserves our careful attention. It is instructive to note that in America both management and workers support the policy of high productivity in the realisation that the existing high standard of living in the U.S. and eventual security of labour depend on producing more at a lower cost.

Labour and management together can, therefore, devise ways and means of reducing the unit cost of production on the one hand and increasing productivity on the other. Reduction in cost can be achieved by a programme of orderly and systematic investigation of all cost factors and the possibilities of their reduction. Increase in output can be accomplished by conducting productivity studies. The I.L.O. Productivity Mission has been in India to show how productivity and earnings of workers in textile and engineering industries can be raised by the application, in selected plants, of modern techniques of work study, and plant organization, and in addition, where appropriate by the introduction of suitable systems of payment by results. The Mission in its interim Report has already shown examples of increase in productivity. It is understood that Government have under consideration the setting up of a National Productivity Centre. The vital importance of productivity is thus recognised by national and inter-national bodies in the pursuit of high levels of production and the development of full employment policies. Indeed, productivity is considered a cornerstone of the economy of the future.

* It is weighted arithmetic mean of relatives of wages obtained by workers in each of the 29 industries covered by the census. The relatives for each industry have been obtained by dividing the wages paid per worker per day in each industry in a particular year by wages paid per worker per day in the base year i.e. 1946. Weights have been assigned in the ratio of workers employed in each industry during the year.

INDUSTRIAL ARCHITECTURE—II

By

BENJAMIN POLK

AT this point it is well to take note of a trend in American factory design which should not be adopted uncritically here. The construction of a 'box' type of factory without any windows or daylighting should be considered only for its functional advantages for certain very special processes especially those requiring full air-conditioning. The unlimited supply of light and air afforded by good fenestration should not be heedlessly discarded. In India the north lighted factory is often wrongly accepted as the only or best alternative to the box type for industrial buildings. In actual fact the unidirectional north light has certain disadvantages. Among these are heavy shadowing of the work, making machine layout a difficult thing at best. The north light also gives an uneven distribution of light at working level as compared to monitor lighting, the north lighted factory also requires a greater overall height of building for the same amount of daylighting which has its bearing on the cost of air-conditioning. In this connection too there is often a wholly artificial hindrance to good design, namely, badly framed factory building codes. These codes should be framed on a performance basis, as progressive codes the world over are now being framed.

Let us return to the first felt need—namely a floor plan and a site plan for the production flow programme which will perfectly fit the manufacturing process. The best practice not only indicates open unobstructed spans as we have noted above but also allocates accessories such as lockers, sanitation facilities or control rooms to mezzanine floors or even to subsidiary extensions of the building leaving the floor space free for the job of work in hand. In urban locations the entire question of multi-story layout may come up for review but where the nature of the industry permits, it is well to avoid the necessity for multi-story factories by allowing full scope to decentralist trends, gaining ground space for operational freedom and living space and amenities for employees as well. Here is just one more illustration of a point where technical matters of the provision of services, of foundation design, (which incidentally is a place where great savings can usually be effected if proper tests and experience are utilized)—to say nothing of the cost of land may all be complementary to wider concepts of town, social, and human planning.

The location, siting and orientation of the plant, particularly if it is a large one, is important. At Rourkela the Government of India has chosen an area well adapted to the auxiliary requirements of housing and town planning as well as to the needs of steel rolling. This wise choice of site can lead to the creation not merely of an industrial asset but of a social asset as well, with its reward in the effective level of well being in this area. Social psychology is a phrase used and misused abroad but it does indicate a trend toward the full use of human possibilities. In many cases all factors of the problem reinforce each other. To take up a small point, which, however, needs emphasis, it is well known that workers who are doing exacting visual tasks gain efficiency from the relaxation of the eyes by an outdoor view. Here, as at other points, the question of the size of the plant itself has a real bearing on the ultimate effectiveness of the operation. The enormous Willow Run plant of the Ford Motor Company at Detroit was found to be too ungainly in countless ways for efficient operation, thus proving the point, if proof be needed, that quantity is no substitute for quality, and the further point that quality in these matters is a subtle thing even for experienced hands.

Further, matters of appearance have a way of turning out to be matters of safety and good organization, as when overhead wiring can be eliminated in favour of cable trenches under floor level, or when the painting of exposed piping and conduit system by bright indicating colours gives both a pleasant pattern to the eye and a quick method of identification. Accoustical design plays its part also since an unnecessarily noisy factory will detract from efficiency.

Just a brief comment on the pre-fabrication of buildings may be in order because a good deal of confusion has resulted from failure to define terms. A pre-fabricated building part, such as an asbestos sheet or a window frame is very much a part of the technique of good construction. It is doubtful, however, if the pre-fabrication of buildings as a whole will ever be either desirable or successful because the required variations always (unless it be with very small steel structures) cancel out the hoped-for advantages of standardization. Or, if the logic of the method is allowed to win the day, the building will be ill-adapted to the given case.

There is no blinking the matter: Indian industrial practice on the whole is weak from the point of view of these wider concepts of factory architecture. The long term value of pre-planning the entire site, the importance of good maintenance, and the money values of good working conditions need to be more carefully assessed. Even the publicity value of a fine factory, fine both in function and appearance, could be reckoned in a statement of assets. If it is understood that architecture is not something 'merely added' as an amusing luxury if there happens to be time and money, then would investors demand from their architects—and get it—the same skilled economic analysis of a problem which they themselves give to their business affairs. The good results of this analysis can be seen today in a few plants in the Bombay, Ahmedabad, and Calcutta areas. Even here, when architects whose place of work is not India are called in, the result of a long-distance effort is often troublesome and dogmatic to say the least. The level of available, building techniques and the ease or difficulty of replacing or repairing imported fittings or parts are considerations usually not properly dealt with from a distance.

In short, to avoid the high cost of poorly planned structures emphatically means fitting the building programme to the financial programmes of the organization. But it does not necessarily mean selecting the cheapest give-away building system that seems ready to hand. It means making an informed choice of many possibilities to suit the given case. It is a technical planning process and the guidance of a team of technicians is needed with ideas focusing on the architect, the man who is at last responsible for putting them into three dimensions.

Before letting go of the subject of industrial architecture I would like to propose that we in India give more thought to the very wide ramifications of decentralization. The problem will be carefully stated and answered first by the Planning Commission itself, but meanwhile the smaller steps taken by each industrialist will count for much in the total pattern. It is to be assumed that the increased expenditure in the second Plan for transport will greatly extend the benefits of decentralization, and the establishment of new trading estates in the hitherto remote areas near the new steel

towns may act in the same direction. But only 'if', and the 'if' is highly important, lessons are drawn from the mistakes of Western industrialism, whether they be British mistakes, or American—or Russian mistakes. If we conceive of the Calcutta of the future as another New York or Moscow we are short-sighted. Western cities have abundantly proven the economic absurdity of megalopolis. But if on the other hand we wait for a corrective government-designed building programme to emerge, we shall have surrendered ourselves to the mercies of the Works Departments, where the thesis of this discussion is seldom practised. The course between these hazards can conceivably consist of semi-private organizations for urban land use guidance. Government and labour will have their parts in this. Human, administrative, cultural and economic factors will have to be synthesized, cultural and economic factors will have to be synthesized, but those persons most immediately concerned, namely the industrialists of India, large or small, are likely through the choice of factory sites, to play a decisive role in the near future in shaping our cities and our countryside. It would be well if these collective decisions made a planning pattern for the future of which we will be proud.

BOOK NEWS:

Company management presents a host of problems to the experienced Executive, Secretary, or Managing Agent, Lawyer, and Auditor. The provisions of the new Companies Act of 1955 are far-reaching and without parallel in any statute relating to companies in any part of the world. A reliable guide and a book of reference to the new Act is indispensable.

Within the pages of the book written by an advocate with a vast and wide experience of company Law and matters, one will find a lucid explanation of the statutory changes effected by this Act.

The important changes effected by the Act are explained in detail. The exact scope of the new amended sections and their operation and the extent to which legitimate advantage may be taken of the exemptions granted and exceptions made in respect of several matters are all set out clearly.

Buy a copy of this book today. It will save you and your office Time and Money. A book of great practical use.

UNSEALING JUTE LOOMS

THE IJMA has decided that, of the 8,000 looms which have been lying idle since the end of 1949, some 1,600 (this represents 2½ per cent of the total loomage and not 2½ per cent of the looms sealed) would be unsealed on and from January 9. This, however, is not considered "adequate" by those in the jute trade as distinguished from those engaged in the manufacture of jute goods.

It would be useful to recall in this connection the circumstances which had led to the sealing of 12½ per cent of the jute mill looms. With the decision of the Pakistan Government not to devalue her currency in 1949 and the consequent trade deadlock between the two countries, the raw jute stock position with the mills in India became alarming, forcing the mills to adopt restrictive measures. After various measures, such as smaller working hours per week, one week's closure in each month, etc., had been tried out to cope with the situation, the Third Principal Working Time Agreement was brought into operation on and from December 12, 1949. The Working Time Agreement has been designed as a stabilising instrument in the jute industry, as its productive capacity is much in excess of the world demand. Under this Third Agreement, working hours were restricted to 42½ hours per week, with 12½ per cent of the looms sealed, except that the smaller mills having not more than 220 looms were permitted to work 72 hours a week with none of their looms sealed. This Agreement was to remain in force for a period of 5 years. Since then, working hours have been raised by stages to 48 hours a week, but 12½ per cent looms continued to remain sealed.

The main reason why there has been this demand for unsealing is that, of late, there have been enquiries from U.S.A. and other countries for Indian jute goods. Pakistan's continued determination not to reduce the jute export minimum price has been a bitter blow to overseas manufacturers, while the price advantage, which Pakistan's jute goods should have had as a result of the devaluation of her rupee, has been largely neutralised by the fact that the quantum of her exportable manufactures is too small yet to make any significant impression on a jute-hungry market. It has, therefore, been urged that India should seize this opportunity and expand her production to the fullest possible extent.

The stocks of jute goods with the mills during the year 1955 have also been the lowest during the last 5 years, as the following figures would show:

a) End of period		Jute goods stocks in thousand tons.	
1951-52		98.6	
1952-53		138.8	
1953-54		86.9	
1954-55		87.6	
b) Period Production Mill Despatches Closing Stocks			
(thousand tons)	(thousand tons)	(thousand tons)	(thousand tons)
July, 1955	84.1	91.6	81.5
Aug. "	81.4	82.7	79.2
Sept. "	87.4	95.8	69.7
Oct. "	78.8	86.8	62.1
Nov. "	90.5	90.0	63.1
Average	84.4	89.4	

As the above figures show, despite sustained production, stocks have been continually going down because of increased mill despatches. At the end of November, 1955, stocks stood at 63,100 tons as compared with 1,27,000 tons when the looms were sealed in 1949. Stocks were below even one month's production. Since then, there has been further depletion of stocks. On December 10, 1955, stocks fell to 50,000 tons only (Hessian 21,300 tons, Sacking 24,400 tons and others 4,300 tons), a little more than only 2 weeks' production. Attended with this, mill despatches in recent months have been consistently above production. Average mill despatches at 89,400 tons per month (average of July-November, 1955) have also been much above the last year's average of 82,400 tons per month. Conditions in the jute industry can thus be described as such as to encourage the IJMA to make this decision.

This decision to unseal 2½ per cent looms is expected to increase monthly production by about 2,000 tons. The annual demand for raw jute will be about 1,40,000 bales only. It has, therefore, been contended in some quarters that this decision of the IJMA will not materially alter the existing position. The increase in production will be very small. According to them, the IJMA should have decided to unseal all the looms so that India could have earned more dollars.

There is some force in this argument. But an equally important consideration is the adequacy of raw jute supply to meet the increased requirements of the mills. In the final estimates for 1955-56, the production of jute in the Indian Union has been placed at 41.4 lakh bales. This estimate is exclusive of the Indian Mesta crop which may be estimated at about 5 lakh bales. The total Indian crop may thus be put at 46 lakh bales. The crop in Pakistan has also been exceptionally good, and in the third estimate the total estimate has been placed at 56 lakh bales. (Actual production may perhaps be 60 lakh bales). The total world supply may thus be estimated at about 102 lakh bales as against the estimated world consumption of 100 lakh bales. Statistically speaking, therefore, it appears that raw jute will be in adequate supply this year. Mills are, however, said to be experiencing some difficulty in obtaining raw jute. This is more due to the lack of adequate transport facilities, particularly rail facilities, rather than to any shortage of the crop. The reluctance of growers and middlemen to part with their crop is also responsible to some extent for smaller arrivals into Calcutta.

Just as the stock of jute goods has been the lowest during the last 5 years, so also is the stock of raw jute with the mills. At the end of September 1955, it had gone down to a mere 3 lakh 80 thousand bales which is the lowest in the history of the IJMA. The supply was barely sufficient for 3 weeks' mill consumption. Since then there has been some improvement in the position, and the stock of raw jute with the mills stood at about 8.3 lakh bales on December 10, 1955. In the circumstances, it is but natural that the IJMA favours a cautious policy in the matter of unsealing of looms.

In the normal course of things, the unsealing of even 2½ per cent of the looms should have given a slight spurt in raw jute prices. But there has actually been very

little rise in the same, as the decision would entail an additional annual demand for about 1.4 lakh bales only. One healthy sign, however, is that the downward trend of the raw jute prices, which had manifested itself due to the statistical position of the world raw jute supply, has been arrested.

It is rumoured that speculative elements in the jute trade have been disappointed that more looms have not been unsealed. They had been deliberately manipulating the market since November, 1955, to bring about a bearish tendency in jute mills shares; their "hopes" were shattered when the IJMA successfully resisted the pressure of a powerful minority group. As is well-known, after the preliminary announcement was made to unseal only 2½ per cent of the looms, the prices of both jute goods and jute mills shares firmed up. It is also rumoured that this minority group wanted to see a moderate rise in the prices of raw jute, not because they were solicitous about the welfare of the jute grower but be-

cause they had some interlocking interests as balers of raw jute. The decision to unseal only 2½ per cent of the looms has shattered this "hope" as well, while raw jute prices continue to rule firm, they have not shown any tendency to rise.

It is difficult to say at this stage if it would have been to the ultimate interest of India to unseal more than 2½ per cent of the looms. In the case of a commodity like jute goods, the future of which is largely bound up with the availability and price of raw jute on the one hand and competitive foreign demand on the other, it is elementary prudence to proceed cautiously. After all, although only 2½ per cent of the looms have been unsealed now, there is nothing to stop the IJMA to unseal a further number of looms later. On the other hand, it would have been most awkward indeed if, after having unsealed all or most of the jute looms, the IJMA were forced, by the logic of future events and circumstances, to re-seal some of the unsealed looms.

ECONOMIC TIES WITH RUSSIA

By
CROESUS

NOW that sufficient time has elapsed since the two top-ranking Russian leaders visited this country and also as the people of this country have had the opportunity to see at first hand, thanks to the Indian Industries Fair, the industrial achievements of Russia and her satellites, it would seem appropriate to assess the possibilities of closer economic relations between India and the Communist countries. Already a broad assessment of the extent of such possibilities has been made by 'The Eastern Economist' in the 1955 Annual Number, but the conclusion reached therein seems to me to proceed on certain assumptions such as, for instance, that India's per capita consumption of food grains may not increase perceptibly or proportionately with the rise in her per capita income and that Russia or her satellite countries would take our surplus agricultural production in exchange for, say, steel. It is doubtful whether Russia can meet India's needs in steel to any substantial extent after satisfying the requirements of herself and China, but, because of the propaganda value attaching to steel exports to India on the one hand, and Russia's need to acquire sterling, on the other, some steel exports could be expected. India also would be interested in Russian steel, if that could be had more easily and sooner than steel from other sources and the Russian prices happen to be more attractive. However, attractive these assumptions appear to be, there is the twin risk of India not being able to command, much less spare, the surplus agricultural products and of the U.S.S.R. or her satellites not wanting these, even if India could afford to export them.

As it is, the trade between the two countries may be said to have only just begun and understandably enough, therefore, it has been on a small scale. What are the prospects of an improvement in the volume of trade between the two countries in future years? The answer to this depends on what Russia is prepared to buy from India, even more than what we may be willing to import from there. If it is Russia's desire to purchase only raw materials from this country, India will not be particularly interested. For, in the first place, there is no dearth of markets abroad for India's raw materials. And, secondly, in the context of her growing unemployment problem, India is naturally anxious to convert as much of her raw materials as possible into manufactured goods so as to provide as much employment opportunity as possible and export only finished goods, of course after fully satisfying the requirements of the home market. To be more pre-

cise, one would like to know if Russia is prepared to buy our cotton textiles, jute manufactures, sewing machines, leather goods, textile machinery, radios, cycles, telephone equipment, automobiles, and locomotives. After what one saw of the industrial skill of Russia and, more than Russia, of her satellites, such as Poland, East Germany and Czechoslovakia, one would only be talking through one's hat as it were, to contend that India can find markets in the Communist countries for any of these, although a report in the daily press mentioned the possibility—rather strangely, it seems—of India exporting cycles. On their part, it is evident that Russia and other communist countries would need only raw materials like mica, iron ore, jute goods, etc., for which India is not having any great difficulty in finding markets. If, therefore, we cannot export raw materials to Russia and Russia, in her turn, is willing to take not our manufactured goods but only food grains, provided we are able to spare them, it follows that there cannot be a torrent of imports of steel, heavy machinery, etc., from Russia and only a trickle of exports of food grains from India. That would create serious problems of trade balance, foreign exchange, and all that. In other words, then, the chances of any sizable expansion in the volume of Indo-Russian or Indo-Communist countries trade do not seem to be bright. What 'The Eastern Economist' Annual Number has estimated must, therefore, be regarded as the outside limit.

As regards the extent of economic aid that India may expect from Russia, all the basis that is available to us to work upon is promises. It is noteworthy that every statement made by the Russian spokesmen during their visit to India on the question of economic aid has been beautifully—I was almost tempted to say 'deliberately'—vague. But, taking the distinguished visitors at their word—if one is prepared to risk it, after the way in which the Bombay Press was let down by them—one should proceed to estimate the total spare resources that Russia can command today, after financing all her atomic and hydrogen bomb projects. Would these resources, one must then go on to assess, be sufficient to go round all the Asian countries which Russia would want to befriend and help economically? If, with all her admittedly abundant resources, even America has thought it necessary to pare down the size of her economic aid to undeveloped and underdeveloped countries and the world trend also seems to be more and more to delegate the work of rendering economic

assistance to underdeveloped areas to either the existing or the newly-to-be-created agencies of the United Nations, it may not be very long before Russia also discovers her limitations and throws up her hands in despair. Frankly, the needs of the world's undeveloped and underdeveloped regions are so great that it is hardly possible for one or two nations, however, economically well-advanced they may be, to meet the challenge. In so far as India is concerned, one should not forget that, despite all the fondness towards her flaunted by the Russians, India could only rank as third or fourth in order of priorities for receiving any aid; she must necessarily come after the requirements of all the satellite countries, Communist China, and North Korea are satisfied. This is but natural, and I have held the same view even in regard to economic aid to India from America; in the case of America she has first to satisfy the needs of Latin American countries, then those of Canada, Western European countries, Philippines and other pro-U.S. countries like Kwamintong China, South Korea, and Pakistan, and then only come to the aid of India.

Finally, I must refer to one other question that people frequently ask: Is the rousing response that the Russian visitors have had an indication of the relatively greater leftist leaning that India is alleged to be having these days? This is a rather controversial question and, whether one likes it or not, the answer to it tends to distort the issue, inasmuch as it is bound to be more subjective than objective; if one is inherently of leftist persuasion, one would naturally hope it is so. Similarly, if one suffers from strong anti-communist inhibitions, one supposes it might be so; in this case, it is the product of auto-suggestion multiplied by the fear complex. Again, if one is a robust rightist, one would perhaps be inclined to dismiss the suggestion as unwarranted, if not farfetched. But, judging from the way in

which Bombay received the Saudi Arabian Ruler, and a few more distinguished visitors from other countries, I am prepared to lay a wager—if the Bombay Government permits—that, if Her Majesty the Queen of England were to visit India, she would have an equally, if not more spectacular and spontaneous reception, notwithstanding the fact that Princely India has today become only a historical relic. Indians will have to live through many more generations before they can forget the hoary precept that a monarch is none other than the Almighty Himself in the form of a human being. Be that as it may, I should not be mistaken to be disrespectful to the Russian visitors, or to any one else, when I say that there have been several occasions when crowds have gate-crashed the Vallabhbai Stadium, as, for instance, when King Kong was scheduled to wrestle!

But there is one explanation that I can think of to the undoubtedly great welcome that the two Russian dignitaries received throughout the country and even outside in other Asian countries. It is the fact, after having just begun to move outside the Iron Curtain region freely, they have aroused curiosity. Human psychology is such that the curious become curiouiser even if something that is normally familiar is forcibly sheltered behind barred doors. It is such a psychology, I reckon, that explains the public's overwhelming ovation to our Russian visitors. But I wonder whether the response will be the same if and when these very distinguished men visit our country for a second time. Already, as Argus has reported in the 'Delhi Diary', the enchantment seems to have vanished with the first touch. I am inclined to say that the remark of the unsophisticated villager—"After all, the Russians too are Europeans"—is as profound as it is simple. The moral of it all is that novelty—even the novelty of Messrs. Bulganin and Krushchev—will soon wear off.

TUSSLE OVER TEXTILE TARGETS

By
CROESUS

FOR reasons only known to them, both the Government of India and the Planning Commission are apt to see nothing beyond a selfish motive in any proposal or suggestion that cotton mill interests in Bombay and Ahmedabad may make. Personally I do not think it is any sin to be selfish. It is the way of all flesh. It is only when the degree of selfishness crosses the point where it clashes with the interests of the community or the country at large, that it has to be, and is rightly deprecated. In other words, one can be selfish—if it is selfishness to look after and safeguard one's own interests to the best of one's ability and, at the same time, be a patriot as well. One need not, therefore, be dismissed cavalierly as selfish or one's words discounted as such merely because one is an industrialist or a business man. Sir Shri Ram, Chairman of the Delhi Cloth and General Mills Co. Ltd., I think, drove home this point very well when, whilst addressing shareholders of the Company at the last annual general meeting, he said: "We industrialists are a much-maligned lot as some debates in Parliament during the year (1955) have shown. But I do wish to point out that most of us, at any rate, are not lesser patriots." And he instanced the role played by industrialists during the first Five-Year Plan period as a concrete proof of the patriotism of the industrial community.

Be that as it may, what I wanted to convey when I set out was that, at least because a Delhi industrialist has made the observations on some of the controversial aspects of the textile industry this time, I now entertain fresh hope that, even at this stage, Government and the Planning Commission would revise their attitude

towards the mill industry by viewing things in their proper perspective. Sir Shri Ram has, I believe, provided ample food for thought to them in this behalf.

The D.C.M. Chief referred to four important aspects of the textile controversy, namely the targets fixed for the mill industry under the second Five-Year Plan, the means of producing cotton cloth, the feasibility of Ambar Charka providing all the yarn required by the handlooms, and the consequences of the failure of Ambar Charka to come up to the expectations of its protagonists. In regard to all or any of these, Sir Shri Ram has said nothing new, but he has certainly highlighted the folly or short-sightedness of every one of these aspects.

In the first place, taking the targets for textiles proposed under the second Five-Year Plan, this Delhi industrialist has just compared the target of 28 per cent increase in textiles, with relatively higher percentage increases indicated in respect of sugar, Vanaspathi, paper, bicycles, and soap, and posed a sort of a rhetorical question, as it were, by asking the authorities themselves to see whether the respective weightages are properly balanced. And, in the hypothesis for the future per capita cloth consumption, it is noteworthy, he has assumed neither the 22 yards per capita estimated by the Millowners' Association of Bombay nor the 18 yards suggested by the Kanungo and the Karve Committees, but has taken the average of the two figures. At the rate at which the internal demand for cloth has been increasing at present, the figure of 20 yards per capita in 1960-61 errs rather on the side of conservatism and is by no means an exaggeration.

Although many may not relish Sir Shri Ram's frank view that "neither those who believe that handlooms could produce, nor those who believe that handlooms could not produce" (all the cloth required even on the basis of 18 yards, let alone 20 yards *per capita*) could be absolutely certain in their belief and definitely say they are right", I am inclined to regard it as a correct statement of the position. Both are arguing on unproven hypothesis. In the circumstances, the best course to adopt is to give the handlooms a trial and then arrive at an unquestionable conclusion on the basis of the results achieved. But, meantime, as the D.C.M. Chairman appropriately suggested, there should be nothing like a complete ban on the increase in cloth production by the mills or the big-scale industry. As he added, this need not come in the way of any subsidy or help to the handloom industry either.

Placing a complete ban on increased production by mills is a risky proposition; in the potentially inflationary context in which this is sought to be done, it carries with it grave risks. For instance, when a mill wants to replace its old or obsolete machinery for which it may have obtained prior permission of Government, under the proposed dispensation, there is the possibility of objection from the handloom interests to allow such expansion on the plea that it would lead to some increase in production by the mill concerned. The plea, it is true, is not specious, although it is fatuous. What will Government do when compared with a predicament thus?

It might be argued that this fear is exaggerated, for with so many mills not working second and third shifts, it should always be easy for Government to ask these mills to work double or treble shifts and make up the shortfall. That sounds easy enough, but how, in practice it is not so, is evident from Sir Shri Ram's view with over fifty years of his experience in the mill line behind it: "... there is a very big number of mills where the machinery is in such a bad state of repair, and so old and inefficient, that it would not be possible to increase the shifts, except perhaps in a mill or two here and there. In fact, if they had been in a position to run extra shifts, they certainly could have done so even now when the margin of profits is certainly above the average."

Now, under the new order of things envisaged, the **Ambar Charka** is to produce all the yarn required by handlooms and, in order to enable it to do so, place a ban on any new spindles installation by the mills. Apart from the higher cost that this would mean to the handlooms (if Sir Shri Ram's figures, or rather those from the A.I.C.C. Economic Review which he has quoted are any authority) there is the question of how far the 20 counts yarn would be acceptable to our handloom weavers. 20 counts yarn is certainly not the yarn required for the manufacture of **dhoties** and **saris** in many parts of the country, particularly in the South. Wherefore, the contingency arises that even if **Ambar Charka** can be organised to produce all the yarn required, many weavers may have to go without yarn raising the slogan (with apologies to Coleridge) "Yarn Yarn everywhere but not a shred to weave". Quantitatively also it is too much to expect **Ambar Charka** to produce the total requirements of yarn required by the handlooms themselves. That means, as Sir Shri Ram remarked, that "even those who believe that the handlooms could produce all the cloth required will find that, on the one hand, the increase in the mill production was banned, and, on the other, the handloom people, without the yarn, will not be able to produce, and there will be heavy shortage of cloth as a whole in the country with most deplorable results".

What will be the consequences if **Ambar Charka** fails to come up to the expectations of its protagonists? According to the D.C.M. Chief, this will hit our exports. It is Sir Shri Ram's view—this is supported by experience all over the world—that exports can only be possible of commodities for which there is a good home market. It is needless to explain here that, if exports fail to reach expected levels, there is always the home market to fall back on and to serve as a cushion to absorb the shock.

Secondly—and this is very important—when large-scale deficit financing to the tune of Rs. 1200 crores is envisaged, prudence dictates that all possible care must be taken to avoid any steps that would or are even likely to promote or add to inflation. Implementation of the Karve Committee's recommendations voluntarily, if not consciously, means courting inflation.

BUSINESS NOTES

RESTRICTED COFFEE CONSUMPTION

AN IMPORTANT fact which emerges from a survey of the internal marketing of coffee in the calendar year 1955 is that actual consumption in the second half of the year had to be kept below effective demand. Conditions were much better in the first half year except for the month of February and the quantity released during the period in the pool sales amounted approximately to 2,000 tons per month. In the second half, however, important considerations influenced the decision to lower the quantity of releases from the pool and the quantities offered were scaled down to 1,750 tons per month to start with and to 1,650 tons per month on revised estimate of the supply potential. The factors determining diminished releases from the pool in the second half year were to spread the stocks over the period as evenly as possible and to provide for a fair carry-over at the end of the year. Earmarking of a comfortable carry-over was found not feasible. The average monthly off-take from the pool stocks was 1,423 tons in the first half and 1,350 tons in the second half. The overall average off-take out of the total supplies from the four channels in the internal market, was of the order of 1,847 tons consisting of Plantation 805 tons, Arabica Cherry 423 tons and Robusta 619 tons. In spite of relaxed releases from pool sales, the off-take of Plantation and Robusta would have risen if only larger stocks could have been offered. The annual consumption stood last year at 22,250 tons and it would be a reasonable estimate to put it at the higher figure of 24,000 tons in the event of availability of adequate supplies.

Mr. K. Shrinivasan, Chairman of the Coffee Board, explaining the supply position at the Board's last meeting early this month, stressed that larger quantities had to be put up each month than either the stock position or average off-take figures indicated and even this liberalisation in releases could not stop prices from rising steadily. As a result of large offers of supplies than warranted by the stocks in hand, it has not been possible to maintain an adequate carry-over at the end of December. The estimate of the provision for internal consumption during the current year has been placed between 23,500 and 24,000 tons and a minimum carry-over of 5,400 tons at the close of December, 1956.

EXPANSION PROGRAMME FOR COAL

ANALYSING THE Government's approach to the problem of keeping the expansion of coal output in step with the rapid increase in demand under the impact of development projects, Mr. D. C. Driver dilated at length, in his presidential speech before the last annual session of the Coal Consumers' Association of India, how the astounding magnitude of requirements of coal in the third Five-Year Plan is dominating official thinking. Government's advisers have suggested the target of 100 million tons as the target of yearly production in 1965 and he emphasizes that it is not the target of 60 million tons for the second Plan but the much higher one for the third Plan which is shaping Government's policy on nationalisation. The estimates that are being advanced initially in respect of the third Plan will necessarily require much more accurate and scientific assessment and Mr. Driver enters into some statistical details to indicate in what directions official planners are likely to lapse into erroneous calculations by omitting to take note of sources of economy in coal consumption. Allowing for a margin of adjustment, the anticipated volume of demand raises the vital question whether the private sector can meet it adequately. He argues that wholesale nationalisation need not be launch-

ed, but coking coal collieries may be taken over by the Government in successive phases as necessity arises.

This trend to take a longer view ought not to be allowed to obscure the perspective for the second Plan. The unprecedented rise in the volume of demand on government account does not establish, *ipso facto*, an unanswerable case for nationalisation and State collieries have not rendered a showing that would substantiate such a case. The increase of 23 million tons envisaged for the second Plan need not be assumed to be beyond the capacity of the private sector to produce and assurances about its ability to satisfy a major part of the increased demand have already come forth from responsible quarters. Part at least of the confusion and apprehension caused over the prospect of nationalisation and compensation has been cleared recently. It is difficult to overlook the fact that during last week's discussion of private colliery owners with the Production Ministry over their plans for expansion, there was a shift from the erstwhile demand in regard to these two controversial issues. This aspect of the change in the situation is certainly much less important than the shift in the position which Government had taken so far. The allocation of the targeted increase in output in the shares of 15 million tons for the State and 8 million tons for the private collieries is no longer an article of irrevocable policy with the Government. Mr. K. C. Reddy's unequivocal clarification at the conference to the effect that there can be no rigid adherence to this apportionment of shares clearly implies a readiness to accept colliery owners' offers to undertake higher responsibility for a larger share.

INSURANCE IN 1954

THE EXTRAORDINARY increase in the volume of life business written in 1954 has been held out as the most spectacular feature of the developments in insurance in that year. New life business of Indian insurers rose steeply in 1954 to Rs. 213.13 crores in respect of 6,83,000 policies yielding premium income at the level of Rs. 10.57 crores. In relation to 1953, this constitutes an increase of Rs. 75.14 crores for 1,44,000 policies bringing Rs. 3.29 crores in the annual premium renewal income. The most pertinent fact about it is that it has been achieved in a year in which the economic situation was free from any unusual elements. The expansion of life insurance business in the post-war period reveals that 1947 was the year, excluding 1954, which registered a peak in increased life business of the order of Rs. 17 crores as compared to the previous year.

There is, however, hardly anything flattering about the spurt in the volume of new life business recorded in 1954 and it may be conceded that this sudden spurt ought not to be taken at face value. It is now common knowledge that the major explanation of this increase is to be found in the policy of reduction in premium rates introduced in that year. There was inevitable rush for making old policies paid-up and re-entering into contracts of new policies at attractive rates. Nevertheless, this was not the sole contributory factor. Improved mortality experience, higher yield from interest earnings and general improvement in the economy are links in a chain of developments imparting a healthy tone to life insurance business. Staff insurance schemes on attractive terms have contributed their bit to swelling the volume of business. The health of the Indian insurance business is in a sound condition by all criteria. The business written by Indian insurers outside India has also shown an increase. In non-life business, if the gross direct premium disclosed some

decline, barring the case of marine insurance, its one reassuring feature was that the net premium income recorded an increase.

It is premature still to expect that harmful practices undermining the strength and soundness of the business will be wiped out immediately. Genuine complaints persist about the prevalence of rate competition, higher bonus declarations and improvised schemes of staff insurance on tempting terms. The Code of Conduct drawn up by the General Executive Committee of the Insurance Association of India for compliance by companies undertaking general business has started stimulating a wholesome tone in business practices. Nevertheless, the prevalence of excessive commissions and high rebates has directed attention to a search for a corrective. An effective remedy in the shape of a standard formula for adoption by insurers in respect of agents' accounts is being evolved. Management expenses continue to call for curbs in some cases, while the size of the lapse ratio urges unfailing caution in underwriting practices.

AUTOMOBILE PROSPECTS

THE OPTIMISTIC outlook for the Indian automobile industry in discernible from the better working results of Premier Automobiles, Ltd., which show a net profit of Rs. 5,86,717 during the year to June, 1955 against a loss of Rs. 13,44,485 in the previous year. During the year under review, the Company sold 2,162 cars and 4,657 trucks against last year's sales of 346 cars and 1,136 trucks. The Company also sold spare parts worth Rs. 66,22,246 against Rs. 38,53,610 in the previous year. The Company's sales during the five months to November 30, 1955 have reached Rs. 5 crores. The current boost to the automobile industry is partly due to the elimination of assemblers from the field. The first impact of liberalised imports of spare parts has also steadily exhausted itself. The recession of 1953 and 1954 began slowly to peter out in 1955, and it is estimated that the total production of vehicles will exceed 22,000 in 1955 against 14,000 in 1954.

The two main factors that influence the demand for automobiles are the standard of living of the people and the development of roads. The development programmes for roads under the second Five-Year Plan are expected to produce a healthy effect on the demand for motor vehicles, provided their prices are not unduly high. The present annual demand for trucks and cars is only 20,000. The main reason for this low demand appears to be the high prices of both imported and locally assembled motor vehicles. The problem of cheap motor vehicles, however, is beset with enormous difficulties. When America and Europe are manufacturing motor cars in millions, thereby taking advantage of mass production methods to reduce the cost, India with her present low annual demand of 20,000 cannot be expected to produce vehicles at a price that is within the means of the people. At present, the lowest priced Indian assembled baby car costs about Rs. 8,000, while the same car can be bought in the overseas market at half this price or still less. Considering the rapid industrialisation of the country which is expected to bring higher living standards in its train, everything should be done for the manufacture of the cheaper motor vehicles within the purchasing capacity of the people. There has been a constant demand from the public as well as from the Government for reduction of motor vehicle prices. Such reduction, however, can occur only when the volume of production expands. The Government of India has, meanwhile, referred the price question to the Tariff Commission, which is expected to rationalise the price formulae in such a way that the producer will be encouraged to produce more,

while the consumer will get his money's worth. There is considerable force in the prevailing feeling that the present restrictions on road transport should be reduced to the minimum so that there will be greater use of the roads through an intensive network of motor transport services.

STALEMATE IN WORLD COTTON STOCKS

The protracted difficulties encountered by America over its surplus cotton disposal plan have been given scant attention by most of the cotton producing countries of the world and even in the USA preoccupation with it is petering out. During the last five years, there has been excess production particularly in the net exporting countries. As a result, at the end of the 1954-55 season, the carry-over stocks in these countries, which have been steadily increasing from 1951 stand at 20.3 million bales as on August 1, 1955. From available indications, the increase in the aggregate stocks on August 1, 1956, will even exceed the 3 million bales increase estimated currently. In the event, the disequilibrium between supply and demand, which has been the bane of cotton for the past few years, will be more pronounced in the current cotton season and this would be watched with concern in world cotton circles.

Analysing the world cotton situation, the International Cotton Advisory Committee, Washington, in its latest monthly bulletin, observes that, in the short space of four years, carryover stocks have almost doubled and that, in view of a possible decline in the total disappearance in respect of US cotton, stocks in that country would increase by about 2.5 to 3 million bales.

If the rate of consumption in the major cotton producing countries has also been equally impressive, the degree of disequilibrium between supply and demand could have been minimised. But the consumption trend has almost remained static, the increase recorded in the United States, Canada and several Asian countries in the opening months of the 1955-56 cotton season being offset by a like decline in cotton consumption by Western Europe, Japan and the U.K. The main reasons for the lethargic performance on the consumption front were the decline in cotton textile exports and the uncertainty over cotton prices. While these were responsible for the setback in cotton consumption in Western Europe and the UK, in the case of America, a rise of 6 per cent in cotton consumption in the first quarter of this season was brought about by rising textile prices and the generally expansionary phase of the US textile industry.

A factor which will have long-term implications in regard to cotton consumption the world over is the significant decision, made recently by many of the producers of newer synthetics, to lower their prices. This new drive to offer price concessions by producers of man-made fibres may prove to be a thorn in the flesh and will work against any notable rise in consumption of cotton. It is true that synthetics like Orlon, Dacron and Nylon, even with their recent price reduction ranging between 20 to 30 cents per pound, are still much more expensive than either cotton or rayon, but it is quite likely that further price reduction may be announced as and when production and consumption warrant such a course. The disequilibrium between demand and supply, which has been characteristic of cotton for the past few years threatens to prolong the stalemate and unless prompt measures are taken the supply and distribution position of world cotton would continue to suffer from imbalance.

COMMODITY NEWS AND NOTES

INCREASE IN WORLD COTTON STOCKS

The International Cotton Advisory Committee in its December review of the free world cotton situation has said that the disequilibrium between supply and demand in recent years is reflected in the stock situation in net exporting countries. In the space of four years, carryover stocks have almost doubled, and, as things stand at the moment, the increase in aggregate stocks on August 1, 1956, at present estimated at some 3 million bales, is likely to be even larger than in previous seasons. The final estimate in the United States puts production at 14.5 million running bales, or some 140,000 bales under the previous estimate. With carryover stocks of 11.1 million bales and allowing for imports, total supply in the U.S. now stands at 25.7 million bales. With total disappearance in the U.S. this season of under 12 million bales, carryover stocks on August 1, 1956, would increase by between 2.5-3 million bales. According to the review, free world production prospects outside the U.S. may not be quite so favourable as earlier in the season. Aggregate production is now estimated at 16.3 million bales, up 500,000 bales from last season. The crop in India is at present estimated at 250,000 bales under last season's total, and in Pakistan it now appears doubtful if there will be any increase in production this season. Production in Turkey is estimated at 600,000 bales, compared with 630,000 bales last season and the official estimate in Egypt has been lowered to 1,760,000 bales. Prospects in Africa, however, continue favourable, particularly in Uganda, while in South Brazil early reports predict a substantial increase in cotton acreage, this season and, in Argentina, planting conditions have been quite favourable in recent weeks. Free World production is now estimated at 30.8 million bales, or roughly 1.5 million bales above last season. Carryover stocks were 20.3 million bales, so that total free world supply is expected to be approximately 51 million bales.

RECORD U.S. MINERAL PRODUCTION IN U.S.A.

Paced by the strong increases in fuels, copper and iron ore, mineral production in the United States jumped 11 per cent to a new level of \$15,800 million (£5,642 million) in 1955. The previous highest figure of \$14,400 million (£5,142 million) was recorded in 1953. Last year's total was \$14,100 million. Most significant developments of the year were in the copper and coal industries. Despite work stoppages in July and August, 20 per cent more recoverable copper was mined than in 1954 and, owing to world-wide demand, prices were spurred to the highest level in 90 years. This was a complete reversal of the situation of early 1954 when voluntary production units were made to avoid excess supplies. Estimated production of crude petroleum for 1955 was 2,469 million barrels, or 6,764,000 barrels daily, a gain of 6.6 per cent over 1954 and 5 per cent above the previous record year, 1953. Total value of crude petroleum at the well is estimated at \$6,839 million, compared with \$6,427 million in 1954. Estimated total demand for all oils in 1955 gained 7.4 per cent, compared with an increase of 1.3 per cent in 1954 over 1953.

COFFEE PRODUCTION IN INDIA

The 1955-56 coffee crop is estimated at 27,740 tons, made up of 18,175 tons of Arabica and 9,565 tons of Robusta. Seasonal conditions for 1955-56 were satisfactory on the whole. Out of the total estimated quantity, after providing for growers requirements for domestic consumption and seed, about 27,400 tons might be available for marketing. Out of 1954-55 crop, a total of 3,250 tons, consisting of 1,750 tons of plantation, 1,250 tons Arabica cherry and 250 tons of Robusta, were allocated for export. The price at sales was satisfactory. In another review, in the latter half of the year, it was found that some more Arabica cherry

could be exported and a quota of 275 tons was allotted recently. According to Chairman of the Coffee Board, Mr. K. Srinivasan, prices at pool auctions, ranged between Rs. 203-6-0 and Rs. 225-15-0 for plantation 'A'. Rs. 168-3-0 and Rs. 195 for Arabica Cherry Flats and Rs. 146-2-0 and Rs. 174-14-0 for Robusta Cherry Flats. The advance in prices was also partly due to the revision of minimum release prices on the basis of Rs. 2-2-0 per point as against Rs. 2-1-0 per point from April 1, 1955, and the enhancement of the excise duty from Re. 1 to Rs. 2-8-0 per cwt. from August 1, 1955.

EXPORT OF OIL CAKES

A fresh quota of 10,000 tons of oil cakes has been released for export during the first half of the current year or till the ceiling is reached. The oil cakes exclude groundnut, linseed, nigerseed, kardiseed, cottonseed, copra, and tobacco seed cakes. A maximum quantity of 200 tons has been fixed for an exporter from all ports, according to a notice issued by the Joint Chief Controller of Imports and Exports.

Another trade notice extends the period of validity of shipping bills, which were passed by the office of the Joint Chief Controller of Imports and Exports, for shipment by December 31, 1955, to the end of January this year in regard to the export of rice, bran, paddy bran, and rice meal.

The export of the following Commodities will, according to a third trade notice, continue to be licensed freely up to the end of June this year: Kardiseed cake and nigerseed cake and decorticated cottonseed oilcake.

COMPANY AFFAIRS

ASSOCIATED CEMENT CO., LTD.

In tune with the rising tempo of development activity in the country, the Associated Cement Co., Ltd., earned a higher gross profit of Rs. 6.3 crores during the year to July 1955 against Rs. 4.62 crores in the previous year. The improved results are mainly due to the sharp rise in cement sales from Rs. 17.13 crores to Rs. 21.23 crores. The higher production and sales, in turn, can be partly attributed to the inclusion of the working of the Bhupendra factory of the Patiala Cement Company. Of the gross profit of Rs. 6.3 crores, managing agents' commission absorbs Rs. 51.56 lakhs against Rs. 32.96 lakhs, depreciation Rs. 1.07 crores against Rs. 85.67 lakhs, and taxation Rs. 2.14 crores against Rs. 1.34 crores. The net profit thus is Rs. 2.57 crores against Rs. 2.09 crores, of which bonus to employees absorbs Rs. 41.80 lakhs against Rs. 36.65 lakhs, plant reinstatement reserve Rs. 55 lakhs against Rs. 50 lakhs, and reserve for gratuities Rs. 15 lakhs against Rs. 10 lakhs. An allocation of Rs. 20 lakhs to development reserve has been made possible under the provisions of recent tax legislation, which provides for a development rebate of 25 per cent of the cost of new plant and machinery in determining assessable profits. The recommended dividend of Rs. 10 per share is the highest in the Company's history and works out at 6.1 per cent of the invested capital.

The work of rehabilitating the older units and modernising the plants is proceeding steadily along

with the various expansion schemes. The construction of the new cement works at Sindri with an annual production capacity of two lakh tons is almost complete. Work on a new factory at Mancherial in Hyderabad State is progressing. The Bhupendra factory is now in a position to make four lakh tons of cement a year as soon as the necessary power becomes available. Shahabad's capacity has been increased to 3.8 lakh tons and the extension of the Kistna cement works to 2.5 lakh tons is due to be completed early in 1957. Steps have also been taken to increase the capacity of the Chaibasa plant to three lakh tons.

In the context of the revised target of 12.5 million tons of cement production by the end of the second Five-Year Plan, the Company has ambitious expansion programmes to double its output. This, of course, will entail considerable capital expenditure, a part of which will be met from the internal resources of the Company and borrowings on the cash credit facilities available from the State Bank of India. The balance will be met by a further capital issue of Rs. 6.36 crores in the ratio of one for two shares at par, subject to Government's sanction. It is proposed to call up Rs. 50 per share on application, and the remaining Rs. 50 will be called up later either in a lump sum or in instalments.

The following table gives the summarised balance-sheets of the Company for 1954-55 as also for the previous two years:

(Figures in Lakhs of Rupees)									
LIABILITIES					ASSETS				
Year	Capital, Premium on Shares, Reserves & other Funds	Sundry Liabilities	Profit & Loss A/c	TOTAL	Fixed Assets Less Depreciation	Stocks & Stores	Book Debts & Advances etc.	Investments	Cash & other Balances
1954-55	1,887.14	1,031.32	132.81	3,051.27	1,711.98	703.81	245.48	73.17	316.83
1953-54	1,686.50	709.02	115.04	2,510.56	1,334.17	574.57	224.44	165.62	211.76
1952-53	1,600.97	511.72	104.07	2,216.76	1,101.36	621.01	123.31	158.12	212.96

THE MYSORE KIRLOSKAR LIMITED

The Audited Balance Sheet and Profit and Loss Account for the year ended June 30, 1955, show that after appropriating Rs. 50,000 towards a part provision for the Gratuity Fund, the net profit of the Company during the year amounts to Rs. 1,55,051 added to this last year's balance of Rs. 6,055 the total comes to Rs. 1,61,106 which is proposed to be distributed as follows:

For payment of dividend at the rate of five plus additional one per cent (total six per cent) per annum free of Income-Tax on the paid-up Capital of the Company as on June 30, 1955	Rs. 1,35,000
For Reserve Fund	" 25,000
TOTAL	Rs. 1,60,000

After appropriating the amount as above, there remains a balance of Rs. 1,106 which is proposed to be carried forward to the next year. During the year under review further progress has been made in the manufacture of all Geared-head lathes. The matter of taking up new lines and increasing the present capacity is under active consideration of the Company.

The Authorised Capital of the Company is now required to be raised from Rs. 25 lakhs to Rs. 50 lakhs to facilitate further expansion and the Share holders have been requested to approve this increase in the ensuing General Meeting.

The Directors have proposed to pay bonus for the year 1954-55 to all employees of the Company including the Staff and the General Manager as stated below

Subject to the following provisions, all employees of the Company including the staff and General Manager will be given a bonus equal to 1/12th of their basic earning during the year under report.

The employees who have worked for less than 75 working day, and more than 32 working days shall be granted a bonus equal to 1/24th of their basic earnings during the year; and the employees who have worked for 32 days or less shall not be paid any bonus.

Any employee who has been dismissed for misconduct during the year under report will not be entitled to any bonus even if he has worked for more than 32 days.

Bonus will be calculated to nearest rupee on the basic earnings (exclusive of all allowances, such as dearness and the bonuses paid during the period) received during the year commencing from July 1, 1954 to June 30, 1955.

Bonus will be paid before June 30, 1956, in two instalments in the manner as the Directors deem fit.

The Hour of Decision

EVENTS this week in many portions of India if they were not filled with tragedy, might have provided an objective onlooker with entertainment. The decisions of the Central Government on the recommendations of the States Reorganisation Commission have brought Chief Ministers racing one after another to Delhi. It was rumoured in Delhi on Saturday that Dr. B. C. Roy, the

Chief Minister of West Bengal, had threatened resignation on an initial decision that the transfer of certain areas from Bihar to West Bengal had been vetoed by the Four-Man High Committee. When on Monday it was announced that 2,900 of the 3,300 square miles of territory proposed to be transferred were transferred to West Bengal, it was a

Sinha's turn to threaten resignation. Meetings are still taking place in Patna demanding the resignation of Bihar Members from Parliament and further drastic action, of all and sundry kinds. In Bombay, after the decision to keep the city under Central control was announced, the police opened fire ninety-five times on Wednesday alone. In this wild display of mobocracy, twenty-one people have been killed and one hundred injured. These are tragic elements in what might otherwise be dismissed as comic opera; one might laugh were one not so high to tears.

How deep are the emotional attachments of the masses to the linguistic areas to which their passions have now been linked? Almost any conclusion seems to be possible; the evidence of the last two months seems inconsistent with much of the evidence on the growth of the basic unity in India in the last few years. It would be a rash person who would argue long-term on the basis of occasional mob demonstrations in the cities of Calcutta and Bombay. It will be remembered that, just three years ago, Calcutta had acquired for itself a quite notorious reputation as a permanent refuge for goondas. At the present time, and, indeed, for the last two years, there has been almost no display of goondism in Calcutta. It may well be that Bombay's unseemly reputation acquired in the last two months will similarly evaporate once the Central political decision is seen to be inevitable. At the present time there is a belief that, as on Andhra, the Prime Minister can be swayed by threats of force. No time should be lost in disabusing Maharashtrians of this error.

So far as other areas in India are concerned, the present outlook is stable and even happy. Notwithstanding a serious Parliamentary setback, cooperation in the Punjab between the Hindu and Sikh communities seems possible. The decision on the Punjab has not yet been announced, and it may be there is more trouble in store in this important State. The fact, however, that a great political sacrifice has been made by Mr. Sachar and his colleagues—though perhaps without a notable degree of self-effacement—seems to suggest that what might have been the worse province of all will eventually stabilise itself on the basis of an adequate recognition of Sikh predominance in the counsels of the Government. It has been a hard and, in some respects, a cruelly unjust decision. But politics is a cruel and unjust mistress. There does not seem to have been any more merciful decision which could have been taken, once the need to placate Sikh opinion was recognised.

It is possible that some minor improvements on Central Government decisions may be attempted. But nothing can be more disastrous than to suggest that, because some minor improvements are possible, the time for discussion can be extended beyond the present. Indeed, it has already been extended far beyond the limits of wisdom, and the Central Government has certainly erred in announcing its decisions so late in the day. It can, indeed, claim that it has given adequate opportunities for all sides to be heard. The complaint cannot be that it has erred in restricting discussion. It has erred in excess; when emotional feeling was so high, there was no point in attempting an undue degree of rational persuasion.

The central point, therefore, is that this, and no other, is the hour of decision. Whatever the merits of the issues in any single case or on all together, the Central Government must refuse abso-

lutely to abdicate in any respect from its present position under threat or pressure of any kind. In the city of Bombay, this should be proclaimed by declaring martial law to make it clear that law and order the essential condition of all government will be maintained with the fiercest determination. It is obviously difficult for the Bombay Government, now rent by dissension and a party to the dispute, to be credited with the faith that, in the maintenance of law and order, it is acting without bias. It is essential that Mr. Morarji Desai should, in these circumstances, be relieved of the major responsibility for the maintenance of law and order. The Central Government, having decided to take over Bombay, must move in force to show that it is determined to govern in an area which has been marked out particularly as its own.

This need for prompt and decisive action is the vital point to be appreciated in this hour of decision. It is essential that the Prime Minister of India should recognise that the country looks to him for a strong lead in this matter. There is no task, of the many tasks which are thrown upon him at this time, which requires equal attention. It is a great pity that he allows himself to be distracted from some of these responsibilities by numerous other engagements which, in the light of present conditions, must be considered petty and trivial. It is essential that his clarion call for the unity of India should rise above all his other pronouncements, sweet and reasonable as they may appear. Only the Prime Minister can give emotional force to an appeal for Indian unity at a time when rational arguments and good sense have failed.

Meanwhile it is good for historians, and those who can take a long-period view of India's political turmoils, to recognise that the background against which fissiparous tendencies are now being wildly exhibited is no other than the fundamental unity of the Indian Union. Precisely because that unity is now firmly established—with the Central Government in the last analysis capable of administering any portion of the country in replacement, if necessary, of any State Government—one can look upon this demonstration of mobocracy as being merely an element of moderate licence given to or taken by unwise people in a democracy in which there is no major danger to the unity of the country as a whole. It is arguable that we have already gone too far in granting this licence. It is not arguable that this display of mobocracy in a few widely separated places is a fundamental denial of the essential unity decreed by political and economic forces in the Indian Union. In a month or two, after the shouting is over, the broad pattern of that unity which incidentally still prevails over the ninety-nine hundredths of the country will not be marred by the unseemly incidents which have been all too prominent this week.

One must look on present events with a heavy heart, but that is no reason why one should look on these events, or any others, with a clouded mind. Today, the mind of the Government of India has been firmly made up on the need for proclaiming its authority without fear or favour. Once that proclamation is enforced—and the overwhelming majority of the Indian people demand that it shall be enforced forthwith—the blots on the national escutcheon can be readily wiped away. This is the hour of decision; it is good to know that, at this time of testing, we also have arms and the man.

Steel Industry Sets the Tone

INDUSTRIAL relations in India during the last few years have presented a mixed picture, but, on the whole, there have been many bright patches which have offset the darker spots. Since the beginning of the first Five-Year Plan, man-days lost through industrial disputes have been only a fraction of the average of the earlier years. Since our industrial production recovered in 1951, labour productivity has shown an increase. Real earnings, which were ahead of productivity in the earlier years, have now a better relationship to output, and in a few industries or in certain sections of some industries, earnings have not, perhaps, fully benefited by the increase. The system of adjudication on disputes, which has become increasingly legalistic, has prevented the fostering of more constructive labour-management relations and any changes in this system have proved politically impracticable, except when they are one-sided, in the direction of yielding to pressure from labour, as in the case of the proposed abolition of the Appellate Tribunal. A wholly unhelpful attitude on the question of rationalisation—which culminated in the Kanpur textile strike a few months ago—has prevented labour's gains through productivity as much as it has hindered the management's plans to cut costs and widen the market. Trade Unions, partly because of their internal divisions and partly because of their close dependence on the Government for safeguarding their status, have not played as active a role as their counterparts in Western countries.

In this uneventful rather than gloomy surface of industrial relations, it is refreshing, therefore, to hear of a positively constructive approach to labour-management co-operation like the agreement concluded recently between the Tata Iron and Steel Company and the Workers' Union at Jamshedpur. It excels the few precedents established in the textile industry in Ahmedabad. The agreement sets out clearly the rights and obligations of labour and management and seeks to break new ground in the development of collective bargaining. Such an agreement among the two parties in any industry would constitute a major advance if it can show the way for others. But it is particularly significant that India's largest existing steel unit should thus be free from anxiety on its labour front, when it is planning for large-scale expansion. The progressive association of employees in the Steel Company's works at Jamshedpur at various levels is proposed to be achieved in gradual stages. Hitherto, the system of works committees, adopted under official inspiration rather than through a spontaneous desire on the part of workers in industry to make a success of them, can hardly be regarded as having succeeded even moderately in establishing the preliminary conditions for success. This has been now admitted officially. If steel workers succeed where others have failed, it must be attributed to a better understanding of their own role in the scheme of industrial relations and this experiment will be watched with great interest.

Some advance indications have already been given of the nature of the co-operation, which offer the assurance that it would be constructive. The Workers' Union has secured some important gains: it has secured an Indian equivalent of the closed shop, which is widely practised in Western countries. The Company will continue to re-

cognise the Union as the sole bargaining agent of the employees, including those in the supervisory grades (which have a separate unit within the Union). The Company has also agreed to a Union membership security system and to the principle, unusual in this country, of collection of Union subscriptions through the payroll in respect of all the non-supervisory employees. Some permissive legislation would be necessary to enable the enforcement of these provisions. Representatives of Joint Committees also get the right to utilise part of their paid working time for discharging Union work, without detriment to their normal work.

There is, however, a definite *quid pro quo*. The Union has recognised the right of the Company to take disciplinary action according to the Standing Orders. It also recognises the management's right to introduce new and improved methods or equipment, to decide the number and location of plants and machinery and manufacturing processes and products. This right is subject, however, to prior consultation with the Union in cases where the employees' interests are adversely affected when the Union can make representations to the management. It is clear that the Union has not in these cases sought a right of veto on the management's freedom of disciplinary action. It has accepted prior consultation as an adequate safeguard—a step which would not have been possible without a feeling of confidence. In the field of industrial relations, as in any other, trust begets trust and one must hope that there will be a wider appreciation in Indian industry of this great truth. The Union has obtained assurance that there will be no retrenchment of existing employees and that those who being surplus will have to be redeployed in other sections will be trained and guaranteed their emoluments. The re-fixation of the number of men required for each operation—which is to be carried out and completed within one year from now—is subject to a carefully devised procedure of arbitration by experts in the event of disagreements. Thus the scope for improving productivity will be increased by a system of job evaluation.

These are significant gains for the Company on the eve of the implementation of its vast scheme of expansion which can easily absorb much of the labour that can be regarded as surplus in the present plant. Enough scope is left for the advancement of the emoluments of those directly engaged on the works, who will have the largest contribution to make in terms of lower costs of the product. The expansion scheme has thus both provided an opportunity and derived an advantage. It has assisted a pioneering venture in the field of labour relations. In other industries, where there are more units in operation, similar principles may not be capable of introduction immediately with the consent of labour; but it sets an example which can always be borne in mind. In the steel industry, the new units will be in the public sector; and there is something of a challenge here made to the latter to provide similar opportunities to labour for consultation in management and for raising rewards through higher productivity. There is here a competition as to who will produce the cheaper steel, along with the provision of the maximum concessions and opportunities to labour. In the three years, which is the duration of this

agreement, when the results will become visible, the public sector will perhaps be left with no option but to adopt similar conditions. Instead of

the public sector setting the tone for the rest, as its champions have argued, the private sector may try to set the tone.

Tax-Free Technicians

THE Press Note issued this week, clarifying the provisions for exemption from income-tax of foreign technicians employed in India, has drawn attention to an amendment in the law which was made at the time of the last Budget but which had escaped attention because of the other controversial provisions in the Finance Bill. Under a new Clause (xiv a) added to section 4(3) of the Income-Tax Act, it was provided that remuneration for services rendered by foreign technicians in any business carried on in India would be exempted under certain conditions. These conditions are that such technician should not have been resident in India in any of the four financial years immediately preceding the year in which his services are engaged in India and that his services should be rendered only as a technician, irrespective of the designation of the post in which he is employed.

It has now been defined that a technician should, in order to qualify, have specialised knowledge in 'industrial arts and sciences and experience in industrial practice.' This definition still leaves a certain area of vagueness and, presumably further clarification will not be forthcoming until specific cases are brought to the notice of the Government of India for purposes of exemption. The language is wide enough to admit of liberal interpretation. Considering that this important new provision has been made without the least practicable delay after the presentation of the Taxation Enquiry Commission's Report, it would be reasonable to infer that no unnecessary obstacles would be created and that as favourable an interpretation as possible would be made in order to attract specialised knowledge to this country to assist in the schemes under the second Five-Year Plan, particularly in those of the private sector.

Actually this new provision was made necessary consequent on the recommendation of the TEC for the abolition of the category "resident but not ordinarily resident" in the Income-Tax Act because such abolition would have rendered foreign technicians liable to tax if they spend more than 182 days in India in any year. In the Finance Act of 1953, employees of foreign enterprises were exempted from tax if their periods of stay did not exceed 90 days in a year and if their services were for firms not connected with business in India. The new provision, however, is a more far-reaching extension of the principle and involves a readiness to sacrifice revenue, the loss of which would be more than counterbalanced by the encouragement to our industrial development.

It is one of the conditions for the grant of this concession to foreign technicians that the contract of service should be approved by the Government of India before the actual commencement of service; such approval entitles him to exemption from taxation during the financial year in which a technician comes to India and for two financial years immediately following it. In other cases, where there is no such prior approval, exemption is available for two years, viz. the year of arrival and for the following year, if the foreign technician's stay in the two years taken

together does not exceed 365 days; but where the stay in India exceeds this period the technician is entitled to exemption from tax only for the financial year in which he arrives in India.

Thus there are three categories of exemption and the maximum concession of exemption for three years is available only to those whose contracts are approved by the Government; in the other cases, there is only an initial advantage. The Finance Act of 1955 proceeded too strictly on the basis of the TEC's recommendation and the restrictions have been the result of such strict adherence. There seems to be a very strong case for further liberalisation of these provisions. It is hardly necessary to point out that they place the public sector relatively at a great advantage because the contracts of service in all such cases will necessarily have the prior approval of the Government. In the case of existing contracts for which prior approval of the Government could not have been taken before the commencement of service in any private undertaking or where no approval can be obtained, a hardship is involved for which suitable relaxations may be necessary.

Obviously it is the experience of the public sector in hiring foreign technicians that has brought about this salutary result. It is known, for example, that Soviet technicians, required for the Bhilai Steel Plant, have secured terms which would compare favourably with any that technical men from the free countries have obtained. A salary of Rs. 4,000 a month net of tax, which is equivalent to a taxable income of about Rs. 8,000 a month paid in other cases to give the same net benefit, has penalised the private sector. The Soviet technicians' terms provided an excellent example of the terms which are required if suitable personnel should be drawn from abroad; but there has been little disposition hitherto to recognise that the rates of Indian income taxation are so high as to deter the flow of personnel to the private sector.

What is now conceded as necessary in the case of technicians may well be applied to a wider field of managerial and entrepreneurial ability which is being penalised more under our system of taxation than in other countries. Surely, the supply of this type of talent, locally or from abroad, is not in such abundance that it can be left to look after itself. The principle is not very much different; in the case of all foreign personnel what should prove attractive is the net reward and unless this is high enough in comparison with what is obtainable in their own countries or in other areas outside India, there would be no inducement to start business here or stay to run the business. While technicians are important, the best results of their work cannot be maintained unless it is combined with the best management. If, in time, there is recognition of this factor the assistance to the private sector can become more fruitful. While it is legitimate to expect that Indian nationals and those who have sought permanent homes here should accept the tax policies of the Government, the same considerations cannot apply to those who can be expected to play a role in our economic development only if the conditions are encouraging.

THE WEEK'S NOTES

MR. SACHAR'S EXIT

EVENTS IN the Punjab have taken a surprising turn. After the public were told by Maulana Azad that he had succeeded in composing the differences between the two contending groups in the State Congress, Mr. Bhimsen Sachar was expected to have greater co-operation from the Kairon group in carrying on the business of government. The reasons for his sudden decision to resign are, therefore, difficult to fathom. If Mr. Sachar was unable to carry on with Sardar Pratap Singh Kairon in the Cabinet and if the latter did not want to work under the former, there was no ground for staging a rapprochement some time ago. It is now learnt that Mr. Sachar himself will propose Sardar Kairon's name for leadership of the Legislature Congress Party. Since Mr. Sachar will not be joining the new Cabinet, it is to be hoped that intra-party group rivalries will come to an end and that no temporary political expediency dictates the change in leadership.

If Mr. Sachar's exit from office looks rather abrupt, it appears Mr. Kairon's accession will portend many happy developments for greater political stability in this border State. The Chief Minister-designate is credited with having not only the support of a majority in the Pradesh Congress Committee, making for greater co-operation between the legislative and political wings of the party, but also with having the support of PEPSU Congressmen, including Mr. Brish Bhan, the present Chief Minister of that State. It is believed that the merger of PEPSU with the Punjab can be carried out with much less friction. Sardar Kairon's election should assure the Sikhs that the Hindus have no plans for dominating the political scene. It has been suggested that the Chief Ministership should alternately go to a Hindu and a Sikh, and events have fortuitously made possible the choice of Sardar Kairon for that post at this juncture. Master Tara Singh is reported to be unaffected by these developments, but reflection should show that there can be no greater security for the Sikhs than the proof of the equality of opportunity demonstrated at this time.

PAKISTAN'S CONSTITUTIONAL BLIND-ALLEY

PAKISTAN'S FOURTH attempt at constitution-making seems destined to end up in confusion if certain changes are not made in the draft. The minorities have the greatest cause for complaint and, as was only to be expected, the Pakistan National Congress and the United Progressive Party of East Bengal have declared that they would do their best to have all discriminatory provisions such as those relating to the election of President and Vice-President amended. Theirs, however, is a lost cause even before the fight begins, and if they form the only opposition to the proposed Constitution, the Government will have no difficulty in getting it passed by the Constituent Assembly.

But, in drawing up the Constitution, those in power in Pakistan have counted without the people of East Pakistan. The proposal for a strong Centre has naturally alarmed them and the Awami League has proclaimed its opposition to it. It now seems certain that, unless the demand for greater regional autonomy is conceded and suitable amendments are made in the draft, the Constitution Bill will have to face rough weather in the Assembly. Nor can the people of East Pakistan agree to equal representation for the two units in the Federal Assembly when they form 55 per cent of the nation's population—an injustice which will be all the more glaring in the absence of regional autonomy. The only political party of East Bengal which has maintained a diplomatic silence over the whole

affair is the United Front (of Mr. Fazlul Huq) which is in charge of the Government in that province and is also participating in the Central Government. Probably there was some understanding between the Muslim League and the United Front and the Constitution was drawn up as a compromise. But whether Mr. Huq can lend a hand in putting it into effect is doubtful, for he can openly support it only at the risk of incurring popular displeasure. Mr. Huq is too experienced a politician not to realise that, if he loses popular support, the Muslim League will throw him on the political scrap-heap.

SOVIET CHALLENGE ON THE ECONOMIC FRONT

THE SOVIET UNION'S sixth Five-Year Plan has been drawn up on the usual ambitious scale on which all such plans of Communist countries are drawn up. But for that very reason it presents a formidable challenge to the West. Following in the wake of promises of economic and technical aid to India and other underdeveloped nations of Asia, the targets set in the plan are bound to have a tremendous impact on the world, whether for good or evil. The competition in 'goodwill' and 'friendliness' (in offering economic assistance) is to be extended to the field of economic progress within the country and to the field of using atomic energy for peaceful purposes.

The targets fixed for 1960—said to be greater than what Stalin envisaged in 1946—indicate the amount of effort the Soviet people will put in in the next five years. Steel output will go up to 68.3 million tons (from 45 million tons), that of coal to 593 million tons (from 390 million tons) and power generated to 320 billion kilowatt hours (from 166 billion kWh). Wages will go up by 30 per cent and industrial output by 65 per cent, heavy industry alone registering a 70 per cent increase. Meat production and housing construction are to be doubled. The number of available technicians and specialists are to be increased by 50 per cent, Atomic power is to be used for power generation and television, including colour television, is to be developed.

Whatever criticisms may be levelled against this plan for its continued emphasis on heavy industry, resulting in a lower rate of increase in the standard of living compared to the increase in the per capita national income, it cannot be denied that by 1960 the Soviet Union will be able to extend technical help—in the shape of personnel and machinery—to a significant extent. It is worth noting that this drive for development is backed by the confidence that, "in peaceful economic competition," in historically the shortest time, the Soviet Union can overtake and surpass—on a population basis—"the most developed capitalist countries". Treating this challenge to the capitalist countries as "the main economic task of the U.S.S.R.", the Soviets are out to prove to the uncommitted world the efficiency of their economic system. The free world cannot ignore this challenge; the propaganda value of the announcement may be as great as the achievement of the targets.

GOLD COAST'S TEETHING TROUBLES

ONE OF the bright spots on the otherwise dark continent of Africa is Gold Coast where Britain has shown a willingness and readiness to assist a colonial people to progress towards self-government. It had originally been hoped that this colony will attain its goal of complete independence before the end of 1957, but this has now become a little uncertain because of the rise of some differences of opinion over the form the future Constitution should take. The present Prime Minister, Dr. Kwame Nkrumah, who is

the leader of the Convention People's Party, is in favour of a unitary form of government. Until 1954, it looked as if he enjoyed the support of the great majority of the people; but since then a new body called the National Liberation Movement, dominated by the chiefs and favouring a federal structure, has gained considerable support. The NLM is not represented in the Assembly as a party and is demanding the setting up of a constitutional assembly to revise the constitution before the attainment of self-government.

The way-out seems to lie in acceptance by both parties of the recommendations of Sir Frederick Bourne, the Constitutional Adviser, who has submitted a report after an inquiry at the request of the Gold Coast Government. While not conceding the principle of a federal set-up, the Bourne report recommends the transfer of some of the powers now exercised by the Centre to regional assemblies and the representation of the regions on the big public boards. It has also suggested that no measure affecting the chiefs' privileges should go to the Assembly without their being consulted (the CPP stands for their complete abolition). Meanwhile, in response to an invitation from Dr. Nkrumah to all parties to attend a conference to study the report, the NLM has demanded that the conference should discuss all constitutional issues, that the results of the conference should be considered by the legislature to be elected immediately after it and that the conclusions reached by the legislature should be the basis of the new constitution. The elections are not due until 1958, but since the NLM is not represented in it, there seems to be no alternative to agreeing that the future set-up should be decided by a more representative legislature. It is to be hoped that both parties will not insist on their respective points of view, but will agree to some compromise, as the overriding objective should be early independence. India will be particularly anxious to see the Gold Coast enter the Commonwealth.

RETHINKING ON LANGUAGE POLICY

THE OFFICIAL LANGUAGE COMMISSION has just completed a tour of the South and gathered the views of State Governments and other institutions and individuals in that part of the country. The consensus of opinion is that English will have to be used even after 1965 for official purposes. The Mysore Government has expressed this view unequivocally, while the Travancore-Cochin Government feels that it will be possible to change over to Hindi by 1965 "if a supreme effort is made". The Madras Government, on the other hand, have stated that, while Hindi can become the official language after 1965, English will have to continue as the subsidiary official language—for obviously a long time, since they are not in favour of making the study of Hindi compulsory, though Rajaji has favoured a period of compulsory teaching at the secondary school level. The universities in general are even more opposed to the elimination of English.

It cannot be denied that the views of the South deserve the greatest consideration in finally deciding on the pace of "Hindi-isation", for that part of India and Bengal will probably be the most affected by any radical change in the language policy. It is hardly possible for us to disagree with Mr. B. G. Kher when he says that "the one single concern and consuming passion of all thoughtful Indians at the moment should be the (cultural) unity and integration of the country". But, when he says that "the provisions in the Constitution relating to the language problem were made after prolonged and anxious consideration", there is room for difference for these articles provided only an acceptable compromise at that time among the various groups. No special sanctity has been attached to other provisions which have been amended from time to time and there is no reason to swear by the Constitution in this case alone, if it is proved to be inadequate in any respect.

When the Constitution was taking shape, the country had just become independent and there was a tendency to take for granted and as embodying the highest wisdom whatever decisions on vital issues had been taken by the Congress in the course of a quarter of a century of freedom struggle. The language problem was one such and, since the Congress stood committed to making Hindi the national language, there was no thought of examining the problem afresh. But there was some fanaticism also, for example on the question of numerals, which as the Travancore-Cochin Government has pointed out, deserve to be modified in favour of international numerals.

DELHI SCHOOL OF ECONOMICS

THE DELHI School of Economics has moved into premises of its own, less than seven years after it was founded. Appropriately enough the new buildings were declared open by Prime Minister Nehru, who is also the President of the School, thus assuring it of continued and uninterrupted growth. The School has gone from strength to strength under the guidance of Dr. V. K. R. V. Rao, its Director, and what began with the Delhi University's Department of Economics with two academic members on the staff has now come to acquire 22 persons on its teaching and research staff alone. The School's activities have also expanded and, in addition to M.A. and Ph.D., new courses of study designed to meet the new developmental needs of the country have been started—such as a two-year post-graduate Diploma Course in Economic Statistics, a one-year post-graduate Diploma Course in Economic Administration and a three-year evening post-graduate Diploma Course in Business Administration. Special research sections have been set up in Agricultural Economics and in Economic Development. The School also has a small statistical laboratory and is publishing its own economic journal. The composition of the staff and students of the School as also the sources of its finances reveal its truly all-India character. With nine foreign students now on its rolls, it is on the way to acquiring an international colour. To the construction of the new premises have come contributions from all over India with the Government of India giving Rs. 4.69 lakhs and the Birla Education Trust Rs. 6 lakhs. With a fine record of work since its foundation, this institution can look forward to a period of steady growth in both its teaching and research—applied and theoretical—activities.

NEPA'S PROMISING START

LAST YEAR'S eventful developments in the history of the National Newsprint and Paper Mills, Nepanagar, constitute an augury for the progressive career of this first newsprint manufacturing enterprise in the country. The initial difficulties in the phase of trial production and subsequent strides made in achieving hundred per cent indigenous manufacture, have been briefly narrated in Sir A. Ramaswami Mudaliar's presidential speech at the last ordinary general meeting which appears elsewhere in this issue. The Chairman has highlighted as the most outstanding event of the year the convincing proof of the suitability of salai groundwood as a raw material for newsprint manufacture about which serious doubts had been raised. Last year's total output of 2,600 tons has been marketed. The exemption of the factory's product from payment of excise duty, which is the latest act of assistance rendered by the Government has facilitated sales. The teething troubles of this venture will need careful nursing and the Chairman's appeal to the Government for the creation of a pool of indigenous and imported newsprint to help it tide over marketing problems deserves sympathetic consideration.

How far will
15 yards of cloth go?

Fifteen yards—no more—is our per capita consumption of cloth. The industry's target for 1960 is 22 yards per head.

Thirty years ago India was importing the bulk of her textile requirements; to-day, she has the second largest textile industry in the world. One hundred crores of rupees have been invested in this key industry. It employs a million workers and produces 5000 million yards of cloth annually.

In our developing economy steel is essential. That is why the Tata Iron & Steel Company has launched an expansion programme which will raise its capacity.

A Window on the World

THE FUTURE OF BRITISH SOCIALISM

By
ODYSSEUS

THIS WEEK in London, I attended a luncheon given by the Commonwealth Correspondents' Association in honour of Mr. Hugh Gaitskell, sometime Chancellor of the British Exchequer, and newly elected leader of the British Labour Party, and I also had the privilege, in your behalf, of a personal chat with him. I do not happen to agree with Mr. Gaitskell's politics but I left him with the feeling that I had been in the presence of a man of outstanding personality and character, and of exceptionally clear thought in economic matters. If, as an alternative to the Conservatives, Britain must have a party committed to the dreary doctrines of Socialism, then she is fortunate in having Mr. Gaitskell to lead it. Whether he will succeed in imposing his sensible economic views on the Labour Movement, I do not know. This will be the true test of his capacity as a leader, for his thought runs counter to a great deal that has been the current coin of Socialism for the past thirty years or more. Nationalisation of the means of production and distribution, for example, is written into the constitution itself of the British Labour Party.

In this, as in so much else, Socialism everywhere is bound down by theories, fetiches, and slogans, adopted in the decades of its infancy before it had practical experience of the responsibilities of office.

Mr. Gaitskell is performing a vital and valuable service to his party, to his own country, and to any other country elsewhere which happens to be adopting the "socialist pattern of society" by fearlessly re-thinking out first principles in the light of twenty-five years of Socialism in office.

I am grateful to Mr. Gaitskell for directing my attention (and now, I hope, yours) to an important essay, "The Ideological Development of Socialism in Britain", that he has just published in "Socialist International Information", which elaborates the views that he threw out at me in our brief talk. As I believe this document may prove a watershed in Socialist thinking in all democratic countries, I propose to outline its basic ideas, allowing myself the liberty of interpolating some comments.

REVOLUTION OR DEMOCRACY

In order to re-state Socialist theory in the light of the needs of the second half of the twentieth century, Mr. Gaitskell goes back to the origins of the ideas which have hitherto held the Socialist field. He sees the beginnings of British Socialism in the 1880's. He points out that Marx's theory of determinism and of the class conflict made little appeal to the British who are "too practical in their reforming zeal to appreciate the solace of an 'inevitability' doctrine". What stuck in the popular mind was not Marx's theory of how the prices of different commodities were decided (the fallacies of which were soon exposed) but the notion that the existence of income from property or "unearned" income, which meant that part of the worker's reward was being stolen from him in so-called surplus value. But the deduction widely drawn from this in Europe that the capitalists must be expropriated, and that this could only be done by revolution, was rejected

by Britain largely because of the influence of the Trades Unions, which were too practical, too busy successfully fighting the workers' battles for better pay and conditions, to be attracted by revolution. It is only the frustrated or the desperate who go in for bringing the roof down over their own heads.

The tone and pace of British Socialism was set by the Fabians, who were the first to realise the practical possibilities of the full adult male suffrage that had just been granted, as a means of securing reforms by democratic political action. They accepted as an inevitable consequence of democratic methods the necessity of gradualism: votes could only be won by persuasion and persuasion takes time. This was one of their greatest contributions to British Socialism and, by sparing Britain useless diversion of energy in class struggles and revolutionary destruction, it has probably done as much as any other single factor to raise the British worker's standard of living.

Mr. Gaitskell gives short shrift to what he calls the Fabians' fallacies about rent. He points out that they confused three different questions: (1) whether not only rents but interest and profit were surplus incomes in the sense that if their payments were abolished the supply of land, capital, and risk-bearing would decline; (2) whether the receipt of rent, interest, and profit, was morally wrong, irrespective of the character and wealth of the recipient; and (3) whether the existing distribution of income among persons and classes was just. He points out that a distinction must be drawn between the rent of agricultural land, on the one hand, which contains a large element of interest or profit—the return on the capital invested in the land to maintain or to improve its productive capacity—and ground rents in a built up area, on the other hand, which are no more than payments for space, with no element of invested capital at all. Again, in the case of interest and profit, the Socialist Mr. Gaitskell is refreshingly realistic: he says that the differences between (1) short and long run effects of changes, (2) effects that large or small changes in the return have on the supply of capital, and (3) the effects of saving on the one side, and lower profits on risky investments, on the other, were not taken into account by the Fabians.

Even where, as with developed land, rent can be regarded as a true surplus payment, in the sense that the supply of land cannot vary, Mr. Gaitskell does not think this to be justification for singling out those particular property owners for high taxation or for expropriation rather than other property owners. If it could be assumed that all landowners were wealthy individuals who had inherited their property, it might be fair to tax them heavily, but the justification would be the scale of their wealth, and that it was inherited, rather than the type of their property. But this assumption cannot be made in a modern economy in which property is constantly changing hands. Anyone can today switch his wealth from land to securities or vice versa. The owners of developed land nowadays include people of very different levels of wealth: insurance companies which invest the premiums paid by millions of individuals, building societies and other corporate bodies.

Mr. Gaitskell sums up by saying that the influence of the Fabians was less through their Socialist theory than through their insistence on democracy and their work on the practical details of immediate reform.

GUILD SOCIALISM

Mr. Gaitskell next reviews Guild Socialism (associated with the name of G.D.H. Cole) which rejected the Fabian thesis of winning power gradually by democratic means, condemning this as a hopeless compromise with capitalism. Guild Socialism based itself on the class war which could only be won by revolution brought about not by the ballot box but by the organised workers. Its theorists opposed nationalisation and wanted ownership transferred to the workers organised in their trades unions. They rejected the supremacy of Parliament and wanted an Assembly representing industry—the producers.

In view of the Marxist-Communist ideology that prevails over a considerable part of the contemporary world, it is significant that Mr. Gaitskell misses no opportunity of proclaiming his belief in progress by constitutional democracy and he emphasises that the revolutionary ideals of the Guild Socialists were completely rejected by the British Labour Party, as by the overwhelming majority of the British people. He argues that there could not have been a more vivid illustration than the British General Strike of 1926 of the "absurd myth" of syndicalism that at the right moment capitalism would of itself collapse. Having in that strike been led to the brink of revolution and seen what lay ahead, the British Labour Movement lumbered decisively away. Thereafter it was accepted that political objectives must be fought for through the Labour Party and the ballot box, while the unions stuck to their job of improving the conditions of the workers.

It was not only the General Strike which clarified the mind of the Labour Movement on how to try to secure power. The success of the Labour Party in increasing its numbers in the House of Commons, be-

coming the official opposition, and then forming a government, brought with it a much wider understanding of the nature of parliamentary democracy, and made it seem more and more absurd to think and talk in revolutionary terms.

While thus forthrightly condemning the revolutionary aspects of Guild Socialism, it is interesting to observe that Mr. Gaitskell maintains that their real contribution to Socialist thought was the recognition that nationalisation solves no problems and is only the exchange of one set of bosses for another. Mr. Gaitskell's essay makes it clear that the future of British Socialism does not lie in nationalisation. In what direction it does lie, we will examine next week.

A DELHI DIARY

ESCAPE TO THE IVORY TOWER

JOURNALISTS, unhappy people, do not easily find an escape to an ivory tower. This week allows me an unusual chance; I propose to bury myself in two academic institutions. This escape comes opportunely; I am seeking a mental escape from the display of violence in Bombay and the strange political antics in at least two other (unmentioned) States. The escape valves are the Delhi School of Economics and the Indian Institute of Public Administration. On the first I might say that practitioners of the dismal science must be heartened by the respect it is gathering; even the Prime Minister of India took time off from what might be called 'law and order' duties (in view of Bombay) to clothe himself in academic robes to open the new building of the Delhi School of Economics. Some of the observations made on the occasion were as far removed from the battle in the streets of Bombay as the ivory tower is removed from the real world. That is for the Prime Minister, as for me, all to the good. I count economics a highly honoured calling in that it has merited the top priority on a day of public crisis. Long may the ivory tower—in economics or otherwise—enjoy equal honour! Equally long may it live to provide relief from non-academic tension!

The opening of the great new building of the Delhi School of Economics deserved not merely this honour; it deserved rather more general interest than I feel it has received. I notice that while some pictures of the School have appeared in the Press, even the Prime Minister's speech on the occasion did not appear on the front-page of most newspapers. Is economics not worthy of greater reverence than it obtains? Looking at the front-page of a particular paper, I observe that it was captured entirely by politics on Thursday morning. Thus having raised economics to the highest of pedestals, I fear that I must now dash it to the ground. The dismal science has attracted wide attention from above; it is not attracting the crowds in the newspapers or elsewhere. In the Age of the People, cannot economics be made the people's (indigestible?) food?

ECONOMICS WITHOUT POLITICS?

The dismal science has not won respect in the country notwithstanding the performance of an imposing Panel of Economists and the circulation of their slightly less imposing papers. Can it be that this is because of a feeling that economists do not exercise power and it is believed their influence is greatly restricted? I think this is true. I wonder, for example, how the opening of the Delhi School of Economics here will compare in history with the opening of the London School of Economics, that one-time centre of radical thinking, now old enough to be conservative! I had the feeling that a great opportunity was missed in Delhi on Wednesday. The political ferment which surrounded the opening of the London School of Economics because of the rising power of the British Labour Party, backed by established Fabian Socialism via the Webbs and Harold J. Laski was completely absent. The London School of Economics was economics made practical; it was a political apparatus. There is no belief at the moment that any School of Economics in India is part of the political scene; that may be a reason why this campus was not filled with white austerity and from the lavishness of the buildings, it has no other!

In some ways I am happy that this is so. It does seem to me that there is enough, and, indeed, too much politics (and austerity) already mixed with Indian economic thinking. If the political parties went to our Schools of Economics for advice (as did the Labour Party at one time in the London School of Economics)

the position will be worse and not better. Almost certainly Shriman Narayan Agarwal would be installed in a position of high authority in the School thereby (I hope he will forgive me!) greatly imperilling its academic reputation. Now at least we know that Congress economics takes its chance with every other brand. Almost any horse may win; or do they all lose?

BIRLA BHAVAN

The new building of the Delhi School which the Prime Minister opened was constructed with a donation of Rs. 6 lakhs from the Birla Education Trust. Mr. V. T. Krishnamachari announced on behalf of the Governing Body that it has been decided to name the building "Birla Bhavan" and made a handsome acknowledgment of the fact that in the working of the Birla Education Trust and in this case wealth has been used for a noble purpose. It was only appropriate that it should have been recognised in this manner. It was also right that full tribute should be paid to Dr. V. K. R. V. Rao (Alphabet Rao as he is affectionately called) who has made the building of this School his ruling passion in the last few years. There is being built up through his efforts a school of thought in Delhi which, whether one agrees with it or not, will need to be taken into account in academic work.

So far as the making of a policy is concerned 'The Eastern Economist' has already expressed my heretical views; the economists will always be left waiting in the corridors until they become practical men as so many economists in the United States have always been, and as a few economists in the United Kingdom are becoming. As practical men need occasionally to escape to the ivory tower, so economists must, it seems, mix in the market-place. Economic theory is full of rarefied assumptions that very few of its theorems are capable of translation into the real world except with a very liberal sprinkling of non-economics.

PUBLIC ADMINISTRATION

I now pass quickly to the opening of another institution, the specialised Library of the Indian Institute of Public Administration at Sapru House. The Indian Institute of Public Administration was established only in March 1954. It is, therefore, still an infant in terms of the normal lives of institutions. It has had, however, quite significant success, and the Directors and Executive Council can certainly congratulate themselves on the new Library which was opened by Pandit Govind Ballabh Pant on Sunday. The Indian Institute of Public Administration has not wanted funds. But much more goes into the building of an institution than mere finance. The success of the Indian Institute is to be reckoned in terms of the enthusiasm it has raised amongst some—by no means all—of its members. In a whisper I must admit that the enthusiasts come from the public sector!

So far as the Library is concerned, one notices that there has been a careful selection of books designed to serve only those fields of study which constitute the Institute's main business. It is good to see that this includes an Information and Reference Service to assist work in Study Groups and Research Projects. One such Research Project on the organisation and administration of municipal services in New Delhi has been taken in hand. My information does not go far enough to indicate whether precautions against jaundice are included in its terms of reference. Perhaps it is not too late to include this important field although this would look like closing the stable after the horse bolted away!

ARGUS.

Economic Report from the U. S.

NO TAX REDUCTION: MORE FOREIGN AID PROPOSED

(BY GUY SIMS FITCH)

WASHINGTON, Jan. 17.—One of the Eisenhower Administration's major economic goals was realised this week, when the President reported to the United States Congress that a balanced Federal budget is in sight for the fiscal year beginning on July 1. What is more, present estimates indicate that the budget also will be balanced in the current fiscal year, which ends on June 30.

Yet the fact that the Government's accounts will probably show a surplus for the first time since 1951 is not in itself the most significant element in the President's message. What makes the message particularly important is that the budget balance will be achieved without sacrificing the Administration's other basic objectives. These can be described, generally, as an ever-growing domestic economy, and continuing co-operation with other nations in the joint search for enduring world peace and well-being.

US economic growth during the past year has been the principal factor underlying the favourable budget situation. In line with the President's firm support for constructive programmes in the foreign and domestic fields, US spending in the fiscal year 1957, at \$65,900 million, will be about \$1,800 million higher than in the fiscal year 1956 and \$1,300 million higher than in the fiscal year 1955. But rising national income accompanying the present prosperity is expected to bring in revenues of \$64,500 million this year and \$66,300 million in 1957.

The projected level of receipts presupposes no cuts in either corporation or individual income tax rates. This is hardly the accepted political course in a year of prosperity, particularly with Presidential elections coming up next November. A more politically expedient course would have been to recommend reductions in both taxes and spending. But the President evidently prefers a position of "fiscal integrity" whereby reduction of the national debt would take precedence over tax cuts. At the same time, he has made it clear once again that progress toward a balanced budget will not be allowed to interfere with US expenditures for peace and prosperity.

So it is that while shunning a tax cut for Americans, he has recommended increased outlays for protecting the national security, expanding US assistance to other countries, and stepping up domestic programmes to build more schools and highways, improve urban facilities, strengthen agriculture, and conserve natural resources. These outlays are proposed with a thought not only to today, but to tomorrow and the day after as well.

This continuity of US policy can be seen most clearly, perhaps, in the field of foreign aid. Since the end of World War II, the United States has provided some \$56,000 million to help other nations revive their war-shattered economies, accelerate their industrial and agricultural development, and protect their national security. About \$46,000 million of this has been in the form of outright grants, the rest in long-term loans.

In the 1957 budget he presented to Congress this week, the President proposes that another \$4,300 million be spent for these purposes, about \$100 million more than in the fiscal year 1956. In addition, he recommends that Congress actually authorize new foreign aid obligations of \$4,900 million, an increase of \$2,200 million over the obligations enacted for the current fiscal year. But it is fair to assume that this Congress, which last year extended the US Trade Agreements Act for another three years and gave the President additional tariff-cutting authority, will go far towards meeting the long-term objectives outlined by Mr. Eisenhower.

Aluminium—India's fastest growing Industry

REGARDED with little favour — even for household uses — by the ordinary man-in-the-bazaar some fifteen years ago, Aluminium has today become the engineer's favourite light metal. It is now fast replacing other metals and wood in the construction of railway-coaches, bus-bodies, aircraft and ships. Experts estimate that by 1960 demand for Aluminium will have doubled, rising to about 40,000 tons per annum.

Company's production capacity to 15,000 tons by 1958. In implementing this major project, Indian Aluminium Company will be able to draw upon the resources and know-how of its Canadian associates, Aluminium Limited — the world's largest group of aluminium companies.

What will it cost ?

The estimated capital requirements for Indian Aluminium Company's Hirakud project are about Rs. 9 crores. A part of these requirements will be raised by a fresh capital issue, half of which will be subscribed by Aluminium Limited and the other half offered to the public.

Aluminium is facing a bright future in India today. India's vast bauxite deposits and water-power resources can support a large aluminium industry for years to come. Harnessing these natural resources, Indian Aluminium Company's Hirakud project will be an important step towards India's goal of self-sufficiency in Aluminium.

What is being done to increase Aluminium production ?

Simultaneously with expanding demand, India's production of Aluminium will increase many times. Indian Aluminium Company, who started the first Aluminium smelter in India, are now installing another smelter at Hirakud, Orissa. This smelter will triple the

WORLDGRAM

AGRICULTURE

Production of Food Grains Exceeds Target: In the fourth year of the first Five Year Plan, the production of food grains in U.P. has exceeded the target of 9.82 million tons by 3.63 million tons. In 1950-51 the production in the State was 8.44 million tons. By 1954-55 the production was raised to 12.45 million tons. Production of jute has also gone up by 17,000 bales from 48,000 bales in 1950-51 to 65,000 bales in 1954-55. The target of 23 million tons of sugar cane by 1955-56 is also expected to be realized.

Farm Management Methods for Fish Breeding: The application of farm management methods to fish farming, worked out by the F.A.O., have been taught at an international Centre on inland fisheries and fish culture at Bogor in Java. Lectures on management principles were given by a farm management specialist of the U.S. Department of Agriculture who has studied the economics of fish culture in Western Germany, Israel, India, Thailand and Malaya.

Economic Developments in Indonesia: Indonesia's food production during the first half of 1955 was adversely affected by the flood damage to the rice crop and the failure of the maize crop in several regions. Rubber production also decreased. The estate rubber output of 131,000 metric tons during this period was 5 per cent lower than in the corresponding period of 1954, as a result of aging plantations, unfavourable weather, and thefts of latex; small-holder rubber output is estimated to have decreased by about 15 per cent. On the other hand, sugar production rose to 209,000 tons, from 126,000 tons in the first six months of 1954, and it is expected that output for the whole of 1955 will be 840,000 tons, against 718,000 tons in 1954. There were increases also in coffee and hard rope fibres, while the output of tea and palm oil during January-June 1955 was nearly the same as during the corresponding months of 1954.

Soil Conservation Work in Rajasthan Desert: A provision of Rs. 2 crores is expected to be made in the second Five-Year Plan for soil conservation work in the Rajasthan desert. The Rajasthan desert covers an area of about 80,000 sq. miles and extends into Kutch, Saurashtra and Bombay in the south and west, Punjab and Pepsu in the north and Uttar Pradesh in the east. The problem with regard to the Rajasthan desert, it is stated, is not one of afforestation alone, but of soil conservation and proper utilisation of land also. The principal cause of erosion in Rajasthan is overgrazing and indiscriminate felling of trees. According to the scheme prepared for inclusion in the second Five-Year Plan, expenditure on the Desert Afforestation Research Station at Jodhpur and its extension activities will be met by the Government of India.

INDUSTRY

Measurement of Building Works: The Indian Standards Institution has circulated for eliciting comments a draft Indian standard method of measurement of building works. The measurement of building works occupies a very important place in the planning and execution of any project. The methods followed in the country for the measurement of building works are by no means uniform, and considerable differences exist between the practices followed by the Central Government, State Governments and the private building industry. While each system of measurement has to be specifically related to the administrative and financial organization of the construction agency responsible for

the work, a unification of the various systems at the technical level has been accepted as very desirable. The standard has been prepared with the object of unifying the various practices and has 20 sections dealing with different aspects of construction work and installation services.

Development of Khadi Industry: The Government of India have sanctioned a sum of over Rs. 10,10,000 to the All-India Khadi and Village Industries Board for the development of the khadi industry. For the Ambar Charkha training scheme an additional expenditure of Rs. 4,95,000 has been sanctioned. The amount is to be utilised for providing stipends and tuition fees for 1,000 trainees and 500 carpenters. For providing equipment grant of Rs. 200 for each trainee in the six regional vidyalayas, the Board has been sanctioned an additional expenditure of Rs. 44,000. For the implementation of the Vastraswavalamban scheme during the current financial year, a further sum of Rs. 3 lakhs as grant has been provided.

Production of Steam Road-Rollers: On the recommendation of the Manufacture of Road-Making Machinery and Mechanization Sub-Committee of the Indian Roads Congress, the Government of India have decided to establish another unit to manufacture steam road-rollers in India on a permanent basis, it is understood. The Committee reviewed the various problems experienced in the manufacture of road-making machinery in India and recommended the setting-up of two stone-crusher units in the country. With regard to the establishment of a diesel road-roller industry in India on a permanent basis, the Committee surveyed the progress made so far and suggested that suitable steps be taken to ensure that the industry is established along with phased manufacturing programme approved by the Union Government.

TRADE

Export of Green Tea Held Up: In a representation submitted to the Central and State Governments the Amritsar Tea Traders' Association has stated that export of green tea worth about Rs. 1.5 crores to Afghanistan and other Central Asian Countries has been held up and stocks worth about Rs. 60 lakhs are lying in godowns in Amritsar. According to the representation, this has happened after the amended Prevention of Food Adulteration Act came into force. It is feared that thousands of workers and traders are faced with the threat of unemployment as a result of the stoppage of the export trade.

Radioactive Isotopes for Export: Restrictions on the export of radioactive isotopes required for medical, agricultural, industrial and scientific purposes, are expected to be relaxed by the U.S. from mid-February. This follows a promise made by U.S. authorities at the Geneva Conference on peaceful uses of atomic energy to liberalise U.S. export procedures for radioactive materials. Exports will be permitted to the Soviet bloc also where they are not inimical to the "defence and security of the U.S.A."

Framing of Export Credit Guarantee Scheme: The Government of India have had under consideration a proposal to introduce an Export Credit Guarantee Scheme for India to stimulate exports. The scheme is conceived to be mainly based on the principle of insurance and is intended to provide a guarantee to the exporter against losses resulting from circumstances which are beyond his control and which are not ordinarily accepted as insurable risks by insurance companies such as insolvency of the foreign buyer, unforeseen

changes in regulations relating to foreign exchange, occurrence of war, incurring of extra delivery charges etc. The Government has now decided to appoint an Export Committee, (1) to examine the suggestions made in this behalf and to consider the scope of the Export Credit Guarantee Scheme, (2) to make recommendations in regard to: (a) the nature of risks to be covered (b) the basis on which premia should be fixed; (c) the structure of the organisation that will be required for the implementation of the scheme; and (b) any other matter necessary for the successful operation of the scheme.

Relaxation of Restrictions on Sample Imports: Import of samples and advertising material from abroad has been eased as the result of a new treaty which came into effect on November 20 for 15 nations. The treaty, in the form of a convention, was sponsored by countries which work together under the General Agreement for Tariffs and Trade (GATT) to reduce trade barriers. Those party to the treaty will allow specified material to enter their countries free of duty and quota restrictions.

FINANCE

New Members of I.F.C.: Britain has now joined the International Finance Corporation, the affiliate of the International Bank for Reconstruction and Development, intended to encourage productive private enterprise, especially in underdeveloped countries. The Corporation will have a capital of \$100 million. Egypt was the first West Asian country to sign the Corporation's Articles of Agreement, and Ecuador was the first of the Latin American Countries to do so recently.

Loan to Honduras: The International Bank for Reconstruction and Development has made a loan of \$4,200,000 to Honduras to enable a highway maintenance organisation to be set up and to begin operations. The loan will finance preliminary engineering studies for the improvement and new construction of various sections of two important trunk roads in Honduras, the Northern and Western Highways.

US Foreign Aid in Fiscal, 1955: Net deliveries of goods and services or cash payments to foreign countries under the US foreign aid programmes totalled \$4.5 billion in the fiscal year 1955. The decline of \$760 million from fiscal 1954 was due primarily to a 28 per cent decrease in transfers of military supplies and services, the greatest contraction occurring in shipments to Western Europe, which have fallen 50 per cent since fiscal 1953. Other grants rose almost one fourth, to \$1.9 billion, reversing a five-year downward trend. This increase was due largely to cash payments to France and Indo-China to help defray costs of the Indo-Chinese war.

Development of Handicrafts: More grants and loans, amounting to over Rs. 5,63,000, have been sanctioned by the Government of India to the All-India Handicrafts Board and to five States, West Bengal, Saurashtra, Rajasthan, Himachal Pradesh and Madras for the development of handicrafts. West Bengal gets two loans of Rs. 29,000 and a grant of Rs. 6,470. For the development of the papier machine industry, Saurashtra has been given a grant of Rs. 16,000. Rajasthan gets a loan of Rs. 12,000 and a sum of Rs. 9,255 as grant. A sum of Rs. 9,600 as grant has been sanctioned to Himachal Pradesh. Madras gets a grant of Rs. 5,450. The All-India Handicrafts Board has been sanctioned an expenditure of Rs. 4,75,000 for organising an exhibition of Indian handicrafts goods in the Leipzig Fair to be held in East Germany this year.

Customs Revenue in November Falls: According to the returns received in the Department of Commercial Intelligence and Statistics, the total gross sea and land customs revenue collected in the Indian Union during November, 1955, amounted to Rs. 13.79 crores as compared with Rs. 13.71 crores in the corresponding month of the previous year. The comparison in the subsequent paragraphs should be taken to refer to that of the current figures with the figures of the corresponding period of the preceding year. Of the total customs revenue collections, import duties accounted for Rs. 10.77 crores as against Rs. 13.21 crores, export duties for Rs. 2.76 crores as against Rs. 5.2 crores and land customs and miscellaneous for Rs. 26 lakhs as against Rs. 30 lakhs. The total gross collection of Union excise duties amounted to Rs. 11.67 crores as compared with Rs. 8.84 crores. During the eight months, April to November 1955, the grand total of gross customs and Union excise revenue realized was Rs. 203.36 crores as compared with Rs. 174.96 crores during the corresponding period of the preceding year. Of this amount, import duties accounted for Rs. 81.08 crores as against Rs. 84.51 crores, export duties for Rs. 24.48 crores as against Rs. 22.37 crores, land customs and miscellaneous for Rs. 1.17 crores as against Rs. 1.99 crores and Union excise duties for Rs. 96.63 crores as against Rs. 66.09 crores.

GENERAL

Fellowships for Foreign Students: More than 50,000 fellowships and scholarships available to foreign students in over 100 countries and territories are listed in the 1955-56 edition of "Study Abroad", published by the UNESCO. It also shows that, in 1954, there were 125,000 students studying in foreign countries. The country having most of them is the USA with 33,833 students. Next come France (9,329) and the UK (8,619). In Latin America, Mexico has the largest number of foreign students (2,039), and in Asia, Japan leads with 3,768 students.

Modern Visual Techniques in Education Campaigns: Under the United Nations world programme of technical assistance for economic development, Unesco is sending this month a British producer of educational and documentary films to Cambodia to help put modern visual techniques to work in an education campaign aimed at raising standards of living in rural areas. He will assist a team of Cambodia educators and Unesco specialists who have begun a fundamental education campaign in some villages in the country.

Annual Session of ECAFE: Some 200 representatives from 24 Asian and non-Asian countries and territories will be present at the twelfth annual session of the ECAFE, to be held in Bangalore from February 2 to 14. One of the highlights of the Commission's session will be a two-day debate on Asia's economic situation. Among the salient problems to attract the main attention of the delegates will be those of economic planning, regional co-operation in economic development, population problems, industrialisation and diversification of Asian economy, and various U.N. advisory services.

Record Air Traffic in 1955: Year-end figures released by the International Civil Aviation Organisation show that passenger and cargo traffic carried by international and domestic scheduled airline companies reached record peaks in 1955. A total of 69,000,000 passengers, 10 million more than the previous year, travelled by air, and each individual journey averaged 559 miles in length. The increase in traffic in 1955 over 1954 is considerably greater than the increase in 1954 over 1953. Cargo carried increased by 19 per cent in 1955 as compared to an increase of 7 per cent in 1954, and passenger-miles and kilometers increased by 18 per cent as against 13 per cent in 1954.

NEWS IN BRIEF

INDIAN

A delegation of Belgian scientists will be in India from the 23rd to the 30th January. They will, while in Delhi, deliver a lecture on the latest developments of steel manufacturing in Belgium.

A sample survey conducted in about 1,100 villages in India in 1951 revealed that 143 systems of weights and measurements were prevalent. Legislation was enacted as far back as 1871 to introduce metric system in the country, but the Act remained a dead letter.

India's food imports came down to 0.77 million tons in 1955 from 4.7 million tons in 1950-51. Food imports in 1955 were primarily meant for building up a reserve rather than for consumption.

In all, 2,668 vessels with a gross tonnage of 13.49 millions entered Bombay port during 1954-55. Of these 1,299 flew the Indian flag, 624 British, 114 Norwegian and 108 American. The largest vessel that entered the port had a gross tonnage of 34,183.

Foreign capital to the tune of Rs. 28.76 crores has so far been invested in the three new oil refineries in India as against Rs. 15.01 crores of Indian capital. Rs. 13.97 crores of foreign capital and Rs. 4.25 crores of Indian capital are expected to be invested further in these refineries.

Receipts in the Prime Minister's National Relief Fund, which was created in November 1947, totalled Rs. 1,60,14,168 at the end of December, 1955. From December 21 to 31, 1955, a sum of Rs. 1,14,873 was received in the Fund.

Scholarships to the children of the Bombay Port Trust Staff accounted for Rs. 13,490 out of a total expenditure of Rs. 54,309 from the Employees' Welfare Fund of the Trust in 1954-55. This represents the highest single item of expenditure from the Fund during the year.

On the recommendation of the Central Social Welfare Board, thirty eight Harijan Welfare institutions were sanctioned grants totalling Rs. 55,550 during 1955, by the Ministry of Home Affairs. The Institutions are distributed over a number of States.

With the establishment of the 153 new National Extension Service Blocks as sanctioned by the Community Projects Administration, the total number of such blocks will be 732, covering 73,000 villages.

Dr. Francesco Chiarini and Mr. Giovanni Lescovici, two Italian experts from the Firm of Snia Viscosa, Milan, are now in India on the invitation of the Union Government to study the scope for the manufacture of rayon grade pulp and newsprint.

The Government of India, it is learnt, has decided to import cement from certain soft currency areas, such as Japan, Czechoslovakia and Poland, since the local production will not be able to meet all urgent requirements of the country.

India's shipping by 1960-61, when it is expected to reach a target of approximately nine lakh tons, will be in a position to carry India's entire coastal trade in addition to 50 per cent of the adjacent trade and 15 per cent of the overseas trade.

FOREIGN

The UN General Assembly has named Argentina, Australia, Canada, Chile, United States, France, Lebanon, Pakistan, and the United Kingdom to serve on a Committee which negotiates with Governments for voluntary contributions to pay for those UN operations not financed from its regular funds.

Tea in Britain will be 4d. a pound cheaper on January 23, the price averaging about 6sh. 6d. a pound. Last year this time it was 8sh. 4d.

It has been announced that Pakistan will receive the second largest allocation of over \$1 million during this year's UN technical assistance programme. Some 98 experts will work on various nation-building projects this year and 75 fellowships will be awarded to Pakistanis to study about 50 subjects abroad.

Greece is the twentieth country to ratify the international agreement sponsored by UNESCO under which signatories abolish duties in books, newspapers, works of art, etc., for the blind. The agreement has been in force since May 1952.

At the request of the Vietnamese Government, the United Nations has sent an economic survey mission to help Viet-Nam overcome its economic problems. The mission will advise on ways to increase production, achieve full employment and ensure economic independence.

Japan has decided to send 27 technicians to India, Pakistan and Ceylon and South-East Asian countries, seeking technical assistance under Colombo Plan Agreements.

Japan will co-operate with other Asian nations in the field of vocational training in education both for students and for workers, from the standpoint of mutual economic development.

New British investment in Australian companies almost doubled in 1953-54 compared to the previous year. Since 1947, British investors have provided £A258.9 million of the total overseas investment in Australia of £A361.8 million.

Australia's four most experienced and largest makers of sugar-milling equipment known as Associated Engineering Manufacturers of Australia Proprietary Ltd., have combined to manufacture for export modern milling equipment. The Company can offer complete plants of the most modern and efficient design.

A British firm is reported to have developed a proofing process eliminating corrosion on the mild-steel parts of motor cars, trucks, etc. The new process is claimed to cause no delay in production and the costs are believed to be below those of present processes.

The Pakistan Government has sanctioned Rs. 3 million to West Pakistan Government for social uplift schemes of the former Punjab area. Health Schemes in this area are expected to cost Rs. 2.5 crores, of which over Rs. 1.6 crores have been sanctioned so far.

WHEN IN EUROPE

fly BEA IN EUROPE'S FINEST AIR FLEET

For business, for pleasure—you'll do far more and see far more . . . if you fly BEA on your next trip to Europe. BEA's famous—and ever-expanding—network offers passengers fast and frequent services to over 50 of Europe's main business and holiday centres. BEA have more of the best airliners—more VISCOUNTS, for example, than any airline in the world. And BEA's long experience in air transport means you enjoy comfort on all routes, and personal service second to none.

BEA links LONDON with most of the principal cities of Europe, including—PARIS · NICE · BRUSSELS · VIENNA · AMSTERDAM · OSLO · STOCKHOLM · COPENHAGEN · HAMBURG · GENEVA · ZURICH · BARCELONA · ISTANBUL · MADRID · LISBON · PALMA · MILAN · ROME · NAPLES · ATHENS, and further afield, for example, to GIBRALTAR · MALTA · CYPRUS and CAIRO as well as WITHIN BRITAIN.

... and fly on the BEA CAR HIRE PLAN

BEA's new Car Hire Plan now makes the rest of your travel smooth as clockwork—in France, Holland, Belgium, Switzerland, Norway, Sweden, Denmark, Italy, Germany, Cyprus and in Great Britain. No deposit; full insurance.

BRITISH EUROPEAN AIRWAYS

Full details of air reservations from your local Travel Agent or any office of B.O.A.C. All arrangements for car bookings at BEA Offices in Europe; or BEA, Dorland Hall, 14-20, Regent Street, London, S.W.1. Gerrard 9833.

Special Articles

FROM WEALTH TO CAPITAL COEFFICIENTS

[This is the first of a series of four exclusive articles on Capital Coefficients written for "The Eastern Economist" by Colin Clark, Director, Agricultural Economics Research Institute, Oxford University.—Ed.]

MANKIND (or economists at any rate) tends to go to the extremes; and what is worse, having got into an extreme position and then got out of it again, often tends to oscillate violently into the opposite extreme.

So it has been with the economists' treatment of capital, both as a subject of statistical measurement and of theoretical reflection. Before 1914, this subject received what appears to us now altogether excessive attention. A great many statisticians, who ought to have been building up some knowledge of national income and national product, were devoting their attention to measuring national capital, often by methods which we now recognise to have been hopelessly erroneous. There were, in those days, a great many more studies of national capital than there were of national product, and we have got very little value from them. And we need not say very much about the manifold but not very fruitful labours of theoretical economists on the subject of capital in those days.

Then came the epoch in which we were all primarily interested in national product; and a very good thing too, because the world badly needed the information. By 1939, the work had advanced to different stages in different countries. In the United States and Germany, national product was already the subject of regular annual enquiry, reasonably thorough and accurate on the part of government departments, and Canada was just about to join them. But in Britain, France, Australia and the Scandinavian countries, as in India, statistics of national product were still only available from the studies of private individuals or universities. The needs of war, even in countries which were neutral or only indirectly participating, and of attempts to check inflation, certainly made the whole world take an interest in securing accurate and up-to-date statistics of national product—although many investigators were content with estimates of money product and devoted far too little effort to securing figures of real product. We need not accept Professor Galbraith's claim that the statisticians did nearly as much to win the war as the generals—Germany and Japan had statisticians too!—but we can agree that, now that nearly every country in the world has some accurate, regular, up-to-date official estimates of national product, both governments and public opinion are now much better informed than they used to be, and probably many foolish mistakes have been avoided, and the world is much better off in consequence.

India began to publish such information in 1951, referring to the year 1948-49.

These innovations affected not only the world affairs, but also the universities, which, freed from having to attempt to compile estimates themselves (a task clearly better performed by government departments) were able to disseminate knowledge on this subject more widely, and to revolutionise the method of teaching economics to first-year students. Professor Hick's "The Social Framework", first published in 1942, was a landmark in this respect. Instead of labouring to get the first-year students to grasp a purely abstract set of concepts, which very few of them can successfully do, a good professor of economics will now begin by introducing them to the interesting facts

of their own country's national product, of its growth, and of its distribution.

Meanwhile, the economists have been interesting themselves in theories of economic growth. This interest should not be slightly regarded—it is an important subject. Particular mention may be made of the work of Professor V. K. R. V. Rao in India, all through the 1930's a lonely but cheerful pioneer in this field, working single-handed in face of official neglect; Professor Lewis (a West Indian by birth) in England; and Monsieur de Jouvenel in France.

While these exciting developments in the study of national product have been taking place, however, the study of national capital, both in statistics and in theory, has been somewhat neglected. It is true that national product studies in many countries have given us a considerable amount of information about that part of the national product devoted to gross capital formation, in money terms, and sometimes in real terms. But we have much less information, unfortunately, about net capital formation, that is to say, after making the appropriate deductions for maintenance, depreciation and obsolescence, an awkward enough problem when we are measuring in money, and still more difficult in real terms. And, until very recently, in nearly every country there has been a shocking dearth of information about the real value of capital stock. (In this case, figures measured in money terms are of very little value, because much of the present capital stock was accumulated in past years when prices were very different from what they are now). Alarmed by the obvious errors and excesses of their predecessors, economic statisticians have tended to avoid this subject. It is all very well to know a country's present rate of gross capital formation, better still its rate of net capital formation, and the various objects to which it is being devoted. But we cannot really get much value from this information, or make plans or judgments about the future, unless we know the capital stock already held, and its relative rate of increase, not only for the national capital as a whole, but also for its component sectors (industry, transport etc.)

It remains to be added that there are signs that this defect may be quite rapidly rectified in the next few years. The international "trade union" of statisticians, both official and private, working in this field, formed in 1947, gave itself the title of the International Association for Research in Income and Wealth, treating the two branches of study as of similar importance. Some important studies in the field of wealth, or capital stock, have recently been completed, and will be described below, and a number of others are in contemplation. There is also a revival of interest in studies of capital among theoretical economists.

It can only be hoped that this movement will not, in its turn, be carried to excess.

The economist is bound to distinguish sharply between two concepts—"real capital", i.e., equipment, buildings, structures, stock in trade and other physical goods which can be used for purposes of production, and "money claims", i.e., property or legal claims whereby a certain sum of money is due to be paid, or assets which can be sold for money. It may appear at first sight—eminent statisticians in the past have

indeed thought so—that the total value of money claims must equal, or at any rate approximate to the current money valuation of real capital. Unfortunately this is not the case, even by a wide margin. There are a number of important categories of money claims which do not represent anything like an equivalent amount of real capital; and, on the other hand, there are certain forms of real capital, which though undoubtedly possessing considerable value, could not be sold.

The danger of modern studies of capital by some economists is that they will either blur this distinction, or pay excessive attention to money claims, which we must recognise, are, while undoubtedly important, nevertheless a matter of secondary interest. The primary object of interest is real capital.

The key figure required for the formulation of any policy of economic development is that which is known as the capital-output ratio, or sometimes the capital coefficient. This is the figure of the number of millions of rupees of net capital investment required (first for the national economy as a whole, and then by sectors) in order to raise net output by one million rupees per annum. It is clear that we here have to deal with net figures. To work with figures of gross capital formation, as some statisticians do, is obviously misleading. A rate of gross capital formation, for instance, which while amounting to a considerable sum in money nevertheless falls short of the amount estimated to be

required to meet maintenance, depreciation and obsolescence, will not add to output at all; it will, in the long run, reduce it.

We must make a further distinction between "average capital coefficient" and "marginal capital coefficient". The former figure tells us the score up to date, how much output is now being obtained, in all, from capital previously invested. It is important to know this. But it is even more important to know the "marginal capital coefficient", or what additions to output are to be expected from the additions to capital now being made. We may have grounds for expecting that the net investments which we are making now are more fruitful than those which our predecessors made, or that various new investments which are being made now will, in different ways, enable us to get a better utilisation of existing capital. There may be some grounds for holding the converse view, that the most productive investments have been made first, and that the new investment which succeeds them is likely therefore to have a lower marginal capital coefficient than the old. It is quite impossible to say *a priori* whether increasing returns or diminishing returns to capital are going to prevail; and the experience of different countries, at different times, gives us different answers. The complexity of the problem may make it more exciting; but at the same time, it will be readily seen how urgent it is that economists should attempt to get at any rate a provisional answer to it.

EXPORTS FROM INDIA 1950 TO 1955 A COMMONWEALTH SURVEY

COMMONWEALTH trade 1954-55—a memorandum prepared in the Intelligence Branch of the Commonwealth Economic Committee—comes opportunely each year. This publication sets out the pattern of trade of all the Commonwealth countries together in a form which highlights their interdependence and the character of the import and export trade of each member separately.

In the tables below there are set out details of the exports of India commoditywise and countrywise over five consecutive years. Most of the facts in regard to particular commodities are known and do not call here for special mention. What is interesting is the total picture which emerges of India's dependence upon the Commonwealth as buyer of her exports.

It will be seen that for every year included, India's exports to the Commonwealth were nearly 50 per cent of her total exports. It will also be seen that the figure has not—contrary to current opinion—tended to decline. On the contrary it has tended to rise. In the year 1954-55, for example, our exports to the Commonwealth were Rs. 323 crores out of a total trade of Rs. 578 crores, in other words, 56 per cent. In the case of 1952-53, the figure was only Rs. 281 crores of a total figure roughly similar to 1954-55, namely, Rs. 572 crores. In other words, in the last two years the percentage of Commonwealth trade has risen from 49 per cent to 56 per cent, a rise of nearly 7 per cent.

The Commonwealth picture is similar to the Sterling area picture though they are by no means identical, Canada being in the dollar area by currency distribution. Again, contrary to usual belief India's trade with the dollar area in value terms is not growing

EXPORTS FROM (In million

Year	Jute Goods	Tea	Cotton Goods
1950-51	1,145	804	1,384
1951-52	2,699	939	586
1952-53	1,294	809	703
1953-54	1,138	1,022	724
1954-55	1,240	1,471	664

and has declined steadily from the peak in 1951-52 in proportion greater than the decline in the value of our total trade.

So far as the total picture is concerned it thus appears that our very much best buyers are in the Commonwealth and in the Sterling area. This must be an argument for both a retention of the Commonwealth political link and no change in our position vis-a-vis the Sterling area.

THE RAMAYANA OF TULSIDAS IN ENGLISH VERSE

LATEST "HINDUSTAN TIMES" PUBLICATION

The famous Hindi epic regarded by many as "the greatest book in all devotional literature" is for the first time now available in English verse.

The translator, the Rev. A. G. Atkins, completed the book after ten years of devoted work. He has tried "to keep and express in English in the fine rhythm and music of the original in simple lucid language, and with as much of the vivacity, wittiness and picturesqueness that Tulsidas has put into his work." He has also followed in some measure Tulsidas's metrical variations such as *chhand*, *chaupal*, *doha* and *soratha*.

In a foreword Mr C. Rajagopalachari says: "Mr Atkins' monumental work and his Introduction are a revelation of hope for those who desire to see all the great religions of mankind come together. . . . His service is not only to English-speaking people but also to that very large number of Hindus in India who do not speak the Hindi language and to whom English has become a very familiar medium."

The book is of special value to libraries, scholars and devotees of Tulsidas.

It has been issued in the following four editions:

- I. Original text of Tulsidas with translation in English verse; three volumes; 1468 pages; price Rs. 50 net.
- II. Translation in English verse; without Hindi text, two volume; 898 pages; price Rs. 40 net.
- III. Special tissue paper edition of I, one volume, price Rs. 100 net.
- IV. Special tissue paper edition of II, one volume, price Rs. 100 net.

BOOK REVIEWS

THE MALAYAN ECONOMY

The Economic Development of Malaya: Printed and distributed for the International Bank for Reconstruction and Development by the Government Printer, Singapore, September 1955: Pages 520. Price: \$6.

The time is certainly opportune for a detailed description of the Malayan economy today; no more authoritative survey could have been desired than one by the International Bank. The publication of the report of the Mission organised by the International Bank for Reconstruction and Development, entitled "The Economic Development of Malaya", is therefore, a timely document, containing critical information on the economy of Malaya, and the Crown Colony of Singapore, and the problems facing them on the eve of major political changes.

The report is the work of a team of thirteen experts on agriculture, public finance, mineral resources, transport and communication, industry, power and social services. Divided into five parts, it contains a general introduction to Malaya and Singapore and a discussion of the problems and prospects of their development in Part I; deals with those sectors of the economy which are themselves productive or closely associated with productive activity in Part II, covers the various fields of social services in Part III and gives an appraisal of the financial resources available for development during 1955-56 in Part IV. Part V consists of technical reports on the various sectors of the two economies. Besides, it contains a statistical appendix and is dotted throughout with valuable tables and graphs.

The report is not intended to present a blue print of the various development projects suggested; it only outlines policy in general terms indicating how the economy of the two lands can be put on a sound footing. Due stress has been laid in the Report on changing pattern of Malaya's export trade—the main source of income of the State—due to technological changes effecting the use of tin and competition to natural rubber from the synthetic product. Essentially the economy of Malaya is not sought to be developed along any different lines than those now in operation. However, balanced stress has been laid on the various sectors of the economy.

Criticism may be levelled that the Report leaves many problems and issues untouched; it would be surprising if it did not. It is not less surprising, however, how much detail has been covered in this single piece.

It may safely be said that there has been no finer coverage of the economic problems of Malaya than is presented in this book. It is compulsory reading-matter for students of South-East Asia. It should find a place also in every reference library.

COMMERCE ANNUAL REVIEW NUMBER

Commerce Annual Review Number—1955: Pages 200: Price Rs. 7-8-0.

The annual review numbers of "The Commerce" usually provide a rich fare and this year's 200-page affair excels its predecessors both by its size and by its comprehensive coverage. The present number contains as many as 46 special articles on such topical subjects as private sector vis-a-vis the public sector, planning, company law, taxation and labour relations. The chronicler of political and economic events in 1955 finds the latter pleasant and the former rather depressing. With the second Five-Year Plan the subject

of discussion everywhere, quite a number of the articles deal with one or the other aspect of planning.

Mr. T. T. Krishnamachari, trying to define the scope of the private sector in a socialist economy, comes to the conclusion that "the place of the private sector..... is in its hands to decide". Mr. S. V. Ramamurthy writes on the role of the administrator in democratic planning, Prof. Shenoy on the self-defeating nature of deficit-financing if it exceeds the safe limit and Mr. G. L. Bansal on the need to leave scope for initiative and private enterprise. There is an illuminating analysis of Britain's monetary policy by Sir Oscar Hobson and of U.S. foreign economic policy by Mr. Samuel C. Waugh. Mr. Naval H. Tata, in an article, expresses the opinion that labour participation in industry has become a psychological necessity. The problems of some of the major industries are also discussed in a number of special articles. The number also contains the usual reviews of progress during the year in banking, insurance, commodity prices, etc., and of market trends on the stock exchanges and in the important commodities. It is a real bumper number.

CAPITAL ANNUAL

Capital: Annual Review Number of Commerce, Trade and Industry: Pages 124: Price Rs. 5.

The annual review number of "Capital" for 1955 of 124 spacious pages, containing over thirty articles, maintains the high reputation it has established for itself all these years. It opens, appropriately, with an article on the educational needs of India by Dr. Thomas Balogh, in which this well-known Oxonian stresses the unsuitability of an "Oxbridge" education for solving India's problems. Mr. B. R. Shenoy has returned to his theme of deficit financing in an outspoken criticism of the financing of the Plan, concluding on the note that deficit financing is not a modern version of the *akshaya patra* of the Hindu fables. Mr. Sushil Dey brings in dialectical approach to the problem of small-scale industries—an approach now accepted by the West Bengal Government—which has been described as "simultaneous stimulation of the sub-marginal production potential in a number of enterprises or crafts, a demand for whose output can be created through a system of mutual exchange". Mr. Tulsidas Kilachand has once again argued the lost case on Company Law Reform. Mr. N. Das takes a hopeful view of the future of private industrial enterprise in India, but with the warning that it should "attune itself to the new outlook". Mr. W. H. J. Christie's plea for less rationalisation and more cottage and small-scale industry strikes a rather odd note. Mrs. Taya Zinkin's stimulating thoughts on the "The Phenomenon of Indianism" are *sui generis*. The number then proceeds to the down-to-earth commercial matters, leaving the readers at the end with a satisfying feeling because of its comprehensiveness and tidy presentation.

INDIAN COAL

Indian Coal Industry Symposium Number of Indian Mining Journal: Volume III. No. 9: Pp. 196: Printed on Art Paper; Illustrated. 6/2, Madan Street, Calcutta-13. Editor: H. Ghosal; Mg. Editor: P. K. Menon: Price Rs. 7-8.

The special issue of the Indian Mining Journal now published, containing 45 articles on almost all technical aspects of Indian coal and lignite, has great topical interest. Coal policy under the second Five Year Plan has been discussed in recent months, but the industry

at the moment faces also other complex problems which are not quite well understood even at the policy-making levels. A comprehensive approach is clearly needed and to this end, geologists, economists and business men have pooled their knowledge in this number of the Indian Mining Journal. They have examined the industry's problems afresh in the light of recent developments and data, and on a broad scale covering the coal geology and reserves, mining, processing, utilization, conservation, legislation and trade. The papers presented here formed part of the "Symposium on Indian Coal Industry" which was held in Calcutta on August 8, last, under the joint auspices of this journal and the Geological, Mining and Metallurgical Society.

Except for a critical review of the working of the Mineral Concessions Rules, not much has been said about the general policies affecting the coal business like nationalisation, compensation, new investment nor about labour and price policies. The reason is the obvious one that the scientist and technical expert are generally neutral on such issues; but it makes the study quite objective. The policy-makers can here derive much knowledge which normally lies outside their ken; they may learn that coal policy is not a mere matter of public vs. private sector in which a vague preference for either sector should decide the issues.

INDUSTRIAL ANNUALS

Major Industries of India Annual 1954-55: Vol. 4: Price Rs. 15/-.

The Indian Cotton Textile Industry 1954-55: Price Rs. 6- Editor M. P. Gandhi: Published by M. P. Gandhi & Co., Bombay-1.

The fourth in the new series of annual volumes on India's major industries which Mr. M. P. Gandhi has been publishing, is a bigger number of 300 pages in art paper, containing about 35 articles. The scope of the publication is wider than its title indicates; it has not led to the exclusion of such subjects like community projects, mechanisation of agriculture, water resources and Indo-Soviet trade. Banking, insurance, village industries, tourism and housing are the other subjects

included here besides the strictly major industries like coal, sugar, jute, cotton and steel. In each case the picture is drawn by one who is intimately in touch with the industry concerned.

Mr. M. P. Gandhi's Textile Industry Annuals are too well-known to require special introduction and it is hardly necessary to say anything except that the number for 1954-55 has brought the data up-to-date.

JOURNAL OF INDUSTRY AND TRADE SUPPLEMENT

Special Industries Supplement of the Journal of Industry and Trade: The Editor, Publications: Ministry of Commerce and Industry, New Delhi: Price Rs. 2/-.

Leading officials and non-officials have contributed to the effort made by the Editor of Publications to bring out a special supplement on Indian industries. There are about 38 articles in six sections, covering the whole field which provide a good introduction to the Indian industrial structure while the tables and charts make the supplement a handy reference book.

INDIAN ECONOMY

Recent Developments in Certain Aspects of Indian Economy (two parts): International Labour Office, India Branch, New Delhi: Pages 50 & 95: Price As. 10 and Re. 1/-.

As the title suggests, the two parts of this pamphlet deal with only some aspects of India's social and economic problems. The first part covers labour legislation in 1953-54, employment situation, post-independence land reforms and cottage and small-scale industries. The second part covers labour, agricultural labour, cooperative housing and community projects and national extension service. The publishers do not claim any originality for the information contained in the publications. The facts and figures have, however, been treated intelligently to enable the reader to get full value as reference books.

CORPORATION FOR STATE TRADING

THE whole tenor of Government's approach to the problem of State trading discloses lack of any clear and firm policy. When the State Trading Committee, appointed five years back, failed to give an unequivocal direction on the subject, it was quite plain that no case could be made out for the adoption of State trading as a regular part of official policy. Even so, the idea of State trading continues to influence official thinking and at any rate the proposal of establishing a State Trading Corporation, which was mooted in the course of the deliberations of the Committee, is being revived from time to time. For some time past, some serious attention has been turned to it and the idea is being pursued by the Ministry for Commerce and Industry.

The State Trading Corporation is conceived primarily in the context of the external trade, but this role has not been thought out in exclusive terms and simultaneous emphasis is also placed, in a lesser degree, on the need of the Corporation to undertake internal trade. This aspect of internal trade, however, has not been discussed except in a superficial manner. This trend may be interpreted as an indication that specific classes of business which enter into the foreign trade have arrested attention as fit subjects to be the first casualties of State trading. From whatever angle the question may be viewed, even in the context of the next few years, the very proposal of floating a State Trading Corporation is fraught with grave consequences to the structure of the country's trade. The public sector, frankly, has no resources to undertake this venture, when it is taking on itself economic tasks on an altogether disproportionate scale. A recent communique addressed by the Federation of Indian Chambers of Commerce and Industry to the Government puts the problem in real perspective. The communique urges an objective approach to the question in the light of past experience, and also examines fresh grounds which have been advanced in recent months on two major counts—the need to augment the financial resources of the public sector during the second Five-Year Plan and to find out a suitable agency to conduct trade with Communist countries.

The second factor seems to possess a semblance of force and reasoning since it is assumed that, when we start larger trade relations with communist countries where trade is nationalised or subjected to strict State control, the real choice left for this country is to set up a State Trading Corporation for successful operations. The manner in which trade has been carried on without encountering special obstacles by India with communist countries like Czechoslovakia completely belies this assumption. Trade between the communist world and the free world is actually in existence on some scale, without individual countries in the latter having been required to establish State agencies for that purpose. The Federation's communique has stressed in this context that discussions with the trade delegations

of Communist countries during the Indian Industries Fair made it clear beyond doubt that these countries would be prepared to nominate individual traders as agents and they could function as counterparts of Indian business men. Any extra information such as is not readily available can certainly be procured through the agency of India's Trade Commissioners or their substitutes in those countries. It would be difficult for a State Trading Corporation, once set off to a start, to execute its functions without impinging upon our trade with other countries. The preponderating consideration of balancing imports and exports in the trade with communist countries as evenly as possible will necessarily push the State Trading Corporation constantly in situations in which it will have to import goods at the risk of losses. These contingencies may either force the Corporation to enter into trade with non-Communist countries or bring pressure on the Government to restrict imports from the free world.

The notion that the State can increase its resources by diverting "lucrative profits" in foreign trade to itself through the medium of State trading has often had strong attraction for the credulous. There is no dearth of advocates championing the cause of nationalisation of foreign trade to pool such profits in the public sector. They blissfully ignore, however, that trade anywhere is not a bed of roses where profits alone are to be "amassed". Even the idea of "amassing" profits betrays lack of perspective. Trade is carried on as a normal operation on modest profit margins. But what is significant is that a blind eye is turned to the stark reality that there exist serious possibilities of losses in trade. The objective of augmenting the resources of the public sector must take cognizance of this plain fact. The caution uttered by the Taxation Enquiry Commission requires reiteration. It has pointed out that the most fruitful time when State trading can be experimented or extended is the period of rising prices and the present is not such a period. The Commission viewed this subject from the restricted angle of finding fresh sources to increase non-tax revenue in the immediate future. But other aspects of this issue call for serious questioning. Is foreign trade to be participated in by the State during periods of rising prices and to be abandoned otherwise without the least thought of dislocations which such a course may cause to the economy? No sound advocacy of State trading can rest on such shortsighted reasoning. A State Trading Corporation must face squarely normal situations of gains and losses. There will hardly be any doubt about the net outcome of its activities. Even in periods of regulated trade and high prices State trading conducted by Government departments has sustained substantial losses. This aspect of State trading apart, it is elementary knowledge that successful and stable trading operations require an arduous and protracted period of experience as well as skill in establishing contacts to ensure some degree of flexibility in negotiating the deals.

BONUS PACTS

By
CROESUS

COLLECTIVE bargaining has made some striking successes in recent months. One is the agreement for payment of bonus to one million plantation workers in the country. Workers on tea, coffee and rubber plantations have never so far received bonus on a general scale, and the present settlement entitles them to an

aggregate bonus of over Rs. 6 crores from the tea plantations alone. Another is the agreement on bonus for 2,25,000 textile workers in Bombay on the lines of the Ahmedabad formula, which has also been applied to the cotton mill industry in Madhya Bharat. This means that with the present agreement, nearly four

lakh textile workers in the country are assured of a minimum bonus of 15 days' basic wages, that is, 4.8 per cent of the annual wages, irrespective of whether individual mills make profits or not.

Though broadly following the Ahmedabad pattern, the Bombay agreement has made certain minor modifications, probably to suit local conditions and to satisfy the Rashtriya Mill Mazdoor Sangh. In particular, the development rebate which was introduced in the Union Budget of 1955 will not be included in the bonus calculations for 1956 and 1957, the last two years of the agreement. Another change is the provision for setting up an impartial commission with agreed terms of reference to enquire into the rehabilitation requirements of Bombay mills, which have often been the cause of constant friction between management and labour. A further concession has been made to labour inasmuch as those mills whose bonus disputes for 1952 were pending before the Industrial Court are also covered by the agreement for that year. This means that these mills, fifteen in number with a labour complement of

more than 60,000, will be obliged to pay at least 15 days' bonus to their workers for 1952 in addition to the benefits under the agreement for five years from 1953. Tribunal awards in the past did not allow for pooling of "bonus resources" within the industry for paying bonus to all workers, including those employed by loss-making mills.

The bonus pacts in the cotton textile industry and the pact between the Tata Iron and Steel Company and its workers mark the beginning of a new era in industrial relations in India, and provide a good augury for launching the second Five-Year Plan. These agreements have generated a fund of goodwill on both sides, and have thus created the necessary psychological climate for the formation of joint consultative machinery for amicable settlement of all points of difference. Not long ago the interests of workers and management were considered mutually exclusive, but once both the parties start working on the basis of joint consultation and mutual accommodation, rapid progress can be made in all directions and higher productivity achieved, thereby ensuring higher real earnings for the worker.

ANOTHER PEAK IN CLOTH PRODUCTION

By

CROESUS

THE performance of the cotton textile industry on the production front during the year 1955 has been verily in the nature of a challenge to the Government and more especially to the Kanungo Committee which urged that cloth production by mills should be frozen at 5,000 million yards a year. At 5,078 million yards, mill cloth production in the country establishes a new record as compared to 5,020 million yards registered in 1954.

An idea of the achievement of the mill industry in the matter of production could be gleaned from the following table:

Month	Cloth		Yarn	
	1955	1954	1955	1954
	(Million yards)		(Million Lbs.)	
January	437	418	135	132
February	402	398	125	122
March	429	405	135	125
April	418	426	130	129
May	401	427	125	129
June	418	432	133	128
July	446	441	144	136
August	419	411	138	131
September	434	410	143	130
October	437	380	144	122
November	400	421	132	135
December				
(Estimated)	437	451	144	143
TOTAL	5,078	5,020	1,628	1,562

It must be noted here that the expansion in the mill output of cloth has been such as to exceed, for the second year in succession, the target of 5,000 million yards set for it by the first Five-Year Plan. Indeed, the increase in cloth production would have been much more had it not been for the Kanpur textile strike which, it has been estimated, has accounted for a loss of 34 million yards of cloth.

In the case of yarn production also the year 1955 has seen substantial increase resulting in a highly encouraging supply position which prompted the Government to allow some exports of yarn. In the previ-

ous year, it may be recalled, the Government did not allow any export of yarn but only granted extension of the period of validity of licences. Four important factors helped sustain the encouraging trend of production in respect of both cloth and yarn. In the first place, thanks to the continued increase in domestic consumption and exports, offtake of cloth was maintained at a high level throughout the year. Naturally mills found it advantageous to maximise their output in which they were further helped by availability of large supplies of raw cotton at attractive prices. The relaxation of controls on purchase of cotton made it all the more easy for the mills to buy cotton according to their requirements. Secondly, the supply of wagons for transport of cotton from the terminal markets to the mills was relatively better than in 1954, the actual number of wagons that carried cotton during the year up to August being as much as 71,000 as against only 62,000 in the corresponding period of the previous year. Again, there was a distinct improvement in the power and fuel supply position. Apart from the Kanpur strike, labour-management relations during the year were also, on the whole, conducive to better production all round.

It is true that there was a decline in the total cloth exports from this country during the year, which is estimated to amount to 865.4 million yards as against 897.7 million yards in 1954. But due to the increase in domestic consumption, reflecting, incidentally, the growing capacity of the country to absorb more and more cloth, cloth stock lying with the mills had been steadily on the decline. In fact, towards the close of the year some centres actually reported scarcity of cloth bordering on cloth famine and consequent rise in prices.

In the light of the above analysis, it cannot be gainsaid that freezing of mill cloth production at the present level of 5,000 million yards is fraught with grave consequences to the economy of the country. As the Chairman of the Millowners' Association pointed out at a Press conference, "if the handloom sector is allowed to bite off more than it can chew and if a rigid ceiling is laid on mill production, a situation may arise when an acute shortage of cloth is felt in the country, resulting in its prices going up much to the undeserved hardship of the consumer".

BUSINESS NOTES

RAILWAY FREIGHT RATES

FOR THE first time, the freight rate structure of Indian railways is being revised in full consultation with transport users whose objective views on specific questions certainly merit the closest attention. The Federation of Indian Chambers of Commerce and Industry, New Delhi, and the Indian Merchants' Chamber, Bombay, have tendered to the Enquiry Committee their memoranda to its questionnaire. As expressions of the studied views of organised transport users, their replies and constructive suggestions on the issues raised are bound to be of value to the process of rationalisation.

The genesis of the demand for a re-investigation of the rates structure is quite pertinent to the present scrutiny. The major argument for revision was that, despite a good deal of rationalisation and simplification of the rates structure in 1948 (and the introduction of telescopic rates for long distances on a continuous mileages basis must be adjudged as its greatest virtue), subsequent direction of policy indicated the Railway Ministry's solicitude to put the revenue angle above most other objectives of that policy. Numerous upgradations of commodities and increases of class rates reveal this bias. The two memoranda emphasise that no criteria of a progressive rates policy can ignore the commercial or revenue aspect of rates and in the aggregate railways much achieve commercial results in their operations. But their other vital character as a public utility enjoying a near-monopoly position imposes an obligation on them to fulfil the requirements of a developing economy.

The replies of the two organisations to some of the representative questions illustrate the need not to over-stress the criterion of revenue. The levy of a surcharge on carriage of goods by express trains has been opposed on the ground that it ignores the economies of large-scale and accelerated operations. The very basis of the assumption, in another question, to the effect that short distance traffic is unremunerative is challenged and the limitation of 300 miles for the first leg of traffic distance, a higher charge for the initial 75 miles and a floor of 20 miles for freight rates are indicated in refutation, along with the implication that telescopic rates convey steeper charges for short distance. The suggestions of railways declining to accept short distance traffic (on the score of unremunerative returns) in favour of roads or inland waterways has been disapproved as wrong in principle and leading to higher transport costs. In respect of certain commodities for which rates are fixed below transport costs (a rare thing of which coal is alleged to be an instance), it is vital to remember that rates cannot be based on the principle of covering full average costs of every single haulage or commodity. In the second Five-Year Plan, in which the railway expansion programme is bound to create acute wagon shortages for the private sector, it is of great importance that the revenue objective of railway rates must be co-ordinated with their developmental purpose.

EMERGENCY IN BOMBAY PORT

THE EMERGENCY powers given to the Chairman of the Bombay Port Trust just five months after the declaration of a similar emergency in Calcutta underline the intractable labour situation in Indian ports. In fact, the Vasist Committee had recommended special powers for the Dock Labour Board Chairman at all the ports to deal with "go-slow" and indiscipline. In certain years there has been a general slackening in the discipline of the dock labour and the Dock Labour Boards have been unable to exercise the needed control while the employers have been helpless to do anything except seek Government intervention. Though it can-

not be established so, there has been a tendency to attribute the labour troubles to the decasualisation scheme for stevedore labour, introduced in Bombay on October 5, 1953, and in Calcutta much earlier. It cannot, however, be denied that ever since the introduction of decasualisation, there has been a steady deterioration in the turn-round of ships. The turn-round time in Bombay was practically the same in 1951, 1952 and 1953, but in 1954, it went up sharply by as much as 50 per cent for the dry months and 64.3 per cent for the wet months. For handling 5,000 tons of import cargo other than food grains, sugar and bulk oil, the time taken in 1954 showed a rise of 30 per cent for the dry and 49.1 per cent for the wet months; for export cargo other than ores, the percentage rises were 43.1 and 38.9 respectively. The percentage of ships which had to wait for want of berths increased from 1.9 in 1953 to 17.8 in 1954. The average period of detention was 5.8 days in 1954 against 1.7 days in 1951. In fact, on a few occasions, vessels had to shut out cargoes owing to the labour situation in the Bombay port. It is easy to see how delays in shipping, apart from causing a great deal of inconvenience to the commercial interests, may often directly affect their business. We may safely assume that with the present poor turn-round we shall need 15 to 20 per cent more berthing facilities and tonnage to accommodate the same number of ships and carry the same amount of cargo.

The Dock Labour Board administration has often suffered due to lack of adequate executive authority, lack of fixed responsibility and too little attention paid to important policy matters. This defect is now sought to be remedied by the emergency powers given to the Port Trust Chairman, who can suspend, dismiss or discharge any employee for indiscipline, "go-slow" or misconduct.

The Vasist Committee had recommended the piece-rate system of wages, which it considered the best remedy for all ills of dock working. Labour interests, on the other hand, have opposed the proposal, although they are in favour of an incentive bonus. In India this system has been accepted by the employers and workers at least at one port, namely, Cochin, and there is, therefore, no reason why it should not be extended to the other major ports. It is also important, at the same time, to take steps to improve and modernise the dock facilities simultaneously with the introduction of piece-rates.

RATIFICATION OF TEA BONUS PACT

THE VERY fact that negotiations over the payment of bonus to tea plantation labour took a protracted course suggests the difficulties which this ticklish issue involves. The announcement of the agreement came at a time when the North-East Indian plantations are passing through a phase of slump in the trade. Before the agreement becomes effective, it needs, of course, the ratification of the parties represented in the negotiations, namely, the Indian Tea Association, the Indian Tea Planters' Association, the United Planters' Association of Southern India, and the employees through their organisations.

The major interest at the present time centres round ratification by the planters in North-East India. The United Planters' of Southern India had actually been paying bonus since 1947 and during this period its rate has varied between the maximum of 10 per cent and the minimum of 4 per cent of the gross earnings. The view taken in the South is that a co-ordinated formula has been evolved which, apart from removing the previous disparity on account of the liability of payment of bonus, will provide a basis from time to time without special strains to which plantation owners

in that region had been subject in the past. This explains the favourable reaction with which the agreement has been received in the South. In so far as the industry in North-East India is concerned, Messrs. B. C. Ghosh and S. K. Banerjee, who represented the Indian Tea Planters' Association (the weaker section in this region) at the bonus talks, have protested against the description of the agreement as voluntary and in any event their statement after the announcement of the agreement indicates their Association's difficulties in the way of ratification. The principal objections they have stressed are that the negotiations did not take into account the genuine distinction between the capacity to pay of big and small units and that the huge losses sustained by the industry in 1951 and 1952 could not be absorbed by the profit of 1953 and had transcended beyond to the year 1954 in certain cases. The total amount of bonus payment which labour in North-East Indian plantations would be entitled to receive for 1954 has been estimated conservatively at Rs. 6 crores and in respect of the two following years—1955 and 1956—the same scale has been made applicable, although the quantum of bonus will vary. Three-fourths of the payment for 1954 is due to be made in the near future while the pressure of uncleared stocks threatens to continue till June next according to informed expectations. Ratification is unlikely to be withheld by the Association, but this liability should serve to underline the critical elements in the situation when the North-Indian Tea Regulation Committee has already had to make a decision for a cut in the crop for the 1956 season. There is a strong case for reduction in State taxation and export duty.

FORWARD TRADE IN JUTE

THE FORWARD MARKETS COMMISSION has taken the step to invite applications from Associations trading in jute and jute goods in Calcutta for the purpose of recognition as duly authorised to conduct futures trade in these commodities one year after the Government of India accepted the recommendation of the Jute Enquiry Commission in this behalf. The Enquiry Commission's recommendation has placed special emphasis on the establishment of a forward market for jute on the model of the East India Cotton Association, providing for a unified and comprehensive channel for forward trade. Unbridled speculation verging on pure gambling was responsible, it will be recalled, for clamping total ban on forward trading in jute goods under the West Bengal Jute Goods Act, 1950, and on raw jute under the Forward Contracts (Regulation) Act, 1952. Speculative elements, however, are said to have been too powerful to allow complete prohibition of forward trading in jute. It has been recognised long since that the establishment of a recognized agency under the Forward Contracts (Regulation) Act would provide for healthy speculation and guarantee insurance against wide fluctuations in prices. The Forward Market Commission's move will be welcomed as setting up such a machinery now that the position in raw jute and jute manufacture has considerably eased. This action comes appropriately at a time when the IJMA has made a bold beginning in unsealing looms in jute mills.

STANDARDS CONVENTION

THE EXPANDING activities of the Indian Standards Institution found further expression in the chemical and textile standards convention held in Bombay recently, the second in the series of such meetings. The first convention relating to the engineering and building industries was held in December 1954 in Calcutta, where there is a heavy concentration of these industries.

Besides publicising the Indian Standards Institution, these conventions help create a general awareness among industrialists and the public of the benefits of standardisation and the role of standards in industrial development. They provide a convenient platform for industrialists and technologists to meet and discuss

important technological and management problems and to pool their knowledge. The agenda for the Bombay convention, included the meetings of the councils for the textile and chemical divisions, discussions on the metric system of Indian standards and statistical quality control.

Today the consumer has greater quality-consciousness than ever before, and with the buyers' market in sight, it is time that serious attention is given to the problem of standardisation and quality control. The promotion of exports also requires the production of quality goods conforming to agreed standards. Barring Japan in the Far East, there is not a single country in South-East Asia, West Asia or Africa, where the cotton and rayon weaving industries are so well established as in India. The textile industry can push the sale of its products in these potential markets, provided goods of uniform and standard quality comparable in price with those of foreign competitors are offered. Though India is meeting increasing competition in foreign markets, especially from Japan and the European countries, little or no effort has so far been made to study the tastes of foreign consumers. A pre-requisite for the promotion of exports, therefore, is specialised market research, which would give a clue to the consumers' preference and selling techniques.

TRANSFER OF EVACUEE BANK ACCOUNTS

THE COMMUNIQUE issued on January 14 last by the Government of India on the mode of implementation of the agreement on transfer of bank accounts as well as lockers and safe deposits of evacuees from West Pakistan promises to bring an early solution of one of the minor outstanding issues. Reciprocal facilities have been extended to Muslim evacuees from East Punjab. The transfer of valuables in lockers or safe deposits is expected to bring much-needed relief in some individual cases, but the magnitude of assets involved in bank accounts is assumed to be modest. Nevertheless, it is a positive gain that banks are being enabled to close a lingering problem with a satisfactory outcome.

The agreement safeguards the interests of Indian banks in regard to the realisation of their assets in Pakistan and this safeguard is extended also to Indian banks which are still continuing their business operations in Pakistan. The safeguards contemplated in this behalf include provision of facilities to be given by the Government of Pakistan in executing sales of immovable properties mortgaged with Indian Banks or over which they have a charge for advances of loans. All amounts due to the banks from the Custodian of Evacuee Property or from Government departments or accounts in either country will be transferred and credited to the banks concerned for which purpose June 30, 1956, has been fixed as the deadline. The State Bank of Pakistan will call upon all banks concerned in Pakistan to prepare lists of accounts of evacuees. Corresponding action will be taken by the Reserve Bank of India and the lists will be exchanged by the two central banks by August 31, 1956.

In so far as transfer "en bloc" of lockers and safe deposits by October 31, 1956, is concerned, no difficulties are apprehended. But it would appear that the wholesale transfer of bank accounts and funds before the same deadline may not be quite smooth. A good deal depends on how the debts due to the banks will be realised, and although the good offices of the government of the country are to be used for this purpose, the mediation has its own limitations. The preparation of lists of accounts and funds is made subject to the condition that objections to such transfer will be invited by the government of the country. Unless a summary procedure is prescribed to dispose of the objections, delays would be inevitable in some cases. These handicaps, however, are not expected to be irritating or serious.

A Letter to the Editor

WANTED A NEW LOOK FOR "PRIVATE ENTERPRISE"

Sir,

India's avowed objectives are a welfare state and a socialistic pattern of society. The extent to which private enterprise can fit into the picture and can play its part in bringing about social justice and better standard of living for the masses will determine its future which may be one of glorious accomplishment or one of virtual and inglorious extinction.

For some time past, the general public has sat on judgment on private enterprise and has found it to be unworthy of trust on its past records. While there is hue and cry amongst the business men and the industrialists at the unfair treatment that is being meted out to private interests by the Government and the subordinate role which the private sector is being called upon to play in the second Five-Year Plan, one sees no concerted drive by business and industrial executives to take such positive measures which will earn public approbation for private ventures, although recent speeches of some prominent industrialists indicate that they themselves realize what should be done.

One need not go too much into details as to why the public opinion today is prejudiced against business interests. Suffice it to say that they are considered guilty of corrupting public servants; profiteering; black marketing and adulteration and otherwise defrauding the public; falsification of records for tax purposes; monopoly and oligopoly; exploitation of labour and white collar workers; nepotism and favouritism in employment; inefficiency in production; and various other malpractices which are more or less anti-social and unpatriotic.

The only way private enterprise can rehabilitate itself is by having a 'new look'. To a large extent this has been accomplished in the United States of America and in the United Kingdom. That explains why private enterprise plays a greater role in those countries and enjoys confidence of the public, as is apparent from the results of recent elections in the U.K., while the prestige of free enterprise is higher than ever in America.

In this connection, one should read the article entitled "Great Trek of 1954" published in the May 1955 issue of Reader's Digest—India edition. It records one of the most outstanding examples of the development of "social conscience" amongst the "Top Management" of a large company—namely the Socony-Vacuum Oil Company.

Briefly, it is the story of migration of 130 workers and their families—495 men, women and children, from Olean in New York State to Puget Sound, Washington, a distance of 2700 miles. Due to unavoidable reasons the company had to close down its refinery at Olean. The workers who lost their jobs as a result were offered employment by the company at their new plant at Puget Sound. Those who decided to migrate were paid all expenses including moving of the furniture, storage, meals en route and hotel bills at the other end for a month by the company.

As for those who chose to remain behind, the company paid liberal severance pay and allowed them certain annuity, hospitalization and savings plans benefits. What the Socony-Vacuum Company did in this instance was "beyond the line of duty". Also they did this without any pressure from the Government or labour unions—they need have done very much less than what they did, if they wanted to do just what was legally required of them to do. They were motivated

primarily by consideration of welfare of their employees. The extraordinary solution of transcontinental migration to another plant was adopted as the small city of Olean could not have provided alternative employment if all the workers were discharged.

Here is something for the Indian industrialists to emulate.

Let the business men in India start now doing something to change the public opinion. I suggest that the leaders of commerce and industry form an all-India Association to consider the course of action to be taken, and organize "action committees" in every city and town in India.

Here are my suggestions for immediate consideration which involve the acceptance of ethical considerations and recognition of obligations to society and human rights as the guiding principles in business.

1. A drive for abolishing black markets.
 2. A drive against adulteration of foodstuffs and drugs.
 3. A drive against defrauding the public by lowering the quality of products after establishing their reputation, including offer of imitation products as genuine.
 4. Acceptance of and adherence to trade standards or ISI or Agmark standards in all manufactured items and agricultural products.
 5. Offering items and products at fair prices to the buyers; advantages of increased availability and lower wholesale prices or manufacturing costs to be passed on to the public; profits to be based on reasonable returns to the investors plus adequate reserves for lean years and expansion.
 6. Avoidance of monopoly and oligopoly for gain at the expense of the public; monopoly or oligopoly which ensures genuinely better products or better service would be exceptions.
 7. Offer of adequate wages or pay and incentives, happy working conditions and opportunities for advancement to the labourers and white collar workers together with the creation of a sense of belonging amongst them.
- In case of rationalization or unavoidable need for reduction in expenses or closing down altogether of a factory or establishment, the management should take on more responsibilities on their shoulders on behalf of the affected persons than they are called upon to shoulder legally.
8. Adoption of a fair policy with regard to recruitment and promotion.
 9. Maintenance of efficiency and increase of efficiency in production.
 10. Maintenance of correct and honest accounts.
 11. Sponsoring "welfare measures" by creating industries for employment. This is often done by Chambers of Commerce in USA.
 12. Refraining from bribing public servants, directly or indirectly or showing them undue favour, in order to obtain unfair advantages.

The existence of a healthy private enterprise is essential in a democracy. It encourages self-reliance and self-help and is the only antidote against all of us becoming supine and wanting to be spoon-fed by the Government.

Yours faithfully,
A. R. PALIT.

Company Meeting

THE NATIONAL NEWSPRINT AND PAPER MILLS, LTD., NEPANAGAR, M.P.

Speech delivered by Shri A. Ramaswami Mudaliar, Chairman of The National Newsprint and Paper Mills Ltd., Nepanagar, M.P., at the Eighth Ordinary General Meeting on Saturday, the 31st December, 1955.

Gentlemen,

I have much pleasure in welcoming you to Nepanagar and I do hope that you will be adequately compensated for the discomforts of your journey to this rather out of the way place by your visit to the Mill and by seeing it in actual production.

The Annual Report and the Audited Accounts of the Company for the year ended March 31, 1955, together with the Balance-sheet as on that date have been in your hands for some time and with your permission I shall take as read.

When we assembled at Nepanagar last year for the first time, the Paper Machine and the Groundwood Mill had been installed, but the Mill had not started producing paper. Since then important developments have taken place. As the Chemical Mill was not ready, your Directors decided that trial production of newsprint should be started with imported chemical pulp and indigenous groundwood. Trial production continued up till May. As unbleached newsprint was not readily marketable it was decided to bleach the groundwood pulp with the existing equipment in July. Since then bleached newsprint has been in production. Although considerable difficulty was experienced in disposing of the sub-standard paper produced initially, it helped to train the crew and to tune the paper machine. The bleached newsprint found a ready market and it has been possible to sell all the paper produced up to date. The newsprint now being produced compares very favourably with the imported newsprint in physical characteristics and brightness. Our newsprint has of course a creamy shade which it derives from the tanin in the salai, but it is a characteristic which does not in any way detract from its quality. During the year the Mill produced 2,600 tons of paper and we have been able to sell all of it. A large number of medium and small newspapers are regularly using the Nepa newsprint. Some larger newspapers also use it for their evening and mofussil editions. We are greatly appreciative of the patronage that they have extended to the Mill and we hope that they will use our paper in larger quantities in future. The most outstanding achievement has been that the salai groundwood, about which serious doubts were expressed in many quarters, has now been proved beyond doubt as a suitable raw material for the manufacture of newsprint. The credit for this achievement of course goes to the courage shown by the Governments of India and Madhya Pradesh in supporting this venture but in no lesser degree it is attributable to the skill and patience of our own technicians. Equally important is the achievement that our technicians have standardised the furnish of the paper. The newsprint now manufactured contains not less than 60 per cent mechanical pulp. The erection of the Chemical Mill has been completed and the Mill is now in a position to produce for the first time a hundred per cent Indian newsprint.

I am also very happy to inform you that the Government of India have exempted the sale of Nepa newsprint to newspapers from payment of excise duty.

We are grateful to the Government of India for this decision which will be of considerable help to the Mill in disposing of its product. We also hope that the Government of India will further assure for the product of this Mill a market by creating a pool of indigenous and imported newsprint. Without this assistance our efforts to achieve a steady marketable production may not be easy. This last year has therefore been a fruitful one and the outlook is now brighter than it has even been in the past in the history of this Mill. It is a matter of satisfaction to all concerned that it has been possible to complete this project within the period of India's First Five Year Plan. I take this opportunity of congratulating all the workers for their sustained hard work and loyalty to the Mill.

I would also like to mention on this occasion that the welfare of the Mill's employees is and has been a prime consideration with your Directors. The main objective of India's industrialisation plans is to improve the living standards of the people and it would be ironical if the people serving those industries are not enabled to live better than they have done in the past. But the success of this Mill, as of the country's plans, depends upon the workers themselves. Their fortunes are inevitably linked up with the fortunes of the industries for which they work. This Mill is a combination of private and public enterprise and it has accordingly a special obligation to fulfil. It has to assimilate the virtues of both and the evils of neither and its employees are privileged to be participating in the "exciting adventure of India's development". They should, therefore, be inspired by a sense of pride and patriotic purposefulness.

The contract of Mr. Roy Tumer, the Works Manager, with the Mill will expire in January. As he will be shortly leaving us, I would like to express your Directors' appreciation of the good work he has done during the 3½ years he has been with us. Mention must also be made of the services of Sarvashri Sagreiya, Moghe and Bhandari. Shri Sagreiya was Managing Director for 5½ years during the most difficult period in the career of the Mill and did a commendable job of work. He proceeded on leave in September and Shri Ragho Raj Singh took over as Managing Director from him as an interim arrangement. Shri Moghe and Shri Bhandari also left us during the year to take up other jobs. Their services to the Mill also deserve mention. Three American technicians under the T.C.M. programme joined the Mill to train our personnel during the year.

You will recollect that last year I had made a personal appeal to those shareholders who had not paid their share money in full. In response to requests from many shareholders your Directors agreed to defer forfeiture of their shares for one year. Now that the Mill has gone into production your Directors are compelled to ask for full payment of all share money in arrears. A final notice has therefore been issued to pay the balance of the share money by January 31, 1956.

I now propose that the Audited Accounts of the Company and the Balance Sheet be adopted.

COMPANY AFFAIRS

BURN AND CO., LTD.

The Directors' Annual Report together with the Audited Accounts of the Company for the year ended April 30, 1955 shows the following position:

After providing for taxation, depreciation and all other charges and setting aside Rs. 10,50,000 to Reserve for Works Reconstruction and Expansion, the profit on the year's working amounts to Rs. 14,28,237

To which is added the balance brought forward from the previous year " 1,09,192

Making a total of Rs. 15,37,435

From this is deducted the dividend for the year on the Preference Share Capital " 1,81,000

Leaving a balance available of Rs. 13,56,435

The Directors recommend that this balance be disposed of as follows:

Payment of a dividend of Rs. 15 per share being at the rate of 15 per cent for the year on the Ordinary Share Capital Rs. 12,60,000

To be carried forward " 96,435

TOTAL Rs. 13,56,435

Since the end of the year under review, the cash credit facility with the former Imperial Bank of India has been closed and the Rs. 75 lakhs First Mortgage Debentures, comprising the security for the account, returned to the Company. Since the Debentures are no longer outstanding, no current provision is required against their redemption and the amount of Rs. 18,75,000 standing to the credit of the Reserve for Debenture Redemption at April 30, 1954, being no longer required, has been transferred to the Reserve for Works Reconstruction and Expansion. In this latter account have also been amalgamated the amounts of Rs. 5,00,000 and Rs. 22,50,000 which at April 30, 1954, stood on the separate reserves for Works Reconstruction Scheme and Works Rehabilitation Programme respectively.

The further programme for the modernisation of the Company's Howrah Works has now been taken in hand and will involve an expenditure of approximately Rs. 32 lakhs spread over a period of three years. Considerable additional capital expenditure must also be incurred on the expansion of the company's output capacity of higher refractories to meet the growing requirements of the steel industry. The Directors have accordingly considered it essential to set aside from the profits of the year under review a sum of Rs. 10,50,000 to the Reserve for Works Reconstruction and Expansion.

The results of the Raniganj Works for the year were badly affected by labour difficulties. The restricted working for the year inevitably resulted in a loss being shown; this loss has been covered by an improvement in the results achieved by the Howrah Works.

THE ELGIN MILLS CO., LTD.

The Audited Accounts of the Company for the year ended September 30, 1955, have been submitted by the Directors.

The results for the year, after providing for all charges including provisions for Depreciation and Taxation, show a surplus of Rs. 16,80,464

To this has been added a refund of Excess Profits Tax (after deduction of Income Tax and Super Tax) amounting to Rs. 3,89,645

Rs. 20,70,169

From which has been appropriated for Rehabilitation Reserve " 13,00,000

.. .. Rs. 7,70,169

To which has been added Carry Forward from the previous year " 62,277

Leaving at credit of Profit and Loss Account Rs. 8,32,386

The Directors recommend this balance to be disposed of as follows:

In payment of a dividend on the Preference Shares of 8 per cent per annum for the year ended September 30, 1955 " 88,000

In payment of a dividend on the 'B' Preference Shares of 5 per cent per annum, free of Income Tax, for the year ended September 30, 1955 " 21,000

In payment of a dividend at the rate of Re. 1 per share for the year ended September 30, 1955, on the Vendors and Ordinary Shares " 6,30,000 Rs. 7,39,000

Carry forward to next account " 93,386

THE EMPIRE JUTE CO., LTD.

The Directors' Report and Audited Statement of Accounts of the Company for the half-year ended June 30, 1955, shows that the profit for the half-year after providing for

Depreciation Rs. 1,60,000 and Taxation Rs. 1,02,000 amounts to Rs. 1,44,136

to which must be added the Credit Balance brought forward from the previous half-year Rs. 1,32,960

Amount received on account of Post-war E.P.T. Refunds, nett 14,298 .. 1,47,258

Making a total of Rs. 2,91,394

Which the Directors recommend should be distributed as follows:

Dividend on 10,000 Preference Shares at 7 per cent per annum for the half-year ended June 30, 1955, or Rs. 3-8 per share Rs. 35,000

Dividend on 1,50,000 Ordinary Shares at 15 per cent per annum for the half-year ended June 30, 1955, or annas 12 per share 1,12,500 Rs. 1,47,500

Leaving to be carried forward Rs. 1,43,894

In accordance with the Main and Supplementary Working Time Agreements of the Indian Jute Mills' Association, the mills worked 48 hours per week with 12½ per cent of their total looms sealed.

Raw jute prices advanced steadily during the early part of the half-year but the rise in manufactured goods was not in proportion to the rise in Raw Material prices, and profit in simultaneous business was not possible.

MMC revolving flat cards

are now being extensively used
in Textile Mills in India.

Outstanding features

1. Five distinct setting points, used singly or in combination, to control setting to .001 inch.
2. Johnson bronze bearings, for cylinders and doffers. Roller bearings to cylinder; ball bearings to doffer and ball bearing comb box also provided as optional equipment.
3. Ball bearings to lick-in pedestals.
4. Self-lubricating 'Olite' bearings at several locations.
5. William's patent stripping motion for flats.
6. Drop lever with new disengaging handle.
7. Fluted lap roller with positive gear drive from feed roll helps uniform feed of lap at the back with minimum possible stretching.
8. Cards can be geared for any production in a mill organization.

COMMODITY NEWS AND NOTES

CENTRAL RUBBER INSTITUTE

The creation of a Central Rubber Institute with one or two Zonal Research Centres was agreed upon at a meeting of the representatives of the Association of Rubber Manufacturers, Calcutta, and Indian Rubber Industries' Association, Bombay, the Ministry of Commerce and Industry and Indian Rubber Board and the National Chemical Laboratory, Poona, held recently in New Delhi. It was also agreed at the meeting that a cess on the consumption of rubber, both indigenous and imported, should be levied at Rs. 8 per ton and the collection should be made available for meeting expenditure of the proposed Research Association. The meeting decided that the Research Association should have a 15-member committee; a formula for the establishment of a Research Association has also been arrived.

COTTON EXPORTS FROM INDIA

Export figures of raw cotton from India for the first four months of the 1955-56 cotton season make encouraging reading and underline the fact that India has become a net exporter of cotton. There has been an increase of nearly 200,000 bales in India's total exports of raw cotton during the period as compared with the corresponding period of 1954-55. A notable feature of cotton exports has been the increasing tempo in the off-take of Indian cotton by Japan, which accounted for nearly 50 per cent of India's total exports during September to December, 1955-56. The quantum of off-take of Indian cotton shared by Hong Kong and China has also been equally impressive, the former accounting for 24,137 bales in the first four months of this season as against nil in the corresponding period of last season, and the latter for 34,651 bales as against just 914 bales.

Sept. 1, 1955 to Dec. 31, 1954

LEMONGRASS OIL PRODUCTION IN INDIA

India with an annual production of about 800 tons, is the principal supplier of lemongrass oil to world markets. The total acreage is nearly 40,000 out of which 90 per cent occurs in the Travancore-Cochin State. Climate and soil conditions necessary for raising the grass are found in many other tracts on the hilly slopes of the West Coast and, therefore, the scope of oil production in India is expected to be stepped up in future. There are two types of lemongrass—the red stemmed and the white stemmed—but it is the red stemmed grass that yields the high quality oil. The distillation of lemongrass oil is done in indigenous direct-fired, copper stills of 8 to 18 cubic feet capacity which are set upon the plantations themselves. A scheme for the compulsory grading and marking of lemongrass oil according to Agmark grades has already come into force. Almost the entire produce of Indian

lemongrass oil is exported mainly to the USA the UK and France. Germany is also now one of the importing countries. Cultivation of this grass has in recent years been stepped up in Guatemala, Honduras, Haiti and Trinidad.

A Research Station has been set up at Odakhali by the Government of Travancore-Cochin to study the problems relating to cultivation and technological aspects of lemongrass and lemongrass oil.

NICKEL OUTPUT IN THE FREE WORLD

Nickel output of the free world during 1955 set a record with an estimated 427 million lbs. This is an increase of approximately 40 million lbs. over the previous high of 387 million lbs. in 1954, and 87 million lbs. over 1953. Looking ahead to 1956, free world's production is expected to increase yet again, by 15 million lbs. to 442 million lbs. This would mean an advance of virtually 65 per cent above pre-Korean war output. It is expected that much more of the metal would become available for industry in 1956. Canadian producers alone during 1955 were responsible for a probable 347 million lbs. which also constitutes new peak, being some 24 million lbs. higher than for 1954. It represents about 81 per cent of total free world production and of the remainder, Cuba accounted for approximately 7 per cent, New Caledonia 5, Japan 3, USA 2 and various other countries 2 per cent.

Our monthly Blue Supplement for January, due to be issued along with the last issue of the month, will be published along with the next issue, dated February 3. The topical importance of 'Insurance in India', which will be the theme of the Blue Supplement, required this alteration in our schedule.

The Nationalisation of Life Insurance

THE nationalisation of life insurance came last Thursday like a thief in the night. It would not be improper to say that it was a thief in the night. Whatever the merits of nationalisation, it is useless to disguise the fact that it takes away from many individuals, who have spent their whole lives in building up a business, all the fruits of their labour, and, in a sense, the springs of their minds; a serious loss is inflicted on particular individuals, whether or not the total result is for the public good. Secondly, on this particular occasion, the whole procedure adopted suggested it was an operation which could not bear the light of day. An ordinance was specifically designed

to prevent Parliament from going through its normal course of debating this great issue of policy. The decision was taken, so to speak, behind Parliament's back; not, indeed, that the result would have been different if the issue had been debated in Parliament. It is vital, however, that in a democracy Parliament should not be bypassed in this hole and corner way. The people of India through their representatives have a right to be consulted on a great issue of policy of this kind in the form conventional in Parliamentary democracies elsewhere in the world. Between Ordinance Rule and a Parliamentary democracy there is a great gulf fixed; in democracies means are as important as ends.

There is only one answer to that discussion...

When these first objections to the process of nationalisation of insurance last Thursday have been stated, one needs to recognise that there is a widespread feeling in the country that this was a fit case for the exercise of public ownership. It is believed by *The Eastern Economist* that this widespread opinion is not based on a full knowledge of the facts and the deeper consequences of a step the initial justification of which might look plausible, and even laudable. It is perfectly true that there has been in the operation of private insurance in this country some considerable dishonesty. This is not concerned or confined only to the most recent case in the public mind, that of the Bharat Fire and General Insurance Company, where serious irregularities were noticed three months ago. It is perfectly true that some insurance companies have not been regular in observing the provision of law that 55 per cent of their revenue should be invested in Government securities. It is rumoured—and it is extremely likely that the rumour is based on facts—that, when insurance companies were taken over last Friday, there were serious deficiencies in the security portfolios in more than one insurance company. Prima facie, the existence of malpractices in some Indian insurance companies has been proved. This by no means implies that nationalisation is in the national interest.

If malpractices were the major reason for the taking over of life insurance, surely it would have been equally proper to take over other kinds of insurance on the same plea. If private funds held in trust for insurance purposes can be misused or misapplied, it surely cannot matter whether those funds arrive from life or general or fire insurance. Why then has the Government of India chosen to restrict its operations only to the life section? The answer is perfectly clear. It is that life insurance gives greater promise of resources, and, therefore, a more fruitful operation for smash and grab by which the public sector intends to lay its hands on the private sector's resources. It is this vital element in the case which needs to be studied with care and objectivity. Is the policy of robbing Peter to pay Paul—whatever the weaknesses which Peter and Paul might individually have—likely to be one which advances the national interest, the national interest being conceived as the output of both Peter and Paul reckoned together? No competent reply has been given to this question by either the private or the public sectors. *The Eastern Economist*, therefore, proposes to bring out its next Blue Supplement on "The Nationalisation of Life Insurance" designed primarily to provide a specific answer to this question as to whether the national interest has been served by this operation. The country should know the truth.

It is not necessary or even desirable at this stage or at any other, that one should look into the motives of the Finance Minister or of the Cabinet in assessing the merits of this decision. Economic events are more important than their causes or their motivations. Unless the policy can be reversed—and in this case reversal is impossible—it is not worth while casting aspersions upon the Cabinet or any individual member of it by saying, as has been said, that this is an entirely 'political' decision. No decision in a political democracy can be vitiated merely because it is 'political'. It may well be that, in some cases, this is its highest recommendation. *The Eastern Economist*, therefore, will not arraign the decision on the ground that it is designed to further

the socialistic pattern of society or to dispossess particular individuals of power, wealth or influence. It will arraign it on the ground, which it believes to be true, that the action of the Government has been shortsighted, failing to recognise that at this particular moment a hasty step such as this will do—and, indeed, has already done—serious damage to the Government of India's credit in foreign private markets. The City of London in particular, which is greatly influenced by British insurance opinion, will now harden its views, already designed to deter private investors from entering India. Estimates of the volume of private investment likely to accrue in the second Plan, after this confirmation of the City of London's fears, are based on thin air. Did the Government of India not recognise that the advantage of obtaining rupees from the private sector was by no means equal to the loss of foreign exchange abroad? Or did it argue that its international credit was so low that an indefinite volume of new recklessness could not destroy it further?

These are hard thoughts which must strike all those who feel that in acting as it has done the Government of India has not taken full account of its own requirements in the second Five-Year Plan. To exhibit a gap of Rs. 800 crores and to invite foreign participation in our plans from private investors and then to make it clear that private investors will not be given the opportunities to obtain either the security or earn the rewards which they deem appropriate is surely to exhibit a degree of inconsistency and blindness unworthy of a distinguished Ministry of Finance.

Arguments can be found to justify, in some respects, the nationalisation of domestic insurance; the administration of a few of our companies has certainly been quite unworthy of the standards of insurance expected from insurance houses anywhere in the world. But it was certainly possible with the powers that the Government enjoys at the present time to effect an improvement of the worst companies without nationalisation. For example, it was always possible to arrange for an inspection of the securities of the insurance companies every week or to require all the scrips to be lodged with the Reserve Bank of India or the State Bank of India. Why was this course not taken? Again, it was possible for the Government to change the percentage of revenue to be invested in securities so that 80 per cent or more of this revenue was invested in Government securities. Why was this course not taken in preference to nationalisation?

The truth is obvious and that is that Government wished not merely to arrest private corruption and malpractices, but to lay its hands on an asset which has been built up by the hard work of private interests. This is an abuse of power which should be resisted in a government of the people, even by the have-nots; for the have-nots of today require at least an assurance of the safety of private property to give them a stake in economic progress and an incentive for private effort. It is well to remind those who are responsible for this act that, while today they are judges and juries in their own case because they have absolute power, there is a judgment of history which is superior to their own. It has been put magnificently in the words of a great historian: "All power corrupts and absolute power corrupts absolutely". Let those who see the mote of corruption in others not ignore the beam in their own.

India and West Germany

WITH the visit to India of Dr. Franz Bluecher, Deputy Prime Minister of the Federal Republic of Western Germany, and the proposed visit of Mr. Nehru to Bonn later this year, a new chapter has opened in the relations between the two countries. In a strictly political sense, the two countries started to work their way towards their destiny at about the same time in the post-war era, India when she secured independence in 1947 and Western Germany when she adopted the democratic process after the destruction and demoralisation caused by war and partition. Beyond the friendly gesture which India then extended to Germany by being the first to terminate the state of war—of which Dr. Bluecher appropriately reminded us during his visit—there was not much that the two countries could have done to get closer. India has advanced in the field of international relations while Western Germany, politically crippled, has made spectacular economic progress. Germany has been under the Occupation, divided and denied full international status and membership of the United Nations in the absence of a Peace Treaty. Not until her economic recovery was well nigh complete was Western Germany in a position to improve these relations. This improvement has, however, been steady in the last five years till Western Germany has acquired importance today as one of the three major exporters of capital goods to India.

These economic relations have led to some impressive results. The outstanding instance of fruitful collaboration is the technical help made available for the construction of the Rourkela Steel Project, under the agreement reached with the Krupp-Demag combine in 1953. India's aspiration for manufacture of steel dates back to 1948 when three technical consultants presented project reports but these had not materialised until the economy of West Germany had been rebuilt to make men and materials available for the purpose. The supply of capital goods from Western Germany has expanded also due to the fact that no payments problems were involved because of India's membership of the sterling area (and thus indirectly of the E.P.U.). In view of the larger schemes of industrialisation under our second Five-Year Plan, West Germany appears, more than ever, a ready source of technical know-how which India needs more urgently than foreign capital. Economic relations have thus been established well enough, so in time as to widen gradually. Our exports to Western Germany have all along been much below our imports from that country for the reason that the commodities required by Western Germany like oil, fibres, food grains, are not in surplus, but this is part of India's general trade pattern, which cannot be expected to change for some time.

Dr. Bluecher's visit has, at the moment, turned India's relations with Western Germany to the larger question of how India could contribute to a solution of the problem of German unification. As the most intractable problem of the Cold War, a solution to the German problem depends on Big Four agreement. The hopes for the emergence of such agreement have now declined, with the steady evaporation of the Geneva spirit; but within the two zones of Germany the appetite for unity has only been whetted by the adverse turn of events since the Geneva Conference. The establishment of diplomatic relations between the Soviet Union and Western Germany has not

brought a solution any nearer. The price which the Soviet Union demands for agreeing, if at all, to German unification still remains high.

It is natural for the German people in this situation to speculate on the possibilities of India using her good offices in discovering a formula that would bring about the unification of divided Germany. Hitherto Mr. Nehru's interest in the German problem has been expressed in a rather remote manner, as part of a desire to see all the divided nationalities of the world unite under single governments. The chances of such union are as distant as ever in all these areas. But the Indian position in international affairs has been changing gradually and with the visit of the Soviet leaders the change has, in the Western view, become marked. The Soviet leaders have now subscribed to the Panchshila and by its acceptance, India appears to the rest of the world to have admitted that Soviet policies have been and will be consistent with those principles.

In an address in Delhi, Dr. Bluecher made the point that Soviet dealings with Germany have violated the Panchshila in letter and spirit. This statement corrected to some extent the impression abroad that India had provided opportunity for one-sided propaganda by the Soviet leaders during their tour. In addition it has served in an indirect manner as a plea for our testing Communist adherence to Panchshila before we decide to accept it at face value, and present it to the world as a successful solvent of tensions. If the acceptance of the Panchshila by Russia and China, in spite of their common alliances and military strength, should be taken as positive proof of their desire for peaceful co-existence, a similar adherence by a unified Germany should, in spite of whatever alliance she may decide to belong to, provide sufficient basis for her acceptance by the Soviet Union as a unified and independent member of the United Nations, with a freely elected government of her own. German assurances of peaceful intentions in the future have been accepted by the West already with safeguards. Soviet conditions which would hinder free elections or seek the preservation of the socialist system of Eastern Germany would constitute an interference in the internal affairs of the German people which may be said to militate against the observance of the Five Principles.

The German problem is thus the touchstone on which Soviet intentions can be now judged. Whether India can mediate effectively on this immensely complex issue is a different question. It may be rash to assume that it is possible. But we owe it to ourselves to see that the Five Principles, which we are putting forward as the key to the problems of the Cold War, are not used as a convenient aid to Communist peace propaganda. In putting the Panchshila to practical proof on the German issue, some constructive steps may be possible. If they are not, we can then at least become aware of its limitations; but if they are, it can take not only India and Germany but the whole world forward. Until then, the present relationships will continue. Though India's formal diplomatic relations are with Western Germany, we have recognised *de facto* the Germans living outside through our trade relations. It should be our policy not to accentuate the division by giving separate recognition to the Eastern wing, but to hasten the day when it will form part of a larger Germany.

The Islamic Republic of Pakistan

THE Draft Constitution for Pakistan, which will form the basis for discussion in the next few months, seems to have a reasonable chance of bringing to a conclusion the long and chequered history of constitution-making in that country. There is evidence that the failure to enact for themselves a Constitution is causing concern and frustration to the people of Pakistan and this, more than any other factor, may compel an early adoption of the Constitution now proposed. But it is not Pakistan's experience alone that has shaped the Constitution now presented; the experience in India in the last six years during which the Republican Constitution has been in force appears to have exercised even greater influence on the framers; and, if imitation is truly the sincerest form of flattery, then the framers have greatly flattered the Indian Constitution in extensively drawing on its provisions.

This is no more than an acceptance of the fact that the problems and even social philosophy of the people of this sub-continent have not become fundamentally different merely by the partition of 1947. In recognising this fact and in seeking to profit by Indian experience, the leaders of Pakistan have acted wisely. There are striking similarities between the two Constitutions, though some of them are due to the circumstance that the pre-partition Constitution has provided a common source. The distinctive features of the Indian Constitution are the chapters on Fundamental Rights and Directive Principles of State Policy and these have been incorporated in Pakistan's draft Constitution in substantially the same fashion. The provisions regarding elections, Service Commissions, the judiciary and the public services and the emergency provisions follow similar lines. The most interesting fact, however, is that even the wording of the articles and the general structure of the draft—which is tidier and shorter—follow the same lines, making thereby the constitutional precedents established here applicable to Pakistan. The few variations in the new constitutional set-up are not material. Pakistan will have a single-chamber Parliament. No citizenship provisions have been included and representation in Parliament is not in strict proportion to population as in India, for the reason that a system of parity between the two wings of Pakistan had to be provided for. There are some differences in the division of powers, the federal list covering a much narrower range than the Indian list; a unique feature is the special provision for a provincial railway authority.

Here the comparison ends. There is an outstanding difference in the major political philosophy behind the Constitutions of the two countries and this is to be found in the religious orientation sought to be given to the Constitution of Pakistan by calling it an Islamic Republic and in making certain special provisions to affirm this Islamic character. This, of course, is not a new development and the belief in the necessity of establishing an Islamic Republic proceeds on the assumption that Pakistan's *raison d'être* is the propagation of Islamic principles. But over eight years of Pakistan's existence have convinced everyone else not only of its being an anachronism in the present-day world but also of its inexpediency in a nation which contains a substantial minority of non-Muslim citizens. Geographical factors and the contentment of this

minority have required all along that the anomalies arising out of the creation of an Islamic State should be prevented. The Nehru-Liaquat Ali agreement of 1950 recognised that the contentment of the minorities in the two countries of this sub-continent required special provisions and safeguards. In India this has been achieved not only through constitutional guarantees and the establishment of equality between citizens before the law but also through the demonstration of the absence of any discrimination in practice on the basis of religion. This is no longer a matter which is open to argument. The most disheartening feature of the draft Constitution of Pakistan is that it has failed to profit by this example. While the dominant cultural pattern will be determined by the ways of thought of the majority, there would be no reason to make it the basis of discrimination.

The Islamic orientation is found not only in the Preamble which invokes Allah and the Quaid-e-Azam, the Holy Quran and Sunnah, but also in the rule that the President and the Vice-President should be Muslims, thereby imposing a positive disability on non-Muslim citizens in aspiring to the highest offices. Even in the case of other posts not so prohibited to non-Muslims, the oath of office would require them to bear allegiance to the Islamic Republic and not merely to the country's Constitution, as in India. The Directive Principles lay down that not only should Islamic principles be promoted, but that even on the international plane, unity among Muslim countries should be strengthened—a provision which has a parallel only in China's Constitution, which prescribes unity among Communist powers as a cardinal principle of foreign policy. The establishment of an Institute of Islamic Research and the prohibition of laws inconsistent with the Quran and Sunnah are fortunately excluded from application to non-Muslims; but these cannot offset the lack of secularism in State policy.

It would be less than fair to overlook the safeguards which have been provided for minorities, subject to this major premise of an Islamic Constitution. The Fundamental Rights provide against discrimination in the services and in educational institutions on the basis of religion and safeguard script and language. It is specifically provided that no person shall be compelled to pay any special tax, the proceeds of which are to be spent on the propagation and maintenance of any religion other than his own, thereby assuring that no modern equivalent of the hated *Jizya* will be levied. The justiciability of these provisions and the independence of the judiciary may safeguard against grosser forms of discrimination, but it cannot be denied that the Islamic character now given to the Constitution creates a secondary class of citizens which is repugnant to modern notions. In particular, the provisions regarding the President and Vice-President militate against equality before the law proposed in Article V. The leaders of Pakistan may not have yet acquired the vision to see the incompatibility of their theocratic conceptions with the requirements of a nation wedded to equality. Or having the vision, they have not acquired the strength to pursue the logical implications thereof. It must be our earnest hope that time would bring understanding, and with it the courage to act justly.

THE WEEK'S NOTES

DO STATES FOUL THE SOCIALIST NEST?

IN THE Prime Minister's speeches to the National Development Council, at its full session last week and before its Committee on January 7, there was a reference to the working of the Industrial Policy Resolution of 1948. Dealing with Prof. Gadgil's criticism that it did not go far enough, Mr. Nehru stated that State Governments were responsible for queering the pitch on the licensing policy on coal. This was a rather strange line to take. The State Governments are the proprietors of mineral wealth under the Constitution but it cannot be said that the Centre has been very scrupulously respecting these State rights. There would then be no point in having the Ministry of Natural Resources or of Production. There is also the case of the Mysore Government whose expropriatory instincts in gold mining are stronger than those of the Centre. Were the two Central Ministries in such a long slumber all along that they were unable to discover in time the wrong State policies in issuing licences for coal exploration or to secure agreement on a common policy? Or is it that they too were passive participants hitherto, but are now able to make scapegoats of State Governments because they function at the Centre and can take cover under its leadership?

Obviously the State Governments were implementing the Mineral Concession Rules, 1949, framed by the Centre under the legislation of 1948 for mineral development. These rules laid down the conditions deemed necessary and, if States have adhered to them strictly, wherein lies their fault? Should they have been preparing all along for the day when, in a sudden rush of the socialist tide, they would have to answer at the bar? Is it not truer to say that the rationing of resources for investment in the public sector sets the limits at the present time to an expansion of the public sector in coal?

It was only a year ago that the Industrial Policy Resolution of 1948 was subjected to severe scrutiny in the midst of the battle between the sectors and the verdict was that the same considerations continued to hold good. The Centre can take credit for interpreting the Resolution constructively in the national interest in the matter of establishing oil refineries and in allowing substantial expansions in the private sector in steel. The States had a similar right in their domain, to interpret the Policy Resolution in a positive manner. There was no reason to adopt a defeatist attitude in the face of the clamour of doctrinaire socialists who have not succeeded in establishing that the actual working of the Policy has been adverse to the national interest.

THE FOOD MINISTER'S WARNING

THE UNION Food Minister, Mr. Ajit Prasad Jain, administered a warning last week to the grain trade against indulgence in speculative activity, giving a categorical assurance that the Government was in a position to meet the effective demand for wheat until the next harvest. Between June and December last year the question of food prices turned full circle and the problem today is once again not price supports but price curbs. It is not expected that there will be a fall in the wheat crop this year though the harvest may be delayed; and the damage to stocks suffered in the Punjab floods would not justify the price increases. It is significant that jowar and gram prices have also been high in the last few months. While speculative activity can be responsible for accelerating price increases, these price trends cannot be entirely due to such activity. For the third year in succession, the index of agricultural production is expected to remain high at 115 (1949-50 = 100); and without any indication of seriously adverse weather conditions, speculation in grain would

hardly pay unless there are reasons to believe that, under the tempo of development expenditure, the demand for grain for consumption has also increased. In 1955, only 435,200 tons of wheat and 264,900 tons of rice were imported. The Food Minister has now reported that some quick arrivals are expected out of the orders now placed for the import of 180,000 tons, to supplement the present Central reserve of 200,000 tons.

Apart from the warning to the trade that the Government's supply line is functioning effectively, Mr. Jain appealed to the self-interest of the traders by pointing out to them that the consequences of their action would be the strengthening of the cry for physical controls and rationing. Mr. Jain has resisted this school of thought just as strongly as his great predecessor in office, the late Mr. Rafi Ahmed Kidwai, who helped to inject dynamism into our agriculture by freeing it from a system of controls which had operated viciously for several years. There is always the danger of a setback being caused by the doctrinaire demand for controls. The trade can avoid only the unhealthy forms of commodity speculation, but its responses to the supply and demand position of commodities can be indicated only through the price mechanism. One of the effects of the present price spurt would be the maintenance of the incentives in agriculture which only six months ago seemed to be decreasing; that is in itself a good augury for achieving the agricultural targets of the second Plan. But the Government on its part must be ready to intervene with its own stocks and to provide the transport from the surplus to deficit areas; in other words, the present policy must be adhered to with greater efficiency. It is now excusable that the Government, which had been worried too much in the past by a price decline, has not been ready with more stocks on hand when the position suddenly changed.

NO COMMON GOVERNORS

OF THE suggestions made by the States Reorganisation Commission for bringing about greater administrative unity was one that some of the States which are contiguous can have common Governors, common Public Service Commissions and such other institutions as would tend to help a common approach. These suggestions were, to some extent, based on considerations of economy in expenditure, though the saving that could be effected would not be large. But it now turns out that the desire of each State to have a Governor all to itself is too strong to be shaken by any consideration. State Chief Ministers fear that acceptance of the S.R.C. recommendation would create difficulties in the smooth running of the administration, that in fact the grievances against Service Commissions or Governors would become common. Difficult questions may arise if two States are to have a common Governor, who may have an unenviable position when inter-State disputes arise. Consultations may involve more expenditure than what is saved by having one Governor in place of two; a nice point is whether the Governor or the State Cabinets would be peripatetic.

The Chief Ministers have also opposed the S.R.C. recommendation for common Public Service Commissions and for more all-India services. It is understandable that the State Governments should be chary of sharing appointments to a Public Service Commission with another State or surrendering them altogether to the Centre. But the constitution of common Service Commissions will cause less administrative inconvenience than having common Governors and may lead to more independent and impartial selections to posts. At least the parochial outlook of some States, exhibited in requiring that candidates should be domiciled in the

State concerned, might have given place to a broader view. The constitution of some more all-India Services will also act as a counter to narrow sectional tendencies which are becoming all too prominent. It is understandable that some of the politicians in charge of affairs in the States do not want any whittling down of their powers (latent, of course, in this instance), which will restrict their scope for doing favours. A second consideration may be the linguistic difficulty in allowing persons from outside the State being recruited in the future unilingual States. In any case, the validity or otherwise of the S.R.C. recommendation cannot be tested by the immediate response; co-ordination in such matters can be sought only over a period of time in unobtrusive ways and not through written directives just now when the atmosphere is full with feelings over boundaries.

WHEN CHARITY BEGINS AT HOME

THE REPORT that the Union Finance Ministry has opposed on financial grounds, as well as in principle, a proposal of the Education Ministry for providing free education up to a certain class to the children of non-gazetted Central Government employees raises an issue of some importance. Free compulsory education up to the age of fourteen is a Constitutional Directive, and quite soon Government servants, like others, will get the benefit which has been now sought to be given to them alone. The question is whether Government servants as such should get a prior benefit of this objective. There are people much worse off than Central Government employees who may be deemed to be deserving the sort of assistance proposed. The children of officials, even those at the bottom, would not normally be deprived of educational opportunities; in most cases, the fees will be paid, though there would be some hardships; but the hardships must be compared with the facilities available to other sections of the community.

Similarly misguided is the move to restore the system of privilege tickets according to which the Central Government used to pay two-thirds of the rail fare for annual trips by Government servants and their families for travel in the class to which they were entitled on the basis of their salary. Apart from the financial implications, there seems to be no justification now to grant a concession which was withdrawn a few years ago on the ground of its discriminatory character. The period of the second Plan will be one of heavy strain on the country's transport system. It is also possible that railway rates, particularly on goods traffic, will be put up as a means of mobilising additional resources for the railway plan and even passenger fares may provide an "abnormal" but necessary means of finding resources. Any proposal indirectly to encourage subsidised rail travel by one section of the community, when the others will in all probability be asked to pay more, is clearly inconsistent with the austerity required on railways. Restraints on unnecessary rail travel can be one of the most effective ways of curbing consumption, and since trains in the next five years are bound to be even more crowded than they are now, it would be wrong to plan for bounties. It must not appear that the Central Government, as the fountain-head of all authority and resources, appropriates to its own employees more privileges than are available to others.

ISRAEL CONDEMNED

CONTRARY TO its usual dithering and platitudes, the United Nations Security Council has condemned Israel for the attack on Syrian outposts which took place on December 11. That the resolution was passed unanimously in no way reflects the impartiality of the eleven members of that august body. In the East-West competition for Arab favour, it is obvious that neither bloc will care to offend Israel's neighbours, and when the Soviet delegate launched a strongly-worded attack on that unhappy country, the result of

the Security Council discussion became a foregone conclusion.

It was a reflection of the present international scene that no one referred to the fundamental cause of the problem, that is Israel, in the debate. That small nation of just over a million people is surrounded by Arab countries which have a population of some thirty million, and more than one Arab leader has declared that the presence of Israel on the shores of the Red Sea is an anachronism. The first need is, therefore, for the Arab States to realise that Israel has come to stay and will stay. Israel also should realise that her future existence depends on coming to an understanding with her neighbours; she has been straining at the leash all the time and has taken the initiative in fierce border attacks which have damaged her cause greatly. The present state of armed truce cannot continue for long, for time is on the side of the Arabs—and they very well know it. It, therefore, behoves Israel to agree to pay compensation to the 900,000 uprooted refugees, for which Mr. Dulles has already indicated the US will help in raising a loan.

Another problem is the demarcation of the frontiers of Israel. Her present borders were fixed by the armistice agreements of 1949, and, though not meant to be permanent, have lasted through six years of frequent clashes. It is true that they do not represent, in many places, any natural boundaries, but it seems unlikely that any change will be acceptable to both the parties concerned. A solution lies in the Big Powers guaranteeing the present lines, unless there are agreed changes.

SINO-AMERICAN TALKS FOUNDER

THE GENEVA talks between representatives of the United States and Chinese Governments seems to be heading for a deadlock. Weeks have been spent in discussing the single issue of renunciation of force and still no agreement is in sight. In fact the discussions have only brought out more clearly than ever before the cleavage of opinion between the two Governments. America's insistence that the declaration renouncing force should include the Formosa area has not so far met with favourable response from China, who obviously holds that Formosa is part of her territory and consequently military action against it is no concern of the United States. Logical as this attitude is, refusal to modify it shuts the door to Sino-American understanding. The United States has, for her part, declared that she was not asking China to abandon her claims to Formosa but only to renounce the use of force for establishing them.

So long as present treaty arrangements between the United States and the Kuomintang Government continue, China cannot hope to gain control of Formosa by mutual agreement. But neither is resort to force a solution because the conflict will be widened. It is, therefore, rather surprising that China should balk at agreeing to a declaration renouncing war as a means of achieving her objectives. Did she hope to persuade the United States into signing a declaration which would have left her free to take Formosa whenever she chose? Nor is Formosa at all an urgent problem for her. Also demonstration of her peaceful intentions may convince the United States that Formosa as a defence outpost is of no particular value.

The repatriation of civilians, agreed upon already, is also not going on as it should. Some thirteen Americans are still in Chinese prisons and the United States is demanding their release. China has in turn charged the United States with not permitting Chinese wanting to return to their country to do so. However, the case of Chinese nationals in the United States is on a somewhat different footing. Several thousands of Chinese in that country have now been there for years and came out with the intention of making the United States their home.

I never realised flying overnight saves so much money!

Time really is money to me. I can't afford to waste valuable working hours. That's why I chose IAC's night service. But I never realised how many other expenses it would save

Travel to and from the airport costs nothing! An IAC luxury coach takes you both ways — so comfortable, quick and convenient

Airport staff take charge of your luggage, put it on the plane, load it on the coach when you arrive — there's nothing to pay

If you are travelling onwards, you step straight into your connecting plane. No overnight stops — so you spend nothing on accommodation!

NOW fly overnight by luxurious 4-engined Skymasters

New luxurious Skymaster services connect Bombay, Delhi, Madras, Nagpur and Calcutta. Carefully scheduled to connect with 34 early morning flights from the 5 great airports, Skymaster service cuts out irritating overnight stops, saves all unnecessary expense on the way!

During the journey you are IAC's guest. And what a fine breakfast they give you — no extra charge, of course

For details contact an I.A.C. booking office or your Travel Agent.

Atomic ELECTRIC LIGHT AND POWER

General Electric has been an important contributor to the atomic development programme from the beginning. An important milestone was reached in 1940, when two G-E scientists, as one of two U.S. research teams, succeeded in separating U-235 from natural uranium. In 1955, G-E switched on America's first commercially-distributed atomic electric power and signed a contract to build the world's largest all-nuclear power plant.

At present, skilled scientists and engineers at G-E are engaged in full-time atomic activity, developing nuclear reactors and other special atomic products for use in many fields, including medicine, metallurgy, agriculture, chemistry and the production of abundant electric power. In this way, G-E continues its progress in research and engineering to make life better for you and enhance the development of your country.

GAITSOCIALISM

By

ODYSSEUS

A RECENT PERSONAL TALK on your behalf with Mr. Hugh Gaitskell, the newly elected leader of the British Labour Party, together with a study of his essay on the future of British Socialism just published in "Socialist International Information", has convinced me that if Britain is moving Left, the British Left is moving Right.

Mr. Gaitskell is, with President Eisenhower, Comrade Khrushchev, Sir Anthony Eden, and our own admirable Pandit, one of the half dozen world leaders whose importance makes them tower over the global scene. Mr. Gaitskell is of this number not only because he must, when sooner or later the next swing of British electoral opinion comes, be Prime Minister of the UK (a country which, in spite of its admitted decline, still remains the third great world power) but also because he is engaged in streamlining Socialist theory in the light of Socialism's past quarter of a century of experience in responsible office.

It is (to coin a Chestertonian paradox) because I am not a Socialist that Mr. Gaitskell's analysis of Socialism fills me with relief. Faithful readers, who spend their spare time poring over back numbers of this column, storing up the treasures of its thought and quoting aloud to each other the stylistic felicities with which it abounds, will know that I have never maintained that Socialism will not work. The argument that I have repeatedly elaborated is that there is no perfect system either of government or of economic organisation, but that all the evidence suggests that the less objectionable, and more just, system is democracy in politics and free enterprise in economics (see, e.g., the series "Is Democracy Possible in India?" published here between January 23 and April 17, 1953, and "Capitalism or Socialism?" between April 23 and July 9, 1954). Of course you can have Socialism and survive, just as you can live, work, and survive the handicap of an amputated leg. In its origins, Socialism is a protest against the all too widespread economic injustices that humane-minded people, such as Sydney and Beatrice Webb and Bernard Shaw, thought were not being adequately fought under the Capitalist system, or which (they believed) could not be eliminated under that system. They therefore thought up a whole series of cures for these ills. Thus was Socialist doctrine formulated. Subsequent experience has shown that a portion of their doctrine (notably the "nationalisation of the means of production and distribution") not only does not cure the ills that it is supposed to cure but actually hinders production, and therefore lowers the standard of living.

BERNARD SHAW'S HOARY ECONOMICS

The trouble with Socialism is that so much of this classical doctrine is bound up with the emotional history of the Socialist movement, with its period of birth and struggle, and with its hours of triumph, so that it has become disloyal or "anti-Socialist" to criticise it.

The exciting thing about Mr. Gaitskell is that while proclaiming his faith in Socialism, he is exposing the worn out slogans and clichés to the blast of contemporary economic realities, and the important thing about

him is that in view of the position that he has won by the force of his character, as leader of the most influential Socialist party in the world, his pronouncements are likely to become the new classical writ for Socialists throughout the free world. India especially could benefit by Mr. Gaitskell's re-thinking out of Socialism, because when not so long ago I made a tour through Calcutta, Bombay, Lucknow, and other universities, I found the hoary Socialist economics of Bernard Shaw and his generation in unchallenged possession.

Mr. Gaitskell points out that the earlier Socialists criticised Capitalism on the grounds of the nature of the payments made, on the wrongness of rent or interest or profits as such, which they therefore treated as the cause of inequality, rather than in seeking to answer why one man got more than another. To the Marxists, who believe that society is rigidly divided into classes, between those who have property and live on surplus values, and those, who, having no property, have to work for wages, the distinction does not matter. And revolutionaries who wish to overthrow the system at one blow, to abolish private property in the means of production, do not bother with the details of distribution between persons.

"But," says Mr. Gaitskell, "to a modern economist who understood the nature of the pricing system, who was not hopelessly prejudiced against a market economy as such, who realised that the class structure was a great deal more complicated than Marxists supposed, who was nevertheless shocked by the social and economic injustices that he saw around him, but being a democrat wished to proceed gradually to remove them, to such a man the realistic analysis of why some individuals were richer than others was of immense importance."

CAUSES OF INEQUALITY OF INCOME

Hugh Dalton was the first to publish a comprehensive study of the causes of inequality of income. His pioneering conclusions are the platitudes of today's economic thought: the distribution of income from property is dependent on the distribution of property itself, which, in turn, largely revolves around the amount that a man inherited. In this, Dalton agreed with the American economist Irving Fisher, who said that the distribution of property was dependent on "inheritance, constantly modified by thrift, ability, industry, luck and fraud." It occurs to me that the difference between a Capitalist and a Socialist is that the Capitalist stresses inequality as arising from "thrift, ability, and industry", whereas the Socialist sees nothing but the "luck and fraud".

As to the distribution of income from work, Dalton said that differences did not arise basically from the amount of work done by the individual but from the different rates of pay which, in turn, arose partly from the nature of the work, but even more because everyone did not have the same opportunity of entering the better paid occupations. Opportunities varied according to environments and education which sprang from inequalities in the wealth of parents. Thus Socialists

believe, and I agree with them, that the major causes of inequality originate in the inheritance of wealth and in the educational system.

SHAMELESS FINANCE MINISTERS

In tackling problems of inheritance, Dalton proposed a distinction between death duties on inherited wealth (a) accumulated by the parent himself and (b) which the parent had inherited from his father and again, a stage further back, from his grandfather. To counter the argument that this would decrease saving, Dalton said that death duties should not be spent in current government revenue but transferred to a capital fund. I must, however, point out that, seeing the way in which governments raid all allegedly specially earmarked funds (like the Road Fund), and seeing the shameless way in which hard-pressed ministers of finance of all parties, of all governments, in all countries, appropriate anything within reach, I am not impressed with Dalton's solution of the problem of ensuring the preservation of savings. One must, however, concede that it is a major step up that the Socialists now recognise that there is a problem of saving that does require solution.

Dalton also proposed that the state should accept securities and land in lieu of cash when the tax was paid, and that "if possible" (sic!) in order to increase the total of saving, half the income which thus became government property should be re-invested (which presumes finance ministers to be men of iron rather than flesh and blood politicians).

Mr. Gaitskell emphasises that Dalton's ideas broke away from the doctrine (still enshrined in the constitution of the British Labour Party) that the nationalisation of industry was the sole method of Socialist advance. Dalton pointed the way to the doctrine that Mr. Gaitskell is now courageously inculcating among the Socialists of Britain that there can be an advance to greater equality via public ownership without necessarily involving public control—an idea which Mr. Gaitskell insists is important if there is to be for

a long period a mixed economy with a large measure of private enterprise. (Are you listening there in the North Block of the Secretariat in New Delhi?)

We will continue next week this sketch of Mr. Gaitskell's streamlined Socialism for 1956.

RECORDS & STATISTICS (QUARTERLY BULLETIN)

Editor: R. V. MURTHY, M.A.

"The Eastern Economist" Bulletin of Records and Statistics surveys economic trends in each quarter in India and abroad with the aid of graphs and all available statistics. One of its special features is the Investment Supplement.

A DELHI DIARY

THE JOY OF REBELLION

SWEET are the joys of rebellion. I did not realise until Republic Day how great can be the satisfaction from a refusal to conform. Everyone was doing it—going to the Republic parade and sitting it out for three momentous hours. I decided that it would be good to keep away to show that the greatest attraction in Delhi could be resisted. I consider that, while I have failed my readers on a description of the Republic Day parade, I can claim to have ruminated more successfully on other things. Also, I discovered it was easier to go through the remaining items of an exacting day without a feeling of weariness which I detected on a large scale at the President's 'At Home', and in the round of traffic seeing the lights and sights, which have now become ritual, until 10 p.m. at night. Long may Republic Day endure as a central passion at a time when national unity has been called in question. But for those who can afford to stay away (having seen the Republic Day parade in similar forms for five years running) I recommend peace and quiet on a spacious lawn for those who can afford (or borrow) this acme of luxury in a socialistic pattern of society.

THE BENGAL-BIHAR MERGER

The great event of the week has certainly been the joint statement of the Chief Ministers of West Bengal and Bihar proposing the merger of the two States. There are plenty of cynical people about who will call this a stunt. It may well be that when this proposal is exposed to the fierce light of day—which includes the quite foolish passions of the moment as well as the not-so-foolish memories of five generations—the merger proposal will look less attractive and less feasible politically. For the present, however, I ignore the cynics and the critics. This is one of the grandest things that have happened in the last few years. It shows a tremendous capacity in the country to generate leadership in the truly grand manner at times of national crisis. I consider that Dr. B. C. Roy and Shri Sri Krishna Sinha have placed themselves amongst the foremost leaders of India by this magnificent gesture. It will be no fault of theirs if they are far ahead of the times. That the merger will come one day under pressure of circumstances seems to me extremely likely. Let the pessimists differ, or better still, let them be converted. A light in the Heavens is all that can be vouchsafed to us at this time. There is no guarantee that peace on earth and goodwill amongst men follows naturally in its course any more than it did two thousand years ago.

THE FINANCE MINISTER

Delhi has been in the throes of its own particular crisis arising out of the States Reorganisation Commission's proposals. The resignation of the Finance Minister, Sir Chintaman D. Deshmukh, burst upon an unprepared world on Monday almost as sharply as did his own thunderbolt on nationalisation of insurance on the previous Friday. I do not know how to assess the events that have taken place in such rapid succession as to defy accurate arrangement in chronological order. The facts seem to be plain, though not the sequence. On Saturday the Maharashtrian appeal to all Maharashtrians to resign struck a chord in Delhi. On Sunday Sir Chintaman sent in his resignation. On Monday the Finance Minister downed tools declining to see any files and returning all papers addressed to him, as though he were not Finance Minister of the country. On Tuesday he declined to act as host at a party in honour of Sir Jeremy Raisman although

invitations had been sent at his direction. On Wednesday the ice thawed and the Finance Minister was reported to be back at work. At the moment the current report is "Weather Fair"; the resignation has neither been pressed nor accepted.

The subject of constant interest in Delhi is why the Finance Minister of India chose to take this particular stand. Does he consider that, as a member for a Parliamentary constituency obviously deeply affected by the decision on Bombay, he should register that feeling by withdrawing from the counsels of the Central Government? If he does, he would be logically required to press his resignation if no modification of the proposal took place. But whether or not he presses his resignation, the point seems to be clear that provincialism has now entered into high places in the Central Government. Thus even the Central executive must be prepared for an attack of the new malady—worse than the Delhi jaundice—called 'Linguism'. The fact that this particular malady has laid low the Finance Minister of India has been one of the most disturbing events in New Delhi in recent years; that it should have got a hold on such a tremendously scholarly and profoundly sensitive mind as Sir Chintaman Deshmukh's seems to indicate that it is a deep and powerful new microbe whose exact behaviour cannot be predicted. The fact that it is being spread on a large scale by the Communists for reasons of their own does not make it any more reputable. I look to the merger movement as the major antidote for the new poison. Everyone in Delhi to whom I have spoken answers 'Amen', but who shall deliver us, in the words of the Apostle, from the body of this death?

THE OPEN DOOR

The best I like to think in the words of Rabi Ben Ezra, is yet to be. If the merger idea gathers force there is no doubt its potentialities are enormous. Already there have been informal talks between Rajasthan and Gujerat for a merger which will certainly come about. Here at least there are no major rivalries; it may well be that Gujerat's 'adventure' will help the backward State of Rajasthan and there will be no losses, only gains on both sides. At a later stage Maharashtra will be invited to join this merger—with what result I dare not prophesy. I am less hopeful about the Dakshan Pradesh proposal of amalgamation of Madras, Mysore and Kerala. Mysore I should mention is already a real merger of the old Mysore and new Karnataka provinces. Why should not Kerala and Mysore be joined in the first instance leaving the door open for Madras later on? There are many people who, like me, believe in the policy of the open door. I commend the open door to Maharashtrians and to Madrasis alike!

MARTHA GRAHAM

As a postscript to a heavy political session may I add a few cheerful words about art? Martha Graham, the famous American dancer, captured attention on three days this week. Her version of modern dancing has not struck a responsive chord everywhere. I must confess, of three pieces which I saw on Tuesday, the central one left me cold. I was, however, greatly moved by 'Seraphic Dialogue' a wonderful piece conveying the mystic communion of Joan of Arc with her favourite Saints. Since the Cold War cannot be absent in art, let me record the arrival of another Chinese delegation as well as a troupe of Soviet dancers!

ARGUS.

Economic Report from the U. S.

ECONOMIC TRENDS

(BY GUY SIMS FITCH)

WASHINGTON, Jan. 24.—It is not exactly surprising to find President Eisenhower reporting, in his annual economic message to congress, that the United States achieved new and unprecedented levels of activity last year. Now was it entirely unexpected to find him predicting a continued strong economic position this year. These, after all, were judgments which most private economists already had made.

However, it is a point of satisfaction, to find these independent appraisals generally confirmed by the Government, which has at its disposal the most comprehensive and refined statistical information ever compiled. And that consolation is heightened by the realization that the men chiefly responsible for preparing the President's Report is not only a renowned research economist and teacher, but an internationally respected expert on the nature and course of business cycles—Dr. Arthur F. Burns, Chairman of the President's Council of Economic Advisers. Business men and economists, therefore, will be taking a close look at the President's realistic analysis of current business trends in the United States. It will give them invaluable clues as to the problems they may encounter in the year ahead, and an idea of the policies the Government may be following to help keep the economy moving upward. These lessons, if studied carefully, can only result in better business management, which is after all a major element in the success of any free enterprise system.

The report notes some slackening in the economic expansion of the past year—a not unexpected development in an economy already operating at close to capacity—it finds the economy "starting the new year from a strong financial as well as a strong industrial position." For every apparent sign of weakness, there is a compensation and overriding sign of strength. Thus, consumers have added heavily to their debts, but they also have added substantially to their liquid assets and earning power. Current liabilities of business firms have risen, but their current assets have risen still more. Agricultural inventories are high, but they are largely held by the Government and their disposal will not be permitted to disrupt markets. Business inventories have been growing, but they are locked, for the most part, in the productive process and have been outstripped by increasing sales. Housing and automobiles, two important industries that have pointed downward recently, come in for special comment. The report attributes the recent slump in home construction to limited supplies of mortgage money and building materials. It finds conditions in the construction industry basically satisfactory, however, with shortages of materials easing recent weeks and the condition of the mortgage market beginning to improve.

The report points out that the trend of aggregate consumer spending continues to be upward, despite recent declines in expenditures on automobiles and other durable goods. Retail sales in December, it notes, were at the highest level ever. While consumers may not buy automobiles in 1956 at 1955's extraordinary rate, they are likely to spend even more freely than in the past on home improvements, home furnishings, and such non-durable goods as food and clothing. Business investment, which had been rising vigorously in recent months, is seen as perhaps the strongest contributor to continued prosperity in 1956. Orders for machine tools, freight cars, turbines and other equipment have been expanding. New business incorporations have been proceeding at a high rate. Contracts for

commercial and industrial construction have been moving to new record levels, as have business plans for capital spending on new plant and equipment, involving to a considerable degree firm commitments for 1956 and even for years to come. Other economic props will come from Governmental outlays and from a healthy international commerce. Pressures for local improvements—notably for schools, roads, hospitals and other public facilities—are expected to generate significant increases in state and community spending. Federal expenditures, which have been declining steadily for more than two years, also may move a little higher. And foreign trade, at once a result of a contributor to economic prosperity around the world, is expected to continue at record levels in the months ahead.

Despite all these heartening factors, Mr. Eisenhower and his advisers are taking nothing for granted. "We must above all things," they say, "avoid complacency." Alertness in adapting monetary and fiscal programmes to current economic conditions has been a keystone of U.S. Government policy in recent years. In this policy of flexible vigilance the American people have an added measure of assurance that their well-being, which reached unparalleled heights in 1955, will continue to improve in 1956.

WORLD CONSUMPTION

India meets over 50% of the world demand for tea which is estimated at over 1,200 million pounds a year, excluding China, Japan and the U.S.S.R.

PST 140

WORLDGRAM

AGRICULTURE

Increase in Afforested Area in Israel: The Jewish National Fund Scheme to plant 5,000,000 trees this season has been initiated. This figure exceeds the 3,500,000 trees planted last year and now represents the yearly quantity in the Five-Year Plan formulated by the Jewish National Fund. The development of 450,000 dunams of hill country—300,000 dunams by reclamation and the rest by afforestation—and the settlement of some 12,000 new immigrant families are the keynotes of the Plan.

Rise in Canadian Wheat Stocks: Visible supplies of Canadian wheat on December 28, 1955, totalled 365,017,000 bushels, slightly above the preceding year's total of 355,114,000 bushels. Wheat marketings in the Prairie Provinces during the week ended December 28 fell to 2,915,000 bushels from 8,444,000 and overseas export clearances dropped to 1,488,000 bushels from 2,081,000.

INDUSTRY

U.S. Car Companies Cut Output: General Motors Corporation and the Chrysler Corporation on January 13 announced cutbacks in production. Output of the Chrysler division is being reduced by 10 per cent to maintain a balance between production and market demand. General Motors is laying off a total of 4,000 at six assembly plants across the country, or 22 per cent of the total labour force at these plants. This move is described as a "scheduled readjustment". Ford Motor cars in dealers' hands at the end of last year totalled 180,000 or five times as many as at the end of the previous year. Production of passenger cars in the last quarter of 1955 totalled 608,000 giving the company 31.5 per cent of the total market. This month the output of both Ford and Mercury cars has been reduced.

Control on Quebec Newsprint Industry: The Bill to place the Quebec newsprint manufacturing industry under strict official control has been tabled in the Legislative Assembly at Quebec because the manufacturers ignored a demand by the Premier of Quebec to keep prices down for local newspapers. The Bill calls for the control of production, distribution and sale of newsprint in Quebec province where 55 mills form one of the biggest single concentrations of newsprint production in the world.

Dieselisation of Bombay Port Trust Railway: Orders for ten diesel locomotives with spares, at a total cost of Rs. 28,20,254 have been placed by the Bombay Port Trust with a German firm, following its decision to dieselise its railway system. Deliveries of these diesel locomotives are expected within 14 months. The Bombay Port Trust has now 23 old steam locomotives. If these are replaced by diesel locomotives, an annual saving of Rs. 4 to Rs. 4.5 lakhs in operating costs is anticipated. In efficiency and economy, the diesel locomotive is believed to be superior to its cousin run on steam. In the case of a steam locomotive, much time is lost in returning to shed for coaling and watering in each shift and in frequently baking fires and raising steam, factors which are totally absent in diesel. So, too, the advantage in expenditure over running sheds lies with the diesels.

Survey For New Railway Line in Uttar Pradesh: The final location and traffic survey for a broad-gauge line of about 100 miles between Robertganj and Garwa Road (via Chopan and Pipri) on the Northern Railway, has been sanctioned by the Railway Board at an esti-

mated cost of Rs. 4,74,000. The Robertganj-Garwa line, when constructed, will help to open up undeveloped territory in Uttar Pradesh and also assist in the construction of the Rihand Dam at Pipri.

Draft Standard for Silver Plating: The Indian Standards Institution has circulated for eliciting comments a draft Indian standard specification for commercial silver plating for articles for domestic and restaurant use. This draft standard lays down the composition of the basic metal, thickness of the deposited silver on electroplated table-ware flatware and hollow-ware, methods for determination of weight of silver deposit and surface area of articles with different shapes. Tests to determine the thickness of plating have also been prescribed in this standard. The draft has been prepared by the Electroplating Sectional Committee of the Indian Standards Institution.

Big Rise in Middle East Oil Output: Although the U.S.A. remains the world's largest oil producer, the most remarkable developments of recent years have taken place in other countries—particularly in the Middle East. Figures just published by the Petroleum Information Bureau in London show how the oil industries in the Middle East have grown over the past 30 years. In 1925, the Middle East supplied no more than 5,000,000 tons of oil, and the major producer in that area was Persia. Last year's contribution from the Middle East was over 160,000,000 tons, of which 16,000,000 tons came from Persia—equal to half her output in her peak year of production (1950). Persia's contribution last year was far exceeded by that of three other States—Kuwait, Saudi Arabia, and Iraq—none of which produced oil 30 years ago. Indeed, Kuwait only supplied her first oil in 1946, and Saudi Arabia in 1938, but the two are together producing over 100,000,000 tons of oil annually at the present time. In fact, the Middle East as a whole is now providing more oil than the entire world did in 1925.

New Atomic Reactor Tested in U.K.: Successful tests have been conducted at the U.K. Atomic Energy Research Establishment at Harwell, Berkshire, with a new type of atomic reactor known as ZEUS (Zero Energy Uranium System). It is a fast breeder reactor designed to create more fissile material than it consumes, and is of the same type as the one to be used in the experimental power station now being built at Dounreay in the north of Scotland. ZEUS is expected to come into regular use shortly. The reactor is designed to study the problems involved in a large-scale power station, and has been under construction at Harwell since early last year.

Big U.P. Order for British Electrical Equipment: A contract for the supply and installation of equipment for the new Chopan steam power station near Mirzapur has been given by the electricity department of the Uttar Pradesh Government to Brush Export, Ltd., of Loughborough, England. The order is worth £360,000 and the designed installation work will be carried out by the General Engineering Division of Brush Export. Equipment to be installed includes two 3,000 kw MCR Brush-Ljungstrom radial-flow turbo-alternators—generating at 6,600V, 3-phase, 50 cycles—and two John Thompson "integral"-type water-tube boilers with a maximum continuous rating of 45,000 lbs. of steam per hour, a pressure of 425 lbs. per sq. inch, and a temperature of 775°F. Feed temperature is 210°F. The Chopan steam power station will be connected through 3,000 KVA transformers to a 33KV transmission line to the Rihand dam diesel power station, which is adjacent to the dam site.

Penicillin Plant in Bombay: The first penicillin plant in South-East Asia has been completed in Pimpri, Bombay, by the Government of India with assistance from the U.N. Plans are under way to purchase additional equipment to increase the output. By next summer the plant, which started its trial runs last March, will reach its first target production of 1,000 lbs. of penicillin per month, about 250,000 10-c.c. vials. The output, however, will eventually go up to 2,500 lbs per month.

TRADE

Swedish Glass Exports: Sweden's glassware exports, which totalled Kr. 16,600,000 (£1,145,000) in 1954, about 1 million kronor more than the previous peak year, 1951, are expected to have shown a similar rise in 1955. The increase is due primarily to a larger export volume, though to some extent also to higher prices. Higher figures were registered for practically all kinds of glassware, such as window glass, bottles and containers, lamp shades, thermos flasks, and also decorative glass and household glassware.

Textile Exports From Japan. Japan last year ranked first in cotton cloth exports and was the greatest spun rayon producer in the world for the third year. Its shipments of cotton cloth, according to the Japan Cotton Spinners' Association, ran to 1,136,931,000 sq. yards, while Japan Synthetic Textiles Association said that its output of spun rayon attained 530,829,000 pounds. Japan also placed a global third in rayon yarn production with a turnout of 173,412,000 pounds. The amount of cotton yarn exported by Japan during the past year was put at 26,202,000 pounds.

Platinum Imports from Britain by Germany: The West German Government's import committee has published authorisations for imports worth more than 11 million marks from Britain. The imports include 5 million marks worth of platinum and its alloys, semi-finished platinum goods, platinum scrap and platinum metals; 2 million marks worth of fine silver, and 1,350,000 marks worth of hand-knitting yarns. The remainder is for foodstuffs.

FINANCE

Tax Relief in Norway: Certain reliefs in State income-tax and in the State tax on companies' funds will be proposed in the coming session of the Norwegian Parliament. The Government, according to Crown Prince Oslav, regards as its most important economic tasks the maintenance of full employment, reduction of the deficit in the foreign trade balance, and keeping a stable level of prices and wages.

Turkish Bank Reform: Chiefly in order to encourage savings and increase security, the Turkish Government is preparing a reform of the country's banking system. A Bill modifying the 1936 regime and based on Swiss, American and German practices is being introduced in the National Assembly. It proposes a union of all banks established in the country to increase collaboration, minimum capital requirements, the limitation of credits in proportion to a bank's capital and "solid guarantees" for saving deposits.

Special Commission of Enquiry For Travancore-Cochin Banks: The Government of India has appointed a Special Commission, under the Chairmanship of Mr. K. Ramunni Menon, former Chief Secretary to the Madras Government to conduct a comprehensive inquiry into the problems of the banks in the Travancore-Cochin State. This decision has been taken in pursuance of the recommendations of the Bank Award Commission which had suggested that such a Commission should be appointed with wide powers to examine

the financial position of banks incorporated in the Travancore-Cochin State in relation to its economy, suggest measures for their integration and make recommendations in regard to the terms and conditions of service of their employees.

GENERAL

Survey on Pattern of Tourism: More than half of the tourists to India come in organised parties or groups, a recent survey has revealed. Tourists in family groups come mainly from the U.S.A. and the U.K. Single tourists are predominantly male, while in family groups the sexes are almost equal. The survey, which was undertaken to assess the pattern of tourism in India, showed that 80 per cent of the tourists came to the country with the primary object of holidaying, pilgrimage, mountaineering and sports and hunting. Many, of course, combined business with sight-seeing and holidaying. By and large, they belonged to the class of business men, Government employees and the liberal professions such as teachers and lawyers. The average duration of stay of a tourist in India was 25.82 days, though in over 67 per cent of the cases the period of stay was less than 15 days.

Technical and Vocational Training: There were 9,343 trainees on the roll of various Training Institutes at the end of November, 1955. Of these 7,611 were receiving training in technical trades. The number of displaced persons undergoing training at the end of November, 1955, was 2,122. Those receiving training in technical trades like electrician, moulder, machinist, welder, etc., were 1,761 and the remaining in vocational trades like weaving, basket making, calico printing, etc. Displaced persons undergoing training as apprentices in industrial undertakings or establishments numbered 1,010 against 1,400 sanctioned seats. Women trainees at the end of November, 1955, at the three Women's Training Institutes in New Delhi, Dehra Dun and Madras were 482.

Development of Cottage Industries in Community Project Areas: A nearly three-fold increase in the employment potential of the cottage and small-scale industries in the Community Project areas is contemplated in a scheme approved by the Community Projects Administration for operation in certain selected areas. To begin with, work will be started for intensive development of cottage and small-scale industries in 26 pilot projects in different parts of the country.

Employment Situation in 1955: The employment situation during November, 1955, showed signs of improvement as the number of registered unemployed at the end of the month declined 6,81,164 from 6,95,239 in the previous month. The number of placements during the month was 14,856 as against 13,461 during October, 1955. Of the placements secured, 6,210 were under Central Government Departments, 4,971 under State Government Departments and 3,675 in non-Government establishments. The number of employers that utilised the services of the Exchanges during November was 4,835 as against 4,599 during October.

Extent of Unemployment Among Engineers: A sample survey to assess the extent of unemployment among the job-seeking engineers was conducted by the Directorate-General of Resettlement and Employment, Government of India, during October, 1955. Out of the 1,480 engineering graduates and diploma holders, who were registered with the Exchanges during the period, the survey was conducted among 245. Of those contacted, 126 or 51 per cent were placed in jobs during the period and the remaining 119 or 49 per cent were still unemployed. Out of the unemployed 88 or 74 per cent were seeking jobs for the first time and the remaining had been employed before.

NEWS IN BRIEF

INDIAN

The Government of India on January 19, announced its decision to nationalise life insurance with immediate effect. The President has, accordingly, promulgated the Life Insurance (Emergency Provisions) Ordinance, 1956, vesting in the Government the management of both indigenous and foreign life insurance business in the country and the foreign business of Indian insurers.

In the recent incidents in Bombay, damage through arson, stone-throwing and other causes to both municipal and private property is estimated to be about a crore of rupees.

The Government of India has decided to ban the export of husked rice outside India with immediate effect.

Dispatches of jute goods from mills in December 1955 rose to 95,296 tons from 88,184 tons in the previous month.

Timber exports from Jammu and Kashmir to India have registered a sharp rise in recent months. In 1955, the exports of timber amounted to 17,68,545 cubic feet as against 11,13,399 cubic feet in 1954.

American wheat—9,500 long tons—landed in Bombay on January 16 as part of the U.S. Government's 20,000-ton programme of distribution of food to flood victims in the country.

The PEPSU Government has set up a committee to deal with the difficulties which the State Government is likely to face in the change-over to the metric system as proposed by the Centre.

The Transport Advisory Council meeting in New Delhi on February 6 and 7 will discuss proposals for the prevention of encroachment on national highways. A Bill to this effect is also expected to be introduced in Parliament during its next session.

Three more tours of Community Projects and Training Centres in India by study teams from other countries have been sponsored by the U.N. Technical Assistance Board. They include a party of six from Middle East countries, a party of seven from the Arab countries and a delegation of Iraqi officials.

The United States Government has sent as gift to the Government of India a certain quantity of Gamma Globulin to be used as prophylactic inoculation against Virus Hepatitis (jaundice).

The Indian delegation to the meeting of the Commonwealth Advisory Committee on Defence Science being held in Canada from 6th to 23rd February, 1956, will be led by Dr. D. S. Kothari, Scientific Adviser to the Ministry of Defence and will include Major-General S. D. Verma, Master-General of the Ordnance, and other senior scientists from the Defence Science Organisation.

The need for adequate propaganda in schools and other educational institutions on the value of preservation of wild life was stressed by Dr. Panjabrao Deshmukh, Union Minister for Agriculture, in a message to the Executive Committee of the Indian Board for Wild Life which began a three-day meeting in Sasan, Saurashtra, on January 18.

FOREIGN

About 30 leading German industrialists are leaving Berlin next month for two extensive goodwill trade tours of Central America and the Far East.

An Australian trade mission of more than twenty business men flew to New Zealand last week to explore the possibilities of increasing sales of Australian manufactures.

A Yugoslav delegation is expected to leave soon for Moscow to negotiate two agreements—one for a Soviet credit to pay for Yugoslav purchases of raw materials in the Soviet Union, the other for a Soviet loan to Yugoslavia in foreign exchange or gold.

The Czechoslovak Foreign Minister, Mr. Vaclav David, said recently that financial and trade talks with Britain, broken off in 1954, would be resumed shortly.

Col. H. W. Mulligan, Deputy Director of the Wellcome Research Laboratories at Beckenham, Kent, has been seconded by the Wellcome Foundation to assist Lieut.-General Sir Bennet Hance, who is in Ceylon to advise the Ceylonese Government on its medical and public health services.

The chairman of Britain's Dollar Exports Council, Sir William Rootes, is leading a new investigation at top level into the United Kingdom's dollar trade with both the United States and Canada.

Mr. A. R. W. Low, U.K. Minister of State, Board of Trade, has been visiting Canada this week to attend the joint meeting of the Dollar Exports Council and the Dollar-Sterling Trade Council.

The fourth International Conference of the General Agreement on Tariffs and Trade (GATT) opened in Geneva on January 19. It is attended by 26 of the world's major trading countries.

The U.S. officials made their first face-to-face appeal to Congressmen on January 18 to put foreign aid on a long-range basis by pointing to the 10-year project of the high Aswan Dam in Egypt as an example of where advance U.S. aid intentions would be helpful.

The Jordanian Government has proposed a meeting of Foreign Ministers of all Arab States to discuss Arab financial aid to the country.

The Afghan Government has entered into an agreement with a Czech firm providing for the establishment of an advisory office on industrial matters by the firm in Afghanistan. The agreement was signed in Kabul on January 9, 1956.

President Eisenhower told Congress in his budget message on January 15, that his administration proposed to spend \$1,200 million on existing economic aid programme in the fiscal year ending June 1957 and \$590 million on new programmes.

The U.N. Technical Assistance Board has appointed, as its representative in Yugoslavia, Mr. J. Richard Symonds (U.K.) who has taken up his post in Belgrade. Mr. Symonds had been its representative in Ceylon and liaison officer with the Colombo Plan since 1954.

FROM WEALTH TO CAPITAL COEFFICIENTS—II

By
COLIN CLARK

[This is the second of a series of four exclusive articles on Capital Coefficients written for "The Eastern Economist" by Mr. Colin Clark, Director, Agricultural Research Institute, Oxford University. The first article appeared in the issue dated January 20, 1956.—Ed.]

ONE of Lord Keynes's favourite devices, when lecturing at Cambridge, was to ask an audience of advanced students each to write down in his own notebook what he thought the average capital coefficient was, or, as Keynes put it more dramatically, if the entire stock of national capital were destroyed, how many years' net national product would have to be set aside in order to replace it in equally serviceable form? And the students used to write down figures of ten years, twenty years, thirty years or even higher; and many men of affairs if asked to give a quick answer to the same problem, and working on a misleading analogy of the ratio between capital and profits in an individual business, might also give a similar answer. We now know that, in fact, the figure is very much lower. Suppose for a moment that the ratio were ten. That would mean that the entire year's net national product would only suffice to pay 10 per cent interest on the national capital. But we know that in fact a big proportion of the net national product goes to labour (using the word in its broad sense, so as to include salaried labour, and the labour of independent working proprietors) and does not go to capital at all. In western countries this proportion may now be 75 per cent or more, although it is generally lower in the East. A generally accepted figure of the capital coefficient in western countries is 4. This means that a national capital of 400 is used in producing a net national product of 100 per annum, out of which labour takes 75, leaving 25 for the net remuneration of capital, and enterprise, or an average return on capital of 6¼ per cent. This is not meant as a precise calculation but does serve to illustrate the orders of magnitude now to be expected in western countries.

The present writer has been responsible, to a considerable degree, for helping to disseminate the figure of 4, based on the best evidence so far available, as the sort of capital coefficient to be generally expected in most countries. This figure has been discussed considerably in India, as a criterion for judging the economic value of public works and other projects which cannot be tested on the basis of their expected direct financial return—namely, whether 4 rupees' worth of investment in a particular project may be expected, in the long run, permanently to raise net national product by 1 rupee per annum (this latter figure including the remuneration of labour as well as the direct return to capital).

More recent and better information now indicates that, at any rate in certain important cases, the figure of 4 has been considerably too high. We do not yet know enough safely to apply the figures derived from one country to a different country. But the indications are that the figure of 4 can probably be regarded as a maximum, and that any revisions are likely to be in a downward direction. This enables us to be much more optimistic about the possible rates of economic growth in countries with limited supplies of capital; or, alternatively, to regard the investment of capital by the wealthier countries in the poorer countries as a less urgent issue than we used to.

However, many people still firmly believe that the capital coefficient is higher, not lower than 4. An Italian statistician recently estimated that the capital coefficient for his country was 7, and so far nobody appears to have strongly controverted him. Many of the figures published, until recently, for Britain and France indicated capital coefficients of about 6.

If you believe that the figures are so high, or anything like so high as that, you will naturally regard the accumulation of capital as by far the most urgent task which confronts any country; whereas if you believe that the ratio is lower, you will probably take a more balanced view, and while regarding the accumulation of capital as important, will not necessarily treat it as the whole key to economic success.

It is remarkable that two influential organs of opinion in Britain seem to have accepted the former view, the supposed need for high and exceptional capital accumulation, namely, the Labour Party and "The Economist". What Britain needs to assure its economic future, they say, almost in so many words, is a greatly increased rate of capital accumulation, whether in public or in private hands. "The Economist" has been telling its readers that the United States and the Soviet Union are economies predominantly concerned with the accumulation of capital (this is not entirely true in either case) and that Britain should follow their example and become more "capitalistic" in outlook. It is still more remarkable to find this point of view accepted by the Labour Party, now become, in a certain sense of the words, the party with the most capitalistic outlook of all, constantly complaining because a Conservative Chancellor of the Exchequer allows money to be paid out in dividends, when they would rather see it re-invested. This excessive preoccupation with capital accumulation is not merely erroneous in itself; it serves to distract attention away from some of the most important hindrances to further economic development in Britain, particularly the excessive rates of taxation now prevailing.

This estimate of an excessively high figure for the capital coefficient, and corresponding over-preoccupation with the need to accumulate capital (or to borrow it from other countries), probably arose in the first place out of two factors; first erroneous methods of statistical measurement and secondly, the confusion of capital with land.

In one sense of the words, if we define capital as physical goods which can be used for the purpose of production, then in that sense land is a form of capital. It certainly belongs to the category of "real capital" rather than merely "money claims". But it suits our purpose better to sub-divide real capital into "reproducible wealth" (building, equipment, stocks of goods etc.) and "non-reproducible wealth" which is found (when we confine ourselves to real wealth rather than to money claims) to consist of agricultural land, sites whose geographical location gives them value as urban

land, and minerals. (Forests are a borderline case which can be reproduced but only very slowly.)

Our reasons for excluding land are two-fold. In the first place, while its economic importance is undoubted, nevertheless the value of land, unlike that of other capital, does not primarily depend on the amount of effort which has gone into improving it, or the care with which it has been maintained. The second reason, more cogent practically, is that values of land are found to be subject to very violent ups and downs, which makes it very difficult to measure it statistically, or to estimate its trend. When you have a piece of land whose rent remains quite unchanged from year to year, nevertheless changes in the rate of interest, which occur quite frequently, always involve a proportionate alteration in the capital value which you put upon the land. And the annual rent obtainable from agricultural land is not fixed by any means. It depends largely on the density of the rural population, and the extent of the alternative employment open to them. In western countries, as industrialization has proceeded, the ratio of rural land rents to the total produce of agriculture has heavily declined, just by the normal operation of the free market, quite apart from countries (such as Britain and Japan) where agricultural rents have been the subject of governmental regulation.

So, if India's programme of industrialization is successful, one of the effects will be to reduce the rent of agricultural land, at any rate rent expressed as a proportion of total product. Unless the Indian Government and banking system pursue a policy of very low

interest rates (a possible but not at all a likely contingency) then the capital value of land will probably decline relative to other capital values.

Economists are familiar with the idea of rising and falling rural land values, but it is a rather more novel concept that urban site values may also be subject to similar growth and erosion. Some investors tend to think of urban site values as more or less permanently a good investment. "Safe as houses" was a favourite motto among Victorian financiers; but it is rather a mockery now. In Britain, urban site values, in relation to other capital values, rose to a maximum in the 1890's, and since then have been declining. In the United States, the turn came later, about the 1920's, but the subsequent decline appears to have been more rapid. Rates of population growth have something to do with it. A rapidly increasing urban population, whether in New York or in Calcutta, tends to raise site values. But these site values are reduced by improvements in urban transport, starting with the tramcar which began in the 1890's.

We may therefore take note of these interesting possible tendencies, both in agricultural and urban land values, but, for the reasons given, leave them out of consideration when we are measuring national capital. We will also omit household furniture and similar personal possessions, although it is convenient to treat houses themselves (which are more frequently bought and sold and leased than furniture) as part of the national capital.

THE RAMAYANA OF TULSIDAS IN ENGLISH VERSE

LATEST "HINDUSTAN TIMES" PUBLICATION

The famous Hindi epic regarded by many as "the greatest book in all devotional literature" is for the first time now available in English verse.

The translator, the Rev. A. G. Atkins, completed the book after ten years of devoted work. He has tried "to keep and express in English in the fine rhythm and music of the original in simple lucid language, and with as much of the vivacity, wittiness and picturesqueness that Tulsidas has put into his work." He has also followed in some measure Tulsidas's metrical variations such as *chhand*, *chaupal*, *doha* and *seratha*.

In a foreword Mr C. Rajagopalachari says: "Mr Atkins' monumental work and his Introduction are a revelation of hope for those who desire to see all the great religions of mankind come together. . . . His service is not only to English-speaking people but also to that very large number of Hindus in India who do not speak the Hindi language and to whom English has become a very familiar medium."

The book is of special value to libraries, scholars and devotees of Tulsidas.

It has been issued in the following four editions:

- I. Original text of Tulsidas with translation in English verse; three volumes; 1468 pages; price Rs. 50 net.
- II. Translation in English verse; without Hindi text, two volume; 898 pages; price Rs. 40 net.
- III. Special tissue paper edition of I, one volume, price Rs. 100 net.
- IV. Special tissue paper edition of II, one volume, price Rs. 100 net.

A Letter to the Editor

"THE AGE OF THE DIVIDED GOSPEL"

Sir,

Your comment, "The Age of the Divided Gospel," (in your issue of January 6), is a classic example of the myopia that excessive loyalty to property rights breeds. It also shows that your opposition to totalitarianism stems not from its regimentation and dehumanising influence but from the fact that it will replace the vested interests of today by a different variety. To you, fundamental human liberties, such as the right to work and to go on strike, the right of free expression and assembly, etc., are nothing compared to property rights which affect, not at all vitally, a microscopic minority of the people. Will you please explain why in a democracy like ours company unions are so numerous and powerful, why collective bargaining is frowned upon, why intelligence agents (C.I.D. men) still function as members of opposition political parties (an old British practice), why correspondence of individuals critical of the regime is censored, why the ruling party is indistinguishable from the Government and why blatant party propaganda is carried on by official organs of publicity like All India Radio? In what way are these different from conditions obtaining in totalitarian countries?

When the P.S.P., conscious of its dual role as an instrument of socialism and as a corrective to the totalitarian tendencies in the country today, stresses the need for a vigilant opposition, instead of appreciating it, you pooh-pooh it notwithstanding your championship of democracy elsewhere, and ask whether it was the fault of the Congress that there was no strong opposition in the country today. Was it the fault of Hitler that German Social Democrats remained silent spectators to the fall of the Weimar Republic? Was it Stalin's fault that no opposition could rise in Russia on the ashes of the Mensheviks? Nearer home, it is a democratic virtue of the Prime Minister that he subverts, instead of facing, opposition?

As for the Gaya Conference of the P.S.P., it was not supposed to bring back Jayaprakash to the helm of

party affairs or cure Acharya Narendra Deva of his chronic asthma. Its purpose was to give the party a comprehensive ideology, an ideology which would obviate dependence on a few leaders who could not see eye to eye with one another. And this purpose it had admirably served. Acharya Narendra Deva may be too ill to provide active guidance to the party but his views, which are embodied in the new policy statement, will inspire the party to move forward. This way the Gaya Conference was a landmark in the history of the Indian socialist movement.

Last, but not least, the Gaya Conference has proved to the hilt that Dr. Lohia's revolt was motivated by personal ambition and nothing else. At the Hyderabad Conference of Lohiaites, wherein you see a transformation from Philip drunk to Philip sober, there was no effort to build up an ideology. Besides the buffoonery of a seven-year leap to power, there was much abuse of others and indulgence in airy verbiage. While the P.S.P. minus Lohia is able to develop an ideology and a programme, the doctor remains what he has been, a self-centred individual, full of froth which will foam away much before seven years.

Yours faithfully,
G. S. BHARGAVA

Karolbagh,
NEW DELHI-5.

[We publish this letter in order to let the readers judge its worth. "The Eastern Economist" has never lagged behind anyone in exposing infringements of our liberties, whenever they were felt to be real, not when they were merely imagined for purposes of political opposition. The gravamen of our criticism was that the Socialists have revealed no concrete or constructive alternatives and have, on the whole, become indistinguishable from the party which they have professed to oppose all the time. They, more than others, have compromised with the means whenever they have agreed with the ends.—Ed.]

Get Extra Protection Against Blowouts and Punctures at No Extra Cost!

WITH Firestone TUBELESS TYRES

With no tube to pinch or blow-out, this tyre gives protection beyond compare. If a nail should penetrate this tyre, the Safety-liner hugs it and prevents immediate loss of air, enabling you to continue driving. Think what these advantages mean in increased safety, extra protection! Built with Safety-Tensioned Gum-Dipped cords for greater strength and longer mileage, they give you full value for every anna of your tyre money. Yet this tyre, with all its features, costs no more than an ordinary tyre and tube. See your Firestone dealer—insist on Firestone Tubeless!

These tyres are so good that many Automobile Manufacturers are now fitting them as standard safety equipment on new car models.

NEW, SAFETY-TENSIONED, SUPER GUM-DIPPED CORD BODY AND TUBELESS CONSTRUCTION GIVES STRONGER BODY—MORE PROTECTION AGAINST BLOW-OUTS AND PUNCTURES.

BOMBAY—WHAT NEXT?

By
CROESUS

PEACE has just returned to Bombay after almost a week of rioting, loot and arson, the like of which the city had not experienced any time in the past, not even at the time of the Partition or the Naval Mutiny, nor even during the civil disobedience days of that fateful year 1942. The situation is still tense, as the presence of large numbers of policemen patrolling in the disturbed areas clearly indicates. One sees too some discontent still smouldering underneath in the rank and file of the Samyukta Maharashtra protagonists, although many of these have apparently been somewhat sobered down since witnessing the orgy of lawlessness and inhumanity perpetrated by an incensed mob. It was a case of "Mischievous, thou art afoot; take what course thou wilt". For a while, man seemed suddenly to have lost every vestige of humanity and all his nobler instincts appeared dead, making one spontaneously recall the words of Wordsworth, "Have I not reason to lament what man has made of man?"

Thanks to the firm handling of the situation by the Government of Bombay and the no less firm reiteration of its stand by the Congress Working Committee and the Prime Minister, Bombay has again become normal with the same surprising suddenness that characterised the outbreak of riots and mass violence earlier in the week. In the meanwhile untold damage has been done to the cause of Samyukta Maharashtra itself, for the situation that developed has only resulted in alienating even those who sympathised with the demand of the Maharashtrians to include Bombay city in Maharashtra, on the one hand, and in strengthening the resolve of the Government of India and the Congress High Command to stick to their decision to make Bombay a centrally administered area, on the other. This apart, the confidence of many non-Maharashtrians has been terribly shaken, as witness the exodus of large numbers of scared Gujarati women and children from Bombay. All these are besides the avoidable loss of precious and, in many cases innocent human lives—of injured (both public and police) at 675—and the very heavy damage to civic property which included the destruction of 1000 gas lamps, 600 electric lamps, 21 conservancy vehicles and any number of fire hydrants. Several buses and trams were also rendered unserviceable. The damage did not stop with that; it extended to the train services by the senseless destruction of signals and overhead wires. Incoming main-line trains were detained at Kalyan since Thursday till

almost last Sunday. Similarly, postal and telephonic communications also were tampered with, causing serious inconvenience to the public. Surely this is not the way of registering one's disapproval of a decision of the highest authority in the country under any democratic regime.

How will all these end? That is what the Bombay-man is wondering now. While it is out of the question to expect the Congress Working Committee or the Government of India to resile now from their stand, especially in the face of the defiance of the Samyukta Maharashtra party. I am not certain if they will not have to modify their stand, not in view of what has happened but in view of what is likely to happen in the years to come. The Maharashtrians have irrevocably lost their case for a unilingual State, including the Bombay city, but if the Maharashtrian leaders can rise to the situation, they can at least endeavour to have the satisfaction of being part-owners of Bombay in a bilingual State, comprising all parts of Maharashtra, including Vidarbha and Marathawada, and Gujarat, including Saurashtra and Kutch and, of course, Bombay. It is up to them to win over the Gujaratis to such an arrangement which is undoubtedly a Herculean task in view of the terror that has been struck in the community by the recent excesses and indecent behaviour of unruly Maharashtrian mobs. But the latest trend towards merger, as, for instance, of West Bengal and Bihar, is in their favour and they should seize the opportunity. They could do so if, say, they now come forward with an offer to the Gujaratis of a fifty per cent share in every sphere of activity, regardless of any majority that the Maharashtrians might have population-wise. The Gujaratis, in their turn, should accept any such offer, if made by the Maharashtrians and if the latter, at the same time express their regret at what has happened and also give a solemn assurance that there would be no repetition of such ugly incidents as have marred the fair name and reputation not only of Maharashtrians but of every Indian and of this country as well. Obviously any such decision presupposes a much calmer atmosphere than what is prevailing today. All efforts should, therefore, be directed towards helping to hasten the bringing into being of such an atmosphere without any avoidable delay. This is at once a test and a challenge to Maharashtrian leaders and their statesmanship. Will they stand the test and accept the challenge?

TANKER FLEET FOR INDIA

By
CROESUS

THE tentative agreement between the Union Ministry of Transport and a leading shipping company in Bombay to acquire five oil tankers during the second Five-Year Plan period, forming the nucleus of India's first tanker fleet, is an honest attempt at meeting a long-felt need. Though the coastal trade of India was reserved for national bottoms as far back as 1951, India has been in the humiliating position of not having even a single Indian tanker plying on this route. The acquisition of the five tankers will thus mark the first step in breaking the foreign monopoly of the oil tanker trade on the Indian coastline. Indian shipowners had all along been rather hesitant in this regard presumably

as they had no guarantee of availability of cargo all the time.

The question of owning a tanker fleet has added importance now with the installation of two oil refineries at Trombay and a third one coming up at Visakhapatnam. India's requirements of petroleum and its products are estimated at 3½ to 4 million tons a year. It is in the national interests of a country which produces or consumes substantial quantities of oil to have a tanker fleet of its own. Iran learnt this lesson too late, but now it appears that, in its agreement with the consortium companies, provision has been made for building a tanker fleet operating under

the Persian flag. Several other West Asian countries are also evincing keen interest in developing national tanker fleets.

The tanker trade of the world is controlled to a great extent by the major oil companies and the Indian attempt to enter this field may be expected to counter some resistance, especially in the light of the agreements already concluded with the oil companies according to which only tankers owned by the Government of India could be allowed to carry the crude or refined oil. But, with goodwill and understanding on both sides and also by reason of the fact that the tankers are going to be acquired by the Government itself, albeit through the agency of a shipping company, it should not be difficult to prevail upon the major companies involved, and obtain their consent to the employment of tankers to be acquired by the Indian shipping company even for the carriage of crude oil from the oil wells in the Persian Gulf to the refineries. For this purpose, bigger tankers of say 16,000 gross tons will be required and it is very necessary that India should begin to participate in this trade by having at least two large tankers capable of carrying about 20 per cent of the crude oil. As regards the distribution of the products of the refineries along the Indian coast, immediate steps should be taken to provide smaller tankers to carry at least 50 per cent of the cargo. The Indian shipowners are naturally keen to participate in this carriage as the coastal trade is now reserved for national shipping and it is their obligation to carry all cargo offering for carriage on the coast in Indian vessels. While the railways are bound to carry a part of these refined products, the authorities concerned would naturally like to ensure that as large a quantity of these

refined products as possible is carried by the Indian coastal tankers, because the refined products are relatively more suited for movement by sea than by rail.

In this context, the decision of the P and O group to build a substantial fleet of tankers would have been read with interest. A quarter of the world's shipping tonnage today is accounted for by tankers, and half of the tonnage under construction is tanker tonnage. The tanker is also increasingly figuring in the fleets of nations, many of which neither produce oil nor consume it in quantities commensurate with their tanker tonnage. During the post war years there has been an enormous growth in world tanker tonnage, the proportion of tanker tonnage to the total merchant fleet at present being 25 per cent as against only 16.9 per cent in 1939. In fact, compared with 1939, the tanker tonnage, according to Lloyd's figures, has more than doubled from 11,585,549 g.r.t. to 24,624,000 g.r.t. in 1954, the total world tonnage having expanded in the same period from 68,509,432 to 97,422,000. When doubts were expressed in some quarters whether the large undertaking in tankers by the P and O Steam Navigation Company would prove profitable, it was pointed out by competent quarters that the total volume of crude and refined oil to be carried over vast distances was likely to grow and the P and O Directors themselves, in the words of Sir William Currie, their Chairman, "have made a close study of the position, and prospects of oil transport and they have satisfied themselves that the advent into the tanker business of a major British shipping group would be welcomed and on known building programmes should be a timely and profitable enterprise".

PROGRESS OF SUGAR INDUSTRY

THE deliberations at the ninth Congress of the International Society of Sugar Technologists which commenced its session here on Wednesday this week are confined to the technical problems of the industry. This fundamental character of the discussions does not turn the Congress into an exclusive assembly, but it is bound to evoke vital interest in the problems for those concerned with its progress. If the visits paid earlier by the delegates to the Congress to research institutions and sugar factories in this country make some impact on the discussion of the problems affecting the industry in this country, it will surely be a distinct gain.

The two main problems of the industry in India which engage continuous attention of the technical expert are the poor yield and low quality of sugarcane. In the two States of UP and Bihar, which between them account for nearly three-fourths of the crop, the yield is as low as 14 tons per acre. In the South in the States of Bombay, Madras, Andhra and Hyderabad, relative proximity to the tropical zone has given a climatic asset to the crop which is easily seen in the higher yield. The average for the South which is often mentioned as 30 tons per acre does not, however, give a precise idea of the potential increase. The average yield in the delta areas of the composite Madras State has remained stable between 45 and 50 tons, while in the plantation areas of Bombay State it has maintained a level of 35 to 40 tons per acre for the 12-month crop. The "Adsali" crop in this State which takes the duration of 18 months has achieved an average of 55 tons per acre. The potential increases in the country as a whole are capable of being pushed to three times the present yields which would give an average of over 40 tons per acre in UP and Bihar. Certain results achieved in the South indicate the range of potential growths. Crop competitions yielded an output of 129 tons in Madras for the 12-month crop and 125 tons for the 18-month "Adsali" crop in Bombay. Actually, in certain areas of the South an average yield around 60 tons has been recorded.

The issue of yield needs to be tackled only in conjunction with the more difficult problem of quality of cane. Frankly, India has a serious handicap on this count. In the North, the sugar content of cane varies between 11.5 and 13 per cent. In the rest of the country it ranges between 13 and 14 per cent, but in Madras and Andhra it is generally lower at 11.5 per cent. The average for the whole country comes around 12 or 12.5 per cent. Successive researches aiming at a higher quality through increased recovery have revealed that the varieties of cane planted, climate or soil do not by themselves account for the present range of quality. In those specific spheres technological improvements are bound to bring better results. But other vital handicaps, affecting quality are the schedules of harvests, flaws in cultivation techniques and the standard conventionally accepted for payment to the cane grower. A change in the practice of payment from the criterion of weight of cane to the percentage of sugar content will remove preoccupation with methods of cultivation promising higher yield regardless of quality. In this country where the pressure on land sets limits to the cultivation of commercial crops, progressive growth of sugarcane will have to be achieved by evenly balancing efforts for intensive cultivation and higher sugar recovery.

Apart from assimilating the advances in production methods registered in other countries, India continues to devote resources to technological research. Some of the achievements in this sphere found brief mention in the opening address of Mr. D. R. Narang, General Chairman of the Congress. The Saha-Jain process has now reached the stage of commercial trial in one factory, while the Ghosh process of electrical clarification is at present at the pilot-plant stage. The crystallisation technique has been perfected by improving circulation in vacuum-pans and separation of crystals from molasses has been made much more efficient than before with the use of automatic high-speed centrifugals. Similar improvements have been made in the technique of steam generation.

BUSINESS NOTES

COLD WAR IN COTTON!

MORE THAN a fortnight has passed since the much-agitated-for resumption of futures trading in cotton is supposed to have taken effect in Bombay, but, as yet, there has been hardly any trading worth the name. Despite the efforts of the East India Cotton Association to inject some life into the market, an obstacle was placed in the form of a case in the High Court here instituted by a member of the Association who contended that the Association had been coerced into taking the action it did, namely, declaring an emergency under by-law 52 and fixing the ceiling price for hedge contracts for February and May 1956, settlements at Rs. 700 per candy. The case was heard by the Court which rejected the contentions of the plaintiff as entirely untenable and holding that, on the facts of the case, no case had been made out for an interim injunction, dismissed the motion with costs. Owing to the uncertainty surrounding the issue during the pendency of this case in the High Court, there was virtually no trading in futures. Moreover, operators found it difficult to have any trading in the February contract at the new ceiling level of Rs. 700, as, very often, the rates unofficially quoted were higher. And confusion became worse compounded when the City was completely paralysed due to the sudden outbreak of violence, following the Government of India's decision centrally to administer the City.

Thus, due to one reason or other, the state of affairs in the cotton futures market since January 7 was such as to make a mockery of the announcement made on that day allowing the resumption of futures trading. Meanwhile, the cold war between the 'rebel' member of the East India Cotton Association and the Association showed no signs of abatement. For the plaintiff appealed against the High Court's decision dismissing his non-injunction plea. This appeal also was heard on Monday (January 24) and was promptly squashed. But then, it is reported, the party to the dispute has been seriously considering seeking the assistance of the Supreme Court to decide the issue finally. While, even legally, it would appear, the Board of the E.I.C.A. could fix the clearing rates before any decision is made by the Supreme Court, the Board seems to have obliged the dissenting member by reportedly agreeing to have the clearing date further postponed.

Since writing the above, it has come to pass that the parties to the dispute have come to a settlement and the plaintiff has withdrawn his notice of motion against the E.I.C.A. It was also decided to let the Association have the option of declaring the clearing 'at its own judgment'. However, before the Association could do anything about it, the Forward Markets Commission released post-haste a communique directing the closing out of the two contracts with effect from Wednesday (January 25) at their respective closing rates as on the previous day, that is, at Rs. 700 for the February contract and Rs. 688-8 for the May contract. This decision on the part of the Commission was solely unwarranted, inasmuch as the E.I.C.A. was in any case invested with powers to deal with such matters and, what is more, it was given the discretion by the High Court only the previous day to fix the clearing rate. Accordingly, the Commission's action was rather unpalatable to the trade and no trading has followed either in the February or in the May contract, which verily amounts to an indirect suspension of trading. While the confidence of the market is already shaken, it is feared that the squaring-up of the transactions at the levels fixed by the Commission now would result in 'discovering' some defaulters. The amount involved is, estimated at Rs. 80 lakhs. It is strongly hinted in market circles that the same party who took up cudgels

against the E.I.C.A. will now move against the Commission's directive.

DEVELOPMENT OF SERICULTURE

THE PROCEEDINGS of the last conference on the sericulture industry held recently in Mysore State only serve to underline the tardy progress made in consolidating its strength and organization. The difficulties of the small operator have been accentuated since the last year by the decline in prices and in the light of this set-back it was only to be expected that stress would be laid on measures of financial relief. Two resolutions adopted at the conference disclose the pre-occupation of sericulturists with this problem. One of the resolutions pressed for exemption of Charkha silk and cocoons from the sales tax and the other pleaded for exemption of mulberry cultivators from liability to pay agricultural income-tax.

The demand for these reliefs highlights the long-term organizational problem of the industry. Palliatives may serve as stop-gap devices offering help in current troubles, but comprehensive remedies are clearly indicated to restore vitality to this small-scale industry. Unless its organization is firmly put on a co-operative basis its chronic tendency to languish cannot be arrested. Mr. V. Nanjappa, President of the Central Silk Board and Textile Commissioner, explained at the conference how sericulturists could emulate the co-operative pattern which has imparted strength to the industry in Japan. Sericulture has a higher priority for developmental outlay than several other small-scale industries in view of its export potential and as a direct result of the special emphasis to be placed on the development of small industries in the second Plan it has claimed an enlarged share of outlay. The development schemes prepared by the Central Silk Board for the next Plan period involve expenditure of the order of Rs. 4 to 5 crores. These schemes are intended mainly to increase the yield of mulberry crop per acre by adoption of improved and scientific methods of cultivation and to reduce production costs. The establishment of a research centre has already been sanctioned at Channarayana and Rs. 22 lakhs have been provided for its requirements in the ratios of Rs. 14 lakhs by the Mysore Government and Rs. 8 lakhs by the Board. Training of young persons with a hereditary tradition of the occupation is now proceeding on an ad hoc basis by means of scholarships available at home or abroad, but the Mysore State Government's proposal to start a regular training school is likely to find acceptance with the Board. These broad lines of modernisation are calculated to revitalise the industry on a competitive basis.

MORE JUTE LOOMS UNSEALED

THE DECISION of the IJMA to unseal a second batch of 5 per cent of the total looms of its member mills was not altogether unexpected. But the announcement has come earlier than jute circles believed. It will be recalled that when the policy of releasing looms from the ban was enunciated about two weeks ago, with unsealing 2½ per cent of the total loomage, the IJMA had adopted a firm attitude and resisted all pressure, then exerted by speculative elements, to lift the ban on the 12½ per cent sealed looms at once. The factor which influenced the IJMA's decision was not that it took a very conservative view of the raw jute supply position but it deliberately chose to adopt a cautious policy.

The present decision to bring 5 per cent more looms back into production from February 20th next was taken on an appraisal of the crop position and production of member mills. The final estimate of the crop for 1955-56 has placed the jute crop at 41.4 lakh

bales in the Indian Union to which needs to be added the Mesta crop estimated approximately at 5 lakhs. This brings the combined raw fibre supply to 46.1 lakh bales. The crop in the premier producing country, Pakistan, is estimated at 56 lakh bales and considering the fact that it is exceptionally good this year, estimate will in all probability prove to be cautious and the actual volume may rise as high as 60 lakh bales. There has usually been a positive element of underestimation in Pakistan in the jute crop forecasts. The total supply in the two countries, therefore, will be 102 lakh bales and will very likely move up to 106 lakh bales. Against this should be set world consumption of the order of 100 lakh bales. Making allowance for the lags in transport facilities and middlemen's choice to regulate stock releases, the overall supply position will be smooth and without any hindrances. The 5 per cent looms which will be brought into commission in the third week of February are expected to increase monthly production by anything between 4,000 and 5,000 tons. About 33 per cent of it will be hessian and most of the balance will be absorbed by sacking. It is too soon to say when the remainder of the 5 per cent immobilised looms will be released for production.

INTERNATIONAL FINANCE CORPORATION

THE INTERNATIONAL FINANCE CORPORATION, whose charter was recently drawn up by the World Bank pursuant to the directive of the UN Social and Economic Council, will enter the field of industrial banking in the immediate future. The Corporation maintains its distinct entity which is not affected in any sense by the fact that the World Bank prepared its charter and a precondition is attached to its formation to the effect that at least thirty countries who are also members of the World Bank must accept the Corporation's membership, subscribing between themselves a minimum capital of \$75 million. Incidentally, the subscription of each member country to the Corporation's share capital is based on its subscription to the World Bank. Out of the requisite minimum number of thirty countries, nine including the US and UK, have already deposited their Instruments of Acceptance of the Corporation and thirty eight other member countries, of which India is one, have very nearly finalised the formalities for this purpose. The nine countries are to subscribe over three-quarters of the minimum capital equivalent to \$56.8 million.

The distinctive feature of the Corporation—to provide capital for private investment in underdeveloped countries without the guarantee of their governments as to payment of interest and capital—promises to make it an effective and expeditious complement to the World Bank with a special sphere of its own functions. Its primary purpose will ensure that, where a project or enterprise is sound in all respects but adequate investment capital is not available on reasonable terms, it will undertake the investment in collaboration with private enterprise in such countries. The experience and skill of its executives will be placed at the disposal of private enterprises in backward countries to import foreign capital and skilled management as well as technical assistance. This combined channel of international and domestic private capital will be directed towards promoting productive enterprises in conformity with the economic policy of the beneficiary country and there is an obligation that the Corporation will refrain from assisting any specified project to which the government of the country takes exception.

PROTECTION FOR CALCIUM CARBIDE

THE CLAIM of the calcium carbide industry for protection has come up before the Tariff Commission. Being a basic heavy chemical industry, its importance was recognised as far back as 1940, when the Government of India announced its decision to promote its growth.

Although technically there are three units in the country, the Birla Jute Manufacturing Company with an annual rated capacity of 3,300 tons is the only plant which is being operated on anything like a commercial scale. The total annual rated capacity of all the three units is 5,050 tons, while then aggregate production was only 1,605 tons in January-June, 1955. With many expansion programmes and new production schemes, especially heavy machinery manufacture under way, however, the demand for and the output of calcium carbide is likely to increase considerably in the next few years.

In view of the initial difficulties which the industry has been surmounting, it will be some time before its position as regards quality and costs is strengthened. But it should be added here that since there is no Indian standard, the quality has to be judged only by the British standard. It has been found to be rather difficult to make a product conforming in all respects to the British standard on account of the inferior quality of the available raw materials. As a result, two deficiencies are particularly noticeable in the indigenous product, namely lower gas yield and impurities of phosphorous compounds.

The factors that normally affect the cost of production are the quality and price of raw materials, namely, limestone, coke and charcoal, as also the cost of electrical energy. It has been represented that the manufacturers face several handicaps, including those in respect of cost of raw materials and electrical energy, size of operation, and freight rates. The industry has pressed a claim for an ad valorem duty of 120 per cent.

INDIAN ALUMINIUM'S NEW ISSUE

THE INDIAN ALUMINIUM COMPANY, the premier producer of aluminium in this country, has come in the capital market with its issue of additional capital of Rs. 3 crores. The technique of raising the fresh capital, though it is quite familiar in Western countries, brings to India an attractive source of investment. The new capital is to be issued in the form of convertible notes carrying a fixed rate of interest with an option to the holder to get them converted into ordinary shares of the company. The investor is thus ensured of a sound investment with a fixed return and he retains the choice to invest in shares either for higher return in the shape of dividend or for capital appreciation.

This new issue of Rs. 3 crores will go to provide part of the additional funds required for the company's aluminium smelter to be set up at Hirakud in Orissa with an annual production capacity of 10,000 tons. The company's total capacity will thus be raised by 200 per cent to 15,000 tons per year. The Canadian majority shareholder of the company, Aluminium Limited, has agreed in principle to take half of the new issue and the other half will be offered to the company's other shareholders and the Indian public. The new smelter is expected to be put into commission in 1958.

BALMER LAWRIE AND CO., LTD.

SOME PUBLICITY has recently been given to the change in ownership of a substantial block of shares in Balmer Lawrie & Co., Ltd. It has been correctly reported that these shares have been sold by Alex Lawrie & Co., Ltd., to the Indo-Burma Petroleum Co., Ltd., and that they represent 25 per cent of the share capital or a little less than half Alex Lawrie's previous holding. It is, however, incorrect to say, as certain papers have done, that IBP have been given the option to purchase the balance of Alex Lawrie's holding in five years' time. No such option exists and the only condition of sale is the no unusual one in a transaction of this kind which provides that neither party will sell either the whole or part of their holding in the Company without giving the other the option to purchase. There would thus appear to be no ground for the belief that a change in the controlling interest of Balmer Lawrie's after five years is likely to take place.

COMPANY AFFAIRS

THE BANK OF INDIA LTD.

The Profit of the Bank of India Limited for the year ended December 31, 1955, subject to audit, including the sum of Rs. 9,10,851 brought forward amounts to		Rs. 94,01,630
Provision for Income-Tax and Super-Tax will absorb	"	25,00,000
Interim dividend at the rate of 6 per cent free of Income-Tax for the half-year ended June 30, 1955, absorbed	"	15,00,000
The balance available for distribution is Rs. 54,01,630		
The Directors propose to pay a final dividend at the rate of 10 per cent free of Income-Tax making 16 per cent for the year	"	25,00,000
To place to the Bank's Landed Property A/C	"	3,00,000
And to Carry Forward, subject to the payment of a bonus to the Staff	"	26,01,630
		Rs. 95,01,630

TATA CHEMICALS LTD.

The Sixteenth Annual Report of the Directors of the Company together with the statement of accounts for the year ended June 30, 1955 shows that		
	Previous Year	
The Profit for the year, after providing for Managing Agents' Commission and depreciation, amounts to	Rs. 13,55,026	Rs. 12,28,181
Adding last year's carry forward	57,571	29,390
The total profit available for disposal amounts to	14,12,597	12,57,571
From which the Directors have made the following appropriations:		
To provision for Bad and Doubtful Debts	5,000	Nil
To Dividend Reserve	13,50,000	12,00,000
Leaving	Rs. 57,597	Rs. 57,571

The Directors recommend the following dividend for the year ended June 30, 1955, to be paid from the Dividend reserve:

A Dividend on Preference Shares at 5 per cent for the period 1-1-1951 to 30-6-1955 Rs. 13,49,325

Although both production and sales were substantially higher, the profits for the year under review, subject to depreciation, were lower by Rs. 5½ lakhs than in the previous year. This was mainly due to the reduction of Rs. 50 per ton which had to be made in November last year in the prices of soda ash and caustic soda. This affected revenues for the year by approximately Rs. 15 lakhs. An additional factor was the necessity, caused by the heavy drop in salt production in 1953-54 to purchase substantial quantities of salt from the market in order to ensure uninterrupted operation of the soda ash plant at higher outputs.

The output of soda ash averaged 123 tons per day as compared to 107 tons in the previous year. The rated capacity of 140 tons per day was achieved and even exceeded for limited periods on several occasions.

The production of sodium bicarbonate increased by 60 per cent and a proposal to raise the rated capacity of this plant by 50 per cent has been sanctioned by Government.

The output of caustic soda was maintained at substantially the same level as in the previous year. Sales had to be continued at uneconomic prices, particularly in respect of caustic soda produced by the conversion

of soda ash which accounts for the bulk of the manufacture of the product of this Company.

In the field of bromides, covered by such products as potassium bromide, sodium bromide and ammonium bromide, which have uses in pharmacy and photography, the total output showed a rise of 46 per cent.

A detailed expansion programme has been formulated and approved by the Board and is estimated to cost approximately Rs. 224 lakhs spread over the next four or five years.

Labour-management relations continued to be satisfactory during the year. After prolonged negotiations, a new agreement was reached with the Mithapur Kamgar Union effective retrospectively from July 1, 1954, covering revision of dearness allowances, holidays, sick leave and casual leave at an estimated additional total cost of Rs. 2.2 lakhs per year.

THE INDIAN OVERSEAS BANK LTD.,

The net profit of the Indian Overseas Bank Ltd., subject to audit, for the year ended December 31, 1955, after providing for contingencies and expenses, amounts to Rs. 18,71,564, including the sum of Rs. 2,15,839 brought forward from the previous year's account.

From this sum the Directors have made the following allocations:

Provision for taxation	Rs. 7,50,000
Transfer to Reserve Fund	" 4,00,000
Provision for bonus to staff	" 1,25,000
The Directors have proposed to recommend payment of dividend of 7½ per cent (free of tax)	
To carry forward	" 3,68,265
	" 2,28,299
Rs. 18,71,564	

BALMADIES PLANTATIONS LTD.

The Directors' Report and the Twelfth Audited Balance Sheet and Profit and Loss Account of the Company for the year ended May 31, 1955, shows that The Company's working for the period under

review resulted in a profit of Rs. 74,474 To this has been added a sum of " 34,760

Being the balance brought forward making a total of	" 82,234
The Directors have appropriated to Reserve Fund	" 25,000
Leaving a balance of	" 57,234
Which they recommend be appropriated as follows:	
To pay a dividend of 6 per cent per annum Tax Free on the Preference Shares for the year ended May 31, 1955	" 4,500
To pay a dividend of 15 per cent on the Ordinary Shares	" 30,000
Leaving a balance of	Rs. 22,734

To be carried forward to next year.

The crop harvested and cured during the year under review was 51.35 tons. The last despatch to the curers which will have post-monsoon curing is estimated at 16 cwts. and is shown as stock in the Balance Sheet. This year's crop has been valued at Rs. 2-4 per point, but the Company expects to realise more.

The total crop of 1,044 cwts., including the stock, was harvested at a cost of Rs. 148-3-7 per cwt., a relatively high average due to the shortage of crop. The total expenditure comprises cost of heavy manuring and frequent spray, increase in the wages of the labourers due to the interim award of the Tribunal, labourers' holidays with pay and sickness benefit.

COMMODITY NEWS AND NOTES

NORTH INDIAN TEA OUTPUT

While tea production in North India increased from 513,560,000 lbs. in 1954 to 533,220,000 lbs. last year, exports declined from 361,940,000 to 289,310,000 lbs.

With a few exceptions, exports to all destinations recorded a decline last year. Out of a fall of 72,630,000 lbs. in total exports, the UK alone accounted for 60,370,000 lbs. and imported only 198,300,000 lbs. in the previous year. Shipments to the USA and Canada fell from 23,650,000 lbs. and 12,580,000 lbs. in 1954 to 17,260,000 lbs. and 10,930,000 lbs. respectively. Exports to the Irish Republic at 17,360,000 lbs. showed a fall of 4,220,000 lbs. Egypt was one of the few countries which increased its offtake last year to 10,100,000 lbs. from 6,220,000 lbs. in 1954. Exports to Iran at 2,920,000 lbs. and those to South America at 1,220,000 lbs. were also slightly higher. The fall in exports, coupled with rising production, resulted in a large accumulation of tea in Calcutta totalling 985,155 chests at the end of December, 1955, compared with 568,353 chests at the end of the previous year. At the end of last year, nearly 24,000,000 lbs. less leaf tea were sold on the Calcutta market compared with 1954.

RESTRICTION PLAN FOR NORTH INDIA TEA

The tea regulation scheme proposed by the Calcutta Tea Regulation Committee to control the 1956 crop is likely to be like the 1953 regulation scheme, though no details are yet known.

The previous scheme imposed a percentage cut on each garden on the basis of the best crop of the previous four years. The decision to recommend restriction follows the present slump in Calcutta auction prices, increased stocks in Calcutta warehouses, and the failure to secure a new International Tea Agreement owing to the refusal of Ceylon to restrict output. It is believed that Ceylon may now be more willing but the situation in Calcutta is now so serious that it is felt that measures can no longer be delayed. Total Indian production in 1955 exceeded expectations by about 30 million lbs. largely as a result of favourable weather conditions in Assam. It is now estimated that world over production was about 50 million lbs. Auction prices in Calcutta are now barely covering the cost of production and in the case of some lower quality grades are well below cost production.

COFFEE EXPORT PROMOTION

Possibilities of setting up an export promotion council for Indian Coffee and a system of open auctions on the lines of the tea auctions which will enable foreign importers or their agents to participate directly in the bid at the auctions and other suitable measures to stimulate exports of coffee are being examined by the Commerce Ministry. Present Exports are regulated by closed bids. The Indian Coffee Board sells to Indian exporters in the first instance, who in turn sell to foreign importers. It is also mentioned that the Government might revive the Indian Coffee Market Expansion Board in London for expanding sales in Europe and the U.K. and also introduce quality standardization by liquoring tests. These proposals follow the Indian Coffee Board's draft plan for trebling the present production of coffee to 68,000 tons. The draft plan envisages achievement of the target by 1970.

WORLD PRODUCTION OF RUBBER

While world production of natural rubber fell to 160,000 tons in November, 1955 from 167,500 tons in the previous month, consumption remained unchanged at 162,500 tons, according to the latest figures published by the International Rubber Study group. Over the first 11 months of 1955, world production at 1,687,500

tons exceeded consumption in the same period by 20,000 tons. There was a further increase of synthetic rubber production in November to 100,000 tons, against 97,500 tons in October and 93,703 tons in September. November consumption was estimated at 97,500 tons. Production of synthetic rubber in the first 11 months of the year amounted to 985,000 tons, exceeding consumption by 20,000 tons.

Over 1955 as a whole, imports into Russia and China are respectively put at 20,175 tons and 30,750 tons.

PEPPER EXPORT

Export inquiry for black pepper during the first four months of 1956 is expected to show a sizable increase particularly from U.S.A. and Russia. There is already evidence of increased U.S.A. buying. Shipments to U.S.A. during December last year were in the neighbourhood of 1,000 tons against a mere 200 tons in November. Russia is said to have bought 1,000 tons during November.

Another favourable factor was the general belief among exporters that Indonesia and Sarawak—India's main competitors in the overseas markets—would not be able to offer severe competition during the first four months of 1956 owing to their very low stock position. The present quiet tone in the internal markets was attributed to increased arrivals of the new crop and offtake also seems to be very good. Low prices and the absence of export duty might as well act as a fresh incentive to exports.

WORLD RICE OUTPUT

Early reports from the large rice-producing countries of Asia suggest that production in 1955-56 will equal that of the previous season. In 1954-55 the world rice harvests (excluding the USSR) amounted to some 159.4 million tons, against 166.8 million in the season earlier. World exports, however, during the first nine months of 1955 were somewhat above previous levels. Shipments from Thailand, for instance, showed a recovery, while among Commonwealth countries consignments from India, Pakistan, British Guiana and Australia were also higher, exports from the US and Italy on the other hand, were smaller than in the previous year.

The first official forecast of the rice crop in India—after China the world's second largest producer—puts the acreage there at 5 per cent more than in the 1954-55 season. In Pakistan the size of the crop is now expected to be roughly equal to the previous one while in Indonesia, on the other hand, preliminary indications suggest a reduced output because of the flooding recently in Sumatra and more recently, in Java. The official estimate of Japanese paddy production has, however, been revised upwards to 14.5 million tons, as against an actual outturn of 11.2 million tons for 1954-55. In Burma the crop is unofficially reported to equal that of the previous season and to include a higher proportion of better-quality rice, while the harvest in Thailand is also expected to be a good one. The second crop in Formosa has evidently been excellent and production in the Philippines is officially estimated to be larger than 1954-55. Drought is likely to limit the exportable surplus of South Viet-Nam although some expansion is recorded in Communist North Viet-Nam. The increase in Chinese production during 1955 is stated to have been in the neighbourhood of 5 million tons—output in the 1954-55 season had been 45 million tons, compared with the pre-war average of 49 million tons.

The Break of Confidence

YESTERDAY, Thursday, February 2, the great barometers of the Bombay and Calcutta Stock Exchanges registered their lowest figures for the last six months. Within a matter of a month Ordinaries have dropped from about Rs. 270 to Rs. 225; in a slightly longer period Indian Iron dropped from over Rs. 43 to Rs. 32. Happily the Stock Exchanges, both in Bombay and Calcutta, the barometers are not at the present performing their barometric function; if all stock prices had fallen in the same proportion an acute stock exchange crisis would have descended on the country. Even as it is, settlement difficulties in Calcutta and in Bombay have meant speculation and adjustment to prevent the full

impact of what might be called free market conditions. It is as well for private enterprise enthusiasts to recognise that, even in its own practice, 'free' markets have their limits. But there is a greater lesson to be learnt at the present time in the public sector; it is that the public and private sectors are, in truth, members of each other.

It is certainly true that at its height near the peak the recent stock exchange boom was unhealthy. Excessive height, like pride, is destined for a fall. But there is no question that the rapidity of the fall has been mostly a measure not of basic technical unhealthiness but of the

break in confidence which hasty government utterances and one particularly ill-timed government act—the nationalisation of life insurance a fortnight ago—have cast upon the country. It is quite usual for the authorities in New Delhi, viewing the country's misfortunes from Olympian heights, to gather to themselves their ideological robes and, gazing fixedly at the long-term horizon, to ignore all the short-period struggles in the market-place. This righteous long-sightedness would have some justification were it not that the Government of India is likely to be the major loser in the departure of the confidence from the country's capital markets. It is to be remembered that the loan figure in the second Five-Year Plan is Rs. 1,200 crores, much more than the organised private sector needs for all its plans. If the current situation in the stock exchanges is not corrected, it spells disaster for the loan targets for the Plan, and, as a consequence, spells a danger of uncontrollable inflation should the Government persist in investment at the scheduled figure even if its loan programme should fail. Because of the deadly chain reaction in the financial world, the Government of India cannot hold itself aloof, as it often deems it can do, from the economic consequences of its own actions. Thus the public sector has as great a stake in the private sector as the private sector has in the public sector. It is physically impossible for either sector to feed itself, in the long run, on the misfortunes of the other.

One would have thought that, within the limits in which this doctrine holds, it was so elementary that the Government of India would not have chosen to inflict such wanton disorder on the financial markets of the country as it has in fact done. Professors of economics have not been wanting in the last two months who have proclaimed their belief in magical doctrines such as those on ceilings of incomes and the all-pervasive power of nationalisation, the first the purveyor of social justice, the second the *deus-ex-machina* for making public resources. The professors are responsible to no one for their views; theirs can be a happy, and irresponsible position. But for the Government to listen to such mystic simplifications not respecting the mundane consequences, makes it heavily responsible for the debacle that has been produced. It will not matter much if only a few individuals are ruined, and some fierce competition kills those unlucky enough to be caught in its coils. Private enterprise is supposed to provide by this struggle unto death for the survival of the fittest. What is dangerous is the manner in which the break of confidence is now endangering the future performance of the whole private sector in the Plan, and the danger it is proclaiming to the spacious resources hopes of the public sector.

This is a stage at which the Finance Minister of India, who has been *hors de combat* for some days in the last week and has only partially recovered from recent political and economic shock-treatment, needs to awaken to current realities. There is no doubt that much that has happened in the last month has been calculated to damp a sensitive spirit and to scar a scholarly mind. But just as anger and pride are bad counsellors, withdrawal from the market-place, such as alone can explain reckless action of the Finance Ministry in the last month, can lead to grave miscalculations. The timing of the ordi-

nance on the nationalisation of life insurance is one of the gravest blunders which the Finance Minister of India has made; an initial error has multiplied itself many times by choosing an inauspicious hour for its appearance.

The disease certainly goes above the Finance Ministry. It has become literally true that in the Central Cabinet today there is not a single Minister who is fully conversant with the extent of feeling in the private market-place against the cold and calculating moves which have been made in the Planning Commission and elsewhere to enlarge the public sector at the expense of private individuals. Some of these moves are associated with Professor P. C. Mahalanobis, who is believed to be a sinister figure affecting the Prime Minister in the romantic, if discredited, methods of backstairs influence. It may well be that Prof. Mahalanobis' influence has been exaggerated. But if it is not, it shows the extent to which power in India can pass from regular civil servants who function with set responsibilities to those who can say and do as they like without any set of rules of conduct or fixed responsibilities. If Prof. Mahalanobis' influence on policies is great, it is vital that his official position should be defined.

In the last analysis India possesses in a marked degree a defence against all these misjudgments of economic events and mistakes on the choice of men who would make of human events only mathematical equations. There is a compulsion in events which this week has operated in the truly grand manner to checkmate not all ideological thinking in its rarefied form. This has been in the sphere of coal. After many months of fruitless waste, the target for the public sector in coal has been reduced from 15 million to 9 million tons. This is a triumph for good sense. But why was good sense so long in coming in this case? The answer is not to be found in the difficulties of this decision. It is to be found very largely in the obstinacy of the hold which ideology exercises in places of power and influence.

There is no greater hindrance to the right ideas than the wrong ones. In that sense, the greatest of all battles are in the minds of men. But the test of rightness and righteousness can never be found in the academic forum which the Planning Commission has now become. Every theory in the social sciences, as in the physical sciences, needs to be tested in the real world. It is a comment on the theories of the professors that in their first contact with reality—namely coal—they have broken down.

It is sincerely to be hoped that the wise decision on coal is a herald at last that in practical affairs practical men—civil servants and business men—will come into their appropriate place. There is no guarantee that the practical men will always be right. But at least they have a feeling for the real world which is important if plans are to move from thoughts to deeds. The professors have had their say; let them now withdraw to their ivory towers. There is plenty of thinking to be done there, while the plans for action are being prepared.

The Role of ECAFE

THE annual session of the Economic Commission for Asia and the Far East, currently being held at Bangalore, is an appropriate occasion for an assessment of the part it has played in the formulation of programmes of economic reconstruction and expansion in this region. There is hardly any divergence on the effectiveness of its services during the last eight years since its inception and the question is posed why it has been unable to make the anticipated impact on the solution of the problems of this region to raise their levels of economic activities. Any comparison of the performance of ECAFE with the spectacular achievements demonstrated by some other organisations of the United Nations armed with financial powers like the World Bank would be not only out of place but totally misconceived. But organisations, not so endowed with solid resources which can be aligned with ECAFE, have not been prevented by this handicap from rendering assistance of immediate value in their special spheres. The major shortcoming of ECAFE has been its failure to invest its work with any concrete purpose.

The full measure of responsibility for this drawback cannot, on any balanced appraisal, be placed on the Commission. Its initial lack of resources in every single sphere of work needs to be appreciated. Unlike the Economic Commission for Europe, which enjoyed the benefit of a sound organizational apparatus, partly inherited from the United Nations' predecessor organization and largely built on a comprehensive and sound basis by reason of command over rich resources of statistical and factual data readily available in economically progressive countries, ECAFE had to grope its way in an area where these aids could be obtained only on a scanty scale. The difficulties in procuring worth while data during the first few years of ECAFE's existence were complicated by the fact that this period synchronised with a period of unsettled conditions over the whole of the region and the fact that differences of degree in dislocation existed in individual countries did not alter the situation. In the wake of their newly acquired independence, the preoccupation of these countries was inevitably diverted to the challenge of political and administrative consolidation. Economic reconstruction from the ravages of war and of subsequent calamities like the partition of the Indian sub-continent or Communist subversion in most other areas was relegated to next priority. Even now when the immediate post-independence transition has been virtually over, ECAFE continues to receive a raw deal on this basic resource.

These obstacles were not altogether unanticipated, and it was one major purpose, however difficult to achieve, assigned to ECAFE to assist the countries of South and South-East Asia in their struggle for economic reconstruction. If it has not been able to respond to the pressure of this obligation and to function effectively as an adviser and guide in specific problems of economic planning, the explanation must be sought, besides these limitations, in the pattern which it has evolved for the technique of its work. Eight years is not an inadequate period for an organisation, deriving its sanction and status from the United Nations, to register its impression on the programmes of economic rehabilitation and development undertaken by its member countries. The in-

ability to make that impression is due mainly to the absence of a dynamic policy to adjust its technique of operation to the fast changing needs of the countries of the region.

Collection of information and its dissemination must continue to form an integral part of ECAFE's work and almost total absorption with this function was quite understandable in the first few years. But the countries of the region have transcended the phase of post-war reconstruction. They have already embarked on programmes of planned development of their economies, and while there are differences of scales on which they have actually resorted to policies of planned development, it is significant that Nepal and Afghanistan are the latest additions to this alignment. Reflecting this pattern of economic activity in the region, a change in the coverage and direction of ECAFE's functions was obviously essential. The complexion of its work indicates that it is still operating, by and large, as a clearing house of information. Its scope has not been entirely narrowed down to this type of activity and its annual surveys as also its publications on individual topics disclose its role in research. This research, however, largely amounts to post-facto analysis of events and developments in the region, mostly incorporated in the official reports of the countries, and when it is routed back to them, efflux of time and intervening changes in economic conditions detract from its use. Whatever the nature of its work, whether it is collection of information or research in specific problems, the conclusion is hard to escape that it is usually removed from the live requirements of immediate urgency in the region.

The present is a crucial phase in the economic development of Asian countries when advice and guidance would be of value to them in tackling urgent issues of mobilising internal resources, formulating manpower budgets with special regard to technical personnel, procuring external capital and technical know-how, and, above all, in preparing blueprints for specific projects. No operational responsibility can be placed on ECAFE in these spheres, but it is certainly within its competence to offer its services to assist individual countries on their requests. If the numerous publications of the Commission on iron and steel or a report of experts on the lignite industry in Australia, leaves the member countries unimpressed and they turn elsewhere for advice, the reason is not wholly that they must turn to those who have intimate knowledge and experience of the projects, but the explanation is offered in part at least by the academic character of these researches. Contrary to the prevailing belief, the constitution of ECAFE does not cramp its initiative. It empowers the Commission to sponsor investigations into problems of importance to the region and in any event it does not define its functions in a more restrictive manner than do the constitutions of its counterparts in Europe and Latin America. The present requirements of South and South-East Asian countries are so varied and pressing that parallel assistance from a number of UN and regional organisations cannot exhaust the potentialities of ECAFE's good offices. If the Marshall Plan with its massive resources still left operating space for ECE, the Colombo Plan with its marginal utility cannot rob ECAFE of its serviceability.

Guest Editorial

Wanted: Better Blood Banks

THE remarkable success which has attended voluntary work in the last year in Bombay to obtain blood for transfusion highlights two remarkable facts which need all-India emphasis. The first of these is that, given leadership of the high quality which has been shown in Bombay—partly, it must be admitted, through imaginative European guidance—it is possible to bring home the difficult message of blood-giving to a large number of people in a remarkably short time. The second, as unsatisfactory as the first is agreeable, is the extent to which recent investigations have shown that blood supplies are short in every Blood Bank in India. The country seems quite unaware of the extent of suffering, and even death, which results from the absence of adequate supplies of the right blood at the right times.

Blood transfusions save life or speed up recovery in many serious cases—accidents and maternity cases where much blood has been lost, serious major operations, particularly chest surgery, burn cases and cases of acute anaemia. The first attempts at blood transfusion were made in France in the 17th century when lamb's blood was injected by means of a quill into human beings, the patients dying in every case. It was not until the beginning of the 19th century that successful transfusions of blood from one human being to another were achieved. It was nearly a century before it was discovered why the blood of one human being could not always be given to another with safety. The reason is that human beings are divided into four different groups and the blood of one group is "incompatible" when mixed with the blood of another group; that is to say, the bloods clot when they meet and cause extremely severe reactions.

The four groups are known as ABI, AII, BIII, and OIV. This incompatibility is true of three of the four groups. OIV is a special group and is known as the Universal Donor; the blood can be given with safety to all the other groups. Indeed, in France, before the war, blood was only taken for transfusion from the OIV group. There is also the Rhesus Factor, discovered in 1940 and named after experiments made on rhesus monkeys. In a very small number of cases the blood groups of the mother and her new-born child are incompatible, causing early death of the child or permanent damage should it survive. This condition can now be alleviated by an early transfusion from a donor of the appropriate blood group. The mother's life may also be saved by a blood transfusion of her own group with the additional characteristic of Rhesus Negative.

In the highly developed countries of the West, there is no difficulty in getting blood from donors in sufficient quantities for all the needs of the hospitals. But to maintain this service a continuous campaign is carried on through the press, over the wireless and by appeals of various kinds. For several months last year all letters from the London area had the legend "Blood Donors are urgently needed" combined with the postmark.

Up to the end of 1954, voluntary blood donors to the National Blood Transfusion Service in England and Wales numbered 540,000, not including donors from the armed forces. A further 25 per cent on the effective donor panel was considered necessary to meet the probable growth in demand. During 1954 the number of blood donations was 700,000. Long service badges are presented to donors with more than 50 donations to their credit. The blood is kept in Regional Blood Banks and is issued to Area Blood Banks which are maintained at general hospitals in each county. Each principal hospital holds a supply not only for its own needs but also for smaller hospitals, nursing homes, etc.

In India there is much quite understandable fear and ignorance connected with giving blood in hospitals. When the relations of a patient are approached, the answer is too often, "if he is destined to die, then let him die!" In spite of this all too prevalent attitude, some hospitals are able to raise as much as 50 per cent of their requirements from friends and relatives of patients. The remaining 50 per cent is bought from professional donors who are in most cases the poorest members of the community whose blood is of inferior quality and is frequently infected.

In India the ratio of potentially civic-minded persons is as high as elsewhere. Six months ago a group of voluntary workers attached to one of Bombay's hospitals started a voluntary blood transfusion service. A documentary film "Blood Bank" is being shown to groups of office workers, a short talk is given and all questions are answered. The response has been so encouraging that the blood transfusion service is now able to supply four of Bombay's leading hospitals with their full requirements free of charge. In addition to this, a stock of "plasma" is being gradually built up. Plasma is made from that part of fresh blood called serum, which is transformed into a powder by a long and complicated process. This plasma can be stored indefinitely and used regardless of the blood group of the donor or the recipient. It is an effective substitute for fresh blood.

A great deal of care goes into the reception of the voluntary donors and the "blood-letting"—a matter of ten minutes and no more pain than what a small injection causes. For the service to be successful, donors must be persuaded to give their blood not once, but regularly, twice, a year perhaps. Of the 700 donors who volunteered in Bombay before the end of 1955, only three were discovered to have infected blood and a very small number had blood of inferior quality. Although the voluntary donors are offered free blood transfusion for themselves and their families should the need arise, it can be said with certainty that this is not the compelling motive. They regard it as a great privilege to save human life. Even otherwise regarded, there is the opportunity for the individual to make a socio-economic contribution to the improvement of medical facilities. It is time official agencies here took a leaf out of Bombay's book. Will not the Social Welfare Board make blood giving a large plank in its activities?

THE WEEK'S NOTES

EISENHOWER REJECTS BULGANIN'S PROPOSAL

AS EXPECTED President Eisenhower has rejected Marshal Bulganin's proposal for a treaty of friendship and co-operation between the United States and the Soviet Union. As a means of reducing international tension, which was the Soviet Premier's ultimate aim, such a non-aggression pact can if at all come only as the culmination of a series of steps designed to solve all outstanding problems between the two countries. Deeds, and not words, spoken or written, can lead to friendly collaboration between States, and as far as deeds are concerned, even the way to good deeds is being closed by Soviet spokesmen as soon as one becomes discernible. Mr. Eisenhower, in his reply to Marshal Bulganin, pointed out that the provisions of the treaty proposed by the Soviet Premier were already covered in the U.N. Charter, and it was in spite of it that there was tension in the world now. One more treaty embodying the same spirit can serve no purpose.

In fact, the assumption of the Soviet Premier that tension can be reduced by a direct pact between the U.S. and the U.S.S.R., over the heads of all other nations, is itself open to serious criticism. In none of the issues which divide the world into two camps can the U.S.—which divide the world into two camps can the U.S.—be said to be directly involved. Nor is the U.S. in immediate fear of a direct attack from the Soviet Union. It is indirect aggression which is more insidious and more difficult to counter. The U.S. obviously cannot pledge itself to be a mere onlooker in case such aggression occurs merely because it does not constitute aggression against her own territories. All the other suggestions for promoting greater mutual understanding made by Marshal Bulganin can be implemented even in the absence of a direct treaty. The scope of these measures must be extended to include all those nations which are in one way or another involved in the Cold War.

GERMANY TO STAY "DIVIDED"?

THE PRAGUE conference of the Warsaw Treaty Powers of Eastern Europe has met and dispersed after taking a step which may have far-reaching repercussions on the character of the most distressing problem separating the free world and the Soviet bloc. In deciding to incorporate East Germany's armed forces in the unified command set up under the pact, the conference has reversed a decision it took only eight months ago. When the treaty was signed in May last, East Germany was admitted as a member, but it was decided not to place her forces under the unified command, a decision which looked like keeping the door open for German unification at any time. What has happened since then to justify the change is not clear. Though the Geneva talks have ended in disappointment, this latest step is only a retaliation by those who were vehement in the denunciation of West Germany's accession to NATO. The Prague decision makes it even more difficult to undo the division of Germany. Mr. Molotov, the Soviet Foreign Minister, significantly enough, declared that it is essential to recognise that there are now two German States, revealing clearly that there has been little sincerity on the part of the Soviet Union in making proposals for unification talks from time to time.

It is becoming increasingly clear that the Soviet Union is not interested in the unification of Germany if it means that unified Germany, in which the western half has a three to one preponderance, will join the West. Viewed as a military problem, the accession of Germany to the West is alarming to Russia; but, once it is realised that the solution of this as of other problems is only a means to peace, such a prospect need cause no alarm. That the Soviet Union is still very far from this realisation can be seen from the fact that,

even while establishing a unified command, it continues to assail other similar groupings as aggressive blocs.

CHINA'S TWELVE-YEAR PLAN

THE AVAILABLE details of China's twelve-year plan for agriculture make interesting reading. The Report on the Five-Year Plan referred last year to the excessive lag in agriculture and the reason for preparing a 12-year plan at this stage is probably to promise achievements which have not been possible hitherto. Higher targets can be set when longer periods are involved. Top priority is assigned to collectivisation since the final formation of collective farms in the "advanced" areas is envisaged by 1957 and the entire work of organising such farms is scheduled to be completed by the next year in the whole of the country. Targets for agriculture are given as so much increase in output per acre, planned rises ranging from doubling yields—to 5,400 pounds an acre—in South China to increases of around 150 per cent in North and Central China. The total area cultivated by State farms is to be increased from 2.2 million acres to 23 million acres. Floods and drought are to be made things of the past. These may be within the range of achievement but higher productivity in a country where it is already high may be difficult, without chemical fertilizers which China cannot afford to produce or to import.

The plan also envisages the wiping out of the "four evils"—rats, sparrows, flies and mosquitoes—abolition of black-death, malaria, small-pox, venereal diseases and animal diseases such as rinderpest and foot-and-mouth disease. Compulsory education is to be introduced within seven to twelve years and illiteracy eradicated. Trained agricultural workers numbering five to six million are to be turned out every year to meet the personnel requirements of the expanding co-operative economy.

Two outstanding features of the plan are that it orders co-operatives to pay equal pay for equal work and makes it obligatory on every able-bodied person in the rural areas to work for a certain number of days in a year—a sort of compulsory labour. Men in the countryside have to put in at least 250 days' work and women 120 days' labour every year. This is the Communist way of solving the unemployment problem. The plan proposes that unemployment in the cities is to be solved in five to seven years, thus admitting the existence of a severe urban unemployment problem.

NEPAL'S NEW MINISTRY

THE FORMATION of a Ministry headed by Mr. Tanka Prasad Acharya, the Praja Parishad leader, with three other partymen of his and three independents ends an interregnum in Nepali politics, but it has surely not solved the basic issues in dispute. The Praja Parishad has formed a Ministry ignoring three other parties, with two of which it was until the other day trying to form a coalition Ministry. The Nepali Congress of Mr. B. P. Koirala and the Nepali National Congress of Mr. Regmi cannot, therefore, be expected to be over-friendly towards the new Government. Nor can it be expected that Dr. K. I. Singh and his United Democratic Party will extend a hand of co-operation. In these circumstances how Mr. Tanka Prasad is going to make a success of his first venture in administration remains uncertain.

Nepal's problems are many. Economic progress is an urgent necessity; the country has been almost at a standstill though it is four years since the rule of the Ranas was ended. But the struggle for ending the despotism of the Ranas has not been followed by popular rule. The country has no constitution and the relationship between the King and the Ministry is

undefined. The failure of the earlier negotiations for a coalition Ministry is ascribed to the insistence of the King that he cannot have a Prime Minister, which will mean the end of his present influence. But Mr. Tanka Prasad has now become Prime Minister and it is to be hoped he will strive to establish democratic precedents and not be too overawed by the King's directives on policy matters, however well-intentioned the present King may be. Otherwise the Praja Parishad's claim to be a popular party will be suspect. The new Premier's aims should be to put over to the people his programme and to arrange for early elections to a Constituent Assembly which will frame a constitution and establish responsible government.

EXODUS FROM EAST BENGAL

OF LATE the exodus of minorities from East Pakistan has been steadily rising. Mr. Mehr Chand Khanna, India's Rehabilitation Minister, disclosed the other day that the number of migrants has gone up from 121,000 in 1954 to 242,000 in 1955, an increase of a hundred per cent. What is even worse, the number of Hindus applying to the Indian Deputy High Commissioner's office in Dacca for migration certificates is increasing every month. To say the least, this is an alarming state of affairs, the reasons for which are not far to seek. One of them may be the economic conditions in East Bengal which are reported to be extremely bad. But this certainly cannot explain the large-scale increase in exodus. However, it is not possible to agree with Mr. Ghazanfar Ali Khan, the Pakistani High Commissioner in India, that the main reason is that migration certificates are being freely granted by Indian officials in Dacca. It is difficult to believe that people will leave their hearths and homes for anything but the most pressing reasons. The more immediate cause is probably the unchanging political climate in the country. With the publication of the Constitution Bill, it is likely that the demand for migration certificates would have gone up in January even more than it did between November and December last—from 9,609 to 11,843.

It is not surprising that the Pakistan Government is in no hurry to respond to Mr. Khanna's request for urgent high-level discussions, for the migration of minorities will create a problem for India, while solving or reducing the magnitude of Pakistan's most difficult and pressing problem. But it is to be hoped that this intransigence is not wanton, for continuance of migration on a bigger scale will be a sad reflection on the character of the Constitution Pakistan is to have. Political discrimination, like the deteriorating economic conditions, can be ended only by resolute action from above. The minorities will like to have the assurance that, even though at the level of the common people there may not be that perfect respect for their rights which is the ideal, there is no official support, direct or indirect, for any discrimination. The attitude of the majority community will undergo a gradual change once they realise that the people of minority communities are, like themselves, citizens with the same rights and duties. It is for the Pakistan Government to give a start to this psychological change.

EDUCATION AND THE SECOND PLAN

THE UNION Education Minister's address at the 23rd meeting of the Central Advisory Board of Education has revealed the sharp differences that exist between the Ministry and the Planning Commission over the question of allocations for education in the second Five-Year Plan. While the first estimate of Rs. 1,000 crores was out of all proportion to the available resources, and doubts could be expressed whether the amount could be utilised properly, the Planning Commission has not found it possible to provide more than Rs. 320 crores against the Ministry's revised estimates of Rs. 526 crores for education in the draft second Five-Year Plan, comprising Rs. 225 crores in the States'

plans and Rs. 95 crores in the Central Plan. Though the present allocation is nearly double of Rs. 169 crores provided for education in the first Five-Year Plan, as percentage of the total outlay it is only 6.7 as against 7.2 of the first Plan.

It has been admitted that the country has made no significant advance in education during the eight years of her independence. The failure of the first Plan to achieve satisfactory progress in this field has been attributed to the lack of co-ordination between the Plans of the Centre and the States and the incapacity of some of the States to raise their own resources in order to entitle themselves to matching assistance from the Centre. The net result has been that the gap in their education levels has tended to widen. The clause relating to education in the Constitution laying down that the State is responsible to provide, by 1960, free and compulsory education to all children up to the age of 14, is still expression of a hope, seriously limited by the available resources of finance and teaching staff. Further, as basic education has been accepted as the pattern of national education, it will need all schools imparting traditional education to be converted into basic education institutions to avoid any complexities to the student in higher studies. These and other related problems have to be tackled vigorously.

UNEMPLOYMENT AMONG THE EDUCATED

THE PLANNING COMMISSION'S estimate that at the end of the second Five-Year Plan there will be approximately 560,000 educated persons in search of employment—a little more than the present number—should cause a re-examination of the "Education Plan". What is even more alarming, this figure does not appear to exclude technical people like engineers. It is not clear whether the estimate has been arrived at after taking into account the additional facilities for high school and collegiate education which will become available during the next five years or not. In either case, it is clear that there has been no co-ordination between the Ministries whose schemes will entail demands on the services of technical, administrative and clerical personnel and the Education Ministry's plans. It must be conceded that complete co-ordination will be impossible to achieve in any event. Geographical and other social factors making for immobility of labour will make it difficult to equate, regionwise—at any rate in the lower cadres—the number of people who will be every year coming into the employment market and the number who will be required for each type of work. But certainly there is no reason why, even after these facts have been brought to light, the Government should provide for increasing educational facilities all round immediately—training people for whom jobs cannot be provided or can be provided only by displacing others already in employment.

Apart from this immediate step, some measures will have to be taken if it is not to rear its head again and again. The suggestions made by the Planning Commission's Study Group for improvement in the present system of recruitment for Government posts, provision of hostels in the big cities and establishment of university employment bureaux can all only help in filling up vacancies quickly but cannot increase the number of jobs available. While there need not be any slackening in regard to elementary education, there is a definite need for a re-examination of needs at higher levels. Emphasis on vocational training or technical education may be misleading in the absence of specifications about what particular type of technical training is to be encouraged. This will be possible only by examining the requirements of personnel. A continual re-assessment of these needs should be combined with widespread publicity to changes in them and flexibility in the educational system to switch over to new lines at short notice.

Indian Aluminium Company plans to treble output

Why this expansion ?

Aluminium has become an important metal today in many fields—from structural engineering to electrical distribution. Experts estimate that by 1960 demand for Aluminium will have doubled, rising to about 40,000 tons per annum.

New Capital Issue

The estimated capital requirements for Indian Aluminium Company's Hirakud project are about Rs. 9 crores. It is proposed to raise a part of these requirements by the issue of new capital in the form of Convertible Notes. These Notes will carry a fixed rate of interest and confer upon the holders of the Notes the right to convert them into Ordinary shares of the Company. The Canadian majority shareholder of the Company, Aluminium Limited, has agreed to take up half of the new issue and the other half will be offered to the other shareholders and the Indian public.

Company's rapid expansion

In order to keep pace with expanding demand, Indian Aluminium Company is increasing its capacity for aluminium production. The new smelter which Indian Aluminium Company is installing at Hirakud, Orissa, will triple the Company's production capacity to 15,000 tons by 1958. In implementing this major project, Indian Aluminium Company will be able to draw upon the resources and know-how of its Canadian associates, Aluminium Limited—the world's largest group of aluminium companies.

Aluminium is facing a bright future in India today. India's vast bauxite deposits and waterpower resources can support a large Aluminium industry for years to come. Harnessing these natural resources, Indian Aluminium Company's Hirakud project will be an important step towards India's goal of self-sufficiency in Aluminium.

A Canadian-Indian enterprise

How banking serves the COIR INDUSTRY

PC.438

INDIA is the world's chief producer of coir and coir products, her yearly output being around 130,000 tons. More than half this output is exported, earning about ten crores of rupees in foreign exchange. The coir industry, which is exclusively South Indian, is concentrated in Malabar and Travancore-Cochin, and employs over six lakhs of workers.

Banking has greatly helped in the rapid growth of this industry. The facilities and guidance of a good bank, such as the availability of ready funds when needed, and the collection of dues in any part of the country, are an essential part of good organisation in the coir industry.

We at Palai are proud that so many leading coir goods manufacturers of South India employ the complete banking service we offer.

A L E A D I N G B A N K I N S O U T H I N D I A

If you have business interests in the South, it will pay you to open an account with us. Our 25 branches are strategically located, 23 in important South Indian business centres and two in Delhi and New Delhi; and we have correspondents in all important Indian cities. We offer a fully comprehensive banking service at each office.

Our clients can make deposits at any of our correspondent banks, situated in all important Indian towns, and have the amounts credited to their accounts at any of our branches.

PALAI CENTRAL BANK LTD.

Head Office: PALAI - TRAVANCORE
Branches at: Madras, Madurai, Cochin,
Quilon, Trivandrum, Mangalore, Ban-
galore, etc. Also at: Delhi and New Delhi.

A Window on the World

UN-DOCTRINAIRE SOCIALISM

By

ODYSSEUS

MR HUGH GAITSKELL, new leader of the British Socialists, has elaborated his views on the future of Socialism in a free democracy in No. 53 of "Socialist International Information" (8 Motcomb St., London, SW. 1.) on which I have been commenting in the past two weeks.

In the course of illustrating the differences between Socialist doctrine in 1924, when the first Labour government took office, and today in 1956, Mr. Gaitskell traces the evolution of Labour's ideas about nationalisation.

Few realise that Socialist interest was beginning to move from the general case for wholesale nationalisation towards arguments for transferring particular industries to public ownership as far back as 1931. The reason for this, which shows how un-doctrinaire and intensely practical the British Socialists are, was that with the advance of labour to political power, the party realised that only a limited number of candidates could, with any hope of success at the polls, stand for wholesale nationalisation, and that it was necessary instead to convince the electors that there were good reasons for nationalising particular industries.

The Labour Party's tests for nationalisation were: (1) Was the industry basic? (2) Was it a monopoly? (3) Did it need re-organisation? I cite these tests not because I agree with them but as part of the history of Socialist theory. In parenthesis, I observe that to assert that only a "basic" industry should be nationalised is comforting only as long as you do not ask why basic industries should be singled out rather than any others? Echo answers why? Secondly, a state monopoly is the worst form of monopoly: whereas against a private monopoly you can pass effective anti-trust legislation (as in the USA), when a government gets hold of an industry, it seeks to extract as much profit for "the public interest" (i.e. the budget) as possible, and consumers who forget themselves so far as to complain are branded as reactionaries. Finally, why civil servants (even if their management is concealed under the name of a Public Corporation) would be more likely to re-organise an industry efficiently than business men who stood to lose their all in the event of failure, is incomprehensible. Moreover, that civil servants will not allow an outmoded nationalised industry to fail, and thus be eliminated from the national economy, only saddles the nation with an ever increasing burden on the taxpayer. The argument for nationalising the British coal industry that it needed a big programme of capital expenditure which private enterprise would not undertake "because of the depressed state of the industry" was an argument in favour of private enterprise. For have not successive British governments poured capital into the coal industry, only to witness a steady decline in the output? If those millions had been invested in atomic fuel research, and British coal prices allowed to find their economic level, Britain's economy would be healthier than it is.

BRITAIN'S NATIONALISED INDUSTRIES

However, to resume the outline of the evolution of Socialist thought, Mr. Gaitskell recalls that the argument that the coal industry needed complete structural

re-organisation was stressed during the election of 1945, and was (in the Labour view) supported by a technical report published by an official committee of mining engineers appointed by the war-time coalition government. They recommended that the collieries be grouped into larger units and that extensive technical changes in mining methods be introduced. They did not recommend nationalisation. It was the Labour Party which asserted that only by nationalisation could their recommendations be carried out. Nobody asked whether it was good that a failing industry should be propped up and whether national savings could not better be invested in alternative forms of fuel.

The same arguments were used to nationalise electricity and gas, industries already in part publicly owned by municipalities. The Labour Party argued for larger units embracing both private and municipal undertakings, and they found support for their views in the report of an official committee whose failure to recommend nationalisation as a remedy for the evils that it diagnosed did not deter the Socialists.

The case for the nationalisation of transport was, similarly, that it was a "basic" industry, that pooling would produce greater efficiency in the railways and in the roads, and that "the problem" (sic!) of competition between road and rail could only be solved (sic!) by co-ordination (sic!) under public ownership. Events have not justified these hopes. The British railways cost more and lose more year by year, and year by year the nationalised railway workers ask for higher wages for less work, and the ordinary citizen is given no alternative but to add the cost of the upkeep of the railways to the total that he has to earn in order to pay his taxes.

The nationalisation of the steel industry was, says Mr. Gaitskell, not based on the need for re-organisation, which he admits had already been carried out by private enterprise. (The British steel industry is reputed one of the most efficient in the world, a fact which suggests what happens if you face entrepreneurs with the necessity of making profits or going out of business). Mr. Gaitskell notes that the method of nationalisation in the steel industry left the units of control untouched; the nationalised Corporation was in effect a public shareholding company. "In the short period of its existence," he says, "the Corporation did not greatly interfere with the running of the individual firms, but the fact that 3½ per cent only had to be paid on the bonds issued in compensation to the shareholders undoubtedly saved the industry substantial sums, while it was also in a position to raise fresh capital more cheaply than private enterprise".

Now, I submit that the concept of an industry being required to pay a fixed return is unsound. It produces a state of mind among workers and directors in which all are anxious to stick to tried ways, markets, and products, to keep all unchanged, on an even keel. But an industry on an even keel is a static industry, and a static industry is one that is slipping down hill (to coin an Irishism). Change and growth are imperative for progress and can only be achieved by the prospect

not of regular but of extra profits—of what the economist calls “marginal profits” (see “Profits for Progress”, June 4, and “Change and Growth”, June 11, 1954).

SOCIALISTS APPROVE COMPENSATION FOR NATIONALISATION

But, however mistaken their identification of nationalisation with efficiency may have been, the British Socialists were, in the light of experience, led more and more to emphasise nationalisation in the interests of efficiency, rather than as a step towards the attainment of wholesale nationalisation for its own sake, as the realisation of a doctrinaire Socialist ideal. Mr. Gaitskell says there were two reasons for this: (1) the advance towards equality through heavy income taxes, and the development of the social services; (2) —and this may be thought by some to have special interest for us in India—when an individual industry was nationalised, full and fair compensation was paid to the shareholders. Thus there was no longer any question that the transfer would involve the disappearance of income from property: all that happened was the exchange of a larger uncertain income in the form of dividends for a smaller fixed income in the form of interest. And, says Mr. Gaitskell, although the nationalisation of individual industries with compensation makes some contribution to greater equality since it eliminates all possibility of capital gains and large private fortunes, these “are small changes compared with complete confiscation”.

Mr. Gaitskell frankly reveals that the Labour Party accepted the doctrine of full compensation because this was the “only course compatible with a gradual and democratic approach. It is,” lays down the British Socialist leader, “impossible to justify confiscating the property of particular classes or owners without regard to their wealth simply because they hold shares which happen to be selected for nationalisation. And in fact

no party which proposed to act in such an arbitrary way would have much prospect of being elected to power in Britain.”

Mr. Gaitskell shows how Socialist thought has evolved on the problem of the relation between the boards of nationalised industries and the government. After the collapse of Guild Socialism which aimed at the control of each industry by its own workers, a reaction against earlier Fabian views which were thought to be too bureaucratic, the pendulum of opinion swung back to the centre away from such syndicalist notions, but did not swing over to the idea that a nationalised industry could be run like a government department under the direct control of a minister.

Instead, says Mr. Gaitskell, there has emerged the idea of the public corporation, a body appointed by the minister to manage the industry, under instructions to see that it pays its way, obliged to submit annual reports and to secure the minister's approval in certain matters, but free from interference either by the minister or parliament in its day-to-day activities. Chiefly responsible for spreading this idea was Herbert Morrison in his book “Socialisation and Transport” and also in innumerable discussions within the Labour Party. “Nobody brought home to the Party more clearly the absolute necessity that nationalisation must be efficient, and that its reputation would largely turn on this. Nobody insisted more forcefully that efficiency in the running of a commercial enterprise could not be combined with continual political interference. It is a measure of Mr. Morrison's influence that the Party nationalisation programme carried out in 1945 accepted completely the notion of the public corporation.”

Once again I ask you to note the emphasis that British Socialists lay on the practical rather than on the doctrinaire. Si sic omnes! Which is the Latin for “Are you listening there in the Secretariats of New Delhi?”

A DELHI DIARY

THROUGH OTHER MINDS

THERE are some rare occasions in the life of a journalist when he finds that thoughts in his own mind are exactly expressed by a dignitary whom he has been sent to report. I must confess that in a long journalistic career this has not happened to me more than twice. Perhaps it is that dignitaries move on a different plane from mine intellectually as well as otherwise. So far as “otherwise” is concerned, this is (alas!) all too true in fact; as I expect it is with all other journalists; we are poor, if proud, folk. I am happy this week to have the rare opportunity of presenting my own point of view in the words of a speaker who, I see, in addition to having captured a column in this Delhi Diary by the mere force of his eloquence, has captured space on the front-pages of every daily newspaper. Mr. Malcolm MacDonald still the “new” British High Commissioner in New Delhi has made, it would seem, a remarkable impression upon the Delhi journalistic world. Or can it be that the daily papers of Delhi are beginning to think in terms as close to Mr. MacDonald's as, let us say, a well-known financial weekly? However, the substance of my theme is that Mr. Malcolm MacDonald's address to Delhi Rotarians on Indo-British relations on Thursday put succinctly the case for Indo-British relations in a form which I think needed presenting, not least because of its implications on Indo-Soviet relations. I now quote the kernel of the piece.

MILITARY ALLIANCES

“We British are members of the SEADO Pact and the Baghdad Pact. Most of you Indians criticise those Pacts. You dislike military pacts and military alliances of any sort. Incidentally, this is a question on which you disagree with every other powerful nation on earth. For example, you are just as much in disagreement about it with the Russians as you are with the British.

“I have read reports in newspapers which seem to suggest that some commentators on public affairs declare that Russia and India think alike on military pacts. That is, of course, nonsense. The Russians are the leading members of two military alliances—the Russo-Chinese Treaty in Asia, and the network of military arrangements which culminated in the Warsaw Pact in Europe.

“As I say, the subject of military pacts is one on which there is a divergence of view between the British Government and the Indian Government. It is an honest difference of opinion. We British think sincerely that in certain circumstances military pacts are helpful in strengthening security against possible armed aggression. The purpose of these pacts is purely defensive. You Indians on the other hand think, with equal sincerity that such pacts are a mistake; that they are more provocative than protective; that they increase international tension instead of decreasing it and that they might even stimulate the very aggression and war which they are intended to prevent.

“Why do we hold contrasting views on military alliances? I think that the disagreement springs partly from differences in our past experiences. In Europe, in our own lifetimes, we have had bitter experiences of military or semi-military aggressions committed by nations who professed to be peace-loving.

“It is a simple, undeniable fact that the aggressive communist advance was only halted when the democratic peoples of Western Europe supported by Canada and the USA formed a military pact which warned the would-be aggressors that force would be resisted by greater force. Nor was there anything immoral in

the free governments' conduct. Regional collective security pacts for self-defence are specifically authorised by the UN Charter.

“So we in the West have learnt by harsh and very recent experiences that defensive military pacts are sometimes valuable contributions to our self preservation. In a dangerous world we think that it is prudent to support such pacts in other areas which appear to us to be threatened by possible aggression. Therefore, we support the SEADO Pact in S.-E. Asia and, too, the Baghdad Pact in the Middle East. Let me make quite clear, beyond any doubt, three points about our policy in those pacts.

“First, the purpose of the pacts is to protect the freedom and independence of the small nations in the areas concerned. We believe in the right of the peoples of the Middle East and of South-East Asia to enjoy the same liberties as you in India and we in Britain enjoy.

“Second, the military clauses of the pacts are wholly defensive. They will never be used for aggression. So, if other governments do not attempt military aggression, these clauses will never come into operation and be used as instruments for waging war.

“Third, the provisions of these pacts are not only military; there are important economic and social clauses as well. They provide that the members of the treaties shall co-operate in schemes of economic development and social progress, so that the peoples of the areas involved can look forward to higher standards of living and of social welfare and education. Of course, the most effective way of ensuring security and contentment amongst peoples is to create economic and social conditions in which they can live happily. That is one of the objects of our pacts. Their grand purposes are to strengthen peace and to spread prosperity.”

THE THOUSANDTH TRAINEE

I have two personal notes to add to this description of political affairs in Delhi this week. There was a delightful opportunity provided by Mr. Malcolm MacDonald on Wednesday for pressmen to meet Mr. B. I. Singh, the thousandth Colombo Plan trainee, who is going off to Glasgow to acquire some new learning on the working of blast-furnaces (or is it re-rolling?). It was good to see a Scotsman in form. Mr. MacDonald prophesied that Mr. Singh would return not only with great new technical knowledge but also with a broad Scotch accent added both to his English and to his Hindi. I have heard the Scotch accent added to the King's English. But my curiosity was certainly aroused at the suggestion that it is now to be applied to classical Hindi. Long may the Colombo Plan lead to technical and linguistic co-operation!

FROM HERE TO THERE

As an example of the way in which nationalisation works, I append, I believe, as a faithful copy of the original, a note which a recently appointed Custodian of Insurance wrote to a General Manager of an Insurance Company which has been taken over. It read as follows:

“Dear Sir,

It is noted that certain items of furniture which are the property of the Company are now located in your house.

You are now directed to transfer the furniture from your house to my house.

Yours faithfully,
(Custodian)”

Has nationalisation made public property more privately public or more publicly private?

Economic Report from the U. S.

1956 ECONOMIC SCENE

(By Guy Sims Fitch)

WASHINGTON, Jan. 31.—What credit and monetary policies are likely to influence the American economic scene in 1956? Economists and business men have found no precise answer to this question so far. The annual economic report President Eisenhower sent to Congress last week provides no clear-cut clues. On the one hand, it notes that terms for the purchase of new homes are being liberalized, and recommends that Congress further ease housing and mortgage regulations. On the other hand, it recommends that Congress authorize new direct controls over consumer credit, to be imposed by the Administration, when and if the situation warrants—a device that has not been used since 1952. But there is more logic to this seeming discrepancy in policy than may appear on the surface. These differing approaches arise from the still fluid state of the US economy as 1956 gets under way.

Washing of home purchase terms to allow a 30-year instead of a 25-year repayment period reflects the fact that residential construction now is 16 per cent below the January 1955 rate. Building may pick up again with warmer weather, of course. But if it does not, an important economic crop will have been weakened. This also could affect adversely the demand for appliances, furniture, draperies, floor coverings, plumbing supplies and other items that go into the construction and furnishing of houses. Over-all demand for labour and goods, however, remains strong, and is still putting pressure on wages, costs, supplies, prices and industrial facilities. The threat of inflation has by no means passed, and it could conceivably grow rather than diminish. The record expansion and modernization programme being launched by American business men this year, for instance, could further complicate the supply situation in both manpower and materials. It is worth noting that the stability of consumer prices in the past year has been due in large measure to the declining cost of food, which accounts for about 30 per cent on the average household budget. Industrial materials have risen some 5 per cent on the average. Business men report that prices of such products as steel, zinc, lead, paper, oil and cement still are going up. The Federal Reserve Board, principal instrument of government monetary policy, is obviously well aware of these conditions, and of the fact that last year's record volume of sales was supported to a large extent by a 20 per cent rise in consumer credit. Such other factors as a 19 per cent boost on bank loans to business and an 18 per cent increase in home mortgages also contributed to the high level of economic activity.

It is true, of course, that high rate of borrowing and spending stimulates demand for goods and services, creating more jobs and higher wages. But too much borrowing by too many people can overemphasize the demand side of the economic equation, squeezing the supply side out of all proportion and leaving the economy vulnerable to even moderate fluctuation in business conditions. At the moment, there is little likelihood that this will happen. Consumer incomes still are rising, the pace of credit expansion has slowed somewhat in recent months, and loan liquidations are proceeding at an orderly and sound rate. In fact, some leaders of business and finance—particularly in the automobile field—have been urging a loosening rather

than a tightening of credit policies. The Federal Reserve Board, however, is sitting tight for the present with its policy of moderate restraint. This has involved largely the rising of bank interest rates to cut down on the volume of loans, and cautions to banks and other private institutions against lending too freely on automobiles and other consumer goods. In addition, government securities have been sold in order to draw lendable funds out of banks.

What the future policy will be may well depend on the course of economic activity in the months ahead. The aim is to keep the economy moving upward while steering it safely between excesses of inflation and recession—an admittedly difficult task with an economy that is already operating at close to capacity. This is in line with President's observation in his economic report: the best way to fight these excesses is to keep them from occurring.

RECORDS & STATISTICS

(QUARTERLY BULLETIN)

Editor: R. V. MURTHY, M.A.

"The Eastern Economist" Bulletin of Records and Statistics surveys economic trends in each quarter in India and abroad with the aid of graphs and all available statistics. One of its special features is the Investment Supplement.

OF
TULSIDAS
IN ENGLISH VERSE****LATEST "HINDUSTAN TIMES" PUBLICATION*****The famous Hindi epic regarded by many as "the greatest book in all devotional literature" is for the first time now available in English verse.***

The translator, the Rev. A. G. Atkins, completed the book after ten years of devoted work. He has tried "to keep and express in English in the fine rhythm and music of the original in simple lucid language, and with as much of the vivacity, wittiness and picturesqueness that Tulsidas has put into his work." He has also followed in some measure Tulsidas's metrical variations such as *chhand*, *chaupal*, *doha* and *seratha*.

In a foreword Mr C. Rajagopalachari says: "Mr Atkins' monumental work and his Introduction are a revelation of hope for those who desire to see all the great religions of mankind come together. . . . His service is not only to English-speaking people but also to that very large number of Hindus in India who do not speak the Hindi language and to whom English has become a very familiar medium."

The book is of special value to libraries, scholars and devotees of Tulsidas.***It has been issued in the following four editions:***

- I. Original text of Tulsidas with translation in English verse; three volumes; 1468 pages; price Rs. 50 net.
- II. Translation in English verse; without Hindi text, two volume; 898 pages; price Rs. 40 net.
- III. Special tissue paper edition of I, one volume, price Rs. 100 net.
- IV. Special tissue paper edition of II, one volume, price Rs. 100 net.

NEW DELHI.****WORLDGRAM****AGRICULTURE**

Better Quality Jute: It is learnt that the Government of India plans to increase Indian jute production to 6 million bales. The Government has indicated readiness to share expense of jute development centres on a fifty-fifty basis with States. The scope of the effort is indicated by the proposal to provide 16,000 new retting tanks and renovate over 8,000 old tanks in jute growing areas of India. To help in cultivation, the plan calls for manufacture and distribution of over 7,000 cheap seed drills and an equal number of weed hewers. Concern of authorities over upgrading quality is encouraging to mills and to consumers of jute goods from India.

Kudzu Vine—A Nutritive Fodder: The kudzu vine makes a nutritive green fodder. It is rich in protein, calcium and phosphorous. Trials show that it provides a good green fodder in April and May, a period when green fodder is scarce, especially where there is no irrigation. At the Indian Agricultural Research Institute, kudzu yielded 447 maunds of green fodder per acre in three cuttings, taken in April, August and October. The vine also makes excellent hay. As green fodder or hay, it is liked by cattle. Kudzu, however, does not stand frequent and close cuttings. It would be a good practice to cut it twice or thrice a year. If regular cuttings are desired, two to three maunds of ammonium sulphate per acre per year should be applied. This will help the plants maintain a high production of green fodder.

Steps for Control of Brinjal Pest: The Epilechna beetle is a serious pest of brinjal. This beetle damages young seedlings in the nursery during the rainy season. The pest can be controlled by hand-picking the adults and grubs and by destroying the eggs of the pest found on the leaves. An effective way of controlling the pest is to dust the crop with sodium fluosilicate by mixing one part of the chemical with eight parts of ordinary ashes. Dusting with 2 per cent DDT has also been found effective.

Care in Pulling out Tobacco Seedlings: A week before transplanting, reduce the watering to seedling-beds. This will harden the seedlings. Water the beds a few hours before lifting the seedlings. This will make it easy to pull them out. All seedlings in the bed will not be of the same size. Remove only those that are ready. Pull out without damaging their roots. Six-inch high seedlings with five to seven leaves are good for cigarette tobacco. Smaller seedlings would do for bidi tobacco.

INDUSTRY

U.S. Industrial Output: U.S. industrial production remained at the same level as last month. The Federal Reserve Board industrial production index remained at the record reading of 144 per cent of the 1947-49 seasonally adjusted average that it had reached in November, 1955. A slight fall in the output of durable manufactures was offset by an increase in minerals production. Production of durables dropped one point to 160 per cent from the November high of 161. Output of minerals advanced two points to a new peak of 127, while soft goods were unchanged at a record of 130. Industrial production in 1955 was 39 per cent above the 1947-49 base period. The 1955 volume was 11 per cent greater than the 1954 total.

Big Expansion in U.K. Steel Production Foreseen: The British Iron and Steel Board expects steel production to increase by more than 3,000,000 ingot tons in the

three years 1956 to 1958, said Mr. Peter Thorneycroft, President of the Board of Trade, in the House of Commons on January 26. Within this overall figure, there would be a substantial increase in sheet capacity and some increase, towards the end of the period, in plate capacity. In view of the growth of the engineering industry and the orders recently received by the U.K. shipbuilding industry in particular, demand for steel is going to rise.

Deepest Well in India: Well No. 12 at Naoholia, in the Hugrija oil prospecting licence area of Upper Assam, has set a new record in deep drilling operations in India according to Assam Oil Company. At its present depth of 11,855 feet (nearly two-and-a-quarter miles) the new well, which is not yet completed, easily beats the record previously held by Assam Oil's Nahorkatiya No. 1 (discovery) Well, which went down to 11,715 feet in 1953. If it goes beyond 12,666 feet (the depth of Lakhra No. 1, in Sind, Pakistan) it will become the deepest well ever drilled in Asia. Well No. 12 started drilling on November 3, 1955, after a ceremony performed by Shri R. K. Ramdhyani, Secretary, Ministry of Natural Resources and Scientific Research, Government of India. Operations at the site are continuing.

Iron-Ore Deposits in Orissa: Nearly 27 million tons of iron-ore, it is estimated, occur in the Tomaka and Kansa areas of Cuttack district in Orissa, according to a preliminary investigation carried out by the Geological Survey of India. A correct idea of the potentialities of the area, however, will be available only after exact demarcation of the zones of varying concentration of ores based on systematic exploration. Also in the same district, 2 to 3 lakh tons of iron-ore are expected to be available from the deposits near Tungaisuni and Dodasil. Besides, about 20,000 tons of fairly high grade ore occurs near Kharipadia, 5 miles south of Sukinda. Further work in this area, it is stated, is bound to increase the estimate of reserves several times.

Iron-Ore Deposits in Andhra: According to a survey carried out by the Geological Survey of India in the State of Andhra, deposits of iron-ore occur in a triangular strip of country between Takkellapadu, Gandrayi and Shermunammadpeta villages near Jaggayapeta. The total iron-ore in this area is estimated at 13½ lakh tons, half of which is reported to have been removed by the time the survey began. Analysis has revealed that the ore is of good quality, containing above 60 per cent iron, but, it is pointed out, at the present rate of exploitation the area is likely to be depleted of its reserve within a short period.

TRADE

Motor Tyre Imports: The Government of India has announced its decision to allow additional import of motor tyres and tubes, giant tyres and tubes and bicycle tyres only in all sizes and ply ratings on an ad hoc basis through the established importers other than tyre manufacturers. Any additional licences granted under this notice would be subject to the condition that not more than 40 per cent of the face value of it could be utilised for the import of bicycle tyres.

Import of Raw Rubber: The import policy of the Government of India in respect of raw rubber for the first half of 1956 will be the same as during the licensing period July-December, 1955. Licences will be granted to actual users and on an ad hoc basis for the following grades of rubber, crepe rubber other than

sole crepe, sheet rubber, scrap rubber, latex, synthetic rubber and reclaimed rubber.

Export of Petroleum Products: For the first time, India exported about 78,000 tons of motor spirit and 1,23,000 tons of furnace oil during the second half of 1955. The main importers were Pakistan, Burma, the Philippines, Australia and Ceylon. The exports were permitted as there was a net surplus after making provision for adequate stocks for the country's requirements. The output of these products at the Burmah Shell and Standard Vacuum refineries in Bombay together with that of the Digboi refinery in Assam during this period was in excess of the country's needs. The two refineries in Bombay, it will be recalled, went into full production last year.

"Ghost" Indents for Wagons: The South-Eastern Railway authorities in a recent surprise check discovered nearly 1,000 "ghost" indents for good wagons registered by the trade in a small section of the Railway. In the area served by the Raipur-Dhamtari section of the Railway, outstanding registrations for wagons suddenly went up by over 60 per cent in a 10-day period during December 1955. Suspecting deliberate inflation in the demand for wagons, the railway authorities decided to meet the demand. Concentrated heavy allotment of wagons was made to satisfy this demand. The result was that all the wagons offered were not taken up by the trade. Nearly 1,000 inflated indents were cancelled. The registration fee paid by indentors with each indent was forfeited. Speculative interests in different parts of the country frequently registered bogus indents for wagons, far beyond their genuine needs, in the hope that by thus depriving possible rivals of available wagons, they could manipulate the prices of commodities to their advantage.

Import of Cement from Soft Currency Areas: The Government of India has under consideration a proposal to facilitate the import of cement during the current half year for being sold through importer-distributors to be nominated for this purpose. Offers are invited before February 5, 1956, for the import of cement from soft currency areas. The minimum quantity for which offers will be accepted is 25,000 tons. The offeror will have to enter into a contract of sale with the importer-distributor selected by the Government of India.

FINANCE

Central Aid for Development of Village Leather Industry: The Government of India has sanctioned loans and grants totalling over Rs. 10,33,000 to the five States—Punjab, Madhya Pradesh, Bihar, Hyderabad and Madhya Bharat—and the All-India Khadi and Village Industries Board for the development of the village leather industry. Punjab gets a loan of Rs. 3,50,500 and a grant of Rs. 3,06,300. A loan of Rs. 29,780 and a grant of Rs. 23,300 have been given to Madhya Pradesh. Bihar gets a grant of Rs. 21,340 and a loan of Rs. 14,880. For establishing two model tanneries in Hyderabad, the State has been given Rs. 18,000 as loan and Rs. 12,000 as grant. Madhya Bharat has been sanctioned a grant of Rs. 22,870, a major portion of which is for two demonstration parties and for the construction and repairs of 120 tanning pits in the State. The All-India Khadi and Village Industries Board gets a loan of Rs. 1,25,000 and a grant of Rs. 1,10,000.

Indo-Ceylon Agreement on Avoidance of Double Income-Tax: An agreement on avoidance of double income-tax has been reached between official delegations representing the Government of India and the Government of Ceylon. The talks between the two delegations began on January 16 and were concluded on January

25. The Agreement will now have to be ratified by the two Governments before it comes into force.

Peak U.S. National Income: The United States national income in the third quarter of 1955 rose to an annual rate of \$326,000 million, the highest on record, according to the Department of Commerce. The Department said that the annual rate for the three quarters combined approached \$320,000 million. The full-year totals in previous years were \$300,000 million in 1954 and \$304,000 million—the previous highest—in 1953.

GENERAL

Extent of Unemployment in Bihar Towns: The largest group among the unemployed in Bihar towns was constituted by those who had read up to middle school standard, according to a survey conducted by the Bihar Unemployment Committee in 1954. The matriculates—17 per cent of the total employed—formed the second largest group. The first category formed 31 per cent. The unemployment in towns having a population of more than one lakh was acuter than in towns with population varying between 20,000 to one lakh. The investigation was conducted by the Committee among 4,716 families spread over 15 towns and representing different classes. Thirteen per cent of the total unemployed were illiterate; 12 per cent had attained primary standard and 11 per cent were literate. 15.4 per cent of the employable males were affected by unemployment and 1.8 per cent of the females willing to work could not find employment. Seven per cent of the employable males were partially unemployed being engaged in part-time work. It was, thus, discovered that 22.4 per cent of the employable males were affected either by unemployment or under-employment.

Greater Emphasis on Staff Welfare in Railways: A new orientation is to be given to the railway personnel organisations throughout the country, with greater emphasis on staff welfare measures as distinguished from mere establishment matters. This re-orientation of approach to the staff has been decided upon by the Railway Board in the belief that during the second Five-Year Plan period the best possible results from individual members of the railway staff can be obtained only by winning their personal goodwill. In a directive issued to the various Railway Administrations, the Railway Board has suggested the allotment of a whole-time officer for personnel work in each railway district, which is the smallest unit of railway administration. The Railway Board's directive is based on certain recommendations made by the Railway Corruption Enquiry Committee.

U.K. National Health Service: The report of the five-man committee under the chairmanship of a Cambridge economist, Mr. C. W. Guillebaud, which was set up to inquire into the working of Britain's National Health Service (NHS) and make recommendations, was published in London on January 25. After two-and-a-half years' consideration of the cost, efficiency, and future of the health services, the committee finds them to be working satisfactorily.

Malaya's Five-Year Plan: The Federation of Malaya's Five-Year Development Plan will be ready in about two months according to the acting Minister for Economic Affairs, Mr. M. K. Johari. The Plan is based mainly on the recommendations made by the World Bank mission which visited Malaya in 1954. About one-fifth of the Plan is now completed and the rest will be drawn up shortly.

NEWS IN BRIEF

INDIAN

Mr. N. S. Lokur, Chairman of the Railway Rates Tribunal, has been appointed a one-member shipping Rates Advisory Board to examine and report on the proposal of the Bombay Steam Navigation Company (1953) Ltd., for an increase in the existing passenger fares on the Konkan trade.

The Government of India has sanctioned the establishment of a co-operative sugar factory in Gurdaspur district, Punjab. The State Government has decided to set up the factory before 1957. It is estimated to cost over a crore of rupees.

The Rs. 2.93-crore Patri Power Station—U.P.'s first major power project to be completed under the first Five-Year Plan—was formally inaugurated by the State Chief Minister, Dr. Sampurnanand, on January 28.

Nearly 350 workers are now engaged in constructing the nine-mile marginal bund along the Jamuna which will protect Shahdara town and the neighbouring colonies and villages from floods.

Norway is still anxious to give economic aid to India despite temporary suspension of credits for the India Fund, according to Mr. Halward Lange, Norwegian Foreign Minister. The Fund has at present sufficient capital to cover expenditure until July 1, 1957.

Mrs. Alva Myrdal, Minister for Sweden in India, paid a visit to the office of the Central Social Welfare Board on January 24, and met Shrimati Durgabai Deshmukh, Chairman of the Board.

Shri K. B. Lall, I.C.S., Joint Secretary, Ministry of Commerce and Industry led the Indian Delegation to the 8th Session of the Committee on Industry and Trade of the Economic Commission for Asia and Far East. The Committee met in Bangalore from January 24 to January 31, 1956.

As a gesture of goodwill and friendship towards India, His Excellency Dr. Franz Bluecher, Deputy Prime Minister of the Federal Republic of Germany presented a model of a Dental Van to the Government of India during his recent visit to the capital.

A special postmark was used at the General Post Office Bombay, Calcutta, Madras, New Delhi, Lucknow, Kanpur, Bangalore and Coimbatore between January 25 and February 2 on the occasion of the ninth Congress of the International Society of Sugarcane Technologists which was held in New Delhi from January 25.

One thousand, one hundred and fifty gift parcels weighing about seven chhattaks each, have been despatched to Indian military and civilian personnel serving on the National and International Delegations in Indo-China, on the occasion of the Republic Day.

The President gave his assent to the Vindhya Pradesh Bhoodan Yagna Bill, 1955, on January 5. The Bill seeks to give statutory recognition to the donations of land and their distribution to landless persons.

The assertion that the existing wheat stocks with the Government of India and the firm commitments it had already entered into for further supplies were more than enough to meet the effective demand for his food grain until the next harvest was made by Mr. A. P. Jain, Union Minister for Food and Agriculture, on January 21.

FOREIGN

The Soviet Union has expressed its readiness to resume full participation in the World Health Organisation from which it withdrew as an active member in February 1949.

Britain last year imported over 724 million lbs. of wool, the largest amount since 1953, the International Wool Secretariat has announced in London.

A 12-Nation Conference will open in Washington on February 27, to discuss President Eisenhower's "atoms-for-peace" plan.

Mr. Eugene R. Black, President of the International Bank for Reconstruction and Development, arrived in Cairo on January 27, on an invitation from Colonel Nasser, Prime Minister of Egypt, for further discussions on the Aswan High Dam project.

The United Kingdom has become the ninth nation to complete action necessary for membership in the International Finance Corporation, the affiliate of the World Bank, which will come into being when it has a membership of 30 countries subscribing a total of at least \$75,000,000.

The appointment of Mr. Ernest Bell, veteran British trade unionist, as chief of the Workers' Relations Service of the International Labour Organisation has been announced by the Director-General of I.L.O., Mr. David A. Morse.

Switzerland has become the seventeenth country to ratify UNESCO's Universal Copyright Convention. The convention which came into force on September 16, 1955, establishes standard copyright provisions for literary, scientific and artistic works.

A new "Staff College" for study and training in economic development was opened in Washington on January 9. Known as the Economic Development Institute, it has been organised by the World Bank, with financial assistance from the Rockefeller and Ford Foundations.

The U.N. Economic and Social Council's Commission on International Commodity Trade has recommended to the Secretary-General that it should hold its third session in New York from May 7 onwards.

Czechoslovakia is the seventeenth country to become a party to an international convention designed to facilitate the importation of commercial samples and advertising materials.

The Central Government of Pakistan has sanctioned the payment of a sum of three million rupees to the Government of West Pakistan for the implementation of approved social uplift schemes of the former Punjab area.

The Food and Agriculture Organisation of the United Nations has sent Dr. D. M. Currie to investigate the possibility of vegetation cover for arid zones in Pakistan.

an invitation to industrialists...

India is on the threshold of a period of tremendous industrial growth and expansion. Those who have faith and courage in the future and who are prepared to join the mighty adventure of rebuilding the nation will find much at Hannover — methods, materials and machines — that can help hasten her to prosperity.

28th April
to 8th May
1956

No less than 4000 European and overseas manufacturers will show their latest technical advances and up-to-date production methods at the German Industries Fair 1956.

Groups exhibited: Mechanical Engineering, Electrical Engineering, Chemistry, Rubber, Precision Mechanics and Optics, Iron and Steel, Tools, Office Equipment, China, Ceramics, Glass, Jewellery, Silverware, Cutlery, Clocks and Watches.

Nearly 80% of German exports to India are produced by the groups participating in the Fair.

MMC**revolving flat cards**

are now being extensively used
in Textile Mills in India.
Their efficiency is undisputed,
their reliability guaranteed.

Outstanding features

- 1 Five distinct setting points, used singly or in combination to control setting to .001 inch.
- 2 Johnson bronze bearings for cylinders and doffers. Roller bearings to cylinder; ball bearings to doffer and ball bearing comb box also provided as optional equipment.
- 3 Ball bearings to lick-in pedestals.
- 4 Self-lubricating 'O-lite' bearings at several locations.
- 5 William's patent stripping motion for flats.
- 6 Drop lever with new disengaging handle.
- 7 Fluted lap roller with positive gear drive from feed roll helps uniform feed of lap at the back with minimum possible stretching.
- 8 Cards can be geared for any production in a mill organization.

The Business World**PSYCHOLOGY IN CEMENT INDUSTRY**

By
CROESUS

"THIS looks more like a political meeting than a meeting of shareholders of an industrial undertaking", observed Mr. Dharamsey M. Khatau when he rose to reply to the shareholders of the Associated Cement Companies, Ltd., at the Nineteenth Annual General Meeting of the Company (on Friday last) over which he presided. I daresay the same remark will hereafter be repeated by one Chairman of an industrial undertaking after another. For no shareholder seems anymore to pause and think whether or no a given industry is listed in the Government Statement on Industrial Policy—present or prospective—as a possible victim of nationalisation. He has become mortally afraid that any company in which he holds shares may be nationalised any time without any notice whatsoever. No less is he afraid that Government might not also give adequate compensation following such nationalisation.

This psychology amongst the investing public is no doubt unfortunate, but the determined—and may I add also hasty?—translation into action of the Socialistic Pattern of Society philosophy by the powers-that-be is that direct and immediate cause of it all. But, I feel, no single action of Government so far has been more directly responsible for generating this psychology than the nationalisation of insurance through an ordinance. One heard repeated references to this by almost every shareholder who spoke at the ACC annual meeting and the shareholders also warned the ACC Management to beware of a similar fate overtaking the cement industry. Actually one shareholder was worried that, as a result of nationalisation of all life insurance companies, Government had overnight become a substantial holder of ACC shares. (This is variously estimated at around 10-15 per cent of the total number of shares). He was afraid that, by reason of this, Government might start interfering too much in the internal management of the Company. So, it is not only managing agents or business spokesmen who look askance at Government intervention; there are quite a few common men outside their fold who also share such a view.

Another feature of this year's ACC annual meeting that must have struck anyone present was the unanimous voice of the shareholders against issue of fresh shares at a premium by the Company. Although the shareholders knew it and were there specifically to participate in an extraordinary general meeting scheduled to come immediately after the annual general meeting for adopting a special resolution to increase the ACC capital from Rs. 16 crores to Rs. 30 crores and issue 6,35,928 shares at par, subject to the consent of the Controller of Capital Issues, fears were expressed that Government might insist on the Company issuing these shares at a premium. In sooth, the unqualified mandate of the shareholders to the management was to insist on the issue of these shares at par and to reject the demand of Government, if any, for these shares being issued at a premium. Even an alternative suggestion put forward to the management to think of raising a loan, if need be, to meet the expansion needs of the company! And some extreme elements went so far as to ask why the Company should at all go in for further expansion in the light of the prevailing uncertainties.

One often hears Government spokesmen asserting that views advanced by managements are their own

and not those of shareholders. How I wish at least one such spokesman was present at this meeting. He would then have noted, much to his surprise, I am sure, that the views expressed by managements are but a very mild and temperate version of, very often, the extremist sentiments voiced by shareholders. He would not have failed to note too the sobering influence that experienced business men like Mr. Dharamsey are capable of exerting on an almost unruly body—as they sometimes become—of shareholders, if I may say so, without meaning any offence to them.

Both in the Chairman's address and in the replies that Mr. Dharamsey gave, he made a few points crystal clear, and it is just as well that he did so.

In the first place, he unequivocally complained about some of Government's hasty and, at times, ill-conceived economic measures.

Secondly, he left no room for doubt in any one's mind that "whether it is a question of raising the general standard of living or of avoiding inflation in the wake of deficit financing of development in the public sector, the sine qua non is continually increasing production" and that "towards this end, Free Enterprise has played its part and will continue to do so", notwithstanding the "handicaps imposed upon it", and "even within the limited scope permitted to it". This was no empty platform oratory, as the annual meeting amply demonstrated. When some shareholders questioned the wisdom of the company embarking upon expanding its installed capacity almost two-fold—from 2.9 million tons to 5.2 million tons—Mr. Dharamsey categorically answered that there was great need in the country for more cement and, being one of the foremost producers of cement in the country, the ACC could not afford to shirk its responsibility and neglect its duty of increasing cement production. No enlightened industrialist or business man ever believed, or believes, in cutting one's nose to spite another's face. It is not the ideologist's or the politician's monopoly to think of the good of the country as a whole. I hold the spokesmen of Free Enterprise one higher, because they don't stop at thinking and talking as do ideologists and politicians, but go a step further and act.

Thirdly, the ACC Chairman did his utmost, both in his speech and in the replies he gave, to convince shareholders that it is no use resisting the Government; at the same time, he reminded the Government that the achievement of the role allotted to the private sector—he had no doubt that this would be quite significant—would "depend, to a large extent, on the broadbased backing of the Government; on wise planning and sound fiscal and political policies, on full and unstinted co-operation from labour, and on the uninterrupted flow of savings and investment year after year". As he rightly underlined further, "in all these matters, the most effective single factor will be the plans and policies of the Central and State Governments in relation to financial matters generally and in regard to taxation and nationalisation in particular". What these plans and policies are going to be will soon be known when the States and the Centre present their budgets. They will also reveal, I daresay, the extent to which the authorities are in a mood to pay heed to the sober counsels of wise business men.

COUNTERING SOVIET ECONOMIC OFFENSIVE

By
CROESUS

AS the Soviet attack on the economic front is becoming more and more aggressive, both the USA and the UK have started seriously to examine their weaknesses with a view to removing them speedily. Alarmed at the large number of technicians and trained engineers who, by the way, are also well-versed in spreading Communist gospel, that the USSR is willing to and has been sending to every part of the globe, in particular, to those areas which were hitherto regarded as sure sanctuaries of the free world philosophy, compared to the dearth of engineers and technicians "who genuinely understand the concepts of free, competitive capitalism" that the Western countries have been suffering from, "Business International", New York, has called on the Western countries to start a campaign to multiply "trained, effective managers of every nation of the free world—men who are not only competent to run a business profitably but who can demonstrate by performance that workers live better, with greater dignity, freedom and opportunity, by working in a free enterprise than in a totalitarian government-run organisation and that consumers get greater benefits from competition than from monopoly".

In the UK also, the "Financial Times", London, recently published an article wherein it described the difficulties of conducting ordinary commercial negotiations in the teeth of the new Russian economic offensive. In the course of this article, the paper has suggested an "expedient" to the Government of India, in connection with the financing of the British steel plant for India, although the writer of the article conveys to the reader the impression that it is, in fact, the Government of India that is thinking of such an expedient "in order to push the British contract through". The Government of India is, indeed, interested in getting Britain to put up a steel plant in this country but only if it is competitive enough vis-a-vis the steel plants that the other two countries have agreed to, and still others who are prepared, put up such plants. Obviously costs in the UK have gone up so high—although this is not willingly conceded—that, if India were to raise a loan in the British capital market which today cannot be at a lower rate of interest than 5½ per cent, to finance the British plant, it would make it "twice as expensive as borrowing from the Russians or Czechs, both of whom are clamouring to construct steel plants for India", to quote the "Financial Times" itself. Even in regard to the time limit for repayment of the loan, the paper says, "the Soviet countries apparently see no reason to set any close limit to the time required for repayment of the credit".

As against these undoubtedly attractive terms offered by the Communistic countries—whatever be the motives underlying them—the "Financial Times" confesses, the most that Britain could do would only be to subsidise the venture in some way and for its Government to reduce its own commitments as far as possible, and goes on to ask: "But how big a subsidy can it afford to give the Indians to help their investment programme at a time when the investment effort of British industry at home is being held up by the credit squeeze?" Hence the suggestion of the expedient referred to above, which is, to quote the paper: "A suggestion in this regard is apparently that India may put up some of her own rather large sterling balances to pay for part of the first stage of the construction of the plant on the understanding that Britain would be prepared to provide a sterling loan at some time in the future, if and when the balances were run down."

This only means that Britain cannot afford to give India financial assistance on terms anywhere similar to the communistic countries. All the same, her frankness in this behalf must be appreciated. Similarly, her suggestion that, rather than float a loan at 1 per cent above the British Bank Rate in the London market to find funds, India should find it more economical to use her surplus sterling balances, especially as this is accompanied by an assurance that Britain would be prepared to provide a sterling loan at some time in the future if and when the balances were run down. It is claimed that the advantage (of this proposal) is that "it mobilises existing balances in London which are at present yielding only between two per cent and four per cent." Actually, these balances are today yielding about 4.05 per cent, but, even so, it would save India more than one per cent, which is quite a sizable gain.

There can be no question about India not being able to draw on her sterling balances today, inasmuch as they now amount to Rs. 739.62 crores, that is nearly Rs. 340 crores more than the safe minimum required as backing for this country's currency, according to the Union Finance Minister. Our balance of payments position has been so comfortable fortunately that we have not even found it necessary to draw the £35 million annual sterling releases which Britain has agreed to.

Apart from this, a very important consideration is—and this should weigh most at the present juncture—that, as far as possible, this country should not go on adding to her commitments with the Communistic countries except on the basis of normal commercial deals. It is to be hoped that all these aspects of the matter will be looked into carefully before the Government of India takes a decision in this behalf.

ROHTAS INDUSTRIES LIMITED

The Directors of the Company have recommended to the forthcoming General Meeting of the Company payment of the following dividends (free of income-tax) for the year ended 31st October, 1955.

Rs. 9 per share on Cum. Pref. Shares.

Rs. 4-4 per share on 'B' Cum. Pref. Shares.

Rs. 1-8 per share (i.e. 15 per cent) on old Ordinary Shares.

Notice is hereby given that the Share Transfer Books of the Company will be closed from 21st February, 1956 to 6th March, 1956, both days inclusive.

SAHU JAIN Ltd.,

Managing Agents.

CALCUTTA,

28-1-56.

BUSINESS NOTES

POLICY FOR MACHINE TOOLS

THE SCATHING criticism of extravagance and of lack of efficiency and organizational planning in the two machine tool factories in the public sector made by the Scaife report and reinforced by the corroborative findings of the Auditor General, ought to produce a sobering effect on Government's policy on machine tool industry. This salutary effect must also be evidenced in its attitude to the private sector and ought to be reflected in a spirit of accommodation. In so far as planning for the expansion of the machine tool industry is concerned, this spirit is happily being shown, but it remains to be exhibited in the policy of purchase of tools for government factories.

Instances do occur in respect of important orders where government departments make purchases for their requirements direct from the State-owned Hindustan Machine Tool Factory, without regard to the policy commitment to invite tenders from the private manufacturers also. Orders for imports are likewise being placed on behalf of State-owned factories for tools which indigenous producers are able to supply. If genuine obstacles exist in making use of domestic capacity in the private sector on the score of precision, quality, price or date of delivery, the position must be settled after full discussion. Mr. B. M. Jambhekar's presidential speech on last Monday before the annual session of the Indian Machine Tool Manufacturers' Association contains a serious grievance that Government has not so far acceded to the Association's request to discuss this issue. The attitude of the Railway Ministry, however, is conciliatory and producers are informed about standardisation and types required for the use of the railways.

It is anomalous that while an ambitious programme of expansion of a wide range of industries is to be launched during the second Plan and it must involve simultaneous expansion of indigenous machine tool manufacture, an objective plan for machine tools to meet the potential requirements in the next five years is being formulated now at a belated stage. A committee of investigation has been appointed for this purpose only recently. It is a saving feature that the Association's representatives have been invited to work on it. Prior to that, a survey was conducted into the actual use of machine tools of various types, sizes and groups in about 800 factories in the country as one source to determine the character of the home demand. This action has limited value. Over 85 per cent of the country's requirements are satisfied by imports and comprehensive data can be obtained on a reliable basis by collection of classified statistics of imported tools. A pressing suggestion made by the Machine Tool Panel of the Engineering Capacity Survey Committee to maintain these imports statistics has not been acted upon.

It is certainly expedient that Government should take measures to remove, or at least to minimise, the major difficulties of private manufacturers. Shortages still persist in respect of graded pig-iron, coke for castings, semi-finished parts for forgings, high tensile alloy steel (particularly nickel alloy steels) and ball bearings. The tendency of government departments at the Centre and in the States to rush with orders on manufacturers in the last quarter of the financial year, with delivery terms by 31st March, to use budget grants, causes great hardship which can be avoided by phasing out orders by advance planning. It is, however, difficult to see how Government can effectively curb colourable devices adopted by users to import tools which are indigenously produced. The root of this malady consists in consumer prejudice which home producers have to remove by persevering action over a long period.

WILL AMERICA DUMP HER COTTON OVERSEAS?

PERHAPS NO other problem has cost so much studied investigation in the U.S. as the disposal of surplus farm products. And yet the American goal of agricultural price stability remains as elusive as ever. If the U.S. Government's price support programmes have only resulted in accumulation of huge stores of farm products in government hands or under government loan, its acreage restrictions have been assiduously offset by more intensive cultivation of the commodity on the restricted acreage and shifting to unregulated crops transferring, in the process, the surplus problem to pastures new. Thus, the solution to the broad question of agricultural price stability, in effect, depended upon the degree of success that the Government achieved in the disposal of its surplus farm products. The handling of the surplus cotton disposal plan by the American Government, through the Commodity Credit Corporation, has exposed the inefficiency of the Government. The latest reports from Washington indicate that the proposal to sell cotton at competitive prices may not be included in the overall Farm Bill. For, it has been found from the first three sales held since January 3, when the cotton surplus disposal plan actually got under way, that the response has been scarcely heartening. In order to attract buyers, it would now seem, America must perforce dangle the bait of cut-rate prices before prospective consumers of the surplus cotton. If and when such transpires, it is needless to say, cotton markets all the world over would be bearishly hit, a development which the U.S. Secretary of Agriculture had been repeatedly reassuring the cotton world to safeguard against.

Frankly, America truly finds herself in an unenviable position today. By pegging her cotton prices above world markets, she stimulated foreign production "to the point of making the rest of the world independent of American cotton". If she should reduce the price of her surplus cotton considerably below world levels—she has no other alternative now—she would be accused of 'dumping' her cotton on overseas markets. She has only to thank her Government for this state of affairs. It has been aptly said that "the Government subsidised efficiency and then subsidised inefficiency, and it is this Janus-like policy that today is chiefly responsible for what the economists describe as 'an excess supply of resources in farming'".

The farm problem, in short, bids fair to become the only great controversial issue in the Presidential election campaign. Already, in his State of the Union Message, President Eisenhower has promised a many-sided assault on the stubborn problems of surpluses, prices, costs and markets and a steady, persistent, imaginative advance in the relationship between farmers and their Government. Market observers aver that "the Government has the bear by the tail and dares not let go" and unless effective measures are taken to halt the drop in farm prices and income, they fear, the entire country may be drawn into a depression.

ACC EMBARKS ON EXPANSION PLAN

THE TARGET of 12.5 million tons of cement fixed for the second Five-Year Plan is almost wholly the responsibility of the private sector and it is facing up to the challenge of its fulfilment with confidence. The Associated Cement Companies, as the largest group of manufacturers of cement in the country, have assumed the task of contributing 5.2 million tons as their share of the target. The speech of Mr. Dharamsey Khatau, Chairman of the Associated Cement Companies, at its annual conference held in Bombay on January 27 last, gives ample evidence of the preparation of ACC's concrete plan of expansion and of the initial steps taken

in augmenting production. In September 1955, ACC's first new plant at Sindri went into production. Its capacity is one lakh tons per year. This was followed by another plant at Sindri with the same capacity in November 1955. An outstanding feature of the expansion in Sindri is the utilization in one of the plants of calcium carbonate sludge, which hitherto went entirely to waste, in the manufacture of cement. This plant would be the second of its kind in the world.

The new plants with the capacity of two lakh tons at Sindri leave out expansion room for production of the order of 50 lakh tons. Programmes have already been formulated to achieve this balance. Five new factories are to be set up at Mancherial in Hyderabad, Yerraguntla in Andhra, Drug near the site of the Bhilai Steel Plant, Abu Road and Porbandar in substitution of the existing old factory. In addition, the present plants at Kymore, Lakheri, Shahabad, Dwarka, Kistna, Chaibasa and Sindri are to be expanded on ambitious scales. The financial resources which ACC plan to raise on their own for this order of expansion of cement production and for establishment of a machine manufacturing factory have been estimated at above Rs. 10 crores. Of this, ACC have arranged to raise Rs. 4 crores by means of cash credit from the State Bank of India on the security of their 5 per cent first mortgage debentures to be deposited in the Bank. Rs. 6.36 crores are to be raised by expansion of the share capital by the issue of 6,35,928 shares of Rs. 100 each to be offered at par to existing shareholders in the ratio of one new share for every two shares held by them. The proposal of this share expansion, of course, awaits the sanction of the Controller of Capital Issues.

One of the most important parts of the expansion of cement plants is the procurement of the necessary machinery and equipment. At present workshops attached to cement factories produce only some of the machinery and equipment. Vigorous expansion of the kind envisaged in the second Plan requires that the new plants should be of the most up-to-date designs, incorporating the latest rationalised techniques of production. ACC have given the fullest consideration to this vital part of the expansion programme. They have entered into an agreement of setting up a large-scale central factory, for the production of such machinery in this country, with Vickers Limited of the United Kingdom. The blue print of the new factory, jointly prepared by ACC and Vickers, is now undergoing final scrutiny. The two parties have undertaken to contribute to the bulk of the capital requirements of this factory in equal shares. ACC's contribution of the finance is to be found out of its scheme of capital expansion of Rs. 10 crores.

FAN MANUFACTURE RECOVERS GROUND

UNLIKE SEVERAL other industries which have surpassed the targets fixed for them in the first Five-Year Plan, the fan manufacturing industry has not been able to reach the target of 3,200,000 units, which has been assumed as the magnitude of the indigenous demand. Nevertheless, it is a healthy sign of the positive recovery made by this industry in the last two calendar years that production has been stabilised at a high level after the set-backs suffered in the two years immediately after 1951 which marked an all-time peak. The trends in output are tabulated below:

Year	Production
1951	2,12,400
1952	1,95,600
1953	1,99,200
1954	2,38,800
1955	2,55,450

The production in 1955 is estimated on the basis of the actual output in the first eight months which amounted to 1,70,300. Mr. T. R. Gupta, Chairman, Fan Makers' Association of India, explained at the last

annual session of the Association that the shortfall in output was due, among several causes, to the inadequate supply of electric power. The target of demand in the second Five-Year Plan has been placed at 6,00,000 units per year and the Chairman expresses the confident hope that the industry would fulfil it and may possibly excel it. An important condition for its fulfilment is a successful attempt to lower the selling price to bring it within the effective demand of the large middle class consumers. It would appear that this industry means to address itself to this task by evolving popular designs. Indian fans have made a start in stabilising their position in the neighbouring export markets and improvement in quality as well as finish have given them competitive strength. It is, however, difficult to share the Chairman's optimism that the home industry would attain an export level of 5,00,000 units "in the not distant" future. This export target is twice as high as production in 1955 and it is obvious that the industry must first plant its roots firmly in the home market as an unfailing base before it embarks on an ambitious programme of large-scale exports.

The industry requires quick action in the removal of its current handicaps. Supplies of pig-iron for castings have been difficult to obtain for a number of months past and electrical steel sheets are another vulnerable spot which create uncertainty in production programmes. The Association's grievances represented to the excise authorities mainly relate to procedural matters, but its request for remission of excise duty on paper and paints merits consideration in view of this year's new levy of excise duty on fans.

LLOYDS BANK LIMITED:

THE ACCOUNTS of the Lloyds Bank Limited disclose a profit of £2,322,439 for the calendar year 1955 which is £136,367 higher than that of the preceding year. The dividend on "A" shares has been proposed at the rate of 12 per cent, which, in effect, maintains the level of 1954. The annual statement of the Chairman, The Rt. Hon. Sir Oliver Franks, gives ample indication that, as a leading foreign exchange bank operating in the Indian sub-continent, the Lloyds Bank has found no difficulty whatever in readjusting its policies to maintain its utility and value in the credit structures of India and Pakistan. Fully appreciative of the legitimate aspirations of the two countries to shift the emphasis in the development of their economies towards industrialisation, the Bank's management has adopted a deliberate policy of sympathetic encouragement to proposals for finance which have a bearing on the establishment of new industries. The decline in the price of staple exports—jute, tea and rice—has had its impact on earnings of foreign exchange in this region, but the new accent on industrialisation and exploitation of natural resources is acting as a counter-balancing force.

The year under report posed the challenge of inflation to the British economy, but that challenge was courageously met and a perilous corner has now been turned. Banks were, of course, directly concerned in the campaign of monetary restraints which the Chancellor of the Exchequer was unflinchingly waging to curb inflationary pressures. Dismal prophecies about a deterioration in the exchange value of the sterling have been falsified and British exports have recently begun to look up. Apprehensions of a deficit in payments have been repelled. But as Sir Oliver emphasizes, a positive and sizable surplus alone can offer real security. He underlines three lessons for future economic policy from the trials of 1955: (a) Maintenance of adequate exchange reserves is of paramount importance. (b) Early application of normal restraints ought to be undertaken to obviate subsequent resort to drastic remedies. (c) Careful vigilance needs to be exercised to control the volume of bank deposits as a vital check on unwarranted levels of spending.

Statement of Chairman

LLOYDS BANK

MONETARY POLICY ON TRIAL

The Annual General Meeting of Lloyds Bank Limited will be held on February 17, 1956 in London.

The following are extracts from the Statement by the Chairman, The Rt. Hon. Sir Oliver Franks, G.C.M.G., K.C.B., C.B.E., accompanying the report and accounts for the year 1955:

The profit, at £2,322,439, is £136,367 higher than last year and we propose a dividend of 12% per annum on the "A" Shares, which is the equivalent—allowing for the capital operation carried out a year ago—of the 15% dividend paid for the year 1954.

BRANCHES IN INDIA, PAKISTAN AND BURMA

The business of our Eastern branches has continued to develop satisfactorily. During the year we opened a new branch in Eastern Pakistan at Khulna, a port which is becoming of increasing significance to the jute trade, and have moved into new and more commodious premises in Madras and Chittagong.

World prices of cotton, jute, tea and rice—the main exporting products of the three countries—have all fallen during the year but progress has been accelerated in the development of natural resources and industrialisation. The bank continues to adopt a sympathetic attitude towards proposals for finance connected, directly or indirectly, with the establishment of new industries in the countries of the sub-continent.

In August, the Pakistan rupee was re-valued at 1s. 6d., as against 2s. 2d., at which it had remained since the devaluation of sterling in 1949, and it is now on a par with the Indian rupee; the operation went through smoothly and there is little doubt that the revaluation should result in an increase in the overseas trade of Pakistan as well as in the trade between that country and India. During the year, both countries have been beset by serious floods and it is not yet possible to estimate the full extent of the damage, though it is feared that cotton and wheat crops may be adversely affected.

Our staff in the East are responding well to the changing conditions in the sub-continent. We, in this country, fully appreciate the services which the Eastern staff render in the bank's interests and I take this opportunity of making full acknowledgment of them.

INFLATION

For the majority of our countrymen 1955 must count as a very good year indeed. It is not, unfortunately, the whole story. Very few of us were prevented from sharing in the general well-being by lack of work. Large sections of our people, on the other hand, were again robbed of that opportunity by inflation, which for many years past has taken the place of unemployment as the main evil afflicting our society. Moreover, while the national standard of living was higher than ever before, it was also higher than the nation could afford without imperilling its future. From the financial point of view, the year was, therefore, dominated

by the Chancellor's efforts, in which the banks were directly involved, to remedy this situation with the aid of monetary restraints.

There was a period in which it was felt in certain quarters that we might not find it easy to maintain the present rate of exchange. Fortunately, the recent performance of exports shows that our competitive position has not been seriously impaired. Our failure in recent years to obtain our share of an expanding world market has been due rather to the other concomitants of inflation—such as delays in delivery and lack of incentive to venture upon the risks of export trade—than to excessive prices. If so, the reduction of inflationary pressure which is now in progress ought not only to restrain imports but also to give a fresh impetus to exports. There should be no doubt, therefore, about our ability to avoid a deficit in the balance of payments. But that is not enough. What we need is a positive surplus, considerable in amount.

LESSONS FOR THE FUTURE

Looking back, the important thing is to be as clear as we can about the lessons we can draw as a guide to future policy.

The first moral is surely the overwhelming importance of adequate exchange reserves. Had our reserves not been so near the danger level, we could have ignored a temporary loss of gold due to a running down of overseas holdings of sterling. The second is that a modest application of the normal restraints, if undertaken early, will often avoid the need for drastic expedients later on.

The third is the importance of keeping a tight rein upon the volume of bank deposits as one of the main determinants of the flow of spending. In other words, the authorities must keep a tight rein upon the supply of Treasury bills available to the banking system.

The true measure of the disinflation brought about since February is the decline of just on 6 per cent in banking deposits, leaving them no higher than in the middle of 1953. It is this decline in deposits—and, therefore, in the totality of bank assets—which is ultimately of importance, not the movement of the single asset, advances. This is not new doctrine; it is all clearly set out in the Macmillan Report.

Conditions today are in many respects very different from those in which monetary policy used to operate. It would be premature to suggest that the disinflationary measures have as yet accomplished their purpose. Undoubtedly, one nasty corner has been turned. The heavy gold losses of the third quarter have tapered off sharply, but we have not reached a point when we can be sure of steady progress and secure from all anxiety about the balance of payments; nor can we yet hope to achieve that substantial surplus which is one of our basic aims.

A solution acceptable to us all, consonant with our developed views about the kind of society we want, is well within our power. The condition is that we have the will to choose and carry out the means which are necessary to the ends we acclaim.

COMMODITY NEWS AND NOTES

COTTON PRODUCTION IN 1955-56

The all-India third estimate for cotton for 1955-56 puts the current year's area and production at 17,189,000 acres and 3,286,000 bales (of 392 lbs each of cotton lint.) A press note by the Ministry of Food and Agriculture states that these figures showed an increase of 1,096,000 acres in area and a decrease of 335,000 bales in production over the area and production in the adjusted third estimate for 1954-55 of 16,093,000 acres and 3,621,000 bales respectively. The production of cotton seed was estimated at 1,150,000 tons during 1955-56 as against the corresponding adjusted estimate of 1,267,000 tons for 1954-55 showing a decline of 117,000 tons. The increase in area under cotton during the current year has been reported mainly by Madhya Bharat, Bombay, Saurashtra, PEPSU, and Madhya Pradesh and has been attributed to favourable weather conditions at the sowing time and to efforts made under the cotton extension schemes. Despite increase in acreage, the production of cotton has gone down in 1955-56. The estimate does not cover the entire area sown to cotton crop during 1955-56. The trade estimates of cotton are generally higher than the official estimates. At this stage the latest available trade estimates put the size of the current year's crop at 48.65 to 48.74 lakh bales as against their corresponding estimates of 48.20 to 48.27 lakh bales for 1954-55 crop and their final estimates of 54.00 to 53.76 lakh bales for 1954-55.

WORLD JUTE SUPPLY

World jute supplies for the 1955-56 season will be considerably larger than in the preceding year. The production in 1955 of 4,723 million lbs, was nearly 40 per cent greater than the 1954 output of 3,402 million lbs, and approximately equalled the large crop of 4,692 million lbs. The current crop in India, estimated at 1,600 million lbs, was the longest since 1952. India and Pakistan were producing about 97 per cent of the world's supply. Pakistan's output in 1955 was set at 3,000 million lbs. The carry-over on June 30, 1955 was relatively small in the growing areas, but both domestic consumption and foreign exports of these areas were expected to increase in this season. The controlled acreage of jute in Pakistan was planned to produce about 2,200 million lbs, this year but excess acreage that was not destroyed because of a later Government decision, combined with good growing weather, and relatively small flood damage, are believed to have resulted in an exceptionally large crop.

KENAF PRODUCTION IN MEXICO

The yield of fibre from the 1955 kenaf crop in Mexico is expected to be round about 3.5m lbs from an estimated 2,100 acres, reports 'Jute Bulletin' of the Indian Central Jute Committee. Of this area, about 900 acres were in the State of Sinaloa, 865 in Vera Cruz and 245 in Morelos. Exports from the current harvest, which commenced in early October, are expected to be nominal. The earlier estimate of fibre yield from the 1954 harvest has been revised downward to about 2.2m lbs. The downward revision has resulted from the loss of fibre due to faulty decortication and to fire. A good part of the production in Culiacan, Sinaloa, was destroyed by fire.

TIN PRODUCTION IN DIFFERENT COUNTRIES

Tin production in Indonesia for 1955 fell to 33,368 tons from 35,861 tons in 1954. December, 1955 production was 2,328 tons, compared with 2,480 tons in November. Belgian Congo production for 1955 was 12,306 tons, against 15,084 tons in 1954, with December

output 1,387 tons, compared with 1,344 tons in November 1954. Production of tin metal in Malaya in November was 5,485 tons, against 6,257 tons in October, 1955. U.K. output was 2,241 tons.

U.S. production of tin metal in December, 1955, rose to 2,452 tons from 1,803 tons in November, but on the whole total production in 1955, fell to 22,329 tons from 27,002 tons.

EXPORT OF CHROME ORE

The Government of India have reviewed the policy for export of chrome ore. It has been decided to regulate export of this ore during the year 1956 on a quota basis through shippers who had exported the ore during any of the three calendar years 1953, 1954, 1955. Shippers are advised to establish by February 15, 1956 their last years exports with the export trade control authorities at the port through which exports were made.

NICKEL OUTLOOK

World nickel production in 1956 is expected to set up an all-time record, the estimated figure being 442 million lbs as against 427 million lbs in 1955. But the anticipated increase is not so marked as in the year 1954 and 1953, when the extent of the rise was 40 million lbs and 87 million lbs respectively. All the same, it is significant that the rising trend in production is being maintained. Despite this uptrend in production, chances of a fall in the prices of the metal seem slender. In fact, indications are, that prices may show a further rise. The limitations on the supply caused by large and augmented defence requirements as also the strategic stock pile needs of the U.S.A., threaten to continue placing a burden on the expansion of civilian markets. An idea of the impact of the U.S. buying on the price pattern of the metal can be had from the fact that that country lifted about two-thirds of the aggregate world supply in 1955.

TOBACCO EXCISE TARIFF

An expert committee has been appointed by the Government of India to review certain aspects of the Tobacco Excise Tariff. The terms of reference to the Committee will be to review generally the departmental procedures now in force for assessment to duty of tobacco on the basis of the criterion of capability of use for the manufacture of biris laid down in terms 9 I(5) and 9 I(6) of the Central Excise Tariff on tobacco other than flue-cured and to consider generally the methods adopted for estimating the produce of tobacco growers for purposes of accounting and assessment, and to recommend measures for remedying the defects, if any, in the existing methods.

FOOD PRODUCTION IN INDIA

Food production in India had risen from 50 million tons in 1950-51 to 65.8 million tons in 1954-55, exceeding the target by about 4.2 million tons, as a result of implementation of irrigation and power projects in the first Five-Year Plan. By the end of 1954-55 four irrigation facilities and increased water supplies were provided to over four million acres of virgin and irrigated soil. According to official sources food imports which totalled 4.7 million tons in 1950-51 had fallen to 0.77 million tons in 1955.

lbs, and approximately equalled the large crop of 1952 of 4,692 million lbs. The current crop in India, estimated at that was not destroyed because of a later government relatively small flood damage, are believed to have re-

Company Meeting

THE ASSOCIATED CEMENT COMPANIES LTD.

The Nineteenth Annual General Meeting of the Associated Cement Companies Limited was held in Bombay on 27th January, 1956. The Chairman, Shri Dharamsey M. Khatau, reviewing the major developments in the economic and industrial field that have taken place in the country said:

"We in this country have got into a curious habit of achieving political, economic and social progress by sudden jerks. Every year, two or three major economic or political concepts are mooted and bitterly pressed, often to extreme limit; this is followed by some hasty legislative action; and the controversy then dies down as suddenly as it began.

"This has been going on since 1950; and the year 1955 was no exception. It began with the proclamation of the 'socialistic pattern of society' as the ultimate objective of political and economic policy. This was followed by the Fourth Amendment to the Constitution, whereby it would no longer be unconstitutional to nationalise, either by acquisition or by obtaining complete physical and management control, every form of private property on payment of only such compensation as may be laid down in the particular nationalisation enactment. Quick on the heels of this serious detraction from fundamental rights came the taxation proposals of the 1955 Budget which contained a curious mixture of measures adversely affecting individual enterprise and incentive, savings and investment, on the one hand, and affording encouragement to industrial development, on the other! And before the ink was dry on this drastic scheme of taxation came the nationalisation of the Imperial Bank. Later, we had the Indian Companies Act with its quite unjustified attack on the Managing Agency system, the objective apparently being to kill rather than to cure the one institution which had been most responsible for the rapid industrial advance we have achieved since the First World War. And finally, the nationalisation of life insurance was announced only last week!"

THE SECOND FIVE-YEAR PLAN

Referring to the 'Plan Frame' of the second Five-Year Plan, Shri Khatau said that he felt it had caused grave concern to knowledgeable circles. He characterised it as "no more than a jumble of ill-conceived and unattainable 'physical targets' of production, tied together with bits and pieces of loose thinking, which completely ignored such practical issues as how or wherewith they were to be achieved". It was fortunate, Shri Khatau added, that the Plan Frame had since been subjected to the most rigid scrutiny with the result that while its old name persisted in substance, it was new and more in the region of practical economics. Shri Khatau continued: "Even so, two features of the second Five-Year Plan as it is now emerging give cause for some anxiety. One is the drastic cutting down of the outlay on transport, especially Railways; and the other, the impractical approach to the problem of resources to cover the enormous over-all outlay of some Rs. 4,800 crores contemplated in the public sector. There lies before us, in consequence, the grave prospect of the probable incapacity of the transport system to cope with the increased production envisaged under the Plan, alongside with acute inflation coupled with crushing taxation of income and capital."

THE PRIVATE SECTOR

Speaking on the progress and prospects of the private sector, the Chairman observed that there could be no doubt that the urgent need to achieve industrial

expansion along sound lines was appreciated as keenly by free enterprise as by those who spoke from the ideological or political platforms. "Whether it is a question of raising the general standard of living or of avoiding inflation in the wake of deficit financing of development in the public sector, the *sine qua non* is continually increasing production. Towards this end free enterprise has played its part, and will continue to do so subject to the numerous handicaps imposed upon it even within the limited scope permitted to it. It is admitted that the targets set for the private sector under the first Five-Year Plan have generally been fulfilled; and that in some cases, they are even likely to be exceeded—as has already happened in the cotton textile industry. No one need doubt, therefore, that the role allotted to the private sector in the second Five-Year Plan will be equally significant. But its achievement will depend to a large extent on the broad-based backing of the public as well as of the Government, on wise planning and sound fiscal and political policies, on full and unstinted co-operation from labour, and on the uninterrupted flow of savings and investment year after year. In all these matters, the most effective single factor will be the plans and policies of the Central and State Governments in relation to financial matters generally and in regard to taxation and nationalisation in particular."

PRODUCTION AND SALES

Turning to the affairs of the Company, the Chairman reported yet another successful year of working for the ACC. Both production and sales of cement were satisfactory, though the Company had not been able fully to cope with the demand. These results were due to the very strenuous and sustained efforts the Company had already made to increase production.

PLANT REHABILITATION AND EXPANSION

Shri Khatau stated that since the ACC embarked upon its post-war expansion programme, it had already increased its annual manufacturing capacity by nearly 1.3 million tons. Satisfactory progress was maintained during the year in the modernisation and extension of the Shahabad, Bhupendra and Kistna factories. The new works for the production of refractories at Katni was about to go into production, and by October 1956 would have a capacity of three times that of the old plant.

SINDRI

Coming to the field of new installations, the Chairman reported that the first unit of the Sindri plant having a capacity of one lakh tons was put into operation in September 1955 and a second unit with a similar capacity went into production two months later. That plant, utilising calcium carbonate sludge (hitherto a waste by-product from the Sindri Fertiliser Factory) for the manufacture of cement is the second of its kind in the world. "This splendid achievement," Shri Khatau said, "involving the solution of some very difficult

technical problems, was the work of the members of our own staff, unaided by any outside consultants or experts. I am glad to say that the cement produced there is well up to our best standards".

TARGET FOR CEMENT INDUSTRY

Referring to the target of 12.5 million tons set for the Cement Industry under the second Five-Year Plan, Shri Khatau spoke of the ACC's role in the implementation of this huge target: "As the leading manufacturers of cement in the country, we have to play our full part in bringing about the very large expansion which the achievement of this target will necessitate. This we plan to do by establishing a number of new factories in various parts of the country and by extending those of our existing works which are favourably situated with raw materials in sufficient quantities. We have already formulated plans to increase our capacity to nearly 5.2 million tons by extending our existing factories at Kymore, Lakheri, Shahabad, Dwarka, Kistna, Chaibasa and Sindri, and by putting up five new factories—at Mancherial in Hyderabad, at Yerraguntla in Andhra, at Drug near the site of the Bhilai Steel plant, at Abu Road and at a new site in Porbandar in replacement of the present old factory. Further projects are under consideration. Apart from our contribution other interests in the cement industry will also undoubtedly have similar plans of expansion so that we may collectively achieve the extremely rapid expansion which is required in fulfilment of the high target".

FINANCE FOR EXPANSION PROJECTS

Speaking about the very substantial capital expenditure entailed by these expansion projects, Shri Khatau said that the ACC had entered into a cash-credit arrangement with the State Bank of India enabling the Company to borrow up to a limit of Rs. 4 crores against the security of its own 5 per cent First Mortgage Debentures deposited with the Bank. He also said that the Extraordinary General Meeting to be held later that evening would consider the issue of 6,35,928 shares of Rs. 100 each to be offered at par to existing shareholders in the ratio of one new share for every two shares held, subject to the sanction of the Controller of Capital Issues. This additional finance, supplemented by the Company's own present and prospective internal resources, the Chairman observed, would be adequate for the purpose of attaining an annual production of nearly 5.2 million tons.

CENTRAL WORKSHOPS

During the past few years, Shri Khatau continued, some of the machinery required for the ACC had been manufactured in the Company's own workshops. But with the plans for rapid expansion ahead, there was now urgent need for considerably higher production of cement-making machinery in India utilising the best techniques and newest developments. Shri Khatau announced that the ACC, with the approval of the Government of India, was negotiating with Messrs. Vickers Ltd. for jointly setting up a plant for the manufacture of a wider range of cement-making and other machinery in India. Vickers Ltd., together with their many associated companies and their respective subsidiaries, the Chairman said, constituted perhaps the largest engineering group in the United Kingdom manufacturing an extensive range of products including heavy engineering machinery, plant and tools of all kinds, cement making machinery, ships, aircraft, railway rolling stock and numerous other products. After preliminary negotiations, Lord Knollys, the Deputy Chairman of Vickers Ltd. visited India. That was followed by Vickers sending out a team of experts who, along with an ACC team, made a thorough investigation of the project and submitted a joint report which

is now under consideration by Vickers Board and by ACC Directors. It was envisaged that the new works to be jointly established would manufacture not only a wide range of cement machinery adequate for the country's entire requirements, but also such badly needed machinery as gears, pumps, mining equipment, etc. The bulk of the capital required for the project would be contributed by Vickers and the ACC in equal shares and provision for the ACC's contribution had been made in the financial arrangements referred to earlier. If on careful consideration the scheme proved to be a worth while proposition, it would be put before the shareholders for their sanction.

WHITE CEMENT

Shri Khatau then stated that the ACC had embarked on the manufacture of white cement at the Porbandar factory on a small scale, and said the production would be gradually increased with growing demand. The new product, which was also an excellent base for making coloured cements and cement paints, was now being marketed under the trade name of "Silvicrete".

BULK CEMENT

The Chairman turned next to the ACC taking the lead in supplying cement in bulk to its customers, and stated that the first Bulk Cement Depot at Delhi was now ready and deliveries of bulk cement from this depot would commence next week. Depending on the experience gained from this experimental project, the Company intended to establish similar bulk cement depots wherever feasible.

PAKISTAN

The Chairman stated that the ACC's two factories in Pakistan were operating satisfactorily, and that remittances of part of the profits from Pakistan were with great difficulty being allowed from time to time. He felt that with the devaluation of the rupee by the Government of Pakistan, the remittance problem should ease. Shri Khatau anticipated some increase in costs there and expressed the hope that the Government of Pakistan would take this into account when fixing cement prices for the current year.

COLLIERIES

Reviewing the progress of the ACC's two collieries at Kotma and Nowrozabad, the Chairman said that in line with the targets for coal production in the second Five-Year Plan, the ACC was considering schemes for increasing the output of the Nowrozabad Colliery and for setting up a coal-washing plant to improve the quality of the coal despatched.

LABOUR-MANAGEMENT RELATIONS

Turning to labour-management relations, the Chairman observed: "I referred last year with some satisfaction to the unanimous decisions of the Industrial Committee on Cement reached at the Hyderabad Conference, and also expressed the hope that we in the cement industry could look forward to a long period of peaceful and productive hard work.

"Unfortunately the goodwill fostered by the Hyderabad Conference and the 'peace within industry' which the ACC has so assiduously sought to build up by its progressive labour policy over a period of years, was marred by the efforts of certain interests to negative the joint decisions taken at the Hyderabad meeting. The interpretations sought to be put on the deliberations of that Conference, as also on the ACC's readiness to react generously to the wishes of labour, have resulted in demands being made on the Company to assume more and more responsibilities and financial burdens without any reciprocal gesture on the part of labour. It is,

therefore, with some sorrow that I have to report that at our Chaibasa factory the workers were misled into a prolonged strike on issues which had already been previously settled by mutual negotiations. Ultimately, when, after a lapse of four months, the Government referred the matter to an Industrial Tribunal, the harm had already been done, and this futile and wasteful stoppage of work resulted in a loss of production of over 60,000 tons of cement. However, I am glad to report that it was possible later to work out a settlement with the Chaibasa Works Union on all matters pending before the adjudicator, resulting in a joint request to him to give his award in terms of the settlement.

"The great majority of the Company's employees, I can say with confidence, are well-satisfied and enthusiastic workers who take pride in the part they are playing in the progress of this great organisation and its service to the nation."

BONUS

The Chairman announced that the Board had recommended the payment of a bonus equivalent to three months' basic earnings to all employees at the Head Office, the Works and Branch Offices, and concluded by recording the Company's appreciation of the excellent work and fullest co-operation of the staff and operatives.

The Report and Audited Statement of Accounts for the year ended 31st July, 1955 were then adopted and confirmed.

FOREIGN EXCHANGE

Indian Tea earned over Rs. 147 crores in terms of foreign exchange during 1954-55.

COMPANY AFFAIRS

THE INDIAN IRON AND STEEL CO., LTD.

The Profit and Loss Account of the Company for the year ended March 31, 1955, shows, for the first time since the merger of the Steel Corporation of Bengal, Ltd., comparable results of two full years' working of the amalgamated concerns. This position is due primarily to the large excess of the production of steel over the estimated output of 290,000 tons adopted by the Government for the purpose of the fixation of the sales retention prices for the year. The increase in output was augmented, among others, by conversion of the large stocks of ingots, pig-iron and meltable scrap accumulated as a result of the labour trouble experienced in 1953.

In view of the heavy additions to block account over recent years, the provision for depreciation has been increased from Rs. 80,00,000 to Rs. 120,00,000. As in the previous year, a sum of Rs. 59,50,000 has been transferred to Plant Rehabilitation Reserve comprising the amounts of Rs. 52,00,000 for the steel plant rehabilitation and Rs. 7,50,000 for the Kulti Blast Furnaces Rehabilitation, to be set aside in accordance with the past recommendation of the Tariff Board.

After allowance of Taxation, Debenture Interest and Sinking Fund, Labour and Staff Benefit Schemes and all other charges and setting aside the above amount of Rs. 59,50,000 on rehabilitation account, there is left a balance of profit for the year of Rs. 2,10,69,223, and allowing for the usual dividend of Rs. 13,49,770 on the Preference share capital, there remains an amount of Rs. 1,97,19,453.

Notwithstanding the necessity for the setting aside to reserve of a substantial part of the profits earned, in view of the very heavy amount that is to be found by the Company from its own resources towards finance of the cost of the expansion programme, the Directors had wished to mark the outstanding results by the payment of some additional dividend for the year. But the Government have found themselves unable to agree to any increase in the dividend which has, therefore, been recommended on the Ordinary Share Capital of one rupee per share, being at the same rate of 10 per cent per annum free of Indian Income-Tax as was paid for the previous year.

Accordingly out of the balance of profits of Rs. 1,97,19,453, a sum of Rs. 43,69,967 has been transferred to General Reserve and Rs. 1,00,00,000 set aside on Works and Ore Mines New Extensions Reserve, leaving an amount of Rs. 53,49,486 to which is added the balance of Rs. 2,98,623 brought forward from the previous year, making a total of Rs. 56,48,109. The Ordinary dividend of one rupee per share will absorb a sum of Rs. 51,83,708, leaving a balance of Rs. 4,64,401 to be carried forward to the next account.

THE BALRAMPUR SUGAR CO., LTD.

The Directors' Report and the Audited Accounts of the Company for the year ended June 30, 1955, show the following position:

The results for the period, after providing for all charges including provisions for Taxation and taking into account earlier provisions no longer required, show a profit of Rs. 3,14,853

To which has to be added the Carry Forward from the previous year 23,527

TOTAL Rs. 3,38,380

From which has been deducted:

Depreciation Rs. 1,20,000
Rehabilitation Reserve 1,00,000
Contingencies Reserve 80,000 Rs. 3,00,000

Leaving at credit of Profit and Loss Account Rs. 38,380

The Directors recommend this balance to be disposed of as follows:

In payment of a dividend of one anna per share free of Income-tax, for the year ended June 30, 1955 Rs. 17,500

Carry forward to next Account Rs. 20,880

The quantity of cane crushed by both factories during the season 1954-55 showed a considerable increase over that crushed during the previous year and was above the average for the last 10 years. Balrampur Factory crushed 21,49,154 lakh maunds with a recovery of 9.75 per cent while Tulsipur Factory crushed 24,42,946 lakh maunds with a recovery of 9.46 per cent.

The cane price was Rs. 1-7 per maund at the factory gate and Rs. 1-5 per maund at out-stations. Out of the total sugar production for the 1954-55 season, Government retained 25 per cent for controlled sales.

While the efficiency of both factories' operations continued at a high level, they were adversely affected by difficulties with the Railways in the transport of sugarcane and in obtaining wagons for the despatch of sugar.

THE BANK OF BARODA LTD.

The Profit of the Bank of Baroda Ltd., for the year 1956, subject to audit, including the sum of Rs. 2,70,302 brought forward, amounts to Rs. 32,35,546 which the Directors have disposed of as under:

An ad-interim dividend was paid for the half-year ended June 30, 1955, at the rate of 10 per cent per annum free of income-tax which absorbed .. Rs. 5,00,000

Provision for taxation 9,00,000
Bonus to staff 8,00,000

The Directors propose to pay a final dividend for the half-year ended December 31, 1955, at the rate of 14 per cent per annum free of income-tax, amounting to Rs. 7,00,000, making in all 12 per cent for the year and to carry forward Rs. 3,35,546 to the next account.

THE BHOPAL SUGAR INDUSTRIES LTD.

The Directors' Report and audited accounts of the Company for the year ended September, 1955, shows a net profit, after providing for Depreciation Rs. 1,60,680 and Managing Agents' Commission Rs. 31,021, of Rs. 2,79,191, subject to taxation. Adding the balance brought forward from the last year's account of Rs. 38,000, the amount available is Rs. 3,17,191 which has been proposed to be disposed of as follows:

Dividend on preference shares @ 5 per cent, free of income-tax Rs. 62,500
Dividend on ordinary shares @ Re. 1 per share free of income-tax 1,75,000
Taxation reserve 75,000
Carry forward 4,691

TOTAL Rs. 3,17,191

India's Second Plan

THE appearance of India's second Five-Year Plan today has made Friday, February 10, one more of those historic days with which India's calendar is now so liberally adorned. This is only, it is true, a summary; but brevity may still be the soul of wit. It is right that one should pay tribute to the skill with which the tremendous clash of interests as well as the oppressive mass of detail have been reconciled in an integrated whole. It may be that much confusing argument which stands behind the ideology will in due course emerge. But this is not the place for criticism. We need not express agreement with the Plan either in outline or in detail to express admiration

for the comprehensive character of its first presentation. It is right that a great tribute should be paid to the Secretariat of the Planning Commission for the quality of its reporting. Both in the economy of words and in the emphasis in its presentation, the second Five-Year Plan records a great improvement on the first.

While this tribute should be paid, very few will accord to the Planning Commission any virtue arising from the element of surprise. Almost everything that the second Plan contains has been known for many weeks. A 25 per cent rise in National Income, with the total investment of

Rs. 4,800 crores in the public sector and Rs. 2,300 crores in the private sector; per capita income to rise by 18 per cent, with a rate of investment increasing from 7 per cent of National Income to 12 per cent; agriculture, community development, irrigation and power to rise by 30 per cent; industries, minerals and transport by 48 per cent; social services and others by 22 per cent; additional employment for about 10 millions of persons of which 8 million jobs would be outside agriculture; all this, and Heaven too. The social appeal of the Plan would not be complete without fashionable lip-service to "the recognition of the private sector's role" and a not-so-innocuous recognition "of the need for reduction of inequalities of income and wealth and a more even distribution of economic power."

The Eastern Economist is publishing with its Budget Number in the first week of March an elaborate critique of India's second Five-Year Plan. This is not the occasion—and this is certainly not the time since the Plan was issued only this morning—to undertake any elaborate examination of the principles by which the development of the economy is sought to be achieved and the likelihood of generous aspirations being matched by vigorous performance. It is enough to say at this stage that *The Eastern Economist* believes firmly that the loads which have been assigned to the public and the private sectors in the Plan are disproportionate, not in the sense that they are wrong in theory, but that they in actual fact will lead to great difficulties in implementation. The public sector is just not equipped to undertake all that it now sets out to claim for its own. The danger is that, while it will fail in its portion of the Plan, the private sector will be denied an opportunity to make good the gap by the failure to provide for investment in advance and the necessary incentives with which alone it can go to work.

It is these problems—lack of managerial and administrative capacity in the public sector and the erosion of incentives in the private sector—which are fundamental to an appreciation of the character of India's second Five-Year Plan. There is no reason why national income in the Indian Union should not in the next five years rise by over 5 per cent per year, provided the task of implementation was given over to proved and tried agencies. When one analyses performance in the first Five-Year Plan, one has to recognise that the basic fact is that the public sector is, in almost every respect, behind schedule while the private sector is ahead of it. If the first Five-Year Plan is today a great success, it is entirely because the volume of overfulfilment in the private sector has greatly exceeded the underfulfilment of the public sector. In other words, it is the private, not the public, sector which has done the job.

Ignoring this fundamental historical fact, which is only a reflection of the capacity of the two sectors at this time, the second Plan gives to the public sector double its load in the first Five-Year Plan as well as more than double the load it accords to the private sector. It thus inverts capacity; having laid down arbitrary targets between the sectors, it assumes, without any shadow of evidence, that performance will match the assignment of loads. Even if incentives in

the private sector were not being eroded in the calculating manner of blocking opportunities and imposing crippling personal taxation, there would be a risk of non-fulfilment because of the gap of underfulfilment in the public sector which would be too large for even a vigorous private sector to cover. But the ideology behind the Plan has been translated in such a manner that the private sector will have no deep interest in overfulfilling itself. It is obvious that under these circumstances the Plan will run the great risk of failure unless some drastic action is taken to provide for the administrative gaps in the public sector.

These administrative gaps mean, quite simply, the training of the necessary managers in a very short period and the organisation of responsibility on commercial lines. A public sector manager must be allowed to function without all the political handicaps which now operate. There is no indication that any such conditions are being developed. Technical assistance can be bought to a great extent and the new provisions for allowing foreign technicians in businesses free of taxation should make it possible for technical bottlenecks to be broken provided only recruitment is immediately set in operation. The immediate bottleneck in technology is not technicians so much as the elaborate blue-prints which can only be prepared with the necessary speed with large teams of consulting engineers and numerous collaboration agreements. Far too little time and thought has been given to the difficulty of getting the Plan off the general descriptive phase and making the detailed blue-prints required in each case. This and no other is the public sector's problem currently to be faced.

Assuming—as seems to be evident—that no basic change in the philosophy of the Plan can now be contemplated, one needs to make the best of the mistakes which a highly coloured political situation has imposed on India's economic affairs. For political reasons on the eve of the elections, the Government of India has chosen to subdue the active agents of India's economic society in order to placate the passive and inert sectors of the economy. For political and even social reasons this decision might be applauded. But, unless the Government of India recognises the inertness in the sectors of the economy to which it has assigned momentous tasks, there will come another time and another election when its political astuteness may well be questioned.

With Jawaharlal Nehru at the head of the Government, that day may be long in coming. But facts are cruel things; they will take no notice of the emotional longings of the Indian people. And, indeed, emotions are themselves the results of facts. It is by deeds, and not by promises, that the Government of India will win the approbation of the Indian people. At the present time, practically all its production has been done by the active agents of India's private sector. If new agencies cannot be created within the time allotted and the old agents are deprived of the opportunities to excel in production as they have done in the last five years, there will come, as certainly as night after day, a questioning of the ideology which stands behind this Plan. The next five years will test the public sector; the last five years proved the private sector. Let all things be tested; only let us hold fast to that which is good.

The Amritsar Congress

THE Amritsar session of the Indian National Congress which commences tomorrow may prove no exception to the rule by which all such sessions have been described as eventful or historic. These common clichés of the columnists have been relevant only to the unfailingly impressive spectacle which the plenary sessions have provided than to the hard core of objectives or doctrine formulated or propagated therein. Skill in the organisation of the show has been developed in the last few years to provide a secondary source of political prestige to the Congress as a party administering State power. In spite of its changed role since independence, the Congress has not altered its system of organisation. Before freedom, it was under a necessity to make itself the focus of allegiance as a rival to British Raj, but even today it continues to claim a similar status and has largely succeeded because there has been no successful challenge to its role as a trustee of political power in India. It is thus that more importance is attached to the formulation of its objectives or its rediscovery of old slogans at Congress sessions; the question has therefore been asked whether Amritsar would presage anything new, in the sense in which Avadi made history last year.

The Avadi session is famous for its having provided the platform for the proclamation of the goal of the socialistic pattern of society. There has also been a translation of that objective in practical terms of policy by the steps taken since then to nationalise the Imperial Bank and insurance business and to enact the Constitutional Fourth Amendment and the Company Law. In this sense the Avadi Congress has become a kind of landmark, though the socialistic pattern of Congress policy has always remained imbedded in its philosophy. Politically, it was a necessary part of the doctrine of equality of man which was fundamental to Congress opposition to colonial rule. But even in its economic aspects, sufficient indications were available in the work of the National Planning Committee of the Indian National Congress, where the refrain on nationalisation at first appeared to be only an individual obsession of the chief draftsman of the Reports, the late Mr. K. T. Shah. The early years of independence seemed to indicate a compromise in practice with the realities of administration and a modification of the policies envisaged before. The actual working of the Industrial Policy Resolution of 1948 (the first major step towards the implementation of socialism underlying the planning report) and the interpretation of the Constitutional objectives put into the Preamble and the Directive Principles of State Policy have so far appeared to be the sagacious acceptance of what was feasible. The Avadi Congress was significant because it marked an abrupt change; it laid emphasis on a return to the earlier objectives, if not in as unqualified terms as before. The difference, however, is that these restatements of some of the old doctrines are being made after a fairly long and fruitful period of experience in practical administration and thereby larger significance is attached to them than when they were divorced from practice and appeared to be purely idealistic.

The major difference between then and now is that in formulating objectives, there is an increasing trend towards identity of views which is

more the result of enforcement from above than of a spontaneous unanimity. The Congress as a national organisation, which it still wishes to be, must be in a position to accommodate more points of view than what it can afford to do in the normal course of its functioning as a political party, with a programme to execute inside the legislatures and canvass public support to assist it. The circumstances in which criticism could be freely given and taken before, have now changed, because the men who could effectively mould political opinion have diminished in number and even more in influence. Whatever criticism exists has been driven below the surface of Congress politics; this is perhaps due less to deliberate design than to a combination of other factors. The distinctions between the various aspects of party organisation have become blurred or extinct altogether, with the result that many limbs of Government, like the Planning Commission, appear to work for party ends. The result has been to make deviations from popularly accepted notions unacceptable with the consequence that criticism has increasingly become the stock-in-trade of the least responsible and most unbalanced sections of the community.

The dominating thought at Amritsar is the search for national unity, which has become urgent because of the sudden discovery since the recent riots that Indian unity has not been nearly as good as it has been often assumed. There is some exaggeration involved in this approach. The Congress in office has only helped to submerge differences that have existed by pressure, not solved them; the result is that these differences tend to erupt later in the body politic on other pretexts, however flimsy. The question of States' reorganisation has become one such pretext; if the whole subject had continued to be discussed all the time as freely as now, some of the ideas that are presenting themselves as possible solutions might have occurred even earlier without coming as revelations. The belief that there was one unbroken surface of unity under Congress rule in the sense of uniform acceptance was too facile; it was possible to hold this belief only because uniformity was largely enforced by the preponderance of the Congress as a party and the towering stature of its *de facto* leader.

The Amritsar Congress will not be able to take a step towards a right solution for the simple reason that the apparent unanimity in public discussion often covers up a lack of unanimity in thought and opinion. Both in acquiring political power and in preventing opposition, the Congress organisation has become diluted. It has sought to wipe out communalism by incorporating some of it in its own ranks in the interests of political success. In disarming the Communists by its foreign policy and in confusing the Socialists by its economic policy, the Congress has greatly widened its structure but not effectively unified its organisation. It is, therefore, now faced with the problem of meeting all the expectations of varying groups, who might otherwise have sought refuge elsewhere or whose opposition might have been canalised through vehement public criticism, without showing itself in bitterness. A deeper understanding of social forces in the country would still help the Congress as a party to do better.

Policy for Shipping

IN the last few days speculation has been rife whether shipping will be singled out as the next casualty of nationalisation. This apprehension cannot be considered as altogether without foundation. Hitherto no declaration of policy on the ownership of shipping was called for and it was in a different context that nine years ago Government announced its decision to participate in the share capital of the projected shipping corporations for plying the overseas trade. The issue whether shipping should be taken over by the public sector did not then arise at all. This threat cannot be ruled out in the case of shipping, notwithstanding the absence of any open discussion in respect of it at the official level. Civil aviation is a case in point.

To drag the issue of nationalisation of shipping at this juncture would be putting the cart before the horse. The most vital problem for the country's shipping at the present time is the expansion of tonnage at the maximum practicable rate and it is bound to remain the major problem during the next three, or even four, Five-Year Plans. Whether shipping is to be permitted to remain in the private sector is entirely a secondary issue. It can even be affirmed with justification that in view of the present regulation of shipping, nationalisation will amount to a formal change in ownership, which cannot show advantages to offset the dislocation.

The extent to which financial assistance granted by the Government to private shipping companies during the period of the first Plan has dominated their capital structure needs much wider appreciation than is generally accorded to it. A total amount of Rs. 12 crores is estimated to have been advanced to them by way of loans for purchase of ships in the first four years of the Plan and, in view of the fact that requests for loans gained momentum at a late stage after their terms were liberalised, the allotment of Rs. 19 crores in the Plan period can certainly be depended upon to be fully absorbed. This aggregate amount easily exceeds the paid-up capital of the borrowing companies. In the second Five-Year Plan, Government outlay on shipping has been placed at Rs. 45 crores as against which the contribution of the private sector cannot be more than one-fifth. There is nothing extraordinary in the assistance of this magnitude and international comparisons will bear out its inadequate scale. Nevertheless, with Government possessing predominant control over the finances of the shipping companies and wielding ample powers of regulation over their management policies including determination of rates for the coastal trade and conditions of service of personnel, little substantial gain is likely to be achieved by nationalisation. An analysis of recent balance sheets of a representative group of nine companies, comprising the three big ones and six medium-sized, discloses their combined profits to be merely a little in excess of Rs. 1.5 crores. Under State management most of this modest quantum is bound to be eaten up by inflated costs. On the score of net revenue, there is a very feeble case for nationalisation of shipping.

This country has made a start only recently in operating scheduled services on a mentionable scale in the adjacent and distant waters. A nucleus of indigenous managerial cadres is still being evolved in the private sector and while it is in the initial stages it has to compete with the

demands of the public sector. The State-participated Eastern Shipping Corporation draws its sustenance for management from the country's premier operator. The second shipping corporation which is to be floated this year is to function on a similar basis of management by a private company. The case of the tanker fleet, which is a novel sphere of trade to this country, has a deeper moral to convey. Private collaboration has now been decided upon by the Government presumably in the interest of smooth and flexible management. This course is being adopted in the hope that a technical hitch in Government's agreements with the oil refinery companies will be got over and adequate business will be obtained from them to engage the tankers notwithstanding their mixed ownership. Future expansion of India's shipping industry is to be planned mainly in the direction of the distant overseas trade and the pattern of corporations prescribed for it, which envisages predominant State ownership, will lean almost entirely on private operators for management. A course which suggests the extinction of this limited source of supply has little to commend it.

The real problem which calls for a bold and forthright solution is the expansion of tonnage. We have moved at a snail's pace in achieving progressive development of our merchant navy. The net addition to our tonnage in the first Plan, after making appropriate provision for obsolescence, has been as low as 210,000 GRT, which takes the total tonnage to about 600,000. In the meantime, there have been setbacks on other fronts. Five years after the reservation of coastal shipping for Indian operators we have discovered that foreign tramps have to be pressed into service in this trade. Our pious belief of hundred per cent acquisition of this sphere has been upset. We are now waking to the realisation of establishing a tramp fleet with a capacity of 60,000 tons to be built in the second Plan.

We are carrying merely 40 per cent of the adjacent trade and a fractional share in the overseas trade amounting to 5 per cent. The expansion contemplated in the second Plan does not make any substantial advance over the first Plan with a net addition of 300,000 tons. In March 1961 our shipping will have reached a target of 900,000 tons. At this level we will have achieved half of the target in about double the number of years prescribed by the Post-War Reconstruction Shipping Policy Sub-Committee whose recommendations are supposed to govern our policy. The inadequacy of the achievement is apparent. The tonnage in 1961 will leave us short of the accepted goal of carrying 50 per cent of the overseas trade by a large margin of 30 per cent, besides the deficiency of 25 per cent in the adjacent trade. The most vital aspect of this expansion relates to saving of foreign exchange of which we are spending a very large sum on shipping services. The basic object of shipping policy must be to conserve this outlay on a progressive scale. It may be possible to establish a relationship between the foreign exchange needed to acquire foreign-built ships every year and the period during which that foreign exchange will be completely saved by our ocean-going services. It would then be possible to plan better for the expansion of the fleet. Let our thoughts turn on this more vital aspect of our national interests in shipping instead of to the dubious values of transfers of ownership.

It's a
BIG job

looking
for oil

Have you ever considered what a long, elaborate and costly business it is looking for oil? Although oil lies thousands of feet underground, the oil prospector may have to take to the air—to photograph the lie of the land and make aeromagnetic surveys. Or he may create artificial earthquakes, in what is called a seismic survey. Then the findings have to be interpreted, in geophysical laboratories, before a test well is bored perhaps to a depth of as much as three miles.

The Assam Oil Company, for many years the pioneer of oil search in India, discovered a fresh source of oil recently at Nahorkatiya in Upper Assam. Crores of rupees have been spent in the search and many more will have to be spent on the development of this discovery.

And all the time, remember, the search for more oil is going on—for further sources of this most elusive mineral are vital for India's industrial development. All the very latest scientific methods and technical equipment, including aeromagnetometers and even helicopters, are being employed. No effort in fact is being spared to reduce India's dependence on oil purchases from abroad.

Save valuable working hours!

FAST NEW Night Air Service

by Luxurious 4-engined

Skymaster

**to BOMBAY-CALCUTTA
DELHI-MADRAS via NAGPUR**

SAVE precious time and unnecessary expenditure on the way—fly overnight by new, luxurious Skymaster service, connecting Bombay, Delhi, Calcutta, Nagpur and Madras. The new service cuts out irritating overnight stops, lands you in time for breakfast—and it is carefully scheduled to connect with 34 morning flights from the big airports. So by midday tomorrow, you can reach almost any important town in India!

Wherever you want to go, whichever flight you choose—Skymaster service makes sure you get there in time! And you have complimentary meals, free travel to and from airport, everything. No extras to pay.

THE WEEK'S NOTES

ANOTHER STEP IN MERGER MOVE

IN FORMULATING his proposals on how the union of West Bengal and Bihar should be brought about, Dr. B. C. Roy has shown the same vision and courage which inspired him and Dr. Sri Krishna Sinha to start the move as a means of diverting attention from all petty border disputes between the two States. It is obvious that the internal structure of the two regions will have to continue as they are now until uniformity can be brought about gradually in course of time. The land system, the tenancy laws and the modes of taxation will not lend themselves to sudden changes without upsetting the economies of the two regions. In these matters, as in respect to provision for social services, uniformity is certainly desirable, and it should be possible to bring about such uniformity in the course of five to ten years. Nor can there be any objection to the languages of the two States—Bengali and Hindi—being the official languages of the united State, with the language of each region having predominance in that region.

It is in regard to the administrative set-up that the union should be fully operative in the first instance. There is to be a single legislature, a single Cabinet, one Governor and a common Public Service Commission. Most of the Government posts in the two regions will be filled by people from the region concerned, at least for some years to come. The regional council for each region, composed of the legislators from the region and presided over by a Minister from the area, should serve as an effective forum, in addition to the legislature, where each region's requirements can be debated and presented. Dr. Roy has also proposed that there should be a Deputy Chief Minister who will belong to the region from which the Chief Minister does not hail. Calcutta, obviously by reason of its size and importance, is to be the primary capital with Patna as the secondary capital.

These are but the bare outlines of the future set-up, but they should be enough to assure both regions that union will not mean domination by the other. It is indeed idle to claim that merger can be brought about straightway, but it is a good augury that the Chief Ministers of the two States realise that many problems will arise and are determined to tackle them to make union a success. Not merely as an example to the rest of the country, but even by itself, the West Bengal-Bihar union will be both economically and politically a wise step. Apart from some economies which can be effected immediately, such a union will make possible a more co-ordinated development of the rich industrial areas of the two States which can be better developed as one unit like the Ruhr Valley. As a means of settling the border disputes which the linguistic principle has started off, this is the best way, for, as Dr. Roy pointed out, there will be no end to this sort of claims and counter-claims. It is also worth noting that the linguistic basis is insisted on only when it is advantageous to a particular group, while the same group does not hesitate, unmindful of its inconsistency, to resist it where its application is likely to involve loss of territory.

INDIA AND BIG POWER STATUS

MR. DAG HAMMARSKJÖLD'S statement at a Press conference in New Delhi that "the immediate future is not the right time to raise the issue" of according Big Power status to India, might have been unwelcome to those who had felt elated by Mr. Khrushchev's ready espousal of this cause. The difficulties involved in the proposal, which requires major changes in the UN Charter, are many. It seems logical to argue that Big Power status should be determined by population

and influence as by military or colonial power and the biggest anomaly next only to the successful exclusion of a Big Power like China has been the oddity of France enjoying this status without the political capacity to play the role. These are not precisely inducements for other countries to seek this status as a particularly significant thing by itself.

There are other reasons why India should not be too much concerned about this matter at this stage. There would be a reluctance here to seek the power of veto even though its existence is accepted as an inevitable evil necessary for the maintenance of the United Nations. Indian interests abroad are not of the character that need to be defended by such power and we should be content to leave many of these disputes to be adjudged by world opinion. The use of the veto is an undemocratic procedure and there is no joy in getting it unless it is intended to use it. The next advantage, of a permanent seat in the Security Council, should not prove very tempting either. So long as the Council is torn by the veto it is thrown into the background; when the veto ceases to operate, if ever, the major problems of world security will be solved. The General Assembly has provided full and sufficient opportunity for India's activities. With a larger number of the members of the UN, more elective seats on the Council will be necessary to provide opportunities to all the new countries to get elected to the Security Council. Some of the old conventions in this respect have outlived their usefulness and the ugly turn in the election this year—resulting in a division of the term between Yugoslavia and the Philippines—is an indication that some new understanding will have to be reached if enough opportunity should be provided for all the areas concerned.

NO ORCHIDS FOR EDEN

SIR ANTHONY EDEN'S mission to the United States has ended with the issuing of a joint declaration by him and President Eisenhower re-affirming Anglo-American unity of purpose and accord on fundamental aims. No one, of course, expected that any serious differences would emerge on the surface; differences of opinion persist on some minor problems which the Washington talks have not succeeded in resolving. Two major world problems must have figured in discussions, among others—the question of relaxing the embargoes on trade with China and the maintenance of peace on the borders of Israel. On the first, Anglo-American views continue to be as divergent as ever. The British Premier's plea that the restrictions should only be similar to those imposed on trade with East European countries has met with no response, though he has gained a tactical victory in that the ban is to be reviewed from time to time. On this matter, as on the bigger question of admitting China to the United Nations, no positive action from the American side can be expected in an election year and, therefore, Sir Anthony probably was never over-optimistic of America falling in line with his proposals.

On Israel, of course, there has been a more positive American stand. The two Powers have agreed to contribute to a settlement by assisting financially in dealing with the Palestine refugee problem and by guaranteeing agreed frontiers. This, of course, does not constitute any new initiative in regard to this problem, but it is a welcome sign that the two Western Powers, along with France, are willing to bear the responsibility for enforcing any agreement. But if the frontiers are to be guaranteed by the stationing of troops, France certainly and Britain in all probability will not be able to spare any troops to undertake the task.

On another problem that is troubling the Middle East—the Baghdad Pact—the US has unequivocally given its support to Britain. Not so on the Buraimi Oasis dispute between Britain and Saudi Arabia, where the oil interests of the two Powers are at variance. Only the hope is expressed that “these differences can be resolved through friendly discussions”. Nor has Sir Anthony succeeded in his attempts to persuade Mr. Eisenhower to warn Saudi Arabia not to use the money got from American oil companies, in Buraimi and in Jordan, to undermine British prestige in the area and to have American aid to countries in the region channelled through the Baghdad Pact Council—which would have, to some extent, helped Britain to bring to heel the errant nations. The outcome at the Washington talks may, considering the political atmosphere which prevailed at home on the eve of Sir Anthony’s voyage, revive criticism of the British Prime Minister’s policies.

GRIM OUTLOOK FOR ALGERIA

IT IS rather creditable that M Guy Mollet’s career as French Prime Minister should have commenced with the pelting of stones and rubbish by French nationals in Algeria, since any policy which pleased them would have been discreditable to France herself. That there would be demonstrations on the occasion of the Socialist Premier’s visit had been evident, but the reception proved to be “hotter” than expected. These outbursts are unlikely to swerve M Mollet from his determination to find a solution of this problem on the basis of agreement with the Algerians; he has announced that his talks with Algerian leaders will take place as programmed. But whether any proposal acceptable to the Algerians and M Mollet can pass the National Assembly is highly doubtful. The parties of the Right can expect some accession of strength in the Assembly when the Algerian elections, which have been postponed, are held, and they are unlikely to forgo this by antagonising the settlers who want Algerian union with France. Nor will the Communists agree to support any of M Mollet’s plan for reform, as that will raise the prestige of the Mollet-Mendes-France coalition.

It has become clear to all parties that the Algerian problem cannot be solved on the basis of continued union with France. But such are the vagaries of the French Parliamentary system that the only group willing to take steps to end this second “Indo-China” cannot act and will not be allowed to act, the settler problem in North Africa being too great by comparison with Indo-China. The French settlers have succeeded in forcing Gen. Catroux, the resident Minister in Algeria, to resign even before he was installed in office, and the outlook looks grim and unpromising.

ROAD TRANSPORT POLICY

WITH OUTLAY on railway development in the second Five-Year Plan restricted to Rs. 1125 crores, the country may have to depend a great deal on the road transport system for movement of goods and passengers in the next five years. One aspect of improving road transport is provision of more and better roads, which is the task of the State, but development of goods transport and, to a large extent, passenger services will still be the responsibility of the private sector. It is well known that the most important factor hindering this development is the burden of taxation on operators, which is the highest in the world. Motor operators have to pay not just a single tax, but a number of taxes, and where there are services extending to more than one State, there is double taxation. Octroi is also often levied by every municipality, adding to the difficulties which operators have to face. The Transport Advisory Council, which recommended as long ago as 1954 that these obstacles should be removed, has again made these recommendations at its recent session.

Mr. Lal Bahadur Shastri, the Transport Minister, who addressed the Council, showed that the authorities are not unaware of the problems of the motor transport industry. But action taken so far by the State Governments has not been up to the mark. Permits for passenger services continue to be issued, in many cases, for short periods even where the Government has decided against nationalisation of particular routes for some time to come. Nor has anything been done to bring the level of taxation to a uniform level as recommended by the Motor Vehicles Taxation Enquiry Committee. The Motor Vehicles (Amendment) Bill, introduced in Parliament in the last session, confers powers on the Centre to regulate inter-State traffic, and safeguards are sought to be given to private operators to induce them to expand their services. Also, the Transport Advisory Council has accepted the principle of single-point taxation and has suggested that the transit fee in municipalities, in place of octroi, be limited to one rupee and that too to trucks. It has decided to set up a high power committee to advise on the reorganisation of road transport administrations in the States. This committee should not confine itself to organisational problems, but must also try to secure the reliefs which are urgently needed if road transport services are to develop fast enough to relieve the strain the railways will have to face as the Plan progresses.

PARLIAMENTARY CONTROL OF STATE ENTERPRISES

WITH THE expansion in the public sector contemplated in the second Five-Year Plan, the question of how and how far parliamentary control over State undertakings should be exercised is becoming increasingly important. Mr. Ashok Kumar Chanda, the Auditor-General, who addressed the other day a meeting of Chartered Accountants in Madras, pointed out that the measure of control exercised by Parliament is governed by the form of management adopted in the enterprise concerned. In the case of units which are departmentally run, Parliament’s control is absolute since the annual requirements of the units for all expenditure are presented to the House in the form of demands for grants. In the case of statutory corporations, Parliament’s control is well defined and certain matters are specifically reserved for its consideration. When the company form of management is adopted, control is necessarily more limited. But even in this case the initial share capital has to be voted by the House and the annual reports are placed before it. Besides, the Auditor-General can undertake an audit and inspection of the accounts of Government undertakings and take such further action thereon as he deems fit. Thus public accountability is secured through interpellations, debates on reports and accounts of the undertakings, and the Auditor-General’s report to the Public Accounts Committee. Mr. Chanda assured Chartered Accountants that the expansion of the public sector and nationalisation will not affect the scope of their employment as they will continue to be the normal auditors, the Auditor-General retaining only the right of supervisory audit.

Mr. Chanda, who also addressed Class II officers of the Audit and Accounts Department, spoke of the necessity to separate audit from accounts. This has already been done in three Central Ministries and the results have been encouraging enough to justify further extension. For introducing greater flexibility in the use of “appropriated” moneys and to enable the administration to have a close watch on the progress of plans, this is a very desirable step. It can be confidently expected that the many problems which the implementation of this scheme as those that will arise in public undertakings will be dealt with in the way they should be.

Around India with Brooke Bond

The Five Treasures of the snows...

Kangchenjunga, which in Tibetan means ‘the five treasures of the snows’, is according to a hill legend the abode of the Almighty God. It is not difficult to understand this sentiment. The grandeur and mystery of this tremendous peak, soaring to over 28,000 ft., creates in the observer an overwhelming sense of awe and reverence. Kangchenjunga is the only Himalayan giant that displays its majesty to the world at large. Any visitor to Darjeeling can enjoy from his hotel balcony the glory of this magnificent peak.

Brooke Bond have thousands of acres of their own tea gardens—more than any other firm of tea distributors in the world. And Brooke Bond is the only tea firm with five blending and packing factories, each serving its own part of the country, from which fresh stocks are rushed to every shop.

Here, as everywhere in India, fresh Brooke Bond Tea is made available through a unique system of fast distribution from factory to shop.

More people buy Brooke Bond Tea than any other brand, and over 55 million cups of Brooke Bond Tea are drunk everyday in India.

A Window on the World

THE ECONOMIC 2ND XI

By
ODYSSEUS

IT CAN BE NO SECRET to those who stroll week by week among the lower slopes, let alone to those who scale the pinnacles and peaks, of this column that while I am in the fullest and most cordial agreement with the ideals of social justice which inspire Socialism, I hold that all the evidence of experience points to the inescapable conclusion that Socialism is a less efficient way of attaining social justice than Free Enterprise as modified by liberal legislation (factory acts, health services, anti-trust laws, etc.) in a democratic state (by which I don't mean a "People's Democracy" which is only Soviet double-speak for a dictatorship). It is perhaps even less of a secret that the intellectual distinction of those who share my distrust of Socialism is equalled only by their diminishing numbers. For the time being the climate of opinion is set towards a Socialist Pattern of Society. Don't forget, however, that the climate of opinion in all countries is as changeable as the meteorological climate of the British Isles (in which it is wise to set out with an umbrella on the sunniest days).

If, then, our ruling elders and betters are determined to impose Socialism on us, let us at least insist that it is a streamlined, up-to-date Socialism, stripped of nineteenth century ideological hangovers, and reconditioned by contact with contemporary economic thought. Or, to vary the metaphor, if we are determined to handicap ourselves by playing all our matches with our 2nd XI, let us at least devote thought and time to raise the quality of the team's bowling, fielding, and batting, by coaching it in the techniques which enable the 1st XI consistently to achieve high scores in those countries, such as Belgium, the USA, and Germany, which believe in putting the best team into the field that they can find.

I, therefore, offer no apology for spending another week in outlining the latest developments of Socialist thought so magisterially set forth by Mr. Hugh Gaitskell, the new leader of the British Labour Party, in the latest issue of "Socialist International Information" (8 Motcombe St., London, SW. 1.). If the Socialist parties of the democratic world would put Mr. Gaitskell's principles into practice, the world's 2nd Economic XI's will still not achieve anything like the high scores of the Free Enterprise 1st XI's but they will substantially raise their present batting averages and avoid some of the more sensational innings defeats that they have periodically suffered.

The basic doctrine of pre-World War II Socialism was the nationalisation of the means of production and distribution. Under Mr. Gaitskell's leadership, it seems certain, judging both by what he says in "Socialist International Information" and by what he recently said to me in a personal chat, that the emphasis will not be on nationalisation but on re-doubled striving towards a society in which great inequalities of income will have been ironed out, chiefly through the re-distribution of income by taxation.

WHY NOT RAISE PRODUCTIVITY?

This objective is unimpeachable, but the 1st XI achieve it by increasing productivity and levelling all

incomes upwards, not, as all 2nd XI's insist, by "soaking the rich"—i.e. by levelling incomes downwards and recoiling from the necessity of raising the productivity of the workers as too suggestive of "capitalist exploitation" and therefore politically dangerous.

Twenty years' experience has changed the views of the British Trade Unions towards nationalisation. In the 1930's, they held that they should take an active part in the organisation of a nationalised industry. Today, most desire to be independent of the management so that they can remain free to protect the interests of the workers—a fundamental difference from the practice in the Union of Soviet Socialist (sic!) Republics where the Trades Unions are part of the machinery of government and the idea that the workers could have any interests other than those of the management is dismissed with a far from indulgent smile.

Under Mr. Gaitskell, the trend of British Socialism is likely to be towards public control, not of the individual industry but of the national economic structure in which it works.

The Socialist point of departure is Keynes' conception that the general level of demand determines employment, and that this level can be easily influenced by the budgetary and credit policies of the government. Closely associated is the idea that since the poorer people save less and more slowly than the richer, a re-distribution of income through taxation at the expense of the richer stimulates demand and, therefore, employment (and, I would interpolate, has been among the more important factors that have stimulated an inflation in Britain which may yet threaten the basis of the Welfare state because it is more difficult to counter in any society of Socialist pattern).

These views lead naturally to an economy controlled by government planning.

Most Socialists argue that the experience of World War II, in which every major economic activity in Britain was controlled and planned by the government, proved irrefutably that planning works. It is characteristic of Mr. Gaitskell's political realism and intellectual honesty that he points out that once the war was over, there could not, in a democracy, in which changes of policy can be pushed through only with the approval of the voters, be any question that the Labour government would continue the whole apparatus of war-time controls. "This would have been impossible," says Mr. Gaitskell, "because it depended for its successful operation, among other things, on a large volume of direct government orders and on the goodwill and readiness to co-operate of the business community—neither of which were likely to continue in peacetime".

MR. GAITSKELL'S FUTURE PROGRAMME

What, then, is Mr. Gaitskell likely to do about economic controls when he returns—as return he must one day—to office in Britain?

First, he characteristically stresses that he has no wish to be "too dogmatic" and that there is "no point in controls for their own sake" (an idea which does

not seem to have penetrated the hinterland of certain secretariats).

Secondly, however, Mr. Gaitskell believes that it is difficult to maintain without inflation the degree of full employment enjoyed in post-war Britain unless controls are used, especially over imports, prices, foreign exchange, and industrial building. A moment's reflection suggests that this apparently modest list could, at the drop of a single Gazette notification, be made exhaustive, e.g., "prices" might include any or every thing.

Thirdly, Mr. Gaitskell would retain controls to cope with any difficulties arising out of Britain's foreign trade balance and the relations of sterling to the dollar.

Fourthly, he would use controls, especially over consumption, to modify the distribution of real income in favour of the poor. If only (one cannot reiterate the point too often) the 2nd XI would aim at doing this by making us all richer instead of rewarding, by making them poorer, the leaders of the middle classes for their energy and enterprise without which we should none of us have any money at all and the whole economic machine would grind to a halt! Already we are on the verge of the point at which the "re-distribution of income in favour of the poor" means in favour of everyone, because we are all poor, and poorer than we need be at that!

The most succinct comment that I have seen on these four points appeared in "The Economist" of December 31, 1955:

"The old sort of controlled economy would have been a grave misfortune in 1955. If Bank rate had still been inoperative, as it was before 1951, then the rise in commodity prices during the past year would

have been much greater and the terms of trade would have turned sharply against Britain. If Britain had entered 1955 with its raw materials still subject to import controls, and subject to the distortions of stock holding habits that went with them, then the dock and railway strikes of the early summer would have brought the economy rapidly to its knees; certainly the strikes would have had a far more serious effect on British living standards than that much milder previous interruption to supplies, the cold snap of 1947. And if there had still been an apparatus of price controls in being this year (with all the encouragement that they give to consumption), as well as a tradition of resorting to import licensing at times of external deficit (with all the incentive which that gives to traders to hurry forward their purchases at the first sign of trouble), then there is every reason to suppose that the near crisis of 1955 would have gone at least as far as the full crises of 1947, 1949, and 1951."

Basically, however, Mr. Gaitskell lays it down that "the Party attitude in the main is that free choice" (of consumers presumably) "must be continued and unfairness corrected rather through re-distribution of income and wealth than through direct controls."

Well, if all the 2nd XI's of the Socialist pattern countries stick to Mr. Gaitskell's ideas, the rate of economic scoring will rise a little nearer to that being achieved by the Free Enterprise 1st XI's who continue to score at a high rate all round the wicket. If you don't believe me, just check up the rate at which real wages have risen in the USA, Germany, and Belgium, since the war and compare it with the Welfare countries. You'll be surprised.

[This is the fourth of a series of five articles on "The Future of Socialism". Previous articles appeared on January 20, and 27, and February 3.—Ed.]

Economic Report from the U. S.

"PEOPLE'S CAPITALISM"

(By Guy Sims Fitch)

WASHINGTON, Feb. 7.—New American achievements in production and consumption, employment and income, are taken almost for granted these days. But they have prompted students of the American scene to seek a term that can properly describe the unique and fruitful system that has made these gains possible.

Not that a label is important in itself. But it is growing increasingly clear that unadorned use of such a traditional and emotion-charged tag as "capitalism" has become inadequate to the point of confusion.

The American economy is capitalistic, of course, to the extent that it draws its vitality from private initiative and enterprise. The profit motive and the desire to improve one's position are still the mainspring of business and individual activity. But unlike the restricted rewards characteristic of the outmoded 19th century model, the new system's benefits are shared by all. The opportunities it affords for personal advancement are without parallel in human history. With this in mind, a number of business men and economists—notably members of the Advertising Council and its President, Theodore Repplier, have suggested as an appropriate label the term "people's capitalism"—a label that has found favour among members of the Eisenhower Administration. The influential "Collier's" magazine recently analysed the term, and concluded editorially that it has "besides a bold ring, the great virtue of truth."

Presumably, the proponents of the term "People's Capitalism" have arrived at such a description because the people themselves own the resources of production; they are the capitalists and share in the benefit of their free economy. Some 115 million Americans—70 per cent of the population—have life insurance policies, valued at nearly \$400,000 million. Some million own stock in corporate enterprises. More than 45 million have bought Government bonds, nearly 21 million have deposited more than \$28,000 million in mutual savings banks. The net liquid assets of all Americans come to \$254,000 million.

The productivity increases resulting from these improved manufacturing and marketing methods are passed on to the employees in the form of higher wages and shorter working hours. The steel worker, for instance, has become a man of some means, earning more than \$5,000 a year—twice as much as 20 years ago. And his basic work week of 40 hours, compared with 60 at the turn of the century, may well be shortened to 35 in the not-too-distant future. He, and 65 million other US workers, are now able to purchase ever-increasing quantities of goods and services—the necessities and conveniences that enrich personal and community life.

This means more than automobiles, refrigerators and radios. It means that nearly 60 per cent of all American families now own their own homes. And it means that Americans have been able to spend an increasing share of their incomes on wholesome recreation during their greater leisure time. Last year alone, they spent \$32,000 million on such leisure pursuits as vacations, hobbies, etc.

Despite these huge purchases of goods and services, Americans had \$16,000 million left to save or invest as they saw fit. In this way, they can increase their stake in society and contribute to their own and their children's security.

The thousands of contracts between the nation's free labour unions and business managers—negotiated

through collective bargaining process—help to keep wage raises high and are important sources of economic stability and protection. In addition, private pension and profit-sharing plans have grown five-fold in the past ten years; more than 12 million workers and their families are covered by them.

The Government, too, has an important role in protecting American living standards. More than 70 million Americans are covered by the US Social Security Programme. About 40 million workers can, if need be, draw unemployment compensation.

Beyond that, the Government—through the Employment Act of 1946—has accepted responsibility for maintaining conditions in which private activity can flourish and in which maximum employment, production and purchasing power can be maintained. To this end, it uses its broad monetary and fiscal power to moderate economic fluctuations that threaten American living standards.

Finding a single phrase to describe this complex and unique instrument of human welfare and progress is a task to baffle not only the economists, but the most adept semanticist. There are those who would call it "consumerism," and others who prefer "mutual capitalism." But "people's capitalism" probably comes as close as any in its descriptive application.

AGRICULTURE

Few Crops More Liable to Pest Attack Than Cane: Few crops were more liable to attack by pests than sugarcane, on which no less than 1,398 species of insects and mites had been recorded as feeding, according to Dr. K. B. Lal, Plant Protection Adviser to the Government of India. While the number of serious pests was undoubtedly much less, even this might run into a few dozens. Pests, particularly insects, constituted a major problem in the cultivation of the cane crop, and, in most cases, the yield at harvest and the quality of the cane juice depended largely on the degree of control of pests achieved. The last decade has seen the gradual replacement of the older methods of mechanical and cultural control by newer methods based on the use of chemical insecticides. This has been helped by the evolution of various organic insecticides, specially those of the chlorinated hydrocarbon group and by the development of various types of machines for the dispersal of insecticides on the crop.

Control of Safflower Pests: Experiments conducted for five years have shown that the Aphis and the leaf-eating caterpillar, two serious pests of safflower, can be controlled. Out of the large number of insecticides tried, nicotine sulphate and pyrocolloid sprays were the most effective and economical to use. Nicotine sulphate should be used in the proportion of one part to eight parts of water. If pyrocolloid, the proportion is one part to a thousand parts of water. In Bombay State, farmers are making use of this control measure against these pests with good results. Wherever the measure has been used, safflower yields have gone up.

Preparation of Orange Juice Powders: A new method for the preparation of orange juice powder has been standardised at the Central Food Technological Research Institute, Mysore. The juice powders can now be fortified with vitamin C and can be used for the preparation of sweetened orange juice. The powders prepared under the new method compare favourably with similar imported products. The Institute studied the changes that take place in vitamin C contents during processing of juice. The studies were conducted with three varieties of Indian oranges, namely, Coorg, Nagpur and Sathgudi. It was also revealed that Sathgudi orange juice concentrate has a much higher vitamin C content than Coorg or Nagpur varieties.

INDUSTRY

Indian Firm to Build British Engines: Automobile Products of India (API) has made an agreement with the firm of Henry Meadows—a subsidiary of Associated British Engineering, Ltd.—for the manufacture of British engines under licence in India. The agreement is the culmination of negotiations begun about 12 months ago, and provides that API will sell, service and ultimately manufacture the whole range of Henry Meadows products in every type of application—automotive and marine engines, generating sets and compressors. A three-year period is envisaged before Indian production of the Henry Meadows range of engines is fully under way. Thus, the agreement provides that in the initial stages complete engines will be imported from Britain; and the first batch, worth about £1,000,000, has already been shipped. Progressively, over the next three years, these will be followed by "knocked-down" engines of increasing range to the point where all Meadows engines will be fully manufactured in India under the control of Indian nationals.

New Titanium Plant Unique in Europe: Europe's first full-scale plant for processing titanium with the

use of metal rectifiers of special design will soon be put into continuous operation at a Sheffield factory. The power plant is rated to work continuously, and the total rectifier capacity is 18,000 amperes at 40 volts. The system, it is claimed, combines high efficiency with a wide range of output characteristics. The control panel is arranged so that each furnace operator has all his controls immediately around him. He is not distracted in his work by any other operator; nor does his use of power interfere with their work.

"Miniature Sun" for Film Studio: A British firm has recently spent £10,000 on making a single electric lamp. It is a 20 kw. tungsten-filament lamp designed for a British film studio, which will use it in the production of colour films. The high cost of this "miniature sun" was largely accounted for by the research and development that went into evolving it. Its borosilicate bulb, 16 inches in diameter, weighs 10 lbs., and is of uniform thickness to minimise fracture strain. There is enough tungsten in the filament to make 20,000 40W lamps. The firm has plants for the manufacture of lamps of 75W power.

The European Chemical Industry: Chemical production in O.E.E.C. countries increased by 15 per cent in 1954 and a similar rate of expansion is likely throughout 1955. This is the main conclusion reached in a report of the Chemical Product Committee of OEEC, "The Chemical Industry in Europe, 1955", which has just been published by the Organisation for European Economic Co-operation. The report gives a survey of the situation in the chemical industry in 1954 and early in 1955 in Europe, with some reference to the United States.

Sweden's Output of Paper in 1955: A new peak was registered for Sweden's paper and board output in 1955, according to Mr. Ewert Landberg, head of the Association of Swedish Paper Mills. The total production is estimated at nearly 1,500,000 tons, as compared with 1,390,000 tons in 1954. Out of the aggregate deliveries of some 1,450,000 tons, 620,000 tons were consumed on the home market, as compared with 590,000 tons in 1954.

Yugoslav Industrial Production in 1955: A total of 2,060.5 billion dinars or an average of 257.5 billion dinars annually were expended on investment construction in Yugoslavia from 1947 to 1954. Consequently, an appreciable increase of industrial output is reported to have been registered last year. Although definite data are not yet available, experts estimate this increase at about 16 per cent as compared to last year. The sharpest production increase was noted in the chemical industry 31 per cent, ferrous metallurgy 29 per cent, electric power production 24 per cent, petroleum extraction 18 per cent and paper industry 20 per cent.

TRADE

Export of Chrome Ore: The Government of India has reviewed the policy for export of chrome ore. It has been decided to regulate export of this ore during the year 1956 on a quota basis, through shippers who had exported the ore during any of the three calendar years 1953, 1954 and 1955. Shippers are advised to establish by February 15, 1956, their best year's export with the export trade control authorities at the port through which exports were made.

Ban on Export of Wheat Products: The Government of India has reviewed the policy regarding the export of wheat products (atta, maida, sooji and rawa)

and in view of the rising trend of wheat prices, it has been decided to ban export of these wheat products outside India with immediate effect.

*

No Change in Tea Export Duty: The Government of India has issued a notification fixing the price of tea, for the purpose of determining the export duty at Rs. 2-14-1 per lb as against Rs. 3-1-5 per lb in force from January 1, 1956. There is no change in the existing rate of duty of annas six per lb.

*

Trade Payments to Japan: With the aim of placing trade on a freer basis, the Japanese Government is reported to be inclining more strongly towards switching present open account trade arrangements it has with many countries to that of a cash settlement basis. Such a changeover already has been concluded with West Germany and Italy, and negotiations are now under way with Thailand and Sweden to effect a similar revision. Latest news along this line is that the Government is studying a plan to repeal the open account set-up with Taiwan, Indonesia, the Philippines, the Netherlands and Finland.

*

Belgian Diamond Imports in 1955: Belgian imports of uncut diamonds last year totalled 3,731,697 carats worth £24,753,157, compared with 2,561,011 carats worth £18,855,847 in 1954. Exports of cut diamonds totalled 830,042 carats worth £28,903,775 against 666,107 carats worth £22,898,663 in 1954.

FINANCE

Procedure for Transfer of P.O. Savings Bank Con-joint Accounts: The Governments of India and Pakistan have agreed on the procedure for the transfer from Pakistan to India and vice versa of the Post Office Savings Bank Conjoint Accounts opened in either country under Rule 44 of the Savings Bank Rules before partition. Where all the beneficiaries of an account have migrated from one country to the other, the entire account would be transferred. Where, however, some beneficiaries are in one country and some in the other, the accounts would be split up accordingly. Claims for the transfer of these accounts from Pakistan to India may be registered at any post office in India doing Savings Bank work. The last date for registering such claims is February 29, 1956.

*

Central Aid for Development of Silk Industry: Grants amounting to over Rs. 6,34,000 have been sanctioned by the Government of India to nine States for the development of silk industry. Four grants totalling Rs. 3,18,660 have been given to Jammu and Kashmir. Mysore gets two grants of Rs. 50,000 and Rs. 11,100 respectively. Bihar gets Rs. 67,100. Assam has been given Rs. 29,150 for installing a drying chamber at Sualkuchi. For establishing a training-cum-production centre, the State gets Rs. 14,700. West Bengal has been given Rs. 19,554 for setting up a training-cum-production centre in silk reeling. Punjab has been sanctioned a grant of Rs. 35,040 for setting up chawki worm rearing centres and Rs. 784 for the scheme to continue chawki rearing. A sum of Rs. 17,025 has been given to Madras for the establishment of a collective chawki rearing centre at Hosur. Hyderabad gets Rs. 11,600 for implementing a scheme to revive the tassar silk industry in Manthani.

*

Finance for Road Development Schemes: Amounts totalling about Rs. 13.57 lakhs have been sanctioned by the Government of India for road development work in Manipur, Andhra, Saurashtra and Kutch. Schemes sanctioned are: a bridge across the Imphal river at Mayang-Imphal in Manipur State costing Rs. 2.79 lakhs; construction of an 18-mile road from Chinturu to Kuna-

varam in East Godavari district, Andhra State, at a cost of Rs. 2.53 lakhs; construction of Ranavav-Bhanvad section of Jamnagar-Porbandar road costing Rs. 6,57,600 and Rs. 67,300 for a bridge on the Manjal-Lakhpat road in Kutch.

*

U.S. Bank Loan to Brazil: The U.S. Export-Import Bank loaned \$19,625,000 to the Brazilian Government's Santos-Jundiai Railway to help it buy equipment in the United States. In addition, American manufacturers will extend \$5,375,000 worth of credit to the railroad. The credit becomes due annually over the 10 years starting in June 1958.

GENERAL

Relief to Educated Unemployed: As a first step towards tackling the problem of the educated unemployed in the country, the Planning Commission has approved the starting of Pilot Projects in the field of small-scale industries. About 10,000 educated unemployed are expected to be benefited by these schemes in the first year of the second Five-Year Plan. The decision to start Pilot Projects was reached by the Planning Commission after considering its Study Group's Report on Educated Unemployed. Establishment of small-scale industries and service industries on modern lines has been recommended by the Study Group as an urgent measure of rendering relief to the educated unemployed. The Group also recommends the setting up of co-operative organisation of production, transport and marketing of production of small-scale industries which would give employment to large number of educated persons. These and other schemes for the educated unemployed are estimated to cost Rs. 130 crores over the next Plan period, and the additional employment is expected to be of the order of 2.35 lakh jobs.

*

International Trade Fair in Washington: Stepped-up preparations for the first Washington State International Trade Fair are under way as 25 exhibitors from eight Asian countries had made reservations for the May 4-13 exhibition. Mr. Donald M. Yates, Trade Fair President has announced that reservations have been made by merchants in Hong Kong, India, Indonesia, Japan, Korea, Pakistan, the Philippines and Thailand. They include manufacturers of textiles, jewellery, furniture, brassware, ivoryware, ceramics, and woodcraft. The Trade Fair will be the only such exhibition in North America this year. Built and fostered by business and civil leaders throughout the State of Washington, the Trade Fair is designed further to develop two-way trade between the United States and Pacific Rim countries. A select list of buyers and importers of high quality oriental goods is being invited to attend the fair and take advantage of its market-place facilities.

*

Engineering Personnel for Second Plan: Suggestions for opening new institutions and increasing the capacity of the existing ones for training engineers and technical personnel required during the second Plan period have been made by the Engineering Personnel Committee, set up in September 1955, in its interim report to the Planning Commission. These recommendations have been made after studying the engineering requirements of the Central Ministries and State Governments. The Committee has phased these demands over the period of the Plan taking into account the special claims of the iron and steel plants, railways, and others. The Committee has suggested that with a view to implementing these recommendations effectively a high-power body for taking policy decisions and a supporting executive organisation should be set up both at the Centre and the State levels. The Committee's recommendations also relate to questions like improving the quality of engineering education, unemployment among engineers and conditions of temporary personnel.

NEWS IN BRIEF

INDIAN

India, with an annual production of 60,000 tons of cashewnuts, has a monopoly of cashew trade in the world. Ninety per cent of the trade is in Indian hands. The principal buyers are the United States and the United Kingdom who import 75 per cent of the Indian produce.

*

The value of capital assets of the Posts and Telegraphs Department rose to Rs. 50 crores at the beginning of the first Five-Year Plan from Rs. 33 crores after partition. It is expected to increase to Rs. 92 crores by the end of the Plan period.

*

The Rs. 16-crore rail-cum-road Ganga bridge in Bihar, will be the largest of its kind in the world. Soil conservation work is to be undertaken in 4 million acres of land under the second Five-Year Plan. Nearly 7 million acres are expected to be surveyed in this connection.

*

The Government of India has set up a 10-member Committee to review the existing capacity for the manufacture of machine tools and assess the country's requirements.

*

India has at present 5,000 Telegraph Offices as against 3,324 at the time of Independence. Besides, 4,000 Telegraph Offices have been set up for the railways and at various irrigation project areas.

*

The percentage of children of school-going age, who actually attend schools, has now gone up to about 50 per cent. Between 1947 and 1951 the percentage went up from 30 to 40.

*

The consumption of ammonium sulphate in India increased from 2.7 lakh tons in 1950 to about 6 lakh tons in 1955, which is very near the first Plan target.

*

With a view to promoting and protecting the common interests of indigenous tea planters and fostering the trade, commerce and industry connected with tea, an all-India Association called the Tea Association of India was formed on January 27, 1956.

*

According to the Indian Sugar Mills Association, the sugar production in India during the month of December, 1955, was 2,80,046 tons, bringing the total production during the first two months of the current sugar season to 3,59,162 tons against 3,31,402 tons during the corresponding period last season.

*

A conference of Registrars of Companies and officers of Regional Directorates of the Department of Company Law Administration, was held at New Delhi from February 7 to 9, to discuss various matters relating to the duties and functions of Registrars, with special reference to the new Companies' Act which is to come into force from April 1, 1956.

*

The second Conference of the Indian National Commission for Co-operation with UNESCO met on February 6 and 7. The Union Minister for Education, Maulana Abul Kalam Azad, presided.

*

A party of Indian officials are proceeding on a tour of foreign countries to study the working of community development programmes there. The officials, who left India on February 5, will visit Norway, Sweden, Denmark, Holland and the United Kingdom, spending about a week in each country.

FOREIGN

The International Bank for Reconstruction and Development (World Bank) has reported a net income of \$13.7 million for the six-month period ending December 31, 1955, compared with \$12.3 million for the corresponding period in 1954.

*

Medical experts from Asian countries will shortly be visiting the Americas under a world-wide programme to keep in check the dread disease of the jungles of Africa and South America, yellow fever, which has defied repeated efforts to eradicate it.

*

A twelve-year afforestation plan, under which the Ministry of Forestry of People's China will plant 105 million hectares of forest on waste hills, waste land and desert regions throughout the country, has been adopted at a national conference in Peking.

*

The directors of the North Sumatra University Foundation have decided to establish a College for Agriculture in Medan. The plans and preparations to open the college are almost complete.

*

Indonesia is to embark on its Five-Year National Construction Plan this year, according to Mr. Djuanda, Head of the State Planning Bureau.

*

More than 6,000 titles are listed in Volume II of the International Bibliography of Economics, recently published by the UNESCO in its Documentation in the Social Sciences series. This volume, the first of its kind in the field of economics, covers works published in 1953.

*

A statement released by Soviet News Agency Tass, says that overall production of the Soviet Union's entire industry increased in 1955 by 12 per cent as compared with 1954.

*

Brazil has laid down new regulations, effective March 26, governing the entry of citizens of countries in America—including Canada—who wish to make tourist visits to Brazil. Nationals of these countries will now be exempt from the need for personal attendance at Brazilian Consulates.

*

An international industrial conference sponsored by the European Productivity Agency of the OEEC and the Italian National Productivity Centre, started in Rome on February 4. The Conference met in order to discuss the experiences on human relations in industry.

*

The Indonesian Parliament has again postponed a decision on the International Tin Agreement.

*

The U.K. Home Secretary, Mr. Lloyd George, has appealed for a "united crusade" to defeat inflation in Britain. According to him, two things were necessary to restore financial balance—to spend less at home and to sell more abroad.

*

Japan may start selling from August this year sugar made from wood. According to a newspaper report, the Noguchi Laboratory has succeeded in producing crystalline grape sugar from wood. A test wood-sugar factory is built in Minamata city to begin the production of crystalline grape sugar from April.

*

Japan is reported to have invested a new synthetic textile made from castor oil, coal and petroleum elements. It is said to be easier to dye, lighter than nylon and heat resistant up to 230°.

Special Articles

FROM WEALTH TO CAPITAL COEFFICIENTS—III

By

COLIN CLARK

[This is the third of a series of four exclusive articles on Capital Coefficients written for "The Eastern Economist" by Mr. Colin Clark, Director, Agricultural Research Institute, Oxford University. Previous articles appeared in the issues dated January 20 and 27, 1956—Ed.]

EXCESSIVE estimates of national capital which have been made in many countries in the past have often included land, minerals, household furniture and other items which they should have excluded. Other statistical defects (this applies even to the work of Lord Stamp) have been to use methods of capitalising income which, in effect, build up a total of money claims, which is not always the same thing as real capital.

Particularly in the poorer and less developed countries the value of land has tended to be very high in proportion to the value of all other forms of capital, and it is often there that excessive ideas of capital requirements are circulated, with very discouraging consequences.

After thus carefully preparing the ground, we can now examine some of the actual information available for other countries. For the United States, a careful study recently completed by Mr. R. W. Goldsmith shows that the capital coefficient (ratio of the stock of capital, depreciated, valued at current replacement costs, to current net national product) has never been more than $3\frac{1}{3}$, the figure which it reached in the 1890's, and has now fallen to about $2\frac{1}{2}$. For Britain, the figure rose to 4 in the 1880's, then also showed a gradual decline, reaching, like the American figure, a value of slightly over $2\frac{1}{2}$ at the present day. For Russia, the figure appears to be only a little over 2, the difference from the American or British figures being almost entirely accounted for by the much lower Russian investment in housing. Unfortunately, there are very few other countries for which we have anything like accurate, up-to-date figures. For the Netherlands, in 1939, we also have a figure of about 3.3. Norway, a country which has invested heavily in merchant shipping and other capital-demanding industries, showed a 1939 figure of about $4\frac{1}{2}$, and Japan, apparently, higher still. The figure for Canada stood at $3\frac{1}{2}$ in 1929, and has probably been reduced subsequently. The Australian figure stood very high—scarcity of population requires fairly heavy capital investment per head, in the form of means of transport, etc.—reaching a level of about 4.4 in 1940, but has subsequently fallen heavily as the population has grown. The only under-developed country for which we have anything like a good estimate of capital stock is that prepared by Mr. Charles Issawi for Egypt, which shows, for 1939, a capital coefficient of 3.2.

Information for Britain is obtained from a comprehensive and important paper by Mr. Philip Redfern submitted to the Royal Statistical Society in January 1955. But we have some quite independent evidence of a stationary or downward trend in the capital coefficient in British industry. In 1951, for instance, the Federation of British Industries made a detailed examination of the accounts of ninety leading companies, with total assets of a thousand million pounds, and found that, valuing throughout at post-war prices, the actual physical capital assets (apart from financial assets) of the companies in 1949 were slightly less than they had been in 1938, while output had considerably increased. Increases in real capital since 1949 have

also probably only about kept pace with increasing output. Mr. George Wansborough, a prominent figure in the motor trade, has stated* that the increase in the real capital of the British motor industry during the last five years has been rather less than proportionate to the increase in the physical value of output.

Information under conditions more comparable though not of course fully comparable) with those of India can be obtained from Latin America. The whole world is indebted to the Economic Commission for Latin America for the publication of "Preliminary Study of the Technique of Programming Economic Development" prepared by Dr. Raul Prebisch. An exile in Chile, Dr. Prebisch was invited to return to his native Argentine on the fall of the Peron regime, and quickly prepared a report on the economic state of the country which startled the world by its thoroughness and frankness. Dr. Prebisch considered that the capital coefficient for Latin America was as low as 2.2. For Brazil he put it at 2.5, but for Chile as low as 1.9. These calculations may have been based on the rather high rates of growth of real product which occurred in the immediate post-war years. The most recent publications of the Economic Commission for Latin America have shown a serious slowing down in the rate of growth of real product (in the other republics besides the Argentine, where conditions are admittedly bad).

The presumption—we certainly have not yet got sufficient evidence to call it a conclusion—is that in each country the capital coefficient passes through an ascending phase, reaches a maximum, and begins to descend. There must be an ascending phase—after all, an economy of handicraftsmen and pack horses uses comparatively little capital. It is the existence of the descending phase which is the novel concept—the idea that, while capital requirements per worker continue to increase, capital requirements per unit of product may begin to fall. Strange though this idea may be, there is no doubt about the facts, at any rate so far as the USA is concerned. A very careful study of Mr. Daniel Creamer, published by the National Bureau of Economic Research in 1954, analysing separately all the different American manufacturing industries, showed that in every case, sometime around about 1920, the capital-output ratio began to fall, alike for fixed capital (buildings and equipment) and working capital (stock in trade).

Economists have long been used to the idea of people inventing machinery which was labour-saving but capital-demanding in its place. The idea of capital-saving inventions is a comparatively new one; but they undoubtedly do occur. Any good industrial engineer will tell you that, if ever he is given a chance of redesigning an old plant, he will take the opportunity of getting a great deal more output for the same capital outlay. The mere speeding up of ships and trains means that a great deal less capital is required per ton-mile of transport performed. And the speeding up

of transport and communications means that it is now possible for both the trader and the manufacturer to carry considerably smaller stocks of goods, relative to turnover, than their predecessors did—this is one of the results which stands out remarkably from the American study.

To return to the ascending phase, the turning point and the descending phase of the capital-output ratio. The best interpretation which we can give so far is that in the first stages of industrialisation investment is made in sort of industries (e.g. textiles) in which capital requirements per unit of output are comparatively low. As industry advances, more capital-demanding projects have to be entertained, in transport and in public utilities as well as in manufacture. The capital coefficient is rising, and the marginal capital coefficient is higher than the average, i.e., each succeeding advance in output costs rather more, in capital, than its predecessor. The turning point is reached, partly through the opportunity of introducing capital-saving inventions, of the type described above; partly because increasing population and product enable the burden of transport services and other expensive national overheads to be spread more widely; and partly because, in the stage reached by the American economy, for instance, further increments to the national product now largely consist of services rather than goods, most of which services (except transport and communication) require comparatively little capital per unit of product.

India's capital coefficient is not known; and it may take a good deal of research effort before the figure

can even be approximated. But it is only prudent to surmise that, while it may now be low, it is probably rising. It is almost bound to be in the ascending phase; which means that the marginal capital coefficient may be very considerably higher than the average.

The factors which, in other countries, may have caused the ascending phase to be replaced by the descending phase are well worth examining more closely to see whether or not they might apply to India. In countries like the United States, the capital coefficient falls because increments to the national product now consist largely of services rather than goods; in India, however, the opposite will be true, for a long time to come. In countries like Australia, it falls when the lightly-loaded transport system is able to spread its overheads better with increasing population and production. The Indian system of transport and public utilities, so far as can be judged from outside, is already heavily loaded, and no relief on this score, therefore, appears possible. The remaining factor, however, may prove beneficial. It will have been of some benefit to India to have started her industrialisation late, because she will be able to profit a great deal by the experience of others; and many of the capital-saving inventions now being developed elsewhere will, in due course, probably be found fully applicable in India.

To sum up, therefore, while India's capital coefficient is probably still in the ascending phase, it may not have to ascend so long or so steeply as did those of other countries.

INDIA'S ADMINISTRATIVE PROBLEM

By

SARDAR K. M. PANIKKAR

THE administrative problem of independent India differs basically in three respects from the problems of the past. In the first place India is now administered in two different and largely mutually exclusive levels. A federal government is essentially a government at two levels, the Central level and the States level, with powers clearly defined over a vast area. All-India administrative conceptions of the past were those of a centralised state, no doubt with wide decentralisation of power; large provincial administrations did exist, but they were controlled by the centre and exercised only such powers as were delegated to them. The existence of a large number of States in India in the past before the British should not blind us to this fact, for each one of them followed a tradition of centralised unitary government. Government at two levels is a new conception in India.

This concept of a federal government has a farther consequence the importance of which has not yet been fully recognised. The main administrative functions today are all with the States and not with the Centre. The Centre's effective power is in regard to defence, foreign policy, transportation, communications and finance. Though these are of supreme importance, they are less important from the point of view of the traditional administration than land revenue, irrigation, education, sanitation, agriculture, forests, etc., in respect to all of which both legislative authority and administration are with the states. Constitutionally the federal and state areas are mutually exclusive, except in the concurrent field where the administration must inevitably remain with the units. The federal constitution thus for the first time breaks up the doctrine of unitary administration which India had inherited from the time of the Mauryas. The practical implications of this basic change we shall deal with later in some detail.

The second difference is in the nature of administration itself. The previous administrations of India concerned themselves mainly with law and order, collection of revenue, the maintenance of communications and such economic activities as were considered profitable for the state or essential to its security. Law and order, collection of land revenue, etc., are important today also, but the objectives of the government have changed radically. The main activities of the government are today in the economic field, in the sphere of the natural resources, and their utilisation for public welfare. Large amounts of public funds are invested in public enterprises which are being administered by government. The socialistic pattern of society and the welfare state to which India is committed raise administrative problems, which neither Kautalya nor Akbar, nor our former British rulers had even contemplated. The entire administrative machinery has to undergo wholesale reorganisation if the new conception of an administering state has to be successfully put into effect.

Thirdly, our administrative system has to be adjusted to the democratic processes of government. All our administration in the past worked under an authoritarian centre, whether that of the absolute monarch as in the earlier times, or under a bureaucratic centralism as under the British. The former administration to use a German phrase was cameralist, that is, the services themselves formulated and carried out the policy of government. The administration and the government were not different. Today in India the government at all levels from the 'gaon sabhas' to the central parliament is democratic. Both outside and inside the government the democratic machinery functions, influencing every aspect of our life. Administration has to be carried on under that all-pervading authority, which even if it does not invade the spheres

of executive action, influences it at all stages and levels. From the Minister in the Central and State governments to the presidents of the village councils, the elected representatives of the people directly concern themselves with the business of government and thereby share in the work of the administration.

The impact of these three major changes on our administrative system requires careful analysis. The apparent continuity of the machinery of administration has so far obscured this radical, almost revolutionary, character of the change. To all outward appearance the same hierarchy functions. The district still has its 'Trimurthy', the collector, the district judge and the superintendent of police. The secretariat is organised much in the same way as before. The State secretariats have their chief secretary and his colleagues in charge of departments assisted by deputy secretaries, under secretaries and others, sitting in the same rooms and attended by chaprasis wearing the same uniform. Their general procedure of conducting work with notings and minutes and their forms of address have not changed. Similar is the position at the Centre. The great departments of the state function as before and the illusion is created that the monolithic structure that we took over from the British has endured and is functioning much the same as before, except that the new recruits no longer write I.C.S. after their names but are described as I.A.S.

But the position as I ventured to point out is totally different. The spirit has totally changed, though the forms have remained and the impact of Federation, democracy and the socialist pattern has created new forces, new motivations and new methods of work which require detailed analysis and study. Each one of these aspects is a major subject for research and I hope the Institute of Public Administration will conduct basic studies on these problems. Here I can only indicate how these factors, individually and collectively, have transformed our administration.

The two-level administration which the Federation implies cuts at the very unity of our all-India services. The problems dealt with at the Centre and in the States are now altogether different, and though the central administration continues to be staffed by members of the civil service requisitioned from the States, the work they have to do bears but little relation to what is being done in the States. The emphasis at the Centre, apart from Ministries concerned with purely all-India matters like railways, posts and telegraphs, audit and accounts has shifted to subjects like steel, industry and commerce. Administrative methods and procedures in regard to these subjects cannot be the same as those with which the States are directly concerned. The experience gained in the States provides an adequate basis for work at the Centre. Besides the range of work has increased so greatly and the higher personnel of the services has multiplied to such an extent that the old system of requisitioning men from the States must inevitably lead to a great weakening of the States' administration. Before the war, in 1939, there were only 6 secretaries to government at the Centre. Today there are 26. The number of joint secretaries hardly amounted to half a dozen. Today there are 65. In the Finance Ministry, there are three full-fledged secretaries and over 25 joint secretaries. To staff all these high offices with personnel from the states would be to deplete and thereby cripple the administration of the units.

No doubt, it is useful for the States to have men with some experience of the central administration, so that they have a wider view and an all-India approach. But this would clearly be only at the intermediate level of deputy secretaries and under secretaries. A

short period of deputation at that level may be desirable. But the importance of such experience at the Centre is not so great now as it was in the past, when policies were determined by civil servants. Today the all-India point of view must come not from the services, but from political chiefs. Policy at both Federal and State levels is determined by Ministers and the method of ensuring co-operation and co-ordination is by frequent discussions at government level and by the control exercised by the national parties.

It would appear, therefore, that one notable effect of the federal system is to bring about a separation between federal and state services. While the recruitment and general training of the main services must as now continue to be on an all-India basis, I think the time has come for a separation of the personnel of the central administration from that of the states. Undoubtedly a basic training in district administration in order to familiarise even those employed at the Centre with the problems of rural India will be necessary. But after a period of, say, five years in the districts, those who are to serve the federal government should be placed in a different cadre and permanently assigned to the Centre, and those allotted to the States placed on different State cadres. Such a change in my opinion has become necessary, and it cannot long be delayed. Any attempt to maintain the old system on a false notion of continuity is to forget the basic change in our political structure brought about by the federation and will be unfair to the States, whose best men are always being requisitioned by the Centre and once so requisitioned show a natural tendency to remain at the Centre. A two-level administration requires a two-level civil service, and however much we may regret the breaking up of the old system, we cannot long avoid it.

One all-India matter which requires special consideration is the problem of internal security generally described as law and order. Under our Constitution, law and order is the function of the State government. The effectuating machinery is with the States except for what was known as the Crown Police Force. So far as the functions relating to internal peace are concerned, they must clearly be with the units, but there is an all-India aspect of this problem which cannot be dealt with by the ordinary process of co-ordination. Under the unitary system of British administration the central policy in regard to matters affecting internal security was under one control, that of the Home Department of the Government of India. Today the Home Ministry, though faced with graver problems of internal security, has neither the authority nor the machinery to deal with this problem. Even the Central Intelligence Service can only keep the Home Ministry informed of what is happening. Action can only be recommended to the State governments. Administrative problems likely to arise from this strange weakness of the Centre have escaped our attention because so far the Central and State governments have been, with minor exceptions, under the control of a single party. But that cannot be postulated for all time. When, as is likely some time, there is a difference in political approach between a major State government and the Centre, the issue may assume serious proportions, for the problem of internal security today is one of dealing with subversive movements aiming at the structure of the state itself.

The second difference from the past, which fundamentally changes our administrative problem, is the nature of our government itself. Our conception of government is not what the British rulers of India had. Broadly speaking, they followed a policy of laissez faire, limiting the activities of the government to the minimum. They were content with the establishment of what they called 'Pax Britannica', the collection of revenue for the upkeep of their government, and for the

defence of the Empire. It was a policy of minimum interference with life. We, on the other hand, are engaged on an unprecedented extension of the state activity in almost every sphere, economic, social and political; on mobilising and utilising our resources, on a complete transformation of our life. We have defined our objective not only as the creation of a welfare state, but the establishment of a socialistic pattern of society. What this means in terms of administration is something which no one has so far analysed or understood. We are simultaneously dealing with large scale industrialisation and with revolutionising life in rural areas, seeking to provide at the same time the necessary amenities of a progressive society, better education, health services, transport facilities and all this through governmental initiative. Governmental activity in this field has multiplied the manifold problems of administration particularly in the management of industries in the public sector. Government investments cover not merely large scale irrigation schemes like the Damodar Valley and Bhakra Nangal Projects, but immense industrial undertakings like the Sindri Fertiliser, the Chittaranjan, the three state-owned steel plants, the Hindustan Shipyard, the Hindustan Aircraft, the Integral Coach Factory, etc., apart from the nationalised Air Transport and now Life Insurance. Besides these, there are the Ordnance Factories and other Defence Force industries. The administrative problems arising from these vast undertakings, financed from the national revenue and controlled by Government are still an unexplored field.

WHEN IN EUROPE

fly **BEA** IN EUROPE'S FINEST AIR FLEET

For business, for pleasure—you'll do far more and see far more . . . if you fly BEA on your next trip to Europe. BEA's famous—and ever-expanding—network offers passengers fast and frequent services to over 50 of Europe's main business and holiday centres. BEA have more of the best airliners—more VISCOUNTS, for example, than any airline in the world. And BEA's long experience in air transport means you enjoy comfort on all routes, and personal service second to none.

BEA links LONDON with most of the principal cities of Europe, including—PARIS · NICE · BRUSSELS · VIENNA · AMSTERDAM · OSLO · STOCKHOLM · COPENHAGEN · HAMBURG · GENEVA · ZURICH · BARCELONA · ISTANBUL · MADRID · LISBON · PALMA · MILAN · ROME · NAPLES · ATHENS, and further afield, for example, to GIBRALTAR · MALTA · CYPRUS and CAIRO as well as WITHIN BRITAIN.

... and fly on the BEA CAR HIRE PLAN

BEA's new Car Hire Plan now makes the rest of your travel smooth as clockwork—in France, Holland, Belgium, Switzerland, Norway, Sweden, Denmark, Italy, Germany, Cyprus and in Great Britain. No deposit; full insurance.

BRITISH EUROPEAN AIRWAYS

Full details of air reservations from your local Travel Agent or any office of B.O.A.C. All arrangements for car bookings at BEA Offices in Europe; or BEA, Dorland Hall, 14-20, Regent Street, London, S.W.1. Gerrard 9833.

STATE BANK OF INDIA

Successors to the Imperial Bank

The need of the day

Our country's economy is expanding rapidly and with the Second Five Year Plan in sight it will gather further momentum. The need for a strong and efficient banking system has never been greater than today as the nation's savings require to be pooled and managed in a resourceful, confident and prudent manner.

The State Bank fulfils these expectations. It has started upon a programme of opening 400 additional branches throughout the country within the next five years.

The State Bank of India offers to serve you efficiently in many ways. It takes care of your savings and valuables, lends moneys against goods, produce and other approved securities and assists you by accepting appointment as executor and/or trustee of your will or trust. Its wide and varied services are at your disposal. Why not talk things over with your nearest bank agent, or write for information?

The State Bank's branch at Delhi, one of more than four hundred offices waiting to serve you throughout India

SALES TAX LAW VALIDATION ORDINANCE 1956

(Contributed)

THE principal object of the Sales Tax Law Validation Ordinance, 1956, which takes effect from January 30, 1956, seems to be to protect between April 1, 1951 and September 6, 1955, the various States which have levied or collected inter-State sales tax from non-resident dealers who may have demanded refund of the amounts paid to them by reason of the latest Supreme Court judgment delivered on September 6, 1955 in the case of the Bengal Immunity Co. vs. the State of Bihar. Besides safeguarding the revenues already accrued to the States, one must take it that the object also includes the maintenance of the status quo as it prevailed in this matter on September 6, 1955, leaving States to appropriate what they had by then actually levied and collected, without any right to re-assessment orders which had not culminated in actual collections nor allowing any right for refund to the non-resident dealers who had made payments.

The Ordinance has validated the levies or collections (that is levies and collections) according to the various States' laws for the period from April 1, 1951 to September 6, 1955, although for the period from April 1, 1951 to March 30, 1953 when the judgment in the United Motors Case was delivered by the Supreme Court, it was generally understood in every State that no State had any right to collect inter-State sales tax by virtue of Article 286 of the Constitution and instances must have been few indeed when any dealer had paid any sales tax at all, not to the "consuming" State which had acquired a new right to levy on the non-resident dealer (it was interpreted like that) after that judgment, but to his own State under its own Sales Tax laws.

The second period included within the extreme dates mentioned in the Ordinance is that between March 30, 1953 and the various dates accepted by the States' Governments for such inter-State collections as agreed at the financial officials' committee in November 1953. Therefore between April 1, 1953 and the date lines evolved, non-resident dealers enjoyed certain immunity from inter-State sales tax demands. The object of the Ordinance is also clearly not to re-open the transactions of this period either for the benefit of the States concerned for making fresh claims or for allowing non-resident dealers to demand any refunds for whatever sums that might have been paid.

The third period is the last phase from March 30, 1953 to September 6, 1955 between the two Supreme Court judgments. Barring West Bengal, which throughout refrained from collecting any inter-State sales tax, most other States had taken advantage of the first judgment and had levied and/or collected some amounts from non-resident dealers. Practically the full effect of the Ordinance is to be seen only in its application to the inter-State transactions that took place during this interval. Here again we meet with different kinds of problems.

(1) Some non-resident dealers who never submitted any returns to the consuming State nor, therefore,

paid any amount at all to that state. These persons have completely avoided all trouble and are also protected under the Ordinance.

(2) Some non-resident dealers had submitted returns in accordance with the Sales Tax Laws of the consuming State and actually paid over the full amounts in respect of all transactions; these dealers can get no relief by way of refund under the Ordinance;

(3) Some non-resident dealers had submitted returns but as no assessment had been made had not paid over any amount or were pleading in answer to the demand that they had not themselves collected any sales tax amounts from their buyers. The Ordinance must protect such dealers also, as the States cannot have a right to make fresh collections of arrears.

(4) Some non-resident dealers had submitted complete returns of the amounts, collected as well as not collected, and as no assessment had been made prior to 6th September 1955 had rightly refunded part of their collections to their buyers who demanded such refund on the strength of the clear judgment of the latest Supreme Court that such collections of the past were clearly illegal till Parliament by fresh legislation made such collections valid.

It may be possible that there are other kinds of individual cases. To set at rest any hardships to anybody, in the coming legislation to regularize the Ordinance, there should be a complete ban on the re-opening of any kind of past inter-State transaction whatsoever, be it by the State Governments or by the non-resident dealers for refunds. Otherwise one can visualize various complications and vexatious threats of litigating the matter in law courts by some parties. In fine, as has been stated at the outset, the ensuing Parliamentary legislation must seek to maintain the status quo as it obtained before 6th September, 1955, with whatever imperfections there might have been in the financial gains or losses of the States or parties on either side. The volume and weight of inconveniences by reopening of past transactions will surely be greater than the few anomalies that may exist by confirmation of the existing order of things. A few possible cases of individual hardships need not be counted in the larger interests of the entire community, who can between 6th September, 1955 and till Parliament by legislation validates inter-State sales tax may enjoy a peaceful exemption from any such levy. This will be adequate compensation for the burdens previously suffered.

But one fears that this period of immunity may not last long as Central legislation on the subject on the outlines of the recommendations of the Taxation Inquiry Commission is inevitable. Here again, to avoid fresh complications the proposed legislation should start with only a prospective levy of inter-State sales tax from a fixed future date line to enable the mercantile community to reconcile themselves to a comprehensive levy, not to speak of the adjustment of the States' budgets accordingly.

INDO-GERMAN CHAMBER OF COMMERCE

By
CROESUS

NO one who has been to the Continent after World War II has come back without admiring the remarkable recovery which Germany has made since the war. Several reasons for this have been given by Indian

visitors as well as other foreign observers of the post-war reconstruction of Germany. But the explanation given by Dr. Bluecher, the Vice-Chancellor of Germany, who specially came down to Bombay to be present on

the occasion of the inauguration of the Indo-German Chamber of Commerce a few days ago, appeals to me very much, perhaps because it has come from a German himself. Said Dr. Bluecher:

"We ascribe the rapid reconstruction of Germany after the war to the intelligent co-operation of the State with the private industry. Enterprise and hard work on the part of both management and workers, together with careful guidance by the authorities, these are the ingredients of our recovery."

It would be worthwhile for our business men and Government, as also our workers, to ask themselves the question as to how many of these ingredients exist in this country today. I do not think that, despite all the doubts and fears expressed by spokesmen of private enterprise, there has been a cessation of further expansion of existing industries and creation of new ones on the part of private enterprise. On the whole, it can be said that our workers too have been giving of their best, except, of course, when they are misguided by professional agitators, who style themselves as trade union leaders, to strike work or to go slow. Not until the Indian worker becomes sufficiently literate and responsible enough to know his own rights and responsibilities, especially his responsibility to his country, will it be possible to wean him away from the evil influence of undesirable outside leadership.

Be that as it may, can we say that there is intelligent co-operation between the State and the private industry? Perhaps I had better ask whether there is co-operation at all between the State and private enterprise to the extent necessary. There is a disposition in certain political circles, which are swayed more by ideological rather than practical considerations, to minimise the imperative need for helpful co-operation between the State and private enterprise. Co-operation implies a certain amount of give and take also a degree of mutual respect. More often than not, especially latterly, private enterprise is treated as a suppliant subordinate of the Government and asked to take orders instead of being asked to offer suggestions, if not advice. In certain official circles, it would seem, seeking such suggestions or advice is regarded as 'infra dig.' The result is lack of understanding and an avoidable atmosphere of suspicion. Because of this suspicion, enemies of both private enterprise and opponents of mixed economy have succeeded in creating the unfortunate impression that private enterprise stands in the way of implementation of the socialistic pattern of society. I hope that, at least from the approach of West Germany, these doubts and apprehensions about private enterprise would be dispelled. By her approach, West Germany has clearly demonstrated that, on questions of economic relations, it matters in the least as to whether the deal is between business men and business men, or between business men and Government, or between a people who are highly advanced industrially and those who subscribe to the philosophy of small and cottage industries. I was really struck by the genuine enthusiasm shown by both the first President of the newly created Indo-German Chamber of Commerce, Mr. K. K. Heller, and the German Vice-Chancellor to greatly expand the present volume of Indo-German trade. Thorough as the Germans are always known to be, they have not been slow to capitalise on what they have done so far. Truly, the record of Indo-German co-operation catalogued by Dr. Bluecher is quite impressive. But the resourcefulness which characterised the German approach to India's plans for small-scale and village industries is really amazing. Thus, the Vice-Chancellor of Germany said: "We are greatly interested in your plans for small-scale and village industries. Germany has centuries of experience in this field and, in some parts of the country, economic life is mainly based on

small and home industries." This is indeed revealing, but, even more than this, I was as much intrigued as interested to hear Dr. Bluecher speak of the German plans with India's Ambassador to Germany, Mr. Nambiar, the possibilities of how best to promote India's small-scale and village industries. Surely, as he claimed, Germans are interested in helping the development of Indian industries and they have also quite a fund of experience to be able to help us in the gigantic tasks ahead of us.

After saying all this, which was perhaps all that a formal function, such as the inauguration warranted, it is significant, Dr. Bluecher went on to mention about certain doubts and fears of German business men. He particularly mentioned the problem of residential permits and the difficulties arising from the "peculiarities of Indian Income-tax system".

He must have had other apprehensions still which all Westerners feel but consider it perhaps delicate to mention over and over again. But I can say, from my conversations with a number of Western business men, that they are very disturbed over the latest constitutional amendment and the nationalisation of insurance. However, the cumulative effect of all these has been to drive the Western business men to adopt an attitude of wait and watch instead of taking on any further commitments.

West Germany's readiness to accept the "big opportunities" under the second Five-Year Plan, as their spokesman put it, is therefore, particularly significant in this context. The realisation on the part of West Germany that the pattern of trade has been gradually changing and is likely to change still further and that, therefore, she should speak more in terms of increasing her exports of heavy and general machinery is a practical and realistic approach which other countries of the West would do well to follow.

Where does the Indo-German Chamber of Commerce come in in all these? Was there need for yet another Chamber of Commerce? These are the natural questions that occur to anyone in connection with the inauguration of this new Chamber of Commerce in Bombay. Both Dr. Bluecher and Mr. Heller doubtless anticipated these queries, in that they themselves provided the answer in the course of their speeches. The former said that the new chamber did not belong to a type known to India, but was one which has proved its value in many other lands, while Mr. Heller referred to the fundamental changes the world trade has undergone, especially the increasing controlling influence of Governments in the conduct of trade and the post-war tendency to view international trade in bilateral terms. "The innumerable rules and regulations, import and export restrictions, price controls and other laws that affect the economies of different countries in different ways," he went on to add, "made it impossible for the ordinary Chambers of Commerce, as traditionally constituted, to deal with the individual problems of two individual countries." This had given rise, he said, to the establishment of bipartite chambers of commerce which mainly concern themselves with the economic relations of the two countries concerned only. A notable feature of these chambers is that they function on a completely reciprocal basis in the two countries, the members of both the countries being entitled to membership and directorship on a fifty-fifty basis, with the office of the President alternating between the two countries in rotation. According to Mr. Heller, bipartite chambers of commerce function either on a reciprocal basis between two countries by maintaining their respective chambers in the guest country or, where such is not possible, by establishing one chamber only on an equal footing in one country alone, as in the case of the newly inaugurated Indo-German Chamber of Commerce. It is noteworthy that the new chamber proposes to work in close

co-operation not only with the Governments of India and Germany, but also in collaboration with the other chambers of commerce in the two countries. This means that the activities of the Indo-German Chamber of Commerce will in no way conflict with, or impinge on, the work or activities of the other chambers, an assurance which Mr. Heller did well specifically to make at the inaugural meeting. This should have dispelled apprehensions, if any, in the minds of spokesmen of other chambers of commerce that were present on the occasion.

Finally, I must say that half the fears that are entertained in this country about foreign aid in the implementation of the second Five-Year Plan would be dissipated if more Western countries adopted the same approach as West Germany has done towards our

second Plan. This country—West Germany—seems to have completely analysed the heavy machinery and equipment requirements that would be necessary to implement both the development projects in the public sector and the expansion and launching of new industries in the private sector with a view to ascertaining what West Germany could offer. This should enable her not only to make an offer of what India needs, but to do so on the most competitive terms as well. West Germany has also not been slow in the matter of closer collaboration in the manufacturing field not only with the private sector but also with the Government of India. After all these worthwhile attempts, crowned as it has been by the recent inauguration of the Indo-German Chamber of Commerce, there is very good reason to expect a closer and better phase of Indo-German economic relations in the near future.

Letters to the Editor

A LEGAL ANOMALY IN THE NEW COMPANIES ACT

Sir,

Section 645 of the Indian Companies Act 1955 says:

"Nothing in this Act shall affect any order, rule, regulation, appointment, conveyance, mortgage, deed, document or agreement made, fee directed, resolution passed, direction given, proceeding taken, instrument executed or issued, or thing done, under or in pursuance of any previous companies law; but any such order, rule, regulation, appointment, conveyance, mortgage, deed, document, agreement, fee, resolution, direction, proceeding, instrument or thing shall, if in force at the commencement of this Act, continue to be in force, and so far as it could have been made, directed, passed, given, taken, executed issued or done under or in pursuance of this Act, shall have effect as if made, directed, given, taken, executed, issued or done under or in pursuance of this Act."

Things done under or in pursuance of the provisions of the Companies Act of 1913 such as a regulation in the articles of a company or an agreement or resolution concerning the appointment, term of office, powers, remuneration, etc., of a managing agent, manager or managing director or the appointment of a life director or of a sole selling agent, or the making of loans, investments, etc. permitted by the previous Act, though prohibited by the provisions of the present Act, all come apparently within the scope of this saving section.

Now we shall take, for instance, Section 331 of the new Act. It says that "All provisions of this Act other than those relating to the term for which the office can be held shall apply to every managing agent holding office at the commencement of this Act, with effect from such commencement."

If the terms of agreement of an existing managing agent had provided for larger remuneration including ample office allowance, or vaster powers, or had conferred on him any special rights or privileges such as the right of appointing one-third of the directors, or acting as selling and buying agents, or being entitled to compensation for loss of office under any circumstances whatsoever, Section 331 is enacted to put an end to them, whereas Section 645 seeks to save them.

The saving Section 645 has been simply copied from the Section 459(2) of the English Act, without taking into consideration, it would seem, certain special features of the Indian enactment, especially the elaborate

provisions by way of restrictions and prohibitions, relating to various aspects of the managing agency system, and those dealing with the terms and conditions of employment, remuneration, duties and powers of directors, manager, managing director, managing agent and/or secretaries and treasurers.

So also, another saving Section (Section 657) provides among other things, that, "nothing in this Act shall affect—

(c) Table A in the First Schedule to the Indian Companies Act, 1913 (VII of 1913), either as originally contained in that Schedule or as altered in pursuance of Section 151 of that Act, so far as the same applies to any company existing at the commencement of this Act."

This is reproduced from subsection (14) of Section 459 of the English Act.

Very many small and moderate-sized existing companies in this country have as their Articles, either the whole or certain specified portions of the Regulations in Table A of the First Schedule of the Companies Act of 1913. Within the knowledge of the present writer in several cases some of the regulations so adopted are Regulations Nos. 69 and 72 of that Act. These are directly opposed to the provisions of Sections 198, 309, 310, 311, 314, 317, etc. of the present Companies Act.

Now, what is the legal effect of these saving clauses vis-a-vis the provisions in the body of the Act, to which they are repugnant?

The case law on the subject is meagre. It was decided in an early English case (Alton Wood's case (1600) 1 Coke's Reports 401) that a saving clause which is repugnant to the purview of a statute is to be rejected and treated as void, and this is approvingly quoted in Halsbury's 'Law of England' 2nd Hailsham ed., Vol. 31, page 486 and discussed in Craies' Statute Law (1952) 5th ed., page 204. On the other hand, the view expressed in Maxwell's 'Interpretation of Statutes' is that "the later of two passages in a statute being the expression of the later intention should prevail over the earlier, as it unquestionably would, if it were embodied in a later Act" (6th ed., Chapter VII, page 283). It is the considered view of the present writer that where one and the same Act of Parliament is concerned, any saving clause repugnant to and having the effect of defeating any of its main provisions is to be treated as void and of no effect. But so far as litigants in this

country are concerned, until the Supreme Court gives a decision on the subject, the position will remain uncertain.

Be it as it may, the point presently for consideration is whether when so thorough-going a piece of legislation is enacted, after many years of deliberation it will not be detrimental to the progress of the country and all interests concerned, that there should be left such serious drafting anomaly giving room for needless and avoidable uncertainty and needless airing of

the spirit of speculative litigation. And it is particularly paining to the present writer to feel that though after the Joint Committee made their Report he brought this defect to the notice of those who piloted the Bill in Parliament, he could not succeed in impressing them of its importance.

Yours faithfully,
A. RAMAIYA.
Advocate

MADURAI

"TUSSLE OVER TEXTILE TARGETS"

Sir,

"Croesus" has ('The Eastern Economist', January 13) entered the lists again to defend the indefensible. He quotes with approval the statement of Sir Sri Ram that it would not be possible to increase the shifts, except perhaps in a mill or two here and there. The Commerce Minister's figure establishes that the mills can produce over 285 million yards of cloth over and above the 5000 million yards. According to reports most of the Ahmedabad mills have gone into the third shift; and Ahmedabad is the second largest textile mill centre in the country! It is not the case of "one or two mills here and there". Again, already over 2 million spindles and 12,000 new automatic looms have been licensed. Certainly these will go into production, too, in the course of the next two years. Why, then, this clamour for more mill spindles?

Whoever told "Croesus" that the Ambar Charkha cannot produce yarn above 20's counts? The fact is that the Ambar Charkha can produce yarn from 16's to 40's and above with Indian cotton and no mixture. The fact is also that for medium counts of yarn, mills have to mix Indian cotton with foreign cotton. The Ambar Charkha has another advantage. Quality to quality of Indian cotton, the Ambar Charkha spins 5 to 10 counts above that spun on the mill spindle.

In quoting Sir Sri Ram's view, "that exports can only be possible of commodities for which there is a good home market", because if export fails to reach expected levels, there is always the home market to fall back on, "Croesus" has let the cat out of the bag. At no time have our exports of textiles reached the

target of 1000 million yards fixed for the second Five-Year Plan period. Millowners know that the export target is impossible of attainment in the changed conditions, and, therefore, if more spindles and looms are permitted to go into production, there will always be additional production with which they can strangle the struggling handloom industry.

The fear that if increase in mill production is banned and handlooms without the yarn are unable to produce enough there will be heavy shortage of cloth as a whole in the country is exaggerated. Do the handlooms get the supply of yarn that the industry requires? The production capacity of the handloom industry in the country is 3,200 million yards and production today does not exceed 1,500 million yards. What is the cause of this unused productive capacity? Non-availability of yarn. What the protagonists of the Ambar Charkha say is that the additional yarn required should be supplied through this Charkha and thus rescue the handloom industry from its uncertain dependence on mills. They do not say that the Ambar Charkha should "produce all the yarn required by the handlooms", as "Croesus" assumes, but only that quantity of yarn that is required for the production of the additional quantity of cloth for which there may be demand during the second Plan period. It is their contention that the Ambar Charkha is capable of producing the yarn, given the appropriate operative conditions; and they ask for nothing more.

Yours faithfully,
C. K. NARAYANSWAMI

A Guide to

THE INDIAN COMPANIES ACT

By A. RAMAIYA, Advocate, Madurai.

PUBLISHED BY

THE MADRAS LAW JOURNAL OFFICE, MADRAS-4

The changes in Company Law effected by the new Act are so thorough and voluminous that it cannot be called a mere amendment of the previous Act. The new Act will call for frequent and constant reference to its provisions from those concerned with the management of Companies. We have pleasure in offering the GUIDE TO THE INDIAN COMPANIES ACT which explains lucidly the changes made by the new Act.

The book is written by a lawyer with wide experience in this branch of Law for many years and brings to bear on this subject his vast practical knowledge.

An indispensable Guide and Book of reference to Managing Agents, Directors, Secretaries, Accountants, Company Lawyers and Top Executives.

BUSINESS NOTES

NEW STEEL PRICE

THE NEW retention price of Rs. 393 for steel represents a rise of Rs. 8 per ton over the ad hoc price of Rs. 385 sanctioned from April 1955. The principle of uniformity of prices for both the major companies has now become officially established, but this may not ensure the manufacturers much because the resources in position remains rather tight. A significant change in policy is the fixation of prices for a fairly long period, i.e., for five years from 1955-56 to 1959-60. In the fixation of the new uniform price, however, care has been taken to allow for variations in the production level assured for purpose of fixation of steel price. For example, if, for reasons beyond their control the IISCO find their works costs in 1958-59 or 1959-60 to be higher than those assumed by the Commission, they may apply to the Government for a review of retention prices. Again, the retention prices may be adjusted from time to time to the extent that manufacturing costs have altered from 1954-55 as a result of changes in railway freights, statutory prices of fuel, raw materials, stores or machinery, and changes in labour costs.

It is natural that the retention prices should be related basically to the works costs of the Indian Iron and Steel Company, which are the higher of the two. This means that the Tata Iron and Steel Co., has been denied the superior benefit of lower production costs, but it is assumed that the Indian Iron and Steel Co. also will sign an agreement with the Government similar to that by the Tatas to the effect that the excess of the effective retention prices over the 1954-55 prices will, after taxation, be transferred to the Special Development Fund.

INDO-US AIR AGREEMENT AT LONG LAST

NEGOTIATIONS FOR a revision of the original air transport agreement, concluded between India and the United States in February 1946, which took a protracted course for three years, were brought to a conclusion acceptable to both the parties and an agreement was signed on February 3rd last. Meanwhile, the original agreement was terminated on January 14, 1955, at India's option and the two American airlines—TWA and PAA—were granted provisional licences to operate scheduled services across the Indian territory on a reduced basis. The bone of contention in these negotiations mainly concerned the fifth freedom traffic, that is, traffic originating in or destined for third countries on the routes specified in the bilateral air transport agreement.

The original Indo-US agreement of February 1946 was the first international air transport agreement entered into by India with any country and at that time India had no subsisting or immediate interest in overseas aviation. But later when she made her entry in international commercial aviation, she realised that equality of opportunity for development of airlines of the contracting parties, which was provided for in the Indo-US agreement of 1946, was theoretical. In conditions of gross inequality of resources, India, as a new and weak entrant, could draw little benefit from it. In plain words, she found the prospect of the development of Air India International hindered by the amount of fifth freedom traffic which was served from time to time by the US airlines. In her agreements with the UK, the Netherlands and Australia, which were concluded subsequently, India secured the incorporation of terms which would assure a reasonable sharing of this fifth freedom traffic on a basis related broadly to the capacities of the airlines of the contracting parties. This was in accordance with an accepted practice. India asked for a revision of her first agreement with the US to provide for this accommodation

in respect of traffic on the specified routes originating or terminating in the territories of third countries. This modification could not be obtained so far.

It is gratifying that the differences between the two countries primarily on this issue have been ironed out. The main angle from which the practical value of the second Indo-US air transport agreement of last week will be judged is the arrangement for a broad allocation of the fifth freedom traffic. It does not, of course, imply any precise or mathematical formula for distribution. But the purpose of the practice of sharing of this traffic is to accommodate both the parties and to allow their airlines reasonable scope to participate in development. The frequency of TWA and PAA has been restricted to two round trips per week and may be increased only with India's consent on the ground of increase in traffic between the two countries. Article 6 of the Indo-US agreement declares that fair and equal opportunity will be granted to both the parties to carry traffic. Articles 7 and 8 stipulate that expansion of the services of any airline will be undertaken after recognition of the capacity of the airline of the other party to serve this traffic and no unreasonable expansion will be made which will militate against the principle of orderly development. The machinery for the supply of the relevant statistical data to assess the implementation of this understanding has also been set out in the agreement.

PAYMENT BY RESULT

THE DECISION of the Labour Appellate Tribunal on the Meher Award to Bombay dock labour must be considered as quite reasonable. It is an attempt to relate wage with outturn and, to that extent, it is designed, and may also be expected, to solve the problem of slow outturn in the docks. But, so long as the datum line fixed is not regarded as altogether satisfactory by labour, some unrest and discontent is bound to persist, although this may not seriously dislocate work at the port.

Since July, 1949, bonus payments, fixed at twice the normal rate for tonnage above the agreed datum line, have been operative, but the response to this incentive scheme has been rather disappointing. The incentive bonus of Rs. 2 lakhs earned by the dock workers in 1950-51 declined to Rs. 30,000 in 1953-54. In recommending piece-rates instead of the time-rated wages, the Tribunal award marks a major departure from the existing procedure in the port of Bombay. The piece-rate system is determined on the basis of a datum line—normal output by an individual. The daily wages are determined in relation to this datum line. The employees' case is that the datum line, fixed by the Port Trust in 1949, was much higher than the normal output of a worker. The Tribunal has accepted the claim of workers with regard to datum line in connection with certain categories of workers. In fact, the Tribunal has so arranged the datum and fixed the emoluments that, according to it, willing workers can reach the datum lines and, with a little extra effort, even secure those rewards which a piece-rate system offers. In its view, workmen would be receiving the equivalent of their present wage at about 87 and 88 per cent of the datum. While accepting the present daily wage as adequate, the Tribunal has introduced this innovation, namely, that there is a steady rise from the minimum daily wage of Rs. 3-1-0 at 76 per cent of the datum line to Rs. 4-5-0 at 100 per cent. Only a brief span between 90 per cent and 94 per cent, it is slightly below the wage awarded by Mr. Meher, but, outside this span, it is generally higher. From Rs. 4-8-0 at 100 per cent, the piece-rate wage rises uniformly to Rs. 8 at 150 per cent of the outturn, where it meets the Meher Award line.

Labour Union's objection to the piece-rate system is due to the fact that workers cannot be sure of the amount they will earn every day. They say that while, from the strictly theoretical point of view, it is desirable to link wages with outturn, yet practical difficulties in working out the scheme are considerable. Employers, on the other hand, contend that the time-rate system has failed since a fair day's work for a fair day's wage is not obtainable, and that a change of system is the only answer to the shortfall in outturn and general atmosphere of indifference to work in the docks. Notwithstanding these differences, it is significant that labour circles have welcomed the modifications effected by the Tribunal, and it is indeed a hopeful sign that the new scheme is to have a fair trial for a year.

POWER TRANSFORMERS

THE TRANSFORMER industry occupies an important place in the economy of the country in view of the several large hydro-electric undertakings in progress and the large-scale rural electrification that has been planned. The current annual demand for the transformers is estimated at 700,000 to 900,000 KVA against which the total rated capacity on a single shift basis of the eleven units now under production is as yet 745,000 KVA. However, after the successful completion of the plans of expansion of different units, the annual rated capacity is expected to increase to about 1,200,000 KVA by the end of 1958. That shows there is no lack of enterprise in this sphere, but this enterprise needs to be properly harnessed by active assistance at the hands of Government.

Now, producers have demanded continuance of protection to the industry beyond December 31, 1956, because of the low prices quoted by foreign manufacturers and the comparatively high costs which have to be incurred by indigenous manufacturers. Commensurate with the increase in rated capacity, there has generally been a substantial increase in the output of transformers since 1952. But while the production of three phase transformers showed progressive increase from year to year, there has been a sharp decline, from 1954 onwards, in the production of single phase transformers. The production of three phase transformers was nearly 500,000 KVA in 1955. A bulk of the production still continues to be of ratings up to 1,000 KVA and 11KVA on the H.T. side, but, in view of the fact that a large amount of additional generating capacity would become available during the second Five-Year Plan period, there should be an accelerated increase in the production of transformers in the higher rating groups.

Imports presently are on a quota basis, and they were valued at Rs. 1,61,68,952 in 1954-55 as against Rs. 1,97,50,172 in 1953-54 and Rs. 1,49,47,157 in 1952-53. The present protective duty of 10 per cent ad valorem, exclusive of surcharge, has been in force from 1952, when the industry was first granted protection.

NEW PEAKS IN U.S. ECONOMY: 1955

THE BUSIEST and most prosperous year in the history of the United States of America has just come to a close and latest information indicates a continuing upward trend. Demand for steel continues to outrun production and supply, although during 1955 a record 117 million tons were produced compared with 88 million tons in 1954. The Federal Reserve Board index of industrial production in November attained a high of 144 compared with 143 in October (1947-49=100). The boom in automobile sales appears to have reached a peak, however, as dealers' inventories continue to pile up; 7,940,862 cars were produced in 1955, compared with 5,509,399 cars in 1954. Nation-wide department stores sales are currently running about 11 per cent above a year earlier. New construction spending for

December amounted to about \$3.2 billions, off 12 per cent from November, but 3 per cent higher than December 1954; total new construction in 1955 amounted to approximately \$42.3 billions and established a record for the ninth straight year. Employment in December stood at 64,200,000 a new high, while unemployment at approximately 2,400,000, was only some 2,000 higher than in November. Personal income in November was at a record annual rate of \$311.4 billions compared with \$309.2 billions in October and \$290.3 billions a year earlier. Total consumer credit in November increased to \$35,059 millions, a rise of \$5,850 millions over November 1954.

HIGHER COST OF ADVANCES TO BANKS

A PRESS COMMUNIQUE issued by the Reserve Bank of India last week-end announces two changes affecting the cost of advances which banks obtain from it against usance bills. The rate of interest charged by the Reserve Bank on these advances will be raised by 1 per cent to 3½ per cent, effective from 1st March, 1956. The second change relates to the incidence of the stamp duty required to be paid in converting demand bills into usance bills. Half the burden of duty which was hitherto borne by the Reserve Bank will no longer be incurred by it from 1st March next. This shifts the whole incidence of the stamp duty on the borrowing bank, but it is negligible amounting to two annas for every thousand rupees or part thereof where the bills are payable in less than one year.

The increase in the rate of interest will go to enhance the cost of bank money and it is a point for interesting speculation whether banks will bear its incidence or pass it on to their borrowers. Considering the upward trend of banks' operating costs, it would appear that eventually it may be shifted to the clients. Even in that event, the Bill Market Scheme which was introduced in 1952 does not stand to suffer a setback since the rate charged on advances on usance bills will be lower than the Bank Rate by 1 per cent. The reason offered in the communique for this increase is that 3½ per cent was the rate originally contemplated under the scheme in 1952, but that it was reduced at the pressing request of banks. It is true that the Bill Market Scheme has stabilised and is now placed on a broader footing. But the timing of the increase may justify banks to raise a reasonable grievance. There are no inflationary pressures in evidence in the economy at the present time to necessitate curbs on credit. Rather, larger funds need to be made available at the existing, if not cheaper cost, to finance development activity. The change in the rate on advances against usance bills will operate in the other direction.

COMPANY AFFAIRS

THE CONSOLIDATED COFFEE ESTATES

The Directors' Report and Statement of Accounts of the Company for the year ended June 30, 1955, shows that the net profit for the year is Rs. 16,04,069. Add Balance as per last Directors' Report .. 4,24,565

TOTAL	Rs. 20,28,634
Less 6% Dividend on Preference Shares	Rs. 1,12,500
Transfer to Reserve for Debenture Redemption Fund ..	1,00,000
General Reserve ..	5,00,000
Leaving a balance of	Rs. 13,16,134
Out of which the Directors recommend the payment of a Dividend of 22½% free of Indian Income Tax on the ordinary shares, absorbing	Rs. 10,73,250
Leaving a balance of	Rs. 2,42,884
to be carried forward.	

In order to distinguish between immature and mature coffee more distinctly, the Board of Directors define immature arabica coffee as under five years planted and mature robusta as under eight years planted. Accordingly, the total coffee acreage of the company is:

	Mature	Immature	Total
Arabica Coffee	3,718	466	4,184
Robusta Coffee	1,992	621	2,613
TOTAL	5,710	1,087	6,797

NELLIMARLA JUTE MILLS CO., LTD.

The Directors' Report and Audited statement of accounts of the Company for the half-year ended June 30, 1955, shows that the profit for the half-year, after making adjustments and providing for Depreciation Rs. 56,200 and Taxation Rs. 1,85,000 amounts to Rs. 2,57,089 to which must be added the—

Credit Balance brought forward from the previous half-year	1,31,393	
Amount received on account of Post-war E.P.T. Re-funds, net	76,520	Rs. 2,07,913
Making a total of		Rs. 4,65,002
From which the Directors have transferred to Reserve for Machinery Renewals		Rs. 1,75,000
Leaving an available balance of		Rs. 2,90,002
Which the Directors recommend should be distributed as follows:		
Dividend on 5,000 Preference Shares at 6 per cent per annum or Rs. 3 per share	15,000	
Dividend on 2,62,500 Ordinary Shares at 10 per cent per annum, or As. 8 per Share	1,31,250	Rs. 1,46,250
Leaving to be carried forward		Rs. 1,43,752

Difficult trading conditions were experienced throughout the period under review. Raw jute prices advanced steadily during the early part of the half-year but the rise in manufactured goods was not in proportion to the rise in Raw Material prices, and profit in simultaneous business was not possible. Prices declined in the latter part of the period. The devaluation of the Pakistan Rupee on July 31, 1955, was followed by the removal of Export Duties by the Government of India from August 1, 1955.

AL-IND
ALL ALUMINIUM
for low voltage distribution lines

Savings up to a minimum of 40 percent are assured by a switch to ALIND all-aluminium conductors. For short span, low-voltage distribution lines, ALIND all-aluminium conductors provide the most economical answer.

COMMODITY NEWS AND NOTES

RUBBER PRODUCTION IN INDIA

The quantity of natural rubber produced in the country is as follows:

1953	..	..	21,136	Tons
1954	..	..	21,493	..
1955	..	..	17,014	..

Synthetic rubber is not produced in the country. The annual requirements of raw rubber have been as follows:

1953	..	..	22,373	Tons
1954	..	..	25,487	..
1955	..	..	27,000	..

The estimated requirements of special purpose synthetic rubber are about 300 tons per annum. The export of natural rubber has been as follows:

1953	..	..	65	Tons
1954	..	..	11	..
1955 (January to August)	..	..	11	..

The question of export of synthetic rubber does not arise, as it is not produced in the country.

SHELLAC EXPORTS

Shipments of shellac during January 1955, were estimated at 23,943 packages compared with 37,433 packages in the previous month showing a decline of 30 per cent. Out of the total shipments shellac accounted for 15,668 packages, seedlac for 4,996 packages, but-ton lac for 402 packages and other grades for 2,877 packages. The corresponding figures for the previous month were 20,375; 10,856; 961 and 5,241 respectively. The sharp fall in exports is attributed mainly to lower offtake by the U.S.A., the principal customer for Indian shellac.

The price of pure T. N. which was Rs. 158 at the beginning of the current year, declined to Rs. 134 per maund by the end of last month and further to Rs. 132 in the past few days. The Bysakhi crop which accounts for nearly two-thirds of the total lac production is expected to move into the market in early April, 1956. As the crop is expected to be large in view of the measures taken by the Indian Lac Cess Committee to encourage lac production, there seem to be little prospects of any improvement in prices in the near future.

FIRST ESTIMATE OF LINSEED

The all-India estimate of linseed for 1955-56 puts the current year's area at 2,524,000 acres, as against the adjusted first estimate of 2,507,000 acres for 1954-55. This shows an increase of 17,000 acres or 0.7 per cent in area over last year.

The increase in acreage under linseed during the current year has been shared mainly by Rajasthan, Madhya Pradesh and Hyderabad and has been attributed to favourable climatic conditions at the sowing time. This increase has, however, been offset, to some extent, by decreases reported by Bihar, Madhya Bharat, U.P. and Bombay due to unfavourable weather conditions at the sowing time. This estimate does not cover the entire area sown to linseed crop during 1955-56.

SECOND ESTIMATE OF RICE

The all-India second estimate of rice for 1955-56 put the current year's area and production of the crop at 72,332,000 acres and 23,775,000 tons, as against the adjusted second estimate of 69,456,000 acres and 22,126,000 tons during 1954-55. This shows an increase of 2,876,000 acres or 4.1 per cent in area and 1,649,000 tons or 7.4 per cent in production over last year.

The increase in acreage during the current year has been shared by almost all the important rice-growing States, except Bombay, Madhya Pradesh, Orissa,

Mysore, Saurashtra and Himachal Pradesh, where slight decreases in acreage have been recorded due to unfavourable weather conditions at the time of sowing. The increase is particularly marked in the case of Bihar, West Bengal, Uttar Pradesh, Andhra, Assam and Hyderabad States and has been generally attributed to better climatic conditions at the time of sowing during the current year as compared to last year. For the first time, the estimate of Travancore-Cochin has been included in this estimate. This State accounts for an area of 1,067,000 acres and production of 547,000 tons in 1955-56.

RECORD WORLD SUGAR CROP

The world will produce the largest sugar crop ever in the year 1955-56, according to the U.S. Department of Agriculture. Most of the increase will be in Russia. The 1955-56 forecast for the Soviet Union at 3 million short tons is 500,000 tons more than the 1954-55 figure. Other major sugar producing countries are Cuba which estimates a 5 million ton production crop this year (4,944,000 tons last year), India which estimates 2.1 million tons (2 million tons) and Brazil, which estimates 2.47 million tons (2.48 million).

WORLD WHEAT SITUATION

A recent survey of the world's wheat situation by the Australian Bureau of Agricultural Economics shows that the world is still being embarrassed by heavy over-production. It points out that notwithstanding substantial reductions in planted acreages both Canada and U.S.A. are harvesting extremely large crops, while production in other countries is also high. Surplus stocks have become a feature of the world wheat situation, in which exporting countries have been painfully learning to adapt themselves. The wheat crop in Australia has been officially estimated at 188.6 million bushels against 166.6 million bushels in 1954-55 or an increase of 11.9 per cent. According to the Bureau of Agricultural Economics prospects of an improvement in the world wheat situation in 1955-56 now seem more remote.

INDIA'S TRADE WITH THE U. K.

I. PRINCIPAL EXPORTS

(Thousand £)

	Year 1954	November 1954 1955		11 Months Jan.-Nov. 1954 1955	
Total All Exports	148,595	18,822	13,600	125,377	143,653
Of which :-					
Tea	76,963	12,687	6,602	60,008	66,229
Leather, leather manufactures & dressed furs	13,271	996	1,065	11,869	11,734
Tobacco & tobacco manufactures	6,910	426	443	6,743	6,617
Hides, skins & fur skins, undressed	974	112	39	900	751
Wool & other animal hair and tops	5,567	618	634	4,956	4,456
Cotton	2,584	101	715	2,330	4,142
Miscellaneous textile fibres & waste	1,070	72	67	1,040	1,351
Metalliferous ores & metal scrap	3,081	305	126	2,854	2,227
Miscellaneous animal & vegetable crude materials	4,528	527	321	4,215	4,459
Animal & vegetable oils, fats, greases & derivatives	1,892	223	510	1,727	8,101
Cotton yarns & woven fabrics	6,855	440	721	6,184	6,667
Miscellaneous textile manufactures	16,444	1,318	740	14,952	13,548

II. PRINCIPAL IMPORTS

(Thousand £)

	Year 1954	November 1954 1955		11 Months Jan.-Nov. 1954 1955	
Total All Imports	114,907	6,293	11,405	104,448	118,385
Of which :					
Machinery other than electric	28,151	1,667	3,054	25,027	29,340
Electric machinery, apparatus & appliances	14,836	628	1,683	13,543	14,832
Wool & other animal hair and tops	4,929	135	342	4,491	4,483
Petroleum & petroleum products	4,610	123	75	4,548	1,635
Chemicals	15,152	977	1,239	13,538	14,644
Paper, paperboard & manufactures thereof	1,331	157	198	1,225	1,607
Iron and steel	5,891	350	1,010	5,337	7,693
Non-ferrous base metals	1,653	134	207	1,468	2,114
Manufactures of metals	5,080	201	466	4,672	6,336
Railway vehicles	3,052	118	142	2,900	3,259
Road vehicles & aircraft	9,363	414	868	8,434	9,262
Scientific instruments; photographic & optical goods; watches & clocks	2,239	127	291	1,937	2,747

III. INDIA'S IMPORTS OF MACHINERY FROM THE U. K.

(Thousand £)

	Year 1954	November 1954 1955		11 Months Jan.-Nov. 1954 1955	
Total Machinery	42,987	2,295	4,737	38,570	44,172
Of which :-					
Boiler & boiler-house plant	1,463	78	219	1,311	1,654
Internal combustion engines	1,883	147	184	1,886	1,663
Agricultural machinery	197	8	27	169	177
Agricultural & track-laying tractors	754	47	64	644	902
Machine tools (excluding portable power tools)	2,005	91	213	1,762	2,249
Pumps	744	56	94	673	756
Industrial & works trucks & tractors & mechanical handling equipment	1,612	113	146	1,406	1,404
Excavating & earth-moving machinery & road rollers	650	76	132	580	1,253
Mining & well drilling machinery	481	31	42	429	374
Printing & bookbinding machinery & printing type	573	73	97	530	605
Textile machinery	6,863	360	708	6,227	6,428
Air-conditioning & refrigerating machinery	252	18	29	233	253
Generating sets, generators & motors	2,233	63	275	1,961	2,082

THE RAMAYANA

OF TULSIDAS IN ENGLISH VERSE

LATEST "HINDUSTAN TIMES" PUBLICATION

The famous Hindi epic regarded by many as "the greatest book in all devotional literature" is for the first time now available in English verse.

The translator, the Rev. A. G. Atkins, completed the book after ten years of devoted work. He has tried "to keep and express in English in the fine rhythm and music of the original in simple lucid language, and with as much of the vivacity, wittiness and picturesqueness that Tulsidas has put into his work." He has also followed in some measure Tulsidas's metrical variations such as chhand, chaupal, doha and soratha.

In a foreword Mr C. Rajagopalachari says: "Mr Atkins' monumental work and his Introduction are a revelation of hope for those who desire to see all the great religions of mankind come together. . . . His service is not only to English-speaking people but also to that very large number of Hindus in India who do not speak the Hindi language and to whom English has become a very familiar medium."

The book is of special value to libraries, scholars and devotees of Tulsidas.

It has been issued in the following four editions:

- I. Original text of Tulsidas with translation in English verse; three volumes; 1468 pages; price Rs. 50 net.
- II. Translation in English verse; without Hindi text, two volume; 898 pages; price Rs. 40 net.
- III. Special tissue paper edition of I, one volume, price Rs. 100 net.
- IV. Special tissue paper edition of II, one volume, price Rs. 100 net.

After the Baghdad Pact

THE ominous rumblings heard this week at the conclusion of the Baghdad Pact reflect a new and deeply disturbing factor in India's international relations, which calls, both at home and abroad, for much greater comment than it has yet received. The fact that the Prime Minister described the Baghdad Pact "as worse than the SEADO Pact" is significant; that is believed to express the highest criticism of India's External Affairs Ministry. Three statements made in the week, first, one on All-India Radio by Mr. V. K. Krishna Menon who now as a Cabinet Minister carries new weight, secondly, one by the Congress President at Amritsar and, finally, unambiguous utterances by the Prime Minister, indicate that Indo-British relations are encountering a spell of very heavy weather. It is true—however much one might regret the fact—that the conclusion of the Baghdad Pact sponsored by Great Britain has endangered Indo-British relations; but it is not only Indo-British relations which are involved. Indian foreign policy itself may well be at a dangerous turning point.

It is important to consider the circumstances under which Indian resentment has thus been raised and to attempt to analyse it with objectivity. It

is sometimes quite difficult from official pronouncements to explain why a general theory that all military alliances are bad should be applied specifically to the military alliances of the Free World while the military alliances of the Communist World—the Sino-Russian Military Pact and the Warsaw Pact—seem to get nimbly away. It is true it is seldom remembered by Indian audiences that the Sino-Russian Military Pact preceded all the Free World pacts and that NATO itself was drawn together only to resist Soviet overlordship in Europe. There are, however, few Indians who will now deny that it was the formation of NATO which held Russian power in Europe. Only those who wish to fly flatly in the face of facts say that particularly military pact has no function of any kind. Why is all this of no consequence in tempering the criticism of Free World pacts which is now rising to a head?

Unhappily, official utterances do much to obscure the picture. It is obvious that, notwithstanding official pronouncements, the current resentment against the Baghdad Pact is different, both in degree and kind, from the academic objection to military alliances in general. For many years NATO was accepted with equanimity and even

with a certain amount of approbation. It is clear—at least to those who can separate theory from practice—that Indian resentment is based primarily on the association of Pakistan with military pacts in the area surrounding the Indian sub-continent, under circumstances which certainly increase the military capacity of Pakistan to endanger the security of the Indian Union. It is Pakistan's participation in a military alliance which is central; not the military alliance in itself.

A general essay on the purpose of military alliances is, therefore, not what is required at the present time. Nevertheless in order to set official theory in its proper position two major questions need to be argued by scholars both in the Free World and in Communist countries. To the Indian argument that all military alliances are redundant and provocative, there is a historical case to be set out in terms of the effectiveness of many alliances which have in fact over many years prevented aggression and, in some cases, made possible the defeat of the aggressor. It is surely nobody's case that no military alliances have performed any useful function either in the defence of peace even for a limited period or in the defence of liberty by the defeat of tyrants to make possible victories of popular governments. If it is the contention of India's External Affairs Ministry that no military alliances have ever served either peace or liberty, its Historical Records Division will need to document this assertion with far more material than has been at the present produced. There is no reading of history which suggests that all military alliances have at all times been redundant or have become instruments of aggressive war.

The second proposition which is also in need of documentation is the extent to which India's belief that military alliances are redundant for herself is the outcome of a particularly favourable position in the balance of power elsewhere in the world. If, indeed, it is a fact that a minor military power cannot protect itself against a major power without an alliance, may it not be that where this doctrine does not apply it is because a danger of aggression is absent or collective security can be applied under the Charter of the United Nations? The real difficulty in the latter case is that the Security Council prevents the operation of defence through the Security Council when one of the Big Four with a veto is an aggressor. India enjoys a position of remarkable freedom from the threat of Big-Power aggression because neither the United States nor the USSR has any reason for committing an act of aggression on the Indian Union. Is it equally clear that neither party has an interest in committing aggression elsewhere, which a regional defence arrangement can restrain?

This is a major issue of principle. The Indian Union takes the stand that countries in the Middle East as well as in South-East Asia enjoy India's position. Whether or not, however, the Indian view is correct on this point, the fact remains that other countries, notably Pakistan, do take a different view. India does not deny Pakistan this theoretical right as a sovereign State to make a decision different from hers. But she believes her security involved in this decision. It is almost certain that Indian concern about SEATO and the Baghdad Pact arises primarily from the fact that Pakistan, in the process of participation in these pacts, is substantially benefited in military terms.

This, and no other, is the prime justification for India's major questioning of military alliance

in the Asian scene. The character of Middle East defence is entirely subsidiary to the pressure on Indian security. Any act of a foreign Power which assists Pakistan's capacity for aggression must have both political and economic consequences in India. Politically—particularly while Kashmir remains unresolved—the Indian people will demand that the Defence Budget of the Indian Union shall always be raised in proportion to every addition to Pakistan's military resources. Economically, since every addition to our Defence Budget demands the use for non-productive purposes of valuable foreign exchange, there is an injury done *pro tanto* to India's second Five-Year Plan. It is no argument to say that India can receive military aid from the Free World equal to that which Pakistan receives at the present time or in any future contingency. The overwhelming majority of the Indian people refuse absolutely to receive military aid merely as a gift to offset Pakistan's potential military power. It is widely believed that the acceptance of such a gift would involve a change in Indian foreign policy; so, indeed, unless one is absolutely blind, one should admit at once.

Too often it is assumed that the substance of India's objection to military alliances is ideological and even a little romantic, in the romantic character of the Gandhian Age. The case of India's objection to military alliances is, however, not ideological, but deeply mundane. The facts are—and the Kashmir war of 1947 and 1948 is proof of the danger—that Pakistan can wage war on the Indian Union and has, while Kashmir lasts, an interest in doing so; for the Free World to argue that arms in Pakistan's hands are necessarily defensive is to argue in terms as idealistic as those which belonged to our Gandhian Age.

The truth is that Indian policy is consistent not on the plane of ideology—on which it might be complained that Free World departure from our 'ideology' receives far less tolerance than do the Communists—but on the hard fact that India's security is always endangered by additional resources in Pakistan's hands. Since India is quite unwilling to receive these additional resources in military form, the answer is for the Free World to undertake the provision of economic aid, either by grant or by loan, so that any additional pressure on our balance of payments arising from additional defence expenditure is met at once by the necessary relief under economic heads. If prompt action is not taken on lines such as these the deterioration of India's relations with the Free World will continue, fast or slow as external circumstances may decree, but largely in terms of the substance of military assistance given to Pakistan.

It cannot require much imagination to see that the logical conclusion of indefinite military assistance to Pakistan without corresponding economic aid to India must involve a pressure on Indian public opinion to receive arms from the Communist countries. This will, it is true, be a terrible denial of India's foreign policy. But there are many in India who think that, if the Free World should take no account of Indian resentment on military assistance to Pakistan, it will be a necessary step to safeguard India's security. It is vital that we, as well as our friends in the Free World, should take account of the deep dangers that loom ahead. The Free World must understand; but we, too, need to think. Pique cannot make policy. National security can never be safeguarded by surrendering ourselves to the tender mercies of the totalitarian world.

Sugar-coating off the Socialist Pill?

THE President's Address to Parliament and the economic policy resolution at the Amritsar Session of the Indian National Congress have drawn pointed attention to a change that has been made in the definition of our national objective as the establishment of the 'socialist' pattern of society. At Amritsar, Mr. Jagjivan Ram specially referred to the change as a significant indication of the new outlook on Congress economic policy; but the precise significance of the change has been left only to be inferred. The consistency with which the word "socialistic" was used in earlier discussions, since the Prime Minister set the slogan for the country, and the close adherence to the changed form of the 'socialist' pattern in the Draft Plan and the President's Address, shows, however, that this is not indeed a difference between tweedledum and tweedledee. In the English language, the two adjectives have been regarded as almost synonymous, with the difference that "socialistic" was hardly ever in common use in socialist literature. This may explain why many British Left-wing intellectuals and economists have made somewhat cynical references to India's "socialistic pattern", almost suspecting it to be a camouflage for a milk-and-water socialism different from their own brand. Despite the many dilemmas of British socialism, which is itself very diluted today, they seem to have little regard for the Indian variety. Their sneers have apparently had some effect.

If the change was regarded necessary merely in order to be felicitous in language, the importance now attached in some quarters to the new form would be without substance. The "socialistic" pattern had the approval of Parliament and of the Avadi Congress, but the Socialist pattern accepted now by the President and the Amritsar Congress, has been introduced in a rather casual manner. "There are at present no authoritative teachers of socialism", said Bernard Shaw in 1889; and the same may be said of Indian socialism today. The authorised exponents prefer to remain vague and he would be a rash person who ventures to speak on their behalf. The Draft Outline of the second Five-Year Plan only vouchsafes the following assurance to us: "The socialist pattern of society is not to be regarded as some fixed or rigid pattern. It is not rooted in any doctrine or dogma. Each country has to develop according to its own genius and traditions. Economic and social policy has to be shaped from time to time in the light of historical circumstances."

Hitherto, the deliberate preference for the words "socialistic" and "pattern" were understood as implying a pragmatic approach to the realisation of the Constitutional objectives of equality, social justice and welfare. Clouds of doubt may now form themselves around these conceptions, especially when a change is effected so soon after positive content was put into a particular form of usage. It may still be held that the preference of the term "socialist pattern", instead of plain "socialism" as such, is proof of a desire to avoid a dogmatic approach (if indeed there is a recognisable socialist dogma applicable to a democracy.) In Britain, socialism has come to be regarded as not identifiable either with nationalisation or with the steady encroachment of the public sector over the private. But here, even within a year of the promulgation of the objective

of a "socialistic" pattern, the pace of advance, achieved through the Constitutional Fourth Amendment, Company Law and the nationalisation of the Imperial Bank and Insurance, has appeared very much forced. If even these are regarded as merely "socialistic", the "socialist" approach may indicate a more drastic attitude to institutional change than has hitherto been visualised.

There are definite signs that a radical twist has been given to the socialist doctrine, which denies the consolation of the possibility of a pragmatic approach, available till now. The content of the new policy remains in uncertainty. Unlike in Britain, the Congress Party manifesto will not reveal clear-cut programmes but assume only general objectives, which can always be claimed as giving a mandate to particular policies. It is, therefore, premature to expect that our democratic process will help to define the details of socialist policy; and in a situation where the choice at the polls is becoming restricted to the Left and the extreme Left, there is little likelihood of the emergence of any moderating influences except those which are self-imposed by those who will determine the course of socialist policy. It was unthinkable that in Britain insurance nationalisation would have been announced with a bang, through an ordinance. It is unthinkable here, at least for a considerable time, that a reversal, as on steel nationalisation in Britain, could be effected through the ballot-box.

These are the considerations which make words like genius, traditions and historical circumstance seem of dubious value as limiting factors to a doctrinaire approach. Their definition would elude public discussion; but the issues would be eventually clinched only by those exercising authority through a general mandate for administering the country. The truth is that there are no checks in the short period of the kind that were available in other systems where democratic socialism has been tried. The method of gradualism in Britain, advocated by the Fabian socialists, has gained in the end over the more radical interpretations, mainly because of the time that was available to test the applicability of doctrines to changing social conditions. Where that time element is not available, the costs of a trial and error policy will have to be incurred.

There are slogans in the air about redistributive policies. There has been an emphatic insistence on the primacy of the public sector, through control, nationalisation and development of basic industry. All these have been possible even without the dose of radicalism indicated by the distinction made in the re-phrasing of the objective as "socialist". It is naive to believe that the abolition of privilege will result from the institutional changes contemplated or through the concentration of greater power in the State. These methods only transfer privilege from one group to others which are less exposed to scrutiny because they have ceased to be regarded as private, even though acquiring a vested interest which is not less powerful because it is public. That has been the lesson of democratic socialism elsewhere, where it could operate under more fierce criticism than is here possible. The genius or the traditions of this country cannot help to achieve substantially different results.

Workers and Management

IN the new mood of radical institutional change contemplated under the socialist pattern of society, greater significance is likely to be attached to the Prime Minister's reference to the need for providing an effective share to labour in the running of industries. Addressing INTUC workers at Shaheed Nagar, Mr. Nehru said that workers should have an effective voice in the working of a mill or factory and that experiments will be made with three or four methods of associating labour with management. This is not a new doctrine; many democratic countries have experimented with both voluntary and statutory schemes of consultation and workers' participation. The Draft second Five-Year Plan has also assumed that for the successful implementation of the Plan increased association of labour through councils of management is desirable. It has also been reported that the INTUC has favoured workers' association, provided their participation was "real and willing" and employees are supplied information on all matters. Opinion within labour is, however, still divided, as it has been in many countries, on the value of full participation in management functions, but it seems that some important steps are indicated in the present phase of our economic and social policies.

As part of the movement towards greater democracy, workers' participation in industrial management has been widely recognised as essential. In theory, there has been much in favour of giving interest to the worker in his job, in raising his self-respect and status and in providing him opportunities to contribute his experience and knowledge to improving methods of production. The fact that Communist systems deny this privilege to workers and fix the responsibility entirely on managers is itself proof to the worker of his better status under democracy where he can hope to have a voice in the running of an enterprise. This privilege must not remain a dream.

In actual working, however, the existing systems of participation have presented workers and trade unions with a dilemma. The British trade unions, which are jealous of their independence from both Government and private industry, have consistently been opposed to direct participation in management while favouring joint consultation. They have felt that the integrity of the trade unions would be at stake when trade union leaders sitting on management boards become divided between their loyalty to the enterprise, on the one hand, and the interest of the union members, on the other.

The foremost condition of effective co-operation is the existence of strong trade unions recognised by the employer and keeping good faith in implementing agreements reached by negotiation. In this respect, the conditions in India, where three different central unions compete for the loyalty of the worker, are far from ripe for workers' participation. This division of loyalty may not be felt on a large number of problems relating to the day-to-day running of a factory such as the introduction of health, safety and recreational measures. Even on questions of production, it is possible that there will be marginal gains, though the extent to which workers are qualified for or are interested in improving technical functions, is an unknown factor. Even in the advanced countries workers have not shown keen interest

in the business and economic aspects of enterprises; but indifference or lack of interest may be a lesser evil than a positive role of irresponsibility which is possible when union leadership is sharply divided according to their respective political affiliations.

Here in India the most recent instance of an attempt to experiment on new lines was seen in the agreement reached at Jamshedpur by the Tata Steel Workers' Union with the management. It was possible because the management trusted the union leadership and the union offered evidence of a genuine interest in improving productivity even through rationalisation. But it is not possible to foresee similar conditions prevailing in many other industries. Perhaps, the growing public sector may be able to set a better example of management-worker relations. This is wholly desirable. The Draft Plan is specific on the point that the management of a public undertaking should not seek exemption from laws or ask for concessions not available to the private sector. This statement might help to prevent the casuistic argument that, because an industry is controlled by the State, the interests of the workers are automatically safeguarded.

But over the rest of the private sector it is necessary that new complications should not be introduced lightly without regard to the possibilities of discord in the exercise of managerial functions. Part of the responsibility for the failure to develop vigorous trade unionism in this country must be shared by the Government, which has preferred the easier and more popular path of regulating industrial relations by a process of litigation and adjudication rather than by free collective bargaining. This system has created a situation in which the interests of the two parties are regarded as essentially divergent and not common. It is not easy to make a change in these attitudes developed over the years, however desirable the change may be. The operation of the system of works committees has not hitherto disclosed any significant interest on the part of the rank and file of labour in the production functions of a factory. Without its intelligent interest, representation on management boards is likely only to degenerate into a perpetual wrangle. The reasons which prevented, for example, provision being made for representation of minority shareholders on company directorates would apply also to a situation in which labour provides the discordant factor.

The real danger is not in promotion of workers' participation as such through voluntary action wherever possible, but in forcing the pace through legislation. Here again, foreign experience has important lessons to teach us. Even though there is statutory provision in Germany for workers' participation, the trade unions act with the conviction that co-determination on the basis of equality should still leave the free enterprise system fully competitive. In France, the law compels the employer to consult workers' committees and to provide information asked for; but he is given authority to disregard advice. The Yugoslavian model, which has lately come into prominence in this country, approximates to the British system of joint consultation rather than to workers' participation. On the whole, both the voluntary and the statutory systems of consultation have recognised the limits within which participation of labour in management is possible

Where do you begin to spell prosperity?

We talk about Progress and Prosperity. Yet, how many of our countrymen could even read these words? Four out of five are illiterate. They must be educated, made to understand the country's problems, and so help to solve them.

Mass education needs more paper. Our Paper Industry is ready to meet this challenge. Thirty-two paper mills in India produce 158,000 tons of paper annually. The target for 1956 is 287,000 tons involving an

expenditure of Rs. 50 million. In our developing economy steel is essential. That is why the Tata Iron & Steel Company has launched an expansion programme which will raise its capacity.

Ingot Production		
1955 ...	1,050,000 tons	
1959 ...	2,000,000 tons	

Private enterprise serves the Nation

THE TATA IRON AND STEEL COMPANY LIMITED

an invitation to industrialists...

India is on the threshold of a period of tremendous industrial growth and expansion. Those who have faith and courage in the future and who are prepared to join the mighty adventure of rebuilding the nation will find much at Hannover - methods, materials and machines - that can help hasten her to prosperity.

No less than 4000 European and overseas manufacturers will show their latest technical advances and up-to-date production methods at the German Industries Fair 1956.

Groups exhibited: Mechanical Engineering, Electrical Engineering, Chemistry, Rubber, Precision Mechanics and Optics, Iron and Steel, Tools, Office Equipment, China, Ceramics, Glass, Jewellery, Silverware, Cutlery, Clocks and Watches.

Nearly 80% of German exports to India are produced by the groups participating in the Fair.

THE WEEK'S NOTES

AMRITSAR'S CALL FOR UNITY

THE AMRITSAR Congress session has, for all appearances, carried a stage further the move for the formation of bigger units. It was inevitable that the question of States reorganisation should have dominated the deliberations. In commending the formation of bilingual units as a means of "healing the wounds", the session was showing one of the possible ways out of the ugly situation into which the country had got itself by too much emphasis on the linguistic principle but it is not always possible to reverse the forces in operation by mere exhortation. Mr. Nehru aptly remarked that the wind of linguistic discord had been sown and the nation was reaping the whirlwind. It would be wrong, however, to interpret the excesses committed in Bombay and Orissa as a threat to Indian unity, though they were out of all proportion to the resentment caused by the award on Bombay city.

At Amritsar, Congress leaders who had come from all corners of India laid stress on the need to build up the country's unity. Not a single discordant note was struck, though there were individual assertions of the need to carry the logic of the linguistic principle to its conclusion if that is made the basis of reorganising the units. Beneath the basic unity of India are many factors which contribute to linguistic fanaticism, provincialism and even casteism. The Congress in its post-independence career has not only failed to counter any of these dividing forces but has neglected and even occasionally utilised them for the realisation of immediate party ends. Were the attitude of many of the leading Congressmen ultimately untainted by parochial and personal considerations, the response to the proposal for bigger States should have been spontaneous and much more enthusiastic than what it has been. But there would be no gain if there is enforced acceptance of the multilingual idea in any area; it is necessary to avoid driving the causes of tension below a surface of apparent unity as discord may erupt later on other pretexts.

The bilingual idea has travelled far since it was originally mooted, but it is a matter for regret that it has not made headway in precisely those areas where its acceptance is most urgent and desirable. Bombay will cease to be a problem if the Maharashtrians and Gujaratis can agree on a bigger State comprising all Marathi and Gujarati-speaking areas. In the Punjab the acceptance of bilingualism, under some formula to allay the fears of the Sikh community, is imperative if this strategic border State is not to be riven by differences, whether united or divided. That both the Akali and Maha Punjab conferences, which met at the same time as the Congress in Amritsar, have also laid emphasis on national unity and peaceful agitation seems to promise a peaceful acquiescence in Pandit Pant's declaration that there is no question of dividing the Punjab. In the South, there has been no positive rejection of the idea and there are hopes yet of a Dakshina Pradesh. Amritsar is reported to have changed the attitude of many a Congressman who, until the other day, swore by the linguistic principle and it is to be hoped that the change will not prove to be fleeting with a change of scene.

MALAYA GAINS FREEDOM ROAD

ONCE AGAIN Britain may claim to have guided a colonial country to freedom. The happy outcome of Tengku Abdul Rehman's talks in London have set Malaya on the final lap to complete independence and

membership of the Commonwealth. A Constitutional Commission is to be set up soon to draw up a constitution for the Federation. There is ample time for the Malayan leaders and the British Government to take the preliminary steps before Malaya can proclaim her sovereignty on August 31, 1957. The terms of the understanding between Britain and Malaya follow, to a large extent, the lines of the Indo-British agreement of 1947. Defence and foreign affairs are to be transferred to Malayan hands from the date of independence. A Malayan Minister will be in charge of internal security too.

These are unequivocal provisions which should satisfy even the fiercest Malayan nationalists, though Britain is to be permitted to maintain forces in the peninsula "for the fulfilment of Commonwealth and international obligations" for an interim period until the Malayan armed forces are built up. Once the internal guerilla war is brought to an end, in which Britain will give financial help if need be, the defence and mutual assistance pact should suffice and the stationing of any large British force, albeit at British expense, may cease to serve any useful purpose, particularly since Britain is to continue to finance certain capital costs of expansion of Malaya's forces. In the economic field, British help on the London money market for Malaya's borrowing needs is assured. Malaya is to continue as a member of the Sterling Area, thereby continuing to give it the stability which her dollar earnings have been giving.

The path has been cleared, but there still remain a few problems. If the Communists are satisfied that the Tengku has succeeded in securing control of internal security and lay down arms—as Chin Peng promised they would—the biggest immediate problem will be solved. But there will still remain the task of converting ex-guerillas to peaceful ways and thoughts. The nine Sultans of the States which compose the Malayan Federation will have to be satisfied that they will not be deprived of their rights and powers all of a sudden. The British Advisers to the Sultans should certainly be able to allay their fears and suspicions and persuade them to co-operate with the Tengku. The problem of citizenship will also have to be solved amicably and humanely if the type of situation created by the Ceylon Government by its narrow and shortsighted policy is to be avoided.

INDONESIA SEVERS DUTCH TIES

INDONESIA'S DECISION to sever her ties with the Netherlands had not been entirely unexpected. Ever since the recent talks between the Foreign Ministers of the two countries, first held at The Hague and later at Geneva, began to founder, the Dutch-Indonesian Union appeared to be in imminent danger of snapping. The recent discussions centred on two issues—the future of West Irian (Dutch New Guinea) and the future financial and economic relations. When the transfer of sovereignty was effected in 1949, Indonesian leaders agreed to the continuance of the *status quo* in West Irian because they did not want the whole negotiations to be jeopardised by disagreement on this one point. Subsequently, in 1952, the Dutch Government tried to forestall Indonesian claims by amending the Constitution to say that the Kingdom of the Netherlands consisted of "the territories of the Netherlands, Dutch New Guinea, Surinam and the Netherlands Antilles," though, as a matter of historical fact, West Irian was never specially mentioned and was always deemed to be included in Indonesia.

After this, all attempts of the surprised and angered Indonesians to get the Dutch to open discussions on the issue proved fruitless, though the 1949 agreement postulated that the political status of that territory was to be settled within one year of the transfer of sovereignty to Indonesia through negotiations. Whatever discussions took place proved of no avail since the Dutch intransigence continued. Even when the recent talks were going on, four Ministers, belonging to two of the parties to the coalition headed by Dr. Harahap, resigned as they were opposed to the continuance of talks with the Dutch. The pressure of parties at home and the pointlessness of continuing the negotiations compelled the Government on January 23 to break off the talks as a prelude to the abrogation of the Union now.

What of the future? It is unlikely that the present step will help Indonesia to bring into her fold West Irian more speedily. But it has not only helped to dramatise the breach between Indonesia and Holland, but also to give expression to the deep feelings of the Indonesian people. No decisions have been taken on the future financial and economic relations between the two countries, though the abrogation of the Union will add to Indonesia's determination to abolish the special protection accorded to Dutch investments totalling 2,400 million rupiahs and treat it on a par with other foreign investments. This should not mean any discouragement to foreign investment as the Indonesian Government has already recognized the need for foreign capital for the country's economic development and has assured investors of fair dealing. The only consequence will be that Dutch investors will lose their special privileges and Dutch manufacturers, perhaps, a good market. One is tempted to ask whether all this Dutch insistence on retaining West Irian has any economic or political advantage when it has meant so much illwill from the 80 million people of Indonesia, who might otherwise have been as friendly to them as Indians are to the British.

EAST-WEST TRADE

THE REPORT of the U.S. International Co-operation Administration submitted to Congress throws much-needed light on the course of East-West trade in the last few years. It is disclosed that trade between the free world and the Soviet bloc began to lag long before the West banned the export of strategic goods; it is in this perspective that we must view the Communist charge that it is these trade restrictions which are holding down trade. The East European nations have only taken minor advantage of the existence of a large number of items trading in which is subject to no control. When trade in certain commodities expands, others shrink leaving the overall position often unaffected. Even the revision of the list of banned items in 1954, when many commodities were taken off it, has had no significant effect on the quantum of trade.

It is clear that the main reason for the small amount of trade between the Communist bloc and the free world is not that the West refuses to export certain items of strategic importance. Even if the present restrictions are removed, total trade may not show much change, if the Soviet bloc countries merely alter the composition of their purchases. The real reason for the low level of East-West trade is to be found in the political outlook which still dominates the Communist world. Picturing the outside world as always on the lookout for chinks in their armour, the Soviet Union and her satellites have developed an economic system

which strives for an integration of trade within the bloc. Foreign trade for these nations is, therefore, mainly with other members of the bloc, with the outside world—including Western Europe, which until a few years ago had a vast trade with Eastern Europe—becoming a convenient market for surpluses and suppliers of essential goods.

From this orientation it is difficult all of a sudden to expand trade with the rest of world, though conscious efforts are now being made to develop commercial relations with many of the underdeveloped areas of the world. Perhaps this indicates that the Communist bloc's present needs from abroad mainly consist of raw materials and foodstuffs—it is now a net importer of food—and not of manufactured articles which the West can sell. Even if manufacturing industries in Communist countries have made great progress, there is no reason why trade in industrial products should not develop particularly when there is a great lag in the supply of consumer goods in the centrally planned Communist economies.

COMPANY ADMINISTRATION

THE FINANCE MINISTER sought the other day to give an answer to the question how the weapons in the armoury of the new Company Law would be used when it comes into force shortly. Addressing Registrars of Companies and officers of Regional Directorates, Mr. Deshmukh stated that the underlying logic of the numerous regulatory provisions in the new Act would be the economic integration between the so-called private and public sectors. The manner in which this integration is achieved would, he said, be the test of efficient and successful economic administration in any modern State. This was ambiguous language; though the officers entrusted with powers under the law have been given more discretionary authority than may be desirable, they cannot be expected to go beyond what is permissible statutorily, to pursue large objectives which are not defined in day-to-day policies. Mr. Deshmukh, therefore, qualified his remarks with these observations: "They should take the Act as it has been enacted and interpret its provisions in the light of such instructions as they may receive from time to time from the headquarters of the new Department and then enforce these provisions with understanding and wisdom."

"Positive helpfulness" in giving guidance on the implications of the law was the motto he set for the Company Law Administration and, in particular, Mr. Deshmukh emphasised the need to deal leniently with unwitting failure and inadvertent omissions arising from lack of understanding. The extent to which this is kept in mind will be known only during the actual implementation of the law, but since a punitive approach was noticeable even during the legislative process, it may become inseparable from the administrative process also. The danger of a bureaucracy is not that it lacks guidance from above especially in a democracy where the Minister in office has to avoid unpopularity, but that it becomes impervious to such influences unless the pressure from the top is continuous and strong enough to prevent it. Where the prevailing attitude is that the private sector is fair game for all, restraint, which is difficult enough even otherwise, becomes a rare virtue. Departments never feel satisfied either with the powers or the staff they have; they always seek more because they can blame their failures only on the lack of these. The establishment of consultative processes at all levels for representing the views of those affected by the powers may help to mitigate such excesses of authority.

A Window on the World

THE ECONOMICS OF SOCIALISM

By

ODYSSEUS

WHETHER OR NOT you agree with the ultimate conception of a Socialist society, whether or not you feel that its unimpeachable objectives of social and economic justice can be achieved more efficiently, and at less social and economic cost, under Free Enterprise (modified by liberal legislation), a study of the economic ideas that Mr. Hugh Gaitskell, the new leader of the British Labour Party, brings to Socialism suggests that he is a realist, abreast of the latest professional economic thought, aware of the difficulties that cannot be solved by clichés and incantations ("Soak the rich! The class war!" etc.) that are Socialism's ideological hangovers from the pre-World War I pioneer era.

If, as I have said before, you are determined to live with one hand tied behind your back, then Mr. Gaitskell's ideas are important as showing how to make the best of your self-imposed handicap.

Mr. Gaitskell stands broadly against further nationalisation—which is merely the exchange of one set of bosses for another and the conversion of risk-taking shareholders into recipients of fixed interest payments—and for progress towards an egalitarian society in which (as he would put it) everyone enjoys the same social rights and standard of living, or (as I would put it) in which the pace of economic progress is set by the least efficient industries and the slowest workers, everyone is kept as poor as everyone else, and anyone daring to show enterprise which could lift him out of the rut of the average is promptly knocked on the head.

Britain's welfare legislation in education, pensions, national insurance, national health service, and so on (for which the Labour Party can without question be given a substantial measure, though by no means all, of the credit) taken together with the growth of progressive taxation (income-tax, surtax, estate duty, profits tax) has contributed much to the re-distribution of income and the ironing out of extremes of wealth and of poverty in Britain. It is, however, significant that when listing these achievements with satisfaction and emphasising that the need for further progress in these policies is accepted by the Labour Party, Mr. Gaitskell nevertheless thinks it wise to add that "the case for extending free or subsidised services financed out of taxation is obviously less strong the more equal are personal incomes before taxation, and the more re-distribution is already being carried out." He is obviously looking ahead and protecting himself against the day when he will be Chancellor of the Exchequer once more.

WELFARE, TAXATION AND SAVING

Mr. Gaitskell reports that there is much discussion in Socialist circles as to how far social welfare expenditure can (or, as I would say, should) be carried and what the priorities should be between different social services. It seems safe to infer that when Mr. Gaitskell secures office again, he will give high priority to education, since he says that even now differences in education play a large part in maintaining social

and economic differences, because it is still possible for better off parents to buy for their children, by sending them to fee-charging schools, an education which can be "intellectually and usually is socially more valuable than the free system offered by the state." Mr. Gaitskell is likely to pour more money into the state schools in order to provide smaller classes and better teaching. What he does not mention is that as state competition with private schools becomes keener, the costs of the private schools must go up, and, as taxation rises, fewer parents will be able to afford them, so that the next step would be for the state to take over all the innumerable private schools that still flourish in Britain. This would mean a gigantic increase in costs to the taxpayers, running into hundreds of millions. Apart from the danger of the propagation of views held to be "safe" by the state authorities, and apart from the danger of sterility in intellectual advance inherent in any single control of all schools and colleges, where is the money to come from? Which brings us to taxation.

British Socialists have become extremely conscious of the problems involved in high taxation and even if they take what seems a stubbornly rosy view of them, it is at least good to know that they are facing them and not thinking just in terms of bank credits and the note printing press. Mr. Gaitskell argues that it is generally agreed that high direct taxation "has not, save in a limited number of cases, caused people to do less work." Since British production continues to rise, this is doubtless strictly true, although it does not, of course, take into account the evil inflationary effects of high taxation, nor the possibility that production would rise even faster if taxation were less burdensome. He also says that the volume of savings is hardly affected by the reduction in the net yield from taxing the payment of interest. This is doubtless true of insurance companies and many commercial enterprises, but I wonder how far it applies to individual savers who are widely frightened of currency inflation—at any rate in Europe where they have experienced its terrible possibilities.

Mr. Gaitskell asserts that difficulties over saving arise more from the refusal of richer tax payers to meet higher taxes by cutting down their standard of living and from their determination to maintain consumption by saving less or by spending their capital. These difficulties, "though by no means to be underestimated", are less serious, he says, because so much more saving is done nowadays by companies whose "directors are inclined to place the development of the company above everything else, including the immediate interests of shareholders"—a tribute both to the spirit in which Free Enterprise is conducted and to Mr. Gaitskell's freedom from average Socialist prejudices and to his grip on the realities around him.

As to investment, while Mr. Gaitskell admits that the fall in the rate of return caused by high taxation may affect willingness to take risks, here again, he thinks that this is modified when company directors act for their companies.

On policy, Mr. Gaitskell lays it down that "the modern Socialist" would say that even if high taxation

can have harmful effects, the right policy, instead of reducing taxation generally "at the expense of the social services" (surely a qualification that begs the question: a reduction in taxation need not be at the expense of the social services) is to counter these harmful effects by discriminating in favour of undistributed as compared with distributed profits and actual purchase of new machinery instead of leaving the money idle (so as to increase investment). He would be attracted by Hugh Dalton's earlier idea of transferring ownership of securities to the state through death duties, and also by some of his ideas on inheritance taxation.

HAROLD LASKI THROWN OVERBOARD

But while favouring more efficient taxation of inheritance, plus state ownership (without, Mr. Gaitskell is careful to add, necessarily taking actual control) as a sound policy for equality, the modern Socialist is as much concerned with the danger of dissaving or capital consumption which obstructs the path to greater equality. He therefore approves discriminatory taxes which favour those who save and penalise those who do not.

Again and again Mr. Gaitskell insists that economic or social policy must be compatible with parliamentary democracy, which requires a basis of consent to legislation and a willingness to compromise: the minority has as much right to life and the pursuit of happiness as the majority. Mr. Gaitskell condemns the revolutionary yearnings of the late Harold Laski, to whose Marxism he attributes Laski's greater influence outside rather than inside Britain, "particularly in India". The students who came to him from lands where full democracy did not then exist lapped up his Marxism, rejected by those who enjoyed parliamentary rights, privileges, and duties. Mr. Gaitskell reproves Laski for blurring the distinction between democracy

and dictatorship, ignoring the identical features of Fascism and Communism, and for emphasising the differences between Capitalist and Socialist states "whatever the nature of their respective political systems".

Mr. Gaitskell draws attention to the late Evan Durbin's book (recently re-published) "The Politics of Democratic Socialism", which argues that it is impossible to achieve true Socialism without democracy. Durbin cut through what Mr. Gaitskell calls "the veil of sentimentality and ignorance" which caused many Socialists to combine protests against Nazi atrocities with silence about Soviet misrule. In his preface to Durbin's book, Mr. Gaitskell reveals his own ideals. What is fundamental, he says, is "social justice free from class hatred," and devoted equally to democracy and personal freedom, to tolerance and the need for compromise. Socialists should be for the rational and the practical, "suspicious of large general ideas which on examination turn out to have no precise content." Socialists should want results. And modern economics and statistics help to get those results. "Above all, while accepting the ultimate emotional basis of moral valuation, they" (i.e. those who, like Mr. Gaitskell, shared Durbin's views) "had great faith in the power of reason, both to find answers to social problems and to persuade men to see the light. They were for the pursuit of truth to the bitter end, through the patient and unswerving application of logical thought. They wanted no barriers of prejudice to obstruct the free working of the mind or to blunt the sharp edge of intellectual integrity."

This is well said. It is, I hope, the basis on which this column, and indeed this journal, is conducted.

[This is the final article in a set of five on "The Future of British Socialism". Previous articles appeared on January 20 and 27, and February 3 and 10.—Ed.]

Economic Report from the U. S.

TRADE WITH THE SOVIET BLOC

(By Guy Sims Fitch)

WASHINGTON, Feb. 14.—A Report issued by the United States Government this week should explode once and for all one of the carefully nurtured myths of the postwar period: that free nations can find greatly expanded opportunities for trade behind the communist iron curtain. It was in August 1954 that the United States, along with other free nations that co-operate in controlling their export of war-supporting goods, significantly relaxed their restrictions on trade with the Soviet bloc. They reduced by nearly a third the number of strategic items embargoed for shipment to the Soviet Union and its best European satellites.

The report issued on Monday by the U.S. International Co-operation Administration (I.C.A.) affords the first real look at the results of that relaxation of controls. And it is not a pleasing picture. For instead of the expanded trade so glibly promised by communist leaders, one finds only a negligible rise, accompanied by a meaningful shift in Red buying practices. Covering the period through June 1955, the report shows that the free nations' exports to the communist bloc, including Red China, increased from \$89.6 million in the first half of 1954 to \$901.3 million in the first half of 1955—a gain of little more than one per cent. At the same time, free nations' imports from the communist bloc rose from \$803.9 million to \$1,088.9 million—a gain of 35 per cent.

These figures point to one obvious conclusion: the virtue of sincerity in seeking greater international commerce ties with the nations and traders of the free world. But the figures themselves do not tell the whole story. While the Soviet bloc increased its over-all imports from the free nations hardly at all, it stepped up sharply its purchases of metals and heavy machinery, notably such formerly embargoed items as copper wire and equipment for making petroleum and chemical products. Its purchases of such peaceful goods as textiles, clothing, appliances, and machinery for consumer industries—which never had been banned by the free nations—actually declined. This again has raised some persistent questions about the communists' motives and capacities in their commercial relations with the rest of the world. The sad fact is that their drive for self-sufficiency, and its related effort to use international trade as a political rather than an economic instrument, have seriously curtailed the flow of goods between communist and non-communist lands.

As the I.C.A. report details, communist trade with the rest of the world has been showing a steady downward trend. In 1938, countries now in the Sino-Soviet bloc accounted for about 7.5 per cent of world trade. In 1948, after the communists had extended their control over bloc nations but before free-world security controls were in effect, this trade was down to 3.5 per cent. And in the year ended last June 30, when world trade reached a record high of \$162,900 million, the Soviet Union, Eastern Europe and Red China together accounted for only \$3,900 million or 2.4 per cent of the total. This undoubtedly is the result of deliberate policy, inasmuch as the entire trade of the communist

bloc is subject to centralized State direction. Under such a system, controls are complete and automatic, and far easier to achieve than in free countries.

The free nations, which have been enjoying mutually advantageous trade relations to the benefit of their economic conditions, have a wide variety of peaceful goods available for sale to communist countries able and willing to buy them. In short supply in communist lands, for instance, are foodstuffs and many consumer items that would help raise existing living standards. But it apparently will take a more sincere interest in international trade than the communist rulers have shown so far before the people of these lands will be able to benefit from this type of peaceful commerce.

AGRICULTURE

Sugarcane Stem-Borer: Research has shown that the parasite, *Trichogramma*, when liberated in a sugarcane field, considerably reduces the population of the stem-borer of sugarcane. The yield of sugarcane also increases as a result. Control of the sugarcane stem-borer through this method was so encouraging in the Deccan Canals tract in Bombay State that a sugar factory in Ahmednagar district constructed its own laboratory for the multiplication of the parasites for releasing them in the sugarcane fields belonging to the factory.

New Types of Cardamom: Cardamom growers have now better chances of getting higher yields by growing new types of cardamom, which have recently been evolved. The new types are the result of a scheme on cardamom research sponsored by the Indian Council of Agricultural Research. The new types, selected and tried at the Cardamom Research Station, Singempatti, are giving two to five times the yield of the ordinary varieties that farmers grow. Among these, two varieties, S. 71 and S. 81, have shown the best results. S. 81 is suitable for growing in heavy rainfall areas, while S. 71 is good for low rainfall regions.

'Damping Off' in Tobacco: Damping off is a disease that is commonly found in all tobacco growing areas. Seedlings are found to collapse and wither away. Generally, a constriction of the stem of the seedling above the soil surface is seen. Sometimes, the attack is so rapid that obviously healthy seedlings are scorched in a few hours. The disease can be controlled by spraying 2-2-50 Bordeaux mixture, or 'Perenox' at four ounces in ten gallons of water. Spraying should commence from the time seedlings develop the first pair of leaves. It is also good to spray the nursery immediately after the heavy rains. The first spraying should be done three weeks after sowing or slightly earlier if there is any sign of the disease. The second and third sprayings should be done at weekly intervals. If the rains are continuous and the weather is cloudy, the interval should be five days. Further spraying will be needed only if the weather is wet and cloudy for days together.

INDUSTRY

Draft Standard for Reinforced Concrete Poles: The Indian Standards Institution has circulated for eliciting comments a draft Indian standard specification for reinforced concrete poles for overhead power and telecommunication lines. The draft specification deals with reinforced concrete poles suitable for use in overhead power and telecommunication lines, and does not cover prestressed concrete poles, which would be covered in a separate Indian standard. The draft classifies the poles into 12 classes with ultimate transverse load ranging from 400 lbs. to 6,500 lbs. and the maximum overall length varying from 30 ft. to 60 ft. The requirements regarding material, design, manufacture and strength test have been included.

Indian Electricity Output: Power production in India in October, 1955, recorded an increase of 1.7 million kilowatt hours over that of September. During the month, 716 electricity undertakings produced 719.3 million kWh. of power, of which 591.9 million kWh. were sold to ultimate consumers. The new additions were four diesel generating units at Baithangal in Bombay, Sagwara in Rajasthan, Armbag in West Bengal and Jalna in Hyderabad and five purchasing

undertakings at Matiari, Dainhat and Chakdah in West Bengal and Gooty and Rayadurg in Andhra. The figures of output and sale, respectively, for October, 1954, are 624.3 million kWh. and 511.6 million kWh. and for October, 1939, 216.4 million kWh. and 180 million kWh.

Increased Output of Coal in India: The output of coal in India increased to 3,387,664 tons in December, 1955, from 3,096,644 tons in November, 1955, according to official statistics released by the Chief Inspector of Mines in India. Despatches of coal amounted to 2,782,267 tons in December, 1955, as against 2,770,609 tons in the preceding month. Coal stocks at pitheads amounted to 3,605,870 tons at the close of the month. Coke plants at collieries and elsewhere produced 355,450 tons of hard, soft and other kinds of coke during the month and despatched 170,684 tons.

Soldering of Aluminium at Low Temperature: A chemical works in the Netherlands makes a new joining alloy in about 35-gram (525-grain) rods with a melting point of 225°C, for soldering aluminium and aluminium alloys and these, if necessary, to copper and brass. On account of its specific composition this solder, which contains no lead, tin or bismuth, is corrosion-resistant and has good heating mechanical properties. The soldering bolt used as a source of heating must, in view of the great abstraction of heat, be heavier than that normally used. It should be metallized for this purpose. The soldering bolt should preferably be provided with a flame screen to prevent contact flame and flux. This soldering method is suitable for sheet metal in thicknesses of up to 1.5 mm. Soldering can take place in a horizontal, a vertical of a sloping position. The strength of the joints is greater than that of tin-solder joints.

Canada's Iron Ore Output: The output of Canada's iron ore industry is expected to reach nearly 20 million tons this year. This compares with actual 1955 deliveries from the mines of 16,445,411 tons, which more than doubled the 1954 total of 7,361,598 tons. Increasing demands from the steel making plants of the United States and Europe, as well as from the domestic steel industry, were responsible for this expansion. Official Government figures indicate that the tonnage of iron ore for export in 1955 went up to 14,985,382 tons from 6,485,000, while shipments to Canadian consumers climbed to 1,460,029 tons from 876,598.

TRADE

India's Foreign Trade in 1955: The adverse trade balance of India rose to Rs. 360,000,000 during 1955 from Rs. 240,000,00 in the previous year, according to official figures. The total value of exports in the calendar year 1955 was about Rs. 5,950,000,000 which was higher by about Rs. 320,000,00 than that in 1954. There was a simultaneous rise in imports which stood at Rs. 6,310,000,000 compared with Rs. 5,870,000,000, in 1954. All the important commodities like jute manufactures, oil and oilseeds, raw cotton and lac contributed to the increase in exports. Despite the recent decline in prices, tea was also able to hold ground. Among the important items which recorded a decline are tanned hides and skins. The increasing tempo of development expenditure in the first Plan is reflected in the higher imports of machinery and will work valued at Rs. 980,600,000 in 1955 compared with Rs. 800,000,000 in 1954.

Indian Cotton Yarn Export: The last date of shipment of cotton yarn has been extended up to June 30,

1956, according to a trade notice issued by the Joint Chief Controller of Imports and Exports, Calcutta. The stipulation that the cotton growers' co-operative marketing or sale societies should apply for export quotas of raw cotton, grown in the State in which it is situated has been waived. The societies that have been allotted export quotas in terms of the above are now free to export the permissible varieties of cotton wherever grown.

German Trade with Egypt: Egypt has agreed to a multilateral payments systems as part of the German-Egyptian trade pact concluded in Cairo. Britain, Belgium and the Netherlands are to be invited to join the Cairo Club, which would be a second regional multilateral arrangements outside the European Payments Union. The first was the Hague Club, arranged among Britain, Brazil, Germany, Belgium and the Netherlands last year. Germany has agreed to consolidate Egypt's trade debt, amounting to \$16 million for a period of five years. In addition, a small short-term loan will be granted in limited convertible marks. Quotas for Egyptian agricultural products are to be raised. German imports of Egyptian cotton are expected to increase as a result of the multilateral trade proposals.

FINANCE

Low-Income Group Housing Grants: The Union Government had sanctioned Rs. 21.08 crores up to December, 1955, as loans to various State Governments under the Low-Income Group Housing Scheme. Of this amount, Rs. 6.07 crores have been disbursed. During December last year, an additional loan allocation of Rs. 33 lakhs was made to the Madras Government, and a sum of Rs. 84 lakhs was disbursed to four State Governments—Rs. 50 lakhs to Madhya Pradesh, Rs. 25 lakhs to PEPSU, Rs. 5 lakhs to UP and Rs. 4 lakhs to Madras.

Holland's Position in the European Payments Union: In the year 1955 the Netherlands had a surplus of \$64,851,000 in the exchange of payments with the member countries of the European Payments Union, against which \$40,175,000 was received in gold or dollars, while a credit of \$24,676,000 was granted to the EPU. An amount of \$12,264,000 was received under the consolidation agreements concluded with Britain, France, Norway and Iceland. In addition, an amount of \$22,038,000 was received as the Netherlands share in an extra partial redemption of France's debt to the EPU. As a result of all these movements, the Netherlands claim on the EPU decreased from \$181,166,000 at the end of 1954 to \$171,540,000 at the end of 1955.

Lower UK Bank Advances: The monthly statement of the London clearing banks for January, issued recently, shows that in the six months following Mr. Butler's request for a significant cut in bank lending, loan totals dropped by £3.9 million to £1,826 million. A substantial part of this movement, however, reflected the contraction in lending to nationalised industries. It is believed that, in the case of other borrowers, there has been a fall in overdrafts of the order of 7 or 8 per cent so that the target the bankers set themselves to meet the Chancellor's request—approximate cut back of 10 per cent within six months—has not been realised.

Export-Import Bank Loan to Brazil: The Export-Import Bank has decided to grant a \$35 million loan for a general extension of the biggest steel mills in South America, at Volta Redonda, 60 miles from Rio de Janeiro on the Parahyba River. The bank loan will increase annual production at the mill from 650,000 ingot tons to 1 million ingot tons. Two previous loans of \$45 million and \$25 million were made by the bank

in 1941 and 1950. The US has contributed \$2,100 million to Brazil through loans, investments and development capital in the last 15 years.

France's \$55 Million EPU Deficit: France incurred a deficit of \$55 million with the European Payments Union in January. The January deficit more than wipes out the total of the 12 successive monthly surpluses accumulated between October 1954 and September 1955. It follows a net deficit of \$23 million in the last quarter of 1955.

GENERAL

Buildings for Welfare Project Centres: Grants totalling up to Rs. 1,75,000 have been sanctioned by the Central Social Welfare Board during the last two months for the construction of buildings in 60 welfare project centres in 7 States. Each centre building will serve a group of 5 to 6 villages and will be in charge of a gram sevika. The maternity centre attached to the centre is looked after by a trained mid-wife or a dai. For the construction of each of the centre buildings the Central Board makes a cash grant of approximately Rs. 2,500, covering about half of the cost of construction, and the balance is contributed by the villagers, who benefit from the activities, in the form of cash or donation of land.

Report on Joint Stock Companies: According to the Monthly Blue Book on Joint Stock Companies in India, issued by the Department of Company Law Administration, during the month of November, 1955, the number of new registrations in all the States of India, excluding Jammu and Kashmir, totalled 102 companies with a total authorised capital of Rs. 16.24 lakhs. Of these new companies, 22 were public and 60 private companies having a total authorised capital of Rs. 12.40 lakhs and Rs. 3.84 lakhs, respectively. The cumulative total of the newly formed companies at the end of November, 1955, in the current fiscal year was 892, having a total authorised capital of Rs. 96.73 lakhs. The number of new registrations exceeds the registrations during the corresponding period of the preceding fiscal year by 144.

India's Technical Assistance to Colombo Plan Countries: India occupies third place amongst the Colombo Plan countries in respect of the number of people who have been provided facilities for training in various subjects. Up to the end of June, 1955, India had granted 340 training awards in addition to supplying 14 experts to various countries of the Colombo Plan region. The subjects, in which training was given, included statistics, civil and mechanical engineering, medicine, small industries, irrigation, mining, communication, air survey and irrigation engineering. The trainees came from Malaya, Philippines, Burma, Ceylon, Thailand, Nepal, Indonesia, Viet-Nam and Pakistan.

Amendments to Estate Duty Rules: The Central Board of Revenue has made certain amendments in the Estate Duty Rules, 1953. These amendments consist of the addition of new rules 31A, 35, 36 and 37, a proviso to rule 14(6) and certain other amendments which are either of a clarificatory nature or have been made for administrative convenience. Rule 31A requires policies taken out or assigned to the President of India for payment of Estate Duty to be lodged with the Controller of Estate Duty within whose jurisdiction the assured resides. This rule also requires that all former deeds of assignment or re-assignment in respect of policies assigned to the President of India for payment of estate duty shall be surrendered to the Controller. Rules 35 to 37 require information to be furnished in respect of certain kinds of property belonging to the deceased.

NEWS IN BRIEF

INDIAN

On the invitation of the FAO, Mr. C. R. Ranganathan, Inspector-General of Forests, and Mr. S. K. Seth, Central Silviculturist, Forest Research Institute, Dehra Dun, have been deputed by the Government of India to attend the first session of the Teak Sub-Commission of the Asia-Pacific Forestry Commission being held at Bangkok from February 9 to 18, 1956.

It has been decided that in future all insurers carrying on life insurance in India will offer uniform rates and policy conditions. The new rates and policy conditions would be applicable to all policies where the risk commenced to run on or after January 20, 1956.

The Government of India has appointed a 15-member Committee, with the Union Minister for Natural Resources as Chairman, to advise the Government on the working of Vigyan Mandir Scheme.

29,600 tons of wheat will be unloaded at the port of Bombay in the third and fourth weeks of February, it is officially stated. Of this quantity, 9,600 tons are being imported from the USA and the remaining from the USSR.

About 4,700 passenger coaches are expected to be produced by the end of the first Five-Year Plan period. This will exceed the Plan target by 320. The bulk of the coaches are being produced in Indian Railway workshops and the Hindustan Aircraft Factory.

Production of bicycles in India rose to 4,80,000 in 1955 from 3,72,365, in 1954.

India received foreign aid to the tune of Rs. 306.7 crores between March, 1951, and January, 1956. Out of this, Rs. 144.6 crores were utilised during the first four years of the first Five-Year Plan. Another Rs. 50 crores are expected to be spent during the current year; the balance to be used during the second Plan period.

The Government of India has spent Rs. 2,07,217 so far on research scholarships in humanities under the first Five-Year Plan. The total allocation for the scheme is Rs. 8,60,000.

Production of automobiles in India has increased by over 50 per cent. 22,528 cars and trucks were manufactured in 1955 as against 14,462 in 1954.

Rs. 200 crores have been allocated for Community Development and National Extension Service Programme in the second Five-Year Plan.

About 17 million acres will have been irrigated through major and minor irrigation schemes by the end of the first Plan period.

India has dropped out of the current fourth-round discussions between members of the General Agreement on Tariffs and Trade (GATT) as she has at present no items on which she is ready to negotiate tariff reductions.

Col. Lyndall F. Urwick, well known British management consultant, is on a six-week visit to India to advise the Indian Government on the future training of India's industrial managers. The arrangements have been made under the Technical Co-operation Scheme of the Colombo Plan.

FOREIGN

The Syrian Government is to reduce imports to improve the country's foreign trade balance. Industrialisation will be stepped up to replace the import of as many essential foreign goods as possible by home production.

The production of the Netherlands coal mines in 1955 was 11,894,562 tons. The production, which had exceeded 12 million tons in 1950, for the first time fell below this volume.

The Netherlands production of steel in 1955 amounted to 974,000 tons. In comparison with 1954, with a production of 929,000 tons, this constituted an increase of 4.8 per cent.

The United States Atomic Energy Commission is to provide private industry with data about Government research into harnessing the hydrogen bomb for peaceful uses.

A group of experts of the World Bank is to visit Austria this month to discuss the possibility of granting another loan for the development of the country's water power stations. The World Bank is reported to be willing to grant a loan of about £14 million.

The Jordan Government has decided to start talks with the British Government in April with a view to relaxing restrictions on currency now imposed on foreign visitors to Jordan.

A newsprint industry is to be set up in East Pakistan to facilitate the growth of the Press in the country.

Pakistan has signed a trade agreement with Poland. The agreement has been reached in pursuance of Pakistan's policy to revive trade with Communist countries.

Nationalisation of Tunisia's two privately owned railway companies has been ordered from February 15. A decree issued by the Bey of Tunis said financial settlement should be completed within six months.

It is learned that a trade and payments agreement will be signed shortly between Egypt and West Germany. Egypt will import mainly heavy machinery, chemicals and pharmaceuticals, while her exports will comprise a wide variety of products, including agricultural produce.

The first stage of Pakistan International Airlines' £400,000 programme to make Karachi one of the major aircraft engine overhaul bases in the East is near completion.

West Germany had a surplus of \$52.4 million with the EPU in January 1956, compared with a surplus of \$49.9 million in December, 1955.

Mr. J. G. Beevor, Managing Director of the Commonwealth Development Finance Company, Limited, has been appointed to the staff of the World Bank in order to assist the management of the Bank in preparatory work on the organisation of the International Finance Corporation.

FROM WEALTH TO CAPITAL CO-EFFICIENTS—IV

By
COLIN CLARK

[This is the last of a series of four exclusive articles on Capital Coefficients written for "The Eastern Economist" by Mr Colin Clark, Director, Agricultural Economics Research Institute, Oxford University. Previous articles appeared in the issues dated January 20 and 27, and February 10, 1956.—Ed.]

WE have decided to treat houses as capital, and of the total capital stock of two, three or four years' national product, it is interesting to see how much is represented by them. In Britain, the United States, the capital stock in the form of houses represents a little over 0.8 years' national income. At first sight this figure may appear improbably low. But it may be taken as a general rule that a man building a new house, in any western country, is not likely to spend more than two years' income on it; and, after all, we do not all live in new houses. Most of us live in old houses, considerably depreciated.

The depreciated stock of capital in the form of houses, expressed as a ratio to national income, appears to be falling in all western countries. This is as true in the United States, where there is a free market, as in Britain, where rents are regulated. In the 19th century, the ratio was generally higher. In fact, the falling demand for housing relative to national income has been one of the principal factors bringing down the capital coefficient. It was fashionable in those days, much more than it is now, for successful men to make a display by building themselves large houses. In any case, building costs were much lower then, relative to the price of other goods and services, than they are now; and also domestic labour to run them and fuel to keep them warm, were also relatively cheaper. People then used to make the display with their houses which they now make with their motor-cars.

Modern India, in this respect, may bear a considerable resemblance to 19th century Europe, in so far as the houses of the wealthy are concerned. Their value, in relation to the national income, may tend to fall in the future. But this factor is almost certain to be offset by the demand of the great majority of Indians for better housing than they have now. For poor families, rent (or imputed rent in the case of an owner-occupied dwelling) in India appears to represent only about 5 per cent of income, perhaps even less in the case of rural workers; but even this low expenditure is met with difficulty, when some 75 per cent, of the whole income has to be spent on food. So far as the outsider can judge, a great many Indians seem to live in cheaply constructed dwellings, where the rate of deterioration is very high, and where the ratio of gross rent (which must include a correspondingly high provision for depreciation and maintenance) to capital value may well be as high as 20 per cent. This means that the Indian who is occupying a dwelling, for the rent of which he pays 5 per cent of his income, is using a capital stock which only amounts to 25 per cent of his years' income. Some fraction as low as this probably represents the order of magnitude of India's capital stock in the form of houses, expressed in relation to a year's national product. Even if this ratio never rises as high as the figure of 0.8 found in Britain and the United States, it is almost certain to rise very considerably above the figure of 0.25 now prevailing.

It is not clear from Dr. Prebisch's figures whether or not he has included housing in his calculations of the capital coefficient for Latin America. If he has not, this would explain the low values which he obtains. The figure of 2.0 obtained for Russia can also be explained in terms of the very low expenditure upon housing there.

For measuring Indian national product and net investment, it is convenient to use the unit popularised by the National Income Committee, the 'abja' of a hundred crores, or a thousand million rupees. The fullest study of Indian investment so far appears to have been that submitted by Messrs. Mukherjee and Ghosh to the International Statistical Institute when it met in Delhi in 1951. They found that India had a gross capital formation of 10.5 and a net capital formation of 5.4 abja in 1949-50 which represents a net investment of 6 per cent of the net national product of that year. This is distinctly above the estimate of the Indian Institute of Public Opinion, which puts net capital formation in 1949-50 at 4 per cent of national product, corresponding to 3.6 abja. Even this represents a figure considerably higher than that estimated by Professor Thomas, (admittedly on less adequate data) for 1925-38, for which period he estimates net investment (revalued to 1949-50 prices) at only a little over 2 abja per annum. The Indian Institute of Public Opinion estimates that the volume of real net investment again began to increase rapidly in 1951-52, and is now twice what it was in 1949-50, now representing 7 per cent of the (increased) net national product.

Mr. K. N. Raj, whose paper to the World Population Conference in 1954 on India's economic development and capital requirements was very well received, thought that a rate of net investment of 7 per cent of net national product was the highest which could be aimed at at present, but he hoped to see the ratio rise to 11 per cent by 1960 and 20 per cent by 1967. He estimated net investment in 1950-51 at 4.5 abja, about half way between the estimates of the Indian Institute of Public Opinion, and of Messrs. Mukherjee and Ghosh. By 1960 he thought that net investment would be (in money of present day purchasing power) 13 abja per annum; but then went on to add the warning that at least half of this would probably be needed for "economic and social overheads", meaning presumably transport, public utilities, governmental services, housing and the like, and would not be directly available for industrial and commercial investment.

There is, unfortunately, a frequent tendency among planners to overlook these expensive but necessary overheads. One does not wish to make fun of the Bombay Plan of 1945, because it was a courageous pioneering effort, and also one of the few "plans" in the world to be drawn up entirely by business men. Its proposal to double real national product in fifteen years was over-optimistic; and it went astray largely because it proposed to devote all available resources to further

investment in manufacturing industry forgetting the costly additional investment in transport and public utilities which was going to be required; even if Indians could be persuaded, as their country became wealthier, not to demand any further investment in housing.

Between 1950-51 and 1953-54, according to the Indian Institute of Public Opinion, real national product grew by as much as 17 per cent, a very satisfactory rate of growth indeed. By a crude comparison between the increase of national product and aggregate net investment over this period, some people have reached the optimistic conclusion that India's marginal capital coefficient is as low as 1.5, i.e., that a net investment of 1.5 abja will increase real national product by 1 abja for each subsequent year. This, however, seems to be proving a little too much. Nearly half of the increase in real product in the last three years has consisted of an increase in agricultural product, which was partly (but by no means wholly) explainable in terms of weather conditions. That real national product should continue to increase by 3 or 4 abja per annum (1953-54 national product was 106 abja) is quite a feasible objective; but we may predicate a marginal capital coefficient of 2 or more, even if little is spent on housing, i.e., that it will require a net investment of at least 7 abja per annum to keep at this rate of growth of national product.

There is, however, one final consideration, which may in the end allow us to reckon for India a marginal capital coefficient considerably lower than that deduced from the experience of other countries. The national total of net capital investment each year will include a small component for net addition to stock in trade and working capital. Of the remainder about two-thirds will represent buildings and structures of various kinds, and one-third equipment. Stock in trade

costs much the same in India as anywhere else, and equipment much of which has to be imported, with transport and installation costs, a little more. But in respect of the main item, namely, building (the same consideration perhaps does not apply to engineering structure), you get far more real capital for your money in India than you do elsewhere. In 1947, the cost of constructing the best western style dwellings in India was stated at only 5-6 rupees per sq. foot (it is true that costs in India have risen since that date, but so they have in other countries). This means that the purchasing power of the rupee over building as compared with its purchasing power over goods in general, is no less than 'five times' as high in India as it is in the United States, three times as high as it is in present day Britain, or twice as high as it was in 19th century Britain. The reason for this paradox is that the operations of the building craftsman are much the same in all countries and times, and although the American bricklayer, with his mechanical hoist and other equipment, may work faster than the Indian bricklayer, his relative superiority in productivity is certainly very much less marked than is that of the American manufacturing operative over the Indian.

Even if we assume that these relative advantages apply much less in the construction of commercial buildings and of engineering structures, nevertheless the high purchasing power of the rupee in this field is so striking, and building represents such an important element in the total of national net investment, that it does seem that we can now safely conclude that the marginal capital coefficient to which Indian planners should work can safely be estimated at any rate at well below the figure of 4 prevailing in 19th century Britain. To put the figure at 2 is probably too low, but it may well be as low as 2½.

INDIA'S ADMINISTRATIVE PROBLEM—II —THE PUBLIC SECTOR

By Sardar K. M. PANIKKAR

GOVERNMENT undertakings fall into three patterns. There are some undertakings which are administered either by the Central Government or by Provinces. The ordnance factories and some of the irrigation schemes, etc., are instances of this pattern. A second pattern is that of government companies, the share capital of which is held by the President of India who nominates the Board of Directors responsible for the administration of the concern. The Hindustan Shipyard is an instance. The third pattern is that of the so-called autonomous corporations; for example, the Damodar Valley Corporation. Each of these patterns raises different problems. Though the object of administering an undertaking through a company or a corporation is to enable the procedure and methods of private enterprise to be followed to a large extent and to reduce so far as possible government interference, the administrative problems created by the extension of government activities to the economic field exist in their cases also. So long as the funds involved belong to the government, the responsibility to Parliament cannot be overlooked or ignored on the ground that they are being managed on a commercial pattern. As long as the Minister in charge is ultimately responsible to Parliament for the investment, his responsibility cannot be shirked and this would mean an overall supervision and control by the central administrative machinery. By merely constituting these operating units into companies and thereby bringing them under the operation of the Company Law, it is obvious that the authority of Parliament cannot be ousted, so long as the company is run by government officials and the investment is wholly that of the government. Any attempt to do so would be

nothing less than a fraud on the constitution. To expend vast sums of public money without the normal controls to safeguard public interests would naturally be resisted by Parliament which is the guardian of public funds. Whether departmentally administered or by companies or corporations, so long as the funds are provided by the authority of Parliament, Parliament's jurisdiction cannot be ousted.

Considering that there are over a hundred units, both provincial and central, which are financed by public funds and managed either directly or under the authority of government, the problems of administration arising out of this development may well be considered one of the most important of all issues facing modern India. The emphasis may, in the first place, be said to have shifted from the administration of land to the administration of industries, though intrinsically the importance of the former could not be said to have decreased. The emergence of industrial administration as one of the major functions of government faces us with two sets of problems, each important in itself but jointly constituting the most important issues for which we have to find a solution.

One set of problems is concerned with the recruitment, training and conditions of service of the personnel in running these vast concerns, at the managerial and technical levels. The training, ability and the skills required for managing a steel factory are not the same as those required for running the general administration. In fact, the successful running of any concern requires a different approach, a different kind

of initiative, and a specialised kind of executive ability. The normal administrator has only to be wise, humane, cautious, honest and function with a general eye to the rules and regulations which have been laid down, tested and proved by the experience of generations. The executive of a large concern has to develop other abilities, the ability to manage and look after men, to solve the day-to-day problems that arise with the least possible delay, to be on the alert about new techniques, to keep one up-to-date about changes in the industrial world in fact is a totally different kind of administration and requires a different type of personnel. The old Macaulayan idea, borrowed from the Chinese mandarin that the best administrator is a man of high intelligence with a liberal education, who is capable of taking sound decisions may be sound enough for general administration, where a margin of efficiency does determine competitive results. But in industrial undertakings the position is different. There, it is that little margin that makes all the difference. The question of the recruitment of the industrial administrators and technical personnel has therefore assumed an importance which we can no longer overlook.

One proposal which has found wide acceptance is what has been described as an Economic Service, a cadre specially recruited and trained for providing the managerial skills in our industrial concerns. There is something to be said in favour of such a service for it is likely to attract energetic young men with ambition, and they may, with adequate training and apprenticeship, provide a reservoir of personnel for these great undertakings. But such a service has obvious weaknesses some of which I should like to emphasise here. The very conception of 'service' involves principles of seniority, promotion, time scale of pay, etc., which in my opinion are unsuited to the management of industrial concerns. Efficiency and talent must find quick promotion and early responsibility in an industrial concern. Equally, the less efficient has to be eliminated without considerations commonly known as security of tenure. This strange doctrine of security of tenure, invented by the services in their own interests and elevated to the rank of a dogma, works mainly as a protection for the less efficient; and unfortunately it has come to be of the essence of the conception of an organised service. The creation of an economic service, which, let us be clear, will gradually imbibed the traditions and methods of administrative services will only create a new vested interest, an interest which will not contribute to efficiency or encourage initiative or talent. Each major industrial unit in my opinion should under proper safeguards be allowed to recruit its own personnel up to the intermediate level of management, while the appointments involving superior control should be by selection over the widest range by the ultimate authority whether it be the Government or a board of control.

In every industrial concern there have to be two different groups of officers, those in charge of technical administration, engineers, chemists, etc., having special technical qualification. There must also be a central staff, which is not necessarily technical, but with knowledge of the special problems of the particular industry. The recruitment and higher training of the first category are most important but do not concern us here. It is the managerial service and the control bodies which come under the proper definition of administration and it is on their ability and efficiency that the success of the system depends. The present method of putting men from the central or provincial secretariats in charge of such managerial posts can only be considered an unavoidable improvisation, and it is not likely to yield the best results.

The second set of problems relating to industrial administration relates to the control which Parliament

must exercise over these giant concerns in which so much of public money is invested. There is a general tendency among administrators and servicemen to consider such control as unnecessary interference, something which stands in the way of their effective exercise of power. What they would like to see is Parliament reduced to the position of a general meeting of the shareholders, themselves holding proxies for the majority. This is a fundamentally wrong view. Where public funds are concerned, Parliament's authority has to be absolute and it is the Parliament's duty to be vigilant and to see both that the money that it has provided is wisely spent, and the policies it has laid down are adhered to. Parliament entrusts its authority to a Minister and the Minister exercises his authority through his secretariat. This is a structure which no state-managed industry can avoid, unless Parliament chooses to abdicate its authority. This is the central contradiction of the nationalisation of industries, the control of productive agencies by a bureaucracy with no special qualifications and situated at a distance from the field of operation. The administrative problems which this situation gives rise to, require careful and detailed study. Basically the issue is how to keep general control of the vast economic operations without interfering with the day-to-day work. The easy answer is to 'trust the man on the spot'. Undoubtedly the man on the spot has to be trusted, but that cannot and does not mean that each unit can run its own show, well or ill, and the nation should be satisfied with whatever results it obtains. Undoubtedly it is for Parliament, working through its appropriate machinery to lay down the policy, co-ordinate the activities, lay down the targets, and see that its decisions are carried out. These functions would involve regular supervision and occasional intervention in administrative matters. That such intervention does not degenerate into daily interference, denying initiative to the people in charge, holding up decisions and making the authorities spend time in replying to minor technical objections is one of the essential conditions of the successful administration of nationalised industries. The problem is one of finding a middle way and that can only be found by experience. A code of political and administrative conduct must develop, both at the Ministerial and Secretarial level, and at the level of those in charge of administration. This is a matter of time and experience.

revolving flat cards

are now being extensively used
in Textile Mills in India.

Outstanding features

1. Five distinct setting points, used singly or in combination, to control setting to .001 inch.
2. Johnson bronze bearings, for cylinders and doffers. Roller bearings to cylinder; ball bearings to doffer and ball bearing comb box also provided as optional equipment.
3. Ball bearings to lick-in pedestals.
4. Self-lubricating 'Olite' bearings at several locations.
5. William's patent stripping motion for flats.
6. Drop lever with new disengaging handle.
7. Fluted lap roller with positive gear drive from feed roll helps uniform feed of lap at the back with minimum possible stretching.
8. Cards can be geared for any production in a mill organization.

Letters to the Editor

EXPORT OF COTTON PIECEGOODS

Sir,

Bleak prospects seem to be ahead of India's export trade of cotton piecegoods, particularly in the U.K. During the past eight weeks or so the price of Indian cotton piecegoods has gone so high that buyers in Lancashire feel that very soon the margin in price which made Indian cotton piecegoods preferable to their own would disappear. This upward trend of prices of Indian cotton piecegoods is only helping Lancashire to get on her own. Such a phenomenon in the face of an impending recession in the cotton market owing to the huge American cotton surplus is contrary to hypothesis and has baffled many buyers who have put off buying.

The very much increased demand for cotton piecegoods in India is reported to be one of the main causes for the increase of textile prices there. This demand it is said was likely to increase further by the end of the second Five-Year Plan. This would naturally lead to further rise in prices at home making our cloth less competitive in the overseas markets. The best way to combat increased demand is by increased production. The present policy of fixing a ceiling on the production of mill cloth is only placing an impediment on production thus allowing prices to remain sky high. Our already threatened export markets have begun to shrink. Entering a new market is a difficult enough job—regaining a lost one is impossible.

We are having formidable competitors in Japan, China, Spain and even Russia all of whom are aggressive sellers at keen prices scheming to capture as many overseas markets as possible. UK is not lagging behind

and is planning to open up textile mills in the Colonies where with cheap labour they hope to produce cloth for local consumption at low prices. One mill in Nigeria has already been completed and is expected to meet a third of Nigeria's requirements of 42 million yards. Nigeria has so far been one of India's best markets.

At such a time when others are trying to enter our markets circumstances in India seem to help them get in. Such circumstances have to be contended with. Something has to be done to keep our prices in the export market steady. The least the State can do to forestall a catastrophe in the textile export trade would be reconsidering their policy on establishment of new weaving mills, encouraging automatization and removal of export duties. "Produce more, wear more and export more" should be the slogan of the textile trade in India.

It is high time people in authority in India woke up and became alive to the situation. By strangling the textile industry in India by restricting their equipment, production, and even progress by way of modern equipment they are not helping India to build up but positively ruining one of her major industries which has struggled hard to successfully enter international markets and has obtained for India a decent share of much needed foreign exchange.

Yours faithfully,
A. S. KRISHNASWAMI.

MANCHESTER,
26-1-1956.

TUSSLE OVER TEXTILE TARGETS

Ordinarily I should have ignored the reactions of Mr. C. K. Narayanaswamy to my article on "Tussle Over Textile Targets" in the issue of the "Eastern Economist" dated January 13, as it seems, he prefers to rely on hearsay reports and not on even authoritative documents published by the Government of India itself. One would have expected that, after Sir Shri Ram's statement doubting the feasibility of increasing shifts in textile mills, there would be no argument on this aspect of the matter at least. But Mr. C. K.N., it seems, refuses to be satisfied with Sir Shri Ram's observations. Let me, therefore, quote the following latest published information on the monthly working of the shifts in cotton mills in India which has the authority of no less a person than the Textile Commissioner, Government of India, behind it:

	First Shift	Second Shift	Third Shift
Ahmedabad			
Spindles (Miln.)	1,875	1,835	405
Looms	39,487	38,269	3,646
Bombay City			
Spindles (Miln.)	2,822	2,730	1,237
Looms	61,693	58,834	13,331
All-India			
Spindles (Miln.)	9,883	9,308	3,610
Looms	175,230	157,725	33,209

As anyone can make out from this table, it is incorrect to say that "most of the Ahmedabad mills" have gone into third shift; percentagewise, the number of looms working third shift in Ahmedabad, for instance, was only slightly over 9 per cent for the month of June, 1955, to which these figures relate.

Even the all-India figure of total looms engaged in third shift working were below 20 per cent. Surely, the superlative adjective 'most' could not be employed accurately to describe this position.

I do not refute the Commerce Minister's figure that the mills can produce over 285 million yds. of cloth over and above 5000 million yds., nor the fact that over 2 million spindles and a few thousand looms have been licensed. These spindles and looms will certainly go into production in the next 18 to 24 months and add to the total production in the country. But, if a ceiling were to be imposed on the cotton mill industry output at 5000 million yds., that is a quantity more than which is even now being produced with the existing equipment, what is to happen to the newly licensed spindles and looms? And where arises the need to work more shifts? What is sought to be impressed upon the layman is not the inability of the mill sector to deliver the goods, but precisely the opposite, that is the ability of the mill sector to do much more than what has been assigned to it, and for which there would appear to be every justification, as the latest memorandum on "The Impact Of Hand-loom On The Indian Economy" submitted to the Planning Commission by the Millowners' Association, Bombay, clearly establishes. The cost of the proposed experiment to the country, as the memorandum declares, will be entirely out of proportion to what is really required to provide additional employment, which seems to be the main consideration that has prompted the Village and the Small-Scale Industries Committee (Karve Committee) to recommend a ceiling on mill cloth production.

I must say that Mr. C. K. N. is more dogmatic than even the Karve Committee about the performance of the **Ambar Charka**. In paragraph 32 of its Report, the Committee says: "On the basis of the present information regarding the mechanical soundness and performance of the three units (**Ambar Charkha**, Kale's spinning unit, and Gupte's spinning unit) and the acceptability of the yarn obtained from them, we are not able to express any opinion about the possibility of meeting yarn requirements for additional cloth production from small spinning units operating on decentralised basis". Even the General Secretary of **Sarva Seva Sangh** only refers to a programme of introducing **Ambar Charka** in about 100 centres by April, 1956 to test the suitability of **Ambar Charka** yarn for handloom industry and the acceptability of handloom cloth woven from such yarn to the consumer. And, again, the Karve Committee itself, evidently being not quite certain, has stated that if, on a review of the position in May, 1956, it is found necessary to license new spindleage, this may be allowed to the necessary extent. When the whole thing is still in a state of flux like this, I would not like to join issue with Mr. C. K. N. as to the ability of the **Ambar Charka** to produce yarn of over 20 counts, much less his claim that "the **Ambar Charka** can produce yarn from 16 to 40 counts to 80 counts and above with Indian cotton and no mixture." This should, indeed, come as a revelation to everyone engaged in the cotton textile industry. The best result in a mill spindle on the best quality Indian cotton, such as, say **Rajapalayam**, is said to be no better than 45 counts and, inasmuch as the **Ambar Charka** is, after all, diminutive version of a spinning frame, it is too much for anyone to stomach the claim that it can produce yarn of over 80 counts with Indian cotton without any mixture. Even after conceding the further claim that, quality-to-quality of Indian cotton, the **Ambar Charka** spins five to 10 counts above that spun on the mill spindle. True, I too have heard it claimed that one can produce even on a **Takli** anywhere up to 90 counts and, on a laboratory spindle, up to even 115 counts! But the preparation involved and the manual dexterity needed are out of all proportion, and one cannot proceed on the basis of such stray records when planning for an increase in production of millions of yards of cloth.

I do not think that I have let any cat out of the bag, in quoting Sir Shri Ram's view that exports can only be possible of commodities for which there is a good home market. The underlying idea of this view—let me make the point clear, again—is that, if the exportable commodities are those as have a good home market—and India with its large area and vast population undoubtedly provides a good home market for any consumer goods—they can withstand the shock of unforeseen dislocations to the export trade in these commodities caused by the import policies of foreign countries.

It is a travesty of facts to say that at no time our exports of textiles reached the target of 1000 million yds. fixed for the second Plan period. Let me refer to a table in the pamphlet on the Indian Cotton Mill Industry (vide P. 14) issued by the Millowners' Asso-

ciation, Bombay, last year, from which he will be able to see that, twice in the recent past (1942 and 1950) the actual performance of the country has exceeded this target by 61 million yds. and 133 million yds., respectively. Let me make it clear here that I am referring to "actual quantities of exports" (according to official figures and "not the quantity passed for shipment", which are the figures of export that the Millowners' Association generally publishes). It is also wrong to say that "the millowners know that the export target is impossible of achievement in the changed conditions and, therefore if more spindles and looms are permitted to go into production, there will be additional production with which they can strangle the struggling handloom industry". Let me, again, disabuse Mr. C. K. N.'s mind by quoting from the same pamphlet of the Association (vide P. 15): "There is a growing realisation in the country of the need for developing external markets for Indian piecegoods not only for purpose of earning foreign exchange but also to enable the mill industry, which has to bear the brunt of foreign competition, to maintain production and employment at their present high level. It is also advantageous to the handloom industry if larger quantities of mill cloth are sent abroad". This extract does not denote any eagerness on the part of the mill industry to strangle the handloom industry, as Mr. C. K. N. alleges.

Finally, I am surprised that even in the year 1956, that is, after over eight years' of Independence, Mr. C. K. N. should be talking of the non-availability of yarn, thereby insinuating the Government of the day that it has not ensured adequate supply of yarn to the handloom industry. This is too stale to be tenable in the prevailing circumstances. Nor is Mr. C.K.N.'s claim that the productive capacity of the handloom industry in the country is 3200 million yds. quite correct. Although it is true, according to the Karve Committee, that the total number of looms engaged on cotton, both active and idle, works out to about 20 lakhs, it is not until 1960-61, when all these handlooms are supposed to fulfil the production programme by working for about 300 days in the year with a daily average output of 6 yds. per loom, that one could speak of the capacity being actually there. In the absence of the fly-shuttle loom and the take-up motion attachment and on the basis of average annual working for only 150 days of even the active looms as at present, the capacity is certainly not 3200 million yds. but very much less. Let the **Ambar Charka** produce by all means a part of the additional quantity of yarn required but not all the 3200 million yds. as suggested by the Kanungo Committee or the Karve Committee. Let it aim at the more practicable and modest figure of, say, 500 million yds. If on the basis of the cost and quality of yarn produced by the **Ambar Charka** to produce this additional 500 million yds., the country and the consumer are prepared to vote for the **Ambar Charka**, there should be no objection. But to rush to do the thing on the unjustifiably ambitious scale on which this is sought to be done now is definitely not going to help the country.

[Correspondence on this subject will cease—Ed.]

The Business World

THE RATIONALE OF TEXTILE TARGETS

By
CROESUS

OUTSIDE probably a very limited circle of those who believe that the handloom industry can achieve impossible miracles, there are few who do not share the view of the millowners that a target of production of anything more than 2000 million yds. for the handlooms is not only impracticable but also uneconomic. If, as has been stated by the protagonists of the handloom industry, the most important objective in requiring the handloom industry to produce as much as 3200 million yds. is to provide full-time employment for all the existing handloom weavers, there should be no objection on the part of these protagonists to a scheme that the millowners have recently forwarded to the Planning Commission, in which they reiterate that the target of production for the handlooms should be 2000 million yds. and also add that, by fixing the target at this level, even the objective of providing full employment for existing handloom weavers could well be attained. This is the positive aspect of the scheme submitted by the Millowners' Association, Bombay. But there is also a negative aspect to it, a very important negative aspect as that, which the Memorandum stresses, namely, the consequences on internal economy and export earnings of the severe shortage of cloth that is likely to develop in the event of the handlooms being called upon to account for a production of as much as 3200 million yds.

On the basis of the results of the 1953 Census of Manufacturing Industries and of an article entitled "**Ambar Charka**. Tentative Prices of Yarn and Cloth", by Dr. J. D. Sundaram, published in December, 1955 issue of **Khadi Gramodyog**, the journal of the All-India Khadi and Village Industries Board, the memorandum rightly comes to the conclusion that the consumer will have to pay a relatively higher price for handloom cloth, besides making good the loss of revenue to the exchequer, consequent on the need to subsidise handloom cloth, by paying enhanced taxes. The consumer might not mind all these if at least a good portion of the extra amount that he is called upon to pay for the handloom cloth thus went to the distressed handloom weaver. But figures have been worked in the B.M.A. memorandum which show that the handloom weaver will, in fact, receive only a very small proportion thereof. At the same time, it has been established that the cost of the experiment to the country will be entirely out of proportion to what is really required to provide the additional employment.

It is noteworthy that the memorandum does not stop at this but proceeds to point a way to create more fruitful employment on the same scale but at a much lower cost to the country. Incidentally, this suggestion has the further merit of avoiding the depressing effect on the standard of living of the common man that would result if he is forced to go in for the relatively higher priced handloom cloth. A very good example has been worked out in the memorandum clearly to illustrate the thesis in question of the millowners. The memorandum examines the effects of a purchase by a consumer of 100 million yds. of cloth each manufac-

tured by mills and by handlooms. The results of the examination are as follows:

(100 Million yards)			
MILL CLOTH		HANDLOOM CLOTH with mill-yarn	
(In million Rs.)		(In million Rs.)	
Consumer pays at 15 as. per yard	93.8	Consumer pays at Rs. 1-2-0 per yd.	112.5
		Rebate paid by the Exchequer at 1 anna per yard	7.0
			Rs. 119.5
Disbursement		Disbursement	
Wages for 7,000 workers employed on weaving side only	10.9	Wages at Re. 1 per day for 70,000 workers:	
		for 7,000 workers	2.1
		for 63,000 "	18.9
			Rs. 21.0
Payment to the Exchequer:			
(In million Rs.)			
Excise duty	4.9		
Income-tax	2.1		
Sales-tax	2.9	9.9	
			20.8
BALANCE	Rs. 73.0	BALANCE	Rs. 98.5

It is seen from these results that, whereas, in the case of handlooms, the amount actually utilised for the common good is Rs. 21 million (being the total wages paid to 70,000 workers), it is Rs. 20.8 million (being total wages and taxes in the case of mills). This means that for only Rs. 0.2 million extra that accrues to the common good, the consumer is asked to pay as much as Rs. 25.7 million more by way of prices for the handloom cloth. Not only that, the consumer who is told that it is the handloom weaver that benefits will find that the balance of Rs. 25.5 million, the additional amount paid by him, (difference between Rs. 25.7 million and Rs. 0.2 million) goes altogether to people other than the handloom weavers! The enormity of the loss to the consumer and to the country at large becomes obvious when it is realised that it is not just 100 million yds. that the handloom weaver is asked to produce but, 3200 million yds. according to the Kanungo and the Karve Committees. This is 1200 million yds. more than the target of production for handlooms which the millowners feel to be a safe limit. To confine ourselves, therefore, to the loss to the country on account of the difference between 3200 and 2000 million yds. as above or of 1200 million yds., one finds that it would be 12 times that indicated in the example above. This has been succinctly stated in the memorandum thus:

Better by air

best

by

KLM

ROYAL DUTCH
AIRLINES

(1) The extra amount which the consumer will have to pay for 1,200 million yards will be as much as Rs. 30.84 crores.

(2) Out of this sacrifice of Rs. 30.84 crores which the consumer will make, the amount utilised for the common good will be as small as Rs. 0.24 crores (at the rate of Rs. 0.2 million per 100 million yards)!

(3) If, instead of handloom cloth, the consumer is provided with mill cloth, he would be in a position to buy 27 per cent more cloth with the same outlay, and this will help not only to increase his standard of living but also to create more employment in cotton fields, mills and all the channels through which this additional cotton and cloth will pass and, at the same time, secure higher receipts to the exchequer.

(4) When 100 million yards are produced on handlooms, extra employment is created for 63,000 workers who receive wages of Rs. 18.9 million. The exchequer, however, has to pay out a rebate of Rs. 7.0 million and lose a revenue of Rs. 9.9 million, which it could have earned from mill cloth. So far as the exchequer is concerned, this makes for a net difference of Rs. 16.9 million, which is almost equal to the wages of Rs. 18.9 million earned by the additional workers. If we also take into account the fact that the consumer could increase his consumption of cloth by 27 per cent, the revenue derived by the exchequer, along with the rebate saved, would be equal to the wages earned by these additional 63,000 handloom weavers.

If such are the consequences of the handloom cloth produced even out of yarn produced by mills, it is unnecessary to project one's mind to the consequences that would result from cloth produced by handloom weavers out of yarn produced on the Ambar Charka. Even the protagonists of Ambar Charka have themselves admitted that cloth woven from yarn produced on Ambar Charka would be costlier than the mill-spun and hand woven cloth by about 4 as. per yd. In all conscience, the strain on national economy involved in this case would be very much more. It is axiomatic that a sacrifice is worthwhile if the resulting benefit is at once considerable and permanent. But is the employment that the handlooms provide of a permanent nature, let alone its not being lucrative? According to the Karve Committee itself, the employment provided through the medium of handlooms is only of a transitional character. To call upon the consumer to pay as much as Rs. 30.84 crores more for his cloth and to deprive the exchequer of an amount almost equal to the wages earned by the additional weavers employed by the handloom industry, all for the sake of just providing transitional employment to a few thousands thus, is neither fair nor right.

The acceptance of the proposal made by the mill-owners in their memorandum to restrict handloom production to 2000 million yds. on the other hand, has the advantage of not only providing lucrative employment to 7000 people but also of enabling expenditure to be incurred on other national building activities which could easily absorb the remaining 63,000 workers who might have been employed by the handlooms had they been commissioned to produce 3200 million yds. Additionally, there is also the important factor that the consumer can raise his standard of living at a lower level of expenditure, which means that he could save the difference and invest it in Government loans to finance other nation building activities. Palliative measures may be necessary for a period to help a particular sector of the community. But even these, as the millowners' memorandum pertinently points out, should be such as to benefit the national economy and should definitely not be such as to penalise the common man and reduce his standard of living.

BUSINESS NOTES

HIGHER EXPORT QUOTA FOR TEA

THE HIGHER export quota of 430 million lbs. of tea from the 1955 crop against 464.9 million lbs. in the previous year may afford some relief to the tea industry, which has been facing a near-crisis. But the measure cannot go far. In fact, tea circles are doubtful if even all the additional quota will be used, considering the none-too-encouraging foreign demand. Moreover, there are other fundamental problems to be tackled.

The year 1955 closed with a record production of tea in the world. For the small loss of production in Indonesia and Pakistan there have been marked rises in India, Ceylon, Africa and, possibly, in Formosa and Japan. There is no indication, however, that consumption too has been higher than in 1954. On the contrary, the possibility seems to be that 1955 may have closed with a world surplus of at least 80 million lbs. If the stock position means anything to the market, 1956 bids fair to be an anxious year for tea, reminiscent, perhaps, of the 1952 days. The supply problem is largely a question of whether another International Tea Agreement can be successfully negotiated.

Producers complain that the competitive power of India's second largest foreign exchange earner is gradually being destroyed by the unrealistic attitude of the Government. The budget of last February doubled the cess and introduced a slab system to determine the rate of export duty, based on the weighted average prices of Indian tea sold in the London auctions during the previous month. The present system of fixing the price of tea on the basis of the weighted London averages is defective, because the prices so fixed are not truly representative of the variations in tea prices here. The planters have strongly complained against this and, in fact, it was also voiced in the Export Advisory Council meeting two and half months back. The best method is to assess the world price of tea for determining the monthly rate of export duty by the combined average prices in London, Calcutta, and Cochin. Pakistan has been more modest in its exaction, though its export duty was doubled at the end of October. No export duty is levied by Indonesia, which, besides, is also granting an export premium of 10 per cent of the declared value in its efforts to assist the growers.

Though 1953 and 1954 were good years, the emphasis now is once again on quality teas which are maintaining their prices, while common teas are at a discount and may even have to be sold below the cost of production. In these circumstances, the restriction on the amount of tea to 140 million lbs. for direct export to London auctions is not quite helpful. Laudable as the objective undoubtedly is, there is no use shutting our eyes to facts and experience. The offtake from the Calcutta market is still not up to expectation. The failure of the Ceylon Government to enforce a similar policy in 1955 is an eye-opener. Only when Ceylon modified her policy to one of restricting the quantity of quality teas, but allowing releases of common teas without restriction, did the industry revive.

INDO-BURMA TEXTILE TRADE

THE BURMESE PURCHASE MISSION, which has been in this country with a view to "maintaining and developing the spirit of cordial co-operation between India and Burma for mutual benefit by establishing a sound and regular trade", to quote the spokesman of the Mission, has achieved its object in that it was able to purchase, among other things, nearly seven million yds. of textiles from this country. The total quantity of all tenders accepted by the Mission up to 10th February amounted to 6,967,308 yds. This, however, compares with nine million yds. which India exported to

Burma in July 1954. But one must be thankful for small mercies. For, the Burmese original plan was only to go in for 7.5 million yds. In view of the good response from Indian shippers, however, the Mission revised its idea of textile purchases from this country upwards and has since changed it to 11 million yds.

The Government of India has, as is only to be expected, been extremely helpful to the Burmese Purchase Mission in assisting the furtherance of trade between the two countries. While it has already announced its decision to grant a rebate in excise duty on cloth to be exported to Burma, it is since learned that the authorities are also likely to arrange for a special ship in order to facilitate prompt shipment.

Until very recently, India was the largest supplier of cotton textiles to Burma. Even in 1954, it supplied 40 million yds. (in 1953 it was more than double at 90 million yds.) but for the first quarter of 1955 it exported 10.03 million yds. It is only since August, 1954 that there has been an alarming decline in India's textile exports to Burma. An all-time low of Burmese offtake of Indian piecegoods was recorded in December, 1954, when only one million yds. of cloth was exported from this country.

The first blow to the import of Indian textiles into Burma was struck with the abolition of the preferential rate of customs duty, which Indian exports to Burma enjoyed up to October, 1953. When, thereafter, a uniform tariff replaced it, the price advantage that Indian exports were enjoying over Japanese exports was nullified and it became incumbent for Indian piecegoods to compete with those of Japan and the UK, our keenest competitors in the field. It is true there was a distinct improvement in our exports of textiles to Burma in the first two months of 1955, but this was followed by an unexpected setback again due to the sudden abolition of the OGL by the Government of Burma. This measure, however, proved to be a temporary hurdle, as Burma restored 50 per cent of the cut on imports of textiles in March.

Thanks to the efficient service rendered by the Textile Export Promotion Council, most of these defects have tended to disappear, if they have not disappeared altogether, and, what is more, steps have also been taken in hand to study consumer preferences in the same way as Japan and other competitors to our textile exports to Burma. In this connection, it may be recalled that a Trade Delegation sponsored by the Council undertook a study tour of Burma, Thailand, Malaya, Indonesia, and Ceylon in the middle of 1955.

If its recommendations regarding standardisation of bale packing, restriction on the quantity of two-part pieces in exports, the introduction of a standard contract form, and the appointment of resident salesmen in our export markets are fully implemented, then the present fortuitous deal with the Burmese Purchase Mission may well be consolidated.

AMERICAN CONSULTANTS FOR INDIAN RAILWAYS

THE AGREEMENT signed at Washington on February 10th last between the Government of India, the U.S. International Co-operation Administration and a New York firm of engineering consultants, Sanderson and Porter, to survey the existing and prospective facilities for the transport of traffic on Indian railways has a significant bearing on the expansion of railway transport in the second Five-Year Plan. It is now common knowledge that in the freight sector alone there will be an increase of over 50 per cent in traffic from the estimated volume of 120 million tons in 1955-56 to 181 million tons in 1960-61. The necessity to cut down the development outlay asked for by the Railway

Ministry for the second Plan by as much as 24 per cent threatens to create a large gap in the anticipated volume of traffic offering and the capacity of the railways to offer transportation facilities. Present hopes are pinned on the possibility of larger funds being placed at the disposal of the railways in the later stages of the Plan. Meanwhile, the Railway Ministry is in search of ways and means to achieve higher carrying capacity by rationalisation including intensive utilisation of equipment. Already the railways have attained higher operational efficiency which is a factor among others responsible for carrying 20 per cent more freight traffic in the last two years.

The eighteen consulting engineers, experts in different branches of railway operations, who will be deputed by Sanderson and Porter to this country next month for an investigation extending over about twenty months, have an assignment to examine every single aspect of railway working in this country. It is likely that while most of their recommendations will be endorsed straightaway by the Railway Ministry, some of the suggestions may require further scrutiny in which representatives of the incoming team will be among the participants. The dollar cost of the contract with this firm, accounted for mainly by salary and passage bills, will be borne by the US International Corporation Administration and is estimated to amount to Rs. 21.42 lakhs (\$450,000), while the rupee cost of the order of Rs. 3.33 lakhs (\$70,000), representing expenditure in this country, will be contributed by the Government of India. Under the technical co-operation agreement, the US has so far spent a total amount of Rs. 18.5 crores (\$38.8 million) for the Indian railways mainly for acquisition of rolling stock.

TRADE DEFICIT WIDENS

THE IDEA of preparing a foreign trade plan which Shri T. T. Krishnamachari, the Union Minister for Commerce and Industry, suggested at the last meeting of the Export Advisory Council takes added importance, now that India's trade deficit is mounting every year. Thus, the trade deficit, which was Rs. 24 crores in 1954, rose to Rs. 36 crores in 1955. Though the total value of exports at Rs. 595 crores was higher by about Rs. 32 crores than in the previous year, there was also a simultaneous rise in imports from Rs. 587 crores to Rs. 631 crores. This was because the import licensing programme in 1955 was more liberal, subject to its integration with industrial development of the country. Import quotas were thus stepped up for items needed for industry, or where domestic production fell short of the country's total consumption requirements. Also, greater facilities were accorded to imports from the dollar area. In absolute value and relative terms, plant and machinery imports were higher than in 1954. Simultaneously there was an upward trend in the import of industrial raw materials. With an even more ambitious programme of development over the period of the second Plan, this trend will continue.

The payments position on current account, however, seems to be virtually in balance and may even show a small surplus in 1955. This improvement, in spite of the heightened tempo of development in the country, is a measure of the growing strength of the economy and shows that net invisible receipts, both on private and Government accounts, are rising. Official donations are mainly under the Indo-American Technical Co-operation Agreement and the Colombo Plan.

Several of the important Indian exports, such as jute goods and manganese, are subject to sharp fluctuations of demand. Most of India's exports, including tea, jute and cotton textiles, have further to meet increasing competition from other countries. Although estimates of foreign exchange earnings and requirements over a period five years cannot be made without a large margin of uncertainty, the Planning Commission estimates that the balance of payments on current

account would show a total deficit of Rs. 1,100 crores over the next Plan period. This deficit has to be covered by external resources, including net private foreign investment and withdrawal from the accumulated foreign exchange reserves of the country. Every effort has, therefore, to be made to promote exports in view of the large foreign exchange requirements of the second Plan.

TOBACCO EXPORT

THE TOBACCO deal with China some time back doubtless served considerably to relieve the congestion in the godowns in Andhra, but the new Export Promotion Council for this commodity has no easy task. There is keen competition abroad and, unless we can sell good tobacco of the kind in demand in other countries, the export trade is bound to suffer. Already there is a fear in the minds of the growers that exports to the UK might suffer owing to the agreement between that country and the Rhodesian tobacco interests.

The Government has, in recent years, abolished or reduced duties on many commodities figuring in the export trade. If higher excise duties affect our competitive ability in the export markets, the position needs to be revised at least in so far as exports go. But this would appear to be doubtful because the Union Commerce and Industry Minister has indicated that the Government is only just beginning to tax tobacco on a rather liberal scale and that it would be some years before the limits of taxation are reached.

Two years the tobacco trade was in such a quandary owing to accumulation of stocks that the Government had to take extraordinary measures for the promotion of exports. Special Sales Officers have now been stationed in London, Antwerp and Hong Kong. Yet more remains to be done. One of these is the abolition of the practice of shipping tobacco on a consignment basis and the creation of a demand in foreign countries on the basis of firm orders in accordance with Agmark grades and fair prices. It is here that the Tobacco Export Promotion Council will be confronted with its most difficult problem.

BAN ON MUSHROOM JUTE UNITS

The Government of India's order imposing control on the production of jute textiles will be welcome for the reason that it aims at maintaining standards of quality. A Press Note issued in this behalf by the Commerce and Industry Ministry on February 14th last states that no one other than the owner of a jute mill, registered or licensed under the Industries (Development and Regulation) Act, 1951, will be allowed to manufacture jute textiles, either wholly or partly from jute, in any factory with the aid of power unless he obtains a licence for that purpose from the Jute Controller. This action was necessitated because quite a number of mushroom jute manufacturing units had sprung up which could successfully escape the clutches of law by keeping their capital investment below Rs. 1 lakh and their employment below 50 persons. Their unregulated production had impaired the reputation of Indian jute goods in the export market which has grown quality-conscious. Apart from preventing this injury to India's jute exports, it is likely to have certain ancillary effects. The pressure on raw jute supply will be eased marginally and in the current context this will be some gain. It is likely that the timing of unseiling the remaining 5 per cent looms which are still put out of production may possibly be advanced. Many of these units were potential purchasers of the old machinery and equipment which the large-scale jute factories are replacing. The loss of the ready market for such kind of machinery may now pose a problem for jute mills. Their handicap suggests that sympathetic treatment should be extended to them in the matter of tax relief on this score.

COMPANY AFFAIRS

SCINDIA STEAM NAVIGATION COMPANY LTD.

The working results of the Scindia Steam Navigation Company during the year to June, 1955 reflect the several difficulties that troubled the coastal and overseas shipping of India during the year. Due to causes like delays to ships in ports and reduction in freights on certain commodities the freight earnings declined from Rs. 842.82 lakhs in 1953-54 to Rs. 829.90 lakhs in 1954-55, though cargo carried showed a slight increase from 19.11 lakh tons to 19.59 lakh tons. Freight and passage income fell from Rs. 917.87 lakhs to Rs. 838.22 lakhs and profits (after providing for depreciation and debenture sinking fund) from Rs. 23.45 lakhs to Rs. 22.73 lakhs. The dividend, however, is proposed to be maintained at As. 8 per share of Rs. 20 paid-up (i.e. 2½ per cent).

The Directors point out that, during the year under review, the conditions of cargo working showed further deterioration due to continued slow working of port and shore labour and congestion at various ports. There was also unexpected detention of rice loaders at Rangoon due to heavy rejections of cargo by the inspecting officers. Some of the ships were delayed at the UK ports and had to be diverted to the Continent owing to the dockers' strike. The costs of stevedoring and other cargo working expenses and marine dues showed further rise, especially at Calcutta, owing to the marked "go slow" of labour and at Madras, owing

to enhancement of wages and introduction of decasualisation of stevedore labour.

The paid-up capital of the Company is Rs. 9.40 crores. Besides, the Company has total reserves and surplus aggregating Rs. 6.52 crores. The value of fleet at cost is Rs. 14.92 crores, against which depreciation of Rs. 4.34 crores has been provided. The Company has a debenture liability of Rs. 4.27 crores, against which a sinking fund totalling Rs. 71.93 lakhs has been built up. The Company's investments in subsidiaries and associated companies (at cost) amount to Rs. 3.84 crores of which Rs. 1.43 lakhs are in the shares of the Eastern Shipping Corporation and Rs. 104.25 lakhs in the shares of the Hindustan Shipyard.

Modernisation of the Company's overseas fleet is speeding up. The Directors have ordered in Germany further six ships, each of 9,500 tons deadweight with a speed of 17 knots. Three of these ships are due for delivery in the second half of 1956 and the other three in the first half of 1957. The Company has also ordered one ship of about 3,300 d.w. tons for the West Coast trade. On completion of the present tonnage programme, the total loans from the Government in respect of the eight overseas ships ordered from Germany will be of the order of Rs. 8½ crores.

The financial position of the Company at the end of the year under review, as also in the previous accounting period, is given below:

(Amounts in '000 rupees)

Year Ended	RESERVES*									
	Paid-up Capital	Debentures	Fleet Re- placement	Depreciation on Fleet	Other Re- serves†	Current Liabilities	Fleet at Cost	Other Assets	Net Profit‡	Dividend Amount and Percentage
30-6-53	9,40.20	4,26.57	2,59.78	4,34.44	5,51.88	3,42.55	14,91.85	16,75.34	22.73	23.47 (2½%)

THE PUNJAB NATIONAL BANK LTD.

Subject to audit, the working of the Punjab National Bank Ltd., for the year ended December 31, 1955, shows the deposits of the Bank as on December 31, 1955, at Rs. 90 crores, indicating an increase of over Rs. 14 crores or about 19 per cent over the deposits a year earlier. The increase in deposits during the year 1954 amounted to Rs. 10.33 crores or 15.8 per cent. The profits of the Bank for the year, including Rs. 4.99 lakhs brought forward from the previous year's account, amount to Rs. 73.6 lakhs, showing an increase of Rs. 16.7 lakhs over the profits of the year 1954. The Bank opened 14 more offices during the year under review, bringing the total number of its offices in the country to 326.

provision for liabilities and setting aside Rs. 4,000 to development and extensions account, there remains a balance of Rs. 10,142, including Rs. 2,680 brought forward from the previous half-year, available for distribution, and this the Directors recommend to be disposed of as follows:

Payment of a dividend at the rate of 5 per cent per annum free of income-tax for the half-year	Rs. 7,500
Carrying forward to next half-year	Rs. 2,642

SAUGOR ELECTRICITY SUPPLY CO., LTD.

The audited account of the Company for the half-year ended June 30, 1955, show that, after making

THE RAMAYANA OF TULSIDAS IN ENGLISH VERSE

LATEST "HINDUSTAN TIMES" PUBLICATION

The famous Hindi epic regarded by many as "the greatest book in all devotional literature" is for the first time now available in English verse.

The translator, the Rev. A. G. Atkins, completed the book after ten years of devoted work. He has tried "to keep and express in English in the fine rhythm and music of the original in simple lucid language, and with as much of the vivacity, wit and picturesqueness that Tulsidas has put into his work." He has also followed in some measure Tulsidas's metrical variations such as *chhand*, *chaupal*, *doha* and *soratha*.

In a foreword Mr C. Rajagopalachari says: "Mr Atkins' monumental work and his Introduction are a revelation of hope for those who desire to see all the great religions of mankind come together. His service is not only to English-speaking people but also to that very large number of Hindus in India who do not speak the Hindi language and to whom English has become a very familiar medium."

The book is of special value to libraries, scholars and devotees of Tulsidas.

It has been issued in the following four editions:

- I. Original text of Tulsidas with translation in English verse; three volumes; 1468 pages; price Rs. 50 net.
- II. Translation in English verse; without Hindi text, two volume; 898 pages; price Rs. 40 net.
- III. Special tissue paper edition of I, one volume, price Rs. 100 net.
- IV. Special tissue paper edition of II, one volume, price Rs. 100 net.

COMMODITY NEWS AND NOTES

COTTON EXPORTS

Recently there has been a spurt in cotton exports. The following table showing actual shipments of raw cotton from India to various countries during the period September 1, 1955 to January 21, 1956 may, therefore, be of interest.

Country:	1955-56	1954-55
	(In bales of 400 lbs.)	
Japan	116,587	39,736
Continent	58,655	15,252
UK	32,559	7,207
China	34,651	..
Hong Kong	24,237	1,383
USA	2,505	7,699
Other Countries	2,235	760
TOTAL	271,469	72,037

Japan still continues to top the list with her offtake of 116,587 bales against 39,736 bales last season, while the Continent and the U.K. follow with their offtake of 58,655 bales and 32,599 bales against 15,252 bales and 7,207 bales respectively. China though has come recently in the market lifts 34,651 bales. Compared with the last period there was an increase of nearly 200,000 bales in total exports in this five month period.

COTTON TARGET FOR SECOND PLAN

Dr. Punjab Rao Deshmukh, Union Minister for Food and Agriculture declared in Bombay recently that a provisional target of 55.88 lakhs has been fixed for cotton production in the second Five-Year Plan. It was further revealed while addressing the 73rd meeting of Indian Central Committee that the bulk of the increase in production contemplated would have to be achieved by resorting to extensive cultivation methods. An increase in production of cotton of staple length is also contemplated so that imported type of cotton could be replaced.

The target fixed for the area of cotton production under the first Five-Year Plan was achieved one year ahead of schedule. This increased cotton production has been followed by upward trend in the offtake of Indian cotton by mills in the country, resulting therein a huge benefit to the national economy. The consumption of Indian cotton by mills during September, 1955, amounted to 3.83 lakh bales.

COTTON PLANS FOR 1956-57

Plans for 1956-57 fixing the targets of acreage and production of cotton at 18.8 million acres and 45.5 lakh bales respectively for all-India have been approved by the Indian Central Cotton Committee. Large representation on the Committee proposed to be given to cotton growing interest in the different states has been welcomed. The Committee endorsed the recommendation of the policy sub-committee regarding the desirability of publication of a monograph on cotton and a sub-Committee has been appointed for that purpose. The Committee at its recent meeting also approved the recommendation for the establishment of five regional cotton research stations and appointed a sub-Committee to go into the question of the location of these stations.

EXPORT OF PULSES

The Government of India has decided to allow export of pulses, gram and gram flour against pre-ban commitments in the cases of (i) firms which have filed the shipping bills complete in all respects as required, (ii) firms which are able to produce valid firm sale

contract concluded and supported by a letter of credit opened up to February 7, 1956, or (iii) firms which are able to produce evidence of sale in the nature of cable offer and cable acceptance received up to February 7, 1956.

A notification issued in this connection by the Joint Chief Controller of Exports, Bombay, says that shipment against the pre-ban commitments will be allowed up to the end of June 1956 only and no extension will be granted under any circumstances. The notification also adds that cases of pre-ban commitments which are not covered by the above procedure, will be considered on the merits of each individual case.

Fresh export of pulses including gram and gram flour was banned by the Government with effect from February 7, 1956.

ALL-INDIA FIRST ESTIMATE OF RAPE AND MUSTARD, 1955-56

The all-India first estimate of rape and mustard for the year 1955-56 puts the current year's area at 2,403,000 acres as against the adjusted first estimate of 2,374,000 acres for 1954-55. This shows an increase of 29,000 acres or about 1 per cent in area over last year. The increase in acreage under rape and mustard during the current year has occurred mainly in PEPSU, Punjab and Rajasthan due generally to favourable weather conditions at the sowing time. This increase, however, been reduced to some extent by the decrease reported mainly by Bihar. The information given in this estimate relates generally to the period up to the middle of December, 1955. Past experience has shown that the area in the first estimate forms roughly 40 per cent of the area under the crop finally reported.

WORLD TIN CONSUMPTION

World tin consumption during September 1955, was over 2 per cent higher than in the previous month, 12,000 tons compared with 12,600 tons in August. The US share rose slightly to 5,330 tons and became the largest monthly total since January 1951. Stocks excluding strategic stock piles again increased during August and by the end of the month were standing at 65,600 tons as against 65,300 tons on July 31, 1955.

IMPORT OF TURMERIC

The East Bengal Government will import from India turmeric (haldi) worth Rs. 10 lakhs. The decision to import turmeric from India is a sequel to discussions held by Syed Azizul Huq, Commerce Minister, East Bengal, with the Central Commerce Minister at Karachi recently. The price of turmeric in East Bengal has gone up very much due to meagre imports. The prevailing turmeric price in the province is Rs. 6 to Rs. 7 per seer.

BAN ON EXPORT OF WHEAT PRODUCTS

The Government of India have reviewed the policy regarding the export of wheat products (atta, maida, sooji and rawa) and in view of the rising trend of wheat prices, it has been decided to ban export of these wheat products outside India with immediate effect.

JUTE PRODUCTION IN U.P.

The U.P. Government proposes to raise jute production in the State to 1.0 lakh bales, an additional production of 45,000 bales by 1960-61. Efforts will be made to improve the quality of jute. U.P., though not a jute producing state, has made a substantial contribution to the growth of jute. During 1950-51, the production of jute in the State was 48,000 bales as against 65,000 bales last year.

* Last Friday Figures.

THE SECOND FIVE-YEAR PLAN

PLAN OUTLAY BY MAJOR HEADS OF DEVELOPMENT

	First Five-Year Plan		Second Five-Year Plan	
	Total Provision (Rs. Crores)	Per Cent	Total Provision (Rs. Crores)	Per Cent
I. Agriculture and Community Development	372	16	565	12
(a) Agriculture*	282	12	365	8
(b) National Extension and Community Development	90	4	200	4
II. Irrigation and Power	661	28	898	18
(a) Irrigation and Flood control	395	17	458	9
(b) Power (including small town and rural electrification programmes)	266	11	440	9
III. Industries and Minerals	179	7	891	19
(a) Large-Scale Industries, Scientific Research and Minerals	149**	6	691	15
(b) Village and Small-Scale Industries	30	1	200	4
IV. Transport and Communications	356	24	1384	29
(a) Railways	268	12	900	19
(b) Roads and Road Transport Schemes	146	6	265	6
(c) Shipping, Ports and Harbours and Inland Water Transport	58	2	100	2
(d) Post and Telegraphs, Civil Aviation, Broadcasting and other Communications	84	4	119	2
V. Social Services, Housing and Rehabilitation	547	23	946	20
(a) Education	169	7	320	7
(b) Health (including water supply and sanitation programmes)	140	6	267	6
(c) Labour and Labour Welfare, Welfare of Backward classes and Scheduled Tribes and Social Welfare	39	1	149	3
(d) Housing	63	3	120	2
(e) Rehabilitation	136	6	90	2
IV. Miscellaneous	41	2	116	2
TOTAL	2356	100	4808	100

* Includes provision for local development works also.

** This excludes the provision for the expansion of the Chittaranjan Locomotive Works, the Integral Coach Factory and the Indian Telephone Industries. The provision for the National Industrial Development Corporation (NIDC) and other finance corporations and for direct assistance to industries is included here.

NET NATIONAL PRODUCT BY INDUSTRIAL ORIGIN

(Rs. crores at 1952-53 prices)

				Percentage Increase	
	1950-51	1953-56	1960-61	1951-56	During 1956-61

D-Day in Delhi

WEDNESDAY, February the 29th, is D-Day in Delhi. This is not merely because an annual budget is being introduced on that day. For the first time there can be no doubt as to the direction of the assault and almost its exact size. With a widely advertised figure of Rs. 450 crores of "additional" taxation over five years, and the Finance Minister's known proclivities for taxing at the start, this order of additional taxation is nearly certain. With those who argue that central taxation is to be only half of the Rs. 450 crores and this half is to be spread over five years, there will be agreement; but this makes the picture no different. Even Rs. 40 crores additional per year in new taxes represents, under present conditions, a source of deep anxiety for taxpayers. In the Budget for the year 1955-56 it will be remembered that the total as finally passed in the Finance Act was only roughly half this figure; in other words, Parliament, speaking for the people, just refused to take an additional Rs. 40 crores. This year it may well be worse since direct taxation can hard-

ly be indulged in with any significance without producing the most disturbing results on economic incentives on the eve of the second Plan.

The fact that there are some cheerful figures to present in terms of revenue receipts during the current year should be noted, but should not of itself mislead one into believing that the picture on D-Day is to be one of good cheer. It is extremely likely with buoyant excise receipts, and with the remarkable good year that the railways have had, that receipts on 1955-56 account may be Rs. 20 crores more than provided in the Budget. Almost certainly expenditure, too, will be up, and this does not, in any case, detract from the new demands for development resources although it has certainly given our cash balances a welcome boost which might avoid some drastic turning of the tax screw. The Central Board of Revenue will not, one hopes, in view of this cash windfall, deem it necessary to be as harsh as usual in the collection of its current demand. That is all to

the good. But the favourable ending of the year 1955-56 does not imply any modification of the broad character of the Budget for 1956-57 imposed by the rigours of the second Five-Year Plan.

It is idle to deny that the Finance Minister of India has no major alternative to the taxation story he is to tell on February the 29th. If a Finance Minister's Budget in the Planning age is no longer a gamble in the rains, it is nevertheless still determined by considerations outside his hands. Once the plan is fixed, so must be the budget surplus, and, except to the extent that deficit financing can be precipitated—a course of action on which there will be no general agreement—the need for taxation at a level of about Rs. 40 crores per year is inescapable. What then can be said as to the best form in which the Finance Minister's limited discretion can be exercised?

Almost certainly the major choice rests on two, and only two, factors. The first is the extent to which additional personal taxation can be avoided by higher corporate taxation. If a sum of one anna more in corporation tax could dispense entirely with additional personal taxation, that is undoubtedly a course heartily to be welcomed. There can be no sense in unloosening disincentives at the beginning of an exacting plan when the imperatives of revenue can be satisfied otherwise. To say that there are political advantages in higher direct personal taxation which are greater because of the general election which is impending, is merely to say that there is obtuse ignorance of the extent to which the rich can be "soaked" under prevailing conditions. The limits of "soaking" so far as direct income-tax and supertaxes are concerned, have already been nearly reached in the areas in which they are most effective, that is, between an annual income of Rs. 60,000 and about Rs. 2 lakhs where India has today the highest direct taxation in the world. If it is argued that the socialist pattern of society requires even greater redistribution of incomes, one might enquire without malice why the Communist countries who claim to be more socialist than any others have chosen to depart from the doctrine they so spaciouly propounded in the early days of their zig-zag history. Communist exponents of good Marxist-Leninist teaching now preach inequality as an essential ingredient of the efficiency of an economic system.

The second pillar on which taxation should be based in the next five years must obviously be the restraint of inflation at a time when defences have to be built in the economy against new price rises. The application of this principle is more technical than the principle of the avoidance of personal taxation. There has been in recent weeks in New Delhi a controversial discussion of a strange new arrival described as an expenditure tax, which has arrived not alone but also with Mr. Nicholas Kaldor, its most prominent advocate and expert in the Western world. To the extent that an expenditure tax can be used as an anti-inflationary measure designed to control unnecessary expenditure and to promote saving, it is obviously in principle-sound. But one wonders whether the problem of an expenditure tax is now one of principle so much as of selection and administration. The issue is not whether expenditure should be taxed, because, of course, excises

and indirect taxes do in fact tax expenditure at present. It is essentially the question which items of expenditure should be taxed in order of priority and how the rates should be graded. The principle of an expenditure tax cannot thus be considered in isolation. It must obviously be related to items most suited to obtaining the revenue required for restraining inflationary dangers. The answer to this riddle has not yet been found.

The taxes most ordinarily believed to be effective in this direction, namely, excises on cloth and sugar, are not nearly so effective as they seem to be at first sight. And if political considerations require some restraint, taxes on cloth and sugar will not be acceptable in the age of the common man. The Finance Minister of India has, therefore, little option but to perform, with trial and error, the difficult task he attempted last year; it may be that this year, as in the last, he will experience the humiliation of an ignominious retreat.

If the position in 1956-57 is so difficult, one might wonder cheerlessly how in each of the next five years the Finance Minister of India will be capable of adding Rs. 40 crores to his receipts by way of "additional" taxation. The truth is that taxable capacity of the Indian people cannot be substantially raised until some considerable advance takes place in the standard of living. Moderate inflation is likely to be the consequence of this dilemma. It may well be that while the Finance Minister is determined to enforce the discipline which the Plan entails, he will be forced to recognise the compulsion of events.

Meanwhile there is only this to be said. The Finance Minister of India must be trusted under the circumstances which have been created not by his own act but by the exacting character of the Plan which is believed to be universally desired and must be given the fullest support and assistance. D-Day in Delhi is not intended to be a day for rejoicing. But at least by the gracious acceptance of the Finance Minister's proposals there will be shown a measure of calm determination that India proposes to go through the decisions on the second Five-Year Plan with all the vigour of a people aroused to the rigours of an exacting but glorious destiny.

It is quite foolish to grouse and to grumble about additional taxation at this hour. For one thing, the Government of India has made itself curiously insensitive to cries of distress from those who with great patriotism have tried in the last year to serve it and the country on reduced allowances and even more reduced prospects of reward. Gratitude is not to be expected by civil servants from this hard employer. Nor can the private sector—on the wrong side of the ideological fence—expect greater consideration. Secondly, there really is no justification for a general fuss, though there may be marginal cases which cry out for treatment. The need for additional taxation is self-evident, like the fundamental truths contained in many high-sounding documents about the rights of men. All that patriots and men of goodwill can ask is that new taxation should be related to the overwhelming need for production. Let taxation assist the Plan, not hinder it. If that is achieved, no one should grudge the price that is demanded.

The Life Insurance Corporation Bill

THE Life Insurance Corporation Bill introduced in the Lok Sabha last week has reduced some of the uncertainty which has prevailed since Government announced its decision to nationalise life insurance through an Ordinance. The Bill confirms the expectation that a Corporation would be regarded as the most suitable agency for the transaction of life insurance business in the future. But the Corporation now proposed will not be an autonomous body, though there was a strong case for making it so. According to Clause 18 of the Bill the Corporation is under an obligation to follow all directions on matters of policy issued by the Central Government so that, in effect, complete control will be ensured over its work. Moreover, under the provisions of Clause 28 of the Bill, the sums assured by all policies, issued or taken over by the Corporation, including bonuses, are guaranteed as to payments by the Central Government, so that the Government has a *prima facie* case for its exercising detailed control and supervision over the functioning of the Corporation.

No substantial issue of principle arises on the question of the provision of a sum of Rs. 5 crores as the capital of the Corporation or over the provisions regarding its constitution, membership and organisation. There are a few significant phrases in the Bill, which are apparently intended to provide assurances about the manner and the exercise of the Corporation's powers. It has laid down as a sort of a directive principle that life insurance business should be "developed to the best advantage" and that in the discharge of its functions the Corporation should act "so far as may be, on business principles". Contrary to earlier expectations, the Central Government's postal insurance business has been kept out of the purview of the Corporation's business, though the insurance schemes of several State Governments will be merged. The reasons for this differential treatment are not clear.

The provisions of this Bill do not, however, indicate even in a general way the principles and the procedure which the Corporation will adopt for the development of insurance business. Much has been left to rules to be framed by the Central Government. On the most vital question of the investment of the funds of the Corporation, there is no assurance of the continuance of the *status quo*. We have to rely for the present only on the Finance Minister's laconic statement to the effect that there was no reason why the private sector should be deprived of the funds hitherto available to it. On the wide range of other matters hitherto regulated by the Insurance Act of 1938, the changes that will be necessary are unknown. It has been obvious that the Act as a whole will be inconsistent with the needs of nationalised insurance. Clause 34 of the Bill enables the Government to avoid the difficulty of devising immediately a whole set of new procedures by merely laying down that all or any of the provisions of the Insurance Act, 1938, may be applied to the Corporation through Government notification, with such modification as the Government may deem fit to make and that the rest of the Act will remain inapplicable to life insurance business. Thus notifications would override the provisions of a law which has not been either formally repealed or amended.

A curious anomaly is the provision for audit: Clause 22 provides that the affairs of the Corporation should be audited by auditors qualified under the Company Law excluding thereby the jurisdiction of the Auditor-General which has been gradually extended to the work of other Corporations in the public sector. A second, is the assumption of power to reduce the amounts of insurance under contracts of life insurance in cases where the financial condition of the companies taken over by the Corporation is considered to justify such a step. It involves that policyholders who did business with unsound companies can be rightly penalised, though it cannot be proved in every case that the companies concerned will not be able to meet their obligations under such contracts as and when they arise if they had not been taken over.

The rights of third parties are also liable to be affected. Under the powers sought in Clause 13 of the Bill, it is possible to reopen any transaction made during the last two years by the life insurance companies in which there is a suspicion that payments, sale or acquisition or other agreements have been made for excessive or inadequate consideration. There is no rationale behind the time limit of two years; there was no policy declaration for the nationalisation of life insurance two years ago in order to justify reopening of transactions made in order to defeat public policy. In any case, the possibility of writing into the nationalisation measure powers of this kind to defeat deliberate evasions of law reinforces the contention that an Ordinance was hardly necessary to announce a decision of such far-reaching importance.

Last, but not the least important, is the question of compensation on which a very elaborate and complicated set of principles has been devised. The interests affected by these provisions will have time to make their views heard, but in a situation in which compensation has come to be regarded as the least important criterion of social policy it is futile to discuss it at length. To the large number of employees engaged in the business till now the same remuneration and rights to pension and gratuity are guaranteed. But this is coupled with a provision that these terms may be altered or reduced in the interest of the Corporation or policy holders in such manner as the Corporation thinks fit and that employment might be terminated on payment of three months' remuneration. These are obviously designed against posts which the Finance Minister considered as sinecures but a state of uncertainty will prevail among all employees because it is difficult to specify the persons who are surplus when a monopoly takes the place of competitive business. The law cannot be specific on this matter and the process of staff rationalisation is bound to be a long and difficult one.

The Bill, therefore, provides no answers to the major questions about the future of insurance. It is a tentative draft and, perhaps, a Joint Select Committee may be able to go to work on this and produce more detailed indications of the Corporation's structure and working. Its future strength lies in its monopolistic position within the country and the use of this position to the best advantage may need other supporting measures like compulsory insurance. The Corporation will virtually be a department of the Government.

Railway Finances

ON the eve of the second Five-Year Plan, it is reassuring to find that railway finances are gaining an added element of buoyancy. The impact of the increasing tempo in the execution of the current Plan is clearly seen in the financial operations of the railways in the last two years. The peaks achieved in 1954-55 have been exceeded by substantial margins in the current year. This was primarily due to an increase of about 8 million tons in goods traffic above 1954-55 which is by any criterion a striking performance. Passenger traffic has also increased by 7.5 per cent in terms of passenger miles and there have been similar increases in other coaching traffic. The net effect of this higher traffic activity has been to push up gross receipts from Rs. 287 crores in 1954-55 to Rs. 314 crores in the revised estimates for 1955-56. Ordinary working expenses have shown an increase of Rs. 8 crores which is quite in consonance with the higher volume of traffic. The net surplus which was available for distribution between the Development Fund and the Revenue Reserve Fund has remained practically at the same level. The appropriation to the Depreciation Reserve Fund for 1956-57 has been stepped up to Rs. 45 crores—an excess of Rs. 10 crores above the provision laid down in the current railway convention, involving a modification of the convention for the period of the second Five-Year Plan. Its main justification lies in the necessity of replenishing the Depreciation Fund which will be called upon to make sizable contributions to the development needs of the second Five-Year Plan.

At the close of the first Plan, the railways can certainly take credit for their achievement which has exceeded the assigned targets by appreciable margins. Total expenditure on railway development will exceed the revised allocation of Rs. 400 crores by 8 per cent. About 55 per cent of the outlay has been devoted to expenditure on rolling stock and in physical terms there have been improvements mainly on account of replacement and additions of the order of 1,600 locomotives, 4,800 passenger coaches and 61,800 goods wagons. A modest programme of extension of track has been implemented with the construction of 380 miles of new lines and 430 miles of restoration of dismantled lines. The primary task of railway expansion in the first Plan which was to eliminate the mounting backlog of rehabilitation has been very nearly accomplished. The railways are now entering a positive phase of development.

The magnitude of the second Five-Year Plan has necessitated an ambitious programme of expansion of the railways. Nevertheless, the outlay of Rs. 1,125 crores which has been allocated for their development is patently short of the potential requirements. In physical terms there will be a shortfall of 30 per cent in the additional freight transport capacity required for the production targets in the Plan. The increase in passenger traffic may be met only half-way, offering virtually no relief in overcrowding. The implications of the problems involved in these shortfalls have been discussed in two special articles in this issue. Even within the reduced funds which have been earmarked for development, railways have been faced with a difficult

problem of finding the full amount of the resources. The obligation cast on the railways is to provide Rs. 375 crores out of their current revenues. Even after the enhanced allocation of Rs. 10 crores per annum to the Depreciation Fund, the shortfall in railway resources will be of the order of Rs. 50 crores at the existing rates of fares and freight charges.

This prospect invests railway budgets in the immediate future with a new character. In essence, they must be treated as development budgets. In the light of this change in the liabilities of railway finances, it was unavoidable that the Railway Minister should take recourse to new ways to find additional finance. The surcharge of one anna in the rupee proposed to be levied at a flat rate on all categories of freight primarily accounts for the increase in the gross traffic receipts in the budget estimates for 1956-57 which are placed at Rs. 345 crores. There is undoubtedly, in this increase, the yield due to the progressive increase in the volume of freight as well as passenger traffic. Working expenses are expected to rise by Rs. 10 crores to Rs. 224 crores. The effect of the adjustment in freight rates and of anticipated increase in traffic is reflected in the net surplus which will amount to Rs. 23 crores as against Rs. 9.5 crores in the current year.

In a situation in which priority for the development of railway transport is essential and the gap is due to limited resources, it becomes inevitable that the railways should earn more both on the goods and passenger traffic. Considering it inopportune at this stage to propose increases in passenger fares, the Minister for Railways has chosen the less unpopular course of levying a surcharge of one anna in the rupee in all freight traffic to fetch an additional yield of Rs. 11.6 crores. A flat rate of this nature may produce anomalous situations in cases where the traffic cannot bear the surcharge and it will be left to the Freight Structure Enquiry Committee to rectify the hardships in particular cases. Over the rest of the field, however, the justification is clear. For the users of transport the cost has certainly been increased; but faced with the alternatives of costly transport and the complete or partial lack of it, there is no doubt as to what the choice should be.

Apart from the fact that additional outlay will very likely be placed at the disposal of the railways in the course of the subsequent stages of the Plan, there is ground for optimism that the actual gap in physical resources will not be allowed to remain as large as it appears at the present time. If railways have been enabled to carry 15 per cent more freight traffic, in terms of the tonnage lifted, in the last two years of the current Plan, an important explanation of this progress in capacity is to be sought in the higher operational efficiency. The Efficiency Bureau has already got into the stride and detentions of stock in the workshops, marshalling yards, break-of-gauges and terminals are being appreciably reduced. If the planned physical resources are procured according to schedule, there is no reason why higher efficiency performance should not reduce the shortfall in capacity by a substantial margin.

CANADA'S ALUMINIUM LABORATORIES

LP BUILD
HIRAKUD SMELTER

AT HIRAKUD, ORISSA, Indian Aluminium Company will soon put up a 10,000 ton capacity smelter. Designed and constructed with the assistance of the Company's Canadian associates, this smelter will triple current production capacity. The know-how and world-wide experience of the Canadian consultants, who spend over Rs. 2 crores annually on aluminium research and development, will thus serve one of India's vital industries.

This aluminium smelter will be India's biggest and will call for a large capital investment to be financed partially by a proposed issue of new capital by the Company.

**Indian Aluminium
Company Limited**

A Canadian-Indian Enterprise

It's a BIG job.... running an oilfield

Many special kinds of skill are required to keep India supplied with oil, from the study of fossils to the operation of complicated plant in refineries—and not excluding the care of elephants.

Consider the complexity of the Assam Oil Company's operations at Digboi, in north-east India. Here, at India's first and hitherto only oilfield, nearly a thousand wells have been drilled into the earth's rocks—a total of over 300 miles of hole. More than 600 of these wells still yield oil regularly, modern production techniques ensuring that the maximum amount of crude is recovered from the field. Science and engineering skills guide every phase of the company's work, nowhere less than in Digboi refinery which in a single day supplies the Indian market with over 250,000 gallons of high-quality petroleum products. In all branches of this full-scale industry the Assam Oil Company employs nearly 9,000 persons, while many hundreds more are engaged in serving the consumer.

Yes, the day-to-day running of the oil industry is a big job. To keep it running the Assam Oil Company has to spend crores of rupees just in "looking ahead." For no oilfield lasts for ever, and in order that India's vital flow of oil may be supplied to an increasing extent from India's own resources, the company is constantly exploring for new sources of petroleum.

ASSAM OIL COMPANY

does it all

PROSPECTING · DRILLING · PRODUCING · REFINING

THE WEEK'S NOTES

ICONOCLASM AFTER IDOLATRY IN MOSCOW

THE TWENTIETH COMMUNIST PARTY CONGRESS in Moscow has provided many headlines in the last few days but hardly much of unexpected news. It has long been clear that the idolatry of Stalin ended with him; it has taken nearly three years for the iconoclastic zeal to come out into the open in the form of a public repudiation of Stalinist policies by Mr. Mikoyan. It is not known whether the Communist leadership in the Soviet Union realises the implications of this confession of error. If Stalin's external policies were wrong, then obviously those who opposed and prepared to defend themselves against them were right. They have reason to be distrustful of a system which permits the errors to end only with the natural end of a dictator without any other check. So long as that system continues, change of men alone will not end errors; another set of errors may be substituted, again without hope of rectification.

To what extents is the "collective leadership" a reality? Considering the ascendancy of Mr. Khrushchev, it looks as though "the cult of personality", which has been declared to have ended with the abolition of some of its formal symbols, will be revived in a different form, for the simple reason that it is inevitable under a system which has no place for a real clash of personalities. Even so, some of the attitudes to the rest of the world have undergone a change, though the belief in the ultimate triumph of Communism all over the world is strongly held, making much of the talk of co-existence unreal. Mr. Mao Tse-tung's message to the Twentieth Congress contains a significant reference to the progress made since the earlier Congress held under Stalin, meaning perhaps that the new line is more acceptable to China than the Stalinist policies.

BRITAIN'S UNENDING WAR

MR. HAROLD MACMILLAN has begun his career as Chancellor of the Exchequer with a series of measures which cannot exactly add to his or his party's popularity. The British public was long taught to believe that such crises were endemic under Labour rule and the initial prosperity of Tory government seemed to justify this belief. The Bank Rate has been raised to 5.5 per cent and the Chancellor has followed it up with a series of fiscal measures. Capital expenditure by the Government and nationalised industries in 1956 will be down by £70 million. Reduction in bread and milk subsidies amounting to £18 and 20 million respectively, will result in increases in price of one penny per loaf of bread and half-penny a pint of milk. Increased down-payments for hire purchase with extension of control to a wide range of goods and the suspension of the investment allowance for industry, with certain exceptions, add to this formidable list of crisis measures. The Chancellor has also asked the Capital Issues Committee to maintain a "vigorously critical attitude" towards all applications.

Coming after the "credit squeeze" applied earlier, which is estimated to have accounted for £400 million of demand, these steps should enable the Chancellor to restrain the demands for goods for both investment and consumption purposes, which had been increasing at a faster rate than the national output. One consequence of this is that the UK has lost gold in the last few months and the position of the pound-sterling has been threatened. Import restrictions might have staved off the payments crisis, but then the demands on internal supplies would have been all the greater. The present measures, on the other hand, will mean no contraction of trade—on the other hand,

exports are expected to go up—and a halt to price and cost rises. The local authorities, responsible for a quarter of the capital expenditure of the country, are also to face restrictions. The cumulative effect of all these measures is expected to be a falling off of £700 million in demands for goods and services.

Already the position of the pound-sterling on the foreign exchange markets has shown improvement, but this was almost exclusively influenced by the change in the Bank Rate. Some of the other measures, the results of which will be seen in the long range, have not received unanimous approbation. The Labour Party has given notice of a motion of censure and may succeed in winning back some of the ground lost, especially under the new leadership of Mr. Gaitskell which may be regarded as more competent and progressive without being doctrinaire. But it may not be sufficient for Labour to return to power as much may happen between now and an election.

INDIA AND IRAN

THE WARM and friendly reception accorded to the Shah and Queen of Iran should remove the fear that India must be necessarily unfriendly to other countries who are members of military pacts to which she is opposed. India's relations with Iran date far back into history, and though invaders from that country were troublesome, they left cultural influences which have been cherished and have compensated for the results of conquest. Persian literary and cultural influences persist and will endure for a long time. The young Shah's visit will further cement these friendly ties, despite the differences in the approach to some of the problems of international relations.

The Shah has been among the progressive and liberal-minded rulers in the world, thwarted by a conservative nobility on the one hand and by extremists on the other. His efforts in the last few years at introducing reforms in Iran for the promotion of democracy and the people's welfare have been well known. In spite of the vast oil riches, Iran is still largely a country of poor peasants. The country's middle class, full of xenophobia, is scornful of all foreign ideas, while the upper strata of society often imitate Western manners without imbibing the democratic spirit. In the post-war years, the country has had to liberate the province of Azerbaijan from Soviet occupation and solve the complicated and long-drawn-out oil problem. With the shadow of her great northern neighbour constantly threatening her, it has fallen to the Shah's lot to save the country from extremists of both sides and to lay the foundations of economic progress and democratic government. During his stay in this country the Shah may be able to see what can be done to tackle similar economic problems though it may not be easy to transplant all the methods in the peculiar conditions of Iran.

ELECTORAL LAW REFORM

THE DEBATE in the Lok Sabha on the Representation of the People (Amendment) Bill as reported in the press seems to have been rather perfunctory, even if it is conceded that many of the provisions were not too controversial. It is difficult to understand why there should have been a prolonged debate on the quality of electoral officers when the last election did not disclose serious errors or partiality of the men appointed to these posts. Similarly, the discussion on the qualifying date for enrolment as a voter was allowed to drag on, when it was obvious that whatever the date it will exclude a large number of people who will complete

21 by election day. The choice of March 1 for this purpose in the Bill was guided by the need to allow sufficient time for enrolment work to be completed and, in any case, those thus excluded would only be a small percentage of those who do not exercise their vote.

Among the clauses which were approved without discussion was one concerning the submission of return of election expenses. Among the minutes of dissent, there were objections to the proposal to exclude recognised parties from the ceiling on expenditure, for this would have, in effect, amounted to the exemption of all party candidates from the limitation on expenses. This clause places independent candidates at a great disadvantage. Already, independents have to face innumerable organisational and other obstacles in contesting an election. If organised parties thus join together to keep out independents, who can speak freely without the compulsions of doctrine which tends to make for uniformity in public life, it will be a loss to our democratic process. This and other points which were not raised in the Lower House should receive consideration at the hands of the "elders" when the Bill comes before the Rajya Sabha.

PERSONNEL FOR PUBLIC SECTOR

THE LOK SABHA the other day rejected a private members's motion for the setting up of an Industrial Service Commission to recruit staff for undertakings in the public sector. Mr. B. N. Datar, in opposing the resolution, urged that such a Commission could only have jurisdiction over departmentally-run industries, and that those managed by independent corporations had their own arrangements for recruiting staff. Whatever be the views on the need for a separate Commission for the purpose, there should be little difference of opinion on the need for an altogether different basis for recruiting managers and assistants for industrial ventures from that adopted for recruitment to the civil service. This is not to say that firms in the public sector are not now being run as well as they can be or that the entire blame for whatever deficiencies there are are due to the personnel. But industrial undertakings have to be run on business lines, and Government servants, accustomed to a different set of problems and beset with routine, will find it difficult to adapt themselves to new procedures.

Industries have to be run by men who can give and take quick decisions. While it is true, as one member said during the debate, that the setting up of a separate Commission cannot solve the problem, that can be one way of dealing with it. The Union Public Service Commission does not inspire the belief that recruitment to the industrial services will be effectively tackled by a separate Commission. There is far too much faith in the potency of Commissions in providing solutions. The Deputy Minister for Production indicated that a separate cadre for managerial and technical personnel is likely to be created. Undoubtedly the best course will be to create such a cadre and recruit men for it entirely on an "open" basis, with or without the help of the UPSC, instead of transferring administrative and accounts personnel to managerial positions.

THE DEATH PENALTY

THE BRITISH HOUSE OF COMMONS bids fair to set an example on one of the vital human problem which has been tormenting the conscience of thinkers for a long time. In adopting a private member's resolution in a 'free vote' calling upon the Government to take steps for the abolition of capital punishment, the Commons was reversing its own decision of last year though

in 1948 it had voted for the suspension of the death penalty as an experimental measure for five years. Then the House of Lords rejected the proposal. But certain recent executions, as in the Evans case, where doubts arose subsequently about the guilt of the person sent to the gallows, have caused much rethinking, and the report of a committee of Conservative lawyers recommending a middle way brought the problem to the forefront. There is bound to be some hesitation in certain quarters about the wisdom of the step, but this only shows the complexity of the problem. In any case, the abolition accords with the principle of jurisprudence that it is better for a hundred culprits to go scot-free than that one innocent person should be punished.

Till now the common view has been that the greatest deterrent to a murderer is the possibility of the loss of his own life. This view was quite uninfluenced by the moralist argument that it was wrong to take away a human life even in return for a life. Only the realisation that a life might have been forfeited by an innocent person convicted of a crime he did not commit has caused the change in the Commons' vote. The abolition of the death penalty can only err on the side of safety, for an innocent person wrongly confined can still be redeemed and set at liberty. It is unlikely that the abolition will act as an inducement to the commission of more murders, for the motives of murderers are quite unconnected with the probability of being punished and the nature of the punishment. Most of the West European countries, with the notable exception of France, have done away with the death penalty and their experience also confirms this conclusion. If anything, the prospect of a long period of jail will probably discourage would-be murderers even more than the chance of a quick hanging.

COASTAL SHIPPING RATES

RISING OPERATING expenses and higher incidence of replacement costs are producing a decisive effect on rates for the transport of shipping cargo everywhere. The situation has been aggravated by unusual delays in several ports. The pressure of these factors is seen in the increase of freight rates overseas introduced a year ago. The increase has ranged around 10 per cent. In India, the coastal shipping trade has felt the impact of higher costs which has been accentuated by the fact that go-slow and other interruptions in work at the docks have reduced the cargo-carrying capacity of vessels by about 20 per cent. The Coastal Conference which intended to put up rates from May last had to postpone its decision due to a directive from the Government to await the report of the Rail-Sea Co-ordination Committee. An interim increase of 5 per cent, however, was allowed effective from mid-October 1955 as against the increase of 10 per cent claimed by the Conference. This issue is still pending decision. Mr. Dharamsey Khatau has analysed the factors involved in costs in his presidential speech at this week's annual meeting of the Scindia Steam Navigation Company. His conclusion is that on a modest reckoning operating costs are rising by 2.5 per cent per year. If rates are to be fixed on current levels and they are to remain in force for a period of four years, an allowance of at least 5 per cent must be made above existing costs. A minimum increase of 15 per cent is essential on this basis. It compares with an increase of 28 per cent on the basis of the Tariff Commission's general formula of 10 per cent on the gross block which would be still higher in the case of new fleets involving a costly element of replacement. A prompt decision on this question is imperative as considerable delay has already been caused.

LET EVERY FAMILY SAVE *One anna more* PER DAY

If every Indian family decides to save even so small a sum as one anna more per day it will all add up to Rs. 13.5 crores in Small Savings per month and Rs. 162 crores a year. Small Savings by millions will help finance all our ambitious development programmes. Remember that National Savings Certificates and National Plan Certificates can be purchased for as small a sum as Rs. 5/-.

A Window on the World

WORLD TRADE: THE SOVIET CHALLENGE

By
ODYSSEUS

SENSATIONAL ARTICLES are not expected in the august pages of "Lloyds Bank Review". Learned articles, important to students of higher economics: yes. But sensational: no. Still, when the Review does publish what strikes me as a challenging piece, one does not expect it to be universally ignored. Yet I have seen no discussion in the Indian, British, or American press of Mr. Michael Hoffman's article, "The Present System of World Trade", published in the current issue, in which he points out (1) the fact that the existing system of international trade could be disrupted without undue difficulty by the USSR and the Communist bloc of nations with the gravest effects on (a) the economic and political relations of the free world's principal trading countries (which, don't forget, include India), (b) the standards of living of millions the world over, (2) that it is inherent in Communist doctrine that such an attempt should sooner or later be made, and in which he (3) poses the question whether the USSR's trade offers to India are the first sighting shots towards such a disruption.

If these points are not sensational then I'm losing my grip.

Needless to say Mr. Hoffman is not sensational in the sense that his object is not, by pandering to those who enjoy having their hair made to stand on end, to push the "Lloyds Bank Review" into the million sale bracket with the "Daily Mirror". No, he states the facts quietly and reaches his conclusions by solid argument.

Mr. Hoffman begins by analysing the existing system of the international exchange of goods and services between the countries of the free world. Immediately after World War II, international trade was everywhere in chaos, and the Bretton Woods conference, leading to the General Agreement on Tariffs and Trade (GATT) attempted to set up ideal objectives. In the meantime recourse was had to a variety of expedients in order to get goods moving across frontiers once more. Mr. Hoffman points out that if, on the one hand, the ideal objectives have not been attained, we do, on the other, have in being not a collection of expedients but a system. The evidence for this is that it has become increasingly difficult to change by international agreement any of the system's main features, not because the free nations are less co-operative but because repeated efforts to reconstruct have led officials to conclude that, given existing national interests, trade, and monetary developments, the system in being works with the least friction and is probably the best for the moment that can be hoped for. At any rate it should be improved by trimming and pruning rather than by major uprootings. Progress towards the ideals of currency convertibility and a stable non-discriminatory system of trade protection has become dependent on the patient prodding of discreet international secretariats.

It is not, however, until one reflects over the existing system that one realises how easily it could be upset by a selfish or hostile power. It is only the unprecedented stability of the tariff schedules of the major countries since the 1947 Geneva conference that

has led people to overlook that in fact it is always possible for a serious breakdown to occur at one of the GATT conferences if the domestic political situation of one of the participants rendered intransigence on some important tariff change inevitable. There are more than 60,000 customs duties covered by GATT's tariff schedules and these 60,000 are a major part of the framework of the world trade system. Any serious breakaway from GATT by one or more major countries could precipitate dissolution of the whole existing pattern of world trade, which, of course, includes our own.

FREE WORLD'S SUCCESSES AND FAILURES

The existing system approaches the Bretton Woods' and GATT objectives in some respects and falls short in others. First, the similarities: in addition to the fixation of tariff duties largely by inter-governmental agreement and (as already said) in addition to their stability as compared with other recent periods of history, we have now predominantly a system of stable exchange rates. Then, again, increasingly since 1952 practical experience has outweighed doctrinaire considerations in the chief countries and led them to try to cope with any deteriorating external balance by reducing the pressure of domestic demand rather than by clamping down import restrictions. Even Australia, according to report, is considering the adoption of measures to avoid periodical tightening of imports. This would be a change indeed in Australian thinking and illustrates once more the basic premise on which this column is conducted, namely, that if, when the whole fashion of contemporary opinion is against you, you continue to uphold what you consider to be the logical view, you need not despair that reason will prevail in the end. Some of the older hands will remember the campaign entitled "This Unsuccessful Age" conducted here from January 12 to April 11, 1952, in which we exposed the deceptions of a controlled economy, particularly as they affect international trade. In the final article, "Australia Demonstrates This Unsuccessful Age", I outlined reasons for suggesting that Australia's decision to overcome by import restrictions an adverse trade balance, caused by internal inflation, would worsen her problems. I received some satirical Australian comments at the time. Now it seems they are toying with the possibility that inflation rather than imports should be restricted!

Mr. Hoffman goes on to point out that the existing system also approaches the Bretton Woods' objective in that private trade has taken back a great part of the sphere lost to state trading during the war, even in food products. On the other hand, one of the most important, and overlooked, weaknesses of the existing free system is that powerful industrial and trading nations are outside it, incorporated in the Communist world empire. The International Monetary Agreement allowed for the admission of the USSR, then the only Communist state, but today the fact is that the world is not only divided between two blocs of political power but also between two parallel and competing

systems of international trade operating radically different rules.

USA'S ROLE IN INTERNATIONAL TRADE

If the existing free system has failed to achieve convertibility and to abolish quantitative restrictions, it does nevertheless work. But one of the most frequently forgotten conditions of its working is the annual injection into its stream of world trade of four to five billion dollars by US government payments. There is no sign whatsoever that this will cease but it is important that it should be remembered, both inside and outside the USA, that without these US government payments the free system would not work, and India would be selling her jute or tea with difficulty and buying scarcely any capital goods. Mr. Hoffman suggests that system will not work without the annual dollar shot in the arm because of the decline in the liquidity of the system as a whole: whereas the value of world trade is nearly four times immediate pre-war, the amount of monetary gold has risen by less than half and the total of gold and foreign exchange available as "reserves" has just a little more than doubled.

It is characteristic of the free system that international trade in agricultural products encounters obstacles from which manufactures and non-agricultural raw materials are free. This is because of the increasing protection given to farmers in highly industrialised countries. The combination of high domestic prices and "burdensome surpluses", once peculiar to the USA, has spread round the world. These agricultural surpluses have led to agreements to reduce food import restrictions and "to consult" when danger threatens, but Mr. Hoffman concedes that no real check has been found for agricultural economic nationalism. The trend is towards more restrictions on agricultural products in international trade.

The free system does, however, enable world trade to expand and it does provide growing freedom for those who conduct it to profit from the diversity of

resources among nations and thus to increase the world's wealth by their better use.

But any system depends on the co-operation of its participants. What could happen to the free world's trade if the economic nationalism of some participant or the ideological hostility of some country began to undermine it?

The system's comparatively small monetary reserves lay it open to disruption from national inflations. Few countries today can stand a loss of reserves of, say, 5 per cent of their annual foreign trade turnover for more than a few months. It is probably impossible for any major trading nation (including the USA) to conform, even if it wished, to the neo-classical gold standard rules under which the effect on prices and incomes of monetary changes in reserves adjusts disturbances in international equilibrium. Today no country can afford to get out of line. If it does, the tendency is to break from the free system by intensifying quantitative, exchange, and other controls. To grapple with inflation has thus become of the first importance for all free countries, not only for the sake of their domestic prosperity but of the very existence of the international exchange of goods.

But, and now we come to Mr. Hoffman's outstanding and "sensational" point, the open system of the free world is liable to attack from the closed system of the Communist world. State trading organisations capable of financing sustained losses, either as a seller or as a buyer, could easily wreck any free market.

I have used up my allotted space. I leave you therefore to mull over two questions: India's economy, as at present organised, depends for its prosperity on the prosperity of the free world's system of international trade. Would her progress towards a higher standard of living be hastened, substantially and permanently, by any economic policies, or bargains, which undermined the free system and strengthened the Communist system? Would India's political independence be strengthened by the dislocation of the free world's economy?

Economic Report from the U. S.

EMPLOYMENT ACT OF 1946

(BY GUY SIMS FITCH)

WASHINGTON, Feb. 21.—Few pieces of legislation win unanimous praise from all political parties and all segments of society, even when such laws have weathered the test of time. Yet leaders from business, labour, agriculture, the professions and government have joined in celebrating the tenth anniversary of the Employment Act of 1946. For this Act, as no other legislative measure had ever done, defines the relationship between the United States Government and the free American economy. In so doing, it has helped lay the foundations for those policies that have contributed to the growing and almost uninterrupted national prosperity of the past 10 years.

The Employment Act places upon the shoulders of government responsibility for creating conditions in which private economic activity can flourish and in which high levels of production, employment and purchasing power can be maintained. It established the three-man council of economic advisers to help the President draw up policies to foster these objectives, and to assist him in the preparation of a new state document—his annual economic report to Congress. This report details the condition of the economy in the past year, and proposes programmes to insure continuing economic growth and well being.

The Chairman of the council thus has become an influential figure in government policy circles. Holding this post under President Eisenhower is Dr. Arthur F. Burns, former research economist and college professor, and an outstanding authority on business cycles. Assisting him and his colleagues is a full-time staff of about 20 experts and a group of informal consultants drawn from business, the universities and other private organizations.

The Act also established the joint Congressional committee on the economic report. Drawn from both the Senate and the House of Representatives, and containing an equal number of Republican and Democratic party members, the committee studies the President's report, holds public hearing on it and then issues a report of its own as a basis for possible Congressional action. Now head of the committee is Senator Paul H. Douglas of Illinois, also a former college professor and a noted economist in his own right.

Clearly, non-partisanship is a keynote of this important legislation. It was introduced in Congress by Senator James E. Murry Democrat from Montana; one of its staunchest supporters was Senator Robert A. Taft, Ohio stalwart who in his lifetime won the title of "Mr. Republican". Not that the Act had clear sailing. It took 13 months of often heated debate before a workable form gained approval of Congressional leaders from both parties. But once that approval was won, the Act was adopted by an overwhelming margin in the House of Representatives and without a single dissent in the Senate.

How effective has the Act been? The record shows that national output of goods and services, adjusted for changes in the value of the dollar, has expanded 37 per cent since 1946 to the amazing 1955 total of \$387,000 million. Employment has increased from 55 millions to nearly 65 millions; unemployment in any one year has not exceeded 5.5 per cent, and is now less than 4 per cent, of the civilian labour force. Purchasing power—income of Americans after taxes, again adjusted

for dollar changes—has risen 25 per cent to a 1955 total of \$269,200 million.

To what extent this remarkable record is attributable to the Employment Act may be a matter of debate. There are those who claim that the Act has yet to be tested as a depression preventative. The fact remains, however, that both Republican and Democratic Administrations have consciously applied its principles as they have adopted fiscal and monetary policies that have bolstered the vitality of the American free-enterprise system while overcoming serious deflationary and inflationary forces.

JARDINE HENDERSON, LIMITED

NOTICE is hereby given that an Interim Dividend at the rate of 2½ per cent, less Indian Income-tax thereon, will be paid to the Registered holders as on the 5th April, 1956, of the 50,000 Cumulative Preference Shares of Rs. 100 each in the Company in respect of the year ending 31st March, 1956.

The Share Transfer Books of the Preference Shares will be closed from the 2nd April, 1956, to the 5th April, 1956, both days inclusive.

LIFE INSURANCE

LIFE BLOOD OF NATIONAL PROGRESS

By the Life Insurance (Emergency Provisions) Ordinance, 1956, promulgated by the President on 19th January, 1956, the Management and Control of Life Insurance business in India, including the foreign business of Indian Insurers and the Indian business of Foreign Insurers vest, with immediate effect, in the Central Government.

This is the first step towards complete Nationalisation of Life Insurance business—a step never before attempted anywhere in the world on such a gigantic scale—and opens a new chapter in the history of Indian Insurance.

How does the new set-up affect YOU?

EXISTING POLICYHOLDERS

If you are insured with any Insurer in India, the terms, conditions, benefits and privileges attaching to your Policies remain exactly as they are and claims will be settled as and when they arise, with absolutely no delay or trouble. What is more, Government Control will ensure prompt and efficient service to which you are entitled as a Policyholder.

Keep your Policies in force. Do not lapse them or make them paid-up. Continue to pay your premiums in the normal manner.

LIFE INSURANCE AGENTS

If you are a Life Insurance Agent your appointment will continue to remain in force.

Armed with the knowledge that the Policies you now sell have the entire backing of Government, go ahead and spread the glorious message of life insurance to as large a section of the public as possible, confident in the belief that thereby you will not only be increasing your income but, at the same time, will also be directly serving the country towards planned economic development.

INSURING PUBLIC

Nationalisation of Life Insurance is primarily aimed at widening and deepening of all possible channels of public savings and is an important step towards mobilising these savings more effectively than heretofore to finance the National Plan.

Every rupee you invest in Life Insurance to-day will not only secure the future financial security of your family but also ensure greater prosperity for more and more people.

The Policies you now effect will have the full backing of the Government and be subject to liberal Policy conditions, uniform throughout India. The rates of premiums will also be uniform as indicated below:

REDUCTION OF PREMIUM

The Premium applicable to Life Insurance contracts completed on and after the 20th January, 1956 will be Re. 1 per Rs. 1,000 Sum Assured per annum less than the rates of premium of the **ORIENTAL GOVERNMENT SECURITY LIFE ASSURANCE CO., LTD.**, for all terms and ages and for all schemes of Insurance, provided that where the annual premium is below Rs. 20 per Rs. 1,000 sum assured the reduction will be 5% of the premium. This reduction is not applicable to Single Premium Policies. Only those Schemes of Insurance which appear in the Tables of Rates of the **ORIENTAL** in force prior to 20th January, 1956, will be offered.

NATIONALISATION

Offers to you

**ABSOLUTE SECURITY — BETTER POLICY CONDITIONS — CHEAPER RATES —
DEPENDABLE SERVICE — ECONOMIC MANAGEMENT—FAVOURABLE RETURNS**

So take out a Policy NOW and become eligible to reap the benefits of Nationalised Insurance.

INSERTED BY COMPANIES TRANSACTING LIFE INSURANCE BUSINESS IN INDIA

WORLDGRAM

AGRICULTURE

Crops Without Soil: The immense advances made in agricultural science can meet the threat of starvation of the growing population, according to research reports issued by the UNESCO. Growing crops without soil is one way in which the world is trying to cope with the problem of feeding its mounting population. Soil-less cultivation, or hydroponics, is one of the most promising of the new methods of food production, and is done by feeding growing plants on chemical solutions. This way of raising food crops is being used successfully in many parts of the world today to grow rice, potatoes, corn, tomatoes, peas, lettuce, French beans and other vegetables. By divorcing food production from the soil, countries lacking farmlands can still produce all the crops they need to nourish their people. Excellent crops can be grown without soil, according to J. Sholto Douglas, a British expert on soilless cultivation, at low cost and with a minimum of trouble in places where conventional methods of agriculture are impossible. Crop can be raised in the absence of soil simply by giving them in artificial form the food which they usually draw from the earth through their roots.

Sore Teats: Sore teats are common in cows and buffaloes. These are caused by the milker squeezing the teats too tightly or over-stretching them. Wet milking and prolonged stripping also results in sore teats. Similarly, vigorous sucking or biting by the calf may cause the injury. Faulty construction of floor may also result in sore teats. When teats are so affected they get swollen, chopped and painful. Milking, therefore, becomes difficult. The first duty of the cattle owner is to remove or check the cause. The animal should be kept in a clean dry place. At milking time vaseline should be thinly smeared on the teats. After milking, the teats should be first cleaned with warm water containing potassium permanganate (one part in a thousand) or a teaspoonful of common salt. After this, the teats should be dried with a clean, soft cloth and some antiseptic ointment like sulphanilamide (one in eight) or boric or zinc ointment applied.

INDUSTRY

Big Coal Shortage in Western Europe: Western Europe will need 6½ million tons more of imported coal this year than in 1955. Total requirements from outside the six nations of the European Coal and Steel Pool are estimated at 29.3 million tons, of which 24.4 million tons are to be bought in the U.S. Coal production in the Pool was 21,625,000 tons, or 1 million tons more in January than the 1955 average. The greatest increase was in Germany, which produced 11.6 million tons, compared with not quite 11.3 million tons in December.

High Level of U.K. Steel Output: Steel production in the UK in January established a new record for that month. The annual rate of output was 21.07 million tons, compared with a rate of 19.79 million tons in January 1955, and the record rate of 21.25 million tons reached in November last. But there are few signs that the exceptionally high level of demand for steel is slackening. The recent cutbacks in motor-car output do not yet seem to have resulted in any requests to steel companies to postpone deliveries of finished steel. Most steelworks have at least six months' orders on hand.

Lisatorb—Absorbent for Carbon Dioxide: When it is desired to penetrate into atmospheres which are not

respirable either on the score of oxygen shortage or of the presence of poisonous or harmful gases, it becomes necessary to employ self-contained breathing apparatus in which oxygen is available or is generated and in which the carbon dioxide produced in breathing is absorbed. For the absorption of such carbon dioxide it is necessary to use suitable carbon dioxide absorbent. An absorbent (Lisatorb) suitable for use in respiratory protective devices and possessing the requisite properties, has been developed at the Fuel Research Institute, Jeal-gora. Practical performance tests of 'Lisatorb' prepared by the Institute, undertaken by the Mines Rescue Stations, Jharia, have established that its performance is satisfactory and comparable to standard products of imported origin.

Establishment of Netherlands-American Drilling Company: Two American industrialists and a Netherlands private individual have established an International Drilling Company at the Hague. The object of the Company is to carry out projects connected with the production of oils, gases, all sorts of minerals and other base materials in the whole world, except in the United States or North America and parts of her realm and possessions. The authorized capital amounts to Fls. 2.01 millions, Fls. 508,100 of which has been paid up.

Atomic Power for Aircraft: Rolls-Royce has announced that it is working on the development of atomic power units for aircraft. Research work on light-weight reactors has, in fact, been going on for the past 18 months. It is probable that atom-powered aircraft will employ the jet propulsion system in one form or another. But whereas the efflux temperature of a conventional turbojet may reach 1300-1500°F in an atomic engine, it may reach as much as 4000°F in an atomic engine. Consequently, the development of metals which boil only at very high temperature is of prime importance. Atomic-powered rocket engines would be less complicated. The coolant would be pumped through the reactor and out of the tailpipe, the range of the aircraft or missile being determined by the amount of coolant carried. Another problem associated with atomic aircraft engines is the shielding of the crew and passengers from radio-activity emitted by the reactor. This necessitates a metal screen of great thickness. If lead were used—this being one of the most effective metals—a thickness of 2 ft. would be necessary thus incurring a tremendous weight penalty.

Eastern Railway's New Loading Record: The Eastern Railway set up a new goods loading record in January 1956, registering an eleven per cent increase over the performance during the same month last year. The Railway loaded, on an average, 4,559 wagons with coal and other goods daily, as against 4,357 wagons loaded daily during November 1955. The November loading figure was itself the previous highest daily loading record on the Railways.

TRADE

UK Exports to Australia: Britain continued to sell more goods to Australia than she bought from her in the first half of the 1955-56 financial year, despite Australian import restrictions imposed in April and October last year. Trade figures released in Canberra show that in the six months to December 31, British exports totalled £142,502,400, compared with £140,275,300 in corresponding six months last year. In the same period Australian exports fell from £114,128,000 to £106,680,000.

UK-Polish Trade Agreement: Poland and Britain have signed a protocol regulating trade between the two countries in 1956, according to the Soviet News Agency, Tass. Poland will supply Britain with coal, machines, chemical goods, timber, textiles, glass china-ware, rubber footwear, bacon and other goods. Britain will export to Poland wool, rubber, non-ferrous metals, chemical goods, ship equipment, pharmaceutical goods and a number of other commodities.

Aluminium Goods Export: The Government of India has decided to licence freely for export semi-manufactures of aluminium such as strips, rods, discs and wires to all permissible destinations, says a notification issued on February 16 by the Joint Chief Controller of Exports, Bombay.

UK's January Exports Up on Last Year's Average: The value of Britain's exports in January this year was £258,000,000. This was one per cent less than the monthly average for the fourth quarter of 1955, but 6½ per cent above the average for 1955 as a whole. Imports amounted to £346,300,000—3½ per cent more than the average for the fourth quarter of 1955, and seven per cent above the average for 1955 as a whole. Re-exports increased sharply to £14,200,000—£4,300,000 more than the monthly rate in 1955. The excess of imports (valued c.i.f.) over exports and re-exports (valued f.o.b.) was £74,200,000 in January—£12,100,000 more than the average for the fourth quarter, and just over £2,000,000 more than the monthly average for 1955. U.K. exports to North America in January were valued at £26,100,000—15½ per cent less than the monthly average in the fourth quarter of 1955. Exports to the USA amounted £16,000,000—11 per cent below the monthly average for the last quarter of 1955, but 5 per cent above the monthly rate for the whole of 1955. Exports to Canada, which are usually seasonally low at this time, amounted to £10,100,000.

FINANCE

Customs and Excise Revenues in India During December, 1955: According to the returns received in the Department of Commercial Intelligence and Statistics, the total gross sea and land customs revenue collected in India during December 1955, amounted to Rs. 15.66 crores as compared with Rs. 16.36 crores in the corresponding month of the previous year. Of the total customs revenue collections, import duties accounted for Rs. 11.95 crores as against Rs. 11.41 crores, export duties for Rs. 3.35 crores as against Rs. 4.70 crores and land customs and miscellaneous for Rs. 33 lakhs as against Rs. 25 lakhs. The total gross collection of Union excise duties amounted to Rs. 13.08 crores as compared with Rs. 9.28 crores. During the 9 months, April to December 1955, the grand total of gross customs and Union excise revenue realised was Rs. 232.38 crores as compared with Rs. 201.83 crores during the corresponding period of the preceding year. Of this amount, import duties accounted for Rs. 93.03 crores as against Rs. 95.92 crores, export duties for Rs. 28.11 crores as against Rs. 27.55 crores, land customs and miscellaneous for Rs. 1.49 crores as against Rs. 2.24 crores and Union excise duties for Rs. 109.75 crores as against Rs. 76.12 crores.

\$3.35 Million US Loan to Chile: Chile's principal steel company has obtained a \$3.35 million Export-Import Bank loan. Cia De Acero Del Pacifico, US, which the Bank described as largely privately-owned, will use the funds for construction of a hot-strip steel mill at Gauchipato, near Concepcion. Cost of the mill will be \$8.5 million. The Blaw-Knox company and international General Electric Company will provide the machinery for the mill. The 10-year loan is the first of several

Export-Import Bank loans, which does not carry a guarantee by the Chilean Government. Previously the Bank had loaned the company a total of \$58 million.

British Bank Rate Raised: The British bank rate, key to the interest rate throughout the country, was raised on February 16, by a 1 per cent to 5½ per cent. The rate had stood at 4½ per cent since February 24 last year when it rose steeply from 3½ per cent as Mr. R. A. Butler applied the brakes to Britain's spending spree. The new rate is the highest since September 21, 1931, when it stood at 6 per cent. This higher bank rate is expected to be followed by other disinflationary moves: hire-purchase restrictions, cuts in capital expenditure by the nationalised industries (except only coal and atomics), cuts in Government spending including any frills in the defence programme and a new savings device.

Rockefeller Foundation Grants: The Rockefeller Foundation grants for the fourth quarter of 1955 totalling \$6,810,939, were announced in New York on February 16. The Gokhale Institute of Economics and Politics, Poona, is the recipient of the largest grant—\$150,000—by the Rockefeller Foundation for the fourth quarter of 1955. Another grant to an Indian institution is \$47,000 to the Horticultural Research Station in U.P. The State Medical College Hospital in Trivandrum has been given \$35,000 to equip and supply two model wards for medical and surgical care to be developed by the hospital for clinical teaching. Field offices in medical education and public health in New Delhi and Tokyo and three in Latin American countries have been granted a total of \$321,250 for their 1956 work.

GENERAL

Labour Conditions in Indian Cigarette Industry: Of the 11,583 workers employed in 14 out of 19 cigarette factories in India 99.4 per cent were time-rated, according to a survey conducted by Labour Bureau, Government of India. 95.3 per cent were permanent. The total employment in these factories decreased from 12,300 in 1952 to 11,747 in 1953 and 11,445 in 1954, but increased to 11,588 in 1955. Labour turnover was negligible during the years 1952 to 1954. Not only were bulk of labourers permanent, but the labour force in the industry was more or less static. The lowest basic wage for unskilled workers as on May 1, 1955, was Rs. 22-5-0 and Rs. 18-0-0 per month for males and females respectively in one unit in Hyderabad; while the maximum wage of Rs. 40-0-0 per month existed in one unit in Bombay.

USA's Gross National Product: The United States of America's gross national product in 1955 reached the record figure of 387,250 million dollars, the Commerce Department said. National income also reached a new record of 322,250 million dollars. The report said that because of price increases the real increase in production was 6 per cent above the 1954 figure and 4 per cent above the 1953 peak. National income was 6 per cent higher than the previous record reached in 1953.

Radio-Telegraph Service to Iran: A direct radio-telegraph service between India and Iran was opened on February 16. The establishment of this service brings the total number of direct Radio-Telegraph Services opened with other countries to fourteen. The other countries with which direct radio-telegraph services have been opened are—UK, USA, USSR, China, Japan, Yugoslavia, Poland, Australia, Thailand, South Viet-Nam, Indonesia, Afghanistan and Burma. Telegraph services—either cable or wireless—to most other important countries of the world are available via London.

NEWS IN BRIEF

INDIAN

A sum of Rs. 30,34,902 has been sanctioned as grants to various State Governments for expansion of basic education during the current financial year up to the end of January 1956, according to the Union Minister for Education, Maulana Abul Kalam Azad.

Sugar production in India is proposed to be increased to about 2.5 million tons during the next five years as against the present capacity of 1.6 million tons in 161 units. Licences have been issued for the establishment of 39 new factories and expansion of 44 existing units.

The Sindri Fertilizer Factory, which has been producing ammonium sulphate since 1951, has helped the country to save over Rs. 33 crores by way of foreign exchange.

India has spent Rs. 809 crores on irrigation and power projects since independence. This is four times the amount invested on such projects when the country was under British rule.

The per capita consumption of electricity will be 25 units at the end of the first Five-Year Plan period as against 14 units in 1952. It is expected to rise to 50 units by 1961.

The present rate of production of the pencil factory at Pimpri, near Poona, is about 8 million mega units per year as against the target of 4.8 million mega units.

Technical assistance and instruction equipment and supplies to assist in the programme to reorganise and strengthen secondary education in India will be available under the terms of an agreement signed between the Government of India and the U.S. Technical Co-operation Mission to India. The agreement will operate for a period of three years—1956 to 1959.

The Union Ministry of Transport has granted to the Government of Uttar Pradesh for the improvement of roads leading to Buddhist pilgrim centres a sum of Rs. 62.95 lakhs so as to afford facilities to pilgrims participating in the 2500th Buddha-Jayanti celebrations in May next.

A large number of challenge cups of the value of about Rs. 1 lakh and prize-money estimated at Rs. 20,000 will be awarded at the fourteenth All-India Cattle Show to be opened at Nagaur in Rajasthan by the Rajpramukh of the State on February 26, 1956.

Mr. P. N. Thapar, Secretary, Union Ministry of Food and Agriculture, leads the Indian delegation to the International Wheat Conference which has been convened by the UN in Geneva from February 20.

Five international professors of preventive medicine and a number of fellowships will be provided to Indian medical colleges by the World Health Organization under an agreement just concluded between the Government of India and WHO.

A sum of Rs. 821 lakhs will be spent on slum clearance in Delhi during the second Plan period. Out of this amount, Rs. 308 lakhs would be for slum clearance and development of areas and the balance of Rs. 513 lakhs for construction of subsidised houses.

FOREIGN

A special mission from the World Bank would be visiting Vienna shortly to discuss a loan of 1,000 million Austrian Schillings (£14 million) for the Austrian State Electricity Board, which controls the country's power stations. The money is to be used to build a new power station.

Preparations are going ahead in Haifa for the first Israel Industries Exhibition to be held there from April 24 to May 13. The fair is to be a full-scale representation of Israel industries.

Pakistan will get \$8.5 million from the US International Co-operation Administration as part of the 1956 aid programme to be utilised for its Karnafuli multi-purpose project in East Bengal, according to an agreement signed on February 13. During this period Pakistan will spend Rs. 28 million on the project.

It is learned that President Eisenhower has decided to begin technical and economic aid to Ceylon—cut off from US assistance for many years because of rubber sales to China. Economic and technical programmes for the first year are expected to total \$5 million.

Several British and US industrialists met recently in New Brunswick for talks about the possible establishment of a £50 million pulp and paper mill in New Brunswick. The proposed mill may be built in Leprean, St. George.

On 21 January the kingdom of Jordan became a member of the International Labour Organisation. The admission of Jordan brings the I.L.O. membership to 71 countries.

At Jordan's request the I.L.O. has deputed Mr. Muhammed Aslam of Pakistan to go to Jordan as Technical Adviser on labour problems to the Government.

The United States on February 13 contributed another \$1,259,518 to the United Nations Children's Emergency Fund (UNICEF). This brings the US payments to UNICEF's 1955 programme to \$8,667,588.

The American Automobile Association (A.A.A.), which arranges thousands of trips overseas each year for American tourists, predicts that such voyages will double by 1960. The A.A.A. says it is the middle and lower income families who now do the bulk of travelling overseas. Not only will the number double, predicts A.A.A., but the expenditures by this group will reach a sum of \$2,000 million annually.

The United Kingdom's contribution towards the cost of setting up the federal capital of the proposed Caribbean Federation is to be increased from £500,000 to £1,000,000, it was announced by the Colonial Office in London on February 13, after the British Caribbean Federation Conference had held its third plenary session.

Egyptian and Sudanese officials are holding discussions in Khartoum on financial and economic matters, including cotton prices and the question of linking the Sudanese currency with the Egyptian currency.

THE RAILWAY DEVELOPMENT PLAN

THE second Five-Year Plan for the Railways prepared by the Railway Ministry at an estimated cost of Rs. 1,480 crores has been reduced by the Planning Commission to Rs. 1,125 crores. This cut of 24 per cent in financial allocation has affected the expansion of transport capacity for passenger traffic as well as for goods traffic and, in addition, the plan for construction of new lines has been drastically cut down. As against the Railway Ministry's estimate of an increase of 6 per cent per year in passenger traffic, provision has been made only for an increase of 3 per cent per year. Construction of new lines has been reduced from 3,000 miles to a mere 850 miles. The new construction will be absorbed principally by the operational needs of the railways themselves and by the additional needs of the coal and steel traffic. From the view-point of the execution of the targets fixed for production in industry and agriculture in the second Plan, however, the vital aspect of the cut in outlay is the one that relates to the expansion of freight transport capacity. All practicable means must be devised at different stages of the Plan to find resources to augment this capacity. It is proposed in this and the subsequent articles to examine the railway expansion programme as modified in the Draft Outline of the second Five-Year Plan.

The Railway Ministry's estimates of the demand which will be created during the second Plan period for increased freight traffic is summarised below:

TABLE I.
RAILWAY MINISTRY'S ESTIMATE OF ADDITIONAL
FREIGHT TRANSPORT

	(Million Tons)
(A) Coal	20.0
Steel and Raw Materials for Steel Plants	18.0
Cement	5.0
Total Specific Increases	43.0
(B) Increase in the Miscellaneous Traffic at 5 per cent per annum or 25 per cent in second Plan period	17.8
Aggregate Increase	60.8

The total goods traffic which is expected to be carried during the current year, 1955-56, is likely to be 115 million tons, according to the official estimate. Hence the increase of 66 million tons, as envisaged in the above table, will be more than 51 per cent above 1955-56. The latest year for which data in respect of actual traffic carried in terms of the various classes of commodities are available is 1953-54. This year, therefore, will be convenient as the base year for comparison and estimates of probable increases in traffic. In 1953-54 the total volume of freight traffic carried amounted to 98 million tons. The Railway Ministry's estimate of an increase of 61 million tons of traffic in the second Plan period represents an increase of 62 per cent above 1953-54. This estimate is conservative and will call for closer scrutiny.

The consequence of the cut of 24 per cent in outlay made by the Planning Commission, in so far as the creation of additional freight transport capacity is concerned, will be to provide for an increase of only 42 million tons during the second Plan, as against the modest estimate of 61 million tons. It would imply

that only the classes of traffic described in the category of "specific increases" in Table I will be provided for. "Miscellaneous traffic", which is placed at about 18 million tons, will have to wait for additional resources and operational improvement on the railways. This includes much the greater part of the requirements of the private sector. There is, however, no ground for undue pessimism that a crisis will arise and the private sector will be starved of its demand. Far too much attention has tended to be concentrated on the backlog of rehabilitation and comparatively little attention has been paid to the strides made by the railway systems in stepping up the actual carrying capacity. The success which has attended the firm efforts of the railways to improve standards of efficiency and higher productivity in relation to the available resources in rolling stock and manpower must be given due appreciation. A convincing indicator of this new turn in railway operations is to be found in the striking increase in the volume of freight traffic estimated to have been carried by the railways in the last two years of the first Plan—an increase of over 20 per cent above 1953-54. These gains in operational efficiency are not only to be consolidated but incorporated as a regular feature of railway working on an organised basis. The recent contract which the Government of India has entered into with the American firm of consulting engineers, Sanderson and Porter, is expected to provide an added scientific approach to this new campaign for progressive levels of productivity.

It is obvious that in any allocation of priority for transport capacity, first priority will be granted to the requirements of the railways themselves, next in precedence will come the public sector, while the needs of the private sector will be placed in the last rank. The classification of traffic made in Table I, setting out the estimated increases in demand, is not useful from this view-point. A classification of traffic increases in the public sector and the private sector is precisely what is needed to assess in what manner adjustments will be directed in the railway expansion programme at different stages of the Plan to avoid deadlocks at the production end. Apart from this consideration, a detailed estimate of the expected increases in traffic in the two sectors separately is of vital importance to arrive at a reasonable magnitude of the increase in freight traffic. The official estimate of a total increase of 66 million tons will have to be tested in the light of the targets assigned for achievement in the second Plan. In Table 2 below the actual volume of traffic carried in 1953-54 and the anticipated increased volume in 1960-61 have been set out in respect of commodities which comprise the major demands of the public sector. Some of these commodities also enter into the demand of the private sector, but this private element has been excluded from this table.

TABLE II.
VOLUME OF FREIGHT IN PRINCIPAL OF CLASSES
OF COMMODITIES IN THE PUBLIC SECTOR

	(Million Tons)	
Commodity	1953-54	1960-61
Coal	12.0	27.0
Iron Ore		14.0
Marbles and Stones	0.7	1.0
Cement		0.5
Iron and Steel		7.5
Railway Stores	11.0	18.0
TOTAL	24.0	66.0

At the present time the demand of the public sector for transport capacity is very nearly accounted for by the movement of free-hauled railway coal and railway stores. The nature of the public sector's demand is going to be changed to a considerable extent by the projected expansion of public enterprises in the second Plan. The estimates of increases in 1960-61 contained in Table 2 are not proportionate to the increases in production as indicated by the targets. For instance, a marginal allowance has to be made for coal consumption at pitheads. Steel plants will entail a heavy demand on traffic capacity, while it is plain that the increase in the volume of railway stores will be substantial in view of the higher pressure of traffic and workshop activity. Traffic in the public sector will thus increase by 42 million tons from 24 million tons in 1953-54 to 66 million tons in 1960-61. This calculation does not include certain requirements of the public sector. The construction of new lines of 850 miles, the river valley projects and the numerous public enterprises will demand additional transport capacity. The public sector's demand for increased traffic may easily reach 50 million tons.

In Table 3 the approximate magnitude of the demand of different classes of freight in the private sector for transport have been estimated for the year 1960-61 in relation to the actual traffic trends in 1953-54. It may be stressed in parenthesis that 1953-54 was a normal year involving no striking fluctuations or inflationary elements in traffic. The tonnage carried in 1953-54 was only one million more than in the previous year and amounted to 98 million tons. In estimating the probable traffic in 1960-61 in the private sector, the targets fixed in the second Plan for production, exports and imports have been taken as the main determining factors. A pro rata increase in the demand for traffic with the increase in production cannot, of course, be assumed. The volume of demand must be related to the volume of the marketable surplus. In view of this governing condition, liberal allowance needs to be made for a large volume of consumption of agricultural products at the source, consequent on increases in population and higher standards of consumption, leaving a proportionately lower volume for additional traffic. Manufacturing, mining and forest industries represent sources of production where practically the entire output takes the character of marketable surplus. The individual items included in Table 3 contain some element of the demand of the public sector emanating from public enterprises, but it is quite negligible.

THE OUTLOOK FOR ROLLING STOCK

THE overall position of traffic which emerges from a combination of the demand of the two sectors analysed in the previous article emerges as follows:

Total Demand for Freight Traffic			
	(Million tons)		
	1953-54	1960-61	Increase in 1960-61 over 1953-54
Public Sector	24	66	42
Private Sector	74	116	42
TOTAL	98	182	84

The volume of increased traffic in 1960-61 will be 84 million tons above the year 1953-54. On the assumption that the goods traffic moved by the railways in 1955-56 would be 17 million tons more than in 1954-55,

TABLE III.
VOLUME OF TRAFFIC PREDOMINANTLY IN THE
PRIVATE SECTOR IN PRINCIPAL CLASSES
OF FREIGHT

		(In thousand tons)	
Class of Freight		1953-54	1960-61
I. Products of Agriculture:			
1. Rice		2,751	3,250
2. Gram & Pulses		1,940	2,500
3. Wheat & Wheat Flour		1,905	2,500
4. Jowar & Bajra		930	1,250
5. Other Grains		734	1,000
6. Oil Seeds		1,359	1,750
7. Raw Cotton		650	1,000
8. Raw Jute		466	580
9. Fruits & Vegetables		2,998	3,750
10. Tobacco		261	310
TOTAL		14,044	17,890
II. Products of Animals:			
1. Live Stock		192	210
2. Hides, Skins & Leather		136	200
TOTAL		328	410
III. Products of Mines:			
1. Coal, Coke, etc.		20,600	29,000
2. Marbles & Stones		3,500	7,000
3. Salt		1,639	1,800
4. Manganese Ore		1,987	2,400
5. Other Metallic Ores		4,039	9,000
TOTAL		31,765	49,200
IV. Mineral Oils:			
1. Oil Fuel & Mineral Oils		941	1,200
2. Kerosene Oil		1,135	1,500
3. Petrol		798	1,000
TOTAL		2,874	3,700
V. Products of Forests		3,272	4,100
VI. Manufactures:			
1. Sugar		1,385	2,100
2. Khandsari Sugar, Gur, Molasses, etc.		867	1,300
3. Cotton Manufacture		466	510
4. Jute Manufactures		232	278
5. Edible & Other Oils		475	635
6. Cement		3,381	9,500
7. Iron & Steel Wrought		2,554	5,000
8. Provisions		784	1,000
9. Glassware		83	130
10. Paper		206	400
11. Tea		293	300
TOTAL		10,726	21,153
VII. Miscellaneous:			
1. Manure & Fertilizers		708	2,100
2. Fodder		1,178	1,500
3. Other Commodities		9,279	12,000
TOTAL		11,165	15,600
GRAND TOTAL		74,174	112,053

the excess in 1960-61 over the current year 1955-56, or the last year of the present Plan, will be 69 million tons. Railway development envisaged in the draft outline of the second Plan provides freight transport capacity to carry an additional load of about 42 million tons, which leaves a balance of 27 million tons uncovered for the time being. If allowance is made for the fact that the increased demand of the existing and new projects in the public sector which have not been included in Table 2 in the last article (where coal, steel and railway stores exhaust the demand of this sector) to be of the order of 8 million tons, the shortfall in capacity may be 35 million tons.

The issue of provision of capacity for moving the higher volume of traffic ought to be considered in terms of the provision of rolling stock. The allocation of capital for acquisition of rolling stock which has made in the Railway Plan is of great significance from this

angle. The allocation actually made for this purpose is Rs. 380 crores. A broad decision has been made that Rs. 197 crores should be earmarked for rehabilitation and Rs. 183 crores for acquisition of additional stock. There can be no rigidity about this distribution. The programme of rehabilitation, has been prepared in detail and is set out in the following table:

Programme of Rolling Stock Rehabilitation in the Second Plan

Stock	Averaged		Overaged
	Stock on 31-3-55	Replacement During Second Plan	Stock in Service on 31-3-61
Locomotives	2,663	1,352	1,798
Goods wagons	49,721	23,852	27,823
Coaching Vehicles	6,384	6,447	1,997

A reassuring outcome of this programme of rehabilitation is that the persisting heavy backlog will be cleared and the number of overaged stock in service in 1960-61 at the end of the second Plan will be brought close to normal proportions. In the case of locomotives and goods wagons, this result will be achieved by retaining a proportion of stock which has run out a span between 40 and 45 years. This, however, need not be looked upon as a disturbing factor. The most striking result of rehabilitation in the second Plan is the substantial improvement of stock of passenger carriages.

The disbursement of Rs. 183 crores which have been earmarked for purchase of additional stock is not available. But, in effect, allocation for replacement stock and additional stock is on a fifty-fifty basis. In view of the appropriate attitude taken by the Planning Commission to give high precedence to the freight sector of the development programme, it is safe to assume that a substantial part of the sum of Rs. 183 crores will be devoted to stock for goods train services. It is not necessary to go into niceties of calculations of the size of stock which will be additionally procured with the outlay of this sum of Rs. 183 crores because it is clear from the Draft Outline of the second Five-Year Plan that this additional stock, as distinguished from stock to be obtained for replacement or rehabilitation, will be 906 locomotives, 83,395 wagons and 4,917 coaches. On a rough reckoning, 800 of these locomotives may be assumed to be earmarked for goods train services. This is a very liberal assumption.

The adequacy or otherwise of the additional stock of this order for freight transport now remains to be examined. It should be considered in relation to the position of the rolling stock in 1955-56 and the freight estimated to have been carried in that year. The stock position in 1955-56 has been tabulated below:

Rolling Stock Position in Indian Government Railways as estimated on March 31, 1956.

Stock:	No. of Units
Locomotives	9,262
Goods Wagons	266,049
Coaching Vehicles	23,779

One element of complexity which arises here relates to locomotives. The number of locomotives in the above table represents the composite stock used for goods train services as well as passenger train services. Distinct distribution separately as between the two types of services is not available in respect of locomotives.

Assuming that the distribution is 60 per cent of goods transport and 40 per cent for passenger transport (ignoring the other minor uses of locomotives), in 1955-56 freight traffic of the order of 115 million tons is estimated to have been moved with the help of 5,420 locomotives and 266,000 goods wagons. The ratio of immobilised stock is unlikely to show any striking change as the establishment of four new workshops and modernization of existing shops will involve considerable time-lag. No substantial change in the location of industries is contemplated in the next Plan with the result that the average length of haul will not be materially different from the average of 224 miles in 1953-54.

On the basis of the stock required to carry 115 million tons of freight in 1955-56, the pro rata requirements for additional traffic of 66 million tons in 1960-61 will be 2,710 locomotives and 133,148 goods wagons. But the assumption of a proportionate increase in stock for carrying additional loads of freight is obviously wrong. Fewer train services can certainly take greater loads. In addition, it should be readily conceded that the railways will be in a position to achieve higher operational efficiency at the rate of 10 per cent per annum during the next plan period, according to their present calculations, and it is likely that a higher ratio of improvement will be actually attained. Considering these factors, it may be assumed that 2,000 locomotives and 110,000 wagons will be required for the additional traffic of 66 million tons. As against this order of requirements the additional provision made in the Draft Outline of the second Plan is 800 locomotives for goods train services (leaving a small margin of over 100 locomotives for passenger train services) and 83,400 wagons. The gap in freight stock, therefore, will be 1,200 locomotives and 26,600 wagons. This is on the assumption of the increase of 66 million tons as estimated by the Railway Ministry which falls short of the estimate in this article by about 10 million tons. Ignoring this difference, it is likely that this gap in stock will entail additional investment of not less than Rs. 85 crores to be closed. It need not pose an insurmountable problem to find higher funds of this order.

EXPORT OF IRON ORES

(CONTRIBUTED)

AMONG the proposals in the Draft Outline of the second Five Year-Plan, the mineral policy envisages an increase of iron ore production from 4½ to 12½ million tons and a stepping up of iron ore exports from 0.9 million tons to 2 million tons in 1960-61. It is necessary that this target of exports should not remain only on paper and that steps taken to increase exports should be viewed as a part of a long-term plan to profit by exports of iron ore in the future and finance development.

India possesses within her boundaries the largest reserves of high grade iron ores in the world, which is more than enough for a large-scale iron and steel industry in the country and for export of iron ore. A good deal of foreign exchange for financing our plans can be made available if we formulate a scheme for export of iron ores for the next fifteen years. There is no disagreement in any quarter that India can well afford to export iron ores. The USA is the largest producer of iron and steel in the world, with a capacity for 120 million ton ingots per year, with only 6 per cent of the total iron ore reserves of the world, averaging an iron content of 50 per cent. The USSR with a capacity of 49 million ton ingots per year has a reserve of 7.6 per cent of the total world reserves averaging an iron content of 38 per cent. India with a production of two million ton ingots per year has a reserve of 21 per cent of the total iron ore resources of the world, averaging an iron content of 54 to 64 per cent.

The reserves of iron ores in countries which have exportable surpluses are as follows:

Sweden	500 million tons ..	high grade
Brazil	150	65% Fe
	350	55 to 60% Fe
	1000	30 to 50% Fe
Canada	418	54% Fe
	530	49.44% Fe
Venezuela ..	560	58% Fe
India	10,000	54 to 64% Fe

From the above, Sweden supplies ore to the steel industry of Europe and has more or less reached its upper limit for annual raisings. Venezuela is now a large-scale exporter to the USA, and has plans to ship ten million tons of ore per year. Brazil has the second largest reserves of iron ore in the world, but due to difficult terrain and the distance of the deposits from the port, development for export purposes is difficult. The importers of Indian ores are Japan, Germany, Czechoslovakia, Italy, the UK, and Luxembourg and the USA may also be interested.

A SAGA OF PRIVATE ENTERPRISE

By
CROESUS

SHAKESPEARE must have been in a confoundedly cynical mood when he wrote: "the evil that men do liveth after them, but the good is oft interred". For, don't we see around us innumerable evidences of the good work that our great men have done in the past, even in the remote past, which compel us not

To manufacture 18 million tons of ingot steel per year, which is the target to be achieved by the end of the third Five-Year Plan in 1966, the following raw materials will be needed:

Iron ore 60% grade	35 million tons
Coking Coal	32.5 " "
Limestone	10.5 " "
Dolomite	0.75 " "
Manganese 30%	1.05 " "
Ferro-manganese	0.18 " "
Refractories for Replacement	1.26 " "

In large-scale mechanical mining, for every four tons of ore mined, a ton of fine ore will be available which has to be sintered before use. The sintered ore will be an ideal raw material from the viewpoint of the blast furnace operator and will be welcomed by our expanding steel industry. If we get an average f.o.b. price of \$8.5 per ton we can make a net profit of Rs. 10. The present market price of high grade ores is over \$11 f.o.b.

The export of the following quantities during the next fifteen years must be our target:

Second Plan Period 1956-61 .. .	9 million tons
Third Plan Period 1961-66 .. .	20 " "
Fourth Plan Period 1966-71 .. .	51 " "
TOTAL	80 million tons

If adequate transport and port facilities are available, and if there is good demand for our ores the above target can considerably be increased, and we must aim for an export of at least 10 million tons per year. For the above target the net profit will be Rs. 80 million per year and foreign exchange to the tune of Rs. 3,200 million in dollars, sterling and other currencies will be available. Apart from the net profit and foreign exchange so necessary for the implementation of our Plans, it will give employment to several thousands of people at the mines, in transport, at port and in other capacities.

For the implementation of the scheme a mechanical loading and unloading port is necessary apart from the existing ports. The new port should be an up-to-date one with all mechanical equipments for export of large bulk cargoes and for the quick unloading of large amount of equipment and machinery which will have to be imported in implementing the multifarious schemes for the large-scale industrialization of the country. From the viewpoint of location the new port has to be in eastern India.

only to remember but also to respect them? Are not the glorious achievements of our great men themselves concrete monuments of their memory? If so, when we instal bronze statues or marble busts, don't we only aim at having poor and ineffective substitutes for those imperishable monuments? Moreover, when we erect

statues of captains of industry these days, are we not unwittingly giving handle to "iconoclasts" of free enterprise?

These thoughts were troubling me as I entrained at V.T. last Friday night to be present at the unveiling of the statue of the late Mr. Walchand Hirachand at Walchandnagar on Sunday by Mr. M. L. Dahanukar, his life-long friend and admirer, and an industrialist in his own right. I even shared these thoughts with one or two of my friends who were out on the same mission but not to much purpose. It was not until I was actually face to face with the statue that I saw the compelling need for it and, in fact, I began to ask myself quite another question: "Why was this not done earlier?" The workmanship of Mr. Goregaonkar, (the sculptor who executed the statue) has really put life into an otherwise inanimate bronze replica, so that you feel the audacious Walchand standing right in front of you in flesh and blood when you face the statue. Thanks to the happy choice, by Mr. Gulabchand, Walchand's brother, of the pose for the statue, one finds little or no difficulty in recognising this great originator of more than a handful of national key industries.

The name "Walchandnagar" conveys to me more perhaps than it does to many others, namely, the home of Walchandnagar Industries Ltd. It is an imperishable symbol of what enlightened free enterprise stands for—rather I should modify it to read what it has stood for for decades past. When I recently visited Chittaranjan Locomotive Works, I did feel that large sums of the tax-payers' money had been spent on the township, but I could not, at the same time, resist admiring the amenities provided to all the staff in the township. By any standards, the Chittaranjan township is magnificent. But this is what has been done by the State now "only in the fifties". What must one say then of Walchand's farsightedness in planning and executing on model lines, a little more than a score of years ago, a township with almost all the amenities of life possible only in large cities? Fancy each 'puri'—the different units of the township are styled thus—having a co-operative store, a primary school, a gymnasium, a club, a reading room, a dispensary, a section officer, a resident supervisor and even a telephone (internally worked by the Company, not State-operated)! When in Chittaranjan I saw that each unit had a separate hospital, I thought that the railways had done there something wonderful that private enterprise has done nowhere else as yet. But, after seeing Walchandnagar, I cannot very well let Chittaranjan get away with the distinction of having been a pioneer in the matter of a planned and progressive township. The credit for this feather in the cap of private enterprise, of course, goes in a large measure, to the man on the spot. Mr. Gulabchand Hirachand, the present Chairman of the Walchandnagar Industries Ltd. While it is true Walchand launched the scheme, the way it has shaped out and its present prosperity are mainly, if not solely, the result of Mr. Gulabchand's single-minded devotion to, and intensive concentration on the growth and development of the township as much as of the sugar industry.

Availing himself of the occasion—this was only natural and appropriate too—Mr. Gulabchand traced the history of Walchandnagar. The events leading up to the taking over of the parent company, Marsland Price and Co., Ltd., an English engineering concern, in 1908 and its successful transformation into the biggest sugarcane farming and sugar manufacturing unit in the State, constitute a veritable saga of private enterprise. Here in Walchandnagar one can see unfolded on the canvas the fullest potentialities of the sugar industry. The enterprise of the management has made it possible to experiment with success the exploitation of every by-product and also the establishment of a number of secondary industries, such as distillery, oil mill, plastics manufacture, paper, etc.

The remarkable way in which the Company has been able to get over the coal (shortage) problem by making use of the waste product bagasse for firing boilers and raising steam is a tribute to the initiative and enterprise of private sector. Obviously, the men who work in this undertaking are not content just to count the hours and do only that much of work which is assigned to them; by reason of the scope allowed to them, they have been able to evolve new methods and venture into uncharted fields, all with a view to furthering the efficiency of the enterprise. The bagasse-fired boilers, the burning of sulphur and the manufacture of many of the component parts—some complicated ones too—eventually taking the Company on to the manufacture of a complete sugar plant, for which the Government of India has given a licence, are possible, it seems to me, only in the climate and atmosphere that enlightened free enterprise offers.

There is much talk amongst our planners that we should stop the exodus from the villages to the towns and reverse the process. But it is amazing that it does not ever occur to them even to mention as concrete illustrations of what they mean, places like Jamshedpur, Birlapur, and Walchandnagar, where, right in the midst of a rural set-up in each case, beautiful townships have grown up with all the amenities of an urban centre. It is not until we have several thousands of Walchandnagars and Birlapurs that we can effectively bring about a complete reversal of the process of migration from the rural to the urban areas.

In giving expression to these reflections of mine, I am afraid, I have not said anything about what Mr. Dahanukar said about Walchand. Having been a close friend for nearly 40 years, Mr. Dahanukar could recount several personal reminiscences which show the stern stuff of which Walchand was made. As he rightly said, Walchand was never satisfied with small things but was always after doing things in a big and grand way; he was ever on the lookout to break fresh ground. This explains how, from starting as a small contractor to the railways Walchand rose to be the inspiring genius of such basic projects of national importance as shipbuilding, automobile, aviation, and heavy engineering. The secret of Walchand's success was that he took care to see that his associates also grew with him and as his stature grew. While he no doubt amassed tons of money, he freely shared the gains with those who worked for him and saw to it that there was contentment all round in his undertakings. In short, he was a captain of industry who belonged to a great generation of eminent Indian business men, the ranks of which are, alas, fast thinning out. This process is only being hastened from what has happened at Avadi and Amritsar. Whether this is for the good or the bad of the country, I leave it for the future economic historian of India to record.

Letters to the Editor

UNAUTHORISED ALTERATIONS IN THE NEW COMPANIES ACT

Sir,

The new Companies Act is published in a Gazette of India Extraordinary of 19-1-1956 as Act. No. 1 of 1956, after having received the assent of the President on 18-1-1956, and it is published under the signature of Shri K. Y. Bhandarkar, Secretary to the Government of India. A comparative study of the text of the Act as published in the Gazette with the text of the Bill as finally passed by both the Houses of Parliament reveals that in the Gazette version there are a large number of alterations and additions (more than forty in number) which apparently have been made subsequently to the passing of the Bill by both the Houses of Parliament and it is not known under what authority or by whom they have been made.* While a good portion of the alterations may be said to be formal and in the nature of drafting improvements such as changing the topical Headings and the Headings of Sections, and supplying inadvertent omissions and correcting of mistakes and illogical phraseology there are at least a few alterations which are really in the nature of material changes affecting the rights and liabilities of those coming within the purview of the provisions concerned. We may take for instance one such change effected in Subsection (1) of Section 113. The provision in the Bill as passed by both the Houses of Parliament provided as follows:

"Every company shall, within three months after the allotment of any of its shares, debentures or debenture stock, and within three months after the registration of the transfer of any such shares, debentures or debenture stock, complete and have ready for delivery the certificates of all shares, the debentures, and the certificates of all debenture stock allotted or transferred, unless the conditions of issue of the shares, debentures or debenture stock otherwise provide."

Now in the Gazette version, in the place of the words "within three months after the registration of the transfer of any such shares" we find substituted the words "within three months after the application for the registration of the transfer of any such shares". This is a very serious change affecting the liability of companies and their officers, as default in complying with the provisions is punishable with fine up to five hundred rupees for each day during which the default continues.

Is it not a serious matter for consideration as to whether and how far any authority other than Parliament itself can exercise any power of altering or adding to the legislative provisions made by Parliament, however erroneous or absurd they may be? Even as regards topical Headings, Headings of Sections and other formal matters, can it be said that anybody else other than Parliament itself can effect any changes by way of corrections or otherwise when both the Houses of Parliament have passed the Bill "with their eyes resting on those matters also" as they existed at the time of passing the Bill?

If any person other than Parliament itself can make any alteration or correction, what safeguard is there against the possible abuse of such apparently limitless power?

* The various alterations and additions have been catalogued by me in the book on the new Companies Act just recently published by the Madras Law Journal Office.

Sir Erskine May in his well-known Treatise on Parliamentary Practice (12th ed. page 385) observes as regards amendments during the Bill stage: "Throughout all these stages and proceedings, the bill itself continues in the custody of the clerk or other officers of the house and no alteration whatever is permitted to be made in it, without express authority of the house or a committee, in the form of an amendment regularly put from the chair, and recorded by the clerks at the table, or by the Chairman in committee". Does not this observation apply with greater force to amendments and alterations made after the Bill is finally passed by both Houses of Parliament?

It appears to me that apart from the fact that the legality of the alterations and amendments, one and all, whether substantial or formal, is open to question, the prerogative of Parliament itself requires to be adequately safeguarded. It may be that both the Parliament and the Executive are only facades of the Congress Party representing the nation and whatever the Executive willed would be carried out by Parliament. But there is a constitutional way of doing things after they are allowed to pass through the furnace of public opinion.

Yours faithfully,
A. RAMAIA,
Advocate.

MADURAI.

TRAVANCORE-COCHIN STATE INSURANCE

Sir,

With the decision of the Government of India on the nationalisation of Life Insurance, the problem of the policyholders of the State Insurance in Travancore-Cochin seems to be complicated.

The first or perhaps, the second of the nationalised Insurance Institutions in India, the Travancore-Cochin Insurance was working very satisfactorily and in the face of very acute competition from companies which used to adopt all kinds of ugly tactics to dissuade the prospects in the State from joining the State Insurance. But in spite of all that, the State Insurance has shown a very good record of progress. There are today about 60,000 policyholders and the funds amount to nearly two crores.

The service of the scheme should be summed up in two words, viz., low premiums and a good bonus record—a combination which it is very difficult for companies to follow. The scheme is being worked out with a low expense ratio of nearly 10 per cent whereas even a progressive company like the Oriental spends 25 per cent. It seems the intention of Government is to follow the example of Oriental. Knowing as we do, the tremendous waste of expenses which the companies have hitherto been following and which Government in the circumstances have borne upon themselves, it is impossible for the Insurance Corporation to keep at the same level of expenses that the Travancore-Cochin State Insurance is doing. The sufferers should be the policyholders, existing and future.

To avoid therefore a good institution from being immersed in a doubtful experiment, it will be better if the Travancore-Cochin State Insurance is kept separate for the present, and given the option to merge after five years when the success of the Indian venture is known. Till that time, the State Insurance may be allowed to remain as the Sole Insurer for the newly formed Kerala State.

Yours faithfully,
A Policyholder.

Trivandrum,

BUSINESS NOTES

DEARER MONEY

INCREASING USE of the orthodox weapons of monetary control has been made in recent weeks by several countries in their fight against inflation. Thus, Britain and Holland have raised their Bank rates, Britain doing it for the third time in just over a year! Even in New Zealand—an exporter of primary commodities—where the Bank rate is as high as 7 per cent, credit has been further tightened and increase in rates of interest on deposits has been officially permitted. Clearly these measures are designed to check imports and boost exports of the countries wedded to credit squeeze. The emphasis in all these countries is to be less on investment and consumption at home and more on exports.

Coming in the wake of the normal stringency of the current busy season and the recent withdrawal of concessions to scheduled banks under the Bill Market Scheme, the latest upgrading of the British Bank rate has affected the Indian money market. Many of the banks have already raised the deposit rates and there is now a move to raise those on overdraft/advances as well. With a disparity of full two per cent between British and Indian Bank rates, the possibility of Exchange Banks bringing funds from abroad is completely ruled out and they have now to rely more and more on the Indian money market for their requirements in this country. Accordingly, one notices, there has already started a scramble for funds which may make the position of Indian scheduled banks difficult, as they may not be in a position to offer the same attractive rates on deposits as their foreign confreres, if it came to a competition for available funds.

As heavy deficit financing gets under way, in this country also, there may be need for additional disinflationary measures. Bank credit has risen during the last one year by 17 per cent, though economic activity has risen by only 5 per cent. This is reflected in a rise in the general index of wholesale prices from 360 to 375.3. Fortunately, there are as yet no threatening signs of inflation; but it is not improbable that the authorities here may seize the opportunity afforded by the developments abroad noted above to bring about a small increase in the Bank rate. There is, however, no reason why India should emulate Britain, inasmuch as conditions and circumstances in the two countries are altogether different. Moreover, an increase in Bank rate now will further raise the cost of this country's economic development. Nevertheless, such a move cannot be ruled out, as it seems to have the blessings of a school of economists who hold the view that, when a country desirous of advancing economically has no other alternative but to resort to large-scale deficit financing and, indeed, decides to do so, it is just as well to take the plunge into inflation fully armed, simultaneously with such safety-devices as higher interest rates and all else that go to make credit tight. This may still not be the view of the powers-that-be. But who knows they may change overnight and bow to the inevitable ere long?

INDIAN COTTON CONSUMPTION

THE TREND of Indian cotton consumption by mills in this country in the first quarter of the new cotton season 1955-56 is hardly encouraging. While the quantum of Indian cotton consumption improved from 382,979 bales in September to 385,910 bales in the following month, the figure for November showed a decline of as much as 33,000 bales at 352,671 bales. As against the record level reached in the total consumption of Indian cotton in the 1954-55 season, when it amounted to over 41 lakh bales, the latest quarterly performance is not quite heartening. But, in view of the series of crises that the cotton market has had to

pass through in December-February—the market is still not out of the woods—and the disturbances in January, 1956, following the Government of India's decision on the SRC Report, which hampered the working of mills for a period, however brief it may be, the consumption trend of cotton in the second quarter of the 1955-56 cotton season is hardly likely to show any improvement.

It is true that this season's consumption of Indian cotton in the first quarter compares favourably with that for the corresponding quarter of the 1954-55 season. It is also true that there were a number of holidays in the month of November, 1955, which may be partly responsible for the reduction in cotton consumption. But one suspects whether the repeated reports of freezing cotton mill production have not started doing harm already.

The following table gives the latest consumption figures for the first quarters of this and the previous season, of both Indian and foreign cottons:

(In bales of 400 lbs.)			
	Total 1st Qtr. 1955-56	Total 1st Qtr. 1954-55	
Indian	1121,560	988,256	
Foreign			
Egyptian	42,532	55,691	
East Africans	51,467	53,427	
Sudans	28,073	6,858	
Russians	185	..	
Americans	9,630	56,774	
Pakistan	..	3,555	
Others	2,106	1,598	
TOTAL	1255,553	1168,159	

INDO-UK TRADE FOR 1955

ALTHOUGH THERE has been a slight fall in the size of India's favourable balance of trade with the UK—this declined from £33,576,000 in 1954 to £29,156,000 in 1955—the value of the trade between the two countries, which aggregated £228,742,000, has been maintained at 9.4 per cent above the preceding year and above 26.3 per cent as compared to the year 1953.

The principal exports from India included tea, leather and manufactures thereof, tobacco, oils, and cotton yarns and woven fabrics, while the major items of imports into India consisted of machinery, chemicals, and road vehicles and aircraft. Excepting for cotton yarns and woven fabrics, the value of exports, which improved from £6,849,000 for 1954 to £7,041,000 for 1955, all the other items showed a moderate decline. Thus, the value of tea exports fell from £76,898,000 to £75,420,000 and those of miscellaneous textile manufactures from £16,363,000 to £14,400,000 as between the full year of 1954 and 1955.

A notable feature of the trade between the two countries in 1955 was the steady increase in the value of all items of imports from the UK into India. As against £28,142,000 worth of machinery, other than electric, imported in 1954, the value of these items rose to £32,344,000 in 1955. In fact, India was the third largest customer for UK machinery, both electric and other than electric. The largest individual items under this head included machine tools, textile machinery, generating sets, generators and motors, converting machinery, transformers, switchgear and switchboards,

as also electric cables, wires, strips and strands (insulated). It is hardly surprising that there has been a 14 per cent increase over 1954 in the imports of machinery, by reason of the fact that India is committed to an ambitious programme of industrial development under her Five-Year Plans. Indeed, India's machinery imports from the UK represented 37 per cent of the total imports from that source. The biggest increase was noted in imports of iron and steel, which rose from a little under £6 million in 1954, to nearly £9 million in 1955. As against this, there was a decline in imports of UK petroleum and petroleum products, the value of which fell from over £4 million in 1954 to nearly £2 million in 1955. This is evidently because of the progress made by the new oil refineries set up in this country.

As usual, tea was the largest item of export from India, accounting for as much as 47 per cent of her total exports. The biggest increase was recorded in the export of animal and vegetable oils which rose from slightly less than £2 million in 1954 to £8 million in 1955, followed by cotton which increased from £2 million to £4 million.

In view of the trend in both the total exports to, and the total imports from, the UK—an increase of 7 and 13 per cent, respectively, over the performance in the previous year (1954)—the steadily rising volume of trade between the two countries noticed in the earlier years may be expected to continue.

SOCIAL ENGINEERING

IT IS now recognised that the management of men is just as important and perhaps far more complicated than the management of machines. We have still to go a long way, and conferences, such as those of the Indian Institute of Personnel Management, held recently in Madras, will undoubtedly help in forming a clearer idea of the problems involved. Personnel management and industrial relations require an acquired skill along with a natural bent of mind to deal with people. Manpower control is partly a matter of leadership, and partly just common sense. In the early days of the industrial revolution a policy of hiring, bossing, and dismissing was accepted as a common sense policy for manpower control. For obvious reasons, this policy was soon found wanting. This brought in trade unionism, which paved the way for industrial liberalism, in the form of medical aid, subsidised canteens and the like. Collective bargaining and joint consultation followed and later still management began to realise that labour too must be accepted as a partner. Translation of all these, however, is not having smooth progress.

If management conferences can find a solution to the problem of better relations between management and labour or between labour and capital, they can congratulate themselves on having got their greatest reward. The reward will be in the form of better efficiency, higher morale, better administration, better teamwork, and, consequently, more production at lower costs. All this, it should be emphasised, can be achieved only by creating a sense of confidence and a feeling of security in the ranks of labour. Labour must be made to feel that they have a stake in the industry. The question is partly, nay, primarily, psychological. It underlines the importance of human values in industry.

With independence and the establishment of popular Governments, the labour situation has changed considerably in this country. In the past few years, a great number of Acts beneficial to labour has been enacted. Thus, the workers have gained considerably by the fixation of minimum wages and the introduction of the health insurance and provident fund schemes. The Industrial Disputes Act of 1947 has as its aim the securing

of cordial labour-management relations by mutual negotiation and conciliation, and, only as a last resort, by compulsory adjudication. Compulsory adjudication, however, has failed to achieve the main object of maintaining harmonious relations. The latest trend of thought is definitely veering away from this principle. Better understanding of human relations is a great revolution in industry, another form of improved 'process'. It is quite possible that new achievements in the field of social engineering lie ahead, perhaps as remarkable as those in physics or chemistry.

COTTON TANGLE COMES UP BEFORE RAJYA SABHA

A BATTLE royal between the East India Cotton Association and the Forward Markets Commission has been going on in earnest for nearly two months now. To put it bluntly, the question at issue is to decide as to who is the boss. By putting a ban on futures trading in cotton on December 23, the Commission may be said to have won the first round. But, when the Commission issued a notification, later on, declaring that both the September and the May contracts be deemed as closed out, an influential trade party took out a notice of motion challenging the Commission's action. This case is now being heard at the Bombay High Court. Meanwhile, taking up the brief on behalf of the Commission, the Union Minister for Commerce and Industry has sought to defend the action taken by the Commission. Intervening in the Lok Sabha on Friday (February 17) during the debate on the Indian Cotton Cess (Amendment) Bill, Mr. Krishnamachari categorically stated that the Government's interference in the affairs of the East Indian Cotton Association was necessitated because of the "complete ineptitude of the Association". He went on to say that the forward market in cotton had become a gambling market and many members of the Association itself were indulging in it.

Referring to ceilings and floors on cotton, the Minister stated that while floor prices had been fixed from time to time, the ceiling was not changed because it was not normally reached. But Government had many devices to see that cotton prices did not reach the ceiling. In short, Government's intervention was justified, according to the Minister, on four counts, namely, (1) "complete ineptitude" of the East India Cotton Association, (2) operation activities of members of the Association, (3) harmful effects of gambling, and (4) Government's responsibility to keep prices of all agricultural produce at a parity. In regard to the first, the Minister was rather harsh on an association, the largest of its kind in Asia, to have referred to its complete ineptitude. As regards unhealthy speculation, whether it is by any odd individual or a representative of the Association, it is proper that such should be checked. But on the question of floors and ceiling, the Minister was not convincing enough. The question of changing the ceilings normally arises only at the beginning of the season and not when it is halfway through. The intervention of the authorities is called for only when the prices pierce or are very near to piercing the ceilings. In fact, it was pointed out by the trade that at the time the Government decided to impose a blanket ban on cotton futures trading, the ruling price was not near the ceiling. It is surprising that the Minister, after admitting that this year's cotton crop was less than last year's and also the fact that the quality of the crop has suffered deterioration, should still defend Government intervention. The above factors are sufficient reasons in themselves to bring about a steadily rising trend in prices. In effect, the situation that developed in the cotton trade was the result of the normal interplay of the law of supply and demand and as such one cannot but come to the conclusion that the situation has been rendered unusual by the "susceptibilities" of individuals, on the Government's side as well as on that of vested interests.

WHEN IN EUROPE

fly **BEA** IN EUROPE'S FINEST AIR FLEET

For business, for pleasure—you'll do far more and see far more... if you fly BEA on your next trip to Europe. BEA's famous—and ever-expanding—network offers passengers fast and frequent services to over 50 of Europe's main business and holiday centres. BEA have more of the best airliners—more VISCOUNTS, for example, than any airline in the world. And BEA's long experience in air transport means you enjoy comfort on all routes, and personal service second to none.

BEA links LONDON with most of the principal cities of Europe, including—PARIS · NICE · BRUSSELS · VIENNA · AMSTERDAM · OSLO · STOCKHOLM · COPENHAGEN · HAMBURG · GENEVA · ZURICH · BARCELONA · ISTANBUL · MADRID · LISBON · PALMA · MILAN · ROME · NAPLES · ATHENS, and further afield, for example, to GIBRALTAR · MALTA · CYPRUS and CAIRO as well as WITHIN BRITAIN.

... and fly on the BEA CAR HIRE PLAN

BEA's new Car Hire Plan now makes the rest of your travel smooth as clockwork—in France, Holland, Belgium, Switzerland, Norway, Sweden, Denmark, Italy, Germany, Cyprus and in Great Britain. No deposit; full insurance.

BRITISH EUROPEAN AIRWAYS

Full details of air reservations from your local Travel Agent or any office of B.O.A.C. All arrangements for car bookings at BEA Offices in Europe; or BEA, Dorland Hall, 14-20, Regent Street, London, S.W.1. Gerrard 9833.

COMMODITY NEWS AND NOTES

PAKISTAN COTTON FOR INDIA

The announcement on February 15, in respect of import of raw cotton from Pakistan has come as a welcome contributory factor to ease the tension in trade relations between India and Pakistan. According to this notification, import of raw cotton of 3" and above is to be allowed from Pakistan, with immediate effect. It may be noted here that the recently renewed Indo-Pakistan Trade Agreement provided for the import of Pakistan cotton of the order of 50,000 bales of 3" cotton.

It is for the first time that the Government of India has permitted imports of 3" and above cotton, all cotton imports in the past having been confined to 1.1/16" cotton. Another feature of the announcement is that the import is to be on consignment, and not on firm basis.

Well-informed trade circles in Bombay anticipated some development of this nature, following the recent visits of the President and the Secretary of the Karachi Cotton Association, so that, when the announcement did come, it had been all but discounted by the market. Moreover, before advantage could be taken of the Government announcement, some hurdles have to be overcome. Thus, the wide disparity between Pakistan cotton and the comparable variety of indigenous cotton has proved to be a major hurdle. It was pointed out that Indian mills could get Vijay cotton at around Rs. 870, the same more or less as the price for comparable styles of Karachi cotton, NT RG. But to this has to be added the export duty of Rs. 270 and incidental expenses involved in getting the cotton down to this country, so that the difference between Indian and Pakistan cotton of the same grade and staple length comes to around Rs. 300 in favour of Indian cotton. It becomes obvious, therefore, that, unless Pakistan persuades herself completely to do away with the export duty, no appreciable business could be hoped for in Pakistan cotton. Even while the chances of import of Pakistan cotton are thus nebulous, is it not rather amusing that South Indian and Kanpur mills are reportedly strongly canvassing for a lion's share of Pakistan cotton?

WORLD TIN OUTPUT

The International Tin Study Group of the Hague estimates 1955 mine world production of tin in concentrates, exclusive of China and the Soviet Union, as 163,000 tons. This estimate is 0.9 per cent lower than actual production in 1954. Production was higher in Malaya, Belgian Congo, Siam and Nigeria, but lower in Indonesia and Bolivia. Malaya's total for 1955 at 61,425 tons reached a new post-war record and was 0.9 per cent higher than in 1954, while that of the Belgian Congo rose by 4.8 per cent to 15,208 tons. Outputs by Siam and Nigeria are estimated at 10,875 tons and 8,060 tons, or respectively, 11.2 per cent and 1.7 per cent more than in the previous year. Indonesian mine production fell from 35,861 tons in 1954 to 33,368 tons. Bolivian exports in 1955 are estimated at 27,400 tons or 5 per cent less.

World consumption of tin metals, excluding China and Soviet Union, in 1955, has risen by 7.6 per cent from 138,500 tons to 149,000 tons. Consumption of tin for the manufacture of tin plate rose by 9 per cent from 59,200 tons to 62,700 tons. World smelters production exclusive of China and Soviet Union declined from 176,000 tons in 1954 to 170,500 tons in 1955.

INDIAN PEPPER VS. INDONESIAN PEPPER

During 1934-38, Indonesia was the largest exporter of pepper—her exports being 57 thousand metric tons

out of a total world export of 107 thousand metric tons per annum on an average. After war, however, position changed considerably and during 1951, Indonesian exports, according to figures published by F.A.O. amounted to only 3,458 metric tons out of a total of world exports of 42,000 metric tons. India, in contrast, has gained position in the post war period and has become the chief exporter of this commodity. During November and December last year pepper exports from India totalled 64,683 cwts as against 43,260 cwts for the corresponding period in the previous year. U.S.A. accounted for over half of India's exports of this item. In January-May 1955, U.S. unground pepper imports were 12.8 million lbs. out of which Indonesia supplied 182,738 lbs. while India supplied 10,078,897 lbs. Earnings from Indian pepper exports, have declined to Rs. 4.4 crores in 1955 as against Rs. 8.1 crores in 1954, partly due to revival of competition from Indonesian pepper and partly as a result of downward trend in its prices—Rs. 775 per candy, and also due to abolition of export duty in September, 1955.

Persistent efforts are being made in Indonesia to increase the production of pepper. In her second plan, Indonesia has fixed a target of 20,000 tons by 1959.

Production of black pepper in India in the year 1953-54 was 24,000 tons and in 1954-55 it was only 26,000 tons.

THIRD ESTIMATE OF SESAMUM

According to the Directorate of Economics and Statistics, the all-India third estimate of sesamum (til or gingelly) for the year 1955-56 puts the current year's acreage and production at 5,587,000 acres and 461,000 tons, as against the adjusted third estimate of 6,123,000 acres and 588,000 tons respectively for 1954-55. This shows a decline of 536,000 acres or 8.8 per cent in area and 127,000 tons or 21.6 per cent in production over last year.

The decline in the acreage and production of sesamum has occurred in almost all the sesamum-growing States and is marked in Uttar Pradesh, Rajasthan, Madhya Pradesh, Hyderabad, Madhya Bharat and Bombay. The decline in area has been attributed to unfavourable climatic conditions this year, particularly during the period of the crop. This estimate does not cover the entire area sown to this crop during 1955-56.

FREE WORLD COTTON STOCKS

The International Cotton Advisory Committee declared recently that at the start of the present season free world stocks of cotton had risen to 20.3 million bales, of which 11.1 million bales were in the United States and the balance of 9.2 million bales in other free world countries. Aggregate free world production is estimated at 30.8 million, an increase of 1.4 million bales compared with 1954-55. It is extremely doubtful if there will be any significant increase in free world consumption this season, the Committee warned. It noted that if there was no improvement in the outlook, in Western Europe, consumption could conceivably decline.

Based on last season consumption of 27.6 million bales, free world production this season appears likely to outstrip consumption by over 3 million bales. Even if allowance is made for a possible increase in net to the Communist countries, the imbalance between supply and demand is likely to be of the order between 2.5-3 million bales, and carry over stocks on August 1, 1956, will be increased by this amount. Stocks on that date are at present expected to be around 23 million bales.

COMPANY AFFAIRS

KILLICK INDUSTRIES LTD.

The Directors' Report of the Company's working for the year ended June 30, 1955, shows that it has resulted in a profit of

	Rs.
sulted in a profit of	26,39,567
Add balance brought forward from last year	18,107

Total profit	26,57,674
After making a provision for Taxation of	11,00,000

There remains a balance of 15,57,674
Out of this balance, the Directors have decided to appropriate the following sums:

To Writing Off New Share Capital	Rs.
Issue Expenses	1,626
To General Reserve	2,00,000
To Equalisation of Dividends Reserve	1,00,000
To Employees' Retirement Reserve	1,13,405
To Employees' Welfare Reserve	28,138
To Development Reserve	8,351
TOTAL	4,51,520

Leaving a balance of	11,06,154
Out of which there has been paid an interim Dividend at the rate of Rs. 4/- per share, free of Income-Tax, for the period from July 1, 1954 to December 31, 1954, during the year ended June 30, 1955, absorbing	4,00,000
There then remains a balance of	7,06,154
The Directors recommend a Final Dividend at the rate of Rs. 7/- per share (making 11 per cent for the year) free of Income-Tax which will absorb	7,00,000
Leaving to be carried forward to next year	6,154

In the managed companies, conditions in the Kohinoor Mills Co., Ltd., during the year ended December 31, 1954, were not so good as they were in the previous year. A fairly satisfactory demand for cloth and yarn continued, but the textile industry faced a downward tendency in prices, which became more marked towards the end of the year. The offtake from the Mills was, however, as good as could be expected.

There was satisfactory progress with 'C' station development of the Ahmedabad Electricity Co., Ltd., and the load development continued to be satisfactory. The new issue of capital of Rs. 1,75,00,000 made by the Company was over-subscribed, indicating the investors' confidence in its future.

Following limited relaxation in restrictions and loads specially sanctioned, the Bombay Suburban Electric Supply Ltd., showed improved results during the year ended March 31, 1955.

Sales of energy of the Surat Electricity Co., Ltd., continued to progress, and a number of modifications and reinforcements were carried out during the year ended 31-12-1954 to improve the distribution system and to cater for new loads. Satisfactory progress continued in other companies also.

THE MYSORE KIRLOSKAR LTD.

The Audited Balance Sheet and Profit and Loss Account of the Company for the year ended June 6, 1955 show that after appropriating Rs. 50,000 towards a part provision for the Gratuity Fund, the net profit of the Company during the year amounts to Rs. 1,55,051. Added to this last year's balance of Rs. 6,055, the total comes to Rs. 1,61,106 which the Directors propose to distribute as follows:

	Rs.
For payment of dividend at the rate of 5 plus additional 1 per cent (total 6 per cent) per annum, free of Income-Tax, on the paid-up Capital of the Company as on June 30, 1955	1,35,000
For Reserve Fund	25,000
TOTAL	1,60,000

After appropriating the amount as above, there remains a balance of Rs. 1,106 which is proposed to be carried forward to the next year.

During the year under review, further progress has been made in the manufacture of all Geared-head lathes. The Directors have proposed to increase the Authorised Capital of the Company from Rs. 25 lakhs to Rs. 50 lakhs to facilitate further expansion.

Subject to certain provisions, the Directors have also proposed to pay bonus for the year 1954-55 to all employees of the Company including the Staff and the General Manager.

THE AGARPARA CO., LTD.

The Directors' Report with the Audited Accounts of the Company for the half-year ended March 31, 1955, shows that, with the sum of Rs. 4,13,973 brought forward from the previous half-year and after providing for Depreciation and all other charges, there remains a balance of Rs. 9,52,027, from which the Directors have set aside Rs. 1,40,000 for taxation, leaving a balance of Rs. 8,12,027. After deducting from this balance the dividends and allocation to general reserve for the half-year ended 30-9-54, there remains a balance of Rs. 5,02,027 which the Directors propose to deal with as follows:

	Rs.
To payment of Dividend on 10,000 Preference Shares at 7 per cent per annum free of Income Tax	35,000
To payment of Dividend on 6,00,000 Ordinary Shares at 7½ per cent per annum, free of Income-Tax	2,25,000
To carry forward to next period	2,42,027
TOTAL	5,02,027

Trading conditions were fair during the period under review. Prices of raw jute, however, rose steeply towards the close of the period without a corresponding rise in the prices of manufactured goods whereby trading conditions again became difficult.

Company Meeting

THE SCINDIA STEAM NAVIGATION CO., LTD.

Speech delivered by the Chairman, Shri Dharamsey M. Khatau, at the 36th Ordinary General Meeting of the Company held on Wednesday, the 22nd February, 1956, at 4 p.m. at Scindia House, Ballard Estate, Bombay.

Gentlemen,

I assume that, as usual, you will permit me to take as read the Directors' Report and the Audited Accounts for the year ended the 30th June, 1955, which have been in your hands for some time now.

It is regrettable that the results this year have been less satisfactory than in the previous year. There are four main causes for this. The Dockers' strike in the U.K. and the congestion at U.K. and Indian ports and the 'Go Slow' of Port and Stevedoring Labour caused a delay of 380 voyage days. The loading of rice at Rangoon was about 400 tons per day as against the anticipated 800 tons per day on which the freight rates are based. This caused considerable loss. The cost of stevedoring has risen to the extent of about 15% over the previous year. The cost of Marine Dues, Claims, etc., have also gone up. The cost of coal increased by about Rs. 10 per ton. The necessity of chartering vessels to fulfil commitments for rice liftings from Burma was unprofitable. This would not have been necessary if the construction of ships at the Visakhapatnam Shipyard had proceeded according to programme.

In view of the unsatisfactory results the Managing Agents have agreed to accept Rs. 8 lakhs only and waive the balance of Rs. 2,26,951 provided that the amount so waived is exempted from Income-tax in their hands. Our thanks are due to the Managing Agents for this gesture.

Our Reserves and Surplus now amount to Rs. 6.51 crores against Rs. 6.27 crores last year. Our Specific Reserves have increased from 5.29 crores to Rs. 5.94 crores at the end of the year.

As we are in need of finance for further modernisation of our tonnage, we have requested the Government to release Rs. 2.47 crores invested in the shares of Hindustan Shipyard Ltd. and Eastern Shipping Corporation Ltd.

COASTAL FREIGHTS

The tonnage plying on the coast today is hardly sufficient to carry all available cargoes. Though coastal trade has been reserved for national shipping and loans are available from Government for the acquisition of additional ships, these measures have achieved little success in promoting the development of coastal shipping. During the five years from 1950 to 1955 coastal tonnage has increased only by about 22 per cent from about 2,00,000 tons gross to 2,44,000 tons gross. I do not wish, on this occasion, to take you into the several factors, beyond the control of shipowners, that have been responsible for this position. Suffice it to say that, due to the prevailing unsatisfactory conditions all-round, about 20 per cent more tonnage is now required to carry the same volume of traffic. This has artificially aggravated the shortage of tonnage on the coast.

There is, therefore, no doubt that expansion of coastal shipping is necessary in order not only to cope with the increasing demand but also to relieve its pressure on the railways in the larger interests of the country's economy. But expansion means building new

ships or buying secondhand ships at the very high prices prevailing today. A standard coastal ship which used to cost about Rs. 44 lakhs in 1950 would now cost about Rs. 80 lakhs. Taking all these factors into consideration it is impossible for any Company to acquire additional tonnage at today's prices when there is hardly any prospect of operating costs diminishing unless the rates of freight are raised to an economic level.

It was with full realisation of this serious position that in April 1955 the Coastal Conference decided to make a modest increase of 10 per cent in freight rates on general cargo with effect from 1st June, and to request Government for a similar increase in coal rates with effect from shipments for May 1955. Prior to that, many of the Overseas Conferences had already increased their rates by 10 per cent in order to cover the increased costs of operation. Due to some unfortunate developments—into the details of which I do not wish to take you—the proposed increase in coastal rates could not be brought into effect. In the meantime, it was suggested by Government that the freight rate structure on the coast should be maintained without any increase until the findings of the Rail-Sea Co-ordination Committee were available. On further representations by the Conference, Government have allowed a meagre increase of 5 per cent in the rates on coal and general cargoes with effect from the 15th October last pending the recommendations of the Committee.

In the opinion of the Coastal Conference the rates of freight should be fixed at a level at which it will be possible for the companies not only to meet fully the costs of operation and at least normal depreciation but also to make a reasonable provision for rehabilitation of fleet and earn a fair return on capital employed. The operating costs show an average increase of about 2½ per cent every year. Therefore, if the rates that may be fixed as a result of the present enquiry are to remain in force during at least the next ½ year, an allowance of 5 per cent should be made on the current level of operating costs. The existing coastal fleets include a number of ships which were acquired at low cost and which being now very old will require replacement at no distant date. A provision for rehabilitation of fleet out of earnings is therefore a necessity. This should be equal at least to the normal depreciation on the cost of ships though it will by no means be adequate, considering that it will be liable to taxation. As regards return on capital, it is understood that the Tariff Commission allow 10 per cent on gross block value. This is intended to cover interest on loans or debentures, Managing Agents' remuneration, income-tax, profit-sharing bonus, dividend to shareholders and allocation to reserves. There is no reason why a similar return should not be granted in the case of the shipping industry while fixing the rates of freight.

It has been estimated that on the above basis the short-fall of earnings over operating expenses, etc., comes to 28 per cent of the earnings as against the increase of only 5 per cent made last October. In the case of a newly built ship the short-fall on the above basis, but without providing for rehabilitation comes to over 50 per cent. While I am not suggesting that the rates should be enhanced to this extent, I do hope and trust that Government will recognize the necessity to

provide reasonable incentive to the shipping companies for expansion of their tonnage to the extent required in order to cope with the country's requirements of coastal transport. Unless the question is dealt with from this point of view, a serious transport bottleneck may develop during the second Five-Year Plan period.

Pending the submission of report by the Committee and its consideration by Government some further interim relief is urgently necessary. The Conference has, therefore, urged that as an interim measure the current rates of freight on coal and general cargo be increased at least by 15 per cent with effect from 1st March, 1956. We trust that the urgency of this question will be taken into consideration and early relief granted by Government.

MADRAS-RANGOON PASSENGER SERVICE

Gentlemen, I informed you last year that we would be compelled to stop this service altogether unless we could secure adequate assistance from Government to enable us to cover our losses caused by considerable decline in cargo and passenger traffic. The attention of Government was drawn to the seriousness of the position long in advance. Though Government were willing to grant the necessary loan for acquisition of a new passenger vessel, the complete cessation of rice imports and the decline in trade between the two countries led us to the conclusion that the employment of a new ship, which would cost Rs. 1½ crores or more, would be an uneconomic proposition. For this reason and also in view of Government's policy not to grant any direct financial assistance, we had no alternative but to discontinue this service in July 1955 after giving sufficient notice to all concerned. There was, however, a pressing demand from the travelling public for resumption of this service and, as desired by Government, we restarted it last August with m.v. "Sonavati" by withdrawing her for the purpose from her normal service on the West Coast. While she is rather small and was not built for such a passenger service, no other more suitable ship was available. Government were fully advised of the type and condition of this vessel. It is, therefore, unfortunate that it should have been stated in the Lok Sabha last September that the service "was suddenly stopped" and that "a sort of rickety ship had been put on the voyage."

At the moment the m.v. "Sonavati" is undergoing her special survey and is expected to be again in commission towards the end of next month. It is intended to revert her to the West Coast as soon as other arrangements are made by Government to maintain this passenger-cum-cargo service.

INDIA-UK-CONTINENT TRADE

We have now secured full membership of the Conferences governing the trades from the UK and Continental ports to India and Pakistan and vice-versa. We have also been admitted as member of the Conference which governs the trade between Western Italy and Pakistan and Ceylon. Some of the foreign lines also have secured increased rights and have expanded their tonnage.

I informed you last year that we have not been admitted to membership of the Conferences governing the trade from the UK and Continental ports to Aden and Colombo and vice-versa. This unsatisfactory position, I regret to say, still continues. I cannot emphasize too strongly that Indian Lines have a legitimate claims for participation in these way-port trades. We are still pursuing this matter and shall make every effort to secure our rights.

The combined lifting of the two Indian Lines—Messrs. India Steamship and ourselves—of the exports from India to the UK and Continental countries amount barely to 15 per cent of our total exports to these

countries. As soon as the new ships on order are delivered we intend to employ 13 ships in these trades. Even so, in the entire overseas trade of this country, the participation of Indian Lines comes barely to 5 per cent. We have, therefore, still to go a long way towards the target of attaining a 50 per cent share in the carriage of our overseas trade. But we are going to expand and I wish to emphasize that it is the ambition of the Indian Lines to participate equally in the carriage of the foreign trade of this country.

TONNAGE PROGRAMME

The question of building new ships for the coast is very difficult. I have already informed you about the very unsatisfactory state of affairs on the coast at present. Needless to repeat that no shipowner can think of building new ships for the coast unless the existing conditions show material improvement.

As already stated by me, we are now full members of the India/UK-Continent Conferences and are at liberty to employ in this trade such volume of tonnage as we consider reasonable. We propose to employ 18 modern ships in this service. But on delivery of all the ships now on order we shall have only 15 modern ships—six 17-knotters, four 14-knotters and five 12-knotters. The four 14-knotters are already in commission. Two 12-knotters delivered by the Visakhapatnam Shipbuilding Yard are also in commission; the third ship is expected to be delivered next May and the remaining two in the second half of 1957. Six 17-knotters have been ordered with Messrs. Lubeck's Shipbuilding Yard in Western Germany. The first three of them were ordered in March 1955, and three more ships were ordered in August last after I had discussions with shipbuilders in the UK and on the Continent and after visiting the Lubeck Yard. We have placed these orders at an agreed base price subject to the usual "rise and fall" clause but with a ceiling. Since then the prices of new ships have risen and deliveries are longer. Further, the shipyards in the UK and on the Continent, being now fully booked with orders for cargo and tanker tonnage, are reluctant to accept orders at a base price subject to a ceiling, with the result that shipowners' liability under the "rise and fall" clause will be unlimited. There is no knowing as to what the final price of the ship would be when she is delivered. Your Company, therefore, has done well in placing these orders at an appropriate time and on satisfactory terms.

In order to have a fleet of 18 fast ships we shall need three new ships; besides, one or two more ships will be required by way of substitutes when other ships are under special survey. It means ordering four or five ships similar to the new Jal-Azad and Jal-Jawahar which are already in commission. As you know, we are committed to borrow from Government about Rs. 8½ crores in respect of the ships already ordered in Germany. Purchase of additional four or five ships will involve further borrowing from Government, which will be of the order of about Rs. 5 crores. Though the prospects in the India/UK-Continent trade are likely to continue to be promising in view of our country's increased requirements under the second Five-Year Plan, owing to the large sum of money involved, your Directors are giving serious consideration to this question and will reach a decision after examining it from every angle.

B.S.N. (1953) LTD.

The operations of this Subsidiary during the year have resulted in a loss of Rs. 4.25 lakhs. This is due to heavy cost of repairs and surveys owing to old age of its vessels; these costs for the ensuing year are likely to be still heavier. Another factor responsible for the loss is the complete suspension of the Company's passenger service between Bombay and Pajim (Goa).

It is difficult at the moment to surmise as to when it would be possible to resume this Service.

Four of the six vessels operated by this Company are more than 20 years old and will need to be replaced during the next three to four years. The cost of replacement of four ships is estimated at about Rs. 3 crores and, even if orders were placed now, it would take not less than 24 months to obtain deliveries. Before we can decide to make such a heavy commitment we would like to make sure that we would be able to earn an adequate return on capital after meeting costs of operation and providing for at least normal depreciation. This is not possible at the present level of fares. In these circumstances we requested Government as early as last August for an increase of 33-1/3 per cent in the existing passenger fares. Government have now referred our proposals to a Shipping Rates Advisory Board consisting of Shri N. S. Lokur, Chairman, Railway Rates Tribunal.

You will agree with me that the Company cannot go on incurring losses year after year and, unless adequate increase in passenger fares is allowed, we may have to consider seriously, the question of closing down these services. I hope and trust that the Authorities will consider this question seriously, keeping in mind the importance of maintaining these services which provide the only convenient link between the Konkan ports and Bombay for 12 lakhs of passengers.

PROSPECTS FOR THE CURRENT YEAR

I would now like to acquaint you with the prospects for the current year as they appear to me. On the expenditure side, costs of operation under various heads show no signs of decrease. Actually there is bound to be increased expenditure under certain items, for example, we shall have to spend considerably more on

ship repairs in view of a larger number of ships having to be put through special surveys during 1955-56. Some of these ships are older and will, therefore, require heavier repairs. Stevedoring costs are already high and will increase further on account of the introduction of Piece Rate system of payment to labour. As regards fuel-oil, there was an increase of sh. 5/- in the prices with effect from March, 1955, and a further increase of sh. 7.6d. from 1st January of the current year; from the 15th of the next month the prices will further increase by about sh. 3/-. On the other hand, as I have already stated, two German-built and two Visakh-built ships were delivered to us during 1955. Three of them will have been in commission practically for the whole of the current year and one for nearly six months. The increase of 10 per cent in freight rates from February 1955 together with comparatively brisk movement of cargoes from the UK and Continental ports to India will show its full effect in the current year. The further increase of 10 per cent in rates which will be effective from next month will be only partly reflected in the current year. A distinct improvement in our freight earnings in the India/UK-Continent service may, therefore, be expected. On the Coast, so far as working conditions at ports are concerned, one may hope that the corner will be turned as a result of the introduction of the Piece Rate system of payment. The rate of freight on salt from Saurashtra to Calcutta has been fixed at Rs. 31.4 per tons for the year 1956, which is Rs. 3-2 more than the previous rate. The rates on coal and general cargoes were increased by 5 per cent last October. Any further increase that it may be possible to secure in coastal rates will not be fully reflected in the current year. Having regard to the position I have indicated, it appears to me that on the whole the working during the current year should be reasonably satisfactory compared with the year under review.

THE RAMAYANA OF TULSIDAS IN ENGLISH VERSE

LATEST "HINDUSTAN TIMES" PUBLICATION

The famous Hindi epic regarded by many as "the greatest book in all devotional literature" is for the first time now available in English verse.

The translator, the Rev. A. G. Atkins, completed the book after ten years of devoted work. He has tried "to keep and express in English in the fine rhythm and music of the original in simple lucid language, and with as much of the vivacity, wittiness and picturesqueness that Tulsidas has put into his work." He has also followed in some measure Tulsidas's metrical variations such as *chhand*, *chaupai*, *doha* and *soratha*.

In a foreword Mr C. Rajagopalachari says: "Mr Atkins' monumental work and his Introduction are a revelation of hope for those who desire to see all the great religions of mankind come together. . . . His service is not only to English-speaking people but also to that very large number of Hindus in India who do not speak the Hindi language and to whom English has become a very familiar medium."

The book is of special value to libraries, scholars and devotees of Tulsidas.

It has been issued in the following four editions:

- I. Original text of Tulsidas with translation in English verse; three volumes; 1468 pages; price Rs. 50 net.
- II. Translation in English verse; without Hindi text, two volume; 898 pages; price Rs. 40 net.
- III. Special tissue paper edition of I, one volume, price Rs. 100 net.
- IV. Special tissue paper edition of II, one volume, price Rs. 100 net.

THE SECOND FIVE-YEAR PLAN

(The following figures are being reproduced from draft outline of the second Five-Year Plan. These are in continuation with similar figures reproduced last week).

INDUSTRIAL PROGRESS IN THE FIRST-PLAN

Industry	Units	Annual Installed Capacity		Actual Production	
		1950-51	1955-56 Estimated	1950-51	1955-56 Estimated
1. Iron & steel—Finished Steel (main producers)	000 tons	1,015	1,300	976	1,300
2. Aluminium Ingots	tons	4,000	7,500	3,677	7,500
3. Cement	'000 tons	3,280	5,100	2,692	4,800
4. Rayon Filament	Mill. Lbs.	4.0	28.1	0.75	16.0
5. Petroleum refining(a)	000 tons	..	3,200	..	2,500
6. Paper & paper board	..	137	220	114	180
7. Railway Rolling Stock					
(a) Locomotives	Nos.	..	170	..	170
(b) Passenger coaches	..	850	1,200	479	950
(c) Wagons	..	6,000	14,000	1,095	12,000
8. Textile Machinery:					
(a) Carding engines	..	Nil	792	Nil	690
(b) Spinning ring-frames	..	396	1,212	260	880
(c) Looms	..	3,600	5,000	1,894	2,900
9. Diesel Engines	..	6,320	21,000	5,540	10,000
10. Automobiles	..	30,000(b)	35,000	16,519	23,000
11. Bicycles	000 Nos.	120	550	101	500
12. Electric motors	000 HP	149	377	99	240
13. Transformers	000 KVA	370	550	179	520
14. Heavy Chemicals:					
(a) Sulphuric Acid	000 tons	150	268	99	160
(b) Soda Ash	..	54	90	45	80
(c) Caustic Soda	..	19	46	11	35
15. Cotton Textiles:					
(a) Yarn	Mill. Lbs.	1,689	1,775(c)	1,179	1,600
(b) Mill Cloth	Mill. Yds.	4,744	4,922(c)	3,718	5,200
16. Fertilizers:

The Private Sector

THE Federation of Indian Chambers of Commerce and Industry has been providing opportunity every year for Indian business men to get together and review their prospects under the 'mixed economy' of the last few years. The term 'mixed' has itself implied that they have a part in the economy; and business men have been inclined to believe that it is an integral part. They have not failed to realise that their position is not in their power to decide; the decisions which have steadily altered the proportions of the mixture have remained outside their influence. But by inviting the Prime Minister to address the annual meetings of the Federation, they have sought to be in close touch with the highest level of policy-making in the land. For the assurances they have sought on their fears and doubts, they

have perhaps rarely secured convincing answers. The business men have, however, listened to, and followed to the best of their capacity, the advice given to them to change and adapt themselves to the new climate. The dynamism in the Indian economy gave them the opportunity and the strength to function effectively all along. While uncertainties did affect their business calculations, Indian business men have been fortified by a belief, based perhaps on instinct rather than reason, that the treatment accorded to them will not be less than fair.

This year, the representatives of the private sector have met in a different climate. They were deeply disturbed, as indeed they had good reason to be, by the feeling that events have been

moving too fast against them. Mr. Shantilal Mangaldas, the President of the Federation, effectively though not forcefully, raised the few important issues now troubling the private sector. But in actual fact there are not many issues but only one major issue of what the socialist pattern of society means in terms of the conditions for the functioning of the private sector. This question was not a new one, but there was a sense of urgency in asking it at the present time because of the wholly unexpected ways in which it has been interpreted lately in terms of policy.

What they got in return was not an answer to specific doubts, but a discourse on the philosophy behind the socialist approach, with the insinuation that its meaning might yet elude their grasp. Mr. Nehru told them that there was an element of inevitability about the socialist trend in the world because of the qualitative changes caused by modern scientific advance, especially after the advent of atomic energy. *Prima facie*, this seems incontrovertible because the modern State is indeed becoming a leviathan. To say that it is therefore socialistic involves the acceptance of the fallacy (of the extreme *laissez-faire* school) that any extension of the powers of the democratic State is itself socialism—a view to which most modern socialists would be reluctant to subscribe. There were diehards who at one time believed that the penny post was the precursor of Bolshevism. The nature of atomic energy certainly makes it necessary that it should be publicly owned and controlled even in a free enterprise system like that of the United States. But that has not by any logical imperative submerged the wide range of distinctions between the United States at the one end and the Soviet Union at the other extreme. Indeed, there is a logical basis for arguing that since the State has such a tremendous source of power which it cannot refuse to take up, it needs little else in order to give it effective control over the resources of the community. It may, therefore more readily acquiesce in a dispersal of decisions, subject to its overall control and national programming.

Notwithstanding, therefore, the Prime Minister's disavowal of any desire to be dogmatic about the socialist pattern, quite a few rigid conceptions have crept into this doctrine of the socialist pattern. Even if the centralised Welfare State today represents the socialist trend—making the British Tory and the US Republican join in common homage to it—are there not vital differences between one type and another and are there not also continuous modifications of the several patterns in the light of experience, altering the content of socialism at any given time? Mr. Nehru has admitted that it is a changing picture that he has in mind. Until now there were reasons to hold that this flexibility was an advantage. The working of the Industrial Policy Resolution of 1948 was realistic enough in its early phases to prove the pragmatic nature of the approach to the doctrine of the public sector. But there has been a change for the worse, particularly at a time when the British socialist has abjured nationalisation or incentive-destroying taxation as infallible means to the society of his dreams. Even in the Soviet Union there is less faith in the competence of the bureaucracy than here. By what quirk of fate then is India, the most prag-

matic among the socialist gossellers, also the most dogmatic, without wishing to be so?

There have been far too many of such actions which have followed an ideological course that it is no longer possible to rationalise them by any pragmatic concept. There is a whole set of ritual about it, the significance of which is not vouchsafed except to the high priests. It is not enough, it seems, that more aluminium should be manufactured in this country; the socialist deity demands that it should be done only in the public sector. If additional coal production is to be shared between the two sectors, on paper at least, a higher figure is being entered against the public sector, whether it is manageable or not eventually, on the resources available. The proposed revision of the Industrial Policy Resolution will certainly not add to its flexibility, whether it makes a serious difference or not to the course of future policy. The moral of the last few years has been that social ends and national interests can be adequately served by the vast armoury of powers—like the Company Law, industrial licensing and regulation and financial policies—without physical ownership except in a few strategic sectors. Business men might have lacked a philosophical approach to modern problems but they have not by any means been slow to appreciate the justification for the public sector's interest in steel, fertiliser or locomotive manufacture. They have not been slow either to see that the outlay in the public sector has also provided new opportunities in terms of orders and in the widening of the market. It has, however, been intriguing when they are hamstrung in their efforts to seize these new opportunities presented by a growing economy.

The most puzzling of all has been the latest decision on insurance nationalisation. It is understandable except as a surrender to the doctrinaire cry for nationalisation. This conclusion is reinforced by the fact that it has synchronised with the period of the greatest emphasis on the public sector. On no other grounds was that drastic step called for and it would be less than honest to pretend there were. The weak points of the insurance business have only provided the excuse for a decision which, as the Prime Minister pointed out, was part of the philosophy. Here, as in other things, there is a difference in the approach of Mr. Nehru and that of his other Ministers and civil servants. They, it appears, are also denied, like business men, an insight into the philosophical approach. When there is such all-round lack of insight, the foundations of that approach cannot indeed be regarded as well laid.

Mr. Nehru was perhaps deliberately vague because, as he remarked later in the week in Hyderabad, he would be laying down dogma which he wishes to avoid. But the inevitability of the public sector being always large may yet be the greatest dogma of all which could vitiate and, in time, hamper the maximum economic growth. The corollary of such a doctrine is the superfluity of a system of incentives; and the denial of incentives destroys initiative. When any philosophy fails to provide answers to these precise questions, it is bound to be viewed as an attempt to run a red-herring across the private sector's trail.

The Retreat on Tea Auctions

THE retreat announced a fortnight ago by the Government of India on the Tea Auctions decision of July 1955 has a far larger significance than might appear at first sight. The new order, it is true, is only a suspension of the limit on teas exported before auctions for the current year. There is no indication that the Government has reversed its policy of encouraging larger Indian auctions. Nevertheless, the fact that a decision, taken after an exhaustive enquiry by an expert Committee and accepted by the Government of India, should be summarily discarded without any adequate explanation why this sudden departure was necessary must reduce the prestige of the Government of India and create further uncertainties in the trade.

It is true that the tea industry was having a rough passage, and Calcutta prices have not always been the most favourable obtaining. But it was no essential ingredient of the Government of India's decision released in July 1955 that tea auctions were to be increased in India only on condition that Calcutta prices were higher than London prices or the other way round. If Calcutta prices were always higher than London prices, there would have been no need for limitation, for producers would only sell in Calcutta; conversely, if Calcutta prices were always lower than London prices, no restriction would have been necessary, for buyers would have come to Calcutta on their own. A temporary slump in Calcutta prices vis-a-vis London prices cannot, therefore, be an argument for the reversal of a long-period policy which was not designed at any time in terms of the price differential which existed between the two markets. The argument, that the restriction was removed in order to give the producers higher London prices is, therefore, irrelevant. Indeed, it has also been eliminated by events, for, at the present time, the differential in favour of London prices for the producers has ceased to exist; and, over the long period, it cannot be established that London is the better market than Calcutta.

What then did the Government of India obtain by its hasty action of suspending its own well-considered decision of July last year? It will be remembered that these orders were passed on the unanimous findings of a Committee set up by the Government of India itself with the express purpose of increasing these auctions in Indian ports. The Committee had amongst its members three Europeans, two of whom were connected with the tea trade in London and one of whom was President of the Indian Tea Association in Calcutta. As far as one can now determine, none of the British members of the Committee, Sir P. J. Griffiths, Mr. R. V. Culverhouse or Mr. Mackay Tallack, has advocated the present decision, which had come to be accepted, to a large extent, by London interests, even by many previously critical. Nor, as far as can be determined, was there any authoritative voice in the tea industry which has maintained that the present difficulties of the industry were the result of the limitations on export of tea before auctions in Calcutta or Cochin. There have been, it is true, serious warehousing difficulties in Calcutta. But these have been surmounted by the remarkable resilience in the warehousing apparatus in Calcutta and had, indeed, been overcome at the time when the Government of India chose to rescind

its previous order. It cannot, therefore, be that warehousing difficulties were responsible for the withdrawal of the Government's order. Even if it were, the remedy would be greater speed in erection of warehouses, not in reducing their need.

There is no doubt that the decision to suspend the operation of increased auctions in Calcutta this year has put fresh heart into those interests in Mincing Lane who, by failing to co-operate in the Calcutta auctions, were seeking to bring indirect pressure on the Government of India to alter its original decision. If the Government thus encourages its opponents—much to the dismay of its friends—it cannot complain if those anxious to assist in larger Indian auctions should halt promptly in their tracks. It will be very difficult to induce large London buyers now to have substantial representation in Calcutta, seeing that it is so easy to make the Government of India yield to the demand for free trade in this manner. Thus, although the present order is only for one year, it has set back the stable working of the tea auctions policy for a much longer period. Stability is an essential ingredient of all policy; how else can one determine the position of stable equilibrium? And if instability is to be the order of the day, no one will make arrangements on the basis that today's facts justify tomorrow's decisions.

The damage produced by this uncertainty will be great; but whether British interests do or do not suffer by this uncertainty, there can be no doubt that Indian national interests, deemed hitherto to depend on larger Indian auctions, have suffered in the process. There was, it would appear, very little pressure from the tea industry or trade asking for suspension of the tea auctions order. Responsible elements had only suggested that, in view of the fact that the crop was larger than anticipated, there was a case for raising the ceiling for export before auctions by another 25 million lbs. Had the Government of India only yielded to this request—which was no more than reasonable and perfectly consistent with its previous order—there would have been no cause for complaint. At the present time there is a widespread feeling that the decision was dictated not by a sound assessment of the economic facts but by an element of whimsicality which will make a stable policy impracticable.

It is right that there should be no worship of consistency. Flexibility, as the Prime Minister has rightly stressed this week, is imposed on all countries of the world by the changing character of current problems. Flexibility, however, is no virtue by itself. It is only a virtue when it becomes the instrument of policy to adjust certain rigid factors in the economy to changing surroundings. There is nothing in the current tea situation which warranted the reversal of the policy of larger Indian auctions. All that was required was a larger release in the current year related to a larger crop. The fact that the Government of India has not chosen the easier course but has suspended its earlier decision must shake the faith of those who believe that, in this highly organised industry, policy will be framed with an objective assessment of all factors operating over the long haul. There is considerable danger to be feared if the Government of India should create the impression that it has no major principles of policy, but is, equally with the marketplace, the creature of mood and chance.

Income-Tax Evasion

THIS year's Finance Bill proposes to introduce amendments to the Indian Income-Tax Act which go far beyond the procedural changes necessitated by the Supreme Court's judgment of December last on the Income-Tax Investigation Commission Act. If the object was to meet the situation created by this latest decision, an enlargement of the period of issue of notices beyond the present limit of March 1956 would have fully served the purpose of preventing one class of detected cases of evasion from escaping assessment merely on account of a technical loophole. The Finance Bill, however, aims at incorporating a substantive change of basic importance in the law on reopening of cases already decided. But in proceeding a step further with drastic changes in the powers relating to collection of evidence, it seeks to introduce a highly questionable principle.

The impression which the amendments create of providing a comprehensive and effective machinery for the prevention of tax evasion is misleading. It cannot be denied that there is tax evasion on a substantial scale; and all efforts to prevent evasion must be supported so long as they are well conceived. Popular imagination has tended to regard the problem of income-tax evasion as co-extensive with the problem of tackling evasion at the highest level. This is a vital part of the problem and since 1947 at any rate drastic measures have been adopted to deal with it. The work of the Income-Tax Investigation Commission was not allowed to go to waste by reason of the invalidation of the Commission; part of it has been transmitted to the departmental organisation. But normal times must have normal methods and the extraordinary powers deemed necessary for the special conditions of the war and post-war period cannot be justified in the changing conditions. Indeed, the problem of evasion itself has changed with the nature of incomes created by development outlay and budgetary policy. To conceive the problem in the old terms would simply not fit in with the present day facts.

The amendments to Section 34 of the Income-Tax Act introduce a distinction in regard to the right to reopen cases of assessment on the basis of the size of incomes involved. The present limit of eight years has been retained only in respect of incomes which are below one lakh of rupees in value. On incomes of a higher magnitude starting with one lakh of rupees, the existing restriction of eight years for re-investigation has been removed. In raking up old claims to taxation, the difficulties of meeting evidence adduced in support of fresh investigations will multiply.

The Taxation Enquiry Commission which examined the question of direct taxes at considerable length has arrived at certain significant conclusions which ought to bring about an objective change in the popular outlook that identifies all problems of income-tax evasion with higher brackets. The scope for augmenting revenue by tightening the screw at these levels is quite limited and any policy aiming at this object must take cognizance of the inevitable disincentives which it is sure to create. Future direction of policy ought to proceed towards widening the range of income-tax at the medium levels and one of the early reforms which the Commission has urged is to lower the exemption limit from Rs. 4,200 to Rs. 3,000. It is hardly

realised that the gap between the volume of incomes arising in the middle income groups and those which are assessed causes serious loss of revenue to the State. The extent to which evasion takes place in this area calls for energetic measures to plug existing loopholes. Perhaps only a third of the small taxable business concerns are assessed; the loss sustained by the failure to tax members of the various independent professions would also be a substantial amount. Responsibility for this failure cannot be placed solely on the Income-Tax Administration and certainly great efforts are needed to arouse social consciousness that a passive attitude not to submit income-tax returns is as reprehensible as attempts to evade tax at any other level. A recent sample examination of income-tax returns has revealed the surprisingly narrow coverage of tax-collection at the source of salaried incomes in the medium brackets.

The task that confronts the Income-Tax Administration is to make an effective drive for new cases simultaneously with the discovery of evasion in the distant past. The difficulties of the Income-Tax Administration do not spring so much from lack of legal powers or a machinery of enforcement as from a chronic laxity in standards of efficiency in executive work. It must be recognised that the handicaps of manpower are quite real. The financial integration of Part B States, in most of which income-tax was an innovation, as also the spurt in money incomes since the war-time inflation have made exacting demands on the resources of the Income-Tax Department. The question is not merely one of numbers; and in qualitative terms urgent attention is called for by training courses, rationalisation of the agencies for procurement of intelligence and a reorientation of the organisation and methods of work. It does not appear that the recommendation of the TEC to institute a committee to investigate this problem has been acted upon.

An amendment of dubious propriety suggested in the Finance Bill relates to the alteration of Section 37 of the Income-Tax Act to strengthen the powers for gathering evidence. The powers of entry, search and seizure of books or documents which are proposed to be conferred upon income-tax officers for use, not necessarily, in cases of specified emergency, are fraught with grave consequences. The analogy of the Income-Tax Investigation Commission having put them to good account is wholly inapplicable since there was the safeguard that the Commission, by virtue of its composition with a judge of the highest rank as Chairman, could be depended upon to exercise the powers in a judicious manner. Once these powers are placed on the statute book, in spite of the precautions that departmental rules may enjoin, the area of discretion will be so wide and vague that abuse at the hands of departmental officials will be difficult to prevent. The infringements of personal liberty which they may involve clearly outweigh the benefits that are argued in support of their grant. The Income-Tax Amendment Bill, 1938, incorporated an identical provision which had to be deleted due to strong opposition to such inquisitorial methods. The evader may still find a way out, but to the majority of tax payers it offers a threat and a possibility of harassment by revenue officials.

turning oil
into petrol

The crude oil that comes out of the well is no use to anybody until it is refined. Then it has a thousand uses. All over India, all through the year, people are using the hundred-and-one different products that come from the Assam Oil Company's "oil town" at Digboi, the site of India's first and most highly developed oil refinery — and the only refinery which processes crude oil produced at India's only oilfield.

You probably think first of petrol when oil products are mentioned. But don't forget that the food you eat was obtained with the help of oil — in the shape of tractor fuel and lubricants. Even the carpet in your house was made with the assistance of oil — the oil that keeps the mills running smoothly.

Oil is vital in the modern world. Though small by world standards, the Assam Oil Company's refinery at Digboi every day produces over 250,000 gallons of high quality products to help to meet India's ever-increasing needs. The Assam Oil Company is looking to the future, too. The company's extensive technical and financial resources are being used to the full to find new sources of oil and to bring into operation new methods of production and refining. If this is successful, the flow of Indian oil to Indian industry, transport and agriculture will increase year by year. The Assam Oil Company will make sure of that.

Self-Sufficiency in TUBES

On March 7, 1956, the works of the Indian Tube Company were formally opened in Jamshedpur by the Hon'ble Dr. Sri Krishna Sinha, Chief Minister, Bihar

The Tata Iron & Steel Co. Ltd. and Stewarts & Lloyds Limited, the largest producer of steel tubes in Europe, have jointly sponsored this project. A Fretz-Moon Mill with an annual capacity of 12,000 miles of

tubes (90,000 tons by weight) at a cost of Rs. 3 crores has been installed. A separate Electric Resistance Weld Mill for the manufacture of some 13,000 tons of high quality precision tubes will be in operation by 1957, and Government's permission is awaited to instal a third mill to make seamless tubes.

When all the three mills are commissioned the country's requirements of practically all varieties of steel tubes should have been met.

THE WEEK'S NOTES

FINANCE MINISTER'S SMEAR CAMPAIGN

DURING THE debate in the Lok Sabha on the Insurance Bill and in the proceedings of the annual meeting of the Federation of Indian Chambers of Commerce and Industry, the representatives of private business have shown a natural indignation against the campaign of 'vilification' of Indian insurance business, launched in order to justify the drastic step of nationalisation. Giving the dog a bad name in order to hang it is an old strategy and the Finance Minister has only employed this method to defend nationalisation. It is not necessary to deny that the various instances of malpractices cited by him have existed; and it may even be conceded that some more may come to light in due course. All these cases, however, far from supporting the Finance Minister, prove how negligent administration has been in enforcing the strict provisions of the Insurance Act as amended in 1950. His only defence was that evaders were more skilful; but flattering ingenuity of those who practised frauds cannot prove that they were absolutely beyond control or regulation. The truth is that no honest attempt has been made for the effective exercise of such control, in spite of the wide powers available under the law. The life funds of any company are at any given moment determinable exactly; and the disposition of the investable portion could be scrutinised quite effectively and the offenders brought to book if an inspectorate had been built up. After failing to do so, the public sector is in a worse position in proving its capacity to run this vast undertaking effectively.

The gravamen of the charge is that it was highly improper on the part of the Finance Minister to indict the whole sector of Indian business on the basis of the few examples of misbehaviour. Mr. Tulsidas Kilachand was forthright in his criticism of this attitude and more of such outspoken views will do good. He might have added that the cases cited by the Finance Minister no more prove the case for nationalisation than the various frauds and irregularities in the public sector—whether it is Bhakra or jeep purchases or any of the other wild schemes like the Housing Factory—give proof of its incapacity to run a Government, much less to take over and manage business and industry.

The justification given for enacting an Ordinance is in the same category of unacceptable pleas. Having conceded that it is always possible to reopen transactions made for defeating the provisions of the law, the Finance Minister sought to justify his abrupt step by drawing a hyperbolic picture of the possibilities of evasion, which can do credit to his imagination but cannot convince anyone of the actual possibilities of evasion on that scale. In any case, there is no purpose to be served by an inquiry at this stage about the working of the private sector in insurance, since the step now taken may not be reversed. The Prime Minister explained to business men that it would be easy for them to understand nationalisation when they grasp the philosophy behind his Government's approach. That is understandable enough as a reason, even if it is not possible to agree with it.

DIFFICULTIES OF A DAKSHIN PRADESH

THE MOVE for a Dakshin Pradesh, comprising Madras and the proposed Kerala States, started a lively controversy which has even threatened to create a crisis in Madras. One of the weaker aspects of the SRC Report is its failure to investigate the possibilities of reconstitution of States on a regional basis, for purposes of economic development, wherever the constituent units can be persuaded to come together for the pursuit of such objectives. An objective analysis of such scope

would have greatly helped the present trend in favour of larger States, but the SRC was too preoccupied with its task of adjudicating upon rival claims to pay attention to these larger questions. Mr. C. Subramaniam, the Madras Finance Minister, has made some outspoken statements on the subject, despite the general impression created in the State that the Chief Minister prefers not to be influenced by the somewhat sudden developments beginning with the Roy-Sinha agreement.

Regionalism, as a method of submerging narrower loyalties to religion, language or culture in a common objective of development, has been suggested before in the pre-partition days. The Madras Finance Minister was only reviving a similar idea when he referred to the possibilities of developing the eastern regions of a southern State with the aid of western resources. By providing opportunities for the more densely populated western half in the east, a quid pro quo would be possible and in the spheres in which some genuine fears are entertained, as in the services, safeguards would have been possible. But all these are details for which the right atmosphere will have to be created and anything which appears to the irredentist groups to be the exercise of pressure from above would only delay the spread of the idea. For a time, perhaps, the majority in the two States concerned will resist the idea of coming together, because of the fascination of the newly won separate status but that status cannot fail to impress on public opinion the insignificance and ineffectiveness of the smaller political units in national policies.

INDO-BRITISH RELATIONS

THE VISIT of Mr. Selwyn Lloyd, the British Foreign Secretary, on the eve of the SEATO talks in Karachi has come at a very opportune moment. Only a few weeks ago, Mr. Malcolm MacDonald, the British High Commissioner, made a reference to a new low in Indo-British relations, and Mr. Lloyd's visit should assure doubters on both sides that it was but a passing phase. It is undeniable that there are differences of opinion between India and Britain on vital international issues, particularly over British participation in military pacts. But there is very close adherence on many topics, born of a common faith in freedom and democracy and the fundamental aim of the foreign policies of both countries, namely, the securing of peace on stable foundations, should continue to bind us together. In speaking about Indo-British relations, Mr. Lloyd laid stress on the wide understanding of the viewpoints of the respective countries in the other. Mr. Nehru's defence of Commonwealth membership in the Lok Sabha some time ago shows that on this side there is no readiness to let the relations mar the extent of co-operation. Differences on a few points, openly discussed and openly arrived at, would not, as Mr. Selwyn Lloyd said, affect friendship. But if differences are not to develop into serious divergences, a continual re-examination of the issues that cause disagreement is necessary. On such issues like the India Office Library, Britain's interests are not served by a stubborn attitude when her case is 'prima facie' very weak.

Mr. Lloyd's statement that Pakistan's Kashmir problem is not a suitable subject for discussion at the SEATO talks will be widely welcomed here. But non-discussion will not mean that the implications of SEATO and the Baghdad Pact, in so far as accession of military strength to Pakistan is concerned, will not be felt to be to the disadvantage of India. It is for Mr. Lloyd to see that India's fears in this regard are allayed, as long as he deems armed pacts to be of value. The defensive character of such alliances, when Indo-Pakistan relations are none too happy, needs to be reasserted if the Commonwealth should remain a club of only dif-

ferences of opinion and not of discord. On the problems of China and Indo-China, there will be a close approximation of views. Mr. Dulles's statement on Goa has made the British attitude appear less objectionable because it has been understandable all along because of her colonial interests.

BRITAIN'S DARKEST HOUR

IT WAS a fateful hour when Britain attempted, as far as could be judged from events at that time, to persuade Jordan to join the Baghdad Pact. When that country set her face firmly against such a course and Britain appeared to have reconciled herself to that position, the episode was taken to have ended with a diplomatic setback for the West. But the sudden and unexpected dismissal of Gen. Glubb Pasha from the command of the Arab Legion, considered the best fighting force in the Arab world, which he helped to build from scratch, has descended heavily on the Tory Government, which has just been trying to recover from a series of misfortunes in domestic and international affairs.

After the evacuation of the Suez Canal base and the loss of Abadan, Jordan had been the fulcrum and focus of British policy and influence in the Middle East. That dominance was secured not only by the annual subsidy of £12 million which Britain is giving Jordan—and which Egypt and Saudi Arabia are threatening to replace—but also through the Arab Legion, nominally Jordan's army, but in fact commanded by a Briton and officered by many Englishmen. But the Amman populace had been demanding an end to this sort of control and King Hussein must have been hard pressed to have yielded to their demand and offended his country's strongest ally by throwing out Glubb Pasha and many of his henchmen. In the wake of this incident have arisen many problems which are right now agitating the minds of Western statesmen. As long as Glubb Pasha was in command of the Arab Legion, there was hope that at least from Jordan's side peace with Israel will not be lightly broken. The fact that it is the extremists thirsting for a holy war on Israel, who have now succeeded in securing his dismissal, makes the outlook gloomy for peace.

INDEPENDENCE FOR MOROCCO

FRANCE'S DECISION to grant independence to Morocco may well be the forerunner of similar acts of generosity before it becomes too late in the case of Tunisia and Algeria. Much serious rethinking on North African policy had been evident for some time at the Quai d'Orsay. Appropriately enough the "declaration of independence within interdependence" has been signed on behalf of France by a Socialist Foreign Minister belonging to a Republican Front Cabinet. The agreement recognises the "sovereignty" and "equality" of Morocco, but emphasises Franco-Moroccan interdependence, especially in regard to defence, external relations, economy and culture. The rights and liberties of Frenchmen in Morocco are guaranteed and the Resident-General is to be replaced by a High Commissioner. A supplementary protocol outlining the links between the two countries is to be worked out. France will also help in the building up of a Moroccan army.

Morocco's achievement of freedom should not blind one to the greater difficulties which still confront France's two other trouble-spots in North Africa. Unlike in Tunisia and in particular Algeria, the French settlers do not form any significant proportion of the population of Morocco, and so the 'colon' problem did not assume such serious proportions. It is the settlers who are now holding up progress in Algeria. And, though M. Mollet beat a hasty retreat last month in the face of settlers' unruly demonstrations in Algiers, the step forward in Morocco should give him confidence to go ahead and reach an agreement with the peoples of Algeria and Tunisia.

THE BANK OF BARODA, LIMITED

Established in 1908

Bank transacts banking business of every description both inland and foreign.

Bank acts as Executor and Trustee under Wills and Settlements including Settlements under Married Women's Property Act.

Bank allows withdrawals by cheques in Savings Bank Accounts.

overheads

Actually its good lighting.
Fluorescent lighting—Philips.
Cutting overhead costs, and giving you over 3 times the light on the job. All workers, office employees and factory labour, who have had experience of this new light correctly handled, will agree that they can work a lot better over a length of time under fluorescent lamps. Less eye-strain, fewer mistakes, quicker work, and an improved general atmosphere, these are the results of better lighting. And working tests have proved that Philips Fluorescent Lamps, used with quality control gear, have a burning life of 7500 hours, which is just about 4 years. These are a few reasons why Philips Fluorescent Lamps & Fittings are being installed in homes, offices and factories throughout the world.

PLANNED LIGHTING BY PHILIPS

Philips are fully prepared to provide you, without any obligation on your part, advice for a planned lighting system. Call them in and discuss it. Philips Electrical Co. (India) Ltd.

EAST-WEST TRAFFIC SHOULD BE TWO WAY

By

ODYSSEUS

POWER, ECONOMIC AND MILITARY, is, whether we like it or not (whether indeed we admit it or not), the chief factor that brings about changes in the conduct of the relations between nations and in the standard of living of the masses in the different countries of the world.

If it is a commonplace that since World War II Europe's power to influence world affairs has diminished and the power of the USA and the USSR vastly increased, so that these two elbow each other, like two colossi, about the world, then at first sight it seems contradictory to observe that since independence India has played an increasingly important role in international affairs. How is it that a country which occupies one of the lowest rungs on the ladder of international economic and military power should be the object of close attention in Moscow, Peking, London, and Washington?

You remember that when Roosevelt and Churchill during the last war expressed the view in front of Stalin that when Rome was occupied the neutrality of the Vatican should be respected, the good comrade laughingly enquired: "Why? How many divisions has the Pope got?" There are those who would argue that the neutrality of the Vatican was respected for the same reasons that India's is today, namely, that the Vatican and India stand for a number of spiritual and moral values the gratuitous violation of which would shock world opinion. I hasten to range myself on the side of the champions of this view. Spiritual values and the conscience of enlightened public opinions (where they exist—an important qualification) are factors that political leaders ignore at their peril (as Napoleon and Hitler, to name but two, were made to realise, the one in exile at St. Helena, the other in the ruins of Berlin).

Nevertheless spiritual values and the panch shila are, alas, by no means the sole factors which regulate international relations, and statesmen must never lose sight of the material factors also involved in their survival.

WHY IS NEUTRALISM SUCCESSFUL?

As, however, one scans the columns of editorial comment on India's foreign policy, one cannot help being struck (1) by the regular attribution of India's success if not solely to the influence of her moral principles then at least to some intrinsic value in neutralism itself, and (2) by the complete failure to suggest any other causes at all. Neutralism, it is argued, can spread over an increasing area of the globe as nation after nation come to see that armaments do not ward off but provoke war and that the formal adoption of the panch shila is all that is wanted to ensure world peace.

It does, however, seem curious that while countries as different in size, outlook, interests, and material power as Yugoslavia, China, and the USSR, have proclaimed their regard for the panch shila, not one of them has given notice of their withdrawal from the military alliances to which they belong, and not one is disarming: on the contrary, they are maintaining or stepping

up their armaments, and one of the more conspicuous of these three nations has not only gone out of its way to supply arms to countries which were seeking them in vain from the Western powers but actually let off an experimental hydrogen bomb while its spokesmen were vociferously applauding the panch shila and India's splendid lack of provocative alliances and armaments.

We may have a clearer perception of where India's foreign interests lie if we try to think out why her neutralist policy has been as successful as it has been in enabling her to divert substantial resources from armaments to economic advance and in causing both power blocs to woo her friendship. The causes are not capable of statement in the simple terms of moral right and wrong so dear to some of our editorialists; they are multiple and complex; and among them must surely be that India is recognised by both power blocs as a tremendous potential future source of economic and military power, that each sees that the ultimate survival of its own ideological system depends respectively, for the West, in maintaining India's liberal democratic system and, for the Sino-Soviets, in gradually swamping it and securing India's inclusion in the communist totalitarian world.

This is so elementary a proposition that one is almost embarrassed in producing it for fear of being derided as naive. But the fact remains that, however elementary, it is never mentioned when the reasons for the success of India's neutralism are being discussed in the Lok Sabha or in the press.

It is not my contention that the panch shila policy is mistaken. Far from it. It has paid dividends in the past and, with both West and East vying in offers of economic aid, it looks as though it may pay even higher dividends for some time to come. But it seems vitally important to recognise that neutralism owes every bit as much of its success to the never mentioned material factors of India's position between the two power blocs, as it does to the panch shila, which risk is becoming a dangerously flattering unction to our parochial patriotic souls. If, on the one hand, we may congratulate ourselves that we are in the happy position of being able to take the West and the USSR separately to one side and indicate discreetly to each in turn: "Well, boys, if one of you doesn't make the effort to help us with our Five-Year Plan, the other will, and you know what that may mean to you if it goes too far," it is also a fact of which our leaders seem unconscious (at least in public) that beyond a certain point it matters desperately to our whole future whether we get more, or less, aid from the West, and whether we relax our links with the West and join ourselves in ever tighter bonds to the Sino-Soviets.

A TIME BOMB IN THE BASEMENT

Barbara Ward, former foreign editor of 'The Economist', explains why this is so in a striking article, "Asia's Needs and Western Policy" in the February 'Atlantic Monthly'. She says:—

"...Since World War II the desire for modernisation has begun to spread beyond the small educated

Asian elite to the people at large, 80 per cent of whom—save in Japan—are still peasants.... It could not be expected that they would understand the economic and administrative implications of their new state of mind. It is a mood of aggressive expectation, all the stronger for being rooted in ignorance. But, for the governments of Asia, it represents a time bomb in the basement of their political structure...."

"Inevitably, all over Asia, there is a gap between the possibility of physical performance and the aroused aspirations of the masses. Under any conditions, such a situation contains political dynamite at least in internal politics, but with Asia and the world divided between a Communist and a free form of society there is no restraining the explosive element behind domestic frontiers. The polarisation of Asian ambition between India and China is perhaps the dominant political fact in Asia today. Both these vast, ancient, overpopulated communities are trying to do fundamentally the same thing: complete the modernisation of their communities. But they are trying to do it by opposite means; in India, by persuasion, co-operation, and decentralised democratic planning; in China, by the strong coercion of bureaucratic dictatorship. The success of one method or the other will set the pattern for Asia. Even their relative speed of development is being watched searchingly in order to determine which model is to be preferred. Moreover, the trial of strength and method has implications beyond Asia. The Soviet Union is deeply involved in China's success and the Western world should be equally concerned in the outcome of the Indian experiment."

For our present discussion, the nub of Miss Ward's argument lies in the two sentences: "The polarisation of Asian ambition between India and China is perhaps the dominant political fact in Asia today" and "The success of one method or the other will set the pattern for Asia". This argument was elaborated here on December 9, 1955, when I observed that if you assert that the premise on which it is based is false and that there is no issue between communism and democracy

that cannot be settled by the panch shila, then there is no less an authority than Lenin who can be quoted against you. For he it was who laid it down that "In the last analysis the issue will be determined by the fact that Russia, India, and China represent a crushing majority of the population of the globe."

Miss Ward goes on to urge (as I did on December 9) how vitally important it is for the West to come to the aid of India economically so that in the interests of the whole free world she may win the political victory for democracy in Asia, but what I now want to submit is that the interests at stake are mutual, and that where the interests are mutual the traffic in material aid and moral comfort cannot be all One Way.

Western commentators repeatedly stress their own public opinions that the survival of the liberal democratic system in the West depends on the success of India's liberal democratic experiment in Asia. Every Western commentator is anxious to see India secure the moral and material leadership of Asia. If some are critical of India's policies, it is not because they are hostile to India but because of their anxiety for her prosperity. This is the traffic that should be Two Way. We must make it clear to our own public opinion that the survival of all that the India that we know and love stands for depends on the survival of the liberal democratic civilisations of America and Europe. It follows that there must be clearly defined limits to Indo-Sino-Soviet political and economic interpenetration if our whole world is not to be swamped by alien ideals and methods.

In this context, the vulnerability of the "open" system of free world trade, to which our economy is geared, to disruption from the closed communist system takes on a sinister significance. As was pointed out here last time, state trading organisations capable of sustained losses could wreck any of the free markets on which our economic survival depends. At present these problems are not debated in public. They ought to be.

A DELHI DIARY

NOTE OF DISSENT

THIS week has belonged wholly to the Finance Minister, Sir Chintaman Deshmukh. Since the Budget Number of 'The Eastern Economist' has failed to reflect my personal feelings in this matter, I insist on putting in my note of dissent. In the first place, I feel that the Budget was a splendid piece of tight-rope walking; the balance between direct and indirect taxes was just right and, as events have proved, business psychology has not been injured in any way. The fact that he has been able to raise Rs. 35 crores of additional taxes without helping bears is one of the most astute financial feats done in recent years. Secondly, I believe I am reflecting a predominant Delhi opinion when I say that the dignity with which the Finance Minister has taken the serious blow of the budget leakage has evoked high praise. It is known that he submitted his resignation and pressed—on the principle of respecting conventions in a parliamentary democracy—that he should be held responsible. The Prime Minister declined to accept his resignation but it should be known that it was submitted and that it was submitted genuinely. Thirdly, I am full of admiration for the Finance Minister's reply to the debate on the Budget in Rajya Sabha which ended on Thursday. This was the most skilful and good-humoured reply to a general debate that I have heard for a long time. It loses none of its virtue by the fact that he dismissed the "abstract calculations" of a certain widely-circulated financial journal. I venture to make an observation on Newton's Third Law; so far as the Finance Minister is concerned, action and reaction are not equal and opposite!

DANGEROUS PARALLELS

Having paid my tribute to the Finance Minister, let me ascend to bolder heights and refer to the Prime Minister's philosophy presented at the Annual General Meeting of the Federation of Indian Chambers of Commerce and Industry last Sunday. As far as I understand the Prime Minister's thesis it was to the effect that scientific newcomers—the example he chose was the Atomic Bomb—had made the socialistic pattern of society inevitable. This, he seemed to say, was true even in the United States although most people there denied it. On the other side, the Communist countries had recognised that they needed to be more flexible when dealing with some factors so that socialism, even in the Communist way of life, was becoming something very different from its original pattern. The moral—not that it was clearly drawn—was that India, going socialist and always remaining flexible, had the best of all possible worlds!

What is the flaw in the Prime Minister's argument addressed to this assembly of business men of India? In my opinion, the over simplification of the differences that exist in the world arises from the absence of objective in regard to the place and prestige of private individuals and the private sector in general. It is fallacious in my opinion to compare the declining private sector philosophy in India with the very vital private sector philosophy in the United States. The question that is important is not whether the public sector is growing in both places, but whether the private sector has adequate scope for its activities. In the United States even when the public sector is extended, it is the private sector which is taken for granted; it is the public sector which is on trial. In India, the position is exactly the reverse. The public sector can do little wrong because we have a public sector outlook; we are determined to restrain free enterprise on a bookish view of its dangers.

What Indian business men want to know is whether the Government of India proposes that they should enjoy the prestige that private business has in the United States or whether they are ultimately to go to the walls as in the Soviet Union. It is no answer to this dilemma to say that the United States is going socialist and the USSR is growing flexible. "Socialism" of the United States does not really hurt the private sector, nor does the flexibility of the USSR make any significant private enterprise there possible. Whatever the atom bomb has done or not done, the systems remain poles apart. They are not coming together.

It is vital that these movements of history should not obscure the point that for the private sector to operate it needs a long-term objective which Government must underwrite. I fear there is no such objective in the Prime Minister's speech, interesting and even exciting as it was. It underwrote nothing, for anybody. Flexibility never does!

GENTLEMEN, THE SPEAKER

The highlight of the Lok Sabha's proceedings this week was the election of a new Speaker, which was conducted in the best traditions of the House. There was all-round bonhomie and Mr. Ananthasayanam Ayyangar was unanimously elected Speaker of the House on the motion of the Prime Minister. Mr. Ayyangar's nomination and election as Speaker was expected in the ordinary course but it was not on this occasion permitted to become a mere formality; when the Prime Minister briskly stepped up to Mr. Ayyangar and bowed and Prof. Hiren Mukerjee joined Mr. Nehru in conducting Mr. Ayyangar to the Chair, an impressive ceremony was enacted which was in keeping with the dignity of this high office, without there being too much solemnity. Felicitations to the new Speaker came pouring in from all sides of the House which showed that he had well and truly earned the trust and friendship of all sections of the House as Deputy Speaker.

The Prime Minister is always ready on such occasions with a sentiment appropriate to the occasion and I thought he touched on a very significant point when he said that criticism without malice is the 'raison d'être' of parliamentary democracy. The complete lack of malice was certainly evident in the continuous cheering for the new Speaker, who as Deputy Speaker must have taken many hard decisions which could have displeased individual members or groups. The Speaker has indeed become a vital symbol of our parliamentary life and I, for one, came back convinced that its future in this country is assured.

ERROR OF COMMISSION

Having now delivered myself pontifically on one dangerous subject, may I make myself truly humble by admitting an error in regard to the description of a letter from a certain custodian to a former General Manager of an Insurance Company now nationalised? I said that some furniture had to be removed from house to house. My informant now admits that the General Manager in question was asked to move the furniture from the house to the office. I tender my sincere apologies to nationalised insurance for this error which I might truly lay at the door of what is called a "usually reliable source of information". The emphasis in this case is on the word 'usually'!

STATE BANK OF INDIA

Successors to the Imperial Bank

The need of the day

Our country's economy is expanding rapidly and with the Second Five Year Plan in sight it will gather further momentum. The need for a strong and efficient banking system has never been greater than today as the nation's savings require to be pooled and managed in a resourceful, confident and prudent manner.

The State Bank fulfils these expectations. It has started upon a programme of opening 400 additional branches throughout the country within the next five years.

The State Bank of India offers to serve you efficiently in many ways. It takes care of your savings and valuables, lends moneys against goods, produce and other approved securities and assists you by accepting appointment as executor and/or trustee of your will or trust. Its wide and varied services are at your disposal. Why not talk things over with your nearest bank agent, or write for information?

The State Bank's branch at Delhi, one of more than four hundred offices waiting to serve you throughout India

STATE BANK OF INDIA

Largest of the Indian Joint Stock Banks

WORLDGRAM

AGRICULTURE

Agricultural and Animal Husbandry Research Schemes: The governing body of the Indian Council of Agricultural Research which met in New Delhi on February 22 sanctioned funds of the order of Rs. 212 lakhs for agricultural and animal husbandry research schemes for the next three years. Of this amount Rs. 59 lakhs have been allotted for new schemes and the rest for current schemes which are to be continued. Intensification of research on hybrid maize, a co-ordinated programme for the improvement of millets, intensification of research in fruits, organisation of fruit shows, breeding and upgrading of buffaloes and award of prizes for the improvement of agricultural implements are some of the new important schemes sanctioned by the governing body. The conference also approved of a proposal referred to by Dr. Deshmukh, that the budget of the I.C.A.R. should be prepared on a biennial basis on the lines of the international organisations like F.A.O. instead of annually as at present.

World Peanut Production: World production of peanuts in 1955 was estimated at a record 12,100,000 tons, according to information gathered by the U.S. Department of Agriculture. This will be an increase of 5 per cent over the production of the previous two years. The most significant increase occurred in the United States, where production was up about 70 per cent from 1954. Harvests in Africa, particularly French West Africa and British West Africa, were also expected to be considerably larger than in the preceding year. Production in India was down slightly and in Argentina was 16 per cent below the production of 1954.

INDUSTRY

Increase in Cotton Textiles Output: The total production of mill-made cloth in India in 1955 was 5,094 million yards as against 4,998 million yards in 1954 and 4,879 million yards in 1953. During the same period, the production of handloom cloth increased by over 100 million yards every year. The production of handloom cloth increased from 1,200 million yards in 1953 to 1,318 million yards in 1954 and 1,454 million yards in 1955. The total production of powerloom cloth was 273 million yards in 1955 as compared with 243 million yards in 1954 and 221 million yards in 1953. The medium varieties accounted for nearly three-fourths of the total mill output in 1954 and 1955. The actual percentage was 73.8 in 1955 and 1954 as against 64.3 in 1953. The percentages for the other varieties were coarse 11.2, fine 9.0 and superfine 6.0 in 1955. While the output of coarse and superfine cloth in 1954 and 1953 was almost at the same level as in 1955, the output of fine varieties which was 17.2 in 1953 fell steeply to 9.2 in 1954 and remained almost at that level in 1955.

TISCO's Expansion Programme: By June 1956, the production capacity of the Tata Iron and Steel Company Ltd. will be 1.5 million tons of saleable steel per year after the completion of the expansion programme for which machinery and equipment worth about Rs. 37 crores will have to be imported. The programme envisages increase in capacity for coke ovens, blast furnaces, steel melting shops, calcining plant, a new blooming mill and a new sheet bar and billet mill, a rail and structural mill, a new medium and light structural mill, a merchant mill and skelp mill, a wheel, tyre and axle plant, and a sleeper plant.

Iron Ore Output in India: The estimated total output of iron ore in India increased to 437,568 tons in December 1955, from 330,285 tons in November, 1955, according to official statistics released by the Chief Inspector of Mines in India. Returns received from 88 mines for the month of December, 1955, show despatches totalling 274,271 tons to the iron and steel plants and 79,935 tons to the export market. The reported stocks as at the end of the month amounted to 1,148,463 tons.

New Company for Nangal Fertilizers Project: A private limited company, known as the Nangal Fertilizers and Chemicals, Ltd., has been registered to take over the control and management of the Nangal Fertilizer-Heavy Water Project of the Government of India. The authorised capital of the Company is Rs. 30 crores. The fertilizer-heavy water factory to be set up at Nangal will have a capacity of 70,000 tons of nitrogen in the form of ammonium nitrate, and about 7 to 8 tons of heavy water, per year.

Drilling Rigs for Coal Prospecting: An agreement between the Government of India and the USSR for the purchase of 20 drilling rigs at a cost of Rs. 21,53,400 was signed recently. The rigs, according to the agreement, "shall be shipped by the suppliers as soon as possible but not later than first quarter of 1956." The drilling rigs will be utilised for prospecting and proving of coal in Korba, Karanpur, Jharia, Raniganj, Chirimiri, Jhilmili and Ramgarh in Bihar, West Bengal and Madhya Pradesh coalfields.

FINANCE

Levy of Excise Duty Under Finance Bill: With effect from March 1, 1956, a Central Excise Duty of Rs. 70 per ton has been imposed on "Vegetable Non-essential Oils", in or in relation to the manufacture of which any process is ordinarily carried on with the aid of power. Two kinds of oils are manufactured from the members of the vegetable kingdoms; they are technically known as "essential" and "non-essential". "Non-essential" oils are subject to the new Central Excise duty, "essential" oils are not.

Grants for Development of Handicrafts: The Government of India have sanctioned further loans and grants amounting to over Rs. two lakhs to the All-India Handicrafts Board and the States of West Bengal, Uttar Pradesh, Bhopal and Assam for the development of handicrafts. The All-India Handicrafts Board has been given a grant of Rs. 57,480 for continuing as an experimental measure for one year the scheme to develop the brocade industry at Surat. Three loans of about Rs. 27,000 and three grants of about Rs. 50,000 have been sanctioned to West Bengal. Uttar Pradesh gets two grants of Rs. 21,700 and Rs. 18,400 for the development of the cane and bamboo industry and the traditional toy industry at Banaras. A sum of Rs. 26,5000 has been given to Bhopal as grant for starting a mobile sale unit with a mobile van in the State.

Transfer of Post Office Savings Bank Accounts and Cash Certificates from West Pakistan: The Union Ministry of Rehabilitation has invited applications up to March 31, 1956 from contractors and others in respect of their dues payable by Government and quasi-Government bodies in West Pakistan. Items in respect of which applications have been invited include 'inter alia', claims in respect of securities in the form of Post Office Savings Bank accounts or postal certificates

pledged or hypothecated with the authorities in Pakistan. The Central Claims Organisation will secure release of such securities through its opposite number in Pakistan. After the release of the securities the accounts and certificates would be transferred to India duly verified by the postal authorities in Pakistan. Applications for transfer of such postal accounts or postal certificates would be accepted by the Director-General of Posts and Telegraphs in relaxation of those dates, provided the fresh applications are filed within six months from the date of the release of Post Office Savings Bank accounts or postal certificates, or up to April 30, 1956, whichever falls later. The above arrangements are also applicable to security deposit claims of Government servants, servants of States and local bodies, which were in the form of Post Office Savings Bank Accounts and postal certificates pledged or hypothecated with the authorities in Pakistan where they were employed prior to migration.

*

Japan's Import Budget: The import budget for the latter half of the current Japanese fiscal year was announced by the Japanese Government in October, 1955. The budget totals up to 1,314 million dollars and involves an increase of about 150 dollars over the budget provision made for the last half year and about 220 million dollars over that for the second half of 1954-55. The automatic approval system and the foreign currency allocation systems have, however, not appreciably modified. It is understood that of the total import budget, about 34 per cent has been earmarked by the Government of Japan for purchases from the Sterling Area. In the second half of 1953-54 and the first of 1954-55, these percentages were only 18 per cent and 20 per cent respectively.

TRADE

India's Trade Agreements: The Trade Agreements with Iraq, Czechoslovakia, Hungary and Italy which expired at the end of 1955, have been extended for a period of one year. Trade Agreements with Indonesia and Austria which also expired at the end of 1955, had been extended until the end of June this year. The Agreement with Poland had been extended until the end of March 1956 and further extension was under consideration. The extension of Agreements with Burma, Bulgaria, Finland, Norway and Rumania, which expired at the end of last year, was under consideration.

*

Rupees 69-Crore Increase in India's Foreign Trade in 1955: The value of India's total foreign trade in 1955 increased by Rs. 69 crores as compared with the level reached in 1954 which in turn was higher than in 1953. Increased domestic output on the one hand and the growing need for capital goods for development activities in the country on the other were mainly responsible for this increased volume of trade. Exports during the year were valued at Rs. 604 crores as against Rs. 563 crores during 1954. Imports rose to Rs. 644 crores from Rs. 616 crores in the previous year. The total trade thus increased from Rs. 1179 crores in 1954 to Rs. 1248 crores in 1955. The overall trade deficit declined from Rs. 53 crores in 1954 to Rs. 40 crores.

*

Indo-Dutch Trade: During the months of July and August 1955, India's exports to the Netherlands were valued at 7,411,000 guilders, whereas her imports from the Netherlands amounted to 15,496,000 guilders. Although the balance of Indo-Dutch trade during January-June 1955, was unfavourable to India, a considerable improvement was noticed in India's export

trade as compared with the same period in 1954. The value of India's exports to Holland increased from 20,438,000 guilders during January-June 1954 to 24,039,000, guilders during the corresponding period, in 1955. Imports from Netherlands on the other hand, declined from 41,143,000 guilders during January-June 1954, to 38,044,000 guilders during January-June 1955.

*

Controlled Imports of Cement: The Government of India has decided to import 500,000 tons of cement during the current half year. It is stated that the Associated Cement Companies will finance, import and distribute the entire imported cement on behalf of the Central Government without any charge. There have been offers for sale of cement from a number of countries including Russia, Yugoslavia, Poland, Bulgaria, Czechoslovakia, Denmark, Belgium, Italy, France, Britain and Japan. It is, however, proposed to buy the commodity in the cheapest market.

*

Burma-Polish Trade Agreement: A three year trade Agreement was concluded on 1st November 1955 between the Government of the Union of Burma and the Government of Polish People's Republic. The Agreement envisages the promotion of the economic and trade relations between the two countries on principles of equality of rights and mutual benefits. Under the Agreement, Burma will export rice and other agricultural products, minerals and ores, timber, rubber and other goods while exports from Polish People's Republic will comprise consumer goods, machinery, ships, river crafts, motor vehicles, and other capital equipments. Imports from Poland will be on CIF basis, while exports from Burma will be on FOB Burmese ports. The transactions will be in pound sterling unless the parties agree on other mode of settlement.

GENERAL

Aid For Development Projects From USA: Five new Agreements have been signed between the Government of India and the United States under the Indo-US Technical Co-operation programme between the two countries. This is the first lot of Agreements, providing a total amount of \$26 million, to be signed against the \$50 million development assistance allocation for the year July 1, 1955 to June 30, 1956. These relate to supply of pipes for the construction of tubewells; steel for railway rehabilitation and expansion; DDT and other equipment for malaria control; fertilizers and poles for rural electrification.

*

Bank Mission to Trust Territory of Somaliland: The World Bank announced recently that at the request of the Italian Government, it is sending a mission to the Trust Territory of Somaliland. The purpose of the mission is to study the existing situation and the Territory's possibilities for development. D. Crena de Iongh, for many years Treasurer of the World Bank and recently retired as Executive Director of the Bank from the Netherlands, will head the mission. The other members are John. H. Williams and Jean-Marie Jentgen, economists on the Bank's staff, and John F. V. Phillips, Agricultural Consultant.

*

No Change in Tea Export Duty: The Government of India has issued a notification fixing the price of tea, for the purpose of determining the export duty, at Rs. 2-11-4 per lb as against Rs. 2-14-1 per lb in force from February 1, 1956. There is no change in the existing rate of duty of annas six per lb.

NEWS IN BRIEF

INDIAN

The Government of India has accepted the principle of a centralised machinery for the purpose of buying Government requirements of stores, with adequate safeguards for direct purchases where necessary. The majority of the recommendations of the stores purchase committee for improving the working of the Central purchases organisation has been examined and accepted by the Government.

*

The Working Journalists (Conditions of Service and Miscellaneous Provisions) Act, which provides certain minimum standards in respect of various aspects of employment of working journalists and others in the newspaper industry, will, like similar other measures, be administered by the Ministry of Labour.

*

The total consumption of sugarcane by the sugar mills in Madhya Bharat during 1954-55 was 1,10,840 tons as against 1,23,920 tons in 1953-54 and 79,713 tons in 1952-53.

*

Seventeen Central Government officers were deputed abroad for training under the various Technical Assistance Programmes viz., animal husbandry, agriculture (including fisheries) and forestry during the year 1954-55.

*

The Union Food and Agriculture Minister, Shri Ajit Prasad Jain, stated in the Lok Sabha recently that a loan of Rs. 30,000 and a grant of Rs. 14,063 were sanctioned to the Government of Madhya Bharat during 1954-55 for municipal compost production under the grow-more-food programme.

CANNING WHAT WE CAN

(CONTRIBUTED)

THE increase in the production of cereals in recent years now provides a per capita availability of 14.4 ounces per head which exceeds the first Five-Year Plan target of 13.71 ounces per head. A gravely unbalanced diet, however, continues, and the time is opportune to concentrate attention on the production of fruits and vegetables, which constitute the main deficiency. The annual production of vegetables is about 4 million tons and of fruit about 6 million. The inadequacy is augmented by wastages between the farms and consumer, which are estimated at 20 to 30 per cent of the total crop, while only about 0.62 per cent of the crop is preserved in any form. The aim should be to increase present average consumption of vegetables, which is a little less than an ounce per day, and of fruit, which is a little more than an ounce a day, to a level of at least 3 ounces of fruit and 10 ounces of vegetables, which nutritional experts regard as adequate. This would imply that the country would have to double its fruit production and increase its vegetable production tenfold without taking into consideration any increase in its present population. The two inter-related problems are to increase total supplies and to eliminate the heavy incidence of wastage. It is a field of endeavour pregnant with many possibilities for health, land utilisation, foreign exchange and national wealth.

Among the complex of factors that have limited the production of fruits and vegetables to areas serving the large towns, the most crucial is the extreme perishability of these goods. It is this which limits markets geographically, and creates a heavy wastage and exaggerates the seasonal fluctuations which make horticultural production on any large scale an extremely precarious undertaking. From this emerge the two points that require attention, the extension of processing facilities, so that these products keep in edible condition, and transport. It is imperative that these facilities are provided at the lowest possible costs, if horticultural produce is to form any part of the average man's consumption.

There are many parts of the country which are ideally suited to support a prosperous horticulture. Kashmir is perhaps the first which occurs to the mind. Kashmir fresh fruits can command a North Indian market, but much must be done before the potentialities of the trade in India and world outside are utilised. Assam produces excellent oranges but in the absence of preserving or canning facilities, its products are priced out of an extensive market by the prohibitive costs of flying fresh fruit to Calcutta. The Nilgiris would develop under the stimulus of a horticultural industry. For employment in general, the intensive methods of horticulture and fruit processing hold out many possibilities that require to be seriously examined, particularly as many of the regions most likely to be concerned will not be able to attract heavy industry in the foreseeable future.

This drive against dietary deficiency and for increased horticultural production, particularly fruits, can be based on a widespread cottage industry with important implications for rural employment and living standards. A range of inexpensive but efficient equipment is available for canning on a small scale. While the production of the precision-made cans that processed food require is essentially a matter of large-scale industry, cans are supplied in small quantities transported in a

flattened condition to save freight, and simply reformed at the processing points by low cost equipment. The actual establishment of canning stations at suitable locations provides few problems, but there are a number of steps which are immediately indicated if the present inhibitions of horticulture and processing are to be removed. An expansion of research facilities particularly directed to the development of special varieties of crop for canning is indicated. The imaginative plans for horticulture announced by the President of the Imperial Council of Agricultural Research when implemented will provide the basis of a supply of good quality fruits and vegetables, and sugar which is extensively used for processing fruits should by then be freely available. Cheap freight rates, for the raw materials and finished products are an imperative necessity.

This factor alone is at present sufficient severely to limit the market for processed horticultural produce, and finally cheap cans—which are an impossible consideration without substantial reduction in the present inflated price of tinplate. It is these cost factors which primarily deserve attention in attempts to increase the per capita consumption of fruits and vegetables, to cut down wastage and develop horticulture.

The responsibility for providing low cost processing facilities must primarily rest with the Government of India. The fruit and vegetable processing industry as it now exists is too small to take the initiative, and the crucial factors—freight rates and tinplate prices, bearing a substantial steel Equalisation Fund levy—are not within its control.

The other point to be stressed in the context of the food preservation industry—as some Indian canners are already aware—is the importance of developing packs that appeal to the Indian public. The market to be aimed at by growers and processors is indicated by the deficiencies of the Indian middle-class diet.

Canning throughout the world has made remarkable progress during recent years. Its extension in the United States, Europe and Japan is an indication of its possibilities; its establishment in Malaya and the Philippines is inter alia a warning that unless effective steps are taken now, this country may lose the chance to build up a valuable external market for canned tropical fruits. An indication of the integral role of processed food in agriculture in some of the more developed countries is given in the statistics appearing on the next page.

The study underlines the extremely small scale on which processing is undertaken in this country compared to its progress in other parts of the world, where food processing constitutes a revolution, in agricultural production and in dietary patterns.

The uninspiring performance of the Indian industry is of no small part due to high freight rates and high tinplate prices. Indigenous tinplates for the processed food industry cost approximately Rs. 1,350 per ton, which is exceedingly high by international standards. The corresponding price for tinplates in the U.K. is Rs. 950.

To summarise, the points that deserve attention are:
(a) research facilities for horticulture,

- (b) crop development consciously planned with the intention of processing its products for specific markets,
 (c) regular sources of fruit and vegetable supply at economic prices,
 (d) cheap freight rates,
 (e) cheap sugar,
 (f) recipe development—evolving products to the

taste of the public.
 (g) cheap cans, which means cheap tinplate.
 The addition of good quality and hygienic fruits and vegetables into their diet will probably be the single most effective contribution that is both immediately practicable and commercially feasible to better standards of nutrition, public health and preventive hygiene.

N.B. 1. No breakdown is available for Japan. Production is now almost certainly between 6,000 and 7,500 lakhs of cans of food of which approximately two-thirds are for home consumption.

2. Annual figures are not available; the above has been compiled from statements from different countries covering single years between 1951 and 1953.

INDIA'S ADMINISTRATIVE PROBLEM—III

Services Under Democracy

By

SARDAR K. M. PANIKKAR

THE third basic change arises from the democratic structure of the Indian government. The civil services in India were organised not merely to administer but to govern the country. During the period of British authority the direct control of administration by political authorities was never seriously considered. Even under the provincial autonomy scheme of 1936, which operated only for too short a period to enable the services to gain experience or to develop a tradition, the Central Government was still under non-parliamentary authority. The methods of the civil services, their administrative practices and their departmental tradition, all of which together constitute the character of the civil services, were evolved and took shape in a non-political atmosphere. Essentially, the services, therefore, constituted a bureaucracy, a government by officials, as opposed to a government by elected representatives.

To adjust this system, with the tradition of a hundred years behind it, and with its methods and practices, firmly established and worked out in detail, to a parliamentary system would at all times have been a difficult task. In India, it was rendered doubly difficult as a parliamentary government was something new while bureaucratic administration was as old as history itself. India has always been accustomed to be governed by officials; she had not in the past the experience of being governed under a system of parliamentary democracy. The problem of mutual adjustment was something dif-

ficult and strange to both sides. The political chief, by and large, at last to start with, began with suspicion and distrust of the civil servants, not merely as rival claimants to power, but as those who stood for a different system, whose approach to problems, and methods and practices of work were not only different but ran counter to many of their accepted ideas. Also, to the political classes generally, the civil servants represented the tradition of old British rule and were in many cases associated with past policies which were considered to be against the interests of the nation. It was not expected that the new popular policies will find sympathetic or adequate executives in those whose training was in the rigid laissez faire policies of the past. So, the political chief was naturally inclined to belittle the position of the services, and to attempt to work independently or at least without the close collaboration of the service chief working under him.

Equally, the civil services were at first uncertain of their own position and distrustful of the vague doctrines and the rather inchoate programmes of their political chiefs. They were in uncharted seas when it came to political considerations. Also they did not know where their authority ended and that of their Ministers began. They were accustomed to work in well defined areas of authority. From the secretary to the superintendent, every one knows within what range he operated and there was normally but little interference from the top within the sphere of allotted authority.

March 9, 1956.

In a civil service, devolution of power is the norm. Under a system of democratic control, this is obviously not possible, as the Minister's power is all-pervading. He cannot escape responsibility to Parliament in respect of the administration of the department by pleading that his function is only to lay down policy. His function is also to ensure that the policy is carried out. So even in administration he must have authority over the entire field, though it must necessarily be one of general supervision and not of daily interference. The natural result of this is a blurring of the normal division of authority in a bureaucratic system. The civil service could not at first realise what had happened. They had, generally speaking, expected that the old system would continue without any material change, and that the Ministers would be satisfied with the functions that the Members of the Executive Council used to exercise in the past. In the circumstances of new India, this was perhaps not unexpected. Elsewhere, the civil services had developed after parliamentary democracy had been functioning for a long time. A regular civil service came into existence in England only in the second half of the 19th century, after the parliamentary system had functioned as the normal form of government for 200 years. The opposite was the case in India and the adjustment of relation between political chiefs and the services was, therefore, not easy. The services were inclined to forget that the Ministers represented certain policies and programmes, which, whether the administrative machinery considered wise or not, had been accepted by the country. The clamour in Parliament for their effectuation inevitably led to intervention by the Minister. The Ministers, on the other hand, were inclined to forget that policies cannot be enforced without effective processing by trained officials and that processing involved detailed examination on the basis of experience of administrative difficulties. It is to the credit of both the political leaders and the senior members of the service that within the short period that we have worked our democracy we have been able to strike a balance.

In a parliamentary system, the relation between policies and administration is of the essence of government. It is the function of the services to render advice on all matters of policy based on their experience and their knowledge of administrative problems. That is the higher aspect of the civil servant's work. It is not right to think that policies do not concern the civil servant. Programmes of political parties do not; but when the programme of a party is translated into a policy of government it becomes an immediate concern of the civil servant. It is then that he has to examine it in terms of practicability and formulate into precise terms the vague phrases in which policies are generally clothed. The processing of policies is essentially the work of the civil servant and it has nothing to do with policies. If, therefore, perfect co-operation does not exist between the political wing of the government and its civil service personnel, parliamentary democracy will not function at all.

The impact of democracy on the civil service is not at the level of parliamentary authority. It permeates the entire sphere of administration, at village and district levels no less than at the government levels. The idea of the civil servant that he should be left free, as before, to administer his district is impossible in a democratic system. Here again the inherited tradition of India is in conflict with our parliamentary system. From the earliest times the district officer was the representative of the 'raj', the 'ma-bap' of the people and equally the spokesman of the district in relation to the provincial government. He represented the interests of the area, championed its causes and claimed its due. Under a democratic system that position must necessarily

undergo a modification. It is not he who represents the people of the district before the provincial government, but the member elected from the area to the state assembly. It is the duty of the people's representative to air in the legislature local grievances and seek remedies from the provincial authorities. With the decline of paternalism, inevitable in a democratic society, the collector or district magistrate also ceases to be the 'ma-bap'. He is no more the representative of the 'raj' in its widest implications but only of the administration. Besides, with much of the welfare work in his area going into non-official or specialised agencies, he ceases to overshadow all the others in the district. These are unavoidable tendencies, conditions inherent in the establishment of a democratic state.

It is, however, necessary to consider how far in a State like India which has traditionally been an administrative State, the executive head of the district could be safely reduced to the position of a mere functionary. The strength of the Indian government at all times has been the stability of its district administration, dependent on the initiative and sense of responsibility of those in charge of this basic unit of government. Under a democratic system the tendency is to weaken this, depriving the district officer of all but his administrative functions. Such a tendency if carried out to its logical conclusion will, in my opinion, weaken our political structure and, therefore, something in the nature of a compromise has to be evolved, which will leave effective power of control in the hands of the district officers without at the same time weakening the democratic machinery or affecting the democratic process of the government. Such a compromise has been working satisfactorily in France, where the Prefects function, with extensive power, side by side with democratic institutions. The secret of the unique stability of French administration in face of the proverbial chaos of French politics lies in the successful working of this compromise. I would earnestly recommend this question—the position of the district officer in a democratic government such as ours—as a serious subject of study and research by the Institute of Public Administration.

From the above analysis it will be seen that the civil services now functioning in India have but little in common with the imposing bureaucracy that we inherited from the British Indian Government. Their functions are fundamentally different. Their responsibilities are not the same. The range of their operations has been extended beyond recognition and more than all, the objectives they have to serve are not the same, as under the British. It is a false sense of continuity, helped by such externals as designations and salaries, that creates the illusion of identity which leads to a feeling of distrust and suspicion (now happily much less) on the part of the politicians, and of the feeling of frustration of not being left alone to do their work, of general dissatisfaction (which again I hope is gradually disappearing) among the service personnel. Only by frankly facing the fact that the I.C.S. government of the past has ceased and the civil services today are different from what they were for over a hundred years, can the situation be normalised.

There is one other aspect of the civil services in India that I shall deal with. I have emphasised that our two-level administration at the Centre and in the States, on subjects which are clearly defined, requires two-level administrative services. That is a basic fact in a federation, but there are two qualifications which I should like to emphasise. The first is that so far as general administration is concerned, though the Central and State services should be broadly speaking exclusive, in the circumstances of India, it is of the utmost importance that the recruitment and training should be on a

uniform all-India basis. The regionalisation of recruitment and training, especially now when education tends more and more to be in regional languages, would, in my opinion, be disastrous to our unity. It is necessary that the services in India should be manned by personnel with a like-mindedness of approach, a common type of education and a general Indianness of mind. This could be ensured only if the senior services are recruited and trained on an all-India basis. Equally it is necessary for those recruited to the service of Central Government to have a preliminary training in the districts so that the Central administrative machinery has some relation to the soil and does not belong solely to the rarefied atmosphere of the Delhi Secretariat.

A second qualification is in relation to the technical

services. It is of importance, even where the services are exclusive, that there should be fair uniformity of standards, and gathering of talents from all areas in the more specialised branches of the technical departments like forestry, irrigation and engineering. Unless there are uniform standards, national interests are bound to suffer. Again if selection to such technical posts is confined to men of the same State, it is obvious that quality cannot often be ensured. For these reasons, in the technical services also the recruitment and training should be on an all-India basis, and their allocation to the States should not wholly be on the basis of the candidate coming from that particular State or area.

(CONCLUDED)

Economic Report from the U. S.

U.S. FOREIGN TRADE POLICY

(By Guy Sims Fitch)

WASHINGTON, March 6.—In hearings before the Ways and Means Committee of the House of Representatives, Government officials and private citizens have been arguing convincingly for United States membership in the Organization for Trade Co-operation (OTC). This is the proposed management body for the 35-nation General Agreement on Tariffs and Trade (GATT).

Some 5,000 miles away in Geneva, meanwhile, delegates from the United States and about 25 of its GATT partners are negotiating further reductions in tariff and other barriers to trade. This is GATT's fourth such negotiating session since its inception in 1947.

The Eisenhower administration attaches prime importance to both the Washington and Geneva meetings. In line with the long-standing US policy of favouring freer world trade as a stimulation to economic progress at home and abroad, it has consistently advocated broader opportunities for commerce and a permanent organization to facilitate GATT operations.

Administration officials consider the General Agreement a highly successful venture. Under it multilateral tariff concessions have been made on nearly 60,000 items affecting more than half of world trade. The 35 nations that now adhere to the Agreement conduct more than 80 per cent of all international commerce.

Since World War II, world trade has climbed to a point twice as high as the pre-war peak. This is not a small achievement when it is considered that most of the nations now subscribing to GATT came out of the war with their economies disrupted, their financial reserves near depletion, and their trading potential seriously impaired. US aid—totalling some \$56,000 million in the past ten years—has helped and continues to help them overcome their economic difficulties. Yet such has been the progress under GATT that many of them now earn more dollar income annually from international trade than they received in American aid during the peak years of US assistance programmes.

Many experts question, however, whether GATT, in its present circumstances, can continue to play as

important a part in widening channels of trade. They note that the United States, the leading trading nation, already has reduced its tariffs some 75 per cent in the past 20 years. Under the Trade Agreement Extension Act approved by Congress last year, it can reduce its tariffs another five per cent a year over the next three years, and can lower to 50 per cent those duties that still exceed that level.

This will present an opportunity for some more significant reductions in US duties at Geneva. US negotiators have available a broad list of nearly 1,600 items on which they are prepared to offer concessions, if acceptable reciprocal concessions are forthcoming from the other GATT parties. But with average US tariffs already down to 12 per cent of dutiable imports, further large-scale American reductions in the years ahead may be difficult to achieve. This also may apply to reductions by some other countries.

Thus, GATT operations may have to be concerned in the future, to a greater degree than in the past, with formulation and observance of trading rules and speedier settlement of differences among trading partners. Beyond that, the contracting parties probably will be laying greater stress on another important GATT function that has been overshadowed to some extent by the emphasis on tariffs—namely, reduction and elimination of other kinds of trade barriers, such as the import quotas that still discriminate against goods from the United States and some other countries. In each of these spheres, OTC—a formal and permanent body with a full-time secretariat, such as the General Agreement does not have now—could prove a valuable instrument.

There is a growing body of opinion in Washington that the arguments in favour of OTC are beginning to take hold. Most observers believe the Trade Organization will gain the approval of the crucial Ways and Means Committee and the full House as well.

Whether it can pass the second Congressional hurdle—the Senate—is far more doubtful. But informed officials here are more optimistic over Congressional approval of OTC than they were a few weeks ago.

LET EVERY FAMILY SAVE *One anna more* PER DAY

If every Indian family decides to save even so small a sum as one anna more per day it will all add up to Rs. 13.5 crores in Small Savings per month and Rs. 162 crores a year. Small Savings by millions will help finance all our ambitious development programmes. Remember that National Savings Certificates and National Plan Certificates can be purchased for as small a sum as Rs. 5/-.

MMC**revolving flat cards**

are now being extensively used
in Textile Mills in India.
Their efficiency is undisputed,
their reliability guaranteed.

Outstanding features

- 1 Five distinct setting points, used singly or in combination to control setting to .001 inch.
- 2 Johnson bronze bearings for cylinders and doffers. Roller bearings to cylinder; ball bearings to doffer and ball bearing comb box also provided as optional equipment.
- 3 Ball bearings to lick-in pedestals.
- 4 Self-lubricating 'O-lite' bearings at several locations.
- 5 William's patent stripping motion for flats.
- 6 Drop lever with new disengaging handle.
- 7 Fluted lap roller with positive gear drive from feed roll helps uniform feed of lap at the back with minimum possible stretching.
- 8 Cards can be geared for any production in a mill organization.

By
CROESUS

ALTHOUGH the stock exchange is normally a dependable barometer of the economic health of the country, I would not judge the reactions on the stock exchange immediately following the Budget even ordinarily—let alone when the Budget proposals were known—as a correct appraisal of the effects of the Budget. For the post-Budget session is always available of to counteract a given position—bearish or bullish—assumed in pre-Budget dealings, with the result that the direct effects of the Budget are eclipsed by some other effects arising out of extraneous factors or non-budgetary causes. To say, therefore, that, because, after the initial decline, the stock markets have improved is an indication that the Budget has been welcomed by the business community is not correct, strictly speaking.

The Finance Minister has asked the public to judge his tax proposals on the basis of not what Government seeks to take from this sector or from that but of what the proposal, in terms of mobilising the real efforts of the country, means. It is precisely on this basis, namely, in terms of mobilising the real efforts of the country that the business community seems to apprehend that the tax proposals for the year 1956-57, which the Finance Minister regards as the first step towards the implementation of the second Five-Year Plan, are not likely to yield the desired result. On the contrary, the consensus of opinion in these circles is that the 1956-57 Budget is far from being helpful to capital mobilisation. I shall endeavour to show why this is so, according to them.

For our purposes here, it is not necessary to go over all the dozen and a half or so proposals, big and small, which the Union Finance Minister has made. Out of the Rs. 35 crores of additional tax revenue that Shri Deshmukh envisages, the net additional revenue from changes in excise duty alone amounts to Rs. 25 crores, so that hardly Rs. 10 crores are sought to be raised by way of direct taxes. Incidentally, the relative smallness of this amount is put forward by official sources to make the point that no substantial draft has been made on the resources available to the private sector, a subtle point to which I shall shortly revert. Out of Rs. 10 crores referred to, a sum of Rs. 1 crore is expected from certain adjustments in the supertax payable on incomes above Rs. 70,000 which raise the rate of tax on the highest slab of income, that is above Rs. 1½ lakhs, to 91.9 per cent against the existing figure of Rs. 88.6 per cent. The Finance Minister has been at pains to make out that this is, in effect, what the Taxation Enquiry Commission had recommended. But, if I may venture to differ from him, there is an important difference, namely that, had the Taxation Enquiry Commission's recommendations regarding the surcharge-cum-compulsory deposit at a graduated rate on incomes above Rs. 25,000 up to a maximum of 5.6 per cent been implemented, there was a possibility of the assessee in this category getting back his deposit together with interest, albeit after 45 years. Under the relevant budget proposal now, however, there is no question of any such repayment.

Another proposal which is expected to yield a similar amount, namely, Rs. 1 crore is to introduce a tax on registered firms. In view of the Government's accepted policy of equating everything, this has at least the merit of consistency, although it ignores the considerations that prompted the income-tax authorities in the past to offer certain concessions to registered firms as against non-registered firms.

But the really important proposal, from which (and other incidental changes) the Finance Minister expects an increase in revenue of as much as Rs. 8 crores, refers to the tax on corporations. One of the justifications that the Finance Minister has put forward in respect of this special attention of his to corporations is that about half of the Government's direct taxes comes from this and there has been no change in company taxation during the last five years. According to him, Rs. 8 crores is "a small extra burden on companies" and "there is adequate justification for it". Be that as it may, the bulk of these Rs. 8 crores is to be obtained by (1) doing away with the rebate of one anna of income-tax at present given to non-Section 23-A companies in respect of undistributed profits, (2) levying an additional super-tax at a graduated rate on the dividends declared by Indian companies above 6 per cent (2 as. in the rupee on the amounts distributed in excess of 6 per cent but up to 10 per cent on the paid-up capital and 3 as. in the rupee on amounts distributed above 10 per cent of such capital); and (3) imposing a tax of 2 as. on bonus issues. In a sense, these proposals are both complementary and contradictory. Thus, while the Finance Minister has removed the rebate of one anna on undistributed profits, he has sought, nevertheless, to maintain the distinction between distributed profits and undistributed profits by the proposal to levy an additional super-tax on dividends above a given limit at a graduated rate; on the other hand, the proposal to levy a tax of 2 as. on bonus issues is definitely penalising those companies which have had the far-sightedness (or, shall we say in retrospect, foolishness?) to plough back profits. It is significant that Shri Deshmukh should have remarked, in reference to the tax on bonus issues: "I have taken due notice of the recommendations of the Taxation Enquiry Commission that there should not be any tax on bonus shares. I consider, however, that there is adequate justification for imposing such tax, and, in any case, such tax is an integral part of the scheme I have proposed". Perhaps there is an element of justification for this remark, inasmuch as, after having done away with the rebate on undistributed profits, the Finance Minister has not shown any compunction in taxing bonus issues. However, even after reading the full text of the Finance Minister's speech, it should be remembered both the Chairman of the Taxation Enquiry Commission, Dr. John Matthai, and the well-known business magnate, Mr. G. D. Birla, found it necessary to remark that there has been no change in the situation since the recommendations were made to warrant such a deviation from the Taxation Enquiry Commission's recommendations.

Apart from the adverse effects on individual companies belonging to the affected category, there is, in fact, no justification for this double taxation of the same income. It might be "an integral part" of the Finance Minister's scheme all right in that, after having decided to tax bonus shares, he could not very well afford not to impose the additional super-tax on dividends. But it is not merely this aspect of double taxation that is to be deprecated. Nor is it much good justifying the proposals by saying that, after all, the private sector is not asked to put anything more than Rs. 8-10 crores which it can very well afford without any adverse effect on its own resources to carry out its part of the second Plan. For, in such matters it is not just the extent of the financial consequences that is involved but something more, namely, the psychological effect on capital mobilisation. It is no good saying in one breath, as the Planning Commission has done, that the private sector has to find resources for financing its part of the Plan from its own profits and, in the very next, to say that it should not be allowed any incentive or inducement to plough back profits. It is true that the additional super-tax on dividends in excess of 6 per cent of the paid-up capital of a company serves as an inducement to some extent. But, human nature being what it is, one cannot expect the same reactions to follow from both a positive inducement and a negative deterrent. This, in fine, is the difference between a rebate of one anna on undistributed profits and the additional levy of a super-tax on dividends in excess of 6 per cent, although the end may be the same.

There are yet a few other aspects of the additional super-tax on dividends which have been discussed in market circles, to which I must refer. One of these, for example, is the almost universal demand from every quarter that the 6 per cent limit must not be on the basis of only the paid-up capital but the total capital employed. One is not quite sure that the authorities would be prepared to go this far, but they might at least care to go as far as Sir Archbald Rowlands, the then Finance Member, proposed in his Budget for the year 1946-47. It may be recalled that he also had proposed an additional super-tax at steepening rates on dividends in excess of 5 per cent of not only paid-up capital but capital and reserves together, or 30 per cent of the total income, whichever was higher. Secondly, there is genuine apprehension in certain circles that labour leaders might seize the new formula

of the Finance Minister and press for its adoption by the industrial courts in place of the prevailing national basis for determining the profit available for distribution of bonus. It may be noted here that the industrial courts allow, for purposes of arriving at the amount available for payment or bonus, a given rate of return on capital plus reserves and not merely paid-up capital. There is a further psychological consequence that arises from any penal dividend taxation proposal such as the one in question which would disturb the prevailing yield pattern on investment. Fortunately, the effect of the particular budget proposal in question so far at any rate does not confirm this fear. But it is a fact that initially, at any rate, there was selling pressure in the gilt-edged market and a marked decline in prices after the Budget was presented, a particularly notable instance being the decline in the 3 per cent conversion loan to a new level, a level that had not been touched for several years. There is an attempt to explain this away in the interested quarters by saying that this is only part of a process of stabilisation that has been taking place in the gilt-edged market lately and that it should not be given any undue importance. One only hopes that there is nothing more than this in the pattern of adjustments that has been taking place in the gilt-edged market of late.

Finally, doubling the penal super-tax payable by Section 23-A companies which deals wholly or mainly in investment cannot but be another attempt (in the wake of nationalisation of insurance) to prevent institutional investors in the private sector from large-scale investments in industries in the private sector. These investment companies used to go in for large blocks of good shares, whenever they got an opportunity to do so, but, by forcing their hands to distribute nearly all their profits as now, or to pay in default higher super-tax, the Government might succeed in netting in more super-tax that would accrue in the case of few individual shareholders. But, at the same time, the dispersal of profits by way of dividends among several individuals will, at least to some extent, prevent the flow of the same extent of money as before into the industries in the private sector.

As an illustration of the widely differing and unwarrantedly adverse effect of the additional super-tax proposal the following instances of incidence of the proposal should be read with interest:

(In lakhs of rupees)

	Paid-up capital	Dividend per cent	Amount distributed as dividend	6 per cent exemption	Balance	Tax to be paid
Tata Steel	963.75	14	134.93	57.83	77.10	12.05

BUSINESS NOTES

COMPENSATION TO INSURERS

BY AND LARGE shareholders of insurance companies are not satisfied with the basis of compensation as provided in the Life Insurance Corporation Bill. The Indian Insurance Companies' Association, Bombay, has, therefore, addressed a communication to the Union Finance Minister, wherein it has pleaded for a more equitable system of compensation. It says, 'inter alia' that the idea underlying the payment of fair compensation should not only be to reimburse to the shareholder any loss of property or of the value, as at the date on which the business is nationalised, but also cover a fair estimate of the future gains he (the shareholder) would have made, had the business continued in the private sector. Data on the growth of insurance business indicate that there has been substantial improvement, especially in the years 1954 and 1955. In view of this, it is obvious that, unless the future estimated profit available to the shareholder is also taken into account, the compensation payable to them would be meagre. Many of the insurers have diligently built up huge reserves during the last few years and for these again, they are naturally entitled to fair compensation.

According to the Life Insurance Corporation Bill, most of the important Indian life insurance companies will receive compensation equal to 20 times the annual average of the share of the surplus allocated to the shareholders in respect of the last two actuarial investigations earlier than January, 1955. The Bill further lays down that, even where an insurer has, in fact, allocated more than 5 per cent of any such surplus, the insurer shall be deemed to have allocated only 5 per cent.

This virtually reduces the amount of compensation by one-third, as most of the life offices have been allocating about 7½ per cent of the valuation surplus to the shareholders. Even the maximum of 7½ per cent provided for in the Insurance (Amendment) Act of 1950 is itself low, considering that, in the U.K. and other countries, the practice of life insurance business is that the shareholders receive not less than 10 per cent.

In order to determine the annual average, the Bill states, the surpluses allocated in the last two actuarial investigations are to be taken into account, which, in fact, means that the period of average is dated back to the immediate post-war years, when conditions were far from normal due to the Partition of the country and the change in the economic and monetary policies. Similarly the Bill fails to take life funds into account in the calculation of compensation. The Association rightly wants these funds also to be added to arrive at the quantum of compensation.

Further, the amount of compensation, it is to be presumed, will not be treated as dividend, as, actually, it is only a return of the approximate present value of the capital calculated in accordance with the principles approved by Parliament. In any case, it is desirable to clarify this point, if only to protect shareholders from being made to pay income-tax on the compensation received.

TWO HURDLES FOR THE COAL PLAN

THE QUESTIONS posed on behalf of the private sector of the coal industry in regard to the ambitious programme of expansion of coal output by 22 million tons in the second Plan surely require a clear statement of policy from the Government. The obvious reason is that the questions relate to certain risks outside the ambit of the normal commercial risks which the industry would be called upon to undertake. Mr. B. Mitter,

Chairman of the Indian Mining Association, has made a well-reasoned statement of the problems posed by the magnitude of the forthcoming coal plan.

In the absence of an assurance of security of tenure for a reasonable period, the Chairman has been constrained to point out certain ambiguities in the alternative assurance given by the Government in respect of payment of compensation in the event of nationalisation. These ambiguities which call for clarification may be stated briefly: (1) Compensation has been promised on the capital outlay on increased production. In this extractive industry it is technically impossible to make a demarcation between outlay undertaken on maintenance of current production and outlay incurred for expanded production. In fact a continuous flow of new investment is essential throughout. (2) Compensation has been promised on such outlay minus depreciation. Considering the rapid rate of depreciation of assets in the coal industry, full deduction of depreciation value in the short period will fail to make proper justice to the claims of suitable compensation. (3) A condition which has been tagged on capital outlay that would qualify for compensation is that it should be incurred with the approval of the Government. If this condition means that approval must be obtained for every single item of new plant and machinery in individual collieries over an indefinite period, it will create an extremely difficult situation to prepare a well substantiated base for compensation.

The coal industry is apparently worried over the ability of the railway system, in so far as the ability can be assessed at the present stage, to provide transport for movement of coal in keeping with the pace of expanded production. Experience in the past has demonstrated that in practice the railway administrations have usually found it difficult to adhere to their targets of wagon supplies for coal transport. The shortfalls in supplies of wagons for the coalfields of Bihar and Bengal have been cited in proof of this fact. The railway plan as it has emerged in the Draft Outline, however, indicates that the requirements of the coal industry for transport for increased output will be met in full. This statement of the overall position, however, may not meet the requirements of a strict schedule of wagon supplies at the time and in the areas required. Then again there ought to be no room for discrimination in wagon allotments on the principle of two sectors, two priorities, which finds its way in practice. The coal industry has urged that part of the coal traffic should be diverted to coastal shipping. But its demand that the coal freight rates on the coastal routes should be readjusted and brought in line with the prevailing lower railway rates runs counter to the claim made by the shipping interests. The decision of the Government on the recommendations of the Rail-Sea Co-ordination Committee on this issue will have a significant bearing on transport costs for coal.

THE STATE BANK OF INDIA

DR. JOHN MATTHAI's presidential address at the first annual general meeting of the State Bank of India gives a reassuring account of the good start which it has made after the eventful transformation of the former Imperial Bank of India. It is clear from the Bank's working during the first half-yearly period ended December 31, 1955, that the management has achieved success in removing the apprehensions created by the change in the status and character of the Bank. Total deposits which declined from Rs. 203 crores in January 1955 to Rs. 184 crores in June 1955 at the time of nationalisation again curved up and in December, 1955, they stood at Rs. 202 crores, or at the same level as in January. Advances exceeded the level obtaining a

year ago by Rs. 5 crores and amounted to Rs. 107 crores. Investments also recorded an improvement of Rs. 8 crores at Rs. 116 crores. The cash ratio was 13 per cent as compared to 15 per cent a year before, indicating greater diversion of funds for business requirements.

An important aspect of the financial results of the Bank's operations during this period relates to the declaration of dividend. The decision of the Board of Directors to maintain dividend at 16 per cent per annum has been recognised as wise. Computed on the purchase price of the shares which was fixed at Rs. 350 per share of the face value of Rs. 100, the return comes to 4.5 per cent. Nationalisation of the Bank cannot be expected to bring cheaper rates. Explaining the policy on interest rate and charges for banking services, Dr. Matthai made it plain that these could not be lowered because the Bank has to take account of rising costs of establishment and the imperative necessity to meet the costly demand of expanding its facilities for the provision of rural credit. The Bank's gross profit for the second half of 1955 amounted to Rs. 351 lakhs which is Rs. 40 lakhs in excess of the gross profit for the corresponding period of 1954. This excess, however, was completely absorbed by increasing establishment costs. The adjustments in salary, allowances, etc. which became essential in terms of the Gajendragadkar Award accounted for an increase in establishment charges of the order of Rs. 23 lakhs. This is merely an index of the general increase in establishment charges of all the commercial banks in the country.

HEDGE TRADING IN COCONUT OIL

ONE DISCOVERED coconut oil to be "non-essential" only with the publication of the Central Budget, which imposes on it an excise duty of Rs. 70 per ton (6 pies per lb.). In popular parlance, however, the term "vegetable non-essential oils" means exactly the opposite of what it does in technical jargon. Although the Budget has dubbed coconut oil as "non-essential", it does not cease to be important, if not essential.

Coconut oil is produced in considerable quantities in India, and it is appropriate that the Government should have accepted the Forward Markets Commission's recommendation to allow forward trading in this commodity to be conducted by the Alleppey Oil Millers' and Merchants' Association. Though there were two other claimants to this privilege, Alleppey has the peculiar advantage of being in the immediate vicinity of important coconut-growing areas and also of having the tradition of futures trading almost without a break for the last eight years.

Kerala accounts for more than one million acres of coconuts and a major portion of India's coconut industry is concentrated there. The total production of coconut oil, crushed from indigenous as well as imported copra, was 131,000 tons in 1952-53. The Indian Central Coconut Committee has formulated plans for increasing the production of coconuts by 30 per cent during the second Five-Year Plan period through intensive cultivation and pest control measures. On this basis, the target of coconut oil output to be reached by 1960-61 is 140,000 tons. Imports of coconut oil have also risen and amounted to 26,000 tons in 1953-54 against 7,000 tons in 1948-49. The main sources of supply are Ceylon, Straits Settlements, and the Federated Malay States. Among the principal vegetable oils ("non-essential vegetable oils") consumed in India, coconut oil is the only one which is imported, others like groundnut oil, castor oil, linseed oil, rapeseed oil and mustard oil being on the export list.

One of the reasons why forward trading in this commodity is necessary is that its price has been fluctu-

ating over a wide range for the last few years. Because of this and in the absence of a futures market, consumers have not been able to plan their purchases ahead. This is particularly so since the demand for coconut oil is wide, as it arises from a number of agencies like soap manufacturers, producers of toilet articles and individual consumers. Prices of copra and coconut oil influence the prices of other oilseeds and oils; they normally remain at relatively higher levels. Indian prices generally exhibit a trend similar to those in London which constitute the index of world prices.

LABOUR LEGISLATION

THE PRIMARY goal of labour policy must be to maintain progressive levels of employment and in the achievement of this goal harmonious labour-management relations have undoubtedly a high place. Where voluntary agreement between the two parties has not been possible and unresolved disputes threaten to dislocate industry, the machinery of labour legislation has to be brought into play. It is not a fact, as is generally presumed, that managements look upon the intervention of legislation as an unmixed evil.

Dealing with the labour situation in the country in his presidential address at the last session of the Upper India Chamber of Commerce, Mr. W. H. J. Christie has been forthright in his assessment of the value of labour legislation. He has frankly stated that labour legislation was one of the factors responsible for promoting better understanding between employers and employees and also in some measure for reducing the impact of strikes. But by and large it has encouraged a morbid tendency towards interminable litigation. Left to themselves, the two principal parties would compose their differences. But the interposition of outside political leadership in trade unions has often prevented this result. Mr. Christie is of the opinion that the two major sources of dispute which have proved difficult to be tackled through the machinery of legislation are bonus and workload. He suggests that in order to make legislation really conducive to good industrial relations two reforms ought to be introduced in law. Outside trade union leadership should be banned and a 'modus vivendi' should be found to exclude bonus and workload from the sphere of disputes to be settled by law. How exactly this is to be done has not been elaborated by him and he concedes that this will prove a slow and difficult reform. But his suggestion in this behalf is vital and it needs to be worked out in objective detail.

CEMENT IMPORTS

THE REPORTED decision of the Government of India to import cement from soft currency areas on a controlled basis has given rise to speculation whether the object of the projected imports is to keep down the prices of indigenous cement. An assessment of the situation relating to the supplies of cement in the country would point out that this is far from being the real intention of the Government. The target for the production of cement which was fixed at 4.80 million tons in 1955-56, it is expected, will be very nearly achieved and the cement industry will have made impressive strides during the first Plan. Nevertheless, the demand for cement created by the expansion projects in other components discloses some margin of shortfall and it is likely that this deficiency would persist for a year or more. It is to eliminate the deficiency in supply that imports will be restored to. It is presumed on reasonable evidence that the price quotations for imported cement would be much higher than the controlled prices of indigenous cement. These facts should put the question of cement imports in its correct perspective.

COMPANY AFFAIRS

BIRD & CO. GROUP OF JUTE COMPANIES

The Directors' Reports and Audited Accounts for the half-year ended September 30, 1955, of the Lawrence, the Dalhousie, the Auckland, the Union, the Lansdowne and the Northbrook jute companies (Managing Agents: Bird & Co., Ltd.) show that with the removal of all Export Duties by the Government of India from August 1955, Indian mills were put in a stronger position to meet competition from other countries. The devaluation of the Pakistan rupee at about the same time has, however, not proved of any benefit to the Indian industry because of Pakistan Government's decision to maintain their minimum export prices at the same sterling level as previously and the increase in their export duty on raw cotton.

Initially, prices of raw jute and manufactured goods drifted lower in the expectation of a bumper crop of good quality, low priced jute and the removal of the fear of a tight position developing for old crop. Later, however, floods in the jute growing areas and the consequent disruption of communications resulted in a shortage of raw material at consuming centres where prices advanced substantially. Even after the restoration of communications, near delivery jute commanded a premium, making it difficult to dispose of the companies' goods at a profit.

The working results of the individual companies are given below:

The Lawrence Jute Co., Ltd.

After providing Rs. 46,862 for depreciation, the profit and loss account shows a loss of Rs. 2,41,274, and adding Rs. 63,570, transferred to provision for contingencies, makes a total of Rs. 3,04,844. This is reduced by Rs. 14,440 brought forward from the previous half-year, Rs. 25,000 transferred from provision for taxation, Rs. 75,000 transferred from equalisation of dividends reserve and Rs. 2,65,555 transferred from general reserves, totalling Rs. 3,79,995. That makes available Rs. 75,151 to be disposed of in paying a 7 per cent per annum dividend on 'A' and 5½ per cent dividend on 'B' preference shares, and Re. 1 per share on ordinary shares, all without any deduction for income-tax paid by the company, absorbing Rs. 17,500, Rs. 27,500 and Rs. 27,997 respectively. The balance of Rs. 2,154 is to be carried forward.

The Dalhousie Jute Co., Ltd.

Setting apart Rs. 79,118 for depreciation and Rs. 18,182 for taxation, the account shows a total loss of Rs. 1,26,861 which includes Rs. 75,934 transferred to provision for contingencies. This is reduced by Rs. 11,882 brought forward from the previous half-year and Rs. 2,00,934 transferred from general reserve, making a total of Rs. 2,12,816 which makes available Rs. 85,955 for disposal. A 7 per cent dividend on preference shares and a dividend of Re. 1 per ordinary share, without deduction for income-tax in either case, absorb Rs. 52,500 and Rs. 31,459 respectively. The balance of Rs. 1,996 is carried forward.

The Auckland Jute Co., Ltd.

After providing Rs. 2,96,360 for depreciation and Rs. 35,622 for taxation, the profit and loss account shows a profit of Rs. 2,16,748 which is increased to Rs. 2,92,841 by adding Rs. 14,285 brought forward from the previous half-year and Rs. 61,808 transferred from general reserve. An amount of Rs. 61,808 has been transferred to provision for contingencies, leaving an available balance of Rs. 2,31,033. A 5½ per cent dividend on preference shares, 4½ per cent on redeemable preference shares and Rs. 4 per ordinary share, all

without any deduction for income-tax, absorb Rs. 27,500, Rs. 33,750 and Rs. 1,60,000, respectively, leaving Rs. 9,783 to be carried forward.

Union Jute Co., Ltd.

The profit for the half-year, after providing Rs. 70,000 for taxation contingencies reserve, Rs. 5,000 for development rebate reserve and Rs. 2,50,758 for depreciation, amounts to Rs. 3,04,189. Adding Rs. 6,219 brought forward from the previous half-year and Rs. 1,21,421 transferred from general reserve, it increases to Rs. 4,31,829. Provision for contingencies takes away Rs. 1,21,421, transfer to general reserve Rs. 75,000 and to jute stock reserve Rs. 20,000, leaving a balance of Rs. 2,15,408. A 7 per cent dividend on preference shares, and Rs. 5 per ordinary share, both without deduction for income-tax, absorb Rs. 21,000 and Rs. 1,79,890, respectively. The balance of Rs. 14,518 is to be carried forward.

The Lansdowne Jute Co., Ltd.

After providing Rs. 35,000 for taxation and Rs. 82,867 for depreciation, the profit amounts to Rs. 51,004. Adding Rs. 11,135 brought forward from the previous half-year, Rs. 36,578 transferred from general reserve, Rs. 10,000 from jute stock reserve and Rs. 40,000 from provision for taxation, the amount totals Rs. 1,48,657. Provision for contingencies is Rs. 36,518, leaving a balance of Rs. 1,12,139. Of this, a dividend of 7 per cent on preference shares and Rs. 2 per ordinary share, both without deduction for income-tax, absorb Rs. 52,500 and Rs. 48,932, leaving Rs. 10,707 to be carried forward.

The Northbrook Jute Co., Ltd.

The total profit, including Rs. 65,116 brought forward from the previous account, amounts to Rs. 2,89,068, after providing Rs. 95,000 for taxation, Rs. 22,000 for taxation contingencies reserve, Rs. 60,000 for development rebate reserve and Rs. 1,76,694 for depreciation. Transfers to general reserve and to jute stock reserve take away Rs. 50,000 and Rs. 25,000 respectively, leaving Rs. 2,14,068. A 5½ per cent dividend on preference shares and Rs. 12 per ordinary share absorb Rs. 41,250 and Rs. 1,25,956, leaving Rs. 46,862 to be carried forward.

COMMODITY NEWS AND NOTES

WOOL PRICES

Increase in Bank rate in the UK had its reflections on wool prices in Bombay as woollen mills in the UK are said to be not in a mood to augment their stocks in view of the high cost of financial accommodation. In fact they are even reported to be prepared to reduce their commitments. The result has been adverse to the Indian supplier of raw wool whose prices have declined by about Rs. 2 per lb since the Bank rate was put up. Price-wise, superior white Bikanner has come down by about As. 3 to Rs. 3-12 per lb while superior pale yellow has fallen by about As. 2 to Rs. 3-2 per lb. Joria white is quoted at round Rs. 3-6 against Rs. 3-8 per lb three weeks ago. Bewar White has lost As. 2 at Rs. 3-4 per lb. The quotation in the U.K. has come down by about 4d. and that in the USA by about 3 cents.

WORLD RICE PRODUCTION FOR 1955-56

World rice production in the 1955-56 crop year (August to July) was forecast by the US Department of Agriculture at 270,000 million pounds of rough rice. This represents an increase of 3 per cent over the 261,300 million pounds produced in the preceding year and is 2.5 per cent below the record harvest of 276,000 million pounds in 1953-54. The increase in production is attributed to higher yields per acre in some areas, as well as to some extension of acreages. World rice acreage is reported at 199 million acres, compared with 196 million acres the year before and 202 million acres in 1953-54. The largest crop increases are in Asia, where 88 per cent of the world's rice output will be harvested. Particularly good yields are reported in Japan and Thailand, and the rice crops of Burma, Pakistan and the Philippines exceed those of the last crop year.

WHEAT AND RICE OUTPUT IN INDIA IN 1955-56

An additional yield of 1.6 million tons of rice and at least 700,000 tons of wheat during 1955-56 over the output in 1954-55, are expected this season. The acreage under wheat has increased by 7.8 per cent from 25,685,000 acres in 1954-55 to 27,698,000 acres in 1955-56. The wheat crop is reported to be very good in the principal growing areas, Punjab and Uttar Pradesh. Though the first estimate covers only about 90 per cent of the area under wheat, the Agriculture Ministry expects that wheat output in 1955-56 will rise from 8.5 million tons in the previous year to more than 9.2 million tons. Output of rice is expected to go up from 22,126,000 tons in 1954-55 to 23,775,000 tons this year. The area under the crop has increased from 69,456,000 acres to 72,332,000 acres in the corresponding period.

RECORD ZINC OUTPUT IN 1955

World output of zinc increased by 11 per cent to over 2.6 million long tons according to the British Bureau of Non-Ferrous Metal Statistics. Consumption also rose during the year by nearly 300,000 tons, thus bringing it to within 50,000 tons of the level of production. In recent years world consumption has been considerably lower than production, though some part of the surplus has been drawn off into stock-piles.

The production figure given by the Bureau includes an estimate of 385,000 tons in the USSR, Poland, and other Soviet-controlled countries; production in the rest of the world totalled 2,258,000 tons as against 2,047,000 tons in 1954. Last year saw increased outputs in all countries except Belgium and Australia; over one-third of the total was produced in the US, where after falling considerably in 1954, output rose 12 per cent to 920,000 tons. In Canada, whose output had followed the same trend, there was 36,000 ton increase. West German output rose 10,000 tons to 177,000 and Japanese 11,000

tons to 111,900 tons. Production in the UK, on the other hand, was virtually unchanged at a little over 81,000 tons, whereas the Australian decrease was in the neighbourhood of 4,000 tons to a level of 101,000 tons and in Belgium of 3,000 tons to 207,000 tons.

FIRST ESTIMATE OF POTATOES

According to the Directorate of Economics and Statistics, Union Ministry of Food and Agriculture, the all-India first estimate of potatoes, 1955-56, puts the current year's area at 552,000 acres as against 551,000 acres in the adjusted first estimate of potatoes, 1954-55. Thus, the current year's area shows a nominal increase of 1,000 acres only. The increase in area during the current year has occurred in Bihar, Uttar Pradesh, PEPSU, Himachal Pradesh and Tripura due to favourable weather conditions at the time of sowing. This increase has, however, been offset to a large extent by decreases recorded in Assam, Madhya Pradesh, West Bengal and Hyderabad.

FIRST ESTIMATE OF RABI PULSES

According to the Directorate of Economics and Statistics, Union Ministry of Food and Agriculture, the all-India first estimate of rabi pulses (other than gram and tur), 1955-56, puts the current year's area at 9,263,000 acres as against the adjusted estimate of 9,550,000 acres for 1954-55. Thus the current year's estimate shows a decrease of 287,000 acres or 3 per cent in area last year. The decrease in area during the current year has occurred mainly in Bihar and has been attributed generally to unfavourable weather conditions at the sowing time. This decrease has been offset to some extent by increases recorded in Madhya Pradesh, U.P. and Hyderabad. This estimate covers the period generally up to the end of December, 1955.

Company Meeting

INDIAN MINING ASSOCIATION

Speech by the Chairman, Mr. B. Mitter, at the Annual General Meeting held on March 2, 1956 at the Bengal Chamber of Commerce and Industry.

GENTLEMEN,

The year that has passed since we last met has been primarily concerned in giving concrete shape to the future and the second Five-Year Plan has dominated the affairs of the Coal Industry. I need hardly emphasise how vital it is for the industrial development of the country that the aspirations of the Plan should be matched by actual attainments, nor need I stress how closely its success hinges on the ability of the Coal Industry to meet its new responsibilities.

In the past the Industry has on the whole been able to give the country all the coal it required and if on occasions some consumers have had to go short, the cause was usually to be found either in special circumstances such as prevailed during the last War, or in the limitations of transport.

The task before the Industry today is however greater than it has ever been called upon to face in the past. It is required to make available 60 million tons of coal by 1960 as against the 38 million tons produced last year. The achievement of this target in the short space of five years undoubtedly poses a problem of formidable proportions, but with the concentrated and co-ordinated effort of all who are in a position to help, there is no reason why the goal should not be successfully attained. In coal the pattern of production is one in which collieries worked by private enterprise operate alongside those worked by Government, and, in the context of the immense increase of potential required, there is ample scope for both to develop and to make their respective contributions towards a common cause. For this mixed economy to function effectively it is important to create an atmosphere in which both the sectors can work to maximum effect in close co-operation. They should both have equality of opportunity and both be allowed to operate under similar conditions.

In some quarters there is a tendency to take every opportunity of casting aspersions on the working of collieries under private ownership. No one claims that in an industry which has several hundred individual producing units conditions everywhere are ideal. Similarly I think it would be difficult even for the stoutest champion of State enterprise to establish that the Government collieries are models of perfection. Negative generalizations against the private sector serve little useful purpose, and, at a time when so much depends on the fulfilment of the Coal Plan, the accent must be not on creating divisions but on mobilising all our resources behind one gigantic effort.

To achieve the success we all desire it is important to examine what are the obstacles which stand in the

way and I propose, therefore, within the time available to me, to lay before you what in my view are some of the main problems facing us at present. In mentioning these difficulties however I wish to emphasise that, contrary to what some people are only too ready to assume, there is no desire on our part to be obstructive in any way. On the contrary I believe that only by a frank statement of difficulties will it be possible to devise remedies to overcome them.

To achieve the new momentum in production required by the Plan, it is obvious that vast new development programmes will have to be launched involving large financial outlays. In the private sector we are prepared to marshal our full potential behind these development projects and to finance them very largely from our own resources. However, whilst we are used to accepting normal commercial risks in the course of business, we cannot ignore the fact that, in a mineral industry like coal, it must necessarily take many years before any return on the capital outlay can be expected. We had accordingly hoped that Government would be in a position to give the industry some reasonable security of tenure in the face of frequent mention of the possibility of nationalisation. Government have unfortunately found themselves unable to give any security of tenure but it has been indicated that, if producers in the private sector made plans for increasing their production and laid out money for the purpose, then in the event of nationalisation full compensation, after taking into account depreciation, would be paid for whatever money was laid out with the approval of Government for this additional production. Whilst we welcome the reasons which prompted this indication, it must be emphasised that the formula is too limited in scope and its application in practice is fraught with too many difficulties to enable it to instil any great sense of confidence amongst those who are not only able but eager to undertake large scale capital outlays on development work.

If the formula is examined it will be seen to consist of three main parts, which lay down that compensation would be paid on capital outlay for increasing production, that it would be paid on capital expenditure less depreciation, and, finally, that it would be paid only on expenditure incurred with the approval of Government. As regards the first part, in an extractive industry like coal which works a wasting asset, even the maintenance of existing levels of production requires a steady flow of new investments and it is technically impossible to distinguish between capital outlay for maintaining production and capital outlay for increasing production. The two are very closely linked when incurred in one and the same mine, and even the sinking of new shaft in the same or another

property might be regarded as necessary for maintaining production.

An example may help to illustrate the point. Let us assume, for instance, that a property is being worked through two shafts and that a small area round the shaft bottom has been developed. In order to develop in accordance with approved mining methods the remaining area of the property towards its boundaries, more haulage engines, motors, switches, cables, steel wire ropes, rails and a host of other things would be required. Such additional installations, far from increasing output immediately, may only enable the mine to maintain its output for five, ten or even fifteen years until the depillaring stage is reached, when output will rise sharply. Will the capital outlay on such additional plant and machinery be regarded as necessary to maintain output or to increase output? The outlay is necessary to maintain present production but it is equally necessary to increase future raisings. Examples such as this can be easily multiplied to bear out the fact that no distinction is possible between the two forms of capital investment. Turning to the second part of the formula, it is suggested that compensation would be paid on capital outlay less depreciation. If a company were to invest a crore of rupees on fresh capital development and Government were to decide to acquire the Industry, say in five years time, then taking into account the rates of depreciation applicable in the Coal Industry, the depreciated value of the outlay would be very substantially less than this crore at the end of five years. At the same time, in the course of these five years, the company can hope to earn very little by way of return on its investment. Consequently, the outlook can hardly be construed as being reassuring to those who contemplate making large financial commitments. As regards the approval of Government to items of expenditure, if the necessity of having the initial investment approved by Government were conceded, should the formula imply that an account had to be kept of every single item of plant and machinery installed at each individual colliery, and, further, that this had to be done for an indefinite period, various practical and procedural problems would inevitably arise making the satisfactory maintenance of the records extremely difficult, if not impossible, both from the point of view of Government as well as that of individual producers.

In the absence of any security of tenure, the terms of compensation are naturally of great significance to those who are making ready to make large investments of money in developing the coal resources of the country. Furthermore, the formula suggested, in its present shape, postulates the laying down by Government of certain intricate procedural arrangements in regard to maintenance of records before any new development work can be undertaken. In view of all these considerations I hope Government will find it possible to evolve a more comprehensive formula which will transcend the limitations of the one mentioned. It has been stated by various Government spokesmen from time to time and even during the debate on the Fourth Amendment to the Constitution that the objective of Government was not to deny compensation but only to make it non-judicial. If that is the avowed objective of Government, then the present suggestion militates against the fulfilment of the objective.

In considering the general state of the Coal Industry I cannot recall any occasion over the years where reference has not been made to the inadequacy of transport facilities available for moving coal. Nevertheless, I feel that I must dwell for a while on this old problem which, under the impact of the second Plan, has assumed new dimensions of magnitude and urgency.

After the inevitable strains and dislocations caused by the last World War the Railways have made commendable efforts to restore the position, and to improve upon it, but the situation still remains one in which the capacity available is sadly deficient in relation to requirements. In 1946 the railways had stated that they were confident of attaining within two years a daily loading of 3,600 wagons in the coalfields of Bihar and Bengal. In 1955, however, after a lapse of nine years, the average number of wagons loaded daily in these two areas was only 3,262. Although this figure was a slight improvement on the 1954 figure of 3,205 wagons, it is manifest that the improvement is not keeping pace with the expanding output. When production plans are being designed to raise the output of coal by 22 million tons in five years, the Industry is apprehensive that transport is not being expanded sufficiently to cope with the vastly increased traffic which will be offering. I referred the other day from another platform to the cut in allocations for the Railway Ministry under the second Plan. Since then the General Managers of our Railways have together given voice to what has been described as "a chorus of complaints" emphasising their difficulties arising from shortages of steel, cement and timber. They are reported to have expressed misgivings about the ability of the Railways to adhere to their schedules of work. Planning in their view had become increasingly difficult and so had the possibility of giving any assurances for the future.

If there is any substance in these reports which have appeared in the Press, they naturally give rise to doubts as to whether adequate importance is being attached to the imperative necessity of achieving the closest co-ordination between the production and transport of coal. We are familiar with the results of the lack of such co-ordination in the shape of accumulated stocks at the pitheads and losses caused by spontaneous combustion. The Railway Budget presented last week also indicates that the development plans will be inadequate to cope with the level of coal production envisaged. The success of the Coal Plan cannot be assured unless transport can move the expected volume of traffic and I would urge that even greater efforts must be made for the breaking of this bottleneck.

Apart from directly expanding the capacities of the Railways, one way in which the strain on the railway system can be mitigated would be to make fuller use of coastal shipping for the carriage of coal. From this Association we accordingly welcomed the setting up last year of the Rail-Sea Transport Co-ordination Committee and urged before it our views that coastal freight rates for coal should be readjusted so as to bear a closer relations to rail freight rates. At present the disparity is glaring and this prevents the optimum utilisation of these two forms of transport.

Within a restricted field, the possibility of improving transport was examined in 1955 by a Committee set up to investigate Pilot and Depot Capacities in the West Bengal and Bihar Coalfields. This Committee has made some recommendations but only from the short period aspect of meeting requirements up to the end of 1957. Although it was limited to examining Pilot and Depot Capacities, the Committee felt that existing route and junction limitations would have to be liberalised considerably in order to achieve a lasting solution and it became obvious during its deliberations, that the transport problem could not be considered satisfactorily in small segments. For the movement of coal a more comprehensive policy is required and not merely the stringing together of a number of ad hoc expedients.

Since it appears almost inevitable, however, that for some time to come at least the insufficiency of wagon supplies will continue, steps should be taken to

ensure that such supplies as are available for coal loading are allocated in an equitable manner. It seems to have become the practice for the State collieries to get first priority in such allocations to the detriment of collieries in the private sector. It is some times said that in fact no discrimination is made, the wagons being allotted strictly on the basis of priority of orders. This is, however, merely a form of sophistry for, if every order placed with a State colliery is ipso facto given a high priority, the resultant position is unaltered. If private enterprise is to be given a fair chance of expanding output, distribution of wagons should be made without arbitrarily subordinating the interests of one integral section of the Coal Industry to the dictates of another.

The expansion of production and the development of new collieries will necessitate provision of new sidings and there are indications that the Railways are now not averse to the construction of sidings on Assisted Terms. This is undoubtedly an improvement on their previous policy, followed for some time, of considering only applications on Private Siding Terms. There is a possibility, however, that the rules governing the provisions of Assisted Sidings may be revised with a view to increasing the financial burden on the owners and proportionately easing the burden on the Railways themselves. If the terms are modified in this fashion the effect would be to saddle on the owners most of the onerous provisions of private sidings. Private enterprise has already expressed its eagerness to embark on large financial outlays for the development of collieries and I trust that in respect of sidings no fresh impositions will be made as compared with the Assisted Terms known to the Industry previously.

Turning from availability of transport, the expansion in production contemplated under the second Plan will make it necessary for large scale import of such plant and machinery as are not made in this country at present. Since Government collieries themselves would be interested in such imports, there is need to ensure that collieries in the private sector are not discriminated against in respect of import facilities, and further that, on the procedural side, all unnecessary hold-ups are obviated. In regard to essential requirements produced in India, some co-ordination at a high level is called for to see that the Coal Industry gets its fair share. I would like to stress in this connection that the position of cement supplies is far from satisfactory and is already causing considerable concern to colliery owners. The present allocations are quite insufficient to meet existing demands of the Industry and this raises the doubt as to whether sufficient quantities will be available for capital works required in connection with the Plan.

Some of the largest coal producers in the country, for instance, applied between them for a total of 2,364 tons of cement for period IV of 1955, against which actual allocations issued by the Cement Adviser amounted to only 423 tons. This insignificant figure included 178 tons of the more expensive sea-borne supplies from South India. Even though the collieries concerned agreed to accept their full balance requirements in cement imported from South India costing over Rs. 50 per ton more than cement produced in Eastern India, the shortfalls were not made good. The example I have cited applies to a very large number of privately run collieries and perhaps I may be permitted to enquire whether the State collieries are in a similar position both as regards the proportionate allocation against demands as well as allocation of cheaper cement from factories located nearer the coalfields.

The mention of the cost of cement brings me to the wider issue of production costs and prices. To shoulder effectively its onerous responsibilities, the Coal Indus-

try must be placed in a position where it can secure an adequate selling price for its output. I think most of you are already aware that today's controlled prices are based on production costs of eight years ago and that over these eight years costs have moved steadily upwards, thus narrowing considerably the margin left to the Industry. This process is still continuing.

Under the Coal Mines (Temporary) Regulations introduced last year, for instance, additional precautions are required to be taken in regard to open cast workings and there are new stipulations governing the use of winding ropes, the construction of precautionary fire dams and the installation of electric lighting underground. The new Mines Rules (1955) require, amongst other things, additional provisions for First Aid personnel and equipment, ambulance rooms, shelters and canteens. They also provide for employment of a much larger number of Welfare Officers who are required to have certain specified qualifications and to be of a certain status. The draft Electricity Rules, gazetted in 1954, lay down many stipulations regarding earth leakage protection gear, flameproof gear, and switchgear at sub-circuits. They restrict the length of trailing cables, thus necessitating more gate-end boxes. Furthermore, they require that all cables in certain areas are to be double-wire armoured.

All reasonable measures necessary to ensure the better working of mines, whether in State sector or in the private sector, have our full support. It must be realised, however, that to implement all these new rules and regulations costs money. In so far as these provisions are progressive they are welcome, but the dynamics of progress cannot be contained indefinitely within the strait-jacket of an inflexible price structure.

It is appreciated that coal being a basic commodity, the level of its selling prices has a bearing on costs in other industries; but these considerations apply equally to important commodities like steel and cement. Whilst this aspect should no doubt be borne in mind, I am sure you will all agree that no single industry should be made to subsidise others if its own economics justify an increase in selling prices. Nor can such an increase be denied on the ground that when production goes up in future, and when transport is available to move this increased production, costs would tend to go down. Consideration of this vital problem should not be allowed to languish in vague generalities of this nature. What is needed now is to make today's controlled selling prices reflect today's costs, and if the Industry's costs go down in future, there is no reason why future prices should be impervious to such changes. I would suggest that Government should no longer delay a comprehensive review of coal prices and that the results of this review should be made known at the earliest opportunity.

Labour costs, as you are aware, constitute the most important single element in the cost of producing coal, and the wage structure of the industry is being reviewed at present by the All-India Industrial Tribunal. The issues before the Tribunal are of great consequence and its findings, which are expected shortly, will no doubt have an important bearing on the future of the Coal Industry.

You have heard in the past references to the question of stowing and the quantum of assistance received for it. There has been no change in the position in the last year and the subsidy continues to be grossly inadequate. The rules governing the grant of assistance are in a large measure illogical, with the result that they give rise to various anomalies. For instance, owing to the peculiar rules governing depreciation, capital investment on mechanisation is penalised as compared

with inefficient installations worked manually. Again under the present rules a colliery situated on a river bank receives the same limit of assistance as a colliery situated many miles away from the source of sand supply. These and many other cases have been the subject of discussion for some considerable time but measures are still awaited to rectify the position. Nor is any solution yet available to the complaint that payment of stowing subsidies continues to be six months or so in arrears. There is need for urgent action in this matter as the present practice is a source of considerable hardship to those collieries which stow and, in so doing, implement one of the best known methods of promoting safety as well as of conserving coal.

Very close to the subject of stowing is that of washing and for some time now the question of arranging supplies of washed coal for the Steel Works has been before the Government and the Industry. I trust that before long we shall have a clear picture both as to the location of washeries and as to the price to be paid for washed coal.

Gentlemen, the years that lie ahead hold a great opportunity for the Coal Industry to make a significant contribution to the industrial growth of the country. The very magnitude of the expansion envisaged poses a challenge, however, and there are many problems to be tackled. To overcome them we must all strive to our utmost and must all pull together. If the authority and power of Government is linked in a joint endeavour with the resources and potentialities of private enterprise, I am sure we shall be able to face with confidence the challenge of this new opportunity.

I would like to conclude, gentlemen, by thanking your Vice-Chairman and the outgoing Committee for the help and support they have given me during the last twelve months. My appreciation also goes to our Secretariat, both here and in the coalfields, for the work they have put in, and, finally, I wish to thank your technical adviser, Mr. L. J. Barraclough, and all the others whose untiring efforts have proved so valuable to me during the past year.

Shree Krishna Gyanoday Sugar Limited

NOTICE is hereby given that the Twentyfirst Annual General Meeting of the Shareholders of the Company will be held on Thursday, the 29th March, 1956, at 11-30 A.M. at the Registered Office of the Company at Dalmianagar (Bihar) to adopt the Directors' Report and Audited Statement of Accounts for the year ended 31st July, 1955, to declare dividends free of Tax at Rs. 6/- per share on 'A' class Preference Shares, Rs. 5/- per share on 'B' class Preference Shares and final dividend of Annas - 12/- per share making a total of Rs. 1-12/- per share on Ordinary Shares (existing on the 31st July, 1955) for the year ended July 1955, to elect a Director in place of the one retiring, to appoint Auditors for the current year and fix their remuneration and to transact any other business that under the Articles of Association of the Company may be transacted at an Annual General Meeting.

The Share Transfer Books of the Company will be closed from the 23rd March, 1956 to 29th March, 1956 both days inclusive.

By Order of the Board,

SAHU JAIN LTD.

Managing Agents.

CALCUTTA,

22nd February, 1956.

Payment of any dividend declared will be made only to those members whose names are registered in the books of the Company on the 29th March, 1956 or to their mandatees.

Federation of Indian Chambers of Commerce and Industry

Presidential Address of Shri Shantilal Mangaldas at the Twenty-ninth Annual Session held on Sunday, the 4th March, 1956, at New Delhi.

Respected Prime Minister, Your Excellencies & Friends,

I have great pleasure in welcoming you all to the 29th Annual Session of the Federation. The occasion is significant. We are at the end of the first Five-Year Plan and on the threshold of the second one. The first Budget of the next Five-Year Plan has been just presented. The All-India Congress, the premier political organisation in the country, has further crystallised its socio-economic policies. For the business community all these have special importance. I therefore deem it a great privilege to have you, Sir, in our midst to guide us in our deliberations...

In exactly four weeks from today the country would be launching on the second Five-Year Plan. Its Draft Outline is before the public and we are, as it were, at the cross-roads in the field of national planning. It is therefore appropriate if I try to make an assessment of the country's achievement during the period of the first Plan and the part played by the business community in it. There is no denying the fact that today our economy is on a much sounder footing than it was when the first Plan was launched. For one thing, agriculture which constitutes by far the most important occupation has taken significant steps during the first Plan period... In terms of investment also the progress of industry during the first Five-Year Plan is according to schedule. Broadly speaking, the investments envisaged in the private sector at the time of drafting the Plan have all been completed with very few exceptions which were due to factors outside the control of industry...

There is no denying that the impulse for most of this development in the private sector, and I use the term here in its wider sense, has come from the dynamic outlook envisaged in the first Five-Year Plan, the investments that have taken place in the public sector, the fruition of a large number of river valley and irrigation projects, etc. Nonetheless, the fact remains that the private sector has played its part and has established its bonafides as being capable of delivering the goods in the fields allotted to it, given of course a suitable climate. I should like therefore to examine the Draft Outline from this particular viewpoint, namely, as to whether the broad policies underlying it have been framed in the background of the experience of the working of the first Plan. I would straightaway say that there are certain features of the new Plan that give us satisfaction. The clear emphasis on rapid industrialisation, the importance of basic industries as also the developmental targets envisaged for different industries, the recognition that the unemployment problem has to be tackled in a realistic manner, are all in keeping with the approach which we in the Federation had outlined in our Draft Note on the second Five-Year Plan. And we welcome them. There are however certain aspects of the Plan which cannot but cause a certain sense of disquiet in the business community and I will be failing in my duty on this occasion if I do not refer to them. I am sure, Sir, that you would like me to put before you and this distinguished gathering our doubts and apprehensions. I would be fair neither to myself nor to the business community of the country whom I have the honour of representing

if I do not mention that in our opinion the experience of the functioning of the private sector in the first Five-Year Plan has not been given as much importance in the formulation of the second Plan as it ought to have been given.

As is well known, the private sector was expected during the Plan period to invest Rs. 383 crores on modernisation, expansion and establishment of new industries. According to the latest estimates, about Rs. 340 crores would have been invested out of this allocation. This small shortfall is due to varied reasons. For instance, in some cases the negotiations with Government took longer than was expected or certain basic requirements, such as power could not become available according to schedule. Further, the targets for the private sector envisaged in the first Plan were essentially tentative in character and were based on collation of modernisation and expansion schemes which in 1950-51 various units were contemplating. The estimates of investment were in many cases based upon the then prevailing prices. Eventually, however, investment requirements, both of fixed capital and even to a greater extent of working capital, were less. The shortfall in the private sector is therefore more apparent than real. There is also another aspect of the matter. Besides the development programmes for the 41 industries envisaged in the first Plan, there have been major developments in certain other lines of production—major not only in the sense that they are new or substantial in terms of investment but also in the sense that they are basic to the development of an industrial economy. For instance, the establishment of steel tube mills, the development of dyestuffs, manufacture of important components in the automobile industry, to name only a few, are developments not envisaged in detail in the Plan, but that does not make them any the less important. I think it will be agreed that the performance of the private sector in the field of manufacturing industry during the last five years is on the whole satisfactory.

It is in this context that allocations in the second Plan in the field of industry need to be viewed. As against the allocation of Rs. 149 crores for large-scale industries, scientific research and minerals for the public sector in the first Plan, the allocation proposed for the second Plan is Rs. 691 crores. According to the most recent estimate, it would appear that out of the provision of Rs. 149 crores, something of the order of Rs. 75 crores would actually have been utilised during the first Plan. On the other hand, the allocation for private organised industry and mining is placed at around Rs. 500 crores apart from another Rs. 100 crores for plantations, private transport and electricity undertakings. Incidentally, according to the Draft Outline, this latter figure is no more than a guess. In other words, the investment in private industry is to be stepped up from Rs. 340 crores to about Rs. 500 crores. Whereas the increase in the private sector is to be of the order of about 40 per cent of the actual investment undertaken during the past five years, the allocation in the public sector is more than nine times the actual level of expenditure during the first Plan. I do not for a moment want to suggest that the rate of investment in industry in the public sector is not capable of

FLY NOW

TRANS WORLD AIRLINES
ASIA • AFRICA • EUROPE U.S.A.

being increased beyond the level attained in the first Plan. Nor do I want to ignore the fact that a substantial proportion of the investment is to be on the three new iron and steel plants. But even if these two factors are allowed for, I cannot but have a feeling that the desire to extend the public sector in the field of industry by reserving certain lines of activity to itself might have the result of slowing the pace of development.

I would therefore like to suggest that an element of flexibility should be introduced as between the schemes of development in the public and private sectors so as to make it possible for one to supplement the other. I realise that it is part of a major policy decision that the State must control and regulate the entire economic activity for planned development and enlarge the field of its ownership and running of certain basic industries essential to the community. Even if we may not be able to see eye to eye with this policy, I believe that it is possible to obtain the same objectives through the type of regulation and control which obtains at present and by Government taking control of strategic heights of the economy. In a modern State with the vast power that it has, it is not necessary for Government to own and run in the physical sense businesses excepting those which the people generally are not in a position to undertake or which are essential to be so owned and run by Government for certain overriding considerations.

It is in this light I should have thought that Government would decide their policy in regard to the nationalisation of life insurance. In point of fact insurance business in India has been under governmental control and supervision which extended to the direction of investments, the proportion thereof, distribution of surplus, etc. The investment pattern of the life insurance companies would show that more than half of the total resources of these companies have been available to the Central, State and Local Governments. Under the statutory restrictions, a substantial portion of the funds of insurance companies were compulsorily invested in Government and semi-Government securities. Thus insurance companies in India have all along been mobilising the savings of the community and promoting, as it were, capital formation for the Government sector. If at all, the feeling was that insurance companies were not providing finance to the extent expected of them to help the private sector of the economy. It has come therefore as a great surprise that Government decided to nationalise life insurance on the ground that it was essential for the implementation of the Plan. Incidentally I may refer to the earlier statements of the Union Finance Minister that the proportion of life funds not already required to be invested in Government and other approved securities was small and that the difference which would be made by nationalisation to the total resources was "not likely to be large". I cannot believe that the alleged malpractices in the business which, even if accepted as true, add up to only an insignificant proportion of the total funds, weighed with Government as the deciding factor to nationalise insurance. Malpractices, if any, should not be countenanced and the Federation is the first to join its resources with Government to eradicate them. We cannot, however, in all conscience, agree that the only remedy to every ill is nationalisation. Would not the exercise of control and supervision with greater diligence by Government have solved the problem? Even if Government decided to nationalise in a manner almost sensational, suddenly and unexpectedly through an Ordinance, is it necessary to run the insurance business through one single agency as proposed now? The Federation recommended, when faced with the fait accompli of nationalisation, that the business should be run through half a dozen Corporations or

so, the idea behind it being that these Corporations would compete with each other and expand insurance business. Today and for many more years to come, life insurance in our country will continue to be a highly personalised business and will not lose its persuasive character. For exploiting new fields and for expanding the business, competition is essential. And the requisite competition cannot be had except through the operation of a few Corporations which will compete with each other in respect of providing service to the policy holders. I would still request Government to reconsider the matter.

In this connection I may refer to another proposal which is said to be engaging the attention of Government, namely, the setting up of a State Trading Corporation. This idea was first mooted during the war and has come to be discussed off and on ever since, though the background against which it is projected has been continuously shifting. More recently it has come to be linked up with the issue of effecting institutional changes in the direction of greater economic and social equality. Further, arguments such as augmenting the resources of the State and facilitating trade in specific commodities with Communist countries have been advanced. The Federation had recently submitted a detailed memorandum to Government discussing these points. I will content myself by underlining the view of the Taxation Enquiry Commission that "no spectacular results, purely from the point of view of revenue, may be expected from State Trading". Experience in India and foreign countries has shown that State Trading as has taken place either in foreign trade or domestic trade is both wasteful and costly. It cannot be otherwise because no single agency despite its monopolistic position—perhaps because of it—can deal satisfactorily with the multiple and unpredictable market trends. Consequently, miscalculations and losses will not be borne by the monopoly corporation of the State, but will be passed on to the consumer and tax-payer. In the field of industry and trade, competition—not monopoly—is the surest and best means to safeguard the interest of the consumers and the general socio-economic objectives as well.

The central problem, as I see it, is to bring every section of the community into the competition of life on a footing of equality of opportunity. In essence the problem which society and Government have to face is how to secure to the fullest degree certain conditions of equality while at the same time retaining the essential incentives necessary for the maintenance and increase of social efficiency. And I think that a time has come when it is by this standard of social efficiency that all the policies that are being suggested currently have to be tested.

I have already discussed the policy of the extension of public sector. Let me take up the other idea which is now popular, namely, decentralisation of economic power by placing ceilings on income and holdings and by revival of cottage industries. I should like to make it absolutely clear that the business community is as anxious as any one else for an improvement in the standard of living of the people. Such inequality as exists is a phenomenon of under-developed economies. As the country develops economically—and only when it develops—inequalities will be reduced. Otherwise, an effort to bring about equality when a country is poor is in effect to distribute poverty and not prosperity.

The suggestions in respect of placing ceilings on incomes and generally encouraging hand industries are not backed, as far as I can see, by economic considerations. I am not suggesting that economic considerations should over-ride social values. But my point is that

the social values which we want to promote cannot be obtained by decree. For instance, it is alleged that modern industry in India is in the nature of monopoly capitalism. It is not quite clear at any rate to me what is there in Indian industry that has merited the charge of monopoly capitalism. Is it suggested that the major industries in this country like textiles, sugar, etc., are closed shops and that there is no competition between the hundreds of units which constitute these industries and compete with each other? In fact the possibility of a monopolistic tendency will arise should the State decide to put a restriction on new entrants and a ban on further expansion. The very fact that it is the representatives of organised industry who have been sounding a note of warning against restricting factory type production or banning expansion of existing units or establishment of new ones is proof positive that they do not want to enjoy a monopoly position.

Take again the question of small-scale and hand industries. Let me straight away concede that in a country like India labour intensive methods may have to be adopted to provide opportunities of employment for the large numbers who are unemployed or under-employed. This does not mean that we should depend only on labour intensive methods or, as it has come to be maintained, that at the one end there should be modern machine-making industries and at the other cottage industries for producing consumer goods. In other words, factory production of consumer goods is to be discouraged. This policy would be self-defeating. A point which is made much of in support of cottage industries is that its employment potentialities are greater than that of factory industries. And although I cannot go as far as to say that employment could be an end in itself, it goes without saying that in the existing state of affairs in our country, the creation of employment opportunities is one of the most important problems. From that point of view it is easy to appreciate the approach of the Planning Commission of placing greater reliance during the next Five-Year Plan on labour intensive methods. What is, however, not so easy to understand is the growing emphasis on outmoded means of production because if that alone was the solution of the unemployment problem it would follow that the more primitive the society the better off it would be because in such a community the techniques are crude and inefficient, and therefore for a given volume of goods and services the manpower required will be much greater. Yet all through history the trend has been towards improved techniques, and greater use of capital to assist human effort. The history of technological progress is most significantly the history of the creation of new resources, new industries, new employments and new facilities for living. Of course, at the present stage of our development there are limits set by scarcity of capital to the possibilities of improving techniques and of using more capital all round. It is no doubt necessary to utilise our limited capital resources wisely and effectively and to that extent an emphasis on labour intensive methods wherever they are economically feasible is only right and proper. But what I find disconcerting is the curious tendency in some of the present discussions to hark back to the past in respect of hand industries and to look to the future as regards large-scale industry. It is necessary in this as in other spheres to retain a sense of perspective. The kind of small-scale industries that we ought to encourage are not the ones which occupied a position of pre-eminence in the past but industries which can be economically run on a small scale and which have an integral part to play in a developing industrial society. It is not often realised that even in the most highly developed industrial structure there is enormous scope for efficient small units which use power and modern equipment. In this country also there is a great deal of scope for all kinds of new industries to be started on a decentralised basis. The

development of small-scale industries is a great and challenging task and though we have made a small beginning in that direction by the establishment of the Small-scale Industries Corporation, I feel that much more attention needs to be paid to this rather than what are essentially the declining trades.

The question of developing small-scale and hand industries and placing restrictions on organised industries has also to be considered in the context of our large foreign exchange requirements. Even according to the Draft Outline of the second Five-Year Plan, on a preliminary view of requirements and likely earnings, it would appear that the balance of payments on current account would show a total deficit of Rs. 1,100 crores over the Plan period. In estimating the earnings, the Draft Plan, for instance, has assumed that exports of cotton textiles will increase progressively from some 814 million yards in 1954-55 to 1100 to 1200 million yards in 1960-61. Here again, there is another assumption that although mill production will not be substantially stepped up, additional supplies will come from the handloom industry. Indeed this large assumption is based on the hope that it would be possible to organise handloom production on the requisite scale. In case the organisational effort required fails, then we will be faced with problems of a serious nature not only in respect of foreign exchange earnings, but also in regard to the effects on the internal price structure. The organised textile industry is a good foreign exchange earner. If a ceiling is put on its progress, we will not only be unable to increase our exports but the internal prices of both mill and handloom goods will also go up. At a time when we are thinking in terms of deficit financing to the extent of Rs. 1,200 crores, the price situation has to be carefully watched. In an under-developed economy like ours, deficit financing has to be relied upon. Moreover, the under-developed state of our economy itself makes it easier to avoid the hazards and dangers of deficit financing in that the inflationary trends can easily be checked with some pre-natal care and by providing adequate supplies of basic essentials, such as food and clothing which constitute more than 70 per cent of the consumption outlay of the masses. But a regular and increasing flow of consumer goods becomes imperative during the Plan period when a substantial proportion of the development outlay will be on industries which have a longer period of gestation.

The taxation policy of Government will have to be geared to the needs of development both in public and private sectors and the maintenance of a reasonable level of prices. If capital formation is to be sustained and dynamic, it must take place by way of personal and corporate savings. Therefore, tax policy should not act as unduly disincentive either to work, save and invest or to consume. Judged in this light, some of the tax proposals of the Finance Minister for the 1956-57 Budget require modification. For instance, his proposal to levy extra burdens on companies by way of withdrawing the rebate of one anna of income-tax at present given to non-Section 23A companies in respect of undistributed profits, the impositions of a super-tax at graduated rates on dividend distributions exceeding 6 per cent and 10 per cent of the paid-up capital, as also a tax of two annas on bonus issues, will discourage the flow of funds to the corporate sector. It is only recently that the Indian public has been slowly getting used to investment in companies. A tax policy that unduly discourages distribution of dividends will prevent the growth of a healthy capital market and adversely affect the psychology of the investor. It will not only affect the flow of venture capital but also the pace of industrialisation.

Before I conclude, I appeal to you, Sir, and to your Government to make use of the experience and talent of the people for building up a more prosperous India.

In the great task that is ahead of our country, the Federation and its constituents will do all that lies in their power. What all we ask is that we be given a reasonable opportunity and a fair deal. You yourself, Sir, were good enough to say recently that the reaction of Indian industrialists as a whole has been rather good and that it would be made use of. You proceeded to state: "It creates an atmosphere of co-operation for going ahead. We can get the benefit of experience, ability, etc. of many people." May your wise counsel guide the policies of your Government and the Legislature! Let the business community be given a chance to make its contribution to the common interest in greater production and a better life for all to share!

It is here that I should like to say a word to my comrades and fellow workers in the business field. We at the present time are entering on an era in which we are about to witness many more changes. It would be a great mistake to consider all changes bad or all changes good. Change is the essence of life. Its outward indications might appear, at first sight, puzzling and conflicting in the extreme and it is not until they are grouped and compared that they are seen to belong to one wide and general movement. We must seek to understand the principles governing the evolution of society. The fuller light in which we can view the great problems can be had by us by strengthening organisations like the Federation. I am sure that my business friends will assist the Federation with their funds and advice so that it can in turn help, classify, assess and estimate the various developments on the economic and social fronts. Then the business community which is pre-eminent in the matter of adapting itself to new ideas and new institutions will find it easier still to understand better the various currents and cross-currents.

Thanking you.

THE RAMAYANA OF TULSIDAS IN ENGLISH VERSE

LATEST "HINDUSTAN TIMES" PUBLICATION

The famous Hindi epic regarded by many as "the greatest book in all devotional literature" is for the first time now available in English verse.

The translator, the Rev. A. G. Atkins, completed the book after ten years of devoted work. He has tried "to keep and express in English in the fine rhythm and music of the original in simple lucid language, and with as much of the vivacity, wittiness and picturesqueness that Tulsidas has put into his work." He has also followed in some measure Tulsidas's metrical variations such as *chhand*, *chaupai*, *doha* and *soratha*.

In a foreword Mr C. Rajagopalachari says: "Mr Atkins' monumental work and his Introduction are a revelation of hope for those who desire to see all the great religions of mankind come together. His service is not only to English-speaking people but also to that very large number of Hindus in India who do not speak the Hindi language and to whom English has become a very familiar medium."

The book is of special value to libraries, scholars and devotees of Tulsidas.

It has been issued in the following four editions:

- Original text of Tulsidas with translation in English verse; three volumes; 1468 pages; price Rs. 50 net.
- Translation in English verse; without Hindi text, two volume; 898 pages; price Rs. 40 net.
- Special tissue paper edition of I, one volume, price Rs. 100 net.
- Special tissue paper edition of II, one volume, price Rs. 100 net.

The Free World in Delhi

THREE Foreign Secretaries of the Free World were in Delhi last week. They did not speak the same language. Indeed, as far as one can determine, M. Pineau's philosophy was more akin to that of a neutral (or is it neutralised?) India than to the current language of the Free World. Not, indeed, that even that language was consistent

in itself. Having spoken deprecatingly of military pacts, one might have hoped that the French Foreign Minister would have a dramatic announcement to make on the bitter experiences of France as a member of NATO, and that he would have preached the need for a revision of these commitments. But he insisted—contrary to France's

reputation for extreme logic—on riding both horses at once. In the end his visit was even less effective than that of Mr. Selwyn Lloyd, who completely blotted his copy-book by asserting in Delhi that Kashmir would not be discussed in the SEADO meeting and then promptly agreed in Karachi to discuss it when Pakistan insisted.

Curious as this may sound, the only Foreign Secretary who has emerged with an enhanced reputation after his Indian visit is Mr. John Foster Dulles. This is the more remarkable because, contrary to some unreasonable expectations, no accommodating statement on Goa materialised. There was, however, no mistake made in a Press Conference lasting over an hour and much that the United States Foreign Secretary said on Kashmir and Goa was free not only from criticism but even from disappointment. He said in effect that the traditional policy of the United States to bring on independence of subject peoples had not lost its application in the Goa case. Only the time and means of each act of intervention depended on circumstances, and Goa did not call for a positive United States role. On Kashmir, again, the point that there was no new line of American policy in the SEADO meeting was well expounded. These might be described as the negative achievements of Mr. Dulles' Press Conference. Without doubt, there is something far more positive to record. This was his categorical reply to the question what line the United States would take if Pakistan attacked India in Kashmir or elsewhere. The United States Secretary of State made it quite clear that under these circumstances "existing arrangements" with Pakistan would cease and, under the United Nations Charter, the United States would come to the defence of India. This in that announcement—never previously set out categorically in these terms—is one which has not yet been completely absorbed by Indian public opinion. There is no doubt, however, that it has done more than any single pronouncement in recent months to place Indo-American relations in a more favourable light.

If Mr. Dulles' statement could be interpreted to mean that India has a specific ally in the United States against Pakistan in the event of aggression, it would eliminate the major source of difference between our two countries. The central factor making for deterioration in Indo-U.S. relations is military aid to Pakistan. It has been argued that, politically, this was designed to bring pressure on India and, therefore, attracted Communist interest. Economically, since it made necessary higher defence expenditure in the Indian Union, it was an additional burden both on our foreign exchange, as well as our domestic resources required urgently for the second Five-Year Plan. If, indeed, it is a fact that American resources will be available in unlimited quantities to meet a possible attack from Pakistan, there would be every reason for satisfaction.

Why is it that, with this statement in black and white, there are so many intelligent people in India who consider that precautions should not be diminished in any way? The answer surely is to be found in the psychological distrust of many of Mr. Dulles' previous pronouncements. There is also—not that this is widely entertained or understood—the belief that there may be difficulty in prompt action by the Security Council in declaring Pakistan an aggressor; United States

assistance may wait upon such a resolution which, in view of current military alliances, might conceivably be jockeyed back and forth before a resolution is finally passed. There is also the question of a factual report. If the offensive is taken in Kashmir, the existence of United Nations military observers could help. But so far as other border disputes are concerned, there is now no machinery for prompt inspection. There certainly is room for some additional machinery to be instituted in areas other than Kashmir. Perhaps if this were done, Indian opinion would tend to be more assured than it is at present that the United States means to act prompt on the assurance that the Secretary of State has given us this week.

The fact remains that Indian opinion is at the present time deeply disturbed, and even somewhat illogically disturbed, about the Free World's attitude to India. There are far too many intelligent people in India who still consider that the logical ending of a long period of military pressure by the Free World in an area surrounding the Indian Union might lead to a pressure on the Government to accept arms from the other side. There are some who, even more imaginatively, think of USSR's direct intervention. They forget that for one thing, there is no evidence that it is possible for the USSR to intervene on Indian territory in a manner effective enough to ward off an attack by Pakistan supported by the Free World. An ineffective ally is only a liability; on the other hand the Free World can be an effective friend. Those who distrust the Free World are unfamiliar with the extent to which Free World interests are bound up with the integrity of India. Once this point is recognised that a Communist military alliance with India will not provide national security against the Free World, and that the Free World has an abiding interest in India which she can never sacrifice for Pakistan, romantic movements of Communist troops or supplies of arms fit into the realm of fantasy to which they undoubtedly belong.

While, there is really no need for alarms and excursions which some misguided people in India seem bent on raising, there is certainly need for recognising that Indian public opinion at the present time is in a state of animated suspense because of the additional military resources which are being placed in the hands of Pakistan via SEADO and the Baghdad Pact. The *Eastern Economist* has recently had occasion in several issues to draw attention to this state of mind as a solid political fact of which the Free World must, in its own interest, take far deeper notice. There is no need at this time why Indian public opinion should not be assured on the point that, corresponding to any additional military aid which Pakistan receives, India will receive economic assistance by aid, or by loan, enough to offset her additional military expenditure and any additional commitments of foreign exchange. Until the conviction is created that the Free World really means business in holding the line between India and Pakistan, it is certain that suspicion of the Free World will continue to exist. Three Foreign Secretaries have come and gone. Nothing will have been achieved by their visits unless the friendliness they have tried to communicate by words finds some expression in deeds in the one area where misunderstanding and distrust have, in recent months, been allowed foolishly to grow.

Lessons of the Leninist Revival

THE Twentieth Congress of the Communist Party of the Soviet Union has created a stir in the capitals of the world. The Congress preceded only by a period of two weeks the third anniversary of the death of Stalin. The speeches at the Congress, especially that of Mr. Mikoyan, showed how thoroughly that mighty figure has been debunked, in spite of Stalin's contribution over a quarter of a century to the consolidation of the Communist system in the Soviet Union and its power in the world outside. The theory of collective leadership has been substituted for the cult of personality which Stalin encouraged; this substitution has taken place in a somewhat dramatic manner, by Mr. Khrushchev asking the delegates to the Congress to stop applauding him and Mr. Bulganin. This incident illustrates forcibly how dependent the Soviet political system is on centralised directives. The revised doctrine, once formulated from above, has been accepted with unanimity in the same uncritical spirit in which Stalin's directives and whims were formerly complied with. It has also been proudly claimed that the Communist Party of the Soviet Union has become more monolithic; and credit for that must be fully conceded.

It is with these reservations that one should view either the new iconoclastic zeal or the revision of doctrine of the Twentieth Congress. The Congress will, nevertheless, be regarded as an important landmark by foes and friends alike of the Soviet Union. The convening of the Congress itself has been a rare occurrence, the last two having been held in 1938 and 1952 respectively, to announce important changes. But at all times, the Congress provided only the audience for the Central Committee and not a policy-shaping assembly; that it had no role in the fateful decade after 1940 is proof of this. It is significant enough now that the top leadership in the Central Committee should have thought it necessary to effect far-reaching changes in the policy and methods of the Communist Party, particularly in the field of international relations. The first signs are revealed of a realisation that the methods hitherto pursued by International Communism against non-Communist Governments have bred widespread suspicion and distrust of the Soviet Union.

It is the first genuine attempt of Communist leaders to adapt their policy to the needs of the atomic age and to explore the conditions of peaceful co-existence of differing social systems. The dismal record of Stalin in the post-war period is being effaced in order to provide the climate for preaching, if not practising, co-existence, and Leninism has been handy to provide a basis for such revision. The following thesis of Lenin has become the theoretical basis for recognizing other forms of transition to socialism in other countries: "All nations will arrive at socialism—this is inevitable; but not all will do so in exactly the same way; each will contribute something of its own in one or another form of democracy, one or another variety of the dictatorship of the proletariat, one or another rate at which socialist transformations will be effected in the various aspects of social life."

This reorientation of Communist international policy has therefore attracted attention and it is natural that the statesmen of the world who have been watching for signs of the 'new look' in the

Soviet Union should now take notice of it. The Prime Minister, Mr. Nehru, while referring to these changes, has interpreted them as the inevitable process of rethinking of doctrinaire attitudes in the present world situation. Mr. Dulles has reacted not unexpectedly when he stated that while he noted the change, he would wait for evidence of the sincerity behind it. But others, like the French Foreign Minister, have been more positive in the assessment of the significance of the Twentieth Congress while remaining even basically sceptical.

It is important to note that all these developments are not the result of weakness either within the Soviet leadership or in the military strength of the USSR. Certainly, the present leadership has no intention, even while it disclaims Stalin's policies, to liquidate the Communist empire in Eastern Europe. The construction of heavy industry in the USSR even at the expense of welfare will not get a lower priority. There is now real confidence in Soviet resources, manpower and an expanding technology; there is less fear of encirclement or of threat from the world outside. Soviet leadership is quite aware of the fact that the socialistic trend in other countries which are democratic has also been neutralistic by and large and that this adds to Russian security. All these factors, together with an internal political system which is no less totalitarian than it was under Stalin, must indeed have induced a feeling of complete confidence in adopting the new attitudes.

So the question, whether the Twentieth Congress represents a change of strategy or change of objective, still remains open and can be debated endlessly. While rejecting the inevitability of war, the Soviet Communist leaders have stressed the Leninist thesis that in so far as imperialism exists there also exists an economic basis for war, though it is held as probable that it will be averted by a correlation of several forces. The Communist leaders have also recognized that the transition to socialism could be accomplished peacefully, without civil war and through the parliamentary methods in each country adopted by all sections of the people. This indeed is a revolutionary change from the old Marxian assumption of the inevitability of revolution; but its purpose is not to dissolve the Communist parties in democratic countries. No such directive seems to have been contemplated by the Twentieth Congress. The Communist Parties have been directed only to establish points of contact with the Social Democrats and to explore the possibility of business-like contact, rapprochement and co-operation. The answer to these blandishments lies with the Social Democrats. Will they help to make Communists respectable by such recognition, ignoring their past?

The clues to Soviet policy in the future must be found only in the actual working of these directives. The largest question will be in relation to the internal structure of the Soviet regime and its relations with its satellites. Some degree of criticism seems to have been permitted recently but the character of the regime is unchanged. Its actual operation as a system of world power will decide in the last resort the bona fides of its professions. Questions like German unity are still the important tests of the genuineness of the new spirit.

The Akali Dal—Gesture and Response

THIS week there has been comforting news on the domestic front. On Sunday, the General Council of the Akali Dal passed a resolution accepting the Government's formula of Regional Councils for the Punjab to solve the linguistic tangle which has been threatening to disrupt the politics of the State. The negotiations on this matter have been long-drawn-out and, until last week, the situation was rather fluid, despite the fact that the talks have all along been held in the most cordial atmosphere and with an unusual degree of mutual understanding which made the outlook hopeful. It was only nine months ago that the Akali Sikhs were involved in an agitation for a Punjabi-speaking State. It was not, however, a linguistic movement on the usual pattern; it was patent at the time that it was only a disguised demand for special treatment to the Sikh community as a whole. It had all the elements of a communal movement and the extent to which the Akali Sikhs were able to rally the sympathy of non-Akali Sikh groups provided some indication of a widening area of grievances. The linguistic demand never provided a coherent basis for the creation of a separate State and the States Reorganisation Commission had no difficulty in exposing its unsoundness. But such exposure did not necessarily solve a problem which was mixed up with some genuine misgivings of the members of the community. A solution in somewhat practical terms was called for; it was a task of political reconciliation and the happy conclusion now reached is evidence that it has been quite successfully tackled.

It serves little purpose now to say that the problem might never have arisen if there had been some forethought in the treatment of such political groups which draw their support from communal feelings. The tendency in the past has been to dismiss them as entirely reprehensible, which in fact they are; but such dismissal, unless followed by persuasion and tangible assurances, only drives communalism beneath the surface for a while, making it raise its head when other reasons provide cause for agitation. In the politics of the Punjab, there has not been a dearth of such provocations due to tactless administrative policies. A change of atmosphere, therefore, was necessary before a political solution could be worked out to the satisfaction of all parties. That change has taken time. The reorganisation of the Punjab Ministry has been one of the major steps taken in this connection to create a climate conducive to a settlement of the Sikh problem.

The largest single factor, however, which contributed to an amicable end of this problem was the top-level meeting between Master Tara Singh, the Akali leader, and the Prime Minister. The confidence which these discussions created in the mind of the Akali leader was a triumph of statesmanship. For Master Tara Singh, the argument that the security of India would be jeopardized by an agitation wholly disproportionate to the ends sought by the Akali Dal, has proved convincing. In thus accepting a fair compromise to avoid conflict and passion on our frontier, he has put patriotism above narrower loyalties. This attitude indeed deserves unstinted praise and no section of the nation will now grudge tribute to the Akali leader.

The merits of the particular solution are not, perhaps, of very great importance in this context of understanding and goodwill. Yet, it must be agreed that the Regional Council formula is the best that could have been achieved in the circumstances. A part of the solution has already been put into practice earlier under the Sachar formula by the recognition of the use of the Punjabi language in certain districts and parts of districts. That process is expected to be completed by the recognition of Punjabi in Gurmukhi script and Hindi in Devnagri script as the official languages at or below the district level in the respective regions for which separate regional councils are proposed to be established. At the higher levels, official business will be transacted in both the languages. The zonal committees will enjoy substantial authority, with their decisions being virtually binding on the Government. The old and discredited system of dyarchy has at least on this occasion provided a precedent for the functioning of zonal bodies within a single State.

It is a new experiment in many ways and in points of procedure—particularly when transport, law and order, finance and revenue are kept as reserved subjects—many new conventions may have to be created; but these points should not prove to be sources of difficulty if the atmosphere remains the same as now, one of cordiality. Both sides must remember that the problem would never have arisen if there had not been distrust on one side and some indifference on the other. Indeed, there is no reason why the devolution of powers to zones in educational and allied matters, where language is an important factor, should create any insuperable difficulties. For example, in the composite State of Madras before 1953 these matters were only of routine importance; the sources of discord there were only on the political plane, for which there were no regional councils to provide a certain amount of decentralisation.

A part of the settlement now reached is the exclusion of Himachal Pradesh from the larger Punjab recommended by the S.R.C. There is no need to regret this step, because opinion within Himachal Pradesh has been uniformly against a merger with the Punjab, and the minority report of the S.R.C. had recognised the force of this opinion. This would disappoint the sponsors of the Maha Punjab movement; but this movement itself was only a reaction or a counterblast to the initial narrowness of the Akali movement. In the new context, it must lose much of its reasons for existence. The leaders of the movement would do well to call it off since their primary aim of preventing a disintegration of the Punjab State has been achieved.

The vexing problem of States' reorganisation, it may be said, has turned the corner with this decision. The painful interlude of the Bombay disturbances has given a warning and the disquiet caused by it has been offset by this distinct advance recorded in our vital frontier State. In turn, this will serve as an example and a guide to the other areas where unresolved problems have to be taken up shortly. It establishes the principle that while language is important enough, it is not such an overriding factor as to cause division. It is a hard-won success and the fruits thereof should not be thrown away by further agitation.

THE *Sleeperette* SERVICE

An innovation in air travel comfort

Pan American's Sleeperette Service is the ultimate in air travel comfort—meets the needs of overseas flights as never before.

Your Sleeperette lounge chair has double the usual leg room... at the touch of a button it extends to full bed-length. You are supported restfully from head to foot while you relax in confidence, and enjoy a good night's sleep aboard the world's most experienced airline. And remember, the Sleeperette costs you no more!

Only Pan American offers you Sleeperette comfort.

- The Sleeperette lounge chairs are scientifically engineered for your comfort.
- Foam-rubber cushions give your body curves restful support.
- Adjustable leg-rest suits your size.
- Costs you nothing extra.

Let your Travel Agent arrange your trip—his services are free. Or call Pan American in:

THE WEEK'S NOTES

T.-C. REGAINS INSTABILITY

THE RESIGNATION of the Congress Ministry in Travancore-Cochin within 13 months of its installation has once again brought to light the unstable political foundations on which the administration of that southern State has to be based. The immediate cause of the resignation was the defection of six members of the Legislature Congress Party, amazingly enough as a protest against the decision to separate the five Tamil-speaking taluks in South Travancore and to include them in Madras in the process of reorganisation of States. This brought down the strength of the Congress to 54 in an Assembly of 117, making resignation unavoidable. None of the other groups is in a position to form a Government either without Congress support, for the simple reason that at least four parties—the Praja-Socialists, the Communists, the Kerala Socialists and the Revolutionary Socialists—will have to join hands to do so, and even then they will not have an assured majority in the Assembly.

In this confusion, the Praja-Socialist Party with 15 members holds a key position, and attempts are currently being made by the other Leftist groups to make them join a coalition. Whether the P-SP joins a Leftist coalition will depend on the National Executive, and it is unlikely that earlier declarations about having no truck with the Communists will be reversed. The prospects of a Congress-PSP coalition are also not too bright because of the unfortunate experience of the earlier P-SP Ministry. Also, Mr. Pattom Thanu Pillai's known opposition to handing over the Tamil taluks to Madras will stand in the way of the 12 T.T.N.C. M.L.As. supporting him, without which the Ministry cannot hope for stability.

The immediate difficulty can be got over by the imposition of President's Rule and having it extended by Parliament until the next general elections are over. But the next elections will also lead up to a blind alley if the parties which believe in democracy and the parliamentary system refuse to recognise the danger ahead. If anything, the 1957 elections to the reorganised State Assembly will accentuate political troubles, with the pro-Congress Tamil areas gone and the largely anti-Congress Malabar district of Madras inside Kerala. It will be too much to expect any miracle such as the one which saved Andhra for the Congress. Some drastic rethinking at national levels in the P-SP and in the Congress seems to be called for if local partisanship is not to be allowed to upset democracy.

TARGET DATE FOR PROHIBITION OFF

THE VIEWS of most of the State Governments on the report of the Prohibition Enquiry Committee have come in and, as was only expected, reveal a general reluctance, on the part of those who have not yet introduced complete Prohibition, to accept any common target, much less April 1, 1958, suggested by the Committee. Even the puritanical Bombay Government seems to feel that the target for other States is too early. The reason for the unwillingness to launch the Prohibition programme was in nearly every case due to the fear of the loss of revenue which it would involve, when the accent is on maximising resources for the implementation of the second Plan, particularly when most of the States have deficits on revenue account. For a State like West Bengal, there is no meaning in forgoing the income from excise which will only widen the already yawning gap in the budget. It has been estimated that the loss of revenue, if Prohibition were enforced all over India from the target date, will be Rs. 120 crores for the period of the second Plan—for three years of complete Prohibition and two years of partial Prohibition.

tion. Apart from this there is the administrative expenditure involved in the fruitless endeavour to enforce the law, the magnitude of which the Committee failed to take fully into account. Some of the States have expressed themselves ready to inaugurate the programme provided the Central Government comes forward with subventions to make up the loss in revenue. But this course will only transfer the burden from the States to Centre, and will not in any way affect the overall financial position.

These views of the State Governments raise an important issue of principle about the procedure adopted by the Prohibition Enquiry Committee. Obviously they were presented with equal force before the Committee—the views of the Madras Minister quoted in the minority report is evidence—but were disregarded by the Committee which thought it fit to substitute its opinions for the inquiry it should have undertaken and the conclusions based on the summing up of the evidence. The fault, perhaps, lay with the Planning Commission which constituted the Committee in a manner which made doctrinaire approach inevitable. The present decision on the question must serve as a warning in future against deciding such vital aspects of social policy—with effects on revenues, enforcement and the area of personal preferences—in the haphazard manner in which the Committee was appointed.

WEST GERMANY'S INCREASING ROLE

THE RECENT visits of a delegation of West German industrialists and of Herr Krupp, after the visit of Dr. Franz Bluecher, the Vice-Chancellor, and the inauguration of the Indo-German Chamber of Commerce in Bombay in January, has once again highlighted the increasingly important share of West Germany in India's foreign trade and her willingness to play a more significant role in the country's economic development. Trade between the two countries has been growing by leaps and bounds in the last few years. India's imports from West Germany were valued at Rs. 42 crores in 1954 and at Rs. 30 crores for the first six months of 1955. Exports recorded an even more remarkable improvement—from Rs. 17 crores in 1954 to Rs. 14.6 crores in the first half of last year. That nearly 90 per cent of the imports in 1954 were in the form of machinery, engineering goods, optical instruments and semi-manufactures like dyes and chemicals gives one an idea of the favourable trends in Indo-German trade capable of helping India's industrial growth.

At present West Germany occupies the third place, after the US and Britain, in its share of international trade. Her recovery in the manufacture of capital goods and other commodities which play a vital role in the establishment and promotion of industry has been astonishing. Under the second Five-Year Plan, India will have to import machinery and equipment to the tune of Rs. 780 crores to implement the industrial projects in the public sector alone. Industry in the private sector will also be importing capital goods for nearly Rs. 300 crores. The second Plan also envisages improvement in rail transport facilities and considerable addition to our shipping tonnage. It is natural that West German industrialists should be anxious to secure a sizable part of the orders which India will in any event have to place abroad. In this West Germany's willingness to extend technical aid and to train Indian technicians in German workshops, and the readiness to undertake investment without asking for special guarantees and to extend credit on easy terms at low rates of interest should give them a definite advantage. Private American investment, finding more profitable avenues in oil or other ventures nearer home, is unwilling to enter India in the fields in which foreign help

will be considered desirable. This leaves the field fairly clear for German participation which has already taken place in a few important projects.

FROM BAD TO WORSE IN CYPRUS

THE BRITISH GOVERNMENT has decided to deport Archbishop Makarios, the "Union with Greece" leader, from Cyprus, following the failure of the talks with him on the future of the island. The ostensible reason adduced for this—to say the least—unwise action is that the Archbishop had been indirectly encouraging terrorist activities. Whatever truth there might be in this allegation, with Archbishop Makarios removed from the scene, there is no one with whom the British can deal as the acknowledged spokesman of four-fifths of the 500,000 Cypriots, and so, as far as the British side is concerned, peaceful settlement in the near future is ruled out. Deportation has been followed by a declaration that law and order will be enforced, but events of the last few days have shown that this will be no easy task. If Cypriot discontent had been exaggerated in the past, as claimed by London, there will be no need for hyperbole hereafter.

It is difficult to believe that Britain has not learnt the bitter lesson France learnt in Morocco and should be going the Salazar way. Strong-arm methods can serve only as expedients. How long Britain can continue to hold on to Cyprus by the power of the sword is a matter for reflection. True, it will be extremely difficult to concede Makarios's demand for the pardon of all Cypriots held on charges of treason as a precondition to co-operation in framing a Constitution. But, if he does not exact this concession, his own position as the leader of Greek Cypriots may be weakened and his ability to enforce an agreement, in the teeth of extremist demands for immediate union with Greece, endangered. The Turkish minority certainly needs to be assured of fair treatment, but that cannot be done by refusing the demand that representation should be on the basis of population. Ultimate union with Greece is bound to come; in the meanwhile the attempt should be to promote goodwill on both sides and not to "divide and rule". There have been demonstrations in Athens and elsewhere in Greece against the British decision. Whether these incidents will further worsen the already none too cordial relations between Greece and Britain is uncertain. To the Eden Government,

which is already harassed, the Cyprus question also may prove a heavy liability.

STALEMATE IN VIET-NAM

RECENT EVENTS in South Viet Nam indicate that the country is heading for an indefinite impasse. After refusing to have anything to do with the Communist-controlled North, President Ngo Dinh Diem has followed up the deposition of Bao Dai in October by elections to a Constituent Assembly. As was foreseen Mr. Diem's followers have been returned in sufficient numbers to ensure that the draft Constitution, which is reported to vest a great deal of powers in the Head of State, will be duly approved without difficulty. But the elections were not held with the fairness and in the freedom which would have given greater strength to Mr. Diem in his opposition to co-operation with the Communists for unifying the country. Means of propaganda were said to have been denied to irksome critics, and the opposition parties felt compelled to boycott the elections, though candidates contested as independents.

Mr. Diem's bid to consolidate political power and attempt to give his regime a constitutional basis have, of course, been accompanied by success in fighting the dissident armed sects. The Bin Xuyen have all been nearly wiped out and Cao Dai warriors are being incorporated in the National Army. Only the Hoa Hao guerillas still remain at large. But with their elimination will go all justification for authoritarian powers for the executive. Though the mere act of voting in the elections can be interpreted as a vote against Communism, it certainly does not mean the people want Diem to continue as an autocrat. The whole-hearted support of the US to Diem has not only made more difficult any democratisation of South Viet Nam—because the President does not think it necessary to be conciliatory—but has also blocked all attempts to get him to honour the Geneva Agreement, to which he was technically not a party. If the Geneva understanding is to be bypassed, let it be done by democratic processes, so that the powers who participated in the talks cannot complain that the people of South Viet Nam are not being allowed freely to voice their opinion on whether they want union under Communist rule or wish to stay divided but free.

Not only does B.O.A.C. offer you marvellous food and wines and really personal service... you'll enjoy the foam soft luxury of fully-reclining "Slumberette" seats. They're wonderful to sit up in... blissful to lie back and sleep in... scientifically designed to give you maximum comfort all the time. Much greater space between rows of seats—only 30 passengers on board—gives you spacious roominess. Sleep when you will in a luxurious full-length "Slumberette"—a superbly restful bed—and arrive at your destination fresh and well rested. Consult your local travel agent or B.O.A.C. office, Calcutta, Delhi, Bombay and Madras.

BRITISH OVERSEAS AIRWAYS CORPORATION

Two people
...but the same tune

IN OTTAWA or in Delhi, in Montreal or in Calcutta,
the pipers play the same tune.

This particular tune is of a ballad which says that, some twenty years ago, Canadian enterprise helped to initiate the development of the aluminium industry in India. Today, Canadian technical and financial resources are again helping the industry to install a new smelter, which will be India's biggest, at Hirakud, Orissa.

The ballad ends with the rejoicing that Canadians and Indians are partners in India's progress towards industrialisation.

A Window on the World

MONEY IN A WELFARE STATE: A CASE HISTORY

By
ODYSSEUS

REVOLUTIONARY are the times in which we live. If you judge revolutions by the cubic feet of blood spilled per second, the French eighteenth and nineteenth century record probably still holds. But if economic effects on the lives of the masses is your yardstick, then the claims of Britain, which pioneered the industrial revolution in the nineteenth century and the Welfare state in the post-World War II twentieth century cannot be overlooked, for the influence of British techniques of production and economic and social re-organisation have in one form or another spread round the world, not least in India, where the embryo of our Socialist (Socialistic?) pattern can be traced back to the famous Beveridge Report, "Full Employment in a Free Society", published in 1944. Britain, being thus a few years ahead on the Welfare path, provides us with an invaluable laboratory for practical research into what we ourselves may expect and, if we have any sense, we will watch the British experiment in order to profit by their mistakes.

The British case history offers at this moment grimly interesting warnings of inflation which we ignore at the peril of all our hopes. Basically, inflation consists in raising the prices of all commodities so that certain individuals or groups, to whom alone enough extra money is given to afford the higher prices, are privileged at the expense of all those groups who are unable for one reason or another, to secure additions to their incomes. These groups with fixed incomes, or with bargaining power insufficient to secure them proportionate increases, are thus compelled to do without goods and services which are thus reserved for the privileged individuals or groups able to insist on more money.

In the past, the privileged have usually been kings or governments who debased their currencies because they wanted to start wars for which they could not raise the money in normal ways. Faced with a war for survival, governments must mobilise all the men, goods, and services they want, and the easiest (though not necessarily the wisest) way is to price everyone else out of the market by granting government buyers limitless credit with which no private citizen or unauthorised groups can compete.

This classic role of the government in creating credit for itself has certainly been one of the factors at work in Britain. Capital investment in the nationalised industries and subsidies to agriculture, plus the enormous requirements of atomic research and the astronomic cost of modern armaments, are part of this picture. The maintenance of vast numbers of young men and women at the most active ages of their lives outside industry in non-productive armies, armaments factories, and research laboratories is a terrible burden which the pre-World War generations did not have to bear.

£5,000 MILLIONS IN TAXES

But contemporary governments are more aware than their pre-war predecessors of the inflationary

risks of government spending, so they seek to counter this by taxation. In theory, if instead of printing money which represents no goods made or services performed, a government takes from a citizen part of the income which his labour has genuinely earned, it is not adding to the volume of money which is chasing goods but merely transferring the money from a private to an official pocket. In practice, this is true providing that taxation does not rise beyond whatever point it is at which the wage or salary earner decides that, since any extra income will not be spendable by him but will be taken from him, there is no sense in making any further effort. If he is a wage earner, he insists on, say, a forty-eight-hour week being reduced to forty-two or fewer hours, for the same pay and output. If he is a salaried man, he takes longer weekends (the majority of professional offices, such as solicitors, are closed in Welfare Britain on Saturdays) and does not allow himself to feel the pressure of his work unduly ("What a time these people take to do anything for you!" is a common complaint heard in the UK nowadays, but it is made to the wrong person: it should be addressed to the tax collector). Worst of all, from the national viewpoint if he is a proprietor of an enterprise, the tax payer knows that if he expands his business by new ventures he may lose his money, or that if the expansion is successful the tax collector will take two-thirds or more of it. Why take the risk? All one can say is that if these principles had existed half a century ago, the wealth of India, for example, would be poorer for the absence of the Tata Iron and Steel Works and a dozen other great but risky ventures. (Have you ever had the curiosity to look up how many years the original shareholders of Tata's had to wait for any return on their investment? Twenty-five or more, if my memory fails not).

But the Welfare state has through its nationalisation of industries and its lavish care of the citizen from birth to death, introduced new sources of inflation of a Himalayan grandeur beside which Henry VII's efforts scale down to mole hills. Central and local government in Britain takes in taxation today over £5,000 million a year, almost half of the national income. In addition to its blighting effects on the will to work, this slows down the whole pace at which the national wealth is increased because the money collected in taxes is not available for productive investment. And, of course, anyone with any first hand experience of how a government department or a nationalised enterprise is actually run, knows that waste and inefficiency are unavoidable. What old Sam Pepys who noted in the seventeenth century "I perceive that the king may not have his needs supplied as cheaply as ordinary men" would say if he could return to Whitehall today would be worth hearing. (Actually since Whitehall now overflows all over London, he would probably lose himself somewhere between the BBC sub-office in Oxford Street and the Ministry of Pensions sub-sub-office in Paddington and never be heard of again).

Beveridge said in his report that the success of the Welfare state depended on two basic assumptions (1) that the Trades Unions would work a national wage

policy culminating not in stoppages but in arbitration and (2) that the value of money would be stable. Neither assumption has been fulfilled.

INCENTIVES IN INDUSTRY

Full employment has been among the reasons for this. To question full employment has become tantamount to professing oneself a hard faced, reactionary survivor of the Bad Old Times. But the fact is that where there is virtually no unemployment, the workers feel immune from dismissal and the knowledge of this goes corruptingly to their heads like absolute power; the pace of the slowest worker sets the pace for all, and every attempt to economise labour is resented, so that ridiculous situations are reported in the press in which redundant hands are kept on riding up and down in a vehicle that no longer needs their attention, doing literally nothing but reading the paper and drawing their pay. On the other hand, employers faced with an all round shortage of labour bid against each other, not as they would in a free economy to attract workers from a fading to an expanding industry, but to steal men from one section of the same industry to another, or faced with a strike employers feel the climate of opinion to be so dangerously against them that they have no alternative but to submit to wage increases.

All this means rising costs to consumers. But consumers are the same workers in their non-working hours. Whereupon they strike for higher wages to meet the higher costs that they have helped to create. The only people who cannot strike are the middle classes who see their standard of living dwindle steadily. "What does that matter?" asks the Welfare proletarian, confident that this is his century. "It's our turn now. Why should the middle classes have any privileges?" Answer: For one reason, if for no other,

because they had a consciousness that duties went with their privileges: they knew that they had to save. Today they cannot, and the workers do not.

For psychological reasons explained in the series on "Incentives in Industry" published here between September 13 and October 9, 1953, the British worker feels satisfied if he can keep his social position up comfortably according to the accepted standards of his particular group. He can always do with a little more money but he is not spurred to great output, as the middle class used to be, by hopes of promotion or of big advances in status. On the contrary, Socialist doctrine has spread the idea that too hard work, enabling a man to "better himself", makes a man a traitor to his class. Contrary to the ambition characteristic of the individualist American worker, the Socialistically influenced British worker regards it as an offence to do anything which shows up a less efficient mate. His ideal is to be as unobtrusively near the average as possible. This may not have mattered in the past, but today when the workers are the only people with ample money to save (Cf. the amounts spent on motor cars, television, etc.) the future of the Welfare state is at stake. Of course, there is a National Savings propaganda campaign, but who wants to invest in a depreciating currency?

Here space cuts short my argument for the week. I do not suggest that Britain is foredoomed to bankrupt herself (and the sterling area) in further inflation. There is today a sense of national emergency of a kind that has rallied the nation before and there is no need to assume that the British will not respond to their government's courageous first measures. Our good wishes should not, however, prevent us from analysing the causes of the British inflation and drawing whatever lessons they suggest. We will consider next week the closely related problems of nationalised industries and inflation.

Economic Report from the U.S.

ANOTHER BOOM YEAR IN THE OFFING

(BY GUY SIMS FITCH)

WASHINGTON, March 13.—Largely overlooked in the news emanating from Washington in the past two weeks has been a Congressional study of the American economic outlook. After a month of listening to expert testimony and examining current trends, the Joint Committee on the Economic Report has backed the Eisenhower Administration's conclusion that 1956 will be another good year for business in the United States.

The Committee, which reviews the President's annual Economic Report, finds that the total national output of goods and services this year will have little difficulty in reaching the \$400,000-million mark predicted by the President and his Council of Economic Advisers. It agrees with the Council that rates of employment and use of industrial capacity are running so high now that they may well hold back an even greater expansion. Conceivably, the Committee notes, expansionary pressure could push total output up to \$405,000 million, possibly to \$410,000 million.

A \$400,000 million economy, according to the Committee, will be fully consistent with the aims of the Employment Act of 1946. The anticipated growth in real output of 3 per cent—compared with 1955's extraordinary 6 per cent—will be sufficient, it believes, to keep production, employment and income at acceptable high levels.

This agreement between the Republican Administration and the Democratic Congress emphasises the degree to which, in the words of the Committee report, "the objectives and machinery" of the Employment Act have become "firmly established" in the past ten years. It reflects the non-partisan character of the Act, and the sincerity with which the executive and legislative branches of Government have approached their responsibilities under it.

Agreement does not extend, however, to the realm of method. The Committee, headed by Senator Paul Douglas, offer some sharp criticisms of the way in which the Council of Economic Advisers has drawn its conclusions. Senator Douglas has expressed the view that the Council ought to set out, in advance, quantitative levels of economic activity as goals for the year. These goals then could serve as a guide for the kind and the degree of Government intervention that might be necessary to maintain a full-employment economy.

But Council Chairman, Arthur Burns, believes that such advance determination would be meaningless, and possibly harmful. In a free and dynamic economy, he holds, quantitative economic trends cannot be predicted with any useful exactitude. It is his view, moreover, that attempts to impose pre-ordained levels on such an economy could lead to rigid patterns that might disrupt the normal working of the private sector and retard its vast growth potential.

While disagreements such as this can take on political overtones, basically they represent an honest difference of opinion over the planning required to fulfil

the objectives of the Employment Act. In general, the Democratic Party has tended toward a larger, the Republican Party toward a smaller, Government role. Nevertheless, both parties have demonstrated successfully in this post-war era their determination to create conditions conducive to stable growth.

It is well to remember, in this connection, that both Burns and Douglas have gained enviable reputations in the field of economics. Each has been an eminent university professor, and each a respected interpreter of the economic scene. The fact that both agree on the soundness of the American economy and the favourable prospects ahead far overshadows any theoretical conflict over economic methods. In this agreement lies the chief significance of the Committee's report.

XXV international FAIR POZNAN (POLAND)

Great International Market in the interests of
EAST-WEST TRADE

At the previous Fair in 1955. Total area of the Fair was
225,000 sq. m., of which Covered in area was 80,000
sq. m., and Open-air exhibition area was 25,000 sq. m.

24 European and Overseas countries exhibited at the
Fair.

The Fair was visited by over 1,300,000 persons, includ-
ing 3,500 visitors and buyers from abroad representing
45 countries.

Transactions were concluded with 35 countries.

WORLDGRAM

AGRICULTURE

Canada's Wheat Yield Up: The farm value of Canada's 1955 wheat crop amounts to \$556,270,000 according to a final estimate by the Bureau of Statistics. This compares favourably with \$349,570,000 a year previously. The final estimate of crop production places the wheat crop at 494,116 bushels, compared with 309,909,000 a year previously. The total farm value of Canada's field crops, including grains, vegetables, feed and sugar beets, amounted to \$1,564,000 (£557.7 million) compared with \$1,242,829,000 (£443,080,000).

Increase in Rhodesian Tobacco Crop: Preliminary official estimates are that the Rhodesian flue-cured tobacco crop this season will be 23 per cent larger than 1954-55 at 157.5 million lbs., compared with 128.2 million lbs. previously. Although the total acreage under flue-cured tobacco in the two Rhodesias this season is officially reported to be 209,500 as against 186,800 before, more than one third of the increase in production is attributable to the highest figure yet attained in Central Africa.

Burma's 1955-56 Cotton Crop: Unofficial estimates of Burma's 1955-56 cotton crop indicate that production will be about the same as the 1954-55 production of 90,000 bales, with acreage of approximately 450,000 for both years. Cotton production in 1953-54 was estimated 100,000 bales, and the area planted to cotton at 400,000 acres. Cotton exports during the August-July 1954-55, marketing year were tentatively estimated at 75,000 bales, nearly half of which was exported to Japan. Quantities exported to other countries are not yet available. Exports in 1953-54 amounted to about 92,000 bales. Cotton stocks on August 1, 1955, were estimated at 20,000 bales, as compared with 18,000 bales held a year earlier.

INDUSTRY

Coal Industry During 1955: The output of coal in India increased to 38.22 million tons in 1955 from 36.88 million tons in 1954, according to provisional estimates released by the Chief Inspector of Mines in India. Dispatches of coal also increased from 32.03 million tons in 1954 to 32.91 million tons in 1955. Coal stocks at pit heads at the end of the year amounted to 3.61 million tons. The average daily employment at the coal mines in India was 340,615 in 1955 as against 332,320 in 1954. On an average they worked about 8.5 million man-shifts per month in 1955 as against 8.3 million man-shifts per month in 1954.

Sugar Factories During Second Plan: According to Shri Ajit Prasad Jain, Union Minister for Food and Agriculture, thirty-five sugar factories would be established in the second Five-Year Plan period. The construction of 35 new factories for which licences had been issued during the first Five-Year Plan, would also be completed during the second Plan period. The increase in production therefrom would be approximately 6.9 lakh tons of sugar per annum, including 3.6 lakh tons from factories licensed during the first Five-Year Plan and 3.3 lakh tons from factories to be licensed during the second Five-Year Plan.

Standards for Bicycle Components: The Indian Standards Institution has recently published two more standards on bicycle components, one on pedal assemblies and the other on hub assemblies. These are two of a series of Indian standards dealing with the more important components of bicycles. The standards on

bicycle pedals and bicycle hubs take care of the interchangeability that is so important. They also specify minimum requirements of the materials, the hardness of components, the plating, the threads and the tests that these components should stand, which should ensure reasonable life and performance of these components. These standards have been prepared by the Bicycles Sectional Committee of ISI.

Sugar Research Stations: New research stations are proposed to be established in Madhya Bharat, Bhopal, Rajasthan, PEPSU, Mysore and West Bengal during the second Plan period, according to Mr. M. V. Krishnappa, Union Deputy Minister for Food and Agriculture. Research stations are already in existence in other important sugarcane growing States. Soil survey is proposed to be made a regular item of the research programme to be pursued at the research stations.

Oil Exploration at Jaisalmer: Rock formations in Jaisalmer area in Rajasthan indicate possibilities of mineral oil, according to Mr. K. D. Malaviya, Union Minister for Natural Resources. It is too early to say anything about the outcome of oil exploration in the area as exploration work is still in progress. A large part of the area is covered under thick sand-dunes. It is only after carrying out geophysical survey that indications of structures could be obtained and drilling work started to prove the existence of oil. Gravity and magnetic survey on the ground is already in progress and an aero-magnetic survey of the entire region of about 20,000 sq. miles is expected to be carried out shortly. The detailed geological and geophysical investigations including seismic methods will be carried out during the next field season.

TRADE

Austro-Soviet Trade Agreement: After nearly four months negotiations, the trade and shipping, payments, and goods exchange agreements between Austria and Soviet Union were signed in Vienna on October 17, 1955. The trade and shipping agreement defined principles of Austro-Soviet economic relations, concerning trade, shipping and the exchange of experiences in the fields of industry, agriculture and transportation. It also guaranteed the mutual application of the most favoured-nation clause. The payments agreements provided for dollar clearing accounts with a permitted swing of 5 million dollars. The goods exchange agreement stipulated a volume of about 25 million dollars each way for the first year. Austria is scheduled to deliver machinery for the light industry and the food stuffs industry, wood-working equipment, turbines, hydro-electric equipment, spares for motor buses, steel wire and cables, steel pipes, veneers, kerosene, diesel fuel, leather, woollen yarns, and ship repairs. Soviet deliveries to Austria will comprise cereals, coal and other Soviet fuel, hides, platinum, miscellaneous machinery equipment, motor vehicles, chemicals, furs, mechanical herbs, bristles, asbestos, cotton and cinematograph films.

Burmese-Yugoslav Barter Agreement: An agreement has been signed between the "Textile Import and Export Enterprise" of Yugoslavia and the Union of Burma Co-operative Wholesale Society Limited and Textile Import Branch of the Civil Supplies Management Board. Under the agreement, the Yugoslav Enterprise will supply 1,300,000 yards of various types of textiles to the civil supplies Management Board in exchange for 1,000 tons of raw cotton from the Union of Burma Co-operative Wholesale

Society Limited. The total value of the deal has been placed at 5 million kyats.

*

Liberalised Imports in O.E.E.C. Area: The twelve O.E.E.C. countries pledged to liberalise up to 90 per cent of their total imports by October 1, 1955, last freed 85.6 per cent of 4.4 per cent short of the target, by December 1. This compared with 61.5 per cent freed from quantitative restrictions in December, 1955, and 83.3 per cent in December, 1954. Five of the twelve countries also failed to carry out their other pledge to liberalise up to at least 75 per cent of their imports under each of the three categories, of food and feeding stuffs, raw materials and manufactured goods. In January, 1954, the Council fixed these targets as from July. Member nations unable to reach them have filed statements pending payments difficulties or "reasons of national importance and equity" for their failure. The countries which failed to reach the 90 per cent target are the U.K. 84.8 per cent, France 77.5 per cent, Norway 75 per cent, Denmark 78.4 per cent and Australia 83.5 per cent. Italy had the best record, with 99.7 per cent, while Germany, Benelux, Portugal, Ireland, Sweden and Switzerland varied between 90.2 and 93.7 per cent. As for the 75 per cent target in the three categories, seven countries—U.K., Germany, Italy, Portugal, Australia, Sweden and Ireland, attained it, but France, Benelux, Denmark, Norway and Switzerland did not.

FINANCE

Tea Earns Less Foreign Exchange: Foreign exchange earned by tea declined sharply to Rs. 1,118,600,000 in 1955 from Rs. 1,312,900,000 in the previous year. Lower exports and a decline in tea prices were responsible for the sharp fall in the value of exports. The quantum of tea exported from India last year is estimated at 363,570,000 lbs compared with 450,400,000 lbs in 1954. Prices declined during the part of 1955, following the hectic boom seen in the previous year. The index number of tea prices, (base 1939-100) dropped from 808 in January to 344 in December last year. The decline in prices was due to lower demand from the U.K. following the limitation of credit facilities there; seasonal arrivals of low-quality rains teas; the glut on the Calcutta market; and expectation of higher world production.

*

Bank Rate Up in West Germany: The West German Central Bank has raised the Bank Rate from 3½ to 4½ per cent. This is the second increase within the last eight months. At the beginning of August last year the Bank, Deutscher Lander put up the rate from 3 to 3½ per cent to counter inflationary pressures and restrict credit. At its meeting recently the Central Banking Council decided also to put up the Lombard Rate from 4½ per cent to 5½ per cent and the interest rate for short-term municipal loans from 3½ to 4½ per cent.

*

Bank of India's Bonus Move: The directors of the Bank of India propose to issue one bonus share of Rs. 50 fully paid for each five shares to mark the celebration of the Golden Jubilee of the Bank. The issue, which is subject to the sanction of the Government, will be met by the transfer of Rs. 50 lakhs from the reserve fund, making the paid-up capital Rs. 3 crores and the reserve fund Rs. 3.02 crores. The Bank's capital would, therefore, consist of two classes of shares, namely, the present partly-paid shares and the new fully-paid shares. Disclosing this at the Bank's annual meeting, Mr. Cowasji Jehangir stated that with the two per cent extra dividend already recommended and the further proposed increase in capital, if sanctioned by the Government, the future dividends will depend not only upon the profits of the Bank but upon the Government's taxation policy.

New Joint Stock Companies: The latest Monthly Blue Book on Joint Stock Companies issued by the Department of Company Law Administration shows an increase of new registrations during the first nine months of the current fiscal year. The total number of new companies registered during this period was 993 with a total authorised capital of Rs. 1,00.33 lakhs as against 877 companies with a total authorised capital of Rs. 1,63.07 lakhs during the corresponding period of the preceding year, 1954-55. The new companies comprised 138 public and 855 private companies having an authorised capital of Rs. 55.54 lakhs and Rs. 45.34 lakhs respectively. During the month of December, 1955, 101 new companies were floated with an authorised capital of Rs. 4.16 lakhs. Of these ten were public companies with an authorised capital of Rs. 1.57 lakhs. Of these 101 new companies 36, 16, 15 and 9 companies were incorporated in the States of West Bengal, Madras, Bombay and Delhi.

GENERAL

Unemployment Among the Educated in India: The number of educated unemployed registered at the Employment Exchanges all over India at the end of December 1955, was 2,16,157. Of these, 1,89,933, were matriculates and 26,224 were graduates. Among the graduates, 628 were engineers, 179 doctors and 25,417 were degree-holders in subjects other than engineering and medicine. The number of women unemployed was 10,510 of whom 9,275 were matriculates and 1,235 graduates. Of the educated unemployed, 96,679 were registered during October-December, 1955, and those placed in jobs by the Exchanges numbered 13,485 during the period. The largest number of registrations—21,134—were made at the Employment Exchanges in Uttar Pradesh and the largest of placements namely, 1,868 were secured in Madras State. The number of educated unemployed registered at the Exchanges during the period in Uttar Pradesh was 40,072, West Bengal 31,046, Bombay 28,718 and Madras 25,084.

*

New Housing Scheme for Coal Mines Workers: The Government of India is contemplating a new scheme for the construction of houses for workers in the coal mines under the Coal Mines Welfare Fund, according to Shri Abid Ali, Union Deputy Minister for Labour. The Welfare Account had spent 60 per cent of the total income till the end of March, 1955. The figure for the Housing Account was 34 per cent. The inadequacy of the work done under the Housing Account is due to the lack of response from mine-owners in utilising the contributory schemes offered to them. New schemes for expenditure on a much greater scale have now been evolved by a sub-committee of the Advisory Committee of the Welfare Fund and a Standing Committee has been set up to watch implementation. No amount has been deposited in the Reserve Fund.

*

Technical Potentialities of Ambar Charkha: A Committee has been set up by the Government of India to investigate the technical potentialities of the Ambar Charkha and to assess the degree of acceptability by the handloom weavers of the yarn produced on the Charkha. The Committee will submit its report by the end of April 1956. According to the terms of reference, announced in a Government Resolution, the Committee will report whether the different tools or machines comprising the Ambar Charkha set are capable of being worked with hand. It will also investigate whether a normal adult can work on the Charkha for 8 hours with reasonable intervals of rest without any particular feeling of fatigue and whether the Charkha can yield a production of about 8 hanks of yarn starting from the carding of cotton or a production of about 16 hanks if the rovings are separately prepared and supplied.

NEWS IN BRIEF

INDIAN

The Government of India have formulated a scheme for the establishment of a large number of maternity and child welfare centres in rural areas.

*

Several States, including Hyderabad, Bombay, Madras, Mysore and Andhra, are expected to participate in the All-India Grape show being organised by the Indian Council of Agricultural Research in the Art Gallery, Hyderabad, on March 17, 18 and 19, 1956.

*

A new raw jute exchange market called the Ready Jute Exchange was opened recently by West Bengal's Labour Minister Mr. K. P. Mookerjee, in Dalhousie Square area, the business centre of the City.

*

Negotiations are now complete and terms of agreement have been finalized for the setting up at Hirakud of an aluminium factory, with an annual production capacity of 10,000 tons.

*

The Centre has given loans to Nepa newsprint mills in Madhya Pradesh of a little over Rs. 1.8 crores for financing the mills, while the State Government has invested Rs. 60 lakhs in the share capital and has given loans of about Rs. 4.08 crores.

*

The amount of money given by way of grants-in-aid or subsidy to the Governments of Pepsu and Himachal Pradesh from 1947 to 1955 was: Pepsu Rs. 2,66,15,331 and Himachal Pradesh Rs. 4,21,89,896.

*

It is reported that 32 spinning mills were under construction in South India and 65 mills had already been licensed to be installed in the near future.

*

A seven-man technical delegation from the well-known Italian Fiat has arrived in Delhi at the invitation of the Government of India on an exploratory mission. This is the first step taken under the technical assistance agreement entered into between Italy and India to advise the Government of India on development of industries.

*

The largest number of visitors to India during 1954 and 1955 came from Germany. They included tourists, business men, technicians and missionaries. The number of Americans who visited during 1954 and 1955 was 7,225 and 8,116 respectively. The comparative figures for the Russian visitors were 210 and 849.

*

The Government of India is considering a proposal to send some Indian experts to the Soviet Union for studying irrigation and power projects there.

*

India imported during last year about 3,653 tons of tin valued at Rs. 3.5 crores.

*

It is reported a barter deal involving Indian cotton for Italian staple fibre and rayon yarn is being negotiated. The money value of the transaction is estimated at Rs. 20,000,000. For this sum worth of Italian staple fibre and rayon yarns, India will export to Italy 50,000 bales of raw cotton.

FOREIGN

The out-turn of tea in Indonesia was lower at 7.4 million lbs. in December, 1955, as compared with 8.5 million lbs. in the corresponding month of the previous year. Output during the whole of last year was also lower at 94.5 million lbs., as compared to 103 million lbs. in 1954.

*

It is reported Russia has begun buying rubber on the Singapore market for the first time since last year.

*

It is forecast that in the next ten years the world petroleum industry will need to spend a total of \$115,000 million (£41,000 million) for maintenance and expansion, assuming that the value of the dollar stays stable over the period.

*

Negotiations are proceeding between Dutch Industrialists and a number of Indian concerns aimed at the investment of private Dutch capital amounting to £3 million in Indian enterprises during the current year.

*

Ceylon had a record favourable trade balance of Rs. 478.9 million in 1955. The previous peak was Rs. 412 million in 1954. Nearly three-fifths of the total export revenue accrued from tea and slightly one-fifth from rubber.

*

Mr. Macmillan stated in the Commons recently that in the financial year 1954-55 the total amount received by the Exchequer in respect of surtax was £134.7 million. About £30 million was paid by tax payers with incomes not exceeding £5,000 after deduction of expenses and charges but before deduction of income-tax and surtax.

*

The management boards of the Yugoslav-Italian and the Italo-Yugoslav Trade Chambers will convene at a joint session during the Milan Fair in April this year. Problems relating to the further promotion of trade exchange between the two countries as well as certain questions which arose in the course of trade transactions so far will be discussed on this occasion.

*

Malaya will send another delegation to Britain later this year to discuss financial matters left in abeyance by the London Conference earlier in February which promised Malaya independence by August, 1957.

*

As a result of negotiations held between the representatives of the Republic of Italy and Pakistan, a trade agreement was signed in Karachi on February 8, 1956.

REVENUE SURPLUSES AND THE PLAN

HOW much of the additional taxation levied this year is a direct contribution to the total additional revenues to be raised under the second Five-Year Plan? Or is the taxation, in whole or part, intended to cover only the deficits on the revenue account, without contributing to the resources for implementing the Plan? The general debate on the Budget in the Rajya Sabha indicated that this question is agitating quite a number of Members of Parliament. In the course of his reply to the discussion, the Finance Minister, Mr. Deshmukh, expressed the view that "taxation has no concern with.....capital expenditure". When asked why it should not have, Mr. Deshmukh gave the answer, "The principle is acceptable to me, but one must consider the capacity of the country from time to time."

It must, however, be pointed out that there is no necessity that there should be revenue surpluses if the revenue account is to contribute to the financing of the Plan, if any of the schemes in the Plan are met from revenues. Of the total expenditure of Rs. 4,800 crores contemplated in the Plan, only Rs. 3,800 crores is estimated to be investment outlay and Rs. 1,000 crores is estimated to be investment outlay of a current nature. If the principle of meeting current expenditure from current revenues is to be adhered to, the revenue accounts of the Central and State Governments should contribute Rs. 1,000 crores to the financing of the Plan. If just this amount of resources can be spared from current revenues towards the implementation of the Plan, the revenue budgets of the Central and State Governments should on balance show no surplus. But an examination of the resources programme indicated in the Draft Outline reveals that the Government expects only Rs. 800 crores from taxation sources—Rs. 350 crores from existing taxation and Rs. 450 crores from additional taxation—for the implementation of the Plan. Now, of course, the Finance Minister contemplates further additional taxation to the tune of Rs. 200 crores as a measure for partly filling the gap of Rs. 400 crores in resources for the Plan. In fact this is the extra tax effort which will be required of the country, apart from what has been mentioned in the Draft Outline, if we are to avoid drawing on capital resources for meeting revenue expenditure.

One reason why so much emphasis is being placed on the contribution of the revenue account to resources for the Plan is the considerable surpluses which the Central Budget, in the last five years, made available to the capital budget over and above the developmental expenditure of a current nature (which is part of the Plan) shown in the revenue budget. The further fact that there were surpluses where, in fact, deficits had been expected or the surpluses were far in excess of those anticipated has led to the belief that there can be no deficit on revenue account in the Central Budget. The following table gives an indication of the Central revenue account's contribution to the Plan:

SURPLUS (OR DEFICIT) ON REVENUE ACCOUNT

Year	(In Rs. crores)		
	Budget Estimates	Revised Estimates	Actual
1951-52	26.10	92.61	141.30
1952-53	3.73	-4.21	38.93
1953-54	0.45	-16.96	8.50
1954-55	-15.36	-5.00	33.51
1955-56	-17.35	12.31	..
	-2.43	78.75	222.24

The surplus in the first year was largely the result of the windfall under the Korean boom, which caused a great increase in receipts from customs duties. As regards the other years, the Finance Minister explained that the somewhat higher provisions in the budget in comparison with actuals was due to the fact that he wanted to give the administrative Ministries a chance to do their best, so that they should not later complain that they were hampered by lack of finance. But the spending Ministries have gained some experience during the last few years and it is unlikely that such considerable shortfalls as have been witnessed so far will occur again. The transfer of a part of excise revenues to States since 1953-54 has transferred a part of the responsibility about resources to the States.

Though the total surplus on the revenue account in the first Plan was around Rs. 230 crores, that not much significance could be attached to this figure was indicated by the Finance Minister in the Rajya Sabha last week when he said, "I keep on transferring expenditure from revenue to capital and from capital to revenue". Apart from this difficulty in estimating the precise surplus or deficit on revenue account, there is also difficulty in estimating the exact contribution of the revenue account to expenditure on the Plan. The Explanatory Memorandum on the Budget for 1956-57 mentions that expenditure on development schemes from out of the revenue account will amount to Rs. 97.8 crores, but not all of this is expenditure included in the Plan. The Finance Minister confessed that "we have not been able to point out which is the new development expenditure even as portrayed in the Central Budget and which is old expenditure which will not be regarded as part of the Plan". Similar difficulty is encountered in regard to the last five years also. Until there is some precision in the budgetary procedures, it is difficult to make exact calculations. The Plan-Frame had assumed that current developmental expenditure on continuing schemes outside the second Plan will be Rs. 1100 crores for both the Centre and the States. Since most of the development sectors which can be a charge on the revenue account, like education and health, are the responsibility of the States, a major portion of the current development outlay outside the Plan, it can be assumed, will be in the budgets of the State Governments.

An estimate of the probable magnitude of the current developmental expenditure on the Plan which will have to be financed from the revenue account of the Central Budget may be possible from the rate of growth of expenditure on the revenue account and its distribution as between developmental and non-developmental schemes:

EXPENDITURE PATTERN

	Amount (Rs. Crores)	Development Expenditure Per Cent	Non-development-Expenditure Per Cent
1950-51	337.88	4	96
1951-52	374.06	5	95
1952-53	396.18	7	93
1953-54	407.48	13	87
1954-55	422.62	16	84
1955-56	439.36	18	82
(Revised)			
1956-57	545.43	18	82
(Budget)			

The proportion of the expenditure devoted to development schemes has been steadily rising. Since the Centre does not have the responsibility of continuing to meet indefinitely current expenditure which developmental outlay will give rise to in the social service sectors, the proportion above five per cent can be roughly taken as contribution to the Plan. On this basis the contribution to the first Plan schemes will be about Rs. 130 crores. Figures for the second Plan will depend on the actual proportion of each year's budget which is devoted to the developmental sectors. If the percentage of 18 is kept up, a rough estimate will put the Central contribution to developmental schemes in the second Plan financed from current revenues at Rs. 450 crores, assuming also that total expenditure will rise at about the same rate as it did during last year. This will leave Rs. 550 crores of the current outlay in the second Plan for the States to finance. Which, of course, does not reflect the scale of additional tax effort—from existing sources as well as from new ones—required of the Centre and the States, as the States have been allotted the task of raising only Rs. 225 crores from new taxation.

All these considerations, however, leave unanswered the main question of the size of the tax effort needed

to contribute resources of the order assumed under the Plan—in addition to the amounts required to meet the increases in non-development revenue expenditure. Prima facie, the Finance Minister is budgeting for an actual revenue deficit, even after additional taxation of the order of Rs. 35 crores—so that a larger effort may be indicated if actual revenue surpluses equal to the total revenue resources required have to be raised. Apart from the normal possibilities of these estimates proving conservative by the emergence of an actual surplus in the final calculation and helping to finance capital expenditure, the concealed expenditure on plan items—like the grants to States for N.E.S. and community development of Rs. 14.27 crores or other grants for research—will be a measure of the contribution to the Plan. It is necessary that the precise relationship of the expenditure to the Plan must be clearly established to give a clearer picture of the effort now being made from all directions to achieve the targets of outlay—which have been expanded by the inclusion of many items that will be financed from revenue. Perhaps, the Finance Commission now set up will find it necessary to have such a picture before it can proceed to discharge its task of finding a basis for an allocation of finances in keeping with the assumptions of the Plan.

RAILWAY TRANSPORT CAPACITY

SOME concern, was expressed during the Railway debate in Parliament in regard to the ability of the railways to move in step with the developing tempo of the economy contemplated in the second Plan. Criticism was freely voiced that there were apprehensions to the effect that discrimination may be made in the allotment of transport capacity and the smaller units in business and industry may find themselves neglected. This criticism is the outcome of an obsession with the cut of about 25 per cent which the Planning Commission found itself constrained to make in the Railway Ministry's demand for outlay for the expansion of railways. There can certainly be no inflexibility about the funds that will be allotted to the railways from time to time, but apart from this consideration, there is a reasonable promise that the railways can be expected to put in a higher volume of productivity. This promise is based on the concrete achievement made by them in the first Five-Year Plan. With a modest increase made subsequently in the financial allocation above the original grant in the first Plan, the railways have demonstrated their ability to carry nearly double the volume of freight traffic of what was first anticipated. In terms of originating tons, the railways carried more than 19 per cent increased traffic in the first Plan as against the target of 10 per cent. It is important to recall in this context that this higher performance was shown with an increase of only 11.4 per cent in the total availability of wagon stock.

The railways have fixed for themselves a goal of an increase of 10 per cent in their operating efficiency each year during the second Plan. This goal may very likely be overreached, but the pre-condition of the provision of minimum of equipment and other resources must be fulfilled. In the course of the general debate on the Railway Budget, pointed attention was drawn to the shortcomings in the operations of the railways in respect of the speed of goods trains and the serious deterioration in the punctuality of passenger trains. The Railway Minister's reply on this specific point sought to explain away the decline on the ground that speed was retarded by the progress of major engineering works under construction on different sections and also by the pressure of increasing traffic. This explanation does not give the full and correct picture. Here, the Estimates Committee has thrown sufficient

light and in its Twenty-First Report it has drawn well-merited attention to the adverse effect on transport capacity produced by the inadequacy of physical resources. The report of the Committee will have served little purpose if advance action is not taken in two important matters. They relate to the renewal and strengthening of track and the supply of steel on an adequate scale.

The condition of track had been allowed to deteriorate to a serious extent well until the beginning of the first Plan. The programme of track renewal which

all over the world

had to be planned on a modest scale due to exigencies of finance received a setback owing to shortage of materials, particularly steel and timber. The shortfall in the renewal programme necessitated a further tightening up of restrictions on the speed of trains. The deterioration in respect of speed restrictions is shown in the following table which gives the total mileage under restriction at the beginning of each financial year:

Year	Total Mileage
1952-53	1,695
1953-54	1,715
1954-55	1,820
1955-56	1,784

A relieving feature of this situation, however, was that the position on the broad-gauge lines was relatively better than the position on the metre-gauge sections. The fact, however, remains that these restrictions have an adverse effect on the flow of traffic. In the second Five-Year Plan the original targets of track renewal fixed by the Railway Ministry for the individual railways were as follows:

Railway	Mileage for Renewal
South Eastern	1,000
Southern	1,200
Central	1,400
Western	1,700
Northern	1,700
North Eastern	2,300
Eastern	700
GRAND TOTAL	10,000

This programme falls below the actual demands made by the individual railways. The total target of 10,000 miles of track renewal was fixed on the assumption that an allotment of Rs. 125 crores would be available for its implementation. This allotment has now been reduced to Rs. 100 crores. The reduction of 20 per cent must inevitably lead to a proportionate reduction in the target of renewal. In the course of the second Five-Year Plan, simultaneous action will have to be taken for a wide range of engineering constructional works on the lines. Another factor of which full cognizance needs to be taken is that there will be an increase of not less than 50 per cent in freight traffic and of 15 per cent in passenger traffic. The cumulative effect of the lower track renewal programme and the two retarding factors will be to lower the speed of goods trains in particular still further. In the event, the turnover of traffic on the railways may not come up to expectations. The prospect of imposing speed restrictions on more than 5 per cent of the total mileage presents a problem on which appropriate action is necessary from the beginning of the Plan.

The requirements of railways in respect of steel for a variety of purposes were never adequately met during the first Plan. In respect of this strategic material, the situation showed progressive deterioration from year to year and the extent of shortage of supply increased from 30 per cent of the requirements in 1951-52 to 49.7 per cent in 1954-55. This overall average figure of shortage for the entire railway system does not give a correct idea of the acute conditions which individual railways had to face. The Northern, South-Eastern, Southern, and in recent years the Central and Western, Railways had to face shortages in excess of 60 per cent of their demands. Estimates for the second Five-Year Plan indicate that the position will not be easy. In the last two years of the Plan, there is a prospect based on reasonable anticipations that the supply situation will return to normal. This should give some

satisfaction, but the apprehended shortages in the first three years require prior measures for elimination. The following table sets out the position of steel requirements and supplies in the first three years of the second Plan:

Year	Total Requirements	Indigenous Supplies	Imported Supplies at Pool Prices	Imported Supplies at World Prices
1956-57	769,000	300,000	200,000	269,000
1957-58	782,000	350,000	260,000	232,000
1958-59	798,000	540,000	200,000	58,000

The compulsion to import steel at world prices poses a difficult problem for the railways. It is quite clear from the modified outlay which has been approved in the Draft Outline that supplies of steel may threaten to be below requirements. An energetic search is being made to find alternative solutions. This is primarily a question for technical investigation. Studies made so far reveal that if the railways can make necessary adaptations and modifications in their requirements, Thomas Quality steel can be procured from abroad at cheap prices. Similarly Milli-Metre section steel which Russia has agreed to supply to the tune of 100,000 tons can be placed entirely at the disposal of the railways, subject again to necessary changes in the specifications of equipment. No estimate of the economy in expenditure which will be possible with the use of these two types of steel is available at present. But from the technical viewpoint it seems that the railways can make the required adaptations in their specifications. This conclusion should go a long way to remove shortage of steel.

LOK SABHA MUST BE WATCH-DOG OF TAXPAYERS' MONEY

By

CROESUS

CRORES and crores of rupees have been, and will be, invested in industrial undertakings in the Public Sector and crores and crores of rupees have been, and will be, given away as grants and loans to the State Governments for enabling them to finance their respective projects of developments, especially under the Five-Year Plans. Some Rs. 1,400 crores will be given by way of grants and loans to the States and nearly Rs. 115 crores will be invested in industries in the Public Sector by March 31, 1957. Moreover, from such data as are available, over Rs. 30 crores will be given as loans to public industrial undertakings only in the year 1956-57. Figures regarding the amounts invested in industries prior to 1951-52 and those regarding amounts advanced to industries prior to 1956-57 are not easily available. But there is no gainsaying the fact that these run into crores of rupees. The total taxpayers' money thus at stake exceeds 3½ times the amounts involved in the current budget! This means that the responsibility of the members of the Lok Sabha, who are answerable to the public for the just and proper use of these vast sums of money in the interest of the country and for the benefit of the people, has tremendously increased. They can ill afford, therefore, except at their own peril, to ignore their supreme duty to see that the object and the purpose for which money is used are fully realised.

After having said this, we would be failing in our duty if we did not, at the same time, refer to certain handicaps of even members who might be quite familiar with budgets. After all, these members can be expected to form their ideas only on the basis of the information supplied to them. Now, it cannot be certainly contended by the Government that the way in which it presents information in the budget is, even if comprehensive, easily intelligible to all. In order, therefore, to be more easily understood by all, the budget papers should contain, among others, a full statement giving information in regard to the amounts invested in, and the amounts given as grants and loans to, industries in the Public Sector. They should also contain the Balance-Sheets and Profit and Loss Accounts of these huge undertakings. They should further include such explanatory notes as would give a correct picture of the working of the industries in all their aspects. The investments in such public undertakings, it should be remembered, will exceed Rs. 1,000 crores before the second Plan period is over. Of course, one can understand that it will be difficult for the members of the Lok Sabha to deal with this question specifically at some length during the course of the discussion of the budget for considerations of time. Accordingly, it is suggested that, in future, a given number of days must be set aside, during the budget session, exclusively for discussing the working of these public undertakings from all points of view generally and, in particular, for ascertaining whether they are running with economy and efficiency

on sound business and commercial lines.

There is, for instance, the Hindustan Aircraft, which has a paid-up capital of Rs. 3.80 crores and a loan of Rs. 0.94 crores. This concern has made a profit of only Rs. 3.53 lakhs. I do not want to give the impression that the Hindustan Aircraft should make a tremendous profit, but I do want to say that, inasmuch as it is the declared policy of the Government that these undertakings in the public sector should run on commercial lines, it is essential to ensure that, after providing for all outgoings, depreciation, and taxation, they should yield a fair and legitimate surplus. Without achieving such a result, it will be difficult to place Indian economy on a permanently sound and stable basis. Let there be no mistake about this. It is in view of this, I say, a convention should be set up that the members of the Lok Sabha are given at least three days, during the session, for discharging their most important responsibility.

As I have stated above, nearly Rs. 1,400 crores will be given, by way of grants and loans, to the States by March 31, 1957. It is true that the States are autonomous bodies. So also is the Central Government with true sovereignty. And yet, it is well-known the International Bank will not lend money even to the Government of India without proper safeguards. Similarly, when the Central Government gives money to industries in the Private Sector, it takes care to nominate its own directors on the Board of such concerns. It will be perfectly legitimate for the Central Government, therefore, to call upon the States to render true reports of the manner in which these huge sums have been utilised by them (the States). These reports must come under the consideration and observation of the members of the Lok Sabha. In my opinion, it will be violating the elementary principles of democratic government if the Lok Sabha cannot have the ultimate say and control in regard to the use of all the sums of money which they grant or lend to the States. It is to be hoped, therefore, that, at least from next year, the budget papers would give this information and also include all such statements as would give the fullest information in regard to the public undertakings, as also in regard to the projects for which the States would utilise the money. The final control and consideration of the Lok Sabha in connection with the purpose and the manner in which these funds would be spent would not only create confidence in the country, but also strengthen the foundations of true democracy in the land.

In the light of what has been said so far, would it be too much to expect the members of the Lok Sabha, first, to press for obtaining the fullest information in regard to all these matters and, secondly, to secure an opportunity for enforcing their right and for giving their verdict in regard to the use of these enormous sums of the taxpayers' money?

THE BULLION PROBLEM

By

CROESUS

THE FORWARD MARKETS COMMISSION'S decision to examine the utility of forward trading in bullion has not naturally found favour with the bullion operators.

There are at present nearly 30 centres in India where forward trading in bullion is carried on. Serious doubts have been expressed in some quarters regarding

the very need for a hedge market in view of the absence of any substantial and continuous source of supply internally and the ban on private imports. But a section of the traders feels hopeful that at least Bombay would be allowed to have a forward market, even if it should be on a restricted scale, in view of the refining facilities available there and its status as a principal centre for ready supplies and demand.

Since the end of the Second World War, gold has been moving into the country almost at a rate reminiscent of the pre-1931 days, but in view of the import ban, imports have been taking place by smuggling. Gold smuggling is the combined result of an improvement in the economic condition of the agricultural population and the wide disparity between the internal and the external prices of gold of as much as Rs. 36 per fine tola. The current imports of gold are estimated at 1.25 million ozs. per annum, costing about Rs. 35 crores. This represents nearly six per cent of the estimated national savings and is a considerable proportion of the annual balance of payments deficits. Though the Sea Customs Act was amended in April 1955 to check gold smuggling further, there has been no appreciable difference in the availability of gold in bullion markets. This evidently indicates a waste of our foreign exchange resources, when the country is hard put to it to find enough capital even to finance its far more important development plans. It has been suggested that a more appropriate exchange valuation of the Indian rupee, which has remained stable at 1s. 6d. since 1927, would eliminate the price differential in gold and remove the present inducement for smuggling. In the place of gold, the community may then import more essential goods. Alternatively, the movement of gold might once again conform to the country's payment requirements.

The traditional importance of gold in the Indian economy cannot be overlooked. There is a hereditary preference on the part of a large number of people to invest either in real estate or bullion. Only about 10 per cent of the demand is for trade and industrial purposes, whereas the remaining 90 per cent is for

hoarding and making ornaments. This is not unnatural, considering that the investment habit is not widespread. Private investment in bullion is certainly unproductive since it does not result in the creation of wealth. Further, it is a handicap to the development of lesser industries, in which investment is lacking. The why people buy gold, as Keynes used to point out, is its remarkable capacity for inspiring confidence that somebody else is always prepared to accept it.

It has been argued that, if the world price of gold were raised, it would discourage hoarding for non-monetary purposes. But whether or not this salutary effect will be long-lived depends on the general economic condition of the country. If inflationary tendencies persist, the diversion of investment from gold will be but a temporary phase. If, on the other hand, a business recession sets in, considerable dishoarding may take place. In times of depression, however, bullion comes out from hoards even without a change in its price. It may be remembered that, during the twelve years following the devaluation of the sterling (and the rupee) in 1931, exports of gold from India totalled Rs. 377 crores, on an annual average of 3.6 million ozs. The exports were the combined result of the Great Depression, the inducement of the higher rupee prices, and the policy of linking the rupee to a fluctuating sterling at a rate which undervalued the Indian currency.

Recent pleas for an increase in the dollar price of gold have been turned down by the United States, probably because of the benefits which the Soviet bloc is bound to derive from it. The Soviet bloc's gold production is about 30 per cent of the world's total. The pattern of world gold stocks presents a similar picture. Valued at \$35 an oz., the Soviet monetary gold stock at the end of 1955 was larger than the combined gold reserves of Britain, Switzerland, Canada, Belgium, and Germany. The entire stocks of the Soviet bloc are estimated at \$7,250 million against \$12,700 million in the rest of the world.

BUSINESS NOTES

GROUNDNUT FUTURES REOPEN

AFTER A lapse of thirteen years, futures trading in groundnut and groundnut oil is to be resumed in the country at Rajkot (Perhaps, by the time these lines appear in print, this would have been accomplished). The market at Rajkot will initially function through three rings for groundnut and two rings for groundnut oil. The Forward Markets Commission has been insistent that the transactions should be subjected to a ceiling and a floor in view of the Government's anxiety to keep down the prices of oilseeds and oils within reasonable limits. The authorities appear to consider these safeguards necessary also because of their desire to prevent corners and bear raids in articles of daily necessity.

Rajkot is one of the four centres in the country where the Forward Markets Commission has recommended the immediate establishment of futures trading in groundnut and groundnut oil, the other centres being Adoni, Madras, and Bombay. The recognised body for this purpose is the newly constituted Saurashtra Oils and Oilseeds Association. As regards continuing the five trading rings, it is said, the question would be re-examined at the end of the year in the light of the data that would then become available. In the Commission's report to the Government it is provided, 'inter alia', that the recognised association will have to grant facilities for membership and trading to the members of other associations in their respective regions and secure a minimum membership. The associations, in certain cases, will also have to obtain the concurrence of the Commission to the appointment of their Presidents.

The acreage under groundnut in the Saurashtra region is about 10 per cent of the total groundnut area in the country and the production in 1953-54 was about 2.5 lakh tons, or 7 per cent of the total production in India. Groundnut is the most important commercial crop in Saurashtra and accounts for 14 per cent of the total cultivated area. A large number of persons in the State depend upon forward trading for their livelihood due to the peculiarity of the region. Indeed, presumably, due to lack of industrial development and employment opportunities, forward trading has been going on at different centres for a number of years in this region, which was a conglomeration of about 200 States until recently, in one form or another.

The importance of establishing, at an early date, more centres in the country cannot be minimised. South India is by far the biggest groundnut-producing area in the country, and it is only proper that futures markets should be established there. Madras and Andhra account for 40 lakh acres or about 35 per cent of the total groundnut area in the whole country. The production of groundnut in the region is about 16 lakh tons or 45 per cent of this country's total production. Moreover, groundnut is the most important commercial crop in the region, the area under it accounting for about 12 per cent of the total cultivated area. The region is also the largest groundnut oil-producing area in the country. The production of groundnut oil in the region is estimated to be about 380,000 tons, i.e. about 48 per cent of the total production of groundnut oil in the country.

Futures trading in groundnut and groundnut oil is essential and the present time seems to be opportune for its resumption. All requirements which render a commodity suitable for futures trading are generally satisfied by groundnut. The crop is largers and the area under groundnut has been steadily increasing. Owing to the expansion of the crushing industry, the internal demand for groundnut also has increased. Both supply and demand are thus adequate to meet the needs of a futures market. Further, the second Plan envisages an

increase in production of all oilseeds of over 23 per cent.

INDUSTRIAL CREDIT AND INVESTMENT CORPORATION

NUMEROUS OFFICIAL enquiries in the past have emphasised the need for the establishment of a regular organisation for underwriting public issues of capital. It was hoped that the Industrial Finance Corporation would help in this objective. This was a difficult task, not least because of the volume of criticism which follows just choices by a Corporation of this kind. It is, therefore, all the more creditable that even during the short span of ten months from March 1955 the Industrial Credit and Investment Corporation of India Ltd. has found it possible to make an encouraging start in this direction. As on December 31, 1955, the contingent liability of the Corporation under guarantees and underwriting agreements for calls not yet paid on ordinary and preference shares was Rs. 23.07 lakhs; this is only a promise of things to come.

The first annual report of the ICIC shows a net profit of Rs. 25.23 lakhs, from which the Directors have appropriated Rs. 5 lakhs to general reserve and Rs. 10.58 lakhs to reserve for taxation, carrying forward Rs. 7.17 lakhs. The Corporation is to be congratulated on its good start.

As a matter of policy, the Corporation has refused to finance businesses run by partnerships or individuals. By the end of the year, the Directors had agreed to give financial assistance to 11 applicants while a further 25 applications were under examination. Of the propositions approved, five related to the underwriting of public issues of ordinary and preference capital, four called for direct subscriptions to ordinary or preference capital and two were requests for loans. The industries concerned were the manufacture of sugar, electrical equipment, fuel injection equipment, chemicals and equipment for the textile industry, metal ores and cotton spinning. The amounts which the Company agreed to provide ranged from approximately Rs. 5 lakhs to Rs. 1 crore. Loans against mortgages totalled Rs. 10.25 lakhs, investments in debentures Rs. 50.05 lakhs and in preference and ordinary shares of industrial companies Rs. 66.40 lakhs. During the first year of its operation—1949—it is of interest to remember here, the IFC had granted loans totalling Rs. 3.4 crores. This was followed by Rs. 3.77 crores in 1950, Rs. 2.39 crores in 1951 and Rs. 4.45 crores in 1952.

The paid-up capital of the ICIC is Rs. 5 crores against an authorised capital of Rs. 25 crores. During the year under review, the Corporation received an interest-free advance of Rs. 7.50 crores from the Government of India in terms of the agreement of 29th January, 1955.

THE BANK OF INDIA

THE RESULTS of the working of the Bank of India Limited during 1955 typify the upward trend in the operations of scheduled banks in the country. The Board of Directors can certainly claim credit for the marked improvement in the Bank's profit which rose by Rs. 8 lakhs to Rs. 85 lakhs in 1955 as compared to the preceding year. This figure has been arrived at after adequate appropriations under all essential heads. An interesting feature of the financial allocations in 1955 is the decision of the Board to pay a final increased dividend of 10 per cent free of income-tax. Together with the interim dividend of 6 per cent declared in August last, the total dividend which the shareholders will receive will add up to 16 per cent free of income-tax. The dividend will absorb Rs. 40 lakhs. The amount carried forward will be Rs. 13 lakhs, or Rs. 4 lakhs in excess of the amount of the previous year.

A pleasant announcement which the Chairman, Sir Cowasjee Jehangir, made at the last annual meeting

of the shareholders was the decision of the Board to issue bonus shares in the proportion of one bonus share of Rs. 50 fully-paid for each five shares of the Bank. The issue is intended to commemorate the golden jubilee which the Bank will celebrate this year. It is, of course, subject to the sanction of the Controller of Capital Issues. It will necessitate a transfer of Rs. 50 lakhs to capital from the Reserve Fund and the altered position will be that the paid-up capital will increase to Rs. 3 crores while the Reserve Fund will stand at Rs. 3.02 crores.

Sir Cowasjee Jehangir's speech makes a pointed reference to the effect of the higher rates of interest which banks have to pay on deposits. This liability is clearly an important ingredient in the rising expenses of banks. The inability of banks to charge higher rates in a corresponding proportion for interest on advances has created hardship with inevitable contraction of the margin of net earnings. The Chairman is of the view that this inability is due to the fact that the current Bank Rate which was fixed more than four years ago at 3½ per cent is out of tune with the prevailing market rates of interest, but banks find it imperative to relate their rates on advances to the Bank Rate.

DURGAPUR STEEL PROJECT

THE MINISTER for Iron and Steel, M. T. T. Krishnamachari, gave in the Lok Sabha on March 13, details of the broad agreement reached recently between the Government of India and the Indian Steelworks Construction Company Limited, London—a Consortium of British manufacturers—for the setting up of a steel plant at Durgapur. He said that the Durgapur Steel Works would produce about 300,000 tons of foundry grade pig-iron and 790,000 tons of medium structurals, blooms and billets for forging, billets for re-rollers, wheels, tyres and axles and sleepers. The steel melting and rolling capacity can be increased by 25 per cent with relatively minor additions to the plant. Steel will be made by the well-known straight open hearth process. There will be a wheel, tyre and axle plant, which is a separate and costly unit, to meet the requirements of the railways for these products.

The plant, machinery and equipment and a considerable part of the steel structures, refractories and other materials required for the works will be supplied by the Indian Steelworks Construction Company. It will also carry out the entire work of construction and civil engineering at site under the supervision of the consulting engineers to the Government of India. Elaborate terms for final specifications and tenders (including final prices) to be submitted by the company by May 1956 and for civil engineering works to be done in India have been stipulated. The foreign exchange cost of the plant, equipment and materials is expected to be about £50 million. The cost in India of erection, civil engineering work, constructional material, etc., is expected to be about Rs. 39 crores. A syndicate of British banks has agreed to give credits to the extent of £11½ million towards financing part of the foreign exchange cost of the plant. The rate of interest will be 1 per cent over the prevailing United Kingdom bank rate. The United Kingdom Government has agreed to give the Government of India a loan of £15 million. The rate of interest will be the rate at which the United Kingdom Government can borrow in the market plus a small element to cover administrative charges. Both these credits will be used for making payments to the suppliers during the latter half of the second Five-Year Plan. The payments during the first two years or so of construction will be made out of India's own resources.

COAL WASHERY PLANT AT KARGALI/BOKARO

THE ACCENT on an ambitious programme of expansion of steel production in this country has necessitated a quick decision on the installation of a plant for wash-

ing coal. During the second Five-Year Plan the minimum requirements of clean washed coking coal will be of the order of 11.41 million tons which will be equivalent to 16.5 million tons of raw coal. Of the quantity of 11.41 million tons of processed coking coal, the share of the steel industry will be 9.73 million tons. The magnitude of this imperative demand has led the Government to make a decision that generally all coking coal shall be washed. The location of the new State coal washery plant has been fixed at Kargali/Bokaro colliery in Bihar.

The Eastern Equipment and Sales Limited have been awarded the order for the coal washing plant with a capacity of 2,220,000 tons per year. This plant will be supplied by the Daiichi Bussan Kaisha, of Tokyo, who are successors to Japan's former biggest Zaibutsu, Mitsui Bussan Kaisha. The tender has been accepted on conditions of a firm price and fixed delivery time. It is to be a turn key job. The washery plant will be in operation by January 1, 1958, well in advance of the time when the Rourkela steel plant goes into production. The full requirements of washed coal of Rourkela plant and part of the requirements of Bhilai plant will be met by this washery. The total cost of the plant will be Rs. 1.66 crores. The designing and other planning for the plant will be made by Nagata Seisa Kusho, a Japanese firm with years of experience in designing of coal washery plants. Another collaborator in this project of plant supply will be Sumitomo Machinery Company, who have a technical agreement with WEMCO of the United States. WEMCO mobil mills are being used in 106 plants which adopt the American Cymenide Company process for separation of coals, iron ores and so forth. The significance of the selection of a Japanese-erected plant will be appreciated when it is recalled that Japanese plants are specially designed for washing coals with a very high ash content which is a characteristic feature of Indian coals.

MANUFACTURE OF STEEL TUBES

THE INDIAN TUBE COMPANY (1953) Limited, whose formal opening was performed by Dr. Sri Krishna Sinha, Chief Minister of Bihar, at Jamshedpur on 7th March last, is the first venture of its kind in this country. It is yet another illustration of fruitful co-operation between Indian and British industry. The joint partners in this venture are Messrs. Tata Iron and Steel Company and their associates who hold 60 per cent shares of the company and Messrs. Stewarts and Lloyds of Great Britain, premier manufacturers of steel tubes, who hold the remaining 40 per cent shares. The formal agreement for the Company was signed in 1950. It is significant that the construction of the first plant of the Company, in a series of three, which was started at the fag-end of 1952 was completed in record time.

The first plant is the Fretz Moon Plant for the manufacture of steel tubes in varying sizes from ½" nominal bore to 3" nominal bore intended for water and gas supply and for low pressure steam piping. This plant, which is named after the technical process it will adopt in its manufacture, has an annual capacity of 90,000 tons whose length equivalent is 12,000 miles. Its cost is Rs. 3 crores. Tata's Skelp Mill with a yearly capacity of 200,000 tons, will supply the strip required for tube manufacture in the form of coils. Construction for the second plant was started recently. This plant with an annual capacity of 13,000 tons of tubes per annum on a double shift basis will be completed by 1957. It will manufacture steel tubes of higher quality required by the bicycle industry and for use in boilers. The second plant will be an electric resistance weld plant with cold rollings. The third will be the seamless tube plant which will cater to defence requirements as well as to requirements of tubes for high pressure work. The three plants together will satisfy all the Indian requirements of tubes except for a small demand for tubes of diameter larger than 6.5/8".

MMC revolving flat cards

are now being extensively used
in Textile Mills in India.

Outstanding features

1. Five distinct setting points, used singly or in combination, to control setting to .001 inch.
2. Johnson bronze bearings, for cylinders and doffers. Roller bearings to cylinder; ball bearings to doffer and ball bearing comb box also provided as optional equipment.
3. Ball bearings to lick-in pedestals.
4. Self-lubricating 'Olite' bearings at several locations.
5. William's patent stripping motion for flats.
6. Drop lever with new disengaging handle.
7. Fluted lap roller with positive gear drive from feed roll helps uniform feed of lap at the back with minimum possible stretching.
8. Cards can be geared for any production in a mill organization.

COMMODITY NEWS AND NOTES

US COTTON DISPOSAL PLAN

The US Agricultural Department has announced that it would start selling its surplus cotton with effect from August 1, 1956. This is, of course, in continuation of the surplus cotton disposal plan already underway since January last. The new programme, however, emphasises that sales of cotton will be made on a competitive basis. An assurance has also been given by the US Secretary of Agriculture to the cotton markets overseas of an ordinary disposal of this cotton with a view evidently not to disrupt world cotton prices according to the Agriculture Secretary. He is led to believe that, inasmuch as the prevailing price depression was in anticipation of this should make little difference to the competitive situation of the domestic textile manufacturers. As the ultimate aim of the surplus disposal plan is to regain the US share of the world cotton market, it is quite likely that this scheme would be more or less a continuing programme. Hope has been expressed by the US Agriculture Secretary that American Cotton sales overseas will shortly hit the five million bale mark. Although it is true that actual sales of this cotton cannot start before August 1, 1956, this early announcement has been made with a view to facilitating domestic cotton interests as well as foreign users of cotton to make their own arrangement for forward sales and purchases.

SUGAR PRICES

It was anticipated by speculators that an excise duty would be levied in the Budget proposals. The stocks were hoarded and as a result of it prices went up. It was only when the two State Governments imposed a duty on sugar that these rumours subsided. The absence of excise duty on sugar in the Budget proposals brought great relief to the industry and the trade generally. As an immediate reaction to the Union Budget, sugar prices have fallen from As. 8-6 to a rupee per maund in various centres. Production in 1955-56 is expected to be 16.68 lakh tons as compared with the actual production of 15.9 lakh tons in 1954-55 season. This coupled with release of stocks is likely to have a bearish effect on prices. The Government's recent decision to reduce the selling price of British refined and French sugar from Rs. 30-8 to Rs. 29-8 per maund for ex-godown delivery at Poona, Indore, Ujjain, Jaipur, Jamshedpur and Ratlam is expected to extenuate the bearish tendency.

US PRODUCTION OF SYNTHETIC RUBBER

US production of synthetic rubber in January 1956 was at a record level of 93,485 tons compared with 69,929 tons in January, 1955, and 90,319 tons in December, 1955. The combined US consumption of natural and synthetic rubber in January 1956 amounted to 133,335 tons, against 124,508 tons in December 1955 and 125,290 tons in January 1955.

FIRST ESTIMATE OF GRAM

According to the Directorate of Economics and Statistics the All-India first estimate of gram for 1955-56 puts the current year's area at 22,185,000 acres, as against the adjusted corresponding first estimate of 19,657,000 acres during 1954-55. This shows an increase of 2,528,000 acres or 12.9 per cent over last year. The increase in area during the current year has been reported by almost all the main growing States. The increase is particularly marked in Bihar, Punjab, Uttar Pradesh, Hyderabad, Pepsu and Rajasthan and has been attributed generally to favourable climatic conditions at the time of sowing. This estimate generally covers the period up to the beginning of January 1956.

FIRST ESTIMATE OF TOBACCO

According to the Directorate of Economics and Statistics Union Ministry of Food and Agriculture, the all-India first estimate of tobacco for 1955-56 puts the current year's area at 807,000 acres as against the adjusted first estimate of 798,000 acres for 1954-55. Thus the current year's estimate shows an increase of 9,000 acres or just one per cent in area over last year. The increase in area has mainly occurred in Andhra, Bombay and Hyderabad due to favourable weather conditions at the time of sowing. The increase in area under tobacco in these States was, however, offset to a large extent by the decrease recorded in Bihar. Past experience has shown that the area at the first estimate stage forms roughly 90 per cent of the area under the crop finally reported.

FUTURE TRADING IN OIL AND SEED

After a lapse of nearly 13 years future trading in groundnut and groundnut oil was resumed in the country at Rajkot from March 7, according to an announcement by the Forward Markets Commission. The Government of India, on recommendation of the Commission has granted recognition to the Saurashtra Oil and Oilseeds Association for conducting forward trading in groundnut and groundnut oil.

COMPANY AFFAIRS

THE KOHINOOR MILLS CO., LTD.

The Directors' Annual Report on the affairs of the Company and the Audited Accounts for the year ended December 31, 1955, show that the profit for the year, after deducting depreciation amounting to Rs. 6,32,652 was Rs. 31,21,795

Add—Balance brought forward from last year 12,185
Rs. 31,33,980

Less—Amount paid as ad-interim dividend on 23-9-1955 at the rate of Rs. 6 per share, free of income-tax Rs. 6,00,000
Rs. 25,33,980

From this amount, the Directors have appropriated:

To Provision for Taxation Rs. 8,50,000
To Development Reserve " 3,00,000
To Employees' Pension and Gratuity Fund 1,50,000
To Payment of a proposed final dividend at the rate of Rs. 12 per share, free of income-tax 12,00,000 Rs. 25,00,000

Leaving to be carried forward to next year's accounts Rs. 33,980

Cotton prices remained steady in the early part of the year but declined somewhat before the start of the cotton season as the crop was expected to be about 55 lakh bales which would have amply covered all demands. However, due to unseasonal rains, crops in some parts suffered a setback and this had the effect of pushing up the prices of all indigenous growths which were higher at the close of the year than the previous year. Foreign cotton remained fairly steady throughout the year with a slight tendency to harden towards the close of the financial year. Cloth prices and offtake were well maintained during the year but there was a definite slump in the prices and demand for yarn and it was only in the last quarter of the year that a slight recovery was noticeable and the demand improved.

THE BUCKINGHAM AND CARNATIC CO., LTD.

The result of the Company's working for the year ended December 31, 1955, after allowing Rs. 30,40,035 for Depreciation but before providing for Taxation and Bonus to Employees is a profit of Rs. 1,01,66,075

Add—Unappropriated Profit brought forward 2,69,005

TOTAL Rs. 1,04,35,080

The Directors have made the following payments:

Dividend of Rs. 3-12 per share on the 7½ per cent Cumulative Preference Shares for the half-year ended June 30, 1955 Rs. 79,883
Interim Dividend of Rs. 4 per share on the Ordinary Shares for the half-year ended June 30, 1955, free of income-tax 7,13,912
Dividend of Rs. 3-12 per share on the 7½ per cent Cumulative Preference

Shares for the half-year ended December 31, 1955 Rs. 79,883

The Directors propose to deal with the balance as follows:

To Provision for Taxation Rs. 39,00,000
To Bonus to Employees for the year 1955 20,52,394
To Debenture Redemption Fund 9,00,000
To General Reserve 10,00,000
To Raw Materials Fluctuation Reserve 75,000
To Fire, Accident and Insurance Reserve 2,13,594
To pay a final Dividend of Rs. 6 per share on the Ordinary Shares for the year ended December 31, 1955, free of income-tax 10,70,868
To Superannuation Fund 1,11,101
And to carry forward 2,38,445

TOTAL Rs. 1,04,35,080

With the completion of the New Weaving Shed, the Power House, and the progress made in the Machinery Replacement programme, production and efficiency improved during the year, and this is reflected in the Profit and Loss Account where sale proceeds of cloth, yarn and waste increased by approximately Rs. 56,70,000 when compared with the previous year.

In spite of import restrictions in some overseas markets, and keen competition in those markets generally, the Company has again succeeded in exporting a substantial part of its production.

THE GANGES MANUFACTURING CO., LTD.

The Directors' Report and the Audited Accounts of the Company for the half-year ended September 30, 1955, show the Profit on Revenue Account Rs. 10,930

Adding thereto:

Share Transfer and Sub-Division Fees	945	
Unclaimed Dividend forfeited	2,356	
Rebate on Foodstuffs	1,560	
Provision for Doubtful Debts no longer required	1,545	
Profit on Sales of Capital Assets	2,000	8,406
		19,336

And deducting:

Retiral Gratuities to Workers	33,628	
Depreciation	3,00,000	3,33,628

The Debit balance is 3,14,292
Deducting the amount brought forward 1,23,024
1,91,268

And Transferring from Reserve for Machinery Renewal and Replacement 3,00,000

There is available for disposal 1,08,732

The Directors propose the payment of a dividend on Preference Shares of Rs. 4 per share or 8 per cent per annum which will absorb Rs. 24,000, leaving to be carried forward Rs. 84,732.

Profitable working during the period under review was difficult with the raw jute supply position maintaining prices at uneconomical levels in relation to those of finished goods which during the period fell sharply. Following on the labour disturbances at the Mills in March, 1955, when it was found necessary to close the Mill for some days, relations between management and labour were slow to return to normal and the Mill's efficiency suffered in consequence.

THE UNITED COMMERCIAL BANK, LIMITED.

(Incorporated on 6th January, 1943.)

THIRTEENTH REPORT

OF THE

BOARD OF DIRECTORS

The Directors submit to the shareholders the Audited Balance Sheet of the Bank as on, and the Profit and Loss Account for the year ended, 31st December, 1955.

The net profit for the year, after providing for all known and anticipated charges and including Rs. 1,08,724-8-9 brought forward from the previous account, amounts to Rs. 37,77,761 2 0

The Directors have made the following appropriations out of the net profit:

1. Transfer to Reserve Fund	Rs. 8,50,000 0 0
2. Provision for Taxes	" 14,00,000 0 0
3. Provision for Bonus to Staff	" 4,00,000 0 0
4. Balance	" 11,27,761 2 0
	Rs. 37,77,761 2 0

Out of the balance of Rs. 11,27,761-2-0 the Directors recommend to the shareholders payment of Dividend at Rs. 2-12-0 per share, free of Income-tax, which will absorb Rs. 11,00,000 leaving Rs. 27,761-2-0 to be carried forward to the next year's account.

The Bank's business has shown a gratifying expansion during the year. The profit for the year 1955 is higher than that of the preceding year due largely to the fact that the deposits of the Bank had shown a substantial increase during the year. Your Directors consider the working of the Bank and the profits for the year as satisfactory. The Bank's investments appear in the balance sheet at below market value.

During the year your Bank took over the business of the Pondicherry branch of the Banque de L'Indochine.

On his appointment as a Director of the State Bank of India, Mr. R. G. Saraiya resigned his seat on the Bank's Board. The Directors wish to place on record their appreciation of the valuable services rendered by him as Director since the inception of the Bank.

The Directors have to report with great sorrow the death in August 1955 of Mr. Navinchandra Mafatlal who was a Director of the Bank since its inception and had contributed greatly to the building up of the Bank. He was held in high esteem and respect by his colleagues and the Directors desire to place on record their high appreciation of the great service rendered by Mr. Navinchandra Mafatlal during his long period of office.

In the vacancies caused by the resignation of Mr. R. G. Saraiya and the death of Mr. B. N. Jalan and Mr. Navinchandra Mafatlal the Directors have appointed Mr. Yogindra N. Mafatlal, Mr. G. D. Kothari and Mr. T. S. Rajam respectively as Directors of the Bank.

The Directors have also to report to you changes in the general management of the Bank. Mr. B. T. Thakur, who was the General Manager since the inception of the Bank, resigned, on grounds of health, from the chief executive charge of the Bank in April 1955 and requested that he be allowed to go on long leave preparatory to retirement. In view of the medical advice received by Mr. Thakur the Directors accepted his resignation with reluctance and regret. The Directors place on record their high appreciation of his service in building up the Bank to its present position, size and strength within a comparatively short period and wish him happiness and restoration to normal health.

The Directors have appointed Mr. S. T. Sadasivan as General Manager in succession to Mr. B. T. Thakur and promoted Mr. R. B. Shah and Mr. O. H. Gheewala as Deputy General Managers of the Bank.

The Directors place on record their appreciation of the services of the General Manager and the officers and staff of the Bank during the year.

Under Article 95 of the Bank's Articles of Association four of your Directors,

Shri M. L. SHAH
Shri G. L. BANGUR
Shri P. D. HIMATSINGKA
Shri M. L. DAHANUKAR

retire by rotation, and, being eligible, offer themselves for re-election.

The Shareholders are requested to appoint auditors for the current year and to fix their remuneration.

CALCUTTA,
February 15, 1956.

By Order of the Board,
I. P. GOENKA
Vice-Chairman

Company Meeting

THE BANK OF INDIA LIMITED

Extracts from the Speech of the Chairman of the Bank of India Limited, Sir Cowasjee Jehangir, Baronet, G.B.E., K.C.I.E., delivered at the 50th Annual Ordinary General Meeting of the Shareholders of the Bank held at Bombay on Thursday, the 8th of March, 1956.

The year saw far-reaching events take place in the direction of state ownership and the progress towards a socialist state in India. Such events included the passing of the Finance Act, 1955, with drastic, and almost penal, increases in the taxes on salaries and incomes, the nationalisation of the Imperial Bank of India and the submission of the Companies Bill which has now become an Act. To an increasing degree the actions of the Government dominate business and the commitments of traders are more and more dependent upon their assessment of the probable future policies of the Government.

The new Companies Act, which was passed on the 18th of January last and comes into force from the 2nd of April, is a gigantic and voluminous piece of legislation which, I believe I am correct in saying, goes further in a number of respects than corresponding legislation in any other country. The Act would appear to have been drafted, to some extent, with regard to considerations other than those concerning only the needs of trade and industry and the interests of shareholders and investors. The comprehensive and far-reaching character of the legislation will give rise to many difficulties and there will be inconsistencies and incongruities and I think you will find that substantial amending legislation will have to be passed before the new Act has been in force for any length of time. The ramifications of the Act will call for much tolerance on the part of those administering it during, at least, the first months of its life.

Since the end of the year there has been a further major operation on the part of the Government which cannot but cause uneasiness. I refer to the nationalisation of life insurance business throughout the country on the 19th of January. It is not to our credit that this nationalisation should have been effected by the undemocratic method of an ordinance. The worst aspect of nationalisation is the unfair method of compensating shareholders for the value of their shares. This is being done under the amendments made in the Constitution on the 27th of April, 1955, by the Constitution (Fourth Amendment) Act, 1955. I know of an instance where the shares of a life insurance company have been valued by actuarial calculation at a certain amount and it is now well-known that, on the basis of the compensation indicated in the Bill which has followed the Ordinance, the Government intend to pay less than half that value. I do not think it was ever intended in a country governed under democratic principles that the Government should take advantage of the amendment of the Constitution to deprive shareholders of their legitimate dues, especially to such an extent as I have just mentioned.

Banks continue to suffer from having to pay higher rates of interest on deposits without being able to charge correspondingly higher rates of interest on advances. The establishment and over-head expenses of banks, which call for a large margin between the cost of money lodged and the yield on money lent, continue to expand.

The bank-rate, which has been 3½ per cent since the 15th of November, 1951, is out of gear with the current interest rates in this country. To obtain and keep deposits, banks must pay interest to depositors at market rates of interest which are governed by the supply and demand of money. On the other hand, banks usually grant advances at rates of interest related to the bank-rate. The rates of interest charged to borrowers consequently do not rise if the bank-rate remains stationary and lags behind current upward movements in the market rates of interest. In such conditions banks are paying increasing interest on deposits and getting very little more interest from advances.

The Bank's profits for 1955 are nearly Rs. 85 lakhs against Rs. 77 lakhs for 1954. Before the profit figure has been struck, usual appropriate and prudent provisions have been made and shareholders will, I feel sure, consider the increase of nearly Rs. 8 lakhs in the profits as eminently satisfactory.

The provision for taxation absorbs Rs. 25 lakhs against Rs. 29 lakhs last year. By reason of the revised taxation proposals in this year's Central Budget introduced last week on the 29th of February, the Bank's liability for tax will now be about Rs. 5 lakhs more than the provision, but that will be met in the current year's accounts.

Your Directors propose to place to the Bank's Land-Ed Property Account the sum of Rs. 3,00,000 and to pay an increased final dividend of 10 per cent, free of income-tax, absorbing Rs. 25 lakhs, and making, with the interim dividend of 6 per cent paid last August, a total of 16 per cent per annum, or Rs. 40 lakhs for the year, free of income-tax. The amount carried forward is increased at something over Rs. 13 lakhs against Rs. 9 lakhs a year ago.

I should like to refer to the Central Budget introduced in the Lok Sabha a week ago on the 29th of February. I must confess to a pessimistic view of the proposals. I might describe the Budget as one to make the poor poorer and the rich poor. Leaving aside China, about which we know little, India is one of the poorest countries in the world and, taking into consideration the size of its population, it has fewer rich men than any other country. We hear a great deal about the equalisation of wealth. Since the landed classes have already been more or less wiped out, I presume that this can only refer to the industrialists. Does the Government mean that these industrialists are of no service to the country and that they do not give employment to hundreds of thousands and serve the country in many other directions of which the Government are well aware. There is now an impression that the intention of the Government is to wipe out the private sector. Every obstruction is being placed in its way and when it is unable to fulfil the targets contemplated for it in the Five-Year Plans the Government may have an excuse for nationalising all industries.

The Budget has introduced the principle of double taxation. Dividends paid by companies above 6 per cent per annum on their paid-up capital are to be taxed. No distinction is made between companies recently brought into existence and companies of long standing which have been managed with efficiency and honesty and which have conserved their resources, enabling them to pay high dividends. All companies have already paid tax on their profits from which dividends are paid. This undoubtedly is double taxation, but, worse still, companies which intend to capitalise some of their accumulated profits on which they have already paid tax will have to pay tax again and companies which have already issued bonus shares from reserves which have been taxed will be taxed again on the dissolution of the companies. Again, the withdrawal of the rebate of 1 anna in the rupee on undistributed profits will cause a further drain on the resources of companies. The penal tax of 8 annas in the rupee on undistributed profits of investment companies which come under Section 23A of the Income-tax Act will preclude any ploughing back of their profits for financing the further development of the country. Also, it appears that all companies which come under Section 23A will fall within the mischief of the new dividends tax. This is grossly unfair as it means that the Government compel such companies to pay a very high dividend and then tax them for doing so.

Few outside India realise that India can claim to be one of the highest taxed countries in the world. The Government have included all sections in the orbit of taxation by increased excise duties. Formerly, deficit financing was unheard-of by financiers and economists. India has put into operation very big schemes by deficit financing. The success of these schemes will depend upon good administration and no corruption. It appears to me that the success of deficit financing mainly depends on getting value for money. Maladministration and corruption may frustrate the very foundation of deficit financing. I am only speaking aloud what I know thousands are saying in ordinary conversations.

Later in the year, the Bank will complete fifty years of its existence and shareholders may like to know the intentions of the Directors regarding commemoration of such an event.

The Directors consider that the completion of fifty years of the Bank's life should be marked by the issue to shareholders of one bonus share of Rs. 50 fully-paid for each 5 shares of the Bank. The Directors, therefore, propose to apply to the Controller of Capital Issues, Government of India, for the necessary sanction.

The sum of Rs. 50 lakhs would be transferred to Capital from the Reserve Fund, making the paid-up Capital Rs. 3 crores and the Reserve Fund Rs. 3 crores and 2 lakhs. The Bank's Capital, would, thereafter, consist of two classes of shares, namely, the present partly-paid shares and the new fully-paid shares.

Shareholders will appreciate that with the 2 per cent extra dividend already recommended and the further proposed increase in capital, if sanctioned by the Government, the future dividends will depend not only upon the profits of the Bank, but also upon the Government's taxation policy.

Note: All capacity and production figures relate to organised factories and do not include the decentralised sector.

* In terms of oil cakes processed.

@Including 170,000 tons for export.

† Includes decentralised sector.

(j) Includes production in the public sector also.

Manufacture of Polythene in India

Imperial Chemical Industries Limited have received the approval of the Government of India to a project to manufacture polythene in India. The manufacture will be undertaken by the I.C.I. associate, The Alkali & Chemical Corporation of India Limited in which the Indian public has a substantial shareholding. The project will involve a total investment of about Rs. 3 crores.

Polythene was first discovered in the research laboratories of I.C.I. Ltd. in the U.K. The process to be used in India will be that developed by I.C.I. and used in the manufacture of their well-known 'ALKATHENE'. The use of this product in India has been developed by I.C.I. (India) Ltd. who have operated a plant at Calcutta for the manufacture of film from imported granules since 1953. Polythene is a tough, flexible, thermoplastic material with outstanding electrical insulating properties. Many thousands of tons are used every year throughout the world in the manufacture of packaging film, flexible pipes, submarine telephone cables, radar equipment and moulded domestic articles, to mention only some of the major uses. As elsewhere, the largest single use of polythene in India will probably continue to be for packaging purposes, both as film and as coating on paper and jute.

The States Reorganisation Bill

THE circulation of the States Reorganisation Bill to State Governments for their opinion has now taken the problem of reorganisation of States a stage further. The most satisfactory feature about the Bill is its timing; the state of relative calm in which the Bill has been published and circulated is of good augury. Two months ago, a Bill on the present lines might have added to the heat of controversy and spoilt the outlook

for its easy acceptance. Today, however, the position is much different. The Punjab settlement is the largest single contribution towards solving the problems of reorganisation and the great wisdom shown on all sides in this area cannot be lost on the rest of the country. The problem of Bombay is, perhaps, still in the melting pot, though a definite stand has been taken in the Bill itself on the lines of the Government's earlier

decision. It is possible that the negotiations which are still being carried on in the background will yield a different solution, but it is not the final solution that is now important. There is evidence now that there has been a general revulsion from the agitational approach, which caused a display of violence and irresponsibility in Bombay. The residue of dissatisfaction is unlikely to express itself through a repetition of such folly. The Government, while determined to be firm, has expressed its willingness to discuss the possibilities of territorial adjustments made with the agreement of the parties. Elsewhere, as in Orissa, there is no doubt as to the answer to be given to demonstrations of violence and the Government can now be confident that it has the firm support of all responsible sections of the country in taking measures against them.

The pattern of reorganisation has undergone a change from that laid out by the S.R.C. Report. There are important deviations in accepting the conclusions of the Report, but these deviations do not detract from the work of the Commission. At worst, they may prove that the Commission could not take adequate account of the broad political considerations which are inescapable in dealing with so large a problem as the redrawing of the map of India. The Commission was able to produce clear-cut solutions to complicated problems; but tidy solutions have to be combined with political insight which was lacking in dealing with the more important issues. The solutions now put forward may be said to have achieved a right blend of the two, after a process of free discussion which is on the whole to the credit of our democracy even though the discussions have been marred by unpleasant incidents.

The most important departure from the S.R.C. Report is the creation of two uni-lingual States of Maharashtra and Gujrat, with Bombay city as a Central area outside both. There still remains the possibility that the final shape of Western India will be much nearer to the conception of the S.R.C. if a large bi-lingual State with Bombay as capital emerges from the current negotiations. There is no reason why it should not and if the Punjab formula is, indeed, a very suitable one as claimed, the creation of regional committees in a large bi-lingual Bombay State must be able to dispel the fears of particular groups. For the present, the Bill provides a basis of common interest to the two linguistic groups in the proposal for the establishment of a common High Court for Gujrat, Maharashtra and Bombay city. There will also be a Zonal Council with co-extensive territorial jurisdiction; and what is now needed is only an extension of these common institutions in order to mitigate the continuing grievance about Bombay.

Of the other changes made, the exclusion of Himachal Pradesh from the greater Punjab contemplated by the S.R.C. must be taken as an indication of a desire to respect the wishes of the people in this area, which were recognised in the minority report of the Commission. But this exclusion is only temporary and the Government has declared its conclusion that ultimately Himachal Pradesh has to form part of the Punjab when it can feel more secure in that larger set-up. The merger of Telangana with Andhra is in accordance with the S.R.C. recommendations, the difference being that the date of merger has been advanced. The clear cases in which the Commission's proposals have been unacceptable relate to the re-opening of the question of Bellary, the merger of

Tripura with Assam and the inclusion of Loharu in Rajasthan. These are in any case minor issues and the Government's decision has been backed by sound reasons. Not until the outcome of the Bengal-Bihar negotiations is known will it be possible for us to assess the value of the Commission's approach to this complicated border problem between two major States. If the merger comes about as now planned, it may reveal a trend which was far outside the range of the Commission's calculations.

The acceptance of the institution of Zonal Councils, after the idea caught on with remarkable rapidity in the post-S.R.C. phase of discussions, is again one of the major improvements recorded in the last six months. It may be unwise to expect too much out of these Councils whose constitutional status will remain nebulous even though they will have a statutory basis when the Bill becomes Law. The Councils can provide opportunities for those who normally tend to be preoccupied with purely local affairs, to have a sense of perspective and to see their problems in a larger context. Each of the five zones proposed covers a large area and at least on a zonal basis some of the smaller entities contained in each zone may be able to submerge their sense of smallness in the consciousness of the membership of a bigger association. In this sense the Zonal Council scheme, for which the credit belongs entirely to the Government, provides a constructive via-media between the suggestions contained in the minority report of the S.R.C. (based on the fears of smaller States) on the one hand, and the resistance offered by the larger States, on the other, to any idea of division for the purpose of creating balanced units within our federal system.

There is a clear indication that all the territorial changes proposed in the Bill will take place on October 1, 1956, in time to hold the next general elections without any postponement. This is an important point to be remembered; complicated though many of these problems of reorganisation are, it would not have been proper to create the impression that they would be used as an excuse for delaying general elections.

The future set-up of the Indian Union will only show two categories of component units, States and Union territories. The institution of Rajpramukhs will have a peaceful ending. There will be fewer High Courts and the reconstitution of the State cadre of the services may be helpful in streamlining public administration at the State level. A host of other details, which are intended to tide over the legal problems of the transition to the new pattern of States, have been included in this Bill of 121 clauses. They do not raise issues of principle connected with reorganisation, but are consequential provisions which have been thoughtfully drawn up by the administration.

The period during which the question of States' reorganisation has been before the Government and the people has been one of severe trial and it is essential that controversies should cease to permit greater attention to the larger tasks of economic development. This trial, like all others, has brought forth the best as well as the not so good traits in our public life; the best of all is the proof it has given that the underlying unity of India is strong and rests on solid foundations.

The Denigration of a Hero

MR. KHRUSHCHEV'S scathing attack on Stalin a fortnight ago has become more sensational news than the ideological changes announced at the Twentieth Congress of the Communist Party of the Soviet Union last month. There was enough evidence in the proceedings of the Congress to show that Stalinist policies would be changed more freely in course of time. Mr. Mikoyan's reference to past mistakes in foreign policy and his readiness to dispute Stalin's thesis on present-day capitalism were important indicators of the bolder approach towards criticism of Stalin's record. It was, however, expected that Soviet leaders would rely much more on reviving Leninist doctrines in order to overshadow Stalin than risk an open attack on Stalin, who personified in himself all that the Soviet Union stood for in the domestic and international spheres for nearly three decades. Mr. Khrushchev has astonished everyone by the violence of his attack; all that has been said regarding Stalin outside the Communist world has been confirmed in his speech. Judging by the few excerpts now available, more criticism of Stalin is expected to follow with the publication of some other documents; the testament of Lenin, is expected to convince the Soviet people of Lenin's lack of faith in the man who succeeded him and held unbridled power for nearly three decades.

It is difficult yet to discover what gain the present leadership in the Soviet Union expects by exposing the worst deeds of Stalin. One possibility is that there is still a section of opinion, possibly outside the higher ranks of the Communist Party, which still believes the legend about Stalin and disfavours changes already made by the new leadership. For the present, however, there is no evidence except the Georgian riots to prove that the pro-Stalin groups are influential. In a country in which all evidence contrary to the prevailing ones may be completely eliminated, it would be difficult to gauge the strength of this opinion, except by the fact that unless it was a substantial one, the Soviet leaders would not have been compelled to denigrate a personality around whom a halo had grown during a long and eventful regime. Communist leaders outside the Soviet Union have followed suit as usual taking the cue from Mr. Khrushchev, but this proves nothing more than the ridiculousness of their position.

Whether we attach much importance or not to the Georgian riots and the remnants of Stalinist influence inside the USSR, Mr. Khrushchev's performance will remain extremely puzzling. Having started on this campaign of exposure, he cannot obviously halt in the middle, though it has been decided that the process will only be gradual, perhaps to temper the shock of the revelations to the Russian people. Mr. Khrushchev could not have overlooked the possibility that it might even create a certain amount of scepticism about the Communist way of life, on the virtues of which the people had been indoctrinated by the propaganda of the last four decades. Have the Soviet people still left the capacity to ask themselves whether, if the dictatorship of the proletariat could not provide checks against the inordinate excesses of a whimsical despot, the system itself has any value, notwithstanding the theoretical claims of Marxist-Leninism? It is clear from Mr. Khrush-

chev's confession that no check was possible on Stalin and that his misdeeds multiplied according to his caprices. When even so bold and confident a leader as Mr. Khrushchev confesses that he was deterred by fear of his life in questioning them, it is not merely Stalin who is put in the dock but Communism itself.

The alternative now offered by the present leaders is the system of collective leadership, but even here the ascendancy of one man, namely of Mr. Khrushchev, has been apparent already. There is nothing in all the discussions of the Twentieth Congress to show that there will be free criticism amongst the leaders themselves, even though mistakes in policies are often admitted in general terms. This only proves that there is a certain amount of inevitability about the dominance of an individual. Marx might have conceived only of a broad-based proletarian dictatorship, but Lenin had narrowed it down to the dictatorship of the Communist Party, thereby elevating the Party itself into a principle. In effect, however, the tendency is to narrow it further into leadership of an individual to symbolize the Party. While such a tendency may be seen even in some parliamentary democracies, the opportunities for changing men during elections or in times of crises have helped to limit the political career of individual leaders who outlive their usefulness. When these opportunities are absent in a totalitarian system no theory of collective leadership can in practice provide a check to the emergence of a dominant leader imposing his will on the rest of his following.

The situation in the Soviet Union is, therefore, full of potentialities which have to be watched with interest. A psychological shake-up may, perhaps, do nothing but good to a people whose spirit has been crushed by long years of despotism. To the extent that Stalin's name was repugnant in the free world for his oppressive policies, the present policy may even create a favourable climate for a genuine approach to co-existence. That Stalin was not a "man of peace" is now established by those who have been his faithful followers during his lifetime. There can be no parallel in the free world for such violently contrary attitudes to a hero in life and in death, though subsequent light on the private lives of great personalities has altered popular verdicts. In the case of Stalin, those who were too close to him have been the last to speak the truth because they prized their own lives better than the cause for which they professed to stand. Stalin's capacity for cruelty might provide the excuse for those who depended on his power but for those who remained outside his jurisdiction and were yet toeing the line with spinelessness, there is none. Marshal Tito alone was an exception and, perhaps, the Chinese Communists would have been compelled to do likewise but for their other fears.

The degree to which concentration of power could be permitted for so long and to such an extent would not be of purely domestic interest even in ordinary times and in respect of ordinary countries. But in the Soviet Union, whose technology for war has been as well-developed as anywhere else, there has been an ever-present danger to the peace of the world. Those who have minimised it all along have not been vindicated in the event.

The Budget Debate

THIS year's debate on the Central Budget was governed by the primary consideration that the budget should give a glimpse of the second Five-Year Plan in its first year. It was right that it should be viewed mainly from this angle. But the Plan itself is still in a tentative stage and much of the criticism that was directed against the financial statement for the coming year would find a proper place in the discussions on the Draft Outline of the Plan. The only exception has been the frequent expression of anxiety over the adequacy of India's defence system, but even here the hard choice between arms and development became the theme, showing the extreme concern over economic progress.

This particular circumstance, however, did not deprive members of the opportunity to tread over the wider ground of the general economic prospects in the coming year. The ideological bias was as usual very pronounced in the criticism against the budget proposals which came from the members of the Communist Party and though Mr. A. K. Gopalan censured the budget proposals as indications of the attempt to secure national development at the cost of the common man, he was disarmed by the Finance Minister's assertion that the common man had to pay for development. There is now an increasing awareness that the scope for direct taxation has been exploited on a far greater scale than the scope for indirect taxation. This is not to imply that advocacy on behalf of the common man was not conspicuous in the course of the debate. The usual point was made that the new levies of indirect taxes constituted an additional burden on the common man's consumption goods and services, synchronising with a phase of rising cost of living.

The Finance Minister's clarification in his reply to the debate in the Lok Sabha, in terms of a comparative picture of the shares of direct and indirect taxes in the total revenue, was sufficient to dispel any vague ideas about uneven distribution between the two sources with a lopsided emphasis on indirect taxes. The conviction is already gaining ground that in a people's Plan which aims at an ambitious rate of development the base of taxation has to be broadened. The spokesmen of the private sector appeared restrained in their general criticism, though they had enough grist to their mills in the taxes on bonus shares and dividends. Mr. Tulsidas Kilachand registered his protest against the conscious attempt to divert financial resources from the private sector to the public sector. Mr. G. D. Somani made moderate suggestions about modifications in the tax on bonus shares and in the basis of computation for the super-tax on dividends in excess of 6 per cent and there has been some basis for the hope that the Select Committee may like to get credit for some liberalisation.

Particular interest attaches to the direct effect of the budget proposals which aim at increasing tax revenue by Rs. 35 crores. The Finance Minister's statement that taxation has no concern with capital expenditure ought not to come as a surprise. Tax revenue is undoubtedly intended to bolster the Plan. But it has a greater bearing on the development expenditure envisaged in the Plan and not on the investment part of the Plan.

In the Draft Outline the size of the development outlay has been placed at Rs. 1,000 crores out of a total expenditure of Rs. 4,800 crores. Taxation which is intended to balance the revenue budget as far as practicable, or in the alternative to minimize the deficit, is directed basically towards meeting demands of the development expenditure in the Plan. Leftist parties exhibited their impatience with the manner in which egalitarian tax proposals are being implemented because of their expectation that at least a beginning would be made with the first budget of the next Plan. Mr. Deshmukh was able to meet the criticism by pointing out that these proposals were not by any means kept in cold storage, though he has thereby offended the politically powerless business sector which is irked by the constant dangling of swords over its head to scare it into a state of inactivity.

There was not the least attempt to conceal a feeling of genuine anxiety over the probable, or rather inevitable, consequences of deficit financing on the economy. There is a general realisation that a certain degree of inflation is inescapable as a consequence of the resort to deficit financing to the extent of one-fourth of the aggregate resources contemplated for the Plan. In fact, a large part of the debate was over-shadowed by this specific aspect of the Plan. In the budget year, the Finance Minister has planned for deficit financing to the extent of Rs. 360 crores. This figure must not be compared with the size of deficit financing budgeted for the current year at Rs. 309 crores, but with the revised estimate of the current year's figure which is now at a much lower level of Rs. 222 crores. The difference is substantial, as large as Rs. 138 crores in a single year, except that a similar shortfall may be shown in the Revised Estimates. This large magnitude of deficit financing in the first year of the second Plan is, however, a deliberate policy of phasing by the Finance Minister, whose broad scheme over the Plan period is to give a tapering effect to the size of deficit financing in the successive years. If deficit financing of the order of Rs. 360 crores in the budget year does not materialise, there may be a more even rate of deficit financing in the subsequent years.

There was counsel for caution in both the Houses in proceeding with this instrument of deficit financing. But Mr. Deshmukh's assurance that the experience gained in the recent past could be used carefully and with skill was reinforced by a note of confidence. Fiscal, monetary and, in the last resort, physical measures would, he said, be applied as the varying situations demanded. But there can be no corrective against inflation so powerful as a supplementary increase in production. It is difficult to concede the Finance Minister's view that this corrective may not be practicable. At least in consumer goods industries which are in general demand there ought to be deliberate effort to raise production, primarily in the production of cloth and food. The prospect of a large subsidy of Rs. 80 crores during the Plan period for the Ambar Charkha introduces an element of confusion in stepping up production of mill cloth. The impact of inflation may dictate a modification of enthusiasm for this proposal.

How strong must the foundation be for 43 lakh houses?

In the last few years, large segments of our population have moved into the cities. Here they live in unbelievably congested tenement houses, adding to the cities' already acute housing shortage. We need 43 lakh houses to ease the strain on our cities.

In 1947 our cement production was 1.45 million tons. Today, it is 4.34 million tons—almost three times the 1947 figure. 40,000 people are employed in 26 modern, efficiently run factories.

In our developing economy steel is

essential. That is why the Tata Iron & Steel Company has launched an expansion programme which will raise its capacity.

Ingot Production		
1955	...	1,050,000 tons
1959	...	2,000,000 tons

Private enterprise serves the Nation

THE TATA IRON AND
STEEL COMPANY LIMITED

Power - electric power - plays a very important part in India's plan for a prosperous future. Vast reserves of power will be necessary to keep the wheels of industry humming with activity. Only efficient electrical engineering will effectively produce, distribute and control this vast power.

The latest developments in Electrical equipment and machinery are displayed at the German Industries Fair, Hannover. Over 4000 manufacturers with all their outstanding exhibits, will be there to demonstrate the benefits of their inventions.

Other Groups exhibited: Mechanical Engineering, Chemistry, Rubber, Precision Mechanics & Optics, Iron & Steel, Tools, Office Equipment, China, Ceramics, Glass, Jewellery, Silverware, Cutlery, Clocks and Watches.

German Industries Fair

COMBINED LIGHT & HEAVY INDUSTRIES

THE WEEK'S NOTES

THE CASE FOR INSURANCE NATIONALISATION

THE FINANCE MINISTER'S speech on the Insurance Bill in the Lok Sabha this week was much nearer to the truth than at any time before, when he said that the nationalisation was based not only on the failure of the private sector but also on other grounds like ideology, philosophy and the objectives of a Welfare State. Mr. Deshmukh was right when he argued that from this point of view it was not necessary to prove, as in a court of law, that malpractices were widespread. But this was a line of which he himself was guilty at an earlier stage, until the Prime Minister intervened to explain it as part of a philosophy. Mr. Deshmukh also shifted his ground when he said that malpractices should not be judged in terms of the quantum of money involved but in terms of the human hardship created. The point that bad management though small was an endemic disease proves nothing except that thereby the Government seeks to rationalise its failure to regulate the business by making effective use of the powers conferred by the legislature. Historically, and on the basis of current experience, it is possible to argue that there are other diseases which are endemic in nationalised enterprise which can create as much human hardship as in the other cases by way of red-tape and rule-of-thumb.

Mr. Deshmukh has been able to produce figures to prove that in the six weeks following nationalisation more business has been done than in the corresponding period of the previous year. For the moment, this has apparently satisfied some sections of opinion, but the proof is not as complete as one would wish. It is well known that in the last few years, business each year has been increasing substantially over the previous year and there is no evidence to show that the figures now produced reveal a tendency which is much in excess of the average rate of increase recorded. Up-to-date figures are not available for the public to prove anything to the contrary, but it is a fair presumption that the volume of business done during the six or eight weeks prior to nationalisation would also have shown an increase over the corresponding period in the earlier year. The only inference that can be drawn from the increase claimed by the Finance Minister is that nationalisation has not caused a setback; but no one expected such a dramatic reversal of the trends in business by the taking over of life companies by Government.

The Finance Minister was, perhaps, right in rejecting the private sector's plea for several corporations for nationalised insurance on the ground that policies have to be evolved in common. His assurance that the policyholders of solvent companies will not be cheated of the bonus to which their loaded policies entitled them, will be noted with relief. The question of compensation on which an elaborate explanation was offered is one for the interests concerned to examine and comment before the Select Committee deals with the matter but that will not be the major issue involved in the transfer.

INDIA AND PAKISTAN

MR. NEHRU'S statement on foreign policy in the Lok Sabha was made in a tone of extreme seriousness which was also reflected in the temper prevailing in the House. The substance of his statement was not, however, unexpected. It largely turned on Indo-Pakistan relations in the context of the recent SEADO Council Meeting and the series of border incidents in the last

two weeks which have caused great anxiety. There was a reference to Mr. Dulles' assurances on aid to Pakistan and US policy on Goa; not much significance, it appears, was attached to his declaration that the USA would be on India's side in the event of aggression by Pakistan. The assurances have not satisfied Indian opinion, much less Mr. Nehru; and the border incidents are regarded as proving that whatever be the object of American policy, the result has been to make Pakistan strain at the leash, as it were, in order to display her new-found strength vis-a-vis India. So with the Portuguese Government. These two matters would have been serious enough but the SEADO Council Meeting provided the occasion for another gratuitous addition to the list of India's anxieties by its wholly pointless reference to the Kashmir question. The fact that the Foreign Ministers of Britain and France have publicly admitted the unsuitability of SEADO's dealing with the matter, has made the United States once again appear as the principal supporter of anti-Indian policies.

Mr. Nehru did not, however, stop with mere expressions of anxiety. To Pakistan he has offered the Panch Shila as a basis of future relations, and apart from this general offer, he has also welcomed Mr. Mohammed Ali's suggestion for a no-war declaration, which India had herself proposed some years ago without effect. But a mere declaration will not restore confidence unless border incidents are stopped forthwith and Pakistan makes amends for the Nekowal incident on which she had promised to accept the verdict of the UN Observers. The charge made by Pakistan's Prime Minister that India is whipping up a bellicose attitude against Pakistan is in keeping with his country's established ideas of anti-Indian propaganda but it cannot be a good prelude to an understanding. India's defence budget is still as stable as before and constitutes a declining percentage of her total budget. Mr. Nehru has rejected all ideas of having an arms-race with Pakistan, even while admitting the responsibility for taking precautions about the country's safety.

BUDGET LEAKAGE BLOWS OVER

THE DEBATE in the Lok Sabha this week on the budget leakage has shown that the Opposition takes its responsibilities seriously and is in no mood to compromise easily on an issue of principle. In this sense, the criticisms levelled against the Government were not inappropriate. At the same time, it cannot be overlooked that the Government has also done its best during the last three weeks to respect the rights of the House and for safeguarding the business of the Government. The Opposition was, perhaps, a little too severe in demanding the resignation of the Finance Minister to satisfy the requirements of principle. It was partly carried away by a sense of injury over the Finance Minister's disclosure of fuller facts in the Upper House first. Insistence on resignation would have involved the assumption that a high-level Minister is expendable on the slightest cause. A case has been registered against certain persons alleged to have been responsible for the leakage and further scrutiny into or comment on the details of the matter is prevented by the reason that the matter is 'sub judice'. It would, therefore, be hazardous to reach any conclusion on the circumstances which led to the leakage; but on the basis of the facts presented to the House there has been a general approval of the course adopted by the Prime Minister.

It would be unwise in such cases to carry our imitation of parliamentary conventions established else-

where to their logical conclusion. There are, however, circumstances in which a Minister's resignation may not only be technically necessary but essential to establish that responsibility is not lightly regarded. A recent instance of this kind was seen in the Health Minister's explanation of her responsibility in the matter of protected water supply to the city of Delhi. Though even there it was a clear case of negligence at the lower levels, a resignation might have had the effect of proving to the public that Government took the matter seriously and would avoid occasions for the recurrence of such negligence. All these examples only prove that these cases must be viewed on their individual merits and according to the degree of public dissatisfaction over a Minister's lapse. In this particular case of the budget leakage it would be the general desire that the matter should rest with the explanations offered by the Home Minister and the Prime Minister.

RECRUITMENT TO SERVICES

THE DEBATE in the Rajya Sabha on the working of the Union Public Service Commission revealed the same faith in the Commission's importance and impartiality which had all along characterised Indian public opinion on this subject. The conviction that all would be well so long as the Government adhered faithfully to the Commission's selections is probably due less to a belief in the infallibility of the Commission and more to a suspicion of the ways of the executive. In any case, this feeling was quite in keeping with the Constitution which provides for an independent body for recruitment to the public services and invests it with a distinct status. By and large, the Government has shown itself ready to accept the Commission's choice; and it would be wrong to exaggerate the importance of the few cases of deviation which are recorded in the report on the working of the Commission.

It cannot, however, be overlooked that this faithful adherence is to some extent remarkable in view of the proved shortcomings of the present system of recruitment. It was stated that during a year the Commission has to choose as many as 5,000 to 6,000 candidates for various posts. This large task makes it inevitable for the Commission to adopt rules-of-thumb in selection, thereby making the quality of recruitment suffer considerably. An even more disquieting factor has been the long intervals between the announcement of vacancies and the final recruitment. The delay may not seriously impede the work of the administration because of the powers of temporary appointment available to the departments but it certainly introduces an element of uncertainty, on the one hand, to the large numbers of temporary recruits who are kept in suspense and, on the other, to the applicants who cannot calculate their chances of being selected. It is not surprising that the quality of candidates who still offer themselves for this endurance test is not high.

It is essential that such delay should be reduced. If, due to circumstances beyond its control, the Commission should be compelled to choose personnel of a lower calibre, the effect will be to diminish popular faith in the efficacy of the system of recruitment and to impair the prestige which the Constitution has deliberately sought to create for this body in view of its special importance.

THE P.S.P. DECIDES

THE NATIONAL EXECUTIVE of the P-SP has now responded magnificently by issuing a directive to its party units prohibiting them from organising or parti-

cipating in satyagraha in connection with the question of reorganisation of States. Though this outcome is attributed to the talks between Mr. Jayaprakash Narayan and Mr. Nehru, it is well known that P-SP leaders like Acharya Kripalani have been as deeply concerned as the Congress leadership over the unseemly developments on the question of States' reorganisation. Calcutta, in particular, provided the local P-SP leadership with an opportunity to demonstrate its party strategy rather than its concern over the national interest. The directive now issued is only against the agitational approach; it does not in any way seek to stifle the expression of personal or party opinion at local or national levels. The Prime Minister's assurance that there has never been any desire to impose a solution on any area has been fully borne out by the manner in which the problem of reorganisation has been so far tackled.

This kind of co-operation may well be extended to other matters where it would be in the national interest. In particular, the problem before Travancore-Cochin today presents an opportunity for an understanding between the Congress and the P-SP if it could be brought about. The instability of Governments in this State in the last few years has become notorious and it is difficult to see great issues of principle or policy involved in the frequent changes of Ministries. The latest instance of ministerial crisis is an extreme case of irresponsibility on the part of a very small group of Congressmen and it would be absurd if only five per cent of the membership of the Legislature should thus create an awkward situation leading directly to President's rule. Few would doubt the need to avoid Central administration on each such occasion. On an earlier occasion, the P-SP was able to function as a minority Government with an uneasy neutrality of the groups on either side; and the conduct of the Congress Party in sitting on the fence, until expediency dictated opposition to the Ministry, was not indeed a proper precedent which could ensure future co-operation. It is not, therefore, understandable that the National Executive should now disfavour Mr. Pattom Thanu Pillai's co-operation with a Congress Ministry to stave off the present crisis. But the moral for the Congress is that it should not leave these matters to be dictated by a sense of sheer expediency at local levels; Congress leadership must give positive lead to avoid reckless conduct, if larger conceptions like bilingual States and zonal councils should have the right atmosphere for acceptance by the people.

NATIONALISED INDUSTRIES AND INFLATION

By
ODYSSEUS

TWO CASTES IN BRITAIN

THE PROFESSED OBJECT of nationalisation of industry is to abolish the profit motive and to produce in the interests, not of a small group of capitalists who put country last and their own selfish interests first, but of the nation as a whole.

We have often argued here that calculation of the profits that it is hoped to make out of an enterprise is the only yardstick by which a Socialist government can decide between the urgent competing claims for limited funds of, say, a dam project or a steel plant. In nowise disconcerted, the Socialist replies that profits are "different" when made for the state which represents "all the citizens". In many of these controversies we are still in the blue-print stage, but we have no excuse for not knowing how our theories will work out in practice because we have in Britain a large-scale Welfare state laboratory which is some years ahead of us in practising what we are preaching. The Marxian purist may object that we ought to study what goes on in the Union of Soviet Socialist Republics rather than in "Socialist pattern" Britain, but there is (as yet) no comparison between our methods of economic organisation and those of the USSR, where India's humane, liberal democratic attitude towards the citizen and the worker has no parallel. Consumer interests, human interests, local interests — all are sacrificed to the attainment of the planned target in the USSR. Workers are now allowed to challenge the allotted conditions. So our investigations must be conducted in the British and not the Soviet laboratory.

What do we see there? Wage claims totalling more than £500 million have recently been put forward by leading British unions. If conceded, the present price level cannot be held and the buying power of the £ must fall further. These claims, spear-headed by the nationalised industries, have now become annual. Once granted, private industry has to follow or lose its workers to the nationalised industries. Britain's national wage levels are, therefore, set by government sponsored negotiations with the Unions, which do not present claims for arbitration but unconditional demands, regardless of the effects on the profit and loss account of their industry and consciously based on the knowledge that a strike would not only paralyse the industry, but by jeopardising Britain's balance of payments, create a political crisis, terrifying to the government in office, whether Conservative or Labour.

Before the war, the government was neutral between workers and employers, but today the future of the Welfare state is tied to the national economy. Government policies are basic factors in the economy. The result is that the workers in Britain's nationalised industries, by virtue of their power to tear a gaping hole in the economy and to create a political crisis, have established a corner in the product of their labour, which their post-war record shows that they are determined to perpetuate. Political power in Britain has passed from the hands of the 37,000,000 electors into those of the 3,000,000 in the nationalised industries who, together with their close allies, the rest of the Trades Union Congress members, total some 8,000,000 workers in 188 unions.

The British have become divided into two castes: those who, being able to wreck the economy if they do not get what they want when they want it, can protect themselves against the inflation that they help to create, and those who, being unable to hurt anyone, are being slowly crushed by inflation. To buy today goods for which they gave less than 8 shillings in 1939, they have to pay £1.

Mr. H. J. Randall, until recently chairman of the London Electricity Board, has thrown light on the actual working of nationalisation: "It is often asked why the nationalised industries should so readily give way to these wage demands," he wrote in 'The Times'. "In answering that question, one is faced with a difficulty which, I am certain, was never foreseen or intended by those responsible for transferring these industries to public ownership. With few exceptions, labour problems in nationalised industries—wage claims, conditions of service, etc.—are dealt with, or the ultimate decisions are taken by, men who were formerly trades union leaders but have been appointed to high positions under nationalisation. These men, who for many years were fighting for higher wages for their members, now find themselves representing the so-called employers, who are, of course, the public. I do not question the high ideals or integrity of these men, but being human they can hardly be expected suddenly to change their thoughts and habits and deal with wage claims in a judicial way. I must regretfully express my conviction that their failure to do so is largely responsible for the inflation and economic trouble which threatens to overwhelm us. Inspired by the recent generosity of the Transport Commission, we have in my industry just conceded the largest wage increase we have ever granted. I have no doubt that the gas industry will shortly follow our example, and others must do the same. What does it matter? The poor public will foot the bill."

So much for the unselfish attitude that permeates the workers when they work not for profit-making capitalists but for all the citizens, all their neighbours—the state.

The British Chancellor has restricted credit as one means of halting inflation, but while this hits private firms which have no resources but their capital and their credit-worthiness, the nationalised industries meet increased wage demands by working at a higher loss and eventually going to the treasury for support. So the Chancellor's vaunted credit squeeze hits private industry while the nationalised industries, the main cause of the inflation, do not take (or care) a rap.

NON-PROFIT-MAKING BENEVOLENT FUNDS

The unions' attitude was illustrated by Mr. J. Hendy, a shop steward in the London Electricity Board, who said: "Mr. Randall's conception of the function of a nationalised industry is so at variance with the view of those who brought nationalisation into being that one wonders how he ever came to accept office. Addressing

the 1947 annual conference of the Electrical Trades Union, Mr. Shinwell—then Minister of Fuel and Power—stated that nationalisation would clearly be of little value if it did not improve the wages and working conditions of those employed in industry. Trades unionists naturally expect a nationalised industry to pay more than private employers do and to lead the way, as befits a superior form of industrial organisation. If Mr. Randall does not share this belief, he should transfer his talents to a more backward sector." (He has).

In other words, Mr. Hendy thinks it "natural" that nationalised industries should constitute themselves into non-profit-making benevolent funds for the sole benefit of their own employees, to the exclusion of the rest of the nation. Why should there be any limit to the improvement of nationalised workers' conditions at the expense of consumers? If running at a loss constitutes a superior form of industrial organisation in Mr. Hendy's eyes, one wonders whether he occasionally feels any apprehensions about the future of private enterprise, that inferior form of industrial organisation which remains the only source of the profits needed to pay the taxes to make up the losses of Britain's nationalised industries.

Faced with the blackmail of the nationalised unions, the point has been forthrightly posed in the British press that what the government must tackle is the re-establishment of the rule of Parliament and of Democracy—to such a pass has nationalisation led the British.

In a recent and widely quoted editorial entitled "The Rue of Fear", "The Times" sounded the tocsin: "...In these matters, over many years now the merits of the case have had scant respect from either party. Lacking either power to divine the nature of our ills or courage to face them, both sides (Conservative and Labour) have found escape in tribal war."

"The real lack is courage. Diagnosis is not so difficult. Time and again ministers have been expected at last to take measures to cut to the root of the cancer that is slowly but inexorably eating away what national wealth we have left. Time and again the story has been the same—half measures; too little too late. Every government, it is true, being collective, has to proceed partly by compromise. There are the realists and there are the politicians. But there are occasions when the politicians should not have the last word. They have had it only too often in cabinets over the past ten years. As a result half measures have failed time and again—or have deluded by their ephemeral success. We have now reached a pass where not even three-quarter measures will do any good. Mr. Mac-Millan has made a bolder cast than any yet. It may do the trick. There would have been less doubt if it had been bolder still."

"It is easy for the rest of the nation to deplore a lack of political courage. The truth is that it is only part of a whole. There is lack of courage in the boards who acquiesce in inefficiency in order to avoid trouble, and who give the inflationary spiral another vicious turn upwards with six, seven, eight, or even ten per cent wage increases in the dishonest and futile hope that this is really the last time. There is a lack of courage in the trades union leaders who tolerate such a festering folly as the Cammell Laird strike; or who know perfectly well that we are heading for the abyss and are yet willing to seize any crumb of excuse in the form of even the mildest disinflationary measures to allow their followers yet more vigorously to push them from behind. There is a lack of courage in the managements which bid up and up to the point of bribery for scarce labour till some total earnings have reached fantastic levels... Inflation is demoralisation... We must "address politics truly to the task of survival... replace the rule of fear by the leadership of courage."

An interesting experiment in the British economic laboratory, isn't it? Shall we repeat it here? Or learn from their lessons in time?

WORLDGRAM

AGRICULTURE

World Food Production: The production of food is increasing faster than world population, according to a US Agriculture Department report. The agriculture survey shows that the 1955-56 index of world farm production is 119 per cent of the 1938-39 pre-war base while population in mid 1955 was only 117 per cent of the pre-war base. Overall production for the 1955-56 crop year exceeds 1954-55 in every major geographical area.

Planting Plans in Ceylon: Ceylon's Ministry of Land is starting its second big scheme to plant coconuts, tea and rubber on 25,000 acres through the assistance of colonists. The Ministry expects to spend Rs. 3 million (£225,000) this year on the colonisation of the first 5,000 acres. The scheme will be spread over five years. In the case of tea and rubber, arrangements are being made to work them through co-operative societies, as the peasants will not be in a position to arrange for factory facilities on their own.

Japanese Method for Wheat Crop: Bombay Government's experiments extending Japanese method of paddy cultivation to wheat and cotton in Khandesh are giving excellent results. It is reported that crop yield can be doubled by this method. The average 20 maund per acre yield of wheat in Maharashtra is likely to be increased to 30 or 35 maunds. Eight thousand acres in Thana, 2,000 in Khandesh and 1,500 in Nasik are under this method.

Wheat Harvest in Australia: A revised estimate of the Australian wheat harvest for 1955-56 shows that it is likely to be 195.6 million bushels. Since the December, 1955, estimate, conditions for harvesting, are stated to have been generally more favourable than anticipated, particularly in West Australia. The latest estimate is 16 per cent higher than that in the previous season, when the smallest crop since 1946-47 was harvested. The estimated average yield of 19.4 bushels per acre compares with the previous record year of 1952-53, when the figure was 19.1 bushels.

Agricultural Credit Societies and Co-operative Institutions in India: The number of primary agricultural credit societies (including grain banks) which stood at 1.15 lakhs in 1950-51 rose to 1.35 lakhs by the end of the year 1955-54. The membership and loans advanced by the primary societies rose from about 52 lakhs and Rs. 22.9 crores in 1950-51 to about 65 lakhs and Rs. 29.99 crores, respectively in 1953-54.

INDUSTRY

Plastics-Making in India: A project for the large-scale manufacture of plastics in India is to be launched by Imperial Chemical Industries (ICI). The scheme involves a sum of about £2,250,000, and manufacture will be undertaken by the Alkali and Chemical Corporation of India, an ICI associate. Technical assistance in the design and operation of the plant will be provided under an agreement with ICI, and processing will be similar to that used in the production of 'Alkathene' plastics in Britain. The project is for the manufacture of polythene, a thermoplastic which can be repeatedly melted or softened by heat without any change in its properties. At present polythene is mainly used in India for packaging, but other uses include flexible pipes and moulded domestic articles.

Wagon Erection Plant at Visakhapatnam: The construction of a wagon erection plant designed to assemble

750 broad gauge goods wagons every month is now nearing completion at Visakhapatnam. Located inside the Visakhapatnam port area, about one and half miles from the main docks, the plant will go into production shortly. The South Eastern Railway, which is setting up the plant, has provided the requisite yard and the permanent structures like gantries. The constructors, who have been given the work of assembling the wagons, are supplying compressors, mobile cranes and other machinery. A Calcutta firm has been given the contract for assembling at this plant 8,800 wagons, both covered and open types, which are being imported in a semi-knocked down condition from Japan, USA, UK, Australia and Poland against the Railways' own procurement programme as well as under international and technical co-operation schemes.

World's Industrial Production: In 1954, the factories and mines of the world (excluding the USSR, Eastern Europe and the Chinese Mainland) were producing nearly twice as much as in any pre-war year. The world's railways were hauling almost twice as much freight, the world's ships were carrying 50 per cent more goods, and there were as many motor vehicles on the world's roads in 1954 as in 1938, according to the 1955 issue of the United Nations Statistical Year Book published recently. Although in some respects 1954, was not quite near a good production year as 1953, nevertheless world (excluding USSR, Eastern Europe and Chinese Mainland) industrial production remained at round the same level as in 1953, and rose over that level in the first two quarters of 1955 by about 7 and 11 per cent respectively. Compared with pre-war peak year 1937 (with 1949 in parenthesis) the world (excluding USSR and China Mainland) in 1954 produced 46 per cent more crude petroleum, 56 per cent more electric energy, 32 per cent more steel, 58 per cent more cement, 25 per cent more motor vehicles and launched 68 per cent more tonnage of ships.

Electricity Output in Russia: During the next Five-Year Plan, electricity output in the Soviet Union is scheduled to rise to 320,000 million kwh annually—150,000 million kwh more than it is today. This is planned as only the preliminary stage to the following Plan period, when it is hoped to produce in the USSR almost as much electricity as the Western World produces today. Important Soviet power developments include a scheme for a national grid transmitting several million kwh over distances from 1,200 to 1,800 miles, and another for a net work of atomic power stations. Both are being launched during the current plan period.

Standard for Pentachlorophenol: An Indian standard specification for pentachlorophenol has just been published by the Indian Standards Institution. Pentachlorophenol is used for wood preservation. The standard prescribes the requirements in respect of chlorinated phenol content, matter insoluble in alkali, freezing point, etc., and also details the methods of test and sampling procedure for the evaluation of these characteristics.

Production of Printing and Fountain Pen Inks: About 75 per cent of India's total requirement of printing ink is met from indigenous production. The production of printing ink in India in 1955 was 2,090 tons as against 1,675 tons in 1954. India was self-sufficient in respect of certain types of printing inks like letter press, off-set and litho inks. The facilities for increasing production were being given to the industry which was being developed in the private sector. The production of fountain pen ink in the country in 1955 was 331,686 dozens of 2 oz. bottles as compared with 597,006

dozens of such bottles in 1954 and 442,800 dozens in 1953.

TRADE

Export-Import Trade of Britain: The excess of British imports in February 1956 over exports plus re-exports was £49,500,000—the lowest figure since May 1955. The value of exports in February was £246,100,000. This was £11,900,000 less than in January, which had one more working day. The average monthly value of exports in January-February was £252,000,000—over 4½ per cent more than in the corresponding period of 1955. Imports amounted to £309,100,000—£37,200,000 less than in January. The average monthly value of imports for January/February—£327,700,000—was 2 per cent higher than in the corresponding period of 1955.

Pakistan's Trade and Payment Surplus: Pakistan had a surplus in trade and payments transactions with India to the extent of Rs. 1.75 crores during the quarter October to December 1955, according to official statistics. Pakistan had an overall trade surplus amounting to Rs. 16.31 crores during the quarter. Surplus with dollar countries amounted to Rs. 2.83 crores and with European Payments Union Countries to Rs. 13 crores. In trade with the United Kingdom, Pakistan had a deficit of Rs. 13 crores.

Japan's Barter Trade: The Government of Japan have recently made certain changes in their barter trade system. Accordingly, barter trade deals will be permitted only for the developments of the new markets and in certain other special circumstances only. The list of Japan's collateral goods for barter deals, have also been narrowed down, as exports through normal channels have been found possible. Thus, rayon, staple fibre textiles and low grade cotton cloth for Central and South American countries and grey cloth for Middle East and Near Eastern countries are removed from the list of barter commodities.

FINANCE

Low-Income Group Housing Grants: The Government of India sanctioned in January, 1956, Rs. 20 lakhs as additional loan allocation to the Madhya Bharat Government under the Low-Income Group Housing Scheme. The State had already been sanctioned Rs. 70 lakhs as loan. During the month, a sum of Rs. 173.37 lakhs was disbursed to six State Governments.—Rs. 100 lakhs to Uttar Pradesh; Rs. 46.67 lakhs to Madhya Bharat; Rs. 11 lakhs to Jammu and Kashmir; Rs. 10 lakhs to Saurashtra; Rs. 4.5 lakhs to Vindhya Pradesh; and Rs. 1.2 lakhs to Coorg. This brings the total allocation under the scheme to various States up to January to about Rs. 21.28 crores of which about Rs. 7.79 crores have been distributed. The following are the loan allocations and payments made to various States up to January (in lakh of rupees): Punjab: 300.0—221.0; Uttar Pradesh: 300.00—165.0; Bombay: 225.0—Nil; West Bengal: 200.0—40.0; Madhya Pradesh: 151.0—65.1; Andhra: 74.0—10.0; Madras: 81.0—17.74; Bihar: 10.0—2.7; Assam: 10.0—Nil; Orissa: 3.0—Nil; Rajasthan: 100.0—20.0; Mysore: 100.0—10.0; Hyderabad: 100.0—10; Madhya Bharat: 90.0—70.0; PEPSU: 41.0—41.0; Saurashtra: 25.0—15.6; Travancore-Cochin: 15.0—3.0; Jammu and Kashmir: 35.0—11.0; Delhi: 200.0—55.0; Ajmer: 20.0—4.0; Himachal Pradesh: 20.0—4.0; Bhopal: 10.0—4.25; Vindhya Pradesh: 9.0—9.0; Coorg: 6.0—1.2; Kutch: 3.2—Nil.

Central Aid to Village Industries: The Government of India have sanctioned loans and grants totalling over Rs. 6 lakhs to various States for the development of village industries. Of this a major portion is for the development of the village leather industry. Uttar

Pradesh gets a grant of Rs. 92,200 and a loan of Rs. 63,000. For the establishment of six model village tanneries a sum of Rs. 57,000 as loan and Rs. 45,000 as grant have been given to Madras. Bombay gets a grant of over Rs. 47,900 and a loan of about Rs. 24,500 to be given to co-operative societies. A sum of Rs. 5,360 as grant has been given to Jammu and Kashmir. Hyderabad gets a loan of over Rs. 2,53,000 for the development of the hand-pounded rice industry. Saurashtra gets a grant of Rs. 7,000 for the development of the palm gur industry. Vindhya Pradesh gets Rs. 3,500 as grant for the development of the gur and khandasari industry and Madhya Pradesh Rs. 1,600 for the development of the fibre industry.

E. African Rail Revenue: Substantial increases over the previous year in both tonnages carried and revenue earned during the twelve months of 1955 are apparent in the rail, road and inland marine services of the East African Railways and harbours. Railway revenue for 1955 was £17.5 million of which £13.8 million was from goods traffic and £1.5 million from passenger and other coaching traffic, against £15.3 million in 1954. Port revenue in 1955 was £3.9 million compared with £2.9 million a year earlier. General cargo imports totalled 167,900 tons and exports 129,300 tons, representing increases of 30,300 tons and 4,300 tons respectively over comparable 1954 figures.

GENERAL

New Payment Scheme for Dock Workers: New schemes for ensuring more secure employment and better remuneration to dock workers and speedier turnaround of ships have been worked out by the Government of India. Under the new scheme the minimum number of days in a month for which wages are guaranteed to a registered worker in the Reserve Pool will be progressively increased. Increased wages will be achieved by a system of payment by results. The Dock Labour Boards will prescribe norms of productivity in respect of cargoes of different kinds. A worker will be entitled to the daily wage proportionate to the standard output. Under the new schemes, the Dock Labour Boards will be concerned with matters of policy and will not be responsible for the day-to-day implementation of the decisions, which will rest in the Chairman of the Board. The Chairman of the Board will be able to delegate many of the powers to a Deputy Chairman in Calcutta and an Executive Officer in Madras. The Chairman of the Boards will have emergency powers to deal with a situation affecting the working of the ports.

Nationalisation of Road Freight Services in States: Shri S. N. Mishra, Deputy Minister for Planning, revealed in the Rajya Sabha recently that the Planning Commission have advised all the State Governments to go slow with the schemes for nationalisation of road freight services. Shri Mishra said that the Planning Commission in a circular letter issued in September 1954 had informed the State Governments that the schemes for nationalisation of road freight services would not be considered for inclusion in the Plan until 1961, i.e. the end of the second Five-Year Plan.

Osaka Trade Fair: Over 800 foreign buyers from 50 countries of the world have already signified their intention of attending the Osaka Fair between April 8 to 15. Eight nations and 375 foreign companies will be participating in the massive fair which outstrips in size and scope the two previous ones—the first held in Osaka in 1954, which drew an attendance of 280,000 persons and recorded transactions aggregating 20,000,000,000 yen in value and the second held in Tokyo last year which attracted a crowd of 450,000 persons and business amounting to 30,000,000,000 yen.

NEWS IN BRIEF

INDIAN

The Employees' Provident Fund Scheme, which was started in November, 1952, covers about 1,350 factories and 15.4 lakhs workers in six industries.

The Fertiliser-Heavy Water Factory, proposed to be set up at Nangal, will have a capacity of 200,000 tons of ammonium nitrate and about 7 to 8 tons of heavy water every year.

The average per acre yield of cotton in India rose to 92 lbs. in 1954-55 from 61 lbs. in 1948-49.

Currency and bank notes of various denominations of the face value of Rs. 8,33,48,29,240 were printed at the Currency Notes Press, during 1955.

It is reported that a design centre for the handloom industry had been established at Bombay. It was proposed to set up three more design centres at Banaras, Madras and Delhi and also three smaller units at Kanchipuram, Surat and Chanderni.

An extraordinary general meeting of TISCO shareholders unanimously approved recently of a scheme for the issue of 1,285,000 new ordinary shares of Rs. 75 each with a premium of Rs. 30 per share.

It is reported schemes estimated to cost about Rs. 1 crore for lighthouse development and navigational aids were approved by the Central Lighthouses Advisory Committee.

Five more firms, in addition to the existing units, have been licensed for the manufacture of bicycles. Of these new units, two will operate in Uttar Pradesh and one each in Pepsu, Punjab and Delhi.

The Government of Bombay proposes to undertake a Rs. 12 lakh scheme to settle the nomadic tribes in the State during the second Five-Year Plan.

It is reported that National Carbon have commenced mailing allotment letters, refund checks, and reject letters. The allotment of shares has been made on a pro-rata basis with a diminishing scale for larger applications.

Messrs. Tata Industries Ltd., Managing Agents for the Tata Iron and Steel Company Limited, report that the total approximate production of iron and steel at the steel works at Jamshedpur during the month of February 1956 was pig iron 97,500 tons and steel ingots 89,500 tons.

Indian shipping companies placed orders abroad for the construction of 17 ships of a total of about 110,000 G.R.T., during the first Five-Year Plan period. Of these, five ships of a total of 33,500 G.R.T. have already been delivered.

The Government of India have, up to January 1956, sanctioned about Rs. 21.28 crores as loans to various States under the Low-Income Group Housing Scheme.

During 1955, 58,236 persons were trained by the National Volunteer Force at 127 training camps, each of 30 days' duration.

FOREIGN

Two new plants which will help to rehabilitate Korea's woollen industry and enable it to compete more favourably with high quality imported goods are being built with United Nations financial aid.

The International Labour Organisation reports that it gave more technical aid to Asia in 1955, than in any previous year. Almost 50 per cent of the requests were for manpower surveys and job training.

Russia signed recently a trade agreement with the Yemen, providing for the supply of industrial equipment, agricultural machinery, building materials, oil products, flour and rice and sugar in exchange for coffee, dried fruit and raw skins.

The Swedish Minister for Trade Mr. Gunnar Lange, has disclosed that a Government bill to abolish price control in Sweden in peace time will be laid before Parliament shortly.

The world consumption of virgin wool last year was 3 per cent higher than in 1954, according to estimates drawn up by the Commonwealth Economic Committee. It rose from 2,502,000,000 lbs. (clean) to 2,580,000,000 lbs. Only in 1950 and 1953 have larger amounts been used since the war.

It is reported that the Government of South Africa had accepted the principle of decimal coinage. A Commission of enquiry is to be appointed to take evidence from those organisations which would be deeply affected by a switch to decimal coinage.

Canada and Russia have entered into a three year trade agreement, which provides for the exchange of most favoured-nation treatment and for Russian purchases of between 400,000 and 500,000 metric tons of Canadian wheat in each of the three next years.

According to an agreement signed between the US and Indonesia recently, the latter will purchase \$96 million (over £34 million) worth of surplus US farm commodities. The purchase will be made in Indonesian rupiahs.

The Norwegian Government has asked Parliament to approve a contribution of £140,000 to the United Nations programme for technical assistance to economically underdeveloped countries this year. This represents a considerable increase compared with last year's contribution of £25,000.

The governing body of the International Labour Organisation has voted to exclude the Soviet Union from its preparatory maritime conference in London next September.

It is reported Britain is to repay to America 88,000,000 ounces of silver bullion borrowed during World War II under lend-lease arrangements.

The School Savings Banks movement in Cyprus inaugurated in 1950 is rapidly progressing from year to year. Almost all elementary schools as well as some secondary schools in the island are participating in the scheme.

The International Co-operation Administration has announced that the USA has offered to make American technicians available to Burma in exchange for rice.

it's a GREAT job...

keeping thousands of workers fit and bappy

Over 8,000 people are on the payroll of the Assam Oil Company—a great community, drillers and doctors, truckdrivers and typists, whose lives are centred round the winning, refining and distributing of oil. Helping to keep contented minds in healthy bodies—both in their leisure and their working hours—is indeed a formidable task.

Taking physical well-being first, Digboi Hospital is one of the most modern and best equipped in India. There are maternity centres and clinics readily accessible and a fully staffed Welfare Office. Malaria, which at one time affected three out of five workers, has been virtually stamped out.

More than 4,300 children attend the company's nine schools, which have a high record of Matriculation successes. Social clubs, sports clubs and playing fields cater for every kind of sport. Vegetable and flower shows, arts and crafts, stage plays, concerts—every form of hobby and recreation is encouraged.

In these ways the Assam Oil Company is glad to acknowledge the loyal service of its family of workers, engaged as they all are in a great national effort to satisfy India's oil needs from her own resources.

EUROPEAN ECONOMIC SURVEY: 1955

THE latest issue of the "Economic Survey for Europe: 1955" which was released this week by the Economic Commission for Europe is of special interest because of the manner in which the achievements of Western Europe and Eastern Europe have been compared. The broad indication given is that in Eastern Europe planning is running into trouble in more than one country. Western Europe has indeed its difficulties in inflation, particularly in the United Kingdom; on the other hand, there is nothing in the Western European picture to cause such great concern as in some of the Eastern European countries. Except in the USSR where planned gross fixed investment and actual investment are running neck to neck there has been in recent years a marked difference between the planned and actual rates of investment. The more significant factor is the serious departure from the levels of National Income planned.

The fear is expressed in the Survey that in a number of Western European countries the restriction on investments to meet immediate difficulties may affect the achievement of levels and patterns of investments needed for a satisfactory long-term rate of expansion. In most Western European countries it is observed that the ratio of gross fixed investments to gross national product has been higher since the war than before, the exception being the United Kingdom where the ratio is lower than in 1938. The investment pattern also shows a smaller share of investment in industry in a growing total. Many Governments in Western Europe have been compelled to adopt measures for restricting investment either because of a fear of rising wages and prices or because of the effects of a rising demand on the balance of payments. It is the opinion of the E.C.E. Secretariat that the risks of restrictionist policies are likely to be greater than the errors of ex-

Planned and actual national income and fixed investment in the Soviet Union and eastern Europe

The year preceding the last completed long term plan = 100 ●

Semi-logarithmic scale

● Both income and investment were planned to increase at the same rate.

(From Economic Survey of Europe—1955.—E.C.E.)

pansionism. The impact of restrictions is generally found to be very severe on industrial investments; where there is reliance on self-finance the tendency has been to concentrate investments on existing enterprises not necessarily in those in which expansion is needed.

There is a different picture in Eastern Europe. While the Soviet Union appears to have been able to hit the targets of investment and of growth of National Income, the East European countries have been unable to overcome shortcomings. In the Soviet Union, there was a miscalculation about agricultural output and the proposed investment for raising yields proved inadequate. Remedial measures, like the ploughing up of virgin land and a deliberate shift of the terms of trade in favour of the farmers, helped to avoid serious failure. The plans of the East European countries were even more ambitious at first than that of the USSR because of their desire to increase the stock of social capital and to build up heavy industry on the lines of the Soviet Union.

But it seems there was very little co-ordination of these industrialisation plans and technical bottlenecks to the fulfilment of too many projects at a time were generally overlooked. In no case did the Governments succeed in devoting to investments as much as was planned but their shortfalls were small in Poland because the targets in this country were much lower. In

the three countries which planned most ambitiously—Czechoslovakia, Hungary and East Germany—the fulfilment was 85 per cent, 80 per cent and about 65 per cent respectively. There was an uneven growth as between different sectors and even the cuts in transport, housing and agriculture did not help to prevent shortfalls in industrial investments. The lack of relationship between investment and the growth of National Income might have been due to serious miscalculations of capital-output ratios. But it is also observed that no firm estimates of food and raw materials were made. There were hardly any financial obstacles of the kind which Western Europe had to face. But so long as initiative came only from the top there was a natural tendency to emphasise only the larger projects which took too long to mature while the medium and small industries capable of giving quicker returns remained neglected. It seems that there is now a change in investment policy in these respects and the fact that more and more Eastern Europe also has to consider the scope for expanding exports outside the Communist world may direct thoughts towards improvement of efficiency. There is more attention being paid to maintenance and replacement of plant which was hitherto either neglected or given a low priority. These are in outline the dangers and difficulties of physical planning which are set alongside of the difficulties experienced under the free enterprise systems of Western Europe. There is much in the Economic Survey of Europe for 1955 to provoke thought on these aspects of planning.

METRIC SYSTEM AND ITS IMPACT

ONE of the most important reforms which will bring about a near-revolution in our country's commerce and trade will have its beginnings in the course of next five years. This concerns the standardization of weights and measures on the basis of the metric system. Though not a scheme under the second Five-Year Plan, the Draft Outline contains a reference to this in the chapter on "Administrative Tasks and Organization." It is common knowledge that the weights and measures in use in our country differ from place to place. Quite often even in the same place different systems are in vogue for different commodities. Even the same terms are frequently found to denote different quantities in different places. Investigations carried out by the National Sample Survey reveal that in 1100 villages scattered all over the country 143 different systems of measurement of weight are in use. It is also found that the term 'maund' stands for 100 different weights ranging from 280 tolas to 8320 tolas in contrast to the standard maund of 3,200 tolas, while the standard weight is 80 tolas. The situation is even worse in regard to the measurement of volume and area of land.

It is obvious that such chaotic diversity cannot be allowed to continue if confusion and difficulty are to be avoided in intra-national trade. Such confusion and difficulty will be aggravated when trade and commerce develop further. Standardization in these matters is best undertaken in the early stages of industrialisation when the cost of the changeover and the difficulties encountered in the process will be comparatively less.

In regard to the choice of a system for standardization, the claims of the metric system are irresistible, both because of its scientific nature based as it is on the decimal system which makes calculations a simple affair, and because of its international character. The metric system is the only system in which there is a simple direct relationship between weight, quantity and cubic measure, since the weight of cubic centimetre of water is one gram and one cubic metre is

one litre. Almost the whole of Europe with the exception of Britain and Ireland and the American continent barring the US and Canada have adopted this system, besides Japan, China and a few other countries in Asia and some territories in Africa. Even in Britain, Ireland, the US and Canada, the metric system is legally optional, though not in common use. Even as early as 1871, the then British Government of India came to the conclusion that standardization of weights and measures in India should be on the basis of the metric system. Unfortunately the closer ties with Britain of those days, which was itself on the foot-pound-gallon system, and the lack of any direct interest in pushing through any such reform resulted in matters being allowed to drift.

One of the minor points which continued to be debated even after the country became independent, and the Government's decision to introduce the metric system became known, was whether decimalisation of the currency should precede or follow the introduction of the metric system of weights and measures. This has now been settled with the passing of the Decimal Coinage Bill by Parliament in August last year. Only two years are to be allowed for the changeover in the currency system whereas the reform in weights and measures is to be spread over ten to fifteen years. It is, of course, far easier for decimal coinage to come into common use since sooner or later all coins and notes will find their way to a Government treasury, post-office, railway booking office or bank from where the old ones can be withdrawn from circulation and replaced by new ones. On the other hand, existing weights and measures can continue to be used for private transactions even after Government makes their use illegal provided the parties to the transactions are mutually agreed on disregarding the law. This neglect and indifference should be overcome by education rather than by legal action against offenders. Anyway, some sort of standardization is needed urgently and a sweeping change such as the one proposed is not likely to meet much more opposition than a slight one.

The introduction of the metric system will involve changes in the measurement of weight, length and quantity. All three measurement are met with in everyday life—we buy a seer of sugar, a yard of cloth or a gallon of oil. Except for the psychological resistance to a change in the system as a whole or to changes in the amounts which familiar terms signify—since as far as possible familiar terms should be used under the new system—there is nothing to worry about here as only frequent use over a period of time can make it universally accepted. But the larger effects on industry and trade, and especially foreign trade, have to be considered.

The main impact of any change in the measurement of quantity and weight will be in the realm of foreign trade, since once the initial resistance is overcome, there will be no problems as far as internal trade is concerned. Though the overwhelming majority of the nations of the world are on the metric system, more than two-thirds of India's foreign trade is with the United Kingdom and other Commonwealth countries and the United States, which are on the foot-pound system. But this should bring about no complication since the prevalence of different systems in France and Britain, for example, has placed no obstacle in the way of trade. Commodities can be sold and contracted for on the basis of the system of the exporting country, unless there should be mutual agreement on some other basis.

Within the country itself the Railways and the Postal Department, among Government departments, and the road transport systems, both run by the State and by private operators, will be considerably affected. The weighing machines and weights in all post offices and railway stations will have to be replaced. Passenger and goods rates and postal rates will have to be fixed on a new basis. The necessity to undertake all these calculations twice—once when decimal coinage is introduced and again when the metric system is adopted—can be avoided by these departments adopting the metric system at the same time as decimal coinage becomes effective.

The principal consequence of adopting the metric system of measurement of length will be in the industrial sector, especially in regard to the manufacture and import of machinery. The fact that until recently the major part of our imports of machinery came from Britain and the US, which manufactures machines with the inch as the basic unit, was advanced as the most powerful argument against any change. But this argument loses much of its force when we consider that the changeover within India itself can be no insuperable obstacle to the import of machinery. Only when we begin to manufacture the machines ourselves, with all the spare parts too, can the reform be in fact ideally complete. In the meanwhile, spare parts needed for British and American machinery will have to be imported as and when they wear out instead of our manufacturing them—or some of them—as hitherto within the country. Machinery based on the foot-pound system may not have to be scrapped before they are completely worn out, unless the economy in installing new machinery on the metric system may more than compensate for the initial loss and expenditure. It may be noted that the benefits to industry and science in the shape of greater fineness and accuracy in precision instruments will be quite significant. Under the foot-pound system the maximum fineness possible is 1/1000th of an inch whereas under the metric system it will be more than twice as great as measurements up to 1/1000th of a centimetre are possible.

The changeover to the metric system is expected to involve an expenditure of Rs. 1 crore for the Postal Department and another Rs. 1 crore for the Railways. No estimate of the probable cost to industry in the private sector and to traders has been made. It may well run into a few crores of rupees. But the expense will have to be weighed against two factors—the advantages which the reform will bring and the much higher cost of such changeover at a later date when industrialisation has proceeded far and trade has grown. There is no controversy over the benefits which the metric system will confer on society. That a highly industrialised, commercial nation will have greater difficulty in switching over to a new system, though it may be admittedly more scientific and advantageous in many ways, can be seen from Britain's inability even to contemplate any such reform. It is possible that some confusion will arise when a change is effected in the existing official systems of weights and measures, particularly because of illiteracy. But in the existing situation in which there is already a bewildering variety of terms and meanings to same terms, it is unlikely that the metric system will appear disturbingly strange.

The Business World

OUTLOOK FOR THE JUTE INDUSTRY

By
CROESUS

TO take a long-range view of things is characteristic of a real business man. Indeed, no one who has wanted to count the chicken before the eggs are hatched has ever been able to survive in this highly competitive economy of our times. It was not surprising to me, therefore, to note that, in his address as Chairman of the Indian Jute Mills' Association (I.J.M.A.) last Friday (16-3-1956), Mr. M. P. Birla resisted the temptation to be complacent about the good turn in the fortunes of the jute industry in India in 1955 and insisted instead on taking a perspective view of this problem industry. This is not to say that he was not grateful even for small mercies, or that he under-rated either the achievement of the year or the happy turn that events started taking in 1955. As far as I can make out—and I may claim to have been a close student of the jute industry for at least two decades—he did not forget to mention even a single development in the year of any significance to the industry. Nevertheless, throughout his speech, one could see his emphasis was mainly on ensuring the stability of the jute industry, because it happens to be an industry which earns for this country a sizable amount of foreign exchange, in particular dollars. And let us not forget that the weakest feature of the second Five-Year Plan is its foreign exchange budget. In fact, the I.J.M.A. Chairman said this in as many words when, whilst making a brief reference to the jute industry and the second Five-Year Plan, he said: "Ours is not an industry in which any large-scale expansion is contemplated under the second Five-Year Plan, but this does not mean that we have not a most important role to fulfil. The Plan will greatly increase India's requirements of foreign exchange. The jute industry is the principal foreign exchange earner in the country and upon our ability to maintain and develop our export markets a great deal will depend."

Now, if the stability of our jute industry is to be ensured, there are a few important pre-requisites, such as an abundant and steady supply of the raw material at reasonable prices, production of manufactured goods to the maximum capacity of the industry and an assured disposal for this production, that is maintenance of our markets, especially the export market. These are no doubt common to all industries, but there are certain aspects in respect of each which are peculiar to the jute industry. For instance, in the matter of supply of raw jute, India has still to depend for a full fourth of its requirements on Pakistan, so that she is vitally concerned not only with the fate of the Indian jute crop but also the Pakistan jute crop.

In regard to every one of these, Mr. Birla had commendable suggestions to make, and one hopes these will receive due attention in the concerned quarters. There is no reason why they should not, especially as, in his capacity as the accredited spokesman of the jute industry, he found himself in the rather rare position (rare, I say among spokesmen of industries) of acknowledging and paying fulsome tribute to the Government for its active assistance and encouragement to the jute industry. The abolition of export duties and the special grants amounting to some 850,000 for the industry's export promotion activities are but two concrete proofs of the Government's keen interest in the jute industry.

In regard to raw jute, the value of which constitutes nearly two-thirds of the total costs of production

of jute goods (as against 52.03 per cent that the value of raw cotton constitutes in the total costs of production of cotton goods) it is a known fact, as Mr. Birla pointed out, that, for years now, the uncertainty over the availability of raw material has been a constant source of anxiety. During the past few years, the combined crop of India and Pakistan has varied between 70 and 110 lakh bales, that is by as much as 40 lakh bales, with the concomitant wild fluctuation in prices, so that the goods market has naturally lacked stability, an essential desideratum in so far as our export markets are concerned. Accordingly, Mr. Birla did well in pressing the powers that be to implement the recommendations of the Expert Committee on Jute (Dr. Narayanaswamy Committee) set up in 1953, especially those which are designed to make India self-sufficient in jute at a very early date. It is the conviction of the jute industry that, "if the improved seeds and methods of cultivation which have been evolved were generally applied, India could produce all the additional raw jute she needs without any increase whatsoever in the existing acreage under jute; but if the problem is approached from the twin points of view of increasing the acreage yield and improving the quality of the crop as well, the cultivator would automatically obtain a better return for his land."

With regard to the production of manufactured goods to the maximum capacity of the industry, the I.J.M.A. Chief's observations on the progress of modernisation of the jute mills are highly encouraging. It is noteworthy that the industry has already been engaged on this work for a number of years now. During 1955, we are told, further substantial progress was made, approximately one-third of the programme having been completed by the end of December last. The entire estimated cost of this, of about Rs. 15 crores, has been found by the jute mills themselves out of their own resources. As for those mills which have been unable to find the money, the arrangements for the grant of loans through the National Industrial Development Corporation, thanks to the good offices of the Government, again, should enable them to undertake and accelerate the modernisation programme. This modernisation should also help the industry "to operate at the highest level of efficiency and reduce its production costs", which is clearly essential if the Indian jute industry has to face the growing competition in the world's export markets.

This takes us to the third important pre-requisite, namely maintenance of our markets, especially export markets, to ensure the disposal of the maximum output of our jute mills. It must be remembered that, despite the recent two unsealings of looms—first of 2½ per cent and, subsequently, of a further 5 per cent—there still remains to be unsealed another 5 per cent of the total 12½ per cent of jute looms sealed in 1949. It is not difficult to visualise how great the problem of disposal of the full production of the entire industry, when completely modernised, would be. On this point, fortunately both the jute industry and the Government of India are of one opinion, and there is the maximum degree of co-ordination of efforts as between them. How imperative and desirable this at once is must be evident to anyone who heard Mr. Birla, or read his speech, in the course of which he dwelt at length on the severely keen competition that Indian jute goods have to face

**DADABHAI NAOROJI
MEMORIAL PRIZE**

The Dadabhai Naoroji Memorial Fellowship of the value of Rs. 3,000 (three thousand) established by the Trustees of the Dadabhai Naoroji Memorial Prize Fund is to be awarded for the year 1956 in the subject of Economics. Nominations are now sought for this award. Persons of Indian nationality who have contributed to the science of economics or done their best to advance the economic interests of the Indian Union during the period of five years ending 31st December, 1955 are eligible. The contribution may have been through publication of significant professional literature, participation in professional activities or valuable achievement in any other manner.

All nominations should be made together with four copies of (i) publications, if any and (ii) a detailed statement containing information upon which recommendation is based, not later than 30th May, 1956 to the Secretary, Dadabhai Naoroji Memorial Prize Fund (Bombay Presidency Association Rooms,) 107, Mahatma Gandhi Road, Bombay 1.

The selected Fellow shall have to deliver in Bombay a series of not less than three and not more than five lectures on the subject. Travelling and halting allowance will be paid to the Fellow.

today. According to him, between 1946 and 1949, India was supplying more than 95 per cent of the USA's total requirement of hessians, whereas, despite the increase in exports recorded last year, India's share of the US market was only 84½ per cent with almost all the Middle Eastern countries and Turkey—the latest to join the list having their own jute mills and with the expansion of their most modern jute industries by Pakistan and Japan, the competition has been steadily and rapidly intensifying. Last year, Japanese exports of jute goods to the USA increased by 50 per cent. Pakistan exported in the last quarter of 1955, four times more than in the first quarter of that year—to about 8000 tons from 2000 tons. Against this background, it cannot but be heartening to any Indian to note the pointed stress of Mr. Birla on public relations and propaganda, especially in foreign countries, to keep Indian jute goods always within sight of the extremely discerning consumers of these goods.

A notably gratifying development of recent origin which holds out great promise, as the I.J.M.A. Chief observed, is the growing home market, what with all the expansion envisaged under the second Five-Year

Plan. It is needless to labour the obvious point that, to the extent that the home market for our jute goods expands, the country can cease to rely on undependable and unpredictable foreign markets. Moreover, as Sir Shri Ram recently said in reference to cotton textiles, there are always greater possibilities of expanding our export markets if we also have an assured and abundant home market. From this point of view, it is noteworthy that the internal consumption of jute goods in 1955 rose sharply by more than 50 per cent to a level of 169,000 tons.

Finally, I would like to draw attention to the need for the constitution of a futures market for jute and jute goods. From what Mr. Birla said, it is clear that great havoc is being caused (to the jute industry particularly and to the country's economy generally) by the unhealthy speculation that is rampant in the 'fatka' market that has been flourishing in Calcutta, despite the West Bengal Government's ban on futures trading in jute goods. Here, again, the remedy is only to implement the more-than-two-year-old recommendation of the Jute Enquiry Committee of 1953.

LATEST ON SHIPPING

By
CRÆSUS

I DO not know to what extent either the Government or the shipowners will heed the splendid exhortation made, at the meeting of the Standing Transport Committee of the Congress Parliamentary Party, early this month, by Mr M. A. Master, that veteran who has laboured for more than three decades to promote Indian shipping, but I would assert that, situated as India is to-day, it is imperative that both of them should do so. For, today, it is not merely a question of Indian ships carrying as large a percentage of the country's coastal and overseas trade—although that too is important—but also one of elementary security. As Mr. Master put it graphically (also geographically), "with the Bay of Bengal on the one side, the Arabian Sea on the other, and the waters of Indian Ocean washing her feet, India occupies not only a strategic but also a vulnerable position in the regions of South-East Asia, the Middle East and Africa". This apart, the fundamental tenets of our foreign policy, of dynamic neutrality for the preservation of international peace and friendship with all nations, impose on this country obligations which make a substantial merchant navy to buttress this policy a grave and compelling necessity. And, unfortunately for India, this has not yet been sufficiently realised.

Mr. Master asked the State and the shipowners to put themselves two questions every day, one when retiring for the day: "What have we done today to further the cause of Indian shipping?", and another when they begin their work for the day: "What shall we do today to carry forward the flag of Indian shipping?" While the State and the shipowners might ask, and also find answers to, these questions, I feel, the public ought to know clearly what the position of Indian shipping today is and what the shipowners have done so far. Such becomes all the more relevant by reason of the intriguing situation that has arisen as a result of two fresh developments. The first is the threat, albeit well-meant, of our Transport Minister, Mr. Lal Bahadur Shastri, that "if the shipping companies do not come up to our expectations, the Government would naturally like to fill the gap," and, the second, the threatened move to transform loans given or to be given to private industrial undertakings into equity capital.

From the figures quoted by Mr. Master himself, I have compiled two tables, one showing the progress of Indian shipping and another showing the progress of shipping in some other countries which have had as serious—if not more serious than—handicaps as this country.

	INDIA	
	Ships	Tonnage (g.r.t.)
January, 1946	42	98,286
April, 1951	97	3,86,229
January, 1956	116	4,70,079
End of 1957	133	5,69,373
1st Five-Year Plan target	—	6,00,000
2nd Five-Year Plan target	—	10,45,000

	TABLE II	
Country	End of 1945	July, 1955
Germany	75,000	2,822,738
Japan (app.)	1,00,000	3,700,000
Italy	3,50,000	3,910,650

Compared to the world tonnage of 100.56 million g.r.t. on July 1, 1955, the tonnage of India actually employed in the coastal, the adjacent, and the overseas trades, on January 1, 1956 at 116 ships of 470,079 g.r.t. constitute less than half a per cent. Singularly enough, India's share of the international trades (in 1951) was slightly better, being over two per cent. But even so, India's tonnage as a whole is below those of even much smaller countries like Argentina (1,043,056 g.r.t.), Brazil (892,823 g.r.t.), Finland (730,573 g.r.t.) and Turkey (532,123 g.r.t.).

Slow as this progress undoubtedly is, the contribution of private enterprise to the growth of Indian shipping has not been inconsiderable. Thus, out of a total investment of about Rs. 60 crores, since January 1, 1946, as much as Rs. 40 crores, have been provided by shipowners, whereas the total amounts advanced by the Government to Indian shipping companies as loans amount to only Rs. 20 crores. That the Indian shipping companies could do even as much as this in the face of all their difficulties and handicaps needs to be praised, not cavilled at, as seems to be the fashion in certain quarters. After the exhaustive manner in which these

handicaps, were recounted by Mr. Master, it is unnecessary for me to catalogue them here.

What I fail to understand is that, while everyone seems to be quite enthusiastic about developing Indian shipping, our Planning Commission should be so conservative. Considering that, by the end of 1957, the Indian tonnage would not after all be very much short of the target indicated in the first Five-Year Plan (only 30,627 tons) there was surely no cause for the Planning Commission to drop down from the target of 15 lakh tons proposed by itself in the first draft frame of the Plan to just 9 lakh tons. It is strange that the Draft Outline of the second Plan does not give any reason for this unusually drastic reduction and also for bringing down the provision of finance from Rs. 80 crores proposed earlier to Rs. 55 crores, even which, be it noted, is inclusive of Rs. 10 crores to be contributed by shipowners.

Stranger still is the quiet acceptance of this reduction by the Transport Minister. For, when the shipowners recommended a net addition of 4.45 lakh tons (g.r.t.) under the second Five-Year Plan, not only did the Transport Ministry approve of this, but the Transport Minister himself declared publicly that, personally, he would have liked to go much beyond the target of 10.45 lakh g.r.t. at the end of the second Plan period. But, when the Planning Commission actually released its Draft Outline of the second Plan, all that Mr. Lal Bahadur Shastri said was: "These provisions fall very much below what we would have accepted. There is, however, no help, because the limitations of finance cannot be got over". It must, however, be added that, more recently, he has held out the assurance that, "if those connected with shipping are able to utilise the funds at our disposal at the earliest, more funds might be forthcoming to help in further increasing our tonnage". One only hopes,

as Mr. Master observed, that there will be prompt and willing response to this lead in accelerating the pace of expansion of India's shipping tonnage.

But, if this is to happen, the Government also must co-operate with and actively assist shipping interests, even as governments in other countries have done, and are still doing. Take, for example, the case of Germany. Under paragraph 7(d) of her Income Tax Law, she has exempted profits of any industry from taxation to the extent they are given as loans for the purpose of building ships. (It is estimated that for four years up to 1954, as much as Rs. 140 crores were thus made available to German shipping interests). A bill was introduced in the German Diet more recently to exempt from taxation at least 25 per cent of the profits of shipping to be utilised for the construction of ships by 1962. The result of all these has been the sharp rise in Germany shipping tonnage from 75,000 g.r.t. at the end of 1945 to 2,632,738 g.r.t. on July 1, 1955, as indicated in Table II above. Similar facilities and encouragement have been afforded to shipping interests in Japan and Italy with equally remarkable results. But despite repeated requests, Indian shipping, which is admittedly the poorest in resources, has not been given much encouragement. Even in matters such as rates offered to Indian ships for carrying Government cargo, allowing our shipping companies to raise freight rates, and relief in regard to taxation and depreciation allowances, the official attitude in this country has been far from helpful. It seems to have been blissfully forgotten by the authorities that continuous financial sacrifices and no financial rewards, as has been the lot of many an Indian shipping company, cannot help to establish, and much less to expand, an industry, certainly not the shipping industry. The need of the hour, therefore, is not to pick holes in each other's coats but for both Government and shipping interests to come closer together to work for the common end—the glory of Indian shipping.

Economic Report from the U. S.

IKE'S FOREIGN AID MESSAGE

(BY BUY SIMS FITCH)

WASHINGTON, Mar. 20.—When viewed in perspective, 'The Foreign Aid Message,' President Eisenhower sent to Congress this week contains some new and important departures. It reverses a trend of three years' operation by requesting a substantial increase in new appropriations. It asks Congressional approval for a long-range approach to the needs of less-developed lands. And it lays even greater stress than heretofore on the economic requirements of areas outside of Europe.

For the fiscal year beginning next July 1, the President is asking Congress to appropriate \$4,900 million in new aid funds. This compares with \$2,700 million for the current fiscal year and \$2,800 million for the preceding year. While \$4,900 million does not appear large in an over-all Federal Budget of more than \$60,000 million, it, nevertheless, is one of the largest single Budget items. It is, for instance, six times as much as the Federal Government currently is spending on highways, four times as much as on all power and water development projects.

As Mr. Eisenhower points out in his message, a large-scale programme of aid to other countries may mean the postponement of desirable economic projects in the United States. But its demonstrated success in fostering international stability and economic growth is considered well worth the effort. Nearly every major aid category is involved in the proposed appro-

priation increase for the coming fiscal year. The military request of \$3,000 million represents a sharp rise over the \$1,000 million voted by Congress for the current year. Most of the proposed outlays would be used to replenish reserves so as to assure future delivery of equipment, it takes time to manufacture. More than half the military total—\$1,640 million—would go to Asia and the Middle East, where the risk of aggression is considered serious.

The President makes it clear in his message, however, that a country need not accept military aid as a prerequisite to economic aid. On the economic side, the President's message calls for \$1,900 million in new aid funds—about \$200 million more than was appropriated for the current year. Virtually all of this will go to areas outside of Western Europe, which has registered a heartening economic upsurge in the past two years. In addition, the President proposes a special \$100 million Fund for Asian development to match in a similar sum appropriated last year, and a new special \$100 million Economic Aid Fund for use in Africa and the Middle East. One of the significant aspects of the President's programme is his request that Congress approve long-range economic commitments—to run up to 10 years but not to exceed \$100 million in any one year—to assist less-developed lands with long-term projects important to their development.

BUSINESS NOTES

IMPORT TRADE PROBLEMS

IN SPITE of the progressive relaxation of import trade controls during the last two years, there are still some snags left in the import policy. One such, for instance, is the canalisation of imports of some of the industrial raw materials like raw silk, caustic soda, and soda ash through official or officially-sponsored agencies. Besides displacing the established trade channels traditionally engaged in their respective lines for a long time and thus adding to the unemployment problem, this has the added disadvantage of removing the element of competition, which is so essential to enable the indigenous industry to secure the raw materials at economic prices. Now, imports of raw silk from China are handled by the Central Silk Board, while two other agencies have been exclusively entrusted with the work of importing soda ash in return for a 12½ per cent margin over landed costs. The declared objective of the Government in this regard no doubt is to ensure adequate supplies of raw materials at reasonable prices to industrial consumers. But this objective could well be achieved in a different, but more acceptable way. Thus, instead of sponsoring monopoly imports, the Government could exercise effective control over prices at which the goods in question are imported and sold to indigenous consumers. Mention may be made here of the system of importation, which was recently announced in respect of soda bicarbonate, and which, in fact, to a certain extent, meet the view-point of the trade. Under this system, it may be noted, applications are invited from traders in this line and preference is given to those applicants who are able to effect economic imports at competitive prices.

Another cause for serious complaint is the lack of proper co-ordination between the Import Trade Control and the Customs authorities. On certain occasions, importers are not in a position to ascertain, in time, the exact classification of articles intended to be imported. The unduly long time taken in completing various formalities often causes the importers considerable loss of time and money. Holding up of goods, especially for seasonal goods like woollen fabrics, at the docks for several weeks results in such goods having to be carried forward to the next season, thereby needlessly blocking the funds of the importers, besides adding to the stringency in the money market and thus adversely affecting other sectors of the economy as well. Varied executive instructions, issued from time to time, have made the customs procedure both complicated and cumbersome. In all conscience, the Sea Customs Act of 1871 has become outdated and ill-suited to the needs of our growing economy today. This stresses the need for a thorough enquiry into, and a recasting of, the Act itself, as also the rules framed, thereunder.

No doubt, the import policy is framed with a view to securing a speedier industrial development of the country. It has also taken into account the magnitude of the requirements of the Plan and the shortfall of the available resources. By extending the basic period to 135 items in the current half-year and enhancing the value of small licences, it has afforded further trading opportunities to commercial interests. All these have been welcomed by trade and industry alike. But as Mr. Bilgrami, the Chief Controller of Imports and Exports, pointed out when the Committee of the Indian Merchants' Chamber met him recently, the present policy of progressive liberalisation will sooner or latter have to be reversed, by reason of the fact that the country will be requiring larger foreign exchange resources to meet its developmental needs under the second and

subsequent Five-Year Plans. But the answer, or even a part of the answer, does not lie in the proposal to establish a State Trading Corporation to handle foreign trade. It is not surprising, therefore, that this has come in for a good deal of criticism. Now, one of the declared objects of the State's entry into the sphere of trade is to augment its resources to finance development plans. But trading is not that easy, and profits do not turn up overnight and are not always assured. Trading operations are often exposed to risks of large losses, and the skill and techniques needed by those who handle foreign trade are acquired only by practical experience over a number of years. Success in trading requires a close and continuous watch over the market situation, changes in tastes and price trends, and a readiness to take normal risks and quick decisions. A State-sponsored institution would, by its very nature, be too slow in taking proper decisions so that there is every likelihood of its incurring losses. And when a State Corporation incurs losses, these have necessarily to be passed on to the taxpayers whose capacity to bear even such avoidable burdens is steadily shrinking.

BONUS PAYMENT TO BOMBAY TEXTILE LABOUR

THE PAYMENT of bonus to a quarter million textile workers in Bombay as per the five-year pact of January has unfortunately encountered certain initial difficulties owing to the recalcitrant attitude of a section of the workers. Though the majority of the workers have already accepted the first instalment of the bonus payable to them, nearly 30,000 workers, who are evidently under Communist influence, have refused the payment, probably because they are not satisfied with the minimum of 15 days' basic wages paid by loss-making mills. Apparently, these workers forget that, in 1952, workers of as many as twenty textile mills did not receive any bonus, as these mills sustained losses. If not, they would have realised that the January agreement has, indeed come as a blessing to labour. Fortunately, the unco-operative attitude of these 30,000 workers cannot torpedo the agreement, since it has a wide measure of support. Nevertheless, the present piquant situation underlines the necessity of having one union per industry at each place.

If the pact is implemented 'in toto', it will involve the payment of six crores of rupees as bonus to the textile workers of Bombay for the first three years of the first Five-Year Plan period. The first instalment itself, consisting of bonus for the year 1953, will be over Rs. 1.75 crores. The Bombay agreement, it should be stressed here, confers certain benefits on the workers which neither the Ahmedabad nor the Indore pact did. First, there is a clear provision for the judicial revision of the industry's rehabilitation quota, which has hitherto been taken as a prior charge on the industry's profits before bonus was calculated. Secondly for the purpose of bonus calculation for the year 1956 and 1957, the mills have agreed not to treat the development rebate on new capital expenditure as a prior charge on profits. Thirdly, under the new Companies Act, which will come into force from April, the Managing Agents' Commission is required to be kept much lower, thereby swelling the amount available for distribution as bonus.

There are only four mills in Bombay which have still not signed the agreement, and it has been suggested by labour interests that the Rashtriya Mill Mazdoor Sangh should approach the Government to compel these

mills to become parties to the pact under the provisions of the Bombay Industrial Relations Act. Before resort is had to such a course, however, it would be graceful on the part of the four mills to become participants in the agreement. Even if they are "conscientious objectors", they may sign the agreement "under protest", if need be. In any case, there is neither profit nor point in their staying out of the agreement, if only because of the supreme need to ensure industrial peace during the Second Plan period.

THE "SIX PER CENT MENTALITY"

THE "SIX PER CENT MENTALITY" of New Delhi was criticised by Mr. E. D. Sheppard, Chairman of the Kohinoor Mills Company Ltd. at its annual general meeting held last Monday in Bombay. The proposed tax on dividends above 6 per cent of the paid-up capital will cost this company Rs. 2 lakhs per annum, assuming that the present rate of dividend distribution is maintained. In fact, the tax acts most unfairly against all companies which have prudently accumulated substantial reserves from the taxed profits of the previous years and is thus a sort of penalty for prudence. It is quite unreasonable that risk capital should be allowed only a return of 6 per cent, without penal tax thus, particularly at a time, when it is proposed to attract a substantial degree of foreign capital for the success of the second Plan. It may be remembered here that the British Bank Rate is as high as 5½ per cent today.

The mill industry generally has had a reasonably good year, according to Mr. Sheppard, but he felt the Planning Commission's decision to "freeze" mill production at its present capacity to be rather disconcerting. During the year under review, trading in Indian cotton remained free of all restrictions on account of ample availability, and foreign cotton prices were fairly steady.

As regards the effect of the new Budget proposals which provide for the enhancement of the excise duty by 6 pies per square yard, the Kohinoor Chairman said that the Company would have to pay Rs. 9 lakhs more to the Government. Besides, in view of the bonus pact, it is calculated that the Company will be required to pay three months' basic pay as bonus for 1953, 1954 and 1955. It has, therefore, been necessary to provide in the accounts for 1955, Rs. 4.43 lakhs in respect of 1954 in addition to Rs. 16.57 lakhs for 1955. The balance sheet, however, shows the strong financial position of the Company. Current assets at Rs. 2.88 crores exceed the current liabilities and provisions by Rs. 1.45 crores. The insurance value of the mills property and stocks on the basis of their reinstatement value now stands at Rs. 10.51 crores, which is higher by about Rs. 36 lakhs. Future prospects also appear bright. The Company has nearly completed a comprehensive programme of expansion and rehabilitation in the last 10 years. The outlook for cloth continues to be good and the yarn market is showing signs of improvement. Further, the selling agents have agreed to a reduction of 25 per cent in their commission. All these should be reflected in the profits for the current year.

ALKALI AND CHEMICAL CORPORATION

THE AUDITED accounts of the Alkali and Chemical Corporation of India Limited for the year ended 30th September, 1955, disclose another big step forward in the Corporation's progress. The net profit after depreciation amounts to Rs. 19.4 lakhs which is more than twice the figure for the previous year. The total amount available for distribution is Rs. 22.9 lakhs. On account of the initial allowance on the new plants of

the Corporation there is no liability for taxation. A sum of Rs. 12.5 lakhs has been transferred to the Reserve for Deferred Income-tax Liabilities, which now totals up to Rs. 23.2 lakhs. The Dividend Equalisation Reserve gets an allocation of Rs. 2.73 lakhs. Dividend on preference shares for the year under report absorbs Rs. 1.55 lakhs. The Directors have recommended a dividend of 8 per cent on ordinary shares which is 2 per cent higher than the dividend of the previous year.

The Chairman, Mr. N. D. Harris, has explained the details of the progress registered last year. Except for acute competition in liquid chlorine, the climate for the Corporation's products was stimulating. It is important to note that the Chairman has made special reference to the considerable dislocation caused to the Company's work and to the paint trade in general by the imposition of the excise duty on paints in the current financial year. It appears that much of the inconvenience results from the administration of the tax on a product covering a complex range of manufactures.

WORKERS' PARTICIPATION IN MANAGEMENT

THE RAILWAY MINISTER'S reference in his budget speech to the policy of introducing workers' participation in the management of railways evoked immediate response from enthusiasts in Parliament and there was a pressing suggestion that the proposal should be taken up for implementation. The trend of the discussion unfortunately revealed that adequate thought had not been given to this far-reaching idea and the practical implications had not been worked out even in broad detail. All that Mr. Lal Bahadur Shastri promised was that workshops would be preferred as suitable priority centres for carrying out this experiment.

Experience in other countries should prove helpful, but it has a basic limitation in that the precise pattern of workers' participation ought to be evolved according to regional peculiarities. In a recent address delivered before the Bombay Management Association, Mr. M. R. Masani, the Association's Vice-President, narrated his observations in the working of labour participation in management in Yugoslavia and West Germany. In Yugoslavia the scheme as it is in operation amounts to joint consultation and not effective participation. Workers' level of training and the presence of dictatorship in the country have hampered progress. Nevertheless, the psychological effect on workers has proved the value of the scheme. In West Germany what is described as the system of co-determination prevails in the coal, and iron and steel industries. Elsewhere it assumes a diluted form. For the present there is evidence that productivity and labour relations have improved. Mr. Masani, however, refrains from drawing positive long-term conclusions about the success of co-determination. He points out that such a conclusion would be premature because this system has been tried in a phase of industrial prosperity. Recession would provide an acid test of its soundness and feasibility. Nevertheless, he feels that it need not be regarded as unworkable. Applying his observations to this country, he makes an important suggestion which is worthy of close consideration. Existence of two parties alone, workers and management, would in most cases result in frequent deadlocks. He suggests a tripartite pattern to include representatives of shareholders, the general body of workers, and technicians and managers in equal proportions. As for workers' representatives, he has no doubt that they should be from among their own class and not from the class of outside leadership of trade unions. Workers have usually shown an intelligent and sympathetic understanding of the problems of their own industries.

COMPANY AFFAIRS

ROHTAS INDUSTRIES LTD.

The working of the Rohtas Industries for the year ended October 31, 1955, has shown all-round improvement in production in the various factories, except in cement where there has been a marginal decline. However during the first quarter of the current working year, production has again shown improvement. The modernisation and expansion of the paper factory is proceeding satisfactorily. A new Coating Machine is expected to go into operation shortly and the entire demand of Indian market for coated varieties of boards can be met from its production. The Vanaspati factory worked in full swing, its production having gone up about ten times from 688 tons in 1953-54 to 6,857 tons during the year under review. The results in respects of other factories like sugar, caustic soda, power, etc. are also satisfactory.

The accounts of the year are as given below:

	Rs.
The year's working, after providing overheads, etc., shows a surplus of	1,50,64,650
Provision for Managing Agents' remuneration, depreciation, etc.	66,87,255
	83,77,395
Leaving a sum of	
Add amount brought forward from last year	4,46,951
	88,24,346
Making a total of	

The Directors have made provision for bonus to staff and workmen for the years 1951-52, 1953-54 and 1954-55, amounting to Rs. 25,81,272. A sum of Rs. 15,00,000 has been transferred to General Reserve, leaving a balance of Rs. 47,43,074. The Directors have recommended payment of dividends, free of income-tax, at Rs. 9 per share on 20,000 Cumulative Preference Shares, Rs. 1,80,000; on 85,047 'B' Cumulative Preference Shares at Rs. 4-4 each, absorbing Rs. 3,61,450; and on 11,40,000 Ordinary (Old) Shares at Rs. 1-3 per share (i.e., 15 per cent) absorbing Rs. 17,10,000, totalling Rs. 22,51,450. Reserve for taxation takes Rs. 20,00,000 and the balance of Rs. 4,91,624 is proposed to be carried forward.

SHREE KRISHNA GYANODAY SUGAR, LTD.

The Directors' Report of the working of the Company during the year ended July 31, 1955, shows that the factories at Hathwa and Lauriya crushed 31,51,972 and 27,39,217 maunds of cane and, with the sugar recovery of 10.13 per cent and 10.57 per cent, produced 3,29,406 maunds and 2,89,620 maunds of sugar respectively. There has been a shortfall in the production of Distillery products which is hoped to improve in the current year. Along with the Rohtas Industries Ltd., the Company also undertook refining of imported raw sugar. During the year, the Company issued a further Rs. 20 lakhs Ordinary Capital. The working results are given below:

	Rs.
After providing for all overheads, etc., the working shows a surplus of	18,66,708
Provision for Depreciation	5,67,137
	12,99,571
Leaving a sum of	
Add last year's balance brought forward	5,475
	13,05,046
Interim dividend on ordinary shares @ Re. 1 per share, free of income-tax	2,00,000
	11,05,046

This amount the Directors recommend to be appropriated as follows:

	Rs.	Rs.
Dividend for the period under review, free of tax on 6,000 'A' Preference Shares at Rs. 6 per share	36,000	
On 12,000 'B' Preference Shares at Rs. 5 per share	60,000	
On 2,00,000 Ordinary Shares a final dividend of As. 12 per share (making a total of Rs. 1-12 or 17½ per cent)	1,50,000	2,46,000
Provision for taxation		7,25,000
Transfer to General Reserve		1,00,000

The balance of Rs. 34,046 is to be carried forward.

THE AHMEDABAD ELECTRICITY CO., LTD.

The Directors' Report and the audited accounts of the Company for the year ended September 30, 1955 show that the gross profit, after charging depreciation amounting to Rs. 36,34,214, amounts to Rs. 36,11,988. To this is to be added Rs. 6,00,000 transferred from Equalisation of Dividends Reserve and Rs. 1,517 brought forward, making a total of Rs. 42,13,505. After providing Rs. 3,27,722 for Statutory Contingencies Reserve, and writing off Rs. 36,408, Rs. 55,680 have been taken to Employees' Retiring Gratuities Reserve. Then there remains a balance of Rs. 37,93,695 from which Rs. 18,25,090 have to be deducted as ad-interim dividend of Rs. 2-8 per share. Of the balance of Rs. 19,68,605, a dividend for the half-year ended September 30, 1955, at Rs. 2-8 per share (making 5 per cent for the year) absorbs Rs. 19,68,417, leaving a balance of Rs. 188 to be carried forward.

There was no change in the rates during 1954-55. In accordance with the decision of the Central Electricity Authority, a surcharge of 3½ per cent was introduced on October 1, 1955, on supplies to industrial and commercial high tension consumers.

The third 15 M.W. Turbine and the fourth Boiler in 'C' station were brought into commission in March-April, 1955. Coal deliveries were not satisfactory, the daily stock having dwindled from about 21,000 tons in October, 1954, to 17,000 tons in September, 1955. However, since the close of the year, the position is improving. Eight new sub-stations for general supply, three for rural electrification and three for municipal drainage pumping and tube-well stations were erected and commissioned.

THE NEW BANK OF INDIA LTD.

The Directors Report shows that the total working capital of the Bank, during the year ended December 31, 1955, has gone up from Rs. 90,62,759 to Rs. 1,06,11,338. Deposits have increased by 10.7 per cent, from Rs. 65,75,563 to Rs. 72,85,208. The proportion of cash and other liquid holdings of the Bank to its total liability comes to 66 per cent, as in the last year, and compares with 54.13 per cent for all banks in India during 1954.

Profits for the year under report are Rs. 1,61,025. Including Rs. 52,377 brought forward, the total amount available for disposal is Rs. 2,13,402. Statutory reserve takes away Rs. 62,965; General Reserve Rs. 34; Charity Rs. 5,000; Divided at As. 4 per share, amounting to 5 per cent p.a. takes Rs. 74,637. The remaining amount of Rs. 70,765 is carried forward.

COMMODITY NEWS AND NOTES

FOREIGN EXCHANGE EARNINGS FROM LAC EXPORTS

Foreign exchange earnings from lac exports increased further to Rs. 125,900,000 in 1955, compared with Rs. 92,300,000 in 1954 and Rs. 75,000,000 in 1953. In addition to higher prices realised last year, the quantum of exports also improved to about 594,099 cwt. compared with 522,818 cwt. in 1954. The increase in lac exports was shared by all grades, but the demand was particularly heavy for shellac, which accounted for Rs. 78,900,000 last year against Rs. 51,800,000 in 1954. The quantum of shipments was also higher at 324,589 cwt. against 252,012 cwt. Earnings from seedlac increased from Rs. 32,300,000 in 1954 to Rs. 36,100,000 in 1955 and those from button lac from Rs. 2,400,000 to Rs. 3,700,000. Seedlac shipments were a shade lower at 173,777, but buttonlac exports were better at 15,395 cwt.

In addition to the USA and the UK, India's principal customers, Communist countries also emerged as substantial buyers of Indian shellac.

INDONESIAN TEA EXPORTS

Tea exports from Indonesia declined sharply to 64,400,000 lbs. in 1955 from 88,500,000 lbs. in the previous year. Lower off-take by Indonesia's principal customers—Holland, Malaya, the U.K. and the U.S.A.—was mainly responsible for the shortfall.

While shipments to Holland and Malaya dropped from 30,700,000 lbs. and 20,300,000 lbs. in 1954 to 25,400,000 lbs. and 10,900,000 lbs. respectively last year, those to the U.K. and the U.S.A. declined from 10,800,000 lbs. and 8,500,000 lbs. to 9,200,000 lbs. and 5,900,000 lbs. respectively.

On the other hand, exports to Australia, South America, including Central America and the West Indies and the Irish Republic showed some improvement last year at 3,700,000 lbs., 19,338 lbs. and 864,356 lbs. respectively.

EXPORT PROMOTION COUNCILS FOR MICA, SHELLAC, HIDES AND SKINS

On account of the export importance of mica, shellac, hides and skins, export promotion councils are being set up soon. The headquarters of mica and shellac promotion Councils will be Calcutta, while hides and skins Council will be registered in Madras. This would increase the total promotion Councils to nine. It is further reported that the Cotton textile export promotion Council is now opening three new offices. The office will be located at Baghdad, Jakarta and West Africa. The Baghdad office will cover, besides Iraq, the Persian Gulf, Syria, Lebanon, Jordan, Israel, Turkey, Cyprus, Iran and Afghanistan. The Jakarta Office will look after the markets in Indonesia, Singapore, Malaya and Thailand.

The textile export promotion Council recently sent a delegation to Burma, Thailand, Singapore, Malaya, Indonesia and Ceylon to make a close study of markets in these regions. Similarly the Silk and Rayon Textile Council and the Engineering Export promotion Council seem to have done useful work. It is hoped that these Councils would succeed in tapping the markets abroad.

WORLD COPPER OUTLOOK

Mr. L. S. Cates, Chairman, and Mr. R. G. Page, President, of Phelps Dodge, told stockholders in their annual report that an increased supply of copper from new mines plus higher output of the industry if free from work stoppage, should result this year in a world supply approximately in balance with demand and a "more suitable" price level abroad. The officials said that new and expanded production from mines both here and abroad should supply in the neighbourhood of 200,000 tons of additional copper in 1956. Moreover,

under strike free conditions, approximately 155,000 tons which were lost by strike should also be available.

The report disclosed new peaks of earnings which were 75 per cent higher at \$73,804,099, compared with a net income in 1954 of \$42,547,811. The report revealed that arrangements between Phelps Dodge and the American Smelting and Refining Company, Cerro de Pasco Corporation and Newmont Mining Corporation for the joint ownership and development of Copper properties in Southern Peru have been concluded.

EXPORT OF COTTON

The Cotton Adviser to the Textile Commissioner Government of India has advised the exporters of cotton to make every possible effort to utilise the export licenses issued in their favour by March 31, 1956, so that they may not lapse. The Cotton Adviser has stated this in reply to a communication for the Cotton Buyers Association, Bombay, requesting the Government of India to extend the validity of cotton export licences for a further period of six months beyond March 31, when licenses are due to expire.

FUTURES TRADING IN PEPPER

The Government of India have accepted the recommendation of the Forward Markets Commission that recognition should be granted for a period of three years to an association that may be constituted at Cochin for carrying on futures trading in pepper. By a notification issued on January 25, 1955, the Government of India had applied Section 17 of the Forward Contracts (Regulation) Act, 1952, to pepper throughout India except the State of Travancore-Cochin. As a result, while the ban imposed under the Essential Supplies (Temporary Powers) Act, 1946 on transferable specific delivery contracts for the purchase of sale of pepper was continued, no restrictions were placed on forward trading in Travancore-Cochin State. The Forward Markets Commission has since examined the question of regulating futures trading in pepper and has come to the conclusion that a futures market should be established at Cochin.

THE TATA IRON & STEEL CO., LTD.

NOTICE

NOTICE is hereby given that the Register of Members and the Transfer Books of the Company will be closed from Thursday, the 12th April, 1956, to Thursday, the 26th April, 1956, both days inclusive.

Notice is also hereby given that pursuant to the Special Resolutions passed at the Extra-ordinary General Meeting of the Company held on Monday, the 12th March, 1956, the holders of Ordinary shares on the Register of Members of the Company on the 26th April, 1956, being the date fixed by the Directors pursuant to the above Resolutions will be entitled to apply for the new Ordinary shares in respect of their holdings of Ordinary shares on such date. Application and Renunciation forms will be posted to the shareholders in due course.

By Order of the Directors

TATA INDUSTRIES LIMITED, MANAGING AGENTS,

J. D. CHOKSI,

Director.

BOMBAY,

Dated 12th March, 1956.

Company Meeting

THE ALKALI & CHEMICAL CORPORATION OF INDIA LTD.

Speech delivered by Mr. N. D. Harris, the Chairman of the Alkali & Chemical Corporation of India, Limited, at the Nineteenth Ordinary General Meeting held at the Registered Office of the Company, 34, Chowringhee, Calcutta, on Wednesday, the 7th March, 1956.

Gentlemen,

The Audited Accounts and Directors' Report for the year ended 30th September, 1955, have been in your hands for some time and with your permission I propose to take them as read.

Your Company has had another successful year in which production and sales of all its products have been considerably greater than in previous years.

Production of Chlorine and Caustic Soda was higher than during the previous year. Caustic Soda sales improved but there was very severe competition in Liquid Chlorine. We were able to sell the entire amount produced but only at a considerably reduced price. An interesting factor and one of deliberate policy has been the growth in the quantity of Chlorine consumed internally for the manufacture of other profitable products. Investigations in this direction continue with vigour.

Sales of Hydrochloric Acid and Zinc Chloride, the latter a relative newcomer to our range, showed similar gratifying increases. In spite of very great competition from other manufacturers' products the demand for our well-known range of "Gammexane" B.H.C. formulations has been difficult to satisfy. To meet this your Company installed greater formulating capacity during the year and sanctioned extensions, now being constructed, to the plant making Benzene Hexachloride (B.H.C.), the basic product.

Our "Dulux" and "Duco" range of paints and allied products continue to be very popular indeed and we have been unable to meet the full demand for them. Your Directors have great confidence that the need for these high quality products will continue to grow as India develops industrially, and because of this they decided last year to double the factory's capacity. These considerable extensions are now well in hand. An important new introduction is the range of metal-pre-treatment products which, under the name "A.C.P.", have already proved popular.

I wish to mention here the introduction after the last Budget of an excise duty on Paints. This sudden imposition on a range of manufactures very different from previously excisable products caused great dislocation to ourselves and to all others in the paint trade.

Relations between the Company and its employees continued to be most cordial and the Works Committee set up at Rishra five years ago again proved its value by acting as a friendly and effective link between the management and the workers. I wish to express the thanks of the Company to all our staff and workers whose loyalty and hard work helped so much in achieving the year's good results.

I have talked primarily about what we have produced. Products do not of course sell themselves and I would like to pay a tribute to the Technical and Sales Staff of our Selling Agents, Imperial Chemical Industries (India) Ltd. They have made a remarkably fine effort in finding new markets and uses for our products. This applies in particular to our paints and "Gammexane" products. I ascribe our success in this direction during the last year very largely to their careful planning and hard work.

The net profit for the year, after providing for depreciation, amounts to Rs. 19,39,845. This is more than twice that of the previous year. The sum available for distribution is Rs. 22,93,168 which includes a balance of Rs. 1,13,627 brought forward, and a reserve for ex-

change losses previously held but now no longer required.

Once again there is no liability to taxation for the year due to initial allowances on the new plant installed, but a sum of Rs. 12,50,000 has been transferred to Reserve for Deferred Income Tax Liabilities. This brings this Reserve to Rs. 23,21,000 which equals the total tax, payment of which has been deferred by the operation of initial allowances. A sum of Rs. 2,73,000 has been transferred to Dividend Equalisation Reserve. The dividends on the Preference Shares for the year absorbed Rs. 1,55,000 and your Directors recommend the payment of a dividend of 8 per cent on the Ordinary Shares, 2 per cent higher than that for last year. If you agree to this, a balance of Rs. 1,19,168 will be left to carry forward.

You will be pleased to hear that we hope shortly to receive Government's approval to a project to manufacture polythene in India. Imperial Chemical Industries Limited, your technical advisers, have agreed to supply their process and continuing "know-how" on very favourable terms. Polythene was discovered by I.C.I. Ltd., who now manufacture large quantities in the U.K. and have licensed its manufacture in several other countries. The production, actual and projected, and consumption of polythene throughout the world have during recent years increased to a remarkable extent, and give every indication of continuing to do so.

The process will be that used by I.C.I. in the manufacture of the well-known "Alkathene" brand of polythene. The use of "Alkathene" in India has been developed by I.C.I. (India) Ltd., who have operated a plant at Calcutta for the manufacture of film from imported granules since 1953. Polythene is a tough, flexible, thermoplastic material with outstanding electrical insulating properties. Many thousands of tons are used every year throughout the world in the manufacture of packaging film, flexible pipes, submarine telephone cables, radar equipment and moulded domestic articles, to mention only some of the major uses. The largest single use of polythene in India will probably continue to be for packaging purposes, both as film and as coating on paper and jute.

The project will involve a total investment of about Rs. 3 crores for which additional capital will have to be found. Methods of raising this are being studied by your Board at the moment, but I wish to take this opportunity of telling you that it will take two to three years at least to bring the plant into economic production. Although the project should ultimately prove profitable, capital invested during the construction period will earn no return and it may, therefore, be difficult for your Company to maintain the higher rate of dividend declared on the Ordinary Shares this year.

The Directors retiring by rotation are Mr. B. R. Goodfellow, Mr. K. W. Young and Dr. E. C. Fairhead and my colleagues and I have pleasure in recommending their re-election.

The Auditors, Messrs. Lovelock and Lewes, also retire and you are requested to re-appoint them for the current year. They have, however, asked for an increased fee of Rs. 7,500 as against Rs. 6,000 sanctioned for the previous year. As you are aware the new Companies Act, which will come into force on the 1st April this year, imposes certain additional duties on Auditors for which we must necessarily pay. In my opinion the increased fee is justified and I recommend its acceptance.

Company Meeting

THE KOHINOOR MILLS COMPANY, LIMITED

Speech of the Chairman, Mr. E. D. Sheppard

Gentlemen,

I am happy to address you again at the close of another year of your Company's working. The year has been an eventful one and I would like to mention to you some of the more important events.

First of all, it is gratifying that there have been no major flare-ups in international affairs. Peace has been maintained throughout the year with the exception of an occasional foray in China, and periodic skirmishes on the Israel-Arab State borders. As far as the latter is concerned, although the fighting has been confined, the atmosphere in the Middle East has in recent months become explosive and might, if it is not brought under control, lead at some future date to a conflagration which might engulf the whole world. The United Nations are sparing no effort to bring about a peaceful solution of the problems that confront the differing parties. India, as usual, is in the forefront.

One feature which is most encouraging is the increasing number of visits that are being paid by the Heads of all countries to others. Here in India, during the course of the year, we had visits from Marshal Tito of Yugoslavia, the Egyptian Prime Minister, the Head of the People's Government of China, Marshal Bulganin and Mr. Khrushchev from Russia, H. M. King Saud of Saudi Arabia, and since the beginning of the year, Their Majesties the Shah and Queen of Iran. Before long we hope we may have with us the President of the United States. Our Prime Minister has himself paid visits to China, Egypt, Russia, Poland, Great Britain and Yugoslavia, and has been invited to go to the United States as the guest of President Eisenhower. In my opinion there is nothing which can be more conducive to bringing about peace and harmony in the world than such visits of leaders of nations to each other, during which they can see for themselves and understand the problems which confront each one of them and which, to some extent, govern the policy that they follow in international affairs. As in the affairs of individuals so with nations, a sympathetic understanding is an essential for the fulfilment of our aspirations for world peace and the advancement of humanity.

Very serious efforts are also being made by all the major powers to bring about the limitation of armaments and the complete banning of atomic and other weapons which, if ever utilized again, can only mean the complete destruction of man.

It is most unfortunate that it has not yet been possible for us to arrive at an understanding on outstanding differences with our closest neighbour—Pakistan. Let us hope that this will be brought about in the near future.

The power position, so far as we are concerned, continued to be satisfactory during the year. Tata's thermal station should be in operation about the end of this year and then there should be no danger of a further shortage of power at any rate for two or three years, or even for considerably longer if the Koyna dam scheme is completed according to schedule. The second Five-Year Plan has now been formulated and, although very much larger than the first in its scope, it is to be hoped that it will be as successful as its predecessor. It is unfortunate that the sponsors of the Plan have 'frozen' the mill industry at its present capacity and have decided to rely on the cottage and handloom industries to produce the

additional cloth which the country will require. I feel that they could, without in any way prejudicing the position of the latter, have permitted reasonable expansion in your industry to enable it to supply the potential demand for mill-made textiles in India and, at the same time, retain its markets overseas.

The Mill industry has had a reasonably good year. The demand for cloth has been steady throughout the year. Earlier in the year prices of cloth, though steady, were not quite at the levels they should have reached to permit of a reasonable profit, but as the year progressed they improved somewhat. Yarn prices I am sorry to say remained very low throughout the year making this part of your Mills' business much less remunerative. This is the reason why your Mills have not shown the improvement in the profits one would have expected because of the good offtake and higher prices of cloth. It must be borne in mind always that, although your Mill has 1,20,000 spindles, half this number is working continuously on the making of yarns and sewing threads for which a special plant has been installed. In view of this 'dual personality' of your Mill, there may be times when as compared to balanced spinning and weaving mills the profits may not seem very large, but there have been times in the past and they will surely come again in the future when with a rise in the prices of yarn and sewing thread your Mill will be in a position to show better progress than others.

The Budget proposals as announced on the 29th of last month provide for the enhancement of the Excise Duty by 6 pies per square yard on all categories of cloth. This will mean that your Company will have to pay Rs. 9 lakhs more to Government under this head. It remains to be seen how much of this it will be possible to pass on to the consumer. The proposed penal tax on Dividends declared at a rate of more than 6 per cent on the paid-up capital will cost your Company Rs. 2 lakhs per annum if it reaches the Statute Book in its present form—assuming that the present rate of Dividend distribution remains unaltered. This proposed tax operates most unfairly against companies such as yours which have prudently accumulated substantial reserves from the taxed profits of past years. Just as disturbing, to my mind, as the actual tax itself is the manifestation of the fact that the "6 per cent mentality" persists in New Delhi. In conditions as they exist today—for example, the Bank Rate in the U.K. is now 5½ per cent—it does not seem reasonable that Risk Capital should only be allowed a return of 6 per cent without a heavy penal tax, and particularly at a time when it is hoped to attract such capital to enter this country.

As regards the Government's policy on personal taxation, I gave you my views on this last year and also reviewed the matter at some length in my address to the shareholders of your Agency Company. I do not propose to indulge in repetition and would only say that my views are unchanged. There is a saying in England that "all work and no play makes Jack a dull boy." It remains to be seen what effect the Government's present policy of "all work and no pay" will have in this country.

Trading in Indian cotton remained free of all restrictions during the whole year as, on account of ample availability, there was no reason for Government to reimpose the quota system. Prices of cotton remained

steady throughout the year but weakened with the approach of the new season because of reports that the crop would be 55 lakhs of bales. This position was, however, short-lived as unseasonal rains caused damage to several of the growths and prices started to rise. Towards the close of the year there has been a very large appreciation and the forward market which had been moving around the 600 mark went up to 740. At this point Government decided to step in and take a hand. The contract was frozen at 700 and futures trading came to a stop. However, in the spot market prices continued to rise and some of the growths very nearly reached the ceilings fixed by Government. The position remains the same to the present time and it would seem that because of the statistical position there is little chance of any appreciable recession.

Foreign cotton prices remained reasonably steady for most of the year but during the last quarter there was a definite upward tendency. Alexandria particularly recorded a steep rise. African and American growths remained fairly steady, but because of a recent announcement by America of the impending release of further large quantities of loan cotton at competitive prices, these have tended to weaken.

I will now turn to the report and accounts. The amount of Rs. 8.50 lakhs provided for taxation is made up of Rs. 5.01 lakhs for Corporation tax and Rs. 0.52 lakhs extra for contingencies.

To meet the statutory depreciation of Rs. 17,62,477 and to set off the initial depreciation of Rs. 3,70,175 allowed in previous years, your Directors have set aside a sum of Rs. 6.33 lakhs from the profits of the year and have appropriated a sum of Rs. 15 lakhs from the Machinery Reserve Account. A sum of Rs. 3 lakhs has been appropriated from the profits of the year to the Development Rebate. A sum of Rs. 1.50 lakhs has been put to the Employees' Pension & Gratuity Fund bringing this to Rs. 12.50 lakhs which represents a full provision for present liabilities under this head.

In view of the Millowners' Association's Bonus Pact with the Rashtriya Mill Mazdoor Sangh on the lines of the Ahmedabad Millowners' Association's agreement, it is calculated that your Company will be required to pay 3 months' basic pay as bonus for all the three years 1953, 1954 and 1955. It became, therefore, necessary to provide in the accounts of the year 1955, Rs. 4.43 lakhs in respect of 1954 in addition to Rs. 16.57 lakhs for the current year.

The insurance value of your Mills' property and stocks on the basis of their reinstatement value now stands at Rs. 10.51 crores which is higher by Rs. 36 lakhs. This is due to an increase in machinery valuation by about Rs. 25 lakhs and to higher stocks of cotton.

The Balance Sheet figures show that your Company continues to be in a strong position as the current assets at Rs. 2.88 crores exceed the current liabilities and provisions by Rs. 1.45 crores. Secured loan of Rs. 38.84 lakhs is lower by Rs. 2.52 lakhs. The liability for expenses is down by Rs. 6.63 lakhs as no provision for arrears of D.A. was necessary this year. The liability for Other Finance is up by Rs. 11.27 lakhs due to the carry-over to the current year of the bonus unpaid for the previous year.

On the assets side of the Balance Sheet the value of stocks of cotton and staple fibre is higher by Rs. 15.66 lakhs mainly due to the increase in the stock of cotton. Art silk and other yarns are up by Rs. 2.40 lakhs due to increase in the stock of art silk yarn. The stock of cloth, yarn and waste, is lower by Rs. 3.66 lakhs due to good deliveries during the concluding period of the year. The stocks of stores, fuel and grain are lower by Rs. 2.36 lakhs. Book debts at Rs. 3.88 lakhs are up by Rs. 2.46 lakhs due to bills for cloth, yarn and cotton being outstanding at the close of the year. Advances at Rs. 10.27 lakhs are lower by Rs. 10.66 lakhs mainly

due to cotton advances being down. Taxation under Advances is down by Rs. 1.39 lakhs due to adjustments in the advance tax payments.

Now I will give you some salient features of the Profit and Loss Account.

Cotton and fibre consumption is down by Rs. 13.37 lakhs due to the consumption of a larger proportion of cheaper cotton. Muccadumage is up by Rs. 0.80 lakhs due to the increase in the muccadumage rate and also in the quantity of cotton received. Yarn and cloth commissions are slightly down due to the lower yarn and cloth values. The stores consumption, etc. is practically the same. Electric power is higher by Rs. 0.32 lakhs due to increased consumption of energy. Salaries and wages are up by Rs. 9.99 lakhs due to the adjustment in the quantum of bonus as already explained. Dearness allowance is down by Rs. 11.89 lakhs compared to the previous year when Rs. 13.98 lakhs including arrears were paid according to a Court Award. Rents and taxes are up by Rs. 0.47 lakhs due to the increase in water rate by 2 annas per 1000 gallons. Although stocks were higher, insurance is down on balance by Rs. 1.18 lakhs as the Company's contribution to the Employees' State Insurance amounting to Rs. 1.89 lakhs has been debited to Salaries and Wages being the compulsory contribution to the Government Fund. Interest is higher by Rs. 0.68 lakhs due to larger purchases of cotton. General charges are up by Rs. 0.58 lakhs on account of the Indian Industries Fair, Delhi, where your Company's products were exhibited. Trade subscriptions are down by Rs. 1.98 lakhs, as a sum of Rs. 2 lakhs was paid as the Company's contribution to the Bombay Textile Research Association Fund in the previous year. Donations are up by Rs. 0.15 lakhs due to a contribution to the Prime Minister's Relief Fund for flood-stricken areas in Bihar, Orissa and the Punjab.

On the credit side of the Profit and Loss Account, the sales of cloth, yarn and waste show a decrease of Rs. 9.89 lakhs mainly due to the production of a large proportion of the cheaper qualities. Yarn and cloth expenses are lower by Rs. 0.39 lakhs in consequence. Miscellaneous receipts are up by Rs. 0.22 lakhs due to a refund of excise duty.

You will have seen from the notice that we have for confirmation by you at this meeting the renewal of the agreements of both our cloth and yarn selling agents. Messrs. V. S. Apte & Son, and Messrs. Nahalchand Laloochand Ltd., have been your selling agents for 44 and 29 years respectively, and I can say without any hesitation that they have served your Company exceedingly well throughout this period. In keeping with the times they will both be receiving about 25 per cent less than hitherto. Our association with them has always been a very pleasant one, and I am confident that it will continue for many years to come.
